GENERAL NOTES FOR ALL ELECTRICAL WORK

1. The location of all conduits, junction boxes, ground boxes, and encroachment services is diagrammatic and may be shifted to accommodate field conditions.

2. Provide new and unused materials. Ensure that all materials and installations comply with the applicable portions of the National Electrical Code (NEC), TxDOT standards and specifications, National Electrical Manufacturers Association (NEMA), and are listed by Underwriters Laboratories (UL) or a Nationally Recognized Testing Lab (NRTL). NRTLs such as Canadian Standard Association (CSA), Intertek Testing Services NA Ltd., or MET Laboratories, Inc. are acceptable. Devices that are marked with the International Electrotechnical Commission (IEC) listed devices will not be considered an acceptable equal to a NEMA listed device. Acceptable devices may have both a NEMA and IEC listing. Faulty fabrication or poor workmanship in any materials, equipment, or installation is justification for rejection. Replace or reinstall rejected material or equipment at no additional cost to the Department.

3. Miscellaneous nuts, bolts and hardware, except for high strength bolts, may be stainless steel when plans specify galvanized, provided the bolt size is 5/8 in. or less in diameter.

4. Provide the following test equipment as required by the Engineer to confirm compliance with the contract and the NEC: ohmmeter, ammeter, megohmmeter 1000 volt DC), ground-resistance tester, torque wrenches, and torque screwdrivers. Ensure all equipment has been properly calibrated by a NIST traceable calibration service within the past year. Furnish when requested. Operate test equipment during inspection as requested by the Engineer.

5. Install grounding as shown on the plans and in accordance with the NEC. Ensure all metallic conduits, metal poles, luminaires, and metal enclosures are bonded to the equipment grounding conductor. Ground all electrical systems as shown on the plans and manufacturer's instructions. Ground rods, connectors, and bonding jumpers are subsidiary to the various bid items.

6. When required by the Engineer, notify the Department in writing of materials from the Materials Producers List (MPL) intended for use on each project. Prequalified materials are listed on the MPL under Item 610, "Roadway Illumination and Electrical Supplies." No substitutions will be allowed for materials on this list.

CONDUIT

A. MATERIALS

1. Provide conduit, junction boxes, fittings, and hardware as per TxDOT Departmental Material Specification DMS 11028 "Conduit" and Item 618 "Conduit" of TxDOT's Standard Specifications for Construction and Maintenance of Highways, Streets, and Bridges," latest edition. Provide conduit of the type, size, and trade number as shown on the plans and in the bid tabulations. Provide conduit types according to the description code or as shown on the plans. Do not substitute other types of conduits for those shown. Provide liquidtight flexible metal conduit (LFMC) when flexible conduit is called for on galvanized sheet-rigid metallic conduit (RMC) systems. Provide liquidtight flexible nonmetallic conduit (LFNC) when flexible conduit is called for on polyvinyl chloride (PVC) systems.

2. Provide galvanized sheet RMC for all exposed conduits, unless otherwise shown on the plans. Properly bond all metal conduits.

3. Unless otherwise shown on the plans, provide junction boxes with a minimum size as shown in the following table, which applies to the greatest number of conductors entering the box through one conduit with no more than four conductors per box. When a mixture of conductor sizes is contained in a box, provide a box size based on the largest size. For situations not applicable to the table, size junction boxes in accordance with NEC.

AWG	3 CONDUCTORS	5 CONDUCTORS	7 CONDUCTORS
#14	10" x 10" x 4"	12" x 12" x 4"	16" x 16" x 4"
#12	8" x 8" x 4"	10" x 10" x 4"	12" x 12" x 4"
#10	8" x 8" x 4"	10" x 10" x 4"	10" x 10" x 4"
#6	8" x 8" x 4"	8" x 8" x 4"	10" x 10" x 4"
#4	8" x 8" x 4"	8" x 8" x 4"	8" x 8" x 4"

4. Junction boxes with an interior volume of less than 100 cu. in. and supported by entering roadways must have threaded entries or hubs identified for the intended purpose and supported by connection of two or more rigid metal conduits. Secure conduit within 3 ft. of the enclosure or within 18 in. of the enclosure if all conduit entries are on the same side. Mechanically secure all junction boxes with an internal volume greater than 100 cu. inches.

5. Provide hot dipped galvanized cast iron or sand cast aluminum outlet boxes for junction boxes containing only #6 AWG or 12 AWG conductors. Do not use die cast aluminum boxes. Size outlet boxes according to the NEC.

6. Provide PVC elbows in PVC conduit systems, unless otherwise shown on the plans. Use only a high, high tensile strength polyester fiber duct tape for pulling conductors through the PVC conduit system. When galvanized sheet RMC elbows are specifically called for in the PVC conduit system, provide a transition from the PVC conduit to the RMC elbow by means of a grounding bushing on a rigid metal extension. Grounding of the rigid metal elbow is not required if the entire RMC elbow is encased in a minimum of 2 in. of concrete. PVC extensions are allowed on these concrete encased rigid metal elbows. RMC or PVC elbows are subsidiary to various bid items.

7. When required, provide high-density polyethylene (HDPE) conduit with factory installed internal conductors according to Item 620 "Duct Cable." At the Contractor's request and with approval by the Engineer, the Department will allow substitution of HDPE conduit for PVC or RMC conduit 3/4 conduit 3/4 under Item 618. Ensure bored HDPE substitutes for PVC in schedule 40 and of the same size PVC called for in the plans. Ensure the substituted HDPE meets the requirements of Item 620, except that the conduit is supplied without factory-installed conductors. Make the transition of the HDPE conduit to PVC or RMC elbow when required at the bore pit. Provide conduit of the size and type called for in the plans for the portion of the conduit installed above the bore pit. Provide PVC or galvanized steel RMC elbows as called for on all ground boxes and foundations.

8. Use heatshrink straps when supporting 2 in. and larger conduits. On electrician service poles, use only 3-band stainless steel or hot dipped galvanized premade standoff straps are allowed on the service riser conduit.

B. CONSTRUCTION METHODS

1. Provide and install expansion joint conduit fittings on all structure-mounted conduits or the structure's expansion joints to allow for movement of the conduit. In addition, provide and install expansion joint fittings on all continuous runs of galvanized sheet RMC conduit externally exposed on structures such as bridges at maximum intervals of 150 ft. When requested by the project Engineer, supply manufacturer's specification sheet for expansion joint fittings. Provide fittings that are designed to accommodate 4 in. of conduit axial movement or as additional load to the Department. Provide the method of determining the amount of expansion to the Engineer upon request. Do not use LFNC or LFMC as a substitute for the required expansion conduit fittings.

2. Space all conduit supports at maximum intervals of 5 ft. Install conduit spacers when attaching metal conduit to surface of concrete structures. See "Conduit Mounting Options" on ED(2). Install conduit support within 3 ft. of all enclosures and conduit terminations.

3. Do not attach conduit supports directly to pre-stressed concrete beams except as shown specified in the plans or as approved by the Engineer.

4. Unless otherwise shown on the plans, jack or bore conduit placed beneath existing roadways, driveways, sidewalks, or other the base or surfacing operation has begun. Backfill and compact the bore pits before the conduit per Item 416 "Drilling, Boring, or Tunneling Pilot or Box" prior to installing conduit or duct cable to prevent bending of the connections.

5. When placing conduit in the sub-grade of new roadways, backfill all trenches with excavated material, flowable backfill, or cement-stabilized base as per requirements of new roadways. Backfill all trenches with cement-stabilized base as per requirements of Items 110 "Excavation", 400 "Excavation and Backfill for Structures", 401 "Flowable Backfill", 402 "Trench Excavation Protection", and 403 "Temporary Special Shoring."

6. Provide and place warning tape approximately 10 in. above all trenched conduit as per Item 618.

7. During construction, temporarily cap or plug open ends of all conduit and raceways immediately after installation to prevent entry of dirt, debris and animals. Temporary caps constructed of durable duct tape are allowed. Tightly fix the tape to the conduit opening. Clean out the conduit and prove it clear in accordance with Item 618 prior to installing any conductors.

8. Ensure conduit entry into the top of any enclosure is waterproof by installing conduit sealing hubs or using boxes with threaded bosses. This includes surface mounted battery switches, meter cans, service enclosures, auxiliary enclosures and junction boxes. Grounding bushings on other than sealing hubs are not required.

9. Fit the ends of all PVC conduit terminations with bushings or bell end fittings. Provide and install a grounding type bushing on all metal conduit terminations.

10. Install a bonding jumper from each grounding bushing to the nearest ground rod, grounding lug, or equipment grounding conductor. Ensure all bonding jumpers are the same size as the equipment grounding conductor. Bonding of conduit used as a coring under roadways for duct cable is not required. If the duct extends the full length through the coring.

11. At all electrical services, install a 6 AWG solid copper grounding electrode conductor.

12. Place conduits entering ground boxes so that the conduit openings are between 3 in. and 6 in. from the bottom of the box. See the ground box detail on sheet ED(4).

13. Seal ends of all conduits with duct seal, expandable foam, or by other methods approved by the Engineer. Seal conduit immediately after completion of conductor installation and pull tests. Do not use duct tape as a permanent conduit sealant. Do not use silicone caulk as a conduit sealant.

14. File smooth the cut ends of all exporting since and conduit. Before installing, paint the field cut threads on all galvanized RMC with a zinc-rich primer conforming to Item 445 "Galvanizing." Use more zinc content to minimize overspray. Use zinc rich paint to touch up galvanized material as allowed under Item 445 "Galvanizing." Do not paint non-galvanized material with a zinc rich paint as an alternative for materials required to be galvanized.

ELECTRICAL CONDUCTORS

A. MATERIAL INFORMATION

1. Provide Type XHHW insulated conductors in accordance with Departmental Material Specification DMS-11040, "Conductors," and Item 620 "Electrical Conductors." Provide conductors as listed on the Material Producers List (MPL) on the Department web site under "Roadway Illumination and Electrical Supplies" Item 620. Color code insulated conductors as follows: Phase conductors shall have black insulation, neutrals shall have white insulation. Identify grounding conductors #6 AWG and smaller by continuous green insulation or bare conductors. Identify ungrounded limit conductors with any color insulation except green, white, or gray. Keep color scheme consistent throughout the entire system. Identify conductors #4 AWG and larger by continuous green insulation or by green tape. Identify conductors #6 AWG and smaller by green sleeve or by colored tape. When identifying conductors with colored tape, mark at least 6 in. of the conductor's insulation with half laps of tape.

2. Provide a solid copper #4 AWG grounding electrode conductor to bond the electrical service equipment to the concrete encased grounding electrode or the ground rod at the service location. Connect the grounding electrode conductor to the ground rod with a UL listed connector in accordance with DMS-11040. Connect the grounding electrode conductor to the concrete encased grounding electrode as shown in the plans.

3. Where two or more circuits are present in one conduit or enclosure, permanently identify the conductors of each branch circuit by attaching a non-metallic tag around both circuit conductors at each accessible location. Provide tags with two arrows, large enough to indicate circuit number, letter, or other identification as shown in the plans. Print circuit identification on the tag with a permanent marker.

4. Use listed compression or screw type pressure connectors, terminal blocks, or split bolt connectors. Insulate splices with heavy wall heat shrink tubing or gel-filled adhesive tape to fill the gap and seal the ends of heat shrink tubing. Provide UL listed gel-filled insulating splice covers. Splicing materials, insulating materials, breakaway disconnects, splice covers, and fuse holders are subsidiary to various bid items.

B. CONSTRUCTION METHODS

1. Use only a flat, high tensile strength polyester fiber pull tape for pulling conductors through the conduit system. After installing conductors in conduit, perform conductor pull test. If a conductor cannot be freely pulled, make any needed alterations or repairs at no additional cost to the department. Perform insulation resistance tests in accordance with Item 620. Coordinate with the Engineer to witness the tests.

2. Leave 2 ft. minimum, 3 ft. maximum length for each conductor up to the splice in pull boxes and 3 ft. minimum, 5 ft. maximum length for each conductor in ground boxes when pulled through with no splice. Leave 1 ft. minimum, 1.5 ft. maximum length of conductor at enclosures, weatherheads and pole bases.

3. Make splices only in junction boxes, ground boxes, pole bases, or electrical service enclosures. Splice conductors using compression connectors, screw type, terminal blocks, or split bolt connectors. Insulate splices with heavy wall heat shrink tubing or gel-filled insulating splice covers to provide a watertight seal. Use heat shrink tubing that has a minimum recovery ratio of 3 to 1. Apply both sides of the splice. Where heat shrink tubing may not shrink sufficiently to provide a watertight seal around the individual conductors, prior to heating the tubing, increase the diameter of the conductor insulation using hot melt adhesive tape to provide a watertight seal between the heat shrink tubing and the conductor. Use hot melt adhesive tape to fill the gap and seal the ends of heat shrink tubing. Heat shrink tubing that appears to have been burned, or overheated, is considered defective and must be replaced.

4. Size and install gel-filled insulating splice covers according to manufacturer's specifications when used in place of heat shrink tubing.

5. Wire nuts with factory applied waterproof sealant may be used for 8 AWG or smaller conductors in above ground junction boxes, but not in pole bases or ground boxes. Install wire nuts in an upright position to prevent the accumulation of water.

6. Support conductors in illumination poles with a J-hook at the top of the pole.

7. When terminating conductors, remove the insulation and jacketing material without nicking the wire. Clean conductors before splicing or terminating. Damaged individual conductor strands or removed strands will be considered damaged.

8. Replace conductors and cables that are damaged beyond repair or that fail an insulation resistance test at no additional cost to the department.

9. Do not reuse damaged conductors with duct tape, electrician tape, or wire nuts. Use only approved splicing methods.

10. Do not terminate more than one conductor under a single connector, unless the connector is rated for multiple conductors. Do not exceed the pressure connector's listing for maximum number and size of conductors allowed.

11. Install breakaway connectors on conductors 8 AWG and smaller when those conductors pass through a breakaway support device. Follow manufacturer's instructions for installation. Use a calibrated torque wrench to achieve proper torque threaded connections. Proper terminations are critical to the safe operation of breakaway devices. Trim waterproofing boots on breakaway connectors to fit snugly around the conductor to ensure waterproof connection. Only one conductor may enter a single opening in a boot. Provide waterproof boots with the correct number of openings for the number of openings factory sealed. Use pressurfilled breakaway connectors as shown on the plans.

12. Provide and install a separate stranded equipment grounding conductor (EGC) in all conduits that contain circuit wiring of 50 volts or more. Unless shown elsewhere, size the EGC to be the same size as the largest current carrying conductor contained in the conduit. Ensure all EGCs are electrically continuous and accessible at junction, pull, and termination points. For flexible conduit installations, provide a minimum size 8 AWG EGC. The EGC is paid for under Item 620.

C. TEMPORARY WIRING

1. Install temporary conductors and electrical equipment in accordance with the NEC article "Temporary Installations" and Department standard sheets.

2. Provide a ground fault circuit interrupter (GFCI) for power outlets for portable electrical equipment, power tools, ice machines, ice storage bins and refrigerators located outdoors on grade. GFCI may be any one of the following: molded cord and plug set, receptacle, or circuit breaker type.

3. Use listed wire nuts with factory applied sealant for temporary wiring where approved.

4. Enclose conductor splices within a listed enclosure or ground box, or ensure the splices are more than 18 in. above grade vertically and more than 3 ft. horizontally from any metal structure. Where installing temporary conductors in areas subject to vehicle traffic or mobile communication equipment, ensure the conductors are buried a minimum of 12 in. deep and are the lowest point. Ground messenger wires that support power conductors in conformance with the NEC.

5. Protect and when necessary repair any existing electrical conduits uncovered during the construction process in a timely manner and in conformance with the NEC.

GROUND RODS & GROUNDING ELECTRODES

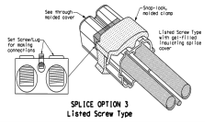
A. MATERIAL INFORMATION

1. Provide and install a grounding electrode at electrical services. Provide ground rods according to DMS-11040 and the plans. Larger diameter or longer length rods may be called for in some specific locations, see the individual plan sheets. Provide grounding electrodes according to NEC article 250 for specific locations including electrical services, see individual plan sheets.

B. CONSTRUCTION METHODS

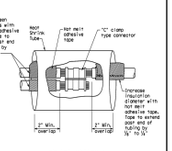
1. Function auxiliary ground rods for lightning protection and install in soil, concrete, or both, as called for in the plans. For ground rods installed in concrete, ensure the connection of the conductor to the ground rod is readily accessible for inspection or repairs. For ground rods installed in soil, ensure that the upper end is between 2 to 4 in. below finished grade.

2. Do not place ground rods in the same drilled hole as a timber pole.



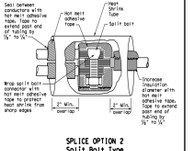
3. Install ground rods so the imprinted part number is at the upper end of the rod.

4. Remove all non-conductive coatings such as concrete splatter from the rod at the clamp location.



5. Route all conductors as short and straight as possible for connection to lightning protection ground rods. When a bend is required, ensure a minimum radius bend of four inches for these conductors.

6. Unless otherwise called for in the plans, protect grounding electrode conductors with non-metallic conduit. When protecting grounding electrode conductors with metal conduit, provide and install a grounding type bushing and properly sized bonding jumper on each end of the metal conduit.



7. Written authorization is required before installing a ground rod in a horizontal trench for rocky soil or a solid rock bottom.

APRON FOR GROUND BOX

(1) Uniformly space ends of conduits within the ground box. Position ends of conduits so that ground box walls do not interfere with the installation of grounding bushings or bell end fittings.

(2) Maintain sufficient space between conduits to allow for proper installation of bushing.

(3) Place aggregate under the box, not in the box. Aggregate should not encroach on the interior volume of the box.

(4) Install a grounding bushing on the upper end of all RMC terminating in a ground box. Ensure the bushing is bonded and the elbow is less than 18 in. below the bottom of the ground box. Install a PVC bell end fitting on the upper end of all PVC conduits terminating in a ground box.

GROUND BOX DIMENSIONS

TYPE	OUTSIDE DIMENSIONS (INCHES) (Width x Length X Depth)
A	12 X 23 X 11
B	12 X 23 X 22
C	16 X 29 X 11
D	16 X 29 X 22
E	12 X 23 X 17

GROUND BOX COVER DIMENSIONS

TYPE	DIMENSIONS (INCHES)							
	H	I	J	K	L	M	N	P
A, B & E	23 ½	23	15 ⅜	13 ½	9 ⅜	5 ⅛	1 ⅜	2
C & D	30 ½	30 ¾	17 ½	17 ¼	13 ¼	6 ⅜	1 ⅜	2

GROUND BOX COVER

GROUND BOXES

A. MATERIALS

1. Provide polymer concrete ground boxes measuring 16x30x24 in. (HxLxD) or smaller in accordance with Departmental Material Specification (DMS) 11070 "Ground Boxes" and Item 624 "Ground Boxes."

2. Provide Type A, B, C, D, and E ground boxes as shown in the plans, and as listed on the Material Producers List (MPL) on the Department web site under "Roadway Illumination and Electrical Supplies," Item 624.

3. Ensure ground box cover is correctly labeled in accordance with DMS 11070.

4. Provide larger ground boxes in accordance with Item 624 and as shown in the plans.

B. CONSTRUCTION METHODS

1. Remove all gravel and dirt from conduit. Cap all conduits prior to placing aggregate and setting ground box. Provide Grade 5 or 6 coarse aggregate as shown in Table 2 of Item 302 "Aggregates for Surface Treatments." Ensure aggregate bed is in place and at least 6 inches deep, prior to setting the ground box. Install ground box on top of aggregate.

2. Open ground box aprons in place. Reinforcing steel may be field bent. Ensure the depth of concrete for the apron extends from finished grade to the top of the aggregate bed under the box. Ground box aprons, including concrete and reinforcing steel, are subsidiary to ground boxes when called for by descriptive code.

3. Keep bolt holes in the box clear of dirt. Bolt covers down when not working in ground boxes.

4. Install all conduits and slip in a neat and workmanlike manner, uniformly space conduits so grounding bushings and bell end fittings can easily be installed.

5. Temporarily seal all conduits in the ground box until conductors are installed.

6. Permanently seal conduits immediately after the completion of conductor installation with duct seal, expandable foam, or other method as approved. Do not use duct tape as a permanent conduit sealant. Do not use silicone caulk as a sealant.

7. When a ground rod is present in a ground box, bond all equipment grounding conductors together and to the ground rod with listed connectors.

8. When a type D or E ground box is stacked to meet volume requirements, it is allowable to cut an appropriately sized hole for conduit entry in the side wall at least 18 inches below grade.

9. If an existing ground box in the contract has a metal cover, bond the cover to the equipment grounding conductor with a 3 Ft. long stranded bonding jumper the same size as the grounding conductor. The bonding jumper is subsidiary to various bid items. Verify existing ground boxes with metal covers are shown on the plans, with notes fully describing the work required.

10. If other ground boxes with metal covers are within the project limits but are not part of the contract, the Engineer may direct the Contractor to bond the metal covers, identifying the specific boxes in writing. This work will be paid for separately.

11. Bond metal ground box covers to the grounding conductor with a new ground type lug.

REVISIONS			

ELECTRICAL SERVICES NOTES

1. Provide new materials, ensure installation and materials comply with the applicable provisions of the National Electrical Code (NEC) and National Electrical Manufacturers Association (NEMA) standards. Ensure material is Underwriters Laboratories (UL) listed.
2. Provide electrical services, including but not limited to, service entrance conductors, circuit breaker panels, and branch circuits breakers as shown on the Electrical Service Data chart in the plans. Faulty fabrication or poor workmanship in material, equipment, or installation will be rejected. Provide products that are standard with the manufacturer and guaranteed as a customary trade practice, furnish these to the State.
3. Provide all work, materials, services, and any incidentals needed to install a complete electrical service as specified in the plans.
4. Coordinate with the Engineer and the utility provider for metering and compliance with the utility company's service drop requirements. Any utility company charges, like meter charges, to the utility company, is provided under the respective bid line item and are paid for in accordance with Item 626. Get approval for the costs associated with these charges prior to engaging the utility company to do the work. Consult with the utility provider to determine costs and requirements, and coordinate the work as approved.
5. The enclosure manufacturer will provide Master Lock Type 2 with brass tumblers for "Off the Shelf" enclosures. Where enclosures are specified to be keyed alike, provide Master Lock #2700 Type 2 with brass tumblers for "Off the Shelf" enclosures. Master Lock #2191 keys and locks become property of the State. Where keyed alike is approved, do not energize electrical service equipment until locks are installed.
6. Enclosures with screened disconnects must de-energize all equipment inside the enclosure do not need a dead front. In lieu, protect exposing the terminations from incidental contact as required by the NEC.
7. When galvanized is specified for nuts, screws, bolts or miscellaneous hardware, stainless steel may be used.
8. Provide wiring and electrical components rated for 75°C. Provide red, black, white, and green conductors for all electrical conductors #6 AWG and smaller (Amer. Wire Gauge (AWG). Identify size 4 AWG conductors by continuous color jacket. Identify electrical conductors sized 4 AWG and larger by continuous color jacket, with color tape, or with color ink. Identify the grounded (neutral) conductor with hot tape of colored tape, when identifying conductors. Ensure each service entrance conductor exits through a separately bushed nonmetallic opening in the service enclosure. Ensure the length of conductor extending beyond the box is no less than 12 inches minimum, 18 inches maximum, or as required by utility.
9. All electrical service conduit and conductors attached to the electrical service including that part of the wiring below ground are subsidiary to the electrical service. The conductors in the service drop from the utility pole to the point of connection at the widow, including service conduit and conductors for the utility pole riser when furnished by the Contractor, will be paid for separately.
10. Provide rigid metal conduit (RMC) for all conduits on service, except for the 3/4 inch PVC conduit containing the electrical service grounding electrode conductor. Ensure the grounding electrode conductor is installed in a separate conduit for branch circuit entry to enclosure is the same size as that shown on the layout sheets for branch circuit conduit. Extend all rigid metal conduits from the top of the service enclosure to the bottom of the service enclosure. Use the conduit shown on the layout for that particular branch circuits. Install a grounding bushing on the RMC where it terminates in the service enclosure.
11. Use of liquidtight flexible metal conduit (LFMC) is allowed between the meter and service enclosure when they are mounted 90 to 180 degrees to each other. Size the LFMC the same size as service entrance conduit. LFMC must not exceed 3 feet in length. Torque LFMC within 1 foot of each end. LFMC less than 12 inches in length must be bonded with a bonding jumper. The LFMC must be terminated with a grounding fitting. The LFMC must contain a grounded neutral conductor. Ensure any bend in LFMC never exceeds 180 degrees. A pull mark is required on the LFMC to determine if the conductor has any degrees of free conductor movement predetermined to the satisfaction of the Engineer.
12. Ensure all mounting hardware and installation details of services conform to utility company specifications.
13. For all electrical service enclosures listed under Item 626 on the MPL, the UL 508 enclosure manufacturers will prepare and submit a schematic drawing unique to each service. Before shipment to the job site, place the applicable reinforced schematic drawings and the reinforced plan sheets showing the electrical service data sheet used to build the enclosure in the enclosure's data packet. The training contractor will verify that the schematic drawing is correct and matches the service and branch circuits supplied by that service. The reinforced plan sheets are to be placed in the service enclosure's document packet. Reduce 11 in. x 17 in. plan sheets to 8 1/2 in. x 11 in. before reinforcing. For 8 1/2 in. x 11 in. plan sheets that are not reinforced with a grounding fitting. The training contractor is to redline plan sheets before laminating.
14. When providing an "Off The Shelf" Type D or Type F service, provide laminated plan sheets detailing equipment and branch circuits supplied by that service. Reduce 11 in. x 17 in. plan sheets to 8 1/2 in. x 11 in before laminating. Deliver these drawings before completion of the work to the Engineer, instead of placing in enclosure that has no door pockets.
15. Do not install conduit in the back wall of a service enclosure where it would penetrate the equipment mounting panel inside the enclosure. Provide grounding bushings for all conduits entering the service enclosure. Provide grounding bushings are not required when the end of the metal conduit is fitted with a conduit sealing hub or threaded boss, such as a meter base hub.

SERVICE ASSEMBLY ENCLOSURE

1. Provide threaded hub for all conduit entries into the top of enclosure.
2. Type galvanized sheet (GS) enclosures may be used for Type C pedestrian and for Type D and F services that do not use an enclosure mounted photocell or lighting contactor. Provide GS enclosures in accordance with DMS 11080, 11082, 11083, and 11084.
3. Provide stainless (SS) and aluminum sheet (SS) enclosures for Types A, C, and D in accordance with DMS 11080, 11081, 11082, 11083, and 11084. Do not paint stainless sheet.
4. Provide pedestal service (PS) enclosures in accordance with SS(R) and DMS 11080 and 11085. Do not provide GS pedestal services. If GS is shown in the PS descriptive code, provide an AL enclosure.

MAIN DISCONNECT & BRANCH CIRCUIT BREAKERS

1. Field drill flange-mounted remote operator handle if needed, to ensure handle is capable to turn the "On" and "Off" positions.
2. When the utility company provides a transformer larger than 50 kVA, verify that the available fault current is less than the circuit breaker's ampere interrupting capacity (AIC) rating and provide documentation from the electric utility provider to the Engineer.

PHOTOELECTRIC CONTROL

1. Provide photocell as listed on the MPL. Mount, adjust, or shield the photocell so that it is oriented to receive light rays from the sky for proper operation. Mount photocell facing north when practical. Mount top of pole photocells as shown on Top Mounted Photocell Detail.

TRAFFIC SIGNAL NOTES
1. Do not pass luminaire conductors through the signal controller cabinet.
2. Include an equipment grounding conductor in all conduits throughout the electrical system. Bond all exposed metal parts to the grounding conductor.
3. Provide roadway luminaires, when required, in accordance with the material and construction sections of Item 610, "Roadway Illumination Assemblies," and the details for mounting of luminaires. Test intensified roadway luminaires for proper operation as a part of the associated traffic signal system test.
4. If internally illuminated street name signs are approved for use, ground the fixture to the pole with a 12 AWG green XHHW conductor.
5. Bond anchor bolts to rebar cage in two locations using #3 bars or 6 AWG stranded copper conductors. Use listed mechanical connectors rigged for embedment in concrete. See TXDOT standard TS-FD for further details.
6. Drill and tap signal poles for ½ in. X 13 UNC rank ground fitting. Drill, tap and thread a hole in the pole for the ½ in. rank ground fitting. Route electrical service encasement/conduit through a properly sized hole through the bottom of the enclosure for the service grounding electrode conductor. Connect the electrical service grounding electrode conductor to the rank ground fitting. Ensure electrical service grounding electrode conductor is #6 AWG minimum copper conductor. Use listed mechanical connector to ground fitting. See Sheet A details for further information. Size all service entrance conduit and branch circuit conduit as shown in the plans.
7. Mount electrical service enclosure and meter to signal pole with stainless steel bands using two-hole bracket. Install bracket so that it is parallel to bands using two-hole brackets. Install brackets near top and bottom of each enclosure. Install properly sized stainless steel washers on each bolt in the enclosure. Bond or drill and tap properly sized stand-off straps to signal pole for grounding conduit.
8. Conduct pull tests and insulation resistance tests on all illumination and power conductors as required in Item 620 "Electrical Conductors" and Ed(1). To prevent electrical damage, do not conduct insulation resistance tests on traffic signal cables after termination.
9. Lock all enclosures and bolt down all ground box covers before applying power to the signal installation.
10. Terminate conduits entering the top of enclosures with a conduit-sealing hub or threaded boss such as meter hub. Install a grounding bushing on all metal conduits not connected to conduit-sealing hub or threaded boss. Bond the grounding bushing to the ground bus with a bonding jumper. Seal all conduits entering enclosures with duct seal or expanding foam. Do not use silicone to seal conduit ends.
11. For all conduits, ensure the burial depth is a minimum of 18". Ensure the minimum burial depth for conduit placed under a roadway is 24".
White insulation or color code 'K' neutral conductor's insulation with white tape where conductor exits weatherhead.
Red insulation or color code 'K' (ungrn or blue if 3 conductor cable) insulation with red tape where conductor exits the weatherhead. Conductor tails lengths, 12" min., 18" max.

PEDESTAL SERVICE NOTES
1. Manufacture pedestal electrical services in accordance with Departmental Material Specifications (DMS) 1080 "Electrical Services", 1085 "Electrical Services-Pedestal ITC" and Item 620 "Electrical Services." Provide pedestal electrical services listed on the Material Products List (MPL) on the Department's web site under "Electrical Services-Pedestal." Ensure that all MPL listed items meet the hardware and fabrication details of services meet utility company specifications. Contact the local utility company for approval of pedestal details prior to manufacturing. Make any additional hardware changes required by the utility company prior to manufacturing the pedestal enclosure.
2. When a meter socket is required, provide a socket with a minimum 100 amp rating that complies with local utility requirements.
3. Provide Class A or C concrete for pedestal service foundations in accordance with Item 420, "Concrete Substructures," except that concrete will not be paid for directly but is considered subsidiary to Item 620.
4. Provide #4 reinforcing steel for foundations in accordance with Item 440, "Reinforcement for Concrete."
5. Install (3) 1/2 in. X 13 in. minimum length concrete single expansion type anchors for mounting pedestal enclosure to foundation. Anchor location to match mounting holes in each corner of enclosure. Secure each of the four corners of the pedestal enclosure to foundation with 1/2 in. diameter by 12 in. long galvanized or stainless steel machine thread bolts, a properly sized washer and a flat washer.
6. Finish top of concrete foundation in a neat and workmanlike manner. If leveling washers are used, ensure no more than 1/2 in. gap at any corner. Do not exceed a maximum slope of 1/8 in. in the foundation within 12 in. of any anchor. When properly installed, ensure the top of the service enclosure is level from to back and side to side within 1/2 in. Repair cracking or movement of the service enclosure at no additional cost to the department.
7. Do not use liquidtight flexible metal conduit (LFMC) on pedestal type services.
8. Ensure all elbows in the foundation are sized as per utility provider's conduit requirements for underground conduit and feeders. PVC connections may be restricted provided the ends of the rigid metal conduits are more than 2 in. below the top of the concrete foundation. Where expansion conduits are metal, grounding bushings must be installed with a bonding jumper properly terminated.

ROADWAY ILLUMINATION ASSEMBLY NOTES

1. Details apply to roadway lighting installations bid or referenced under Item 618, "Roadway Illumination Assemblies." Provide, furnish, and install all other materials not shown on the plans which may be necessary for complete and proper construction. Where manufacturers provide warranties or guarantees as a customary trade practice, furnish to the State such warranties or guarantees.

2. The locations of poles and fixtures may be shifted by the Engineer to accommodate local conditions. Install or remove poles and luminaires located near overhead electrical lines using established industry and utility safety practices and in accordance with laws governing such work. Consult with the appropriate utility company prior to beginning such work.

3. Provide new and unused materials. Ensure that all materials and installations comply with the applicable articles of the National Electrical Code (NEC), TxDOT standards and specifications, National Electrical Manufacturers Association (NEMA), and are listed by Underwriters Laboratories (UL) or a Nationally Recognized Testing Lab (NRTL). NRTLs such as Canadian Standard Association, Intertek Testing Services NA Inc., or FM Approvals LLC can be considered equivalent to UL. Faulty fabrication or poor workmanship in any materials, equipment, or installation is justification for rejection.

4. Provide Roadway Illumination Light Fixtures as per TxDOT Departmental Material Specification (DMS) 11010, Item 610, and as shown on the Material Producers List (MPL) for Roadway Illumination and Electrical Supplies.

5. Fabricate steel roadway illumination poles in accordance with Roadway Illumination Poles (RIP) standards and Item 610. Poles fabricated according to RIP standards do not require shop drawing submittals.

   a. Alternate designs to RIP standards or the use of aluminum to fabricate poles will require the submission of shop drawings electronically. For instructions on submitting shop drawings electronically see "Guide to Electronic Shop Drawing Submittal" on the TxDOT web sites.

   b. Limitations on use of the RIP standards: The RIP standard details were developed for installations in locations where the 3-second gust basic maximum wind speed is 110 mph, and where the elevation of the base of the pole is less than 11 ft, not more than 25' above the elevation of the surrounding terrain. In accordance with the "AASHTO Standard Specifications for Structural Supports for Highway Signs, Luminaires and Traffic Signals," 6th Edition (2013) or the AASHTO Design Specifications, for poles to be installed in regions where the maximum basic wind speed exceeds 110 mph or to be mounted more than 25' above the surrounding terrain, provide poles meeting the following requirements:

      I. Submittals. Following the electronic shop drawing submittal process (see Guide to Electronic Shop Drawing Submittal on the TxDOT web sites), submit to the Engineer for approval fabrication drawings and calculations for the poles, sealed by a Texas licensed professional engineer (P.E.).

      II. Luminaire Structural Support Requirements. Provide slip joints, arms, and anchor bolt assemblies with a 25 year design life to safely resist dead loads, ice loads and the required basic wind speeds at the location of installation in accordance with the 6th edition (2013) of the AASHTO Design Specifications. For transformer base poles, provide transformer bases and connecting hardware in accordance with shop drawing submittals. Submit certification of the slip joint fatigue test and the anchor bolt fatigue test for the model of pole being furnished with the shop drawings. Submit certification of the plastic moment load test and FMEA breakaway requirement test of the model of base being furnished with the shop drawings. Show breakaway base model number, manufacturer's name, and logo on shop drawings. Include on manufacturer's shop drawings the ASTM designations for all materials to be used.

6. For both transformer and shoe-base type illumination poles, provide and install double-pole breakaway fuse holders as specified by DMS-11042. Breakaway fuse holders are listed on the MPL for Roadway Illumination and Electrical Supplies under Items 610 & 620. Provide 10 each time delay fuses for breakaway connectors. In light poles, or inside the light fixture for underpass luminaires, in each pole, connect luminaires to the breakaway connector with continuous stranded 12 AWG copper conductors as listed on the MPL. Bond all equipment grounding conductors together and to the ground lug in the transformer base or hand hole.

7. Tighten anchor bolts for shoe base, concrete traffic barrier base, and bridge mount roadway illumination poles, in accordance with Item 449.

8. Install T-Base with following procedures:

   a. Anchor Bolt Tightening.

      I. Coat the threads of the anchor bolts with electrically conductive lubricant.

      II. Place the T-base over the anchor bolts. Foundation must be level and flat. The maximum permissible gap under any one corner of the T-base is 1/8" before nuts are tightened.

      III. Coat the bearing surfaces of the nuts and washers with electrically conductive lubricant. Install (1) 1/2" hard down washer, (1) lock washer, and (1) nut on each anchor bolt. Turn the nuts onto the bolts so that each is hand-tight against the washer.

      IV. Using a torque wrench, tighten each nut to 150 ft-lb. Uniform contact is required between the foundation and the T-base in the corner regions of the T-base, and all corner gaps must be closed after applying torque. If a gap still exists after torquing to 150 ft-lbs, continue torquing each bolt incrementally until gap is closed or maximum allowable torque of 250 ft. pound is reached, whichever comes first. If 250 ft-lbs is not enough to close the gap the foundation must be leveled. Gaps along the straight sides of the T-bases and the foundation are permissible. Ensure that no high point of contact occurs between the straight sides of the T-base and the foundation.

      V. Check top of T-base for level. If not level then foundation must be leveled.

   b. Top Bolt Procedure

      I. Erect pole over T-base with crane. Coat bolts, nuts, washers, and lock washers with electrically conductive lubricant.

      II. Install bolts and 1/2" connecting washers from the inside of the T-base, thread up through the pole base. Install flat washers, lock washers and nuts snug tight according to Item 447, "Structural Bolting."

      III. Tighten each nut to 150 ft-lb, using a torque wrench.

   c. Level and Plumb

      I. Ensure pole is plumb and mast arm is perpendicular to the roadway according to plans to within 5 degrees.

9. Construct luminaire pole foundations in accordance with Item 416, "Drilled Shaft Foundations," and TxDOT standard sheet RID(3).

10. Provide and install underpass luminaires in accordance with Item 610, DMS-11010, and TxDOT standard sheet RID(3). Typical luminaire size for underpass luminaires is 150W HPS or 150W EQ LED.

11. Mount luminaires on arms level as shown by the luminaire level indicator.

12. Orient luminaires perpendicular to the roadway (mounted to be ↕↕ unless otherwise shown on the plans.

Wiring Diagram Notes:

1. Use 1/2 IN.-13 UNC threaded, copper or tin-plated copper, pole bonding connector, sized appropriately for conductors, bonded to T-base, or use ground lug in handhole as available.
2. Use pre-qualified two-pole breakaway connectors for all luminaire pole installations. For luminaires fed by a circuit with a neutral conductor, use double pole breakaway connectors with the neutral side unfused and marked white.
3. Split bolt or other connector.

TYPICAL WIRING DIAGRAM

LUMINAIRES SERVED AT 480V OR 240/480 VOLT SERVICE OR LUMINAIRES SERVED AT 240V FOR 120/240 VOLT SERVICE.

Decorative LED Lighting Notes:

1. LED Drivers in Remote Outdoor enclosures (for drivers that do not include an enclosure as part of a factory assembly):
   a. Provide NEMA 3R outdoor enclosure or as approved.
   b. Install enclosure at least 12" above ground or other horizontal surface. Mount vertically or on ceiling, and avoid direct sun where possible.
   c. Install drivers with at least 2 inches of space from enclosure walls.
   d. For multiple drivers in an enclosure, provide at least 4 inches side to side and 1 inch end to end from other drivers or electronics equipment.
   e. For drivers mounted on back wall of enclosure, mount enclosure on 1 5/8" strut or other standoff to dissipate heat, or mount driver to side of the enclosure or to the metal cover.
   f. Provide remote drivers with a maximum of 100 watts.
   g. Provide drivers with documentation of 100,000 hr lifetime or Tcase of 65C or higher.

Driver Spacing in Remote Enclosure

GENERAL NOTES:

1. All work, materials and services not shown on the plans which may be necessary for complete and proper construction shall be performed, furnished and installed by the Contractor. Faulty fabrication or poor workmanship in any material, part or assembly shall be corrected or replaced by the Contractor. The Contractor shall provide all available warranties or guarantees as a customary trade practice, furnish to the Department such warranties or guarantees.

2. The location of poles and fixtures are diagrammatic only and may be shifted by the Engineer to accommodate local conditions. Install or remove poles and luminaires located near overhead electrical lines using established industry safe practices and in accordance with laws governing such work. Consult with the appropriate utility company prior to beginning such work.

3. Standard Steel Pole Designs. Steel poles fabricated in accordance with the details and dimensions shown herein, shall be considered standard designs. Submission of shop drawings and design calculations for standard designs is not required.

4. Optional Steel Pole Designs. Multi-sided steel poles may be allowed as optional designs, if steel poles are permitted or required, pending approval by the Department as outlined below.

   a. Shop Drawings. Optional designs require submission of shop drawings and design calculations bearing the seal and signature of a Professional Engineer registered in the State of Texas for approval by the Engineer. The Department may elect to pre-approve some shop drawings for optionally designed poles. Submission of shop drawings and design calculations is not required for structures fabricated in accordance with the details of shop drawings on the pre-approved list maintained by the TxDOT Traffic Operations Division. Any deviation from the pre-approved shop drawings will require submission of shop drawings of the complete structure for approval by the Engineer prior to fabrication.
   b. Structural Support Design for Luminaires. Lighting support structures shall be designed for a 25 year design life in accordance with the AASHTO Standard Specifications for Structural Supports for Highway Signs, Luminaires and Traffic Signals, 6th Edition, 2013 with Interim Revisions through 2015. Poles shall be designed for 110 mph 3-second gust wind speeds. The Gust Factor, G_f, and Wind Importance Factor, I_r, shall be applied as per the AASHTO Specifications assuming a 25-year design life. The design wind pressure for hurricane wind velocities greater than 100 mph shall not be less than the design wind pressure using 100 mph with the non-hurricane Wind Importance Factor, I_r, value. For hurricane wind velocities greater than 100 mph, the Wind Importance Factor, I_r, shall be used in the design calculations and shop drawing submittals. All transformer bases shall have been structurally tested to resist the theoretical plastic moment capacity of the pole. Certification of the plastic moment load test and the breakaway design shall be submitted for approval. Base plates furnished shall be matched with the shop drawings. Approved shop drawings shall be stamped "Approved for Fabrication" before fabrication begins.
   c. Manufacturer's shop drawing shall include the ASTM designations for all materials to be used.
   d. Mast arm Attachments. All poles and attachments shall be structurally designed to support two 12-foot mast arms and luminaires. Poles shall be supplied with mast arm combinations as shown in the plans. All mast arms shall be designed for a 50-pound luminaire having an effective projected area of 1.5 square feet.
   e. Anchor Bolt Assembly. Anchor bolt assemblies for optionally designed poles shall be the same as those shown herein.

5. Aluminum Pole Designs. Aluminum pole designs may be allowed, if aluminum poles are permitted or required, pending approval by the Department as outlined below.

   a. Meet all of the requirements stated above for optional steel pole designs and the following:
      1. Aluminum pole designs shall be designed in accordance with the AASHTO Specifications, LTS-5 (2013).
      2. Aluminum pole designs shall use the same anchor bolt assembly and be subject to the same geometric restraints and other requirements for steel poles specified herein.
      3. Aluminum poles shall be equipped with vibration mitigation devices, as approved by the engineer.
      4. Pole components shall be constructed using the following materials:
      Shaft: ASTM B209 Alloy 6061-T6 or ASTM B221 Alloy 6005-T5.
      Base Flanges: ASTM B26 Alloy 356.0-T6 or ASTM B108 Alloy 356.0-T6 if yield strength test required.
      Mast arm Fittings: ASTM B209 Alloy 6061-T6 or ASTM B221 Alloy 6005-T5.
      Mast Arms: ASTM B241 Alloy 6061-T6 or Alloy 6063-T6.
      Hand hole cover: ASTM B26-356.0-T6 or Alloy 5086-H32 or B26 Alloy 356.0-T6.
      Bolts: Stainless Steel 2(5) 300 series. Bolts threading into aluminum threads shall be treated with anti-seize compound, Never-Seez Compound, Permatex 133A or equal.

6. Special Designs. Poles with architectural treatments shall meet the requirements shown elsewhere in the plans.

7. Luminaire Mounting Height. Actual luminaire mounting height shall be the nominal mounting height given on RIP(2) for all pole-arm combinations except for poles with 4 ft. luminaire arms, which shall be 3'-0" lower than the nominal height, unless otherwise shown or directed.

40.00	10.50	4.48	43.00	0.1345	25.1	30.5

GENERAL NOTES:

1. Designs conform to AASHTO Standard Specifications for Structural Supports for Highway Signs, Luminaires, and Traffic Signals, 6th Edition (2013) and Interim Revisions thereto. Design 3-Second Gust Wind Speed supporting documents are based on ASCE 7-10 and a basic wind speed of 3.33 gust factor, adjusted for wind speed to a 25 year recurrence interval. Design moments listed in tables assume base of pole is 25' above natural ground level.
2. Structures are designed to support two 12' luminaire mast arms and luminaires. Mast arms are designed to support a single luminaire having an effective projected area of 1.5 square feet.
3. Fabrication shall be in accordance with the Specifications and with the details, dimensions, and weld procedures shown on the plans. The Fabricator shall submit working drawings of luminaire pole assemblies fabricated in accordance with the details, dimensions, and weld procedures shown on the plans. Working drawings shall include the procedures which the Fabricator must obtain prior to fabrication. Materials, fabrication tolerances, and shipping practices shall meet the requirements of these sheets and the Specifications. In the absence of specified tolerances, the Fabricator shall follow the most rigorous tolerances generally obtainable in normal fabrication practice.
4. For mounting heights between values shown in the tables, use the greater diameter and thickness values for the larger height.
5. Unless otherwise noted, all steel parts shall be galvanized in accordance with Item 445, "Galvanizing."
6. Steel poles shall be fabricated in accordance with Item 441, "Steel Structures." Longitudinal seam welds for pole shafts shall be complete joint penetration (CJP) groove welds and shall be in accordance with AWS D1.1, Structural Welding Code-Steel.
7. Telescoping poles joined by slip-fit expansion sleeves will not be permitted, unless otherwise shown on the plans. Poles may be fabricated in two sections and field-assembled by the Contractor if desired. The two sections shall be telescoped a minimum of 1.5 times, but not more than 1-1/2 times the shaft diameter at the top joint.
8. Alternate material equal to or better than material specified may be substituted with the approval of the Engineer.
9. Lubricate and tighten anchor bolts, when erecting shoe base poles and concrete traffic barrier base poles, in accordance with Item 449, "Anchor Bolts."
10. All poles, except Transformer Base Poles, shall have hand hole openings. For poles mounted on a shoe base or a concrete shoe base poles, hand holes shall be placed 90 degrees to mast arm unless otherwise noted on the plans. For poles mounted on a bridge or retaining wall, or for direct buried poles, hand holes shall be located 180 degrees from luminaire arm. For poles mounted on a concrete traffic barrier with two luminaire arms, all hand holes shall be on the same side of the barrier. For poles mounted on a bridge lighting bracket or retaining wall, all hand holes shall be located on the traffic side of the pole, at a height that will allow clear the barrier.
11. The finished pole shall have a smooth, uniform finish free of pits, blisters, or other defects. Scratched, chipped, and other damaged galvanized areas on poles and mast arms shall be repaired in accordance with Item 445, "Galvanizing."
12. Pole length is based on a 5'-6" luminaire arm-rise. A 7'-6" luminaire arm-rise shall be used for 40' poles. Concrete poles will have an actual mounting height 2'-0" less than the nominal mounting height. Increasing the pole length to meet the nominal mounting height is allowed, but unnecessary unless otherwise directed by the engineer.
13. Erect transformer base poles in accordance with sheet RIG111.

MATERIAL DATA

COMPONENT	ASTM DESIGNATION	MIN. YIELD (ksi)
Pole Shaft- (0.14"/Ft. Taper)	A572 Gr 50, A595 Gr A, A1011 Gr 50 or 55 CL 2 (3), or A1008 HSLAS Gr 50 CL 2	50
Base Plate and Handhole Frame	A572 Gr.50, or A36	36
T-Base Connecting Bolts	F3125 Gr A325	92
Anchor Bolts	F1554 Gr 55, A193-B7 or A321	55 105
Anchor Bolt Templates	A36	36
Heavy Hex (H.H.) Nuts	A194 Gr 2H,or A563 Gr DH	
Flat Washers	F436	

NOTES:

(1) 5'-6" rise for 4 Ft. luminaire arms.

(2) Before oscillized as shown on Concrete Traffic Barrier Base Baseplate details, Sheet 4 of 4.

(3) A1011 SS Gr 50 may be used instead of A572 Gr 50 provided it also meets the elongation requirements for HSLAS.

POLE ASSEMBLY FABRICATION TOLERANCES TABLE

DIMENSION	TOLERANCE
Shaft length	±1"
O.D. of outside piece at slip fitting pieces	+1/8", -1/16"
O.D. of inside piece at slip fitting pieces	+1/32", -1/8"
Shaft diameter; other	+3/16"
Out of "round"	1/4"
Straightness of shaft	±1/4" in 10 Ft
Twist in multi-sided shaft	4° in 10' Ft
Perpendicular to baseplate	1/8" in 24"
Pole centered on baseplate	±1/4"
Location of attachments	±1/4"
Bolt hole spacing	±1/16"

NOTES:
④ Any of the materials listed for plates may be used where the drawings do not specify a particular ASTM designation.
⑤ ASTM must be suitable for forging and also meet the following requirements: Minimum yield point of 35 ksi, and elongation in 2 inches of 22 percent.
⑥ A572, A1008 HSLAS-F, and A1011 HSLAS-F materials may have higher yield strengths but shall not have less elongation than the grade indicated.
⑦ Dimensional limits are given to show acceptable variation in design. Any deviation in a production or a particular length shall have the same dimensions within specified tolerances.
⑧ Each pole simplex fitting shall be supplied complete with all bolts, nuts and washers as specified. The bolts and lock washers shall be secured to the pole with the other hardware items called for in the plans.
⑨ Proposed deviations in arm simplex dimensions or materials must be submitted to the Department for approval.
⑩ A welded handhole frame is permissible. Maximum of two 121 CJP weld splices is allowed.
MATERIALS
Pole or Arm Simplex | ASTM A27 Gr 65-35 or Gr 70-36, A148 Gr 80-50, A576 Gr 1021 ⑤ or A36 (one piece)

TRAFFIC SIGNAL CONTROLLER BASE:

1. Provide a traffic signal control base (cabinet base) manufactured of polymer concrete material consisting of aggregate and resin binder. Provide a base with a minimum thickness of 2 inches. The cabinet base must be reinforced on the inside of the cabinet base with fiberglass matting. Provide one of the following bases: Ameridan Part # 4600184824, Suddle Model # PC30402TBS, or other as approved by TxDOT Traffic Safety Division.
2. The polymer concrete material must have a minimum compressive strength of 10,300 pounds per square inch (psi), minimum flexural strength of 3600 psi, and minimum shear strength of 3600 psi.
3. The polymer concrete cabinet base must conform to the dimensions shown and must accommodate a standard TxDOT basement cabinet.
4. Supply the cabinet base with four 1/2"-13 UNC stainless steel inserts for attachment of the cabinet to the base. Inserts must withstand a minimum torque of 50 ft-lb and a minimum straight pull out strength of 750 lbs.
5. Provide the cabinet base with 4 cable risers mounted one on each side of the base 3" to 5" from the top edge of the base, unless approved otherwise. Cable risers must be 1-1/2 x 9¼in 3¼in/inch steel channel with eight 1-slots spaced at 1-1/2 inches. The cable risers must easily accommodate the insertion of tie wraps to attach field wiring to the risers to serve as strain relief. Secure cable risers to the base using 1/2"-13 UNC stainless steel screws and inserts.
6. The cabinet base, when secured to the concrete slab with controller cabinet attached, must withstand a minimum wind load of 125 mph or a 300 lb force applied at 48" above the bottom of the base without causing the base or cabinet to come out of their anchored position or cause any permanent deformation. The manufacturer must provide a letter of certification stating this requirement, signed by a Licensed Professional Engineer. Provide the cabinet base with hardware for attachment to a concrete slab.
7. The traffic signal base must be permanently marked either by ingress or by permanent ink with the manufacturer's model number and date of mfgr.
8. Seal the base to the concrete with a silicone caulk bead and fastened to the slab per manufacturer's instructions.

CONCRETE SLAB:

9. Traffic signal controller pad must be a portland cement concrete slab poured in place, must conform to the dimensions shown, and must be level.
10. Grade earthwork such that it is flush with the concrete pad on all four sides, unless otherwise shown on the plans. Satisfactory to ITEM 680, four inch rip rap may be used in lieu of earthwork. Slopes shall gradually contour to match grade.
11. Bond a #6 AWG copper ground wire and an 8 ft ground rod bonded to the reinforcing mesh by a suitable UL listed clamp and terminated to the cabinet grounding bus for the purpose of providing a resistance ground for the electrical grounding conductor. The electrical grounding conductor specified in Item 680-2.6.4 is required and must be terminated to the cabinet ground bus.
12. Install a PVC sleeve to prevent the ground rod from direct embedment in the slab.
13. Provide welded wire mesh 6X6-W2.9 X W2.9 for reinforcement. Provide joints and splices in the mesh with a minimum 6-inch overlap. Center the mesh between top and bottom and provide a minimum 3 inch cover on the edges.
14. Provide Class B concrete minimum for the slab in accordance with Item 421. Construct the slab in accordance with Item 531.

CONDUITS:

15. Stub up and run 3-inch conduits through the slab for the various traffic signal poses and ground boxes as shown on the layouts. Install the number of conduits as shown on layouts plus two additional 2 inch conduits for future use. Terminate the conduits with a bushing between 2 and 4 inches above the slab.
16. Extend conduits for future use on least 18 inches from the edge of the slab, terminate underground with a coupling and plug or cap so that the slab can be removed without damaging the conduit. Tie a nylon slide apply to unused telephone conduit.
17. Stub up two separate conduits through the slab from the electrician and telephone services. Run the conduit for the electrician feed directly to the electrician service enclosure. Run the conduit for the telephone line directly to the telephone service, usually located on the same pole as the electrician service. Telephone must not under any circumstance share a conduit with any other function.
18. Terminate electric and telephone conduits above the slab with a coupling. After the base is installed, extend the conduits above the top of the base and secure to the base using a sheet aluminum strap or similar suitable substitute.

CONTROLLER CABINET:

19. Anchor the controller cabinet to the base using four stainless steel 1/2-13 NC bolts.
20. The silicone caulk bead specified in Item 680.3.8 must be RTV 133.

PAYMENT:

21. Bid TS-CF as subsidiary to Item 680.

City Council Meeting

Item Number: 7

Meeting Date: September 9, 2025

To: City Council / City Manager

From: Justine Ruff, Director

Subject: **RESOLUTION AUTHORIZING THE EXECUTION OF A CONTRACT WITH CERRIS BUILDERS, INC., IN THE AMOUNT OF $38,577,000.00 FOR THE TERMINAL MODERNIZATION AND EXPANSION PROJECT AT MIDLAND INTERNATIONAL AIR & SPACE PORT; APPROVING $3,857,700.00 FOR CONTINGENCIES; APPROPRIATING FUNDS; AND AUTHORIZING PAYMENT FOR SAID PROJECT (DISTRICT 4) (AIRPORTS) (TRANSPARENT & CONSISTENT COMMUNICATION)**

Purpose:

Resolution authorizing the execution of a contract with Cerris Builders, Inc. in the amount of $38,577,000.00 for the MAF Terminal Modernization and Expansion Project at Midland International Airport and appropriate the necessary funds for said project.

Recommended City Council Action:

Approve

Fiscal Impact:

City/Airport Fund – Non eligible share		$ 778.124.21
City/Airport Fund - Contingency		$ 3,857,700.00

Construction Improvement Costs		$ 38,577,000.00
Design Existing Checkpoint 3rd Lane Construction Contingency		$ 36,000.00
Airport Furniture, Fixtures and Misc. Equipment (FF&E)		$ 600,000.00
Construction Contingency		$ 3,857,700.00
Recommended Construction Phase Appropriation	**Total**	**$ 47,038,844.00**

Appropriation Language:

That the sum of $4,635,824.21 is hereby appropriated from the Airport Operating Fund (500) Unappropriated Fund Balance and transferred to the Terminal Building Security Checkpoint Project (900449-505).

That the sum of $22,300,898 will be paid by FAA grant funds and is hereby appropriated in the Terminal Building Security Checkpoint Project (900449-505).

That the sum of $20,102,121.79 will be appropriated from the PFC Fund to support long term financing for the Terminal Building Security Checkpoint Project (900449-505).

Strategic Priority:

(Transparent & Consistent Communication)

Discussion:

At the September 10, 2024, Council meeting, a resolution was adopted authorizing a capital funding plan for Airport Improvements. This plan included 18 projects, among which was the Midland International Air & Space Port Terminal Modernization and Expansion Project.

The project was publicly advertised in May 2025, and sealed bids were opened on Wednesday, July 30, 2025, at 2:00 p.m. Cerris Builders Inc. submitted the sole bid for this project.

The scope of work includes expanding the terminal building to accommodate up to six security checkpoint lanes, additional lobby restrooms, a post-security pet relief area, an additional escalator and elevator, and the rehabilitation of an existing elevator. The

project also incorporates energy-efficient upgrades to the terminal's HVAC and lighting systems.

City Manager's Office

RESOLUTION NO._____

RESOLUTION AUTHORIZING THE EXECUTION OF A CONTRACT WITH CERRIS BUILDERS, INC., IN THE AMOUNT OF $38,577,000.00 FOR THE TERMINAL MODERNIZATION AND EXPANSION PROJECT AT MIDLAND INTERNATIONAL AIR & SPACE PORT; APPROVING $3,857,700.00 FOR CONTINGENCIES; APPROPRIATING FUNDS; AND AUTHORIZING PAYMENT FOR SAID PROJECT

WHEREAS, the City approved plans and specifications and authorized the advertisement for bids for the Terminal Modernization and Expansion Project at Midland International Air & Space Port (the "Project"); and

WHEREAS, the City received one (1) responsive bid, with said bid being submitted by Cerris Builders, Inc., for a total cost of $38,577,000.00 for the construction of the Project; and

WHEREAS, the City Council finds the price proposed by Cerris Builders, Inc., for the construction of the Project to be fair and reasonable; and

WHEREAS, the City Council finds it to be in the public interest to award a contract to Cerris Builders, Inc., for the construction of the Project and to appropriate necessary funds; and

WHEREAS, the City Council finds it to be in the public interest to approve $3,857,700.00 for contingencies;

NOW, THEREFORE, BE IT RESOLVED BY THE CITY COUNCIL OF THE CITY OF MIDLAND, TEXAS:

SECTION ONE. That the City Manager, or his designee, and the City Secretary are hereby authorized and directed to execute and attest, respectively, on behalf of the City of Midland, a contract with Cerris Builders, Inc., in the amount of $38,577,000.00 for the construction of the Project. Said contract shall be on file in the office of the City Secretary and referenced by the date and number of this resolution.

SECTION TWO. That the sum of $3,857,700.00 for contingencies is hereby approved.

SECTION THREE. That the following amounts are hereby appropriated and transferred from the following funds to the Terminal Building Security Checkpoint Project (900449-505):

- $4,635,824.21 from the Airport Operating Fund (500) Unappropriated Fund Balance; and
- $20,102,121.79 from the PFC Fund.

Additionally, the sum of $22,300,898.00 in grant funds issued by the Federal Aviation Administration to the City of Midland shall be appropriated to the Terminal Building Security Checkpoint Project (900449-505).

SECTION FOUR. That the City Comptroller is hereby authorized and directed to pay Cerris Builders, Inc., pursuant to the terms of said contract from funds appropriated herein upon receipt of proper invoices or statements approved by the City Manager or his designee.

On motion of Council member _____, seconded by Council member _____, the above and foregoing resolution was adopted by the City Council of the City of Midland at a regular meeting on the _____ day of _____, A.D., 2025, by the following vote:

SECTION 00 31 00 – AVAILABLE PROJECT INFORMATION

PART 1 - GENERAL

1.1 SUMMARY

A. Related Sections:
1. Division 01 Specification Sections apply to Work of this Section.

1.2 INFORMATION

A. Geotechnical Data:
1. An investigation of subsurface soil conditions at the building site was authorized by the Owner, and these investigations were made by:

Terracon
10400 State Hwy 191
Midland, Texas 79707
432.684.9600

2. Entire report is bound at the end of this Section.

B. Property Survey:
1. A survey of the property was authorized by the Owner, and the survey was made by:

Piper Surveying Co., Inc.
Post Office Box 60432
Midland, Texas 79711
432.550.7810

2. Site layout, drawings and boundary traverse and closure information are included in the drawings.
3. Property survey and site improvement layout is available for Contractor's information only and is not a warranty of existing conditions.

1.3 RESPONSIBILITY

A. Bidders are expected to examine the geotechnical data report and site survey information then determine for themselves the validity of the information contained there-in as it relates to this Project.
B. Architect and Owner do not guarantee continuity of conditions indicated at boring locations and assume no responsibility for variations of subsoil quality or conditions.
C. Architect and Owner assume no responsibility for variations of site survey information.

DOCUMENT 00 41 00 - BID FORM

Date: July 30 , 2025

Marcia Bently-German, City Secretary
City of Midland
300 N. Loraine Street
Midland, Texas 79701

Dear Madam:

The undersigned, having carefully examined the specifications, drawings, and related documents entitled:

Terminal Expansion and Modernization
Midland International Air & Space Port
9506 La Force Blvd, Midland, Texas

all as prepared by Parkhill 1700 West Wall Street, Suite 100, Midland, Texas 79701; 432.697.1447, made an on-site inspection of the premises and all other conditions affecting the cost and/or execution of the work, proposes to furnish all materials, labor, and equipment necessary to complete the work in accordance with said documents, of which this bid is a part, for the following sum:

I. BASE BID: THIRTY EIGHT MILLION FIVE HUNDRED SEVENTY SEVEN THOUSAND Dollars ($ 38,577,000.00)

II. ALTERNATE #1 BID: EIGHT THOUSAND SIX HUNDRED

Dollars ($ 8,600.00)

III. ALTERNATE #2 BID: NO BID

Dollars ($ [redacted]0.00)

TOTAL BID INCLUDING BASE AND ALTERNATES: THIRTY EIGHT MILLION FIVE HUNDRED EIGHTY FIVE THOUSAND SIX HUNDRED Dollars ($ 38,585,600.00)

(**Note:** All amounts shall be shown in both written and figure form. In case of discrepancy between the written amount and the figure, the written amount will govern. For alternates, check whether it is an add, deduct, or no change.)

We have included, in the Bid sum, all applicable taxes and all allowances described in Section 01 20 00 "Price and Payment Procedures."

The undersigned acknowledges receipt of 5 addenda to the Drawings and Project Manual as follows:

No. 1 Date 6/11/2025 No. 2 Date 7/1/2025 No. 3 Date 7/7/2025

No. 4 Date 7/8/2025 No. 5 Date 7/28/2025 No. Date

(The Bidder is to fill in I.D. Number and date of each thereby acknowledging receipt of Addenda).

The undersigned acknowledges they have read and met the requirements of paragraph IB-8 in Section 00 80 12.02 "Instructions to Bidders" and have examined the site, and are familiar with all existing conditions.

If awarded the contract, the undersigned agrees to commence work under this contract on or before a date to be specified in Written Notice to Proceed, and to substantially complete the project within ~~420~~ 580 calendar days from said date unless modified by change order. T.W.

Bidder agrees to pay the Owner $1,000.00 per day, as liquidated damages, for each day the substantial completion of this project extends beyond the stipulated substantial completion date.

If notified of the acceptance of this bid within ninety (90) days of the time set for the opening of bids, bidder agrees within 10 days of notification, to execute a contract in the form of the City of Midland Contract included in Section 00 80 10 "Owner-Provided Contracting Documents" for the above work, for the above stated compensation.

BID SECURITY, as defined in the Request For Bids and Instructions to Bidders, which the Undersigned agrees to disposition of, is attached to this Bid.

Upon acceptance of this Bid by Owner, Contractor shall furnish, at the time of the signing of the contract, a PERFORMANCE BOND AND LABOR/MATERIAL PAYMENT BOND, in the amount of 100 percent of the Contract Price. Surety shall meet requirements specified in the Owner/Contractor Agreement.

It is understood that the Owner reserves the right to accept or reject any and all Bids and to waive all formalities in accordance with State law.

Means, normals and averages are based on records covering a period of 4 years from 2020-2024.

SECTION 00 73 43 – WAGE RATE REQUIREMENTS

PART 1 - GENERAL

1.1 WAGE RATE ESTABLISHMENT

A. Pursuant to Chapter 2258, Texas Government Code, all contractors and any subcontractor involved in the construction of a public work project shall pay not less than the prevailing rates as per diem wages in the locality at the time of construction to all laborers, workmen and mechanics employed by them in the execution of this contract.
B. The contractor shall forfeit as a penalty to the Owner, $60.00 for each laborer, workman, or mechanic employed for each calendar day, or portion thereof, such laborer, workman, or mechanic is paid less than the said stipulated rates for any work done under this contract by him, or by any subcontractor under him.
C. Nothing herein contained, however, shall be construed to prohibit the payment of more than the prevailing rate of wages to any laborer, workman, or mechanic employed on the work.
D. Attention is called to the fact that there must be paid on this project not less than the general prevailing rates which have been established by the Owner and verified by the Contractor as indicated in the Schedule at the end of this document.
E. The General Prevailing Rate for overtime shall be 1-1/2 times the scheduled rate on an hourly basis.

1.2 POSTING WAGE RATES

A. Minimum Wage Rates shall be posted on job site in a conspicuous place open for inspection by all workmen.

1.3 EMPLOYEE CLAIMS

A. Any employee who alleges that he has not been paid the minimum wage rate may file a written claim with the Owner.

1.4 PAYMENT OF EMPLOYEES AND PAYROLL RECORDS

A. The Contractor and each subcontractor shall pay each of his employees engaged to perform work under this contract in full (less mandatory legal deductions) not less than once a week.
B. Payment is to be in cash or check readily payable without discount. If payment is by cash, obtain the signature of the employee verifying the payroll period, total hours worked, rate per hour, total wages earned and the date received.
C. Attach one copy of cash payment verification to payroll records.
D. The Contractor and each subcontractor engaged at the site of the work shall prepare and maintain weekly payroll reports certified to be correct.
E. Payroll records shall contain the name, social security number, classification, rate per hour, hours worked each day, including regular hours and overtime hours.

1.5 PAYROLL RECORDS

A. Payroll records shall be made available upon request for inspection by the Architect or by a designated representative of the Owner to ascertain compliance with the minimum wage scale provision of this contract.

1.6 WAGE RATE SCHEDULE

A. See attached General Decision TX20250261 dated March 14, 2025, issued by the Federal Government and any revisions/updates issued for Midland County.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION

"General Decision Number: TX20250261 03/14/2025

Superseded General Decision Number: TX20240261

State: Texas

Construction Type: Building

County: Midland County in Texas.

BUILDING CONSTRUCTION PROJECTS (does not include single family homes or apartments up to and including 4 stories).

Note: Contracts subject to the Davis-Bacon Act are generally required to pay at least the applicable minimum wage rate required under Executive Order 14026 or Executive Order 13658. Please note that these Executive Orders apply to covered contracts entered into by the federal government that are subject to the Davis-Bacon Act itself, but do not apply to contracts subject only to the Davis-Bacon Related Acts, including those set forth at 29 CFR 5.1(a)(1).

If the contract is entered into on or after January 30, 2022, or the contract is renewed or extended (e.g., an option is exercised) on or after January 30, 2022:	. Executive Order 14026 generally applies to the contract. . The contractor must pay all covered workers at least $17.75 per hour (or the applicable wage rate listed on this wage determination, if it is higher) for all hours spent performing on the contract in 2025.
If the contract was awarded on or between January 1, 2015 and January 29, 2022, and the contract is not renewed or extended on or after January 30, 2022:	. Executive Order 13658 generally applies to the contract. . The contractor must pay all covered workers at least $13.30 per hour (or the applicable wage rate listed on this wage determination, if it is higher) for all hours spent performing on that contract in 2025.

The applicable Executive Order minimum wage rate will be adjusted annually. If this contract is covered by one of the Executive Orders and a classification considered necessary for performance of work on the contract does not appear on this wage determination, the contractor must still submit a conformance request.

Additional information on contractor requirements and worker protections under the Executive Orders is available at http://www.dol.gov/whd/govcontracts.

WELDERS - Receive rate prescribed for craft performing operation to which welding is incidental.

==========

** Workers in this classification may be entitled to a higher minimum wage under Executive Order 14026 ($17.75) or 13658 ($13.30). Please see the Note at the top of the wage determination for more information. Please also note that the minimum wage requirements of Executive Order 14026 are not currently being enforced as to any contract or subcontract to which the states of Texas, Louisiana, or Mississippi, including their agencies, are a party.

Note: Executive Order (EO) 13706, Establishing Paid Sick Leave for Federal Contractors applies to all contracts subject to the Davis-Bacon Act for which the contract is awarded (and any solicitation was issued) on or after January 1, 2017. If this contract is covered by the EO, the contractor must provide employees with 1 hour of paid sick leave for every 30 hours they work, up to 56 hours of paid sick leave each year. Employees must be permitted to use paid sick leave for their own illness, injury or other health-related needs, including preventive care; to assist a family member (or person who is like family to the employee) who is ill, injured, or has other health-related needs, including preventive care; or for reasons resulting from, or to assist a family member (or person who is like family to the employee) who is a victim of, domestic violence, sexual assault, or stalking. Additional information on contractor requirements and worker protections under the EO is available at https://www.dol.gov/agencies/whd/government-contracts.

Unlisted classifications needed for work not included within the scope of the classifications listed may be added after award only as provided in the labor standards contract clauses (29CFR 5.5 (a) (1) (iii)).

The body of each wage determination lists the classifications and wage rates that have been found to be prevailing for the type(s) of construction and geographic area covered by the wage determination. The classifications are listed in alphabetical order under rate identifiers indicating whether the particular rate is a union rate (current union negotiated rate), a survey rate, a weighted union average rate, a state adopted rate, or a supplemental classification rate.

Union Rate Identifiers

A four-letter identifier beginning with characters other than ""SU"", ""UAVG"", ?SA?, or ?SC? denotes that a union rate was prevailing for that classification in the survey. Example: PLUM0198-005 07/01/2024. PLUM is an identifier of the union whose collectively bargained rate prevailed in the survey for this classification, which in this example would be Plumbers. 0198 indicates the local union number or district council number where applicable, i.e., Plumbers Local 0198. The next number, 005 in the example, is an internal number used in processing the wage determination. The date, 07/01/2024 in the example, is the effective date of the most current negotiated rate.

Union prevailing wage rates are updated to reflect all changes over time that are reported to WHD in the rates in the collective bargaining agreement (CBA) governing the classification.

Union Average Rate Identifiers

The UAVG identifier indicates that no single rate prevailed for those classifications, but that 100% of the data reported for the classifications reflected union rates. EXAMPLE:

UAVG-OH-0010 01/01/2024. UAVG indicates that the rate is a weighted union average rate. OH indicates the State of Ohio. The next number, 0010 in the example, is an internal number used in producing the wage determination. The date, 01/01/2024 in the example, indicates the date the wage determination was updated to reflect the most current union average rate.

A UAVG rate will be updated once a year, usually in January, to reflect a weighted average of the current rates in the collective bargaining agreements on which the rate is based.

Survey Rate Identifiers

The ""SU"" identifier indicates that either a single non-union rate prevailed (as defined in 29 CFR 1.2) for this classification in the survey or that the rate was derived by computing a weighted average rate based on all the rates reported in the survey for that classification. As a weighted average rate includes all rates reported in the survey, it may include both union and non-union rates. Example: SUFL2022-007 6/27/2024. SU indicates the rate is a single non-union prevailing rate or a weighted average of survey data for that classification. FL indicates the State of Florida. 2022 is the year of the survey on which these classifications and rates are based. The next number, 007 in the example, is an internal number used in producing the wage determination. The date, 6/27/2024 in the example, indicates the survey completion date for the classifications and rates under that identifier.

?SU? wage rates typically remain in effect until a new survey is conducted. However, the Wage and Hour Division (WHD) has the discretion to update such rates under 29 CFR 1.6(c)(1).

State Adopted Rate Identifiers

The ""SA"" identifier indicates that the classifications and prevailing wage rates set by a state (or local) government were adopted under 29 C.F.R 1.3(g)-(h). Example: SAME2023-007 01/03/2024. SA reflects that the rates are state adopted. ME refers to the State of Maine. 2023 is the year during which the state completed the survey on which the listed classifications and rates are based. The next number, 007 in the example, is an internal number used in producing the wage determination. The date, 01/03/2024 in the example, reflects the date on which the classifications and rates under the ?SA? identifier took effect under state law in the state from which the rates were adopted.

WAGE DETERMINATION APPEALS PROCESS

1) Has there been an initial decision in the matter? This can be:

a) a survey underlying a wage determination
b) an existing published wage determination
c) an initial WHD letter setting forth a position on a wage determination matter
d) an initial conformance (additional classification and rate) determination

On survey related matters, initial contact, including requests for summaries of surveys, should be directed to the WHD Branch of Wage Surveys. Requests can be submitted via email to davisbaconinfo@dol.gov or by mail to:

Branch of Wage Surveys
Wage and Hour Division
U.S. Department of Labor
200 Constitution Avenue, N.W.
Washington, DC 20210

Regarding any other wage determination matter such as conformance decisions, requests for initial decisions should be directed to the WHD Branch of Construction Wage Determinations. Requests can be submitted via email to BCWD-Office@dol.gov or by mail to:

Branch of Construction Wage Determinations
Wage and Hour Division
U.S. Department of Labor
200 Constitution Avenue, N.W.
Washington, DC 20210

2) If an initial decision has been issued, then any interested party (those affected by the action) that disagrees with the decision can request review and reconsideration from the Wage and Hour Administrator (See 29 CFR Part 1.8 and 29 CFR Part 7). Requests for review and reconsideration can be submitted via email to dba.reconsideration@dol.gov or by mail to:

Wage and Hour Administrator
U.S. Department of Labor
200 Constitution Avenue, N.W.
Washington, DC 20210

The request should be accompanied by a full statement of the interested party's position and any information (wage payment data, project description, area practice material, etc.) that the requestor considers relevant to the issue.

3) If the decision of the Administrator is not favorable, an interested party may appeal directly to the Administrative Review Board (formerly the Wage Appeals Board). Write to:

Administrative Review Board
U.S. Department of Labor
200 Constitution Avenue, N.W.
Washington, DC 20210.

END OF GENERAL DECISION"

SECTION 00 80 10 - OWNER-PROVIDED CONTRACTING DOCUMENTS

Section Includes:
Advertisement for Bids
Instructions to Bidders
City of Midland – Message to Vendors
Exhibit C - Bonding Requirements
Bid Bond
Payment Bond
Performance Bond
Exhibit D – Building Wage Rates
Conflict of Interest Reporting Requirements
Conflict of Interest Questionnaire
Consideration of Location of Bidder's Principal Place of Business Affidavit of Eligibility
Notice to Bidders
General Conditions of Bidding
Standard Purchase Terms
City of Midland Contract
Non-Collusion Statement

ADVERTISEMENT FOR BIDS
NOTICE TO BIDDERS

Sealed proposals addressed to the City Secretary will be received at the office of the City Secretary, City Hall, Midland, Texas until **2:00 pm, Wednesday, June 25, 2025**, for furnishing all necessary materials, machinery, equipment, superintendence, and labor for constructing certain improvements at Midland International Air & Space Port, Midland, Texas. These improvements are contained in Plans and Specifications entitled, "Midland International Air & Space Port, Terminal Expansion and Modernization," dated May 23, 2025.

Immediately following the closing time for receipt of Bids/Proposals will be publicly opened and read aloud. Any Bid received after closing time will be returned unopened.

Principal items of Work are set forth in specific detail in the Proposal Section of these Specifications; however, Work items may be generally described as expansion of Terminal Building for new passenger checkpoint and modernization of existing Terminal Building.

Work will also include other miscellaneous materials, equipment, machinery, superintendence, and labor for constructing these improvements for the Midland International Air & Space Port, Midland, Texas.

A Bid Proposal guaranty is to accompany the Bid, thereby guaranteeing the good faith of the Bidder and that Bidder will enter into the written contract. The guaranty is to amount to 5 percent of the total bid and must be in the form of cash or certified check, issued by a bank satisfactory to the City of Midland, or a bid bond.

Bidders are expected to inspect site of work and inform themselves regarding all local conditions.

In all areas of employment, women will be afforded equal opportunity for employment. Employment of women shall not diminish the standards or requirements for employment of minorities.

This project is subject to Minority Business Enterprise Contract Provisions, Foreign Trade Restrictions, Federal Debarment and Suspension, Drug-free Workplace, and other requirements stated in the Instructions to Bidders and other sections of project specifications and contract documents.

Policy. It is the policy of the Department of Transportation (DOT) that disadvantaged business enterprises as defined in 49 CFR Part 26 shall have maximum opportunity to participate in performance of contracts financed in whole or in part with Federal funds.

Buy American Provision. Proposed contract is subject to the Buy American Provision under Section 9129 of the Aviation Safety and Capacity Expansion Act of 1990. Details of such requirement are contained in Specifications.

MAF treats Bidder/Offer compliance with good faith effort requirements as a matter of responsiveness.

Requirements of 49 CFR Part 26, Regulations of the U.S. Department of Transportation, apply to this contract. It is the policy of MAF to practice nondiscrimination based on race, color, sex, or national origin in award or performance of this contract. All firms qualifying under this solicitation are encouraged to submit Bids/Proposals. Award of this contract will be conditioned upon satisfying requirements of this bid specification. These requirements apply to all Bidders/Offerors, including those who qualify as a DBE. DBE contract goal of 2.93 percent has been established for this contract. Bidder/Offeror shall make good faith efforts, as defined in Appendix A, 49 CFR Part 26, to meet contract goal for DBE participation in performance of this contract.

Successful Bidder/Offeror will be required to submit the following information: (1) names and addresses of DBE firms that will participate in contract; (2) description of work each DBE firm will perform; (3) dollar amount of participation of each DBE firm participating; (4) written documentation of bidder/offeror's commitment to use a DBE subcontractor whose participation submits to meet contract goal; (5) written confirmation from the DBE of participation in contract as provided in commitment made under (4); and (6) if contract goal is not met, evidence of good faith efforts. Successful Bidder or Offeror must provide written confirmation of participation from each DBE firm the Bidder or Offeror lists in their commitment. This Bidder/Offeror must submit DBE written confirmation of participation within five days of receiving Owner notice to successful Bidder.

Information for Bidders, Proposal forms, Specifications, and Plans are on file in the office of the Director of Airports, Midland International Air & Space Port.

Downloaded documents (PDF file extension format) can be obtained from the Parkhill Info Exchange website after registering as a plan holder with Parkhill via https://parkhill.com/projects-for-bid/ or by contacting Elizabeth Hollenbeck, Project Coordinator, at ehollenbeck@parkhill.com. No cost or deposit required for downloaded documents.

CITY OF MIDLAND, TEXAS
Marcia Bentley-German
City Secretary

INSTRUCTIONS TO BIDDERS

IB-1. BID FORMS

Bid shall be submitted on Proposal form in the bound Specifications.

In addition to the completed Proposals, bid forms shall include Bid Security, Financial Statement, and other specified documents. Failure to submit a complete Bid as specified will be considered as sufficient cause for rejection of the Bid.

IB-2. PREPARATION OF PROPOSALS

All blanks in the forms shall be filled in and all required information shall be included with Proposals. Bid prices shall be written in ink. Receipt of all addenda issued shall be acknowledged in the space provided on the addendum. Each addendum received and the Bid Security shall be enclosed with Proposal. Proposal and accompanying documents shall be enclosed in a sealed envelope, addressed to the City Secretary, 300 N. Loraine, Midland, Texas 79701, marked "Terminal Expansion and Modernization" with name and address of Bidder also shown thereon. **If Sealed Bid is sent in a mailing envelope, outside of mailing envelope must also have same marking visible.**

IB-3. EXPERIENCE RECORD AND FINANCIAL STATEMENT

Experience Record included herein, shall be filled in, showing completed jobs, of a similar nature to the one covered by Proposal, and work in progress with contract and bond amounts and percent complete.

A sworn statement of the current financial condition of Bidder shall also be enclosed with Proposal, to provide Owner with information relative to the responsibility of bidders and their ability to finance and construct the work. This statement shall be enclosed with Proposal in a separate envelope and will be returned to Bidder upon return of his bid security.

TxDOT prequalification can be submitted in lieu of a financial statement with bids; however, financial information may be required of the apparent low Bidder.

IB-4. BID SECURITY

Each proposal must be accompanied by a Bid Bond, Certified Check, or cash in the amount of not less than 5 percent of the maximum bid submitted, payable without recourse to the City of Midland, Texas. If a Bid Bond is submitted as Bid Security, it shall be executed by an approved surety company authorized to do business in the State of Texas and accepted according to the latest list of companies holding certificates of authority from the Secretary of the Treasury of the United States of America. Such Bid Security shall be so conditioned if Bidder is awarded Contract and unable or fails to furnish performance and payment bonds and execute Contract within 10 days after date of award, Security shall revert to Owner as compensation for damages which Owner suffers because of such failure by Bidder.

IB-5. PERFORMANCE AND PAYMENT BONDS

With execution and delivery of the Contract Documents, Contractor shall furnish, on the forms provided herein, bonds, as required by the General Conditions, of 100 percent of the total contract price, executed by an approved surety company authorized to do business in the State of Texas, and accepted according to the latest list of companies holding certificates of authority from the Secretary of the Treasury of the United States of America. Performance and Payment Bonds submitted shall be in compliance with Chapter 2253 of the Texas Government Code.

IB-6. INTERPRETATION OF BIDS

No bid will be considered which fails to supply all information indicated, or which has any limitation or provisions placed upon it by Bidder. In case of a difference between the written words and the figures in Proposal, amount stated in written words will be considered as bid price, without recourse on the part of Contractor. In case of ambiguity or lack of clearness in Proposal, Owner will adopt the most advantageous construction thereof or reject the bid. Owner reserves the right to accept or reject any or all bids, if it is deemed to be in the best interest of the public. Further, Owner reserves the right to reject any bids because of irregularity or to waive such irregularity if such action is in the public interest.

IB-7. DISPOSITION OF BIDS

Owner expects to make award of the contracts as soon as possible after the opening of bids, but specifically reserves the right to hold all Proposals for a period not to exceed 90 days, before making an award. No Proposal, having been opened, may be withdrawn prior to expiration of this 90-day period. Bid security of all but the successful Bidder will be returned upon making an award.

Contract will be awarded to the responsible bidder submitting the lowest bid complying with the conditions of the Advertisement for Bidders and the Instructions to Bidders.

IB-8. EXAMINATION OF SITE, PLANS, AND SPECIFICATIONS

Prior to submission of a Proposal, each Bidder shall have made a thorough examination of the site of work and of the plans and specifications, and shall become informed as to the location and nature of the proposed construction, labor conditions and all other matters that may affect the cost and time of completion of the work upon which he bids. Bidders shall make such investigations of the nature of the project as they deem necessary and shall assume all responsibility for fully informing themselves of the character of materials which will be encountered. Submission of a Proposal shall be prima facie evidence that Bidder has made such an examination. Contact Steve Hirst, Airport Facilities Manager (432.560.2200), to schedule a site examination visit.

IB-9. PREBID CONFERENCE

A prebid conference will be held at **10:00 am, Wednesday, June 4, 2025**, in the Conference Room at Midland International Air & Space Port. At this time, all interested bidders will be requested to appear and present any questions they may have pertaining to this project. All bidders are urged to attend prebid conference because they will be charged with notice of the matters discussed therein. Attendance to the prebid conference is not mandatory.

IB-10. INTERPRETATION OF SPECIFICATIONS PRIOR TO BIDDING

Any questions arising during the advertising period as to the meaning or intent of the specifications will be answered by an addendum which will be sent to all who have placed a deposit and/or furnished plans and Contract documents issued by Parkhill. Engineer shall receive requests for clarifications to specifications and plans at least seven (7) days prior to the date for receipt of bids.

Receipt of each addendum shall be acknowledged by Bidder in the space provided and each addendum shall be enclosed with Proposal when it is submitted. All addenda shall become a part of these contract documents.

IB-11. AVAILABILITY OF PLANS

All parties with an interest in the type of work included in the project covered by these documents, shall be given a reasonable opportunity to examine the documents and prepare a bid or sub-bid. Documents may be examined without charge as noted in the Notice to Bidders.

Downloadable documents (PDF file extension format) can be obtained from the Parkhill Info Exchange website after registering as a plan holder with Parkhill via https://parkhill.com/projects-for-bid/ or through Elizabeth Hollenbeck, Project Coordinator, at ehollenbeck@parkhill.com. No cost or deposit required for downloaded documents.

IB-12. PLANT LOCATION AND STORAGE AREA

Contractors bidding on the work included in this contract who desire to locate a material storage area or other similar facility on the airport property may secure such site, buildings or areas by direct negotiation with the Director of Airports, Midland International Air & Space Port, Midland, Texas. An area located adjacent to the project area will be identified as available for use by Contractor for staging and material storage.

IB-13. WITHDRAWAL OF PROPOSALS

Any Bidder, upon his or his authorized representative's written request, will be given permission to withdraw his Proposal not later than the time set for opening thereof. At the time of opening of Proposals, when such Proposal is reached, it will be returned to him unread.

IB-14. DISQUALIFICATION OF BIDDERS

Any one or more of the following causes may be considered as sufficient for the disqualification of bidder and the rejection of his bid or bids:

More than one Proposal for the same work from an individual firm, partnership, or corporation under the same or different name.

Evidence of collusion among bidders. Participants in such collusion may not receive recognition as Bidders for any future work.

Unbalanced Proposals in which the prices for some items are out of proportion to the prices for other items.

Failure to submit a unit price for each item of work for which a bid price is required by Proposal.

Lack of competency as revealed by the financial statement submitted.

Lack of responsibility as shown by past work judged from the standpoint of workmanship and progress.

Uncompleted work which, in the judgment of Owner, might hinder or prevent the prompt completion of additional work if awarded.

For being in arrears on existing contracts, in litigation with Owner, or having defaulted on a previous contract.

IB-15. MATERIAL GUARANTY

Before any contract is awarded, Bidder may be required to furnish a complete statement of origin, composition, or manufacture of any or all materials proposed to be used in the construction of the work, together with samples, which may be subjected to the tests provided for in these Specifications to determine their quality and fitness for the work.

IB-16. DISADVANTAGED BUSINESS ENTERPRISE CONTRACT PROVISIONS

It is the policy of the Department of Transportation (DOT) that disadvantaged business enterprises as defined in 49 CFR Part 26 shall have the maximum opportunity to participate in the performance of contracts financed in whole or in part with Federal funds under this agreement. Consequently, Bidder will be required to conform to the DBE requirements of 49 CFR Part 26.

IB-17. WAIVER

BY SUBMITTING A BID, EACH BIDDER AGREES TO AND DOES HEREBY WAIVE ANY CLAIM BIDDER HAS OR MAY HAVE AGAINST THE CITY OF MIDLAND, TEXAS, AND THE CITY'S EMPLOYEES, AGENTS, AND OFFICERS ARISING OUT OF OR IN ANY WAY CONNECTED WITH THE FOLLOWING:

1. ADMINISTRATION, EVALUATION, OR RECOMMENDATION OF ANY BID;
2. WAIVER OR DELETION OF ANY REQUIREMENT UNDER BID DOCUMENTS OR CONTRACT DOCUMENTS;
3. ACCEPTANCE OR REJECTION OF ANY BIDS; AND
4. AWARD OF CONTRACT

BY SUBMITTING A BID, BIDDER ACKNOWLEDGES THAT BIDDER UNDERSTANDS ALL TERMS OF BIDDING DOCUMENTS AND CONSENTS TO BIDDING PROCESS AND THE POSSIBILITY OF A NEGATIVE ASSESSMENT. BY SUBMITTING A BID, BIDDER ACKNOWLEDGES AND AGREES THAT THERE WAS AND IS NO DISPARITY OF BARGAINING POWER BETWEEN BIDDER AND THE CITY OF MIDLAND, TEXAS.

BIDDER AGREES THIS IS THE INTENTIONAL RELINQUISHMENT OF THE LISTED PRESENTLY EXISTING KNOWN RIGHTS.

A Message for Our Vendors

The City of Midland, Texas has developed a strategic plan with long-term objectives, new mission and vision statements, and a course of action to carry out goals established by and for our community. This includes strategic priorities that will address our economy, infrastructure, quality of life, standards for a safe and secure city, plus much more that's detailed below. We hope you join us on this exciting journey and to be part of the energy toward a successful and prosperous Midland!

Vision Statement

The City of Midland will be the premier and safest city in West Texas by providing world-class municipal services through operational excellence and a culture of innovation.

Mission Statement

Deliver exceptional services and promote a high quality of life and place for ALL our citizens.

Guiding Principles: I-FORCE

Integrity
Financial Stewardship
Outstanding Service
Respect
Collaboration
Excellence

City Council Key Focus Areas

Communication • Customer Service
Economic Development
Fiscal Responsibility & Accountability
High-Performing City Team • Legislation
Quality of Place • Technology Improvements

Core Values

Commitment: Duty to the public good.
Engagement: Foster partnerships and collaboration.
Excellence: Practice continuous improvement.
Innovation: Embrace creativity and cutting-edge solutions.
Integrity: Operate with transparency and accountability.
Inclusivity: Ensure all voices are heard and valued.

Vendor & Contractor Communication

In order to ensure smooth coordination and effective communication between contractors and the City of Midland**, it is imperative that contractors provide adequate advance notice before commencing work on specific projects**. The city requires ten (10) days' notice on commencement of project. This advance notice requirement serves to notify all relevant city departments, ensuring proper preparation and coordination of resources. Additionally, it facilitates timely dissemination of information to the public, if necessary, thereby minimizing potential disruptions and maximizing transparency throughout the project lifecycle. **By adhering to this protocol, contractors demonstrate their commitment to fostering productive partnerships with the City of Midland and upholding standards of efficient project management and community engagement. This commitment is a part of our strategic plan, with direct ties to Goal 4: Transparent and Consistent Communication and Strategies 4.4 and 4.5.**

Strategic Plan

1. Strong Economy with More Quality Jobs

1.1 Increase the Midland Sales Tax Base: Develop strategies to expand the tax base by attracting businesses and supporting local commerce.
1.2 Enhance Visitor Revenue Opportunities: Boost tourism through marketing and infrastructure improvements.
1.3 Continue Downtown and West Midland Redevelopment: Promote revitalization efforts for a vibrant downtown.
1.4 Nurture Development Districts: Establish key action plans honed to enhance Development Districts.
1.5 Grow the Core Business of Air Transportation: Develop and transform the Midland airport system.
1.6 Diversify Midland's Economy: Support initiatives that diversify the local economy and enhance resilience.
1.7 Expand Opportunities and Programming for General and Small Business: Foster the growth, retention, and expansion of local small businesses as well as business in general.
1.8 Improve Speed to Market for Citizens, Builders, Developers, and Contractors: Reduce wait times for permit review/approval and inspection process of permitted work.
1.9 Establish Our Community as a Premier Destination for Retail and Entertainment: Offer unique and compelling experiences that draw visitors, ultimately driving economic growth and community vibrancy, while increasing tourism and business development.

2. Set the Standard for a safe and secure City

2.1 Enhance public safety programs.
2.2 Improve Pedestrian and Motorist Safety: Invest in traffic management and infrastructure.
2.3 Implement Effective Code Enforcement Strategies: Address nuisances to improve overall health and safety.
2.4 Revitalize Neighborhoods: Utilize best practices to support the redevelopment of neighborhoods.
2.5 Enhance Animal Services: Ensure the welfare of pets and wildlife in the city.
2.6 Grow and Retain Public Safety Resources: Expand law enforcement presence as well as fire reduction and prevention programs while reducing attrition.

3. Quality of Life and Place

3.1 Enhance Community Engagement: Champion innovative recreational, educational, and cultural programs that enrich residents' lives in partnership with the business community.
3.2 Foster Relationships with Foundations and Outside Businesses: Collaborate to create world-class facilities and amenities.
3.3 Create an Attractive and Inclusive Living Environment: Develop and enhance live, work, and play opportunities for our citizens.
3.4 Establish Beautification Programs: Implement initiatives to make the community clean and bright.
3.5 Nurture and Promote a Healthy Community: Increase healthy community living and education opportunities for citizens of all ages.
3.6 Build the Best Parks System in Our Region: Offer diverse, accessible, and enjoyable green spaces, tournament-ready ball fields, safe playgrounds, and unique recreational opportunities that enhance the quality of life/quality of place for our community.

4. Transparent and Consistent Communication

4.1 Set a Climate of Respect, Collaboration, and Team Spirit: Cultivate a culture of openness and respect.
4.2 Enhance Communication Efficiency and Effectiveness: Leverage and expand the use of technology to facilitate the exchange of information.
4.3 Elevate Internal Communication and Employee Engagement: Strengthen information flow and collaboration among city staff.
4.4 Advance Two-Way Communication of Key Messages: Engage effectively with external stakeholders; foster community engagement.
4.5 Strengthen Messaging Opportunities Through Various Media Outlets: Communicate the city's achievements and initiatives.

5. Provide Sound Governance and Fiscal Management

5.1 Recruit and Retain a Skilled and Diverse Workforce: Invest in talent and diversity; grow our local pipeline of skilled employees.
5.2 Enhance Citizen Experience: Improve employee working conditions to better serve citizens.
5.3 Hone Public Servant Proficiency: Cultivate a culture of professional growth, skilled mastery, and information exchange.
5.4 Implement Cutting-Edge Practices: Harness automation and Artificial Intelligence technology for efficient resource utilization.
5.5 Promote a Well-Balanced Customer Service Philosophy: Consistently deliver excellent service to residents.
5.6 Deliver Services Timely and Efficiently: Prioritize continuous improvement.
5.7 Ensure Continued Financial Stability and Accountability: Maintain financial transparency.
5.8 Deliver Effective and Efficient Processes: Maximize value in procurement.
5.9 Ensure Reliability and Safety: Maintain existing assets and develop new city asset opportunities, including parks

and other facilities, with a standard of excellence.

5.10 Create a Work Environment that Supports Bleeding-Edge Practices: Encourage bleeding-edge practice that then cultivates an environment where employees can learn from their experiences and improve processes; thus, becoming a learning organization.

6. Strengthen and Sustain Our Infrastructure

6.1 Provide Reliable and Sustainable Utilities: Guarantee water supply and distribution systems security and longevity.

6.2 Enhance Infrastructure for Economic Growth: Improve competitiveness through infrastructure investments that includes collaboration with neighboring jurisdictions and exemplary peer agencies.

6.3 Streamline and Consolidate City Facilities: Create synergy for improved services.

6.4Standardize Infrastructure Processes Across the City: Ensure consistency, timeliness, and accountability in infrastructure development.

6.5 Implement a Funding Stream for Infrastructure: Establish reliable funding for continual improvements.

6.6 Strategize for and Monitor City Growth: Develop proactive responses to growth rather than reactive.

6.7 Develop and Implement Comprehensive Road Planning and Maintenance Initiatives: Ensure safe and maintained roads for existing and new developing areas and main thoroughfares.

EXHIBIT C

Bonding Requirements

The successful bidder shall be required to furnish a Performance & Payment Bond* for bids in excess of $50,000.00, in an amount equal to one hundred percent (100%) of the total contract price, such bond to be executed by a Corporate Surety authorized to do business in the State of Texas and acceptable to the City of Midland. **All bonds must be executed on forms contained in these contract documents**. The form of agreement which the successful bidder, as contractor, will be required to execute is also included herewith. The form of agreement and the form of the bonds should be carefully examined by the bidder.

A certified check, cashier's check, bank money order, or irrevocable letter of credit issued by a bank satisfactory to the City, **or a bidder's bond on the form provided**, in the amount of five percent (5%) of the largest possible lump sum bid submitted, payable without recourse to the City, must accompany the bidder's proposal, as a guaranty that the bidder will enter a contract and execute the required payment bond and guaranty in the forms provided within fifteen (15) days after notice of award of contract to him. Bids or proposals without the required bid guaranty will not be considered. All bid sureties and payment bonds shall name the City of Midland as Obligee.

*A cash security such as a cashier's check or irrevocable letter of credit issued by a bank satisfactory to the City for 100 % of the contract amount may be supplied in lieu of the Performance and Payment Bonds. The check will be returned un-cashed upon satisfactory completion of the work and evidence of payment of all obligations due for the contract.

CERTIFICATION

Resolutions adopted by the Boards of Directors of FEDERAL INSURANCE COMPANY, VIGILANT INSURANCE COMPANY, and PACIFIC INDEMNITY COMPANY on August 30, 2016; WESTCHESTER FIRE INSURANCE COMPANY on December 11, 2006; and ACE AMERICAN INSURANCE COMPANY on March 20, 2009:

"RESOLVED, that the following authorizations relate to the execution, for and on behalf of the Company, of bonds, undertakings, recognizances, contracts and other written commitments of the Company entered into in the ordinary course of business (each a "Written Commitment"):

(1) Each of the Chairman, the President and the Vice Presidents of the Company is hereby authorized to execute any Written Commitment for and on behalf of the Company, under the seal of the Company or otherwise.

(2) Each duly appointed attorney-in-fact of the Company is hereby authorized to execute any Written Commitment for and on behalf of the Company, under the seal of the Company or otherwise, to the extent that such action is authorized by the grant of powers provided for in such person's written appointment as such attorney-in-fact.

(3) Each of the Chairman, the President and the Vice Presidents of the Company is hereby authorized, for and on behalf of the Company, to appoint in writing any person the attorney-in-fact of the Company with full power and authority to execute, for and on behalf of the Company, under the seal of the Company or otherwise, such Written Commitments of the Company as may be specified in such written appointment, which specification may be by general type or class of Written Commitments or by specification of one or more particular Written Commitments.

(4) Each of the Chairman, the President and the Vice Presidents of the Company is hereby authorized, for and on behalf of the Company, to delegate in writing to any other officer of the Company the authority to execute, for and on behalf of the Company, under the Company's seal or otherwise, such Written Commitments of the Company as are specified in such written delegation, which specification may be by general type or class of Written Commitments or by specification of one or more particular Written Commitments.

(5) The signature of any officer or other person executing any Written Commitment or appointment or delegation pursuant to this Resolution, and the seal of the Company, may be affixed by facsimile on such Written Commitment or written appointment or delegation.

FURTHER RESOLVED, that the foregoing Resolution shall not be deemed to be an exclusive statement of the powers and authority of officers, employees and other persons to act for and on behalf of the Company, and such Resolution shall not limit or otherwise affect the exercise of any such power or authority otherwise validly granted or vested."

I, Rupert HD Swindells, Assistant Secretary of FEDERAL INSURANCE COMPANY, VIGILANT INSURANCE COMPANY, PACIFIC INDEMNITY COMPANY, WESTCHESTER FIRE INSURANCE COMPANY and ACE AMERICAN INSURANCE COMPANY (the "Companies") do hereby certify that

(i) the foregoing Resolutions adopted by the Board of Directors of the Companies are true, correct and in full force and effect,
(ii) the foregoing Power of Attorney is true, correct and in full force and effect.

Given under my hand and seals of said Companies at Whitehouse Station, NJ, this July 9, 2025

Rupert HD Swindells, Assistant Secretary

PAYMENT BOND

THE STATE OF TEXAS §

COUNTY OF MIDLAND § SURETY NO _____

KNOW ALL MEN BY THESE PRESENTS, THAT _____ of the City of _____ of the County of _____ and State of Texas as Principal, and _____, as Surety, are held and firmly bound unto the City of Midland, Texas, as Obligee, in the amount of _____ DOLLARS ($ _____) for the payment whereof the said Principal and Surety bind themselves, their heirs, administrators, executors, successors and assigns, jointly and severally, firmly by these presents.

WHEREAS, the Principal has entered into a certain written contract with the Obligee, dated the _____ day of _____, 20__, for the furnishing of materials, equipment to perform all labor and work necessary for _____, hereof as fully and to the same extent as if copied at length herein.

NOW, THEREFORE, the condition of the obligation is that if the said Principal shall pay all claimants supplying labor and material to him or a subcontractor in the prosecution of the work provided for in said contract, then this obligation shall be null and void; otherwise, it is to remain in full force and effect.

Surety, for value received, stipulates and agrees that no change, extension of time alteration or addition to the terms of the contract, or to the work performed there under, or the plans, specifications of drawings accompanying the same, or any assignment of the contract as may be provided for in the instructions to bidders, shall in anywise affect its obligation on this Bond, and it does waive notice of any such change, extension of

time, alteration or addition to the terms of the contract, assignment thereof, or to the work to be performed there under.

IN WITNESS WHEREOF the said Principal and Surety have signed and sealed this instrument, this _____ day of _____ , 20__ .

For current Building Wage Rates, please refer to Section 00 73 43 "Wage Rate Requirements."

IMPORTANT NOTICE

Conflict Of Interest Reporting Requirements

Compliance with LOCAL GOVERNMENT CODE TITLE 5. MATTERS AFFECTING PUBLIC OFFICERS AND EMPLOYEES SUBTITLE C. MATTERS AFFECTING PUBLIC OFFICERS AND EMPLOYEES OF MORE THAN ONE TYPE OF LOCAL GOVERNMENT CHAPTER 176. DISCLOSURE OF CERTAIN RELATIONSHIPS WITH LOCAL GOVERNMENT OFFICERS; PROVIDING PUBLIC ACCESS TO CERTAIN INFORMATION.

Form CIQ: This questionnaire reflects changes made to the law by H.B. 23, 84th Leg., Regular Session. This questionnaire shall be filed in accordance with Chapter 176, Local Government Code, by a vendor who has a business relationship as defined by Section 176.001(1-a) with a local governmental entity and the vendor meets requirements under Section 176.006(a). By law this questionnaire must be filed with the records administrator of the local governmental entity not later than the 7th business day after the date the vendor becomes aware of facts that require the statement to be filed. See Section 176.006(a-1), Local Government Code. A vendor commits an offense if the vendor knowingly violates Section 176.006, Local Government Code. An offense under this section is a misdemeanor.

Bidders are responsible for filing Conflict of Interest form "CIQ" in accordance with the above referenced statute. Failure to do so is a class C Misdemeanor. Contracts or Purchase Orders awarded to a vendor that has violated this law is subject to termination at such time that the violation is discovered with no recourse to the City of Midland. The bidder will be subsequently removed from the bidders list for a minimum of one year.

When there is no known conflict of interest as defined by the statute, it is not necessary to file/submit the Form CIQ. The form must be submitted if a conflict is subsequently discovered.

By submitting a response to this request, vendor represents that it complies with the requirements of Chapter 176 of the Texas Local Government Code.

For a current list of the local government officers go to: http://www.midlandtexas.gov/

Upon completion of the form, sign and submit with bid or mail to:

City of Midland

CONFLICT OF INTEREST QUESTIONNAIRE
For vendor doing business with local governmental entity

A complete copy of Chapter 176 of the Local Government Code may be found at http://www.statutes.legis.state.tx.us/Docs/LG/htm/LG.176.htm. For easy reference, below are some of the sections cited on this form.

Local Government Code § 176.001(1-a): "Business relationship" means a connection between two or more parties based on commercial activity of one of the parties. The term does not include a connection based on:

(A) a transaction that is subject to rate or fee regulation by a federal, state, or local governmental entity or an agency of a federal, state, or local governmental entity;

(B) a transaction conducted at a price and subject to terms available to the public; or

(C) a purchase or lease of goods or services from a person that is chartered by a state or federal agency and that is subject to regular examination by, and reporting to, that agency.

Local Government Code § 176.003(a)(2)(A) and (B):

(a) A local government officer shall file a conflicts disclosure statement with respect to a vendor if:

***

(2) the vendor:

(A) has an employment or other business relationship with the local government officer or a family member of the officer that results in the officer or family member receiving taxable income, other than investment income, that exceeds $2,500 during the 12-month period preceding the date that the officer becomes aware that

(i) a contract between the local governmental entity and vendor has been executed; or

(ii) the local governmental entity is considering entering into a contract with the vendor;

(B) has given to the local government officer or a family member of the officer one or more gifts that have an aggregate value of more than $100 in the 12-month period preceding the date the officer becomes aware that:

(i) a contract between the local governmental entity and vendor has been executed; or

(ii) the local governmental entity is considering entering into a contract with the vendor.

Local Government Code § 176.006(a) and (a-1)

(a) A vendor shall file a completed conflict of interest questionnaire if the vendor has a business relationship with a local governmental entity and:

(1) has an employment or other business relationship with a local government officer of that local governmental entity, or a family member of the officer, described by Section 176.003(a)(2)(A);

(2) has given a local government officer of that local governmental entity, or a family member of the officer, one or more gifts with the aggregate value specified by Section 176.003(a)(2)(B), excluding any gift described by Section 176.003(a-1); or

(3) has a family relationship with a local government officer of that local governmental entity.

(a-1) The completed conflict of interest questionnaire must be filed with the appropriate records administrator not later than the seventh business day after the later of:

(1) the date that the vendor:

(A) begins discussions or negotiations to enter into a contract with the local governmental entity; or

(B) submits to the local governmental entity an application, response to a request for proposals or bids, correspondence, or another writing related to a potential contract with the local governmental entity; or

(2) the date the vendor becomes aware:

(A) of an employment or other business relationship with a local government officer, or a family member of the officer, described by Subsection (a);

(B) that the vendor has given one or more gifts described by Subsection (a); or

(C) of a family relationship with a local government officer.

Form provided by Texas Ethics Commission www.ethics.state.tx.us Revised 1/1/2021

Consideration of Location of Bidder's Principal Place of Business
For Bids of $50,000 up to $100,000 for Services and $500,000 for Commodities
Affidavit of Eligibility

Pursuant to Texas Local Government Code 271.9051, in purchasing real property, personal property that is not affixed to real property, or services, if the City receives one or more bids from a bidder whose principal place of business is in the City of Midland and whose bid is within five percent (5%) of the lowest bid price received by the City from a bidder who is not a resident of the City of Midland, the City may enter into a contract with:

(1) the lowest bidder; or

(2) the bidder whose principal place of business is in the City of Midland if the City Council determines, in writing, that the local bidder offers the City the best combination of contract price and additional economic development opportunities for the City of Midland created by the contract award, including the employment of residents of the City of Midland and increased tax revenues to the City of Midland.

In order to receive consideration, bidders must submit this affidavit to:

Erika Martinez
Purchasing Manager
City of Midland
300 N. Loraine St.,
PO BOX 1152
Midland, TX 79702-1152

Complete all areas below. Incomplete affidavits may be rejected.

Local Business Name: Cerris Builders, Inc.

5. Does your business have more than one office in the State of Texas? ☑ Yes ☐ No
   If Yes, identify the office location considered as the point-of sale for the purpose of sales tax calculation:

   4050 Smith Rd. Midland, TX 79705

6. Was the local business required to pay business and/or real property tax for the most recent tax year?

   ☐ Yes ☑ No

   If Yes, did the local business pay any of this tax to the City of Midland? ☐ Yes ☑ No

Under penalty of perjury, the undersigned states that the foregoing statements are true and correct. It is further acknowledged that any person, firm, corporation or entity intentionally submitting false information to the City in an attempt to qualify for eligibility shall be prohibited from bidding on City of Midland products and services for a period of one (1) year.

Authorized Signature:  Date: July 30, 2025

Printed Name and Title: Todd Winnerman, President

NOTICE TO BIDDERS

IF THIS PURCHASE REQUIRES A CONTRACT, THE ATTACHED **CONTRACT AND INSURANCE REQUIREMENTS ARE NON-NEGOTIABLE**. MODIFICATIONS BY BIDDER/COMPANY OF ANY MATERIAL TERM(S) TO THE CONTRACT DOCUMENTS WILL BE DEEMED A NON-RESPONSIVE BID. NON-RESPONSIVE BIDS WILL BE REJECTED. BIDDER/COMPANY MUST BE WILLING TO SIGN THE CONTRACT AS IS AND WITHOUT MODIFICATIONS, PROVIDE PROPERLY EXECUTED BONDS (IF APPLICABLE) AND PROVIDE INSURANCE SPECIFICALLY AS REQUIRED WITHIN THE CONTRACT DOCUMENTS **WITHIN 21 DAYS** OF THE DATE OF THE TRANSMITTAL LETTER.

IF THE SELECTED BIDDER/COMPANY CANNOT MEET THE ABOVE REQUIREMENTS, THEN **THE CITY RESERVES THE RIGHT TO AWARD THIS PURCHASE TO ANOTHER BIDDER**.

IMPORTANT NOTICE – IF THE CONTRACT DOCUMENTS REQUIRE WORKER'S COMPENSATION INSURANCE, BIDDER/COMPANY MUST CARRY WORKER'S COMPENSATION INSURANCE TO BE ELIGIBLE FOR THIS CONTRACT. IF YOU CANNOT PROVIDE WORKER'S COMPENSATION INSURANCE AS REQUIRED BY STATE OF TEXAS STATUTE, WE RESPECTFULLY REQUEST THAT YOU "NO BID" THIS WORK.

COMPLIANCE: Company agrees that it shall comply with Texas Government Code Section 2252.908, *et seq.*, as amended. Company agrees that it shall comply with Texas Local Government Code Section 176.006, *et seq.*, as amended. For further instructions on how to comply with Texas Government Code Section 2252.908 and Texas Local Government Code Section 176.006,

please go to https://www.ethics.state.tx.us/whatsnew/elf_info_form1295.htm and https://www.ethics.state.tx.us/filinginfo/conflict_forms.htm.

ANY VENDOR WHO FAILS TO COMPLY WITH THE TERMS OF THE AWARD **MAY BE DECLARED AN IRRESPONSIBLE VENDOR**. BIDS SUBMITTED BY SAID VENDOR SHALL NOT BE CONSIDERED AGAIN FOR A MINIMUM PERIOD OF SIX MONTHS AS DETERMINED BY THE CITY MANAGER.

IMPORTANT: READ CAREFULLY BEFORE MAKING BID
GENERAL CONDITIONS OF BIDDING

1. All bids are to be submitted as specified in the procurement document(s).

2. Each Bidder is requested to provide: Descriptive literature clearly marked to show each item on this bid. Any catalog or manufacturer's reference in this proposal is descriptive, but not restrictive, and is used only to indicate type and quality. If, however, the bidder proposes similar but not identical terms, he must furnish all particulars. If no mention is made of any exceptions, it is assumed that he is bidding on the article specified and not on an approved equal and he will be required to deliver exact article specified.

3. Prices should be itemized. (Indicate unit price and extend to show total price.) In case of discrepancy between the unit price and the extension, the unit price shall govern.

4. Unit price for each item offered shall include all discounts; e.g., trade, seasonal, etc. with net 30 days payment terms. Discounts shall not be shown as such but shall be incorporated in the base bid price. Any bid showing discounts will be considered an alternate bid. The City of Midland will not be responsible for any goods delivered without a purchase order number.

5. If the Contract is awarded, it will be awarded to either the lowest responsible bidder, or to the bidder who provides goods or services at the best value for the City of Midland. In determining the best value for the City of Midland, the City of Midland may consider the criteria enumerated in Section 252.043 of the Texas Local Government Code. The City of Midland reserves the right to award by item or by total bid, or to reject any or all bids or parts of bids. Further, the City of Midland reserves all rights granted by Section 271.027 of the Texas Local Government Code. The City of Midland reserves the right to award the bid to the lowest responsible bidder.

6. Time of proposed delivery shall be stated in number of calendar days.

7. NOTE: The City of Midland, Texas is exempt from all Federal, State and City tax. Please do not include these taxes in your bid price or invoice. Taxable items must be so designated, and the City will supply vendor with a Tax Exemption Certificate, properly executed.

8. All items are to be delivered, unloaded and stacked at the location indicated on the Bid Request and Purchase Order.

9. All items are to be delivered F.O.B. to the City of Midland, Texas with freight prepaid and included in the bid.

10. Detailed specifications rule over General specifications (headings, etc.)

11. The City of Midland reserves the right to remove a company from the bid list for (1) continued failure to respond to request for bids, (2) failure to deliver merchandise within promised time, or (3) delivery of substandard merchandise.

12. No officer or employee of the City shall have a financial interest, direct or indirect, in any contract with the City, or be financially interested, directly or indirectly, in the sale to the City of any lands, materials, supplies or services except as allowed under chapter 176 of the Local Government Code. Form CIQ shall be submitted and placed on file with the City of Midland.

13. The City shall determine the most advantageous bid for the City and accept the proposal of the responsible party submitting the lowest and/or most advantageous bid or reject any and all bids.

14. The City of Midland, Texas may consider as informal any bid not prepared and submitted in accordance with the provisions hereof, and may waive, in its sole discretion, any informalities.

15. Public Information. To the extent that Bidder is submitting a bid for a contract described by Section 552.371 of the Texas Government Code, Bidder agrees as follows in accordance with Section 552.372(b) of the Texas Government Code: The requirements of Subchapter J, Chapter 552, Government Code, may apply to this bid, and the contractor or vendor agrees that the contract can be terminated if the contractor or vendor knowingly or intentionally fails to comply with a requirement of that subchapter.

STANDARD PURCHASE TERMS AND CONDITIONS
PURCHASING DIVISION, CITY OF MIDLAND, TEXAS

"Seller", as used herein, has the same meaning as "Company". "Buyer", as used herein, has the same meaning as "City".

Seller and Buyer agree as follows:

1. SELLER TO PACKAGE GOODS - Seller will package goods in accordance with good commercial practice. Each shipping container shall be clearly and permanently marked as follows; (a) Seller's name and address, (b) Consignee's name, and address, and purchase order number, (c) Container number and total number of containers, e.g. box 1 of 4 boxes, and (d) the number of the container bearing the packing slip. Seller shall bear cost of packaging unless otherwise provided. Goods shall be suitably packed to secure lowest transportation costs and to conform with requirements of common carriers and any applicable specifications. Buyer's count or weight shall be final and conclusive on shipments not accompanied by packing lists.

2. SHIPMENT UNDER RESERVATION PROHIBITED - Seller is not authorized to ship the goods under reservation and no tender of a bill of lading will serve as a tender of goods.

3. TITLE & RISK OF LOSS - The title and risk of loss of the goods shall not pass to Buyer until Buyer actually receives and takes possession of the goods at the point or points of delivery in Midland, Texas.

4. NO REPLACEMENT OF DEFECTIVE TENDER - Every tender or delivery of goods must fully comply with all provisions of this contract as to time of delivery, quality and the like. If a tender is made which does not fully conform, this shall constitute a breach and Seller shall not have the right to substitute a conforming tender, provided, where the time for performance has yet expired, the Seller may reasonably notify Buyer of his intention to cure and may then make a conforming tender within the contract time but not afterward.

5. PLACE OF DELIVERY - The place of delivery shall be that set forth in the block of the purchase order entitled "deliver to".

6. INVOICES - Seller shall submit separate ORIGINAL invoices, on each purchase order. Invoices shall indicate the purchase order number. All invoices must be mailed to City of Midland, Accounts Payable, P.O. Box 1152, Midland, TX 79702-1152. Payment will be made within 30 days from the date the invoice and properly executed receiving documents are received by City of Midland, Accounts Payable at the above address. Invoices sent to any other address will delay payment.

7. GRATUITIES - The buyer may, by written notice to the seller, cancel this contract without liability to Seller, if it is determined by Buyer that gratuities, in the form of entertainment, gifts, or otherwise, were offered or given by the seller, or any agent or representative of the Seller, to any officer or employee of the City of Midland with a view toward securing a contract or securing favorable treatment with respect to performing of such a contract. In the event this contract is cancelled by Buyer pursuant to this provision, Buyer shall be entitled, in addition to any other rights and remedies, to recover or withhold the amount of the cost incurred by Seller in providing such gratuities.

8. WARRANTY - PRICE -

a. The price to be paid by the Buyer shall be that contained in Seller's bid which Seller warrants to be no higher than Seller's current prices on order by others for products of the kind and specifications covered by this agreement for similar quantities under similar or like conditions and methods of purchase. In the event Seller breaches this warranty, the prices of the items shall be reduced to the Seller's current prices on order by others, or in the alternative, Buyer may cancel this contract without liability to Seller for breach or Seller's actual expense.

b. The Seller warrants that no person or selling agency has been employed or retained to solicit or secure this contract upon an agreement or understanding for commission, percentage, brokerage, or contingent fee excepting bona fide employees or bona fide established commercial or selling agencies maintained by the Seller for the purpose of securing business. For breach or violation of this warranty the Buyer shall have the right or rights to cancel this contract without liability and to deduct from the contract price, or otherwise recover the full amount of such commission, percentage, brokerage or contingent fee.

9. WARRANTY - PRODUCT - Seller shall not limit or exclude any implied warranties and any attempt to do so shall render this contract voidable at the option of the Buyer. Seller warrants that the goods furnished will conform to the specification, drawings, and description listed in the bid invitation, and to the sample(s) furnished by Seller, if any. In the event of a conflict between the specifications, drawings and descriptions, the specifications shall govern.

10. SAFETY WARRANTY - Seller warrants that the product sold to Buyer shall conform to the standards promulgated by the U.S. Department of Labor under the Occupational Safety and Health Act of 1970. In the event the product does not conform to OSHA standards, Buyer may return the product for correction or replacement at the Seller's expense. In the event Seller fails to make the appropriate correction within a reasonable time, correction made by buyer will be at Seller's expense.

11. RIGHT OF INSPECTION - Buyer shall have the right to inspect the goods at delivery before accepting them.

12. CANCELLATION - Buyer shall have the right to cancel for default all or any part of the undelivered portion of this order if Seller breached any of the terms hereof including warranties of Seller if the Seller becomes insolvent or commits acts of bankruptcy. Such right of cancellation is in addition to and not in lieu of any other remedies which Buyer may have in law or equity.

13. TERMINATION - The performance of work under this order may be terminated in whole, or in part by the Buyer in accordance with this provision. Termination of work hereunder shall be effected by the delivery to Seller of a "Notice of Termination" specifying the extent to which performance of work under the order is terminated and the date upon which such termination becomes effective. Such right of termination is in addition to and not in lieu of the rights of Buyer set forth in Clause 13, herein.

14. FORCE MAJEURE - Neither party shall be held responsible for losses, resulting if the fulfillment of any terms or provisions of this contract is delayed or prevented by any cause not within the control of the party whose performance is interfered with, and which by the exercise of reasonable diligence said party is unable to prevent.

15. ASSIGNMENT - DELEGATION - No right or interest in this contract shall be assigned or delegation of any obligation made by Seller without the written permission of the Buyer. Any attempted assignment or delegation by the Seller shall be wholly void and totally ineffective for all purposes unless made in conformity with this paragraph.

16. MODIFICATIONS - This contract can be modified or rescinded only by a writing signed by both of the parties or their duly authorized agents.

17. INTERPRETATION - PAROL EVIDENCE - This writing, plus any specifications for bids and performance provided by Buyer in its advertisement for bids, is intended by the parties as a final expression of this agreement. No course of prior dealings between the parties and no usage of the trade shall be relevant to supplement or explain any term used in this agreement. Acceptance or acquiescence in a course of performance rendered under this agreement shall not be relevant to determine the meaning of this agreement even though the accepting or acquiescing party has knowledge of the performance and opportunity for objection. Whenever a term defined by the Uniform Commercial Code is used in this agreement, the definition contained in the Code is to control.

18. ADVERTISING - Seller shall not advertise or publish without Buyer's prior consent the fact that Buyer has entered into the contract, except to the extent necessary to comply with proper requests for information from an authorized representative of the federal, state or local government.

19. RIGHT TO ASSURANCE - Whenever one party to the contract in good faith has reason to question the other party's intent to perform he may demand that the other party give written assurance of this intent to perform. In the event that a demand is made and no assurance is given within five (5) days, the demanding party may treat this failure as an anticipatory repudiation of the contract.

20. PROTECTION AGAINST ROYALTIES OR PATENT INFRINGEMENT - The Seller shall pay all royalties and license fees, and shall provide for the use of any design, device, material or process covered by letters patent or copyright by suitable legal agreement with Patentee or Owner thereof. The Seller shall defend all suits or claims for infringement of any patent or copyrights and shall indemnify and save the Buyer harmless from any loss on account thereof, except that Buyer shall defend all such suits and claims and shall be responsible for all such loss when a particular design, device, material or process is allowed to the Seller, the Seller shall indemnify and save Buyer harmless from any loss on account thereof. If the material or process specified or required by Buyer is an infringement, the Seller shall be responsible for such loss unless he promptly gives written notice to the buyer of such infringement.

21. TIME - It is hereby expressly agreed and understood that time is of the essence for the performance of this contract, and any failure by contract to meet the time specifications of this agreement will cause Seller to be in default of this agreement.

22. TAX - The City of Midland is exempt from all Federal, State and City tax. Please do not include these taxes in your bid price or invoice. Taxable items must be so designated, and the City will supply vendor with a Tax Exemption Certificate, properly executed.

23. **INSURANCE –**

The following provisions apply unless the agreement is for the supply of goods only:

Seller shall at all times during the term of this agreement maintain and keep in full force and effect insurance in the following types and minimum amounts with companies authorized to do business in the State of Texas:

Commercial General Liability (including Contractual liability):	
-Personal Injury:	$1,000,000.00 per person
	$1,000,000.00 per occurrence
-Property Damage:	$500,000.00 per occurrence
Business Automobile Liability:	$250,000.00 combined single limit - Personal Injury and Property Damage
Worker's Compensation:	Statutory limits
Employers' Liability:	$500,000.00 per accident or occurrence

The Commercial General Liability shall be on a per project or policy aggregate, including completed operations, and shall be on an occurrence basis.

The Workers' Compensation coverage provided by Seller shall inure to the benefit of employees injured during the course and scope of their employment by Seller pursuant to this agreement.

The Business Automobile Liability insurance provided by Seller shall cover any auto for bodily injury and property damage, including owned vehicles, hired and non-owner vehicles, and employee non-ownership, and the amount of such policy shall be a minimum of $250,000.00 covering any vehicle used for the execution of the work that is the subject of this agreement.

All insurance required pursuant to this agreement, except for Worker's Compensation Insurance, shall name the Buyer as an additional insured on a claims occurred basis. All insurance required pursuant to this agreement, including Worker's Compensation Insurance, shall provide for a waiver of subrogation as to the Buyer.

The parties agree that, prior to the execution of the agreement, Seller shall provide one or more certificates of insurance showing that the requirements of this article have been met, and specifically containing, without limitations, the following endorsement:

"The City of Midland is included as an additional insured, on a claims occurred basis, on all policies except for Worker's Compensation. The Seller and Insurer hereby waive all rights of subrogation with respect to claims against the City of Midland, its agents, employees and officers, on all policies of insurance."
Buyer shall be provided the notice by Seller's insurance provider not later than thirty (30) days prior to any reduction or termination of such coverage. Buyer shall not be required to provide any insurance whatsoever pursuant to this agreement.

Seller shall contractually require all contractors, subcontractors, and sub-subcontractors that work on any portion of the work that is the subject of this agreement to obtain insurance coverage that meets or exceeds the policy requirements and minimum amounts specified herein. All contractors, subcontractors, and sub-subcontractors shall obtain insurance policies that provide blanket waivers of subrogation in favor of the City of Midland and policies that name the City of Midland as an additional insured on a claims occurred basis (except workers compensation).

24. ASSIGNMENT - Seller shall not, either directly or indirectly, assign all or any part of this agreement or any interest, right or privilege herein, without the prior written consent of the Buyer. The issue on whether or not to grant consent to an assignment is in the sole discretion of the Buyer.

25. RELEASE - NOTWITHSTANDING ANY OTHER PROVISIONS, SELLER HEREBY RELEASES, ACQUITS, RELINQUISHES AND FOREVER DISCHARGES BUYER, BUYER'S EMPLOYEES AND OFFICERS, FROM ANY AND ALL DEMANDS, CLAIMS, DAMAGES, OR CAUSES OF ACTION OF ANY KIND WHATSOEVER WHICH SELLER HAS OR MIGHT HAVE IN THE FUTURE, INCLUDING BUT NOT LIMITED TO BREACH OF CONTRACT, QUANTUM MERUIT, CLAIMS UNDER THE DUE PROCESS AND TAKINGS CLAUSES OF THE TEXAS AND UNITED STATES CONSTITUTIONS, TORT CLAIMS, OR BUYER'S NEGLIGENCE.

26. GOVERNING LAW AND VENUE - This agreement shall be governed by the laws of the State of Texas. All performance and payment made pursuant to this agreement shall be deemed to have occurred in Midland County, Texas. Exclusive venue for any claims, suits or any other action arising from or connected in any way to this agreement or the performance of this agreement shall be in Midland County, Texas. The obligations and undertakings of each of the parties to this agreement shall be deemed to have occurred in Midland County, Texas.

27. INDEPENDENT CONTRACTOR - It is expressly understood and agreed that Seller shall perform all work and services described herein as an independent contractor and not as an officer, agent, servant or employee of the Buyer; that Seller shall have exclusive control of and the exclusive right to control the details of the services and work performed hereunder, and all persons performing the same; and shall be solely responsible for the acts and omissions of its officers, agents, employees, contractors and subcontractors; that the doctrine of respondeat superior shall not apply as between Buyer and Seller, its officers, agents, employees, contractors and subcontractors; and that nothing herein shall be construed as creating a partnership or joint enterprise between Buyer and Seller. No person performing any of the work and services described hereunder by Seller shall be considered an officer, agent, servant or employee of the Buyer. Further, it is specifically understood and agreed that nothing in this agreement is intended or shall be construed as creating a "Community of Pecuniary Interest" or "An Equal Right of Control" which would give rise to vicarious liability. Seller shall be an independent contractor under this agreement and shall assume all of the rights, obligations and liabilities, applicable to it as such independent contractor hereunder. The Buyer does not have the power to direct the order in which the work is done. The Buyer shall not have the right to control the means, methods or details of the Seller's work. Seller shall assume exclusive responsibility for the work. Seller is entirely free to do the work in its own way.

28. NOTICE OF ALLEGED BREACH; STATUTORY PREREQUISITES - As a condition precedent to filing suit for alleged damages incurred by an alleged breach of an express or implied provision of this agreement, Seller or his legal representative, shall give the City Manager, or any other reasonable official of the Buyer, notice in writing (consisting of one original and seven copies of notice attached to a copy of this agreement) of such damages, duly verified, within one-hundred-twenty (120) days after the same has been sustained. The discovery rule does not apply to the giving of this notice. The notice shall include when, where and how the damages occurred, the apparent extent thereof, the amount of damages sustained, the amount for which the Seller will settle, the physical and mailing addresses of Seller at the time and date the claim was presented and the physical and mailing addresses of Seller for the six months immediately preceding the occurrence of such damages, and the names and addresses of the witnesses upon whom the Seller relies to establish its claim; and a failure to so notify the City Manager within the time and manner provided herein shall exonerate, excuse and except the Buyer from any liability whatsoever. The Buyer is under no obligation to provide notice to Seller that Seller's notice is insufficient. Buyer reserves the right to request reasonable additional information regarding the claim. Said additional information shall be supplied within thirty (30) days after receipt of notice.

The statutory prerequisites outlined herein constitute jurisdictional requirements pursuant to Section 271.154 of the Texas Local Government Code and Section 311.034 of the Texas Government Code. Notwithstanding any other provision, Seller's failure to comply with the requirements herein shall perpetually bar Seller's claim for damages under Chapter 271 of the Texas Local Government Code, and Section 311.034 of the Texas Government Code, regardless if Buyer has actual or constructive notice or knowledge of said claim or alleged damages. Seller agrees that the requirements of this entire agreement are reasonable.

29. INDEMNITY (NOT APPLICABLE TO PURCHASE AGREEMENTS) - SELLER WILL INDEMNIFY AND HOLD HARMLESS AND DEFEND BUYER AND ALL OF BUYER'S OFFICERS, AGENTS AND EMPLOYEES FROM ALL SUITS, ACTIONS, CLAIMS, DAMAGES, PERSONAL INJURIES, LOSSES, PROPERTY DAMAGE AND EXPENSES OF ANY CHARACTER WHATSOEVER, INCLUDING REASONABLE ATTORNEY'S FEES,

BROUGHT FOR OR ON ACCOUNT OF ANY INJURIES OR DAMAGES RECEIVED OR SUSTAINED BY ANY PERSON OR PERSONS OR PROPERTY, ON ACCOUNT OF ANY NEGLIGENT ACT OF SELLER, its agents or employees, or any subcontractor, arising out of, or resulting from, Seller's use of, or activities on, the agreement premises, and Seller will be required to pay any judgment with costs which may be obtained against Buyer or any of its officers, agents or employees, including reasonable attorney's fees.

SELLER SHALL INDEMNIFY AND HOLD HARMLESS AND DEFEND BUYER AND ALL OF BUYER'S OFFICERS, AGENTS AND EMPLOYEES FROM ALL SUITS, ACTIONS, CLAIMS, DAMAGES, ACCIDENTAL DEATH, PERSONAL INJURIES, PROPERTY DAMAGE, LOSSES, AND EXPENSE OF ANY CHARACTER WHATSOEVER INCLUDING REASONABLE ATTORNEY'S FEES, BROUGHT FOR OR ON ACCOUNT OF ANY INJURIES OR DAMAGES RECEIVED OR SUSTAINED BY ANY PERSON OR PERSONS OR PROPERTY, ON ACCOUNT OF ANY NEGLIGENT ACT OF BUYER, BUYER'S OFFICERS, AGENTS AND EMPLOYEES, WHETHER SUCH NEGLIGENT ACT WAS THE SOLE PROXIMATE CAUSE OF THE INJURY OR DAMAGE OR A PROXIMATE CAUSE JOINTLY AND CONCURRENTLY WITH SELLER OR SELLER'S EMPLOYEES, AGENTS OR SUBCONTRACTORS NEGLIGENCE, IN THE EXECUTION, SUPERVISION AND OPERATIONS GROWING OUT OF OR IN ANY WAY CONNECTED WITH THE PERFORMANCE OF THIS AGREEMENT AND SELLER WILL BE REQUIRED TO PAY ANY JUDGMENT WITH COSTS WHICH MAY BE OBTAINED AGAINST BUYER OR ANY OF BUYER'S OFFICERS, AGENTS OR EMPLOYEES, INCLUDING ATTORNEY'S FEES.

30. SOVEREIGN IMMUNITY - By executing this agreement the Buyer is not waiving its right of sovereign immunity. The Buyer is retaining its immunity from suit. The Buyer is not granting consent to be sued by legislative resolution or action. **THERE IS NO WAIVER OF SOVEREIGN IMMUNITY**.

31. THIRD PARTY BENEFICIARY - The Buyer's approval of this agreement does not create a third party beneficiary. There is no third party beneficiary to this agreement. No person or entity who is not a party to this agreement shall have any third party beneficiary or other rights hereunder.

32. <u>ATTORNEY FEES</u> - BY EXECUTING THIS AGREEMENT, SELLER AGREES TO WAIVE AND DOES HEREBY KNOWINGLY, CONCLUSIVELY, VOLUNTARILY AND INTENTIONALLY WAIVE ANY CLAIM IT HAS OR MAY HAVE IN THE FUTURE AGAINST THE BUYER, REGARDING THE AWARD OF ATTORNEY'S FEES, WHICH ARE IN ANY WAY RELATED TO THE AGREEMENT, OR THE CONSTRUCTION, INTERPRETATION OR BREACH OF THE AGREEMENT. THE SELLER SPECIFICALLY AGREES THAT IF THE SELLER BRINGS OR COMMENCES ANY LEGAL ACTION OR PROCEEDING RELATED TO THIS AGREEMENT, THE CONSTRUCTION, INTERPRETATION, VALIDITY OR BREACH OF THIS AGREEMENT, INCLUDING BUT NOT LIMITED TO ANY ACTION PURSUANT TO THE PROVISIONS OF THE TEXAS UNIFORM DECLARATORY JUDGMENTS ACT (TEXAS CIVIL PRACTICE AND REMEDIES CODE SECTION 37.001, ET. SEQ., AS AMENDED), OR CHAPTER 271 OF THE TEXAS LOCAL GOVERNMENT CODE, THE SELLER AGREES TO ABANDON, WAIVE AND RELINQUISH ANY AND ALL RIGHTS TO THE RECOVERY OF ATTORNEY'S FEES TO WHICH SELLER MIGHT OTHERWISE BE ENTITLED.

SELLER AGREES THAT THIS IS THE VOLUNTARY AND INTENTIONAL RELINQUISHMENT AND ABANDONMENT OF A PRESENTLY EXISTING KNOWN RIGHT. SELLER ACKNOWLEDGES THAT IT UNDERSTANDS ALL TERMS AND CONDITIONS OF THE AGREEMENT. THE SELLER FURTHER ACKNOWLEDGES AND AGREES THAT THERE WAS AND IS NO DISPARITY OF BARGAINING POWER BETWEEN THE BUYER AND THE SELLER. THIS SECTION SHALL NOT BE CONSTRUED OR INTERPRETED AS A WAIVER OF SOVEREIGN IMMUNITY.

THE SELLER AND BUYER ARE RELYING ON THEIR OWN JUDGMENT. EACH PARTY HAD THE OPPORTUNITY TO DISCUSS THIS AGREEMENT WITH LEGAL COUNSEL PRIOR TO ITS EXECUTION.

33. CONSIDERATION - The terms of this agreement are supported by good and valuable consideration, the receipt and sufficiency of which is hereby acknowledged by the parties named herein.

34. CERTIFICATION - In accordance with the Texas Local Government Code, the City of Midland Department of Facilities and Fleet Management does hereby certify that the City of Midland is in compliance with Sections 252, 271 and all applicable sections of the Texas Local Government Code and other state law as it applies to procurement and contracting issues.

35. FEDERAL WAGE REQUIREMENTS - If applicable, the Davis-Bacon Act, 29 CFR 5.5, and any related acts or regulations are hereby incorporated by reference and made a part of this agreement, and all terms and requirements under said laws, by such incorporation, are made terms and requirements of this agreement, to which the parties to this agreement have agreed to be bound.

36. COMPLIANCE WITH FEDERAL, STATE AND LOCAL LAWS - Seller shall at all times during the term of this agreement comply with applicable federal, state, and local laws regarding Seller's activities pursuant to this agreement, including but not limited to all applicable sections of the Municipal Code of Midland, Texas, as may be amended, said sections being hereby incorporated by reference and made a part of this agreement for all legal purposes. Failure to abide by any such law mentioned herein constitutes grounds for the immediate termination of this agreement.

THE CITY OF MIDLAND

CONTRACT

Contract No.

THIS CONTRACT, effective the ____day of _____ 20____, by and between the City of Midland, hereinafter referred to as "CITY", and Cerris Builders, Inc., hereinafter referred to as "COMPANY", is made for the following considerations:

1. **Cost:** Total Proposal: $ 38,577,000.00 (BASE BID) DOLLARS

2. **Scope of Work:** COMPANY shall perform all work described and shall provide labor, materials, equipment and supervision necessary for MAF Terminal Building. Said work being more particularly described in the following documents, which are attached hereto and incorporated herein for all purposes.

EXHIBIT A .....Specifications, Proposal or Cost Summary
EXHIBIT B .....Intentionally Omitted
EXHIBIT C .....Bonding instructions for Public Works Contract of $50,000 and more
EXHIBIT D .....Wage Scale

3. **City:** The words "CITY's Representative" or "representative" shall mean City of Midland or the designee under whose supervision these contract documents, including the plans and specifications, were prepared, or who may inspect work performed under this Contract; or such other representative, supervisor, or inspector as may be authorized by CITY to act in any particular capacity under this Contract.

4. **City's Representative:** CITY's Representative may make periodic visits to the site to observe the progress and quality of the executed work and to determine, in general, if the work is proceeding in accordance with the contract documents. CITY's representative will not be required to make exhaustive or continuous on-site inspections to check the quality or quantity of the work, nor will such representative be responsible for the construction means, methods, techniques, sequences or procedures, or the safety precautions incident thereto. CITY's representative will not be responsible for COMPANY's failure to perform the work in accordance with the contract.

5. **Company:** Unless otherwise stipulated, COMPANY shall provide and pay for all materials, supplies, machinery, equipment, tools, superintendence, labor, insurance, and all water, light, power, fuel, transportation and all other facilities necessary for the execution and completion of the work covered by the contract documents. Unless otherwise specified, all materials shall be new, and both workmanship and materials shall be of a good quality. COMPANY shall, if required, furnish satisfactory evidence as to the kind and quality of materials.

5.1. COMPANY shall, at its expense, obtain all permits and licenses necessary for the performance of this contract and pay all fees and taxes required by law, and comply with all laws, ordinances, rules and regulations governing COMPANY's performance of the contract, including all environmental laws and regulations, whether state or federal.

5.2. All work shall be done and all materials furnished in strict conformity with the contract and specifications.

6. **Minor Work Not Mentioned:** All minor detail of the work not specifically mentioned in the Specifications but obviously necessary for the proper completion of the work, such as the proper connection of new work to old, shall be considered as incidental to and a part of the work for which the prices are named in the contract. COMPANY will not be entitled to any additional compensation therefor unless specifically stated otherwise. Otherwise the term "extra work" as used in this contract shall mean and include all work that may be required by CITY to be done by COMPANY to accomplish any alteration or addition to the work as shown on the Specifications.

6.1. COMPANY shall perform all extra work under the direction of CITY's Representative when presented with a written work order signed by CITY's Representative, subject, however, to the right of the COMPANY to require written confirmation of such extra work order by CITY. Payment for extra work shall be as agreed in the work order.

7. **Safety:** COMPANY shall at all times exercise reasonable precaution for the safety of employees and others on or near the work and shall comply with all applicable provisions of federal, state and municipal laws. All machinery and equipment and other physical hazards shall be guarded in accordance with federal, state or municipal laws or regulations.

8. **INDEMNITY: COMPANY SHALL INDEMNIFY AND HOLD HARMLESS AND DEFEND CITY AND ALL OF CITY'S OFFICERS, AGENTS AND EMPLOYEES FROM ALL SUITS, ACTIONS, CLAIMS, DAMAGES, PERSONAL INJURIES, ACCIDENTAL DEATH, LOSSES, PROPERTY DAMAGE AND EXPENSES OF ANY CHARACTER**

WHATSOEVER, INCLUDING ATTORNEY'S FEES, BROUGHT FOR OR ON ACCOUNT OF ANY INJURIES OR DAMAGES RECEIVED OR SUSTAINED BY ANY PERSON OR PERSONS OR PROPERTY, ON ACCOUNT OF ANY NEGLIGENT ACT OF COMPANY, THEIR AGENTS OR EMPLOYEES, OR ANY SUBCONTRACTOR, IN THE EXECUTION, SUPERVISION AND OPERATIONS GROWING OUT OF OR IN ANY WAY CONNECTED WITH THE PERFORMANCE OF THIS CONTRACT, AND COMPANY WILL BE REQUIRED TO PAY ANY JUDGMENT WITH COSTS WHICH MAY BE OBTAINED AGAINST CITY OR ANY OF ITS OFFICERS, AGENTS OR EMPLOYEES, INCLUDING ATTORNEY'S FEES. THE OBLIGATIONS CONTAINED IN THIS SECTION 8 SHALL SURVIVE THE TERMINATION OF THIS CONTRACT.

8.1. **COMPANY SHALL INDEMNIFY AND HOLD HARMLESS AND DEFEND CITY AND ALL OF CITY'S OFFICERS, AGENTS AND EMPLOYEES FROM ALL SUITS, ACTIONS, CLAIMS, DAMAGES, PERSONAL INJURIES, ACCIDENTAL DEATH, PROPERTY DAMAGE, LOSSES, AND EXPENSES OF ANY CHARACTER WHATSOEVER INCLUDING ATTORNEY'S FEES, BROUGHT FOR OR ON ACCOUNT OF ANY INJURIES OR DAMAGES RECEIVED OR SUSTAINED BY ANY PERSON OR PERSONS OR PROPERTY, ON ACCOUNT OF ANY NEGLIGENT ACT OF CITY, CITY'S OFFICERS, AGENTS AND EMPLOYEES, WHETHER SUCH NEGLIGENT ACT WAS THE SOLE PROXIMATE CAUSE OF THE INJURY OR DAMAGE OR A PROXIMATE CAUSE JOINTLY AND CONCURRENTLY WITH COMPANY OR COMPANY'S EMPLOYEES, AGENTS OR SUBCONTRACTORS NEGLIGENCE IN THE EXECUTION, SUPERVISION AND OPERATIONS GROWING OUT OF OR IN ANY WAY CONNECTED WITH THE PERFORMANCE OF THIS CONTRACT, AND COMPANY WILL BE REQUIRED TO PAY ANY JUDGMENT WITH COSTS WHICH MAY BE OBTAINED AGAINST CITY OR ANY OF ITS OFFICERS, AGENTS OR EMPLOYEES, INCLUDING ATTORNEY'S FEES. THE OBLIGATIONS CONTAINED IN THIS SECTION 8.1 SHALL SURVIVE THE TERMINATION OF THIS CONTRACT.**

8.2. **COMPANY AGREES THAT IT WILL INDEMNIFY AND SAVE CITY HARMLESS FROM ALL CLAIMS GROWING OUT OF ANY DEMANDS OF SUBCONTRACTORS, LABORERS, WORKMEN, MECHANICS, MATERIALMEN, AND FURNISHERS OF MACHINERY AND PARTS THEREOF, EQUIPMENT, POWER TOOLS AND ALL SUPPLIES, INCURRED IN THE FURTHERANCE OF THE PERFORMANCE OF THIS CONTRACT. WHEN CITY SO DESIRES, COMPANY**

SHALL FURNISH SATISFACTORY EVIDENCE THAT ALL OBLIGATIONS OF THE NATURE HEREINABOVE DESIGNATED HAVE BEEN PAID, DISCHARGED OR WAIVED. COMPANY, ITS SURETIES AND INSURANCE CARRIERS SHALL DEFEND, INDEMNIFY AND SAVE HARMLESS CITY AND ALL OF ITS OFFICERS, AGENTS AND EMPLOYEES FROM ALL SUITS, ACTIONS, OR CLAIMS OF ANY CHARACTER WHATSOEVER, BROUGHT FOR OR ON ACCOUNT OF ANY INJURIES OR DAMAGES RECEIVED OR SUSTAINED BY ANY PERSON OR PERSONS OR PROPERTY, ARISING FROM ANY ACT OF COMPANY OR ANY SUBCONTRACTOR, THEIR AGENTS OR EMPLOYEES, IN THE EXECUTION AND SUPERVISION OF THIS CONTRACT, AND WILL BE REQUIRED TO PAY ANY JUDGMENT WITH COSTS WHICH MAY BE OBTAINED AGAINST CITY OR ANY OF ITS OFFICERS, AGENTS, OR EMPLOYEES INCLUDING ATTORNEY'S FEES. THE OBLIGATIONS CONTAINED IN THIS SECTION 8.2 SHALL SURVIVE THE TERMINATION OF THIS CONTRACT.

9. **Start of Work:** COMPANY shall commence work no later than ten (10) days after receipt of the execution of this document or other written release to proceed and shall complete such work no later than 420 calendar days after release to proceed.

10. **Clean Up:** COMPANY shall promptly remove from CITY's premises all materials condemned by CITY's Representative on account of failure to conform to the contract, whether actually incorporated in the work or not, and COMPANY shall at its own expense promptly replace such condemned materials with other materials conforming to the requirements of the contract. COMPANY shall also bear the expense of restoring all work of other contractors damaged by any such removal or replacement. If COMPANY does not remove and replace any such condemned materials within a reasonable time after a written notice by CITY, CITY may remove and replace such at COMPANY's expense.

11. **Warranty:** Neither the final payment nor any provision in this contract shall relieve COMPANY of responsibility for faulty materials or workmanship, and he shall remedy any defects due thereto and pay for any damage to other work resulting therefrom, which shall appear within a period of one (1) year from the date of substantial completion. CITY shall give notice of observed defects with reasonable promptness.

12. **Remedy:** CITY may, on account of subsequently discovered evidence, withhold whole or part of any payment to such extent as may be necessary to protect itself from loss on account of:

12.1. Defective work not remedied or

12.2. Claims filed or reasonable evidence indicating possible filing of claims; or

12.3. Failure of COMPANY to make payments promptly to subcontractors or for material or labor which CITY may pay as an agent for the COMPANY; or

12.4. Damages to another contractor or subcontractor.

When the above grounds to withhold payment are removed, or COMPANY provides a surety bond satisfactory to CITY, which will protect CITY in the amount withheld, payment may be released.

13. **Funding Out:** In the event no funds or insufficient funds are appropriated and budgeted or are otherwise unavailable in any fiscal period for contract payments due under the contract, then this contract shall terminate on the last day of the fiscal period for which full appropriations were made, without penalty or expense to CITY of any kind whatsoever.

14. **Wage Scale:** COMPANY agrees to pay all workmen in his employ no less than the generally prevailing wage rate for employees of similar category in the Permian Basin Area, as is depicted in the wage rate scale attached hereto as Specification Section 00 73 42 "Wage Rate Requirements," and incorporated herein by reference for all legal purposes.

14.1. If applicable, the Davis-Bacon Act, 29 CFR 5.5, and any related acts or regulations are hereby incorporated by reference and made a part of this Contract, and all terms and requirements under said laws, by such incorporation, are made terms and requirements of this Contract, to which the parties to this Contract have agreed to be bound.

15. **Prompt Pay Act:** CITY and COMPANY agree that Texas Government Code, Chapter 2251, Payment for Goods and Services (the "Prompt Pay Act") does not waive governmental immunity.

16. **Payment; Retainage:** After all work is completed by COMPANY, including all Change Orders altering the original scope and amount of the contract are completed, and the CITY has inspected and approved that the work is completed and in compliance with the contract and all subsequent Change Orders, the CITY may thereafter issue payment to COMPANY in the amount of the contract and all Change Orders. The CITY shall be the final judge of when the work is completed by COMPANY. The CITY, in its sole discretion, shall determine if the work under the contract and under any Change Orders has been done to the CITY's requirements.

16.1. The CITY may make periodic payments to COMPANY; provided, however, such periodic payments may only be made pursuant to this section, and only after all work and all Change Orders are completed by COMPANY and approved by the CITY. The approval shall be in

the CITY's sole discretion. Requests for progress payments may be made to the extent of the materials and labor completed at the end of each month. Upon approval by the CITY or the CITY's representative, the request and invoice shall be forwarded for payment less 5% retainage. The total of these payments shall not exceed 95% of the total contract amount.

17. **Late Completion; Liquidated Damages:** It is hereby understood and mutually agreed, by and between COMPANY and the CITY, that the date of beginning and the time for completion as specified in the contract of the work to be done hereunder are ESSENTIAL CONDITIONS of this contract; and it is further mutually understood and agreed that the work embraced in this contract shall be commenced on a date to be specified in the "Notice to Proceed." COMPANY agrees that said work shall be prosecuted regularly, diligently, and uninterruptedly at such rate of progress as will insure full completion thereof within the time specified. It is expressly understood and agreed, by and between COMPANY and the CITY, that the time for the completion of the work described herein is a reasonable time for the completion of the same, taking into consideration the average climatic range and usual industrial conditions prevailing in this locality.

17.1. In the event COMPANY shall neglect, fail or refuse to complete the work within the time herein specified, or any proper extension thereof granted by the CITY, then COMPANY and

COMPANY's surety, if any, shall be liable for and does hereby agree, as a part consideration for the awarding of this contract, to pay to the CITY $1,000.00, not as a penalty but as liquidated damages for such breach of contract as hereinafter set forth, for each and every day that COMPANY shall be in default after the time stipulated in the contract for completing the work. Further, the CITY shall have the right to cancel this contract for such delay. In the event the CITY cancels this contract pursuant to the terms of this section, the CITY shall pay to COMPANY only those monies deemed appropriate by the CITY, in its sole discretion, to compensate COMPANY for any work actually performed, less any liquidated damages COMPANY owes the CITY.

17.2. The said amount is fixed and agreed upon by and between COMPANY and the CITY because of the impracticability and extreme difficulty of fixing and ascertaining the actual damages the CITY would in such event sustain, and said amount is agreed to be the amount of damages which the CITY would sustain and said amount shall be retained from time to time by the CITY from current periodical estimates.

17.3. It is further agreed that time is of the essence of each and every portion of this contract and of the specifications wherein a definite and certain length of time is fixed for the

performance of any act whatsoever; and where under the contract an additional time is allowed for the completion of any work, the new time limit fixed by such extension shall be of the essence of this contract. Provided, that COMPANY shall not be charged with liquidated damages or any excess cost when the CITY determines, in its sole discretion, that COMPANY is without fault and COMPANY's reasons for the time extension are acceptable to the CITY. Provided, further, that COMPANY shall not be charged with liquidated damages of any excess cost when the delay in completion of the work is due:

a. To any preference, priority or allocation order duly issued by the Government;

b. To unforeseeable cause beyond the control and without the fault or negligence of COMPANY, including, but not restricted to, acts of God, or of the public enemy, acts of the CITY, acts of another contractor in the performance of a contract with the CITY, fires, floods, epidemics, quarantine restrictions, strikes, freight embargoes, and severe weather; and

c. To any delays of subcontractors or suppliers occasioned by any of the causes specified in subsections (a) and (b) of this article.

17.4. Provided, further, that COMPANY shall, within ten (10) days from the beginning of such delay, unless the CITY shall, in its sole discretion grant a further period of time prior to the date of final settlement of the contract, notify the CITY, in writing, of the causes of the delay, who shall ascertain the facts and extent of the delay and notify COMPANY within a reasonable time of its decision in the matter.

17.5. **COMPANY AGREES THAT THE PAYMENT OF SUCH LIQUIDATED DAMAGES MAY BE RECOVERED BY THE CITY FROM RETAINAGE HELD BY THE CITY. NOTWITHSTANDING ANY OTHER PROVISION HEREOF, COMPANY HEREBY RELEASES, ACQUITS, RELINQUISHES AND FOREVER DISCHARGES CITY, CITY'S EMPLOYEES AND OFFICERS FROM ANY AND ALL DEMANDS, CLAIMS, DAMAGES, OR CAUSES OF ACTION OF ANY KIND WHATSOEVER ARISING FROM THE CITY WITHHOLDING PAYMENT FROM COMPANY AS LIQUIDATED DAMAGES FOR COMPANY'S FAILURE TO COMPLETE THE WORK WITHIN THE TIME SPECIFIED HEREIN, INCLUDING BUT NOT LIMITED TO BREACH OF CONTRACT, QUANTUM MERUIT, CLAIMS UNDER THE DUE PROCESS AND TAKINGS CLAUSES OF THE TEXAS AND UNITED STATES CONSTITUTIONS, TORT CLAIMS, OR CITY'S NEGLIGENCE.**

17.6. **COMPANY SHALL RECEIVE NO FINANCIAL COMPENSATION FOR DELAY OR HINDRANCE TO THE WORK. IN NO EVENT SHALL THE CITY BE**

LIABLE TO COMPANY OR ANY SUBCONTRACTOR OR SUPPLIER, ANY OTHER PERSON OR ANY SURETY FOR OR ANY EMPLOYEE OR AGENT OF ANY OF THEM, FOR ANY DAMAGES ARISING OUT OF OR ASSOCIATED WITH ANY DELAY OR HINDRANCE TO THE WORK, REGARDLESS OF THE SOURCE OF THE DELAY OR HINDRANCE, INCLUDING EVENTS OF FORCE MAJEURE, AND EVEN IF SUCH DELAY OR HINDRANCE RESULTS FROM, ARISES OUT OF OR IS DUE, IN WHOLE OR IN PART, TO THE NEGLIGENCE OF THE CITY. COMPANY'S SOLE REMEDY IN ANY SUCH CASE SHALL BE AN EXTENSION OF TIME.

18. **No Third-Party Beneficiary:** CITY's approval of this contract does not create a third-party beneficiary. There is no third-party beneficiary to this contract. No person or entity who is not a party to this contract shall have any third-party beneficiary or other rights hereunder.

19. **WAIVER OF ATTORNEY FEES: BY EXECUTING THIS CONTRACT, COMPANY AGREES TO WAIVE AND DOES HEREBY KNOWINGLY, CONCLUSIVELY, VOLUNTARILY AND INTENTIONALLY WAIVE ANY CLAIM IT HAS OR MAY HAVE IN THE FUTURE AGAINST CITY REGARDING THE AWARD OR ATTORNEY'S FEES, WHICH ARE IN ANY WAY RELATED TO THIS CONTRACT, OR THE CONSTRUCTION, INTERPRETATION OR BREACH OF THIS CONTRACT. COMPANY SPECIFICALLY AGREES THAT IF COMPANY BRINGS OR COMMENCES ANY LEGAL ACTION OR PROCEEDING RELATED TO THIS CONTRACT, THE CONSTRUCTION, INTERPRETATION, VALIDITY OR BREACH OF THIS CONTRACT, INCLUDING, BUT NOT LIMITED TO, ANY ACTION PURSUANT TO THE PROVISIONS OF THE TEXAS UNIFORM DECLARATORY JUDGMENTS ACT (TEXAS CIVIL PRACTICE AND REMEDIES CODE SECTION 37.001, ET SEQ., AS AMENDED), OR CHAPTER 271 OF THE TEXAS LOCAL GOVERNMENT CODE, COMPANY AGREES TO ABANDON, WAIVE AND RELINQUISH ANY AND ALL RIGHTS TO THE RECOVERY OF ATTORNEY'S FEES TO WHICH COMPANY MIGHT OTHERWISE BE ENTITLED.**

COMPANY AGREES THAT THIS IS THE VOLUNTARY AND INTENTIONAL RELINQUISHMENT AND ABANDONMENT OF A PRESENTLY-EXISTING KNOWN RIGHT. COMPANY ACKNOWLEDGES THAT IT UNDERSTANDS ALL TERMS AND CONDITIONS OF THIS CONTRACT. COMPANY FURTHER ACKNOWLEDGES AND AGREES THAT THERE WAS AND IS NO DISPARITY OF BARGAINING POWER BETWEEN CITY AND COMPANY. THIS SECTION SHALL NOT BE CONSTRUED OR INTERPRETED AS A WAIVER OR GOVERNMENTAL IMMUNITY AND SHALL SURVIVE THE TERMINATION OF THIS CONTRACT.

COMPANY IS RELYING ON ITS OWN JUDGMENT. COMPANY HAD THE OPPORTUNITY TO DISCUSS THIS CONTRACT WITH COMPETENT LEGAL COUNSEL PRIOR TO ITS EXECUTION. THE OBLIGATIONS CONTAINED IN THIS SECTION 18 SHALL SURVIVE THE TERMINATION OF THIS CONTRACT.

20. **Governmental Immunity:** By executing this contract CITY is not waiving its right of governmental immunity. CITY is retaining its immunity from suit. CITY is not granting consent to be sued by legislative resolution or action.

THERE IS NO WAIVER OF GOVERNMENTAL IMMUNITY.

21. **Insurance:**

COMPANY shall at all times during the term of this Contract maintain and keep in full force and effect insurance in the following types and minimum amounts with companies authorized to do business in the State of Texas:

Commercial General Liability (including Contractual liability):	
-Personal Injury:	$1,000,000.00 per person $1,000,000.00 per occurrence
-Property Damage:	$500,000.00 per occurrence
Business Automobile Liability:	$250,000.00 combined single limit - Personal Injury and Property Damage
Workers' Compensation:	Statutory limits
Employers' Liability:	$500,000.00 per accident or occurrence

The Commercial General Liability shall be on a per project aggregate, including completed operations, and shall be on a claims-occurred basis. This insurance shall name CITY as an additional insured and waive subrogation in favor of CITY.

The Business Automobile Liability insurance provided by COMPANY shall cover any auto for bodily injury and property damage, including owned vehicles, hired and non-city vehicles, and employee non-ownership, and the amount of such policy shall be a minimum of $250,000.00 covering any vehicle used for the execution of the work that is the subject of this Contract. This insurance shall name CITY as an additional insured and waive subrogation in favor of CITY.

The Workers' Compensation coverage provided by COMPANY shall inure to the benefit of employees injured during the course and scope of their employment by COMPANY pursuant to this Contract. The Workers' Compensation shall waive all rights of subrogation in favor of CITY. All insurance required pursuant to this Contract shall provide for a waiver of subrogation in favor of CITY. All insurance required pursuant to this Contract, except for Workers' Compensation Insurance, shall name CITY as an additional

insured on a claims occurred basis. CITY shall be provided the notice by COMPANY's insurance provider not later than thirty (30) days prior to any reduction or termination of such coverage.

COMPANY shall contractually require all contractors, subcontractors, and sub-subcontractors that work on any portion of the work that is the subject of this Contract to obtain insurance coverage that meets or exceeds the policy requirements and minimum amounts specified herein. All contractors, subcontractors, and sub-subcontractors shall obtain insurance policies that provide blanket waivers of subrogation in favor of the City of Midland and policies that name the City of Midland as an additional insured on a claims occurred basis (except workers' compensation).

The parties agree that, prior to the execution of the Contract, COMPANY shall provide one or more certificates of insurance specifically stating that these requirements have been met and subject to the approval of CITY. CITY shall not be required to provide any insurance whatsoever pursuant to this Contract.

COMPANY certifies that the certificate of insurance provided as required herein complies with the requirements of Chapter 1811 of the Texas Insurance Code. COMPANY shall not use an unapproved certificate of insurance or insert inappropriate language on a certificate. Compliance with state law is the sole responsibility of COMPANY.

22. **Assignment**: COMPANY shall not, either directly or indirectly, assign all or any part of this Contract or any interest, right or privilege herein, without the prior written consent of CITY. The issue on whether or not to grant consent to an assignment is in the sole discretion of CITY.

23. **RELEASE: NOTWITHSTANDING ANY OTHER PROVISION CONTAINED HEREIN, COMPANY HEREBY RELEASES, ACQUITS, RELINQUISHES AND FOREVER DISCHARGES CITY AND CITY'S COUNCIL MEMBERS, EMPLOYEES, AND OFFICERS FROM ANY AND ALL DEMANDS, CLAIMS, DAMAGES OR CAUSES OF ACTION OF ANY KIND WHATSOEVER THAT COMPANY HAS OR MIGHT HAVE IN THE FUTURE, INCLUDING, BUT NOT LIMITED TO, BREACH OF CONTRACT, QUANTUM MERUIT, CLAIMS UNDER THE DUE PROCESS AND TAKINGS CLAUSES OF THE TEXAS AND UNITED STATES CONSTITUTIONS, TORT CLAIMS, OR CITY'S NEGLIGENCE. THE OBLIGATIONS CONTAINED IN THIS SECTION SHALL SURVIVE THE TERMINATION OF THIS CONTRACT**.

24. **Governing Law and Venue:** This contract shall be governed by the laws of the State of Texas. All performance and payment made pursuant to this contract shall be deemed to have occurred in Midland County, Texas. The obligations and undertakings of each of the parties to this Agreement shall be deemed

to have occurred in Midland County, Texas. Exclusive venue for any claims, suits or any other action arising from or connected in any way to this contract or the performance of this contract shall be in Midland County, Texas.

25. **Independent Contractor:** COMPANY shall perform all work and services described herein as an independent contractor and not as an officer, agent, servant, or employee of CITY. COMPANY shall have exclusive control of, and the exclusive right to control the details of the services and work to be performed hereunder, and all persons performing the same. COMPANY shall be solely responsible for the acts and omissions of its officers, agents, employees, contractors and subcontractors and the doctrine of respondeat superior shall not apply as between CITY and COMPANY, its officers, agents, employees, contractors and subcontractors. Nothing in this Contract shall be construed as creating a partnership or joint enterprise between CITY and COMPANY. No person performing any of the work and services described hereunder by COMPANY shall be considered an officer, agent, servant or employee of CITY. Further, it is specifically understood and agreed that nothing in this contract is intended or construed as creating a "Community of Pecuniary Interest" or an "Equal Right of Control" which would give rise to vicarious liability.

COMPANY shall be an independent contractor under this Contract and shall assume all of the rights, obligations and liabilities, applicable to it as such independent contractor hereunder. CITY does not have the power to direct the order in which the work is done. CITY shall not have the right to control the means, methods or details of COMPANY's work. COMPANY shall assume exclusive responsibility for the work. COMPANY is entirely free to do the work in its own way.

26. **Notice of Alleged Breach; Statutory Prerequisites:** As a condition precedent to filing suit for alleged damages incurred by an alleged breach of an express or implied provision of this Contract, COMPANY or its legal representative, shall give the City Manager, or any other reasonable official of CITY, notice in writing (consisting of one (1) original and seven (7) copies of notice attached to a copy of this Contract) of such damages, duly verified, within one hundred twenty (120) days after the same has been sustained. The discovery rule does not apply to the giving of this notice. The notice shall include when, where and how the damages occurred, the apparent extent thereof, the amount of damages sustained, the amount for which COMPANY shall settle, the physical and mailing addresses of COMPANY at the time and date the claim was presented and the physical and mailing addresses of COMPANY for the six (6) months immediately preceding the occurrence of such damages, and the names and addresses of the witnesses upon whom COMPANY relies to establish its claim; and a failure to provide such written notification within the time and manner provided herein shall exonerate, excuse and except

CITY from any liability whatsoever. CITY is under no obligation to provide notice to COMPANY that COMPANY's notice is insufficient. CITY reserves the right to request additional information regarding the claim. Said additional information shall be supplied within thirty (30) days after receipt of notice.

The statutory prerequisites outlined herein constitute jurisdictional requirements pursuant to Section 271.154 of the Texas Local Government Code and Section 311.034 of the Texas Government Code. Notwithstanding any other provision to the contrary, COMPANY's failure to comply with the requirements of this Section shall perpetually bar COMPANY's claim for damages under Chapter 271 of the Texas Local Government Code, and Section 311.034 of the Texas Government Code, regardless if CITY has actual or constructive notice or knowledge of said claim or alleged damages. COMPANY agrees that the requirements of this entire Contract are reasonable. The provisions and obligations of this Section shall survive the termination of this Contract.

27. **Consideration:** The terms of this Contract are supported by good and valuable consideration, the receipt and sufficiency of which is hereby acknowledged by the parties named herein.

28. **Termination At Will:** CITY may terminate this Contract at will for no or any reason upon giving at least one hundred eighty (180) days written notice to COMPANY. The parties to this Contract understand and agree that it is in CITY's sole discretion to cancel the Contract during the term of the Contract without penalty to CITY. COMPANY has no expectation and has received no guarantees that this Contract will not be terminated before the end of the Contract term. The parties have bargained for the flexibility of terminating this Contract upon tender of the requisite notice at any time during the term of the Contract. All work and services under the Contract shall be suspended upon termination of the Contract becoming effective.

29. **Compliance:** COMPANY agrees that it shall comply with Texas Government Code Section 2252.908, *et seq.*, as amended. COMPANY agrees that it shall comply with Texas Local Government Code Section 176.006, *et seq.*, as amended.

30. To the extent that Sections 2271.002, 2274.002, and 2276.002 of the Texas Government Code (collectively, the "Anti-Boycott Statutes") apply to this Contract, COMPANY hereby verifies:

- that Company does not boycott Israel and will not boycott Israel during the term of this Contract;
- that Company does not boycott energy companies and will not boycott energy companies during the term of this Contract; and

- that Company does not have a practice, policy, guidance, or directive that discriminates against a firearm entity or firearm trade association and will not discriminate during the term of this Contract against a firearm entity or firearm trade association.

To the extent that the Anti-Boycott Statutes do not apply to this Contract, such verification is not required, and Company shall be deemed to have not made such verification.

31. **Records Retention and Production of Information.** To the extent that this Contract constitutes a contract described by Section 552.371 of the Texas Government Code, COMPANY shall: (i) preserve all contracting information related to this Contract as provided by the records retention requirements applicable to CITY for the duration of this Contract; (ii) promptly provide to CITY any contracting information related to the Contract that is in the custody or possession of COMPANY on request of CITY; and (iii) on completion of the Contract, either: (a) provide at no cost to CITY all contracting information related to the Contract that is in the custody or possession of COMPANY; or (b) preserve the contracting information related to the Contract as provided by the records retention requirements applicable to CITY.

32. **Public Information.** To the extent that this Contract is a contract described by Section 552.371 of the Texas Government Code, COMPANY agrees as follows in accordance with Section 552.372(b) of the Texas Government Code: The requirements of Subchapter J, Chapter 552, Government Code, may apply to this Contract, and COMPANY agrees that the contract can be terminated if COMPANY knowingly or intentionally fails to comply with a requirement of that subchapter.

33. **Conflict of Terms.** If a conflict of terms or language exists between: (i) any of the provisions of this Contract and (ii) any of the provisions contained in any exhibit(s) attached to this Contract, precedence shall be given to the provisions of this Contract. For the avoidance of any doubt, the provisions contained in this Contract shall supersede any and all conflicting provisions contained in any exhibit(s) attached hereto. Furthermore, the parties acknowledge and agree that any provision contained in an exhibit(s) attached to this Contract that imposes an additional express or implied obligation on CITY is hereby made void and of no force or effect. CITY's sole and exclusive obligations under this Contract are contained in the provisions of this Contract that precede the signature page(s), which evidences the parties' execution.

34. Company agrees that all iron or steel products produced through a manufacturing process and used in the project that is the subject of this Contract shall be produced in the United States in accordance with Government Code § 2252.202, et seq., as amended.

NON-COLLUSION STATEMENT

The undersigned hereby certifies that:

(1) The price(s) and amount of this bid have been arrived at independently and without collusion, consultation, communication or agreement with any other company, firm, contractor, bidder or potential bidder.

(2) Neither the price(s) nor the amount of this bid, and neither the approximate price(s) nor approximate amount of this bid, have been disclosed to any other company, firm or person who is a bidder or potential bidder, and they will not be disclosed before bid opening.

(3) No attempt has been made or will be made to induce any company, firm or person to refrain from bidding on this contract, or to submit a bid higher than this bid, or to submit any intentionally high or noncompetitive bid or other form of complementary bid.

(4) The bid of my company or firm is made in good faith and not pursuant to any agreement or discussion with, or inducement from, any company, firm or person to submit a complementary or other noncompetitive bid.

FEDERAL CONTRACT PROVISIONS

ACCESS TO RECORDS AND REPORTS

Contractor must maintain an acceptable cost accounting system. Contractor agrees to provide the Owner, the Federal Aviation Administration and the Comptroller General of the United States or any of their duly authorized representatives access to any books, documents, papers and records of Contractor which are directly pertinent to the specific contract for the purpose of making audit, examination, excerpts and transcriptions. Contractor agrees to maintain all books, records and reports required under this contract for a period of not less than three years after final payment is made and all pending matters are closed.

NOTICE OF REQUIREMENT FOR AFFIRMATIVE ACTION TO ENSURE EQUAL EMPLOYMENT OPPORTUNITY

1. The Offeror's or Bidder's attention is called to the "Equal Opportunity Clause" and the "Standard Federal Equal Employment Opportunity Construction Contract Specifications" set forth herein.

2. The goals and timetables for minority and female participation, expressed in percentage terms for Contractor's aggregate workforce in each trade on all construction work in the covered area, are as follows:

Timetables

Goals for minority participation for each trade: 19.1%

Goals for female participation in each trade: 6.9%

These goals are applicable to all of Contractor's construction work (whether or not it is Federal or federally assisted) performed in the covered area. If Contractor performs construction work in a geographical area located outside of the covered area, it shall apply the goals established for such geographical area where the work is actually performed. With regard to this second area, Contractor also is subject to the goals for both its federally involved and nonfederally involved construction.

Contractor's compliance with the Executive Order and the regulations in 41 CFR Part 60-4 shall be based on its implementation of the Equal Opportunity Clause, specific affirmative action obligations required by the specifications set forth in 41 CFR 60-4.3(a) and its efforts to meet the goals. The hours of minority and female employment and training must be substantially uniform throughout the length of the contract, and in each trade, and Contractor shall make a good faith effort to employ minorities and women evenly on each of its projects. The transfer of minority or female employees or trainees from Contractor to Contractor or from project to project for the sole purpose of meeting Contractor's goals shall be a violation of the contract, the Executive Order, and the regulations in 41 CFR Part 60-4. Compliance with the goals will be measured against the total work hours performed.

3. Contractor shall provide written notification to the Director of the Office of Federal Contract Compliance Programs (OFCCP) within 10 working days of award of any construction subcontract in excess of $10,000 at any tier for construction work under the contract resulting from this solicitation. The notification shall list the name, address, and telephone number of the subcontractor; employer identification number of the subcontractor; estimated dollar amount of the subcontract; estimated starting and completion dates of the subcontract; and the geographical area in which the subcontract is to be performed.

4. As used in this notice and in the contract resulting from this solicitation, the "covered area" is Texas, Midland County, City of Midland.

BREACH OF CONTRACT TERMS

Any violation or breach of terms of this contract on the part of Contractor or its subcontractors may result in the suspension or termination of this contract or such other action that may be necessary to enforce the rights of the parties of this agreement.

Owner will provide Contractor written notice that describes the nature of the breach and corrective actions Contractor must undertake in order to avoid termination of the contract. Owner reserves the right to withhold payments to Contractor until such time Contractor corrects the breach or the Owner elects to terminate the contract. Owner's notice will identify a specific date by which Contractor must correct the breach. Owner may proceed with termination of the contract if Contractor fails to correct the breach by the deadline indicated in Owner's notice.

The duties and obligations imposed by the Contract Documents and the rights and remedies available thereunder are in addition to, and not a limitation of, any duties, obligations, rights, and remedies otherwise imposed or available by law.

BUY AMERICAN PREFERENCE

SOURCE

Title 49 USC § 50101

Executive Order 14005, *Ensuring the Future is Made in All of America by All of America's Workers*

Bipartisan Infrastructure Law (Pub. L. No. 117-58), Build America, Buy America (BABA)

APPLICABILITY

The Buy American Preference incorporates statutory requirements and policies outlined in the in 49 USC § 50101, Executive Order 14005, and BABA.

Section 50101 of 49 USC requires that all steel and manufactured goods used on AIP projects be produced in the United States. This section also gives the FAA the ability to issue a waiver to a Sponsor to use non-domestic material on an AIP funded project subject to meeting certain conditions. A Sponsor may request that the FAA issue a waiver from the Buy American Preference requirements if the FAA finds that:

1) Applying the provision is not in the public interest.
2) The steel or manufactured goods are not available in sufficient quantity or quality in the United States.

3) The cost of components and subcomponents produced in the United States is more than 60 percent of the total components of a facility or equipment, and final assembly has taken place in the United States. Items that have an FAA standard specification item number (such as specific airport lighting equipment) are considered the equipment.
4) Applying this provision would increase the cost of the overall project by more than 25 percent.

Executive Order 14005 advances the Administration's priority to use terms and conditions of Federal financial assistance awards to maximize the use of goods, products, and materials produced in, and services offered in, the United States. The Order directs, to the extent appropriate and consistent with applicable law, agencies shall partner with the Hollings Manufacturing Extension Partnership (MEP) to conduct supplier scouting in order to identify American companies that are able to produce goods, products, and materials in the United States that meet Federal procurement needs, prior to consideration of using non-domestic products.

The Bipartisan Infrastructure Law, Build America, Buy America (BABA) Act strengthens Made in America Laws and bolsters America's industrial base, protects national security, and supports high-paying jobs. Under BABA, iron, steel, and certain construction materials are required to be 100% produced in the United States.

Under the Bipartisan Infrastructure Law (Pub. L. No. 117-58) BABA three waivers are available for iron and steel, manufactured products, and construction materials when a Federal agency finds that:
1) Applying the domestic content procurement preference would be inconsistent with the public interest (a "public interest waiver");
2) Types of iron, steel, manufactured products, or construction materials are not produced in the United States in sufficient and reasonably available quantities or of a satisfactory quality (a "nonavailability waiver"); or
3) The inclusion of iron, steel, manufactured products, or construction materials produced in the United States will increase the cost of the overall project by more than 25 percent (an "unreasonable cost waiver").

BABA defines construction materials, items that are or consists primarily of non-ferrous metals, plastic, and polymer-based products (including polyvinylchloride, composite building materials, and polymers used in fiber optic cables), glass (including optic glass), lumber or drywall.

Items that consist of two or more of the aforementioned materials that have been combined together through a manufacturing process, and items that include at least one of the listed materials combined with a material that is not listed through a manufacturing process, should be treated as manufactured products, rather than as construction materials. For example, a plastic framed sliding window should be treated as a manufactured product while plate glass should be treated as a construction material**.**

The Buy America Preference requirements flow down from the Sponsor to first tier contractors, who are responsible for ensuring that lower tier contractors and subcontractors are also in compliance.

Note: The Buy American Preference does not apply to temporary equipment a contractor uses as a tool of its trade and which does not remain as part of the project.

Required Documentation

The FAA Buy American Requests. All applications (requests) for an FAA Buy American Preference Waiver includes, at minimum, a completed Content Percentage Worksheet and Final Assembly Questionnaire. Additional information may be requested from the applicant by the FAA. Airport Sponsors, consultants, construction contractors, or equipment manufacturers are responsible for completing and submitting waiver applications. The FAA is unable to make a determination on waiver requests with incomplete information. Sponsors must confirm with the bidder or offeror to assess the adequacy of the waiver request and associated information prior to forwarding a waiver request to the FAA for action. All FAA waivers forms are available from the FAA Buy American Requirements webpage.

Proprietary Confidentiality. Exemption 4 of the Freedom of Information Act protects "trade secrets and commercial or financial information obtained from a person that is privileged or confidential. Proprietary manufacturing and design information submitted to the Federal Aviation Administration for the purposes of receiving a Buy American Waiver shall not be disclosed outside the FAA. The FAA will provide a written notification to the Airport Sponsor, manufacturer(s), contractor(s) or supplier(s) when a waiver determination is complete.

Timing of Waiver Requests. Sponsors desiring a Type 2 waiver should submit their waiver request, with justification, *before* issuing a solicitation for bids or a request for proposal for a project.

The Sponsor must submit a Type 2, Type 3, or Type 4 waiver request *prior* to executing the contract. The FAA will generally not consider waiver requests after execution of the contract except where extraordinary and extenuating circumstances exist.

The Buy American Notice of Determination (NOD) Process. The FAA Reauthorization Act of 2018 requires that all approved waivers must be posted to the FAA's website and remain posted for public comment for 10 days, before becoming effective. All FAA waivers must complete the NOD process. Sponsors are encouraged to wait until approved waivers become effective before executing AIP projects.

Buy American Conformance Lists. The FAA Office of Airports maintains listings of projects and products that have received a waiver from the Buy American Preference requirements for project specific and nationwide use. Each of these conformance lists is available online at www.faa.gov/airports/aip/buy_american/. Products listed on the FAA Nationwide Buy American Conformance list do not require additional submittal of domestic content information. Nationwide waivers expire five years from the date issued, unless revoked earlier by the FAA.

Facility Waiver Requests. For construction of a facility, the Sponsor may submit the waiver request after bid opening, but prior to contract execution. Examples of facility construction include terminal buildings, terminal renovation, and snow removal equipment buildings.

Contract Types –

Construction and Equipment – The Sponsor must meet the Buy American Preference requirements of 49 USC § 50101 and BABA for all AIP funded projects that require materials that are or consists primarily of iron, steel or manufactured goods and construction materials.

Professional Services – Professional service agreements (PSAs) do not normally result in a deliverable that meets the definition of a manufactured product. However, the emergence of various project delivery methods has created situations where task deliverables under a PSA may include

a manufactured product. If a PSA includes providing a manufactured good as a deliverable under the contract, the Sponsor must include the Buy American Preference provision in the agreement.

Property – Most land transactions do not involve acquiring a manufactured product. However, under certain circumstances, a property acquisition project could result in the installation of a manufactured product. For example, the installation of property fencing, gates, doors and locks, etc. represent manufactured products acquired under an AIP funded land project that must comply with Buy American Preferences.

Use of Provisions – No mandatory language provided. The following language is acceptable to the FAA and meets the intent of this requirement. If the Sponsor uses different language, the Sponsor's revised language must fully comply with 49 USC § 50101 and BABA.

There are two types of FAA Buy American certifications. The Sponsor must incorporate the appropriate certifications of compliance with FAA Buy American Preference in the solicitation:

- **Construction Projects** involving the replacement, rehabilitation, reconstruction of airfield surfaces such as on runways, taxiways, taxilanes, aprons, roadways, parking lots, etc. – Insert the Certificate of compliance to FAA Buy American Preference based on Construction Projects.
- **Equipment and Buildings Projects** involving and including the acquisition of equipment such as snow removal equipment, navigational aids, wind cones, and the construction of buildings such as hangars, terminal development, lighting vaults, aircraft rescue & firefighting buildings, etc. - Insert the Certificate of Compliance with FAA Buy American Preference Based on Equipment/Building Projects.

MODEL SOLICITATION CLAUSES

Certification of Compliance with FAA Buy American Preference Statement

FAA BUY AMERICAN PREFERENCE

Contractor certifies that its bid/offer is in compliance with 49 USC § 50101, BABA and other related Made in America Laws,[1] U.S. statutes, guidance, and FAA policies, which provide that Federal funds may not be obligated unless all iron, steel and manufactured goods used in AIP funded projects are produced in the United States, unless the Federal Aviation Administration has issued a waiver for the product; the product is listed as an Excepted Article, Material Or Supply in Federal Acquisition Regulation subpart 25.108; or is included in the FAA Nationwide Buy American Waivers Issued list.

[1] Per Executive Order 14005 "Made in America Laws" means all statutes, regulations, rules, and Executive Orders relating to federal financial assistance awards or federal procurement, including those that refer to "Buy America" or "Buy American," that require, or provide a preference for, the purchase or acquisition of goods, products, or materials produced in the United States, including iron, steel, and manufactured products offered in the United States.

PACKET 7.88 September 9, 2025

The Bidder or Offeror must complete and submit the certification of compliance with FAA's Buy American Preference, BABA and Made in America laws included herein with their bid or offer. The Airport Sponsor/Owner will reject as nonresponsive any bid or offer that does not include a completed certification of compliance with FAA's Buy American Preference and BABA.

The Bidder or Offeror certifies that all constructions materials, defined to mean an article, material, or supply other than an item of primarily iron or steel; a manufactured product; cement and cementitious materials; aggregates such as stone, sand, or gravel; or aggregate binding agents or additives that are or consist primarily of: non-ferrous metals; plastic and polymer-based products (including polyvinylchloride, composite building materials, and polymers used in fiber optic cables); glass (including optic glass); lumber; or drywall used in the Project are manufactured in the U.S.

Certification of Compliance with FAA Buy American Preference – Construction Projects

As a matter of bid responsiveness, Bidder or Offeror must complete, sign, date, and submit this certification statement with its proposal. Bidder or Offeror must indicate how it intends to comply with 49 USC § 50101, BABA and other related Made in America Laws, U.S. statutes, guidance, and FAA policies, by selecting one of the following certification statements. These statements are mutually exclusive. Bidder must select one or the other (i.e., not both) by inserting a checkmark (✓) or the letter "X".

☐ Bidder or Offeror hereby certifies that it will comply with 49 USC § 50101, BABA and other related U.S. statutes, guidance, and policies of the FAA by:

a) Only installing iron, steel and manufactured products produced in the United States;

b) Only installing construction materials defined as: an article, material, or supply – other than an item of primarily iron or steel; a manufactured product; cement and cementitious materials; aggregates such as stone, sand, or gravel; or aggregate binding agents or additives that are or consist primarily of non-ferrous metals; plastic and polymer-based products (including polyvinylchloride, composite building materials, and polymers used in fiber optic cables); glass (including optic glass); lumber or drywall that have been manufactured in the United States.

c) Installing manufactured products for which the Federal Aviation Administration (FAA) has issued a waiver as indicated by inclusion on the current FAA Nationwide Buy American Waivers Issued listing; or

d) Installing products listed as an Excepted Article, Material or Supply in Federal Acquisition Regulation Subpart 25.108.

By selecting this certification statement, the bidder or offeror agrees:

a) To provide to the Airport Sponsor or the FAA evidence that documents the source and origin of the iron, steel, and/or manufactured product.
b) To faithfully comply with providing U.S. domestic products.
c) To refrain from seeking a waiver request after establishment of the contract, unless extenuating circumstances emerge that the FAA determines justified.
d) Certify that all construction materials used in the project are manufactured in the U.S.

☒ The bidder or offeror hereby certifies it cannot comply with the 100% Buy American Preferences of 49 USC § 50101(a) but may qualify for a Type 3 or Type 4 waiver under 49 USC § 50101(b). By selecting this certification statement, the apparent bidder or offeror with the apparent low bid agrees:

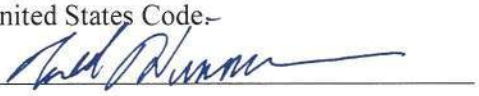
a) To the submit to the Airport Sponsor or FAA within 15 calendar days of being selected as the responsive bidder, a formal waiver request and required documentation that supports the type of waiver being requested.
b) That failure to submit the required documentation within the specified timeframe is cause for a non-responsive determination that may result in rejection of the proposal.
c) To faithfully comply with providing U.S. domestic products at or above the approved U.S. domestic content percentage as approved by the FAA.

d) To furnish U.S. domestic product for any waiver request that the FAA rejects.
e) To refrain from seeking a waiver request after establishment of the contract, unless extenuating circumstances emerge that the FAA determines justified.

Required Documentation

Type 2 Waiver (Nonavailability) - The iron, steel, manufactured goods or construction materials or manufactured goods are not available in sufficient quantity or quality in the United States. The required documentation for the Nonavailability waiver is

a) Completed Content Percentage Worksheet and Final Assembly Questionnaire
b) Record of thorough market research, consideration where appropriate of qualifying alternate items, products, or materials including;
c) A description of the market research activities and methods used to identify domestically manufactured items capable of satisfying the requirement, including the timing of the research and conclusions reached on the availability of sources.



Type 3 Waiver – The cost of components and subcomponents produced in the United States is more than 60 percent of the cost of all components and subcomponents of the "facility/project." The required documentation for a Type 3 waiver is:

a) Completed Content Percentage Worksheet and Final Assembly Questionnaire including;
b) Listing of all manufactured products that are not comprised of 100% U.S. domestic content (excludes products listed on the FAA Nationwide Buy American Waivers Issued listing and products excluded by Federal Acquisition Regulation Subpart 25.108; products of unknown origin must be considered as non-domestic products in their entirety).
c) Cost of non-domestic components and subcomponents, excluding labor costs associated with final assembly and installation at project location.
d) Percentage of non-domestic component and subcomponent cost as compared to total "facility" component and subcomponent costs, excluding labor costs associated with final assembly and installation at project location.

Type 4 Waiver (Unreasonable Costs) - Applying this provision for iron, steel, manufactured goods, or construction materials would increase the cost of the overall project by more than 25%. The required documentation for this waiver is:

a) A completed Content Percentage Worksheet and Final Assembly Questionnaire from;
b) At minimum two comparable equal bids and/or offers;
c) Receipt or record that demonstrates that supplier scouting called for in Executive Order 14005, indicates that no domestic source exists for the project and/or component;
d) Completed waiver applications for each comparable bid and/or offer.

False Statements: Per 49 USC § 47126, this certification concerns a matter within the jurisdiction of the Federal Aviation Administration and the making of a false, fictitious, or fraudulent certification may render the maker subject to prosecution under Title 18, United States Code.

PACKET 7.92 September 9, 2025

GENERAL CIVIL RIGHTS PROVISIONS

In all its activities within the scope of its airport program, the Contractor agrees to comply with pertinent statutes, Executive Orders, and such rules as identified in Title VI List of Pertinent Nondiscrimination Acts and Authorities to ensure that no person shall, on the grounds of race, color, national origin (including limited English proficiency), creed, sex (including sexual orientation and gender identity), age, or disability be excluded from participating in any activity conducted with or benefiting from Federal assistance.

This provision is in addition to that required by Title VI of the Civil Rights Act of 1964.

Specific Clause used for General Contract Agreements

The above provision binds Contractor and subcontractors from the bid solicitation period through the completion of the contract.

Title VI Solicitation Notice:

The Midland International Air & Space Port, in accordance with the provisions of Title VI of the Civil Rights Act of 1964 (78 Stat. 252, 42 USC §§ 2000d to 2000d-4) and the Regulations, hereby notifies all bidders or offerors that it will affirmatively ensure that for any contract entered into pursuant to this advertisement, select businesses, or disadvantaged business enterprises will be afforded full and fair opportunity to submit bids in response to this invitation and no businesses will be discriminated against on the grounds of race, color, national origin (including limited English proficiency), creed, sex (including sexual orientation and gender identity), age, or disability in consideration for an award.

Title VI List of Pertinent Nondiscrimination Acts and Authorities

During the performance of this contract, Contractor, for itself, its assignees, and successors in interest (hereinafter referred to as the "Contractor") agrees to comply with the following non-discrimination statutes and authorities; including but not limited to:

- Title VI of the Civil Rights Act of 1964 (42 USC § 2000d *et seq*., 78 stat. 252) (prohibits discrimination on the basis of race, color, national origin);
- 49 CFR part 21 (Non-discrimination in Federally-Assisted programs of the Department of Transportation—Effectuation of Title VI of the Civil Rights Act of 1964);
- The Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970, (42 USC § 4601) (prohibits unfair treatment of persons displaced or whose property has been acquired because of Federal or Federal-aid programs and projects);
- Section 504 of the Rehabilitation Act of 1973 (29 USC § 794 *et seq*.), as amended (prohibits discrimination on the basis of disability); and 49 CFR part 27 (Nondiscrimination on the Basis of Disability in Programs or Activities Receiving Federal Financial Assistance);
- The Age Discrimination Act of 1975, as amended (42 USC § 6101 *et seq*.) (prohibits discrimination on the basis of age);
- Airport and Airway Improvement Act of 1982 (49 USC § 47123), as amended (prohibits discrimination based on race, creed, color, national origin, or sex);

- The Civil Rights Restoration Act of 1987 (PL 100-259) (broadened the scope, coverage and applicability of Title VI of the Civil Rights Act of 1964, the Age Discrimination Act of 1975 and Section 504 of the Rehabilitation Act of 1973, by expanding the definition of the terms "programs or activities" to include all of the programs or activities of the Federal-aid recipients, sub-recipients and contractors, whether such programs or activities are Federally funded or not);
- Titles II and III of the Americans with Disabilities Act of 1990 (42 USC § 12101, et seq) (prohibit discrimination on the basis of disability in the operation of public entities, public and private transportation systems, places of public accommodation, and certain testing entities) as implemented by U.S. Department of Transportation regulations at 49 CFR parts 37 and 38;
- The Federal Aviation Administration's Nondiscrimination statute (49 USC § 47123) (prohibits discrimination on the basis of race, color, national origin, and sex);
- Executive Order 12898, Federal Actions to Address Environmental Justice in Minority Populations and Low-Income Populations (ensures nondiscrimination against minority populations by discouraging programs, policies, and activities with disproportionately high and adverse human health or environmental effects on minority and low-income populations);
- Executive Order 13166, Improving Access to Services for Persons with Limited English Proficiency, and resulting agency guidance, national origin discrimination includes discrimination because of limited English proficiency (LEP). To ensure compliance with Title VI, you must take reasonable steps to ensure that LEP persons have meaningful access to your programs 70 Fed. Reg. 74087 (2005);
- Title IX of the Education Amendments of 1972, as amended, which prohibits you from discriminating because of sex in education programs or activities (20 USC § 1681, et seq).

Compliance with Nondiscrimination Requirements:

During the performance of this Contract, Contractor, for itself, its assignees, and successors in interest (hereinafter referred to as the "Contractor"), agrees as follows:

1. **Compliance with Regulations:** Contractor (hereinafter includes consultants) will comply with the Title VI List of Pertinent Nondiscrimination Acts and Authorities, as they may be amended from time to time, which are herein incorporated by reference and made a part of this Contract.
2. **Nondiscrimination:** Contractor, with regard to the Work performed by it during the Contract, will not discriminate on the grounds of race, color, national origin (including limited English proficiency), creed, sex (including sexual orientation and gender identity), age, or disability in the selection and retention of subcontractors, including procurements of materials and leases of equipment. Contractor will not participate directly or indirectly in the discrimination prohibited by the Nondiscrimination Acts and Authorities, including employment practices when the contract covers any activity, project, or program set forth in Appendix B of 49 CFR part 21.
3. **Solicitations for Subcontracts, including Procurements of Materials and Equipment:** In all solicitations, either by competitive bidding or negotiation made by Contractor for Work to be performed under a subcontract, including procurements of materials, or leases of equipment, each potential subcontractor or supplier will be notified by Contractor of Contractor's obligations under this contract and the Nondiscrimination Acts and Authorities on the grounds of race, color, or national origin.

4. **Information and Reports:** Contractor will provide all information and reports required by the Acts, the Regulations, and directives issued pursuant thereto and will permit access to its books, records, accounts, other sources of information, and its facilities as may be determined by the Sponsor or the Federal Aviation Administration to be pertinent to ascertain compliance with such Nondiscrimination Acts and Authorities and instructions. Where any information required of a contractor is in the exclusive possession of another who fails or refuses to furnish the information, Contractor will so certify to the Sponsor or the Federal Aviation Administration, as appropriate, and will set forth what efforts it has made to obtain the information.
5. **Sanctions for Noncompliance:** In the event of a Contractor's noncompliance with the non-discrimination provisions of this Contract, the Sponsor will impose such contract sanctions as it or the Federal Aviation Administration may determine to be appropriate, including, but not limited to:
    a. Withholding payments to Contractor under the Contract until Contractor complies; and/or
    b. Cancelling, terminating, or suspending a contract, in whole or in part.
6. **Incorporation of Provisions:** Contractor will include the provisions of paragraphs one through six in every subcontract, including procurements of materials and leases of equipment, unless exempt by the Acts, the Regulations, and directives issued pursuant thereto. Contractor will take action with respect to any subcontract or procurement as the Sponsor or the Federal Aviation Administration may direct as a means of enforcing such provisions including sanctions for noncompliance. Provided, that if Contractor becomes involved in, or is threatened with litigation by a subcontractor, or supplier because of such direction, Contractor may request the Sponsor to enter into any litigation to protect the interests of the Sponsor. In addition, Contractor may request the United States to enter into the litigation to protect the interests of the United States.

CLEAN AIR AND WATER POLLUTION CONTROL

Contractor agrees to comply with all applicable standards, orders, and regulations issued pursuant to the Clean Air Act (42 USC §§ 7401-7671q) and the Federal Water Pollution Control Act as amended (33 USC §§ 1251-1387). Contractor agrees to report any violation to the Owner immediately upon discovery. Owner assumes responsibility for notifying the Environmental Protection Agency (EPA) and the Federal Aviation Administration.

Contractor must include this requirement in all subcontracts that exceed $150,000.

CONTRACT WORKHOURS AND SAFETY STANDARDS ACT REQUIREMENTS

1. Overtime Requirements.

No Contractor or subcontractor contracting for any part of the contract work which may require or involve the employment of laborers or mechanics shall require or permit any such laborer or mechanic, including watchmen and guards, in any workweek in which he or she is employed on such work to work in excess of 40 hours in such workweek unless such laborer or mechanic receives compensation at a rate not less than one and one-half times the basic rate of pay for all hours worked in excess of 40 hours in such workweek.

2. Violation; Liability for Unpaid Wages; Liquidated Damages.

In the event of any violation of the clause set forth in paragraph (1) of this clause, Contractor, and any subcontractor responsible therefor shall be liable for the unpaid wages. In addition, such contractor and subcontractor shall be liable to the United States (in the case of work done under contract for the District of Columbia or a territory, to such District or to such territory), for liquidated damages. Such liquidated damages shall be computed with respect to each individual laborer or mechanic, including watchmen and guards, employed in violation of the clause set forth in paragraph (1) of this clause, in the sum of $29 for each calendar day on which such individual was required or permitted to work in excess of the standard workweek of forty hours without payment of the overtime wages required by the clause set forth in paragraph (1) of this clause.

3. Withholding for Unpaid Wages and Liquidated Damages.

The Federal Aviation Administration (FAA) or Owner shall upon its own action or upon written request of an authorized representative of the Department of Labor withhold or cause to be withheld, from any moneys payable on account of Work performed by Contractor or subcontractor under any such contract or any other Federal contract with the same Prime Contractor, or any other federally-assisted contract subject to the Contract Work Hours and Safety Standards Act, which is held by the same prime contractor, such sums as may be determined to be necessary to satisfy any liabilities of such Contractor or subcontractor for unpaid wages and liquidated damages as provided in the clause set forth in paragraph (2) of this clause.

4. Subcontractors.

Contractor or subcontractor shall insert in any subcontracts the clauses set forth in paragraphs (1) through (4) and also a clause requiring the subcontractor to include these clauses in any lower tier subcontracts. The Prime Contractor shall be responsible for compliance by any subcontractor or lower tier subcontractor with the clauses set forth in paragraphs (1) through (4) of this clause.

COPELAND “ANTI-KICKBACK” ACT

Contractor must comply with the requirements of the Copeland “Anti-Kickback” Act (18 USC 874 and 40 USC 3145), as supplemented by Department of Labor regulation 29 CFR part 3. Contractor and subcontractors are prohibited from inducing, by any means, any person employed on the project to give up any part of the compensation to which the employee is entitled. Contractor and each Subcontractor must submit to Owner, a weekly statement on the wages paid to each employee performing on covered work during the prior week. Owner must report any violations of the Act to the Federal Aviation Administration.

DAVIS-BACON REQUIREMENTS

1. Minimum Wages.

(i) All laborers and mechanics employed or working upon the site of the work will be paid unconditionally and not less often than once a week, and without subsequent deduction or rebate on any account (except such payroll deductions as are permitted by the Secretary of Labor under the Copeland Act (29 CFR Part 3)), the full amount of wages and bona fide fringe benefits (or cash equivalent thereof) due at time of payment computed at rates not less than those contained in the wage determination of the Secretary of Labor which is attached hereto and made a part hereof, regardless of any contractual relationship which may be alleged to exist between Contractor and such laborers and mechanics.

Contributions made or costs reasonably anticipated for bona fide fringe benefits under section 1(b)(2) of the Davis-Bacon Act on behalf of laborers or mechanics are considered wages paid to such laborers or mechanics, subject to the provisions of paragraph (1)(iv) of this Section; also, regular contributions made or costs incurred for more than a weekly period (but not less often than quarterly) under plans, funds, or programs which cover the particular weekly period, are deemed to be constructively made or incurred during such weekly period. Such laborers and mechanics shall be paid the appropriate wage rate and fringe benefits on the wage determination for the classification of work actually performed, without regard to skill, except as provided in 29 CFR § 5.5(a)(4). Laborers or mechanics performing work in more than one classification may be compensated at the rate specified for each classification for the time actually worked therein: *Provided,* that the employer's payroll records accurately set forth the time spent in each classification in which work is performed. The wage determination (including any additional classification and wage rates conformed under (1)(ii) of this section) and the Davis-Bacon poster (WH-1321) shall be posted at all times by Contractor and its subcontractors at the site of the work in a prominent and accessible place where it can easily be seen by the workers.

(ii)(A) The contracting officer shall require that any class of laborers or mechanics, including helpers, which is not listed in the wage determination and which is to be employed under the contract shall be classified in conformance with the wage determination. The contracting officer shall approve an additional classification and wage rate and fringe benefits therefore only when the following criteria have been met:

(1) The work to be performed by the classification requested is not performed by a classification in the wage determination;

(2) The classification is utilized in the area by the construction industry; and

(3) The proposed wage rate, including any bona fide fringe benefits, bears a reasonable relationship to the wage rates contained in the wage determination.

(B) If Contractor and the laborers and mechanics to be employed in the classification (if known), or their representatives, and the contracting officer agree on the classification and wage rate (including the amount designated for fringe benefits where appropriate), a report of the action taken shall be sent by the contracting officer to the Administrator of the Wage and Hour Division, U.S. Department of Labor, Washington, DC 20210. The Administrator, or an authorized representative, will approve, modify, or disapprove every additional classification action within 30 days of receipt and so advise the contracting officer or will notify the contracting officer within the 30-day period that additional time is necessary.

(C) In the event Contractor, the laborers, or mechanics to be employed in the classification, or their representatives, and the contracting officer do not agree on the proposed classification and wage rate (including the amount designated for fringe benefits, where appropriate), the contracting officer shall refer the questions, including the views of all interested parties and the recommendation of the contracting officer, to the Administrator for determination. The Administrator, or an authorized representative, will issue a determination within 30 days of receipt and so advise the contracting officer or will notify the contracting officer within the 30-day period that additional time is necessary.

(D) The wage rate (including fringe benefits where appropriate) determined pursuant to subparagraphs (1)(ii) (B) or (C) of this paragraph, shall be paid to all workers performing work in the classification under this contract from the first day on which work is performed in the classification.

(iii) Whenever the minimum wage rate prescribed in the contract for a class of laborers or mechanics includes a fringe benefit which is not expressed as an hourly rate, Contractor shall either pay the benefit as stated in the wage determination or shall pay another bona fide fringe benefit or an hourly cash equivalent thereof.

(iv) If Contractor does not make payments to a trustee or other third person, Contractor may consider as part of the wages of any laborer or mechanic the amount of any costs reasonably anticipated in providing bona fide fringe benefits under a plan or program, *Provided,* that the Secretary of Labor has found, upon the written request of Contractor, that the applicable standards of the Davis-Bacon Act have been met. The Secretary of Labor may require Contractor to set aside in a separate account assets for the meeting of obligations under the plan or program.

2. Withholding. The Federal Aviation Administration or the Sponsor shall upon its own action or upon written request of an authorized representative of the Department of Labor withhold or cause to be withheld from Contractor under this contract or any other Federal contract with the same prime contractor, or any other federally-assisted contract subject to Davis-Bacon prevailing wage requirements, which is held by the same prime contractor, so much of the accrued payments or advances as may be considered necessary to pay laborers and mechanics, including apprentices, trainees, and helpers, employed by Contractor or any subcontractor the full amount of wages required by the contract. In the event of failure to pay any laborer or mechanic, including any apprentice, trainee, or helper, employed or working on the site of the work, all or part of the wages required by the contract, the Federal Aviation Administration may, after written notice to Contractor, Sponsor, Applicant, or Owner, take such action as may be necessary to cause the suspension of any further payment, advance, or guarantee of funds until such violations have ceased.

3. Payrolls and Basic Records.

(i) Payrolls and basic records relating thereto shall be maintained by Contractor during the course of the work and preserved for a period of three years thereafter for all laborers and mechanics working at the site of the work. Such records shall contain the name, address, and social security number of each such worker; his or her correct classification; hourly rates of wages paid (including rates of contributions or costs anticipated for bona fide fringe benefits or cash equivalents thereof of the types described in 1(b)(2)(B) of the Davis-Bacon Act); daily and weekly number of hours worked; deductions made; and actual wages paid. Whenever the Secretary of Labor has found under 29 CFR 5.5(a)(1)(iv) that the wages of any laborer or mechanic include the amount of any costs reasonably anticipated in providing benefits

under a plan or program described in section 1(b)(2)(B) of the Davis-Bacon Act, Contractor shall maintain records that show that the commitment to provide such benefits is enforceable, that the plan or program is financially responsible, and that the plan or program has been communicated in writing to the laborers or mechanics affected, and records which show the costs anticipated or the actual costs incurred in providing such benefits. Contractors employing apprentices or trainees under approved programs shall maintain written evidence of the registration of apprenticeship programs and certification of trainee programs, the registration of the apprentices and trainees, and the ratios and wage rates prescribed in the applicable programs.

(ii)(A) Contractor shall submit weekly for each week in which any contract work is performed a copy of all payrolls to the Federal Aviation Administration if the agency is a party to the contract, but if the agency is not such a party, Contractor will submit the payrolls to the applicant, Sponsor, or Owner, as the case may be, for transmission to the Federal Aviation Administration. The payrolls submitted shall set out accurately and completely all of the information required to be maintained under 29 CFR § 5.5(a)(3)(i), except that full social security numbers and home addresses shall not be included on weekly transmittals. Instead the payrolls shall only need to include an individually identifying number for each employee (*e.g.,* the last four digits of the employee's social security number). The required weekly payroll information may be submitted in any form desired. Optional Form WH–347 is available for this purpose from the Wage and Hour Division Web site at https://www.dol.gov/agencies/whd/government-contracts/construction/payroll-certification or its successor site. The prime contractor is responsible for the submission of copies of payrolls by all subcontractors. Contractors and subcontractors shall maintain the full social security number and current address of each covered worker and shall provide them upon request to the Federal Aviation Administration if the agency is a party to the contract, but if the agency is not such a party, Contractor will submit them to the applicant, Sponsor, or Owner, as the case may be, for transmission to the Federal Aviation Administration, Contractor, or the Wage and Hour Division of the Department of Labor for purposes of an investigation or audit of compliance with prevailing wage requirements. It is not a violation of this section for a prime contractor to require a subcontractor to provide addresses and social security numbers to the prime contractor for its own records, without weekly submission to the sponsoring government agency (or the applicant, Sponsor, or Owner).

(B) Each payroll submitted shall be accompanied by a "Statement of Compliance," signed by Contractor or subcontractor or his or her agent who pays or supervises the payment of the persons employed under the contract and shall certify the following:

(1) That the payroll for the payroll period contains the information required to be provided under 29 CFR § 5.5(a)(3)(ii), the appropriate information is being maintained under 29 CFR § 5.5 (a)(3)(i), and that such information is correct and complete;

(2) That each laborer and mechanic (including each helper, apprentice, and trainee) employed on the contract during the payroll period has been paid the full weekly wages earned, without rebate, either directly or indirectly, and that no deductions have been made either directly or indirectly from the full wages earned, other than permissible deductions as set forth in Regulations, 29 CFR Part 3;

(3) That each laborer or mechanic has been paid not less than the applicable wage rates and fringe benefits or cash equivalents for the classification of work performed, as specified in the applicable wage determination incorporated into the contract.

(C) The weekly submission of a properly executed certification set forth on the reverse side of Optional Form WH-347 shall satisfy the requirement for submission of the "Statement of Compliance" required by paragraph (3)(ii)(B) of this section.

(D) The falsification of any of the above certifications may subject Contractor or subcontractor to civil or criminal prosecution under Section 1001 of Title 18 and Section 231 of Title 31 of the United States Code.

(iii) Contractor or subcontractor shall make the records required under paragraph (3)(i) of this section available for inspection, copying, or transcription by authorized representatives of the Sponsor, the Federal Aviation Administration, or the Department of Labor and shall permit such representatives to interview employees during working hours on the job. If Contractor or subcontractor fails to submit the required records or to make them available, the Federal agency may, after written notice to Contractor, Sponsor, applicant, or Owner, take such action as may be necessary to cause the suspension of any further payment, advance, or guarantee of funds. Furthermore, failure to submit the required records upon request or to make such records available may be grounds for debarment action pursuant to 29 CFR § 5.12.

4. Apprentices and Trainees.

(i) Apprentices. Apprentices will be permitted to work at less than the predetermined rate for the work they performed when they are employed pursuant to and individually registered in a bona fide apprenticeship program registered with the U.S. Department of Labor, Employment and Training Administration, Office of Apprenticeship Training, Employer and Labor Services, or with a State Apprenticeship Agency recognized by the Office, or if a person is employed in his or her first 90 days of probationary employment as an apprentice in such an apprenticeship program, who is not individually registered in the program, but who has been certified by the Office of Apprenticeship Training, Employer and Labor Services or a State Apprenticeship Agency (where appropriate) to be eligible for probationary employment as an apprentice. The allowable ratio of apprentices to journeymen on the job site in any craft classification shall not be greater than the ratio permitted to Contractor as to the entire work force under the registered program. Any worker listed on a payroll at an apprentice wage rate, who is not registered or otherwise employed as stated above, shall be paid not less than the applicable wage rate on the wage determination for the classification of work actually performed. In addition, any apprentice performing work on the job site in excess of the ratio permitted under the registered program shall be paid not less than the applicable wage rate on the wage determination for the work actually performed. Where a contractor is performing construction on a project in a locality other than that in which its program is registered, the ratios and wage rates (expressed in percentages of the journeyman's hourly rate) specified in Contractor's or subcontractor's registered program shall be observed. Every apprentice must be paid at not less than the rate specified in the registered program for the apprentice's level of progress, expressed as a percentage of the journeymen hourly rate specified in the applicable wage determination. Apprentices shall be paid fringe benefits in accordance with the provisions of the apprenticeship program. If the apprenticeship program does not specify fringe benefits, apprentices must be paid the full amount of fringe benefits listed on the wage determination for the applicable classification. If the Administrator determines that a different practice prevails for the applicable apprentice classification, fringes shall be paid in accordance with that determination. In the event the Office of Apprenticeship Training, Employer and Labor Services, or a State Apprenticeship Agency recognized by the Office, withdraws approval of an apprenticeship program, Contractor will no longer be permitted to utilize apprentices at less than the applicable predetermined rate for the work performed until an acceptable program is approved.

(ii) Trainees. Except as provided in 29 CFR § 5.16, trainees will not be permitted to work at less than the predetermined rate for the work performed unless they are employed pursuant to and individually registered in a program which has received prior approval, evidenced by formal certification by the U.S. Department of Labor, Employment and Training Administration. The ratio of trainees to journeymen on the job site shall not be greater than permitted under the plan approved by the Employment and Training Administration. Every trainee must be paid at not less than the rate specified in the approved program for the trainee's level of progress, expressed as a percentage of the journeyman hourly rate specified in the applicable wage determination. Trainees shall be paid fringe benefits in accordance with the provisions of the trainee program. If the trainee program does not mention fringe benefits, trainees shall be paid the full amount of fringe benefits listed on the wage determination unless the Administrator of the Wage and Hour Division determines that there is an apprenticeship program associated with the corresponding journeyman wage rate on the wage determination that provides for less than full fringe benefits for apprentices. Any employee listed on the payroll at a trainee rate that is not registered and participating in a training plan approved by the Employment and Training Administration shall be paid not less than the applicable wage rate on the wage determination for the classification of work actually performed. In addition, any trainee performing work on the job site in excess of the ratio permitted under the registered program shall be paid not less than the applicable wage rate on the wage determination for the work actually performed. In the event the Employment and Training Administration withdraws approval of a training program, Contractor will no longer be permitted to utilize trainees at less than the applicable predetermined rate for the work performed until an acceptable program is approved.

(iii) Equal Employment Opportunity. The utilization of apprentices, trainees, and journeymen under this part shall be in conformity with the equal employment opportunity requirements of Executive Order 11246, as amended, and 29 CFR Part 30.

5. Compliance with Copeland Act Requirements.

Contractor shall comply with the requirements of 29 CFR Part 3, which are incorporated by reference in this contract.

6. Subcontracts.

Contractor or subcontractor shall insert in any subcontracts the clauses contained in 29 CFR §§ 5.5(a)(1) through (10) and such other clauses as the Federal Aviation Administration may by appropriate instructions require, and also a clause requiring the subcontractors to include these clauses in any lower tier subcontracts. The prime contractor shall be responsible for the compliance by any subcontractor or lower tier subcontractor with all the contract clauses in 29 CFR § 5.5.

7. Contract Termination: Debarment.

A breach of the contract clauses in paragraph 1 through 10 of this Section may be grounds for termination of the contract, and for debarment as a contractor and a subcontractor as provided in 29 CFR § 5.12.

8. Compliance with Davis-Bacon and Related Act Requirements.

All rulings and interpretations of the Davis-Bacon and Related Acts contained in 29 CFR Parts 1, 3, and 5 are herein incorporated by reference in this contract.

9. Disputes Concerning Labor Standards.

Disputes arising out of the labor standards provisions of this contract shall not be subject to the general disputes clause of this contract. Such disputes shall be resolved in accordance with the procedures of the Department of Labor set forth in 29 CFR Parts 5, 6, and 7. Disputes within the meaning of this clause include disputes between Contractor (or any of its subcontractors) and the contracting agency, the U.S. Department of Labor, or the employees or their representatives.

10. Certification of Eligibility.

(i) By entering into this Contract, Contractor certifies that neither it (nor he or she) nor any person or firm who has an interest in Contractor's firm is a person or firm ineligible to be awarded Government contracts by virtue of section 3(a) of the Davis-Bacon Act or 29 CFR § 5.12(a)(1).

(ii) No part of this Contract shall be subcontracted to any person or firm ineligible for award of a Government contract by virtue of section 3(a) of the Davis-Bacon Act or 29 CFR § 5.12(a)(1).

(iii) The penalty for making false statements is prescribed in the U.S. Criminal Code, 18 USC § 1001.

CERTIFICATION OF OFFEROR/BIDDER REGARDING DEBARMENT

By submitting a bid/proposal under this solicitation, the bidder or offeror certifies that neither it nor its principals are presently debarred or suspended by any Federal department or agency from participation in this transaction.

CERTIFICATION OF LOWER TIER CONTRACTORS REGARDING DEBARMENT

The successful bidder, by administering each lower tier subcontract that exceeds $25,000 as a "covered transaction," must confirm each lower tier participant of a "covered transaction" under the project is not presently debarred or otherwise disqualified from participation in this federally-assisted project. The successful bidder will accomplish this by:

1. Checking the System for Award Management at website: http://www.sam.gov.
2. Collecting a certification statement similar to the Certification of Offeror /Bidder Regarding Debarment, above.
3. Inserting a clause or condition in the covered transaction with the lower tier contract.

If the Federal Aviation Administration later determines that a lower tier participant failed to disclose to a higher tier participant that it was excluded or disqualified at the time it entered the covered transaction, the FAA may pursue any available remedies, including suspension and debarment of the non-compliant participant.

DISADVANTAGED BUSINESS ENTERPRISE

Bid Information Submitted as a matter of responsiveness:
Owner's award of this Contract is conditioned upon Bidder or Offeror satisfying the good faith effort requirements of 49 CFR § 26.53.

As a condition of responsiveness, the Bidder or Offeror must submit the following information with its proposal on the forms provided herein:

1) The names and addresses of Disadvantaged Business Enterprise (DBE) firms that will participate in the Contract;
2) A description of the work that each DBE firm will perform;
3) The dollar amount of the participation of each DBE firm listed under (1);
4) Written statement from Bidder or Offeror that attests their commitment to use the DBE firm(s) listed under (1) to meet the Owner's project goal;
5) Written confirmation from each listed DBE firm that it is participating in the contract in the kind and amount of work provided in the prime contractor's commitment; and
6) If Bidder or Offeror cannot meet the advertised project DBE goal, evidence of good faith efforts undertaken by the Bidder or Offeror as described in appendix A to 49 CFR part 26. The documentation of good faith efforts must include copies of each DBE and non-DBE subcontractor quote submitted to the bidder when a non-DBE subcontractor was selected over a DBE for work on the contract.

Bid Information submitted as a matter of responsibility:
The Owner's award of this contract is conditioned upon Bidder or Offeror satisfying the good faith effort requirements of 49 CFR § 26.53.

As a condition of responsibility, every Bidder or Offeror must submit the following information on the forms provided herein within five days after Bid Opening.

1) The names and addresses of Disadvantaged Business Enterprise (DBE) firms that will participate in the contract;
2) A description of the work that each DBE firm will perform;
3) The dollar amount of the participation of each DBE firm listed under (1);
4) Written statement from Bidder or Offeror that attests their commitment to use the DBE firm(s) listed under (1) to meet the Owner's project goal;
5) Written confirmation from each listed DBE firm that it is participating in the contract in the kind and amount of work provided in the prime contractor's commitment; and
6) If Bidder or Offeror cannot meet the advertised project DBE goal, evidence of good faith efforts undertaken by the Bidder or Offeror as described in appendix A to 49 CFR part 26. The documentation of good faith efforts must include copies of each DBE and non-DBE subcontractor quote submitted to the bidder when a non-DBE subcontractor was selected over a DBE for work on the contract.

Contract Assurance (49 CFR § 26.13)

Contractor, subrecipient or subcontractor shall not discriminate on the basis of race, color, national origin, or sex in the performance of this contract. Contractor shall carry out applicable requirements of 49 CFR part 26 in the award and administration of DOT-assisted contracts. Failure by Contractor to carry out these requirements is a material breach of this contract, which may result in the termination of this contract or such other remedy as the recipient deems appropriate, which may include, but is not limited to:

1) Withholding monthly progress payments;
2) Assessing sanctions;
3) Liquidated damages; and/or
4) Disqualifying Contractor from future bidding as non-responsible.

Prompt Payment (49 CFR § 26.29) –
The Prime Contractor agrees to pay each subcontractor under this prime contract for satisfactory performance of its contract no later than 30 days from the receipt of each payment the prime contractor receives from City of Midland, Texas. The Prime Contractor agrees further to return retainage payments to each subcontractor within 30 days after the subcontractor's work is satisfactorily completed. Any delay or postponement of payment from the above-referenced time frame may occur only for good cause following written approval of the City of Midland, Texas. This clause applies to both DBE and non-DBE subcontractors.

Termination of DBE Subcontracts (49 CFR § 26.53(f)) –
The Prime Contractor must not terminate a DBE subcontractor listed in response to this Bid Proposal (or an approved substitute DBE firm) without prior written consent of City of Midland, Texas. This includes, but is not limited to, instances in which the Prime Contractor seeks to perform work originally designated for a DBE subcontractor with its own forces or those of an affiliate, a non-DBE firm, or with another DBE firm.

The Prime Contractor shall utilize the specific DBEs listed to perform the work and supply the materials for which each is listed unless Contractor obtains written consent City of Midland, Texas. Unless City of Midland, Texas consent is provided, the Prime Contractor shall not be entitled to any payment for work or material unless it is performed or supplied by the listed DBE.

City of Midland, Texas may provide such written consent only if City of Midland, Texas agrees, for reasons stated in the concurrence document, that the prime contractor has good cause to terminate the DBE firm. For purposes of this paragraph, good cause includes the circumstances listed in 49 CFR §26.53.

Before transmitting to City of Midland, Texas its request to terminate and/or substitute a DBE subcontractor, the Prime Contractor must give notice in writing to the DBE subcontractor, with a copy to City of Midland, Texas, of its intent to request to terminate and/or substitute, and the reason for the request.

The Prime Contractor must give the DBE five days to respond to the Prime Contractor's notice and advise City of Midland, Texas, and Contractor of the reasons, if any, why it objects to the proposed termination of its subcontract and why City of Midland, Texas should not approve the prime contractor's action. If required in a particular case as a matter of public necessity (e.g., safety), City of Midland, Texas may provide a response period shorter than five days.

In addition to post-award terminations, the provisions of this Section apply to preaward deletions of or substitutions for DBE firms put forward by offerors in negotiated procurements.

TEXTING WHEN DRIVING

In accordance with Executive Order 13513, "Federal Leadership on Reducing Text Messaging While Driving," (10/1/2009) and DOT Order 3902.10, "Text Messaging While Driving," (12/30/2009), the Federal Aviation Administration encourages recipients of Federal grant funds to adopt and enforce safety policies that decrease crashes by distracted drivers, including policies to ban text messaging while driving when performing work related to a grant or subgrant.

In support of this initiative, the Owner encourages Contractor to promote policies and initiatives for its employees and other work personnel that decrease crashes by distracted drivers, including policies that ban text messaging while driving motor vehicles while performing work activities associated with the project. Contractor must include the substance of this clause in all sub-tier contracts exceeding $10,000 that involve driving a motor vehicle in performance of work activities associated with the project.

PROHIBITION ON CERTAIN TELECOMMUNICATIONS AND VIDEO SURVEILLANCE SERVICES OR EQUIPMENT

Contractor and Subcontractor agree to comply with mandatory standards and policies relating to use and procurement of certain telecommunications and video surveillance services or equipment in compliance with the National Defense Authorization Act.

EQUAL OPPORTUNITY CLAUSE

During the performance of this contract, Contractor agrees as follows:

(1) Contractor will not discriminate against any employee or applicant for employment because of race, color, religion, sex, sexual orientation, gender identity, or national origin. Contractor will take affirmative action to ensure that applicants are employed, and that employees are treated during employment, without regard to their race, color, religion, sex, sexual orientation, gender identify, or national origin. Such action shall include, but not be limited to, the following: employment, upgrading, demotion, or transfer; recruitment or recruitment advertising; layoff, or termination; rates of pay or other forms of compensation; and selection for training, including apprenticeship. Contractor agrees to post in conspicuous places, available to employees and applicants for employment, notices to be provided setting forth the provisions of this nondiscrimination clause.

(2) Contractor will, in all solicitations or advertisements for employees placed by or on behalf of Contractor, state that all qualified applicants will receive consideration for employment without regard to race, color, religion, sex, sexual orientation, gender identity, or national origin.

(3) Contractor will not discharge or in any other manner discriminate against any employee or applicant for employment because such employee or applicant has inquired about, discussed, or disclosed the compensation of the employee or applicant or another employee or applicant. This provision shall not apply to instances in which an employee who has access to the compensation information of other employees or applicants as a part of such employee's essential job functions discloses the compensation of such other employees or applicants to individuals who do not otherwise have access to such information, unless such disclosure is in response to a formal complaint or charge, in furtherance of an investigation, proceeding, hearing, or action, including an investigation conducted by the employer, or is consistent with Contractor's legal duty to furnish information.

(4) Contractor will send to each labor union or representative of workers with which it has a collective bargaining agreement or other contract or understanding, a notice to be provided by the agency contracting officer, advising the labor union or workers' representative of Contractor's commitments under this section 202 of Executive Order 11246 of September 24, 1965, and shall post copies of the notice in conspicuous places available to employees and applicants for employment.

(5) Contractor will comply with all provisions of Executive Order 11246 of September 24, 1965, and of the rules, regulations, and relevant orders of the Secretary of Labor.

(6) Contractor will furnish all information and reports required by Executive Order 11246 of September 24, 1965, and by the rules, regulations, and orders of the Secretary of Labor, or pursuant thereto, and will permit access to his books, records, and accounts by the contracting agency and the Secretary of Labor for purposes of investigation to ascertain compliance with such rules, regulations, and orders.

(7) In the event of Contractor's noncompliance with the nondiscrimination clauses of this contract or with any such rules, regulations, or orders, this contract may be canceled, terminated, or suspended in whole or in part and Contractor may be declared ineligible for further Government contracts in accordance with procedures authorized in Executive Order 11246 of September 24, 1965, and such other sanctions may be imposed and remedies invoked as provided in Executive Order 11246 of September 24, 1965, or by rule, regulation, or order of the Secretary of Labor, or as otherwise provided by law.

(8) Contractor will include the provisions of paragraphs (1) through (8) in every subcontract or purchase order unless exempted by rules, regulations, or orders of the Secretary of Labor issued pursuant to section 204 of Executive Order 11246 of September 24, 1965, so that such provisions will be binding upon each subcontractor or vendor. Contractor will take such action with respect to any subcontract or purchase order as may be directed by the Secretary of Labor as a means of enforcing such provisions, including sanctions for noncompliance*: Provided,* however, that in the event Contractor becomes involved in, or is threatened with, litigation with a subcontractor or vendor as a result of such direction, Contractor may request the United States to enter into such litigation to protect the interests of the United States.

STANDARD FEDERAL EQUAL EMPLOYMENT OPPORTUNITY
CONSTRUCTION CONTRACT SPECIFICATIONS

1. As used in these specifications:

a. "Covered area" means the geographical area described in the solicitation from which this contract resulted;

b. "Director" means Director, Office of Federal Contract Compliance Programs (OFCCP), U.S. Department of Labor, or any person to whom the Director delegates authority;

c. "Employer identification number" means the Federal social security number used on the Employer's Quarterly Federal Tax Return, U.S. Treasury Department Form 941;

d. "Minority" includes:

(1) Black (all persons having origins in any of the Black African racial groups not of Hispanic origin);

(2) Hispanic (all persons of Mexican, Puerto Rican, Cuban, Central or South American, or other Spanish culture or origin, regardless of race);

(3) Asian and Pacific Islander (all persons having origins in any of the original peoples of the Far East, Southeast Asia, the Indian Subcontinent, or the Pacific Islands); and

(4) American Indian or Alaskan native (all persons having origins in any of the original peoples of North America and maintaining identifiable tribal affiliations through membership and participation or community identification).

2. Whenever Contractor, or any subcontractor at any tier, subcontracts a portion of the work involving any construction trade, it shall physically include in each subcontract in excess of $10,000 the provisions of these specifications and the Notice which contains the applicable goals for minority and female participation, and which is set forth in the solicitations from which this contract resulted.

3. If Contractor is participating (pursuant to 41 CFR part 60-4.5) in a Hometown Plan approved by the U.S. Department of Labor in the covered area either individually or through an association, its affirmative action obligations on all work in the Plan area (including goals and timetables) shall be in accordance with that Plan for those trades which have unions participating in the Plan. Contractors must be able to demonstrate their participation in and compliance with the provisions of any such Hometown Plan. Each contractor or subcontractor participating in an approved plan is individually required to comply with its obligations under the EEO clause and to make a good faith effort to achieve each goal under the Plan in each trade in which it has employees. The overall good faith performance by other contractors or subcontractors toward a goal in an approved Plan does not excuse any covered contractor's or subcontractor's failure to take good faith efforts to achieve the Plan goals and timetables.

4. Contractor shall implement the specific affirmative action standards provided in paragraphs 7a through 7p of these Specifications. The goals set forth in the solicitation from which this contract resulted are expressed as percentages of the total hours of employment and training of minority and female utilization Contractor should reasonably be able to achieve in each construction trade in which it has employees in the covered area. Covered construction contractors performing construction work in a geographical areas where they do not have a Federal or federally assisted construction contract shall apply the minority and

female goals established for the geographical area where the work is being performed. Goals are published periodically in the Federal Register in notice form, and such notices may be obtained from any Office of Federal Contract Compliance Programs office or from Federal procurement contracting officers. Contractor is expected to make substantially uniform progress in meeting its goals in each craft during the period specified.

5. Neither the provisions of any collective bargaining agreement, nor the failure by a union with whom Contractor has a collective bargaining agreement, to refer either minorities or women shall excuse Contractor's obligations under these specifications, Executive Order 11246, or the regulations promulgated pursuant thereto.

6. In order for the nonworking training hours of apprentices and trainees to be counted in meeting the goals, such apprentices and trainees must be employed by Contractor during the training period, and Contractor must have made a commitment to employ the apprentices and trainees at the completion of their training, subject to the availability of employment opportunities. Trainees must be trained pursuant to training programs approved by the U.S. Department of Labor.

7. Contractor shall take specific affirmative actions to ensure equal employment opportunity. The evaluation of Contractor's compliance with these specifications shall be based upon its effort to achieve maximum results from its actions. Contractor shall document these efforts fully, and shall implement affirmative action steps at least as extensive as the following:

a. Ensure and maintain a working environment free of harassment, intimidation, and coercion at all sites, and in all facilities at which Contractor's employees are assigned to Work. Contractor, where possible, will assign two or more women to each construction project. Contractor shall specifically ensure that all foremen, superintendents, and other onsite supervisory personnel are aware of and carry out Contractor's obligation to maintain such a working environment, with specific attention to minority or female individuals working at such sites or in such facilities.

b. Establish and maintain a current list of minority and female recruitment sources, provide written notification to minority and female recruitment sources and to community organizations when Contractor or its unions have employment opportunities available, and maintain a record of the organizations' responses.

c. Maintain a current file of the names, addresses, and telephone numbers of each minority and female off-the-street applicant and minority or female referral from a union, a recruitment source, or community organization and of what action was taken with respect to each such individual. If such individual was sent to the union hiring hall for referral and was not referred back to Contractor by the union or, if referred, not employed by Contractor, this shall be documented in the file with the reason therefor, along with whatever additional actions Contractor may have taken.

d. Provide immediate written notification to the Director when the union or unions with which Contractor has a collective bargaining agreement has not referred to Contractor a minority person or woman sent by Contractor, or when Contractor has other information that the union referral process has impeded Contractor's efforts to meet its obligations.

e. Develop on-the-job training opportunities and/or participate in training programs for the area which expressly include minorities and women, including upgrading programs and apprenticeship and trainee programs relevant to Contractor's employment needs, especially those programs funded or approved by the Department of Labor. Contractor shall provide notice of these programs to the sources compiled under 7b above.

f. Disseminate Contractor's EEO policy by providing notice of the policy to unions and training programs and requesting their cooperation in assisting Contractor in meeting its EEO obligations; by including it in any policy manual and collective bargaining agreement; by publicizing it in the company newspaper, annual report, etc.; by specific review of the policy with all management personnel and with all minority and female employees at least once a year; and by posting the company EEO policy on bulletin boards accessible to all employees at each location where construction work is performed.

g. Review, at least annually, the company's EEO policy and affirmative action obligations under these specifications with all employees having any responsibility for hiring, assignment, layoff, termination, or other employment decisions including specific review of these items with onsite supervisory personnel such superintendents, general foremen, etc., prior to the initiation of construction work at any job site. A written record shall be made and maintained identifying the time and place of these meetings, persons attending, subject matter discussed, and disposition of the subject matter.

h. Disseminate Contractor's EEO policy externally by including it in any advertising in the news media, specifically including minority and female news media, and providing written notification to and discussing Contractor's EEO policy with other contractors and subcontractors with whom Contractor does or anticipates doing business.

i. Direct its recruitment efforts, both oral and written, to minority, female, and community organizations, to schools with minority and female students and to minority and female recruitment and training organizations serving Contractor's recruitment area and employment needs. Not later than one month prior to the date for the acceptance of applications for apprenticeship or other training by any recruitment source, Contractor shall send written notification to organizations such as the above, describing the openings, screening procedures, and tests to be used in the selection process.

j. Encourage present minority and female employees to recruit other minority persons and women and, where reasonable, provide after school, summer, and vacation employment to minority and female youth both on the site and in other areas of a contractor's work force.

k. Validate all tests and other selection requirements where there is an obligation to do so under 41 CFR part 60-3.

l. Conduct, at least annually, an inventory and evaluation at least of all minority and female personnel, for promotional opportunities and encourage these employees to seek or to prepare for, through appropriate training, etc., such opportunities.

m. Ensure that seniority practices, job classifications, work assignments, and other personnel practices do not have a discriminatory effect by continually monitoring all personnel and employment related

activities to ensure that the EEO policy and Contractor's obligations under these specifications are being carried out.

n. Ensure that all facilities and company activities are nonsegregated except that separate or single-user toilet and necessary changing facilities shall be provided to assure privacy between the sexes.

o. Document and maintain a record of all solicitations of offers for subcontracts from minority and female construction contractors and suppliers, including circulation of solicitations to minority and female contractor associations and other business associations.

p. Conduct a review, at least annually, of all supervisor's adherence to and performance under Contractor's EEO policies and affirmative action obligations.

8. Contractors are encouraged to participate in voluntary associations, which assist in fulfilling one or more of their affirmative action obligations (7a through 7p). The efforts of a contractor association, joint contractor-union, contractor-community, or other similar group of which Contractor is a member and participant may be asserted as fulfilling any one or more of its obligations under 7a through 7p of these specifications provided that Contractor actively participates in the group, makes every effort to assure that the group has a positive impact on the employment of minorities and women in the industry, ensures that the concrete benefits of the program are reflected in Contractor's minority and female workforce participation, makes a good faith effort to meet its individual goals and timetables, and can provide access to documentation which demonstrates the effectiveness of actions taken on behalf of Contractor. The obligation to comply, however, is Contractor's and failure of such a group to fulfill an obligation shall not be a defense for Contractor's noncompliance.

9. A single goal for minorities and a separate single goal for women have been established. Contractor, however, is required to provide equal employment opportunity and to take affirmative action for all minority groups, both male and female, and all women, both minority and non-minority. Consequently, Contractor may be in violation of the Executive Order if a particular group is employed in a substantially disparate manner (for example, even though Contractor has achieved its goals for women generally, Contractor may be in violation of the Executive Order if a specific minority group of women is underutilized).

10. Contractor shall not use the goals and timetables or affirmative action standards to discriminate against any person because of race, color, religion, sex, sexual orientation, gender identity, or national origin.

11. Contractor shall not enter into any subcontract with any person or firm debarred from Government contracts pursuant to Executive Order 11246.

12. Contractor shall carry out such sanctions and penalties for violation of these specifications and of the Equal Opportunity Clause, including suspension, termination, and cancellation of existing subcontracts as may be imposed or ordered pursuant to Executive Order 11246, as amended, and its implementing regulations, by the Office of Federal Contract Compliance Programs. Any contractor who fails to carry out such sanctions and penalties shall be in violation of these specifications and Executive Order 11246, as amended.

13. Contractor, in fulfilling its obligations under these specifications, shall implement specific affirmative action steps, at least as extensive as those standards prescribed in paragraph 7 of these specifications, so as to achieve maximum results from its efforts to ensure equal employment opportunity. If Contractor fails to comply with the requirements of the Executive Order, the implementing regulations, or these specifications, the Director shall proceed in accordance with 41 CFR part 60-4.8.

14. Contractor shall designate a responsible official to monitor all employment related activity to ensure that the company EEO policy is being carried out, to submit reports relating to the provisions hereof as may be required by the Government, and to keep records. Records shall at least include for each employee, the name, address, telephone numbers, construction trade, union affiliation if any, employee identification number when assigned, social security number, race, sex, status (e.g., mechanic, apprentice, trainee, helper, or laborer), dates of changes in status, hours worked per week in the indicated trade, rate of pay, and locations at which the work was performed. Records shall be maintained in an easily understandable and retrievable form; however, to the degree that existing records satisfy this requirement, contractors shall not be required to maintain separate records.

15. Nothing herein provided shall be construed as a limitation upon the application of other laws which establish different standards of compliance or upon the application of requirements for the hiring of local or other area residents (e.g. those under the Public Works Employment Act of 1977 and the Community Development Block Grant Program).

FEDERAL FAIR LABOR STANDARDS ACT (FEDERAL MINIMUM WAGE)

All contracts and subcontracts that result from this solicitation incorporate by reference the provisions of 29 CFR part 201, et seq, the Federal Fair Labor Standards Act (FLSA), with the same force and effect as if given in full text. The FLSA sets minimum wage, overtime pay, recordkeeping, and child labor standards for full and part-time workers.

Contractor has full responsibility to monitor compliance to the referenced statute or regulation. Contractor must address any claims or disputes that arise from this requirement directly with the U.S. Department of Labor – Wage and Hour Division.

CERTIFICATION REGARDING LOBBYING

The Bidder or Offeror certifies by signing and submitting this bid or proposal, to the best of his or her knowledge and belief, that:

(1) No Federal appropriated funds have been paid or will be paid, by or on behalf of the Bidder or Offeror, to any person for influencing or attempting to influence an officer or employee of an agency, a Member of Congress, an officer or employee of Congress, or an employee of a Member of Congress in connection with the awarding of any Federal contract, the making of any Federal grant, the making of any Federal loan, the entering into of any cooperative agreement, and the extension, continuation, renewal, amendment, or modification of any Federal contract, grant, loan, or cooperative agreement.

(2) If any funds other than Federal appropriated funds have been paid or will be paid to any person for influencing or attempting to influence an officer or employee of any agency, a Member of Congress, an officer or employee of Congress, or an employee of a Member of Congress in connection with this Federal contract, grant, loan, or cooperative agreement, the undersigned shall complete and submit Standard Form-LLL, "Disclosure Form to Report Lobbying," in accordance with its instructions.

(3) The undersigned shall require that the language of this certification be included in the award documents for all sub-awards at all tiers (including subcontracts, subgrants, and contracts under grants, loans, and cooperative agreements) and that all sub-recipients shall certify and disclose accordingly.

This certification is a material representation of fact upon which reliance was placed when this transaction was made or entered into. Submission of this certification is a prerequisite for making or entering into this transaction imposed by section 1352, title 31, U.S. Code. Any person who fails to file the required certification shall be subject to a civil penalty of not less than $10,000 and not more than $100,000 for each such failure.

PROHIBITION OF SEGREGATED FACILITIES

(a) Contractor agrees that it does not and will not maintain or provide for its employees any segregated facilities at any of its establishments, and that it does not and will not permit its employees to perform their services at any location under its control where segregated facilities are maintained. Contractor agrees that a breach of this clause is a violation of the Equal Employment Opportunity clause in this contract.

(b) "Segregated facilities," as used in this clause, means any waiting rooms, work areas, rest rooms and wash rooms, restaurants and other eating areas, time clocks, locker rooms and other storage or dressing areas, parking lots, drinking fountains, recreation or entertainment areas, transportation, and housing facilities provided for employees that are segregated by explicit directive or are in fact segregated on the basis of race, color, religion, sex, sexual orientation, gender identity, or national origin because of written or oral policies or employee custom. The term does not include separate or single-user rest rooms or necessary dressing or sleeping areas provided to assure privacy between the sexes.

(c) Contractor shall include this clause in every subcontract and purchase order that is subject to the Equal Employment Opportunity clause of this contract.

OCCUPATIONAL SAFETY AND HEALTH ACT OF 1970

All contracts and subcontracts that result from this solicitation incorporate by reference the requirements of 29 CFR Part 1910 with the same force and effect as if given in full text. The employer must provide a work environment that is free from recognized hazards that may cause death or serious physical harm to the employee. The employer retains full responsibility to monitor its compliance and their subcontractor's compliance with the applicable requirements of the Occupational Safety and Health Act of 1970 (29 CFR Part 1910). The employer must address any claims or disputes that pertain to a referenced requirement directly with the U.S. Department of Labor – Occupational Safety and Health Administration.

PROCUREMENT OF RECOVERED MATERIALS

Contractor and subcontractor agree to comply with Section 6002 of the Solid Waste Disposal Act, as amended by the Resource Conservation and Recovery Act, and the regulatory provisions of 40 CFR Part 247. In the performance of this contract and to the extent practicable, Contractor and subcontractors are to use products containing the highest percentage of recovered materials for items designated by the Environmental Protection Agency (EPA) under 40 CFR Part 247 whenever:

1) The contract requires procurement of $10,000 or more of a designated item during the fiscal year; or
2) Contractor has procured $10,000 or more of a designated item using Federal funding during the previous fiscal year.

The list of EPA-designated items is available at www.epa.gov/smm/comprehensive-procurement-guidelines-construction-products.

Section 6002(c) establishes exceptions to the preference for recovery of EPA-designated products if Contractor can demonstrate the item is:

a) Not reasonably available within a timeframe providing for compliance with the contract performance schedule;
b) Fails to meet reasonable contract performance requirements; or
c) Is only available at an unreasonable price.

SEISMIC SAFETY

The Contractor agrees to ensure that all work performed under this contract, including work performed by subcontractors, conforms to a building code standard that provides a level of seismic safety substantially equivalent to standards established by the National Earthquake Hazards Reduction Program (NEHRP). Local building codes that model their code after the current version of the International Building Code (IBC) meet the NEHRP equivalency level for seismic safety.

CERTIFICATION OF OFFEROR/BIDDER REGARDING TAX DELINQUENCY AND FELONY CONVICTIONS

The applicant must complete the following two certification statements. The applicant must indicate its current status as it relates to tax delinquency and felony conviction by inserting a checkmark (✓) in the space following the applicable response. The applicant agrees that, if awarded a contract resulting from this solicitation, it will incorporate this provision for certification in all lower tier subcontracts.

Certifications

1) The applicant represents that it is ( ) is not ( ) a corporation that has any unpaid Federal tax liability that has been assessed, for which all judicial and administrative remedies have been exhausted or have lapsed, and that is not being paid in a timely manner pursuant to an agreement with the authority responsible for collecting the tax liability.

2) The applicant represents that it is ( ) is not ( ) a corporation that was convicted of a criminal violation under any Federal law within the preceding 24 months.

Note

If an applicant responds in the affirmative to either of the above representations, the applicant is ineligible to receive an award unless the Sponsor has received notification from the agency suspension and debarment official (SDO) that the SDO has considered suspension or debarment and determined that further action is not required to protect the Government's interests. The applicant therefore must provide information to the owner about its tax liability or conviction to the Owner, who will then notify the FAA Airports District Office, which will then notify the agency's SDO to facilitate completion of the required considerations before award decisions are made.

Term Definitions

Felony conviction: Felony conviction means a conviction within the preceding twenty four (24) months of a felony criminal violation under any Federal law and includes conviction of an offense defined in a section of the U.S. Code that specifically classifies the offense as a felony and conviction of an offense that is classified as a felony under 18 USC § 3559.

Tax Delinquency: A tax delinquency is any unpaid Federal tax liability that has been assessed, for which all judicial and administrative remedies have been exhausted, or have lapsed, and that is not being paid in a timely manner pursuant to an agreement with the authority responsible for collecting the tax liability.

TERMINATION FOR CONVENIENCE (CONSTRUCTION & EQUIPMENT CONTRACTS)

The Owner may terminate this contract in whole or in part at any time by providing written notice to Contractor. Such action may be without cause and without prejudice to any other right or remedy of Owner. Upon receipt of a written notice of termination, except as explicitly directed by the Owner, Contractor shall immediately proceed with the following obligations regardless of any delay in determining or adjusting amounts due under this clause:

1. Contractor must immediately discontinue work as specified in the written notice.
2. Terminate all subcontracts to the extent they relate to the work terminated under the notice.
3. Discontinue orders for materials and services except as directed by the written notice.

4. Deliver to the Owner all fabricated and partially fabricated parts, completed, and partially completed work, supplies, equipment and materials acquired prior to termination of the work, and as directed in the written notice.
5. Complete performance of the work not terminated by the notice.
6. Take action as directed by the Owner to protect and preserve property and work related to this contract that Owner will take possession.

Owner agrees to pay Contractor for:

1. Completed and acceptable work executed in accordance with the contract documents prior to the effective date of termination;
2. Documented expenses sustained prior to the effective date of termination in performing work and furnishing labor, materials, or equipment as required by the contract documents in connection with uncompleted work;
3. Reasonable and substantiated claims, costs, and damages incurred in settlement of terminated contracts with Subcontractors and Suppliers; and
4. Reasonable and substantiated expenses to Contractor directly attributable to Owner's termination action.

Owner will not pay Contractor for loss of anticipated profits or revenue or other economic loss arising out of or resulting from the Owner's termination action.

The rights and remedies this clause provides are in addition to any other rights and remedies provided by law or under this contract.

TERMINATION FOR CAUSE (CONSTRUCTION)

Section 80-09 of FAA Advisory Circular 150/5370-10 establishes standard language for conditions, rights, and remedies associated with Owner termination of this contract for cause due to default of Contractor.

TRADE RESTRICTION CERTIFICATION

By submission of an offer, the Offeror certifies that with respect to this solicitation and any resultant contract, the Offeror –

1) is not owned or controlled by one or more citizens of a foreign country included in the list of countries that discriminate against U.S. firms as published by the Office of the United States Trade Representative (USTR);

2) has not knowingly entered into any contract or subcontract for this project with a person that is a citizen or national of a foreign country included on the list of countries that discriminate against U.S. firms as published by the USTR; and

3) has not entered into any subcontract for any product to be used on the Federal project that is produced in a foreign country included on the list of countries that discriminate against U.S. firms published by the USTR.

This certification concerns a matter within the jurisdiction of an agency of the United States of America and the making of a false, fictitious, or fraudulent certification may render the maker subject to prosecution under Title 18 USC § 1001.

The Offeror/Contractor must provide immediate written notice to the Owner if the Offeror/Contractor learns that its certification or that of a subcontractor was erroneous when submitted or has become erroneous by reason of changed circumstances. Contractor must require subcontractors provide immediate written notice to Contractor if at any time it learns that its certification was erroneous by reason of changed circumstances.

Unless the restrictions of this clause are waived by the Secretary of Transportation in accordance with 49 CFR § 30.17, no contract shall be awarded to an Offeror or subcontractor:

1) who is owned or controlled by one or more citizens or nationals of a foreign country included on the list of countries that discriminate against U.S. firms published by the USTR; or
2) whose subcontractors are owned or controlled by one or more citizens or nationals of a foreign country on such USTR list; or
3) who incorporates in the public works project any product of a foreign country on such USTR list.

Nothing contained in the foregoing shall be construed to require establishment of a system of records in order to render, in good faith, the certification required by this provision. The knowledge and information of a contractor is not required to exceed that which is normally possessed by a prudent person in the ordinary course of business dealings.

The Offeror agrees that, if awarded a contract resulting from this solicitation, it will incorporate this provision for certification without modification in all lower tier subcontracts. Contractor may rely on the certification of a prospective subcontractor that it is not a firm from a foreign country included on the list of countries that discriminate against U.S. firms as published by USTR, unless the Offeror has knowledge that the certification is erroneous.

This certification is a material representation of fact upon which reliance was placed when making an award. If it is later determined that Contractor or subcontractor knowingly rendered an erroneous certification, the Federal Aviation Administration (FAA) may direct through the Owner cancellation of the contract or subcontract for default at no cost to the Owner or the FAA.

VETERAN'S PREFERENCE

In the employment of labor (excluding executive, administrative, and supervisory positions), Contractor and all sub-tier contractors must give preference to covered veterans as defined within Title 49 United States Code Section 47112. Covered veterans include Vietnam-era veterans, Persian Gulf veterans, Afghanistan-Iraq war veterans, disabled veterans, and small business concerns (as defined by 15 USC § 632) owned and controlled by disabled veterans. This preference only applies when there are covered veterans readily available and qualified to perform the work to which the employment relates.

CERTIFICATION REGARDING DOMESTIC PREFERENCES FOR PROCUREMENTS

The Bidder or Offeror certifies by signing and submitting this bid or proposal that, to the greatest extent practicable, the Bidder or Offeror has provided a preference for the purchase, acquisition, or use of goods, products, or materials produced in the United States (including, but not limited to, iron, aluminum, steel, cement, and other manufactured products) in compliance with 2 CFR § 200.322.

REFER TO SECTION 00 73 43 “WAGE RATE REQUIREMENTS” FOR THE LATEST VERSION OF THE WAGE RATE TABLES.

CONTRACT ASSURANCE

Contractor will ensure that the following clause is placed in every DOT-assisted contract and subcontract:

Contractor or subcontractor shall not discriminate on the basis of race, color, national origin, or sex in the performance of this contract. Contractor shall carry out applicable requirements of 49 CFR Part 26 in the award and administration of DOT-assisted contracts. Failure by Contractor to carry out these requirements is a material breach of this contract which may result in the termination of this contract or such other remedy as the recipient deems appropriate. This may include, but is not limited to:

1. Withholding monthly progress payments;
2. Assessing sanctions;
3. Liquidated damages; and or
4. Disqualifying the contractor from future bidding as non-responsible.

PROMPT PAYMENT

Prime Contractor agrees to pay each Subcontractor under this Prime Contract for satisfactory performance of its contract no later than 30 working days from the receipt of each payment the prime contractor receives from the City of Midland. Prime contractor agrees further to return retainage payments to each subcontractor within 30 working days after the subcontractor's work is satisfactorily completed. Any delay or postponement of payment from the above referenced time frame may occur only for good cause following written approval of the City of Midland. The clause applies to both DBE and non-DBE subcontractors.

For purposes of this section, a subcontractor's work is satisfactorily completed when all the tasks called for in the subcontract have been accomplished and documented as required by the City of Midland. When the City of Midland has made an incremental acceptance of a portion of a prime contract, the work of a Subcontractor covered by that acceptance is deemed to be satisfactorily completed.

Contractor will not be reimbursed for work performed by Subcontractors unless and until the contractor ensures that the subcontractors are promptly paid for the work they have performed.

Contractor failure to comply with the requirements of the DBE Plan shall constitute a material breach of this contract. In such a case, the City of Midland reserves the right to terminate the contract; to deduct the amount of DBE goal not accomplished by DBEs from the money due or to become due Contractor, not as a penalty but as liquidated damages to the City of Midland or such other remedy or remedies as the City of Midland deems appropriate.

CITY OF MIDLAND DEPARTMENT OF AIRPORTS
DBE POLICY STATEMENT

Section 26.1, 26.23 Objectives/Policy Statement

The City of Midland, Owner, and Operator of Midland International Air & Space Port, herein referred to as MAF, established a Disadvantaged Business Enterprise (DBE) program in accordance with regulations of the U.S. Department of Transportation (DOT), 49 CFR Part 26. MAF received Federal financial assistance from the Department of Transportation and as a condition of receiving this assistance, MAF signed an assurance to comply with 49 CFR Part 26.

It is the MAF policy to ensure DBEs, as defined in Part 26, have an equal opportunity to receive and participate in DOT-assisted contracts. It is also our policy to:

1. ensure nondiscrimination in award and administration of DOT-assisted contracts;
2. create a level playing field on which DBEs can compete fairly for DOT-assisted contracts;
3. ensure DBE Program is narrowly tailored in accordance with applicable law;
4. ensure only firms who fully meet 49 CFR Part 26 eligibility standards are permitted to participate as DBEs;
5. help remove barriers to participation of DBEs in DOT-assisted contracts; and
6. assist development of firms that can successfully compete in the marketplace outside the DBE program.

An MAF staff person has been delegated as the DBE Liaison Officer. In that capacity, appointed staff is responsible for implementing all DBE program aspects. Implementation of the DBE program is accorded the same priority as compliance with all other legal obligations incurred by MAF in financial assistance agreements with the Department of Transportation.

MAF disseminated this policy statement to the City Council of the City of Midland, Texas, and all components of the organization. We distributed this statement to DBE and non-DBE business communities who perform Work for us on DOT-assisted contracts. This is accomplished via inclusion in all our Bid Documents.

Justine Ruff, Director of Airports

Section 26.37 Monitoring Responsibilities

MONITORING PAYMENTS TO DBEs AND NON-DBEs

MAF undertakes ongoing monitoring of prime payments to subcontractors over the course of any covered contract. Such monitoring activities will be accomplished as follows:

1. Prime Contractors must submit monthly proof of prompt payment to Airport.
2. DBELO will monitor prompt payment to subcontractors via review of cancelled checks and/or accounts payable ledgers submitted with monthly reports.
3. DBELO will verify checks payable to subcontractors are dated within prompt payment period.
4. DBELO may also contact DBE subcontractors by phone/email to confirm receipt of payment within prompt payment period.

Airport requires prime contractors to maintain records/documents of payment to subcontractors, including DBEs, for a minimum of three years unless otherwise provided by applicable record retention requirements for Airport financial assistance agreement, whichever is longer. These records will be made available for inspection upon request by any authorized representative of the MAF or DOT. This reporting requirement extends to all DBE and non-DBE subcontractors.

INFORMATION TO BE SUBMITTED (26.53(B)):

MAF treats Bidder/Offeror compliance with good faith effort requirements as a matter of responsiveness.

Requirements of 49 CFR Part 26, Regulations of the U.S. Department of Transportation, apply to this Contract. It is MAF policy to practice nondiscrimination based on race, color, sex, or national origin in award or performance of this Contract. All firms qualifying under this solicitation are encouraged to submit Bids/Proposals. Award of this Contract will be conditioned upon satisfying Bid Specification requirements applying to all Bidders/Offerors, including those who qualify as a DBE. A DBE Contract goal of 2.93 percent has been established for this Contract. Bidder/Offeror shall make good faith efforts, as defined in Appendix A, 49 CFR Part 26, to meet the Contract goal for DBE participation in performance of this Contract.

Types of actions to support good faith efforts at meeting Contract goal for DBE participation (not intended as an all-inclusive list and other methods by Bidder may be relevant in documenting good faith effort:

1. Have DBE subcontractors attend Prebid Meeting
2. Documentation of notices sent to potential DBE subcontractors requesting interest in bidding.
3. Documentation of emails sent to potential DBE subcontractors requesting interest in bidding.
4. Documentation (dates and times) of phone calls made to potential DBE subcontractors informing them of the Project and soliciting an interest in bidding. This should include follow-up calls to support aggressively attempting to obtain DBE participation.

Good faith effort documentation must be included with Proposal submitted.

TO INCLUDE WITH PROPOSAL:

Bidder/Offeror shall include with their proposal:

1. Form 1: Disadvantaged Business Enterprise (DBE) Utilization, (signed by Bidder/Offeror);
2. Form 2: Letter of Intent (for each DBE firm). Note: *DBE firm signature not required at time of proposal submission*; and
3. Completed Bidder Information Sheet.

UPON AWARD OF CONTRACT:

Successful Bidder/Offeror will be required to submit the following information within 5 days of Bid Opening:

(1) names and addresses of DBE firms who will participate in the Contract;
(2) description of work each DBE firm will perform;
(3) dollar amount of participation for each DBE firm participating;
(4) written documentation of Bidder/Offeror commitment to use a DBE subcontractor whose participation meets Contract goal;
(5) written confirmation from DBE of Contract participation as provided in commitment made under (4); and
(6) upon unmet Contract goal, evidence of good faith efforts. Successful Bidder/Offeror must submit DBE written confirmation of participation within five days after Bid Opening.

Midland International Air & Space Port

To all Bidders for AIP-funded projects for Midland International Air & Space Port (MAF):

Any company desiring to submit a bid on an AIP grant project for MAF, must complete a Bidder Information Sheet that includes:

- Name of Firm;
- Address of Firm;
- Age of Firm;
- If Firm is a certified Disadvantaged Business Enterprise (DBE); and
- Amount of annual gross receipts.

Before Contract is awarded, companies must also submit Demonstration of Good Faith Efforts, Form 1: DBE Utilization, and Form 2: Letter of Intent for each DBE subcontractor. If DBE goal percentage is met, complete one Form 1 and a separate Form 2 for each DBE subcontractor. If not met, complete Form 1 and submit documentation of Good Faith Efforts (see 49 CFR Part 26, Appendix A) to support percentage accomplished.

Upon Airport acceptance of bid, submit the following information to MAF Disadvantage Business Enterprises Liaison Officer (DBELO) before Project starts:

- Commitments made to all subcontractors (DBE/non-DBE): MAF Form 2: Letter of Intent or TxDOT Form 4901; and
- Proof of DBE certification of all DBE subcontractors.

Once Project starts, submit monthly to the DBELO a Monthly Progress Report (MAF form or TxDOT Forms 4903 or 4904) of actual dollar amount paid to DBE subcontractors.

Call 432.560.2200 for questions. Thank you for your time and consideration regarding this matter.

Sincerely,

MAF, Liaison Officer
Disadvantage Business Enterprise

Encl

FORMS 1 AND 2: DEMONSTRATION OF GOOD FAITH EFFORTS

Form 1: Disadvantaged Business Enterprise (DBE) Utilization

Undersigned Bidder/Offeror has satisfied bid specification requirements as follows:

☐ Bidder/Offeror met DBE contract goal:

Bidder/Offeror is committed to a minimum of 2.93% DBE utilization on this contract.

☐ Bidder/Offeror has not met DBE contract goal:

Bidder/Offeror is committed to a minimum of ___ DBE utilization on this contract and submitted documentation demonstrating good faith efforts.

Legal name of Bidder/Offeror's firm: Cerris Builders, Inc.

Bidder/Offeror Representative: Todd Winnerman, President

Name/Title: Todd Winnerman, President

Signature

July 30, 2025
Date

Form 2: Letter of Intent

Note: Authorized representative (AR) named herein must be a vested individual with authority to make contracting decisions on behalf of the firm.

Name of Bidder/Offeror's firm: Cerris Builders, Inc.

Name/title of firm's AR: Todd Winnerman, President

Phone: 913.317.3740 Email: twinnerman@cerris.com

Name of DBE firm: To be determined

Name/title of DBE firm's AR: To be determined

Address: _____

City: _____ State: ____ Zip: _____

Phone: _____ Email: _____

Work to be performed by DBE firm: To be determined

Description of Work	NAICS	Dollar Amount/%*	Dealer/Manufacturer**

**Percentage to be used only in negotiated procurements, including design-build contracts.*
***For material suppliers only, indicate if DBE is a manufacturer or regular dealer as defined by §26.55.*

Undersigned Bidder/Offeror is committed to utilizing the named DBE firm for work described herein. Total expected dollar value of this Work is $_____. Bidder/Offeror understands if awarded contract/agreement resulting from this procurement, it must enter a subcontract with identified DBE firm representative of listed type and amount of Work. Bidder/Offeror understands upon submitting this form with bid/offer, it may not substitute/terminate listed DBE without following procedures of 49 CFR Part 26, §26.53.

_____ July 30, 2025

Signature of Bidder/Offeror's Authorized Representative Date

Undersigned DBE affirms it is ready, willing, and able to perform amount and type of work as described herein and is properly certified to be counted for DBE participation, therefore.

To be determined _____

Signature of DBE's Authorized Representative Date

If Bidder/Offeror does not receive award of Prime Contract, all representations in this Letter of Intent shall be null and void.

Submit this page for each DBE subcontractor.

Subject: MAF Terminal Modernization - Invitation to Bid

Good Afternoon,

You have been invited to bid on the MAF Terminal Expansion and Modernization in Midland, TX. The link below will take you to the plans and specifications. If you are interested and would like to bid, follow up through email. If you have any questions please reach out.

Bid Documents: https://mmccorp.egnyte.com/fl/MfPjKGwVQpHm

The project consists of a 37,229 square foot addition to the existing terminal – selective demolition, structural steel frame, coal-tar roof, masonry and composite panel exterior, paving, utilities, and site improvements.

Thank you,

EMILY BURGESS
Estimating/Precon Lead

Midland International Air & Space Port

Department of Airports

BIDDER INFORMATION SHEET

Firm Name: Cerris Builders, Inc.

Address: 3712 Helios Way

Pflugerville, TX 78660

Age of Firm: 54 years

Is your Firm a Certified Disadvantaged Business Enterprise (DBE)? **YES** ☐ **NO** ☑

Mark the category of your Firm's Annual Gross Receipts.

- ☐ **Less than $1 million.**
- ☐ **More than $1 million, less than $5 million.**
- ☐ **More than $5 million, less than $10 million.**
- ☐ **More than $10 million, less than $15 million.**
- ☑ **More than $15 million.**

SECTION 01 10 00 - SUMMARY

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
1. Work covered by Contract Documents.
2. Contractor use of site and premises.
3. Work sequence.
4. Owner occupancy.

B. Related Requirements:
1. Division 01 Specification Sections apply to Work of this Section.
2. Section 01 30 00 "Administrative Requirements" for Project information management.

1.2 WORK COVERED BY CONTRACT DOCUMENTS

A. Location: Midland, Texas.

B. Without force or effect, Work of Project consists of the expansion of Terminal Building for new passenger checkpoint and modernization of existing Terminal Building.

1.3 OWNER FURNISHED PRODUCTS

A. Products furnished to site and paid for by Owner:
1. TSA Equipment.

B. Owner's Responsibilities:
1. Arrange for and deliver Owner reviewed Shop Drawings, product data, and samples, to Contractor.
2. Arrange and pay for product delivery to site.
3. On delivery, inspect products jointly with Installer and Contractor.
4. Submit claims for transportation damage and replace damaged, defective, or deficient items.

C. Contractor's Responsibilities:
1. Review Owner reviewed Shop Drawings, product data, and samples.
2. Receive and unload products at site; inspect for completeness or damage, jointly with Owner and Installer.

1.4 CONTRACTOR USE OF SITE AND PREMISES

A. Limit use of site and premises to allow:
1. Owner occupancy: Owner will operate facility continuously throughout construction.
2. Work by others.
3. Use of site and premises by public.

B. Construction Operations: Limited to areas noted on Drawings. Contractor's personnel will be required to wear Airport issued badge at all times. Cost of badging will be by Contractor. All Contractor personnel must be supervised while accessing or working within Airport "Sterile" areas.

C. Time Restrictions for Performing Interior Work: Coordinate Stage 3 work, see 1.7.A.3 of this Section, such that no less than one Airport "KABA" Exit device is operational at all times.

D. Utility Outages and Shutdown: Utility outages or shutdowns are to be held to a minimum, executed after Airport hours, and closely coordinated with Facility Staff a minimum 72 hours prior to outage or shutdown.

1.5 WORK SEQUENCE

A. Construct Work in stages to accommodate Owner's occupancy requirements during construction period, coordinate construction schedule and operations with Owner:
   1. Stage 1: Necessary selective demolition and construction of terminal expansion.
   2. Stage 2: Relocation of existing security lanes after installation of new security lanes.
   3. Stage 3: Selective demolition of existing security checkpoint and construction of new lease space(s).

1.6 OWNER OCCUPANCY

A. Owner will occupy premises during construction to conduct normal operations.
B. Cooperate with Owner to minimize conflict, and to facilitate Owner's operations.
C. Coordinate noisy, odoriferous, and disruptive work with Owner.
D. Schedule Work to accommodate Owner occupancy.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION

SECTION 01 20 00 - PRICE AND PAYMENT PROCEDURES

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Material allowances.
   2. Adjustments allowance.
   3. Schedule of Values.
   4. Application for Payment.
   5. Change Procedures.
   6. Alternates.

B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.
   2. Section 01 30 00 "Administrative Requirements" for Project information management.
   3. Section 01 33 00 "Submittal Procedures" for Schedule of Values.
   4. Section 01 60 00 "Product Requirements" for product substitutions.

1.2 MATERIAL ALLOWANCES

A. Costs Included in Material Allowances: Cost of product (materials and equipment) to Contractor or subcontractor, less applicable trade discounts, delivery to site, and applicable taxes.

B. Costs Not Included in Material Allowance, but included in Contract Sum/Price: Handling at site, including unloading, uncrating, and storage; protection of products from elements and from damage, labor, payroll (including taxes, benefits, pensions, insurance and other employee wage costs) installation and finishing costs, bonds, project insurance (workers comp, auto, general liability, builders risk and other insurance required by the Owner/Contractor agreement overhead, profit, and other expenses contemplated for stated allowance amounts.

C. Architect Responsibilities:
   1. Consult with Contractor in consideration and selection of product, suppliers.
   2. Select products in consultation with Owner and transmit decision to Contractor.
   3. Prepare Change Order.

D. Contractor Responsibilities:
   1. Assist Architect in selection of product and suppliers.
   2. Obtain proposals from suppliers and offer recommendations.
   3. On notification of selection by Architect, execute purchase agreement with designated supplier.
   4. Arrange for and process shop drawings, product data, and samples. Arrange for delivery.
   5. Promptly inspect products upon delivery for completeness, damage, and defects. Submit claims for transportation damage.

E. Funds will be drawn from Cash Allowances only by Change Order.

F. At closeout of Contract, funds remaining in Cash Allowances will be credited to Owner by Change Order.

G. Allowances Schedule:
   1. Include $95,000 for purchase of Light Art lighting fixtures above security checkpoint and at first floor elevator entry. Cost of fixture delivery to site and installation by Contractor.
   2. Section 10 14 00 "Signage": Include stipulated sum for purchase and delivery of interior signage to match existing. See schedule attached to Section 10 14 00 "Signage."
   3. Include $50,000 for refurbishment of existing South Commuter Gate Elevator.
   4. Include $30,000 for Terrazzo floor pattern at entrance to Hall L096.

1.3 ADJUSTMENT ALLOWANCE

A. Include stipulated sum of $500,000 for use upon Owner's instruction.
B. Costs Included in Allowance: Contractor's costs for products, equipment, delivery, installation, labor, payroll (including taxes, benefits, pensions, insurance and other employee wage costs), applicable taxes, and equipment rental; handling at site, including unloading, uncrating, and storage; protection of products from elements and from damage; finishing costs.
C. Costs Not Included in Allowance, but included in Contract Sum/Price: Bonds, project insurance (workers comp, auto, general liability, builders risk and other insurances required by the Owner/Contractor agreement), overhead, profit, and other expenses contemplated for stated allowance amounts.
D. Funds will be drawn from Allowance only by Change Order.
E. At closeout of Contract, funds remaining in Allowance will be credited to Owner by Change Order.

1.4 SCHEDULE OF VALUES

A. Submit typed schedule on AIA Form G703 - Application and Certificate for Payment Continuation Sheet.
B. Submit Schedule of Values in duplicate within 15 days after date established in Notice to Proceed or of Owner-Contractor Agreement, whichever is sooner.
C. Format: Utilize Table of Contents of this Project Manual. Identify each line item with number and title of major specification Section , separating labor and material for each line item. Identify site mobilization, general conditions, testing, bonds, and insurance as separate line items.
D. Include in each line item amount of Allowances specified in this Section.
E. Include within each line item, a directly proportional amount of Contractor's overhead and profit.
F. Revise schedule to list approved Change Orders, with each Application for Payment. Construction Change Requests (CCR) will be listed numerically at end of schedule as they are added to the Work.

1.5 APPLICATIONS FOR PAYMENT

A. Submit notarized application on AIA Form G702 - Application and Certificate for Payment and AIA G703 - Continuation Sheet.
B. Content and Format: Utilize Schedule of Values for listing items in Application for Payment.

C. Deposits on Material, Equipment or Products:
   1. Material/Equipment Deposits: Owner will not pay for deposits for material, equipment or products that may be required of the Contractor in order to start the fabrication process of work that will eventually be incorporated into the Project but are not actually on the Project site. All material, equipment or products must be on the Project site and properly stored before the Owner will make payment to the Contractor.
   2. The Owner will make payment for materials, equipment or products that are properly delivered and stored on the Project site for subsequent incorporation into the Project as authorized in the Owner-Contractor Agreement.
   3. Owner may consider payment of materials, equipment or products that are properly stored, secured and insured in a third party warehouse within a fifty (50) mile radius of the Project site that are in accordance with the requirements and authorized in the Owner-Contractor Agreement.

D. Payment Period: As defined in Owner-Contractor agreement.

E. A complete application for payment includes one copy of waiver of liens from each subcontractor, Construction progress schedule, and submittal schedule, all items are required to process the Application for Payment.

1.6 CHANGE PROCEDURES

A. Architect will advise of minor changes in Work not involving an adjustment to Contract Sum/Price or Contract Time as authorized by Owner/Contractor Agreement by issuing Architect's Supplemental Instructions on Architect's Standard Supplemental Instruction form.

B. Architect may issue a Construction Change Request which includes a detailed description of a proposed change with supplementary or revised Drawings and Specifications and a change in Contract Time for executing change. Contractor will prepare and submit an estimate within seven days.

C. Contractor may propose a change by submitting request for change to Architect. Include reason for change and effect on Contract Sum/Price, Contract Time, and subcontractors. Document requested substitutions in accordance with Section 01 60 00 "Product Requirements."

D. Stipulated Sum/Price Change Order: Based on Proposal Request and Contractor's fixed price quotation or Contractor's request for a Change Order as approved by Architect.

E. Construction Change Directive: Architect may issue a directive, on AIA Form G714 Construction Change Directive or Primary Designer approved form Construction Change Request (CCR) signed by Owner, instructing Contractor to proceed with a change in Work, for subsequent inclusion in a Change Order. Document will describe changes in Work, and designate method of determining any change in Contract Sum/Price or Contract Time. Promptly execute change.

F. Time and Material Change Order:
   1. Submit itemized account and supporting data after completion of change, within time limits indicated in Conditions of the Contract.
   2. Architect will determine change allowable in Contract Sum/Price and Contract Time as provided in Contract Documents.
   3. Maintain detailed records of work done on Time and Material basis.
   4. Provide full information required for evaluation of proposed changes, and to substantiate costs for changes in Work.

G. Change Order Forms: AIA G701 Change Order.
H. Execution of Change Orders: Architect will issue Change Orders for signatures of parties as provided in Conditions of the Contract.
I. Change Order: Furnish an itemized breakdown, in form acceptable to Architect of costs and supporting information including but not limited to quantities and material prices. Tier subcontracted work performed at labor rates, employer payments, and rental rates. Itemize breakdown detail shall be same for subcontractor work. Provide complete supporting information for profit and overhead or markups used when requested. Consider the following items a part of overhead or Contractor's and subcontractor's mark-up and do not include as separate cost item: Labor for Superintendents, Assistant Superintendents, home office personnel, timekeepers, and maintenance mechanics at any level of contracting; individual pieces of equipment, hand tools or instruments having a new value of $500.00 or less, whether or not consumed by use; on site and main offices; modification to record Contract Documents; nor guarantee period costs.

1.7 ALTERNATES

A. Alternates quoted on Bid Forms will be reviewed and accepted or rejected by Owner. Accepted Alternates will be identified in Owner-Contractor Agreement.
B. Coordinate related work and modify surrounding work as required.
C. Schedule of Alternates:
    1. Alternate No. 1: Terrrazzo Tile Flooring.
        a. Base Bid Item:
            1) Section 09 66 23 "Resinous Matrix Terrazzo Flooring," (TER1) as specified in its entirety.
            2) Sheets I-001 and I-111 as noted.
        b. Alternate Item:
            1) Section 09 66 16 "Terrazzo Floor Tile," (TER2) as specified in its entirety.
            2) Sheets I-001 and I-111 substituting TER2 for TER1 everywhere it is noted.
    2. Alternate No. 2: Photovoltaic Collectors.
        a. Alternate Item:
            1) Suggested Photovoltaic Collectors layout, sheet a-141, system as noted for delegated design by qualified system designer.
            2) Provide roof mounted hose bibs and hose reels only if Alternate No. 2 is approved by Owner.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION

SECTION 01 30 00 - ADMINISTRATIVE REQUIREMENTS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
1. Project Information Management.
2. Coordination.
3. Survey.
4. Electronic drawing file (digital data) request.
5. Submittal schedule.
6. Preconstruction meeting.
7. Request for information.
8. Progress meetings.
9. Preinstallation meetings.
10. Cutting and patching.

B. Related Requirements:
1. Division 01 Specification Sections apply to Work of this Section.

1.2 PROJECT INFORMATION MANAGEMENT

A. Project Website:
1. Use Newforma Info Exchange; https://projects.team-psc.com/UserWeb/Login to send and receive Project information.
2. Contact Architect to setup a user name and password information.
3. If this Project is not listed when logged in, contact Architect to add this Project to your account.

B. Project information includes, but is not limited to, the following:
1. Product Submittals.
2. Requests for Information (RFI).
3. Applications for Payment.
4. Schedules.
5. Construction Change Requests (CCRs).
6. Closeout Documents.
7. Construction Document Files.
   a. Weather Days.
   b. Electronic File Requests.
   c. Correspondence.
   d. Test Reports.
   e. Meeting Minutes.
   f. Field Reports.

1.3 COORDINATION

A. Coordinate scheduling, submittals, and Work to assure efficient and orderly sequence of installation of construction elements, with provisions for accommodating items installed later.
B. Verify that utility requirements and characteristics of operating equipment are compatible with building utilities. Coordinate work of various Sections having interdependent responsibilities for installing, connecting to, and placing in service, such equipment.
C. Coordinate space requirements and installation of mechanical and electrical work which are indicated diagrammatically on Drawings. Follow routing shown for pipes, ducts, and conduit, as closely as practicable; place runs parallel with line of building. Utilize spaces efficiently to maximize accessibility for other installations, for maintenance, and for repairs.
D. In finished areas, except as otherwise indicated, conceal pipes, ducts, and wiring within construction. Coordinate locations of fixtures and outlets with finish elements.
E. Large Apparatus: Any large apparatus which is to be installed in any space and is too large to permit access through windows, doorways, or shafts shall be provided before enclosing structure is completed.
F. Items which require electrical connections shall be coordinated with Division 26 Electrical for:
    1. Voltage.
    2. Phase.
    3. Ampacity.
    4. Number and size of wires.
    5. Wiring diagrams.
    6. Starter size, details, and location.
    7. Control devices and details.
G. Coordinate completion and clean-up of Work of separate Sections in preparation for Substantial Completion and for portions of Work designated for Owner's occupancy.
H. After Owner occupancy of premises, coordinate access to site with Owner for correction of defective Work and Work not in accordance with Contract Documents, to minimize disruption of Owner's activities.

1.4 SURVEY

A. Employ surveyor registered in the State of Texas to locate survey control and reference points.
B. Protect survey control and reference points.
C. Control datum for survey is that shown on Drawings.
D. Verify set-backs and easements, and confirm Drawing dimensions and elevations.
E. Provide field surveying services. Establish elevations, lines, and levels, utilizing recognized surveying practices.
F. Submit registered site drawing and certificate signed by registered surveyor that elevations and locations of Work are in conformance with Contract Documents.

1.5 ELECTRONIC DRAWING FILE (DIGITAL DATA) REQUEST

A. Upon Award of Contract:

1. At the pre-construction meeting, Contractor shall bring the executed Digital Data Licensing Agreement (AIA C106-2022) at the end of this Section for the release of electronic files. Upon Contractor submitting the executed Agreement to the Architect, the Architect will provide the Contractor one (1) electronic copy of the Revit®BIM Model file(s), AutoCAD (.dwg) file(s), when Revit®BIM Model file is not available, and Portable Document Format (.pdf) file(s) at no charge within 5 working days. **Note that CAD files associated with the work can be accessed and exported from the Revit®BIM Model provided to the Contractor through the use of Revit®software; therefore, individual CAD files will not be provided by the Architect**.
2. The Revit®BIM Model file provided to the Contractor is NOT FOR CONSTRUCTION PURPOSES, but for convenience only. This BIM Model will consist of the original model utilized for base bid. It is the responsibility of the Contracor to coordinate all accepted alternates, addenda, Request for Information, Porposal Requests, and any other changes realized during the procurement and construction phases. The Architect will not provide up-to-date Contract Documents or updated BIM Models to the Contractor unless otherwise stated within the Owner/Architect Agreement.
3. Conformed Construction Documents: If Conformed Construction Documents are required by the Owner/Architect Agreement, they will be provided in PDF. Conformed Construction Documents are the Drawings and Specifications modified to include any Addenda issued before execution of the Contract.
    a. To the extent Conformed Construction Documents are provided to the Contractor, the following provisions shall apply:
        1) The Conformed Construction Documents and related information contained therein, are provided for Contractor's convenience only, and does not relieve the Contractor from the requirements of the Contract Documents. Specifically, to the extent that any discrepancy or conflict exists between the Issue for Bid documents, including any Addenda issued prior to execution of the Contact or Modifications issued after the execution of the Contact on the one hand, and the Conformed Construction Documents on the other; the Issue for Bid documents, Addenda, and Modifications shall control unless otherwise specified in writing by the Architect.
        2) Contractor shall not use such drawings, documents, or other data, in whole or in part, for any purpose or project other than this Project in the preparation of Shop Drawings and other submittals.
        3) Contractor acknowledges that such drawings, documents, and other data are subject to change or modification. Contractor shall be responsible for updating any drawings, documents, or other data obtained prior to use by them for any purpose.
        4) Any Conformed Construction Documents, including any Drawings, Specifications, documents, or other data related thereto are provided "as is" without representation or warranty by Architect, either expressed or implied.

5) Contractor acknowledges that Conformed Construction Documents provided by Architect are as a courtesy to Contractor, at their specific request, and accordingly, CONTRACTOR HEREBY AGREES TO RELEASE, HOLD HARMLESS, DEFEND AND INDEMNIFY ARCHITECT AND OWNER FROM ANY AND ALL CLAIMS, DEMANDS, OR CAUSES OF ACTION, WHICH CONTRACTOR OR ANY THIRD PARTY MAY HAVE BY REASON OF ANY INJURY OR DAMAGE SUSTAINED BY CONTRACTOR OR THIRD PARTY ARISING OUT OF OR IN ANY WAY RELATED TO THE USE OF SUCH CONFORMED CONSTRUCTION DOCUMENTS.

1.6 SUBMITTAL SCHEDULE

A. Prepare submittal schedule in accordance with General Conditions of the Contract for Construction.
B. Include in submittal schedule all submittals and samples required by all section of this Project Manual and any additional submittals required by the Contractor to construct the Project.
C. Submit submittal schedule for Architect's review within 15 days after date established in Notice to Proceed or with the first Application for Payment, whichever is sooner. **Failure to submit submittal schedule with the first Application for Payment will be cause for not processing Application for Payment.**

1.7 PRECONSTRUCTION MEETING

A. Architect will schedule a meeting after Notice to Proceed.
B. Attendance Required:
   1. Owner.
   2. Architect.
   3. Contractor.
   4. Major subcontractors.
C. Agenda:
   1. Submission of executed bonds and insurance certificates.
   2. Distribution of Contract Documents.
   3. Submission of list of subcontractors, list of products, Schedule of Values, submittal schedule, and progress schedule.
   4. Designation of personnel representing each party in Contract and Architect.
   5. Procedures and processing of field decisions, submittals, substitutions, applications for payments, proposal request, Change Orders, Request for Information (RFI), and Contract closeout procedures.
   6. Review Notice to Proceed (NTP) and Substantial Completion Dates.
   7. Workers' Identification and Background Checks.
   8. Surface drainage requirements (SWPPP).
   9. Scheduling:
      a. Use of premises by Owner and Contractor.
      b. Owner's requirements and occupancy.
      c. Survey and building layout.
      d. Security and housekeeping procedures.

e. Construction progress meetings.
f. Procedures for testing.
g. Procedures for maintaining record documents.
h. Requirements for start-up of equipment.
i. Inspection and acceptance of equipment put into service during construction period.

10. Scheduling activities of Construction Material Testing (CMT) lab.

D. Record minutes and distribute copies within 3 days after meeting to participants with 2 copies to Architect and those affected by decisions made.

1.8 REQUEST FOR INFORMATION

A. Request for information (RFI) requests from subcontractors or material suppliers will not be considered. All RFI's must be submitted by Contractor.
B. RFI's must be submitted to Architect via software as indicated in paragraph 1.2.A
C. Information indicated on RFI shall be complete before submission. If Architect determines that request can be answered with information provided, Architect will assign an RFI tracking number. Requests determined by Architect not to be an RFI will be returned to Contractor electronically and deleted from Architect's electronic tracking software without being assigned an RFI tracking number. A transmittal document returning the denied RFI request will be provided with a response indicating action to be taken by Contractor.
D. RFIs may contain more than one item when items are related issues. Otherwise, only one item shall be addressed on each RFI request.
E. Allow 7 days for Architect's response to each RFI.
F. Response to RFI will be issued to Contractor and Owner per Section 01 33 00 "Submittal Procedures."
G. Responses from Architect are not changes unless issued with a change per Section 01 20 00 Price and Payment Procedures."
H. Section 01 30 01 is a sample RFI Form. Contractor will be provided a blank for its use. Any RFI submitted without this form will be returned without review and unanswered.

1.9 PROGRESS MEETINGS

A. Schedule and administer meetings throughout progress of Work at minimum monthly intervals.
B. Make arrangements for meetings, prepare agenda with copies for participants, and preside at meetings.
C. Attendance Required:
1. Owner.
2. Job superintendent.
3. Major subcontractors.
4. Suppliers.
5. Architect as appropriate to agenda topics for each meeting.
D. Agenda:
1. Field observations, problems, and decisions.
2. Identification of problems which impede planned progress.
3. Review of submittals schedule and status of submittals.
4. Review of off-site fabrication and delivery schedules.
5. Maintenance of progress schedule.

6. Corrective measures to regain projected schedules.
7. Planned progress during succeeding work period.
8. Coordination of projected progress.
9. Maintenance of quality and work standards.
10. Effect of proposed changes on progress schedule and coordination.
11. Other business relating to Work.

E. Record minutes, and distribute copies within 3 days to Architect, participants, and those affected by decisions made.

1.10 PREINSTALLATION MEETING

A. When required in individual specification Sections, convene a preinstallation meeting at site prior to installing Work.
B. Require attendance of parties directly affecting, or affected by, Work.
C. Notify Architect 7 days in advance of meeting date.
D. Prepare agenda and preside at meeting.
1. Review conditions of installation, preparation and installation procedures.
2. Review coordination with related work.
E. Record minutes, and distribute copies within 3 days after meeting to participants.

PART 2 - PRODUCTS

2.1 EQUIPMENT ELECTRICAL CHARACTERISTICS AND COMPONENTS

A. Motors: Specific motor type is specified in individual Specification Sections.
B. Wiring Terminations: Provide terminal lugs to match branch circuit conductor quantities, sizes, and materials indicated. Size terminal lugs to NFPA 70, include lugs for terminal box.
C. Cord and Plug: Provide minimum 6-foot cord and plug including grounding connector for connection to electric wiring system. Cord of longer length is specified in individual Specification Sections.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify that existing site conditions and substrate surfaces are acceptable for subsequent Work. Beginning new Work means acceptance of existing conditions.
B. Verify that existing substrate is capable of structural attachment of new Work being applied or attached.
C. Examine and verify specific conditions described in individual Specification Sections.
D. Verify that utility services are available, of correct characteristics, and in correct location.

3.2 PREPARATION

A. Clean substrate surfaces prior to applying next material or substance.
B. Seal cracks or openings of substrate prior to applying next material or substance.
C. Apply any manufacturer required or recommended substrate primer, sealer, or conditioner prior to applying any new material or substance in contact or bond.

3.3 CUTTING AND PATCHING

A. Employ skilled and experienced installer to perform cutting and patching.
B. Submit request in advance of cutting or altering elements which affects:
   1. Structural integrity of element.
   2. Integrity of weather-exposed or moisture-resistant elements.
   3. Efficiency, maintenance, or safety of element.
   4. Visual qualities of sight-exposed elements.
   5. Work of Owner or separate contractor.
C. Execute cutting, fitting, and patching including excavation and fill, to complete Work, and to:
   1. Fit several parts together, to integrate with other Work.
   2. Uncover Work to install or correct ill-timed Work.
   3. Remove and replace defective and non-conforming Work.
   4. Remove samples of installed Work for testing.
   5. Provide openings in elements of Work for penetrations of mechanical and electrical Work.
D. Execute work by methods which will avoid damage to other Work, and provide proper surfaces to receive patching and finishing.
E. Cut rigid materials using masonry saw or core drill.
F. Restore Work with new products in accordance with requirements of Contract Documents.
G. Fit Work tight to pipes, sleeves, ducts, conduit, and other penetrations through surfaces.
H. Maintain integrity of wall, ceiling, or floor construction; completely seal voids.
I. Refinish surfaces to match adjacent finishes. For continuous surfaces, refinish to nearest intersection. For an assembly, refinish entire unit.
J. Identify any hazardous substance or condition exposed during Work to Architect for decision or remedy.

Digital Data Licensing Agreement

AGREEMENT made as of the day of in the year
(In words, indicate day, month, and year.)

BETWEEN the Party transmitting Digital Data ("Transmitting Party"):
(Name, address, and contact information, including electronic addresses)

and the Party receiving the Digital Data ("Receiving Party"):
(Name, address, and contact information, including electronic addresses)

for the following Project:
(Name and location or address of the Project)

for the following Digital Data ("Digital Data"):
(Identify below, in detail, the information created or stored in digital form that the Parties intend to be subject to this Agreement.)

[Revit Models (.rvt files)]
[AutoCAD (.dwg files)]
[Portable Document Format (.pdf)]

The Transmitting Party and Receiving Party agree as follows.

ADDITIONS AND DELETIONS:
The author of this document has added information needed for its completion. The author may also have revised the text of the original AIA standard form. An *Additions and Deletions Report* that notes added information as well as revisions to the standard form text is available from the author and should be reviewed. A vertical line in the left margin of this document indicates where the author has added necessary information and where the author has added to or deleted from the original AIA text.

This document has important legal consequences. Consultation with an attorney is encouraged with respect to its completion or modification.

TABLE OF ARTICLES

1 GENERAL PROVISIONS

2 TRANSMISSION OF DIGITAL DATA

3 LICENSE CONDITIONS

4 LICENSING FEE OR OTHER COMPENSATION

ARTICLE 1 GENERAL PROVISIONS

§ 1.1 The purpose of this Agreement is to grant a license from the Transmitting Party to the Receiving Party for the Receiving Party's use of Digital Data and to set forth the license terms.

§ 1.2 This Agreement is the entire and integrated agreement between the Parties. Except as specifically set forth herein, this Agreement does not create any other contractual relationship between the Parties.

§ 1.3 Confidential Digital Data is Digital Data containing confidential or business proprietary information that the Transmitting Party designates as "confidential."

ARTICLE 2 TRANSMISSION OF DIGITAL DATA

§ 2.1 The Transmitting Party grants to the Receiving Party a nonexclusive limited license to use the Digital Data solely and exclusively for the uses, and in accordance with the terms, set forth in Article 3.

§ 2.2 Only the Receiving Party is permitted to access and use the Digital Data. Unlicensed and unauthorized access or use by third parties is strictly prohibited except as set forth in Section 2.4.1.

§ 2.3 The transmission of Digital Data constitutes a warranty by the Transmitting Party to the Receiving Party that the Transmitting Party is the copyright owner of the Digital Data or otherwise has permission to transmit the Digital Data to the Receiving Party for its use on the Project in accordance with the terms and conditions of this Agreement.

§ 2.4 Where the Transmitting Party has designated information furnished pursuant to this Agreement as "confidential," the Receiving Party shall keep the information confidential and shall not disclose it to any other person or entity except as set forth in Section 2.4.1.

§ 2.4.1 The Receiving Party may disclose Confidential Digital Data after seven (7) days' notice to the Transmitting Party where disclosure is required by law, including a subpoena or other form of compulsory legal process issued by a court or governmental entity, or by court or arbitrator(s) order. The Receiving Party may also disclose Confidential Digital Data to its employees, consultants, sureties, subcontractors and their employees, sub-subcontractors, and others who need to know the content of such information solely and exclusively for the Project and who agree to maintain the confidentiality of such information.

§ 2.5 By transmitting Digital Data, the Transmitting Party does not convey any ownership right in the Digital Data or in the software used to generate the Digital Data. Unless otherwise granted in a separate license, the Receiving Party's right to use, modify, or further transmit Digital Data is specifically limited to those uses, and in accordance with the terms, set forth in Article 3, and nothing contained in this Agreement conveys any other right to use the Digital Data.

§ 2.6 To the fullest extent permitted by law, the Receiving Party shall indemnify and defend the Transmitting Party from and against all claims arising from or related to the Receiving Party's modification to, or unlicensed use of, the Digital Data.

§ 2.7 Transmission of the Digital Data does not abridge or extinguish the Transmitting Party's rights, including, to the extent applicable, exclusive ownership interest, in such information under all applicable state, federal, and international laws including, without limitation, laws governing the protection of copyrights and intellectual property.

§ 2.8 The provisions of this Article 2 shall survive the termination of this Agreement.

ARTICLE 3 LICENSE CONDITIONS

§ 3.1 The Receiving Party may use and rely upon the Digital Data to the extent set forth in this Article 3.

(Paragraph deleted)

[X] **§ 3.1.1** The Digital Data is transmitted solely for the Receiving Party's information. Receiving Party acknowledges that any use of the Digital Data shall be at Receiving Party's sole risk. The Receiving Party accepts the Digital Data "as is" without any warranty or representations from the Transmitting Party as to whether the Digital Data is accurate, complete, or fit for use as intended by the Receiving Party. The Receiving Party is solely responsible for verifying whether the Digital Data is accurate, complete, or fit for the Receiving Party's intended use.

(Paragraphs deleted)

§ 3.1.1.1 This Digital Data is part of the Transmitting Party's Instruments of Service and shall not be used by Receiving Party or anyone else receiving this data through or from the Receiving Party for any purpose other than as a convenience in the preparation of bid submittals, shop drawings, coordination drawings, construction phase submittals, and field layout and staking required by the Owner for the exclusive use of the referenced Project. Any use or reuse by the Receiving Party or by others will be at the Receiving Party's sole risk and without liability or legal exposure to Transmitting Party. The Receiving Party agrees to make no claim and hereby waive, to the fullest extent permitted by law, any claim or cause of action of any nature against Transmitting Party, its officers, directors, employees, or subconsultants that may arise out of or in connection with Receiving Party's use of this Digital Data.

§ 3.1.1.2 No representation as to the compatibility of this Digital Data with Receiving Party's hardware or software is provided.

§ 3.1.1.3 This Digital Data is not a Construction Document. Differences may exist between this Digital Data and corresponding two-dimensional hard-copy Construction Document. The Transmitting Party makes no representation regarding the accuracy or completeness of the Digital Data the Receiving Party receives. In the event that a conflict arises between the signed/sealed two-dimensional hard-copy Construction Document prepared by Transmitting Party and the Digital Data, the signed/sealed two-dimensional hard-copy Construction Document shall govern. The Receiving Party is responsible for determining if any conflict exists. By the Receiving Party's use of this Digital Data, Receiving Party is not relieved of their duty to fully comply with the Contract Documents, including, and without limitation, the need to check, confirm and coordinate all dimensions and details, field measurements, verify field conditions and coordination of work with that of other contractors for the Project.

§ 3.1.1.4 Because information presented in the Digital Data can be modified, unintentionally or otherwise, the Transmitting Party reserves the right to remove all indicia of ownership and/or involvement from each Digital Data.

§ 3.1.1.5 Under no circumstances shall delivery of this Digital Data for use by the Receiving Party be deemed a sale of document ownership by Transmitting Party, and no warranties, either express or implied, of merchantability or fitness for any particular purpose is made. In no event shall the Transmitting Party be liable for any loss of profit or any consequential damages as a result of the Receiving Party's use or reuse of this Digital Data.

§ 3.1.1.6 The Digital Data file does not necessarily contain all the information that is required to produce finished Construction Documents. Because of this, there may be data within the Digital Data that is missing, incomplete or even contradictory to the information provided in the final two dimensional Construction Documents.

§ 3.1.1.7 Professional judgment will need to be used by the Receiving Party, along with reasonable expectations and interpretations in order to use the Digital Data for its intended purpose. Should the Transmitting Party provide revised and updated copies of the Digital Data to the Receiving Party throughout the Project, all terms and conditions of this agreement will be applicable and unchanged for all subsequent transmissions of the Digital Data

ARTICLE 4 LICENSING FEE OR OTHER COMPENSATION

The Receiving Party agrees to pay the Transmitting Party the following fee or other compensation for the Receiving Party's use of the Digital Data:

(State the fee, in dollars, or other method by which the Receiving Party will compensate the Transmitting Party for the Receiving Party's use of the Digital Data.)

This Agreement is entered into as of the day and year first written above and terminates one year from said date, except as set forth below.

(Indicate when this Agreement will terminate, if other than one year from the date it was entered into, and other conditions related to termination.)

SECTION 01 33 00 - SUBMITTAL PROCEDURES

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Submittal procedures.
   2. Resubmittal requirements.
   3. Construction progress schedules.
   4. Proposed products list.
   5. Shop drawings.
   6. Product data.
   7. Samples.
   8. Design data.
   9. Test reports.
   10. Certificates.
   11. Manufacturers' instructions.
   12. Manufacturers' field reports.
   13. Erection drawings.
   14. Construction photographs.

B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.
   2. Section 01 20 00 "Price and Payment Procedures" for Schedule of Values; Inspecting and Testing Allowances.
   3. Section 01 30 00 "Administrative Requirements" for Project information management.
   4. Section 01 40 00 "Quality Requirements" for manufacturers' field services and reports; Testing Laboratory Services.
   5. Section 01 70 00 "Execution and Closeout Requirements" for Contract warranty, manufacturer's certificates, and closeout submittals.

1.2 SUBMITTAL PROCEDURES

A. Submit to Architect for review for limited purpose of checking for conformance with information given and design concept expressed in Contract Documents.

B. Produce copies and distribute in accordance with this Article.

C. Use Project website to submit record documents as described in Section 01 70 00 "Execution and Closeout Requirements."

D. A complete submittal consists of all the items required within an individual specification section, i.e. product data, shop drawings, LEED information, product samples, etc. for every material and component within the specification sections. All submittals documents shall be clearly marked as to the specific item within the document that is being submitted for review. Contents of the submittals document that is not pertinent shall be struck-thru.

E. Transmit each submittal separately with Contractor's standard transmittal letter including Contractor's name, address, and phone number. Each submittal shall contain only one Specification Section.

F. Sequentially number transmittal forms using Section number or Contractors other sequential numbering system.

G. Identify Project, Contractor, subcontractor, or supplier; pertinent drawing sheet and detail number(s), and Specification Section number appropriate to submittal.
H. Apply Contractor's stamp, signed or initialed certifying that review, verification of products required, field dimensions, adjacent construction Work, and coordination of information, is in accordance with requirements of Work and Contract Documents.
I. Schedule submittals to expedite Project, and deliver to Architect. Coordinate submission of related items.
J. For each submittal for review, allow 15 calendar days excluding delivery time to and from Contractor.
K. Identify variations from Contract Documents and product or system limitations which may be detrimental to successful performance of completed Work. Information, comments, field verifications, responses, or other notations marked on submittals by Contractor shall be done in blue or green colors only.
L. Allow space on submittals for Contractor and Architect's review stamps.
M. Distribute copies of reviewed submittals to concerned parties. Instruct parties to promptly report any inability to comply with provisions.
N. Submittals not requested will not be recognized or processed.
O. Format:
    1. Submit all submittals digitally using .PDF file extension. Each submittal shall be a single .PDF file including transmittal letter. Multiple files for same submittal will not be accepted.
    2. Submittals in any other format, including .ZIP files, will be rejected.
    3. Hard copies will not be accepted.
    4. To ensure each page is legible, .PDF pages of drawings shall be same size/scale as a hard copy. Where applicable, scale symbols should be provided to indicate scale. Illegible submittals will be rejected.
    5. Uploaded submittals to Project website.
P. Submittal procedures described in this Article applies to construction progress schedule, products list, shop drawings, product data, samples (actual samples and digital files of same), design data, test reports, certificates, manufacturer's instructions and field reports, erection drawings, and any other type of submittal submitted to Architect.

1.3 RESUBMITTAL REQUIREMENTS

A. Revise and resubmit submittals, as required, and resubmit to meet requirements as specified and as noted on submittal reviews.
B. Mark as RESUBMITTAL.
C. Re-use original transmittal number and supplement with sequential alphabetical or numeric suffix for each re-submittal.

1.4 CONSTRUCTION PROGRESS SCHEDULES

A. Submit initial progress schedule for Architect's review within 15 calendar days after date established in Notice to Proceed or with the first Application for Payment, whichever is sooner.
B. Revise and resubmit as required.
C. Submit revised schedule with each Application for Payment, identifying changes since previous version.

D. Show complete sequence of construction by activity, identifying Work of separate stages and other logically grouped activities. Indicate early and late start, early and late finish, float dates, and duration.
E. Indicate estimated percentage of completion for each item of Work at each submission.
F. Dates reviewed submittals will be required from Architect. Indicate decision dates for selection of finishes. Submit separate schedule of submittal dates for following:
   1. Shop drawings.
   2. Product data.
   3. Samples.
   4. Owner furnished products.
   5. Products identified under Allowances.
G. Determine appropriate lead times to allow for manufacturing and delivery of products/material for incorporation into Work. Indicate product/material manufacturer's lead-time for manufacturing and delivery to site. Include as a separate line for each product/material. Failure to timely submit and process submittals, and ordering of products/materials for delivery to site will not be grounds for approval of substitutions for other products/materials.
H. Indicate delivery dates for Owner furnished products and products identified under Allowances.
I. Revisions to Schedules:
   1. Indicate progress of each activity to date of submittal, and projected completion date of each activity.
   2. Identify activities modified since previous submittal, major changes in scope, and other identifiable changes.
   3. Prepare narrative report to define problem areas, anticipated delays, and impact on Schedule. Report corrective action taken, or proposed, and its effect including effect of changes on schedules of separate contractors.

1.5 PROPOSED PRODUCTS LIST

A. Within 15 calendar days after date of Notice to Proceed, submit complete list of major products proposed for use, with name of manufacturer, trade name, and model number of each product.
B. For products specified only by reference standards, give manufacturer, trade name, model or catalog designation, and reference standards.

1.6 SHOP DRAWINGS

A. Indicate special utility and electrical characteristics, utility connection requirements, and location of utility outlets for service for functional equipment and appliances.
B. Printable Image Size: Minimum 8-1/2 by 11 inches and maximum 30 by 42 inches.
C. Draw details to a minimum scale of 1/2-inch equal to 1 foot.
D. Draw site plans to same scale indicated on Contract Drawings.
E. Draw other plans to a minimum scale of 1/8-inch equal to 1 foot.
F. Construction Documents (electronic or paper format) issued by Architect cannot be used in any shape, form, or fashion in creation and development of shop drawings, except that electronic files containing floor plans or site plans which have been acquired from Architect may be used as backgrounds for Contractor, subcontractors, sub-subcontractors, and material suppliers in shop drawing process.

G. In creation and publication of Shop Drawings, under no circumstances shall Design Professional's seal or title block of drawing be reproduced. Shop drawings must be original works from Contractor, subcontractors, sub-subcontractors, and material suppliers.

1.7 PRODUCT DATA

A. Mark each copy to identify applicable products, models, options, and other data. Supplement manufacturers' standard data to provide information unique to this Project.
B. Include recommendations for application and use, and reference to compliance with specified standards of trade associations and testing agencies.
C. Include notation of special coordination requirements for interfacing with adjacent work and building utilities where applicable.
D. After review, distribute in accordance with "Submittal Procedures" Article above and provide copies for Record Documents described in Section 01 70 00 "Execution and Closeout Requirements."

1.8 SAMPLES

A. Submit samples to illustrate functional and aesthetic characteristics of product, with integral parts and attachment devices. Submit physical sample after color digital image (photo or scanned .PDF) of sample has been electronically submitted to Project Management website with appropriate Transmittal Letter(s). Coordinate sample submittals for interfacing work.
B. Unless otherwise specified, submit samples of finishes from manufacturers' full range of standard colors, textures, and patterns, for Architect's selection.
C. Where variations in color, pattern, or texture are inherent in material or product, submit multiple samples to indicate approximate range or variations.
D. Include full Project information and identification of manufacturer, model number, type, style and color on each sample.
E. Submit number of samples specified in individual Specification Sections; one of which will be retained by Architect.

1.9 DESIGN DATA

A. Submit for Architect's knowledge as Contract Administrator or for Owner.
B. Submit for information for limited purpose of assessing conformance with information given and design concept expressed in Contract Documents.

1.10 TEST REPORTS

A. Submit for Architect's knowledge as Contract Administrator or for Owner.
B. Submit test reports for information for limited purpose of assessing conformance with information given and design concept expressed in Contract Documents.

1.11 CERTIFICATES

A. When specified in individual Specification Sections, submit certification by manufacturer, installation/application subcontractor, or Contractor to Architect.
B. Indicate material or product conforms to or exceeds specified requirements. Submit supporting reference data, affidavits, and certifications as appropriate.
C. Certificates may be recent or previous test results on material or product, but must be acceptable to Architect.

1.12 MANUFACTURER'S INSTRUCTIONS

A. When specified in individual Specification Sections, submit manufacturers' printed instructions for delivery, storage, assembly, installation, startup, adjusting, and finishing.
B. Identify conflicts between manufacturers' instructions and Contract Documents.
C. Indicate special procedures, conditions requiring special attention and special environmental criteria required for application or installation.

1.13 MANUFACTURER'S FIELD REPORTS

A. Submit reports for Architect's benefit as Contract Administrator or for Owner.
B. Submit report within 30 days of observation to Architect for information.
C. Submit for information for limited purpose of assessing conformance with information given and design concept expressed in Contract Documents.

1.14 ERECTION DRAWINGS

A. Submit drawings for Architect's benefit as Contract Administrator or for Owner.
B. Submit for information for limited purpose of assessing conformance with information given and design concept expressed in Contract Documents.
C. Data indicating inappropriate or unacceptable Work may be subject to action by Architect or Owner.

1.15 CONSTRUCTION PHOTOGRAPHS

A. Each month submit photographs to Architect with Application for Payment.
B. Photographs:
    1. Format: JPEG file extension; color.
    2. Subject:
        a. Take 2 site photographs from differing directions and 5 interior photographs indicating relative progress of Work, 5 days maximum prior to submitting pay request.
C. Identify photographs with date, time, orientation, and Project identification.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION

SECTION 01 40 00 - QUALITY REQUIREMENTS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Quality control and control of installation.
   2. Tolerances.
   3. References.
   4. Testing and Inspection services.
   5. Examination.
   6. Preparation.

B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.
   2. Section 01 30 00 "Administrative Requirements" for Project information management.
   3. Section 01 33 00 "Submittal Procedures" for submission of manufacturers' instructions and certificates.
   4. Section 01 60 00 "Product Requirements" for requirements for material and product quality.

1.2 QUALITY CONTROL AND CONTROL OF INSTALLATION

A. Monitor quality control over suppliers, manufacturers, products, services, site conditions, and workmanship, to produce Work of specified quality.
B. Comply with manufacturers' instructions, including each step in sequence.
C. Should manufacturers' instructions conflict with Contract Documents, request clarification from Architect before proceeding.
D. Comply with specified standards as a minimum quality for Work except when more stringent tolerances, codes, or specified requirements indicate higher standards or more precise workmanship.
E. Perform Work by persons qualified to produce workmanship of specified quality.
F. Verify field measurements are as indicated on shop drawings or as instructed by manufacturer.
G. Secure products in place with positive anchorage devices designed and sized to withstand stresses, vibration, physical distortion, or disfigurement.

1.3 TOLERANCES

A. Monitor fabrication and installation tolerance control of products to produce acceptable Work. Do not permit tolerances to accumulate.
B. Comply with manufacturers' tolerances. Should manufacturers' tolerances conflict with Contract Documents, request clarification from Architect before proceeding.
C. Adjust products to appropriate dimensions; position before securing in place.

1.4 REFERENCES

A. For products or workmanship specified by association, trade, or other consensus standards, comply with requirements of standard, except when more rigid requirements are specified or are required by applicable codes.
B. Conform to reference standard by date of issue current on date of Contract Documents, except where a specific date is established by Code.
C. Obtain copy of standards when required by Specification Section.
D. Neither contractual relationship, duties, nor responsibilities of parties in Contract nor those of Architect shall be altered from Contract Documents by mention or inference otherwise in any reference document.

1.5 TESTING AND INSPECTION SERVICES

A. Owner will appoint, employ, and pay for specified services of an independent firm to perform inspection and testing.
B. The independent firm will perform inspections, tests, and other services specified in individual Specification Sections and as required by Architect or Owner.
C. Testing, inspections and source quality control may occur on or off Project site. Perform off-site testing as required by Architect or Owner.
D. Submit independent testing laboratory firm's reports to Architect. Reports to include observations and results of tests and will indicate compliance or non-compliance with Contract Documents.
E. Cooperate with independent firm; furnish samples of materials, design mix, equipment, tools, storage, provide safe access to Project site, and provide assistance by incidental labor as requested.
    1. Notify , Architect and independent firm 48 hours prior to expected time for operations requiring services.
    2. Pay for additional samples and tests required for Contractor's use.
F. Employment of independent testing agency or laboratory does not relieve Contractor from performing Work to Contract requirements.
G. Re-testing and/or re-inspection required because of non-conformance to specified requirements will be charged to Contractor by deducting re-testing and/or re-inspection charges from Contract Sum/Price.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify existing site conditions and substrate surfaces are acceptable for subsequent Work. Beginning new Work means acceptance of existing conditions.
B. Verify existing substrate is capable of structural support or attachment of new Work being applied or attached.
C. Examine and verify specific conditions described in individual Specification Sections.
D. Verify utility services are available, of correct characteristics, and in correct locations.

3.2 PREPARATION

A. Clean substrate surfaces prior to applying next material or substance.
B. Seal cracks or openings of substrate prior to applying next material or substance.
C. Apply manufacturer required or recommended substrate primer, sealer, or conditioner prior to applying new material or substance in contact or bond.

END OF SECTION

SECTION 01 42 00 - REFERENCES

PART 1 - GENERAL

1.1 DEFINITIONS

A. General: Basic Contract definitions are included in the Conditions of the Contract.
B. "Approved": When used to convey Architect's action on Contractor's submittals, applications, and requests, "approved" is limited to Architect's duties and responsibilities as stated in the Conditions of the Contract.
C. "Directed": A command or instruction by Architect. Other terms including "requested," "authorized," "selected," "required," and "permitted" have the same meaning as "directed."
D. "Indicated": Requirements expressed by graphic representations or in written form on Drawings, in Specifications, and in other Contract Documents. Other terms including "shown," "noted," "scheduled," and "specified" have the same meaning as "indicated."
E. "Regulations": Laws, ordinances, statutes, and lawful orders issued by authorities having jurisdiction, and rules, conventions, and agreements within the construction industry that control performance of the Work.
F. "Furnish": Supply and deliver to Project site, ready for unloading, unpacking, assembly, installation, and similar operations.
G. "Install": Unload, temporarily store, unpack, assemble, erect, place, anchor, apply, work to dimension, finish, cure, protect, clean, and similar operations at Project site.
H. "Provide": Furnish and install, complete and ready for the intended use.
I. "Project Site": Space available for performing construction activities. The extent of Project site is shown on Drawings and may or may not be identical with the description of the land on which Project is to be built.

1.2 INDUSTRY STANDARDS

A. Applicability of Standards: Unless the Contract Documents include more stringent requirements, applicable construction industry standards have the same force and effect as if bound or copied directly into the Contract Documents to the extent referenced. Such standards are made a part of the Contract Documents by reference.
B. Publication Dates: Comply with standards in effect as of date of the Contract Documents unless otherwise indicated.
    1. For standards referenced by applicable building codes, comply with dates of standards as listed in building codes.
C. Copies of Standards: Each entity engaged in construction on Project should be familiar with industry standards applicable to its construction activity. Copies of applicable standards are not bound with the Contract Documents.
    1. Where copies of standards are needed to perform a required construction activity, obtain copies directly from publication source.

1.3 ABBREVIATIONS AND ACRONYMS

A. Industry Organizations: Where abbreviations and acronyms are used in Specifications or other Contract Documents, they shall mean the recognized name of the entities indicated in Gale's "Encyclopedia of Associations: National Organizations of the U.S." or in Columbia Books' "National Trade & Professional Associations of the United States."

B. Industry Organizations: Where abbreviations and acronyms are used in Specifications or other Contract Documents, they shall mean the recognized name of the entities in the following list. Abbreviations and acronyms not included in this list shall mean the recognized name of the entities indicated in Gale's "Encyclopedia of Associations: National Organizations of the U.S." or in Columbia Books' "National Trade & Professional Associations of the United States." The information in this list is subject to change and is believed to be accurate as of the date of the Contract Documents.

C. Code Agencies: Where abbreviations and acronyms are used in Specifications or other Contract Documents, they shall mean the recognized name of the entities in the following list. This information is believed to be accurate as of the date of the Contract Documents.
1. DIN - Deutsches Institut fur Normung e.V.; www.din.de.
2. IAPMO - International Association of Plumbing and Mechanical Officials; www.iapmo.org.
3. ICC - International Code Council; www.iccsafe.org.
4. ICC-ES - ICC Evaluation Service, LLC; www.icc-es.org.

D. Federal Government Agencies: Where abbreviations and acronyms are used in Specifications or other Contract Documents, they shall mean the recognized name of the entities in the following list. Information is subject to change and is up to date as of the date of the Contract Documents.
1. COE - Army Corps of Engineers; www.usace.army.mil.
2. CPSC - Consumer Product Safety Commission; www.cpsc.gov.
3. DOC - Department of Commerce; National Institute of Standards and Technology; www.nist.gov.
4. DOD - Department of Defense; www.quicksearch.dla.mil.
5. DOE - Department of Energy; www.energy.gov.
6. EPA - Environmental Protection Agency; www.epa.gov.
7. FAA - Federal Aviation Administration; www.faa.gov.
8. FG - Federal Government Publications; www.gpo.gov/fdsys.
9. GSA - General Services Administration; www.gsa.gov.
10. HUD - Department of Housing and Urban Development; www.hud.gov.
11. LBL - Lawrence Berkeley National Laboratory; Environmental Energy Technologies Division; www.eetd.lbl.gov.
12. OSHA - Occupational Safety & Health Administration; www.osha.gov.
13. SD - Department of State; www.state.gov.
14. TRB - Transportation Research Board; National Cooperative Highway Research Program; The National Academies; www.trb.org.
15. USDA - Department of Agriculture; Agriculture Research Service; U.S. Salinity Laboratory; www.ars.usda.gov.
16. USDA - Department of Agriculture; Rural Utilities Service; www.usda.gov.
17. USDOJ - Department of Justice; Office of Justice Programs; National Institute of Justice; www.ojp.usdoj.gov.
18. USP - U.S. Pharmacopeial Convention; www.usp.org.
19. USPS - United States Postal Service; www.usps.com.

E. Standards and Regulations: Where abbreviations and acronyms are used in Specifications or other Contract Documents, they shall mean the recognized name of the standards and regulations in the following list. This information is subject to change and is believed to be accurate as of the date of the Contract Documents.
1. CFR - Code of Federal Regulations; Available from Government Printing Office; www.govinfo.gov.
2. DOD - Department of Defense; Military Specifications and Standards; Available from DLA Document Services; www.quicksearch.dla.mil.
3. DSCC - Defense Supply Center Columbus; (See FS).

4. FED-STD - Federal Standard; (See FS).
5. FS - Federal Specification; Available from DLA Document Services; www.quicksearch.dla.mil.
    a. Available from Defense Standardization Program; www.dsp.dla.mil.
    b. Available from General Services Administration; www.gsa.gov.
    c. Available from National Institute of Building Sciences/Whole Building Design Guide; www.wbdg.org.
6. MILSPEC - Military Specification and Standards; (See DOD).
7. USAB - United States Access Board; www.access-board.gov.
8. USATBCB - U.S. Architectural & Transportation Barriers Compliance Board; (See USAB).

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION

SECTION 01 50 00 - TEMPORARY FACILITIES AND CONTROLS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Temporary Utilities:
      a. Electricity.
      b. Lighting.
      c. Heating.
      d. Cooling.
      e. Ventilation.
      f. Communication services.
      g. Water.
      h. Sanitary.
   2. Construction Facilities:
      a. Field offices and sheds.
      b. Vehicular access.
      c. Parking.
      d. Progress cleaning.
      e. Project identification.
      f. Traffic regulation.
   3. Temporary Controls:
      a. Barriers.
      b. Fencing.
      c. Security.
      d. Water control.
      e. Dust control.
      f. Erosion and sediment control.
      g. Protection of Work.
   4. Removal of utilities, facilities, and controls.

B. Related Requirements:
   1. Divisions 01 Specification Sections apply to Work of this Section.
   2. Section 01 70 00 "Execution and Closeout Requirements" for final cleaning.

1.2 TEMPORARY ELECTRICITY

A. Connect to existing power service. Power consumption shall not disrupt Owner's need for continuous service.

B. Provide temporary electric feeder from existing building electrical service at location as directed. Power consumption shall not disrupt Owner's need for continuous service.

C. Provide separate metering and pay utility provider for cost of energy used.

D. Provide power outlets for construction operations, with branch wiring and distribution boxes as required.

E. Provide flexible power cords as required.

F. Provide main temporary service disconnect and overcurrent protection at convenient location in conformance with National Electric Code.

G. Permanent convenience receptacles may not be utilized during construction.

H. Provide adequate distribution equipment, wiring, and outlets to provide single phase branch circuits for power and lighting.
   1. Provide 20 ampere duplex outlets, single phase circuits for power tools for every 2,000 sq. ft. of active work area and at specific locations as required.
   2. Provide 20 ampere, single phase branch circuits for lighting.

1.3 TEMPORARY LIGHTING FOR CONSTRUCTION PURPOSES

A. Existing building lighting may not be utilized during construction. Provide and maintain 1 watt/sq. ft. lighting to exterior staging and storage areas after dark for security purposes.
B. Provide and maintain 0.25 watt/sq. ft. H.I.D. lighting to interior work areas after dark for security purposes.
C. Provide branch wiring from power source to distribution boxes with lighting conductors, pigtails, and lamps as required.
D. Maintain lighting and provide routine repairs.

1.4 TEMPORARY HEAT

A. Provide and pay for heat devices as required to maintain specified conditions for construction operations until new heating system is installed.
B. Owner will pay cost of energy used. Exercise measures to conserve energy.
C. Enclose building prior to activating temporary heat in accordance with "Exterior Enclosure" Article in this Section.
D. Maintain minimum ambient temperature of 50 degrees F in areas where construction is in progress, unless indicated otherwise in Specifications.

1.5 TEMPORARY COOLING

A. Provide and pay for temporary cooling devices as required to maintain specified conditions for construction operations until new cooling system is installed.
B. Existing facilities shall not be used.
C. Owner will pay cost of energy used. Exercise measures to conserve energy.
D. Provide separate metering and pay utility provider for cost of energy used.
E. Enclose building prior to activating temporary cooling in accordance with "Enclosures" Article in this Section.
F. Prior to operation of permanent equipment for temporary cooling purposes, verify installation is approved for operation, equipment is lubricated and filters are in place. Provide and pay for operation, maintenance, and regular replacement of filters and worn or consumed parts.
G. Maintain maximum ambient temperature of 80 degrees F in areas where construction is in progress, unless indicated otherwise in Specifications.

1.6 TEMPORARY VENTILATION

A. Ventilate enclosed areas to assist cure of materials, to dissipate humidity, and to prevent accumulation of dust, fumes, vapors, or gases.
B. Provide temporary fan units as required to maintain clean air for construction operations.

1.7 TEMPORARY COMMUNICATION SERVICES

A. As a minimum, provide cellular mobile telephone service for on-site superintendent and home office telephone service.
B. Owner's communication systems shall not be used .
C. Provide field office with the following service:
   1. Provide data service including all required equipment (modems, filters, etc.) with minimum 5.0Mbps downstreams/2.0Mbps upstream. Service shall utilize a DHCP IP address for connection. Contractor shall pay all costs associated with this service including any Internet Service Provider feeds.

1.8 TEMPORARY WATER SERVICE

A. Connect to existing water source for construction operations. Extend and supplement with temporary devices as needed to maintain specified conditions for construction operations.
B. Provide separate metering and reimburse Owner for cost of water used.
C. Exercise measures to conserve water.
D. Provide temporary pipe insulation to prevent freezing.

1.9 TEMPORARY SANITARY FACILITIES

A. Provide and maintain required facilities and enclosures.
B. Existing facilities shall not be used.
C. At end of construction, return facilities to same or better condition than originally found.

1.10 FIELD OFFICES AND SHEDS

A. Do not use existing facilities for field offices or for storage.
B. Office:
   1. Weathertight, with lighting, electrical outlets, heating, cooling, and ventilating equipment.
   2. Equip with sturdy furniture including conference table and chairs to accommodate six persons.
   3. Provide temporary communications services specified in this Section.
   4. Locate offices and sheds a minimum distance of 30 feet from existing and new structures.
C. Storage Areas and Sheds:
   1. Size storage to requirements for products of individual Sections, allowing for access and orderly provision for maintenance and for inspection of products to requirements of Section 01 60 00 "Product Requirements."
   2. Fire Extinguishers: Appropriate type fire extinguisher at each storage area.
   3. Interior Materials in Storage Sheds: As required to provide specified environmental conditions for storage of products.
   4. Heating and Ventilation: As required to maintain products in accordance with Contract Documents.
   5. Lighting: As required for maintenance and inspection of products.

D. Preparation: Fill and grade sites for temporary structures sloped for drainage away from buildings.
E. Installation: Install office spaces ready for occupancy 15 calendar days after date fixed in Notice to Proceed..
F. Maintenance and Cleaning:
   1. Weekly janitorial services for offices; periodic cleaning and maintenance for office and storage areas.
   2. Maintain approach walks free of mud, water, and snow.
G. Removal: At completion of Work remove buildings, foundations, utility services, and debris. Restore areas.

1.11 EMPLOYEE RESIDENTIAL OCCUPANCY

A. Not allowed on Owner's property.

1.12 VEHICULAR ACCESS

A. Location as indicated on Drawings.
B. Provide and maintain access to fire hydrants and control valves free of obstructions.
C. Provide means of removing mud from vehicle wheels before entering on site paved areas and public streets.
D. Use existing on-site roads for construction traffic as designated.

1.13 PARKING

A. Construct temporary gravel surface parking areas to accommodate construction personnel.
B. Locate as approved by Architect.
C. When site space is not adequate, provide additional off-site parking.
D. Use of existing on-site streets and driveways for construction traffic is ermitted.
E. Use of existing parking facilities by construction personnel is not permitted.
F. Do not allow heavy or tracked vehicles or construction equipment in parking areas.
G. Do not allow vehicle parking on existing pavement.
H. Permanent Pavements and Parking Facilities:
   1. Prior to Substantial Completion, bases for permanent roads and parking areas may be used for construction traffic.
   2. Avoid traffic loading beyond paving design capacity. Tracked vehicles not allowed.
   3. Use of permanent parking structures is not permitted.
I. Maintenance:
   1. Maintain traffic and parking areas in sound condition free of excavated material, construction equipment, products, mud, snow, and ice.
   2. Maintain existing and permanent paved areas used for construction; promptly repair breaks, potholes, low areas, standing water, and other deficiencies, to maintain paving and drainage in original, or specified, condition.
J. Removal, Repair:
   1. Remove temporary materials and construction before Substantial Completion.
   2. Remove underground work and compacted materials to depth of 2 feet; fill and grade site as specified.
   3. Repair existing facilities damaged by use, to specified condition.
K. Mud from Site Vehicles: Provide means of removing mud from vehicle wheels before entering streets.

1.14 PROGRESS CLEANING

A. Maintain areas free of waste materials, debris, and rubbish. Maintain site in a clean and orderly condition.
B. Remove debris and rubbish from pipe chases, plenums, attics, crawl spaces, and other closed or remote spaces, prior to enclosing space.
C. Broom and vacuum clean interior areas prior to start of surface finishing, and continue cleaning to eliminate dust.
D. Remove waste materials, debris, and rubbish from site and dispose off-site at intervals as required to maintain clean site.

1.15 PROJECT IDENTIFICATION

A. Project Identification Sign:
   1. Size: Provide one 8 feet wide by 4 feet high, as shown in drawings.
   2. Materials: 3/4-inch-thick exterior grade plywood and solid wood frame.
   3. Background Paint: Exterior quality, two coats; sign background of color as selected.
   4. Lettering: Exterior paint of quality adequate to withstand weathering, fading, and chipping for duration of construction, colors as selected with exhibit lettering by professional sign painter.
B. Project Informational Signs:
   1. If required by other Documents or Sections of Project Manual, provide weather-protected signs for site safety procedures, wage rates, and Storm Water Pollution Prevention Plan.
   2. Erect sign on or adjacent to field office, if required.
C. Design sign and structure to withstand 90 miles/hr wind velocity.
D. Installation:
   1. Install Project identification sign within 15 days after date fixed by Notice to Proceed.
   2. Erect at location directed by Architect.
   3. Erect supports and framing on secure foundation, rigidly braced and framed to resist wind loadings.
   4. Install sign surface plumb and level, with butt joints. Anchor securely.
   5. Paint exposed surfaces of sign supports and framing.
E. No other signs are allowed without Owner's permission except those required by law.
F. Maintenance: Maintain signs and supports clean, repair deterioration and damage.
G. Removal: Remove signs, framing, supports, and foundations at completion of Project and restore area.

1.16 TRAFFIC REGULATION

A. Signs, Signals, and Devices:
   1. Post Mounted and Wall Mounted Traffic Control and Informational Signs: As approved by authority having jurisdiction.
   2. Traffic Cones and Drums: As approved by authority having jurisdiction.

B. Haul Routes:
   1. Consult with authority having jurisdiction, establish public thoroughfares to be used for haul routes and site access.
   2. Confine construction traffic to designated haul routes.
   3. Provide traffic control at critical areas of haul routes to regulate traffic, to minimize interference with public traffic.

C. Traffic Signs and Signals:
   1. Provide signs at approaches to site and on site, at crossroads, detours, parking areas, and elsewhere as needed to direct construction and affected public traffic.
   2. Relocate as Work progresses, to maintain effective traffic control.

D. Removal:
   1. Remove equipment and devices when no longer required.
   2. Repair damage caused by installation.
   3. Remove post settings to depth of 2 feet.

1.17 BARRIERS

A. Provide barriers to prevent unauthorized entry to construction areas and to protect existing facilities and adjacent properties from damage from construction operations and demolition.
   1. Allow for Owner's use of site.

B. Protect site improvements including but not limited to pavements, walkways, and drainage structures from damage. Replace damaged site improvements to original condition.

C. Protect non-owned vehicular traffic and stored materials from damage.

1.18 TEMPORARY FENCING

A. Construction: Commercial grade chain link fence.

B. Provide 6-foot-high fence around construction site and temporary materials storage area; equip with vehicular gates with locks.

1.19 SECURITY

A. Security Program:
   1. Protect Work, existing premises, and Owner's operations from theft, vandalism, and unauthorized entry.
   2. Initiate program in coordination with Owner's existing security system at Project mobilization.
   3. Maintain program throughout construction period until Owner occupancy.

B. Entry Control:
   1. Restrict entrance of persons and vehicles into Project site and existing facilities.
   2. Allow entrance only to authorized persons with proper identification.
   3. Coordinate access of Owner's personnel to site in coordination with Owner's security forces.

C. Personnel Identification:
   1. Provide identification badge to each person authorized to enter premises.
   2. Badge to Include information required by Owner.
   3. Maintain list of accredited persons, submit to Owner on request.
   4. Require return of badges at expiration of their employment on Work.

1.20 WATER CONTROL

A. Grade site to drain.
B. Maintain excavations free of water.
C. Provide, operate, and maintain pumping equipment.
D. Protect site from puddling and running water. Provide water barriers as required to protect site from soil erosion.
E. Provide water barriers as required to protect existing buildings from puddling, ponding or other water accumulation that may damage foundations or other sub-surface construction.

1.21 DUST CONTROL

A. Execute Work by methods to minimize raising dust from construction operations.
B. Provide positive means to prevent air-borne dust from dispersing into atmosphere.

1.22 EROSION AND SEDIMENT CONTROL

A. Plan and execute construction by methods to control surface drainage from cuts and fills, from borrow and waste disposal areas. Prevent erosion and sedimentation.
B. Minimize surface area of bare soil exposed at one time.
C. Provide temporary measures including berms, dikes, and drains, and other devices to prevent water flow that would result in erosion.
D. Construct fill and waste areas by selective placement to avoid erosive surface silts or clays.
E. Periodically inspect earthwork to detect evidence of erosion and sedimentation; promptly apply corrective measures.

1.23 PROTECTION OF INSTALLED WORK

A. Protect installed Work and provide special protection where specified in individual Specification Sections.
B. Provide temporary and removable protection for installed products. Control activity in immediate work area to minimize damage.
C. Provide protective coverings at openings in walls, roof, and soffits.
D. Protect finished walkways, drives, and other surfaces from traffic, dirt, wear, damage, or movement of heavy objects, by protecting with durable sheet materials.
E. Prohibit traffic or storage upon waterproofed or roofed surfaces. If traffic or activity is necessary, obtain recommendations for protection from waterproofing or roofing material manufacturer.
F. Prohibit traffic from landscaped areas.

1.24 REMOVAL OF UTILITIES, FACILITIES, AND CONTROLS

A. Remove temporary above grade utilities, equipment, facilities, and materials as soon as permanent facilities can be utilized.
B. Remove risers for underground utilities to a minimum depth of 2 feet and cap.
C. Remove buried equipment, facilities, and materials completely to a minimum depth of 2 feet and cap.

D. Backfill excavations as specified in other sections and grade site as indicated.
E. Clean and repair damage caused by installation or use of temporary work.
F. Restore existing facilities used during construction to original condition. Restore permanent facilities used during construction to specified condition.
G. Remove the following at completion of Work:
    1. Office.
    2. Storage sheds.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION

SECTION 01 57 13 - TEMPORARY EROSION AND SEDIMENT CONTROL

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes implementation of a Project Stormwater Pollution Prevention Plan (SWPPP) and installation, maintenance, and removal of erosion and sediment control devices.
B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.

1.2 REFERENCES

A. Reference standards cited herein refer to the current reference standard published at the time of the latest revision date logged unless a date is specifically cited.
   1. ASTM D3786 - Standard Test Method for Bursting Strength of Textile Fabrics - Diaphragm Bursting Strength Tester Method.
   2. ASTM D4632 - Standard Test Method for Grab Breaking Load and Elongation of Geotextiles.
   3. ASTM D4751 - Standard Test Method for Determining Apparent Opening Size of a Geotextile.
   4. ASTM D4833 - Standard Test Method for Index Puncture Resistance of Geomembranes and Related Products.
   5. TCEQ TPDES General Permit No. TXR15000.
   6. TxDOT DMS-6230 Temporary Sediment Control Fence Fabric.•
   7. TxDOT Item 506 Temporary Erosion, Sedimentation, and Environmental Controls.•

1.3 CONTRACTOR RESPONSIBILITIES

A. Meet all TCEQ and EPA requirements for stormwater pollution prevention to include:
   1. Developing a Stormwater Pollution Prevention Plan (SWPPP) unless otherwise stated in Contract Documents;
   2. Filing Notice of Intent (NOI) and include Owner as Operator;•
   3. Installing and maintaining all erosion control measures and best management practices (BMPs);
   4. Performing inspections and preparing reports;
   5. Filing Notice of Termination (NOT); and
   6. Removing erosion control measures and BMPs from site.

1.4 SUBMITTALS

A. SWPPP.
B. TCEQ NOI and NOT for stormwater discharges associated with construction activity under TPDES General Permit.
C. Construction site notice.
D. Notice of Change (if applicable).
E. Other related documentation conforming to Section 01 33 00 Submittal Procedures.•

PART 2 - PRODUCTS

2.1 PRODUCT TYPES AND MATERIALS

A. Sandbag Material: Furnish sandbags meeting Article 2.1.F herein except any gradation of aggregate may be used to fill sandbags.

B. Stabilized Construction Entrances. Provide materials to meet details shown herein and on Drawings.
   1. Provide crushed aggregate for long- and short-term construction exits.
   2. Furnish clean, hard, and durable aggregates free from adherent coatings such as salt, alkali, dirt, clay, loam, shale, soft or flaky materials, organic, and injurious matter.
   3. Use 3- to 5-inch coarse aggregate with a minimum thickness of 12 inches..
   4. Place aggregate over a geotextile fabric meeting the following criteria:
      a. Tensile Strength: 300 pounds, per ASTM D4632.
      b. Puncture Strength: 120 pounds, per ASTM D4833.
      c. Mullen Burst Rate: 600 psi, per ASTM D3786.
      d. Apparent Opening Size: No. 40 (max), per ASTM D4751.
   5. For existing pavement to remain in an area that will function as a stabilized construction entrance, Contractor to provide trackout control mat or approved equal.

C. Sandbags:
   1. Provide sandbag material of polypropylene-, polyethylene-, or polyamide-woven fabric with minimum 4-ounce-per-square-yard unit weight, Mullen burst-strength exceeding 300 psi, and ultraviolet stability exceeding 70 percent.
   2. Use natural coarse sand or manufactured sand meeting gradation given in Table 1 to fill sandbags.
   3. Filled sandbags must be 24 to 30 inches long, 16 to 18 inches wide, and 6 to 8 inches thick.

Table 1 - SAND GRADATION

Sieve No.	Maximum Retained
4	3% by weight
100	80% by weight
200	95% by weight

D. Temporary Sediment Control Fence:
   1. Provide net-reinforced fence using woven, geotextile fabric.
   2. Logos visible to traveling public is not allowed.
   3. Fabric: Provide fabric materials per DMS-6230, Temporary Sediment Control Fence Fabric.•
   4. Posts:
      a. Provide essentially straight wood or steel posts with minimum 48-inch length, unless otherwise shown on Drawings.
      b. Soft wood posts must be at least 3 inches in diameter or nominal 2 by 4 inches.
      c. Hardwood posts must have minimum 1.5- by 1.5-inch cross section
      d. T- or L-shaped steel posts must have minimum 1.3-lb. per foot weight.

5. Net Reinforcement: Provide at least 12.5-gauge, galvanized, welded-wire mesh, with maximum 2- by 4-inch opening size, at least 24 inches wide, unless otherwise shown on Drawings.
6. Staples: Provide with a crown at least 3/4-inch wide and legs 1/2-inch long.

PART 3 - EXECUTION

3.1 INSTALLATION

A. SWPPP: Develop and implement in accordance with TPDES Construction General Permit requirements or as shown on Plans. Prevent water pollution from stormwater runoff by using and maintaining appropriate structural and nonstructural BMPs to reduce pollutants discharges from construction site.

B. Control Measures:
   1. Implement in area to be disturbed before beginning construction, or as directed. Limit disturbance to area shown on Drawings, or as directed.
   2. Control site waste such as discarded building materials, concrete truck washout water, chemicals, litter, and sanitary waste at construction site.
   3. If, in Engineer¢s opinion, Contractor cannot control soil erosion and sedimentation resulting from construction operations, Engineer will limit disturbed area to what Contractor can control.
   4. Immediately correct ineffective control measures. Implement additional controls as directed. Remove excavated material within time requirements specified in applicable stormwater permit.
   5. Upon acceptance of vegetative cover by the City, remove and dispose all temporary control measures, temporary embankments, bridges, matting, falsework, piling, debris, or other obstructions placed during construction that are not part of finished work, or as directed.

C. Do not locate disposal areas, stockpiles, or haul roads in any wetland, water body, or streambed.

D. Do not install temporary construction crossings in or across any water body without prior approval of appropriate resource agency and Engineer.

E. Provide protected storage area for paints, chemicals, solvents, and fertilizers at an approved location. Keep paints, chemicals, solvents, and fertilizers off bare ground and provide shelter for stored chemicals.

F. Installation and Maintenance:
   1. Perform work per TPDES General Permit.
   2. When approved, dispose sediments within embankments or where material will not contribute to further siltation.
   3. Dispose removed material in accordance with federal, state, and local regulations.
   4. Remove devices upon approval or when directed.
      a. Upon removal, finish-grade and dress area.
      b. Stabilize disturbed areas per permit, as shown on Drawings, and/or as directed.
   5. Contractor retains ownership of stockpiled material and must remove from Project when new installations or replacements are no longer required.

G. Construction Entrances:
1. When tracking conditions exist, prevent traffic from crossing or exiting construction site or moving directly onto a public roadway, alley, sidewalk, parking area, or other right of way areas other than at construction entrance locations.
2. Place exit over a foundation course, if necessary. Grade foundation course or compacted subgrade to direct runoff from construction exits to a sediment trap as shown on Drawings, or as directed.
3. At drive approaches, verify construction entrance is full width of drive and meets length shown on Drawings.
   a. Width: at least 20 feet for 1-way and 24 feet for 2-way traffic for all other points of ingress or egress, or as directed by Engineer.

H. Earthwork for Erosion Control. Perform excavation and embankment operations to minimize erosion and remove collected sediments from other erosion control devices.
1. Excavation and Embankment for Erosion Control Measures
   a. Place earth dikes, swales, or combinations of both along low crown of daily lift placement, or as directed, to prevent runoff spillover.
   b. Place swales and dikes at other locations as shown on Drawings, or as directed, to prevent runoff spillover or divert runoff.
   c. Construct cuts with low end blocked with undisturbed earth to prevent erosion of hillsides.
   d. Construct sediment traps at drainage structures in conjunction with other erosion control measures as shown on Drawings, or as directed.
   e. Where required, create a sediment basin providing 3,600 cubic feet of storage per acre drained, or equivalent control measures for drainage locations that serve an area with 10 or more disturbed acres at one time, not including offsite areas.
2. Excavation of Sediment and Debris: Remove when accumulation affects performance of devices, after a typical rain event, and when directed.

I. Sandbags for Erosion Control:
1. Construct a berm or dam of sandbags to intercept sediment-laden stormwater runoff from disturbed areas, create a retention pond, detain sediment, and release water in sheet flow.
2. Fill each bag with sand so at least top 6 inches of bag is unfilled to allow for proper tying of open end.
3. Place sandbags with tied ends in same direction.
4. Offset subsequent rows of sandbags half the length of preceding row.
5. Place single layer of sandbags downstream as secondary debris trap.
6. Place additional sandbags as necessary or directed for supplementary support to berms, dams of sandbags, or earth.

J. Temporary Sediment-Control Fence:
1. Provide temporary sediment-control fence near downstream perimeter of disturbed area to intercept sediment from sheet flow.
2. Incorporate fence into erosion-control measures used to control sediment in areas of higher flow. Install fence as shown on Drawings, specified herein, or as directed.
   a. Post Installation: Embed posts at least 18 inches deep or adequately anchor, if in rock, with a 6- to 8-foot spacing and install on slight angle toward run-off source.

b. Fabric Anchoring:
   1) Dig trenches along uphill side of fence to anchor 6-8 inches of fabric.
   2) Provide minimum trench cross-section of 6 by 6 inches.
   3) Place fabric against side of trench and align approximately 2 inches of fabric along bottom in upstream direction.
   4) Backfill trench then hand-tamp.

c. Fabric and Net Reinforcement Attachment:
   1) Unless otherwise shown on Drawings, attach reinforcement to wooden posts with staples, (or to steel posts with T-clips), in at least four places, equally spaced.
   2) Sewn vertical pockets may be used to attach reinforcement to end posts.
   3) Fasten fabric to top strand of reinforcement by hog rings or cord every 15 inches or less.

d. Fabric and Net Splices:
   1) Locate splices at fence post with minimum 6-inch lap attached in at least six places equally spaced, unless otherwise shown on Drawings. Do not locate splices in concentrated flow areas.
   2) Requirements for installation of used temporary sediment-control fence include:
      a) Fabric with minimal or no visible signs of biodegradation (weak fibers);
      b) Fabric without excessive patching (more than one patch every 15-20 feet);
      c) Posts without bends; and
      d) Backing without holes.

3.2 CLEANING

A. Waste Management: Remove sediment, debris, and litter as needed.

3.3 MAINTENANCE

A. Install and maintain temporary erosion- and sedimentation-control device integrity to accumulate silt and debris until earthwork construction and permanent erosion-control features are in place or disturbed area is adequately stabilized as determined by Engineer.
B. If device ceases to function as intended, repair or replace device or portions thereof as necessary.
C. Inspect construction site as prescribed in TPDES General Permit.
D. Maintain records of inspections and modifications based on inspection results, if any, and make available in accordance with permit.

3.4 CLOSEOUT ACTIVITIES

A. Erosion-control measures remain in place and maintained until all soil-disturbing activities at Project site are complete and site is stabilized as required by the permit.
B. Establish a uniform vegetative cover of 70 percent on all unpaved areas, areas not covered by permanent structures, or where permanent erosion-control measures (i.e. riprap, gabions, or geotextiles) are employed.
C. Transmit copy of submitted NOT to Engineer.

END OF SECTION

SECTION 01 60 00 - PRODUCT REQUIREMENTS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Products.
   2. Product delivery, storage, and handling.
   3. Substitutions.

B. Related Requirements:
   1. Section 00 21 13 "Instructions to Bidders" for product options and substitution procedures.
   2. Division 01 Specification Sections apply to Work of this Section.
   3. Section 01 30 00 "Administrative Requirements" for Project information management.
   4. Section 01 40 00 "Quality Requirements" for product quality monitoring. Testing Laboratory Services.
   5. Section 01 42 00 "References."

1.2 PRODUCTS

A. Products: Means new material, machinery, components, equipment, fixtures, and systems forming Work and does not include machinery and equipment used for preparation, fabrication, conveying and erection of Work.

B. Hazardous Materials: Products or material containing hazardous materials or substances, including but not limited to asbestos or polychlorinated biphenylshall (PCB), shall not be included in Work.

C. Do not use materials and equipment removed from existing premises, except as specifically permitted by Contract Documents.

D. Provide interchangeable components of same manufacturer, for similar components.

E. Materials required to match existing work and not otherwise specified, shall be equal to existing work in quality, color, and finish. Workmanship and installation shall be comparable to adjacent existing work. Architect shall be authority in determination of acceptable work.

1.3 PRODUCT DELIVERY, STORAGE, AND HANDLING

A. Delivery:
   1. Deliver materials, products, and equipment to site in manufacturer's original, unopened containers or packaging, with identifying labels intact and legible.
   2. Promptly inspect shipments to assure that products comply with requirements, quantities are correct, and products are undamaged.
   3. Provide equipment and personnel to handle products by methods to prevent soiling, disfigurement, or damage.
   4. Arrange deliveries in accord with construction schedule and in ample time to facilitate inspection prior to installation to avoid unnecessary delays in construction process.

B. Storage:
   1. Store and protect products in accordance with manufacturer's instructions, with seals and labels intact and legible.
   2. Store sensitive products in weathertight, climate-controlled enclosures.
   3. For exterior storage of fabricated products, place on supports, above ground, sloped to drain water.
   4. Cover products subject to deterioration with impervious sheet covering. Provide ventilation to avoid condensation or potential degradation of products.
   5. Store loose granular materials on solid flat surfaces in a well-drained area. Prevent mixing with foreign matter.
   6. Provide equipment and personnel to store products by methods to prevent soiling, disfigurement, or damage.
   7. Arrange storage of products to permit access for inspection. Periodically inspect to verify products are undamaged and are maintained in acceptable condition.
   8. Materials, products, and equipment may be stored off site in a bonded and insured warehouse approved by Architect and Owner. Pay all costs incurred for off-site storage facilities. Products properly stored in off-site storage facilities may be included in progress pay requests with written approval of Architect.

C. Handling: Handle materials, products, and equipment in a manner prescribed by manufacturer or specified to protect from damage during storage and installation.

1.4 SUBSTITUTIONS

A. Instructions to Bidders specify time restrictions for submitting requests for Substitutions during bidding period to requirements specified in this Section.

B. Substitutions (after bidding period) may be considered when a product becomes unavailable through no fault of Contractor.

C. Document each request with complete data substantiating compliance of proposed Substitution with Contract Documents. Provide each request on CSI Form 13.1A supplied by Architect.

D. A request constitutes a representation that Bidder:
   1. Has investigated proposed product and determined that it meets or exceeds quality level of specified product.
   2. Will provide same warranty for Substitution as for specified product.
   3. Will coordinate installation and make changes to other Work which may be required for Work to be complete with no additional cost to Owner.
   4. Waives claims for additional costs or time extension which may subsequently become apparent.
   5. Will reimburse Owner and Architect for review or redesign services associated with re-approval by authorities.

E. Substitutions will not be considered when they are indicated or implied on shop drawing or product data submittals, without separate written request, or when acceptance will require revision to Contract Documents.

F. Substitution Submittal Procedure:
   1. Submit request for substitution for consideration. Limit each request to one proposed Substitution.
   2. Requests shall include name of material or equipment to be substituted and a description of proposed substitution including drawings, performance and test data, and other information necessary for an evaluation.
   3. Submit item-by-item (line-by-line) comparison of each item listed in Specification compiled and submitted comparing specified material/product with proposed substitution and specifically noting all differences between the compared products and/or systems.
   4. Submit statement setting forth changes in other material, equipment or other portions of Work including changes in work of other contracts that incorporation of proposed substitution would require shall be included.
   5. Submit shop drawings, product data, and certified test results for proposed product equivalence.
   6. Architect will notify Contractor, in writing, of decision to accept or reject request.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION

SECTION 01 70 00 - EXECUTION AND CLOSEOUT REQUIREMENTS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Closeout procedures.
   2. Final cleaning.
   3. Starting of systems.
   4. Demonstration and instructions.
   5. Testing, adjusting, and balancing.
   6. Protecting installed construction.
   7. Hazardous materials affidavits.
   8. Project record documents.
   9. Operation and maintenance data.
   10. Manual for materials and finishes.
   11. Manual for equipment and systems.
   12. Spare parts and maintenance products.
   13. Product warranties and product bonds.

B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.
   2. Section 01 30 00 "Administrative Requirements" for Project information management.

1.2 CLOSEOUT PROCEDURES

A. Submit written certification that Contract Documents have been reviewed, Work has been inspected, and that Work is complete in accordance with Contract Documents and ready for Architect's review.

B. Provide submittals to Architect required by authority having jurisdiction.

C. Submit final Application for Payment identifying total adjusted Contract Sum, previous payments, and sum remaining due.

D. Closeout documents will be submitted electronically in OCR (Optical Character Recognition)/PDF format.

E. At Owner's request, Contractor shall provide a hard copy of Closeout Documents in 3-ring binders.

1.3 FINAL CLEANING

A. Execute final cleaning prior to final Project assessment.

B. Clean interior and exterior glass, surfaces exposed to view; remove temporary labels, stains, and foreign substances; polish transparent and glossy surfaces; and vacuum carpeted and soft surfaces.

C. Clean equipment and fixtures to sanitary condition with cleaning materials appropriate to surface and material being cleaned.

D. Replace filters of operating equipment.
E. Clean debris from roofs, gutters, downspouts, and drainage systems.
F. Clean site; sweep paved areas, rake clean landscaped surfaces.
G. Remove waste and surplus materials, rubbish, and construction facilities from site.

1.4 STARTING OF SYSTEMS

A. Coordinate schedule for startup of various equipment and systems.
B. Notify Primary Designer days prior to startup of each item.
C. Verify each piece of equipment or system has been checked for proper lubrication, drive rotation, belt tension, control sequence, and for conditions which may cause damage.
D. Verify tests, meter readings, and specified electrical characteristics agree with those required by equipment or system manufacturer.
E. Verify wiring and support components for equipment are complete and tested.
F. Execute startup under supervision of applicable manufacturer's representative in accordance with manufacturers' instructions.
G. Submit a written report in accordance with Section 01 33 00 "Submittal Procedures" that equipment or system has been properly installed and is functioning correctly.

1.5 DEMONSTRATION AND INSTRUCTIONS

A. Demonstrate operation and maintenance of products to Owner's personnel two weeks prior to date of final inspection.
B. For equipment or systems requiring seasonal operation, perform demonstration for other season within six months.
C. Utilize operation and maintenance manuals as basis for instruction. Review contents of manual with Owner's personnel in detail to explain aspects of operation and maintenance.
D. Demonstrate startup, operation, control, adjustment, troubleshooting, servicing, maintenance, and shutdown of each item of equipment at agreed time, at equipment location.
E. Prepare and insert additional data in operations and maintenance manuals when need for additional data becomes apparent during instruction.

1.6 TESTING, ADJUSTING, AND BALANCING

A. Testing, adjusting, and balancing will be performed in accordance with requirements specified in Division 23 Section "Testing, Adjusting, and Balancing."
B. Owner will appoint, employ, and pay for services of independent firm to perform testing, adjusting, and balancing.
C. Independent firm will perform services specified in Division 23 Section "Testing, Adjusting, and Balancing."
D. Reports will be submitted by independent firm to Architect indicating observations and results of tests and indicating compliance or non-compliance with requirements of Contract Documents.

1.7 PROTECTING INSTALLED CONSTRUCTION

A. Protect installed Work and provide special protection where specified in individual Specification Sections.
B. Provide temporary and removable protection for installed products. Control activity in immediate work area to prevent damage.
C. Protect finished floors, stairs, and other surfaces from traffic, dirt, wear, damage, or movement of heavy objects, by protecting with durable sheet materials.
D. Prohibit traffic or storage upon waterproofed or roofed surfaces. When traffic or activity is necessary, obtain recommendations for protection from waterproofing or roofing material manufacturer.
E. Prohibit traffic from landscaped areas.

1.8 HAZARDOUS MATERIALS AFFIDAVITS

A. Contractor to provide notarized affidavit declaring that hazardous materials were not incorporated into or delivered to site.
B. Hazardous materials include asbestos, lead polychlorinated biphenyl (PCB), prohibited termite eradication chemicals or any substance of any proportion determined or suspected by an agency of federal or state government to create a health hazard.
C. Provide table of contents listing affidavits in alphabetical order.
D. Prepare cover page with printed title "AFFIDAVITS OF NON-INCORPORATED HAZARDOUS MATERIALS", Title of Project, Project Address, Owner's Name, Address and Phone, and Date of Construction Completion.
E. Provide one complete set of aforementioned information in OCR (Optical Character Recognition)/PDF format.
F. Submit prior to Application for Final Payment.

1.9 PROJECT RECORD DOCUMENTS

A. Maintain on site 1 set of record documents; record actual revisions to Work:
   1. Drawings.
   2. Specifications.
   3. Addenda.
   4. Change Orders and other modifications to Contract.
   5. Reviewed Shop Drawings, Product Data, and Samples.
   6. Complete set of MSDS sheets for materials.
   7. Manufacturer's instruction for assembly, installation, and adjusting.
B. Ensure entries are complete and accurate, enabling future reference by Owner.
C. Store record documents separate from documents used for construction.
D. Record information concurrent with construction progress, not less than weekly.
E. Specifications: Legibly mark and record at each product Section description of products installed, including following:
   1. Manufacturer's name and product model and number.
   2. Product substitutions or alternates utilized.
   3. Changes made by Addenda, Change Orders, RFI responses, and other modifications. For Addenda, Change Orders, and RFI responses, cut out and tape to pages in appropriate location, referencing source of change.

F. Record Drawings and Shop Drawings: Legibly mark each item to record actual construction including:
   1. Measured depths of foundations in relation to finish first floor datum.
   2. Measured horizontal and vertical locations of underground utilities and appurtenances, referenced to permanent surface improvements.
   3. Measured locations of internal utilities and appurtenances concealed in construction, referenced to visible and accessible features of Work.
   4. Field changes of dimension and detail.
   5. Details not on original Contract Drawings.
   6. Changes made by Addenda, Change Order, RFI responses, and other modifications. For Addenda, Change Orders, and RFI responses, cut out and tape to pages in appropriate location, referencing source of change.
   7. Submit in OCR (Optical Character Recognition)/PDF format.
   8. Comply with most current requirements of Department of State Health Services, Texas Asbestos Health Protection Rules (TAHPR), Title 25., HEALTH SERVICES, Part I, Chapter 295-Occupational Health, §295.34-Asbestos Management in Facilities and Public Buildings, paragraph (i) as a minimum and as outlined below.
   9. Submit MSDS on products used in construction of Project.
   10. Submit MSDS electronically in 8-1/2- by 11-inch format text pages.
   11. Prepare cover page with printed title "MATERIAL SAFETY DATA SHEETS (MSDS)", Title of Project, Project Address, Owner's Name, Address and Phone, and Date of Construction Completion.
   12. Internally subdivide contents with page dividers, organized into CSI format shown in Project Manual.
   13. Prepare a table of contents, listing each of Division headings and listing each material/product under each heading by manufacturer and material/product name.
   14. Submit complete set of aforementioned information in OCR (Optical Character Recognition)/PDF format.
   15. Submit information with Application for Final Payment and include MSDS for materials/products delivered or installed in Project.
   16. Failure to submit updated electronic MSDS documents will cause Application for Final Payment to be held by Architect (not submitted to Owner for processing) until such time updated electronic MSDS documents are received and reviewed for compliance by Architect.

G. Submit documents to Architect with claim for final Application for Payment.

1.10 OPERATION AND MAINTENANCE DATA

A. Submit data electronically in 8-1/2- by 11-inch text pages, OCR (Optical Character Recognition)/PDF format.

B. Prepare cover page with printed title "OPERATION AND MAINTENANCE INSTRUCTIONS", title of Project.

C. Internally subdivide contents with page dividers, logically organized as described below:
   1. Drawings: Provide in OCR (Optical Character Recognition)/PDF format.
   2. Contents: Prepare Table of Contents for each file (if multiple files), with each product or system description identified, in three parts as follows:
      a. Part 1: Directory, listing names, addresses, and telephone numbers of Architect, Contractor, subcontractors, and major equipment suppliers.

b. Part 2: Operation and maintenance instructions, arranged by system and subdivided by Specification Section. For each category, identify names, addresses, and telephone numbers of subcontractors and suppliers. Identify:
   1) Significant design criteria.
   2) List of equipment.
   3) Parts list for each component.
   4) Operating instructions.
   5) Maintenance instructions for equipment and systems.
   6) Maintenance instructions for finishes, including recommended cleaning methods and materials, and special precautions identifying detrimental agents.

c. Part 3: Project documents and certificates, including:
   1) Shop drawings and product data.
   2) Air and water balance reports.
   3) Certificates.
   4) Scanned copies of warranties and bonds in OCR (Optical Character Recognition)/PDF format.

D. Submit one complete set of aforementioned information in OCR (Optical Character Recognition)/PDF format.

E. Submit documents with Application for Final Payment.

1.11 MANUAL FOR MATERIALS AND FINISHES

A. Submit in OCR (Optical Character Recognition)/PDF format of preliminary draft or proposed formats and outlines of contents before start of Work. Architect will review draft and return electronic file with comments.

B. For equipment, or component parts of equipment put into service during construction and operated by Owner, submit documents within 10 days after acceptance.

C. Submit one electronic copy of completed volumes 15 days prior to final inspection. Draft copy to be reviewed and returned , with Architect comments. Revise content of electronic document set as required prior to final submission.

D. Submit electronic documents of revised final volumes in final form within 10 days after final inspection.

E. Building Products, Applied Materials, and Finishes: Include product data, with catalog number, size, composition, and color and texture designations. Include information for re-ordering custom manufactured products.

F. Instructions for Care and Maintenance: Include manufacturer's recommendations for cleaning agents and methods, precautions against detrimental agents and methods, and recommended schedule for cleaning and maintenance.

G. Moisture Protection and Weather Exposed Products: Include product data listing applicable reference standards, chemical composition, and details of installation. Include recommendations for inspections, maintenance, and repair.

H. Additional Requirements: As specified in individual product Specification Sections.

I. Include listing in Table of Contents for design data, with fly sheet.

1.12 MANUAL FOR EQUIPMENT AND SYSTEMS

A. Submit in OCR (Optical Character Recognition)/PDF format of preliminary draft or proposed formats and outlines of contents before start of Work. Architect will review draft and return with comments.
B. For equipment, or component parts of equipment put into service during construction and operated by Owner, submit electronic documents within 10 days after acceptance.
C. Submit electronic copy of completed volume(s) 15 days prior to final inspection. Draft copy to be reviewed and returned [after final inspection], with Architect comments. Revise content of electronic document set as required prior to final submission.
D. Submit electronic documents in OCR (Optical Character Recognition)/PDF format of revised final volumes in final form within 10 days after final inspection.
E. Each Item of Equipment and Each System: Include description of unit or system, and component parts. Identify function, normal operating characteristics, and limiting conditions. Include performance curves, with engineering data and tests, and complete nomenclature and model number of replaceable parts.
F. Panelboard Circuit Directories: Provide electrical service characteristics, controls, and communications; by label machine.
G. Include color coded wiring diagrams as installed.
H. Operating Procedures: Include startup, break-in, and routine normal operating instructions and sequences. Include regulation, control, stopping, shutdown, and emergency instructions. Include summer, winter, and special operating instructions.
I. Maintenance Requirements: Include routine procedures and guide for preventative maintenance and troubleshooting; disassembly, repair, and reassembly instructions; and alignment, adjusting, balancing, and checking instructions.
J. Include servicing and lubrication schedule, and list of lubricants required.
K. Include manufacturer's printed operation and maintenance instructions.
L. Include sequence of operation by controls manufacturer.
M. Include original manufacturer's parts list, illustrations, assembly drawings, and diagrams required for maintenance.
N. Include control diagrams by controls manufacturer as installed.
O. Include Contractor's coordination drawings, with color coded piping diagrams as installed.
P. Include charts of valve tag numbers, with location and function of each valve, keyed to flow and control diagrams.
Q. Include list of original manufacturer's spare parts, current prices, and recommended quantities to be maintained in storage.
R. Include test and balancing reports as specified in Section 01 40 00 "Quality Requirements".
S. Additional Requirements: As specified in individual product Specification Sections.
T. Include listing in Table of Contents for design data, with dividers.

1.13 SPARE PARTS AND MAINTENANCE PRODUCTS

A. Furnish spare parts, maintenance, and extra products in quantities specified in individual Specification Sections.
B. Deliver to Project site and place in location as directed by Owner; obtain receipt prior to final payment.
C. Submit receipts signed by Owner or letter stating Contractor has delivered extra products to Owner.

1.14 PRODUCT WARRANTIES AND PRODUCT BONDS

A. Obtain warranties and bonds executed by responsible subcontractors, suppliers, and manufacturers, within 10 days after completion of applicable item of work.
B. Execute and assemble transferable warranty documents and bonds from subcontractors, suppliers, and manufacturers.
C. Verify documents are in proper form, contain full information, and are notarized.
D. Co-execute submittals when required.
E. Include Table of Contents.
F. Submit one complete set of aforementioned information in OCR (Optical Character Recognition)/PDF format for review.
G. Submit prior to Application for Final Payment.
H. Time of Submittals:
    1. For equipment or component parts of equipment put into service during construction with Owner's permission, submit documents within 10 days after acceptance.
    2. Make other submittals within 10 days after Date of Substantial Completion, prior to final Application for Payment.
    3. For items of Work for which acceptance is delayed beyond Date of Substantial Completion, submit within 10 days after acceptance, listing date of acceptance as beginning of warranty or bond period.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION

SECTION 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Commissioning Authority will be hire by General Contractor directly.
   2. Commissioning Authority shall provide services necessary to comply with Section C408 of the 2015 International Energy Conservation Code.
   3. Contractor shall perform and assist in the commissioning process. Perform commissioning in a systematic process to ensure that all building systems perform interactively according to design intent and Owner's operational needs. Commissioning process shall encompass and coordinate separate functions of system documentation, equipment startup, control system calibration, testing and balancing, performance testing, and training.
   4. Commissioning during construction phase is intended to achieve the following specific objectives according to the Contract Documents:
      a. Verify applicable equipment and systems are installed in accordance with manufacturer's recommendations and to industry accepted minimum standards and that they receive adequate operational checkout by installing contractors.
      b. Verify and document proper performance of equipment and systems.
      c. Verify operation and maintenance documentation left on-site is complete.
   5. Commissioning process shall not take away from or reduce responsibility of Contractor to provide finished and fully functioning product.
   6. HVAC commissioning description.

B. Related Requirements:
   1. Other Division 01 Specification Sections apply to Work of this Section.

1.2 DEFINITIONS

A. Acceptance Phase: Phase of construction after startup and initial checkout when functional performance tests, operation and maintenance documentation review, and training occurs.

B. Approval: Acceptance that a piece of equipment or system has been properly installed and is functioning in tested modes according to Contract Documents.

C. Architect: Prime consultant and subconsultants who comprise design team, generally HVAC Mechanical Designer/Engineer and Electrical Designer/Engineer.

D. Commissioning Authority: Commissioning Authority directs and coordinates day-to-day commissioning activities. Commissioning Authority does not take an oversight role like Construction Manager. Commissioning Authority is part of Construction Manager team or shall report directly to Construction Manager.

E. Commissioning Plan: An overall plan, developed before or after bidding, that provides structure, schedule, and coordination planning for commissioning process.

F. Contractor: Provider of labor, materials, equipment, and services to complete the Work as outlined in the Contract Documents.

G. Construction Checklist: A list of items to inspect and elementary component tests to conduct to verify proper installation of equipment, provided by Commissioning Authority to subcontractor. Construction checklists are primarily static inspections and procedures to prepare equipment or system for initial operation (e.g., belt tension, oil levels OK, labels affixed, gages in place, sensors calibrated, etc.). However, some construction checklist items entail simple testing of function of a component, a piece of equipment or system (such as measuring voltage imbalance on a three-phase motor). Construction checklists augment and are combined with manufacturer's startup checklist.

H. Construction Manager:
   1. Owner's Representative in day-to-day activities of construction. In general, construction management services Contractor is hired by Owner to assist in overall management of Project including supervising and on-site managing authority over a Project's construction. General Contractor reports to Construction Manager. Construction Manager is Owner's on-site representative.
   2. When Commissioning Authority is hired by Contractor or Architect, Construction Manager referred to in commissioning process is a member of Construction Manager team (staff or independent contractor) who shall have direct significant mechanical engineering and commissioning experience. That person designated from Construction Manager team is Owner's Representative verifying adequacy of commissioning process. In this case, Construction Manager will be more involved in commissioning work and in witnessing portions of process (selected startup and functional tests) and reviewing documents (test approvals, etc.) than in following case.
   3. When Commissioning Authority is hired by Construction Manager (on staff or as a subcontractor), or directly by Owner, there may not need to be another Construction Manager representative reviewing and approving work of Commissioning Authority, other than schedule approvals and consultation during problem solving. In that case, references to Construction Manager in these Specifications would actually mean Commissioning Authority, except that Commissioning Authority progress reports would go to Project Manager rather than Construction Manager.

I. Deferred Functional Tests: Functional tests that are performed later, after Substantial Completion, due to partial occupancy, equipment, seasonal requirements, design or other site conditions that disallow test from being performed.

J. Deficiency: A condition in installation or function of a component, piece of equipment, or system that is not in compliance with Contract Documents (that is, does not perform properly or is not complying with design intent).

K. Design Intent: A dynamic document that provides explanation of ideas, concepts and criteria that are considered to be very important to Owner. It is initially outcome of programming and conceptual design phases.

L. Design Narrative or Design Documentation: Sections of either Design Intent or Basis of Design.

M. Factory Testing: Testing of equipment on-site or at factory, by-factory personnel with Owner's Representative present.

N. Functional Performance Test: Test of dynamic function and operation of equipment and systems using manual (direct observation) or monitoring methods. Functional testing is dynamic testing of systems (rather than just components) under full operation (e.g., chiller pump is tested interactively with chiller functions to see if pump ramps up and down to maintain differential pressure setpoint). Systems are tested under various modes, such as during low cooling or heating loads, high loads, component failures, unoccupied, varying outside air temperatures, fire alarm, power failure, etc. Systems are run through all control system's sequences of operation and components are verified to be responding as sequences state. Traditional air or water test and balancing is not functional testing, in the commissioning sense of the word. Testing and balancing contractor's primary work is setting up system flows and pressures as specified, while functional testing is verifying that which has already been set up. Commissioning Authority develops functional test procedures in a sequential written form, coordinates, oversees and documents actual testing, which is usually performed by installing contractor or vendor. Functional tests are performed after construction checklists, and startup are complete.

O. Indirect Indicators: Indicators of a response or condition, such as a reading from a control system screen reporting a damper to be 100 percent closed.

P. Manual Test: Using hand-held instruments, immediate control system readouts or direct observation to verify performance (contrasted to analyzing monitored data taken over time to make "observation").

Q. Monitoring: Recording of parameters (flow, current, status, pressure, etc.) of equipment operation using data loggers or trending capabilities of control systems.

R. Noncompliance: See "Deficiency."

S. Nonconformance: See "Deficiency."

T. Overwritten Value: Writing over a sensor value in control system to see response of a system (e.g., changing outside air temperature value from 50 to 75 degrees F to verify economizer operation). See also "Simulated Signal."

U. Owner-Contracted Tests: Tests paid for by Owner outside of the Agreement with Contractor and for which Commissioning Authority does not oversee. Tests will not be repeated during functional tests if properly documented.

V. Phased Commissioning: Commissioning that is completed in phases (by floors, for example) due to size of structure or other scheduling issues, in order minimize total construction time.

W. Project Manager: Contracting and managing authority for Owner over design and/or construction of Project, a staff position.

X. Sampling: Functionally testing only a fraction of total number of identical or near identical pieces of equipment. Refer to article "Functional Performance Testing" for additional details.

Y. Seasonal Performance Tests: Functional Tests that are deferred until system(s) will experience conditions closer to their design conditions.

Z. Simulated Condition: Condition that is created for purpose of testing response of a system (e.g., applying a hair blower to a space sensor to see response in a VAV box).

AA. Simulated Signal: Disconnecting a sensor and using a signal generator to send an amperage, resistance, or pressure to transducer and DDC system to simulate a sensor value.

BB. Startup: Initial starting or activating of dynamic equipment, including executing construction checklists.

CC. Subcontractors: Specialty contractors who hold contracts with Contractor to furnish and install building components and systems.
DD. Test Procedures: Step-by-step process which must be executed to fulfill test requirements.
EE. The test procedures are developed by Commissioning Authority.
FF. Test Requirements: Requirements specifying what modes and functions, etc., shall be tested. The test requirements are not detailed test procedures. The test requirements are specified in Contract Documents.
GG. Trending: Monitoring using building control system.
HH. Vendor: Supplier of equipment.

1.3 REFERENCES

A. 2018 International Energy Conservation Code:
1. Section C408, for minimum and mandatory commissioning requirements.

1.4 SUBMITTALS

A. Commissioning Authority will provide appropriate subcontractors with specific request for type of submittal documentation Commissioning Authority requires to facilitate commissioning work. Requests will be integrated into normal submittal process and protocol of construction team. At minimum, request will include manufacturer and model number, manufacturer's printed installation and detailed startup procedures, full sequences of operation, operation and maintenance data, performance data, any performance test procedures, Control Drawings, and details of Owner-contracted tests. In addition, installation and checkout materials that are actually shipped inside equipment and actual field checkout sheet forms to be used by factory or field technicians shall be submitted to Commissioning
B. authority. All documentation requested by Commissioning Authority will be included by subcontractors in their operation and maintenance data manual contributions.
1. Commissioning Authority will review submittals related to commissioned equipment for conformance to Contract Documents as it relates to commissioning process, to functional performance of equipment, and adequacy for developing test procedures. Review will be primarily to aid in development of functional testing procedures and only secondarily to verify compliance with equipment specifications. Commissioning Authority will notify Construction Manager, Project Manager, or Architect as requested, of items missing or areas that are not in conformance with Contract Documents and which require resubmission.
2. Commissioning Authority may request additional design narrative from Architect and controls contractor, depending on completeness of design intent documentation and sequences provided with Specifications.
3. Submittals to Commissioning Authority do not constitute compliance for operation and maintenance manual documentation. Operation and maintenance manuals are responsibility of Contractor, though Commissioning Authority will review them.

4. Written Work Products: Commissioning process generates a number of written work products described in various parts of Specifications. Commissioning plan lists all formal written work products, describes briefly their contents, who is responsible to create them, their due dates, who receives and approves them and location of specification to create them. Written products are:

Product	Developed By
Final commissioning plan	Commissioning Authority
Commissioning meeting minutes	Commissioning Authority
Commissioning schedules	Commissioning Authority with Contractor and Project Manager / Construction Manager
Equipment documentation submittals	Subcontractors
Sequence clarifications	Subcontractors and Architect as needed
Construction checklists	Commissioning Authority
Startup and initial checkout plan	Subcontractors and Commissioning Authority (compilation of existing documents)
Startup and initial checkout forms filled out	Subcontractors
Final TAB report	TAB Subcontractor
Issues log (deficiencies)	Commissioning Authority
Commissioning Progress Record	Commissioning Authority
Deficiency reports	Commissioning Authority
Functional test forms	Commissioning Authority
Filled out functional tests	Commissioning Authority with Contractor
O&M manuals	Subcontractors
Commissioning record book	Commissioning Authority
Final commissioning report	Commissioning Authority
Misc. approvals	Commissioning Authority

1.5 QUALITY ASSURANCE

A. Meetings:
1. Scoping Meeting: Within 14 days of commencement of construction, Commissioning Authority will schedule, plan, and conduct a commissioning scoping meeting with
2. entire commissioning team in attendance. Meeting minutes will be distributed to all parties by Commissioning Authority. Information gathered from this meeting will allow Commissioning Authority to revise commissioning plan to its "final" version, which will also be distributed to all parties.
3. Miscellaneous Meetings: Other meetings will be planned and conducted by Commissioning Authority as construction progresses. Meetings will cover coordination, deficiency resolution, and planning issues with particular subcontractors. Commissioning Authority will plan meetings and will minimize unnecessary time being spent by subcontractors. For large projects, meetings may be held monthly, until final three months of construction when they may be held as frequently as one per week.

B. Coordination:
   1. Members of commissioning team shall consist of Commissioning Authority, Project Manager, designated representative of Owner's Construction Management firm, Contractor, Architect, and design engineers (particularly mechanical engineer), mechanical subcontractor, electrical subcontractor, testing and balancing representative, controls subcontractor, and other installing subcontractors or vendors. Owner's building or plant operator/engineer shall also be a member of commissioning team.
   2. Management: Commissioning Authority shall direct and coordinate commissioning activities and report to the Construction Manager, Project Manager and Owner. Members of commissioning team shall work together to fulfill their contracted responsibilities and meet objectives of the Contract Documents.

C. Reporting:
   1. Commissioning Authority will provide regular reports to Construction Manager, Project Manager, or Owner, depending on management structure, with increasing frequency as construction and commissioning progresses. Standard forms are provided and referenced in commissioning plan.
   2. Commissioning Authority will regularly communicate with all members of commissioning team, keeping them apprised of commissioning progress and scheduling changes through memos, progress reports, etc.
   3. Testing or review approvals and nonconformance and deficiency reports are made regularly with review and testing as described in later Sections.
   4. Final summary report by Commissioning Authority will be provided to Construction Manager, Project Manager, or Owner, focusing on evaluating commissioning process issues and identifying areas where process could be improved. Acquired documentation, logs, minutes, reports, deficiency lists, communications, findings, unresolved issues, etc., will be compiled in appendices and provided with summary report. Construction checklists, functional tests, and monitoring reports will not be part of final report but will be stored in Commissioning Record in operation and maintenance manuals.

1.6 ENGINEER'S RESPONSIBILITIES

A. Construction and Acceptance Phase:
   1. Perform normal submittal review, construction observation, etc., as contracted. On-site observation shall be completed just prior to system startup.
   2. Engineer shall assist (along with subcontractors) in clarifying operation and control of commissioned equipment in areas where Specifications, Control Drawings, or equipment documentation is not sufficient for writing detailed testing procedures.
   3. Participate in resolution of system deficiencies identified during commissioning, according to Contract Documents.
   4. Review construction checklists for major pieces of equipment for sufficiency prior to their use.
   5. Review functional test procedure forms for major pieces of equipment for sufficiency prior to their use.

B. Warranty Period: Participate in resolution of noncompliance, nonconformance, and design deficiencies identified during commissioning during warranty period commissioning.

C. Follow commissioning plan.

1.7 COMMISSIONING AUTHORITY'S RESPONSIBILITIES

A. Commissioning Authority shall not be responsible for design concept, design criteria, compliance with codes, design or general construction scheduling, cost estimating, or construction management. Commissioning Authority may assist with problem-solving, nonconformance, or deficiencies. Primary role of Commissioning Authority shall be to develop and coordinate execution of testing plan, observe, and document performance that systems are functioning in accordance with documented design intent and in accordance with Contract Documents. Contractor shall provide tools and labor to start, check-out and functionally test equipment and systems.

B. Construction and Acceptance Phase:

1. Coordinate and direct commissioning activities in a logical, sequential, and efficient manner using consistent protocols and forms, centralized documentation, clear and regular communications and consultations with necessary parties, frequently updated timelines and schedules, and technical expertise.
2. Coordinate commissioning work and, with Contractor and Project/Construction Manager, ensure that commissioning activities are being scheduled into master schedule.
3. Revise commissioning plan as necessary.
4. Plan and conduct commissioning scoping meeting and other commissioning meetings.
5. Request and review additional information required to perform commissioning tasks, including operation and maintenance materials, Contractor startup, and checkout procedures.
6. Before startup, gather and review current control sequences and interlocks and work with subcontractors and design engineers until sufficient clarity has been obtained, in writing, to be able to write detailed testing procedures.
7. Review Contractor submittals applicable to systems being commissioned for compliance with commissioning needs, concurrent with Architect reviews.
8. Write and distribute construction checklists.
9. Perform site visits, as necessary, to observe component and system installations. Attend selected planning and job-site meetings to obtain information on construction progress. Review construction meeting minutes for revisions/substitutions relating to commissioning process. Assist in resolving any discrepancies.
10. Notify Owner of pre-functional tests and construction checklist completion by reviewing prefunctional checklist reports and by selected site observation and spot checking.
11. Notify Owner of systems startup by reviewing startup reports and by selected site observation.
12. Review testing and balancing execution plan.
13. Before testing and balancing is executed, oversee sufficient functional testing of control system and approve system to be used for testing and balancing.
14. Review air and water systems balancing by spot testing, by documenting completed reports, and by selected site observation.

15. With necessary assistance and review from installing subcontractors, write functional performance test procedures for equipment and systems. Test procedures may include energy management control system trending, stand-alone data logger monitoring, or manual functional testing. Submit to Owner for review, and for approval if required.
16. Analyze functional performance trend logs and monitoring data to verify performance.
17. Coordinate and witness functional performance tests performed by installing subcontractors. Coordinate retesting as necessary until satisfactory performance is achieved.
18. Maintain master deficiency and resolution log and separate testing record. Provide Owner with written progress reports and test results with recommended actions.
19. Review equipment warranties to ensure that Owner's responsibilities are clearly defined.
20. Compile and maintain commissioning record and building systems book(s).
21. Review operation and maintenance manuals.
22. Provide final commissioning report as specified below.
23. Develop commissioning record book in accordance with ASHRAE HVAC Commissioning Guideline 0-2005.

C. Warranty Period:
1. Coordinate and supervise required seasonal or deferred testing and deficiency corrections.
2. Return to site at 10 months into the 12-month warranty period and review with facility staff current building operation and condition of outstanding issues related to original and seasonal commissioning. Identify areas that may come under warranty or under original construction contract as a warranty period punch list.
3. Prepare and submit final Commission Record report to Owner.

D. Attend commissioning scoping meeting and additional meetings, as necessary.
E. Follow commissioning plan.
F. Conduct HVAC system orientation and inspection.
G. Air Economizer shall undergo a functional test to determine that they operate in accordance with manufacturer's specifications.

1.8 CONSTRUCTION MANAGER'S - OWNER'S REPRESENTATIVE'S RESPONSIBILITIES

A. Construction and Acceptance Phase:
1. Facilitate coordination of commissioning work by Commissioning Authority, and, with Contractor and Commissioning Authority, ensure that commissioning activities are being scheduled into master schedule.
2. Review and approve final commissioning plan.
3. Attend commissioning scoping meeting and other commissioning team meetings.
4. Perform normal review of Contractor submittals.
5. Furnish copy of construction documents, addenda, change orders and approved submittals and Shop Drawings related to commissioned equipment to Commissioning Authority.
6. Prior to testing, review and approve functional performance test procedures submitted by Commissioning Authority.
7. When necessary, observe and witness construction checklists, startup and functional testing of selected equipment.

8. Review commissioning progress and deficiency reports.
9. Coordinate resolution of noncompliance and design deficiencies identified in all phases of commissioning.
10. Sign-off (final approval) on individual commissioning tests as completed and passing. Recommend completion of commissioning process to Project Manager.
11. Assist Contractor in coordinating training of Owner personnel.

B. Warranty period: Assist Commissioning Authority as necessary in seasonal or deferred testing and deficiency corrections required by Specifications.
C. Attend commissioning scoping meeting and additional meetings, as necessary.
D. Follow commissioning plan.

1.9 OWNER'S PROJECT MANAGER'S RESPONSIBILITIES

A. Construction and Acceptance Phase:
1. Manage contract of Architect and of Contractor.
2. Arrange for facility operating and maintenance personnel to attend various field commissioning activities and field training sessions according to commissioning plan - construction phase.
3. Provide final approval for completion of commissioning work.

B. Warranty period: Ensure seasonal or deferred testing and deficiency issues are addressed.
C. Attend commissioning scoping meeting and additional meetings, as necessary.
D. Follow commissioning plan.

1.10 CONTRACTOR'S RESPONSIBILITIES

A. Construction and Acceptance Phase:
1. Facilitate coordination of commissioning work by Commissioning Authority, and, with Commissioning Authority, ensure that commissioning activities are being scheduled into master schedule.
2. Include cost of commissioning in total Contract Price.
3. Furnish copy of construction documents, addenda, change orders and approved submittals and Shop Drawings related to commissioned equipment to Commissioning Authority.
4. In each Purchase Order or subcontract written, include requirements for submittal data, operation and maintenance data, commissioning tasks and training.
5. Ensure subcontractors execute commissioning responsibilities according to Contract Documents and schedule.
6. Representative shall attend commissioning scoping meeting and other necessary meetings scheduled by Commissioning Authority to facilitate commissioning process.
7. Coordinate training of Owner's personnel.
8. Prepare operation and maintenance manuals, according to Contract Documents, including clarifying and updating original sequences of operation to record "as-built" conditions.

B. Warranty Period:
1. Ensure subcontractors execute seasonal or deferred functional performance testing, witnessed by Commissioning Authority, according to Contract Documents.
2. Ensure subcontractors correct deficiencies and make necessary adjustments to operation and maintenance manuals and "as-built" Record Drawings for applicable issues identified in seasonal testing.

C. Attend commissioning scoping meeting and additional meetings, as necessary.
D. Follow commissioning plan.

1.11 VENDOR'S RESPONSIBILITIES

A. Provide requested submittal data, including detailed startup procedures and specific responsibilities of Owner to keep warranties in force.
B. Assist in equipment testing per agreements with subcontractors.
C. Include special tools and instruments (only available from vendor, specific to a piece of equipment) required for testing equipment in accordance with Contract Documents in bid price, except for standalone data logging equipment that may be used by Commissioning Authority.
D. Analyze specified products and verify that designer has specified newest most updated equipment reasonable for Project's scope and budget.
E. Provide information requested by Commissioning Authority regarding equipment sequence of operation and testing procedures.
F. Review test procedures for equipment installed by manufacturer's factory representatives.
G. Attend commissioning scoping meeting and additional meetings, as necessary.
H. Follow commissioning plan.

1.12 SCHEDULING

A. Commissioning Authority shall work with Owner and Contractor according to established protocols to schedule commissioning activities. Commissioning Authority shall provide sufficient notice to Owner and Contractor for scheduling commissioning activities. Contractor shall integrate commissioning activities into master schedule. Commissioning Authority, Owner, and Contractor shall address scheduling problems and make necessary notifications in timely manner in order to expedite commissioning process.
B. Commissioning Authority shall provide initial schedule of primary commissioning events at commissioning scoping meeting. Commissioning plan shall provide format for schedule. As construction progresses, more detailed schedules shall be developed by Commissioning Authority. Commissioning plan shall also provide format for detailed schedules.
C. Prepare schedule indicating anticipated start dates for the following:
    1. Piping system pressure testing
    2. Piping system flushing and cleaning.
    3. Ductwork cleaning.
    4. Ductwork pressure testing.
    5. Equipment and system startups
    6. Automatic temperature control system checkout.
    7. Testing, adjusting, and balancing.
    8. HVAC system orientation and inspection.
    9. Lighting system controls testing.
    10. Operation and maintenance manual submittals.
    11. Training sessions.

1.13 OWNER'S INSTRUCTION

A. Contractor shall be responsible for training coordination and scheduling and ultimately for ensuring training is completed.

1.14 COMMISSIONING DESCRIPTION

A. HVAC commissioning process includes the following tasks:
   1. Testing and startup of HVAC equipment and systems.
   2. Equipment and system verification checks.
   3. Assistance in functional performance testing and balancing, and equipment and system performance.
   4. Provide qualified personnel to assist in commissioning tests, including seasonal testing.
   5. Complete and endorse functional performance test checklists provided by Commissions Authority to assure equipment and systems are fully operational and ready for functional performance testing.
   6. Provide equipment, materials, and labor necessary to correct deficiencies found during commissioning process to fulfill contract and warranty requirements.
   7. Provide operation and maintenance information and record drawings to Commissioning Authority for review verification and organization, prior to authorization.
   8. Provide a preliminary commissioning report that identifies the following:
      a. Itemization of deficiencies found during testing required by Section C408.2.3 in the IECC 2018, that have not been corrected at the time of report preparation.
      b. Deferred test that cannot be performed at the time of report preparation because of climatic conditions.
      c. Climatic conditions required by performance of the deferred tests.
   9. Provide assistance to Commissioning Authority to develop, edit, the document system operation descriptions.
   10. Provide training for systems specified in this Section with coordination by Commissioning Authority.
   11. Provide operating and maintenance manual that includes the following:
      a. Submittal data stating equipment size and selected options for each piece of equipment requiring maintenance.
      b. Manufacturer's operation manuals and maintenance manuals for each piece of equipment requiring maintenance, except equipment not furnished as part of the project. Required routine maintenance actions shall be clearly identified.
      c. Name and address of at least one service agency.
      d. HVAC and service hot water controls system maintenance and calibration information, including wiring diagrams, schematics and control sequence descriptions. Desired or field-determined set points shall be permanently recorded on control drawings at control devices or, for digital control systems, in system programming instructions.
      e. Submittal data indicating all selected options for each piece of lighting equipment and lighting controls.
      f. Operating and maintenance manuals for each piece of lighting equipment. Required routine maintenance actions, cleaning and recommended re-lamping shall be clearly identified.
      g. A schedule for inspection and recalibrating all lighting controls.
      h. A narrative of how each system is intended to operate, including recommended set points.

12. Provide a final commissioning report that contains the following:
    a. The result of the functional performance tests, disposition of deficiencies found during the testing.
    b. Include details of corrective measures used or proposed
    c. Functional performance test procedures used during the commissioning process including measurable criteria for test acceptance, provide herein for repeatability.
13. Provide a system balancing report describing the activities and measurements completed in accordance with Section C408.2.2 in IECC 2015.

B. Equipment and Systems to Be Commissioned:
1. New HVAC systems that were installed under this Contract.

C. The following is a partial list of equipment included in the HVAC Commissioning:
1. Provide functional performance testing specified in Section C408.2.3 of IECC 2018. Equipment functional performance testing shall demonstrate the installation and operation of components, systems, and system-to-system interfacing relationships in accordance with approved plans and specifications such that operation, function, and maintenance serviceability for each of the commissioned systems is confirmed. Testing shall include all modes and sequence of operation, including under full-load, part-load and the following emergency conditions.
    a. All modes as described in the sequence of operation.
    b. Redundant or automatic back-up mode.
    c. Performance of alarms.
    d. Mode of operation upon a loss of power and restoration of power.
        1) Pumps.
        2) Piping systems.
        3) Ductwork.
        4) Variable frequency drives.
        5) VRF indoor units.
        6) VRF outdoor units.
        7) ERV unit.
        8) Mini-splits.
        9) Package Rooftop Units.
        10) Outside air unit.
        11) Electric Water Heater.
        12) Fire Pump System
        13) Unit Heaters.
        14) HVLS Fans.
        15) Indoor Air Quality.
        16) Testing, Adjusting and Balancing work.

D. Perform seasonal function performance tests for the following equipment and systems:
1. Heating equipment during heating season.
2. Cooling equipment during cooling season.

PART 2 - PRODUCTS

2.1 TEST EQUIPMENT

A. Standard testing equipment required to perform startup and initial checkout and required functional performance testing shall be provided by each contractor for equipment being

B. For example, mechanical subcontractor shall ultimately be responsible for standard testing equipment for HVAC system and controls system, except for equipment specific to and used by testing and balancing contractor in their commissioning responsibilities. Two-way radios shall be provided by Contractor for equipment being tested.

1. Special equipment, tools and instruments which are only available from vendor, specific to a piece of equipment and required for testing equipment shall be provided, left on site, and shall become property of Owner.
2. Testing equipment shall be of sufficient quality and accuracy to test and/or measure system performance with tolerances specified.

PART 3 - EXECUTION

3.1 COMMISSIONING PROCESS

A. Commissioning plan shall provide guidance in execution of commissioning process. Immediately after initial commissioning scoping meeting, Commissioning Authority will update plan submitted with Bid which is then considered "final" plan. Plan will continue to evolve and expand as Project progresses.

B. Commissioning Tasks and Sequence:

1. Commissioning during construction shall begin with scoping meeting conducted by Commissioning Authority to review commissioning process with commissioning team members.
2. Additional meetings required during construction shall be scheduled by Commissioning Authority with necessary parties attending, to plan, scope, coordinate, schedule future activities and resolve problems.
3. Equipment documentation shall be submitted to Commissioning Authority during normal submittals, including detailed startup procedures.
4. Commissioning Authority shall work with subcontractors in developing startup plans and startup documentation formats, including providing subcontractors with construction checklists to be completed, during startup process.
5. Checkout and performance verification shall proceed from simple to complex; from component level to equipment to systems and intersystem levels with construction checklists being completed before functional testing.
6. Subcontractors shall execute and document construction checklists and perform startup and initial checkout. Commissioning Authority shall document that checklists and startup were completed according to approved plans. Commissioning Authority may witness startup of selected equipment.
7. Commissioning Authority shall develop specific equipment and system functional performance test procedures. Subcontractors shall review procedures.

8. Procedures shall be executed by subcontractors, under direction of, and documented by Commissioning Authority.
9. Items of noncompliance in material, installation, or setup shall be corrected at subcontractor's expense and system shall be retested.
10. Commissioning Authority shall review operation and maintenance documentation for completeness.
11. Commissioning shall be completed prior to Substantial Completion.
12. Deferred testing shall be conducted, as specified or required.

3.2 STARTUP, CONSTRUCTION CHECKLISTS, AND INITIAL CHECKOUT

A. Perform following procedures on equipment to be commissioned. Some systems that are not comprised, e.g., electrical system power quality, may have very simplified construction checklists and startup.

B. Construction checklists shall verify that equipment and systems are hooked up and operational. It ensures that functional performance testing (in-depth system checkout) may proceed without unnecessary delays. Each piece of equipment receives full checkout. No sampling strategies are used. Prefunctional testing for a given system must be successfully completed prior to formal functional performance testing of equipment or subsystems of given system.

3.3 FUNCTIONAL PERFORMANCE TESTING

A. Functional performance testing shall demonstrate that each system is operating in accordance with documented design intent and Contract Documents. Functional testing shall facilitate bringing systems from state of Substantial Completion to full dynamic operation. During testing process, areas of deficient performance shall be identified and corrected, improving operation and functioning of systems.

B. Each system shall be operated through all modes of operation (seasonal, occupied, unoccupied, warm-up, cool-down, part- and full-load) where there is a specified system response. Verify each sequence in sequences of operation is required. Proper responses to such modes and conditions as power failure, freeze condition, low oil pressure, no flow, equipment failure, etc. shall also be tested. Development of test procedures: Before test procedures are written, Commissioning Authority shall obtain all requested documentation and a current list of change orders affecting equipment or systems, including an updated points list, program code, control sequences and parameters. Commissioning Authority shall develop specific test procedures and forms to verify and document proper operation of each piece of equipment and system. Each subcontractor or vendor responsible to execute a test shall provide limited assistance to Commissioning Authority in developing procedures review (answering questions about equipment, operation, sequences, etc.). Prior to execution, Commissioning Authority shall provide a copy of test procedures to subcontractor(s) who shall review tests for feasibility, safety, equipment, and warranty protection. Commissioning Authority may submit tests to Architect for review, if requested.

C. Commissioning Authority shall review Owner-contracted, factory testing or required Owner acceptance tests which Commissioning Authority is not responsible to oversee, including documentation format, and shall determine what further testing or format changes may be required to comply with Specifications. Redundancy of testing shall be minimized.

D. Purpose of specific test is to verify and document compliance with stated criteria of acceptance given on test form.

3.4 PHASED COMMISSIONING

A. Startup and initial checkout may be executed in phases.
B. Phasing shall be planned and scheduled during coordination meeting of Commissioning Authority, Construction Manager, Contractor and mechanical, testing and balancing, and controls contractors.
C. Results shall be incorporated into master and commissioning schedule.

3.5 FINAL DOCUMENTATION

A. Standard operation and maintenance manuals: Specific content and format requirements for standard operation and maintenance manuals shall be as specified in Section 01 70 00 "Execution and Closeout Requirements."
B. Final report details: Final commissioning report shall include executive summary, list of participants and roles, brief system description, overview of commissioning and testing scope and a general description of testing and verification methods. For each piece of commissioned equipment, report shall contain disposition of commissioning authority regarding adequacy of equipment, documentation, and training meeting Contract Documents in following areas:
    1. Equipment meeting equipment Specifications.
    2. Equipment installation.
    3. Functional performance and efficiency.
    4. Equipment documentation and design intent.
C. Outstanding noncompliance items shall be specifically listed. Recommendations for improvement to equipment or operations, future actions, commissioning process changes, etc. shall also be listed.
D. Each noncompliance issue shall be referenced to specific functional test, inspection, trend log, etc. where deficiency is documented.
E. Functional performance and efficiency section for each piece of equipment shall include brief description of verification method used (manual testing, BAS trend logs, data loggers, etc.) and include observations and conclusions from testing.
F. Other documentation will be retained by Commissioning Authority.

END OF SECTION

SECTION 02 41 19 - SELECTIVE DEMOLITION

PART 1 - GENERAL

1.1 SUMMARY

A. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.

1.2 MATERIALS OWNERSHIP

A. Unless otherwise indicated, demolition waste becomes property of Contractor.
B. Historic items, relics, antiques, and similar objects including, but not limited to, cornerstones and their contents, commemorative plaques and tablets, and other items of interest or value to Owner that may be uncovered during demolition remain the property of Owner.
   1. Carefully salvage in a manner to prevent damage and promptly return to Owner.

1.3 FIELD CONDITIONS

A. Conditions existing at time of inspection for bidding purpose will be maintained by Owner as far as practical.
B. Notify Architect of discrepancies between existing conditions and Drawings before proceeding with selective demolition.
C. Storage or sale of removed items or materials on-site is not permitted.
D. Utility Service: Maintain existing utilities indicated to remain in service and protect them against damage during selective demolition operations.
   1. Maintain fire-protection facilities in service during selective demolition operations.

PART 2 - PRODUCTS (Not used)

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify that utilities have been disconnected and capped before starting selective demolition operations.
B. Review record documents of existing construction provided by Owner. Owner does not guarantee that existing conditions are same as those indicated in record documents.
C. Survey existing conditions and correlate with requirements indicated to determine extent of selective demolition required.
D. When unanticipated mechanical, electrical, or structural elements that conflict with intended function or design are encountered, investigate and measure the nature and extent of conflict. Promptly submit a written report to Architect.

3.2 SELECTIVE DEMOLITION, GENERAL

A. General: Demolish and remove existing construction only to the extent required by new construction and as indicated. Use methods required to complete the Work within limitations of governing regulations and as follows:
   1. Proceed with selective demolition systematically, from higher to lower level. Complete selective demolition operations above each floor or tier before disturbing supporting members on the next lower level.
   2. Neatly cut openings and holes plumb, square, and true to dimensions required. Use cutting methods least likely to damage construction to remain or adjoining construction. Use hand tools or small power tools designed for sawing or grinding, not hammering and chopping, to minimize disturbance of adjacent surfaces. Temporarily cover openings to remain.
   3. Cut or drill from the exposed or finished side into concealed surfaces to avoid marring existing finished surfaces.
   4. Do not use cutting torches until work area is cleared of flammable materials. At concealed spaces, such as duct and pipe interiors, verify condition and contents of hidden space before starting flame-cutting operations. Maintain fire watch and portable fire-suppression devices during flame-cutting operations.
   5. Maintain adequate ventilation when using cutting torches.
   6. Remove decayed, vermin-infested, or otherwise dangerous or unsuitable materials and promptly dispose of off-site.
   7. Remove structural framing members and lower to ground by method suitable to avoid free fall and to prevent ground impact or dust generation.
   8. Locate selective demolition equipment and remove debris and materials so as not to impose excessive loads on supporting walls, floors, or framing.
   9. Dispose of demolished items and materials promptly.

3.3 CLEANING

A. Clean adjacent structures and improvements of dust, dirt, and debris caused by selective demolition operations. Return adjacent areas to condition existing before selective demolition operations began.

END OF SECTION

SECTION 03 10 00 - CONCRETE FORMING AND ACCESSORIES

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Form-facing material for cast-in-place concrete.
   2. Shoring, bracing, and anchoring.

B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.

1.2 DEFINITIONS

A. Form-Facing Material: Temporary structure or mold for the support of concrete while the concrete is setting and gaining sufficient strength to be self-supporting.

B. Formwork: The total system of support of freshly placed concrete, including the mold or sheathing that contacts the concrete, as well as supporting members, hardware, and necessary bracing.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.
   1. Review the following:
      a. Special inspection and testing and inspecting agency procedures for field quality control.
      b. Construction, movement, contraction, and isolation joints
      c. Forms and form-removal limitations.
      d. Shoring and reshoring procedures.
      e. Anchor rod and anchorage device installation tolerances.

1.4 ACTION SUBMITTALS

A. Product Data: For each of the following:
   1. Exposed surface form-facing material.
   2. Concealed surface form-facing material.
   3. Pan-type forms.
   4. Form ties.
   5. Waterstops.
   6. Form-release agent.

B. Shop Drawings: Prepared by, and signed and sealed by, a qualified professional engineer responsible for their preparation, detailing fabrication, assembly, and support of forms.
   1. For exposed vertical concrete walls, indicate dimensions and form tie locations.
   2. Indicate dimension and locations of construction and movement joints required to construct the structure in accordance with ACI 301.
      a. Location of construction joints is subject to approval of the Architect.
   3. Indicate location of waterstops.
   4. Indicate proposed schedule and sequence of stripping of forms, shoring removal, and reshoring installation and removal.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Waterstops: Store waterstops under cover to protect from moisture, sunlight, dirt, oil, and other contaminants.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Concrete Formwork: Design, engineer, erect, shore, brace, and maintain formwork, shores, and reshores in accordance with ACI 301, to support vertical, lateral, static, and dynamic loads, and construction loads that might be applied, until structure can support such loads, so that resulting concrete conforms to the required shapes, lines, and dimensions.
   1. Design wood panel forms in accordance with APA's "Concrete Forming Design/Construction Guide."
   2. Design formwork to limit deflection of form-facing material to 1/240 of center-to-center spacing of supports.

2.2 FORM-FACING MATERIALS

A. As-Cast Surface Form-Facing Material:
   1. Provide continuous, true, and smooth concrete surfaces.
   2. Furnish in largest practicable sizes to minimize number of joints.
   3. Acceptable Materials: As required to comply with Surface Finish designations specified in Section 03 30 00 "Cast-In-Place Concrete, and as follows:
      a. Plywood, metal, or other approved panel materials.

B. Concealed Surface Form-Facing Material: Lumber, plywood, metal, plastic, or another approved material.
   1. Provide lumber dressed on at least two edges and one side for tight fit.

C. Pan-Type Forms: Glass-fiber-reinforced plastic or formed steel, stiffened to resist plastic concrete loads without detrimental deformation, with straight or tapered end forms.

2.3 WATERSTOPS

A. Self-Expanding Butyl Strip Waterstops: Manufactured rectangular or trapezoidal strip, butyl rubber with sodium bentonite or other hydrophilic polymers, for adhesive bonding to concrete, 3/4- by 1-inch.

B. Self-Expanding Rubber Strip Waterstops: Manufactured rectangular or trapezoidal strip, bentonite-free hydrophilic polymer-modified chloroprene rubber, for adhesive bonding to concrete, 3/8- by 3/4-inch.

2.4 RELATED MATERIALS

A. Chamfer Strips: Wood, metal, PVC, or rubber strips, 3/4- by 3/4-inch, minimum.

B. Form-Release Agent: Commercially formulated form-release agent that does not bond with, stain, or adversely affect concrete surfaces and does not impair subsequent treatments of concrete surfaces.
   1. Formulate form-release agent with rust inhibitor for steel form-facing materials.

C. Form Ties: Factory-fabricated, removable or snap-off, glass-fiber-reinforced plastic or metal form ties designed to resist lateral pressure of fresh concrete on forms and to prevent spalling of concrete on removal.
   1. Furnish units that leave no corrodible metal closer than 1-inch to the plane of exposed concrete surface.
   2. Furnish ties that, when removed, leave holes no larger than 1-inch in diameter in concrete surface.
   3. Furnish ties with integral water-barrier plates to walls indicated to receive dampproofing or waterproofing.

PART 3 - EXECUTION

3.1 INSTALLATION OF FORMWORK

A. Comply with ACI 301.
B. Construct formwork, so concrete members and structures are of size, shape, alignment, elevation, and position indicated, within tolerance limits of ACI 117 and to comply with the Surface Finish designations specified in Section 03 30 00 "Cast-In-Place Concrete" for as-cast finishes.Limit concrete surface irregularities as follows:
   1. Surface Finish-1.0: ACI 117 Class D, 1-inch.
   2. Surface Finish-2.0: ACI 117 Class B, 1/4-inch.
   3. Surface Finish-3.0: ACI 117 Class A, 1/8-inch.
C. Construct forms tight enough to prevent loss of concrete mortar.
   1. Minimize joints.
   2. Exposed Concrete: Symmetrically align joints in forms.
D. Construct removable forms for easy removal without hammering or prying against concrete surfaces.
   1. Provide crush or wrecking plates where stripping may damage cast-concrete surfaces.
   2. Provide top forms for inclined surfaces steeper than 1.5 horizontal to 1 vertical.
   3. Install keyways, reglets, recesses, and other accessories, for easy removal.
E. Do not use rust-stained, steel, form-facing material.
F. Set edge forms, bulkheads, and intermediate screed strips for slabs to achieve required elevations and slopes in finished concrete surfaces.
   1. Provide and secure units to support screed strips
   2. Use strike-off templates or compacting-type screeds.
G. Provide temporary openings for cleanouts and inspection ports where interior area of formwork is inaccessible.
   1. Close openings with panels tightly fitted to forms and securely braced to prevent loss of concrete mortar.
   2. Locate temporary openings in forms at inconspicuous locations.
H. Chamfer exterior corners and edges of permanently exposed concrete.
I. At construction joints, overlap forms onto previously placed concrete not less than 12 inches.

J. Form openings, chases, offsets, sinkages, keyways, reglets, blocking, screeds, and bulkheads required in the Work.
   1. Determine sizes and locations from trades providing such items.
   2. Obtain written approval of Architect prior to forming openings not indicated on Drawings.

K. Construction and Movement Joints:
   1. Construct joints true to line with faces perpendicular to surface plane of concrete.
   2. Install so strength and appearance of concrete are not impaired, at locations indicated or as approved by Architect.
   3. Place joints perpendicular to main reinforcement.
   4. Locate joints for beams, slabs, joists, and girders in the middle third of spans.
      a. Offset joints in girders a minimum distance of twice the beam width from a beam-girder intersection.
   5. Locate horizontal joints in walls and columns at underside of floors, slabs, beams, and girders and at the top of footings or floor slabs.
   6. Space vertical joints in walls at 60 feet maximum.
      a. Locate joints beside piers integral with walls, near corners, and in concealed locations where possible.

L. Provide temporary ports or openings in formwork where required to facilitate cleaning and inspection.
   1. Locate ports and openings in bottom of vertical forms, in inconspicuous location, to allow flushing water to drain.
   2. Close temporary ports and openings with tight-fitting panels, flush with inside face of form, and neatly fitted, so joints will not be apparent in exposed concrete surfaces.

M. Clean forms and adjacent surfaces to receive concrete. Remove chips, wood, sawdust, dirt, and other debris just before placing concrete.

N. Retighten forms and bracing before placing concrete, as required, to prevent mortar leaks and maintain proper alignment.

O. Coat contact surfaces of forms with form-release agent, according to manufacturer's written instructions, before placing reinforcement.

3.2 INSTALLATION OF EMBEDDED ITEMS

A. Place and secure anchorage devices and other embedded items required for adjoining Work that is attached to or supported by cast-in-place concrete.
   1. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
   2. Install anchor rods, accurately located, to elevations required and complying with tolerances in Section 7.5 of AISC 303.
   3. Clean embedded items immediately prior to concrete placement.

3.3 INSTALLATION OF WATERSTOPS

A. Self-Expanding Strip Waterstops: Install in construction joints and at other locations indicated on Drawings, according to manufacturer's written instructions, by adhesive bonding, mechanically fastening, and firmly pressing into place.
   1. Install in longest lengths practicable.
   2. Locate waterstops in center of joint unless otherwise indicated on Drawings.
   3. Protect exposed waterstops during progress of the Work.

3.4 REMOVING AND REUSING FORMS

A. Formwork for sides of beams, walls, columns, and similar parts of the Work that does not support weight of concrete may be removed after cumulatively curing at not less than 50 degrees F for 24 hours after placing concrete. Concrete has to be hard enough to not be damaged by form-removal operations, and curing and protection operations need to be maintained.
   1. Leave formwork for beam soffits, joists, slabs, and other structural elements that support weight of concrete in place until concrete has achieved at least 70 percent of its 28-day design compressive strength.
   2. Remove forms only if shores have been arranged to permit removal of forms without loosening or disturbing shores.

B. Clean and repair surfaces of forms to be reused in the Work.
   1. Split, frayed, delaminated, or otherwise damaged form-facing material are unacceptable for exposed surfaces.
   2. Apply new form-release agent.

C. When forms are reused, clean surfaces, remove fins and laitance, and tighten to close joints.
   1. Align and secure joints to avoid offsets.
   2. Do not use patched forms for exposed concrete surfaces unless approved by Architect.

3.5 SHORING AND RESHORING INSTALLATION

A. Comply with ACI 318 and ACI 301 for design, installation, and removal of shoring and reshoring.
   1. Do not remove shoring or reshoring until measurement of slab tolerances is complete.

B. Plan sequence of removal of shores and reshore to avoid damage to concrete. Locate and provide adequate reshoring to support construction without excessive stress or deflection.

3.6 FIELD QUALITY CONTROL

A. Special Inspections: Owner will engage a special inspector and qualified testing and inspecting agency to perform field tests and inspections and prepare test reports.

B. Inspections:
   1. Inspect formwork for shape, location, and dimensions of the concrete member being formed.

END OF SECTION

SECTION 03 20 00 - CONCRETE REINFORCING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Steel reinforcement bars.
   2. Welded-wire reinforcement.
B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.

1.2 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.
   1. Review the following:
      a. Special inspection and testing and inspecting agency procedures for field quality control.
      b. Steel-reinforcement installation.

1.3 ACTION SUBMITTALS

A. Shop Drawings: Comply with ACI SP-066:
   1. Include placing drawings that detail fabrication, bending, and placement.
   2. Include bar sizes, lengths, materials, grades, bar schedules, stirrup spacing, bent bar diagrams, bar arrangement, location of splices, lengths of lap splices, details of mechanical splice couplers, details of welding splices, tie spacing, hoop spacing, and supports for concrete reinforcement.
B. Construction Joint Layout: Indicate proposed construction joints required to build the structure.
   1. Location of construction joints is subject to approval of the Architect.

1.4 DELIVERY, STORAGE, AND HANDLING

A. Steel Reinforcement: Deliver, store, and handle steel reinforcement to prevent bending and damage.
   1. Store reinforcement to avoid contact with earth.

PART 2 - PRODUCTS

2.1 STEEL REINFORCEMENT

A. Reinforcing Bars: ASTM A615, Grade 60, deformed.
B. Low-Alloy Steel Reinforcing Bars: ASTM A706, deformed.

2.2 REINFORCEMENT ACCESSORIES

A. Joint Dowel Bars: ASTM A615, Grade 60, plain-steel bars, cut true to length with ends square and free of burrs.
B. Bar Supports: Bolsters, chairs, spacers, and other devices for spacing, supporting, and fastening reinforcing bars and welded-wire reinforcement in place.
   1. Manufacture bar supports from steel wire, plastic, or precast concrete in accordance with CRSI's "Manual of Standard Practice," of greater compressive strength than concrete and as follows:
      a. For concrete surfaces exposed to view, where legs of wire bar supports contact forms, use CRSI Class 1 plastic-protected steel wire, all-plastic bar supports, or CRSI Class 2 stainless steel bar supports.
C. Steel Tie Wire: ASTM A1064, annealed steel, not less than 0.0508-inch in diameter.
   1. Finish: Plain.

2.3 FABRICATING REINFORCEMENT

A. Fabricate steel reinforcement according to CRSI's "Manual of Standard Practice."

PART 3 - EXECUTION

3.1 PREPARATION

A. Protection of In-Place Conditions:
   1. Do not cut or puncture vapor retarder.
   2. Repair damage and reseal vapor retarder before placing concrete.
B. Clean reinforcement of loose rust and mill scale, earth, ice, and other foreign materials that reduce bond to concrete.

3.2 INSTALLATION OF STEEL REINFORCEMENT

A. Comply with CRSI's "Manual of Standard Practice" for placing and supporting reinforcement.
B. Accurately position, support, and secure reinforcement against displacement.
   1. Locate and support reinforcement with bar supports to maintain minimum concrete cover.
   2. Do not tack weld crossing reinforcing bars.
C. Preserve clearance between bars of not less than 1-inch, not less than one bar diameter, or not less than 1-1/3 times size of large aggregate, whichever is greater.
D. Provide concrete coverage in accordance with ACI 318.
E. Set wire ties with ends directed into concrete, not toward exposed concrete surfaces.
F. Splices: Lap splices as indicated on Drawings.
   1. Bars indicated to be continuous, and all vertical bars shall be lapped not less than 36 bar diameters at splices, or 24 inches, whichever is greater.
   2. Stagger splices in accordance with ACI 318.

G. Install welded-wire reinforcement in longest practicable lengths.
   1. Support welded-wire reinforcement in accordance with CRSI "Manual of Standard Practice."
      a. For reinforcement less than W4.0 or D4.0, continuous support spacing shall not exceed 12 inches.
   2. Lap edges and ends of adjoining sheets at least one wire spacing plus 2 inches for plain wire and 8 inches for deformed wire.
   3. Offset laps of adjoining sheet widths to prevent continuous laps in either direction.
   4. Lace overlaps with wire.

3.3 JOINTS

A. Construction Joints: Install so strength and appearance of concrete are not impaired, at locations indicated or as approved by Architect.
   1. Place joints perpendicular to main reinforcement.
   2. Continue reinforcement across construction joints unless otherwise indicated.
   3. Do not continue reinforcement through sides of strip placements of floors and slabs.

3.4 INSTALLATION TOLERANCES

A. Comply with ACI 117.

3.5 FIELD QUALITY CONTROL

A. Special Inspections: Owner will engage a special inspector and qualified testing and inspecting agency to perform field tests and inspections and prepare test reports.
B. Inspections:
   1. Steel-reinforcement placement.

END OF SECTION

SECTION 03 30 00 - CAST-IN-PLACE CONCRETE

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Cast-in-place concrete, including concrete materials, mixture design, placement procedures, and finishes.

B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.
   2. Section 03 10 00 "Concrete Forming and Accessories" for form-facing materials and waterstops.
   3. Section 03 20 00 "Concrete Reinforcing" for steel reinforcing bars and welded-wire reinforcement.
   4. Section 07 92 00 "Joint Sealants."

1.2 DEFINITIONS

A. Cementitious Materials: Portland cement alone or in combination with one or more of the following: blended hydraulic cement, fly ash, slag cement, other pozzolans, and silica fume; materials subject to compliance with requirements.

B. Water/Cement Ratio (w/cm): The ratio by weight of water to cementitious materials.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.
   1. Require representatives of each entity directly concerned with cast-in-place concrete to attend, including the following:
      a. Contractor's superintendent.
      b. Independent testing agency responsible for concrete design mixtures.
      c. Ready-mix concrete manufacturer.
      d. Concrete Subcontractor.
      e. Special concrete finish Subcontractor.
   2. Review the following:
      a. Special inspection and testing and inspecting agency procedures for field quality control.
      b. Construction joints, control joints, isolation joints, and joint-filler strips.
      c. Semirigid joint fillers.
      d. Vapor-retarder installation.
      e. Anchor rod and anchorage device installation tolerances.
      f. Cold and hot weather concreting procedures.
      g. Concrete finishes and finishing.
      h. Curing procedures.
      i. Forms and form-removal limitations.
      j. Shoring and reshoring procedures.
      k. Methods for achieving specified floor and slab flatness and levelness.
      l. Floor and slab flatness and levelness measurements.

m. Concrete repair procedures.
n. Concrete protection.
o. Initial curing and field curing of field test cylinders (ASTM C31).
p. Protection of field cured field test cylinders.

1.4 ACTION SUBMITTALS

A. Product Data: For each of the following.
1. Fly ash.
2. Blended hydraulic cement.
3. Aggregates.
4. Admixtures:
a. Include limitations of use, including restrictions on cementitious materials, supplementary cementitious materials, air entrainment, aggregates, temperature at time of concrete placement, relative humidity at time of concrete placement, curing conditions, and use of other admixtures.
5. Vapor retarders.
6. Curing materials.
7. Joint fillers.
8. Repair materials.

B. Design Mixtures: For each concrete mixture, include the following:
1. Mixture identification.
2. Minimum 28-day compressive strength.
3. Durability exposure class.
4. Maximum w/cm.
5. Slump limit.
6. Air content.
7. Nominal maximum aggregate size.
8. Indicate amounts of mixing water to be withheld for later addition at Project site if permitted.
9. Intended placement method.
10. Submit alternate design mixtures when characteristics of materials, Project conditions, weather, test results, or other circumstances warrant adjustments.

C. Shop Drawings:
1. Construction Joint Layout: Indicate proposed construction joints required to construct the structure.
a. Location of construction joints is subject to approval of the Architect.

D. Concrete Schedule: For each location of each Class of concrete indicated in "Concrete Mixtures" Article, including the following:
1. Concrete Class designation.
2. Location within Project.
3. Formed Surface Finish designation and final finish.
4. Final finish for floors.
5. Curing process.

1.5 INFORMATIONAL SUBMITTALS

A. Material Test Reports: For the following, from a qualified testing agency:
   1. Fly ash.
   2. Blended hydraulic cement.
   3. Admixtures:
B. Minutes of preinstallation conference.

1.6 QUALITY ASSURANCE

A. Ready-Mixed Concrete Manufacturer Qualifications: A firm experienced in manufacturing ready-mixed concrete products and that complies with ASTM C94 requirements for production facilities and equipment.
   1. Manufacturer certified in accordance with NRMCA's "Certification of Ready Mixed Concrete Production Facilities."

1.7 DELIVERY, STORAGE, AND HANDLING

A. Comply with ASTM C94 and ACI 301.

1.8 FIELD CONDITIONS

A. Cold-Weather Placement: Comply with ACI 301 and ACI 306.1 and as follows.
   1. Protect concrete work from physical damage or reduced strength that could be caused by frost, freezing actions, or low temperatures.
   2. When average high and low temperature is expected to fall below 40 degrees F for three successive days, maintain delivered concrete mixture temperature within the temperature range required by ACI 301.
   3. Do not use frozen materials or materials containing ice or snow.
   4. Do not place concrete in contact with surfaces less than 35 degrees F, other than reinforcing steel.
   5. Do not use calcium chloride, salt, or other materials containing antifreeze agents or chemical accelerators unless otherwise specified and approved in mixture designs.
B. Hot-Weather Placement: Comply with ACI 301 and ACI 305.1, and as follows:
   1. Maintain concrete temperature at time of discharge to not exceed 95 degrees F.
   2. Fog-spray forms, steel reinforcement, and subgrade just before placing concrete. Keep subgrade uniformly moist without standing water, soft spots, or dry areas.

PART 2 - PRODUCTS

2.1 CONCRETE, GENERAL

A. ACI Publications: Comply with ACI 301 unless modified by requirements in the Contract Documents.

2.2 CONCRETE MATERIALS

A. Source Limitations:
   1. Obtain all concrete mixtures from a single ready-mixed concrete manufacturer for entire Project.
   2. Obtain each type or class of cementitious material of the same brand from the same manufacturer's plant.
   3. Obtain aggregate from single source.
   4. Obtain each type of admixture from single source from single manufacturer.

B. Cementitious Materials:
   1. Fly Ash: ASTM C618, Class C or F.
   2. Blended Hydraulic Cement: ASTM C595, Type IL, portland-limestone cement.

C. Normal-Weight Aggregates: ASTM C33, Class 3M coarse aggregate or better, graded. Provide aggregates from a single source.
   1. Alkali-Silica Reaction: Comply with one of the following:
      a. Expansion Result of Aggregate: Not more than 0.04 percent at one-year when tested in accordance with ASTM C1293.
      b. Expansion Results of Aggregate and Cementitious Materials in Combination: Not more than 0.10 percent at an age of 16 days when tested in accordance with ASTM C1567.
      c. Alkali Content in Concrete: Not more than 4 lb./cu. yd. for moderately reactive aggregate or 3 lb./cu. yd. for highly reactive aggregate, when tested in accordance with ASTM C1293 and categorized in accordance with ASTM C1778, based on alkali content being calculated in accordance with ACI 301.
   2. Maximum Coarse-Aggregate Size: 1-1/2 inches nominal.
   3. Fine Aggregate: Free of materials with deleterious reactivity to alkali in cement.

D. Air-Entraining Admixture: ASTM C260.

E. Chemical Admixtures: Certified by manufacturer to be compatible with other admixtures that do not contribute water-soluble chloride ions exceeding those permitted in hardened concrete. Do not use calcium chloride or admixtures containing calcium chloride in steel-reinforced concrete.
   1. Water-Reducing Admixture: ASTM C494, Type A.
   2. High-Range, Water-Reducing Admixture: ASTM C494M, Type F.

F. Water and Water Used to Make Ice: ASTM C94, potable

2.3 VAPOR RETARDERS

A. Sheet Vapor Retarder, Class A: ASTM E1745, Class A; not less than 10 mils thick. Include manufacturer's recommended adhesive or pressure-sensitive tape.
   1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
      a. Reef Industries, Inc.
      b. Stego Industries, LLC.

2.4 CURING MATERIALS

A. Absorptive Cover: AASHTO M 182, Class 2, burlap cloth made from jute or kenaf, weighing approximately 9 oz./sq. yd. when dry.
B. Moisture-Retaining Cover: ASTM C171, polyethylene film burlap-polyethylene sheet.
C. Water: Potable or complying with ASTM C1602.
D. Clear, Waterborne, Membrane-Forming, Dissipating Curing Compound: ASTM C309, Type 1, Class B.
    1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
        a. Dayton Superior.
        b. Euclid Chemical Company (The); an RPM company.

2.5 RELATED MATERIALS

A. Expansion- and Isolation-Joint-Filler Strips: ASTM D1751, asphalt-saturated cellulosic fiber.
B. Semirigid Joint Filler: Two-component, semirigid, 100 percent solids, epoxy resin with a Type A shore durometer hardness of 80 in accordance with ASTM D2240.

2.6 REPAIR MATERIALS

A. Repair Underlayment: Cement-based, polymer-modified, self-leveling product that can be applied in thicknesses from 1/8-inch and that can be feathered at edges to match adjacent floor elevations.
    1. Cement Binder: ASTM C150- portland cement or hydraulic or blended hydraulic cement, as defined in ASTM C219.
    2. Primer: Product of underlayment manufacturer recommended for substrate, conditions, and application.
    3. Aggregate: Well-graded, washed gravel, 1/8- to 1/4-inch or coarse sand, as recommended by underlayment manufacturer.
    4. Compressive Strength: Not less than 4,100 psi at 28 days when tested in accordance with ASTM C109.
B. Repair Overlayment: Cement-based, polymer-modified, self-leveling product that can be applied in thicknesses from 1/4-inch and that can be filled in over a scarified surface to match adjacent floor elevations.
    1. Cement Binder: ASTM C150 portland cement or hydraulic or blended hydraulic cement, as defined in ASTM C219.
    2. Primer: Product of topping manufacturer recommended for substrate, conditions, and application.
    3. Aggregate: Well-graded, washed gravel, 1/8- to 1/4-inch or coarse sand as recommended by topping manufacturer.
    4. Compressive Strength: Not less than 5,000 psi at 28 days when tested in accordance with ASTM C109.

2.7 CONCRETE MIXTURES, GENERAL

A. Prepare design mixtures for each type and strength of concrete, proportioned on the basis of laboratory trial mixture or field test data, or both, in accordance with ACI 301.
   1. Use a qualified testing agency for preparing and reporting proposed mixture designs, based on laboratory trial mixtures.

B. Cementitious Materials: Limit percentage, by weight, of cementitious materials other than portland cement in concrete as follows:
   1. Fly Ash or Other Pozzolans: 25 percent by mass.

C. Admixtures: Use admixtures in accordance with manufacturer's written instructions.
   1. Use water-reducing high-range water-reducing or plasticizing admixture in concrete, as required, for placement and workability.
   2. Use water-reducing admixture in pumped concrete, and concrete with a w/cm below 0.50.

2.8 CONCRETE MIXTURES

A. Class A: Normal-weight concrete used for footings, grade beams, and tie beams.
   1. Minimum Compressive Strength: 3,000 psi at 28 days.
   2. Maximum w/cm: 0.50.
   3. Air Content:
      a. 4.5 percent, plus or minus 1.5 percent at point of delivery for concrete containing 1-1/2-inch nominal maximum aggregate size.
   4. Limit water-soluble, chloride-ion content in hardened concrete to 0.30 percent by weight of cement.

B. Class B: Normal-weight concrete used for foundation walls.
   1. Minimum Compressive Strength: 4,000 psi at 28 days.
   2. Maximum w/cm: 0.45.
   3. Slump Limit: 8 inches, plus or minus 1-inch for concrete with verified slump of 3 inches plus or minus 1-inch before adding high-range water-reducing admixture or plasticizing admixture at Project site.
   4. Air Content:
      a. 4.5 percent, plus or minus 1.5 percent at point of delivery for concrete containing 1-1/2-inch nominal maximum aggregate size.
   5. Limit water-soluble, chloride-ion content in hardened concrete to 0.30 percent by weight of cement.

C. Class C: Normal-weight concrete used for interior slabs-on-ground.
   1. Minimum Compressive Strength: 3,000 psi at 28 days.
   2. Maximum w/cm: 0.45.
   3. Slump Limit: 5 inches, plus or minus 1-inch.
   4. Air Content:
      a. Do not use an air-entraining admixture or allow total air content to exceed 3 percent for concrete used in trowel-finished floors.

D. Class D: Normal-weight concrete used for interior suspended slabs.
   1. Minimum Compressive Strength: 4,000 psi at 28 days.
   2. Maximum w/cm: 0.45.
   3. Slump Limit: 8 inches, plus or minus 1-inch for concrete with verified slump of 3 inches plus or minus 1-inch before adding high-range water-reducing admixture or plasticizing admixture at Project site.
   4. Air Content:
      a. Do not use an air-entraining admixture or allow total air content to exceed 3 percent for concrete used in trowel-finished floors.

E. Class E: Normal-weight concrete used for concrete toppings.
   1. Minimum Compressive Strength: 3,000 psi at 28 days.
   2. Slump Limit: 5 inches, plus or minus 1-inch.
   3. Air Content:
      a. Do not use an air entraining admixture or allow total air content to exceed 3 percent for concrete used in trowel-finished floors.

F. Class F: Normal-weight concrete used for building frame members.
   1. Minimum Compressive Strength: 4,000 psi at 28 days.
   2. Maximum w/cm: 0.45.
   3. Slump Limit: 8 inches, plus or minus 1-inch for concrete with verified slump of 3 inches plus or minus 1-inch before adding high-range water-reducing admixture or plasticizing admixture at Project site.

G. Class G: Normal-weight concrete used for building walls.
   1. Minimum Compressive Strength: 4,000 psi at 28 days.
   2. Maximum w/cm: 0.45.
   3. Slump Limit: 8 inches, plus or minus 1-inch for concrete with verified slump of 3 inches plus or minus 1-inch before adding high-range water-reducing admixture or plasticizing admixture at Project site.
   4. Air Content:
      a. 4.5 percent, plus or minus 1.5 percent at point of delivery for concrete containing 1-1/2-inch nominal maximum aggregate size.
   5. Limit water-soluble, chloride-ion content in hardened concrete to 1.00 percent by weight of cement.

H. Class H: Normal-weight concrete used for interior metal pan stairs and landings:
   1. Minimum Compressive Strength: 3,000 psi at 28 days.
   2. Maximum w/cm: 0.53.
   3. Maximum Size Aggregate: 1/2-inch.
   4. Air Content: 0 percent, plus or minus 0.5 percent at point of delivery.

2.9 CONCRETE MIXING

A. Ready-Mixed Concrete: Measure, batch, mix, and deliver concrete in accordance with ASTM C94, and furnish batch ticket information.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verification of Conditions:
   1. Before placing concrete, verify that installation of concrete forms, accessories, and reinforcement, and embedded items is complete and that required inspections have been performed.
   2. Do not proceed until unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Provide reasonable auxiliary services to accommodate field testing and inspections, acceptable to testing agency, including the following:
   1. Daily access to the Work.
   2. Incidental labor and facilities necessary to facilitate tests and inspections.
   3. Secure space for storage, initial curing, and field curing of test samples, including source of water and continuous electrical power at Project site during site curing period for test samples.
   4. Security and protection for test samples and for testing and inspection equipment at Project site.

3.3 INSTALLATION OF EMBEDDED ITEMS

A. Place and secure anchorage devices and other embedded items required for adjoining Work that is attached to or supported by cast-in-place concrete.
   1. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
   2. Install anchor rods, accurately located, to elevations required and complying with tolerances in Section 7.5 of ANSI/AISC 303.

3.4 INSTALLATION OF VAPOR RETARDER

A. Sheet Vapor Retarders: Place, protect, and repair sheet vapor retarder in accordance with ASTM E1643 and manufacturer's written instructions.
   1. Install vapor retarder with longest dimension parallel with direction of concrete pour.
   2. Face laps away from exposed direction of concrete pour.
   3. Lap vapor retarder over footings and grade beams not less than 6 inches, sealing vapor retarder to concrete.
   4. Lap joints 6 inches and seal with manufacturer's recommended tape.
   5. Terminate vapor retarder at the top of floor slabs, grade beams, and pile caps, sealing entire perimeter to floor slabs, grade beams, foundation walls, or pile caps.
   6. Seal penetrations in accordance with vapor retarder manufacturer's instructions.
   7. Protect vapor retarder during placement of reinforcement and concrete.
      a. Repair damaged areas by patching with vapor retarder material, overlapping damages area by 6 inches on all sides, and sealing to vapor retarder.

3.5 JOINTS

A. Construct joints true to line, with faces perpendicular to surface plane of concrete.
B. Construction Joints: Coordinate with floor slab pattern and concrete placement sequence.
   1. Install so strength and appearance of concrete are not impaired, at locations indicated on Drawings or as approved by Architect.
   2. Place joints perpendicular to main reinforcement.
      a. Continue reinforcement across construction joints unless otherwise indicated.
      b. Do not continue reinforcement through sides of strip placements of floors and slabs.
   3. Form keyed joints as indicated. Embed keys at least 1-1/2 inches into concrete.
   4. Locate joints for beams, slabs, joists, and girders at third points of spans. Offset joints in girders a minimum distance of twice the beam width from a beam-girder intersection.
   5. Locate horizontal joints in walls and columns at underside of floors, slabs, beams, and girders and at the top of footings or floor slabs.
   6. Space vertical joints in walls at 60 feet maximum. Unless otherwise indicated on Drawings, locate vertical joints beside piers integral with walls, near corners, and in concealed locations where possible.
C. Control Joints in Slabs-on-Ground: Form weakened-plane control joints, sectioning concrete into areas as indicated. Construct control joints for a depth equal to at least one-fourth of concrete thickness as follows:
   1. Grooved Joints: Form control joints after initial floating by grooving and finishing each edge of joint to a radius of 1/8-inch. Repeat grooving of control joints after applying surface finishes. Eliminate groover tool marks on concrete surfaces.
   2. Sawed Joints: Form control joints with power saws equipped with shatterproof abrasive or diamond-rimmed blades. Cut 1/8-inch-wide joints into concrete when cutting action does not tear, abrade, or otherwise damage surface and before concrete develops random cracks.
D. Isolation Joints in Slabs-on-Ground: After removing formwork, install joint-filler strips at slab junctions with vertical surfaces, such as column pedestals, foundation walls, grade beams, and other locations, as indicated.
   1. Extend joint-filler strips full width and depth of joint, terminating flush with finished concrete surface unless otherwise indicated on Drawings.
   2. Terminate full-width joint-filler strips not less than 1/2-inch or more than 1-inch below finished concrete surface, where joint sealants, specified in Section 07 92 00 "Joint Sealants," are indicated.
   3. Install joint-filler strips in lengths as long as practicable. Where more than one length is required, lace or clip sections together.
E. Doweled Joints:
   1. Install dowel bars and support assemblies at joints where indicated on Drawings.
   2. Lubricate or asphalt coat one-half of dowel bar length to prevent concrete bonding to one side of joint.
F. Dowel Plates: Install dowel plates at joints where indicated on Drawings.

3.6 CONCRETE PLACEMENT

A. Before placing concrete, verify that installation of formwork, reinforcement, embedded items, and vapor retarder is complete and that required inspections are completed.
   1. Immediately prior to concrete placement, inspect vapor retarder for damage and deficient installation, and repair defective areas.
   2. Provide continuous inspection of vapor retarder during concrete placement and make necessary repairs to damaged areas as Work progresses.

B. Notify Architect and testing and inspection agencies 24 hours prior to commencement of concrete placement.

C. Do not add water to concrete during delivery, at Project site, or during placement unless approved by Architect in writing, but not to exceed the amount indicated on the concrete delivery ticket.
   1. Do not add water to concrete after adding high-range water-reducing admixtures to mixture.

D. Deposit concrete continuously in one layer or in horizontal layers of such thickness that no new concrete is placed on concrete that has hardened enough to cause seams or planes of weakness.
   1. If a section cannot be placed continuously, provide construction joints as indicated.
   2. Deposit concrete to avoid segregation.
   3. Deposit concrete in horizontal layers of depth not to exceed formwork design pressures and in a manner to avoid inclined construction joints.
   4. Consolidate placed concrete with mechanical vibrating equipment in accordance with ACI 301.
      a. Do not use vibrators to transport concrete inside forms.
      b. Insert and withdraw vibrators vertically at uniformly spaced locations to rapidly penetrate placed layer and at least 6 inches into preceding layer.
      c. Do not insert vibrators into lower layers of concrete that have begun to lose plasticity.
      d. At each insertion, limit duration of vibration to time necessary to consolidate concrete, and complete embedment of reinforcement and other embedded items without causing mixture constituents to segregate.

E. Deposit and consolidate concrete for floors and slabs in a continuous operation, within limits of construction joints, until placement of a panel or section is complete.
   1. Do not place concrete floors and slabs in a checkerboard sequence.
   2. Consolidate concrete during placement operations, so concrete is thoroughly worked around reinforcement and other embedded items and into corners.
   3. Maintain reinforcement in position on chairs during concrete placement.
   4. Screed slab surfaces with a straightedge and strike off to correct elevations.
   5. Level concrete, cut high areas, and fill low areas.
   6. Slope surfaces uniformly to drains where required.
   7. Begin initial floating using bull floats or darbies to form a uniform and open-textured surface plane, before excess bleedwater appears on the surface.
   8. Do not further disturb slab surfaces before starting finishing operations.

3.7 FINISHING FORMED SURFACES

A. As-Cast Surface Finishes:
   1. ACI 301 Surface Finish SF-1.0: As-cast concrete texture imparted by form-facing material.
      a. Patch voids larger than 1-1/2 inches wide or 1/2-inch deep.
      b. Remove projections larger than 1-inch.
      c. Tie holes do not require patching.
      d. Surface Tolerance: ACI 117 Class D.
      e. Apply to concrete surfaces not exposed to public view.
   2. ACI 301 Surface Finish SF-3.0:
      a. Patch voids larger than 3/4-inch-wide or 1/2-inch-deep.
      b. Remove projections larger than 1/8-inch.
      c. Patch tie holes.
      d. Surface Tolerance: ACI 117 Class A.
      e. Locations: Apply to concrete surfaces to receive a rubbed finish,.

B. Rubbed Finish: Apply the following to as cast surface finishes where indicated on Drawings:
   1. Smooth-Rubbed Finish:
      a. Perform no later than one day after form removal.
      b. Moisten concrete surfaces and rub with carborundum brick or another abrasive until producing a uniform color and texture.
      c. If sufficient cement paste cannot be drawn from the concrete by the rubbing process, use a grout made from the same cementitious materials used in the in-place concrete.
      d. Maintain required patterns or variances as shown on Drawings or to match .

C. Related Unformed Surfaces:
   1. At tops of walls, horizontal offsets, and similar unformed surfaces adjacent to formed surfaces, strike off smooth and finish with a color and texture matching adjacent formed surfaces.
   2. Continue final surface treatment of formed surfaces uniformly across adjacent unformed surfaces unless otherwise indicated.

3.8 FINISHING FLOORS AND SLABS

A. Comply with ACI 302.1R recommendations for screeding, restraightening, and finishing operations for concrete surfaces. Do not wet concrete surfaces.

B. Scratch Finish:
   1. While still plastic, texture concrete surface that has been screeded and bull-floated or darbied.
   2. Use stiff brushes, brooms, or rakes to produce a profile depth of 1/4-inch in one direction.
   3. Apply scratch finish to surfaces to receive mortar setting beds for bonded cementitious floor finishes.

C. Float Finish:
1. When bleedwater sheen has disappeared and concrete surface has stiffened sufficiently to permit operation of specific float apparatus, consolidate concrete surface with power-driven floats or by hand floating if area is small or inaccessible to power-driven floats.
2. Repeat float passes and restraightening until surface is left with a uniform, smooth, granular texture and complies with ACI 117 tolerances for conventional concrete.
3. Apply float finish to surfaces to receive trowel finish.

D. Trowel Finish:
1. After applying float finish, apply first troweling and consolidate concrete by hand or power-driven trowel.
2. Continue troweling passes and restraighten until surface is free of trowel marks and uniform in texture and appearance.
3. Grind smooth any surface defects that would telegraph through applied coatings or floor coverings.
4. Do not add water to concrete surface.
5. Do not apply hard-troweled finish to concrete, which has a total air content greater than 3 percent.
6. Apply a trowel finish to surfaces exposed to view or to be covered with resilient flooring, carpet, ceramic or quarry tile set over a cleavage membrane, paint, or another thin-film-finish coating system.
7. Finish surfaces to the following tolerances, in accordance with ASTM E1155, for a randomly trafficked floor surface:
a. Slabs on Ground:
1) Specified overall values of flatness, FF 35; and of levelness, FL 25; with minimum local values of flatness, FF 24; and of levelness, FL 17.
b. Suspended Slabs:
1) Specified overall values of flatness, FF 35; and of levelness, FL 20; with minimum local values of flatness, FF 24; and of levelness, FL 15.

E. Trowel and Fine-Broom Finish: Apply a first trowel finish to surfaces where ceramic or quarry tile is to be installed by either thickset or thinset method. While concrete is still plastic, slightly scarify surface with a fine broom perpendicular to main traffic route.
1. Coordinate required final finish with Architect before application.
2. Comply with flatness and levelness tolerances for trowel-finished floor surfaces.

F. Broom Finish: Apply a broom finish to exterior concrete platforms, steps, ramps, and locations indicated on Drawings.
1. Immediately after float finishing, slightly roughen trafficked surface by brooming with fiber-bristle broom perpendicular to main traffic route.
2. Coordinate required final finish with Architect before application.

3.9 INSTALLATION OF MISCELLANEOUS CONCRETE ITEMS

A. Filling In:
1. Fill in holes and openings left in concrete structures after Work of other trades is in place unless otherwise indicated.
2. Mix, place, and cure concrete, as specified, to blend with in-place construction.
3. Provide other miscellaneous concrete filling indicated or required to complete the Work.

B. Curbs: Provide monolithic finish to interior curbs by stripping forms while concrete is still green and by steel-troweling surfaces to a hard, dense finish with corners, intersections, and terminations slightly rounded.

C. Steel Pan Stairs: Provide concrete fill for steel pan stair treads, landings, and associated items.
   1. Cast-in inserts and accessories, as shown on Drawings.
   2. Screed, tamp, and trowel finish concrete surfaces.

3.10 CONCRETE CURING

A. Protect freshly placed concrete from premature drying and excessive cold or hot temperatures.
   1. Comply with ACI 301 and ACI 306.1 for cold weather protection during curing.
   2. Comply with ACI 301 and ACI 305.1 for hot-weather protection during curing.
   3. Maintain moisture loss no more than 0.2 lb/sq. ft. x h, calculated in accordance with ACI 305.1, before and during finishing operations.

B. Curing Formed Surfaces: Comply with ACI 308.1 as follows:
   1. Cure formed concrete surfaces, including underside of beams, supported slabs, and other similar surfaces.
   2. If forms remain during curing period, moist cure after loosening forms.
   3. If removing forms before end of curing period, continue curing for remainder of curing period, as follows:
      a. Continuous Fogging: Maintain standing water on concrete surface until final setting of concrete.
      b. Continuous Sprinkling: Maintain concrete surface continuously wet.
      c. Absorptive Cover: Pre-dampen absorptive material before application; apply additional water to absorptive material to maintain concrete surface continuously wet.
      d. Water-Retention Sheeting Materials: Cover exposed concrete surfaces with sheeting material, taping, or lapping seams.
      e. Membrane-Forming Curing Compound: Apply uniformly in continuous operation by power spray or roller in accordance with manufacturer's written instructions.
         1) Recoat areas subject to heavy rainfall within three hours after initial application.
         2) Maintain continuity of coating and repair damage during curing period.

C. Curing Unformed Surfaces: Comply with ACI 308.1 as follows:
   1. Begin curing immediately after finishing concrete.
   2. Interior Concrete Floors:
      a. Floors to Receive Floor Coverings Specified in Other Sections: Contractor has option of the following:
         1) Absorptive Cover: As soon as concrete has sufficient set to permit application without marring concrete surface, install prewetted absorptive cover over entire area of floor.
            a) Lap edges and ends of absorptive cover not less than 12-inches.
            b) Maintain absorptive cover water saturated, and in place, for duration of curing period, but not less than seven days.

2) Moisture-Retaining-Cover Curing: Cover concrete surfaces with moisture-retaining cover for curing concrete, placed in widest practicable width, with sides and ends lapped at least 12 inches, and sealed by waterproof tape or adhesive.
   a) Immediately repair any holes or tears during curing period, using cover material and waterproof tape.
   b) Cure for not less than seven days.
3) Ponding or Continuous Sprinkling of Water: Maintain concrete surfaces continuously wet for not less than seven days, utilizing one, or a combination of, the following:
   a) Water.
   b) Continuous water-fog spray.

b. Floors to Receive Polished Finish: Contractor has option of the following:
1) Absorptive Cover: As soon as concrete has sufficient set to permit application without marring concrete surface, install prewetted absorptive cover over entire area of floor.
   a) Lap edges and ends of absorptive cover not less than 12 inches.
   b) Maintain absorptive cover water saturated, and in place, for duration of curing period, but not less than seven days.
2) Ponding or Continuous Sprinkling of Water: Maintain concrete surfaces continuously wet for not less than seven days, utilizing one, or a combination of, the following:
   a) Water.
   b) Continuous water-fog spray.

3.11 TOLERANCES

A. Conform to ACI 117.

3.12 JOINT FILLING

A. Prepare, clean, and install joint filler in accordance with manufacturer's written instructions.
   1. Defer joint filling until concrete has aged at least 6 months.
   2. Do not fill joints until construction traffic has permanently ceased.
B. Remove dirt, debris, saw cuttings, curing compounds, and sealers from joints; leave contact faces of joints clean and dry.
C. Install semirigid joint filler full depth in saw-cut joints and at least 2 inches deep in formed joints.
D. Overfill joint, and trim joint filler flush with top of joint after hardening.

3.13 CONCRETE SURFACE REPAIRS

A. Defective Concrete:
   1. Repair and patch defective areas when approved by Architect.
   2. Remove and replace concrete that cannot be repaired and patched to Architect's approval.
B. Patching Mortar: Mix dry-pack patching mortar, consisting of 1 part portland cement to 2-1/2 parts fine aggregate passing a No. 16 sieve, using only enough water for handling and placing.

C. Repairing Formed Surfaces: Surface defects include color and texture irregularities, cracks, spalls, air bubbles, honeycombs, rock pockets, fins and other projections on the surface, and stains and other discolorations that cannot be removed by cleaning.
   1. Immediately after form removal, cut out honeycombs, rock pockets, and voids more than 1/2-inch in any dimension to solid concrete.
      a. Limit cut depth to 3/4-inch.
      b. Make edges of cuts perpendicular to concrete surface.
      c. Clean, dampen with water, and brush-coat holes and voids with bonding agent.
      d. Fill and compact with patching mortar before bonding agent has dried.
      e. Fill form-tie voids with patching mortar or cone plugs secured in place with bonding agent.
   2. Repair defects on surfaces exposed to view by blending white portland cement and standard portland cement, so that, when dry, patching mortar matches surrounding color.
      a. Patch a test area at inconspicuous locations to verify mixture and color match before proceeding with patching.
      b. Compact mortar in place and strike off slightly higher than surrounding surface.
   3. Repair defects on concealed formed surfaces that will affect concrete's durability and structural performance as determined by Architect.

D. Repairing Unformed Surfaces:
   1. Test unformed surfaces, such as floors and slabs, for finish, and verify surface tolerances specified for each surface.
      a. Correct low and high areas.
      b. Test surfaces sloped to drain for trueness of slope and smoothness; use a sloped template.
   2. Repair finished surfaces containing surface defects, including spalls, popouts, honeycombs, rock pockets, crazing, and cracks in excess of 0.01-inch-wide or that penetrate to reinforcement or completely through unreinforced sections regardless of width, and other objectionable conditions.
   3. After concrete has cured at least 14 days, correct high areas by grinding.
   4. Correct localized low areas during, or immediately after, completing surface-finishing operations by cutting out low areas and replacing with patching mortar.
      a. Finish repaired areas to blend into adjacent concrete.
   5. Correct other low areas scheduled to receive floor coverings with a repair underlayment.
      a. Prepare, mix, and apply repair underlayment and primer in accordance with manufacturer's written instructions to produce a smooth, uniform, plane, and level surface.
      b. Feather edges to match adjacent floor elevations.
   6. Correct other low areas scheduled to remain exposed with repair topping.
      a. Cut out low areas to ensure a minimum repair topping depth of 1/4-inch to match adjacent floor elevations.
      b. Prepare, mix, and apply repair topping and primer in accordance with manufacturer's written instructions to produce a smooth, uniform, plane, and level surface.

7. Repair defective areas, except random cracks and single holes 1-inch or less in diameter, by cutting out and replacing with fresh concrete.
    a. Remove defective areas with clean, square cuts, and expose steel reinforcement with at least a 3/4-inch clearance all around.
    b. Dampen concrete surfaces in contact with patching concrete and apply bonding agent.
    c. Mix patching concrete of same materials and mixture as original concrete, except without coarse aggregate.
    d. Place, compact, and finish to blend with adjacent finished concrete.
    e. Cure in same manner as adjacent concrete.
8. Repair random cracks and single holes 1-inch or less in diameter with patching mortar.
    a. Groove top of cracks and cut out holes to sound concrete, and clean off dust, dirt, and loose particles.
    b. Dampen cleaned concrete surfaces and apply bonding agent.
    c. Place patching mortar before bonding agent has dried.
    d. Compact patching mortar and finish to match adjacent concrete.
    e. Keep patched area continuously moist for at least 72 hours.

E. Perform structural repairs of concrete, subject to Architect's approval, using epoxy adhesive and patching mortar.

F. Repair materials and installation not specified above may be used, subject to Architect's approval.

3.14 FIELD QUALITY CONTROL

A. Special Inspections: Owner will engage a special inspector to perform field tests and inspections and prepare testing and inspection reports.

B. Testing Agency: Owner will engage a qualified testing and inspecting agency to perform tests and inspections and to submit reports.
1. Testing agency shall be responsible for providing curing container for composite samples on Site and verifying that field-cured composite samples are cured in accordance with ASTM C31.
2. Testing agency shall immediately report to Architect, Contractor, and concrete manufacturer any failure of Work to comply with Contract Documents.
3. Testing agency shall report results of tests and inspections, in writing, to Owner, Architect, Contractor, and concrete manufacturer within 48 hours of inspections and tests.
    a. Test reports shall include reporting requirements of ASTM C31, ASTM C39, and ACI 301, including the following as applicable to each test and inspection:
        1) Project name.
        2) Name of testing agency.
        3) Names and certification numbers of field and laboratory technicians performing inspections and testing.
        4) Name of concrete manufacturer.
        5) Date and time of inspection, sampling, and field testing.
        6) Date and time of concrete placement.
        7) Location in Work of concrete represented by samples.
        8) Date and time sample was obtained.
        9) Truck and batch ticket numbers.

10) Design compressive strength at 28 days.
11) Concrete mixture designation, proportions, and materials.
12) Field test results.
13) Information on storage and curing of samples before testing, including curing method and maximum and minimum temperatures during initial curing period.
14) Type of fracture and compressive break strengths at seven days and 28 days.

C. Batch Tickets: For each load delivered, submit three copies of batch delivery ticket to testing agency, indicating quantity, mix identification, admixtures, design strength, aggregate size, design air content, design slump at time of batching, and amount of water that can be added at Project site.

D. Inspections:
1. Headed bolts and studs.
2. Verification of use of required design mixture.
3. Concrete placement, including conveying and depositing.
4. Curing procedures and maintenance of curing temperature.
5. Verification of concrete strength before removal of shores and forms from beams and slabs.

E. Concrete Tests: Testing of composite samples of fresh concrete obtained in accordance with ASTM C172 shall be performed in accordance with the following requirements:
1. Testing Frequency: Obtain one composite sample for each day's pour of each concrete mixture exceeding 5 cu. yd., but less than 25 cu. yd., plus one set for each additional 50 cu. yd. or fraction thereof.
a. When frequency of testing provides fewer than five compressive-strength tests for each concrete mixture, testing shall be conducted from at least 5 randomly selected batches or from each batch if fewer than five are used.
2. Slump: ASTM C143:
a. One test at point of placement for each composite sample, but not less than one test for each day's pour of each concrete mixture.
b. Perform additional tests when concrete consistency appears to change.
3. Air Content: ASTM C231 pressure method, for normal-weight concrete.
a. One test for each composite sample, but not less than one test for each day's pour of each concrete mixture.
4. Concrete Temperature: ASTM C1064:
a. One test hourly when air temperature is 40 degrees F and below or 80 degrees F and above, and one test for each composite sample.
5. Compression Test Specimens: ASTM C31:
a. Cast and laboratory cure one set of four 6-inch by 12-inch or 4-inch by 8-inch cylinder specimens for each composite sample.
b. Cast, initial cure, and field cure oneset of four standard cylinder specimens for each composite sample.
6. Compressive-Strength Tests: ASTM C39.
a. Test 1 laboratory-cured specimen at 7 days and 1 set of 2 specimens at 28 days.
b. Test 1 field-cured specimen at 7 days and 1 set of 2 specimens at 28 days.
c. A compressive-strength test shall be the average compressive strength from a set of 2 specimens obtained from same composite sample and tested at age indicated.

7. When strength of field-cured cylinders is less than 85 percent of companion laboratory-cured cylinders, Contractor shall evaluate operations and provide corrective procedures for protecting and curing in-place concrete.
8. Strength of each concrete mixture will be satisfactory if every average of any 3 consecutive compressive-strength tests equals or exceeds specified compressive strength, and no compressive-strength test value falls below specified compressive strength by more than 500 psi if specified compressive strength is 5,000 psi, or no compressive strength test value is less than 10 percent of specified compressive strength if specified compressive strength is greater than 5,000 psi.
9. Nondestructive Testing: Impact hammer, sonoscope, or other nondestructive device may be permitted by Architect but will not be used as sole basis for approval or rejection of concrete.
10. Additional Tests:
    a. Testing and inspecting agency shall make additional tests of concrete when test results indicate that slump, air entrainment, compressive strengths, or other requirements have not been met, as directed by Architect.
    b. Testing and inspecting agency may conduct tests to determine adequacy of concrete by cored cylinders complying with ASTM C42 or by other methods as directed by Architect.
        1) Acceptance criteria for concrete strength shall be in accordance with ACI 301 section 1.6.6.3.
11. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.
12. Correct deficiencies in the Work that test reports and inspections indicate do not comply with the Contract Documents.

F. Measure floor and slab flatness and levelness in accordance with ASTM E1155 within 24 hours of completion of floor finishing and promptly report test results to Architect.

3.15 PROTECTION

A. Protect concrete surfaces as follows:
1. Protect from petroleum stains.
2. Diaper hydraulic equipment used over concrete surfaces.
3. Prohibit vehicles from interior concrete slabs.
4. Prohibit use of pipe-cutting machinery over concrete surfaces.
5. Prohibit placement of steel items on concrete surfaces.
6. Prohibit use of acids or acidic detergents over concrete surfaces.
7. Protect liquid floor treatment from damage and wear during the remainder of construction period. Use protective methods and materials, including temporary covering, recommended in writing by liquid floor treatments installer.
8. Protect concrete surfaces scheduled to receive surface hardener or polished concrete finish using Floor Slab Protective Covering.

END OF SECTION

SECTION 04 05 23 – THROUGH-WALL AND WALL SUBSTRATE FLASHING SYSTEM

PART 1 - GENERAL

1.1 GENERAL

A. Contractor shall review American Concrete Institute 530.1 mandatory specification checklist for additional requirements necessary for specific project.

B. Flashing system shall be provided and installed by a qualified waterproofing contractor.

C. Contractor shall provide a photo manifest of through-wall installation, including all starts, stops, and transitions in plane.

D. It is the intent of this specification that the new work will provide a watertight facility restricted to the location where work is to be performed. The specifications describe the minimum acceptable standards of construction and finish.

E. Contractor shall water test all through-wall flashings once veneer is twelve inches (12”) above installed flashing. Coordinate test with Architect and Consultant.

F. Manufacturer of cloak flashing shall have a representative inspect the installed work a minimum of two times per week. The representative shall not be the installer.

G. All vertical flashing to be installed full height of the vertical surface.

I. The design intent is to have windows installed, flashed, and water tested prior to veneer installation.

1.2 RELATED SECTIONS

1. Section 07 22 16 – Roof Board Insulation
2. Section 07 53 00 – Coal-Tar Elastomeric Roof System
3. Section 07 62 00 – Sheet Metal Flashing and Miscellaneous Accessories
4. Section 07 72 00 – Roof Accessories

1.3 QUALITY ASSURANCE

A. At a scheduled pre-construction meeting with all trades, contractor shall review flashing for the project and how the flashing shall be sequenced with the following: below grade waterproofing, air and vapor system, window installation, sealant installation, relief angles and roofing.

1.4 SUBMITTALS

A. Shop Drawings: Contractor shall provide from the manufacturer a review of the flashing design for the project and location of preformed shapes on reduced floor plan.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials in manufacturer's original, unopened containers and rolls with all labels intact and legible including labels indicating appropriate warnings, storage conditions, lot numbers, and usage instructions. Materials damaged in shipping or storage shall not be used.

B. Manufacturer's packaging and/or roll plastic is not acceptable for exterior storage. Tarpaulin with grommets shall be minimum acceptable for exterior coverings. All materials stored as above shall be a minimum of four inches (4") off the substrate, and the tarpaulin tied off with rope.

C. Deliver materials in sufficient quantity to allow continuity of work.

D. Handle and store material in such a manner as to avoid damage.

E. Protect materials against damage by construction traffic.

F. Storage: All materials should be stored under cover to avoid site damage. During cool weather construction, store materials inside at 50º F or higher.

G. The proper storage of materials is the sole responsibility of the contractor and damaged materials shall be discarded, removed from the project site, and replaced prior to application.

1.6 SITE CONDITIONS

A. Job Condition Requirements: Coordinate the work of the contractor with the work to be performed by the Owner's personnel, to ensure proper sequencing of the entire work. The contractor shall follow local, state, and federal regulations, safety standards, and codes. When a conflict exists, use the stricter document.

B. Protection of Work and Property:
1. Work: The contractor shall maintain adequate protection of all his work from damage and shall protect the Owner's and adjacent property from injury or loss arising from this contract. He shall provide and maintain at all times any OSHA required danger signs, guards, and/or obstructions necessary to protect the public and his workmen from any dangers inherent with or created by the work in progress. All federal, state, and city rules and requirements pertaining to safety and all EPA standards, OSHA standards, NESHAP regulations shall be fulfilled by the contractor as part of his proposal.
2. Property: Protect existing planting and landscaping as necessary or required to provide and maintain clearance and access to the work of this contract. Examples of two categories or degrees of protection are generally as follows: a) removal, protection, preservation, or replacement and replanting of plant materials; b) protection of plant materials in place, and replacement of any damage resulting from the contractor's operations.

C. Damage to Work of Others: The contractor shall repair, refinish, and make good any damage to the building or landscaping resulting from any of his operation. This shall include, but is not limited to, any damage to plaster, tile work, wall covering, paint, ceilings, floors, or any other finished work. Damage done to the building, equipment, or grounds shall be repaired at the successful contractor's expense holding the Owner harmless from any other claims for property damage and/or personal injury.

PACKET 7.233 September 9, 2025

D. Measurements: It will be the contractor's responsibility to obtain and/or verify any necessary dimensions by visiting the job site, and the contractor shall be responsible for the correctness of same. Any drawings supplied are for reference only.

E. Cleaning and Disposal of Materials:
1. Contractor shall keep the job clean and free from all loose materials and foreign matter. Contractor shall take necessary precautions to keep outside walls clean.
2. All waste materials, rubbish, etc., shall be removed from the Owner's premises as accumulated. Rubbish shall be carefully handled to reduce the spread of dust. At completion, all work areas shall be left clean and all contractor's equipment and materials removed from the site.
3. Debris shall be deposited at an approved disposal site.

1.7 WARRANTY

A. Flashing Manufacturer: Project shall be installed in such a manner that the flashing material manufacturer will furnish a written ten (10) year materials warranty from the date of substantial completion of the completed project.

B. If the CTEM roof system is being provided and installed on the same facility as the flashing is being provided and installed, the warranty period for this flashing system shall be included in the roof warranty for the same twenty (20) year period.

PART 2 – PRODUCTS

2.1 BUILT-IN FLASHING MEMBRANE

A. The built-in flashing membrane shall be 40 mil flexible sheet material, consisting of a blend of elastomeric and polymers. The membrane shall be reinforced with synthetic fibers, calendered into sheet form, rolled and cut to width.

B. Cloaks shall be pre-formed, three dimensional flexible units used for detail corners, level changes, stop ends, and special applications.

Physical Properties		
Elongation	175%	ASTM D412
Tensile Strength	650 psi	ASTM D412
Tear Strength	280 psi	ASTM D624
Low Temperature Flexibility	-25º F Pass	ASTM D146
Water Absorption	Less than 0.1%	ASTM D471

C. Cloak color shall be as selected by Architect. Reference manufacturer's list of colors for selection.

PACKET 7.234 September 9, 2025

2.2 RELATED MATERIALS FOR BUILT-IN FLASHING MEMBRANE

A. Flashing Membrane Adhesive: Flashing adhesive exceeds the requirements of TTS00230C Type II, Class B, ASTM C 92094. The product shall be terra cotta (dull red) in color.

Physical Properties		
Hardness Shore A	24 ± 3	ASTM C 661
Shear Strength	75 psi	ASTM D 1002
Tack Free Time	25 minutes	ASTM C 679
Slump (sag)	Zero slump	ASTM C 697
Shrinkage	No measurable shrinkage after 14 days	
Low Temperature Flexibility	-20° F pass 1/4 inch mandrel	
Service Temperature	-40° F to 200° F continuous service	
Shelf Life	One year	

2.3 SURFACE-ADHERED WITH DRIP FLASHING MEMBRANE

A. Surface-adhered with drip membrane shall be a composite 40 mil membrane consisting of 25 mils of elastomeric/thermal plastic membrane and 15 mils of SBS asphaltic adhesive. The membrane shall be reinforced with synthetic fibers, calendered into sheet form, rolled and cut to standard widths.

B. Standard Sheet Dimensions:

Thickness	40 mil
Roll length	75 ft
Roll widths	12, 18, 24, 36 in

C. Cloaks shall be pre-formed, three dimensional flexible units used for detail corners, level changes, stop ends, and special applications.

Physical Properties		
Elongation	225%	ASTM D412
Tensile Strength	875 psi	ASTM D412
Tear Strength	270 psi	ASTM D624
Low Temperature Flexibility	-25º F Pass	ASTM D146
Water Absorption	Less than 0.1%	ASTM D471

2.4 RELATED MATERIALS FOR SURFACE ADHERED FLASHING MEMBRANE

A. Asphalt Primer: Shall be a two-sided, self-adhering tape used to seal the top of cloaks against the back-up wythe. Adhesive may be used as an alternative.

B. Substrate Primer:

Physical Properties		
Solids by Weight	68%	
Viscosity	758 cps	
Weight per Gallon	9.3 lbs.	
Elongation	>656% no Breakage, Exceeded Travel of Instron	ASTM D 2370
Tensile Strength	85.1 psi	ASTM D 2370
pH	10	
Hardness Shore A	59	
Peel Strength	Aluminum No Fail at 4.60 pli Concrete No Fail at 3.86 pli	

C. Mastic: Shall be used at all laps and joints, and top terminations.

2.5 WALL DRAINAGE SYSTEM

A. Collection device shall be a dovetail shaped material to place in the cavity of brick masonry walls for collecting mortar droppings above the level of the weep holes and flashing. The 90% open weave construction material shall be High Density Polyethylene (HDPE) mesh for thickness of 0.4 – 1.0 inch, or recycled polyester mesh for 2.0 inch thickness.

B. Material shall not oxidize, rot, promote mold or fungus, or react with other common building materials such as mortar, cement, asphalt, modified bitumen, PVC, copper, or galvanized metal; shall be Mortar Net, or approved equal.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine conditions for compliance with requirements for installation tolerances and other specific conditions.

3.2 GENERAL

A. Laying Masonry Walls: Use an inverted lintel CMU or fully grouted hollow CMU as a base for flashing at sills, floor joints, and other similar conditions.

B. Preparation: All sharp protrusions and mortar droppings must be removed from the substrate, and the surface must be clean and dry.

C. Where brick work occurs above the roof elevation, provide solid protection of the existing roof system until work is complete.

D. Flashing shall be fully supported when crossing the cavity except at sill and coping locations.

E. Flashing shall be fully adhered around all wall penetrations prior to veneer installation.

3.3 INSTALLATION OF BUILT-IN FLASHING MEMBRANE

A. Flashing membrane and cloaks shall be installed in a bed of fresh mortar and should extend through the outer wythe a minimum of one-fourth inch (1/4") and left exposed. Flashing membrane is UV resistant.

B. Weep holes shall be provided immediately above all flashing at 24-inch centers. A minimum of two weeps shall be installed above any wall opening.

C. All joints in the flashing membrane shall be lapped a minimum of four inches (4") using flashing membrane adhesive.

D. Flashing membrane shall be installed six inches (6") above finished grade level.

E. Cloaks and end dams shall be installed at all window, door heads and sills.

F. Vertical flashing at wall openings shall extend into the wall opening four inches (4"). The door/window frame shall be installed with the flashing extending onto the back of the frame.

G. Cleaning: Flashing membrane shall not be damaged by cavity cleaning after installation. Precautions to be taken during subsequent work are:
1. Use of cavity battens to prevent mortar droppings;
2. Removal of droppings before they harden;
3. Never use implements such as steel rods for cleaning the cavity; and
4. Inspection of cavity flashing for damage as the work proceeds.

3.4 INSTALLATION OF SURFACE-ADHERED FLASHING WITH DRIP MEMBRANE

A. Priming: All flashing substrates shall be primed. Flashing primer shall be applied with a brush, roller or sprayed. Coverage is approximately 400 square feet per U.S. gallon (3.78L). Drying time may vary depending on temperature, humidity, and air movement; drying time should be approximately 45 minutes.

B. Flashing System Installation: Starting at a corner, mount cloak to substrate flashing adhesive. Cut surface adhered membrane into workable sections (8'-10'). Remove the release sheet and adhere the membrane to the inner leaf of construction lapping the membrane onto the cloak four inches (4"). Use firm hand pressure and a steel roller to totally adhere membrane in place. Extend membrane completely through the outer leaf and leave it exposed one-fourth inch (1/4") minimum. The surface-adhered membrane is UV resistant. Apply a bead of flashing mastic to all top termination edges.

C. Termination Bar: The surface-adhered membrane shall be installed using a termination bar for additional attachment to the inner leaf.

D. Weep holes shall be provided immediately above all flashing at 24-inch centers. A minimum of two baffle weeps shall be installed above any wall opening.

E. Flashing membrane shall be installed six inches (6") above finished grade level.

F. Stop end cloaks shall be installed at all windows, door heads, sills, and through-wall starts, stops, steps, etc.

G. Enveloped vertical flashing at wall openings shall extend onto the window unit one inch (1"). The door/window frame shall be installed with the flashing extending onto the back of the frame.

H. Enveloped vertical flashing shall be installed at all abutments of dissimilar exterior wall treatments: inside and outside nineties (90°), etc.

I. Cleaning: Flashing membrane shall not be damaged by cavity cleaning after installation. Precautions to be taken during subsequent work are:
   1. Use of cavity battens to prevent mortar droppings;
   2. Removal of droppings before they harden;
   3. Never use implements such as steel rods for cleaning the cavity; and
   4. Inspection of cavity flashing for damage as the work proceeds.

3.5 FLASHING MEMBRANE ADHESIVE

A. Application:
   1. Flashing adhesive shall be applied to clean, dry and relatively smooth surfaces.
   2. When joint two (2) pieces of flashing membrane, or joining flashing membrane to Cloaks:
      a) Apply two (2) one-fourth inch (1/4") beads of adhesive approximately one-half inch (1/2") and one and one-half inch (1-1/2"), respectively, from the edge of the bottom membrane along the entire width of the bottom membrane. Overlap the top membrane over the bottom membrane two inches (2") and roll lap with steel hand roller, causing excess to extrude the entire length of the overlap.
   3. Do not remove excess adhesive.

B. Safety, Storage and Handling: Keep container tightly closed when not in use. Store at room temperature. Clean up tools and hands with waterless hand cleaner.

3.6 SUBSTRATE PRIMER

A. Surface Preparation: Areas to be primed should be dry.

B. Application: Substrate primer may be applied using a soft roller or brush. It can be removed from masonry with soapy water while wet and a solvent-based cleaner if dry (mineral spirits or citrus cleaner).

C. Coverage: Depending on the condition of the surface, coverage may vary from as little as 150 square feet to 200 square feet per gallon.

D. Caution:
   1. Substrate primer should not be applied when temperatures are below 40° F or when rain is imminent.
   2. Keep substrate primer from freezing.
   3. During hot weather, the product should be stored in a cool shaded area.
   4. Do not thin this product.
   5. Curing rates will vary depending on the ambient temperature relative humidity, wind speed, sky condition and the proper rate of application. Generally speaking, Substrate primer will dry within 15 to 30 minutes when applied at 70° F or above. At 50° F, on a cloudy day, cure time may be extended to as much as one hour.
   6. Check several places on primed area for dryness prior to proceeding with the flashing application.

END OF SECTION

SECTION 04 20 00 - UNIT MASONRY

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Brick.
   2. Mortar and grout materials.

B. Products Installed But Not Furnished Under This Section:
   1. Cast-stone trim in unit masonry.
   2. Stone trim units in unit masonry.
   3. Steel lintels in unit masonry.
   4. Steel shelf angles for supporting unit masonry.
   5. Cavity wall insulation adhered to masonry backup.

C. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.

1.2 DEFINITIONS

A. Reinforced Masonry: Masonry containing reinforcing steel in grouted cells.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Shop Drawings: For the following:
   1. Masonry Units: Indicate sizes, profiles, coursing, and locations of special shapes.

C. Samples for Initial Selection:
   1. Clay face or Hollowbrick, in the form of straps of 5 or more bricks.
   2. Glazed brick.
   3. Colored mortar.

D. Samples for Verification: For each type and color of the following:
   1. Concrete face brick.
   2. [Clay face] [Hollow] brick[, in the form of straps of five or more bricks].
   3. Special brick shapes.
   4. Glazed brick.
   5. [Pigmented] [and] [colored-aggregate] mortar. Make samples using same sand and mortar ingredients to be used on Project.

1.4 DELIVERY, STORAGE, AND HANDLING

A. Store masonry units on elevated platforms in a dry location. If units are not stored in an enclosed location, cover tops and sides of stacks with waterproof sheeting, securely tied. If units become wet, do not install until they are dry.

B. Store cementitious materials on elevated platforms, under cover, and in a dry location. Do not use cementitious materials that have become damp.

C. Store aggregates where grading and other required characteristics can be maintained and contamination avoided.
D. Deliver preblended, dry mortar mix in moisture-resistant containers. Store preblended, dry mortar mix in delivery containers on elevated platforms in a dry location or in covered weatherproof dispensing silos.
E. Store masonry accessories, including metal items, to prevent corrosion and accumulation of dirt and oil.

1.5 FIELD CONDITIONS

A. Protection of Masonry: During construction, cover tops of walls, projections, and sills with waterproof sheeting at end of each day's work. Cover partially completed masonry when construction is not in progress.
   1. Extend cover a minimum of 24 inches down both sides of walls, and hold cover securely in place.
   2. Where 1 wythe of multiwythe masonry walls is completed in advance of other wythes, secure cover a minimum of 24 inches down face next to unconstructed wythe, and hold cover in place.
B. Do not apply uniform floor or roof loads for at least 12 hours and concentrated loads for at least three days after building masonry walls or columns.
C. Stain Prevention: Prevent grout, mortar, and soil from staining the face of masonry to be left exposed or painted. Immediately remove grout, mortar, and soil that come in contact with such masonry.
   1. Protect base of walls from rain-splashed mud and from mortar splatter by spreading coverings on ground and over wall surface.
   2. Protect sills, ledges, and projections from mortar droppings.
   3. Protect surfaces of window and door frames, as well as similar products with painted and integral finishes, from mortar droppings.
   4. Turn scaffold boards near the wall on edge at the end of each day to prevent rain from splashing mortar and dirt onto completed masonry.
D. Cold-Weather Requirements: Do not use frozen materials or materials mixed or coated with ice or frost. Do not build on frozen substrates. Remove and replace unit masonry damaged by frost or by freezing conditions. Comply with cold-weather construction requirements contained in TMS 602.
   1. Cold-Weather Cleaning: Use liquid cleaning methods only when air temperature is 40 degrees F and higher and will remain so until masonry has dried, but not less than seven days after completing cleaning.
E. Hot-Weather Requirements: Comply with hot-weather construction requirements contained in TMS 602.

PART 2 - PRODUCTS

2.1 SOURCE LIMITATIONS

A. Obtain exposed masonry units, cementitious mortar components and mortar aggregate from single manufacturer.
B. For exposed masonry units and cementitious mortar components, obtain each color and grade from single source with resources to provide materials of consistent quality in appearance and physical properties.

2.2 BASIS OF DESIGN PRODUCTS

A. Acme Brick:
   1. 3020 W. Front Street, Midland, Texas 79701.
B. Bilco Brick
   1. 2116 N. Lancaster-Hutchins Road, Lancaster, Texas 75134.
C. Caprock Brick
   1. 8708 County Road 6820, Lubbock, Texas 79407.

2.3 PERFORMANCE REQUIREMENTS

A. Seismic Performance: Masonry to withstand the effects of earthquake motions determined in accordance with ASCE/SEI 7.
B. Providestructuralunit masonry that develops indicated net-area compressive strengths at 28 days.
   1. Determine net-area compressive strength of masonry from average net-area compressive strengths of masonry units and mortar types (unit-strength method) in accordance with TMS 602.
   2. Determine net-area compressive strength of masonry by testing masonry prisms in accordance with ASTM C1314.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine conditions, with installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
   1. For the record, prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.
   2. Verify that foundations are within tolerances specified.
   3. Verify that reinforcing dowels are properly placed.
   4. Verify that substrates are free of substances that impair mortar bond.
B. Before installation, examine rough-in and built-in construction for piping systems to verify actual locations of piping connections.
C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION, GENERAL

A. Thickness: Build cavity and composite walls and other masonry construction to full thickness shown. Build single-wythe walls to actual widths of masonry units, using units of widths indicated.
B. Build chases and recesses to accommodate items specified in this and other Sections.
C. Leave openings for equipment to be installed before completing masonry. After installing equipment, complete masonry to match construction immediately adjacent to opening.
D. Use full-size units without cutting if possible. If cutting is required to provide a continuous pattern or to fit adjoining construction, cut units with motor-driven saws; provide clean, sharp, unchipped edges. Allow units to dry before laying unless wetting of units is specified. Install cut units with cut surfaces and, where possible, cut edges concealed.

E. Select and arrange units for exposed unit masonry to produce a uniform blend of colors and textures. Mix units from several pallets or cubes as they are placed.

F. Matching Existing Masonry: Match coursing, bonding, color, and texture of existing masonry.

G. Wetting of Brick: Wet brick before laying if initial rate of absorption exceeds 30 g/30 sq. in. per minute when tested in accordance with ASTM C67. Allow units to absorb water so they are damp but not wet at time of laying.

3.3 TOLERANCES

A. Dimensions and Locations of Elements:
   1. For dimensions in cross section or elevation, do not vary by more than plus 1/2-inch or minus 1/4-inch.
   2. For location of elements in plan, do not vary from that indicated by more than plus or minus 1/2-inch.
   3. For location of elements in elevation, do not vary from that indicated by more than plus or minus 1/4 inch in a story height or 1/2-inch total.

B. Lines and Levels:
   1. For bed joints and top surfaces of bearing walls, do not vary from level by more than 1/4-inch in 10 feet, or 1/2-inch maximum.
   2. For conspicuous horizontal lines, such as lintels, sills, parapets, and reveals, do not vary from level by more than 1/8-inch in 10 feet, 1/4-inch in 20 feet, or 1/2-inch maximum.
   3. For vertical lines and surfaces, do not vary from plumb by more than 1/4-inch in 10 feet, 3/8-inch in 20 feet, or 1/2-inch maximum.
   4. For conspicuous vertical lines, such as external corners, door jambs, reveals, and expansion and control joints, do not vary from plumb by more than 1/8-inch in 10 feet, 1/4-inch in 20 feet, or 1/2-inch maximum.
   5. For lines and surfaces, do not vary from straight by more than 1/4-inch in 10 feet, 3/8-inch in 20 feet, or 1/2-inch maximum.
   6. For vertical alignment of exposed head joints, do not vary from plumb by more than 1/4-inch in 10 feet, or 1/2-inch maximum.
   7. For faces of adjacent exposed masonry units, do not vary from flush alignment by more than 1/16-inch except due to warpage of masonry units within tolerances specified for warpage of units.

C. Joints:
   1. For bed joints, do not vary from thickness indicated by more than plus or minus 1/8inch, with a maximum thickness limited to 1/2-inch.
   2. For exposed bed joints, do not vary from bed-joint thickness of adjacent courses by more than 1/8-inch.
   3. For head and collar joints, do not vary from thickness indicated by more than plus 3/8-inch or minus 1/4-inch.
   4. For exposed head joints, do not vary from thickness indicated by more than plus or minus 1/8-inch. Do not vary from adjacent bed-joint and head-joint thicknesses by more than 1/8-inch.
   5. For exposed bed joints and head joints of stacked bond, do not vary from a straight line by more than 1/16-inch from one masonry unit to the next.

3.4 LAYING MASONRY WALLS

A. Lay out walls in advance for accurate spacing of surface bond patterns with uniform joint thicknesses and for accurate location of openings, movement-type joints, returns, and offsets. Avoid using less-than-half-size units, particularly at corners, jambs, and, where possible, at other locations.

B. Bond Pattern for Exposed Masonry: Unless otherwise indicated, lay exposed masonry in running bond ; do not use units with less-than-nominal 4-inch horizontal face dimensions at corners or jambs.

C. Lay concealed masonry with all units in a wythe in running bond or bonded by lapping not less than [2 inches] [4 inches]. Bond and interlock each course of each wythe at corners. Do not use units with less-than-nominal 4-inch horizontal face dimensions at corners or jambs.

D. Stopping and Resuming Work: Stop work by stepping back units in each course from those in course below; do not tooth. When resuming work, clean masonry surfaces that are to receive mortar, remove loose masonry units and mortar, and wet brick if required before laying fresh masonry.

E. Built-in Work: As construction progresses, build in items specified in this and other Sections. Fill in solidly with masonry around built-in items.

F. Fill space between steel frames and masonry solidly with mortar unless otherwise indicated.

G. Where built-in items are to be embedded in cores of hollow masonry units, place a layer of metal lath, wire mesh, or plastic mesh in the joint below, and rod mortar or grout into core.

H. Fill cores in hollow CMUs with grout 24 inches under bearing plates, beams, lintels, posts, and similar items unless otherwise indicated.

I. Build nonload-bearing interior partitions full height of story to underside of solid floor or roof structure above unless otherwise indicated.

1. Install compressible filler in joint between top of partition and underside of structure above.
2. Fasten partition top anchors to structure above and build into top of partition. Grout cells of CMUs solidly around plastic tubes of anchors, and push tubes down into grout to provide 1/2-inch clearance between end of anchor rod and end of tube. Space anchors [48 inches] <**Insert spacing**> o.c. unless otherwise indicated.
3. Wedge nonload-bearing partitions against structure above with small pieces of tile, slate, or metal. Fill joint with mortar after dead-load deflection of structure above approaches final position.
4. At fire-rated partitions, treat joint between top of partition and underside of structure above to comply with Section 07 84 43 "Joint Firestopping."

3.5 MORTAR BEDDING AND JOINTING

A. Lay as follows:

1. Bed face shells in mortar and make head joints of depth equal to bed joints.
2. Bed webs in mortar in all courses of piers, columns, and pilasters.
3. Bed webs in mortar in grouted masonry, including starting course on footings.
4. Fully bed entire units, including areas under cells, at starting course on footings where cells are not grouted.
5. Fully bed units and fill cells with mortar at anchors and ties as needed to fully embed anchors and ties in mortar.

B. Lay solid masonry units with completely filled bed and head joints; butter ends with sufficient mortar to fill head joints and shove into place. Do not deeply furrow bed joints or slush head joints.

C. Set [**stone**] [**cast-stone**] trim units in full bed of mortar with full vertical joints. Fill dowel, anchor, and similar holes.
   1. Clean soiled surfaces with fiber brush and soap powder and rinse thoroughly with clear water.
   2. Allow cleaned surfaces to dry before setting.
   3. Wet joint surfaces thoroughly before applying mortar.
   4. Rake out mortar joints for pointing with sealant.

D. Rake out mortar joints at to a uniform depth of 1/4-inch and point with epoxy mortar to comply with epoxy-mortar manufacturer's written instructions.

E. Tool exposed joints slightly concave when thumbprint hard, using a jointer larger than joint thickness unless otherwise indicated.
   1. For glazed masonry units, use a nonmetallic jointer 3/4-inch or more in width.

F. Cut joints flush for masonry walls to receive plaster or other direct-applied finishes (other than paint) unless otherwise indicated.

G. Cut joints flush where indicated to receive [**waterproofing**] [**cavity wall insulation**] [**air barriers**] unless otherwise indicated.

3.6 COMPOSITE MASONRY

A. Bond wythes of composite masonry together [**using one of the following methods**] [**as follows**]:
   1. Individual Metal Ties: Provide ties as indicated installed in horizontal joints, but not less than one metal tie for [4.5 sq. ft.] [2.67 sq. ft.] [1.77 sq. ft.] of wall area spaced not to exceed [36 inches] [24 inches] [16 inches] o.c. horizontally and 16 inches o.c. vertically. Stagger ties in alternate courses. Provide additional ties within 12 inches of openings and space not more than 36 inches apart around perimeter of openings. At intersecting and abutting walls, provide ties at no more than 24 inches o.c. vertically.
      a. Where bed joints of wythes do not align, use adjustable-type (two-piece-type) ties.
   2. Masonry-Joint Reinforcement: Installed in horizontal mortar joints.
      a. Where bed joints of both wythes align, use [**ladder-type reinforcement extending across both wythes**] [**tab-type reinforcement**].
      b. Where bed joints of wythes do not align, use adjustable-type (two-piece-type) reinforcement[**with continuous horizontal wire in facing wythe attached to ties**].
   3. Header Bonding: Provide masonry unit headers extending not less than 3 inches into each wythe. Space headers not more than [8 inches] [12 inches] clear horizontally and 16 inches clear vertically.

B. Bond wythes of composite masonry together using bonding system indicated on Drawings.

C. Collar Joints: Solidly fill collar joints by parging face of first wythe that is laid and shoving units of other wythe into place.

D. Collar Joints in Clay Tile Masonry: After each course is laid, fill the vertical, longitudinal joint between wythes solidly with mortar at [**exterior walls, except cavity walls**] [**, and**] [**interior walls and partitions**].

E. Corners: Provide interlocking masonry unit bond in each wythe and course at corners unless otherwise indicated.
   1. Provide continuity with masonry-joint reinforcement at corners by using prefabricated L-shaped units as well as masonry bonding.

F. Intersecting and Abutting Walls: Unless vertical expansion or control joints are indicated at juncture, bond walls together as follows:
   1. Provide individual metal ties not more than [8 inches] [16 inches] o.c.
   2. Provide continuity with masonry-joint reinforcement by using prefabricated T-shaped units.
   3. Provide rigid metal anchors not more than [24 inches] [48 inches] o.c. If used with hollow masonry units, embed ends in mortar-filled cores.

3.7 CAVITY WALLS

A. Bond wythes of cavity walls together [**using one of the following methods**] [**as follows**]:
   1. Individual Metal Ties: Provide ties as indicated installed in horizontal joints, but not less than one metal tie for [4.5 sq. ft.] [2.67 sq. ft.] [1.77 sq. ft.] of wall area spaced not to exceed [36 inches] [24 inches] [16 inches] o.c. horizontally and 16 inches o.c. vertically. Stagger ties in alternate courses. Provide additional ties within 12 inches of openings and space not more than 36 inches apart around perimeter of openings. At intersecting and abutting walls, provide ties at no more than 24 inches o.c. vertically.
      a. Where bed joints of wythes do not align, use adjustable-type (2-piece-type) ties.
      b. Where 1 wythe is of clay masonry and the other of concrete masonry, use adjustable-type (2-piece-type) ties to allow for differential movement regardless of whether bed joints align.
   2. Masonry-Joint Reinforcement: Installed in horizontal mortar joints.
      a. Where bed joints of both wythes align, use [**ladder-type reinforcement extending across both wythes**] [**tab-type reinforcement**].
      b. Where bed joints of wythes do not align, use adjustable-type (2-piece-type) reinforcement[**with continuous horizontal wire in facing wythe attached to ties**].
      c. Where 1 wythe is of clay masonry and the other of concrete masonry, use adjustable-type (2-piece-type) reinforcement[**with continuous horizontal wire in facing wythe attached to ties**] to allow for differential movement regardless of whether bed joints align.
   3. Header Bonding: Provide masonry unit headers extending not less than 3 inches into each wythe. Space headers not more than [8 inches] [12 inches] clear horizontally and 16 inches clear vertically.
   4. Masonry-Veneer Anchors: Comply with requirements for anchoring masonry veneers.

B. Bond wythes of cavity walls together using bonding system indicated on Drawings.

C. Keep cavities clean of mortar droppings and other materials during construction. Bevel beds away from cavity, to minimize mortar protrusions into cavity. Do not attempt to trowel or remove mortar fins protruding into cavity.

D. Parge cavity face of backup wythe in a single coat approximately 3/8-inch-thick. Trowel face of parge coat smooth.

E. Installing Cavity Wall Insulation: Place small dabs of adhesive, spaced approximately 12 inches o.c. both ways, on inside face of insulation boards, or attach with plastic fasteners designed for this purpose. Fit courses of insulation between wall ties and other confining obstructions in cavity, with edges butted tightly both ways. Press units firmly against inside wythe of masonry or other construction as indicated.
   1. Fill cracks and open gaps in insulation with crack sealer compatible with insulation and masonry.

3.8 ANCHORED MASONRY VENEERS

A. Anchor masonry veneers to [**wall framing**] [**and**] [**concrete and masonry backup**] with[**seismic**] masonry-veneer anchors to comply with the following requirements:
   1. Fasten [**screw-attached**] [**and**] [**seismic**] anchors [**through sheathing to wall framing**] [**and**] [**to concrete and masonry backup**] with metal fasteners of type indicated. Use two fasteners unless anchor design only uses one fastener.
   2. Embed [**tie sections**] [**connector sections and continuous wire**] in masonry joints.
   3. Locate anchor sections to allow maximum vertical differential movement of ties up and down.
   4. Space anchors as indicated, but not more than 18 inches o.c. vertically and 24 inches o.c. horizontally, with not less than one anchor for each 2 sq. ft. of wall area. Install additional anchors within 12 inches of openings and at intervals, not exceeding 8 inches, around perimeter.
   5. Space anchors as indicated, but not more than 16 inches o.c. vertically and 25 inches o.c. horizontally, with not less than one anchor for each [2.67 sq. ft.] [3.5 sq. ft.] of wall area. Install additional anchors within 12 inches of openings and at intervals, not exceeding 36 inches, around perimeter.
   6. Space anchors as indicated, but not more than 18 inches o.c. vertically and horizontally. Install additional anchors within 12 inches of openings and at intervals, not exceeding 24 inches, around perimeter.

B. Provide not less than [2 inches] [1 inch] <**Insert distance**> of airspace between back of masonry veneer and face of [**sheathing**] [**insulation**].
   1. Keep airspace clean of mortar droppings and other materials during construction. Bevel beds away from airspace, to minimize mortar protrusions into airspace. Do not attempt to trowel or remove mortar fins protruding into airspace.

3.9 MASONRY-JOINT REINFORCEMENT

A. General: Install entire length of longitudinal side rods in mortar with a minimum cover of 5/8-inch on exterior side of walls, 1/2-inch elsewhere. Lap reinforcement a minimum of 6 inches.
   1. Space reinforcement not more than 16 inches o.c.
   2. Space reinforcement not more than 8 inches o.c. in foundation walls and parapet walls.
   3. Provide reinforcement not more than 8 inches above and below wall openings and extending 12 inches beyond openings[**in addition to continuous reinforcement**].

B. Interrupt joint reinforcement at control and expansion joints unless otherwise indicated.
C. Provide continuity at wall intersections by using prefabricated T-shaped units.
D. Provide continuity at corners by using prefabricated L-shaped units.
E. Cut and bend reinforcing units as directed by manufacturer for continuity at[**corners,**] returns, offsets, column fireproofing, pipe enclosures, and other special conditions.

3.10 ANCHORING MASONRY TO STRUCTURAL STEEL AND CONCRETE

A. Anchor masonry to structural steel and concrete, where masonry abuts or faces structural steel or concrete, to comply with the following:
   1. Provide an open space not less than [1/2-inch-] [1 inch] [2 inches] wide between masonry and structural steel or concrete unless otherwise indicated. Keep open space free of mortar and other rigid materials.
   2. Anchor masonry with anchors embedded in masonry joints and attached to structure.
   3. Space anchors as indicated, but not more than 24 inches o.c. vertically and 36 inches o.c. horizontally.

3.11 CONTROL AND EXPANSION JOINTS

A. General: Install control- and expansion-joint materials in unit masonry as masonry progresses. Do not allow materials to span control and expansion joints without provision to allow for in-plane wall or partition movement.

B. Form control joints in concrete masonry [**as follows**] [**using one of the following methods**]:
   1. Fit bond-breaker strips into hollow contour in ends of CMUs on one side of control joint. Fill resultant core with grout, and rake out joints in exposed faces for application of sealant.
   2. Install preformed control-joint gaskets designed to fit standard sash block.
   3. Install interlocking units designed for control joints. Install bond-breaker strips at joint. Keep head joints free and clear of mortar, or rake out joint for application of sealant.
   4. Install temporary foam-plastic filler in head joints, and remove filler when unit masonry is complete for application of sealant.

C. Form expansion joints in brick as follows:
   1. Build flanges of metal expansion strips into masonry. Lap each joint 4 inches in direction of water flow. Seal joints below grade and at junctures with horizontal expansion joints if any.
   2. Build flanges of factory-fabricated, expansion-joint units into masonry.
   3. Build in compressible joint fillers where indicated.
   4. Form open joint full depth of brick wythe and of width indicated, but not less than [3/8-inch] [1/2-inch] <**Insert minimum width**> for installation of sealant and backer rod specified in Section 07 92 00 "Joint Sealants."

D. Provide horizontal, pressure-relieving joints by either leaving an airspace or inserting a compressible filler of width required for installing sealant and backer rod specified in Section 07 92 00 "Joint Sealants," but not less than [3/8-inch] <**Insert minimum width**>.
   1. Locate horizontal, pressure-relieving joints beneath shelf angles supporting masonry.

3.12 FLASHING, WEEP HOLES, AND CAVITY VENTS

A. General: Install embedded flashing and weep holes in masonry at shelf angles, lintels, ledges, other obstructions to downward flow of water in wall, and where indicated.[**Install cavity vents at shelf angles, ledges, and other obstructions to upward flow of air in cavities, and where indicated.**]

B. Install flashing as follows unless otherwise indicated:
   1. Prepare masonry surfaces so they are smooth and free from projections that could puncture flashing. Where flashing is within mortar joint, place through-wall flashing on sloping bed of mortar and cover with mortar. Before covering with mortar, seal penetrations in flashing with adhesive, sealant, or tape[**as recommended by flashing manufacturer**].
   2. At multiwythe masonry walls, including cavity walls, extend flashing through outer wythe, turned up a minimum of [4 inches] [8 inches], and through inner wythe to within 1/2 inch of the interior face of wall in exposed masonry. Where interior face of wall is to receive furring or framing, carry flashing completely through inner wythe and turn flashing up approximately 2 inches on interior face.
   3. At multiwythe masonry walls, including cavity walls, extend flashing through outer wythe, turned up a minimum of [4 inches] [8 inches], and 1-1/2 inches into the inner wythe.[**Form** 1/4-inch **hook in edge of flashing embedded in inner wythe.**]
   4. At masonry-veneer walls, extend flashing through veneer, across airspace behind veneer, and up face of sheathing at least 8 inches; with upper edge tucked under [**water-resistive barrier**] [**air barrier**], lapping at least 4 inches.[**Fasten upper edge of flexible flashing to sheathing through termination bar.**]
   5. At lintels and shelf angles, extend flashing 6 inches minimum[**, to edge of next full unit**] at each end. At heads and sills, extend flashing 6 inches minimum[**, to edge of next full unit**] and turn ends up not less than 2 inches to form end dams.
   6. Interlock end joints of sawtooth sheet metal flashing by overlapping ribs not less than 1-1/2 inches or as recommended by flashing manufacturer, and seal lap with elastomeric sealant complying with requirements in Section 07 92 00 "Joint Sealants" for application indicated.
   7. Install metal [**drip edges**] [**and**] [**sealant stops**] with sawtooth sheet metal flashing by interlocking hemmed edges to form hooked seam. Seal seam with elastomeric sealant complying with requirements in Section 07 92 00 "Joint Sealants" for application indicated.
   8. Install metal drip edges beneath flexible flashing at exterior face of wall. Stop flexible flashing 1/2-inch back from outside face of wall, and adhere flexible flashing to top of metal drip edge.
   9. Install metal flashing termination beneath flexible flashing at exterior face of wall. Stop flexible flashing 1/2-inch back from outside face of wall, and adhere flexible flashing to top of metal flashing termination.
   10. Cut flexible flashing off flush with face of wall after masonry wall construction is completed.

C. Install single-wythe CMU flashing system in bed joints of CMU walls where indicated to comply with manufacturer's written instructions. Install CMU cell pans with upturned edges located below face shells and webs of CMUs above and with weep spouts aligned with face of wall. Install CMU web covers so that they cover upturned edges of CMU cell pans at CMU webs and extend from face shell to face shell.

D. Install reglets and nailers for flashing and other related construction where they are indicated to be built into masonry.

E. Install weep holes in exterior wythes and veneers in head joints of first course of masonry immediately above embedded flashing.
   1. Use [**specified weep/cavity vent products**] [**or**] [**open-head joints**] to form weep holes.
   2. Use wicking material to form weep holes above flashing under brick sills. Turn wicking down at lip of sill to be as inconspicuous as possible.
   3. Space weep holes 24 inches o.c. unless otherwise indicated.
   4. Space weep holes formed from 16 inches o.c.
   5. Cover cavity side of weep holes with plastic insect screening at cavities insulated with loose-fill insulation.
   6. Trim wicking material flush with outside face of wall after mortar has set.

F. Place pea gravel in cavities as soon as practical to a height equal to height of first course above top of flashing, but not less than 2 inches, to maintain drainage.
   1. Fill cavities full height by placing pea gravel in cavities as masonry is laid, so that at any point, masonry does not extend more than 24 inches above top of pea gravel.

G. Place cavity drainage material in [**cavities**] [**airspace behind veneers**] to comply with configuration requirements for cavity drainage material in "Accessories" Article.

H. Install cavity vents in head joints in exterior wythes at spacing indicated. Use [**specified weep/cavity vent products**] [**or**] [**open-head joints**] to form cavity vents.
   1. Close cavities off vertically and horizontally with blocking in manner indicated. Install through-wall flashing and weep holes above horizontal blocking.

3.13 REINFORCED UNIT MASONRY

A. Temporary Formwork and Shores: Construct formwork and shores as needed to support reinforced masonry elements during construction.
   1. Construct formwork to provide shape, line, and dimensions of completed masonry as indicated. Make forms sufficiently tight to prevent leakage of mortar and grout. Brace, tie, and support forms to maintain position and shape during construction and curing of reinforced masonry.
   2. Do not remove forms and shores until reinforced masonry members have hardened sufficiently to carry their own weight and that of other loads that may be placed on them during construction.

B. Placing Reinforcement: Comply with requirements in TMS 602.

C. Grouting: Do not place grout until entire height of masonry to be grouted has attained enough strength to resist grout pressure.
   1. Comply with requirements in TMS 602 for cleanouts and for grout placement, including minimum grout space and maximum pour height.
   2. Limit height of vertical grout pours to not more than [60 inches] [12.67 ft.] <**Insert height**>.

3.14 PARGING

A. Parge exterior faces of below-grade masonry walls, where indicated, in two uniform coats to a total thickness of 3/4-inch. Dampen wall before applying first coat, and scarify first coat to ensure full bond to subsequent coat.

B. Use a steel-trowel finish to produce a smooth, flat, dense surface with a maximum surface variation of 1/8-inch per foot. Form a wash at top of parging and a cove at bottom.

C. Damp-cure parging for at least 24 hours and protect parging until cured.

3.15 REPAIRING, POINTING, AND CLEANING

A. Remove and replace masonry units that are loose, chipped, broken, stained, or otherwise damaged or that do not match adjoining units. Install new units to match adjoining units; install in fresh mortar, pointed to eliminate evidence of replacement.

B. Pointing: During the tooling of joints, enlarge voids and holes, except weep holes, and completely fill with mortar. Point up joints, including corners, openings, and adjacent construction, to provide a neat, uniform appearance. Prepare joints for sealant application, where indicated.

C. In-Progress Cleaning: Clean unit masonry as work progresses by dry brushing to remove mortar fins and smears before tooling joints.

D. Final Cleaning: After mortar is thoroughly set and cured, clean exposed masonry as follows:

1. Remove large mortar particles by hand with wooden paddles and nonmetallic scrape hoes or chisels.
2. Test cleaning methods on sample wall panel; leave one-half of panel uncleaned for comparison purposes. Obtain Architect's approval of sample cleaning before proceeding with cleaning of masonry.
3. Protect adjacent stone and nonmasonry surfaces from contact with cleaner by covering them with liquid strippable masking agent or polyethylene film and waterproof masking tape.
4. Wet wall surfaces with water before applying cleaners; remove cleaners promptly by rinsing surfaces thoroughly with clear water.
5. Clean brick by bucket-and-brush hand-cleaning method described in BIA Technical Notes 20.
6. Clean concrete masonry by applicable cleaning methods indicated in NCMA TEK 8-4A.
7. Clean masonry with a proprietary acidic masonry cleaner applied according to manufacturer's written instructions.

3.16 MASONRY WASTE DISPOSAL

A. Salvageable Materials: Unless otherwise indicated, excess masonry materials are Contractor's property. At completion of unit masonry work, remove from Project site.

B. Waste Disposal as Fill Material: Dispose of clean masonry waste, including excess or soil-contaminated sand, waste mortar, and broken masonry units, by crushing and mixing with fill material as fill is placed.

1. Crush masonry waste to less than 4 inches in each dimension.
2. Mix masonry waste with at least two parts of specified fill material for each part of masonry waste. Fill material is specified in Section 31 20 00 "Earth Moving."
3. Do not dispose of masonry waste as fill within 18 inches of finished grade.

C. Masonry Waste Recycling: Return broken CMUs not used as fill to manufacturer for recycling.

D. Excess Masonry Waste: Remove excess clean masonry waste that cannot be used as fill, as described above or recycled, and other masonry waste, and legally dispose of off Owner's property.

END OF SECTION

SECTION 05 12 00 - STRUCTURAL STEEL FRAMING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Structural steel.
   2. Shrinkage-resistant grout.

B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.
   2. Section 05 12 13 "Architecturally Exposed Structural Steel Framing" for additional requirements for architecturally exposed structural steel.
   3. Section 09 91 23 "Interior Painting" for painting requirements.

1.2 DEFINITIONS

A. Structural Steel: Elements of the structural frame indicated on Drawings and as described in ANSI/AISC 303.

1.3 COORDINATION

A. Coordinate selection of shop primers with topcoats to be applied over them. Comply with paint and coating manufacturers' written recommendations to ensure that shop primers and topcoats are compatible with one another.

B. Coordinate installation of anchorage items to be embedded in or attached to other construction without delaying the Work. Provide setting diagrams, sheet metal templates, instructions, and directions for installation.

1.4 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.5 ACTION SUBMITTALS

A. Shop Drawings: Show fabrication of structural-steel components.
   1. Include details of cuts, connections, splices, camber, holes, and other pertinent data.
   2. Include embedment Drawings.
   3. Indicate welds by standard AWS symbols, distinguishing between shop and field welds, and show size, length, and type of each weld. Show backing bars that are to be removed and supplemental fillet welds where backing bars are to remain.
   4. Indicate type, size, and length of bolts, distinguishing between shop and field bolts. Identify pretensioned and slip-critical, high-strength bolted connections.
   5. Identify members not to be shop primed.

1.6 INFORMATIONAL SUBMITTALS

A. Welding certificates.

1.7 QUALITY ASSURANCE

A. Fabricator Qualifications: A qualified fabricator that participates in the AISC Quality Certification Program and is designated an AISC-Certified Plant, Category BU.
B. Welding Qualifications: Qualify procedures and personnel in accordance with AWS D1.1.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Store materials to permit easy access for inspection and identification. Keep steel members off ground and spaced by using pallets, dunnage, or other supports and spacers. Protect steel members and packaged materials from corrosion and deterioration.
    1. Do not store materials on structure in a manner that might cause distortion, damage, or overload to members or supporting structures. Repair or replace damaged materials or structures as directed.
B. Store fasteners in a protected place in sealed containers with manufacturer's labels intact.
    1. Fasteners may be repackaged provided Owner's testing and inspecting agency observes repackaging and seals containers.
    2. Clean and relubricate bolts and nuts that become dry or rusty before use.
    3. Comply with manufacturers' written recommendations for cleaning and lubricating ASTM F3125, Grade F1852 bolt assemblies and for retesting bolt assemblies after lubrication.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Comply with applicable provisions of the following specifications and documents:
    1. ANSI/AISC 303.
    2. ANSI/AISC 360.
    3. RCSC's "Specification for Structural Joints Using High-Strength Bolts."
B. Connection Design Information:
    1. Option 3 and 3B: Design connections and final configuration of member reinforcement at connections in accordance with ANSI/AISC 303 by fabricator's qualified professional engineer.
        a. Use Load and Resistance Factor Design; data are given at factored-load level.
C. Moment Connections: Type PR, partially restrained.
D. Construction: Combined system of braced frame and shear walls.

2.2 STRUCTURAL-STEEL MATERIALS

A. W-Shapes, Channels: ASTM A992.
B. Angles: ASTM A572, Grade 50.
C. Plate and Bar: ASTM A36.
D. Cold-Formed Hollow Structural Sections: ASTM A500, Grade C structural tubing.
E. Steel Pipe: ASTM A53, Type E or Type S, Grade B.
    1. Weight Class: Standard.
    2. Finish: Black.
F. Welding Electrodes: Comply with AWS requirements.

2.3 BOLTS AND CONNECTORS

A. High-Strength A325 Bolts, Nuts, and Washers: ASTM F3125, Grade A325, Type 1, heavy-hex steel structural bolts; ASTM A563, Grade DH, heavy-hex carbon-steel nuts; and ASTM F436, Type 1, hardened carbon-steel washers; all with plain finish.
B. High-Strength A490 Bolts, Nuts, and Washers: ASTM F3125, Grade A490, Type 1, heavy-hex steel structural bolts or Grade F2280 tension-control, bolt-nut-washer assemblies with splined ends; ASTM A563, Grade DH, heavy-hex carbon-steel nuts; and ASTM F436, Type 1, hardened carbon-steel washers; all with plain finish.
C. Tension-Control, High-Strength Bolt-Nut-Washer Assemblies: ASTM F3125, Grade F1852, Type 1, heavy-hex head assemblies, consisting of steel structural bolts with splined ends; ASTM A563, Grade DH, heavy-hex carbon-steel nuts; and ASTM F436, Type 1, hardened carbon-steel washers.
    1. Finish: Plain.

2.4 RODS

A. Unheaded Anchor Rods: ASTM F1554, Grade 36.
    1. Configuration: Straight.
    2. Nuts: ASTM A563 heavy-hex carbon steel.
    3. Plate Washers: ASTM A36 carbon steel.
    4. Washers: ASTM F436, Type 1, hardened carbon steel.
    5. Finish: Plain.

2.5 SLIDE BEARINGS

A. Structural Slide Bearings: Low-friction assemblies, of configuration indicated, that provide vertical transfer of loads and allow horizontal movement perpendicular to plane of expansion joint while resisting movement within plane of expansion joint.

2.6 PRIMER

A. Steel Primer:
    1. Fabricator's standard lead- and chromate-free, nonasphaltic, rust-inhibiting primer complying with MPI#79 and compatible with topcoat.

2.7 SHRINKAGE-RESISTANT GROUT

A. Nonmetallic, Shrinkage-Resistant Grout: ASTM C1107, factory-packaged, nonmetallic aggregate grout, noncorrosive and nonstaining, mixed with water to consistency suitable for application and a 30-minute working time.

2.8 FABRICATION

A. Structural Steel: Fabricate and assemble in shop to greatest extent possible. Fabricate in accordance with ANSI/AISC 303 and to ANSI/AISC 360.
   1. Camber structural-steel members where indicated.
   2. Fabricate beams with rolling camber up.
   3. Mark and match-mark materials for field assembly.
   4. Complete structural-steel assemblies, including welding of units, before starting shop-priming operations.

B. Thermal Cutting: Perform thermal cutting by machine to greatest extent possible.
   1. Plane thermally cut edges to be welded to comply with requirements in AWS D1.1.

C. Bolt Holes: Cut, drill, mechanically thermal cut, or punch standard bolt holes perpendicular to metal surfaces.

D. Finishing: Accurately finish ends of columns and other members transmitting bearing loads.

E. Cleaning: Clean and prepare steel surfaces that are to remain unpainted in accordance with SSPC-SP 2.

F. Holes: Provide holes required for securing other work to structural steel and for other work to pass through steel members.
   1. Cut, drill, or punch holes perpendicular to steel surfaces. Do not thermally cut bolt holes or enlarge holes by burning.
   2. Baseplate Holes: Cut, drill, mechanically thermal cut, or punch holes perpendicular to steel surfaces.
   3. Weld threaded nuts to framing and other specialty items indicated to receive other Work.

2.9 SHOP CONNECTIONS

A. Weld Connections: Comply with AWS D1.1 for tolerances, appearances, welding procedure Specifications, weld quality, and methods used in correcting welding work.
   1. Assemble and weld built-up sections by methods that maintain true alignment of axes without exceeding tolerances in ANSI/AISC 303 for mill material.

2.10 GALVANIZING

A. Hot-Dip Galvanized Finish: Apply zinc coating by the hot-dip process to structural steel in accordance with ASTM A123.
   1. Fill vent and drain holes that are exposed in the finished Work unless they function as weep holes, by plugging with zinc solder and filing off smooth.

2.11 SHOP PRIMING

A. Shop prime steel surfaces, except the following:
   1. Surfaces embedded in concrete or mortar. Extend priming of partially embedded members to a depth of 2 inches.
   2. Surfaces to be field welded.
   3. Surfaces of high-strength bolted, slip-critical connections.
   4. Surfaces to receive sprayed fire-resistive materials (applied fireproofing).
   5. Surfaces enclosed in interior construction.

B. Surface Preparation of Steel: Clean surfaces to be painted. Remove loose rust and mill scale and spatter, slag, or flux deposits. Prepare surfaces in accordance with the following specifications and standards:
   1. SSPC-SP 3.

C. Priming: Immediately after surface preparation, apply primer in accordance with manufacturer's written instructions and at rate recommended by SSPC to provide a minimum dry film thickness of 1.5 mils. Use priming methods that result in full coverage of joints, corners, edges, and exposed surfaces.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify, with certified steel erector present, elevations of concrete- and masonry-bearing surfaces and locations of anchor rods, bearing plates, and other embedments for compliance with requirements.
   1. Prepare a certified survey of existing conditions. Include bearing surfaces, anchor rods, bearing plates, and other embedments showing dimensions, locations, angles, and elevations.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Provide temporary shores, guys, braces, and other supports during erection to keep structural steel secure, plumb, and in alignment against temporary construction loads and loads equal in intensity to design loads. Remove temporary supports when permanent structural steel, connections, and bracing are in place unless otherwise indicated on Drawings.

3.3 ERECTION

A. Set structural steel accurately in locations and to elevations indicated and in accordance with ANSI/AISC 303 and ANSI/AISC 360.

B. Baseplates and Bearing Plates: Clean concrete- and masonry-bearing surfaces of bond-reducing materials, and roughen surfaces prior to setting plates. Clean bottom surface of plates.
   1. Set plates for structural members on wedges, shims, or setting nuts as required.
   2. Weld plate washers to top of baseplate.
   3. Snug-tighten anchor rods after supported members have been positioned and plumbed. Do not remove wedges or shims but, if protruding, cut off flush with edge of plate before packing with grout.
   4. Promptly pack shrinkage-resistant grout solidly between bearing surfaces and plates, so no voids remain. Neatly finish exposed surfaces; protect grout and allow to cure. Comply with manufacturer's written installation instructions for grouting.

C. Maintain erection tolerances of structural steel within ANSI/AISC 303.

D. Align and adjust various members that form part of complete frame or structure before permanently fastening. Before assembly, clean bearing surfaces and other surfaces that are in permanent contact with members. Perform necessary adjustments to compensate for discrepancies in elevations and alignment.
   1. Level and plumb individual members of structure. Slope roof framing members to slopes indicated on Drawings.
   2. Make allowances for difference between temperature at time of erection and mean temperature when structure is completed and in service.

E. Splice members only where indicated.

F. Do not use thermal cutting during erection unless approved by Architect. Finish thermally cut sections within smoothness limits in AWS D1.1.

G. Do not enlarge unfair holes in members by burning or using drift pins. Ream holes that must be enlarged to admit bolts.

3.4 FIELD CONNECTIONS

A. High-Strength Bolts: Install high-strength bolts in accordance with RCSC's "Specification for Structural Joints Using High-Strength Bolts" for bolt and joint type specified.
   1. Joint Type: Snug tightened.

B. Weld Connections: Comply with AWS D1.1 for tolerances, appearances, welding procedure specifications, weld quality, and methods used in correcting welding work.

3.5 REPAIR

A. Touchup Painting:
   1. Immediately after erection, clean exposed areas where primer is damaged or missing, and paint with the same material as used for shop painting to comply with SSPC-PA 1 for touching up shop-painted surfaces.
      a. Clean and prepare surfaces by SSPC-SP 2 hand-tool cleaning or SSPC-SP 3 power-tool cleaning.

3.6 FIELD QUALITY CONTROL

A. Special Inspections: Owner will engage a special inspector to perform the following special inspections:
   1. Verify structural-steel materials and inspect steel frame joint details.
   2. Verify weld materials and inspect welds.
   3. Verify connection materials and inspect high-strength bolted connections.

B. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.
   1. Bolted Connections: Inspect and test bolted connections in accordance with RCSC's "Specification for Structural Joints Using High-Strength Bolts."
   2. Welded Connections: Visually inspect field welds in accordance with AWS D1.1.
      a. In addition to visual inspection, test and inspect field welds in accordance with AWS D1.1 and the following inspection procedures, at testing agency's option:
         1) Liquid Penetrant Inspection: ASTM E165.
         2) Magnetic Particle Inspection: ASTM E709; performed on root pass and on finished weld. Cracks or zones of incomplete fusion or penetration are not accepted.
         3) Ultrasonic Inspection: ASTM E164.
         4) Radiographic Inspection: ASTM E94.

END OF SECTION

SECTION 05 12 13 - ARCHITECTURALLY EXPOSED STRUCTURAL STEEL FRAMING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Architecturally exposed structural steel (AESS).
B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.
   2. Section 05 12 00 "Structural Steel Framing" requirements that also apply to AESS.
   3. Section 09 91 23 "Interior Painting."

1.2 DEFINITIONS

A. AESS: Architecturally exposed structural steel.

1.3 ACTION SUBMITTALS

A. Shop Drawings: Show fabrication of AESS components. Shop Drawings for structural steel may be used for AESS.
   1. Identify AESS category for each steel member and connection, including transitions between AESS categories and between AESS and non-AESS.

1.4 QUALITY ASSURANCE

A. Fabricator Qualifications: A qualified fabricator that participates in the AISC Quality Certification Program and is designated an AISC-Certified Plant, Category BU.
B. Mockups: Build mockups of AESS to set quality standards for fabrication and installation.
   1. Coordinate painting requirements with Section 09 91 23 "Interior Painting."
   2. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Use special care in handling AESS to prevent twisting, warping, nicking, and other damage during fabrication, delivery, and erection. Store materials to permit easy access for inspection and identification. Keep AESS members off ground and spaced by using pallets, dunnage, or other supports and spacers. Protect AESS members and packaged materials from corrosion and deterioration.
   1. Do not store AESS materials on structure in a manner that might cause distortion, damage, or overload to members or supporting structures. Repair or replace damaged materials or structures as directed.

1.6 FIELD CONDITIONS

A. Field Measurements: Where AESS is indicated to fit against other construction, verify actual dimensions by field measurements before fabrication.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Comply with requirements of ANSI/AISC 303, Sections 1 through 9 and as modified in Section 10, "Architecturally Exposed Structural Steel."

2.2 FILLER

A. Polyester filler intended for use in repairing dents in automobile bodies.

2.3 PRIMER

A. Steel Primer:
   1. Comply with Section 09 91 23 "Interior Painting."

2.4 FABRICATION

A. Shop fabricate and assemble AESS to the maximum extent possible. Locate field joints at concealed locations if possible. Detail assemblies to minimize handling and to expedite erection.
   1. Use special care handling and fabricating AESS before and after shop painting to minimize damage to shop finish.

B. Category AESS 1:
   1. Comply with overall profile dimensions of AWS D1.1 for welded built-up members. Keep appearance and quality of welds consistent. Maintain true alignment of members without warp exceeding specified tolerances.
   2. Prepare surfaces according to Part 2 "Shop Priming" Article and SSPC-SP 6 (WAB)/NACE WAB-3.
   3. Grind sheared, punched, and flame-cut edges to remove burrs and provide smooth surfaces and eased edges.
   4. Make intermittent welds appear continuous, using filler or additional welding.
   5. Seal weld open ends of hollow structural sections with 3/8-inch closure plates.
   6. Limit butt and plug weld projections to 1/16-inch.
   7. Install bolt heads on the same side of each connection and maintain orientation consistently from 1 connection to another.
   8. Remove weld spatter, slivers, and similar surface discontinuities.
   9. Remove blemishes and surface irregularities resulting from temporary braces or fixtures by filling or grinding, before cleaning, treating, and shop priming.
   10. Grind tack welds smooth unless incorporated into final welds.
   11. Remove backing and runoff tabs, and grind welds smooth.

C. Category AESS 2: In addition to requirements for Category AESS 1, comply with the following:
   1. Limit as-fabricated straightness tolerance to one-half that permitted for structural-steel materials in ANSI/AISC 303.
   2. Limit as-fabricated curved structural steel tolerance to that permitted for structural-steel materials in ANSI/AISC 303.

3. Limit as-fabricated straightness tolerance of welded built-up members to one-half that permitted by AWS D1.1.
4. Conceal fabrication and erection markings from view in the completed structure.
5. Make welds uniform and smooth.

D. Category AESS 3: In addition to requirements for Category AESS 1 and AESS-2, comply with the following:
1. Cut out mill marks from mill material or hide these markings from view in the completed structure. Where neither method is possible, remove mill marks by grinding and filling surfaces as approved by Architect.
2. Grind butt and plug welds smooth or fill, removing weld splatter exposed to view.
3. Orient HSS seams as indicated or away from view.
4. Align and match abutting member cross sections.
5. At visible open joints of copes, miters, and cuts, maintain uniform clear gaps of 1/8-nch. At closed joints, maintain uniform contact within 1/16-inch.
6. Fabricate with exposed surfaces smooth, square, and of surface quality approved by Architect.

E. Erection marks, painted marks, and other marks are permitted on galvanized steel surfaces of completed structure.

2.5 SHOP PRIMING

A. Shop prime steel surfaces, except the following:
1. Surfaces embedded in concrete or mortar. Extend priming of partially embedded members to a depth of 2 inches.
2. Surfaces to be field welded.
3. Surfaces to be high-strength bolted with slip-critical connections.
4. Corrosion-resisting (weathering) steel surfaces.
5. Galvanized surfaces.

B. Surface Preparation: Clean nongalvanized surfaces to be painted. Remove loose rust and mill scale and spatter, slag, or flux deposits. Prepare surfaces according to the following specifications and standards:
1. SSPC-SP 6 (WAB)/NACE WAB-3.

C. Priming: Immediately after surface preparation, apply primer according to manufacturer's written instructions and at rate recommended by SSPC to provide a minimum dry film thickness of 1.5 mils. Use priming methods that result in full coverage of joints, corners, edges, and exposed surfaces.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify, with steel erector present, elevations of concrete- and masonry-bearing surfaces and locations of anchor rods, bearing plates, and other embedments for compliance with requirements.
B. Examine AESS for twists, kinks, warping, gouges, and other imperfections before erecting.
C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Provide temporary shores, guys, braces, and other supports during erection to keep AESS secure, plumb, and in alignment against temporary construction loads and loads equal in intensity to design loads. Remove temporary supports when permanent structural steel, connections, and bracing are in place unless otherwise indicated.

3.3 ERECTION

A. Take special care during erection to avoid marking or distorting the AESS and to minimize damage to shop painting. Set AESS accurately in locations and to elevations indicated and according to ANSI/AISC 303 and ANSI/AISC 360.
   1. Remove welded tabs that were used for attaching temporary bracing and safety cabling and that are exposed to view in the completed Work. Take care to avoid any blemishes, holes, or unsightly surfaces resulting from the use or removal of temporary elements.
   2. Grind tack welds smooth.
   3. Remove backing and runoff tabs, and grind welds smooth.
   4. Orient bolt heads on the same side of each connection and maintain orientation consistently from one connection to another.
   5. Conceal fabrication and erection markings from view in the completed structure.

3.4 REPAIR

A. Galvanized Surfaces: Clean field welds, bolted connections, and abraded areas.

3.5 FIELD QUALITY CONTROL

A. Testing Agency: Owner will engage a qualified testing agency to inspect AESS as specified in Section 05 12 00 "Structural Steel Framing." The testing agency is not responsible for enforcing requirements relating to aesthetic effect.
B. Architect will observe AESS in place to determine acceptability relating to aesthetic effect.

END OF SECTION

SECTION 05 31 00 - STEEL DECKING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Acoustical roof deck.
   2. Composite floor deck.
B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.
   2. Section 03 30 00 "Cast-in-Place Concrete" for normal-weight structural concrete fill over steel deck.

1.2 ACTION SUBMITTALS

A. Product Data: For the following:
   1. Acoustical roof deck.
B. Shop Drawings:
   1. Include layout and types of deck panels, anchorage details, reinforcing channels, pans, cut deck openings, special jointing, accessories, and attachments to other construction.

1.3 DELIVERY, STORAGE, AND HANDLING

A. Protect steel deck from corrosion, deformation, and other damage during delivery, storage, and handling.
B. Stack steel deck on platforms or pallets and slope to provide drainage. Protect with a waterproof covering and ventilate to avoid condensation.

PART 2 - PRODUCTS

2.1 ACOUSTICAL ROOF DECK

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   1. New Millennium Building Systems, LLC.
B. Acoustical Roof Deck: Fabricate panels, without top-flange stiffening grooves, to comply with "SDI Specifications and Commentary for Steel Roof Deck," in SDI Publication No. 31, and with the following:
   1. Prime-Painted Steel Sheet: ASTM A1008, Structural Steel (SS), Grade 80 minimum, shop primed with manufacturer's standard baked-on, rust-inhibitive primer.
      a. Color: Manufacturer's standard.
   2. Deck Profile: As indicated.
   3. Design Uncoated-Steel Thickness: As indicated.
   4. Side Laps: Overlapped.

2.2 COMPOSITE FLOOR DECK

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   1. New Millennium Building Systems, LLC.
   2. Nucor Corp.
B. Composite Floor Deck: Fabricate panels, with integrally embossed or raised pattern ribs and interlocking side laps, to comply with "SDI Specifications and Commentary for Composite Steel Floor Deck," in SDI Publication No. 31, with the minimum section properties indicated, and with the following:
   1. Galvanized-Steel Sheet: ASTM A653, Structural Steel (SS), Grade 33, G60 zinc coating.
   2. Profile Depth: As indicated.
   3. Span Condition: Triple span or more.

2.3 ACCESSORIES

A. Provide manufacturer's standard accessory materials for deck that comply with requirements indicated.
B. Mechanical Fasteners: Corrosion-resistant, low-velocity, power-actuated or pneumatically driven carbon-steel fasteners; or self-drilling, self-threading screws.
C. Side-Lap Fasteners: Corrosion-resistant, hexagonal washer head; self-drilling, carbon-steel screws, No. 10 minimum diameter.
D. Flexible Closure Strips: Vulcanized, closed-cell, synthetic rubber.
E. Miscellaneous Sheet Metal Deck Accessories: Steel sheet, minimum yield strength of 33,000 psi, not less than 0.0359-inch design uncoated thickness, of same material and finish as deck; of profile indicated or required for application.
F. Column Closures, End Closures, Z-Closures, and Cover Plates: Steel sheet, of same material, finish, and thickness as deck unless otherwise indicated.
G. Flat Sump Plates: Single-piece steel sheet, 0.0747-inch-thick, of same material and finish as deck. For drains, cut holes in the field.
H. Galvanizing Repair Paint: ASTM A780.
I. Repair Paint: Manufacturer's standard rust-inhibitive primer of same color as primer.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine supporting frame and field conditions for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION, GENERAL

A. Install deck panels and accessories according to applicable specifications and commentary in SDI Publication No. 31, manufacturer's written instructions, and requirements in this Section.

B. Install temporary shoring before placing deck panels if required to meet deflection limitations.
C. Locate deck bundles to prevent overloading of supporting members.
D. Place deck panels on supporting frame and adjust to final position with ends accurately aligned and bearing on supporting frame before being permanently fastened. Do not stretch or contract side-lap interlocks.
   1. Align cellular deck panels over full length of cell runs and align cells at ends of abutting panels.
E. Place deck panels flat and square and fasten to supporting frame without warp or deflection.
F. Cut and neatly fit deck panels and accessories around openings and other Work projecting through or adjacent to deck.
G. Provide additional reinforcement and closure pieces at openings as required for strength, continuity of deck, and support of other Work.
H. Comply with AWS requirements and procedures for manual shielded metal arc welding, appearance and quality of welds, and methods used for correcting welding work.
I. Mechanical fasteners may be used in lieu of welding to fasten deck. Locate mechanical fasteners and install according to deck manufacturer's written instructions.

3.3 INSTALLATION OF ROOF DECK

A. Fasten roof-deck panels to steel supporting members by arc spot (puddle) welds of the surface diameter indicated or arc seam welds with an equal perimeter that is not less than 1-1/2 inches long, and as follows:
   1. Weld Diameter: 3/4-inch, nominal.
B. Side-Lap and Perimeter Edge Fastening: Fasten side laps and perimeter edges of panels between supports, at intervals indicated, and as follows:
   1. Mechanically fasten with self-drilling, No. 12 diameter or larger, carbon-steel screws.
C. End Bearing: Install deck ends over supporting frame with a minimum end bearing of 2 inches, with end joints as follows:
   1. End Joints: Butted.
D. Roof Sump Pans and Sump Plates: Install over openings provided in roof deck and mechanically fasten flanges to top of deck. Space mechanical fasteners not more than 12 inches apart with at least one fastener at each corner.
E. Miscellaneous Roof-Deck Accessories: Install ridge and valley plates, finish strips, end closures, and reinforcing channels according to deck manufacturer's written instructions. mechanically fasten to substrate to provide a complete deck installation.

3.4 INSTALLATION OF FLOOR DECK

A. Fasten floor-deck panels to steel supporting members by arc spot (puddle) welds of the surface diameter indicated and as follows:
   1. Weld Diameter: 5/8-inch, nominal.
   2. Weld Spacing: Weld edge ribs of panels at each support. Space additional welds an average of 12 inches apart, but not more than 18 inches apart.
B. Side-Lap and Perimeter Edge Fastening: Fasten side laps and perimeter edges of panels between supports, at intervals not exceeding the lesser of one-half of the span or 36 inches, and as follows:
   1. Mechanically fasten with self-drilling, No. 10 diameter or larger, carbon-steel screws.

C. End Bearing: Install deck ends over supporting frame with a minimum end bearing of 1-1/2 inches, with end joints as follows:
   1. End Joints: Lapped.

D. Pour Stops and Girder Fillers: Weld steel sheet pour stops and girder fillers to supporting structure according to SDI recommendations unless otherwise indicated.

E. Floor-Deck Closures: Weld steel sheet column closures, cell closures, and Z-closures to deck, according to SDI recommendations, to provide tight-fitting closures at open ends of ribs and sides of deck.

3.5 REPAIR

A. Galvanizing Repairs: Prepare and repair damaged galvanized coatings on both surfaces of deck with galvanized repair paint according to ASTM A780 and manufacturer's written instructions.

B. Repair Painting:
   1. Wire brush and clean rust spots, welds, and abraded areas on both surfaces of prime-painted deck immediately after installation, and apply repair paint.
   2. Apply repair paint, of same color as adjacent shop-primed deck, to bottom surfaces of deck exposed to view.

3.6 FIELD QUALITY CONTROL

A. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.

END OF SECTION

SECTION 06 06 60 - SCHEDULES FOR PLASTIC FABRICATIONS

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes the plastic fabrication as shown and specified in the described system(s):
   1. Window Glazing.
B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.
   2. Section 08 41 13 "Aluminum-Framed Entrances and Storefronts."

1.2 SUBMITTALS

A. General: Submit the following in accordance with conditions of contact and Section 01 33 00 “Submittal Procedures.”
B. Product Data: Submit manufacturer’s product data; include product description, fabrication information, and compliance with specified performance requirements.
C. Shop Drawings: Include Plans, elevations, sections, panel dimensions, details, and attachments to other work.
D. Samples for Verification:
   1. Submit minimum 4-inch by 4-inch sample for each type, texture, pattern and color of solid plastic fabrication.
E. Maintenance Data: Submit manufacturer’s care and maintenance data, including care, repair and cleaning instructions. Include in Project closeout documents.

1.3 DELIVERY, STORAGE, AND HANDLING

A. Deliver plastic fabrications, systems, and specified items in manufacturer’s standard protective packaging.
B. Do not deliver plastic fabrications, system, components, and accessories to Project site until areas are ready for installation.
C. Store materials in a flat orientation in a dry place that is not exposed to exterior elements.
D. Handle materials to prevent damage to finished surfaces. Provide protective coverings to prevent damage or staining following installation for duration of Project.
E. Before installing plastic fabrications, permit them to reach room temperature.

1.4 PROJECT CONDITIONS

A. Environmental Limitations: Do not install solid polymer fabrications until spaces are enclosed and weatherproof, and ambient temperatures and humidity conditions are maintained at the levels indicated for Project when occupied for its intended use.

1.5 WARRANTY

A. Manufacturer's Special Warranty on Plastic Fabrications: Manufacturer's standard form agreeing to repair or replace units that fail in material or workmanship within the specified warranty period.
B. Warranty Period: One year after the date of Substantial Completion.
C. The warranty shall not deprive the Owner of other rights or remedies the Owner may have under other provisions of the Contract Documents, and is in addition to and runs concurrent with other warranties made by the Contractor under the requirements of the Contract Documents.

PART 2 - PRODUCTS

2.1 MANUFACTURER

A. Basis of Design Manufacturer: 3form, LLC., Salt Lake City, Utah, USA, 801649.2500.

2.2 MATERIALS

A. Varia Ecoresin™ Sheet
   1. Engineered co-polyester resin produced in the USA.
   2. Sheet Size: Maximum 4 by 10 feet.
   3. Thickness: Per interior material legend in Drawings.
B. Sheet Minimum Performance Attributes:
   1. Rate of Burning: ASTM D635, material must attain CC1 Rating for a nominal thickness of 0.060-inch and greater.
   2. Self-Ignition Temperature: ASTM D1929, material must have a self-ignition temperature greater than 650 degrees F.
   3. Density of Smoke: ASTM D2843, material must have a smoke density less than 75 percent.
   4. Flame Spread and Smoke Developed Testing: ASTM E84, material must be able to meet a level of Class A (flame spread less than 25 and smoke less than 450) at thickness of 1/8-, 3/16-, and 1 inch.
   5. Room Corner Burn Test: NFPA 286, material must meet Class A criteria at 1/4-inch (walls only) and 3/8-inch (walls only/standoffs only) thickness as described by the 2012 *International Building Code.*
   6. Extent of Burning: UL 94, must submit UL card.
   7. Impact Strength: Minimum impact strength test as measured by ASTM D3763 of 20 foot pounds (for durability, shipping, installation, and use).

2.3 FABRICATION

A. General: Fabricate plastic fabrications to designs, sizes and thicknesses indicated and to comply with indicated standards. Sizes, profiles, and other characteristics are indicated on the Drawings.
B. Comply with manufacturer's written recommendations for fabrication.

2.4 MISCELLANEOUS MATERIALS

A. General: Provide products of material, size, and shape required for application indicated, and with a proven record of compatibility with surfaces contacted in installation.
B. Cleaner: Type recommended by manufacturer.
C. Fasteners: 3 Form Point support system.
D. Adhesives: As required for direct attach installation per written installation instructions.
   1. 3M VHB double sided foam tape.
   2. Momentive SCS 1201 Structural Silicone.
E. Corner Conditions - Reference details: Schluter Vinpro RO, color per Interior Material Legend in Drawings.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions where installation of plastic fabrications will occur, with installer present, for compliance with manufacturer's requirements. Verify that substrates and conditions are satisfactory for installation and comply with requirements specified.

3.2 INSTALLATION

A. General: Comply with manufacturer's written instructions for the installation of plastic fabrications.
B. Manufacturer's shop to fabricate items to the greatest degree possible.
C. Utilize fasteners, adhesives, and bonding agents recommended by manufacturer for type of installation indicated. Material that is chipped, warped, hazed or discolored as a result of installation or fabrication methods will be rejected.
   1. Install panels directly to the wall using adhesive and grommets.
   2. Place 1/8-inch reveal between panels both horizontally and vertically. Leave 1/2-inch space on both sides and top and bottom of overall installation.
   3. Where 3 Form meets at outside corners, install Schluter Outside Corner Trim.
D. Install components plumb, level and rigid, scribed to adjacent finishes, in accordance with approved Shop Drawings and product data.
E. Form field joints using manufacturer's recommended procedures. Locate seams in panels so that they are not directly in line with seams in substrates.

3.3 CLEANING AND PROTECTION

A. Protect surfaces from damage until date of Substantial Completion. Repair Work or replace damaged Work, which cannot be repaired to Architect's satisfaction.

END OF SECTION

SECTION 06 10 00 - ROUGH CARPENTRY

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Wood blocking and nailers.
   2. Wood furring.
   3. Plywood backing panels.

B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.
   2. Section 06 16 00 "Sheathing" for sheathing, subflooring, and underlayment.

1.2 DEFINITIONS

A. Boards or Strips: Lumber of less than 2 inches nominal size in least dimension.

B. Dimension Lumber: Lumber of 2 inches nominal size or greater but less than 5 inches nominal size in least dimension.

1.3 INFORMATIONAL SUBMITTALS

A. Material Certificates: For dimension lumber specified to comply with minimum allowable unit stresses. Indicate species and grade selected for each use and design values approved by the ALSC Board of Review.

B. Evaluation Reports: For the following, from ICC-ES:
   1. Wood-preservative-treated wood.

1.4 DELIVERY, STORAGE, AND HANDLING

A. Stack wood products flat with spacers beneath and between each bundle to provide air circulation. Protect wood products from weather by covering with waterproof sheeting, securely anchored. Provide for air circulation around stacks and under coverings.

PART 2 - PRODUCTS

2.1 WOOD PRODUCTS, GENERAL

A. Lumber: DOC PS 20 and applicable rules of grading agencies indicated. If no grading agency is indicated, comply with the applicable rules of any rules-writing agency certified by the ALSC Board of Review. Grade lumber by an agency certified by the ALSC Board of Review to inspect and grade lumber under the rules indicated.

B. Maximum Moisture Content of Lumber: 15 percent unless otherwise indicated.

2.2 WOOD-PRESERVATIVE-TREATED LUMBER

A. Preservative Treatment by Pressure Process: AWPA U1; Use Category UC2 for interior construction not in contact with ground, Use Category UC3b for exterior construction not in contact with ground, and Use Category UC4a for items in contact with ground.
B. Kiln-dry lumber after treatment to a maximum moisture content of 19 percent. Do not use material that is warped or that does not comply with requirements for untreated material.
C. Mark lumber with treatment quality mark of an inspection agency approved by the ALSC Board of Review.
D. Application: Treat items indicated on Drawings, and the following:
    1. Wood cants, nailers, curbs, equipment support bases, blocking, stripping, and similar members in connection with roofing, flashing, vapor barriers, and waterproofing.
    2. Wood sills, sleepers, blocking, furring, and similar concealed members in contact with masonry or concrete.

2.3 MISCELLANEOUS LUMBER

A. General: Provide miscellaneous lumber indicated and lumber for support or attachment of other construction, including the following:
    1. Blocking.
    2. Nailers.
    3. Furring.
B. Dimension Lumber Items: Construction or No. 2 grade lumber of any of the following species:
    1. Hem-fir (north); NLGA.
    2. Mixed southern pine or southern pine; SPIB.
    3. Spruce-pine-fir; NLGA.
    4. Hem-fir; WCLIB or WWPA.
    5. Spruce-pine-fir (south); NeLMA, WCLIB, or WWPA.
C. For blocking not used for attachment of other construction, Utility, Stud, or No. 3 grade lumber of any species may be used provided that it is cut and selected to eliminate defects that will interfere with its attachment and purpose.
D. For blocking and nailers used for attachment of other construction, select and cut lumber to eliminate knots and other defects that will interfere with attachment of other work.
E. For furring strips for installing plywood or hardboard paneling, select boards with no knots capable of producing bent-over nails and damage to paneling.

2.4 PLYWOOD BACKING PANELS

A. Equipment Backing Panels: Plywood, DOC PS 1, Exposure 1, C-D Plugged, fire-retardant treated, in thickness indicated or, if not indicated, not less than 3/4-inch nominal thickness.

2.5 FASTENERS

A. General: Fasteners shall be of size and type indicated and shall comply with requirements specified in this article for material and manufacture.
   1. Where rough carpentry is exposed to weather, in ground contact, pressure-preservative treated, or in area of high relative humidity, provide fasteners with hot-dip zinc coating complying with ASTM A153.

B. Power-Driven Fasteners: Fastener systems with an evaluation report acceptable to authorities having jurisdiction, based on ICC-ES AC70.

2.6 MISCELLANEOUS MATERIALS

A. Flexible Flashing: Composite, self-adhesive, flashing product consisting of a pliable, butyl rubber compound, bonded to a high-density polyethylene film, aluminum foil, or spunbonded polyolefin to produce an overall thickness of not less than 0.025-inch.

B. Water-Repellent Preservative: NWWDA-tested and -accepted formulation containing 3-iodo-2-propynyl butyl carbamate, combined with an insecticide containing chloropyrifos as its active ingredient.

PART 3 - EXECUTION

3.1 INSTALLATION, GENERAL

A. Framing Standard: Comply with AF&PA's WCD 1, "Details for Conventional Wood Frame Construction," unless otherwise indicated.

B. Set rough carpentry to required levels and lines, with members plumb, true to line, cut, and fitted. Fit rough carpentry accurately to other construction. Locate furring, nailers, blocking, and similar supports to comply with requirements for attaching other construction.

C. Install plywood backing panels by fastening to studs; coordinate locations with utilities requiring backing panels. Install fire-retardant-treated plywood backing panels with classification marking of testing agency exposed to view.

D. Provide blocking and framing as indicated and as required to support facing materials, fixtures, specialty items, and trim.
   1. Provide metal clips for fastening gypsum board or lath at corners and intersections where framing or blocking does not provide a surface for fastening edges of panels. Space clips not more than 16 inches o.c.

E. Sort and select lumber so that natural characteristics do not interfere with installation or with fastening other materials to lumber. Do not use materials with defects that interfere with function of member or pieces that are too small to use with minimum number of joints or optimum joint arrangement.

F. Comply with AWPA M4 for applying field treatment to cut surfaces of preservative-treated lumber.
   1. Use inorganic boron for items that are continuously protected from liquid water.
   2. Use copper naphthenate for items not continuously protected from liquid water.

G. Where wood-preservative-treated lumber is installed adjacent to metal decking, install continuous flexible flashing separator between wood and metal decking.

H. Securely attach rough carpentry work to substrate by anchoring and fastening as indicated, complying with the following:
   1. Table 2304.9.1, "Fastening Schedule," in ICC's International Building Code (IBC).
   2. ICC-ES evaluation report for fastener.

I. Use steel common nails unless otherwise indicated. Select fasteners of size that will not fully penetrate members where opposite side will be exposed to view or will receive finish materials. Make tight connections between members. Install fasteners without splitting wood. Drive nails snug but do not countersink nail heads unless otherwise indicated.

3.2 INSTALLATION OF WOOD BLOCKING AND NAILERS

A. Install where indicated and where required for attaching other work. Form to shapes indicated and cut as required for true line and level of attached work. Coordinate locations with other work involved.

B. Attach items to substrates to support applied loading. Recess bolts and nuts flush with surfaces unless otherwise indicated.

3.3 PROTECTION

A. Protect rough carpentry from weather. If, despite protection, rough carpentry becomes wet enough that moisture content exceeds that specified, apply EPA-registered borate treatment. Apply borate solution by spraying to comply with EPA-registered label.

END OF SECTION

SECTION 06 16 00 - SHEATHING

PART 1 - GENERAL

1.1 SUMMARY

A. Related Requirements:
1. Division 01 Specification Sections apply to Work of this Section.

1.2 DELIVERY, STORAGE, AND HANDLING

A. Stack panels flat with spacers beneath and between each bundle to provide air circulation. Protect sheathing from weather by covering with waterproof sheeting, securely anchored. Provide for air circulation around stacks and under coverings.

PART 2 - PRODUCTS

2.1 WOOD PANEL PRODUCTS

A. Thickness: As needed to comply with requirements specified, but not less than thickness indicated.
B. Factory mark panels to indicate compliance with applicable standard.

2.2 FASTENERS

A. General: Provide fasteners of size and type indicated that comply with requirements specified in this article for material and manufacture.
1. For sheathing, provide fasteners with hot-dip zinc coating complying with ASTM A153.
2. For sheathing, provide fasteners with organic-polymer or other corrosion-protective coating having a salt-spray resistance of more than 800 hours according to ASTM B117.
B. Nails, Brads, and Staples: ASTM F1667.
C. Power-Driven Fasteners: Fastener systems with an evaluation report acceptable to authorities having jurisdiction, based on ICC-ES AC70.
D. Screws for Fastening Sheathing to Wood Framing: ASTM C1002.
E. Screws for Fastening Wood Structural Panels to Cold-Formed Metal Framing: ASTM C954, except with wafer heads and reamer wings, length as recommended by screw manufacturer for material being fastened.
F. Screws for Fastening Gypsum Sheathing to Cold-Formed Metal Framing: Steel drill screws, in length recommended by sheathing manufacturer for thickness of sheathing to be attached.
1. For steel framing less than 0.0329-inch-thick, use screws that comply with ASTM C1002.
2. For steel framing from 0.033 to 0.112-inch-thick, use screws that comply with ASTM C954.

G. Screws for Fastening Composite Nail Base Insulated Roof Sheathing to Metal Roof Deck: Steel drill screws, in type and length recommended by sheathing manufacturer for thickness of sheathing to be attached, with organic-polymer or other corrosion-protective coating having a salt-spray resistance of more than 800 hours according to ASTM B117. Provide washers or plates if recommended by sheathing manufacturer.

2.3 MISCELLANEOUS MATERIALS

A. Adhesives for Field Gluing Panels to Wood Framing: Formulation complying with ASTM D3498 that is approved for use with type of construction panel indicated by manufacturers of both adhesives and panels.

PART 3 - EXECUTION

3.1 INSTALLATION, GENERAL

A. Do not use materials with defects that impair quality of sheathing or pieces that are too small to use with minimum number of joints or optimum joint arrangement. Arrange joints so that pieces do not span between fewer than three support members.
B. Cut panels at penetrations, edges, and other obstructions of work; fit tightly against abutting construction unless otherwise indicated.
C. Securely attach to substrate by fastening as indicated, complying with the following:
   1. Table 2304.9.1, "Fastening Schedule," in the ICC's International Building Code.
   2. Table R602.3(1), "Fastener Schedule for Structural Members," and Table R602.3(2), "Alternate Attachments," in the ICC's International Residential Code for One- and Two-Family Dwellings.
   3. ICC-ES evaluation report for fastener.
D. Use common wire nails unless otherwise indicated. Select fasteners of size that will not fully penetrate members where opposite side will be exposed to view or will receive finish materials. Make tight connections. Install fasteners without splitting wood.
E. Coordinate sheathing installation with flashing and joint-sealant installation so these materials are installed in sequence and manner that prevent exterior moisture from passing through completed assembly.
F. Do not bridge building expansion joints; cut and space edges of panels to match spacing of structural support elements.
G. Coordinate sheathing installation with installation of materials installed over sheathing so sheathing is not exposed to precipitation or left exposed at end of the workday when rain is forecast.

END OF SECTION

SECTION 06 16 00.16 - SHEATHING (ZIP SYSTEM)

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Combination insulating wall sheathing, water resistive barrier and air barrier.
   2. Self-adhering flexible flashing.

B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.
   2. Section 06 10 00 "Rough Carpentry" for plywood backing panels.
   3. Section 07 27 26 "Fluid-Applied Membrane Air Barriers."

1.2 ACTION SUBMITTALS

A. Product Data: For each type of process and factory-fabricated product. Indicate component materials and dimensions and include construction and application details.

B. Sustainable Design Submittals:
   1. Product Data: For composite wood products, indicating that product contains no urea formaldehyde.

1.3 QUALITY ASSURANCE

A. Manufacturer Qualifications: Capable of demonstrating that all wood procurement operations are conducted in accordance with procedures and policies of the Sustainable Forestry Initiative (SFI) Program.

B. Code Compliance: Comply with requirements of the following:
   1. International Code Council (ICC), ICC-ESR1474.
   2. International Code Council (ICC), ICC-ESR2227.

1.4 DELIVERY, STORAGE, AND HANDLING

A. Outdoor Storage. Comply with manufacturer's recommendations and as follows:
   1. Set panel bundles on supports to keep off ground.
   2. Cover panels loosely with waterproof protective material.
   3. Anchor covers on top of stack, but keep away from sides and bottom to assure adequate air circulation.
   4. When high moisture conditions exist, cut banding on panel stack to prevent edge damage.

1.5 WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of sheathing system that fail due to manufacturing defects within specified warranty period.
   1. System Warranty Period: 30 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Fire-Resistance Ratings: As tested according to ASTM E119; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
   1. Fire-Resistance Ratings: Indicated by design designations from UL's "Fire Resistance Directory" or from the listings of another qualified testing agency.

2.2 WOOD PANEL PRODUCTS

A. Oriented Strand Board: DOC PS 2-10.
B. Thickness: As needed to comply with requirements specified, but not less than thickness indicated. Thickness shall satisfy minimum and maximum requirements for referenced performance category.
C. Factory mark panels to indicate compliance with applicable standard.

2.3 COMBINATION INSULATING WALL SHEATHING, AIR AND WATER-RESISTIVE BARRIER

A. Oriented-Strand-Board Wall Sheathing: With integral water-resistive barrier, Exposure 1 sheathing.
   1. Basis-of-Design Product: Subject to compliance with requirements, provide Huber Engineered Woods LLC; ZIP System® Wall Sheathing or a comparable product.
   2. Characteristics:
      a. Span Rating and Performance Category of Sheathing Layer: Not less than 24/16; 7/16 Performance Category.
      b. Thickness: 1-1/2-inch.
      c. Thermal Resistivity (R Value): minimum of 7.5.
      d. Edge Profile: Square edge.
      e. Weather Barrier Facer: Medium-density, phenolic-impregnated polymer-modified sheet material meeting requirements for weather-resistvie barrier in accordance with ICC-ES AC38 - Water-Resistive Barriers, with fastner spacing symbols on exterior facer for 16-inch and 24-inch on center spacing, with the following characteristics
         1) Water Resistance of Coatings: Pass 14-day exposure test in accordance with ASTM D2247 - Standard Practice for Testing Water Resistance of Coatings in 100 percent Relative Humidity.
         2) Water-Vapor Permeance, Facer: Minimum 12 perms when tested in accordance with ASTM E96 - Standard Test Methods for Water Vapor Transmission of Materials.

2.4 FASTENERS

A. General: Size and type complying with manufacturer's written instructions for Project conditions and requirements of authorities having jursidiction.
   1. Corrosion Resistant.

2.5 MISCELLANEOUS MATERIALS

A. Self-Adhering Seam and Flashing Tape: Pressure-sensitive, self-adhering, cold-applied, proprietary seam tape consisting of polyolefin film with acrylic adhesive.
   1. Basis-of-Design Product: Subject to compliance with requirements provide Huber Engineered Woods; ZIP System® Seam and Flashing Tape or a comparable product.
   2. Thickness: 0.012-inch.
   3. Width: 3.75-inch.
   4. Code Compliance: Comply with requirements of authorities having jurisdiction and ICC Evaluation Service, Inc. "AC148 - Acceptance Criteria for Flexible Flashing Materials."
   5. International Code Council (ICC), ICC-ES ESR2227.

B. Liquid-Applied Flashing Membrane: Gun-grade, cold-applied, silyl-terminated polyether (STPE) liquid flashing membrane compatible with sheathing/weather barrier and self-adhering seam and flashing tape, and tested as part of an assembly meeting performance requirements. Follow manufacturer's recommendation for integration with self-adhering seam and flashing tape.
   1. Basis-of-Design Product: Subject to compliance with requirements, provide Huber Engineered Woods; ZIP System® Liquid Flash or a comparable product.
   2. Hardness, Shore A, ASTM C661: 40 to 45.

C. Self-Adhering Flexible Flashing Tape: Pressure-sensitive, self-adhering, cold-applied, flexible flashing tape consisting of a flexible acrylic foam backing with acrylic adhesive.
   1. Basis-of-Design Product: Subject to compliance with requirements provide Huber Engineered Woods; ZIP System® Stretch Tape or a comparable product.

PART 3 - EXECUTION

3.1 INSTALLATION, GENERAL

A. Do not use materials with defects that impair quality of sheathing or pieces that are too small to use with minimum number of joints or optimum joint arrangement.

B. Cut panels at penetrations, edges, and other obstructions of work; fit tightly against abutting construction unless otherwise indicated.

C. Securely attach to substrate by fastening as indicated, complying with the following:
   1. Chapter 23 in the ICC's International Building Code.

D. Coordinate wall sheathing installation with flashing and joint-sealant installation so these materials are installed in sequence and manner that prevent exterior moisture from passing through completed assembly.

E. Do not bridge building expansion joints; cut and space edges of panels to match spacing of structural support elements.

3.2 SHEATHING JOINT TREATMENT

A. Seal sheathing joints according to sheathing manufacturer's written instructions.
   1. Apply seam tape to joints between sheathing panels.
   2. Utilize tape gun or hard rubber roller provided by manufacturer to ensure tape is completely adhered to substrates.
   3. When using liquid-applied flashing to seal sheathing joints follow manufacturer's recommendations for sealing panel seams.

3.3 FLEXIBLE OR LIQUID-APPLIED FLASHING INSTALLATION

A. Apply tape flexible flashing or membrane where indicated to comply with manufacturer's written instructions.
   1. After flexible flashing tape has been applied, roll surfaces with a hard rubber to ensure that flashing is completely adhered to substrates.
   2. Width for flexible flashing: 6-inch.
   3. Apply liquid-applied flashing membrane at penetrations, gaps, and cracks to form continuous weathertight surface. Apply liquid membrane according to manufacturer's written instructions. Follow manufacturer's recommendation for integration with seam and flashing tape.

B. Apply liquid applied flashing membrane where indicated to comply with manufacturer's written instructions.
   1. After liquid applied flashing membrane has been applied, tool wet product with a plastic spreader, putty knife, or similar tool to ensure that flashing is opaque and substrate is no longer visible.
   2. Minimum Thickness for Liquid Flashing: 12 mils.
   3. Apply liquid flashing membrane according to manufacturer's written instructions. Follow manufacturer's recommendations for integration with seam and flashing tape or flexible flashing tape.

C. Apply flexible flashing tape where indicated to comply with manufacturer's written instructions.
   1. After flexible flashing tape has been applied, roll surfaces with a hard rubber to ensure that flashing is completely adhered to substrates.
   2. Width of flexible flashing: 6 inches or 10 inches.

END OF SECTION

SECTION 07 21 00 - THERMAL INSULATION

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Extruded polystyrene foam-plastic board insulation.
   2. Glass-fiber blanket insulation.

B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.
   2. Section 06 16 00 "Sheathing" for foam-plastic board sheathing installed directly over wood or steel framing.
   3. Section 07 22 16 "Roof Board Insulation."
   4. Section 07 27 26 "Fluid-Applied Membrane Air Barriers."
   5. Section 07 53 00 "Coal-Tar Elasometric."
   6. Section 09 29 00 "Gypsum Board" for sound attenuation blanket used as acoustic insulation.

1.2 ACTION SUBMITTALS

A. Product Data: For the following:
   1. Extruded polystyrene foam-plastic board insulation.
   2. Glass-fiber blanket insulation.

1.3 DELIVERY, STORAGE, AND HANDLING

A. Protect insulation materials from physical damage and from deterioration due to moisture, soiling, and other sources. Store inside and in a dry location. Comply with manufacturer's written instructions for handling, storing, and protecting during installation.

B. Protect foam-plastic board insulation as follows:
   1. Do not expose to sunlight except to necessary extent for period of installation and concealment.
   2. Protect against ignition at all times. Do not deliver foam-plastic board materials to Project site until just before installation time.
   3. Quickly complete installation and concealment of foam-plastic board insulation in each area of construction.

PART 2 - PRODUCTS

2.1 EXTRUDED POLYSTYRENE FOAM-PLASTIC BOARD INSULATION

A. Extruded Polystyrene Board Insulation, Type IV: ASTM C578, Type IV, 25-psi minimum compressive strength; unfaced.
   1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
      a. Dow Chemical Company (The).
      b. Owens Corning.
   2. Flame-Spread Index: Not more than 25 when tested in accordance with ASTM E84.
   3. Smoke-Developed Index: Not more than 450 when tested in accordance with ASTM E84.
   4. Labeling: Provide identification of mark indicating R-value of each piece of insulation 12 inches and wider in width.

2.2 GLASS-FIBER BLANKET INSULATION

A. Glass-Fiber Blanket Insulation, Unfaced: ASTM C665, Type I; passing ASTM E136 for combustion characteristics.
   1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
      a. CertainTeed Corporation.
      b. Johns Manville; a Berkshire Hathaway company Company.
      c. Knauf Insulation.
      d. Owens Corning.
   2. Flame-Spread Index: Not more than 25 when tested in accordance with ASTM E84.
   3. Smoke-Developed Index: Not more than 50 when tested in accordance with ASTM E84.
   4. Labeling: Provide identification of mark indicating R-value of each piece of insulation 12 inches and wider in width.

2.3 ACCESSORIES

A. Insulation for Miscellaneous Voids:
   1. Glass-Fiber Insulation: ASTM C764, Type II, loose fill; with maximum flame-spread and smoke-developed indexes of 5, per ASTM E84.

PART 3 - EXECUTION

3.1 PREPARATION

A. Clean substrates of substances that are harmful to insulation, including removing projections capable of puncturing insulation or vapor retarders, or that interfere with insulation attachment.

3.2 INSTALLATION, GENERAL

A. Comply with insulation manufacturer's written instructions applicable to products and applications.
B. Install insulation that is undamaged, dry, and unsoiled and that has not been left exposed to ice, rain, or snow at any time.
C. Install insulation with manufacturer's R-value label exposed after insulation is installed.
D. Extend insulation to envelop entire area to be insulated. Fit tightly around obstructions and fill voids with insulation. Remove projections that interfere with placement.
E. Provide sizes to fit applications and selected from manufacturer's standard thicknesses, widths, and lengths. Apply single layer of insulation units unless multiple layers are otherwise shown or required to make up total thickness or to achieve R-value.

3.3 INSTALLATION OF CAVITY-WALL INSULATION

A. Foam-Plastic Board Insulation: Install pads of adhesive spaced approximately 24 inches o.c. both ways on inside face and as recommended by manufacturer.
    1. Fit courses of insulation between wall ties and other obstructions, with edges butted tightly in both directions, and with faces flush.
    2. Press units firmly against inside substrates.
    3. Supplement adhesive attachment of insulation by securing boards with two-piece wall ties designed for this purpose and specified in Section 04 20 00 "Unit Masonry."

3.4 INSTALLATION OF INSULATION IN FRAMED CONSTRUCTION

A. Blanket Insulation: Install in cavities formed by framing members according to the following requirements:
    1. Use insulation widths and lengths that fill the cavities formed by framing members. If more than one length is required to fill the cavities, provide lengths that will produce a snug fit between ends.
    2. Place insulation in cavities formed by framing members to produce a friction fit between edges of insulation and adjoining framing members.
    3. Maintain 3-inch clearance of insulation around recessed lighting fixtures not rated for or protected from contact with insulation.
    4. For metal-framed wall cavities where cavity heights exceed 96 inches, support unfaced blankets mechanically and support faced blankets by taping flanges of insulation to flanges of metal studs.
    5. Vapor-Retarder-Faced Blankets: Tape joints and ruptures in vapor-retarder facings, and seal each continuous area of insulation to ensure airtight installation.
B. Miscellaneous Voids: Install insulation in miscellaneous voids and cavity spaces where required to prevent gaps in insulation using the following materials:
    1. Glass-Fiber Insulation: Compact to approximately 40 percent of normal maximum volume equaling a density of approximately 2.5 lb/cu. ft.

3.5 PROTECTION

A. Protect installed insulation from damage due to harmful weather exposures, physical abuse, and other causes.
B. Provide temporary coverings or enclosures where insulation is subject to abuse and cannot be concealed and protected by permanent construction immediately after installation.

END OF SECTION

SECTION 07 22 16 – ROOF BOARD INSULATION

PART 1 – GENERAL

1.1 REFERENCES (INCLUDING LATEST REVISIONS)

A. Comply with governing local, state, and federal regulations, safety standards, and codes.

B. Testing Laboratory Services: Test results shall meet or exceed established standards.

C. Underwriters Laboratories, Inc. (Roofing Covering): Class A fire hazard classification.

D. American Society of Testing Materials (ASTM)

1.	C 177	Test Method for Steady-State Heat Flux Measurements and Thermal Transmission Properties by Means of the Guarded-Hot-Plate Apparatus
2.	C 209	Methods of Testing Insulating Board (Cellulosic Fiber), Structural and Decorative
3.	C 728	Perlite Thermal Insulation Board
4.	C 1289	Standard Specification for Faced Rigid Cellular Polyisocyanurate Thermal Insulation Board
5.	D 41	Asphalt Primer Used in Roofing and Waterproofing
6.	D 312	Asphalt Used in Roofing
7.	D 1621	Test Method for Compressive Properties of Rigid Cellular Plastics
8.	D 4601	Asphalt Coated Glass Fiber Base Sheet Used in Roofing

E. The National Roofing Contractors Association (NRCA) - Roofing and Waterproofing Manual

F. American National Standards Institute/Single Ply Roofing Industry (ANSI/SPRI)

G. American Society of Civil Engineers - ASCE 7 Minimum Design Loads for Buildings and Other Structures (for wind uplift criteria)

1.2 QUALITY ASSURANCE

A. Regulatory Requirements
1. Classified by Underwriter's Laboratories (UL) as Class A roof covering.
2. Follow local, state, and federal regulations, safety standards, and codes.

B. Installation
1. Installation shall be in accordance with manufacturer's current published application procedures, NRCA general recommendations, and ASCE 7 wind uplift criteria.
2. Roof system manufacturer's technical specifications shall be considered part of this specification and shall be used as reference for specific application procedures.

C. Contract Documents
1. In the case of an inconsistency between the drawings and specifications or within either document not clarified by addendum, the better quality or greater quantity of work shall be provided in accordance with the Project Manager's/Architect's interpretation.

1.3 SUBMITTALS

A. Product Data: Submit Manufacturer's product data sheets for each product. Indicate each item or component to be used on project to include thicknesses, sizes, profiles, etc.

B. Shop Drawings: Layout of roof plan showing crickets, direction of slope, amount of slope, spot elevations indicating thicknesses at high and low points.
   1. Submit fastening requirements from manufacturer for each roof zone as per applicable building code.
   2. Submit manufacturer’s recommended fastener layout/placement pattern for each roof zone. Refer to Factory Mutual Loos Prevention Data Sheet (LPDS) 1-29 for more information.

C. Certification: Submit roof manufacturer's certification in writing that insulation is acceptable as substrate for application of specified roof system.

D. Pullout Tests in accordance to ANSI/SPRI FX-1.

1.4 DELIVERY, STORAGE, AND HANDLING

A. Store materials in accordance with manufacturer's recommendations.

B. When stored outdoors:
   1. Tarp and shield insulation from moisture and ultraviolet rays.
   2. Elevate insulation above substrate four inches minimum.
   3. Secure insulation to resist high winds.
   4. Distribute insulation stored on roof deck to prevent concentrated loads that would impose excessive stress or stain on deck or structural members. Verify that structure can accommodate additional loading.
   5. Wet insulation, or insulation that has been wet but which has dried, may not be used and shall be removed completely and immediately from the job site.
   6. Do not double stack bundles of insulation on the roof top.

1.5 SEQUENCING AND SCHEDULING

A. Substrate Acceptance: Roof system manufacturer's representative shall inspect roof deck and associated substrates and provide written acceptance of conditions.

B. Manufacturer's approved roofing contractor shall inspect and approve deck and substrates.

C. Plan roof layout with respect to roof deck slope to prevent rainwater drainage into completed roofing.

D. Do not install more insulation than can be covered with complete roof system in same day.

1.6 PRODUCT CONDITIONS

A. Environmental Requirements:
   1. Apply roofing and insulation in dry weather.
   2. Do not proceed with roof construction during inclement weather or when precipitation is predicted 40% or more possibility.
   3. Do not apply insulation over wet or moist deck or in foggy conditions.

4. Days with wind speeds of 30 mph or greater shall be considered "Bad Weather" days.

B. Emergency Equipment: Maintain on-site equipment and material necessary to apply emergency temporary seals in the event of sudden storms or inclement weather.

C. Costs for emergency roofing shall be borne by Contractor.

PART 2 – PRODUCTS

2.1 INSULATION – FLAT STOCK

A. All insulation shall be approved in writing by the membrane manufacturer as to thickness, type, and manufacturer. All insulation must be approved for the specific application, Underwriters Laboratory approved, and be listed in the FM Global Approval Guide.

B. Polyisocyanurate Roof Insulation: Insulation shall be two layers of rigid polyisocyanurate foam board; meeting Federal Specification No. HH-I-1972/1 or 2 with 20 psi minimum compressive strength and 2.0 pcf minimum density. First layer shall be a minimum thickness of one and one-half inch (1-1/2"). R-value over each roof area shall meet or exceed R-25. Board shall be surfaced on two (2) sides with non-asphaltic facer material.

2.2 INSULATION – TAPERED

A. Factory Tapered Polyisocyanurate Crickets: Factory cut twenty-four inch by forty-eight inch (24" x 48") polyisocyanurate board cut to one-half inch (1/2") per foot slope used in conjunction with standard thickness of polyisocyanurate board to provide positive slope.

2.3 COVER BOARD

A. Shall be impact-resistant, nonstructural, specially engineered gypsum and cellulose fiber panels with 95% recycled content; uniform water-resistance throughout core and surface. Board size four feet by four feet (4' x 4') thickness 1/2"; conforming to ASTM C 1278, meeting FM 4470 Class 1 criteria, classified by Underwriters Laboratories, and listed in the FM Global Approval Guide. Board will meet the following physical properties, Securock® Roof Board, as manufactured by USG Corporation, or approved equal.

Test	Typical Value	Test Method
Fire Resistance	Class A	UL 790
Permeance	≤ 30	ASTM C473
Surface water absorption	≤ 1.6 nominal grams	ASTM C473
Water resistance	Maximum 10% weight percentage gain	
Mold Resistance	Minimum rating of "10"	ASTM D3273

2.4 ASPHALT ROOF PRIMER

A. Quick-dry asphalt-based primer for priming of asphalt roof surfaces, as manufactured by GAF, or approved equal.

Applicable Federal Specification	SS-A-701B
ASTM	D 41
Flash Point	105° F
Viscosity at 80° F (ASTM D 217)	50-60 K.U.
Weight per gallon	7.4 pounds
Drying time (to touch)	Min. 4 hours

2.5 BITUMEN

A. Shall be ASTM D 312 Type IV extra steep asphalt.

B. Contractor shall mix with the hot asphalt an additive that eliminates the asphalt odor, such as Trumbull TruLo, as manufactured by Owens Corning, deScent, as manufactured by ArrMaz Custom Chemicals, or approved equal.

2.6 FASTENERS

A. Fasteners and fastening plates and/or termination bars shall be FM Approved and shall be listed in the FM Global Approval Guide, and as recommended by the insulation/fastener manufacturer for the specific application to meet the minimal requirements for wind uplift as required by the local jurisdiction and/or FM Global.

B. Heavy Duty Fastener for Steel Applications for 18-22 gauge Steel and Wood Substrates: Shall be a #14 fastener with a minimum .190 diameter shank and a thread diameter of .245 with ten (10) threads per inch and a 30 degree spade point. Fasteners shall be fluorocarbon coated with CR-10 corrosion resistant coating when subjected to 30 Kesternich cycles (DIN 50018) shows less than 15% red rust which surpasses FM Global Approval Standard 4470, as manufactured by OMG Roofing Products, or approved equal. All fasteners shall be used in conjunction with the manufacturers approved round pressure plate. Fasteners, plates, and/or bars shall be FM approved and listed in the FM Global Approval Guide.

PART 3 – EXECUTION

3.1 PROTECTION OF ROOFING

A. Provide special protection from traffic on yet to be removed roofing.

B. Provide special protection from traffic on completed work.

3.2 EXAMINATION AND PREPARATION

A. Do not install until defects are corrected and deck substrate meets roof system manufacturer's requirements.

B. Do not apply insulation unless asphalt application temperature, EVT of approximately 375° F to 425° F, can be maintained or when water or moisture is present on substrate. Do not heat asphalt above flashing point, or 525° F.

C. Examine substrate and related surfaces, and verify that there are no conditions such as inadequate anchorage, foreign materials, moisture, ridges, depressions, or other conditions which would prevent satisfactory installation of roof system.

D. Start of work constitutes acceptance of deck substrate and site conditions.

3.3 APPLICATION OF INSULATION – GENERAL INSTRUCTIONS

A. Manufacturer's Instructions: In regard to attachment, the manufacturer's instructions or specifications shall determine the suitability for an application. Installation must meet ASCE 7 criteria and meet local governing building codes.

B. Precautions: The surface of the insulation must not be ruptured due to overdriving of fasteners.

C. Thermal insulation boards shall be laid on the substrate in parallel rows with end joints staggered and butted as close as possible. All joints shall be tight and at the roof perimeter and roof penetrations, insulation shall be cut neatly and fitted to reduce openings to a minimum. All openings one-fourth inch (1/4") or larger shall be filled with insulation.

D. Insulation shall be tapered or feathered at drains and scuppers to provide proper drainage (if applicable).

E. No more insulation shall be installed than can be covered by the completed roof system by the end of the day or the onset of inclement weather.

F. Tapered insulation and crickets, when specified, shall be placed in accordance with the drawings and/or as required to minimum of NRCA standards.

3.4 APPLICATION OF INSULATION – LOOSE LAID and MECHANICALLY FASTENED WITH ADHERED COVER BOARD

A. Flat stock insulation shall be laid with edges parallel to flutes and bearing on deck surface/flats. The long dimension of first layer of insulation must be fully supported by the top flange of the metal deck. The edges of insulation boards must not cantilever over the flutes of the metal deck.

B. First layer of specified flat stock insulation shall be loose laid over the deck. Boards shall be staggered and butted as close as possible with voids over one-fourth inch (1/4") to be filled.

C. The second layer of specified flat stock insulation shall be applied over the first layer using offset joints, so that each layer breaks joints to a minimum of six inches (6") both ways with the preceding layer. Second layer of insulation shall be mechanically fastened through the first layer into the deck to conform to the ASCE 7 criteria for wind uplift as dictated by wind zone applicable to location of project.

D. The top surface of the last layer of insulation shall be coated with hot asphalt using twenty-five pounds (25#) ±20%, per one hundred (100) square feet of surface, and a one-half inch (1/2”) tapered layer of insulation shall be applied using offset joints, so that each layer breaks joints to a minimum of six inches (6") both ways with the preceding layer, and immediately walked in place.

PACKET 7.288 September 9, 2025

E. The top surface of the preceding layer of insulation shall be coated with hot asphalt using twenty-five pounds (25#) ±20%, per one hundred (100) square feet of surface, and specified cover board shall be applied using offset joints, so that each layer breaks joints to a minimum of six inches (6") both ways with the preceding layer, and immediately walked in place.

3.5 BACKNAILING/STRAPPING

A. On slopes greater than one inch (1") in twelve inches (12"), refer to NRCA and/or manufacturer's guidelines for backnailing procedures and follow the more stringent guidelines for all specified materials.

Slope	Interply& Top Pour	Backnail	Strap
0 - ½" per 12"	Type IV	No	No
½" - 2" per 12"	Type IV	Yes	Strap if possible
2" - 3" per 12"	Type IV	Yes	Yes

3.6 ADJUSTING

A. Remove insulation which has been damaged (broken, cracked, punctured, wet, etc.) and install acceptable new units before installation of roof system.

3.7 CLEANING

A. Remove debris and material wrappers from jobsite. Leave insulation clean and dry, ready to receive roofing membrane.

END OF SECTION

SECTION 07 27 26 - FLUID-APPLIED MEMBRANE AIR BARRIERS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Vapor-permeable, fluid-applied air barriers.
B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.
   2. Section 06 16 00 "Sheathing" for wall sheathings and wall sheathing joint-and-penetration treatments.

1.2 DEFINITIONS

A. Air-Barrier Material: A primary element that provides a continuous barrier to the movement of air.
B. Air-Barrier Accessory: A transitional component of the air barrier that provides continuity.
C. Air-Barrier Assembly: The collection of air-barrier materials and accessories applied to an opaque wall, including joints and junctions to abutting construction, to control air movement through the wall.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.
   1. Include manufacturer's written instructions for evaluating, preparing, and treating each substrate; technical data; dry film thickness; and tested physical and performance properties of products.

1.4 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer. Include list of ABAA-certified installers and supervisors employed by Installer, who work on Project.
B. Product Certificates: From air-barrier manufacturer, certifying compatibility of air barriers and accessory materials with Project materials that connect to or that come in contact with the barrier.
C. Product Test Reports: For each air-barrier assembly, for tests performed by a qualified testing agency.

1.5 QUALITY ASSURANCE

A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer.
   1. Installer shall be licensed by ABAA according to ABAA's Quality Assurance Program and shall employ ABAA-certified installers and supervisors on Project.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Remove and replace liquid materials that cannot be applied within their stated shelf life.
B. Protect stored materials from direct sunlight.

1.7 FIELD CONDITIONS

A. Environmental Limitations: Apply air barrier within the range of ambient and substrate temperatures recommended in writing by air-barrier manufacturer.
   1. Protect substrates from environmental conditions that affect air-barrier performance.
   2. Do not apply air barrier to a damp or wet substrate or during snow, rain, fog, or mist.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Source Limitations: Obtain primary air-barrier materials and air-barrier accessories from single source from single manufacturer.

2.2 PERFORMANCE REQUIREMENTS

A. Air-Barrier Performance: Air-barrier assembly and seals with adjacent construction shall be capable of performing as a continuous air barrier and as a liquid-water drainage plane flashed to discharge to the exterior incidental condensation or water penetration. Air-barrier assemblies shall be capable of accommodating substrate movement and of sealing substrate expansion and control joints, construction material changes, penetrations, tie-ins to installed waterproofing, and transitions at perimeter conditions without deterioration and air leakage exceeding specified limits.
B. Air-Barrier Assembly Air Leakage: Maximum 0.04 cfm/sq. ft. of surface area at 1.57 lbf/sq. ft., when tested according to ASTM E2357.

2.3 LOW-BUILD AIR BARRIERS, VAPOR PERMEABLE

A. Low-Build, Vapor-Permeable Air Barrier: Synthetic polymer material with an installed dry film thickness, according to manufacturer's written instructions, of 6 to 15 mils over smooth, void-free substrates.
   1. Physical and Performance Properties:
      a. Vapor Permeance: Minimum 10 perms; ASTM E96, Desiccant Method, Procedure A.
      b. Ultimate Elongation: Minimum 250 percent; ASTM D12, Die C.
      c. Adhesion to Substrate: Minimum 16 lbf/sq. in. when tested according to ASTM D4541.
      d. Fire Propagation Characteristics: Passes NFPA 285 testing as part of an approved assembly.
      e. UV Resistance: Can be exposed to sunlight for 180 days according to manufacturer's written instructions.

2.4 ACCESSORY MATERIALS

A. Requirement: Provide primers, transition strips, termination strips, joint reinforcing fabric and strips, joint sealants, counterflashing strips, flashing sheets and metal termination bars, termination mastic, substrate patching materials, adhesives, tapes, foam sealants, lap sealants, and other accessory materials that are recommended in writing by air-barrier manufacturer to produce a complete air-barrier assembly and that are compatible with primary air-barrier material and adjacent construction to which they may seal.
B. Primer: Liquid primer recommended for substrate by air-barrier material manufacturer.
C. Stainless-Steel Sheet: ASTM A240, Type 304, 0.0187-inch-thick, and Series 300 stainless-steel fasteners.
D. Preformed Silicone Extrusion: Manufacturer's standard system consisting of cured low-modulus silicone extrusion, sized to fit opening widths, with a single-component, neutral-curing, Class 100/50 (low-modulus) silicone sealant for bonding extrusions to substrates.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with installer present, for compliance with requirements and other conditions affecting performance of the Work.
    1. Verify that substrates are sound and free of oil, grease, dirt, excess mortar, or other contaminants.
    2. Verify that substrates have cured and aged for minimum time recommended in writing by air-barrier manufacturer.
    3. Verify that substrates are visibly dry and free of moisture. Test concrete substrates for capillary moisture by plastic sheet method according to ASTM D4263.
    4. Verify that masonry joints are flush and completely filled with mortar.
B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 SURFACE PREPARATION

A. Clean, prepare, treat, fill, and seal substrate and joints and cracks in substrate according to manufacturer's written instructions and details. Provide clean, dust-free, and dry substrate for air-barrier application.
B. Mask off adjoining surfaces not covered by air barrier to prevent spillage and overspray affecting other construction.
C. Remove grease, oil, bitumen, form-release agents, paints, curing compounds, and other penetrating contaminants or film-forming coatings from concrete.
D. Remove fins, ridges, mortar, and other projections and fill honeycomb, aggregate pockets, holes, and other voids in concrete with substrate-patching material.
E. Remove excess mortar from masonry ties, shelf angles, and other obstructions.
F. At changes in substrate plane, apply sealant or termination mastic beads at sharp corners and edges to form a smooth transition from one plane to another.

G. Cover gaps in substrate plane and form a smooth transition from one substrate plane to another with stainless-steel sheet mechanically fastened to structural framing to provide continuous support for air barrier.

H. Bridge expansion joints discontinuous wall-to-wall, deck-to-wall, and deck-to-deck joints with air-barrier accessory material that accommodates joint movement according to manufacturer's written instructions and details.

3.3 ACCESSORIES INSTALLATION

A. Install accessory materials according to air-barrier manufacturer's written instructions and details to form a seal with adjacent construction and ensure continuity of air and water barrier.
   1. Coordinate the installation of air barrier with installation of roofing membrane and base flashing to ensure continuity of air barrier with roofing membrane.
   2. Install transition strip on roofing membrane or base flashing so that a minimum of 3 inches of coverage is achieved over each substrate.
   3. Unless manufacturer recommends in writing against priming, apply primer to substrates at required rate and allow it to dry.
   4. Apply primer to substrates at required rate and allow it to dry. Limit priming to areas that will be covered by air-barrier material on same day. Reprime areas exposed for more than 24 hours.

B. Connect and seal exterior wall air-barrier material continuously to roofing-membrane air barrier, concrete below-grade structures, floor-to-floor construction, exterior glazing and window systems, glazed curtain-wall systems, storefront systems, exterior louvers, exterior door framing, and other construction used in exterior wall openings, using accessory materials.

C. At end of each working day, seal top edge of strips and transition strips to substrate with termination mastic.

D. Apply joint sealants forming part of air-barrier assembly within manufacturer's recommended application temperature ranges. Consult manufacturer when sealant cannot be applied within these temperature ranges.

E. Wall Openings: Prime concealed, perimeter frame surfaces of windows, curtain walls, storefronts, and doors. Apply preformed silicone extrusion so that a minimum of 3 inches of coverage is achieved over each substrate. Maintain 3 inches of full contact over firm bearing to perimeter frames, with not less than 1-inch of full contact.
   1. Transition Strip: Roll firmly to enhance adhesion.
   2. Preformed Silicone Extrusion: Set in full bed of silicone sealant applied to walls, frame, and air-barrier material.

F. Fill gaps in perimeter frame surfaces of windows, curtain walls, storefronts, and doors, and miscellaneous penetrations of air-barrier material with foam sealant.

G. Seal strips and transition strips around masonry reinforcing or ties and penetrations with termination mastic.

H. Seal top of through-wall flashings to air barrier with an additional 6-inch-wide, transition strip.

I. Repair punctures, voids, and deficient lapped seams in strips and transition strips. Slit and flatten fishmouths and blisters. Patch with transition strips extending 6 inches beyond repaired areas in strip direction.

3.4 PRIMARY AIR-BARRIER MATERIAL INSTALLATION

A. Apply air-barrier material to form a seal with strips and transition strips and to achieve a continuous air barrier according to air-barrier manufacturer's written instructions and details. Apply air-barrier material within manufacturer's recommended application temperature ranges.
   1. Unless manufacturer recommends in writing against priming, apply primer to substrates at required rate and allow it to dry.
   2. Limit priming to areas that will be covered by air-barrier material on same day. Reprime areas exposed for more than 24 hours.
   3. Where multiple prime coats are needed to achieve required bond, allow adequate drying time between coats.

B. Low-Build Air Barriers: Apply continuous unbroken air-barrier material to substrates according to the following thickness. Apply an increased thickness of air-barrier material in full contact around protrusions such as masonry ties.
   1. Vapor-Permeable, Low-Build Air Barrier: Total dry film thickness as recommended in writing by manufacturer to comply with performance requirements, applied in one or more equal coats. Apply additional material as needed to achieve void- and pinhole-free surface, but do not exceed thickness on which required vapor permeability is based.

C. Do not cover air barrier until it has been tested and inspected by testing agency.

D. Correct deficiencies in or remove air barrier that does not comply with requirements; repair substrates and reapply air-barrier components.

3.5 FIELD QUALITY CONTROL

A. ABAA Quality Assurance Program: Perform examinations, preparation, installation, testing, and inspections under ABAA's Quality Assurance Program.

B. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.

C. Inspections: Air-barrier materials, accessories, and installation are subject to inspection for compliance with requirements. Inspections may include the following:
   1. Continuity of air-barrier system has been achieved throughout the building envelope with no gaps or holes.
   2. Air-barrier dry film thickness.
   3. Continuous structural support of air-barrier system has been provided.
   4. Masonry and concrete surfaces are smooth, clean, and free of cavities, protrusions, and mortar droppings.
   5. Site conditions for application temperature and dryness of substrates have been maintained.
   6. Maximum exposure time of materials to UV deterioration has not been exceeded.
   7. Surfaces have been primed, if applicable.
   8. Laps in strips and transition strips have complied with minimum requirements and have been shingled in the correct direction (or mastic has been applied on exposed edges), with no fishmouths.
   9. Termination mastic has been applied on cut edges.
   10. Strips and transition strips have been firmly adhered to substrate.

11. Compatible materials have been used.
12. Transitions at changes in direction and structural support at gaps have been provided.
13. Connections between assemblies (air-barrier and sealants) have complied with requirements for cleanliness, surface preparation and priming, structural support, integrity, and continuity of seal.
14. All penetrations have been sealed.

D. Tests: As determined by testing agency from among the following tests:
1. Air-Leakage-Location Testing: Air-barrier assemblies will be tested for evidence of air leakage according to ASTM E1186, chamber pressurization or depressurization with smoke tracers.
2. Air-Leakage-Volume Testing: Air-barrier assemblies will be tested for air-leakage rate according to ASTM E783 or ASTM E2357.
3. Adhesion Testing: Air-barrier assemblies will be tested for required adhesion to substrate according to ASTM D4541 for each 600 sq. ft. f installed air barrier or part thereof.

E. Air barriers will be considered defective if they do not pass tests and inspections.
1. Apply additional air-barrier material, according to manufacturer's written instructions, where inspection results indicate insufficient thickness.
2. Remove and replace deficient air-barrier components for retesting as specified above.

F. Repair damage to air barriers caused by testing; follow manufacturer's written instructions.

G. Prepare test and inspection reports.

3.6 CLEANING AND PROTECTION

A. Protect air-barrier system from damage during application and remainder of construction period, according to manufacturer's written instructions.
1. Protect air barrier from exposure to UV light and harmful weather exposure as recommended in writing by manufacturer. If exposed to these conditions for longer than recommended, remove and replace air barrier or install additional, full-thickness, air-barrier application after repairing and preparing the overexposed materials according to air-barrier manufacturer's written instructions.
2. Protect air barrier from contact with incompatible materials and sealants not approved by air-barrier manufacturer.

B. Clean spills, stains, and soiling from construction that would be exposed in the completed work using cleaning agents and procedures recommended in writing by manufacturer of affected construction.

C. Remove masking materials after installation.

END OF SECTION

SECTION 07 42 13.23 - METAL COMPOSITE MATERIAL WALL PANELS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes MCM wall panels.
B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.

1.2 DEFINITIONS

A. DBVR: Drained and back-ventilated rainscreen system; rainscreen system designed to drain and dry cavity entering water through drainage channels, weeps, and air ventilation.
B. MCM: Metal composite material; cladding material formed by joining two thin metal skins to polyethylene or fire-retardant core and bonded under precise temperature, pressure, and tension.
C. PER: Pressure equalized rainscreen system; rainscreen system designed for no water intrusion with equal pressure between interior system cavity and outside cladding barrier.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.
   1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for each type of panel and accessory.
B. Shop Drawings:
   1. Include fabrication and installation layouts of MCM panels; details of edge conditions, joints, panel profiles, corners, anchorages, attachment assembly, trim, flashings, closures, and accessories; and special details.
   2. Accessories: Include details of the flashing, trim and anchorage, at a scale of not less than 1-1/2 inches per 12 inches.
C. Samples for Initial Selection: For each type of MCM panel indicated with factory-applied color finishes.
   1. Include similar Samples of trim and accessories involving color selection.
D. Samples for Verification: For each type of exposed finish required, prepared on samples of size indicated below.
   1. MCM Panels: 12 inches long by actual panel width. Include fasteners, closures, and other MCM panel accessories. Submit custom color samples in paint manufacturer's standard size.

1.4 INFORMATIONAL SUBMITTALS

A. Qualification Data: For installer.
B. Product Test Reports: For each product, tests performed by a qualified testing agency.
   1. MCM Manufacturer's Material Test Reports: Certified test reports showing compliance with specific performance or third-party listing documenting compliance to comparable code sections IBC 1407.14 and IBC 1703.5.

2. MCM System Fabricator's Certified System Tests Reports: Certified system test reports showing system compliance with specific performance or third-party listing documenting compliance code section. Base performance requirements on MCM system type provided.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Deliver components, MCM panels, and other manufactured items so as not to be damaged or deformed. Package MCM panels for protection during transportation and handling.
B. Unload, store, and erect MCM panels in a manner to prevent bending, warping, twisting, and surface damage.
C. Stack MCM panels on platforms or pallets, covered with suitable weathertight and ventilated covering. Store MCM panels to ensure dryness, with positive slope for drainage of water. Do not store MCM panels in contact with other materials that might cause staining, denting, or other surface damage.
D. Retain strippable protective covering on MCM panels during installation.

1.6 FIELD CONDITIONS

A. Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit assembly of MCM panels to be performed in accordance with manufacturers' written instructions and warranty requirements.

1.7 COORDINATION

A. Coordinate MCM panel installation with rain drainage work, flashing, trim, construction of soffits, and other adjoining work to provide a leakproof, secure, and noncorrosive installation.

1.8 WARRANTY

A. Warranty on Panel Material: Manufacturer's standard form in which manufacturer agrees to replace MCM that fails within specified warranty period.
   1. Warranty Period: Five years from date of Substantial Completion.
B. Special Warranty on Panel Finishes: Manufacturer's standard form in which manufacturer agrees to repair finish or replace MCM panels that show evidence of deterioration of factory-applied finishes within specified warranty period.
   1. Finish Warranty Period: 20 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Structural Performance: Provide MCM panel systems capable of withstanding the effects of the following loads, based on testing in accordance with ASTM E330:
   1. Wind Loads: As indicated on Drawings.
   2. Deflection Limits: For wind loads, panel deflection no greater than L/60 of the span.
B. Thermal Movements: Include expansion and contraction points as needed to allow for free and noiseless thermal movements from surface temperature changes.

2.2 MCM WALL PANELS

A. MCM Wall Panel Systems: Provide factory-formed and -assembled, MCM wall panels fabricated from two metal facings that are bonded to a solid, extruded thermoplastic core; formed into profile for installation method indicated. Include attachment assembly components, panel stiffeners, and accessories required for weathertight system.
   1. Basis-of-Design Product: Subject to compliance with requirements, provide 3A Composites USA Inc.; ALUCOBOND PLUS or comparable product by one of the following:
      a. Arconic Architectural Products (USA).
      b. Mitsubishi Chemical Composites.

B. Aluminum-Faced Composite Wall Panels: Formed with 0.020-inch-thick, anodized aluminum sheet facings.
   1. Core: Fire retardant.
   2. Exterior Finish: PVDF fluoropolymer with coats and thicknesses that comply with MCM panel manufacturer's performance and warranty requirements.
      a. Color: To match existing .
   3. Fire Performance: Flame spread less than 25 and smoke developed less than 450, in accordance with ASTM E84.

C. Attachment Assembly Components: Formed from extruded aluminum.

2.3 MISCELLANEOUS MATERIALS

A. Miscellaneous Metal Subframing and Furring: ASTM C645, cold-formed, metallic-coated steel sheet ASTM A653, G90 hot-dip galvanized coating designation or ASTM A792, Class AZ50 aluminum-zinc-alloy coating designation unless otherwise indicated. Provide Fabricator's standard sections as required for support and alignment of MCM panel system.

B. Panel Accessories: Provide components required for a complete, weathertight panel system including trim, copings, fasciae, mullions, sills, corner units, clips, flashings, sealants, gaskets, fillers, closure strips, and similar items. Match material and finish of MCM panels unless otherwise indicated.

C. Flashing and Trim: Provide flashing and trim formed from same material as MCM panels as required to seal against weather and to provide finished appearance. Locations include, but are not limited to, bases, drips, sills, jambs, corners, endwalls, framed openings, rakes, fasciae, parapet caps, soffits, reveals, and fillers. Finish flashing and trim with same finish system as adjacent MCM panels.
   1. Basis-of-Design Product: Subject to compliance with requirements, provide 3A Composites USA Inc.; ALUCOBOND Axcent Trim or comparable product by one of the following:
      a. Arconic Architectural Products (USA).
      b. Mitsubishi Chemical Composites.
   2. Aluminum Trim: Formed with 0.040-inch-thick, coil-coated aluminum sheet facings.

D. Panel Fasteners: Self-tapping screws designed to withstand design loads. Provide exposed fasteners with heads matching color of MCM panels by means of plastic caps or factory-applied coating. Provide EPDM or PVC sealing washers for exposed fasteners.

E. Panel Sealants: ASTM C920; elastomeric polyurethane or silicone sealant; of type, grade, class, and use classifications required to seal joints in MCM panels and remain weathertight; and as recommended in writing by MCM panel manufacturer.

2.4 FABRICATION

A. General: Fabricate and finish MCM panels and accessories at the factory, by manufacturer's standard procedures and processes, as necessary to fulfill indicated performance requirements demonstrated by laboratory testing. Comply with indicated profiles and with dimensional and structural requirements.

B. Fabricate MCM panel joints with factory-installed captive gaskets or separator strips that provide a weathertight seal and prevent metal-to-metal contact, and that minimize noise from movements.

C. Sheet Metal Flashing and Trim: Fabricate flashing and trim to comply with manufacturer's recommendations or recommendations in SMACNA's "Architectural Sheet Metal Manual" that apply to design, dimensions, metal, and other characteristics of item indicated.

1. Form exposed sheet metal accessories that are without excessive oil canning, buckling, and tool marks and that are true to line and levels indicated, with exposed edges folded back to form hems.
2. Seams for Aluminum: Fabricate nonmoving seams with flat-lock seams. Form seams and seal with epoxy seam sealer. Rivet joints for additional strength.
3. Seams for Other Than Aluminum: Fabricate nonmoving seams in accessories with flat-lock seams. Tin edges to be seamed, form seams, and solder.
4. Sealed Joints: Form non-expansion, but movable, joints in metal to accommodate sealant and to comply with SMACNA standards.
5. Conceal fasteners and expansion provisions where possible. Exposed fasteners are not allowed on faces of accessories exposed to view.
6. Fabricate cleats and attachment devices from same material as accessory being anchored or from compatible, noncorrosive metal recommended in writing by metal panel manufacturer.
    a. Size: As recommended by SMACNA's "Architectural Sheet Metal Manual" or metal wall panel manufacturer for application but not less than thickness of metal being secured.

2.5 FINISHES

A. Protect mechanical and painted finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

B. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Noticeable variations in same piece are not acceptable. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

C. Aluminum Panels and Accessories:
1. PVDF Fluoropolymer: AAMA 2605. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with installer present, for compliance with requirements for installation tolerances, MCM panel supports, and other conditions affecting performance of the Work.
1. Examine wall framing to verify that girts, angles, channels, studs, and other structural panel support members and anchorage have been installed within alignment tolerances required by MCM wall panel manufacturer.
2. Examine wall sheathing to verify that sheathing joints are supported by framing or blocking and that installation is within flatness tolerances required by MCM wall panel manufacturer.
a. Verify that air- or water-resistive barriers have been installed over sheathing or backing substrate to prevent air infiltration or water penetration.

B. Examine roughing-in for components and assemblies penetrating MCM panels to verify actual locations of penetrations relative to seam locations of MCM panels before installation.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Miscellaneous Supports: Install subframing, furring, and other miscellaneous panel support members and anchorages in accordance with ASTM C754 and MCM panel manufacturer's written recommendations.

3.3 MCM PANEL INSTALLATION

A. General: Install MCM panels in accordance with Fabricator's written instructions in orientation, sizes, and locations indicated on Drawings. Install panels perpendicular to supports unless otherwise indicated. Anchor MCM panels and other components of the Work securely in place, with provisions for thermal and structural movement.
1. Shim or otherwise plumb substrates receiving MCM panels.
2. Flash and seal MCM panels at perimeter of all openings. Fasten with self-tapping screws. Do not begin installation until air- or water-resistive barriers and flashings that will be concealed by MCM panels are installed.
3. Install screw fasteners in predrilled holes.
4. Locate and space fastenings in uniform vertical and horizontal alignment.
5. Install flashing and trim as MCM panel work proceeds.
6. Locate panel splices over, but not attached to, structural supports. Stagger panel splices and end laps to avoid a four-panel lap splice condition.

7. Align bottoms of MCM panels and fasten with blind rivets, bolts, or self-tapping screws. Fasten flashings and trim around openings and similar elements with self-tapping screws.
8. Provide weathertight escutcheons for pipe- and conduit-penetrating panels.

B. Fasteners:
1. Aluminum Panels: Use aluminum or stainless steel fasteners for surfaces exposed to the exterior; use aluminum or galvanized-steel fasteners for surfaces exposed to the interior.

C. Metal Protection: Where dissimilar metals contact each other or corrosive substrates, protect against galvanic action as recommended in writing by MCM panel manufacturer.

D. Attachment Assembly, General: Install attachment assembly required to support MCM wall panels and to provide a complete weathertight wall system, including subgirts, perimeter extrusions, tracks, drainage channels, panel clips, and anchor channels.
1. Include attachment to supports, panel-to-panel joinery, panel-to-dissimilar-material joinery, and panel-system joint seals.

E. Panel Installation: Attach MCM wall panels to supports at locations, spacings, and with fasteners recommended by Fabricator to achieve performance requirements specified.
1. Wet Seal Systems: Seal horizontal and vertical joints between adjacent MCM wall panels with sealant backing and sealant. Install sealant backing and sealant in accordance with requirements specified in Section 07 92 00 "Joint Sealants."
a. Clip Installation: Attach panel clips to supports at locations, spacings, and with fasteners recommended in writing by Fabricator. Attach routed-and-returned flanges of wall panels to panel clips with Fabricator's standard fasteners.
b. Panel Installation:
1) Seal horizontal and vertical joints between adjacent panels with sealant backing and sealant. Install sealant backing and sealant in accordance with requirements specified in Section 07 92 00 "Joint Sealants."
2) Seal horizontal and vertical joints between adjacent MCM wall panels with Fabricator's standard gaskets.
c. Joint Sealing: Seal all joints in accordance with AAMA 501.

F. Accessory Installation: Install accessories with positive anchorage to building and weathertight mounting, and provide for thermal expansion. Coordinate installation with flashings and other components.
1. Install components required for a complete MCM panel assembly including trim, copings, corners, seam covers, flashings, sealants, gaskets, fillers, closure strips, and similar items. Provide types indicated by MCM panel Fabricator; or, if not indicated, provide types recommended in writing by MCM system Fabricator.

G. Flashing and Trim: Comply with performance requirements, manufacturer's written installation instructions, or SMACNA's "Architectural Sheet Metal Manual." Provide concealed fasteners where possible, and set units true to line and level as indicated. Install work with laps, joints, and seams that are permanently watertight.
1. Install exposed flashing and trim that is without buckling and tool marks and that is true to line and levels indicated, with exposed edges folded back to form hems. Install sheet metal flashing and trim to fit substrates and to result in waterproof performance.

2. Expansion Provisions: Provide for thermal expansion of exposed flashing and trim. Space movement joints at a maximum of 10 feet with no joints allowed within 24 inches of corner or intersection. Where lapped expansion provisions cannot be used or would not be sufficiently waterproof, form expansion joints of intermeshing hooked flanges, not less than 1-inch-deep, filled with mastic sealant (concealed within joints).

3.4 ERECTION TOLERANCES

A. Site Verifications of Conditions:
   1. Verify conditions of substrate previously installed under other Sections are acceptable for the MCM system installation. Provide documentation indicating detrimental conditions to the MCM system performance.
   2. Once conditions are verified, MCM system installation tolerances are as follows:
      a. Shim and align MCM wall panel units within installed tolerance of 1/4-inch in 20 feet, non-accumulative, on level, plumb, and location lines as indicated, and within 1/8-inch offset of adjoining faces and of alignment of matching profiles.

3.5 FIELD QUALITY CONTROL

A. Testing Agency: Owner will engage a qualified independent testing agency to perform field tests and inspections.
B. Water-Spray Test: After installation, test area of assembly for water penetration in accordance with AAMA 501.2.

3.6 CLEANING AND PROTECTION

A. Remove temporary protective coverings and strippable films, if any, as MCM panels are installed, unless otherwise indicated in manufacturer's written installation instructions. On completion of MCM panel installation, clean finished surfaces as recommended by MCM panel manufacturer. Maintain in a clean condition during construction.
B. After MCM panel installation, clear weep holes and drainage channels of obstructions, dirt, and sealant.
C. Replace MCM panels that have been damaged or have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

END OF SECTION

SECTION 07 53 00 – COAL-TAR ELASTOMERIC ROOFING SYSTEM

PART 1 – GENERAL

1.1 DESCRIPTION

A. Related Work
1. Documents affecting work of this Section include, but are not necessarily limited to, General Requirements / Conditions, Supplementary General Conditions, and Sections in Division 01 of these Specifications.
2. Section 04 05 23 – Through-Wall and Substrate Flashing System
3. Section 07 22 16 – Roof Board Insulation
4. Section 07 62 00 – Sheet Metal Flashing and Trim
5. Section 07 72 00 – Roof Accessories

B. Work shall include removal of the existing roof assembly down to the existing insulation. Remove and replace any wet or damaged as specified. Adhere all associated saddles and crickets as noted on the roof plan. Then adhere one layer of (25/32”) inch cover board set in the specified Type IV asphalt. Adhere a smooth surface modified bitumen base sheet set in Type IV asphalt then adhering the Coal-Tar Elastomeric Membrane as per the attached details.

1.2 INSTALLER QUALIFICATIONS

A. Roofing installer must be:
1. Currently prequalified with the Owner in accordance with Owner's prequalification requirements.
2. Currently in good standing with the manufacturer.
3. Installer must be an experienced single firm specializing in the type of roofing repair and/or removal and replacement work required, employing only experienced workers for the class of work in which they are employed, having at least five (5) years successful experience on projects similar in size and scope and acceptable as applicators by the Owner's representative.
4. Contractor must have successfully completed previous projects warranted by the manufacturer.

B. It shall remain each Bidder's responsibility to determine his current status with the manufacturer's certification plan.

1.3 QUALITY ASSURANCE

A. Testing Laboratory Services: Test results shall meet or exceed established standards.

B. Underwriters Laboratories, Inc. (Roofing Covering): Class A fire hazard classification.

C. Comply with governing local, state, and federal regulations, safety standards, and codes.

1.4 REFERENCES (INCLUDING LATEST REVISIONS)

1.5 SUBMITTALS

A. Samples and Manufacturer's Submittals: Submit prior to delivery or installation.
1. Samples of all roofing system components including all specified accessories.
2. Submit samples of proposed warranty complete with any addenda necessary to meet the warranty requirements as specified.
3. Submit latest edition of manufacturer's specifications and installation procedures. Submit only those items applicable to this project.
4. A written statement from the roofing materials manufacturer approving the installer, specifications and drawings as described and/or shown for this project and stating the intent to guarantee the completed project.
5. Manufacturer's Equiviscous Temperatures (EVT) for the specified bitumens.

B. Shop Drawings: Provide manufacturer's approved details of all perimeter conditions, projection conditions, and any additional special job conditions which require details other than indicated in the drawings.

D. Maintenance Procedures: Within ten days of the date of Substantial Completion of the project, deliver to the Owner three copies of the manufacturer's printed instructions regarding care and maintenance of the roof.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials in manufacturer's original, unopened containers and rolls with all labels intact and legible including labels indicating appropriate warnings, storage conditions, lot numbers, and usage instructions. Materials damaged in shipping or storage shall not be used.

B. Manufacturer's packaging and/or roll plastic is not acceptable for exterior storage. Tarpaulin with grommets shall be minimum acceptable for exterior coverings. All materials stored as above shall be minimum of four inches (4") off the substrate, and the tarpaulin tied off with rope.

C. Deliver materials requiring fire resistance classification to the job with labels attached and packaged as required by labeling service.

D. Deliver materials in sufficient quantity to allow continuity of work.

E. Handle and store material and equipment in such a manner as to avoid damage. Liquid products shall be delivered sealed, in original containers.

F. Handle rolled goods so as to prevent damage to edge or ends.

G. Select and operate material handling equipment so as not to damage existing construction or applied roofing.

H. Moisture-sensitive products shall be maintained in dry storage areas and properly covered. Provide continuous protection of materials against wetting and moisture absorption. Store roofing and flashing materials on clean raised platforms with weather protective covering when stored outdoors.

I. Store rolled goods on end.

J. Protect materials against damage by construction traffic.

K. The proper storage of materials is the sole responsibility of the contractor and any wet or damaged roofing materials shall be discarded, removed from the project site, and replaced prior to application.

L. Comply with fire and safety regulations, especially with materials which are extremely flammable and/or toxic. Use safety precautions indicated on labels.

M. Products liable, such as emulsions, to degrade as a result of being frozen shall be maintained above 40° F in heated storage.

N. No storage of materials shall be permitted on roof areas other than those materials that are to be installed the same day. Any exception must be in written form.

O. The contractor is to erect a temporary chain link fence, minimum six feet (6') in height, around work area stage and kettles. Fence is to be secured on a daily basis.

1.7 SITE CONDITIONS

A. Job Condition Requirements:

1. Coordinate the work of the contractor with the work to be performed by the Owner's personnel, to ensure proper sequencing of the entire work. The Owner's personnel will be erecting interior protection for equipment, if required. The contractor is to schedule his work so that adequate time is allowed for the Owner's personnel to perform this work. No roof work shall be performed until the Owner's personnel have completed erection of the interior protection in that area.
2. Apply roofing in dry weather.
3. Do not apply roofing when ambient temperature is below 40° F (4° C).
4. Proceed with roofing work only when weather conditions are in compliance with manufacturer's recommended limitations, and when conditions will permit the work to proceed in accordance with specifications.
5. For further information regarding roofing material manufacturer's recommendations for project conditions, refer to the manufacturer's published application manual.
6. Schedule the work so the building will be left watertight at the end of each day. Do not remove more roofing or insulation material than can be reinstalled in any working day.
7. All surfaces to receive new roofing shall be smooth, dry, and free from dirt, debris, and foreign material before any of this work is installed. Competent operators shall be in attendance at all times equipment is in use. Materials shall be stored neatly in areas designated by the Owner. Load placed on the roof at any point shall not exceed the safe load for which the roof is designed.
8. The contractor shall take all necessary precautions to protect the roof mat and deck from damage. The contractor shall be responsible for repairing all new areas of damage caused by the negligence of the contractor, at the contractor's expense. The Owner's on-site representative shall determine damage caused by contractor negligence.
9. The contractor is to be aware of the potential for roof leaks on the existing roof as a result of ruptured blisters and/or roof mat damage caused by the vacuum process, foot traffic, or material and equipment storage. The contractor is to take all necessary precautions to prevent damage to the existing roof. All damage to the existing roof that could result in roof leaks is to be repaired on a daily basis by the roofing contractor.
10. The contractor shall follow local, state, and federal regulations, safety standards, and codes for the removal, handling, and disposal of asbestos containing materials, if present. When a conflict exists, use the stricter document.
11. Follow insurance underwriter's requirements acceptable for use with specified products or systems.
12. Due caution should be exercised so as not to alter the structural integrity of the deck. When cutting through any deck, care should be taken so as not to damage the deck or any part of the deck, such as post tension cables, etc.
13. All kettles shall have a fume recovery system and temperature gauge, all in working order.
14. The contractor is to verify the location of all interior ducts, electrical lines, piping, conduit, and/or similar obstructions. The contractor is to perform all work in such a manner as to avoid contact with the above mentioned items.
15. Surface and air temperatures should be a minimum 45° F during applications of cleaner and waterproof coating and remain above 45° F for a minimum of four (4) hours following applications. Verify compatibility of cleaner with coatings, paints, primers and joint sealers specified. Advise Owner's representative of any problems in this regard prior to commencing cleaning operations.

16. Temporary Sanitary Facilities: The contractor shall furnish and maintain temporary sanitary facilities for employees' use during this project. These will be removed after the completion of the project. All portable facilities shall comply with local laws, codes, and regulations.

B. Protection of Work and Property:
1. Work: The contractor shall maintain adequate protection of all his work from damage and shall protect the Owner's and adjacent property from injury or loss arising from this contract. He shall provide and maintain at all times any OSHA required danger signs, guards, and/or obstructions necessary to protect the public and his workmen from any dangers inherent with or created by the work in progress. All federal, state, and city rules and requirements pertaining to safety and all EPA standards, OSHA standards, NESHAP regulations pertaining to asbestos as required shall be fulfilled by the contractor as part of his proposal.
2. Property: Protect existing planting and landscaping as necessary or required to provide and maintain clearance and access to the work of this contract. Examples of two categories or degrees of protection are generally as follows: a) removal, protection, preservation, or replacement and replanting of plant materials; b) protection of plant materials in place, and replacement of any damage resulting from the contractor's operations.
3. Twenty-four Hour Call: The contractor shall have personnel on call 24 hours per day, seven (7) days per week for emergencies during the course of a job. The Owner's Project Manager is to have the 24 hour numbers for the contact. Contractor must be able to respond to any emergency call and have personnel on-site within two (2) hours after contact. Numbers available to the Owner's Project Manager are to be home, mobile, and office numbers for:
   a) Job Foreman
   b) Job Superintendent
   c) Owner or Company Officer

C. Damage to Work of Others: The contractor shall repair, refinish, and make good any damage to the building or landscaping resulting from any of his operation. This shall include, but is not limited to, any damage to plaster, tile work, wall covering, paint, ceilings, floors, or any other finished work. Damage done to the building, equipment, or grounds must be repaired at the successful contractor's expense holding the Owner harmless from any other claims for property damage and/or personal injury.

P. Measurements: It will be the contractor's responsibility to obtain and/or verify any necessary dimensions by visiting the job site, and the contractor shall be responsible for the correctness of same. Any drawings supplied are for reference only.

E. Use of Premises:
1. The contractor is advised that the Owner will occupy the building at all times, and the contractor must provide all safeguards required to protect personnel and to keep noise levels as low as reasonably possible for each operation.
2. The contractor shall:
   a) Coordinate work in such a manner as to not interfere with the normal operation of the building.
   b) Assume full responsibility for protection and safekeeping of products stored on premises.
   c) Agree to hold the Owner harmless in any and all liability of every nature and description which may be suffered through bodily injuries, including death of any persons by reason of negligence of the contractor, agents, employees, or subcontractors.

F. Cleaning and Disposal of Materials:

1. Contractor shall keep the job clean and free from all loose materials and foreign matter. Contractor shall take necessary precautions to keep outside walls clean and shall allow no roofing materials to remain on the outside walls.
2. All waste materials, rubbish, etc., shall be removed from the Owner's premises as accumulated. Rubbish shall be carefully handled to reduce the spread of dust. A suitable scrap chute or hoist must be used to lower any debris. At completion, all work areas shall be left broom clean and all contractor's equipment and materials removed from the site.
3. All bituminous or roofing related materials shall be removed from ladders, stairs, railings, and similar parts of the building.
4. Debris shall be deposited at an approved disposal site.

1.8 SEQUENCING AND SCHEDULING

A. Coordinate roofing schedule with work of other trades.

B. Plan lay up roofing membrane with respect to deck slope. Avoid situations where excessive drainage could pass into completed roofing.

C. Maintain communication with roofing manufacturer's representative to inform of progress and to schedule periodic sample testing.

D. All penetrations shall be made in roof prior to beginning with roof installation.

1.9 WARRANTY

A. Roofing - Manufacturer: Project shall be installed in such a manner that the roofing material manufacturer will furnish a written twenty (20) year NDL type warranty from the date of substantial completion of the completed project. Manufacturer issuing warranty shall provide historical data supporting hail resistance.

B. Roofing - Contractor: The contractor, jointly with any subcontractors employed by him, shall guarantee the work required and performed under this contract will be free from defects in workmanship and materials, and that the building will be and remain waterproof for a two (2) year warranty period, after the Owner accepts the work as substantially complete. The warranty shall be in approved notarized written form, to obligate the contractor and his subcontractors, if any, to make good the requirements of the warranty.

C. Warranty repairs shall be performed by a certified installer. The repairs shall be performed in accordance with the manufacturer's written instructions and recommended procedures so as to not void the warranty. Repair of the system, including materials and labor, shall be done at no cost to the Owner.

D. During the proposal period each Bidder shall make arrangements with the material manufacturer to provide the required warranty. Refer to SUBMITTALS Paragraph in this section for requirements concerning submittals of warranty.

PART 2 – PRODUCTS

2.1 GENERAL

A. All materials shall be furnished, specified, or approved in writing by the manufacturer issuing the warranty.

B. Samples of all materials used on the project, which are not supplied by the membrane manufacturer, shall be submitted to the membrane manufacturer for written approval prior to work starting.

C. All materials used on the project shall be asbestos free.

2.2 FINISH MEMBRANE

A. The coal-tar elastomeric membrane (CTEM) shall be 60 mil overall calendered thickness. The membrane shall be a high-performance elastomeric membrane incorporating a DuPont™ Elvaloy® KEE (ketone ethylene ester), extended with coal-tar pitch and reinforced with polyester fibers as manufactured by Hyload, Inc., or approved equal.

B. The coal-tar elastomeric membrane (CTEM) shall meet the following physical properties: Elongation 170%, ASTM D 412; Tensile Strength 1500 lbs/in2, ASTM D 412; Tear Strength 330 ppi, ASTM D 624; Density @ 70° F, 80 lbs/ft3; Low Temperature Flexibility, Pass, 37-GP-56M; and Water Absorption less than 0.1%, 37-GP-56M.

2.3 WHITE FLEECEBACK WELDED-SEAM FLASHING MEMBRANE

A. Membrane shall be nominal seventy-five (75) mil in overall thickness consisting of a white sixty (60) mil EIP elastomeric membrane with fifteen (15) mil thick backing of polyester fleece backing with a minimum one and one-half inch (1-1/2") dry selvage edge for welding. The white fleece backed welded-seam membrane shall be a high-performance elastomeric membrane incorporating a DuPont Ethylene Interpolymer (EIP) alloy, reinforced with polyester fibers as manufactured by Hyload, Inc., or approved equal.

2.4 BITUMEN

A. Shall be ASTM D 312 Type IV extra steep asphalt.

Slope	Interply	Top Pour	Backnail	Strap
0 - ½" per 12"	Type IV	Type IV	No	No
½" - 2" per 12"	Type IV	Type IV	Yes	Strap if possible
2" - 3" per 12"	Type IV	Type IV	Yes	Yes

B. Contractor shall mix with the hot asphalt an additive that eliminates the asphalt odor, such as descent, as manufactured by ArrMaz Custom Chemicals, or approved equal.

2.5 FELTS

A. Shall be Underwriters Laboratory approved and listed in the FM Global Approval Guide.

B. Shall be nominal ninety (90) mil, smooth surfaced, ModiFlex MP HD modified asphalt, glass fibered scrim base sheet, meeting ASTM D6163, Type 1, Grade S as manufactured by IKO, or approved equal.

2.6 INSULATION

A. All insulation shall be in compliance with Section 07 22 16 Roof Board Insulation.

B. All insulation shall be approved in writing by the membrane manufacturer as to thickness, type, and manufacturer. All insulation must be approved for the specific application, Underwriters Laboratory approved, and be listed in the FM Global Approval Guide.

2.7 CANT STRIP

A. Shall be wood fiber where used for non-structural purposes. Shall be treated solid wood where used for structural purposes meeting NRCA, FM Global and Underwriters Laboratory guidelines. If solid wood cant is used where insulation exists, cant is to be toe nailed into treated solid wood nailer the same height as insulation.

2.8 WOOD

A. All wooden nailers, cants, and curbs shall be treated lumber as required by NRCA, FM Global and Underwriters Laboratory guidelines.

2.9 CAULKS

A. One-part Urethane Sealant: Sealant for use at coping joints, reglet joints, etc., shall be a one-component urethane non-sag, gun grade sealant designed for use in active exterior joints, and shall meet or exceed Federal Specification No. 1 TT-S-00230C, Type II, Class A, ASTM C 920. Where joint surfaces are contained or are contaminated with bituminous materials, provide manufacturer's modified-type sealant (modified with coal-tar or asphalt as required), as manufactured by Sonneborn, or approved equal.

B. Silyl-terminated Polyether Sealant: To seal the leading edge of the CTEM membrane, to bond CTEM at terminations with metal, and for open CTEM seam repair, sealant shall be a thermosetting, solvent free, non-slump, self-fixturing, multipurpose structural sealant which shall meet the following physical and performance properties, M-1 as manufactured by Chem Link, Inc., or approved equal.

Properties	
Specific Gravity	1.62 (13.5 lbs./gallon)
Viscosity	800,000 cps Brookfield RTV, TF spindle, 4 rpm 70° F.
Shear Strength (ASTM D-1002)	300 psi+ (7 day ambient cure)
Elongation @ break (ASTM D-412)	300% (7 day ambient cure)
Hardness Shore A (ASTM C-661)	50 – 55 (14 day ambient cure)
Tack free time (ASTM C-679)	35 minutes
Low temperature flex	Minus 20° F: PASS
Slump (sag) (ASTM C-639)	Zero slump
Shrinkage (ASTM D-2453)	No measurable shrinkage (14 cay cure)
Service temperature	-40° F to 200° F

2.10 FASTENERS

A. Fasteners and fastening plates or bars shall be listed in the FM Global Approval Guide, and be as recommended by the fastener manufacturer for the specific application.

B. Fastener for Brick: Shall be one-fourth inch by two inches (1/4" x 2"), zinc with plated steel or stainless steel nail, one piece unit, flat head, as manufactured by Rawl Zamac Nailin, or approved equal.

2.11 ROOFING AGGREGATE

A. ASTM D 1863 covers the quality and grading of crushed stone and water worn gravel suitable for use as coarse mineral aggregate.

B. General Characteristics of Crushed Stone and Gravel: The stone and gravel at the time of application shall be hard, durable, surface dry (up to 2%) by weight moisture content), free of clay, loam, sand, or other foreign substances, and shall conform to size grading and property requirements.

C. Grading: The aggregate shall conform to sieve analysis as follows:

Sieve	Total Passing
3/4"	100
1/2"	90 to 100
3/8"	40 to 70
No. 4	0 to 15
No. 8	0 to 5

D. Physical Property Requirements:

Moisture, crushed stone and gravel	2.0% max.
Unit Weight (loose)	60 lbs./cu. ft., min.
Dust	0.5% max.
Hardness, amount passing No. 5 (3.36 mm) sieve when tested in accordance with ASTM D 1865	20% max.

2.12 ASPHALT PLASTIC ROOF CEMENT

A. Trowel-applied mastic used to repair blisters, splits, and flanges on gravel stops, stacks, vents, and similar applications, as manufactured by Johns-Manville, or approved equal.

Applicable Federal Specification	SS-C-153C, Type I
ASTM	D 4586
Flash Point	105° F
Weight per gallon (approximate)	11 lbs.
Viscosity @ 80° F (ASTM D 217)	270-330
% Non-Volatile (Fed. Test Method 141)	70% Min.
% Specially Processed Bitumen	30% Min.
% Total Solids, by Volume	75% Min.
Dry film thickness of 1 gal./15 sq. ft.	85 Mils
Drying time	2 to 3 days
Service Temperature, Extended Exposure	-20° to +150° F
Resistance to Oils & Solvents	Poor
Resistance to Sunlight	Good
Resistance to Chemicals	Good
Effects of Weathering	Slight chalking
Water Resistance	
Under Good Drainage Conditions	Excellent
Under Continuous Submersion	Fair

2.13 ASPHALT ROOF PRIMER

A. Quick-dry asphalt-based primer for priming of asphalt roof surfaces, as manufactured by GAF, or approved equal.

Applicable Federal Specification	SS-A-701B
ASTM	D 41
Flash Point	105° F
Viscosity at 80° F (ASTM D 217)	50-60 K.U.
Weight per gallon	7.4 pounds
Drying time (to touch)	Min. 4 hours

2.14 ASPHALT FLASHING CEMENT

A. Designed for laying-up cold process roof membrane flashings where fast-setting adhesive is required, as manufactured by GAF, or approved equal.

Applicable Federal Specification	SS-C-153C, Type I
ASTM	D 4586
Flash Point	105° F (41° C)
Weight per gallon (approximate)	10.8 lbs.
Viscosity @ 77° F (25° C) (ASTM D 217)	230-330
% Non-Volatile (Fed. Test Method 141)	68% Min.
% Specially Processed Bitumen	42% Min.
% Total Solids, by Volume	60% Min.
Cured film thickness of 1 gal./15 sq. ft.	75 Mils
Drying time	2 to 3 days
Service Temperature, Extended Exposure	-40° to +180° F
Resistance to Oils & Solvents	Poor
Resistance to Sunlight	Good
Resistance to Chemicals	Good
Effects of Weathering	Slight chalking
Water Resistance	
Under Good Drainage Conditions	Excellent
Under Continuous Submersion	Fair

2.15 LEAD JACKS

A. Shall be four pound (4#) lead, and of dimensions required to completely cover existing plumbing stack.

2.16 LEAD FLASHING DRAINS

A. Shall be four pound (4#) lead, minimum thirty-six inches by thirty-six inches (36" x 36"), used for flashing of internal drains.

2.17 PITCH PAN SEALANT

A. Pitch pan sealant shall be coal tar urethane which shall meet the following physical and performance properties, or approved equal.

Test	Typical Value	Test Method
Uniformity	Pass	ASTM D 4479
Elongation	450%	ASTM D 2370
Solids by Weight	98.5%	ASTM D 4479
Density	10.6 lbs/gal.	ASTM D 1475
Viscosity	20,000 – 25,000 cps	ASTM D 2196
Flash Point	250°F minimum	ASTM D 93
VOC	25 g/l	ASTM D 6511
Asbestos Content	0%	EPA 600/R-93/116

2.18 TERMINATION/PRESSURE BARS

A. Aluminum strip shall be extruded channel bar with a mill finish, height to be one inch (1"), thickness to be 0.25" ± 0.1", leg height to be one-fourth inch (1/4") top and bottom, leg angle to be ninety degrees (90°), for perimeter and curb anchorage, having predrilled holes six inches (6") on center, as manufactured by Olympic Fasteners, or approved equal.

2.19 DELIVERY AND STORAGE

A. All materials shall be delivered with appropriate carton and can labels indicating appropriate warnings, storage conditions, lot numbers, and usage instructions. Materials damaged in shipping or storage shall not be used.

2.20 PRECAUTIONS

A. Some of the indicated materials are extremely flammable and/or toxic. Use precautions indicated on can and carton labels.

2.21 ICE AND WATER SHIELD

A. A premium heavyweight, self-adhering underlayment, to use as an ice and water shield, such as: All Climate as manufactured by Elk Premium Building Products; Tamko TW Metal and Tile Underlayment as manufactured by Tamko Roofing Products, Inc.; or Vycor Ultra, as manufactured by Grace Construction Products; or approved equal.

2.22 MISCELLANEOUS MATERIALS

A. Other materials shall be as specified or of the best grade for the proposed use as recommended by the manufacturer.

PART 3 – EXECUTION

3.1 REFERENCE

A. The manufacturer's Technical Specifications and current NRCA, Underwriters Laboratory and IBC guidelines shall be considered a part of this specification and should be referred to for more specific application procedures and recommendations.

B. Application of materials shall be in strict accordance with the manufacturer's recommendations and current NRCA, Underwriters Laboratory and IBC guidelines, except where more stringent requirements are shown or specified. In the instance of a conflict between these specifications and those of the manufacturer and/or current NRCA, Underwriters Laboratory and IBC guidelines, the more stringent specifications shall take precedence.

C. General Installation:
1. Comply with governing local, state, and federal regulations, safety standards, and codes.
2. Protect adjacent areas with tarpaulin or other durable materials.
3. Contractor shall prevent overspray, and be responsible for parking lot areas and/or adjoining areas not part of this contract.
4. Contractor shall be responsible for sealing, as required, all openings that may allow bitumen migration or drippage, i.e. pitch dams, envelopes, and filler strips.
5. Prepare surfaces according to manufacturer's or applicator's published instructions. All metal that is to receive bitumen, or come in contact with bitumen or adhesive, shall be first primed with appropriate primer. Any prefinished galvanized sheet steel that is to receive bitumen, or come in contact with bitumen or adhesive, shall be scored, scuffed or abraded before receiving primer application.
6. Use cleaning materials or primers necessary to render an acceptable surface/substrate.

7. All surfaces/substrates shall be clean and dry prior to application of materials.
8. Prior to application of felts and membrane, all foreign matter, gravel, etc., shall be removed from the insulation and/or substrate. Gravel or debris between the insulation/substrate and plies is not acceptable.
9. Prior to application of flashing membranes, substrate shall be clean and free of any previously installed roofing materials. Contractor shall ensure that all components of substrate be structurally sound before application of flashing materials.
10. Bitumen kettle shall have a fume recovery system, and visible thermometer to provide positive monitoring of the bitumen temperature when it is heated in accordance with manufacturer's instructions.
11. Ambient temperature shall be 45° F and rising.
12. The maximum heating temperature of Type IV asphalt shall be 525° F.
13. The temperature of Type IV asphalt shall be approximately 475° F ± at the point of application.
14. Maintain kettle and/or tanker temperature at least 25° F below the actual flash point of the bituminous materials used.
15. Never heat the bituminous materials at high temperatures for prolonged periods of time.
16. Do not allow bituminous materials to stand in luggers for long periods.
17. Circulate bituminous materials.
18. Insulate hot transport lines if required.
19. The base sheets and the 60 mil coal-tar elastomeric membrane (CTEM) are to be laid in the direction of maximum roof slope, working from bottom of slope toward ridge.
20. All roof areas will be picture framed with the 60 mil coal-tar elastomeric membrane (CTEM) as the system is being applied. The outer edge of the picture frame sheet shall extend approximately two inches (2") above the top of the cant. All end laps of the field sheets of the 60 mil coal-tar elastomeric membrane shall lap the picture frame sheet a minimum of eight inches (8") or the picture frame sheet side laps shall lap the field sheet a minimum of eight inches (8").
21. Wrinkles, buckles, kinks, and fishmouths are not acceptable when laying felt and membrane.
22. Dry voids of felt on felt or membrane on membrane are not acceptable.
23. Where deteriorated base flashing is removed, primed cant strips shall be installed at the intersection of the deck and the vertical surfaces. All flashings shall be mechanically top-fastened with a termination bar a minimum of six inches (6") on center at the top leading edge, and be a minimum of eight inches (8") in height from finished membrane.
24. On slopes greater than one inch (1") in twelve inches (12"), refer to NRCA and/or manufacturer's guidelines for backnailing procedures and follow the more stringent guidelines for all specified materials.
25. All surfaces that are to receive the self-adhered membranes shall be primed with a fast drying asphaltic primer. Except when self-adhered membrane is to be installed over a CTEM surface.

3.2 CANTS

A. Toe of cant shall be level with the surface to receive new roof membrane and in all cases anchored according to NRCA, Underwriters Laboratory and IBC guidelines.

3.3 INSULATION

A. Installation of roof insulation shall be in accordance with Section 07 22 16 Roof Board Insulation.

B. Manufacturer's Instructions: In regard to attachment, the manufacturer's instructions or specifications shall determine the suitability for an application. Installation must meet ASCE 7 criteria and meet local governing building codes.

C. Precautions: The surface of the insulation must not be ruptured due to overdriving of fasteners.

D. Insulation shall be tapered or feathered at drains and scuppers to provide proper drainage (if applicable).

E. No more insulation shall be installed than can be covered by the completed roof system by the end of the day or the onset of inclement weather.

3.4 NAILERS

A. All nailers shall be installed in accordance with Section 06 10 53 Miscellaneous Carpentry.

B. Wooden nailers shall be installed at gravel stops, drip edges, and expansion joints on outside perimeter of building according to NRCA, Underwriters Laboratory and IBC guidelines.

C. All Construction: Nailers shall be the same height as the new recovery board being installed where required. Nailers shall be raised if necessary by anchoring an additional nailer of appropriate height to the existing nailer if the existing nailer is not to be replaced. Nailers shall be anchored to resist a pull-out force of one hundred seventy-five pounds (175#) per foot. Fasteners shall be no less than two (2) per nailer, and be spaced at three feet (3') on center maximum. Expansion joint nailers shall extend upward a minimum of eight inches (8") above finish roof height.

3.5 WOOD CANTS

A. All wood cants shall be installed in accordance with Section 06 10 53 Miscellaneous Carpentry.

B. Toe of cant shall be level with the surface to receive new roof membrane and in all cases anchored according to NRCA, Underwriters Laboratory and IBC guidelines.

3.6 APPLICATION OF PLY SHEETS

A. Insulation shall be covered with one (1) ply of nominal eighty-five (85) mil, smooth surfaced, SBS modified asphalt, glass reinforced base sheet, meeting ASTM D6163, Type 1, Grade S adhered as follows:

All layers shall be solid mopped at the nominal rate of thirty pounds (30#) ± 20% per one hundred (100) square feet using steep asphalt Type IV as required by slope, properly heated. Specified layers shall be applied in accordance with the manufacturer's recommendations and in accordance with general practices as set forth by the NRCA Roofing Manual.

3.7 APPLICATION OF FINISH MEMBRANE PLY

A. Unroll at least ten feet (10') of the 60 mil coal-tar elastomeric membrane (CTEM) and position the sheet. The properly heated steep asphalt (per specification) should be applied at the rate of approximately thirty pounds (30#) ± 20% per one hundred (100) square feet with a mop just ahead of the roll of the CTEM to form a pool of asphalt into which the membrane is to be rolled. The roll of CTEM should push a puddle of asphalt ahead of it with no voids. Care should also be taken not to trap air under the membrane. The pool of asphalt in front of the roll will eliminate entrapped air.

B. The asphalt must be mopped so as to extend beyond both edges of the sheet. The amount of asphalt should be just sufficient for excess asphalt to squeeze out along the edges.

C. Picture frame all roof areas with 60 mil coal-tar elastomeric membrane (CTEM) as finish membrane ply is being applied. Rectangular type projections should also be picture framed.

3.8 LAP SPLICE

A. Coal-tar elastomeric membrane (CTEM) shall be installed as above with side lap minimum three inches (3"), no maximum. End laps shall be minimum eight inches (8"), no maximum, and staggered a minimum of four feet (4'), no maximum.

B. Lap Splice with Bitumen: The membrane shall be laid in the same direction as the base sheet, but the laps shall not coincide with the base sheet. While asphalt is still hot, pressure shall be applied to the laps with a trowel or similar tool to ensure complete contact with the asphalt, and a squeeze-out of bitumen shall be visible. The side laps in the 60 mil coal-tar elastomeric membrane (CTEM) should not be located above those in the base sheet, but located to one side or other to avoid excessive ply build-up. Lack of or no side lap bitumen squeeze-out is not acceptable. Contractor shall cut away dry material to dry material, and install a minimum of twelve inch (12") wide membrane overlaid in hot bitumen.

C. Seams/Laps:
1. All hot-air welded seams/laps shall be welded daily and tested daily with a probe for integrity, no variance.
2. All laps/seams, cross seams, T-joints, seams/openings at penetrations, or other details shall be sealed and checked daily, no variance.
3. Laps: All laps shall be straight and free of wrinkles and/or fishmouths, no variance.

3.9 PERIMETER FASTENING

A. Wood nailers are required for perimeter gravel stops or drip edges. Field membrane and all plies shall be mechanically fastened to nailer on twelve inch (12") centers maximum.

3.10 FLEECE BACKED WELDED-SEAM VERTICAL WALL FLASHING

A. Base flashings shall be installed using the 60 mil calendered thickness fleece backed white welded seam elastomeric roof membrane flashing, with length of run not to exceed ten linear feet (10').

B. Wooden nailers or curbs shall be installed at all edges and openings in the roof, mechanically fastened to the deck.

C. Cant strips shall be installed at the intersection of the deck and all vertical surfaces.

D. The roofing field membrane shall extend up over and two inches (2") above the top of cant strips at all vertical intersections or out to the roof's edge.

E. All existing substrates receiving flashing membrane shall be clean and primed with asphalt primer, prior to application.

F. Flashing membrane shall always be installed with one (1) ply of SBS modified bitumen base sheet as an underlayment. Both the Type IV glass felt underlayment and the flashing membrane shall be set in hot asphalt. NOTE: Care shall be taken to avoid asphalt contamination at end laps where the vertical laps of the must be hot-air welded.

G. All flashings shall be mechanically fastened with a termination bar a maximum of six inches (6") on center, extend a minimum of nine inches (9") onto the field of horizontal roof membrane, and not exceed ten linear feet (10') of run in length.

H. After proper termination of the base flashing at approximate eight inch (8") height, a saw cut reglet with counterflashing shall be installed according to NRCA and SMACNA guidelines.

I. All vertical flashing lap seams of the flashing membrane shall be hot-air welded, and not exceed ten feet (10') on center.

J. All flashing membrane shall be hot mopped to the vertical flashing and to field of roof membrane; hot-air weld vertical laps. NOTE: Once the membrane has been contaminated with hot asphalt, it is not possible to clean the asphalt off and hot air weld it for long term effectiveness. A patch of membrane must be welded over the area large enough to be welded one and one-half inches (1-1/2") past any contaminated area.

K. Flashing laps shall be minimum three inch (3") width, no maximum. Hot-air weld of flashing lap shall be minimum one and one-half inch (1-1/2") width, no maximum.

L. Hot-Air Welding of Flashing Laps:
1. When using a hand-held hot-air welder, the seams should be pressed together using a hand-held roller. The speed and temperature settings of the welding equipment can be affected by the weather conditions at the site of application, therefore, these parameters should be set by trial and error using two (2) pieces of the elastomeric membrane. Minimum width of hot-air weld one and one-half inches (1-1/2"), no maximum.
2. Lay the laps together and apply pressure to the welded seam to ensure full adhesion.
3. Allow the seams to set fully, and probe the entire length for voids. Reseam voids immediately with a hot-air gun and roller.

L. All hot-air welded seams/laps shall be tested daily with a probe for integrity, no variance.

3.11 DRAIN FLASHINGS

A. All drains shall receive new lead flashings. Flashings shall be installed in strict accordance with manufacturer's recommendations and with practices as set forth in the NRCA Roofing Manual.

B. Drain shall be covered with the 60 mil coal-tar elastomeric roofing membrane (CTEM) and underlayment plies as specified, slitting the membranes over the drain hole with an "X".

C. Lead flashings as specified shall be installed and primed with asphalt base primer and allowed to dry prior to application of flashing layers.

D. Lead flashing shall be covered with flashing membranes consisting of one layer of fiberglass ply sheet and one layer of 60 mil coal-tar elastomeric roofing membrane (CTEM). Each layer shall be installed in a solid bed of asphalt bitumen as specified and shall extend a minimum of twelve inches (12") past the outer edges of the three by three foot (3' x 3') lead flashing. Flashing membranes and lead flashing shall be slit over the drain hole with an "X", cutting excess material from the interior of the drain bowl.

3.12 PROJECTION FLASHINGS

A. Plumbing Vents: Soil vent stack pipes shall receive new lead flashings installed in strict accordance with practices set forth in the NRCA Roofing Manual. The lead shall be carried up and over the top of the stack, and crimped down into the pipe to form a watertight seal. Projections that cannot be sealed thus should be boxed in and flashed as recommended by the roof membrane manufacturer.

B. Square Projections: Lay the 60 mil coal-tar elastomeric membrane (CTEM) up to the projection, and cut membrane so that it will extend twelve inches (12") beyond the projection. Cut a slit in the membrane to correspond with the position of the projection, and lay the membrane in hot asphalt. Apply another layer of membrane in exactly the same fashion, but from the opposite direction. For metal flange-type projections, after doing above, strip in with six inch (6") strips of membrane.

C. Round Projections: Cut membrane square and eighteen inches (18") from perimeter of projection. Slit square membrane with an "X" of proper size to ensure a close fit and positive seal. Place over projection, and adhere to clean membrane already on the roof. Cut a six inch (6") piece of membrane to apply as a collar, and secure with an all stainless steel clamp.

3.13 CURB FLASHINGS

A. The flashing substrate shall be free of any dirt and loose material.

B. The underlayment ply or plies and the coal-tar elastomeric membrane (CTEM) shall be brought to two inches (2") past the top of the cant strip and adhered.

C. Starting on the roof at least six inches (6") from the roofside edge of the cant strip, adhere one (1) ply of SBS modified bitumen base sheet extending over the cant and up the vertical a minimum of eight inches (8"). Each lap of the ply sheet shall be a minimum of three inches (3").

D. Over the Type IV ply sheet starting on the roof at least eight inches (8") from the roofside edge of the cant strip, adhere the coal-tar elastomeric membrane (CTEM) extending over the cant and up the vertical a minimum of eight inches (8"). Each lap of the coal-tar elastomeric membrane (CTEM) shall be a minimum of three inches (3"), hot-air welded, and shall not coincide with the laps of the underlayment sheet.

E. Fasten the top edge of the flashings on six inch (6") centers using approved termination bar and fasteners.

F. An NRCA-approved metal counterflashing shall extend down over the flashing a minimum of four inches (4").

3.14 EDGING FLASHINGS

A. An NRCA-approved gravel stop/fascia system shall be installed in strict accordance with published instructions.

B. The 60 mil coal-tar elastomeric field membrane (CTEM) shall extend a minimum of one inch (1") below the base of the nailer, and be fastened six inches (6") on center. A metal edge of proper gauge and dimensions shall be mechanically fastened, using a continuous clip fastened six inches (6") on center, to the wood nailer over the membrane. The metal shall have a minimum of a three inch (3") flange, set in asphalt mastic and fastened into nailer a minimum of six inches (6") on center, and a minimum of a four inch (4") fascia (match existing). The lower elevation of the metal edge shall extend a minimum of one inch (1") below the juncture of the bottom edge of the wood nailer and adjoining wall surface. The metal edge shall have a minimum of one inch (1") gravel stop.

C. All metal coming in contact with bituminous material shall be primed. Strip metal edge flange with one strip of Type IV fiberglass felt set in hot bitumen extending inward from the lip of the gravel guard a minimum of three inches (3") past metal flange. Strip in fiberglass felt with 60 mil coal-tar elastomeric membrane (CTEM) flashing from the lip of the gravel guard to a minimum of three inches (3") past the edge of the fiberglass underlayment using hot bitumen. At the leading edge of the CTEM along the lip of the gravel guard, a liberal bead of silyl-terminated polyether sealant shall be applied.

NOTE: If internal flange of metal edge detail is tapered, CTEM self-adhered membrane shall be used in lieu of the 60 mil CTEM. Any laps of the CTEM self-adhered membrane shall be covered with a four inch (4") wide piece of the 60 mil CTEM field membrane centered over the lap, hot-air welded and extending the full length of the lap. At the top leading edge where the self-adhered CTEM membrane does not have a selvedge edge for welding CTEM to CTEM, a liberal bead of silyl-terminated polyether sealant shall be applied.

D. The coal-tar elastomeric membrane (CTEM) finishing strip shall have a minimum of four inch (4") lap joints that are staggered from any joints in the gravel guard.

3.15 EXPANSION JOINT DETAILS

A. Expansion joints at walls and field of the roof shall be curbed as outlined in accordance with NRCA and SMACNA guidelines. The curbs will be flashed as outlined above in Curb Flashings.

3.16 SURFACE FINISH

A. Aggregate: Shall be applied at the minimum rate of five hundred pounds (500#) per one hundred (100) square feet set in hot (liquid) flood coat of steep asphalt Type IV applied at the minimum rate of sixty pounds (60#) per one hundred (100) square feet.

3.17 MEMBRANE PROTECTION

A. Where equipment pads, wood sleepers, or walkway slabs are to be installed over the roofing membrane, an additional layer of the roofing membrane shall be installed between the roofing membrane and the pad, sleeper, or slab. Due caution shall be exercised to prevent roofing membrane damage during placement. Where required, membrane shall be welded to field membrane to prevent slippage.

3.18 OVERNIGHT SEAL

A. Shall be performed according to accepted roofing practice as outlined in the NRCA Roofing Manual.

3.19 ICE AND WATER SHIELD

A. To all eave, rake, ridge, rise wall applications and all projections, equipment and miscellaneous flashing applications, provide one (1) full sheet of the respective ice/watershield in accordance with the manufacturer's specific recommendations and application procedures. All eave applications shall extend a minimum of three feet (3') upslope beyond the interior wall, and all valley applications shall be a minimum of two (2) plies, with one (1) full sheet laminated to the deck, and one-half (1/2) sheet adhered to the base ply. All vertical transitions shall extend up the vertical surface a minimum of twelve inches (12"). All fiberglass underlayment applications shall extend a minimum of nine inches (9") onto the ice/water shield membrane, no exceptions.

END OF SECTION

SECTION 07 62 00 – SHEET METAL AND MISCELLANEOUS ACCESSORIES

PART 1 - GENERAL

1.1 AREAS COVERED

A. Refer to roof plans for areas to be included in the scope of work.

1.2 DEFINITIONS

ANSI	American National Standards Institute
ASCE	American Society of Civil Engineers
ASTM	American Society for Testing and Materials
EPA	Environmental Protection Agency
EVT	Equiviscous Temperatures
FM	Factory Mutual
IBC	International Building Code
NDL	No Dollar Limit
NESHAP	National Emissions Standards for Hazardous Air Pollutants
NRCA	National Roofing Contractors Association
OSHA	Occupational Safety & Health Administration
SBS	Styrene-Butadiene-Styrene
SDI	Steel Deck Institute
SMACNA	Sheet Metal and Air Conditioning Contractors National Association
UL	Underwriters Laboratories, Inc.

1.3 REFERENCES (INCLUDING LATEST REVISIONS)

A. Comply with governing local, state, and federal regulations, safety standards, and codes.

B. Testing Laboratory Services: Test results shall meet or exceed established standards.

C. Underwriters Laboratories, Inc. (Roofing Covering): Class A fire hazard classification.

D. American Society for Testing and Materials (ASTM)

E. The National Roofing Contractors Association (NRCA) - Roofing and Waterproofing Manual

F. Sheet Metal and Air Conditioning Contractors National Association (SMACNA) - Architectural Sheet Metal Manual

G. American Society of Civil Engineers – ASCE 7

1.4 INSTALLER QUALIFICATIONS

A. Roofing installer must be:
1. Currently prequalified with the Owner in accordance with Owner's prequalification requirements.
2. Currently in good standing with the manufacturer.

3. Installer must be an experienced single firm specializing in the type of roofing repair and/or removal and replacement work required, employing only experienced workers for the class of work in which they are employed, having at least five (5) years successful experience on projects similar in size and scope and acceptable as applicators by the Project Manager/Architect.
4. Contractor must have successfully completed previous projects warranted by the manufacturer.

B. It shall remain each Bidder's responsibility to determine his current status with the manufacturer's certification plan.

1.5 MANUFACTURER QUALIFICATIONS

A. A qualified manufacturer is one that is UL listed and has FM approvals for a membrane roofing system similar to that used for this project for a minimum of fifteen (15) years.

1.6 CONTRACT DOCUMENT QUALITY ASSURANCE

A. In the case of an inconsistency between the drawings and specifications or within either document not clarified by addendum, the better quality or greater quantity of work shall be provided in accordance with the Project Manager's/Architect's interpretation

1.7 SUBMITTALS

A. Product Data: Provide technical data, installation instructions (as applicable) and general recommendations for each specified sheet material and fabricated product.

B. Shop Drawings: Showing layout, profiles, jointing methods, fastening details, locations, and installation details.
1. Submit shop drawings, product data and mockups of all sheet metal fabrications to be used on project.
2. Shop drawings shall be single line profile engineered drawings or CAD drawings of each fabrication component on 8-1/2” x 11” sheet and shall indicate date, project name, project number, Architect/Engineer name, name of component, sheet metal type, finish, gauge, securement, and approximate dimensions of finished product. All dimensions shall be field verified prior to fabrication.
3. Submit manufacturers and contractor’s sample warranty documents.
4. Submit ES-1 certifications of sheet metal fabrication shop and ES-1 certifications of each applicable sheet metal component. (ie: edge metals, copings, & gutters).

C. Samples: Submit six inch (6”) long samples of shop fabricated and/or factory products illustrating component design, finish, color and configuration.

1.8 QUALITY ASSURANCE

A. Comply with governing local, state, and federal regulations, safety standards, and codes. Provide products of acceptable manufacturers in satisfactory use in similar service for five (5) years. Use experienced installers. Deliver, handle and store materials in accordance with manufacturer's instructions.

B. Reference Standards: Applicable portions of ASCE, SMACNA, ASTM, and NAAMM publications.

1.9 PRE-INSTALLATION CONFERENCE

A. Convene a preinstallation conference two weeks prior to commencing the Work.

B. Require attendance of parties directly affecting the Work of this Section.

C. Review condition of roof deck and installation, installation procedures and coordination with related work.

1.10 WARRANTIES

A. Contractor's Warranty Period: For roofing flashing and sheet metal, provide a written warranty which shall warrant work to be free of leaks and defects in materials and workmanship for two (2) years, starting from date of substantial completion.

B. Defects of the sheet metal occurring during the warranty period shall be promptly corrected by the contractor, and defects of the roofing shall be promptly corrected by the manufacturer at no additional cost to the Owner. Upon notification from the Owner or the Owner's representative that evidence of a defect exists, the party responsible shall immediately inform the Owner's representative of the date on which corrective work will be scheduled, and shall notify the Owner's representative when the corrective work has been completed.

PART 2 - PRODUCTS

2.1 SHEET METAL MATERIAL

A. Stainless Steel for use as pitch pans: Minimum 24-gauge, commercial quality, ASTM A 653/A 653M.

B. Hot-dipped Galvanized Steel for use as continuous clips: Minimum 22-gauge, G-90, hot-dipped galvanized metal, commercial quality, ASTM A 653/A 653M.

C. Prefinished Galvanized Sheet Steel (where visible from the ground): Shall be 24-gauge flat stock, prefinished with Kynar finish meeting ASTM A 446, forty-five and one-half inches to forty-eight inches width by one hundred twenty inches in length (45-1/2" - 48" x 120") for use as new metal edge gravel guard, cover plates, downspouts, gutters, coping and miscellaneous metal.

D. Stainless Steel: QQ-S-766, Class 304 or 316; or ASTM A 167, Type 304 or 316; form and condition most suitable for the purpose.

E. All prefinished metal color shall be as selected by Owner/Architect from manufacturer's full range of colors, including metallics.

2.2 FASTENERS

A. Fasteners shall be same metal as flashing/sheet metal, or other non-corrosive metal as recommended by sheet manufacturer for the specific application. Match finish of exposed heads with material being fastened.

B. Fasteners and fastening plates or bars shall be listed in the FM Global Approval Guide.

C. Fastener for Brick: Shall be one-fourth inch by two inches (1/4" x 2"), zinc with plated steel or stainless steel nail, one piece unit, flat head.

D. Screws: Self-taping sheet metal type with neoprene washer, as appropriate.

E. Pop Rivets: Full stainless-steel Series 42 or 44, as appropriate.

F. Continuous Clip: Concealed hold-down clip type; of same materials as coping, gravel guard, sized to suit application. Use a continuous clip, minimum 22-gauge G-90 galvanized.

2.3 RELATED MATERIAL

A. Plastic Cement: FS SS-C-153, cutback asphalt type.

B. Solder: QQ-S-571 composition best suited for purpose; use high tin content, minimum 60/40, for stainless steel and Monel alloy.

C. Sealant (for Sheet Metal): One-component polyurethane, conforming to requirements of FS TT-S-230C, non-staining and non-bleeding.

D. Miscellaneous Materials:
1. Downspout Boots: Provide and install cast iron by Neenah Foundry Company, or pre-approved equal. Provide powder coating to match adjacent downspout color.
2. Splash Blocks: Concrete, 3000 psi, 28 days. Provide and install with protection pads at all downspouts. Dimensions shall be a minimum eighteen inches wide by thirty-six inches long (18" x 36").
3. Metal Accessories: Provide and install sheet metal clips, straps, anchoring devices, and similar accessory units as required for installation of work, matching or compatible with material being installed, non-corrosive, size, and gauge required for performance.

PART 3 - EXECUTION

3.1 INSPECTION

A. Verify roof openings, curbs, pipes, sleeves, ducts or vents through roof are solidly set, cant strips and reglets in place, substrates are smooth and clean and nailing strips located.

B. Verify membrane termination and base flashings are in place, sealed and secure, prior to metal installation.

C. Beginning of installation means acceptance of conditions.

D. Compatibility: Provide materials that are recommended by manufacturers to be fully compatible with indicated substrates or provide separation materials as required to eliminate contact between incompatible materials.

3.2 PREPARATION

A. Field measure site conditions prior to fabricating work. Provide all shop drawings and mock-ups one month prior to installation to the Owner/Project Consultant for approval.

B. Install starter and edge strips and cleats before starting installation.

3.3 FABRICATION - GENERAL

A. Shop-fabricate work to greatest extent possible. Comply with details shown, and with applicable requirements of SMACNA "Architectural Sheet Metal Manual" and other recognized industry practices. Fabricate for waterproof and weather-resistant performance; with expansion provisions for running work, sufficient to permanently prevent leakage, damage or deterioration of the work. Form work to fit substrates. Comply with material manufacturer's instructions and recommendations. Form exposed sheet metal work without excessive oil-canning, buckling, and tool marks, true to line and levels as indicated, with exposed edges folded back to form hems.

B. Fabricate gravel stops/fascia, gutters/downspouts, counterflashing’s, expansion joints, and copings with new galvanized sheet metal as specified. Fabricate gravel guard and fascia to size and dimensions as indicated on the drawings. Fabricate light metal coping, gutters and downspouts as indicated. Fabricate pitch pans with new stainless steel as specified.

C. Form sheet metal on bending brake.

D. Form materials with straight lines, sharp angles and smooth curves.

E. Fold back edges on concealed side of exposed edge to form hem (1/4" minimum).

F. Weld or solder joints on parts that are to be permanently and rigidly assembled.

G. Limit single-piece lengths to ten feet (10').

H. Fabricate corner pieces with eighteen inch (18") extensions, mitered and sealed by forming as one piece.

I. Where installing flashing directly to masonry or dissimilar materials, backpaint with bituminous paint.

J. Install new metal rooftop projections. New rooftop projection details shall be as recommended in NRCA or SMACNA handbooks. All rooftop projections shall be cleaned, all joints sealed, and painted with a rust inhibitive paint.

K. All sheet metal shall be sealed and watertight.

L. Metal work should be secured so as to prevent damage from buckling or wind. Where clips are shown, fabricate as detailed.

M. All metal to receive bitumen or adhesive shall be first primed with asphalt primer.

N. All prefinished metal shall be sanded and/or abraded prior to receiving primer.

O. Separations: Provide for separation of metal from non-compatible metal or corrosive substrates by coating concealed surfaces at locations of contact, with bituminous coating or other permanent separation as recommended by manufacturer/fabricator.

P. Bed flanges of work in a thick coat of bituminous roofing cement where required for waterproof performance.

3.4 INSTALLATION

A. General: All sheet metal termination to vertical wall shall have a through-wall with receiver installed on masonry walls or prefabricated "Z" bar flashing pre-installed to fluid applied wall finished prior to installation of sheet metal termination. This applies to edge metal, base flashing closures and all vertical surface intersections. Refer to NRCA, SMACNA, and metal manufacturer's guidelines.

B. Gravel Guard/Fascia:
1. Shall be installed with expansion joints, ten feet (10') on center, one-fourth inch (1/4") expansion leeway, with a cover plate.
2. Form sections identical to profiles as shown or approved similar, to match existing building.
3. Fabricate corner pieces with minimum eighteen inch (18"), maximum forty-eight inch (48") extensions, formed and sealed with rivets and sealant, as one piece.
4. Hem exposed edges one-half inch (1/2") minimum.
5. Backpaint flashing in contact with masonry or dissimilar materials with bituminous paint. Surface sand before applying primers.
6. Integrate flashing in a manner consistent with detailing.
7. Provide and install continuous clip, minimum 22 gauge.
8. Apply sealant at horizontal juncture of gravel guard metal to exterior vertical wall.
9. Shall be fabricated in accordance with published details.
10. Install bead of sealant at metal edge juncture at exterior wall surface.

C. Coping:
1. Install new pre-manufactured metal coping for a permanent watertight installation.
2. All coping shall be pre-manufactured to include low profile standing metal seam.
3. Shall be minimum 24-gauge prefinished Kynar installed in ten foot (10') sections maximum.
4. Vertical fascia shall extend minimum two and one-half inches (2-1/2") or be minimum one and one-half inches (1-1/2") below bottom of nailer, whichever is greater.
5. Fabricate corner pieces with minimum eighteen inch (18"), maximum forty-eight inch (48") extensions, formed and sealed with rivets and sealant, as one piece.
6. Hem exposed edges one-fourth inch (1/4") minimum.
7. Provide and install continuous clip, minimum 22-gauge.
8. Shall be fabricated in accordance with published details.

D. Expansion Joint Field and at Wall:
1. Shall be as outlined by details and be in full compliance with these specifications.
2. Lock seams and end joints.
3. Fabricate corner pieces with minimum eighteen-inch (18"), maximum forty-eight-inch (48") extensions, formed and sealed with rivets and sealant, as one piece.

4. Hem exposed edges one-fourth inch (1/4") minimum.
5. Back paint flashing in contact with masonry or dissimilar materials with bituminous paint. Surface sand before applying primers.
6. Integrate flashing in a manner consistent with detailing.
7. Provide and install continuous clip, minimum 22-gauge or one gauge thicker than flashing.
8. Shall be fabricated in accordance with published details.

E. Counterflashing:
1. Provide and install new two-piece sheet metal counterflashing as required for a permanent watertight installation.
2. Saw cut brick mortar joint to receive friction fit reglet and removable counterflashing as detailed in SMACNA 7th Edition Figure 4-4D.

F. Pitch Pans –
1. Install pitch pans of 24-gauge stainless steel according to NRCA standards, minimum of six inches by six inches (6" x 6").
2. Pitch pans shall be fabricated to minimum of four inches (4") above the finished roof membrane. Seams of pitch pans shall be soldered inside and out.
3. Mastic shall be applied under pitch pan flange a minimum of one-half pound (1/2#) per linear foot.
4. All metal flanges shall be primed with asphalt primer prior to flashing installation. Inside of pitch pan shall be cleaned and primed.
5. All projections enclosed in pitch pans shall be cleaned in any manner suitable and coated with a rust inhibitive coating as approved by the Owner/Project Consultant. Coating shall be allowed to dry prior to pitch pan fill.
6. Base of pitch pans shall be filled around penetration with M-1 sealant. Sprinkle mod bit granules over sealant 1/4" deep.
7. Top finish fill shall be coal-tar urethane, with minimum fill to top of pitch pan sides.
8. Strip metal flange of pitch pan with two plies of the modified base sheet set in hot bitumen extending from the outer edge of the flange a minimum of three inches (3") inward to base of pitch pan.

G. Bonnets/Hoods:
1. Fabricate and install above all pitch pans, where necessary, or reinstall as applicable, metal bonnets over all pitch pans, NO EXCEPTIONS.
2. Bonnets/Hoods shall be manufactured with metal compatible with metal to which bonnet is to be attached.
3. On beams and other steel, weld in place bonnets fabricated from one-fourth inch (1/4") steel plate.
4. Draw band bonnets fabricated from 22-gauge galvanized steel may be used on circular projections.

3.5 FINISH

A. Backpaint concealed metal surfaces with bituminous paint where expected to be in contact with cementitious materials or dissimilar metals. Exposed surfaces to be provided with a factory applied fluorocarbon Kynar finish meeting ASTM A 446 and AAMA specification 605.2 for high performance coating.

END OF SECTION 07 62 00

SECTION 07 72 00 – ROOF ACCESSORIES

PART 1 – GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes the following:
   1. Equipment supports

1.3 SUBMITTALS

A. Product Data: For each type of roof accessory indicated. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.

B. Shop Drawings: Show fabrication and installation details for roof accessories. Show layouts of roof accessories including plans and elevations. Indicate dimensions, weights, loadings, required clearances, method of field assembly, and components. Include plans, elevations, sections, details, and attachments to other work.

C. Coordination Drawings: Roof plans, drawn to scale, and coordinating penetrations and roof-mounted items. Show the following:
   1. Size and location of roof accessories specified in this Section.
   2. Method of attaching roof accessories to roof or building structure.
   3. Other roof-mounted items including mechanical and electrical equipment, ductwork, piping, and conduit.

D. Samples: For each type of exposed factory-applied finish required and for each type of roof accessory indicated, prepared on Samples of size to adequately show color.

E. Warranty: Special warranty specified in this Section.

1.4 QUALITY ASSURANCE

A. Sheet Metal Standard: Comply with SMACNA's "Architectural Sheet Metal Manual" details for fabrication of units, including flanges and cap flashing to coordinate with type of roofing indicated.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Pack, handle, and ship roof accessories properly labeled in heavy-duty packaging to prevent damage.

1.6 PROJECT CONDITIONS

A. Field Measurements: Verify required openings for each type of roof accessory by field measurements before fabrication and indicate measurements on Shop Drawings.

1.7 COORDINATION

A. Coordinate layout and installation of roof accessories with roofing membrane, base flashing and interfacing and adjoining construction to provide a leakproof, weathertight, secure, and noncorrosive installation.
   1. With Architect's approval, adjust location of roof accessories that would interrupt roof drainage routes and roof expansion joints.

1.8 WARRANTY

A. Special Warranty on Painted Finishes: Manufacturer's standard form in which manufacturer agrees to repair finish or replace roof accessories that show evidence of deterioration of factory-applied finishes within specified warranty period.
   1. Fluoropolymer Finish: Deterioration includes, but is not limited to, the following:
      a) Color fading more than 5 Hunter units when tested according to ASTM D 2244.
      b) Chalking in excess of a No. 8 rating when tested according to ASTM D 4214.
      c) Cracking, checking, peeling, or failure of paint to adhere to bare metal.
   2. Finish Warranty Period: twenty (20) years from date of Substantial Completion.

PART 2 – PRODUCTS

2.1 MANUFACTURERS

A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, manufacturers listed in other Part 2 articles.

B. Manufacturers: Subject to compliance with requirements, provide products by one of the manufacturers listed in other Part 2 articles.

2.2 METAL MATERIALS

A. Aluminum Extrusions and Tubes: ASTM B 221 (ASTM B 221M), alloy and temper recommended by manufacturer for type of use, mill finished.

B. Steel Shapes: ASTM A 36/A 36M, hot-dip galvanized to comply with ASTM A 123/A 123M, unless otherwise indicated.

C. Steel Tube: ASTM A 500, round tube, baked-enamel finished.

D. Galvanized Steel Tube: ASTM A 500, round tube, hot-dip galvanized to comply with ASTM A 123/A 123M.

E. Galvanized Steel Pipe: ASTM A 53/A 53M.

2.3 ROOF SUPPORTS

A. Pipe Roof Supports: Adjustable height, extruded-aluminum tube, urethane insulation filled, two inches (2") in diameter, with aluminum base plates and manufacturer's recommended hardware for mounting to structure and extruded-aluminum carrier assemblies, suitable for quantity of pipe runs and sizes, with EPDM end caps. Include manufacturer's standard hardware for mounting to structure or structural roof deck.
   1. Manufacturers:
      a) Advanced Pipe Supports
   2. Pipe Support Height: As indicated.
   3. Pipe Roller Assembly: Stainless-steel roller assembly sized for supported pipes with extruded aluminum.

B. Light-Duty Pipe Roof Supports: Extruded-aluminum base assembly and Type 304 stainless-steel roller assembly for pipe sizes indicated, including manufacturer's standard hardware for mounting to structure or structural roof deck.
   1. Manufacturers:
      a) Advanced Pipe Supports.

PART 3 – EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, to verify actual locations, dimensions, and other conditions affecting performance of work.
   1. Verify that substrate is sound, dry, smooth, clean, sloped for drainage, and securely anchored and is ready to receive roof accessories.
   2. Verify dimensions of roof openings for roof accessories.
   3. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. General: Install roof accessories according to manufacturer's written instructions. Anchor roof accessories securely in place and capable of resisting forces specified. Use fasteners, separators, sealants, and other miscellaneous items as required for completing roof accessory installation. Install roof accessories to resist exposure to weather without failing, rattling, leaking, and fastener disengagement.

B. Install roof accessories no further than ten feet apart, fit to substrates and to result in watertight performance.

C. Metal Protection: Where dissimilar metals will contact each other or corrosive substrates, protect against galvanic action by painting contact surfaces with bituminous coating or by other permanent separation as recommended by manufacturer.
   1. Coat concealed side of uncoated aluminum roof accessories with bituminous coating where in contact with wood, ferrous metal, or cementitious construction.
   2. Underlayment: Where installing exposed-to-view components of roof accessories directly on cementitious or wood substrates, install a course of felt underlayment and cover with a slip sheet, or install a course of polyethylene underlayment.

3. Bed flanges in thick coat of asphalt roofing cement where required by roof accessory manufacturers for waterproof performance.

D. Install roof accessories level, plumb, true to line and elevation, and without warping, jogs in alignment, excessive oil canning, buckling, or tool marks.

E. Equipment Support Installation:
1. Set equipment support so top surface of equipment support is level and no further than ten foot apart .

3.3 TOUCH UP

A. Touch up factory-primed surfaces with compatible primer ready for field painting in accordance with Division 9 painting Sections.

B. Galvanized Surfaces: Clean field welds, bolted connections, and abraded areas and repair galvanizing to comply with ASTM A 780.

3.4 CLEANING

A. Clean exposed surfaces according to manufacturer's written instructions.

END OF SECTION

SECTION 07 92 00 - JOINT SEALANTS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
1. Nonstaining silicone joint sealants.
2. Urethane joint sealants.
3. Silyl-terminated polyether joint sealants.
4. Mildew-resistant joint sealants.
5. Polysulfide joint sealants.
6. Butyl joint sealants.
7. Latex joint sealants.

B. Related Requirements:
1. Division 01 Specification Sections apply to Work of this Section.

1.2 ACTION SUBMITTALS

A. Product Data: For each joint sealant product.

B. Joint-Sealant Schedule: Include the following information:
1. Joint sealant application, joint location, and designation.
2. Joint sealant manufacturer and product name.
3. Joint sealant formulation.
4. Joint sealant color.

1.3 INFORMATIONAL SUBMITTALS

A. Qualification Data:
1. For installer.

1.4 QUALITY ASSURANCE

A. Installer Qualifications: An authorized representative who is trained and approved by manufacturer.

1.5 FIELD CONDITIONS

A. Do not proceed with installation of joint sealants under the following conditions:
1. When ambient and substrate temperature conditions are outside limits permitted by joint sealant manufacturer.
2. When joint substrates are wet.
3. Where joint widths are less than those allowed by joint sealant manufacturer for applications indicated.
4. Where contaminants capable of interfering with adhesion have not yet been removed from joint substrates.

PART 2 - PRODUCTS

2.1 JOINT SEALANTS, GENERAL

A. Compatibility: Provide joint sealants, backings, and other related materials that are compatible with one another and with joint substrates under conditions of service and application, as demonstrated by joint sealant manufacturer, based on testing and field experience.

B. VOC Content of Interior Sealants: Sealants and sealant primers used inside the weatherproofing system shall comply with the following:
   1. Architectural sealants shall have a VOC content of 250 g/L or less.
   2. Sealants and sealant primers for nonporous substrates shall have a VOC content of 250 g/L or less.
   3. Sealants and sealant primers for nonporous substrates shall have a VOC content of 775 g/L or less.

2.2 NONSTAINING SILICONE JOINT SEALANTS

A. Nonstaining Joint Sealants: No staining of substrates when tested according to ASTM C1248.

B. Silicone, Nonstaining, S, NS, 100/50, NT: Nonstaining, single-component, non-sag, plus 100 percent and minus 50 percent movement capability, nontraffic-use, neutral-curing silicone joint sealant; ASTM C920, Type S, Grade NS, Class 100/50, Use NT.
   1. Products: Subject to compliance with requirements, provide one of the following:
      a. Pecora Corporation; 890FTS/TXTR or 890 NST.
      b. Sika Corporation U.S.; Sikasil-WS-290 FPS or Sikasil-WS-290.
      c. Tremco Incorporated; Spectrem 1.

C. Silicone, Nonstaining, S, NS, 50, NT: Nonstaining, single-component, non-sag, plus 50 percent and minus 50 percent movement capability, nontraffic-use, neutral-curing silicone joint sealant; ASTM C920, Type S, Grade NS, Class 50, Use NT.
   1. Products: Subject to compliance with requirements, provide one of the following:
      a. Dow Corning Corporation; 756 SMS or 795.
      b. GE Construction Sealants; Momentive Performance Materials Inc; SilPruf NB.
      c. Pecora Corporation; 864NST, 895NST, or 898NST.
      d. Sika Corporation U.S.; Sikasil-WS-295 FPS.
      e. Tremco Incorporated; Spectrem 2 or Spectrem 3.

D. Silicone, Nonstaining, S, NS, 100/50, T, NT: Nonstaining, single-component, non-sag, plus 100 percent and minus 50 percent movement capability, traffic- and nontraffic-use, neutral-curing silicone joint sealant; ASTM C920, Type S, Grade NS, Class 100/50, Uses T and NT.
   1. Products: Subject to compliance with requirements, provide one of the following:
      a. Dow Corning Corporation; 790.

E. Silicone, Nonstaining, M, NS, 50, NT: Nonstaining, multicomponent, non-sag, plus 50 percent and minus 50 percent movement capability, nontraffic-use, neutral-curing silicone joint sealant; ASTM C920, Type M, Grade NS, Class 50, Use NT.
   1. Products: Subject to compliance with requirements, provide one of the following:
      a. Tremco Incorporated; Spectrem 4-TS.

2.3 URETHANE JOINT SEALANTS

A. Urethane, S, NS, 25, NT: Single-component, non-sag, nontraffic-use, plus 25 percent and minus 25 percent movement capability, urethane joint sealant; ASTM C920, Type S, Grade NS, Class 25, Use NT.
   1. Products: Subject to compliance with requirements, provide one of the following:
      a. BASF Construction Chemicals - Building Systems; Sonalastic TX1.
      b. Bostik, Inc.; Chem-Calk GPS1, 900, 915, 916, or 2000.
      c. ER Systems, an ITW Company; Pacific Polymers Elasto-Thane 230 MP.
      d. Pecora Corporation; Dynatrol I-XL.
      e. Polymeric Systems, Inc.; Flexiprene 1000.
      f. Schnee-Morehead, Inc., an ITW company; Permathane SM7108.
      g. Sherwin-Williams Company (The); Stampede-1 or Stampede-TX.
      h. Sika Corporation U.S.; Sikaflex Textured Sealant.
      i. Tremco Incorporated; Dymonic.

B. Urethane, S, NS, 100/50, T, NT: Single-component, non-sag, plus 100 percent and minus 50 percent movement capability, traffic- and nontraffic-use, urethane joint sealant; ASTM C920, Type S, Grade NS, Class 100/50, Uses T and NT.
   1. Products: Subject to compliance with requirements, provide one of the following:
      a. Sika Corporation U.S.; Sikaflex 15LM.

C. Urethane, S, NS, 25, T, NT: Single-component, non-sag, plus 25 percent and minus 25 percent movement capability, traffic- and nontraffic-use, urethane joint sealant; ASTM C920, Type S, Grade NS, Class 25, Uses T and NT.
   1. Products: Subject to compliance with requirements, provide one of the following:
      a. LymTal International, Inc.; Iso-Flex 330 or Iso-Flex 875R.

D. Urethane, S, P, 35, T, NT: Single-component, pourable, plus 35 percent and minus 35 percent movement capability, traffic- and nontraffic-use, urethane joint sealant; ASTM C920, Type S, Grade P, Class 35, Uses T and NT.
   1. Products: Subject to compliance with requirements, provide one of the following:
      a. Bostik, Inc.; Chem-Calk 955-SL.

E. Urethane, S, P, 25, T, NT: Single-component, pourable, plus 25 percent and minus 25 percent movement capability, traffic- and nontraffic-use, urethane joint sealant; ASTM C920, Type S, Grade P, Class 25, Uses T and NT.
   1. Products: Subject to compliance with requirements, provide one of the following:
      a. BASF Construction Chemicals - Building Systems; Sonolastic SL 1.
      b. Pecora Corporation; NR-201.
      c. Polymeric Systems, Inc.; Flexiprene 952.
      d. Schnee-Morehead, Inc.; an ITW company; Permathane SM7101.
      e. Sherwin-Williams Company (The); Stampede 1SL.

F. Urethane, M, NS, 50, NT: Multicomponent, non-sag, plus 50 percent and minus 50 percent movement capability nontraffic-use, urethane joint sealant; ASTM C920, Type M, Grade NS, Class 50, Use NT.
   1. Products: Subject to compliance with requirements, provide one of the following:
      a. Pecora Corporation; Dynatrol II.

G. Urethane, M, NS, 25, NT: Multicomponent, non-sag, plus 25 percent and minus 25 percent movement capability, nontraffic-use, urethane joint sealant; ASTM C920, Type M, Grade NS, Class 25, Use NT.
   1. Products: Subject to compliance with requirements, provide one of the following:
      a. Sherwin-Williams Company (The); Stampede-2NS.

H. Urethane, M, NS, 50, T, NT: Multicomponent, non-sag, plus 50 percent and minus 50 percent movement capability, traffic- and nontraffic-use, urethane joint sealant; ASTM C920, Type M, Grade NS, Class 50, Uses T and NT.
   1. Products: Subject to compliance with requirements, provide one of the following:
      a. Tremco Incorporated; Dymeric 240.

I. Urethane, M, NS, 25, T, NT: Multicomponent, non-sag, plus 25 percent and minus 25 percent movement capability, traffic- and nontraffic-use, urethane joint sealant; ASTM C920, Type M, Grade NS, Class 25, Uses T and NT.
   1. Products: Subject to compliance with requirements, provide one of the following:
      a. Bostik, Inc.; Chem-Calk 505.
      b. LymTal International, Inc.; Iso-Flex 881 or Iso-Flex 885 SG.
      c. Sika Corporation U.S.; Sikaflex - 2c NS EZ Mix.

J. Urethane, M, P, 50, T, NT: Multicomponent, pourable, plus 50 percent and minus 50 percent movement capability, traffic- and nontraffic-use, urethane joint sealant; ASTM C920, Type M, Grade P, Class 50, Uses T and NT.
   1. Products: Subject to compliance with requirements, provide one of the following:
      a. LymTal International, Inc.; Iso-Flex 888QC.

K. Urethane, M, P, 25, T, NT: Multicomponent, pourable, plus 25 percent and minus 25 percent movement capability, traffic- and nontraffic-use, urethane joint sealant; ASTM C920, Type M, Grade P, Class 25, Uses T and NT.
   1. Products: Subject to compliance with requirements, provide one of the following:
      a. Bostik, Inc.; Chem-Calk 555-SL.
      b. LymTal International, Inc.; Iso-Flex 880 GB.
      c. Pecora Corporation; Dynatrol II SG or Urexpan NR 200.
      d. Sherwin-Williams Company (The); Stampede-2SL.
      e. Tremco Incorporated; THC 900/901.

2.4 SILYL-TERMINATED POLYETHER (STPE) JOINT SEALANTS

A. STPE, S, NS, 50, NT: Single-component, non-sag, plus 50 percent and minus 50 percent movement capability, nontraffic-use, silyl-terminated polyether joint sealant; ASTM C920, Type S, Grade NS, Class 50, Use NT.
   1. Products: Subject to compliance with requirements, provide one of the following:
      a. GE Construction Sealants; Momentive Performance Materials Inc; SCS7000.
      b. Pecora Corporation; DynaTrol I-XL Tru-White.
      c. Sherwin-Williams Company (The); Stampede 100.

B. STPE, S, NS, 35, NT: Single-component, non-sag, plus 35 percent and minus 35 percent movement capability, nontraffic-use, silyl-terminated polyether joint sealant; ASTM C920, Type S, Grade NS, Class 35, Use NT.
   1. Products: Subject to compliance with requirements, provide one of the following:
      a. Tremco Incorporated; Dymonic FC.

C. STPE, S, NS, 25, NT: Single-component, non-sag, plus 25 percent and minus 25 percent movement capability, nontraffic-use, silyl-terminated polyether joint sealant; ASTM C920, Type S, Grade NS, Class 25, Use NT.
   1. Products: Subject to compliance with requirements, provide one of the following:
      a. Polymeric Systems, Inc.; Sil-Thane 803.
      b. Schnee-Morehead, Inc., an ITW company; SM2100.

D. STPE, S, NS, 100/50, T, NT: Single-component, non-sag, plus 100 percent and minus 50 percent movement capability, traffic- and nontraffic-use, silyl-terminated polyether joint sealant; ASTM C920, Type S, Grade NS, Class 100, Uses T and NT.
   1. Products: Subject to compliance with requirements, provide one of the following:
      a. Soudal USA; SoudaSeal 150LM.

E. STPE, S, NS, 50, T, NT: Single-component, non-sag, plus 50 percent and minus 50 percent movement capability, traffic- and nontraffic-use, silyl-terminated polyether joint sealant; ASTM C920, Type S, Grade NS, Class 50, Uses T and NT.
   1. Products: Subject to compliance with requirements, provide one of the following:
      a. Soudal USA; SoudaSeal 50LM.

F. STPE, S, NS, 35, T, NT: Single-component, non-sag, plus 35 percent and minus 35 percent movement capability, traffic- and nontraffic-use, silyl-terminated polyether joint sealant; ASTM C920, Type S, Grade NS, Class 35, Uses T and NT.
   1. Products: Subject to compliance with requirements, provide one of the following:
      a. Soudal USA; SoudaSeal AP.

G. STPE, S, NS, 25, T, NT: Single-component, non-sag, plus 25 percent and minus 25 percent movement capability, traffic- and nontraffic-use, silyl-terminated polyether joint sealant; ASTM C920, Type S, Grade NS, Class 25, Uses T and NT.
   1. Products: Subject to compliance with requirements, provide one of the following:
      a. Soudal USA; SoudaSeal CL or SoudaSeal FC.

H. STPE, S, P, 25, T, NT: Single-component, pourable, plus 25 percent and minus 25 percent movement capability, traffic- and nontraffic-use, silyl-terminated polyether joint sealant; ASTM C920, Type S, Grade P, Class 25, Uses T and NT.
   1. Products: Subject to compliance with requirements, provide one of the following:
      a. Soudal USA; SoudaSeal SL.

2.5 MILDEW-RESISTANT JOINT SEALANTS

A. Mildew-Resistant Joint Sealants: Formulated for prolonged exposure to humidity with fungicide to prevent mold and mildew growth.

B. Silicone, Mildew Resistant, Acid Curing, S, NS, 25, NT: Mildew-resistant, single-component, non-sag, plus 25 percent and minus 25 percent movement capability, nontraffic-use, acid-curing silicone joint sealant; ASTM C920, Type S, Grade NS, Class 25, Use NT.
   1. Products: Subject to compliance with requirements, provide one of the following:
      a. Dow Corning Corporation; 786-M White.
      b. GE Construction Sealants; Momentive Performance Materials Inc.; SCS1700 Sanitary.
      c. Sika Corporation U.S.; Sikasil-GP.
      d. Soudal USA; RTV GP.
      e. Tremco Incorporated; Tremsil 200.

C. STPE, Mildew Resistant, S, NS, 50, NT: Mildew-resistant, single-component, non-sag, plus 50 percent and minus 50 percent movement capability, nontraffic-use, silyl-terminated polyether joint sealant; ASTM C920, Type S, Grade NS, Class 50, Use NT.
   1. Products: Subject to compliance with requirements, provide one of the following:
      a. BASF Construction Chemicals - Building Systems; Sonolastic 150.

2.6 POLYSULFIDE JOINT SEALANTS

A. Polysulfide, S, NS, 25, NT: Single-component, non-sag, plus 25 percent and minus 25 percent movement capability, nontraffic-use, polysulfide joint sealant; ASTM C920, Type S, Grade NS, Class 25, Use NT.
   1. Products: Subject to compliance with requirements, provide one of the following:
      a. W.R. Meadows, Inc.; Deck-O-Seal One Step.

B. Polysulfide, M, NS, 25, T, NT: Multicomponent, non-sag, plus 25 percent and minus 25 percent movement capability, nontraffic-use, polysulfide joint sealant; ASTM C920, Type M, Grade NS, Class 25, Use NT.
   1. Products: Subject to compliance with requirements, provide one of the following:
      a. W.R. Meadows, Inc.; Deck-O-Seal Gun Grade.

C. Polysulfide, M, P, 25, T, NT: Multicomponent, pourable, plus 25 percent and minus 25 percent movement capability, traffic- and nontraffic-use, polysulfide joint sealant; ASTM C920, Type M, Grade P, Class 25, Uses T and NT.
   1. Products: Subject to compliance with requirements, provide one of the following:
      a. W.R. Meadows, Inc.; Deck-O-Seal 125 or Deck-O-Seal 150.

2.7 BUTYL JOINT SEALANTS

A. Butyl-Rubber-Based Joint Sealants: ASTM C1311.
   1. Products: Subject to compliance with requirements, provide one of the following:
      a. Bostik, Inc.; Chem-Calk 300.
      b. Pecora Corporation; BC-158.

2.8 LATEX JOINT SEALANTS

A. Acrylic Latex: Acrylic latex or siliconized acrylic latex, ASTM C834, Type OP, Grade NF.
   1. Products: Subject to compliance with requirements, provide one of the following:
      a. BASF Construction Chemicals - Building Systems; Sonolac.
      b. Pecora Corporation; AC-20.
      c. Sherwin-Williams Company (The); 850A, 950A, or PowerHouse.
      d. Sika Corporation U.S.; Sikacryl-20 FC.
      e. Tremco Incorporated; Tremflex 834.

2.9 JOINT-SEALANT BACKING

A. Sealant Backing Material, General: Nonstaining; compatible with joint substrates, sealants, primers, and other joint fillers; and approved for applications indicated by sealant manufacturer based on field experience and laboratory testing.
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. BASF Construction Chemicals - Building Systems.
      b. Construction Foam Products, a division of Nomaco, Inc.

B. Cylindrical Sealant Backings: ASTM C1330, any of the following types; as approved in writing by joint sealant manufacturer for joint application indicated. Size and density to control sealant depth and otherwise contribute to producing optimum sealant performance.

C. Bond-Breaker Tape: Polyethylene tape or other plastic tape recommended by sealant manufacturer for preventing sealant from adhering to rigid, inflexible joint-filler materials or joint surfaces at back of joint. Provide self-adhesive tape where applicable.

2.10 MISCELLANEOUS MATERIALS

A. Primer: Material recommended by joint sealant manufacturer where required for adhesion of sealant to joint substrates indicated, as determined from preconstruction joint sealant-substrate tests and field tests.

B. Cleaners for Nonporous Surfaces: Chemical cleaners acceptable to manufacturers of sealants and sealant backing materials, free of oily residues or other substances capable of staining or harming joint substrates and adjacent nonporous surfaces in any way, and formulated to promote optimum adhesion of sealants to joint substrates.

C. Masking Tape: Nonstaining, nonabsorbent material compatible with joint sealants and surfaces adjacent to joints.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine joints indicated to receive joint sealants, with installer present, for compliance with requirements for joint configuration, installation tolerances, and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Surface Cleaning of Joints: Clean out joints immediately before installing joint sealants to comply with joint sealant manufacturer's written instructions and the following requirements:

1. Remove all foreign material from joint substrates that could interfere with adhesion of joint sealant, including dust, paints (except for permanent, protective coatings tested and approved for sealant adhesion and compatibility by sealant manufacturer), old joint sealants, oil, grease, waterproofing, water repellents, water, surface dirt, and frost.
2. Clean porous joint substrate surfaces by brushing, grinding, mechanical abrading, or a combination of these methods to produce a clean, sound substrate capable of developing optimum bond with joint sealants. Remove loose particles remaining after cleaning operations above by vacuuming or blowing out joints with oil-free compressed air. Porous joint substrates include the following:
    a. Concrete.
    b. Masonry.
    c. Unglazed surfaces of ceramic tile.
    d. Exterior insulation and finish systems.

3. Remove laitance and form-release agents from concrete.
4. Clean nonporous joint substrate surfaces with chemical cleaners or other means that do not stain, harm substrates, or leave residues capable of interfering with adhesion of joint sealants. Nonporous joint substrates include the following:
    a. Metal.
    b. Glass.
    c. Porcelain enamel.
    d. Glazed surfaces of ceramic tile.

B. Joint Priming: Prime joint substrates where recommended by joint sealant manufacturer or as indicated by preconstruction joint sealant-substrate tests or prior experience. Apply primer to comply with joint sealant manufacturer's written instructions. Confine primers to areas of joint sealant bond; do not allow spillage or migration onto adjoining surfaces.

C. Masking Tape: Use masking tape where required to prevent contact of sealant or primer with adjoining surfaces that otherwise would be permanently stained or damaged by such contact or by cleaning methods required to remove sealant smears. Remove tape immediately after tooling without disturbing joint seal.

3.3 INSTALLATION OF JOINT SEALANTS

A. General: Comply with joint sealant manufacturer's written installation instructions for products and applications indicated, unless more stringent requirements apply.

B. Sealant Installation Standard: Comply with recommendations in ASTM C1193 for use of joint sealants as applicable to materials, applications, and conditions indicated.

C. Install sealant backings of kind indicated to support sealants during application and at position required to produce cross-sectional shapes and depths of installed sealants relative to joint widths that allow optimum sealant movement capability.
1. Do not leave gaps between ends of sealant backings.
2. Do not stretch, twist, puncture, or tear sealant backings.
3. Remove absorbent sealant backings that have become wet before sealant application, and replace them with dry materials.

D. Install bond-breaker tape behind sealants where sealant backings are not used between sealants and backs of joints.

E. Install sealants using proven techniques that comply with the following and at the same time backings are installed:
1. Place sealants so they directly contact and fully wet joint substrates.
2. Completely fill recesses in each joint configuration.
3. Produce uniform, cross-sectional shapes and depths relative to joint widths that allow optimum sealant movement capability.

F. Tooling of Non-sag Sealants: Immediately after sealant application and before skinning or curing begins, tool sealants according to requirements specified in subparagraphs below to form smooth, uniform beads of configuration indicated; to eliminate air pockets; and to ensure contact and adhesion of sealant with sides of joint.
1. Remove excess sealant from surfaces adjacent to joints.
2. Use tooling agents that are approved in writing by sealant manufacturer and that do not discolor sealants or adjacent surfaces.
3. Provide concave joint profile per Figure 8A in ASTM C1193 unless otherwise indicated.

3.4 CLEANING

A. Clean off excess sealant or sealant smears adjacent to joints as the Work progresses by methods and with cleaning materials approved in writing by manufacturers of joint sealants and of products in which joints occur.

3.5 PROTECTION

A. Protect joint sealants during and after curing period from contact with contaminating substances and from damage resulting from construction operations or other causes so sealants are without deterioration or damage at time of Substantial Completion. If, despite such protection, damage or deterioration occurs, cut out, remove, and repair damaged or deteriorated joint sealants immediately so installations with repaired areas are indistinguishable from original work.

3.6 JOINT-SEALANT SCHEDULE

A. Joint-Sealant Application: Exterior joints in horizontal traffic surfaces.
   1. Joint Locations:
      a. Control and expansion joints in brick pavers.
      b. Isolation and contraction joints in cast-in-place concrete slabs.
      c. Tile control and expansion joints.
      d. Joints between different materials listed above.
      e. Other joints as indicated on Drawings.
   2. Joint Sealant:
      a. Urethane, S, P, 35, T, NT.
      b. Urethane, S, P, 25, T, NT.
      c. Urethane, M, P, 50, T, NT.
      d. Urethane, M, P, 25, T, NT.
      e. STPE, S, P, 25, T, NT.
      f. Polysulfide, M, P, 25, T, NT.
   3. Joint-Sealant Color: As selected by Architect from manufacturer's full range of colors.

B. Joint-Sealant Application: Exterior joints in vertical surfaces and horizontal nontraffic surfaces.
   1. Joint Locations:
      a. Construction joints in cast-in-place concrete.
      b. Joints between plant-precast architectural concrete units.
      c. Control and expansion joints in unit masonry.
      d. Joints in dimension stone cladding.
      e. Joints in exterior insulation and finish systems.
      f. Joints between metal panels.
      g. Joints between different materials listed above.
      h. Control and expansion joints in ceilings and other overhead surfaces.
      i. Other joints as indicated on Drawings.

2. Joint Sealant:
    a. Silicone, nonstaining, S, NS, 100/50, NT.
    b. Silicone, nonstaining, S, NS, 50, NT.
    c. Silicone, nonstaining, S, NS, 100/50, T, NT.
    d. Silicone, nonstaining, M, NS, 50, NT.
    e. Urethane, S, NS, 25, NT.
    f. Urethane, S, NS, 100/50, T, NT.
    g. Urethane, S, NS, 25, T, NT.
    h. Urethane, M, NS, 50, NT.
    i. Urethane, M, NS, 25, NT.
    j. Urethane, M, NS, 50, T, NT.
    k. Urethane, M, NS, 25, T, NT.
    l. STPE, S, NS, 50, NT.
    m. STPE, S, NS, 35, NT.
    n. STPE, S, NS, 25, NT.
    o. STPE, S, NS, 100/50, T, NT.
    p. STPE, S, NS, 50, T, NT.
    q. STPE, S, NS, 35, T, NT.
    r. STPE, S, NS, 25, T, NT.
    s. Polysulfide, S, NS, 25, NT.
    t. Polysulfide, M, NS, 25, T, NT.
3. Joint-Sealant Color: As selected by Architect from manufacturer's full range of colors.

C. Joint-Sealant Application: Interior joints in horizontal traffic surfaces.
1. Joint Locations:
    a. Isolation joints in cast-in-place concrete slabs.
    b. Control and expansion joints in tile flooring.
2. Joint Sealant:
    a. Urethane, S, P, 35, T, NT.
    b. Urethane, S, P, 25, T, NT.
    c. Urethane, M, P, 50, T, NT.
    d. Urethane, M, P, 25, T, NT.
    e. Polysulfide, M, P, 25, T, NT.
3. Joint-Sealant Color: As selected by Architect from manufacturer's full range of colors.

D. Joint-Sealant Application: Interior joints in vertical surfaces and horizontal nontraffic surfaces.
1. Joint Locations:
    a. Control and expansion joints on exposed interior surfaces of exterior walls.
    b. Tile control and expansion joints.
    c. Vertical joints on exposed surfaces of unit masonry, concrete, walls, and partitions.
    d. Joints on underside of plant-precast structural concrete beams andplanks.
2. Joint Sealant:
    a. Silicone, nonstaining, S, NS, 100/50, NT.
    b. Silicone, nonstaining, S, NS, 50, NT.
    c. Silicone, nonstaining, S, NS, 100/50, T, NT.
    d. Silicone, nonstaining, M, NS, 50, NT.

e. Urethane, S, NS, 25, NT.
f. Urethane, S, NS, 100/50, T, NT.
g. Urethane, S, NS, 25, T, NT.
h. Urethane, M, NS, 50, NT.
i. Urethane, M, NS, 25, NT.
j. Urethane, M, NS, 50, T, NT.
k. Urethane, M, NS, 25, T, NT.
l. STPE, S, NS, 50, NT.
m. STPE, S, NS, 35, NT.
n. STPE, S, NS, 25, NT.
o. STPE, S, NS, 100/50, T, NT.
p. STPE, S, NS, 50, T, NT.
q. STPE, S, NS, 35, T, NT.
r. STPE, S, NS, 25, T, NT.
s. Polysulfide, S, NS, 25, NT.
t. Polysulfide, M, NS, 25, T, NT.
u. Acrylic Latex.

3. Joint-Sealant Color: As selected by Architect from manufacturer's full range of colors.

E. Joint-Sealant Application: Mildew-resistant interior joints in vertical surfaces and horizontal nontraffic surfaces.
1. Joint Locations:
a. Joints between plumbing fixtures and adjoining walls, floors, and counters.
b. Tile control and expansion joints where indicated.
2. Joint Sealant:
a. Silicone, mildew resistant, acid curing, S, NS, 25, NT.
b. STPE, mildew resistant, S, NS, 50, NT.
3. Joint-Sealant Color: As selected by Architect from manufacturer's full range of colors.

F. Joint-Sealant Application: Concealed mastics.
1. Joint Locations:
a. Thresholds.
b. Sill plates.
2. Joint Sealant: Butyl-rubber based.

END OF SECTION

SECTION 07 92 19 - ACOUSTICAL JOINT SEALANTS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes: Acoustical joint sealants.
B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.
   2. Section 07 92 00 "Joint Sealants" for elastomeric, latex, and butyl-rubber-based joint sealants for nonacoustical applications.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.
B. Sustainable Design Submittals:
   1. Product Data: For sealants, indicating VOC content.

1.3 DELIVERY, STORAGE, AND HANDLING

A. Store materials not in use in tightly covered containers in well-ventilated areas with ambient temperatures continuously maintained between 40 and 95 degrees F.
   1. Maintain containers in clean condition, free of foreign materials and residue.
   2. Remove rags and waste from storage areas daily.

PART 2 - PRODUCTS

2.1 ACOUSTICAL JOINT SEALANTS

A. Acoustical joint-sealant products that effectively reduce airborne sound transmission through perimeter joints and openings in building construction, as demonstrated by testing representative assemblies in accordance with ASTM E90.
   1. Sealant shall have a VOC content of 250 g/L or less.
B. Acoustical Sealant for Concealed Joints: Manufacturer's standard nonsag, nondrying, nonhardening, nonskinning, nonstaining, gunnable, synthetic-rubber acoustical sealant.
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. OSI Sealants; Henkel Corporation.
      b. Pecora Corporation.
      c. Tremco Incorporated.
      d. USG Corporation.

2.2 MISCELLANEOUS MATERIALS

A. Primer: Material recommended by acoustical joint-sealant manufacturer where required for adhesion of sealant to joint substrates.
B. Cleaners for Nonporous Surfaces: Chemical cleaners acceptable to manufacturers of sealants and sealant backing materials, free of oily residues or other substances capable of staining or harming joint substrates and adjacent nonporous surfaces in any way, and formulated to promote optimum adhesion of sealants to joint substrates.
C. Masking Tape: Nonstaining, nonabsorbent material compatible with joint sealants and surfaces adjacent to joints.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine joints indicated to receive acoustical joint sealants, with installer present, for compliance with requirements for joint configuration, installation tolerances, and other conditions affecting performance of the Work.
B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Surface Cleaning of Joints: Clean out joints immediately before installing acoustical joint sealants to comply with joint-sealant manufacturer's written instructions.
B. Joint Priming: Prime joint substrates where recommended by acoustical joint-sealant manufacturer. Apply primer to comply with joint-sealant manufacturer's written instructions. Confine primers to areas of joint-sealant bond; do not allow spillage or migration onto adjoining surfaces.
C. Masking Tape: Use masking tape where required to prevent contact of sealant or primer with adjoining surfaces that otherwise would be permanently stained or damaged by such contact or by cleaning methods required to remove sealant smears. Remove tape immediately after tooling without disturbing joint seal.

3.3 INSTALLATION OF ACOUSTICAL JOINT SEALANTS

A. Comply with acoustical joint-sealant manufacturer's written installation instructions unless more stringent requirements apply.

3.4 CLEANING

A. Clean off excess sealant or sealant smears adjacent to joints as the Work progresses by methods and with cleaning materials approved in writing by manufacturers of acoustical joint sealants and of products in which joints occur.

3.5 PROTECTION

A. Protect acoustical joint sealants during and after curing period from contact with contaminating substances and from damage resulting from construction operations or other causes so sealants are without deterioration or damage at time of Substantial Completion. If, despite such protection, damage or deterioration occurs, cut out, remove, and repair damaged or deteriorated acoustical joint sealants immediately so installations with repaired areas are indistinguishable from original work.

END OF SECTION

SECTION 08 11 13 - HOLLOW METAL DOORS AND FRAMES

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes hollow-metal work.
B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.
   2. Section 08 11 19 "Stainless-Steel Doors and Frames" for hollow-metal doors and frames manufactured from stainless steel.
   3. Section 08 71 00 "Door Hardware" for door hardware for hollow-metal doors.

1.2 DEFINITIONS

A. Minimum Thickness: Minimum thickness of base metal without coatings according to NAAMM-HMMA 803 or SDI A250.8.

1.3 COORDINATION

A. Coordinate anchorage installation for hollow-metal frames. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors. Deliver such items to Project site in time for installation.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.
   1. Include construction details, material descriptions, core descriptions, fire-resistance ratings, and finishes.
B. Shop Drawings: Include the following:
   1. Elevations of each door type.
   2. Details of doors, including vertical- and horizontal-edge details and metal thicknesses.
   3. Frame details for each frame type, including dimensioned profiles and metal thicknesses.
   4. Locations of reinforcement and preparations for hardware.
   5. Details of each different wall opening condition.
   6. Details of anchorages, joints, field splices, and connections.
   7. Details of accessories.
   8. Details of moldings, removable stops, and glazing.
   9. Details of conduit and preparations for power, signal, and control systems.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Deliver hollow-metal work palletized, packaged, or crated to provide protection during transit and Project-site storage. Do not use non-vented plastic.
B. Deliver welded frames with two removable spreader bars across bottom of frames, tack welded to jambs and mullions.
C. Store hollow-metal work vertically under cover at Project site with head up. Place on minimum 4-inch-high wood blocking. Provide minimum 1/4-inch space between each stacked door to permit air circulation.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   1. Ceco Door; ASSA ABLOY.
   2. Curries Company; ASSA ABLOY.
B. Source Limitations: Obtain hollow-metal work from single source from single manufacturer.

2.2 INTERIOR DOORS AND FRAMES

A. Construct interior doors and frames to comply with the standards indicated for materials, fabrication, hardware locations, hardware reinforcement, tolerances, and clearances, and as specified.
B. Maximum-Duty Doors and Frames: SDI A250.8, Level 4.
   1. Physical Performance: Level A according to SDI A250.4.
   2. Doors:
      a. Type: As indicated in the Door and Frame Schedule.
      b. Thickness: 1-3/4 inches.
      c. Edge Construction: Model 1, Full Flush..
      d. Core: Vertical steel stiffener.
   3. Frames:
      a. Construction: Knocked down.
   4. Exposed Finish: Prime.

2.3 MATERIALS

A. Cold-Rolled Steel Sheet: ASTM A1008, Commercial Steel (CS), Type B; suitable for exposed applications.
B. Metallic-Coated Steel Sheet: ASTM A653, Commercial Steel (CS), Type B.
C. Frame Anchors: ASTM A879, Commercial Steel (CS), 04Z coating designation; mill phosphatized.

2.4 FABRICATION

A. Fabricate hollow-metal work to be rigid and free of defects, warp, or buckle. Accurately form metal to required sizes and profiles, with minimum radius for metal thickness. Where practical, fit and assemble units in manufacturer's plant. To ensure proper assembly at Project site, clearly identify work that cannot be permanently factory assembled before shipment.

B. Hollow-Metal Doors:
   1. Steel-Stiffened Door Cores: Provide minimum thickness 0.026-inch, steel vertical stiffeners of same material as face sheets extending full-door height, with vertical webs spaced not more than 6 inches apart. Spot weld to face sheets no more than 5 inches o.c. Fill spaces between stiffeners with glass- or mineral-fiber insulation.
   2. Top Edge Closures: Close top edges of doors with inverted closures, except provide flush closures at exterior doors of same material as face sheets.
   3. Bottom Edge Closures: Close bottom edges of doors with end closures or channels of same material as face sheets.
   4. Astragals: Provide overlapping astragal on one leaf of pairs of doors where required by NFPA 80 for fire-performance rating or where indicated. Extend minimum 3/4-inch beyond edge of door on which astragal is mounted or as required to comply with published listing of qualified testing agency.

C. Hollow-Metal Frames: Where frames are fabricated in sections due to shipping or handling limitations, provide alignment plates or angles at each joint, fabricated of same thickness metal as frames.
   1. Frames: Provide closed tubular members with no visible face seams or joints, fabricated from same material as door frame. Fasten members at crossings and to jambs by butt welding.
   2. Provide countersunk, flat- or oval-head exposed screws and bolts for exposed fasteners unless otherwise indicated.
   3. Floor Anchors: Weld anchors to bottoms of jambs with at least four spot welds per anchor; however, for slip-on drywall frames, provide anchor clips or countersunk holes at bottoms of jambs.
   4. Jamb Anchors: Provide number and spacing of anchors as follows:
      a. Masonry Type: Locate anchors not more than 16 inches from top and bottom of frame. Space anchors not more than 32 inches o.c., to match coursing, and as follows:
         1) Two anchors per jamb up to 60 inches high.
         2) Three anchors per jamb from 60 to 90 inches high.
         3) Four anchors per jamb from 90 to 120 inches high.
         4) Four anchors per jamb plus one additional anchor per jamb for each 24 inches or fraction thereof above 120 inches high.
      b. Stud-Wall Type: Locate anchors not more than 18 inches from top and bottom of frame. Space anchors not more than 32 inches o.c. and as follows:
         1) Three anchors per jamb up to 60 inches high.
         2) Four anchors per jamb from 60 to 90 inches high.
         3) Five anchors per jamb from 90 to 96 inches high.
         4) Five anchors per jamb plus one additional anchor per jamb for each 24 inches or fraction thereof above 96 inches high.
   5. Door Silencers: Drill stops to receive door silencers where specified in Section 08 71 00 "Door Hardware." Keep holes clear during construction.

D. Fabricate concealed stiffeners and edge channels from either cold- or hot-rolled steel sheet.
E. Hardware Preparation: Factory prepare hollow-metal work to receive templated mortised hardware; include cutouts, reinforcement, mortising, drilling, and tapping according to SDI A250.6, the Door Hardware Schedule, and templates.
   1. Reinforce doors and frames to receive non-templated, mortised, and surface-mounted door hardware.
   2. Comply with applicable requirements in SDI A250.6 and BHMA A156.115 for preparation of hollow-metal work for hardware.

2.5 STEEL FINISHES

A. Prime Finish: Clean, pretreat, and apply manufacturer's standard primer.
   1. Shop Primer: Manufacturer's standard, fast-curing, lead- and chromate-free primer complying with SDI A250.10; recommended by primer manufacturer for substrate; compatible with substrate and field-applied coatings despite prolonged exposure.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
B. Examine roughing-in for embedded and built-in anchors to verify actual locations before frame installation.
C. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.
D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Remove welded-in shipping spreaders installed at factory. Restore exposed finish by grinding, filling, and dressing, as required to make repaired area smooth, flush, and invisible on exposed faces.
B. Drill and tap doors and frames to receive non-templated, mortised, and surface-mounted door hardware.

3.3 INSTALLATION

A. General: Install hollow-metal work plumb, rigid, properly aligned, and securely fastened in place. Comply with Drawings and manufacturer's written instructions.
B. Hollow-Metal Frames: Install hollow-metal frames for doors, transoms, sidelites, borrowed lites, and other openings, of size and profile indicated. Comply with SDI A250.11 or NAAMM-HMMA 840 as required by standards specified.
   1. Set frames accurately in position; plumbed, aligned, and braced securely until permanent anchors are set. After wall construction is complete, remove temporary braces, leaving surfaces smooth and undamaged.

2. Floor Anchors: Provide floor anchors for each jamb and mullion that extends to floor, and secure with postinstalled expansion anchors.
3. Metal-Stud Partitions: Solidly pack mineral-fiber insulation inside frames.
4. Masonry Walls: Coordinate installation of frames to allow for solidly filling space between frames and masonry with grout.
5. Concrete Walls: Solidly fill space between frames and concrete with mineral-fiber insulation.

C. Hollow-Metal Doors: Fit hollow-metal doors accurately in frames, within clearances specified below. Shim as necessary.
1. Non-Fire-Rated Steel Doors:
a. Between Door and Frame Jambs and Head: 1/8-inch plus or minus 1/32-inch.
b. Between Edges of Pairs of Doors: 1/8-inch to 1/4-inch plus or minus 1/32-inch.
c. At Bottom of Door: 3/4-inch plus or minus 1/32-inch.
d. Between Door Face and Stop: 1/16-inch to 1/8-inch plus or minus 1/32-inch.
2. Fire-Rated Doors: Install doors with clearances according to NFPA 80.

D. Glazing: Comply with installation requirements in Section 08 80 00 "Glazing" and with hollow-metal manufacturer's written instructions.

3.4 ADJUSTING AND CLEANING

A. Final Adjustments: Check and readjust operating hardware items immediately before final inspection. Leave work in complete and proper operating condition. Remove and replace defective work, including hollow-metal work that is warped, bowed, or otherwise unacceptable.

B. Remove grout and other bonding material from hollow-metal work immediately after installation.

C. Prime-Coat Touchup: Immediately after erection, sand smooth rusted or damaged areas of prime coat and apply touchup of compatible air-drying, rust-inhibitive primer.

D. Touchup Painting: Cleaning and touchup painting of abraded areas of paint are specified in painting Sections.

END OF SECTION

SECTION 08 11 19 - STAINLESS-STEEL DOORS AND FRAMES

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Stainless steel doors and frames.
B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.
   2. Section 08 71 00 "Door Hardware" for door hardware for stainless steel doors.

1.2 COORDINATION

A. Coordinate anchorage installation for stainless steel frames. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors. Deliver such items to Project site in time for installation.
B. Coordinate requirements for installation of door hardware, electrified door hardware, and access control and security systems.

1.3 ACTION SUBMITTALS

A. Product Data:
   1. Stainless steel doors and frames.
   2. Stainless steel panels.
B. Product Data Submittals: For each product.
   1. Include construction details, material descriptions, core descriptions, and finishes.
C. Sustainable Design Submittals:
   1. Product Data: For recycled content, indicating postconsumer and preconsumer recycled content and cost.
D. Shop Drawings: Include the following:
   1. Elevations of each door type.
   2. Details of doors, including vertical and horizontal edge details and metal thicknesses.
   3. Frame details for each frame type, including dimensioned profiles and metal thicknesses.
   4. Locations of reinforcement and preparations for hardware.
   5. Details of each different wall opening condition.
   6. Details of electrical raceway and preparation for electrified hardware, access control systems, and security systems.
   7. Details of anchorages, joints, field splices, and connections.
   8. Details of accessories.
   9. Details of moldings, removable stops, and glazing.

E. Samples:
   1. Frames: Show profile, corner joint, floor and wall anchors, and silencers. Include separate section showing fixed hollow-metal panels and glazing if applicable.

F. Product Schedule: For stainless steel doors and frames, prepared by or under the supervision of supplier, using same reference numbers for details and openings as those on Drawings. Coordinate with final door hardware schedule.

1.4 DELIVERY, STORAGE, AND HANDLING

A. Deliver stainless steel doors and frames palletized, packaged, or crated to provide protection during transit and Project-site storage. Do not use nonvented plastic.

B. Deliver welded frames with two removable spreader bars across bottom of frames, tack welded to jambs and mullions.

C. Store stainless steel doors and frames under cover at Project site with head up. Place units on minimum 4-inch-high wood blocking.

D. Provide minimum 1/4-inch space between each stacked door to permit air circulation.

PART 2 - PRODUCTS

2.1 STAINLESS STEEL DOORS AND FRAMES

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   1. Ceco Door; AADG, Inc.; ASSA ABLOY.
   2. Curries, AADG, Inc.; ASSA ABLOY Group .
   3. Stainless Doors, Inc.

B. Construct stainless steel door and frame assemblies to comply with NAAMM-HMMA 866 for the application indicated, including materials, fabrication methods, hardware reinforcement, tolerances, and clearances, and as specified. Comply with SDI ANSI/A250.4, for Physical Performance Level A.

C. Doors and Frames for Aesthetic Environments: At locations indicated in the Door and Frame Schedule on Drawings.
   1. Stainless Steel Doors:
      a. Type: As indicated in the Door and Frame Schedule on Drawings.
      b. Thickness: 1-3/4 inches.
      c. Face Sheets: Type 304 stainless steel sheet, minimum thickness 0.062-inch.
      d. Edge Construction: Continuous Interlocking Vertical Edge Seam.
      e. Top and Bottom Edges: Inverted Top and Bottom Channels, minimum thickness 0.050-inch.
         1) Provide flush top and bottom closures for exterior doors, with weep holes at bottom edge.
      f. Core Construction: Polyisocyanurate, polystyrene, or polyurethane laminated to face sheets.
   2. Stainless Steel Frames:
      a. Materials: Type 304 stainless steel sheet.
      b. Construction: Knocked down.
   3. Finish: ASTM A480No. 4, Directional Satin.

2.2 MATERIALS

A. Recycled Content of Steel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than 25 percent.
B. Stainless Steel Sheet: ASTM A240, austenitic stainless steel, Type 304.
C. Steel Sheet: ASTM A1008 or ASTM A1011, commercial steel, Type B.
D. Metallic-Coated Steel Sheet: ASTM A653, commercial steel, Type B; with minimum G60 or A60 metallic coating.
E. Foam-Plastic Insulation: Manufacturer's standard urethane board insulation with maximum flame-spread and smoke-developed indexes of 75 and 450, respectively, in accordance with ASTM E84. Enclose insulation completely within door.

2.3 FABRICATION

A. Stainless Steel Door Fabrication: Provide doors rigid and free of defects, warp, or buckle. Accurately form metal to required sizes and profiles, with minimum radius for thickness of metal.
    1. Tolerances: Fabricate doors to tolerances indicated in NAAMM-HMMA 866.
    2. Stops and Moldings: Factory cut openings in doors. Provide minimum 0.038-inch-thick, stainless steel stops and moldings around glazed lites. Form corners of stops and moldings with butted or mitered hairline joints.
        a. Glazed Lites: Provide fixed stops and moldings welded on secure side of door.
        b. Coordinate rabbet width between fixed and removable stops with type of glazing and type of installation indicated.
B. Stainless Steel Frame Fabrication: Provide stainless steel frames rigid and free of defects, warp, or buckle. Accurately form metal to required sizes and profiles, with minimum radius for thickness of metal.
    1. Tolerances: Fabricate frames to tolerances indicated in NAAMM-HMMA 866.
    2. Fabricate in one piece except where handling and shipping limitations require multiple sections. Where frames are fabricated in sections, provide alignment plates or angles at each joint, fabricated of metal of same or greater thickness as frames. To ensure proper assembly at Project site, clearly identify work that cannot be permanently factory assembled before shipment.
    3. Door Silencers: Except on weather-stripped and gasketed frames, drill stops to receive door silencers as follows. Provide plastic plugs to keep holes clear during construction.
        a. Single-Door Frames: Drill stop in strike jamb to receive three door silencers.
        b. Double-Door Frames: Drill stop in head jamb to receive two door silencers.
    4. Stops and Moldings: Provide stops and moldings formed integrally with stainless steel frames around glazed lites, minimum 5/8-inch high unless otherwise indicated. Form corners of stops and moldings with butted or mitered hairline joints.
        a. Loose Stops for Glazed Lites and Panels: 0.038-inch-thick, stainless steel.
        b. Single Glazed Lites: Provide fixed stops and moldings welded on secure side of door or frame.
        c. Coordinate rabbet width between fixed and removable stops with type of glazing and type of installation.
        d. Provide stops for installation with countersunk flat- or oval-head machine screws spaced uniformly not more than 9 inches o.c. and not more than 2 inches o.c. from each corner.

C. Hardware Preparation: Factory prepare stainless steel doors and frames to receive templated mortised hardware, and electrical wiring; include cutouts, reinforcement, mortising, drilling, and tapping, in accordance with the Door Hardware Schedule on Drawings, and templates.
   1. Reinforce doors to receive nontemplated mortised and surface-mounted door hardware.
   2. Comply with ANSI/BHMA A156.115 for preparing hollow-metal doors and frames for hardware.

2.4 FINISHES

A. Stainless Steel Finishes: Remove tool and die marks and stretch lines, or blend into finish. Grind and polish surfaces to produce uniform finish, free of cross scratches. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.
B. Grain Direction: For finishes exhibiting grain, run grain vertically on door faces and frame jambs.

2.5 ACCESSORIES

A. Glazing: Comply with requirements in Section 08 80 00 "Glazing."

PART 3 - EXECUTION

3.1 PREPARATION

A. Remove welded-in shipping spreaders installed at factory. Restore exposed finish by grinding, filling, and dressing, as required to make repaired area smooth, flush, and invisible on exposed faces.
B. Prior to installation and with installation spreaders in place, adjust and securely brace stainless steel door frames for squareness, alignment, twist, and plumb to the following tolerances:
   1. Squareness: Plus or minus 1/16-inch, measured at door rabbet on a line 90 degrees from jamb, and perpendicular to frame head.
   2. Alignment: Plus or minus 1/16-inch, measured at jambs on a horizontal line parallel to plane of wall.
   3. Twist: Plus or minus 1/16-inch, measured at opposite face corners of jambs on parallel lines, and perpendicular to plane of wall.
   4. Plumbness: Plus or minus 1/16-inch, measured at jambs on a perpendicular line from head to floor.
C. Drill and tap doors and frames to receive nontemplated mortised and surface-mounted door hardware.

3.2 INSTALLATION

A. Install stainless steel doors and frames plumb, rigid, properly aligned, and securely fastened in place; comply with approved Shop Drawings and with manufacturer's written instructions.

B. Stainless Steel Frames:
   1. Set frames accurately in position; plumbed, aligned, and braced securely until permanent anchors are set. After wall construction is complete, remove temporary braces, without damage to completed Work.
      a. Where frames are fabricated in sections, field splice at approved locations by welding face joint continuously; grind, fill, dress, and make splice smooth, flush, and invisible on exposed faces.
      b. Install frames with removable glazing stops located on secure side of opening.
   2. Solidly pack mineral-fiber insulation inside frames.
   3. In-Place Concrete or Masonry Construction: Secure frames in place with postinstalled expansion anchors.
   4. Installation Tolerances: Adjust stainless steel frames for squareness, alignment, twist, and plumb to the following tolerances:
      a. Squareness: Plus or minus 1/16-inch, measured at door rabbet on a line 90 degrees from jamb, and perpendicular to frame head.
      b. Alignment: Plus or minus 1/16-inch, measured at jambs on a horizontal line parallel to plane of wall.
      c. Twist: Plus or minus 1/16-inch, measured at opposite face corners of jambs on parallel lines, and perpendicular to plane of wall.
      d. Plumbness: Plus or minus 1/16- inch, measured at jambs at floor.

C. Stainless Steel Doors: Fit and adjust stainless steel doors accurately in frames within clearances specified below:
   1. Non-Fire-Rated Doors: Comply with NAAMM-HMMA 841 and NAAMM-HMMA 866.

3.3 ADJUSTING AND CLEANING

A. Clean grout and other bonding material off stainless steel doors and frames immediately after installation.

B. Stainless Steel Touchup: Immediately after erection, smooth any scratched or damaged areas of stainless steel; polish to match undamaged finish.

END OF SECTION

SECTION 08 33 23 - OVERHEAD COILING DOORS

PART 1 - GENERAL

1.1 SUMMARY

A. Related Requirements:
1. Division 01 Specification Sections apply to Work of this Section.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Source Limitations: Obtain overhead coiling doors from single source from single manufacturer.
1. Obtain operators and controls from overhead coiling-door manufacturer.

2.2 PERFORMANCE REQUIREMENTS

A. Sound-Control Doors: Assemblies tested in a laboratory for sound-transmission-loss performance according to ASTM E90, calculated according to ASTM E413, and rated for not less than the STC value indicated.
B. Accessibility Standard: Comply with applicable provisions in the USDOJ's "2010 ADA Standards for Accessible Design," the ABA standards of the Federal agency having jurisdiction, and ICC A117.1.
C. Structural Performance, Exterior Doors: Capable of withstanding the following design wind loads:
1. Design Wind Load: Uniform pressure (velocity pressure) of 20 lbf/sq. ft., acting inward and outward.
2. Testing: According to ASTM E330 or DASMA 108 for garage doors and complying with acceptance criteria of DASMA 108.
3. Deflection Limits: Design overhead coiling doors to withstand design wind load without evidencing permanent deformation or disengagement of door components.
4. Operability under Wind Load: Design overhead coiling doors to remain operable under uniform pressure (velocity pressure) of 20-lbf/sq. ft.wind load, acting inward and outward.
D. Windborne-Debris Impact Resistance: Provide glazedand impact-protective overhead coiling doors that pass ASTM E1886 missile-impact and cyclic-pressure tests according to ASTM E1996 for Wind Zone IIIor DASMA 115for enhanced protection.
1. Large-Missile Test: For overhead coiling doors located within 30 feetof grade.
2. Small-Missile Test: For overhead coiling doors located between 30 feet and 60 feet above grade.

E. Seismic Performance: Overhead coiling doors are to withstand the effects of earthquake motions determined according to ASCE/SEI 7.
   1. Seismic Data:
      a. SS: 0.09.
      b. S1: 0.026.
      c. SMS: 0.12.
      d. SM1: 0.064.
      e. SDS: 0.081.
      f. SD1: 0.042.
      g. TL: 6.
      h. PGAM: 0.051.
      i. VS30: 260.
      j. Seismic Design Category: A.
   2. Component Importance Factor: 1.5.

2.3 MATERIALS, GENERAL

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.4 GENERAL FINISH REQUIREMENTS

A. Comply with NAAMM/NOMMA 500 for recommendations for applying and designating finishes.
B. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates areas and conditions, with installer present, for compliance with requirements for substrate construction and other conditions affecting performance of the Work.
B. Examine locations of electrical connections.
C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION, GENERAL

A. Install overhead coiling doors and operating equipment complete with necessary hardware, anchors, inserts, hangers, and equipment supports; according to manufacturer's written instructions and as specified.
B. Install overhead coiling doors, hoods, controls, and operators at the mounting locations indicated for each door.
C. Accessibility: Install overhead coiling doors, switches, and controls along accessible routes in compliance with the accessibility standard.
D. Smoke-Control Doors: Install according to NFPA 80 and NFPA 105.
E. Power-Operated Doors: Installautomatic garage doors openersaccording to UL 325.

3.3 STARTUP SERVICE

A. Engage a factory-authorized service representative to perform startup service.
   1. Complete installation and startup checks according to manufacturer's written instructions.
   2. After electrical circuitry has been energized, operate doors to confirm proper motor rotation and door performance.
   3. Test and adjust controls and safety devices. Replace damaged and malfunctioning controls and equipment.

3.4 ADJUSTING

A. Adjust hardware and moving parts to function smoothly so that doors operate easily, free of warp, twist, or distortion.
   1. Adjust exterior doors and components to be weather resistant.
B. Lubricate bearings and sliding parts as recommended by manufacturer.
C. Adjust seals to provide tight fit around entire perimeter.

END OF SECTION

SECTION 08 33 33- SECURITY GRILLES SIDE-FOLDING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Side Folding Security Grilles, manually operated.
B. Related Requirements:
   1. Section 05 50 00 "Metal Fabrications" for miscellaneous steel supports, angle-framing of grille opening, and corner guards.

1.2 ACTION SUBMITTALS

A. Product Data: For each type and size of coiling grille and accessory.
   1. Include construction details, material descriptions, dimensions of individual components, profiles for curtain components, and finishes.
   2. Include rated capacities, operating characteristics, electrical characteristics, and furnished accessories.
B. Shop Drawings: For each installation and for special components not dimensioned or detailed in manufacturer's product data.
   1. Include plans, elevations, sections, and mounting details.
   2. Include details of equipment assemblies. Indicate dimensions, required clearances, method of field assembly, components, and location and size of each field connection.
   3. Include points of attachment and their corresponding static and dynamic loads imposed on structure.
   4. Show locations of controls, locking devices, and other accessories.
C. Samples for Initial Selection: Manufacturer's finish charts showing full range of colors and textures available for units with factory-applied finishes.
   1. Include similar Samples of accessories involving color selection.

1.3 QUALITY ASSURANCE

A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer for both installation and maintenance of units required for this Project.

1.4 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of grilles that fail in materials or workmanship within specified warranty period.
   1. Warranty Period: Two years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Source Limitations: Obtain overhead coiling grilles from single source from single manufacturer.
   1. Obtain operators and controls from overhead coiling-grille manufacturer.

2.2 SIDE FOLDING SECURITY GRILLES

A. Side-Folding Open Aluminum Grilles: Basis of Design Overhead Door Coportation Model 683.
   1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
      a. Overhead Door Corporation.

B. Curtain: Constructed of 1/8-inch by 5/8-inch by 6-inch horizontal clear anodized aluminum links that slide into 5/16-inch vertical rods. Links held in place by 1/2-inch clear anodized aluminum S-126 spacer tubes on alternate rods.
   1. Panel Width: 6-5/16-inch.
   2. Finish:
      a. Aluminum clear anodized or color selected by Architect.
   3. Track:
      a. Trolley assemblies shall be 1-1/8-inch and adjustable 1-inch upward or downward without the removal of the curtain.
      b. Track shall be heavy extruded aluminum 1-3/8-inch-wide by 1-5/8-inch-igh.
   4. Locking:
      a. Provide lead post with a concealed hook bolt lock activated by a keyed cylinder or thumb turn that engages a full height wall channel. Where required, provide a top and bottom spring loaded locking post with interior thumb turn and protection or keyed cylinder and dustproof floor sockets for all drop bolts. Provide rubber bumper at the edge of locking post.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify opening sizes, tolerances and conditions are acceptable.
B. Examine substrates, areas, and conditions, with installer present, for compliance with requirements for substrate construction and other conditions affecting performance of the Work.
C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Install equipment complete with necessary hardware, anchors, and equipment supports, according to manufacturer's written instructions and as specified.
B. Securely and rigidly brace components suspended from structure. Secure guides to structural members only.
C. Fit and align assembly including hardware; level and plumb, to provide smooth operation.
D. Install perimeter trim and closures.

3.3 ADJUSTING

A. Adjust hardware and moving parts to function smoothly, so that grilles operate easily, free of warp, twist, or distortion.
B. Lubricate bearings and sliding parts as recommended by manufacturer.

3.4 CLEANING

A. Clean curtain and components using non-abrasive materials and methods recommended by manufacturer.
B. Remove lables and visible markings.
C. Touch-up, repair or replace damaged products before Substantial Completion.

3.5 PROTECTION

A. Protect installed products until completion of Project.

END OF SECTION

SECTION 08 41 13 - ALUMINUM-FRAMED ENTRANCES AND STOREFRONTS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Aluminum-framed storefront systems.
   2. Aluminum-framed entrance door systems.

B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.
   1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.

B. Shop Drawings: For aluminum-framed entrances and storefronts. Include plans, elevations, sections, full-size details, and attachments to other work.
   1. Include details of provisions for assembly expansion and contraction and for draining moisture occurring within the assembly to the exterior.
   2. Include full-size isometric details of each type of vertical-to-horizontal intersection of aluminum-framed entrances and storefronts, showing the following:
      a. Joinery, including concealed welds.
      b. Anchorage.
      c. Expansion provisions.
      d. Glazing.
   3. Include point-to-point wiring diagrams showing the following:
      a. Power requirements for each electrically operated door hardware.
      b. Location and types of switches, signal device, conduit sizes, and number and size of wires.

C. Samples for Initial Selection: For units with factory-applied color finishes.

1.3 INFORMATIONAL SUBMITTALS

A. Certificates:
   1. Energy Performance Certificates: For aluminum-framed entrances and storefronts, accessories, and components, from manufacturer.
      a. Basis for Certification: NFRC-certified energy performance values for each aluminum-framed entrance and storefront.

B. Test and Evaluation Reports:
   1. Product Test Reports: For aluminum-framed entrances and storefronts, for tests performed by qualified testing agency.

C. Qualification Statements:
   1. For installer.

D. Sample warranties.

1.4 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For aluminum-framed entrances and storefronts.

1.5 QUALITY ASSURANCE

A. Qualifications:
   1. Installers: An entity that employs installers and supervisors who are trained and approved by manufacturer and that employs a qualified glazing contractor for this Project who is certified under the North American Contractor Certification Program (NACC) for Architectural Glass & Metal (AG&M) contractors.

B. Product Options: Information on Drawings and in Specifications establishes requirements for aesthetic effects and performance characteristics of assemblies. Aesthetic effects are indicated by dimensions, arrangements, alignment, and profiles of components and assemblies as they relate to sightlines, to one another, and to adjoining construction.
   1. Do not change intended aesthetic effects, as judged solely by Architect, except with Architect's approval. If changes are proposed, submit comprehensive explanatory data to Architect for review.

1.6 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of aluminum-framed entrances and storefronts that do not comply with requirements or that fail in materials or workmanship within specified warranty period.
   1. Failures include, but are not limited to, the following:
      a. Structural failures, including, but not limited to, excessive deflection.
      b. Noise or vibration created by wind and thermal and structural movements.
      c. Deterioration of metals, metal finishes, and other materials beyond normal weathering.
      d. Water penetration through fixed glazing and framing areas.
      e. Failure of operating components.
   2. Warranty Period: Five years from date of Substantial Completion.

B. Special Finish Warranty, Anodized Finishes: Standard form in which manufacturer agrees to repair finishes or replace aluminum that shows evidence of deterioration of anodized finishes within specified warranty period.
   1. Deterioration includes, but is not limited to, the following:
      a. Chalking in excess of a No. 8 rating when tested in accordance with ASTM D214.
      b. Cracking, peeling, or chipping.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   1. Arcadia, Inc.
   2. Commercial Architectural Products, Inc.
   3. Kawneer North America, an Arconic company.
   4. Nana Wall Systems, Inc.
   5. Oldcastle BuildingEnvelope (OBE); CRH Americas.
   6. Trulite Glass & Aluminum Solutions, LLC.
   7. Tubelite Inc.

B. Source Limitations: Obtain all components of aluminum-framed entrance and storefront system, including framing spandrel panels venting windows and accessories, from single manufacturer.

2.2 PERFORMANCE REQUIREMENTS

A. Delegated Design: Engage a qualified professional engineer, as defined in Section 01 40 00 "Quality Requirements," to design aluminum-framed entrances and storefronts.

B. General Performance: Comply with performance requirements specified, as determined by testing of aluminum-framed entrances and storefronts representing those indicated for this Project without failure due to defective manufacture, fabrication, installation, or other defects in construction.
   1. Aluminum-framed entrances and storefronts shall withstand movements of supporting structure, including, but not limited to, twist, column shortening, long-term creep, and deflection from uniformly distributed and concentrated live loads.
   2. Failure also includes the following:
      a. Thermal stresses transferring to building structure.
      b. Glass breakage.
      c. Noise or vibration created by wind and thermal and structural movements.
      d. Loosening or weakening of fasteners, attachments, and other components.
      e. Failure of operating units.

C. Structural Loads:
   1. Wind Loads: As indicated on Drawings.

D. Deflection of Framing Members Supporting Glass: At design wind load, as follows:
   1. Deflection Normal to Wall Plane: Limited to 1/175 of clear span for spans of up to 13 feet 6 inches and to 1/240 of clear span plus 1/4-inch for spans greater than 13 feet 6 inches.
   2. Deflection Parallel to Glazing Plane: Limited to amount not exceeding that which reduces glazing bite to less than 75 percent of design dimension and that which reduces edge clearance between framing members and glazing or other fixed components to less than 1/8-inch.
      a. Operable Units: Provide a minimum 1/16-inch clearance between framing members and operable units.
   3. Cantilever Deflection: Limited to 2L/175 at unsupported cantilevers.

E. Structural: Test in accordance with ASTM E330 as follows:
   1. When tested at positive and negative wind-load design pressures, storefront assemblies, including entrance doors, do not evidence deflection exceeding specified limits.
   2. When tested at 150 percent of positive and negative wind-load design pressures, storefront assemblies, including entrance doors and anchorage, do not evidence material failures, structural distress, or permanent deformation of main framing members exceeding 0.2 percent of span.
   3. Test Durations: As required by design wind velocity, but not less than 10 seconds.

F. Water Penetration under Static Pressure: Test in accordance with ASTM E331 as follows:
   1. No evidence of water penetration through fixed glazing and framing areas, including entrance doors, when tested in accordance with a minimum static-air-pressure differential of 20 percent of positive wind-load design pressure, but not less than 10 lbf/sq. ft.

G. Water Penetration under Dynamic Pressure: Test in accordance with AAMA 501.1 as follows:
   1. No evidence of water penetration through fixed glazing and framing areas when tested at dynamic pressure equal to 20 percent of positive wind-load design pressure, but not less than 10 lbf/sq. ft.
   2. Maximum Water Leakage: In accordance with AAMA 501.1. Water leakage does not include water controlled by flashing and gutters, or water that is drained to exterior.

H. Thermal Movements: Allow for thermal movements resulting from ambient and surface temperature changes.
   1. Temperature Change: 120 degrees F, ambient; 180 degrees F, material surfaces.
   2. Thermal Cycling: No buckling; stress on glass; sealant failure; excess stress on framing, anchors, and fasteners; or reduction of performance when tested in accordance with AAMA 501.5.
      a. High Exterior Ambient-Air Temperature: That which produces an exterior metal-surface temperature of 180 degrees F.
      b. Low Exterior Ambient-Air Temperature: 0 degrees F.
      c. Interior Ambient-Air Temperature: 75 degrees F.

2.3 STOREFRONT SYSTEMS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   1. Arcadia, Inc.
   2. Commercial Architectural Products, Inc.
   3. Kawneer North America, an Arconic company.
   4. Oldcastle BuildingEnvelope (OBE); CRH Americas.
   5. Tubelite Inc.

B. Framing Members: Manufacturer's extruded- or formed-aluminum framing members of thickness required and reinforced as required to support imposed loads.
   1. Interior Vestibule Framing Construction: Nonthermal.
   2. Glazing System: Retained mechanically with gaskets on four sides.
   3. Glazing Plane: Center.

4. Finish: Clear anodic finish.
5. Fabrication Method: Field-fabricated stick system.
6. Aluminum: Alloy and temper recommended by manufacturer for type of use and finish indicated.
7. Steel Reinforcement: As required by manufacturer.

2.4 ENTRANCE DOOR SYSTEMS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   1. Arcadia, Inc.
   2. Commercial Architectural Products, Inc.
   3. Kawneer North America, an Arconic company.
   4. Nana Wall Systems, Inc.
   5. Oldcastle BuildingEnvelope (OBE); CRH Americas.
   6. Tubelite Inc.

B. Entrance Doors: Manufacturer's standard glazed entrance doors for manual-swing or automatic operation.
   1. Door Construction: 1-3/4-inch overall thickness, with minimum 0.125-inch-thick, extruded-aluminum tubular rail and stile members. Mechanically fasten corners with reinforcing brackets that are deeply penetrated and fillet welded or that incorporate concealed tie rods.
      a. Thermal Construction: High-performance plastic connectors separate aluminum members exposed to the exterior from members exposed to the interior.
   2. Door Design: Wide stile; 5-inch nominal width.
   3. Glazing Stops and Gaskets: Square, snap-on, extruded-aluminum stops and preformed gaskets.
   4. Finish: Match adjacent storefront framing finish.

2.5 ENTRANCE DOOR HARDWARE

A. General:
   1. Door Hardware: Hardware not specified in this Section is specified in Section 08 71 00 "Door Hardware."
   2. Cylinders: As specified in Section 08 71 00 "Door Hardware."
   3. Door Hardware on Fire Rated Aluminum Entrances: Door manufacture must approve hardware.
   4. References to BHMA Standards: Provide products complying with these standards and requirements for description, quality, and function.

B. Hardware sets for aluminum doors located in Section 08 71 00.10 "Door Hardware Schedule."
   1. Weather Stripping: Manufacturer's standard replaceable components.
   2. Weather Sweeps: Manufacturer's standard exterior-door bottom sweep with concealed fasteners on mounting strip.
   3. Thresholds: BHMA A156.21 raised thresholds beveled with a slope of not more than 1:2, with maximum height of 1/2-inch.

2.6 GLAZING

A. Glazing: Comply with Section 08 80 00 "Glazing."Glazing."

2.7 MATERIALS

A. Sheet and Plate: ASTM B209.
B. Extruded Bars, Rods, Profiles, and Tubes: ASTM B221.
C. Structural Profiles: ASTM B308.

2.8 ACCESSORIES

A. Fasteners and Accessories: Manufacturer's standard corrosion-resistant, nonstaining, nonbleeding fasteners and accessories compatible with adjacent materials.
   1. Use self-locking devices where fasteners are subject to loosening or turning out from thermal and structural movements, wind loads, or vibration.
   2. Reinforce members as required to receive fastener threads.
B. Bituminous Paint: Cold-applied asphalt-mastic paint containing no asbestos, formulated for 30-mil thickness per coat.
C. Rigid PVC filler.

2.9 FABRICATION

A. Form or extrude aluminum shapes before finishing.
B. Fabricate components that, when assembled, have the following characteristics:
   1. Profiles that are sharp, straight, and free of defects or deformations.
   2. Accurately fitted joints with ends coped or mitered.
   3. Physical and thermal isolation of glazing from framing members.
   4. Accommodations for thermal and mechanical movements of glazing and framing to maintain required glazing edge clearances.
   5. Provisions for field replacement of glazing from .
   6. Fasteners, anchors, and connection devices that are concealed from view to greatest extent possible.
C. Mechanically Glazed Framing Members: Fabricate for flush glazing without projecting stops.
D. Entrance Door Frames: Reinforce as required to support loads imposed by door operation and for installing entrance door hardware.
   1. At interior and exterior doors, provide compression weather stripping at fixed stops.
E. Entrance Doors: Reinforce doors as required for installing entrance door hardware.
F. Entrance Door Hardware Installation: Factory install entrance door hardware to the greatest extent possible. Cut, drill, and tap for factory-installed entrance door hardware before applying finishes.
G. After fabrication, clearly mark components to identify their locations in Project in accordance with Shop Drawings.

2.10 ALUMINUM FINISHES

A. Clear Anodic Finish: AAMA 611, AA-M12C22A41, Class I, 0.018 mm or thicker.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas, with installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION, GENERAL

A. Comply with manufacturer's written instructions.
B. Do not install damaged components.
C. Fit joints to produce hairline joints free of burrs and distortion.
D. Rigidly secure nonmovement joints.
E. Install anchors with separators and isolators to prevent metal corrosion and electrolytic deterioration and to prevent impeding movement of moving joints.
F. Seal perimeter and other joints watertight unless otherwise indicated.
G. Metal Protection:
    1. Where aluminum is in contact with dissimilar metals, protect against galvanic action by painting contact surfaces with materials recommended by manufacturer for this purpose or by installing nonconductive spacers.
    2. Where aluminum is in contact with concrete or masonry, protect against corrosion by painting contact surfaces with bituminous paint.
H. Set continuous sill members and flashing in full sealant bed, as specified in Section 07 92 00 "Joint Sealants," to produce weathertight installation.
I. Install joint filler behind sealant as recommended by sealant manufacturer.
J. Install components plumb and true in alignment with established lines and grades.

3.3 INSTALLATION OF GLAZING

A. Install glazing as specified in Section 08 80 00 "

3.4 INSTALLATION OF STRUCTURAL GLAZING

A. Prepare surfaces that will contact structural sealant in accordance with sealant manufacturer's written instructions, to ensure compatibility and adhesion. Preparation includes, but is not limited to, cleaning and priming surfaces.
B. Set glazing into framing in accordance with sealant manufacturer and framing manufacturer's written instructions and standard practice. Use a spacer or backer as recommended by manufacturer.
C. Set glazing with proper orientation so that coatings face exterior or interior as specified.
D. Hold glazing in place using temporary retainers of type and spacing recommended by manufacturer, until structural sealant joint has cured.
E. Apply structural sealant to completely fill cavity, in accordance with sealant manufacturer and framing manufacturer's written instructions and in compliance with local codes.
F. Apply structural sealant at temperatures indicated by sealant manufacturer for type of sealant.
G. Allow structural sealant to cure in accordance with manufacturer's written instructions.
H. Clean and protect glass as indicated in Section 08 80 00 "Glazing."

3.5 INSTALLATION OF ALUMINUM-FRAMED ENTRANCE DOORS

A. Install entrance doors to produce smooth operation and tight fit at contact points.
   1. Exterior Doors: Install to produce weathertight enclosure and tight fit at weather stripping.
   2. Field-Installed Entrance Door Hardware: Install surface-mounted entrance door hardware in accordance with entrance door hardware manufacturers' written instructions using concealed fasteners to greatest extent possible.

3.6 ERECTION TOLERANCES

A. Install aluminum-framed entrances and storefronts to comply with the following maximum tolerances:
   1. Plumb: 1/8-inch in 10 feet; 1/4-inch in 40 feet.
   2. Level: 1/8-inch in 20 feet; 1/4-inch in 40 feet.
   3. Alignment:
      a. Where surfaces abut in line or are separated by reveal or protruding element up to 1/2-inch-wide, limit offset from true alignment to 1/16-inch.
      b. Where surfaces are separated by reveal or protruding element from 1/2- to 1-inch-wide, limit offset from true alignment to 1/8 inch.
      c. Where surfaces are separated by reveal or protruding element of 1 inch wide or more, limit offset from true alignment to 1/4-inch.
   4. Location: Limit variation from plane to 1/8-inch in 12 feet; 1/2-inch over total length.

3.7 FIELD QUALITY CONTROL

A. Retain this article for testing of aluminum-framed entrances and storefronts during installation or for testing of field mockups.
B. Retain first option in "Testing Agency" Paragraph below if Owner hires an independent testing agency.
C. Tests and Inspections: Perform the following tests on representative areas of aluminum-framed entrances and storefronts.
   1. Water-Spray Test: Before installation of interior finishes has begun, areas designated by Architect shall be tested in accordance with AAMA 501.2 and shall not evidence water penetration.
      a. Perform a minimum of two tests in areas as directed by Architect.
      b. Perform tests in each test area as directed by Architect. Perform at least three tests, prior to 10, 35, and 70 percent completion.
   2. Air Leakage: ASTM E783 at 1.5 times the rate specified for laboratory testing in "Performance Requirements" Article but not more than 0.09 cfm/sq. ft. at a static-air-pressure differential of 1.57 lbf/sq. ft.
      a. Perform a minimum of two tests in areas as directed by Architect.
      b. Perform tests in each test area as directed by Architect. Perform at least three tests, prior to 10, 35, and 70 percent completion.

3. Water Penetration: ASTM E1105 at a minimum uniform static-air-pressure differential of 0.67 times the static-air-pressure differential specified for laboratory testing in "Performance Requirements" Article, but not less than 6.24 lbf/sq. ft., and shall not evidence water penetration.
4. Structural-Sealant Adhesion: Test structural sealant in accordance with recommendations in ASTM C1401, Destructive Test Method A, "Hand Pull Tab (Destructive)," Appendix X2.
    a. Test a minimum of two areas on each building facade.
    b. Repair installation areas damaged by testing.
5. Egress Door Inspections: Inspect each aluminum-framed entrance door equipped with panic hardware, each aluminum-framed entrance door located in an exit enclosure, each electrically controlled aluminum-framed egress door, and each aluminum-framed entrance door equipped with special locking arrangements, in accordance with NFPA 101, Section 7.2.1.15.

D. Aluminum-framed entrances and storefronts will be considered defective if they do not pass tests and inspections.

E. Prepare test and inspection reports.

END OF SECTION

SECTION 08 44 13 - GLAZED ALUMINUM CURTAIN WALLS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes: Glazed aluminum curtain wall systems:
   1. Conventionally glazed.
B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.
   2. Section 07 92 00 "Joint Sealants" for installation of joint sealants installed with glazed aluminum curtain walls and for sealants to the extent not specified in this Section.
   3. Section 08 80 00 "Glazing" for curtain wall glazing.

1.2 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.3 ACTION SUBMITTALS

A. Product Data:
   1. For each type of product.
      a. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.
B. Sustainable Design Submittals:
   1. Product Data: For sealants, indicating VOC content.
C. Shop Drawings: For glazed aluminum curtain walls. Include plans, elevations, sections, full-size details, and attachments to other work.
   1. Include details of provisions for assembly expansion and contraction and for draining moisture occurring within the assembly to the exterior.
   2. Show connection to and continuity with adjacent thermal, weather, air, and vapor barriers.
D. Samples for Verification: For each type of exposed finish required, in manufacturer's standard sizes.

1.4 INFORMATIONAL SUBMITTALS

A. Qualification Data:
   1. For professional engineer's experience with providing delegated design engineering services of the kind indicated, including documentation that engineer is licensed in the state in which Project is located.
B. Energy Performance Certificates: For glazed aluminum curtain walls, accessories, and components from manufacturer.
   1. Basis for Certification: NFRC-certified energy performance values for each glazed aluminum curtain wall.
C. Product Test Reports: For glazed aluminum curtain walls, for tests performed by a qualified testing agency.

1.5 CLOSEOUT SUBMITTALS

A. Maintenance Data: For glazed aluminum curtain walls to include in maintenance manuals.

1.6 QUALITY ASSURANCE

A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer and that employs a qualified glazing contractor for this Project who is certified under the North American Contractor Certification Program (NACC) for Architectural Glass & Metal (AGM) contractors and that employs glazing technicians certified under the Architectural Glass and Metal Technician (AGMT) certification program.

B. Product Options: Information on Drawings and in Specifications establishes requirements for aesthetic effects and performance characteristics of assemblies. Aesthetic effects are indicated by dimensions, arrangements, alignment, and profiles of components and assemblies as they relate to sightlines, to one another, and to adjoining construction.
   1. Do not change intended aesthetic effects, as judged solely by Architect, except with Architect's approval. If changes are proposed, submit comprehensive explanatory data to Architect for review.

1.7 WARRANTY

A. Special Assembly Warranty: Manufacturer agrees to repair or replace components of glazed aluminum curtain wall that do not comply with requirements or that fail in materials or workmanship within specified warranty period.
   1. Warranty Period: 10 years from date of Substantial Completion.

B. Special Finish Warranty, Factory-Applied Finishes: Standard form in which manufacturer agrees to repair finishes or replace aluminum that shows evidence of deterioration of baked enamel, powder coat, or organic finishes within specified warranty period.
   1. Warranty Period: 10 years from date of Substantial Completion.

C. Special Finish Warranty, Anodized Finishes: Standard form in which manufacturer agrees to repair finishes or replace aluminum that shows evidence of deterioration of anodized finishes within specified warranty period.
   1. Warranty Period: Five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Delegated Design: Engage a qualified professional engineer, as defined in Section 01 40 00 "Quality Requirements," to design glazed aluminum curtain walls.

B. General Performance: Comply with performance requirements specified, as determined by testing of glazed aluminum curtain walls representing those indicated for this Project without failure due to defective manufacture, fabrication, installation, or other defects in construction.
   1. Glazed aluminum curtain walls shall withstand movements of supporting structure, including, but not limited to, story drift, twist, column shortening, long-term creep, and deflection from uniformly distributed and concentrated live loads.

2. Failure also includes the following:
    a. Thermal stresses transferring to building structure.
    b. Glass breakage.
    c. Noise or vibration created by wind and thermal and structural movements.
    d. Loosening or weakening of fasteners, attachments, and other components.
    e. Failure of operating units.

C. Structural Loads:
1. Wind Loads: As indicated on Drawings.
2. Other Design Loads: As indicated on Drawings.

D. Deflection of Framing Members Supporting Glass: At design wind load, as follows:
1. Deflection Normal to Wall Plane: Limited to 1/175 of length of span of the framing member for lengths of up to 13 feet 6 inches and to 1/240 of length of span of the framing member plus 1/4-inch for lengths of greater than 13 feet 6 inches.
2. Deflection Parallel to Glazing Plane: Limited to amount not exceeding that which reduces glazing bite to less than 75 percent of design dimension and that which reduces edge clearance between framing members and glazing or other fixed components to less than 1/8-inch.
    a. Operable Units: Provide a minimum 1/16-inch clearance between framing members and operable units.
3. Cantilever Deflection: Limited to 2/175 of the unsupported length.

E. Structural: Test in accordance with ASTM E330 as follows:
1. When tested at positive and negative wind-load design pressures, assemblies do not evidence deflection exceeding specified limits.
2. When tested at 150 percent of positive and negative wind-load design pressures, assemblies, including anchorage, do not evidence material failures, structural distress, or permanent deformation of main framing members exceeding 0.2 percent of span.
3. Test Durations: As required by design wind velocity, but not less than 10 seconds.

F. Water Penetration under Static Pressure: Test in accordance with ASTM E331 as follows:
1. No evidence of water penetration through fixed glazing and framing areas when tested in accordance with a minimum static-air-pressure differential of 20 percent of positive wind-load design pressure, but not less than 15 lbf/sq. ft.

G. Energy Performance: Certified and labelled by manufacturer for energy performance as follows:
1. Thermal Transmittance (U-factor):
    a. Fixed Glazing and Framing Areas: U-factor for the system of not more than 0.29 Btu/sq. ft. by h by degrees F as determined in accordance with NFRC 100.
2. Solar Heat Gain Coefficient (SHGC):
    a. Fixed Glazing and Framing Areas: SHGC for the system of not more than 0.25 as determined in accordance with NFRC 200.
3. Air Leakage:
    a. Fixed Glazing and Framing Areas: Air leakage for the system of not more than 0.06 cfm/sq. ft. at a static-air-pressure differential of 6.24 lbf/sq. ft. when tested in accordance with ASTM E283.
4. Condensation Resistance Factor (CRF):
    a. Fixed Glazing and Framing Areas: CRF for the system of not less than 80 as determined in accordance with AAMA 1503.

H. Windborne-Debris Impact Resistance: Pass ASTM E1886 missile-impact and cyclic-pressure tests in accordance with ASTM E1996 for Wind Zone 3 for basic protection.
   1. Large-Missile Test: For glazing located within 30 feet f grade.
   2. Small-Missile Test: For glazing located between 30 feet and 60 feet above grade.

I. Thermal Movements: Allow for thermal movements resulting from ambient and surface temperature changes:
   1. Temperature Change: 120 degrees F, ambient; 180 degrees F, material surfaces.
   2. Thermal Cycling: No buckling; stress on glass; sealant failure; excess stress on framing, anchors, and fasteners; or reduction of performance when tested in accordance with AAMA 501.5.
      a. High Exterior Ambient-Air Temperature: That which produces an exterior metal-surface temperature of 180 degrees F.
      b. Low Exterior Ambient-Air Temperature: 0 degrees F.

2.2 GLAZED ALUMINUM CURTAIN WALL SYSTEMS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   1. Kawneer Company, Inc.; Arconic Corporation.

B. Basis-of-Design Product:
   1. 1600 Wall System 1 Curtain Wall.
      a. Sightline 2-1/2 inches.
      b. System Depth: 10-1/2 inches with steel reinforcing.
      c. Outside-glazed pressure plate format.

C. Framing Members: Manufacturer's extruded- or formed-aluminum framing members of thickness required and reinforced as required to support imposed loads.
   1. Construction: Thermally broken.
   2. Glazing System: Retained mechanically with gaskets on four sides.
   3. Glazing Plane: Front.
   4. Finish: Clear anodic finish.
   5. System: Either stick or unitized system.
   6. Aluminum: Alloy and temper recommended by manufacturer for type of use and finish indicated.
   7. Steel Reinforcement: As required by manufacturer.

D. Brackets and Reinforcements: Manufacturer's standard high-strength aluminum with nonstaining, nonferrous shims for aligning system components.

E. Entrance Door Systems: Comply with Section 08 41 13 "Aluminum-Framed Entrances and Storefronts."

2.3 SUN CONTROL

A. Sunshades: Assemblies consisting of manufacturer's standard outrigger brackets, louvers, and fascia, designed for attachment to curtain wall with mechanical fasteners.

B. Basis-of-Design Product:
   1. Versoleil Single Blade Horizontal Sunshade.
   2. Projection from Wall: As indicated on Drawings.
   3. Finish: Match adjacent glazed aluminum curtain wall.
   4. Aluminum: Alloy and temper recommended by manufacturer for type of use and finish indicated.
   5. Steel Reinforcement: As required by manufacturer.

2.4 GLAZING

A. Glazing: Comply with Section 08 80 00 "Glazing."
B. Glazing Gaskets: ASTM C509 or ASTM C864. Manufacturer's standard .
C. Glazing Sealants: As recommended by manufacturer.

2.5 MATERIALS

A. Sheet and Plate: ASTM B209.
B. Extruded Bars, Rods, Profiles, and Tubes: ASTM B221.
C. Structural Profiles: ASTM B308.
D. Steel Reinforcement:
   1. Structural Shapes, Plates, and Bars: ASTM A36.
   2. Cold-Rolled Sheet and Strip: ASTM A1008.
   3. Hot-Rolled Sheet and Strip: ASTM A1011.
E. Steel Reinforcement Primer: Manufacturer's standard zinc-rich, corrosion-resistant primer complying with SSPC-PS Guide No. 12.00; applied immediately after surface preparation and pretreatment. Select surface preparation methods in accordance with recommendations in SSPC-SP COM, and prepare surfaces in accordance with applicable SSPC standard.
F. Recycled Content of Steel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than 25 percent.

2.6 FABRICATION

A. Form or extrude aluminum shapes before finishing.
B. Weld in concealed locations to greatest extent possible to minimize distortion or discoloration of finish. Remove weld spatter and welding oxides from exposed surfaces by descaling or grinding.
C. Fabricate components that, when assembled, have the following characteristics:
   1. Profiles that are sharp, straight, and free of defects or deformations.
   2. Accurately fitted joints with ends coped or mitered.
   3. Physical and thermal isolation of glazing from framing members.
   4. Accommodations for thermal and mechanical movements of glazing and framing to maintain required glazing edge clearances.
   5. Provisions for field replacement of glazing from exterior.
   6. Fasteners, anchors, and connection devices that are concealed from view to greatest extent possible.
D. Fabricate components to resist water penetration as follows:
   1. Internal guttering system or other means to drain water passing joints, condensation occurring within framing members, and moisture migrating within glazed aluminum curtain wall to exterior.
   2. Pressure-equalized system or double barrier design with primary air and vapor barrier at interior side of glazed aluminum curtain wall and secondary seal weeped and vented to exterior.
E. Curtain-Wall Framing: Fabricate components for assembly using manufacturer's standard assembly method.

F. Factory-Assembled Frame Units:
   1. Rigidly secure nonmovement joints.
   2. Prepare surfaces that are in contact with structural sealant in accordance with sealant manufacturer's written instructions, to ensure compatibility and adhesion. Preparation includes, but is not limited to, cleaning and priming surfaces.
   3. Seal joints watertight unless otherwise indicated.
   4. Install glazing to comply with requirements in Section 08 80 00 "Glazing."
G. After fabrication, clearly mark components to identify their locations in Project in accordance with Shop Drawings.

2.7 ALUMINUM FINISHES

A. Clear Anodic Finish: AAMA 611, AA-M12C22A41, Class I, 0.018 mm or thicker.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas, with installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION, GENERAL

A. Comply with manufacturer's written instructions.
B. Do not install damaged components.
C. Fit joints to produce hairline joints free of burrs and distortion.
D. Rigidly secure nonmovement joints.
E. Install anchors with separators and isolators to prevent metal corrosion and electrolytic deterioration and to prevent impeding movement of moving joints.
F. Where welding is required, weld components in concealed locations to minimize distortion or discoloration of finish. Protect glazing surfaces from welding.
G. Seal joints watertight unless otherwise indicated.
H. Metal Protection:
   1. Where aluminum is in contact with dissimilar metals, protect against galvanic action by painting contact surfaces with primer, applying sealant or tape, or installing nonconductive spacers as recommended by manufacturer for this purpose.
   2. Where aluminum is in contact with concrete or masonry, protect against corrosion by painting contact surfaces with bituminous paint.
I. Install components to drain water passing joints, condensation occurring within framing members, and moisture migrating within glazed aluminum curtain wall to exterior.
J. Install components plumb and true in alignment with established lines and grades.

3.3 INSTALLATION OF GLAZING

A. Install glazing as specified in Section 08 80 00 "Glazing."

3.4 INSTALLATION OF WEATHERSEAL SEALANT

A. After structural sealant has completely cured, remove temporary retainers and insert backer rod between lites of glass, as recommended by sealant manufacturer.
B. Install weatherseal sealant to completely fill cavity, in accordance with sealant manufacturer's written instructions, to produce weatherproof joints.

3.5 ERECTION TOLERANCES

A. Install glazed aluminum curtain walls to comply with the following maximum tolerances:
   1. Plumb: 1/8-inch in 10 feet; 1/4-inch in 40 feet.
   2. Level: 1/8-inch in 20 feet; 1/4-inch in 40 feet.
   3. Alignment:
      a. Where surfaces abut in line or are separated by reveal or protruding element up to 1/2-inch-wide, limit offset from true alignment to 1/16-inch.
      b. Where surfaces are separated by reveal or protruding element from 1/2- to 1-nch-wide, limit offset from true alignment to 1/8-inch.
      c. Where surfaces are separated by reveal or protruding element of 1-inch-wide or more, limit offset from true alignment to 1/4-inch.
   4. Location: Limit variation from plane to 1/8-inch in 12 feet; 1/2-inch over total length.

3.6 FIELD QUALITY CONTROL

A. Field Quality-Control Testing: Perform the following test on representative areas of glazed aluminum curtain walls.
   1. Water-Spray Test: Before installation of interior finishes has begun, areas designated by Architect shall be tested in accordance with AAMA 501.2 and shall not evidence water penetration.
      a. Perform a minimum of two tests in areas as directed by Architect.
B. Glazed aluminum curtain walls will be considered defective if they do not pass tests and inspections.
C. Prepare test and inspection reports.

END OF SECTION

SECTION 08 71 00 - DOOR HARDWARE

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Hardware for fire-rated doors.
   2. Electrically operated and controlled hardware.
   3. Lock cylinders for doors with balance of hardware specified in other Sections.
   4. Thresholds.
   5. Weatherstripping and gasketing.

B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.
   2. Section 08 1113 “Hollow Metal Doors and Frames.”
   3. Section 08 3323 “Overhead Coiling Doors”: Door hardware, except cylinders.

1.2 REFERENCE STANDARDS

A. ADA Standards - 2010 ADA Standards for Accessible Design; 2010.
B. BHMA A156.1 - Standard for Butts and Hinges; 2021.
C. BHMA A156.3 - Exit Devices; 2020.
D. BHMA A156.4 - Door Controls - Closers; 2019.
E. BHMA A156.5 - Cylinders and Input Devices for Locks; 2020.
F. BHMA A156.6 - Standard for Architectural Door Trim; 2021.
G. BHMA A156.7 - Template Hinge Dimensions; 2016.
H. BHMA A156.13 - Mortise Locks & Latches Series 1000; 2022.
I. BHMA A156.16 - Auxiliary Hardware; 2018.
J. BHMA A156.21 - Thresholds; 2019.
K. BHMA A156.22 - Standard for Gasketing; 2021.
L. BHMA A156.26 - Standard for Continuous Hinges; 2021.
M. BHMA A156.28 - Standard for Recommended Practices for Mechanical Keying Systems; 2018.
N. BHMA A156.115 - Hardware Preparation in Steel Doors and Steel Frames; 2016.
O. BHMA A156.115W - Hardware Preparation in Wood Doors with Wood or Steel Frames; 2006.
P. DHI (H&S) - Sequence and Format for the Hardware Schedule; 2019.
Q. DHI (KSN) - Keying Systems and Nomenclature; 2019.
R. ICC A117.1 - Accessible and Usable Buildings and Facilities; 2017.
S. ITS (DIR) - Directory of Listed Products; Current Edition.
T. NFPA 70 - National Electrical Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.
U. NFPA 80 - Standard for Fire Doors and Other Opening Protectives; 2022.
V. NFPA 105 - Standard for Smoke Door Assemblies and Other Opening Protectives; 2022.
W. NFPA 252 - Standard Methods of Fire Tests of Door Assemblies; 2022.
X. UL (DIR) - Online Certifications Directory; Current Edition.
Y. UL 10C - Standard for Positive Pressure Fire Tests of Door Assemblies; Current Edition, Including All Revisions.
Z. UL 1784 - Standard for Air Leakage Tests of Door Assemblies; Current Edition, Including All Revisions.

1.3 ADMINISTRATIVE REQUIREMENTS

A. Coordinate the manufacture, fabrication, and installation of products that door hardware is installed on.
B. Sequence installation to ensure facility services connections are achieved in an orderly and expeditious manner.
C. Preinstallation Meeting: Convene a preinstallation meeting one week prior to commencing work of this section; require attendance by affected installers and the following:
    1. Architect.
    2. Installer's Architectural Hardware Consultant (AHC).
    3. Hardware Installer.
    4. Owner's Security Consultant.
D. Furnish templates for door and frame preparation to manufacturers and fabricators of products requiring internal reinforcement for door hardware.
E. Keying Requirements Meeting:
    1. Attendance Required:
        a. Owner.
        b. Architect.
    2. Agenda:
        a. Establish keying requirements.
        b. Verify locksets and locking hardware are functionally correct for project requirements.
        c. Verify that keying and programming complies with project requirements.
        d. Establish keying submittal schedule and update requirements.
    3. Incorporate "Keying Requirements Meeting" decisions into keying submittal upon review of door hardware keying system including, but not limited to, the following:
        a. Access control requirements.
        b. Key control system requirements.
        c. Schematic diagram of preliminary key system.
        d. Flow of traffic and extent of security required.
    4. Record minutes and distribute copies within two days after meeting to participants, with 2 copies to Architect, Owner, participants, and those affected by decisions made.
    5. Deliver established keying requirements to manufacturers.

1.4 SUBMITTALS

A. See Section 01 30 00 “Administrative Requirements” for submittal procedures.
B. Product Data: Manufacturer's catalog literature for each type of hardware, marked to clearly show products to be furnished for this Project, and includes construction details, material descriptions, finishes, and dimensions and profiles of individual components.
C. Shop Drawings - Door Hardware Schedule: A detailed listing that includes each item of hardware to be installed on each door.
    1. Prepared by or under supervision of Architectural Hardware Consultant (AHC).
    2. Comply with DHI (H&S) using door numbering scheme and hardware set numbers as indicated in Contract Documents.
        a. Submit in vertical format.
    3. Include complete description for each door listed.

D. Shop Drawings - Electrified Door Hardware: Include diagrams for power, signal, and control wiring for electrified door hardware that include details of interface with building safety and security systems. Provide elevations and diagrams for each electrified door opening as follows:
   1. Prepared by or under supervision of Architectural Hardware Consultant (AHC) and Electrified Hardware Consultant (EHC).
   2. Elevations: Include front and back elevations of each door opening showing electrified devices with connections installed and an operations narrative describing how opening operates from either side at any given time.
   3. Diagrams: Include point-to-point wiring diagrams that show each device in door opening system with related colored wire connections to each device.

E. Manufacturer's Installation Instructions: Indicate special procedures and perimeter conditions requiring special attention.

F. Manufacturer's qualification statement.

G. Installer's qualification statement.

H. Supplier's qualification statement.

I. Maintenance Data: Include data on operating hardware, lubrication requirements, and inspection procedures related to preventative maintenance.

J. Keying Schedule:
   1. Submit 3 copies of Keying Schedule in compliance with requirements established during Keying Requirements Meeting unless otherwise indicated.

K. Warranty: Submit manufacturer's warranty and ensure that forms have been completed in Owner's name and registered with manufacturer.

L. Project Record Documents: Record actual locations of concealed equipment, services, and conduit.

M. Maintenance Materials and Tools: Furnish the following for Owner's use in maintenance of project.
   1. See Section 01 60 00 “Product Requirements,” for additional provisions.

1.5 QUALITY ASSURANCE

A. Standards for Fire-Rated Doors: Maintain 1 copy of each referenced standard on site, for use by Architect and Contractor.

B. Manufacturer Qualifications: Company specializing in manufacturing products specified in this Section with minimum 3 years of documented experience.

C. Installer Qualifications: Company specializing in performing work of the type specified for commercial door hardware with at least 3 years of documented experience.

D. Supplier Qualifications: Company with certified Architectural Hardware Consultant (AHC) and Electrified Hardware Consultant (EHC) to assist in work of this section.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Package hardware items individually; label and identify each package with door opening code to match door hardware schedule.

1.7 WARRANTY

A. See Section 01 70 00 “Execution and Closeout Requirements” for additional warranty requirements.
B. Manufacturer Warranty: Provide manufacturer warranty against defects in material and workmanship for period indicated, from date of Substantial Completion. Complete forms in Owner's name and register with manufacturer. Unless otherwise indicated, warranty shall be 5 years from date of Substantial Completion.
   1. Closers: Lifetime warranty.
   2. Exit Devices: Five years, minimum.
   3. Locksets and Cylinders: Five years, minimum.
   4. Hinges: Lifetime warranty.

PART 2 - PRODUCTS

2.1 GENERAL REQUIREMENTS

A. Provide specified door hardware as required to make doors fully functional, compliant with applicable codes, and secure to extent indicated.
B. Provide individual items of single type, of same model, and by same manufacturer.
C. Closers:
   1. Provide door closer on each exterior door, unless otherwise indicated.
   2. Provide door closer on each fire-rated and smoke-rated door.
   3. Spring hinges are not an acceptable self-closing device, unless otherwise indicated.
D. Drip Guards: Provide at head of out-swinging exterior doors unless protected by roof or canopy directly overhead.
E. Weatherstripping and Gasketing:
   1. Provide weatherstripping on each exterior door at head, jambs, and meeting stiles of door pairs, unless otherwise indicated.
   2. Provide door bottom sweep on each exterior door, unless otherwise indicated.
F. Electrically Operated and/or Controlled Hardware: Provide necessary power supplies, power transfer hinges, relays, and interfaces as required for proper operation; provide wiring between hardware and control components and to building power connection in compliance with NFPA 70.
G. Antimicrobial Coating: Where indicated in the Door Hardware Schedule with "AM" code, provide manufacturer's standard silver-based coating that inhibits the growth of fungus, mold, mildew and bacteria.
H. Fasteners:
   1. Provide fasteners of proper type, size, quantity, and finish that comply with commercially recognized standards for proposed applications.
      a. Aluminum fasteners are not permitted.
      b. Provide Phillips flat-head screws with heads finished to match door surface hardware unless otherwise indicated.
   2. Provide machine screws for attachment to reinforced hollow metal and aluminum frames.
      a. Self-drilling (Tek) type screws are not permitted.
   3. Provide stainless steel machine screws and lead expansion shields for concrete and masonry substrates.
   4. Provide wall grip inserts for hollow wall construction.

5. Fire-Resistance-Rated Applications: Comply with NFPA 80.
    a. Provide wood or machine screws for hinges mortised to doors or frames, strike plates to frames, and closers to doors and frames.
    b. Provide steel through bolts for attachment of surface mounted closers, hinges, or exit devices to door panels unless proper door blocking is provided.

2.2 PERFORMANCE REQUIREMENTS

A. Provide door hardware products that comply with the following requirements:
1. Applicable provisions of federal, state, and local codes.
2. Accessibility: ADA Standards and ICC A117.1.
3. Fire-Resistance-Rated Doors: NFPA 80, listed and labeled by qualified testing agency for fire protection ratings indicated, based on testing at positive pressure in accordance with NFPA 252 or UL 10C.
4. Hardware on Fire-Resistance-Rated Doors: Listed and classified by UL (DIR), ITS (DIR), or testing firm acceptable to authorities having jurisdiction as suitable for application indicated.
5. Hardware for Smoke and Draft Control Doors: Provide door hardware that complies with local codes, and requirements of assemblies tested in accordance with UL 1784.
6. Hardware Preparation for Steel Doors and Steel Frames: BHMA A156.115.
7. Hardware Preparation for Wood Doors with Wood or Steel Frames: BHMA A156.115W.
8. Products Requiring Electrical Connection: Listed and classified by UL (DIR) as suitable for the purpose specified.

2.3 HINGES

A. Acceptable Manufacturers:
1. ABH.
2. BEST; dormakaba Group: www.bestaccess.com/#sle.
3. Hager Hinges.
4. Select Hinges.

B. Properties:
1. Butt Hinges: As applicable to each item specified.
    a. Standard Weight Hinges: Minimum of 2 permanently lubricated non-detachable bearings.
    b. Template screw hole locations.
    c. Bearing assembly installed after plating.
    d. Bearings: Concealed fully hardened bearings.
    e. Bearing Shells: Shapes consistent with barrels.
    f. Pins: Easily seated, non-rising pins.
        1) Fully plate hinge pins.
        2) Non-Removable Pins: Slotted stainless-steel screws.
    g. UL 10C listed for fire-resistance-rated doors.

2. Continuous Hinges: As applicable to each item specified.
    a. Geared Continuous Hinges: As applicable to each item specified.
        1) Non-handed.
        2) Anti-spinning through-fastener.
        3) UL 10C listed for fire-resistance-rated doors.
            (a) Metal Door Installation: Rated up to 90 minutes.
            (b) Wood Door Installation: Rated up to 60 minutes.
        4) Sufficient size to permit door to swing 180 degrees

C. Sizes: See Door Hardware Schedule.
1. Hinge Widths: As required to clear surrounding trim.
2. Sufficient size to allow 180-degree swing of door.

D. Finishes: See Door Hardware Schedule.
1. Fully polish hinges; front, back, and barrel.

E. Grades:
1. Butt Hinges: Comply with BHMA A156.1 and BHMA A156.7 for templated hinges.
2. Continuous Hinges: Comply with BHMA A156.26, Grade 1.

F. Material: Base metal as indicated for each item by BHMA material and finish designation.

G. Types:
1. Butt Hinges: Include full mortise hinges.
2. Continuous Hinges: Include geared hinges.

H. Options: As applicable to each item specified.

I. Quantities:
1. Butt Hinges: Three hinges per leaves up to 90 inches in height. Add 1 for each additional 30 inches in height or fraction thereof.
    a. Hinge weight and size unless otherwise indicated in hardware sets:
        1) For doors up to 36 inches wide and up to 1-3/4 inches thick provide hinges with a minimum thickness of 0.134-inch and a minimum of 4-1/2 inches in height.
        2) For doors from 36 inches wide up to 42 inches wide and up to 1-3/4 inches thick provide hinges with a minimum thickness of 0.145-inch and a minimum of 4-1/2 inches in height.
        3) For doors from 42 inches wide up to 48 inches wide and up to 1-3/4 inches thick provide hinges with a minimum thickness of 0.180-inch and a minimum of 5 inches in height.
        4) For doors greater than 1-3/4 inches thick provide hinges with a minimum thickness of 0.180-inch and a minimum of 5 inches in height.
2. Continuous Hinges: One per door leaf.

J. Applications: At swinging doors.
1. Provide non-removable pins at out-swinging doors with locking hardware and all exterior doors.

K. Products:
1. Butt Hinges:
    a. Concealed bearing, 5-knuckle.
2. Continuous Hinges:
    a. Aluminum geared hinges.

2.4 BOLTS

A. Acceptable Manufacturers:
1. ABH.
2. Don-Jo.
3. Rockwood, Assa Abloy Group.
4. Trimco, Allegion Group.

B. Properties:
1. Flush Bolts:
a. Manual Flush Bolts: Manually latching upon closing of door leaf.
1) Bolt Throw: 3/4-inch, minimum.
b. Automatic Flush Bolts: Automatically latching upon closing of door leaf.
1) Bolt Throw: 3/4-inch, minimum.
2. Dustproof Strikes: For bolting into floor, provide except at metal thresholds.

C. Options:
1. Extension Bolts: In leading edge of door, one bolt into floor, one bolt into top of frame.
2. Lever extensions: Provide for top bolt at oversized doors.

D. Products:
1. Manual flush bolts.
2. Automatic flush bolts.

2.5 EXIT DEVICES

A. Acceptable Manufacturers:
1. BEST, dormakaba Group: www.bestaccess.com/#sle.
2. Von Duprin, Allegion Group.

B. Properties:
1. Actuation: Full-length touchpad.
2. Touchpads: 'T" style metal touchpads and rail assemblies with matching chassis covers end caps.
3. Latch Bolts: Stainless steel deadlocking with 3/4-inch projection using latch bolt.
4. Lever Design: Match project standard lockset trims.
5. Cylinder: Include where cylinder dogging or locking trim is indicated.
6. Strike as recommended by manufacturer for application indicated.
7. Sound dampening on touch bar.
8. Dogging:
a. Non-Fire-Resistance-Rated Devices: Cylinder dogging.
b. Fire-Resistance-Rated Devices: Manual dogging not permitted.
9. Touch bar assembly on wide style exit devices to have a 1/4-inch clearance to allow for vision frames.
10. All exposed exit device components to be of architectural metals and "true" architectural finishes.
11. Handing: Field-reversible.
12. Fasteners on Back Side of Device Channel: Concealed - exposed fasteners not allowed.
13. Vertical Latch Assemblies' Operation: Gravity, without use of springs.

C. Grades: Complying with BHMA A156.3, Grade 1.
1. Provide exit devices tested and certified by UL or by a recognized independent laboratory for mechanical operational testing to 10 million cycles minimum with inspection confirming Grade 1 Loaded Forces have been maintained.

D. Options:
   1. Internally mounted switch used to signal other components.
   2. MLR: Motorized latch retraction.
E. Products:
   1. 2000.

2.6 REMOVABLE MULLIONS

A. Acceptable Manufacturers:
   1. BEST, dormakaba Group: www.bestaccess.com/#sle.
   2. Von Duprin, Allegion Group.
B. Properties:
   1. Rectangular shape 3 inches by 2 inches tubes with minimum 1/8-inch wall thickness.
   2. Furnished by the same manufacturer as exit devices.
   3. Pre-drilled holes for installation of exit device strikes.
   4. Spacers: Provide as required for proper installation, based on frame profile and dimensions.
C. Grades: Complying with BHMA A156.3.
D. Materials: Manufacturer's standard for items specified.
   1. Top and Bottom Brackets: Investment-cast steel.
E. Options:
   1. Furnish Keyed Removable “KR” feature and corresponding cylinders as specified.
      a. Mullions capable of being installed without physical key present.
      b. Physical key required to operate.
F. Applications: As indicated on Drawings and in Door Hardware Schedule.
G. Products:
   1. 822 Series.

2.7 ELECTROMAGNETIC LOCKS

A. Acceptable Manufacturers:
   1. RCI; dormakaba Group: www.dormakaba.com/us-en/#sle.
B. Properties:
C. Standards Compliance: Fire-resistance-rated applications.
   1. Comply with UL 10C, with ratings up to 90 minutes.
D. Options:
   1. Voltage: 24 VDC.
E. Installation: Connect electromagnetic locks into fire alarm interface where doors are scheduled to release with fire or sprinkler alarm condition.
   1. Mounting: Surface mounted to door and frame on secure side, with fasteners, brackets, and spacer bars as required for application.
F. Products:
   1. Standard mag locks.

2.8 LOCK CYLINDERS

A. Acceptable Manufacturers:
   1. BEST, dormakaba Group: www.bestaccess.com/#sle.
B. Properties:
   1. Lock Cylinders: Provide key access on outside of each lock, unless otherwise indicated.
      a. Provide cylinders from same manufacturer as locking device.
      b. Provide cams and/or tailpieces as required for locking devices.
      c. Provide cylinders with appropriate format interchangeable cores where indicated.
C. Grades:
   1. Standard Security Cylinders: Comply with BHMA A156.5.
D. Material:
   1. Manufacturer's standard corrosion-resistant brass alloy.
E. Types: As applicable to each item specified.
F. Applications: At locations indicated in hardware sets, and as follows
   1. As required for items with locking devices provided by other sections.
      a. When provisions for lock cylinders are referenced elsewhere in the Project Manual to this Section, provide compatible type of lock cylinder, keyed to building keying system, unless otherwise indicated.
G. Products:
   1. Rim/mortise.

2.9 MORTISE LOCKS

A. Acceptable Manufacturers:
   1. BEST, dormakaba Group: www.bestaccess.com/#sle.
B. Properties:
   1. Mechanical Locks: Manufacturer's standard.
      a. Fitting modified ANSI A115.1 door preparation.
      b. Door Thickness Coordination Fitting 1-3/4-inch- to 2-1/4-inch-thick doors.
      c. Latch: Solid, 1-piece, anti-friction, self-lubricating stainless steel.
         1) Latchbolt Throw: 3/4-inch, minimum.
      d. Auxiliary Deadlatch: 1-piece stainless steel, permanently lubricated.
      e. Backset: 2-3/4-inch.
      f. Lever Trim:
         1) Functionality: Allow the lever handle to move up to 45 degrees from horizontal position prior to engaging the latchbolt assembly.
         2) Strength: Locksets outside locked lever designed to withstand minimum 1,400 inch-lbs. of torque. In excess of that, a replaceable part will shear. Key from outside and/or inside lever will still operate lockset.
         3) Spindle: Designed to prevent forced entry from attacking of lever.
         4) Independent spring mechanism for each lever.
            (a) Trim to be self-aligning and thru-bolted.
         5) Handles: Made of forged or cast brass, bronze, or stainless-steel construction. Levers that contain a hollow cavity are not acceptable.
         6) Levers to operate a roller bearing spindle hub mechanism.
         7) Match existing #17M design.

2. Electrified Locks: Same properties as standard locks, and as follows:
   a. Voltage: 24 VDC.
   b. Function: Electrically locked (Fail Safe) or unlocked (Fail Secure), as indicated for each lock in Door Hardware Schedule.

C. Finishes: See Door Hardware Schedule.
   1. Core Faces: Match finish of lockset.

D. Grades:
   1. Comply with BHMA A156.13, Grade 1, Security Grade 2.
   2. Locksets shall match existing BEST 35H series with 45H series upgrades.

E. Options:
   1. Provide locksets made in a manufacturing facility to compliant with ISO 9001-Quality Management and ISO 14001-Environmental Management.

F. Products: Mortise locks, including standard and electrified types.
   1. 40H.

2.10 CLOSERS

A. Acceptable Manufacturers:
   1. dormakaba commercial, dormakaba Group: www.dormakaba.com/us-en/#sle.
   2. LCN, Allegion Group.

B. Properties:
   1. Surface Mounted Closers: Manufacturer's standard.
      a. Construction: Cast iron.
      b. Maximum Projection from Face of Door: 2-7/16 inches.
      c. Mechanism: Separate tamper-resistant adjusting valves for closing and latching speeds.
         1) Include delayed action feature.
      d. Hydraulic Fluid: All-weather type.
      e. Arm Assembly: Standard for product specified.
         1) Include hold-open, integral stop, or spring-loaded stop feature, as specified in Door Hardware Schedule.
         2) Parallel arm to be a heavy-duty rigid arm.
      f. Covers:
         1) Type: Standard for product selected.
            (a) Full.
         2) Material: Plastic.
         3) Finish: Painted.

C. Grades:
   1. Closers: Comply with BHMA A156.4, Grade 1.
      a. Underwriters Laboratories Compliance:
         1) Product Listing: UL (DIR) and ULC for use on fire-resistance-rated doors.
            (a) UL 228 - Door Closers-Holders, With or Without Integral Smoke Detectors.

D. Types:
   1. Rack-and-pinion, surface-mounted. 1-1/2 inches minimum bore.

E. Installation:
1. Mounting: Includes surface mounted installations.
2. Mount closers on non-public side of door and stair side of stair doors unless otherwise noted in hardware sets.
3. At outswinging exterior doors, mount closer on interior side of door.
4. Provide adapter plates, shim spacers, and blade stop spacers as required by frame and door conditions.
5. Where an overlapping astragal is included on pairs of swinging doors, provide coordinator to ensure door leaves close in proper order.

F. Products:
1. Surface Mounted:
a. QDC100.

2.11 PROTECTION PLATES

A. Acceptable Manufacturers:
1. ABH.
2. Don-Jo.
3. Rockwood, Assa Abloy Group.
4. Trimco, Allegion Group.

B. Properties:
1. Plates:
a. Armor Plates: Provide on bottom half of push side of doors that require protection from objects moving through openings that may damage door surface.
b. Kick Plates: Provide along bottom edge of push side of every wood door with closer, except aluminum storefront and glass entry doors, unless otherwise indicated.
c. Mop Plates: Provide along bottom edge of push side of doors to provide protection from cleaning liquids and equipment damage to door surface.
d. Edges: Beveled, on 4 unless otherwise indicated.

C. Grades: Comply with BHMA A156.6.

D. Material: As indicated for each item by BHMA material and finish designation.
1. Metal Properties: Stainless steel.

E. Installation:
1. Fasteners: Countersunk screw fasteners

2.12 STOPS AND HOLDERS

A. Acceptable Manufacturers:
1. ABH.
2. Don-Jo.
3. Rockwood, Assa Abloy Group.
4. Trimco, Allegion Group.

B. General: Provide overhead stop/holder when wall or floor stop is not feasible.

C. Grades:
1. Door Holders, Wall Bumpers, and Floor Stops: Comply with BHMA A156.16 and Resilient Material Retention Test as described in this standard.

D. Material: Base metal as indicated for each item by BHMA material and finish designation.
E. Types:
   1. Wall Bumpers: Bumper, concave, wall stop.
F. Installation:
   1. Non-Masonry Walls: Confirm adequate wall reinforcement has been installed to allow lasting installation of wall bumpers.
G. Products:
   1. Wall Bumpers.

2.13 THRESHOLDS

A. Acceptable Manufacturers:
   1. National Guard Products, Inc: www.ngpinc.com/#sle.
   2. Pemko, Assa Abloy Group.
   3. Reese Industries.
B. Properties:
   1. Threshold Surface: Fluted horizontal grooves across full width.
C. Grades: Thresholds: Comply with BHMA A156.21.
D. Types: As applicable to project conditions. Provide barrier-free type at every location where specified.

2.14 WEATHERSTRIPPING AND GASKETING

A. Acceptable Manufacturers:
   1. National Guard Products, Inc: www.ngpinc.com/#sle.
   2. Pemko, Assa Abloy Group.
   3. Reese Industries.
B. Properties:
   1. Adhesive-Backed Perimeter Gasketing: Silicone gasket material applied to frame with self- adhesive.
   2. Rigid, Housed, Perimeter Gasketing: Sponge silicone gasket material held in place by aluminum housing; fastened to frame stop with screws.
   3. Door Sweeps: Silicone gasket material held in place by flat aluminum housing or flange; surface mounted to face of door with screws.
C. Grades: Comply with BHMA A156.22.

2.15 MISCELLANEOUS ITEMS

A. Acceptable Manufacturers:
   1. ABH.
   2. Don-Jo.
   3. Rockwood, Assa Abloy Group.
   4. Trimco, Allegion Group.
B. Properties:
   1. Silencers: Provide at equal locations on door frame to mute sound of door's impact upon closing.
      a. Single Door: Provide three on strike jamb of frame.
      b. Pair of Doors: Provide two on head of frame, one for each door at latch side.
      c. Material: Rubber, gray color.
C. Products:
   1. Silencers.

2.16 ELECTRIFIED HARDWARE

A. Acceptable Manufacturers:
   1. BEST, dormakaba Group: www.bestaccess.com/#sle.
   2. dormakaba; dormakaba Group: www.dormakaba.com/us-en/#sle.
   3. Schlage, Allegion Group.

B. Properties:
   1. Door Position Switches: Recessed devices with balanced magnetic contacts.
      a. Power Requirement: 50mA Max, 100 VDC.
      b. SPDT configuration with magnetic tamper.
   2. Power Supply Units: Manufacturer's standard.
      a. Enclosures: Lockable NEMA Type 1, with hinged cover and knockouts.
      b. Emergency Release Terminals: Designed to release devices upon activation of fire alarm system.
      c. Auxiliary contacts for remote signaling.
      d. User-selectable time delay from 0 to 4 minutes.
      e. Fire Alarm System Interface: Standard.
         1) Fire alarm terminal with green LED indicating power is available.
      f. Output Distribution Board with indicator LEDs.
      g. On/Off LED power indicator.
   3. Power Transfers: Manufacturer's standard.
      a. Mortised Type with Wires & Connectors:
         1) Listed by UL and ULC.
         2) Stainless steel housing and spring conduit.
         3) Wire Harness: Pre-installed, twelve wire, equipped with ten 24-gauge wires and two 18-gauge wires.
         4) Accommodate 180-degree door swing.
         5) Quick-Connect Plugs: Pre-installed.
   4. Wire Harnesses: Of sufficient length, with quick connectors.
      a. Wire Harness End Connection to Power Supply or Junction Box: One end with bare leads.

C. Products:
   1. Door Position Switches:
      a. MC4.
   2. Power Supplies:
      a. RPSMLR2.
      a. DKPS Series.
   3. Power Transfers:
      a. EPT-12C.
   4. Wire Harnesses:
      a. BEST wire harnesses.

2.17 KEYS AND CORES

A. Acceptable Manufacturers:
   1. BEST, dormakaba Group: www.bestaccess.com/#sle.

B. Properties: Complying with guidelines of BHMA A156.28.
   1. Provide small format interchangeable core.
   2. Key to Owner's existing key system.
   3. Provide keying information in compliance with DHI (KSN) standards.

4. Keying Schedule: Arrange for a keying meeting, with Architect, Owner, and hardware supplier, and other involved parties to ensure locksets and locking hardware, are functionally correct and keying complies with Project requirements.
5. Keying: Master keyed.
6. Include construction keying and control keying with removable core cylinders.
7. Supply keys in following quantities:
   a. Master Keys: 4 each.
   b. Construction Master Keys: 6 each.
   c. Construction Keys: 15 each.
   d. Construction Control Keys: 2 each.
   e. Control Keys if New System: 2 each.
   f. Permanent Keys: 2 per keyed device.
8. Provide key collection envelopes, receipt cards, and index cards in quantity suitable to manage number of keys.
9. Deliver keys with identifying tags to Owner by security shipment direct from manufacturer.
10. Permanent Keys and Cores: Stamped with applicable key marking for identification. Do not include actual key cuts within visual key control marks or codes. Stamp permanent keys "Do Not Duplicate."
11. Include installation of permanent cores and return construction cores to hardware supplier. Construction cores and keys to remain property of hardware supplier.

C. Products:
   1. Standard.

2.18 FINISHES

A. Finishes: Identified in Hardware Sets.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify that doors and frames are ready to receive this work; labeled, fire-rated doors and frames are properly installed, and dimensions are as indicated on Shop Drawings.
B. Correct all defects prior to proceeding with installation.
C. Verify that electric power is available to power operated devices and of correct characteristics.

3.2 INSTALLATION

A. Install hardware in accordance with manufacturer's instructions and applicable codes.
B. Install hardware using the manufacturer’s fasteners provided. Drill and tap all screw holes located in metallic materials. Do not use “Riv-Nuts” or similar products.
C. Install hardware on fire-rated doors and frames in accordance with applicable codes and NFPA 80.
D. Install hardware for smoke and draft control doors in accordance with NFPA 105.
E. Use templates provided by hardware item manufacturer.
F. Do not install surface mounted items until application of finishes to substrate are fully completed.

G. Wash down masonry walls and complete painting or staining of doors and frames.
H. Complete finish flooring prior to installation of thresholds.
I. Set exterior door thresholds with full-width bead of elastomeric sealant at each point of contact with floor providing a continuous weather seal; anchor thresholds with stainless steel countersunk screws.
J. Include in installation for existing doors and frames any necessary field modification and field preparation of doors and frames for new hardware. Provide necessary fillers, reinforcements, and fasteners for mounting new hardware and to cover existing door and frame preparations.

3.3 FIELD QUALITY CONTROL

A. Perform field inspection and testing under provisions of Section 01 40 00 “Quality Requirements.”

3.4 ADJUSTING

A. Adjust work under provisions of Section 01 70 00 “Execution and Closeout Requirements.”
B. Adjust hardware for smooth operation.
C. Adjust gasketing for complete, continuous seal; replace if unable to make complete seal.

3.5 CLEANING

A. Clean finished hardware in accordance with manufacturer's written instructions after final adjustments have been made.
B. Clean adjacent surfaces soiled by hardware installation activities.
C. Replace items that cannot be cleaned to manufacturer's level of finish quality at no additional cost.

3.6 PROTECTION

A. Protect finished Work under provisions of Section 01 70 00 “Execution and Closeout Requirements.”
B. Do not permit adjacent Work to damage hardware or finish.

3.7 HARDWARE SCHEDULE

Manufacturer list

ABH	Architectural Builders Hardware
BES	BEST
PRE	BEST (Precision)
D-J	DON-JO
DKA	dormakaba Architectural
DKC	dormakaba Commercial
NGP	National Guard Products

Option list

Code:	Name:

END OF SECTION

SECTION 08 80 00 - GLAZING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Glass products.
   2. Laminated glass.
   3. Insulating glass.
   4. Glazing sealants.
   5. Glazing tapes.
   6. Miscellaneous glazing materials.

B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.

1.2 DEFINITIONS

A. Glass Manufacturers: Firms that produce primary glass, fabricated glass, or both, as defined in referenced glazing publications.

B. Glass Thicknesses: Indicated by thickness designations in millimeters in accordance with ASTM C1036.

C. IBC: International Building Code.

D. Interspace: Space between lites of an insulating-glass unit.

1.3 COORDINATION

A. Coordinate glazing channel dimensions to provide necessary bite on glass, minimum edge and face clearances, and adequate sealant thicknesses, with reasonable tolerances to achieve proper safety margins for glazing retention under each design load case, load case combination, and service condition.

1.4 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.
   1. Review and finalize construction schedule and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
   2. Review temporary protection requirements for glazing during and after installation.

1.5 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Glass Samples: For each type of glass product other than clear monolithic vision glass; 12 inches square.
   1. Insulating glass.

C. Glazing Schedule: List glass types and thicknesses for each size opening and location. Use same designations indicated on Drawings.

1.6 INFORMATIONAL SUBMITTALS

A. Product Certificates: For glass.
B. Product Test Reports: For fabricated glass, for tests performed by a qualified testing agency.
   1. For glazing sealants, provide test reports based on testing current sealant formulations within previous 36-month period.

1.7 QUALITY ASSURANCE

A. Fabricated-Glass Manufacturer Qualifications: A qualified manufacturer of fabricated glass units who is approved and certified by primary glass manufacturer.
B. Installer Qualifications: A qualified glazing contractor for this Project who is certified under the North American Contractor Certification Program (NACC) for Architectural Glass & Metal (AG&M) contractors and who employs glazing technicians certified under the Architectural Glass and Metal Technician (AGMT) certification program.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Protect glazing materials in accordance with manufacturer's written instructions. Prevent damage to glass and glazing materials from condensation, temperature changes, direct exposure to sun, or other causes.
B. Comply with insulating-glass manufacturer's written instructions for venting and sealing units to avoid hermetic seal ruptures due to altitude change.

1.9 FIELD CONDITIONS

A. Environmental Limitations: Do not proceed with glazing when ambient and substrate temperature conditions are outside limits permitted by glazing material manufacturers and when glazing channel substrates are wet from rain, frost, condensation, or other causes.
   1. Do not install glazing sealants when ambient and substrate temperature conditions are outside limits permitted by sealant manufacturer or are below 40 deg F.

1.10 WARRANTY

A. Manufacturer's Special Warranty for Coated-Glass Products: Manufacturer agrees to replace coated-glass units that deteriorate within specified warranty period. Deterioration of coated glass is defined as defects developed from normal use that are not attributed to glass breakage or to maintaining and cleaning coated glass contrary to manufacturer's written instructions. Defects include peeling, cracking, and other indications of deterioration in coating.
   1. Warranty Period: 10 years from date of Substantial Completion.
B. Manufacturer's Special Warranty for Laminated Glass: Manufacturer agrees to replace laminated-glass units that deteriorate within specified warranty period. Deterioration of laminated glass is defined as defects developed from normal use that are not attributed to glass breakage or to maintaining and cleaning laminated glass contrary to manufacturer's written instructions. Defects include edge separation, delamination materially obstructing vision through glass, and blemishes exceeding those allowed by referenced laminated-glass standard.
   1. Warranty Period: 10 years from date of Substantial Completion.

C. Manufacturer's Special Warranty for Insulating Glass: Manufacturer agrees to replace insulating-glass units that deteriorate within specified warranty period. Deterioration of insulating glass is defined as failure of hermetic seal under normal use that is not attributed to glass breakage or to maintaining and cleaning insulating glass contrary to manufacturer's written instructions. Evidence of failure is obstruction of vision by dust, moisture, or film on interior surfaces of glass.
   1. Warranty Period: 10 years from date of Substantial Completion.

D. Manufacturer's Special Warranty for Heat-Soaked Tempered Glass: Manufacturer agrees to replace heat-soaked tempered glass units that spontaneously break due to nickel sulfide (NiS) inclusions at a rate exceeding 0.3 percent within specified warranty period. Coverage for any other cause is excluded.
   1. Warranty Period: 10 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. General Glass Manufactures: Unless specified otherwise and subject to compliance with requirements, provide products by the following:
   1. AGC Glass Company North America, Inc.
   2. Guardian Glass; SunGuard.
   3. Pilkington North America.
   4. Viracon, Inc.
   5. Vitro Architectural Glass.

B. Source Limitations for Glass: Obtain glass from single source from single manufacturer.

C. Source Limitations for Glazing Accessories: For each product and installation method, obtain from single source from single manufacturer.

2.2 PERFORMANCE REQUIREMENTS

A. General: Installed glazing systems shall withstand normal thermal movement and wind and impact loads (where applicable) without failure, including loss or glass breakage attributable to defective manufacture, fabrication, or installation; failure of sealants or gaskets to remain watertight and airtight; deterioration of glazing materials; or other defects in construction.

B. Structural Performance: Glazing shall withstand the following design loads within limits and under conditions indicated determined in accordance with the IBC and ASTM E1300:
   1. Design Wind Pressures: As indicated on Drawings.
   2. Thermal Loads: Design glazing to resist thermal stress breakage induced by differential temperature conditions and limited air circulation within individual glass lites and insulated glazing units.

C. Safety Glazing: Where safety glazing is indicated, provide glazing that complies with 16 CFR 1201, Category II.

D. Thermal and Optical Performance Properties: Provide glass with performance properties specified, as indicated in manufacturer's published test data, based on procedures indicated below:
   1. U-Factors: Center-of-glazing values, in accordance with NFRC 100 and based on most current non-beta version of LBL's WINDOW computer program, expressed as Btu/sq. ft. by h by degrees F.
   2. SHGC and Visible Transmittance: Center-of-glazing values, in accordance with NFRC 200 and based on most current non-beta version of LBL's WINDOW computer program.
   3. Visible Reflectance: Center-of-glazing values, in accordance with NFRC 300.

E. Acoustic Performance:
   1. Exterior Glazing: 28 OITC.
   2. Interior Glazing: 37 STC.

2.3 GLASS PRODUCTS, GENERAL

A. Glazing Publications: Comply with published recommendations of glass product manufacturers and organizations below unless more stringent requirements are indicated. See these publications for glazing terms not otherwise defined in this Section or in referenced standards.
   1. NGA Publications: "Glazing Manual."
   2. IGMA Publication for Insulating Glass: SIGMA TM-3000, "North American Glazing Guidelines for Sealed Insulating Glass Units for Commercial and Residential Use."

B. Thickness: Where glass thickness is indicated, it is a minimum. Provide glass that complies with performance requirements and is not less than thickness indicated.

C. Strength: Where annealed float glass is indicated, provide annealed float glass, heat-strengthened float glass, or fully tempered float glass. Where heat-strengthened float glass is indicated, provide heat-strengthened float glass or fully tempered float glass. Where fully tempered float glass is indicated, provide fully tempered float glass.

2.4 GLASS PRODUCTS

A. Clear Annealed Float Glass: ASTM C1036, Type I, Class 1 (clear), Quality-Q3.

B. Tinted Annealed Float Glass: ASTM C1036, Type I, Class 2 (tinted), Quality-Q3.

C. Fully Tempered Float Glass: ASTM C1048, Kind FT (fully tempered), Condition A (uncoated) unless otherwise indicated, Type I, Class 1 (clear) or Class 2 (tinted) as indicated, Quality-Q3.
   1. Fabrication Process: By horizontal (roller-hearth) process with roll-wave distortion parallel to bottom edge of glass as installed unless otherwise indicated.

D. Heat-Strengthened Float Glass: ASTM C1048, Kind HS (heat strengthened), Type I, Condition A (uncoated) unless otherwise indicated, Type I, Class 1 (clear) or Class 2 (tinted) as indicated, Quality-Q3.
   1. Fabrication Process: By horizontal (roller-hearth) process with roll-wave distortion parallel to bottom edge of glass as installed unless otherwise indicated.

E. Reflective- and Low-E-Coated Vision Glass: ASTM C1376.

2.5 LAMINATED GLASS

A. Laminated Glass: ASTM C1172. Use materials that have a proven record of no tendency to bubble, discolor, or lose physical and mechanical properties after fabrication and installation.
   1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
      a. Eastman Chemical Company.
      b. Kuraray America, Inc.
   2. Construction: Laminate glass with polyvinyl butyral interlayer, ionoplast interlayer, or, cast-in-place and cured-transparent-resin interlayer to comply with interlayer manufacturer's written instructions.
   3. Interlayer Thickness: Provide thickness not less than that indicated and as needed to comply with requirements.
   4. Interlayer Color: Clear unless otherwise indicated.

2.6 INSULATING GLASS

A. Insulating-Glass Units: Factory-assembled units consisting of sealed lites of glass separated by a dehydrated interspace, qualified in accordance with ASTM E2190.
   1. Sealing System: Dual seal, with manufacturer's standard primary and secondary sealants.
   2. Desiccant: Molecular sieve or silica gel, or a blend of both.

2.7 GLAZING SEALANTS

A. General:
   1. Compatibility: Compatible with one another and with other materials they contact, including glass products, seals of insulating-glass units, and glazing channel substrates, under conditions of service and application, as demonstrated by sealant manufacturer based on testing and field experience.
   2. Suitability: Comply with sealant and glass manufacturers' written instructions for selecting glazing sealants suitable for applications indicated and for conditions existing at time of installation.
   3. Colors of Exposed Glazing Sealants: As selected by Architect from manufacturer's full range of industry colors.

2.8 GLAZING TAPES

A. Back-Bedding Mastic Glazing Tapes: Preformed, butyl-based, 100 percent solids elastomeric tape; nonstaining and nonmigrating in contact with nonporous surfaces; with or without spacer rod as recommended in writing by tape and glass manufacturers for application indicated; and complying with ASTM C1281 and AAMA 800 for products indicated below:
   1. AAMA 806.3 tape, for glazing applications in which tape is subject to continuous pressure.
   2. AAMA 807.3 tape, for glazing applications in which tape is not subject to continuous pressure.

2.9 MISCELLANEOUS GLAZING MATERIALS

A. General: Provide products of material, size, and shape complying with referenced glazing standard, recommended in writing by manufacturers of glass and other glazing materials for application indicated, and with a proven record of compatibility with surfaces contacted in installation.
B. Cleaners, Primers, and Sealers: Types recommended by sealant or gasket manufacturer.
C. Setting Blocks:
    1. Type recommended in writing by sealant or glass manufacturer.
D. Spacers:
    1. Type recommended in writing by sealant or glass manufacturer.
E. Edge Blocks:
    1. Type recommended in writing by sealant or glass manufacturer.

2.10 FABRICATION OF GLAZING UNITS

A. Fabricate glazing units in sizes required to fit openings indicated for Project, with edge and face clearances, edge and surface conditions, and bite complying with written instructions of product manufacturer and referenced glazing publications, to comply with system performance requirements.
    1. Allow for thermal movements from ambient and surface temperature changes acting on glass framing members and glazing components.
        a. Temperature Change: 120 degrees F, ambient; 180 degrees F, material surfaces.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine framing, glazing channels, and stops, with installer present, for compliance with the following:
    1. Manufacturing and installation tolerances, including those for size, squareness, and offsets at corners.
    2. Presence and functioning of weep systems.
    3. Minimum required face and edge clearances.
    4. Effective sealing between joints of glass-framing members.
B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Clean glazing channels and other framing members receiving glass immediately before glazing. Remove coatings not firmly bonded to substrates.
B. Examine glazing units to locate exterior and interior surfaces. Label or mark units as needed so that exterior and interior surfaces are readily identifiable. Do not use materials that leave visible marks in the completed Work.

3.3 GLAZING, GENERAL

A. Comply with combined written instructions of manufacturers of glass, sealants, gaskets, and other glazing materials, unless more stringent requirements are indicated, including those in referenced glazing publications.
B. Protect glass edges from damage during handling and installation. Remove damaged glass from Project site and legally dispose of off Project site. Damaged glass includes glass with edge damage or other imperfections that, when installed, could weaken glass, impair performance, or impair appearance.
C. Apply primers to joint surfaces where required for adhesion of sealants, as determined by preconstruction testing.
D. Install setting blocks in sill rabbets, sized and located to comply with referenced glazing publications, unless otherwise required by glass manufacturer. Set blocks in thin course of compatible sealant suitable for heel bead.
E. Do not exceed edge pressures stipulated by glass manufacturers for installing glass lites.
F. Provide spacers for glass lites where length plus width is larger than 50 inches.
    1. Locate spacers directly opposite each other on both inside and outside faces of glass. Install correct size and spacing to preserve required face clearances, unless gaskets and glazing tapes are used that have demonstrated ability to maintain required face clearances and to comply with system performance requirements.
    2. Provide 1/8-inch-minimum bite of spacers on glass and use thickness equal to sealant width. With glazing tape, use thickness slightly less than final compressed thickness of tape.
G. Provide edge blocking where indicated or needed to prevent glass lites from moving sideways in glazing channel, as recommended in writing by glass manufacturer and in accordance with requirements in referenced glazing publications.
H. Set glass lites in each series with uniform pattern, draw, bow, and similar characteristics.
I. Set glass lites with proper orientation so that coatings face exterior or interior as specified.

3.4 TAPE GLAZING

A. Position tapes on fixed stops so that, when compressed by glass, their exposed edges are flush with or protrude slightly above sightline of stops.
B. Install tapes continuously, but not necessarily in one continuous length. Do not stretch tapes to make them fit opening.
C. Cover vertical framing joints by applying tapes to heads and sills first, then to jambs. Cover horizontal framing joints by applying tapes to jambs, then to heads and sills.
D. Place joints in tapes at corners of opening with adjoining lengths butted together, not lapped. Seal joints in tapes with compatible sealant approved by tape manufacturer.
E. Do not remove release paper from tape until right before each glazing unit is installed.
F. Apply heel bead of elastomeric sealant.
G. Center glass lites in openings on setting blocks, and press firmly against tape by inserting dense compression gaskets formed and installed to lock in place against faces of removable stops. Start gasket applications at corners and work toward centers of openings.
H. Apply cap bead of elastomeric sealant over exposed edge of tape.

3.5 SEALANT GLAZING (WET)

A. Install continuous spacers, or spacers combined with cylindrical sealant backing, between glass lites and glazing stops to maintain glass face clearances and to prevent sealant from extruding into glass channel and blocking weep systems until sealants cure. Secure spacers or spacers and backings in place and in position to control depth of installed sealant relative to edge clearance for optimum sealant performance.
B. Force sealants into glazing channels to eliminate voids and to ensure complete wetting or bond of sealant to glass and channel surfaces.
C. Tool exposed surfaces of sealants to provide a substantial wash away from glass.

3.6 CLEANING AND PROTECTION

A. Immediately after installation, remove nonpermanent labels and clean surfaces.
B. Protect glass from contact with contaminating substances resulting from construction operations. Examine glass surfaces adjacent to or below exterior concrete and other masonry surfaces at frequent intervals during construction, but not less than once a month, for buildup of dirt, scum, alkaline deposits, or stains.
    1. If, despite such protection, contaminating substances do contact with glass, remove substances immediately as recommended in writing by glass manufacturer. Remove and replace glass that cannot be cleaned without damage to coatings.
C. Remove and replace glass that is damaged during construction period.
D. Wash glass on both exposed surfaces not more than four days before date scheduled for inspections that establish date of Substantial Completion. Wash glass as recommended in writing by glass manufacturer.

3.7 MONOLITHIC GLASS SCHEDULE

A. Clear Glass Type G02: Fully tempered float glass.
    1. Minimum Thickness: 6 mm.
    2. Safety glazing required.

3.8 INSULATING GLASS SCHEDULE

A. Low-E-Coated, Tinted Insulating Glass Type G12:
    1. Basis-of-Design Product: Subject to compliance with requirements, Guardian Clear Glass or comparable product from a manufacture listed listed in Part 2.
    2. Overall Unit Thickness: 25.4 mm.
    3. Minimum Thickness of Each Glass Lite: 6 mm.
    4. Outdoor Lite: Tinted annealed float glass.
    5. Tint Color: Match existing.
    6. Interspace Content: Air.
    7. Indoor Lite: Clear annealed float glass.
    8. Low-E Coating: Pyrolytic on third surface.
    9. Summer Daytime U-Factor: 0.46 maximum.
    10. Visible Light Transmittance: 50 percent minimum.
    11. SGHC: .25 maximum.
    12. Safety glazing required.

END OF SECTION

SECTION 08 87 00 – DECORATIVE FILM

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Decorative films.
B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.
   2. Section 08 80 00 “Glazing”: Substrate for application of decorative film.

1.2 REFERENCES

A. ASTM International (ASTM):
   1. ASTM E903 - Test Method for Solar Absorptance, Reflectance, and Transmittance of Materials Using Integrating Spheres.

1.3 DEFINITIONS

A. Visible Light Transmittance: The ratio of the amount of visible light (380 to 780 nm) that is allowed to pass through a glazing system to the amount of visible light falling on the glazing system. The value is expressed as a percentage.
B. Diffuse Visible Light Reflectance (exterior): The percentage of visible light falling on a flat, non-mirrored surface that is neither transmitted nor absorbed but scattered backwardly at random angles from that surface. This value is also known as “non-specular reflectance”.
C. Privacy Film Rating: This number, between 0 (clear) and 10 (opaque), represents the relative difficulty an observer has in identifying the nature and character of an object located on the opposite side of the window, with the observer and the object both located at least 2 feet from the pane upon which the product has been installed.
D. Frost Series: These films have frosted and translucent finishes that ensure privacy without sacrificing natural light. They are ideal for commercial interior glazing applications such as office partitions or to meet interior design goals at a fraction of the cost of etched glass.

1.4 PERFORMANCE REQUIREMENTS

A. Provide Decorative films that do not have a masking sheet.

1.5 SUBMITTALS

A. Submit under provisions of Section 01 33 00 “Submittal Procedures.”
B. Product Data: Submit for each product specified indicating:
   1. Performance properties.
   2. Preparation and installation instructions and recommendations.
   3. Storage and handling recommendations.

C. Verification Samples: For each type of decorative film specified, 2 samples, 12 inches square.
D. Qualification Data: Submit documentation indicating qualifications of decorative film manufacturer.
E. Operation and Maintenance Data: Submit for decorative film to include in maintenance manuals.
F. Warranty: Submit sample special warranty specified in this Section.

1.6 QUALITY ASSURANCE

A. Manufacturer Qualifications: A qualified manufacturer that has a minimum of 10 years of documented experience manufacturing decorative films similar to be used for this Project.
B. Installer Qualifications: A firm that is authorized by decorative film manufacturer to install film in accordance with guidelines set forth by the manufacturer.
C. Source Limitations: Obtain each type of decorative film from same manufacturer.

1.7 DELIVERY, STORAGE AND HANDLING

A. Deliver, store and handle materials in manufacturer's protective packaging.
B. Store and protect materials according to manufacturer's written recommendations to prevent damage from condensation, temperature changes, direct exposure to sun, or other causes.

1.8 SITE CONDITIONS

A. Ambient Conditions: Maintain temperature, humidity, and ventilation within limits recommended by manufacturer.

1.9 LIMITED WARRANTY

A. Manufacturer's Limited Warranty: Certain restrictions apply.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Basis-of-Design Product: The design for decorative films is based on LLumar® Decorative Frost Films manufactured by an Eastman Chemical Company business: CPFilms Inc., 575 Maryville Centre Drive, St. Louis, Missouri 63141; Telephone: 800.255.8627; Email address: commercialalerts@eastman.com; Web Site: www.llumar.com.
B. Substitutions will be considered, subject to compliance with requirements of this Section, under provisions of Section 01 60 00 “Product Requirements.”

2.2 DECORATIVE FROST FILMS

A. Decorative Film: LLumar® NRMV80DCPS3 Decorative Frost Film with the following performance characteristics when applied to the interior surface of single-pane, 1/8-inch clear glass:

% Visible Light Transmission	87
% Diffuse Visible Light Reflectance (exterior)	11
Privacy Film Rating	7
Thickness without Liner	inches
Film Color	Dusted Crystal

2.3 DECORATIVE FILM ACCESSORIES

A. General: Provide accessories either manufactured by or acceptable to decorative film manufacturer for application indicated, and with a proven record of compatibility with surfaces contacted in installation.
B. Pressure Sensitive Adhesive: This adhesive is activated by pressure and water. It is characterized by its permanently tacky nature and its installation ease.
C. Cleaners, Primers, and Sealers: Types recommended by film manufacturer.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates for compliance with requirements and for conditions affecting performance of decorative film including glass that is broken, chipped, cracked, abraded, or damaged in any way.
B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Comply with manufacturer’s written instructions for surface preparation.
B. Clean substrates thoroughly prior to installation.
C. Prepare substrates using methods recommended by film manufacturer to achieve the best results for the substrate under project conditions.
D. Protect window frames and surrounding surfaces to prevent damage during installation.

3.3 INSTALLATION

A. Install in accordance with manufacturer’s written instructions.
B. Install with no gaps or overlaps.
C. If seamed, make seams non-overlapping.
D. Do not remove release liner from film until just before each piece of film is cut and ready for installation.
E. Custom cut to the glass with neat, square corners and edges to within 1/8-inch of the window frame.
F. Remove air bubbles, blisters, and other defects. Be careful to remove “fingers” to eliminate any contamination or excess water pockets. It is crucial to remove as much water as possible during installation.

3.4 FIELD QUALITY CONTROL

A. After installation, view film from a distance of 10 feet against a bright uniform sky or background. Film shall appear uniform in appearance with no visible streaks, wrinkles, banding, thin spots or pinholes.
B. If installed film does not meet these criteria, remove and replace with new film.

3.5 CLEANING AND PROTECTION

A. Remove excess mounting solution at finished seams, perimeter edges, and adjacent surfaces.
B. Use cleaning methods recommended by film manufacturer.
C. Replace films that cannot be cleaned.
D. Protect installed products until completion of Project.
E. Touch-up, repair or replace damaged products before Substantial Completion.

END OF SECTION

SECTION 09 22 16 - NON-STRUCTURAL METAL FRAMING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Non-load-bearing steel framing systems for interior partitions.
   2. Suspension systems for interior ceilings and soffits.
   3. Grid suspension systems for gypsum board ceilings.

B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.
   2. Section 05 40 00 "Cold-Formed Metal Framing" for exterior and interior load-bearing and exterior non-load-bearing wall studs; floor joists; and roof rafters and ceiling joists.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

1.3 INFORMATIONAL SUBMITTALS

A. Product Certificates: For each type of code-compliance certification for studs and tracks.

B. Evaluation Reports: From ICC-ES or other qualified testing agency acceptable to authorities having jurisdiction for the following:
   1. Embossed, high-strength steel studs and tracks.
   2. Firestop tracks.

1.4 QUALITY ASSURANCE

A. Code-Compliance Certification of Studs and Tracks: Provide documentation that framing members are certified according to the product-certification program of the Certified Steel Stud Association, the Steel Framing Industry Association, the Steel Stud Manufacturers Association, or the Supreme Steel Framing System Association.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Notify manufacturer of damaged materials received prior to installation.

B. Deliver materials in manufacturer's original, unopened, undamaged containers with identification labels intact.

C. Protect cold-formed metal framing from corrosion, deformation, and other damage during delivery, storage, and handling as required by AISI S202, "Code of Standard Practice for Cold-Formed Steel Structural Framing."

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Fire-Test-Response Characteristics: For fire-resistance-rated assemblies that incorporate non-load-bearing steel framing, provide materials and construction identical to those tested in assembly indicated, according to ASTM E119 by an independent testing agency.

B. Horizontal Deflection: For composite and non-composite wall assemblies, limited to following ratios of the wall height based on horizontal loading of 5 lbf/sq. ft.
   1. Ceramic and Stone Tile: 1/360.
   2. Plaster: 1/360.
   3. Gypsum Board and Other Finishes: 1/240.

C. Design framing systems in accordance with AISI S220, "North American Specification for the Design of Cold-Formed Steel Framing - Nonstructural Members," unless otherwise indicated.

2.2 FRAMING SYSTEMS

A. Framing Members, General: Comply with for conditions indicated.
   1. Steel Sheet Components: Comply with requirements for metal unless otherwise indicated
   2. Protective Coating: Comply with ASTM A653, G40; or coating with equivalent corrosion resistance. Galvannealed products are unacceptable.
      a. Coating demonstrates equivalent corrosion resistance with an evaluation report acceptable to authorities having jurisdiction.

B. Studs and Track:
   1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
      a. CEMCO; California Expanded Metal Products Co.
      b. ClarkDietrich.
      c. Custom Stud.
      d. Jaimes Industries.
      e. MarinoWARE.
      f. MBA Building Supplies.
      g. MRI Steel Framing, LLC.
      h. Phillips Manufacturing Co.
      i. SCAFCO Steel Stud Company.
      j. Steel Construction Systems.
      k. Telling Industries.
      l. The Steel Network, Inc.
   2. Minimum Base-Steel Thickness: As required by performance requirements for horizontal deflection.
   3. Depth: As indicated on Drawings.

C. Embossed, High Strength Steel Studs and Tracks: Roll-formed and embossed with surface deformations to stiffen the framing members so that they are structurally comparable to conventional ASTM C645 steel studs and tracks.
   1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
      a. CEMCO; California Expanded Metal Products Co.
      b. ClarkDietrich.
      c. MarinoWARE.
      d. MBA Building Supplies.
      e. Phillips Manufacturing Co.
      f. SCAFCO Steel Stud Company.
      g. Steel Construction Systems.
      h. Telling Industries.
      i. The Steel Network, Inc.
      j. Minimum Base-Steel Thickness: As required by horizontal deflection performance requirements .
      k. Depth: As indicated on Drawings.

D. Firestop Tracks: Top track manufactured to allow partition heads to expand and contract with movement of structure while maintaining continuity of fire-resistance-rated assembly indicated; in thickness not less than indicated for studs and in width to accommodate depth of studs.
   1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
      a. CEMCO; California Expanded Metal Products Co.
      b. ClarkDietrich.
      c. Fire Trak Corp.
      d. MarinoWARE.
      e. Metal-Lite.
      f. SCAFCO Steel Stud Company.
      g. Steel Construction Systems.
      h. The Steel Network, Inc.

E. Hat-Shaped, Rigid Furring Channels: ASTM C645.
   1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
      a. ClarkDietrich.
      b. Jaimes Industries.
      c. MarinoWARE.
      d. MBA Building Supplies.
      e. MRI Steel Framing, LLC.
      f. SCAFCO Steel Stud Company.
      g. Steel Construction Systems.
   2. Minimum Base-Steel Thickness: 0.0329-inch.
   3. Depth: As indicated on Drawings.

2.3 SUSPENSION SYSTEMS

A. Tie Wire: ASTM A641, Class 1 zinc coating, soft temper, 0.062-inch-iameter wire, or double strand of 0.048-inch-diameter wire.
B. Hanger Attachments to Concrete:
   1. Post-Installed Anchors: Fastener systems with an evaluation report acceptable to authorities having jurisdiction, based on ICC-ES AC193 as appropriate for the substrate.
      a. Type: Torque-controlled, expansion anchor.
      b. Material for Interior Locations: Carbon-steel components zinc-plated to comply with ASTM B633 or ASTM F1941, Class Fe/Zn 5, unless otherwise indicated.
      c. Material for Exterior or Interior Locations and Where Stainless Steel Is Indicated: Alloy Group 1 stainless steel bolts, ASTM F593, and nuts, ASTM F594.
C. Wire Hangers: ASTM A641, Class 1 zinc coating, soft temper, 0.16 inch in diameter.
D. Carrying Channels (Main Runners): Cold-rolled, commercial-steel sheet with a base-steel thickness of 0.0538-inch and minimum 1/2-inch-wide flanges.
   1. Depth: 1-1/2 inches.
E. Furring Channels (Furring Members):
   1. Cold-Rolled Channels: 0.0538-inch uncoated-steel thickness, with minimum 1/2-inch-wide flanges, 3/4-inch-deep.
   2. Steel Studs and Tracks: ASTM C645.
   3. Embossed, High-Strength Steel Studs and Tracks: ASTM C645.
   4. Hat-Shaped, Rigid Furring Channels: ASTM C645, 7/8-inch-deep.
F. Grid Suspension System for Gypsum Board Ceilings: ASTM C645, direct-hung system composed of main beams and cross-furring members that interlock.
   1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
      a. Armstrong Ceiling & Wall Solutions.
      b. Certainteed; SAINT-GOBAIN.
      c. Rockfon (Rockwool International).
      d. USG Corporation.

2.4 AUXILIARY MATERIALS

A. General: Provide auxiliary materials that comply with referenced installation standards.
   1. Fasteners for Steel Framing: Of type, material, size, corrosion resistance, holding power, and other properties required to fasten steel members to substrates.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas and substrates, with installer present, and including welded hollow-metal frames, cast-in anchors, and structural framing, for compliance with requirements and other conditions affecting performance of the Work.
B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Coordination with Sprayed Fire-Resistive Materials:
   1. Before sprayed fire-resistive materials are applied, attach offset anchor plates or ceiling tracks to surfaces indicated to receive sprayed fire-resistive materials. Where offset anchor plates are required, provide continuous plates fastened to building structure not more than 24 inches o.c.
   2. After sprayed fire-resistive materials are applied, remove them only to extent necessary for installation of non-load-bearing steel framing. Do not reduce thickness of fire-resistive materials below that are required for fire-resistance ratings indicated. Protect adjacent fire-resistive materials from damage.

3.3 INSTALLATION, GENERAL

A. Installation Standard: ASTM C754.
   1. Gypsum Board Assemblies: Also comply with requirements in ASTM C840 that apply to framing installation.
B. Install framing and accessories plumb, square, and true to line, with connections securely fastened.
C. Install supplementary framing, and blocking to support fixtures, equipment services, heavy trim, grab bars, toilet accessories, furnishings, or similar construction.
D. Install bracing at terminations in assemblies.
E. Do not bridge building control and expansion joints with non-load-bearing steel framing members. Frame both sides of joints independently.

3.4 INSTALLING FRAMED ASSEMBLIES

A. Install framing system components according to spacings indicated, but not greater than spacings required by referenced installation standards for assembly types.
B. Where studs are installed directly against exterior masonry walls or dissimilar metals at exterior walls, install isolation strip between studs and exterior wall.
C. Install studs so flanges within framing system point in same direction.
D. Install tracks at floors and overhead supports. Extend framing full height to structural supports or substrates above suspended ceilings except where partitions are indicated to terminate at suspended ceilings. Continue framing around ducts that penetrate partitions above ceiling.
   1. Door Openings: Screw vertical studs at jambs to jamb anchor clips on door frames; install track section (for cripple studs) at head and secure to jamb studs.
      a. Install two studs at each jamb unless otherwise indicated.
      b. Install cripple studs at head adjacent to each jamb stud, with a minimum 1/2-inch clearance from jamb stud to allow for installation of control joint in finished assembly.
      c. Extend jamb studs through suspended ceilings and attach to underside of overhead structure.
   2. Other Framed Openings: Frame openings other than door openings the same as required for door openings unless otherwise indicated. Install framing below sills of openings to match framing required above door heads.
   3. Sound-Rated Partitions: Install framing to comply with sound-rated assembly indicated.

E. Direct Furring:
   1. Screw to wood framing.
   2. Attach to concrete or masonry with stub nails, screws designed for masonry attachment, or powder-driven fasteners spaced 24 inches o.c.

F. Installation Tolerance: Install each framing member so fastening surfaces vary not more than 1/8-inch from the plane formed by faces of adjacent framing.

3.5 INSTALLING CEILING SUSPENSION SYSTEMS

A. Install suspension system components according to spacings indicated, but not greater than spacings required by referenced installation standards for assembly types.
   1. Hangers: 48 inches o.c.
   2. Carrying Channels (Main Runners): 48 inches o.c.
   3. Furring Channels (Furring Members): 16 inches o.c.

B. Isolate suspension systems from building structure where they abut or are penetrated by building structure to prevent transfer of loading imposed by structural movement.

C. Suspend hangers from building structure as follows:
   1. Install hangers plumb and free from contact with insulation or other objects within ceiling plenum that are not part of supporting structural or suspension system.
      a. Splay hangers only where required to miss obstructions and offset resulting horizontal forces by bracing, countersplaying, or other equally effective means.
   2. Where width of ducts and other construction within ceiling plenum produces hanger spacings that interfere with locations of hangers required to support standard suspension system members, install supplemental suspension members and hangers in the form of trapezes or equivalent devices.
      a. Size supplemental suspension members and hangers to support ceiling loads within performance limits established by referenced installation standards.
   3. Wire Hangers: Secure by looping and wire tying, either directly to structures or to inserts, eye screws, or other devices and fasteners that are secure and appropriate for substrate, and in a manner that will not cause hangers to deteriorate or otherwise fail.

D. Fire-Resistance-Rated Assemblies: Wire tie furring channels to supports.

E. Grid Suspension Systems: Attach perimeter wall track or angle where grid suspension systems meet vertical surfaces. Mechanically join main beam and cross-furring members to each other and butt-cut to fit into wall track.

F. Installation Tolerances: Install suspension systems that are level to within 1/8-inch in 12 feet measured lengthwise on each member that will receive finishes and transversely between parallel members that will receive finishes.

END OF SECTION

SECTION 09 29 00 - GYPSUM BOARD

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
1. Interior gypsum board.
2. Exterior gypsum board for ceilings and soffits.
3. Tile backing panels.
4. Texture finishes.

B. Related Requirements:
1. Division 01 Specification Sections apply to Work of this Section.
2. Section 06 16 00 "Sheathing" for gypsum sheathing for exterior walls.
3. Section 07 92 19 "Acoustical Joint Sealants" for acoustical joint sealants installed in gypsum board assemblies.
4. Section 09 22 16 "Non-Structural Metal Framing" for non-structural steel framing and suspension systems that support gypsum board panels.
5. Section 09 30 13 "Ceramic Tiling" for cementitious backer units installed as substrates for ceramic tile.

1.2 ACTION SUBMITTALS

A. Product Data: For the following:
1. Gypsum wallboard.
2. Gypsum board, Type X.
3. Gypsum ceiling board.
4. Mold-resistant gypsum board.
5. Glass-mat, water-resistant backing board.
6. Joint treatment materials.
7. Sound-attenuation blankets.
8. Acoustical sealant.
9. Textured finishes.

1.3 DELIVERY, STORAGE AND HANDLING

A. Store materials inside under cover and keep them dry and protected against weather, condensation, direct sunlight, construction traffic, and other potential causes of damage. Stack panels flat and supported on risers on a flat platform to prevent sagging.

1.4 FIELD CONDITIONS

A. Environmental Limitations: Comply with ASTM C840 requirements or gypsum board manufacturer's written instructions, whichever are more stringent.
B. Do not install paper-faced gypsum panels until installation areas are enclosed and conditioned.

C. Do not install panels that are wet, moisture damaged, and mold damaged.
   1. Indications that panels are wet or moisture damaged include, but are not limited to, discoloration, sagging, or irregular shape.
   2. Indications that panels are mold damaged include, but are not limited to, fuzzy or splotchy surface contamination and discoloration.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Fire-Resistance-Rated Assemblies: For fire-resistance-rated assemblies, provide materials and construction identical to those tested in assembly indicated according to ASTM E119 by an independent testing agency.
B. STC-Rated Assemblies: For STC-rated assemblies, provide materials and construction identical to those tested in assembly indicated according to ASTM E90 and classified according to ASTM E413 by an independent testing agency.

2.2 GYPSUM BOARD, GENERAL

A. Size: Provide maximum lengths and widths available that will minimize joints in each area and that correspond with support system indicated.

2.3 INTERIOR GYPSUM BOARD

A. Gypsum Wallboard: ASTM C1396.
   1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
      a. CertainTeed Corporation; Saint-Gobain North America.
      b. Georgia-Pacific Gypsum LLC.
      c. National Gypsum Company.
      d. USG Corporation.
   2. Thickness: 5/8-inch.
   3. Long Edges: Tapered.
B. Gypsum Board, Type X: ASTM C1396.
   1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
      a. CertainTeed Corporation; Saint-Gobain North America.
      b. Georgia-Pacific Gypsum LLC.
      c. National Gypsum Company.
      d. USG Corporation.
   2. Thickness: 5/8-inch.
   3. Long Edges: Tapered.

C. Gypsum Ceiling Board: ASTM C1396.
   1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
      a. CertainTeed Corporation; Saint-Gobain North America.
      b. Georgia-Pacific Gypsum LLC.
      c. National Gypsum Company.
      d. USG Corporation.
   2. Thickness: 1/2-inch.
   3. Long Edges: Tapered.

D. Mold-Resistant Gypsum Board: ASTM C1396. With moisture- and mold-resistant core and paper surfaces.
   1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
      a. CertainTeed Corporation; Saint-Gobain North America.
      b. Georgia-Pacific Gypsum LLC.
      c. National Gypsum Company.
      d. USG Corporation.
   2. Core: 5/8-inch, Type X.
   3. Long Edges: Tapered.
   4. Mold Resistance: ASTM D3273, score of 10 as rated according to ASTM D3274.

2.4 TILE BACKING PANELS

A. Glass-Mat, Water-Resistant Backing Board: ASTM C1178, with manufacturer's standard edges.
   1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
      a. CertainTeed Corporation; Saint-Gobain North America.
      b. Georgia-Pacific Gypsum LLC.
      c. National Gypsum Company.
      d. USG Corporation.
   2. Core: 5/8-inch, Type X.
   3. Mold Resistance: ASTM D3273, score of 10 as rated according to ASTM D3274.
   4. Basis of Design: USG Durock Brand Glass-Mat Tile Backerboard.

2.5 TRIM ACCESSORIES

A. Interior Trim: ASTM C1047.
   1. Material: Galvanized or aluminum-coated steel sheet, rolled zinc, plastic, or paper-faced galvanized-steel sheet.
   2. Shapes:
      a. Cornerbead.
      b. U-Bead: J-shaped; exposed short flange does not receive joint compound.
      c. Expansion (control) joint.

2.6 JOINT TREATMENT MATERIALS

A. General: Comply with ASTM C475.
B. Joint Tape:
   1. Interior Gypsum Board: Paper.
   2. Tile Backing Panels: As recommended by panel manufacturer.
C. Joint Compound for Interior Gypsum Board: For each coat, use formulation that is compatible with other compounds applied on previous or for successive coats.
   1. Prefilling: At open joints, rounded or beveled panel edges, and damaged surface areas, use setting-type taping compound.
   2. Embedding and First Coat: For embedding tape and first coat on joints, fasteners, and trim flanges, use setting-type taping compound.
      a. Use setting-type compound for installing paper-faced metal trim accessories.
   3. Fill Coat: For second coat, use setting-type, sandable topping compound.
   4. Finish Coat: For third coat, use drying-type, all-purpose compound.
D. Joint Compound for Tile Backing Panels:
   1. Glass-Mat, Water-Resistant Backing Panel: As recommended by backing panel manufacturer.
   2. Cementitious Backer Units: As recommended by backer unit manufacturer.

2.7 AUXILIARY MATERIALS

A. Provide auxiliary materials that comply with referenced installation standards and manufacturer's written instructions.
B. Steel Drill Screws: ASTM C1002 unless otherwise indicated.
   1. Use screws complying with ASTM C954 for fastening panels to steel members from 0.033- to 0.112-inch-thick.
   2. For fastening cementitious backer units, use screws of type and size recommended by panel manufacturer.
C. Sound-Attenuation Blankets: ASTM C665, Type I (blankets without membrane facing) produced by combining thermosetting resins with mineral fibers manufactured from glass, slag wool, or rock wool.
   1. Fire-Resistance-Rated Assemblies: Comply with mineral-fiber requirements of assembly.
D. Acoustical Sealant: As specified in Section 07 92 19 "Acoustical Joint Sealants."
E. Thermal Insulation: As specified in Section 07 21 00 "Thermal Insulation."
F. Vapor Retarder: As specified in Section 07 26 00 "Vapor Retarders."

2.8 TEXTURE FINISHES

A. Primer: As recommended by textured finish manufacturer.
B. Polystyrene Aggregate Ceiling Finish: Water-based, job-mixed, polystyrene aggregate finish with flame-spread and smoke-developed indexes of not more than 25 when tested according to ASTM E84.
   1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
      a. Georgia-Pacific Gypsum LLC.
      b. National Gypsum Company.
      c. USG Corporation.
   2. Texture: Fine.

C. Non-Aggregate Finish: Premixed, vinyl texture finish for spray application.
   1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
      a. CertainTeed Corporation; Saint-Gobain North America.
      b. National Gypsum Company.
      c. USG Corporation.
   2. Texture: Orange peel.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas and substrates including welded hollow-metal frames and support framing, with installer present, for compliance with requirements and other conditions affecting performance of the Work.
B. Examine panels before installation. Reject panels that are wet, moisture damaged, and mold damaged.
C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION AND FINISHING OF PANELS, GENERAL

A. Comply with ASTM C840.
B. Install ceiling panels across framing to minimize the number of abutting end joints and to avoid abutting end joints in central area of each ceiling. Stagger abutting end joints of adjacent panels not less than one framing member.
C. Install panels with face side out. Butt panels together for a light contact at edges and ends with not more than 1/16-inch of open space between panels. Do not force into place.
D. Locate edge and end joints over supports, except in ceiling applications where intermediate supports or gypsum board back-blocking is provided behind end joints. Do not place tapered edges against cut edges or ends. Stagger vertical joints on opposite sides of partitions. Do not make joints other than control joints at corners of framed openings.
E. Form control and expansion joints with space between edges of adjoining gypsum panels.
F. Cover both faces of support framing with gypsum panels in concealed spaces (above ceilings, etc.), except in chases braced internally.
   1. Unless concealed application is indicated or required for sound, fire, air, or smoke ratings, coverage may be accomplished with scraps of not less than 8 sq. ft. in area.
   2. Fit gypsum panels around ducts, pipes, and conduits.
   3. Where partitions intersect structural members projecting below underside of floor/roof slabs and decks, cut gypsum panels to fit profile formed by structural members; allow 1/4- to 3/8-inch-wide joints to install sealant.
G. Isolate perimeter of gypsum board applied to non-load-bearing partitions at structural abutments. Provide 1/4- to 1/2-inch-wide spaces at these locations and trim edges with edge trim where edges of panels are exposed. Seal joints between edges and abutting structural surfaces with acoustical sealant.
H. Attachment to Steel Framing: Attach panels so leading edge or end of each panel is attached to open (unsupported) edges of stud flanges first.

I. STC-Rated Assemblies: Seal construction at perimeters, behind control joints, and at openings and penetrations with a continuous bead of acoustical sealant. Install acoustical sealant at both faces of partitions at perimeters and through penetrations. Comply with ASTM C919 and with manufacturer's written instructions for locating edge trim and closing off sound-flanking paths around or through assemblies, including sealing partitions above acoustical ceilings.

J. Install sound attenuation blankets before installing gypsum panels unless blankets are readily installed after panels have been installed on one side.

3.3 INSTALLATION OF INTERIOR GYPSUM BOARD

A. Install interior gypsum board in the following locations:
   1. Wallboard Type: As indicated on Drawings.
   2. Type X: Where required for fire-resistance-rated assembly.
   3. Ceiling Type: Ceiling surfaces.
   4. Glass-Mat Interior Type: As indicated on Drawings.

B. Single-Layer Application:
   1. On ceilings, apply gypsum panels before wall/partition board application to greatest extent possible and at right angles to framing unless otherwise indicated.
   2. On partitions/walls, apply gypsum panels vertically (parallel to framing) unless otherwise indicated or required by fire-resistance-rated assembly, and minimize end joints.
      a. Stagger abutting end joints not less than one framing member in alternate courses of panels.
      b. At stairwells and other high walls, install panels horizontally unless otherwise indicated or required by fire-resistance-rated assembly.
   3. On Z-shaped furring members, apply gypsum panels vertically (parallel to framing) with no end joints. Locate edge joints over furring members.
   4. Fastening Methods: Apply gypsum panels to supports with steel drill screws.

C. Multilayer Application:
   1. On partitions/walls, apply gypsum board indicated for base layers and face layers vertically (parallel to framing) with joints of base layers located over stud or furring member and face-layer joints offset at least one stud or furring member with base-layer joints unless otherwise indicated or required by fire-resistance-rated assembly. Stagger joints on opposite sides of partitions.
   2. On Z-shaped furring members, apply base layer vertically (parallel to framing) and face layer either vertically (parallel to framing) or horizontally (perpendicular to framing) with vertical joints offset at least one furring member. Locate edge joints of base layer over furring members.
   3. Fastening Methods: Fasten base layers with screws; fasten face layers with adhesive and supplementary fasteners.

3.4 INSTALLATION OF TILE BACKING PANELS

A. Glass-Mat, Water-Resistant Backing Panels: Comply with manufacturer's written installation instructions and install at locations indicated to receive tile. Install with 1/4-inch gap where panels abut other construction or penetrations.

B. Cementitious Backer Units: ANSI A108.11, at locations indicated to receive tile.

C. Water-Resistant Backing Board: Install where indicated with 1/4-inch gap where panels abut other construction or penetrations.

3.5 INSTALLATION OF TRIM ACCESSORIES

A. General: For trim with back flanges intended for fasteners, attach to framing with same fasteners used for panels. Otherwise, attach trim according to manufacturer's written instructions.
B. Control Joints: Install control joints according to ASTM C840 and in specific locations approved by Architect for visual effect.
C. Interior Trim: Install in the following locations:
    1. Cornerbead: Use at outside corners.

3.6 FINISHING GYPSUM BOARD

A. General: Treat gypsum board joints, interior angles, edge trim, control joints, penetrations, fastener heads, surface defects, and elsewhere as required to prepare gypsum board surfaces for decoration. Promptly remove residual joint compound from adjacent surfaces.
B. Prefill open joints and damaged surface areas.
C. Apply joint tape over gypsum board joints, except for trim products specifically indicated as not intended to receive tape.
D. Gypsum Board Finish Levels: Finish panels to levels indicated below and according to ASTM C840:
    1. Level 1: Ceiling plenum areas, concealed areas, and where indicated.
    2. Level 2: Panels that are substrate for tile.
    3. Level 4: At panel surfaces that will be exposed to view unless otherwise indicated.
        a. Primer and its application to surfaces are specified in Section 09 91 23 "Interior Painting."
E. Glass-Mat Faced Panels: Finish according to manufacturer's written instructions.
F. Cementitious Backer Units: Finish according to manufacturer's written instructions.

3.7 INSTALLATION OF TEXTURE FINISHES

A. Surface Preparation and Primer: Prepare and apply primer to gypsum panels and other surfaces receiving texture finishes. Apply primer to surfaces that are clean, dry, and smooth.
B. Texture Finish Application: Mix and apply finish using powered spray equipment, to produce a uniform texture free of starved spots or other evidence of thin application or of application patterns.
C. Prevent texture finishes from coming into contact with surfaces not indicated to receive texture finish by covering them with masking agents, polyethylene film, or other means. If, despite these precautions, texture finishes contact these surfaces, immediately remove droppings and overspray to prevent damage according to texture-finish manufacturer's written instructions.

3.8 PROTECTION

A. Protect adjacent surfaces from drywall compound and promptly remove from floors and other non-drywall surfaces. Repair surfaces stained, marred, or otherwise damaged during drywall application.
B. Protect installed products from damage from weather, condensation, direct sunlight, construction, and other causes during remainder of the construction period.
C. Remove and replace panels that are wet, moisture damaged, and mold damaged.
    1. Indications that panels are wet or moisture damaged include, but are not limited to, discoloration, sagging, or irregular shape.
    2. Indications that panels are mold damaged include, but are not limited to, fuzzy or splotchy surface contamination and discoloration.

END OF SECTION

SECTION 09 30 13 - CERAMIC TILING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Porcelain tile.
   2. Setting material.
   3. Grout materials.

B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.
   2. Section 07 92 00 "Joint Sealants" for sealing of movement joints in tile surfaces.
   3. Section 09 29 00 "Gypsum Board" for tile backing panels.

1.2 DEFINITIONS

A. General: Definitions in ANSI A108 series of tile installation standards and in ANSI A137.1 apply to Work of this Section unless otherwise specified.

B. Face Size: Actual tile size, excluding spacer lugs.

C. Large Format Tile: Tile with at least one edge 15 inches or longer.

D. Module Size: Actual tile size plus joint width indicated.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.
   1. Porcelain tile.
   2. Crack isolation membranes.
   3. Setting material.
   4. Grout materials.

B. Shop Drawings: Show locations, plans, and elevations, of each type of tile and tile pattern. Show widths, details, and locations of movement joints in tile substrates and finished tile surfaces.

C. Samples for Verification:
   1. Full-size units of each type and composition of tile and for each color and finish required.
   2. Metal flooring transitions 6-inch lengths.

1.4 INFORMATIONAL SUBMITTALS

A. Qualification Data: For installer.

1.5 MAINTENANCE MATERIAL SUBMITTALS

A. Extra Stock Material: Furnish extra materials, from the same production run, to Owner that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
   1. Tile and Trim Units: Furnish quantity of full-size units equal to 3 percent of amount installed for each type, composition, color, pattern, and size indicated.
   2. Grout: Furnish quantity of grout equal to 3 percent of amount installed for each type, composition, and color indicated.

1.6 QUALITY ASSURANCE

A. Installer Qualifications:
   1. Installer has 5 years documented experience of similar size and complexity of wall tile and large format tile.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Deliver and store packaged materials in original containers with seals unbroken and labels intact until time of use. Comply with requirements in ANSI A137.1 for labeling tile packages.
B. Store tile and cementitious materials on elevated platforms, under cover, and in a dry location.
C. Store aggregates where grading and other required characteristics can be maintained and contamination can be avoided.
D. Store liquid materials in unopened containers and protected from freezing.

1.8 FIELD CONDITIONS

A. Environmental Limitations: Do not install tile until construction in spaces is complete and ambient temperature and humidity conditions are maintained at the levels indicated in referenced standards and manufacturer's written instructions.

1.9 WARRANTY

A. System Warranty: Manufacturer's non-prorated comprehensive warranty that agrees to repair and replace defective installation areas, material, and labor that fail under normal usage within specified warranty period.
   1. Warranty Period: Five years from date of Product Purchase.

PART 2 - PRODUCTS

2.1 SOURCE LIMITATIONS

A. Tile: Obtain tile of each type and color or finish from single source or producer.
   1. Obtain tile of each type and color or finish from same production run and of consistent quality in appearance and physical properties for each contiguous area.

B. Tiling System: Obtain system products from single manufacturer and each aggregate from single source or producer.
   1. Obtain setting and grouting materials, except for unmodified portland cement and aggregate, from single manufacturer.
   2. Obtain joint sealants from manufacturer of setting and grouting materials.

2.2 PRODUCTS, GENERAL

A. ANSI Ceramic Tile Standard: Provide tile that complies with ANSI A137.1 for types, compositions, and other characteristics indicated.
   1. Provide tile complying with Standard Grade requirements.
B. ANSI Standards for Tile Installation Materials: Provide materials complying with ANSI A108.02, ANSI standards referenced in other Part 2 articles, ANSI standards referenced by TCNA installation methods specified in tile installation schedules, and other requirements specified.
C. Factory Blending: For tile exhibiting color variations within ranges, blend tile in factory and package so tile units taken from one package show same range in colors as those taken from other packages and match approved Samples.
D. Mounting: For factory-mounted tile, provide back- or edge-mounted tile assemblies as standard with manufacturer unless otherwise indicated.

2.3 PORCELAIN TILE

A. Porcelain Tile Type CT:
   1. Manufacturers: Basis of Design and subject to compliance with requirements, provide products by the following:
      a. As indicated on Interior Material Legend in Drawings.
   2. Face Size: As indicated on Interior Material Legend in Drawings.
   3. Thickness: Per Drawings.
   4. Tile Color, Glaze, and Pattern: As indicated on Interior Material Legend in Drawings.
   5. Grout Color: As indicated on Interior Material Legend in Drawings.

2.4 SETTING MATERIALS

A. Improved Modified Dry-Set Mortar (Thinset): ANSI A118.15.
   1. Manufacturers: Subject to compliance with requirements, provide products by the following:
      a. ARDEX Americas.
   2. Provide prepackaged, dry-mortar mix containing dry, redispersible, vinyl acetate or acrylic additive to which only water must be added at Project site.
   3. For wall applications, provide mortar that complies with requirements for nonsagging mortar in addition to other requirements in ANSI A118.15.

2.5 GROUT MATERIALS

A. Water-Cleanable Epoxy Grout: ANSI A118.3[, with a VOC content of 65 g/L or less].
   1. Manufacturers: Subject to compliance with requirements, provide products by the following:
      a. ARDEX Americas.

2.6 MISCELLANEOUS MATERIALS

A. Trowelable Underlayments and Patching Compounds: Latex-modified, portland cement-based formulation provided or approved by manufacturer of tile-setting and adhesive materials for installations indicated.
B. Metal Edge Trim: Profile designed for wall terminations and edge protection.
   1. Manufacturers: Subject to compliance with requirements, provide products by the following:
      a. Schluter Systems L.P.
   2. Description: As indicated on Interior Material Legend in Drawings.
   3. Material and Finish: As indicated on Interior Material Legend in Drawings exposed-edge material.
C. Tile Cleaner: A neutral cleaner capable of removing soil and residue without harming tile and grout surfaces, specifically approved for materials and installations indicated by tile and grout manufacturers.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions where tile will be installed, with installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
   1. Verify that substrates for setting tile are firm; dry; clean; free of coatings that are incompatible with tile-setting materials, including curing compounds and other substances that contain soap, wax, oil, or silicone; and comply with flatness tolerances required by ANSI A108.01 for installations indicated.
   2. Verify that concrete substrates for tile floors installed with thinset mortar comply with surface finish requirements in ANSI A108.01 for installations indicated.
      a. Verify that surfaces that received a steel trowel finish have been mechanically scarified.
      b. Verify that protrusions, bumps, and ridges have been removed by sanding or grinding.
   3. Verify that installation of grounds, anchors, recessed frames, electrical and mechanical units of work, and similar items located in or behind tile has been completed.
   4. Verify that joints and cracks in tile substrates are coordinated with tile joint locations; if not coordinated, adjust joint locations in consultation with Architect.
B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Remove coatings, including curing compounds or other coatings, that are incompatible with tile-setting materials.
B. Fill cracks, holes, and depressions in concrete substrates for tile floors installed with thinset mortar with trowelable leveling and patching compound specifically recommended by tile-setting material manufacturer.

C. Where indicated, prepare substrates to receive waterproof membrane by applying a reinforced mortar bed that complies with ANSI A108.1 and is sloped 1/4-inch per foot toward drains.

D. Blending: For tile exhibiting color variations, verify that tile has been factory blended and packaged so tile units taken from one package show same range of colors as those taken from other packages and match approved samples. If not factory blended, either return to manufacturer or blend tiles at Project site before installing.

E. Substrate Flatness:
   1. For tile shorter than 15 inches, confirm that structure or substrate is limited to variation of 1/4-inch in 10 feet from the required plane, and no more than 1/16-inch in 12 inches when measured from tile surface high points.
   2. For large format tile, tile with at least one edge 15 inches or longer, confirm that structure or substrate is limited to 1/8-inch in 10 feet from the required plane, and no more than 1/16-inch in 24 inches when measured from tile surface high points.

F. Field-Applied Temporary Protective Coating: If indicated under tile type or needed to prevent grout from staining or adhering to exposed tile surfaces, precoat them with continuous film of temporary protective coating, taking care not to coat unexposed tile surfaces.

3.3 INSTALLATION OF CERAMIC TILE SYSTEM

A. Install tile backing panels and treat joints in accordance with ANSI A108.11 and manufacturer's written instructions for type of application indicated.

B. Mix mortars and grouts to comply with referenced standards and mortar and grout manufacturers' written instructions.
   1. Add materials, water, and additives in accurate proportions.
   2. Obtain and use type of mixing equipment, mixer speeds, mixing containers, mixing time, and other procedures to produce mortars and grouts of uniform quality with optimum performance characteristics for installations indicated.

C. Install tile in accordance with TCNA's "Handbook for Ceramic, Glass, and Stone Tile Installation" for TCNA installation methods specified in tile installation schedules. Comply with parts of ANSI A108 series that are referenced in TCNA installation methods and specified in tile installation schedules, and apply to types of setting and grouting materials used.
   1. Extend tile work into recesses and under or behind equipment and fixtures to form complete covering without interruptions unless otherwise indicated. Terminate work neatly at obstructions, edges, and corners without disrupting pattern or joint alignments.
   2. Accurately form intersections and returns. Perform cutting and drilling of tile without marring visible surfaces. Carefully grind cut edges of tile abutting trim, finish, or built-in items for straight aligned joints. Fit tile closely to electrical outlets, piping, fixtures, and other penetrations so plates, collars, or covers overlap tile.
   3. Where accent tile differs in thickness from field tile, vary setting-bed thickness so that tiles are flush.
   4. Jointing Pattern: Lay tile in grid pattern unless otherwise indicated. Lay out tile work and center tile fields in both directions in each space or on each wall area. Lay out tile work to minimize use of pieces that are less than half of a tile. Provide uniform joint widths unless otherwise indicated.
      a. Where adjoining tiles on floor, base, walls, or trim are specified or indicated to be same size, align joints.

D. Movement Joints: Provide movement joints and other sealant-filled joints, including control, contraction, and isolation joints, where indicated on Drawings. Form joints during installation of setting materials, mortar beds, and tile. Keep joints free of dirt, debris, and setting materials prior to filling with sealants. Do not saw-cut joints after installing tiles.
   1. Where joints occur in concrete substrates, locate joints in tile surfaces directly above them.

E. Metal Wall Trim: Install at locations indicated on Drawings.

3.4 ADJUSTING AND CLEANING

A. Remove and replace tile that is damaged or that does not match adjoining tile. Provide new matching units, installed as specified and in a manner to eliminate evidence of replacement.

B. Cleaning: On completion of placement and grouting, clean all ceramic tile surfaces so they are free of foreign matter.
   1. Remove grout residue from tile as soon as possible.
   2. Clean grout smears and haze from tile in accordance with tile and grout manufacturer's written instructions. Use only cleaners recommended by tile and grout manufacturers and only after determining that cleaners are safe to use by testing on samples of tile and other surfaces to be cleaned. Protect metal surfaces and plumbing fixtures from effects of cleaning. Flush surfaces with clean water before and after cleaning.

3.5 PROTECTION

A. Protect installed tile work with kraft paper or other heavy covering during construction period to prevent staining, damage, and wear. If recommended by tile manufacturer, apply coat of neutral protective cleaner to completed tile walls and floors.

B. Prohibit foot and wheel traffic from tiled floors for at least seven days after grouting is completed.

C. Before final inspection, remove protective coverings and rinse neutral protective cleaner from tile surfaces.

3.6 INTERIOR CERAMIC TILE INSTALLATION SCHEDULE

A. Interior Wall Installations, Wood or Metal Studs or Furring:
   1. TCNA 244C-11.
      a. Porcelain tile.
      b. Grout - Epoxy.
      c. Joint width: 1/8-inch.
      d. Movement joints as need for installation.

END OF SECTION

SECTION 09 51 13 - ACOUSTICAL PANEL CEILINGS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes acoustical panels and exposed suspension systems for interior ceilings.
B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.
C. Products furnished, but not installed under this Section, include anchors, clips, and other ceiling attachment devices to be cast in concrete.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.
B. Samples for Verification: For each component indicated and for each exposed finish required, prepared on samples of sizes indicated below:
   1. Acoustical Panels: Set of 6-inch-square amples of each type, color, pattern, and texture.

1.3 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Reflected ceiling plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
   1. Ceiling suspension-system members.
   2. Structural members to which suspension systems will be attached.
   3. Method of attaching hangers to building structure.
      a. Furnish layouts for cast-in-place anchors, clips, and other ceiling attachment devices whose installation is specified in other Sections.
   4. Carrying channels or other supplemental support for hanger-wire attachment where conditions do not permit installation of hanger wires at required spacing.
   5. Size and location of initial access modules for acoustical panels.
   6. Items penetrating finished ceiling and ceiling-mounted items including the following:
      a. Lighting fixtures.
      b. Diffusers.
      c. Sprinklers.
      d. Access panels.
   7. Show operation of hinged and sliding components covered by or adjacent to acoustical panels.
   8. Minimum Drawing Scale: 1/8-inch equal to 1 foot.
B. Field quality-control reports.

1.4 CLOSEOUT SUBMITTALS

A. Maintenance Data: For finishes to include in maintenance manuals.

1.5 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials, from the same product run, that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
   1. Acoustical Ceiling Units: Full-size panels equal to 2 percent of quantity installed.
   2. Suspension-System Components: Quantity of each exposed component equal to 2 percent of quantity installed.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Deliver acoustical panels, suspension-system components, and accessories to Project site and store them in a fully enclosed, conditioned space where they will be protected against damage from moisture, humidity, temperature extremes, direct sunlight, surface contamination, and other causes.
B. Before installing acoustical panels, permit them to reach room temperature and a stabilized moisture content.

1.7 FIELD CONDITIONS

A. Environmental Limitations: Do not install acoustical panel ceilings until spaces are enclosed and weathertight, wet-work in spaces is complete and dry, work above ceilings is complete, and ambient temperature and humidity conditions are maintained at the levels indicated for Project when occupied for its intended use.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Source Limitations: Obtain each type of acoustical ceiling panel and its supporting suspension system from single source from single manufacturer.

2.2 PERFORMANCE REQUIREMENTS

A. Surface-Burning Characteristics: Comply with ASTM E84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
   1. Flame-Spread Index: Class A according to ASTM E1264.
   2. Smoke-Developed Index: 50 or less.

2.3 ACOUSTICAL PANELS ACT1

A. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
   1. Armstrong World Industries, Inc. Match facility standard.
B. Acoustical Panel Standard: Provide manufacturer's standard panels according to ASTM E264 and designated by type, form, pattern, acoustical rating, and light reflectance unless otherwise indicated.

C. Classification: Provide panels as follows:
   1. Type and Form: A, Form A2.2.
   2. Pattern: E (lightly textured).
D. Color: as indicated on Interior Material Legend in Drawings.
E. Light eflectance (LR): Not less than 88.
F. Ceiling Attenuation Class (CAC): Not less than 35.
G. Noise Reduction Coefficient (NRC): Not less than 0.75.
H. Edge/Joint Detail: Tegular sized to fit flange of exposed suspension-system members.
I. Thickness: 3/4-inch.
J. Modular Size: As indicated on Drawings.

2.4 ACOUSTICAL PANELS ACT2

A. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
   1. Armstrong World Industries, Inc. Match facility standard.
B. Acoustical Panel Standard: Provide manufacturer's standard panels according to ASTM E1264 and designated by type, form, pattern, acoustical rating, and light reflectance unless otherwise indicated.
C. Classification: Provide panels as follows:
   1. Type and Form: A, Form A3.2.
   2. Pattern: G (smooth).
D. Color: as indicated on Interior Material Legend in Drawings.
E. Light eflectance (LR): Not less than 89.
F. Ceiling Attenuation Class (CAC): Not less than 33.
G. Edge/Joint Detail: Square.
H. Thickness: 5/8-inch.
I. Modular Size: As indicated on Drawings.

2.5 METAL SUSPENSION SYSTEM for ACT1 and ACT2

A. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
   1. Armstrong World Industries, Inc.
B. Metal Suspension-System Standard: Provide manufacturer's standard, direct-hung, metal suspension system and accessories according to ASTM C635 and designated by type, structural classification, and finish indicated.
   1. High-Humidity Finish: Where indicated, provide coating tested and classified for "severe environment performance" according to ASTM C635.
C. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than 25 percent.
D. Wide-Face, Capped, Double-Web, Steel Suspension System: Main and cross runners roll formed from cold-rolled steel sheet; prepainted, electrolytically zinc coated, or hot-dip galvanized, G30 coating designation; with prefinished 15/16-inch-wide metal caps on flanges.
   1. Structural Classification: Intermediate-duty system.
   2. End Condition of Cross Runners: Override (stepped) type.
   3. Cap Material: Cold-rolled steel or aluminum.
   4. Cap Finish: Painted white.

2.6 ACCESSORIES

A. Wire Hangers, Braces, and Ties: Provide wires as follows:
   1. Zinc-Coated, Carbon-Steel Wire: ASTM A641, Class 1 zinc coating, soft temper.
   2. Stainless-Steel Wire: ASTM A580, Type 304, nonmagnetic.
   3. Nickel-Copper-Alloy Wire: ASTM B164, nickel-copper-alloy UNS No. N04400.
   4. Size: Wire diameter sufficient for its stress at three times hanger design load (ASTM C 635, Table 1, "Direct Hung") will be less than yield stress of wire, but not less than 0.106-inch-diameter wire.

B. Hold-Down Clips: Manufacturer's standard hold-down.

C. Clean-Room Gasket System for use with ACT2 only: Where indicated, provide manufacturer's standard system, including manufacturer's standard gasket and related adhesives, tapes, seals, and retention clips, designed to seal out foreign material from and maintain positive pressure in clean room.

2.7 METAL EDGE MOLDINGS AND TRIM

A. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
   1. Armstrong World Industries, Inc.

B. Roll-Formed, Sheet-Metal Edge Moldings and Trim: Type and profile indicated or, if not indicated, manufacturer's standard moldings for edges and penetrations that comply with seismic design requirements; formed from sheet metal of same material, finish, and color as that used for exposed flanges of suspension-system runners.
   1. Edge moldings shall fit acoustical panel edge details and suspension systems indicated and match width and configuration of exposed runners unless otherwise indicated.
   2. For lay-in panels with reveal edge details, provide stepped edge molding that forms reveal of same depth and width as that formed between edge of panel and flange at exposed suspension member.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, including structural framing to which acoustical panel ceilings attach or abut, with installer present, for compliance with requirements specified in this and other Sections that affect ceiling installation and anchorage and with requirements for installation tolerances and other conditions affecting performance of acoustical panel ceilings.

B. Examine acoustical panels before installation. Reject acoustical panels that are wet, moisture damaged, or mold damaged.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Measure each ceiling area and establish layout of acoustical panels to balance border widths at opposite edges of each ceiling. Avoid using less-than-half-width panels at borders unless otherwise indicated, and comply with layout shown on reflected ceiling plans.
B. Layout openings for penetrations centered on the penetrating items.

3.3 INSTALLATION

A. Install acoustical panel ceilings according to ASTM C636 and manufacturer's written instructions.
B. Suspend ceiling hangers from building's structural members and as follows:
    1. Install hangers plumb and free from contact with insulation or other objects within ceiling plenum that are not part of supporting structure or of ceiling suspension system.
    2. Where width of ducts and other construction within ceiling plenum produces hanger spacings that interfere with location of hangers at spacings required to support standard suspension-system members, install supplemental suspension members and hangers in form of trapezes or equivalent devices.
    3. Do not support ceilings directly from permanent metal forms or floor deck. Fasten hangers to cast-in-place hanger inserts, postinstalled mechanical or adhesive anchors, or power-actuated fasteners that extend through forms into concrete.
    4. When steel framing does not permit installation of hanger wires at spacing required, install carrying channels or other supplemental support for attachment of hanger wires.
    5. Do not attach hangers to steel deck tabs.
    6. Space hangers not more than 48 inches o.c. along each member supported directly from hangers unless otherwise indicated; provide hangers not more than 8 inches from ends of each member.
    7. Size supplemental suspension members and hangers to support ceiling loads within performance limits established by referenced standards.
C. Install edge moldings and trim of type indicated at perimeter of acoustical ceiling area and where necessary to conceal edges of acoustical panels.
    1. Screw attach moldings to substrate at intervals not more than 16 inches o.c. and not more than 3 inches from ends. Miter corners accurately and connect securely.
    2. Do not use exposed fasteners, including pop rivets, on moldings and trim.
D. Install suspension-system runners so they are square and securely interlocked with one another. Remove and replace dented, bent, or kinked members.
E. Install acoustical panels with undamaged edges and fit accurately into suspension-system runners and edge moldings. Scribe and cut panels at borders and penetrations to provide precise fit.
    1. Arrange directionally patterned acoustical panels as follows:
        a. Install panels with pattern running in one direction parallel to long axis of space.
    2. For square-edged panels, install panels with edges fully hidden from view by flanges of suspension-system runners and moldings.
    3. For reveal-edged panels on suspension-system runners, install panels with bottom of reveal in firm contact with top surface of runner flanges.

4. Paint cut edges of panel remaining exposed after installation; match color of exposed panel surfaces using coating recommended in writing for this purpose by acoustical panel manufacturer.
5. Install hold-down clips where ACT2 is specified in areas indicated; space according to panel manufacturer's written instructions unless otherwise indicated.
   a. Hold-Down Clips: Space o.c. on all cross runners.
6. Install clean-room gasket system in areas indicated, sealing each panel and fixture as recommended by panel manufacturer's written instructions.

3.4 ERECTION TOLERANCES

A. Suspended Ceilings: Install main and cross runners level to a tolerance of 1/8-inch in 12 feet, non-cumulative.
B. Moldings and Trim: Install moldings and trim to substrate and level with ceiling suspension system to a tolerance of 1/8-inch in 12 feet, non-cumulative.

3.5 CLEANING

A. Clean exposed surfaces of acoustical panel ceilings, including trim, edge moldings, and suspension-system members. Comply with manufacturer's written instructions for cleaning and touchup of minor finish damage.
B. Remove and replace ceiling components that cannot be successfully cleaned and repaired to permanently eliminate evidence of damage.

END OF SECTION

SECTION 09 54 23 - METAL PAN CEILINGS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Linear metal ceilings.
B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.

1.2 COORDINATION

A. Coordinate layout and installation of linear metal pans and suspension system with other construction that penetrates ceilings or is supported by them, including light fixtures, HVAC equipment, fire-suppression system, and partition assemblies.

1.3 ACTION SUBMITTALS

A. Product Data: For linear metal ceilings.
B. Shop Drawings: For linear metal ceilings.
   1. Include reflected ceiling plans, sections, and details, drawn to scale, showing the following:
      a. Linear ceiling patterns and joints.
      b. Ceiling suspension members.
      c. Method of attaching hangers to building structure and locations of cast-in-place anchors, clips, and other ceiling attachment devices whose installation is specified in other Sections.
      d. Ceiling-mounted items including, but not limited to, light fixtures, diffusers, grilles, speakers, sprinklers, and access panels.
      e. Ceiling perimeter and penetrations through ceiling; trim and moldings.
C. Samples for Verification: For the following products:
   1. Linear Metal Pans: 12 inches long by full-width samples of each type, color, and finish and a 12-inch-long spliced section.
   2. Suspension-System Members: 12-inch-long sample of each type.
   3. Exposed Molding and Trim: 12-inch-long samples of each type, color, and finish.
   4. Filler Strips: 12-inch-long samples of each type, color, and finish.
   5. Sound Absorbers: 12 inches long by full width.
   6. End Caps: Full size.
   7. Acoustical Infill.

1.4 CLOSEOUT SUBMITTALS

A. Maintenance Data: For finishes to include in maintenance manuals.

1.5 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
   1. Linear-Metal-Ceiling Components: Quantity of each pan, carrier, accessory, and exposed molding and trim equal to 2 percent of quantity installed.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Deliver ceiling components and accessories to Project site in original, unopened packages and store them in a fully enclosed, conditioned space where they are protected against damage from moisture, humidity, temperature extremes, direct sunlight, surface contamination, and other causes.
B. Handle ceiling components and accessories in a manner that prevents damage.

1.7 PROJECT CONDITIONS

A. Environmental Limitations: Do not install interior ceilings until spaces are enclosed and weathertight, wet-work in spaces is complete and dry, work above ceilings is complete, and HVAC system is operating and maintaining temperature and relative humidity at levels planned for building occupants during the remainder of the construction period.

PART 2 - PRODUCTS

2.1 METAL PAN CEILINGS MCP

A. Pans and Suspension System:
   1. Manufacturers: Basis of Design and Subject to compliance with requirements, provide products by one of the following:
      a. Armstrong Ceiling & Wall Solutions.
B. Metal Pans: Complying with ASTM E1264 for and formed to snap on to carriers securely, without separate fasteners.
   1. Surface-Burning Characteristics: For metal-pan assemblies, including backings, determined by testing in accordance with ASTM E84 by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
      a. Flame-Spread Index: 25 or less.
      b. Smoke-Developed Index: 50 or less.
   2. Metal: Acceptable product:
      a. Armstrong Metal Works Torsion Spring by Armstrong Industries.
   3. Form: Perforated.
      a. Perforation Pattern: M15.
   4. Noise Reduction Coefficient (NRC) Rating: Not less than 0.90when tested in accordance with ASTM C423.
   5. Backing: 1-inch fiberglass infill, Black.
   6. Pan Thickness: Not less than 0.040-inch.
   7. Pan Edge Detail: Square.

8. Pan Width: As indicated on Drawings.
9. Metal-Pan Finish: Protected on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping and as follows:
    a. Color-Coated Finish: Manufacturer's standard baked paint finish complying with coating manufacturer's written instructions for surface preparation, pretreatment, application, baking, and minimum dry film thickness.
        1) Color and Pattern: As indicated by manufacturer's product designation as indicated on Interior Material Legend in Drawings.

C. Adhesives: Do not use adhesives that contain urea formaldehyde.

D. Pan Splices: Formed for snap fit into butt-cut pans, long.
1. Finish: Matching pan.

E. End Caps: Manufacturer's standard material fabricated to fit and conceal exposed ends of pans.
1. Finish: Matching pan.

F. Filler Strips: Manufacturer's standard, fabricated to close voids between pans.
1. Finish: Matching pan.

G. Moldings and Trim: Manufacturer's standard for exposed members, to conceal edges of penetrations through ceiling, to conceal ends of pans and carriers, for fixture trim and adapters, for fasciae at changes in ceiling height, and for other conditions; of metal and finish matching linear metal pans or extruded plastic unless otherwise indicated.

2.2 SUSPENSION SYSTEM

A. Components: All main beams and cross tees shall be commercial quality hot dipped galvanized steel as per ASTM A653. Main beams and cross tees are double-web steel construction with 15/16-inch type exposed flange design. Exposed surfaces chemically cleansed, capping prefinished galvanized steel in baked polyester paint. Main beams and cross tees shall have rotary stitching.
1. 7301TS 360 Prelude® XL® 12-foot HD Main Beam – Slotted.
2. XL7341TS Prelude XL 4-foot Cross Tee.
3. XL7390TS Prelude XL 6-foot Cross Tee – Slotted.
4. XL7378 Prelude XL 30-inch Cross Tee.
5. XL8320 Prelude XL 2-foot Cross Tee.
6. XL7341 Prelude XL 4-foot Cross Tee.

B. Attachment Devices: Size for five times design load indicated in ASTM C635, Table 1, Direct Hung unless otherwise indicated.

C. Wire for Hangers and Ties: ASTM A641, Class 1 zinc coating, soft temper, pre-stretched, with a yield stress load of at least times-three design load, but not less than 12-gauge.

2.3 ACCESSORIES

A. Access Panels: For access at locations indicated, provide door hinge assembly, retainer clip, and retainer bar, assembled with ceiling panels and carrier sections into access doors permitting upward or downward opening.
1. Size: As indicated on Drawings.

B. Air-Distribution Devices: Where indicated on Drawings, provide independently suspended air-distribution devices that are relocatable and adjustable from below finished ceiling, that do not interrupt ceiling components, and that are fully concealed by and integrated with ceiling system.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, including structural framing and substrates to which linear metal ceilings attach or abut, with installer present, for compliance with requirements specified in this and other Sections that affect ceiling installation and anchorage and with requirements for installation tolerances and other conditions affecting performance of linear metal ceilings.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Measure each ceiling area and establish layout of linear metal pans.
   1. Balance border widths at opposite edges of each ceiling.
   2. Avoid using less-than-half-width pans at borders.

3.3 INSTALLATION OF LINEAR METAL CEILINGS

A. Suspend ceiling hangers from building's structural members and as follows:
   1. Install hangers plumb and free from contact with insulation or other objects within ceiling plenum that are not part of supporting structure or of ceiling suspension system.
   2. Splay hangers only where required to miss obstructions; offset resulting horizontal forces by bracing, countersplaying, or other equally effective means.
   3. Where width of ducts and other construction within ceiling plenum produces hanger spacings that interfere with location of hangers at spacings required to support standard suspension-system members, install supplemental suspension members and hangers in form of trapezes or equivalent devices.
   4. Do not support ceilings directly from permanent metal forms or floor deck. Fasten hangers to cast-in-place hanger inserts or postinstalled mechanical or adhesive anchors that extend through forms into concrete.
   5. When steel framing does not permit installation of hanger wires at spacing required, install carrying channels or other supplemental support for attachment of hanger wires.
   6. Do not attach hangers to steel deck tabs.
   7. Do not attach hangers to steel roof deck. Attach hangers to structural members.
   8. Space hangers not more than 48 inches o.c. along each member supported directly from hangers unless otherwise indicated; provide hangers not more than 8 inches from ends of each member.
   9. Size supplemental suspension members and hangers to support ceiling loads within performance limits established by referenced standards and publications.

B. Secure bracing wires to ceiling suspension members and to supports with a minimum of four tight turns in 1-1/2 inches. Suspend bracing from building's structural members as required for hangers and without attaching to permanent metal forms, steel deck, or steel deck tabs. Fasten bracing wires into concrete with cast-in-place or postinstalled anchors.

C. Install edge moldings and trim at perimeter of linear metal ceiling area and where necessary to conceal edges and ends of linear metal pans.
   1. Screw attach moldings to substrate at intervals of not more than 16 inches o.c. and not more than 3 inches from ends, leveling with ceiling suspension system to a tolerance of 1/8-inch in 12 feet. Miter corners accurately and connect securely.
   2. Do not use exposed fasteners, including pop rivets, on moldings and trim.

D. Install suspension-system carriers so they are aligned and securely interlocked with one another.
   1. Install stabilizer channels, tees, and bars at regular intervals to stabilize carriers and at light fixtures, air-distribution equipment, access doors, and other equipment; spaced as standard with manufacturer for use indicated.
   2. Remove and replace dented, bent, or kinked members.

E. Cut linear metal pans for accurate fit at borders and at interruptions and penetrations by other work through ceilings. Stiffen edges of cut units as required to eliminate evidence of buckling or variations in flatness.

F. Install linear metal pans in coordination with suspension system and exposed moldings and trim.
   1. Align joints in adjacent courses to form uniform, straight joints parallel to room axis in both directions unless otherwise indicated on Drawings.
   2. Fit adjoining units to form flush, tight joints. Scribe and cut units for accurate fit at borders and around construction penetrating ceiling.
      a. Install pans with butt joints aligned using internal pan splices.
   3. Install directionally textured or patterned metal pans in directions indicated.
   4. Where metal pan ends are visible, install end caps unless trim is indicated.
   5. Install sound-absorbent pads at right angle to perforated metal pans so pads do not hang unsupported.

3.4 CLEANING

A. Clean exposed surfaces of linear metal ceilings, including trim and edge moldings, after removing strippable, temporary protective covering if any. Comply with manufacturer's written instructions for stripping of temporary protective covering, cleaning, and touchup of minor finish damage. Remove and replace ceiling components that cannot be successfully cleaned and repaired to permanently eliminate evidence of damage, including dented and bent units.

END OF SECTION

SECTION 09 65 13 - RESILIENT BASE AND ACCESSORIES

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Thermoplastic-rubber base.
   2. Rubber molding accessories.

B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Samples for Verification: For each type of product indicated and for each color, texture, and pattern required in manufacturer's standard-size samples, but not less than 12 inches long.

C. Product Schedule: For resilient base and accessory products. Use same designations indicated on Drawings.

1.3 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials[, from the same product run,] that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
   1. Furnish not less than 10 linear feet for every 500 linear feet or fraction thereof, of each type, color, pattern, and size of resilient product installed.

1.4 DELIVERY, STORAGE, AND HANDLING

A. Store resilient products and installation materials in dry spaces protected from the weather, with ambient temperatures maintained within range recommended by manufacturer, but not less than 50 degrees F or more than 90 degrees F.

1.5 FIELD CONDITIONS

A. Maintain ambient temperatures within range recommended by manufacturer, but not less than 70 degrees F or more than 95 degrees F, in spaces to receive resilient products during the following periods:
   1. 48 hours before installation.
   2. During installation.
   3. 48 hours after installation.

B. After installation and until Substantial Completion, maintain ambient temperatures within range recommended by manufacturer, but not less than 55 degrees F or more than 95 degrees F.

C. Install resilient products after other finishing operations, including painting, have been completed.

PART 2 - PRODUCTS

2.1 THERMOPLASTIC-RUBBER BASE RB1

A. Manufacturers: Subject to compliance with requirements, provide products by the following:
   1. As indicated on Interior Material Legend in Drawings..
B. Product Standard: ASTM F1861, Type TP (rubber, thermoplastic).
   1. Group: II (layered).
   2. Style and Location:
      a. Style B, Cove: Provide in areas indicated on Drawings.
C. Thickness: 0.125-inch.
D. Height: 4 inches.
E. Lengths: Coils in manufacturer's standard length.
F. Outside Corners: Job formed.
G. Inside Corners: Job formed.
H. Colors: As indicated on Interior Material Legend in Drawings.

2.2 RUBBER MOLDING ACCESSORY RACC1

A. Manufacturers: Subject to compliance with requirements, provide products by the following:
   1. Roppe Corporation, USA.
B. Description: As required per drawing conditions.
C. Profile and Dimensions: As required for transition to dissimilar materials.
D. Locations: Provide rubber molding accessories in areas indicated on Drawings.
E. Colors and Patterns: As indicated on Interior Material Legend in Drawings.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, with installer present, for compliance with requirements for maximum moisture content and other conditions affecting performance of the Work.
   1. Verify that finishes of substrates comply with tolerances and other requirements specified in other Sections and that substrates are free of cracks, ridges, depressions, scale, and foreign deposits that might interfere with adhesion of resilient products.
B. Proceed with installation only after unsatisfactory conditions have been corrected.
   1. Installation of resilient products indicates acceptance of surfaces and conditions.

3.2 PREPARATION

A. Prepare substrates according to manufacturer's written instructions to ensure adhesion of resilient products.
B. Fill cracks, holes, and depressions in substrates with trowelable leveling and patching compound; remove bumps and ridges to produce a uniform and smooth substrate.

C. Do not install resilient products until materials are the same temperature as space where they are to be installed.
   1. At least 48 hours in advance of installation, move resilient products and installation materials into spaces where they will be installed.
D. Immediately before installation, sweep and vacuum clean substrates to be covered by resilient products.

3.3 RESILIENT BASE INSTALLATION

A. Comply with manufacturer's written instructions for installing resilient base.
B. Apply resilient base to walls, columns, pilasters, casework and cabinets in toe spaces, and other permanent fixtures in rooms and areas where base is required.
C. Install resilient base in lengths as long as practical without gaps at seams and with tops of adjacent pieces aligned.
D. Tightly adhere resilient base to substrate throughout length of each piece, with base in continuous contact with horizontal and vertical substrates.
E. Do not stretch resilient base during installation.
F. On masonry surfaces or other similar irregular substrates, fill voids along top edge of resilient base with manufacturer's recommended adhesive filler material.
G. Job-Formed Corners:
   1. Outside Corners: Use straight pieces of maximum lengths possible and form with returns not less than 5 inches in length.
      a. Form without producing discoloration (whitening) at bends.
   2. Inside Corners: Use straight pieces of maximum lengths possible and form with returns not less than 5 inches in length.
      a. Miter or cope corners to minimize open joints.

3.4 RESILIENT ACCESSORY INSTALLATION

A. Comply with manufacturer's written instructions for installing resilient accessories.
B. Resilient Molding Accessories: Butt to adjacent materials and tightly adhere to substrates throughout length of each piece. Install reducer strips at edges of floor covering that would otherwise be exposed.

3.5 CLEANING AND PROTECTION

A. Comply with manufacturer's written instructions for cleaning and protecting resilient products.
B. Perform the following operations immediately after completing resilient-product installation:
   1. Remove adhesive and other blemishes from surfaces.
C. Protect resilient products from mars, marks, indentations, and other damage from construction operations and placement of equipment and fixtures during remainder of construction period.
D. Cover resilient products subject to wear and foot traffic until Substantial Completion.

END OF SECTION

SECTION 09 66 16 - TERRAZZO FLOOR TILE

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Terrazzo floor tile covering and accessories.
B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.
   2. Division 03 - Concrete (subfloors).
   3. Section 07 - Thermal and Moisture Protection.

1.2 REFERENCE STANDARDS

A. ASTM International:
   1. ASTM C1028 - Standard Test Method for Determining the Static Coefficient of Friction of Ceramic Tile and Other Like Surfaces by the Horizontal Dynamometer Pull-Meter Method.
   2. ASTM D2240 - Standard Test Method for Durometer Hardness.
   3. ASTM E648 - Standard Test Method for Critical Radiant Flux of Flooring Systems Using a Radiant Energy Source.
   4. ASTM E662 - Standard Test Method for Specific Optical Density of Smoke Generated by Solid Materials.
   5. ASTM F925 - Standard Test Method for Resistance to Chemicals of Resilient Flooring.
   6. ASTM F970 - Standard Test Method for Static Load Limit.
   7. ASTM F1869 - Standard Test Method for Measuring Moisture Vapor Emission Rate of Concrete Subfloor Using Anhydrous Calcium Chloride.
   8. ASTM F2170 - Standard Test Method for Determining Relative Humidity in Concrete Floor Slabs Using In Situ Probes.
B. Other Referenced Documents:
   1. National Fire Protection Association (NFPA) 253: Standard Test Method for Critical Radiant Flux of Floor Covering Systems Using a Radiant Energy Source.
   2. LEED-NC, version 3.

1.3 ADMINISTRATIVE REQUIREMENTS

A. Coordination: Install floor covering after finishing operations, including painting and ceiling operations, have been completed.
B. Pre-installation Meetings: Meet to confirm Project requirements, substrate conditions, manufacturer’s installation instructions and warranty requirements in compliance with Division 01 requirements.
C. Sequencing: Do not install floor covering over concrete substrates until substrates have cured and are dry to bond with adhesive as determined using test methods specified in ASTM F710 and following adhesive manufacturer’s instructions.

1.4 ACTION SUBMITTALS

A. General: Submit listed submittals in accordance with Conditions of the Contract and Section 01 01 33 00 “Submittal Procedures.”
B. Product Data: For specified products, submit latest edition of product supplier’s technical specifications data.
C. Samples: Submit selection and verification samples showing the required style and color for flooring as well as cove or sanitary base, stair treads and wall protection units

1.5 INFORMATION SUBMITTALS

A. Test and Evaluation Reports:
   1. Product test reports: As required by Conditions of the Contract and Section 01 60 00 “Product Requirements,” submit test certificates from an independent test laboratory showing compliance with specified performance characteristics and physical properties.
   2. Compatibility and adhesion test reports: Submit test reports confirming adhesive’s effectiveness with the product(s) specified.
B. Manufacturer Instructions: For specified products, submit latest editions of product supplier’s installation, cleaning, and maintenance instructions.

1.6 CLOSEOUT SUBMITTALS

A. Warranty documentation: For specified products and accessories, submit product supplier’s warranty documents.

1.7 QUALITY ASSURANCE

A. Installer: To be qualified to install the material, installer shall fulfill 1 of the following requirements:
   1. Installing company shall utilize installers that are certified on the applicable Floorazzo installation process (Butt or Fusion Technique) by the supplier. Installers must be able to provide valid Certification documentation at the time of installation start.
   2. Installer shall hire the manufacturer’s representative to provide a minimum of 2 days of training and onsite supervision. Training shall be conducted prior to the start of the installation. Installing company shall provide installers ample time to participate in the training and certification process. This shall be included in the price of the installation from the Flooring Contractor.
B. Testing Agency: Agency shall be independent and qualified to perform concrete substrate moisture and humidity testing according to ASTM F710 prior to the flooring being installed.

C. Preconstruction Testing:
1. Concrete substrate: Reference Standard ASTM F710 for more detail. To partially summarize here, regardless of its age or grade level or history of use, perform the following concrete tests:
a. Concrete Moisture Test: Perform moisture tests (ASTM F1869 and ASTM F2170) on concrete with a minimum of three tests for the first 1,000 square feet and one additional test for each 1,000 square feet or fraction thereof. A diagram of the area showing the location and results of each test shall be dated and submitted to the Architect, General Contractor, and/or Owner. If test results exceed the floor covering manufacturer's limits, installation shall not commence until results conform to limits.
b. If test results on installations exceed the following limits, installation shall not commence until results conform to limits:

	Mapei Ultrabond ECO 373 OR ECO MS4 Adhesive
ASTM F1869	8 lbs/1,000 ft²/24 hrs
ASTM F2170	90% relative humidity

D. Concrete pH Test: Perform pH tests on concrete. Do not install when the pH is greater than or equal to 12. Readings below 7.0 and above 10.0 can adversely affect resilient flooring or adhesives, or both.

1.8 DELIVERY, STORAGE, AND HANDLING

A. General: Comply with Section 01 60 00 "Product Requirements."
B. Delivery and Acceptance Requirements: Comply with the product supplier's ordering and lead time requirements to avoid construction delays, and to allow material to acclimatize as required in the specified product's installation instructions. Accept delivery of materials only if they are in unopened, undamaged packaging that bears the name and brand of the manufacturer/product supplier, project identification, and shipping and handling instructions.
C. Storage and Handling Requirements: Upon receiving floor covering, immediately remove from pallet and lay on a flat surface. Store material, including underlayment panels, patching or underlayment compound, floor covering material and adhesive, in the original packaging (as delivered) in areas that are enclosed and weather tight with the permanent HVAC system set at a temperature of between 65 degrees F and 80 degrees F for a minimum of 48 hours prior to commencement of installation. In addition, comply with storage and handling requirements listed on product packaging, and described in the latest edition of the product's installation instructions.

1.9 AMBIENT SITE CONDITIONS

A. The permanent HVAC system shall be operational and set at a temperature of between 65 degrees F and 80 degrees F for a minimum of 48 hours prior to commencement of installation, during the time of installation, and for 48 hours after installation has been completed.
B. Minimum temperature shall be 55 degrees F. Refer to the latest version of the installation instructions for additional ambient requirements (humidity, completion of related Work or substrates, etc.) under which the Work must be performed in order for the Work results to provide the specified quality.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Basis of Design Supplier: Floorazzo Tile, LLC, 1217 Harold Andrews Road, Siler City, North Carolina 27344, Ph: 919.663.1684, www.floorazzo.com.
B. Product shall be Precast Terrazzo Tile product made with Polyester Resins for flexibility of installation. Products made from Epoxy Resins or Cementitious Materials shall not be allowed. Product must be designed for installation with resilient adhesive; thin-set and grouting is not allowed.
C. Obtain all materials including tile, adhesive, fusion, etc. from single manufacturer.
D. Product Installation Type:
    1. Butt install method: 2- by 2-foot terrazzo tile shall be installed in Butt Tile fashion, where tiles are laid next to each other without grout line.
E. Substitutions: Substitutions permitted where products are determined to be equal.
F. Product Options:
    1. Floorazzo Tiles, Custom:
        a. Size: 24 by 24 inches or 24 by 48 inches.
        b. Weight: 2.15 lb/ft^2.
        c. Gauge: 3/16-inch.
        d. Edges: Straight
        e. Install: Butt.
        f. Colors: Custom selection to match existing.
G. Performance: Physical properties of Floorazzo Tiles shall conform to the following minimums:
    1. Safety:
        a. Critical radiant flux ASTM E648: Class 1.
        b. Smoke density ASTM E662: Pass.
        c. Slip Resistance ASTM C1028: Wet: 0.7; Dry: 0.66.
    2. Durability:
        a. Static load limit ASTM F970: 1,000 psi.
        b. Chemical resistance ASTM F925: No change.
    3. LEED-NC v.2.2:
        a. MR Credit 4 Recycled content 18 percent pre-consumer recycled content.
            1) Gem (Glass): 18 percent post-consumer recycled content.
            2) Marbled: 18 percent pre-consumer recycled content.
        b. IEQ Credit 4.1: Low-emitting adhesives:
            1) Mapei Ultrabond ECO 373 Adhesive has a low VOC Content.
        c. IEQ Credit 4.2: Low-emitting sealers:
            1) Diversey Plaza Plus Sealer/Finish or equal.
        d. IEQ Credit 4.3: Low-emitting flooring:
            1) Floorazzo is manufactured with a mineral base.

2.2 ACCESSORY PRODUCTS

A. Cove Base: 4- or 6-inch cove base in matching color.
B. Divider Strips: Consult factory.
C. Sanitary Cove: Architect shall specify use of standard or sanitary cove as required by application.
D. Stair Tread: Stair tread shall be same material and color as specified for tiles.
E. Wall Protection: Wall Tiles shall be made of the same material and thickness as the floor tile material.
F. Adhesive: Architect to specify adhesive and trowel notch size per the latest edition of the installation instructions.
G. Sealer: Architect shall specify per the latest edition of the installation instructions.
H. Cleaning Products: Architect can specify per the latest edition of the maintenance instructions.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Overall: Follow guidelines laid out in Section 01 40 00 “Quality Requirements.”
B. Verification of Conditions: Inspect all substrates and subfloors for proper tolerances and dryness and report any discrepancies to the General Contractor in writing.
C. Pre-installation Testing: Verify that concrete testing per ASTM F710 has been conducted by an independent testing agency, and that results are within the adhesive and floor covering manufacturers’ requirements.
D. Proper storage and acclimation of product according to manufacturer’s procedures

3.2 SURFACE PREPARATION

A. Follow guidelines laid out in Section 01 40 00 “Quality Requirements.”
B. Prepare concrete substrates per ASTM F710. All work required to put the concrete subfloor in acceptable condition shall be the responsibility of the General Contractor.
C. Close adherence to the manufacturer requirements for floor levelness and preparation.

3.3 INSTALLATION

A. Follow Division 01 relevant guidelines, and the latest edition of the manufacturer’s installation instructions. Only use written instructions from the manufacturer.
B. Interface with Other Work: If transitions are required to and/or from the specified floor covering, contact the supplier for suitable transition material.

3.4 FIELD QUALITY CONTROL

A. Manufacturer Services: Coordinate with supplier if an on-site manufacturer’s representative is required. Installers without prior experience must have manufacturer’s representative on site for training and oversight as required by the manufacturer.

3.5 CLEANING

A. General: Clean up job site, including sweeping or dust mopping the floor to remove all dirt or grit, and put all waste in General Contractor's dumpster. Follow overall cleaning guidelines described manufacturer's written instructions and documentation.
B. Initial Maintenance: Installer is responsible and must conduct the initial penetrating floor sealer and surface treatment. It must be conducted immediately after installation.
C. Initial maintenance shall be per the latest edition of the manufacturer's maintenance instructions.

3.6 CLOSEOUT ACTIVITIES

A. Follow stated requirements and Section 01 70 00 "Execution and Closeout Requirements," for protecting installed construction.

END OF SECTION

SECTION 09 66 23 - RESINOUS MATRIX TERRAZZO FLOORING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Thin-set, epoxy-resin terrazzo flooring.
B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.

1.2 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.
   1. Review methods and procedures related to terrazzo including, but not limited to, the following:
      a. Inspect and discuss condition of substrate and other preparatory work performed by other trades.
      b. Review and finalize construction schedule and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
      c. Review special terrazzo designs and patterns.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.
B. Sustainable Design Submittals:
   1. Product Data: For adhesives, indicating VOC content.
C. Shop Drawings: Include terrazzo installation requirements. Include plans, sections, component details, and relationship to other work. Show layout of the following:
   1. Divider strips.
   2. Control-joint strips.
   3. Accessory strips.
   4. Abrasive strips.
   5. Stair treads, risers, and landings.
   6. Precast terrazzo jointing and edge configurations.
   7. Terrazzo patterns.
D. Samples for Verification: For each type, material, color, and pattern of terrazzo and accessory required showing the full range of color, texture, and pattern variations expected. Label each terrazzo sample to identify manufacturer's matrix color and aggregate types, sizes, and proportions. Prepare samples of same thickness and from same material to be used for the Work, in sizes indicated below:
   1. Terrazzo: 6-inch-square samples.
   2. Accessories: 6-inch-long samples of each exposed strip item required.

1.4 INFORMATIONAL SUBMITTALS

A. Qualification Data: For installer.
B. Installer Certificates: Signed by manufacturers certifying that installers comply with requirements.

1.5 CLOSEOUT SUBMITTALS

A. Maintenance Data: For terrazzo to include in maintenance manuals.

1.6 QUALITY ASSURANCE

A. Installer Qualifications:
   1. Installers must be pre-qualified prior to selection for work by Owner and Architect.
   2. Provide 3 references and projects of similar size and complexity for review and approval.
   3. Engage an installer who is a contractor member of NTMA.
   4. Engage an installer who is certified in writing by terrazzo manufacturer as qualified to install manufacturer's products.
B. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for materials and execution.
   1. Build mockups for terrazzo including accessories.
      a. Size: Minimum 100 sq. ft. of typical poured-in-place flooring[and base] condition for each color and pattern in locations directed by Architect.
      b. Include base first three stair treads and stringer.
   2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials to Project site in supplier's original wrappings and containers, labeled with source's or manufacturer's name, material or product brand name, and lot number if any.
B. Store materials in their original, undamaged packages and containers, inside a well-ventilated area protected from weather, moisture, soiling, extreme temperatures, and humidity.

1.8 FIELD CONDITIONS

A. Environmental Limitations: Comply with manufacturer's written instructions for substrate temperature, ambient temperature, moisture, ventilation, and other conditions affecting terrazzo installation.
B. Provide permanent lighting or, if permanent lighting is not in place, simulate permanent lighting conditions during terrazzo installation.
C. Close spaces to traffic during terrazzo application and for not less than 24 hours after application unless manufacturer recommends a longer period.
D. Control and collect water and dust produced by grinding operations. Protect adjacent construction from detrimental effects of grinding operations.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Source Limitations: Obtain primary terrazzo materials from single source from single manufacturer. Provide secondary materials including patching and fill material, joint sealant, and repair materials of type and from source recommended by manufacturer of primary materials.
B. Source Limitations for Aggregates: Obtain each color, grade, type, and variety of granular materials from single source with resources to provide materials of consistent quality in appearance and physical properties.

2.2 PERFORMANCE REQUIREMENTS

A. NTMA Standards: Comply with NTMA's written recommendations for terrazzo type indicated unless more stringent requirements are specified.

2.3 EPOXY-RESIN TERRAZZO

A. Epoxy-Resin Terrazzo TER1: Comply with manufacturer's written instructions for matrix and aggregate proportions and mixing. Comply with "Terrazzo Specifications and Design Guide" and written intstructions for matrix and aggregate proportions and mixing.
    1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:
        a. Terrazzo & Marble Supply Companies.
        b. Terroxy Resin Systems.
B. Mix Color and Pattern: As selected by Architect from manufacturer's full range. Match existing.
C. Thickness: 3/8-inch.
D. Materials:
    1. Moisture-Vapor-Emission-Control Membrane: Two-component, high-solids, high-density, low-odor, epoxy-based membrane-forming product produced by epoxy terrazzo manufacturer that reduces moisture emission from concrete substrate to not more than 3 lb of water/1,000 sq. ft. in 24 hours.
    2. Substrate-Crack-Suppression Membrane: Product of terrazzo-resin manufacturer, having minimum 120 percent elongation potential according to ASTM D412.
        a. Reinforcement: Fiberglass scrim.
    3. Primer: Manufacturer's product recommended for substrate and use indicated.
    4. Epoxy-Resin Matrix: and in color required for mix indicated.
        a. Physical Properties without Aggregates:
            1) Hardness: 60 to 85 per ASTM D2240, Shore D.
            2) Minimum Tensile Strength: 3,000 psi per ASTM D638 for a 2-inch specimen made using a "C" die per ASTM D412.
            3) Minimum Compressive Strength: 10,000 psi per ASTM D695, Specimen B cylinder.

4) Chemical Resistance: No deleterious effects by contaminants listed below after seven-day immersion at room temperature per ASTM D1308.
   a) Distilled water.
   b) Mineral water.
   c) Isopropanol.
   d) Ethanol.
   e) 0.025 percent detergent solution.
   f) 1.0 percent soap solution.
   g) 5 percent acetic acid.
   h) 10 percent sodium hydroxide.
   i) 10 percent hydrochloric acid.
   j) 30 percent sulfuric acid.

b. Physical Properties with Aggregates: For terrazzo blended according to manufacturer's recommendations with one part epoxy resin with three parts marble aggregate consisting of 60 percent No. 1 chips and 40 percent No. 0 chips that is ground and grouted to a 1/4-inch nominal thickness, and cured for 7 days at 75 degrees F plus or minus 2 degrees F and at 50 percent plus or minus 2 percent relative humidity.
   1) Flammability: Self-extinguishing, maximum extent of burning 1/4-inch according to ASTM D635.
   2) Thermal Coefficient of Linear Expansion: 0.0025-inch per degrees F according to ASTM C531.

5. Aggregates: Comply with NTMA gradation standards for mix indicated and contain no deleterious or foreign matter.
   a. Abrasion and Impact Resistance: Less than 40 percent loss per ASTM C131.
   b. 24-Hour Absorption Rate: Less than 0.75 percent.
   c. Dust Content: Less than 1.0 percent by weight.
6. Finishing Grout: Resin based.

2.4 PRECAST EPOXY-RESIN TERRAZZO

A. Precast Terrazzo Base : Minimum 3/8-inch thick, epoxy terrazzo units cast in maximum lengths possible, but not less than 36 inches. Comply with manufacturer's written instructions for fabricating precast terrazzo base units in sizes and profiles indicated.
   1. Type: As indicated Coved with minimum 3/4-inch radius.
   2. Top Edge: Straight, to match existing.
   3. Outside Corner Units: With finished returned edges at outside corner.
   4. Color, Pattern, and Finish: Match adjacent poured-in-place terrazzo flooring.

2.5 STRIP MATERIALS

A. Thin-Set Divider Strips: L-type angle in depth required for topping thickness indicated.
   1. Material: Match existing.
   2. Top Width: Match existing.

B. Heavy-Top Divider Strips: L-type angle in depth required for topping thickness indicated.
   1. Bottom-Section Material: Matching top-section material.
   2. Top-Section Material: Match existing.
   3. Top-Section Width: Match existing.

C. Control-Joint Strips: Separate, double L-type angles, positioned back to back, that match material and color of divider strips and in depth required for topping thickness indicated.

D. Accessory Strips: Match divider-strip width, material, and color unless otherwise indicated. Use the following types of accessory strips as required to provide a complete installation:
   1. Base-bead strips for exposed top edge of terrazzo base.
   2. Edge-bead strips for exposed edges of terrazzo.
   3. Nosings for terrazzo stair treads and landings.

E. Abrasive Strips: Three-line abrasive inserts at nosings. Silicon carbide or aluminum oxide, or combination of both, in epoxy-resin binder and set in channel.
   1. Width: 1/2-inch.
   2. Depth: As required by terrazzo thickness.
   3. Length: 4 inches less than stair width.
   4. Color: As selected by Architect from full range of industry colors.

2.6 MISCELLANEOUS ACCESSORIES

A. Strip Adhesive: Epoxy-resin adhesive recommended by adhesive manufacturer for this use.
   1. Adhesives shall have a VOC content of 70 g/L or less.

B. Anchoring Devices:
   1. Strips: Provide mechanical anchoring devices or adhesives for strip materials as recommended by manufacturer and as required for secure attachment to substrate.

C. Patching and Fill Material: Terrazzo manufacturer's resinous product approved and recommended by manufacturer for application indicated.

D. Joint Compound: Terrazzo manufacturer's resinous product approved and recommended by manufacturer for application indicated.

E. Resinous Matrix Terrazzo Cleaner: Chemically neutral cleaner with pH factor between 7 and 10 that is biodegradable, phosphate free, and recommended by sealer manufacturer for use on terrazzo type indicated.

F. Sealer: Slip- and stain-resistant, penetrating-type sealer that is chemically neutral; does not affect terrazzo color or physical properties; and is recommended by sealer manufacturer. Water based:
   1. Surface Friction: Not less than 0.6 according to ASTM D2047.
   2. Acid-Base Properties: With pH factor between 7 and 10.
   3. Sealers shall have a VOC content of 200 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates and areas, with installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions, including levelness tolerances, have been corrected.

3.2 PREPARATION

A. Clean substrates of substances, including oil, grease, and curing compounds, that might impair terrazzo bond. Provide clean, dry, and neutral substrate for terrazzo application.

B. Concrete Slabs:
   1. Provide sound concrete surfaces free of laitance, glaze, efflorescence, curing compounds, form-release agents, dust, dirt, grease, oil, and other contaminants incompatible with terrazzo.
      a. Shot-blast surfaces with an apparatus that abrades the concrete surface, contains the dispensed shot within the apparatus, and recirculates the shot by vacuum pickup.
      b. Repair damaged and deteriorated concrete according to terrazzo manufacturer's written instructions.
      c. Use patching and fill material to fill holes and depressions in substrates according to terrazzo manufacturer's written instructions.

C. Verify that concrete substrates are dry and moisture-vapor emissions are within acceptable levels according to manufacturer's written instructions.

D. Preinstallation Moisture Testing:
   1. Moisture Testing: Test for moisture content by method recommended in writing by terrazzo manufacturer.
   2. Proceed with terrazzo installation only after concrete substrates pass moisture testing.

E. Substrate-Crack-Suppression Membrane: Install to isolate and suppress substrate cracks according to manufacturer's written instructions.
   1. Prepare and prefill substrate cracks with membrane material.
   2. Install membrane at substrate cracks to produce full substrate coverage in areas to receive terrazzo.
   3. Reinforce membrane with fiberglass scrim.

F. Protect other work from water and dust generated by grinding operations. Control water and dust to comply with environmental protection regulations.
   1. Erect and maintain temporary enclosures and other suitable methods to limit water damage and dust migration and to ensure adequate ambient temperatures and ventilation conditions during installation.

3.3 EPOXY-RESIN TERRAZZO INSTALLATION

A. Comply with NTMA's written recommendations for terrazzo and accessory installation.

B. Strip Materials:
   1. Divider and Control-Joint Strips:
      a. Locate divider strips in locations indicated.
      b. Install control-joint strips back to back and directly above concrete-slab control joints.
      c. Install control-joint strips with 1/4-inch gap between strips, and install sealant in gap.
      d. Install strips in adhesive setting bed without voids below strips, or mechanically anchor strips as required to attach strips to substrate, as recommended by strip manufacturer.
   2. Accessory Strips: Install as required to provide a complete installation.
   3. Abrasive Strips: Install with surface of abrasive strip positioned 1/16-inch higher than terrazzo surface.

C. Apply primer to terrazzo substrates according to manufacturer's written instructions.
D. Place, rough grind, grout, cure grout, fine grind, and finish terrazzo according to manufacturer's written instructions.
   1. Installed Thickness: 3/8-inch nominal.
   2. Terrazzo Finishing: Ensure that matrix components and fluids from grinding operations do not stain terrazzo by reacting with divider and control-joint strips.
      a. Rough Grinding: Grind with 24-grit or finer stones or with comparable diamond abrasives. Follow initial grind with 60/80-grit stones or with comparable diamond abrasives.
      b. Grouting: Before grouting, clean terrazzo with water, rinse, and allow to dry. Apply and cure epoxy grout.
      c. Fine Grinding/Polishing: Delay fine grinding until heavy trade work is complete and construction traffic through area is restricted. Grind with 80-grit stones or with comparable diamond abrasives until grout is removed from surface.
   3. Installation Tolerance: Limit variation in terrazzo surface from level to 1/4-inch in 10 feet; noncumulative.
E. Install and finish poured-in-place terrazzo stairs at the same time the adjacent terrazzo flooring is installed.
F. Install and finish poured-in-place terrazzo base at the same time the adjacent terrazzo flooring is installed.

3.4 REPAIR

A. Cut out and replace terrazzo areas that evidence lack of bond with substrate. Cut out terrazzo areas in panels defined by strips and replace to match adjacent terrazzo, or repair panels according to NTMA's written recommendations, as approved by Architect.

3.5 CLEANING AND PROTECTION

A. Cleaning:
   1. Remove grinding dust from installation and adjacent areas.
   2. Wash surfaces with cleaner according to NTMA's written recommendations and manufacturer's written instructions; rinse surfaces with water and allow them to dry thoroughly.
B. Sealing:
   1. Seal surfaces according to NTMA's written recommendations.
   2. Apply sealer according to sealer manufacturer's written instructions.
C. Protection: Provide final protection and maintain conditions, in a manner acceptable to Installer, that ensure that terrazzo is without damage or deterioration at time of Substantial Completion.

END OF SECTION

SECTION 09 67 26 – RESINOUS FLOORING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Labor, products, equipment and services necessary for resinous flooring Work in accordance with the Contract Drawings covering the following components:
      a. Primer: Sikafloor® 161.
      b. 1st Body Coat: Sikafloor® 217 W/ Broadcast Decorative Quartz to Rejection.
      c. 2nd Body Coat: Sikafloor® 217 W/ Broadcast Decorative Quartz to Rejection.
      d. 1st Grout Coat: Sikafloor® 217.
      e. Top Coat: Sikafloor® 315N.

B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Seciton.
   2. Section 03 30 00 “Cast-in-Place Concrete.”

1.2 REFERENCES

A. ASTM C579, Standard Test Methods for Compressive Strength of Chemical-Resistant Mortars, Grouts, Monolithic Surfacings, and Polymer Concretes.
B. ASTM D2240, Standard Test Method for Rubber Property—Durometer Hardness.
C. ASTM D2369, Standard Test Method for Volatile Content of Coatings.
D. ASTM D4060, Standard Test Method for Abrasion Resistance of Organic Coatings by the Taber Abraser.
E. ASTM D4541, Standard Test Method for Pull-Off Strength of Coatings Using Portable Adhesion Testers.
F. For additional standards please refer to Product Data Sheets

1.3 SUBMITTALS

A. Comply with Section 01 33 00 “Submittal Procedures.”
B. Product Data: Submit manufacturer's product data, including physical properties and colors available.
C. Manufacturer’s Safety Data Sheet for each product being used.
D. Product Samples: Submit srchitectural standard samples representative of the final finish, as applied. The standard shall be approved in writing by the Architect and shall be the final standard of acceptance of the finish.
E. Maintenance Instructions: Submit manufacturer's maintenance instructions.

1.4 QUALITY ASSURANCE

A. Manufacturer Qualifications:
   1. Acceptable Manufacturer: Sika Corporation, 201 Polito Drive, Lyndhurst, New Jersey 07071, Ryan Manchester, MANCHESTER, 214.914.5564.
      a. No request for substitution shall be considered that would change the generic type of system specified. Equivalent materials of other manufacturers may be substituted only on approval of the Architect. Requests for substitution will be considered only if submitted 10 days prior to Bid date. Requests shall include the respective manufacturer’s technical literature for each product giving the name, generic type, descriptive information, recommended dry film thickness (DFT), Material Safety Data Sheet (MSDS), and certified test reports showing results to equal performance criteria of products specified herein.

B. Applicator Qualifications:
   1. Pre-Qualification: Each Bidder for this project shall be pre-qualified and approved in writing by the material manufacturer. Ryan Manchester, MANCHESTER, 214.914.5564.
   2. Applicator Experience: Each bidder must have a minimum 5 years’ experience in the application of the type of system specified. Contractor shall submit a list of 5 projects of similar size, scope and complexity.

C. Mock-Up:
   1. Construct one 100 sq.ft. mock-up of each type and color of resinous flooring in location acceptable to Architect to demonstrate quality of finished system, complying with manufacturer's instructions.
   2. Arrange for Architect’s review and acceptance, obtain written acceptance before proceeding with Work.
   3. Upon acceptance, mock-up shall serve as a minimum standard of quality for the balance of the Work of this Section. Mock-up shall be left in place for the duration of the Work.

D. Pre-application Meeting: Convene a pre-application meeting 2 weeks before start of application of floor coating. Require attendance of parties directly affecting Work of this Section, including Contractor, Architect, applicator, and manufacturer's representative. Review surface preparation, priming, application, curing, protection, and coordination with other Work.

1.5 DELIVERY, STORAGE AND HANDLING

A. Delivery:
   1. Deliver materials to site in manufacturer's original, unopened containers and packaging, with labels clearly identifying product name, manufacturer, batch or lot number, and date of manufacture.
   2. Material should be delivered to job site and checked for completeness and shipping damage prior to job start.

B. Storage:
   1. Store materials in accordance with manufacturer's written instructions.
   2. Keep containers sealed until ready for use. Material should be stored in a dry, enclosed, protected area from the elements.
   3. Do not subject material to excessive heat or freezing.
   4. Shelf life: Established based on manufacturer's written recommendation for each material being used.

C. Handling: Protect materials during handling and application to prevent damage or contamination.

D. Condition materials for use accordingly to manufacturer's written instructions prior to application.

E. Record material lot number and quantity delivered to jobsite/storage.

1.6 SITE CONDITIONS

A. Do not install the Work of this Section outside of the following environmental ranges with Manufacturers' written acceptance:
   1. Material Temperature: Precondition material for at least 24 hours between 65 degrees F to 75 degrees F.
   2. Ambient Temperature: Minimum 50 degrees F to Maximum 85 degrees F.
   3. Substrate Temperature: Minimum 50 degrees F to Maximum 85 degrees F. Substrate temperature must be at least 5 degrees F above measured dew Point.
   4. Mixing and Application attempted at Material, Ambient and/or Substrate Temperature conditions less than 65 degrees F will result in a decrease in product workability and slower cure rates.
   5. Relative Ambient Humidity: Minimum ambient humidity 30 percent, maximum ambient humidity 75 percent (during application and curing).
   6. Measure and confirm substrate moisture content, ambient relative humidity, ambient and surface temperature, and dew point.

B. Substrate moisture:
   1. Moisture content of concrete substrate must be less than or equal to 4 percent by mass as measured with a Tramex® CME/CMExpert type concrete moisture meter.
   2. Additionally, relative humidity tests may be conducted per ASTM F2170 and values must be less than or equal to 85 percent.
   3. If moisture content of concrete substrate is greater than 4 percent by mass as measured with Tramex® CME/CMExpert type and/or if relative humidity tests per ASTM F2170 exceed values greater than 85 percent, consider moisture mitigation systems or moisture tolerant primer.

C. Utilities, including electric, water, HVAC and permanent lighting to be supplied by General Contractor

D. Maintain constant ambient room temperature of plus or minus 15 degrees F with a minimum temperature of 50 degrees F and maximum temperature of 85 degrees F. Maintain constant ambient room temperature for 48 hours before, during and after installation, or until cured. Do not apply while ambient and temperatures are rising.

E. Erect suitable barriers and post legible signs at points of entry to prevent traffic and trades from entering the work area during application and cure period of the floor.

F. Protection of finished floor from damage by subsequent trades shall be the responsibility of the General Contractor.

G. Insure adequate ventilation and air flow.

1.7 WARRANTY

A. Manufacturer's warranty covering the resinous flooring against defects in materials for one year from date of installation.

PART 2 - PRODUCTS

2.1 MANUFACTURER

A. Manufacturer shall be certified under ISO 9001: 2008 All liquid materials, including primers, resins, curing agents, finish coats, and sealants are manufactured and tested under an ISO 9001:2008 registered quality system.
B. Approved Manufacturer shall be Sika Corporation, Industrial Flooring, 201 Polito Avenue, Lyndhurst, New Jersey 07071, 214.914-5564 Attn: Ryan Manchester.

2.2 SYSTEM

A. Resinous flooring system: Sikafloor Quartzite Broadcast System is a seamless, aesthetic, broadcast and sealed epoxy floor, composed of multicolored quartz aggregates finished with transparent top coats applied between 56 to 125 mils thick. System to consist of the following components:
   1. Primer: Sikafloor® 161 applied between 8 to 10 mils.
   2. 1st Body Coat: Sikafloor® 217 W/ Broadcast Decorative Quartz to Rejection applied at 16 mils.
   3. 2nd Body Coat: Sikafloor® 217 W/ Broadcast Decorative Quartz to Rejection applied at 16 mils.
   4. Top Coat: Sikafloor® 217 applied at 16 mils.
   5. Optional Top Coat: Sikafloor® 315N applied between 3 to 3.5 mils.

2.3 MATERIALS

A. Primer: Sikafloor 161 is a 2-part, epoxy resin for priming and leveling mortars with the following properties:
   1. Pull-off Strength (ASTM D4541): > 400 psi with 100 percent concrete failure.
   2. Shore D Hardness (ASTM D2240): 76 at 7 days.
   3. Solid Content: ~ 100 percent (by volume) / ~ 100 percent (by weight).
   4. VOC Content (ASTM D2369): ≤ 50 g/L.
   5. Permeability (ASTM E96): 9.0 g/m² (24 hours / +75 degrees F).
   6. Water Absorption (ASTM D570): 0.14 g/h - m2.
   7. Viscosity (approximately) of Components A + B: 775 (SP2/100).
B. Body Coats and Top Coat: Sikafloor 217 is a low odor, 100 pecent solids, epoxy resin coating system primarily designed for high build coatings and decorative quartz and flake applications. Sikafloor 217 may be used as a primer and may be in [clear] or [Refer to Sikafloor color chart color] color with the following properties:
   1. Pull-off Strength (ASTM D4541): > 400 psi with 100 percent concrete failure.
   2. Shore D Hardness (ASTM D2240): 78 to 82 at 7 days.

3. Solid Content: ~ 100 percent (by volume) / ~ 100 percent (by weight).
4. VOC Content (ASTM D2369): ≤ 50 g/L.
5. Compressive Strength (ASTM C579): 7,250 psi at 28 days.
6. Flexural Strength (ASTM C580): 2,900 psi at 28 days.

C. Broadcast Aggregate: Decorative Quartz aggregate.

D. Optional Top Coat: Sikafloor 315N is a high solids, low VOC abrasion resistant, aliphatic polyurethane coating in [Refer to Sikafloor color chart] color with the following properties:
1. Pull-off Strength to Primed Concrete (ASTM D4541): > 400 psi with 100 percent concrete failure.
2. Hardness (ASTM D3363 Pencil): 2H to 3H concrete failure.
3. VOC Content (ASTM D2369): With Wear Aggregate ≤ 100 g/L, With Sikafloor Urethane Color Add Only ≤ 50 g/L.
4. Tensile Strength (ASTM D2370): 2,882 psi.
5. Elongation: 2.29.
6. Abrasion Resistance (ASTM D4060): 0.01 to 0.02 grams (CS-17 Wheel, 1,000 gm load, 1,000 cycles).
7. Coefficient Of Friction (ASTM D2047): 0.6 to 0.7.
8. Slip Resistance: Equivalent to ASTM D2047 Passes.

E. Cove base: 293 Epoxy mortar cove based.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine surfaces to receive flooring system. Notify Architect/General Contractor/Owner/Owner's representative if surfaces are not acceptable. Do not begin surface preparation or application until unacceptable conditions have been corrected. Do not apply to substrate treatments for moisture, repair, or leveling not of the same Manufacturer.

B. Surface must be clean, sound and dry. Remove dust, laitance, grease, curing compounds bond inhibiting impregnations, waxes and any other contaminants. All projections, rough spots, etc., should be dressed off to achieve a level surface prior to the application.

C. Concrete substrate to have a minimum compressive strength of 3,500 psi at 28 days and a minimum of 215 psi in tension at time of application.

D. Substrate moisture:
1. Measure and confirm substrate moisture content, ambient relative humidity, ambient and surface temperature, and dew point.
2. Confirm and record above values at least once every 3 hours during installation, or more frequently whenever conditions change (e.g. Ambient Temperature rise/fall, Relative Humidity increase/decrease, etc.).

E. Ensure concrete substrate conforms to the minimum requirements of the flooring manufacturer.

F. Flooring system shall not be applied to sand-cement setting beds. Sand-cement beds shall be removed to structural concrete substrate and re-leveled/sloped as necessary to achieve grade and/or adequate drainage.

G. Flooring system shall not be applied to asphaltic or bitumen membranes, soft wood, aluminum, copper or fiberglass reinforced polyester/vinyl ester composites.

H. Application to glazed or vitrified brick and tile, structural wood, steel shall only be permitted with Manufacturer's written recommendation.

3.2 SURFACE PREPARATION

A. Prepare surface to receive flooring systems in accordance with manufacturer's written instructions.
B. Remove dirt, oil, grease, wax, laitance, curing compounds, water-soluble concrete hardeners, and other surface contaminants. Remove sealers, finishes, and paints. Remove unsound concrete by appropriate mechanical means.
C. Concrete: Shall be cleaned and prepared to achieve laitance-free and contaminant-free, open textured surface by shot blasting or equivalent mechanical means (CSP level as per ICRI guidelines and manufacturer’s written recommendation).
D. Chemical Surface Preparation: Chemical surface preparation (acid etching) is unacceptable and will void Manufacturer’s warranty.
E. Control joints and cracks: Provide repair and treatment of control joints and surface cracks utilizing manufacturer’s standard materials and installation details.

3.3 APPLICATION

A. Mix and apply material with strict adherence to manufacturer’s written installation procedures and coverage rates.
B. Follow Manufacturer’s written recommendations on terminations and connections to walls, drains, doorways, columns and floor-to-floor transitions.
C. Do not apply while ambient and substrate temperatures are rising.
D. Apply resinous flooring with care to ensure that no laps, voids, or other marks or irregularities are visible, and with an appearance of uniform color, sheen and texture, all within limitations of materials and areas concerned.
E. Match colors and textures of approved samples.
F. Install cove base [ ] high with [ ] radius in accordance with manufacturer’s written instructions.

3.4 CLEAN UP

A. Disposal of this product, solution and any by-products should at all times comply with the requirements of environmental protection and waste disposal legislation and any regional local authority requirements.
B. Empty containers should be taken to an approved waste handling site for recycling or disposal.

3.5 PROTECTION

A. Freshly applied material should be protected from dampness, condensation and water for at least 72 hours.
B. Beware of air flow and changes in air flow. Introduction of dust, debris, and particles, etc., may result in surface imperfections and other defects.
C. Follow manufacturer’s written recommendation with respect to cure, wait time and return to service.

END OF SECTION

SECTION 09 68 13 - TILE CARPETING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Carpet tile.
B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.
   2. Section 09 65 13 "Resilient Base and Accessories" for resilient wall base and accessories installed with carpet tile.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.
   1. Include manufacturer's written data on physical characteristics, durability, and fade resistance.
   2. Include manufacturer's written installation recommendations for each type of substrate.
B. Shop Drawings: For carpet tile installation, showing the following:
   1. Columns, doorways, enclosing walls or partitions, built-in cabinets, and locations where cutouts are required in carpet tiles.
   2. Carpet tile type, color, and dye lot.
   3. Type of subfloor.
   4. Type of installation.
   5. Pattern of installation.
   6. Pattern type, location, and direction.
   7. Pile direction.
   8. Type, color, and location of edge, transition, and other accessory strips.
   9. Transition details to other flooring materials.
C. Samples for Verification: Actual sample of finished products for each of the following products and for each color and texture required. Label each sample with manufacturer's name, material description, color, pattern, and designation indicated on Drawings and in schedules.
   1. Carpet Tile: Full-size sample.
   2. Exposed Edge, Transition, and Other Accessory Stripping: 12-inch-long samples.
D. Product Schedule: For carpet tile. Use same designations indicated on Drawings.

1.3 CLOSEOUT SUBMITTALS

A. Maintenance Data: For carpet tiles. Include the following:
   1. Methods for maintaining carpet tile, including cleaning and stain-removal products and procedures and manufacturer's recommended maintenance schedule.
   2. Precautions for cleaning materials and methods that could be detrimental to carpet tile.

1.4 MAINTENANCE MATERIAL SUBMITTALS

A. Extra Stock Material: Furnish extra materials, from the same production run, to Owner that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
   1. Carpet Tile: Full-size units equal to 25 percent of amount installed for each type indicated, but no fewer than 10 full-size units.

1.5 QUALITY ASSURANCE

A. Installer Qualifications: An authorized representative who is certified by the International Certified Floorcovering Installers Association at the Commercial II certification level.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Comply with CRI 104.

1.7 FIELD CONDITIONS

A. Comply with CRI 104 for temperature, humidity, and ventilation limitations.
B. Environmental Limitations: Do not deliver or install carpet tiles until spaces are enclosed and weathertight, wet-work in spaces is complete and dry, and ambient temperature and humidity conditions are maintained at levels planned for building occupants during the remainder of the construction period.
C. Do not install carpet tiles over concrete slabs until slabs have cured and are sufficiently dry to bond with adhesive and concrete slabs have pH range recommended in writing by carpet tile manufacturer.

PART 2 - PRODUCTS

2.1 CARPET TILE CPT1

A. Manufacturers: Basis of Design and subject to compliance with requirements, provide products by the following:
   1. As indicated on Interior Material Legend in Drawings.
B. Color: As indicated on Interior Material Legend in Drawings..
C. Pattern: As indicated on Interior Material Legend in Drawings.
D. Construction: Textile Composite.
E. Dye Method: Solution Dyed.
F. Backing: Kinetex Felt Cushion.
G. Standard Adhesive : Kinetex Adhesive.
H. Total Recycled content: 47 percent.
I. Size: As indicated on Interior Material Legend in Drawings.

2.2 INSTALLATION ACCESSORIES

A. Trowelable Leveling and Patching Compounds: Latex-modified, hydraulic-cement-based formulation provided or recommended in writing by carpet tile manufacturer.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with installer present, for compliance with requirements for maximum moisture content, alkalinity range, installation tolerances, and other conditions affecting carpet tile performance.
B. Examine carpet tile for type, color, pattern, and potential defects.
C. Concrete Slabs: Verify that finishes comply with requirements specified in Section 03 30 00 "Cast-in-Place Concrete" and that surfaces are free of cracks, ridges, depressions, scale, and foreign deposits.
    1. Moisture Testing: Perform tests so that each test area does not exceed 500 sq. ft., and perform no fewer than three tests in each installation area and with test areas evenly spaced in installation areas.
        a. Perform moisture tests recommended in writing by adhesive and carpet tile manufacturers. Proceed with installation only after substrates pass testing.
D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. General: Comply with CRI 104 and with carpet tile manufacturer's written installation instructions for preparing substrates.
B. Use trowelable leveling and patching compounds, in accordance with manufacturer's written instructions, to fill cracks, holes, depressions, and protrusions in substrates. Fill or level cracks, holes and depressions 1/8-inch wide or wider, and protrusions more than 1/32-inch unless more stringent requirements are required by manufacturer's written instructions.
C. Concrete Substrates: Remove coatings, including curing compounds, and other substances that are incompatible with adhesives and that contain soap, wax, oil, or silicone, without using solvents. Use mechanical methods recommended in writing by adhesive and carpet tile manufacturers.
D. Broom and vacuum clean substrates to be covered immediately before installing carpet tile.

3.3 INSTALLATION

A. General: Comply with CRI 104, Section 10, "Carpet Tile," and with carpet tile manufacturer's written installation instructions.
B. Installation Method: As recommended in writing by carpet tile manufacturer and As indicated on Interior Material Legend in Drawings.
C. Maintain dye-lot integrity. Do not mix dye lots in same area.
D. Maintain pile-direction patterns indicated on Drawings.
E. Extend carpet tile into toe spaces, door reveals, closets, open-bottomed obstructions, removable flanges, alcoves, and similar openings.
F. Maintain reference markers, holes, and openings that are in place or marked for future cutting by repeating on carpet tile as marked on subfloor. Use nonpermanent, nonstaining marking device.
G. Install pattern parallel to walls and borders.

3.4 CLEANING AND PROTECTION

A. Perform the following operations immediately after installing carpet tile:
   1. Remove excess adhesive and other surface blemishes using cleaner recommended in writing by carpet tile manufacturer.
   2. Remove yarns that protrude from carpet tile surface.
   3. Vacuum carpet tile using commercial machine with face-beater element.

B. Protect installed carpet tile to comply with CRI 104, Section 13.7.

C. Protect carpet tile against damage from construction operations and placement of equipment and fixtures during the remainder of construction period. Use protection methods indicated or recommended in writing by carpet tile manufacturer.

END OF SECTION

SECTION 09 77 00 - SPECIAL WALL SURFACES

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Pre-manufactured panel system including mounting hardware and specified accessories.

B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.
   2. Section 06 10 00 "Rough Carpentry": Furring, blocking, and other carpentry work that is not exposed to view.
   3. Section 09 29 00 "Gypsum Board": Metal support systems not included in this section.

1.2 REFERENCES

A. American Society for Testing and Materials (ASTM) E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.
   1. Class 1/A - Flame Spread 0-25, Smoke Developed 450 or less.
   2. Class 2/B - Flame Spread 26-75, Smoke Developed 450 or less.

B. Architectural Woodwork Institute (AWI) Quality Standards.

1.3 SUBMITTALS

A. Submit under provisions of Section 01 30 00 "Submittal Procedures."

B. Product Data:
   1. Preparation instructions and recommendations.
   2. Storage and handling requirements and recommendations.
   3. Installation methods.

C. Shop Drawings: Shop Drawings in sufficient detail to show fabrication, installation, anchorage, and interface of the work of this Section with adjacent Work.

D. Verification Samples: For each finish product specified, one set of color samples representing selections made on Drawings.

1.4 QUALITY ASSURANCE

A. Manufacturer Qualifications:
   1. Firm experienced in successful production of wall systems similar to that indicated for the Project, with sufficient production capacity to produce required units without causing delay in the Work.
   2. Provide certificate signed by panel manufacturer certifying that products comply with specified requirements.

B. Installer Qualifications: Demonstrate successful experience in installing architectural woodwork similar in type and quality to those required for this Project.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Do not deliver wall system until painting, wet work, grinding, and similar operations that could damage, soil, or deteriorate wall system have been completed in installation areas as specified by AWI 1700-G-3.
B. If panels are stored prior to installation, store them flat in completely enclosed areas, out of the weather. If panels must be stored in other than installation areas, store only in areas where environmental conditions comply with manufacturer's recommendations. Do not expose panels to continuous direct sunlight, nor to extremes in temperature and humidity. Store products in manufacturer's packaging until ready for installation.
C. Store and dispose of solvent-based materials, and materials used with solvent-based materials, in accordance with requirements of local authorities having jurisdiction.

1.6 PROJECT CONDITIONS

A. Do not deliver or install wall system until building is enclosed, wet work is complete and HVAC system is operating and will maintain temperature and relative humidity at occupancy levels during the remainder of the construction period as specified by AWI 1700-G-3.
B. Do not install wall system until normal lighting conditions exist. Normal lighting conditions are described as those in place when the project is finished. This includes, but not limited to, design lighting (wall washers, spotlights and flood lights, and similar fixtures) and natural lighting.
C. Wall, ceilings, floors, and openings must be level, plumb, straight, in-line and square as specified by AWI 1700-G-3.
D. Maintain environmental conditions (temperature, humidity, and ventilation) within limits recommended by manufacturer for optimum results, both during installation and subsequent occupancy. Do not install products under environmental conditions outside manufacturer's absolute limits. Panels shall be conditioned in the environment in which they will be installed for a minimum of 72 hours prior to installation. The recommended environment is 60 to 80 degrees F and 35 to 55 percent relative humidity.
E. Manufacturer warrants any product it has manufactured and sold against defects in materials or workmanship for a period of one year from the date of original purchase and acceptance for use. This warranty extends to products assembled / installed and used in the manner intended and does not cover damage or failure caused by misuse, abuse or accidents, exposure to extreme temperature, improper installation, improper maintenance and exposure to water or excessive humidity or excessive moisture.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Basis of Design Manufacturer: Panel Specialists, Inc.; 3115 Range Rd., Temple, Texas 76504. ASD. Toll Free Tel: 800.947.9422. Tel: 254.774.9800. Fax: 254.598.3222. Email: psiwalls@panelspec.com. Web: http://www.panelspec.com.
B. Requests for substitutions will be considered in accordance with provisions of Section 01 60 00 "Product Requirements."

2.2 PANEL SYSTEMS

A. Provide prefinished decorative panels where shown on the Drawings, as specified herein, and as needed for a complete and proper installation.
B. Comply with applicable requirements of "Architectural Woodwork Quality Standards" in the production and installation of the wall panel system as published by the Architectural Woodwork Institute (AWl) unless otherwise indicated.
C. Panel System: #310/312 as manufactured by Panel Specialists, Inc.
    1. Panel Thickness: 7/16-inch.
    2. System to provide a 1/2-inch-wide recessed reveal between panels and system to provide a 1/16-inch reveal between panels
        a. Reference Interior Elevations for placement.
    3. Panel Edge Finish: Panel edges to be finished with 0.018-inch PVC edge banding.
    4. Panel Finish: Refer to Interior Material Legend in Drawings.
    5. Main Laminated Panel Fire Rating:
        a. Fire Rating: ASTM E84, Class B.
    6. Molding: All moldings to be 0.062-inch-thick (at structural areas) 6063 alloy aluminum with T5 temper.
        a. Divider Moldings:
            1) #312 1/2-inch-wide horizontal recessed channel divider molding.
            2) #302a 1/16-inch-wide Vertical Divider Molding.
        b. 1/2-Inch-Wide Edge Trims and 1-Inch Corners:
            1) #304 1/2-inch edge trim molding.
            2) #304A 1/2-inch edge trim molding (2-piece).
            3) #103-90 1-inch rounded 90-degree outside corner.
            4) #304-90 end cap for top and bottom of 90-degree outside corner.
D. Finishes:
    1. Panel Face:
        a. Finish #1: Per Interior Material Legend in Drawings.
    2. Panel Face Pattern Direction:
        a. Vertical.
        b. Reference Interior Elevations.
        c. Reference Interior Elevations for grain direction.
    3. Panel Edge Banding: (select one or enter custom color choice)
        a. 0.5mm PVC Custom Color: Reference Interior Material Legend on Drawings.
    4. Aluminum Molding Finish: (select one or enter custom color choice)
        a. Clear Anodized.

2.3 MATERIALS

A. High Pressure Decorative Laminates (SWS1):
    1. High Pressure Laminate (VGS, VGF.) and non-decorative backers (BKV) used to surface wall panels systems shall be manufactured to meet or exceed the National Electrical Manufacturing Association (NEMA LD3-2005) for thickness, performance properties and appearance.

B. Phenolic Panels (SWS2):
   1. Panels to be durable 3/8-inch compact laminate panels formed from melamine resin saturated overlay and decorative papers bonded to a core of phenolic resin impregnated kraft papers to provide superior impact and moisture resistance.
   2. Fire Rating ASTM- E84 Class A.
C. Panel core to be industrial grade M2 particle board used in Class II (B) panel composition.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Do not begin installation until substrates have been properly prepared according to AWI 1700-G-3.
B. If substrate preparation is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

3.2 FIELD DIMENSIONS

A. Where wall system is indicated to be fitted to other constructions, check actual dimensions of other constructions by accurate field measurements before manufacturing wall system; show recorded measurements on final Shop Drawings. Coordinate manufacturing schedule with construction progress to avoid delay of Work.
B. Where field measurements cannot be made without delaying the Work, guarantee dimensions and proceed with manufacture of wall system without field measurements coordinate other construction to ensure that actual dimensions correspond to guaranteed dimensions.

3.3 PREPARATION

A. Panels must be acclimated to ambient temperature and humidity conditions in accordance with manufacturer's specifications prior to installation. Refer to PSI installation guide for proper, handling, storage, and acclimation procedures.
B. Clean surfaces thoroughly prior to installation.
C. Prepare surfaces using the methods recommended by the manufacturer for achieving the best result for the substrate under the Project conditions.

3.4 INSTALLATION

A. Install in accordance with manufacturer's instructions.
B. When interior paneling is on an exterior wall or in a wet area, provide a barrier sheet of plastic film between the outside wall and the panels in order to prevent condensation affecting the stability of the panels.
C. Field cutting of all wall systems should be accomplished using carbide tools. All face penetrations and cutouts should have a minimal 1/8-inch radius in corners according to NEMA Standards Publication LD 3-2005.

D. All wall systems should receive an "S" bead of panel mastic on the back of the panel during installation.
E. For vertical applications, wall systems shall be mechanically fastened to horizontal metal furring strapping spaced 24 inches O.C. Furring straps shall be no less than 18-gauge 3-1/2 inches wide, continuously. Metal strapping to be installed to the drywall studs prior to the application of the gypsum board by the framing contractor.

3.5 PROTECTION

A. Protect installed products until completion of Project.
B. Touch-up, repair or replace damaged products before Substantial Completion.

END OF SECTION

SECTION 09 91 23 - INTERIOR PAINTING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Surface preparation and the application of paint systems on the following interior substrates:
      a. Steel.
      b. Cast iron.
      c. Galvanized metal.
      d. Aluminum (not anodized or otherwise coated).
      e. Gypsum board.
      f. Plaster.
   2. Fire and smoke assembly identification.

B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.

1.2 DEFINITIONS

A. Gloss Level 1: Not more than 5 units at 60 degrees and 10 units at 85 degrees, according to ASTM D523, a matte flat finish.

B. Gloss Level 2: Not more than 10 units at 60 degrees and 10 to 35 units at 85 degrees, according to ASTM D523, a high-side sheen flat, velvet-like finish.

C. Gloss Level 3: 10 to 25 units at 60 degrees and 10 to 35 units at 85 degrees, according to ASTM D523, an eggshell finish.

D. Gloss Level 4: 20 to 35 units at 60 degrees and not less than 35 units at 85 degrees, according to ASTM D523, a satin-like finish.

E. Gloss Level 5: 35 to 70 units at 60 degrees, according to ASTM D523, a semi-gloss finish.

F. Gloss Level 6: 70 to 85 units at 60 degrees, according to ASTM D523, a gloss finish.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product. Include preparation requirements and application instructions.

B. LEED Submittals:
   1. Product Data for Credit EQ 4.2: For paints and coatings, including printed statement of VOC content.
   2. Laboratory Test Reports for Credit EQ 4: For paints and coatings, documentation indicating that they meet the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

C. Samples for Verification: For each type of paint system and in each color and gloss of topcoat.
   1. Submit samples on rigid backing, 8 inches square.
   2. Step coats on samples to show each coat required for system.
   3. Label each coat of each sample.
   4. Label each sample for location and application area.

D. Product List: For each product indicated, include the following:
   1. Cross-reference to paint system and locations of application areas. Use same designations indicated on Drawings and in schedules.
   2. VOC content.

1.4 CLOSEOUT SUBMITTALS

A. Coating Maintenance Manual: Provide coating maintenance manual including area summary with finish schedule, area detail designating location where each product/color/finish was used, product data pages, material safety data sheets, care and cleaning instructions, touch-up procedures, and color samples of each color and finish used.

1.5 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials, from the same product run, that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
   1. Paint: 5 percent, but not less than 1 gallon of each material and color applied.

1.6 QUALITY ASSURANCE

A. Mockups: Apply mockups of each paint system indicated and each color and finish selected to verify preliminary selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
   a. Vertical and Horizontal Surfaces: Provide samples of at least 100 sq. ft.
   b. Other Items: Architect will designate items or areas required.
   2. Final approval of color selections will be based on mockups.
      a. If preliminary color selections are not approved, apply additional mockups of additional colors selected by Architect at no added cost to Owner.
   3. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
   4. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Delivery and Handling: Deliver products to Project site in an undamaged condition in manufacturer's original sealed containers, complete with labels and instructions for handling, storing, unpacking, protecting, and installing. Packaging shall bear the manufacturer's label with the following information:
   1. Product name and type (description).
   2. Batch date.

3. Color number.
4. VOC content.
5. Environmental handling requirements.
6. Surface preparation requirements.
7. Application instructions.

B. Store materials not in use in tightly covered containers in well-ventilated areas with ambient temperatures continuously maintained at not less than 45 degrees F.
1. Maintain containers in clean condition, free of foreign materials and residue.
2. Remove rags and waste from storage areas daily.

1.8 FIELD CONDITIONS

A. Apply paints only when temperature of surfaces to be painted and ambient air temperatures are between 50 and 95 degrees F.
B. Do not apply paints when relative humidity exceeds 85 percent; at temperatures less than 5 degrees F above the dew point; or to damp or wet surfaces.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Basis-of-Design Product: Subject to compliance with requirements, provide Sherwin-Williams Company products indicated or comparable product from one of the following:
1. PPG Architectural Finishes, Inc.
B. Source Limitations: Obtain paint materials from single source from single listed manufacturer.
1. Manufacturer's designations listed on a separate color schedule are for color reference only and do not indicate prior approval.

2.2 PAINT, GENERAL

A. Standards: Provide products that comply with Manufacture's Premium 1st Quality standards indicated and like VOC limits.
B. Material Compatibility:
1. Provide materials for use within each paint system that are compatible with one another and substrates indicated, under conditions of service and application as demonstrated by manufacturer, based on testing and field experience.
2. For each coat in a paint system, provide products recommended in writing by manufacturers of topcoat for use in paint system and on substrate indicated.
C. VOC Content: Products shall comply with VOC limits of authorities having jurisdiction[and, for interior paints and coatings applied at Project site, the following VOC limits, exclusive of colorants added to a tint base, when calculated according to 40 CFR 59, Subpart D (EPA Method 24)].
1. Flat Paints and Coatings: 50 g/L.
2. Nonflat Paints and Coatings: 150 g/L.
3. Dry-Fog Coatings: 400 g/L.
4. Primers, Sealers, and Undercoaters: 200 g/L.

5. Anticorrosive and Antirust Paints Applied to Ferrous Metals: 250 g/L.
6. Zinc-Rich Industrial Maintenance Primers: 340 g/L.
7. Pretreatment Wash Primers: 420 g/L.
8. Floor Coatings: 100 g/L.
9. Shellacs, Clear: 730 g/L.
10. Shellacs, Pigmented: 550 g/L.

D. Low-Emitting Materials: Interior paints and coatings shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers

E. Colors: As selected by Architect from manufacturer's full range and as indicated on Interior Material Legend in Drawings.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates and conditions, with applicator present, for compliance with requirements for maximum moisture content and other conditions affecting performance of the Work. Verify suitability of substrates, including surface conditions and compatibility with existing finishes and primers. Where acceptability of substrate conditions is in question, apply samples and perform in-situ testing to verify compatibility, adhesion, and film integrity of new paint application.
   1. Report, in writing, conditions that may affect application, appearance, or performance of paint.

B. Substrate Conditions:
   1. Maximum Moisture Content of Substrates: When measured with an electronic moisture meter as follows:
      a. Concrete: 12 percent.
      b. Masonry (Clay and CMU): 12 percent.
      c. Gypsum Board: 12 percent.
   2. Gypsum Board Substrates: Verify that finishing compound is sanded smooth.

C. Proceed with coating application only after unsatisfactory conditions have been corrected; application of coating indicates acceptance of surfaces and conditions.

3.2 PREPARATION

A. Comply with manufacturer's written instructions and recommendations in "MPI Manual" applicable to substrates indicated.

B. Remove hardware, covers, plates, and similar items already in place that are removable and are not to be painted. If removal is impractical or impossible because of size or weight of item, provide surface-applied protection before surface preparation and painting.
   1. After completing painting operations, use workers skilled in the trades involved to reinstall items that were removed. Remove surface-applied protection if any.

C. Clean substrates of substances that could impair bond of paints, including dust, dirt, oil, grease, and incompatible paints and encapsulants.
   1. Remove incompatible primers and reprime substrate with compatible primers or apply tie coat as required to produce paint systems indicated.

D. Steel Substrates: Remove rust, loose mill scale, and shop primer, if any. Clean using methods recommended in writing by paint manufacturer.

E. Shop-Primed Steel Substrates: Clean field welds, bolted connections, and abraded areas of shop paint, and paint exposed areas with the same material as used for shop priming to comply with SSPC-PA 1 for touching up shop-primed surfaces.

F. Galvanized-Metal Substrates: Remove grease and oil residue from galvanized sheet metal fabricated from coil stock by mechanical methods to produce clean, lightly etched surfaces that promote adhesion of subsequently applied paints.

G. Aluminum Substrates: Remove loose surface oxidation.

3.3 APPLICATION

A. Apply paints according to manufacturer's written instructions and to recommendations in "MPI Manual."
   1. Use applicators and techniques suited for paint and substrate indicated.
   2. Paint surfaces behind movable equipment and furniture same as similar exposed surfaces. Before final installation, paint surfaces behind permanently fixed equipment or furniture with prime coat only.
   3. Paint front and backsides of access panels, removable or hinged covers, and similar hinged items to match exposed surfaces.
   4. Do not paint over labels of independent testing agencies or equipment name, identification, performance rating, or nomenclature plates.
   5. Primers specified in painting schedules may be omitted on items that are factory primed or factory finished if acceptable to topcoat manufacturers.

B. Tint each undercoat a lighter shade to facilitate identification of each coat if multiple coats of same material are to be applied. Tint undercoats to match color of topcoat, but provide sufficient difference in shade of undercoats to distinguish each separate coat.

C. If undercoats or other conditions show through topcoat, apply additional coats until cured film has a uniform paint finish, color, and appearance.

D. Apply paints to produce surface films without cloudiness, spotting, holidays, laps, brush marks, roller tracking, runs, sags, ropiness, or other surface imperfections. Cut in sharp lines and color breaks.

E. Painting Fire Suppression, Plumbing, HVAC, Electrical, Communication, and Electronic Safety and Security Work:
   1. Paint the following work where exposed in equipment rooms:
      a. Equipment, including panelboards and switch gear.
      b. Uninsulated metal piping.
      c. Uninsulated plastic piping.
      d. Pipe hangers and supports.
      e. Metal conduit.
      f. Plastic conduit.
      g. Tanks that do not have factory-applied final finishes.
   2. Paint the following work where exposed in occupied spaces:
      a. Equipment, including panelboards.
      b. Uninsulated metal piping.
      c. Uninsulated plastic piping.

d. Pipe hangers and supports.
e. Metal conduit.
f. Plastic conduit.
g. Other items as directed by Architect.

3. Paint portions of internal surfaces of metal ducts, without liner, behind air inlets and outlets that are visible from occupied spaces.

F. Fire and Smoke Assembly Identification: Where assembly types are identified in Drawings, provide stenciled identification in accessible concealed spaces and where noted in Drawings.
1. Assembly Types Requiring Identification: Fire walls, fire barriers, fire partitions, smoke barriers, and smoke partitions.
2. Accessible concealed spaces include below accessible floors, above ceilings, and attic spaces.
3. Locate within 15 feet of partition ends and at intervals not exceeding 30 feet measured horizontally.
4. Lettering not less than 3 inches in height with a minimum 3/8-inch stroke in a contrasting color.
5. Wording: Include hour rating and assembly type followed by "protect all openings."

3.4 FIELD QUALITY CONTROL

A. Dry Film Thickness Testing: Owner may engage the services of a qualified testing and inspecting agency to inspect and test paint for dry film thickness.
1. Contractor shall touch up and restore painted surfaces damaged by testing.
2. If test results show that dry film thickness of applied paint does not comply with paint manufacturer's written recommendations, Contractor shall pay for testing and apply additional coats as needed to provide dry film thickness that complies with paint manufacturer's written recommendations.

3.5 CLEANING AND PROTECTION

A. At end of each workday, remove rubbish, empty cans, rags, and other discarded materials from Project site.
B. After completing paint application, clean spattered surfaces. Remove spattered paints by washing, scraping, or other methods. Do not scratch or damage adjacent finished surfaces.
C. Protect work of other trades against damage from paint application. Correct damage to work of other trades by cleaning, repairing, replacing, and refinishing, as approved by Architect, and leave in an undamaged condition.
D. At completion of construction activities of other trades, touch up and restore damaged or defaced painted surfaces.

3.6 INTERIOR PAINTING SCHEDULE

A. Concrete Substrates, Pedestrian Traffic Surfaces:
1. Clear Acrylic System, Gloss Finish:
a. First Coat: S-W H&C Concrete Sealer Wet Look Water Base, at 100 to 200 sq. ft. per gal.
b. Second Coat: S-W H&C Concrete Sealer Wet Look Water Base, at 100 to 200 sq. ft. per gal.

B. Metal Substrates (Aluminum, Steel, Galvanized Steel):
   1. Water-Based Light Industrial Coating System: (Hollow metal door and frames)
      a. Prime Coat: Primer, rust-inhibitive, water based: S-W Pro Industrial Pro-Cryl Universal Primer, B66-310 Series, at 5.0 to 10.0 mils wet, 2.0 to 4.0 mils dry.
      b. Intermediate Coat: Light industrial coating, interior, water based, matching topcoat.
      c. Topcoat: Light industrial coating, interior, water based, semi-gloss (Gloss Level 5): S-W Pro Industrial Pre-Catalyzed Water Based Epoxy, K46-151 Series, at 4.0 mils wet, 1.5 mils dry, per coat.

C. Metal Substrates (Stair railing, nosings, stringers-reference Drawings for locations):
   1. Two-component, high solids, polyester-aliphatic urethane coating over Epoxy Primer System.
      a. Prime coat: Primer, epoxy, anti-corrosive SW Macropoxy 646.
      b. Intermediate coat: Two-component, high-solids polyester aliphatic urethane coating, interior, matching topcoat.
      c. Topcoat: Two-component, high-solids, polyester-aliphatic urethane coating, semi-gloss.

D. Gypsum Board Substrates:
   1. Latex System:
      a. Prime Coat: Primer, latex, interior: S-W ProMar 200 Zero VOC Latex Primer, B28W2600, at 4.0 mils wet, 1.5 mils dry.
      b. Intermediate Coat: Latex, interior, matching topcoat.
      c. Topcoat: Latex, interior, eggshell (Gloss Level 3): S-W ProMar 200 Zero VOC Latex Eg-Shel, B20-2600 Series, at 4.0 mils wet, 1.7 mils dry, per coat.
   2. Water-Based Light Industrial Coating System:
      a. Prime Coat: Primer sealer, latex, interior: S-W ProMar 200 Zero VOC Latex Primer, B28W2600, at 4.0 mils wet, 1.5 mils dry.
      b. Intermediate Coat: Light industrial coating, interior, water based, matching topcoat.
      c. Topcoat: Light industrial coating, interior, water based, eggshell (Gloss Level 3): S-W Pro Industrial Pre-Catalyzed Waterbased Epoxy, K45-151 Series, at 4.0 mils wet, 1.5 mils dry, per coat.

END OF SECTION

SECTION 10 14 00 - SIGNAGE

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes: Interior signs.
B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.
   2. Section 22 05 53 "Identification for Plumbing Piping and Equipment" for nameplates, labeling, and identification methods for plumbing equipment and components.
   3. Section 23 05 53 "Identification for HVAC Piping and Equipment" for nameplates, labeling, and identification methods for HVAC equipment and components.

1.2 DEFINITIONS

A. VHB Tape: Very High Bond tape.

1.3 ALLOWANCES

A. Section 01 20 00 "Price and Payment Procedures": Material allowance procedures.
B. Allowance Includes: Purchase, delivery, and installation of interior signs.

1.4 SUBMITTALS

A. Section 01 33 00 "Submittal Procedures": Requirements for submittals.
B. Shop Drawings: Indicate sign styles, lettering font and size, foreground and background colors, locations, and overall dimensions of each sign.
C. Samples: Submit two signs, sizes to match existing, illustrating type, style, letter font and size, colors, and method of attachment.
D. Manufacturer Instructions: Submit detailed instructions on installation requirements, including storage and handling procedures.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Section 01 60 00 "Product Requirements": Requirements for transporting, handling, storing, and protecting products.
B. Inspection: Accept materials on Site in manufacturer's original packaging and inspect for damage.
C. Storage:
   1. Store materials according to manufacturer instructions.
   2. Store adhesive attachment tape at ambient room temperatures.
D. Protection:
   1. Protect materials from moisture and dust by storing in clean, dry location remote from construction operations areas.
   2. Provide additional protection according to manufacturer instructions.

1.6 AMBIENT CONDITIONS

A. Section 01 50 00 "Temporary Facilities and Controls": Requirements for ambient condition control facilities for product storage and installation.
B. Minimum Conditions: Do not install signs when ambient temperature is lower than recommended by manufacturer.
C. Subsequent Conditions: Maintain temperatures above minimum during and after installation of signs.

PART 2 - PRODUCTS

2.1 INTERIOR SIGNS

A. Manufacturers:
1. ASI Sign Systems, Inc.
2. Best Sign Systems, Inc.
3. Clarke Systems.
4. Mohawk Sign Systems.
5. Vista System.
6. Substitutions: As specified in Section 01 60 00 "Product Requirements."

2.2 ACCESSORIES

A. Tape:
1. Description:
a. Double-faced black foam tape.
b. Use in conjunction with silicone adhesive for installation of wall-mounted signs.
2. VHB tape, as manufacturers by 3M.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Use manufacturer's installation template and attachment devices.
B. Install signs after surfaces are finished.
C. Locations: As indicated on Drawings.
D. Locate sign on wall surface, level.

3.2 ATTACHMENTS

A. Office Door Signs: Match existing as shown.
B. Service Room Signs: Match existing as shown.
C. Restroom Door Graphic: Match existing as shown.

END OF SECTION

SECTION 10 21 13.14 - STAINLESS STEEL TOILET COMPARTMENTS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Metal toilet compartments.
   2. Metal urinal screens.

B. Related Requirements:
   1. Division 01 Specification Secitons apply to Work of this Section.
   2. Section 06 10 00 "Rough Carpentry": Blocking and supports.
   3. Section 10 28 13 "Toilet Accessories."

1.2 REFERENCE STANDARDS

A. ADA Standards - 2010 ADA Standards for Accessible Design; 2010.
B. ASTM A240 - Standard Specification for Chromium and Chromium-Nickel Stainless Steel Plate, Sheet, and Strip for Pressure Vessels and for General Applications; 2024b.
C. ASTM A653 - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process; 2023.
D. ASTM A666 - Standard Specification for Annealed or Cold-Worked Austenitic Stainless Steel Sheet, Strip, Plate, and Flat Bar; 2023.
E. ASTM A743 - Standard Specification for Castings, Iron-Chromium, Iron-Chromium-Nickel, Corrosion Resistant, for General Application; 2021.
F. ASTM B86 - Standard Specification for Zinc and Zinc-Aluminum (ZA) Alloy Foundry and Die Castings; 2023.
G. ASTM B221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes; 2021.
H. ASTM D1735 - Standard Practice for Testing Water Resistance of Coatings Using Water Fog Apparatus; 2021.
I. ASTM D2247 - Standard Practice for Testing Water Resistance of Coatings in 100 % Relative Humidity; 2015 (Reapproved 2020).
J. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials; 2023d.
K. ICC A117.1 - Accessible and Usable Buildings and Facilities; 2017.

1.3 ADMINISTRATIVE REQUIREMENTS

A. Coordination: Coordinate Work with placement of support framing and anchors in walls and ceilings.

1.4 SUBMITTALS

A. See Section 01 30 00 "Administrative Requirements" for submittal procedures.
B. Product Data: Provide data on panel construction, hardware, accessories, finishes.

C. Shop Drawings:
   1. Indicate plans, elevations, dimensions. Include door swings, toilet fixture centerlines, floor drains on plans.
   2. Indicate details of wall and floor supports and attachments.
   3. Indicate cutouts for through-partition toilet accessories.
   4. Indicate reinforcements in toilet partition panels for grab bar attachment.

D. Samples:
   1. For Verification: Submit 1 sample of partition materials, 3 inches by 3 inches in size, indicating color.

E. Manufacturer's qualification statement.

1.5 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing products specified in this Section, with at least 3 years of documented experience.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Deliver, store, and handle materials and products in accordance with manufacturer's instructions and recommendations and industry standards.

B. Do not deliver materials or begin installation until building is enclosed, with complete protection from outside weather, and building temperature maintained at minimum of 60 degrees F.

C. Store products indoors in manufacturer's or fabricator's original containers and packaging, with labels clearly identifying product name and manufacturer. Protect from damage.

D. Lay cartons flat, with adequate support to ensure flatness and prevent damage to prefinished surfaces.

E. Do not store where ambient temperature exceeds 120 degrees F.

1.7 FIELD CONDITIONS

A. Ambient Conditions: Maintain environmental conditions such as temperature, humidity, and ventilation within limits recommended by manufacturer for optimum results. Do not install products under environmental conditions outside manufacturer's absolute limits.

B. Ambient Conditions: Maintain building temperature at minimum of 60 degrees F for 24 hours before, during, and after installation of toilet partitions.

C. Existing Conditions: Verify actual locations of toilet fixtures, walls, columns, ceilings, and other construction contiguous with toilet compartments by field measurements before fabrication.

1.8 WARRANTY

A. See Section 01 70 00 "Execution and Closeout Requirements" for additional warranty requirements.

B. Stainless Steel Finish Warranty: Provide 5-year manufacturer warranty against corrosion or discoloration of stainless-steel material properly maintained in accordance with manufacturer's recommendations.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Basis of Design Manufacturer: ASI Global Partitions: www.asi-globalpartitions.com/#sle.
B. Substitutions: See Section 01 60 00 "Product Requirements."
   1. Submit proposed substitutions in writing for approval by Architect minimum of 10 working days prior to bid date and make available to bidders. Accompany proposed substitutes with review of specification and the appropriate ASI Group partition company specifications noting compliance on line-by-line basis.
C. Source Limitations: Furnish products produced by single manufacturer

2.2 METAL TOILET COMPARTMENTS

A. Toilet Compartments with Integrated Privacy: Stainless steel, sightline blocking molding affixed to hinge and latch sides of door during fabrication. Field-applied, no-sight strips not permitted.
   1. Ultimate Privacy-72; floor-anchored, overhead-braced mounting.
B. Urinal Screens: Stainless steel, wall hung flat panel with integral flanges. Floor anchored post to ceiling.
C. Design Criteria:
   1. Accessibility: Design compartments indicated on Drawings
   2. Surface Burning Characteristics: Provide assemblies with flame spread index of 25 or less and smoke developed index of 450 or less (Class A), when tested in accordance with ASTM E84.
D. Fabrication:
   1. Fabricate toilet compartment components to sizes indicated.
   2. Coordinate requirements and provide cutouts for through-partition toilet accessories and reinforcement within panel where required for attachment of grab bars.
   3. Provide shoes at pilasters and posts to conceal anchors, supports, and leveling mechanisms.
   4. Provide Easy-Stall shoes at floor anchored, overhead braced toilet compartments.
   5. Provide manufacturer's standard corrosion-resistant supports, leveling mechanisms, anchors, and anchoring assemblies for pilasters and posts.
   6. Floor Anchored, Overhead Braced Units: Provide supports, leveling mechanisms, Easy-Stall shoes, and anchors at pilasters to suit floor conditions.
   7. Floor Anchored, Overhead Braced Units with Adjustable Pedestals: Provide adjustable pedestals at pilasters to suit floor conditions.
   8. Urinal Posts: Provide anchoring assemblies with leveling adjustment at tops of posts.

2.3 COMPONENTS

A. Doors, Panels, and Pilasters: Seamless sheet steel faces, pressure bonded to sound-deadening cellular honeycomb core. Provide doors with integral no-sightline system including integrated privacy component on latch and hinge sides that overlaps adjacent pilasters.
   1. Stainless Steel: Satin finish.

2. Panel Faces: 22-gauge, 0.0299-inch.
3. Door Faces: 22-gauge, 0.0299-inch.
4. Edge Moldings for Stainless Steel Doors: Integrated sightline continuous roll form 22-gauge, 0.0299-inch.
5. Pilaster Faces, Braced at Both Ends: 22-gauge, 0.0299-inch.
6. Side Seams: Interlocking continuous molding strip.
7. Internal Reinforcement: Provide reinforcement of size and material adequate for panel to withstand applied downward load on grab bar of at least 250 lbf without deformation of panel.

B. Door and Panel Dimensions:
1. Thickness: 1-inch.
2. Door Width: As indicated on Drawings
3. Door Width for Handicapped Use: 36 inches, swing as indicated on Drawings.
4. Ultimate Privacy-72:
a. Door Panel Height: 72 inches.
b. Door Height Above Floor: 9 inches.
5. Urinal Panel Height: 58 inches.
6. Urinal/Entrance Screen Panel Height Above Floor: 12 inches.

C. Pilasters: 1-1/4-inch-thick, of sizes required to suit compartment width and spacing.
1. Pilaster Height: 84 inches.
2. Easy-Stall Pilaster Shoes: Formed 20-gauge, 0.0359-inch, ASTM A666 Type 304 stainless steel with No.4 finish, 3 inches high, concealing floor fastenings and leveling bolts; secured to pilaster with stainless steel tamper-resistant screws; secured to floor with concrete anchors.
a. Provide height and leveling adjustment with machine thread leveling bolts and bottom of pilaster threaded inserts.
b. Provide Easy-Stall shoes at floor anchored, overhead braced toilet compartments.

D. Urinal Post: Manufacturer's standard post design of square aluminum tube with satin finish 1-3/4-inch by 1-3/4-inch, with shoe matching that on pilaster.

E. Head Rails: Hollow anodized aluminum tube, 1-inch by 1-5/8-inch size, with anti-grip surface and aluminum wall brackets.

2.4 MATERIALS

A. Aluminum Extrusions: ASTM B221**,** 6063 alloy, T6 temper
B. Stainless Steel Sheet: ASTM A240 or ASTM A666, Type 304, stretcher-leveled standard of flatness.
C. Stainless Steel Castings: ASTM A743.
D. Zamac: ASTM B86, commercial zinc-alloy die castings, chrome plated.

2.5 HARDWARE AND ACCESSORIES

A. Brackets:
1. Continuous Type: Brushed stainless steel, standard depth.

B. Door Hardware: Brushed stainless steel.
1. Hinges: Brushed stainless steel continuous hinge, cam type, swings to closed or partially open position, available only in 58-inch.

2. Latch and Keeper: Surface-mounted ASI integrated privacy slide latch with occupancy indicator and emergency access.
3. Coat Hook: Manufacturer's standard coat hook with rubber bumper; one per compartment, mounted on panel.
4. Door Pull: Provide door pull for out-swinging doors. Provide on both sides of doors designated as accessible.
5. Door Bumper: Provide rubber-tipped door bumpers at out-swinging doors.

C. Attachments, Screws, and Bolts: Stainless steel, tamper-resistant type.
1. For Attaching Panels and Pilasters to Brackets: Sex-type through-bolts and nuts, tamper-resistant.

2.6 SOURCE QUALITY CONTROL

A. See Section 01 40 00 "Quality Requirements" for additional requirements.
B. Confirm that exposed surfaces are free of pitting, seam marks, roller marks, stains, discolorations, telegraphing of core material, or other imperfections.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify existing conditions before starting Work.
B. Verify that field measurements are as indicated on Shop Drawings.
C. Verify correct spacing of and between plumbing fixtures.
D. Verify correct location of built-in framing, anchorage, and bracing.

3.2 INSTALLATION

A. Install partitions secure, rigid, plumb, and level in accordance with manufacturer's written instructions.
B. Attach Easy Stall shoe system to floor with 1/4- by 2-inch screws. Insert pilaster into Easy Stall shoe and secure after height adjustment.
C. Attach panel brackets securely to walls using anchor devices.
D. Attach panels and pilasters to brackets. Locate head rail joints at pilaster centerlines.
E. Do not permit field touch-up of scratches or damaged finish. Replace damaged or scratched materials with new materials.

3.3 TOLERANCES

A. Maximum Variation From True Position: 1/4-inch.
B. Maximum Variation From Plumb: 1/8-inch.

3.4 ADJUSTING

A. Adjust and align hardware to uniform clearance at vertical edge of doors, not exceeding 3/16-inch.
B. Adjust hinges to locate doors in partially opened position when unlatched. Return out-swinging doors to closed condition.
C. Adjust adjacent components for consistency of line or plane.

3.5 CLEANING

A. See Section 01 70 00 "Execution and Closeout Requirements" for additional requirements.
B. Clean partition and screen surfaces with materials and cleansers in accordance with manufacturer's recommendations.

END OF SECTION

SECTION 10 26 00 - WALL AND DOOR PROTECTION

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Corner guards.
   2. End-wall guards.
   3. Abuse-resistant wall coverings.

B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.
   1. Include construction details, material descriptions, impact strength, dimensions of individual components and profiles, and finishes.
   2. Include fire ratings of units recessed in fire-rated walls and listings for door-protection items attached to fire-rated doors.

B. Shop Drawings: For each type of wall and door protection showing locations and extent.
   1. Include plans, elevations, sections, and attachment details.[Show handrail design and support spacing required to withstand structural loads.]

C. Samples for Verification: For each type of exposed finish on the following products, prepared on Samples of size indicated below:
   1. [Corner] [and] [End-Wall] Guards: 12 inches long. Include example top caps.
   2. Abuse-Resistant Wall Covering: 6 by 6 inches square.

1.3 CLOSEOUT SUBMITTALS

A. Maintenance Data: For each type of wall and door protection product to include in maintenance manuals.
   1. Include recommended methods and frequency of maintenance for maintaining best condition of plastic covers under anticipated traffic and use conditions. Include precautions against using cleaning materials and methods that may be detrimental to finishes and performance.

1.4 DELIVERY, STORAGE, AND HANDLING

A. Store wall and door protection in original undamaged packages and containers inside well-ventilated area protected from weather, moisture, soiling, extreme temperatures, and humidity.
   1. Maintain room temperature within storage area at not less than 70 degrees F during the period plastic materials are stored.
   2. Keep plastic materials out of direct sunlight.
   3. Store plastic wall- and door-protection components for a minimum of 72 hours, or until plastic material attains a minimum room temperature of 70 degrees F.
      a. Store corner-guard covers in a vertical position.
      b. Store covers in a horizontal position.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Source Limitations: Obtain wall- and door-protection products[**of each type**] from single source from single manufacturer.

2.2 PERFORMANCE REQUIREMENTS

A. Surface Burning Characteristics: Comply with ASTM E84 or UL 723; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
   1. Flame-Spread Index: 25 or less.
   2. Smoke-Developed Index: 450 or less.

2.3 CORNER GUARDS

A. Surface-Mounted, Metal Corner Guards CG: Fabricated as one piece from formed or extruded metal with formed edges; with 90- or 135-degree turn to match wall condition.
   1. Manufacturers: Basis of Design and Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
      a. As indicated on Interior Material Legend in Drawings.
   2. Material: Stainless-steel sheet, Type 304.
      a. Thickness: Minimum 14 gauge.
      b. Finish: Directional satin, No. 4.
   3. Wing Size: Nominal 2-1/2 by 2-1/2 inches.
   4. Corner Radius: 1/8-inch.
   5. Mounting: Adhesive.

2.4 END-WALL GUARDS

A. Surface-Mounted, Metal, End-Wall Guards CG2: Fabricated from one-piece, formed or extruded metal that covers entire end of wall; with formed edges.
   1. Manufacturers: Basis of Design and Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   2. As indicated on Interior Material Legend in Drawings.
   3. Material: Stainless-steel sheet, Type 304.
      a. Thickness: Minimum 14 Gauge.
      b. Finish: Directional satin, No. 4.
   4. Wing Size: Nominal 2-1/2 by 2-1/2 inches.
   5. Corner Radius: 1/8-inch.
   6. Mounting: Adhesive.

2.5 STAINLESS STEEL BASE

A. Hygenic Cover Base.
   1. Manufacturer: Basis of Design and Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   2. As indicated on Interior Material Legend in Drawings.
   3. Material: Stainless-steel sheet, Type 304.
      a. Thickness: Minimum 14 Gauge .
   4. Finish: Directional satin, No. 4.
   5. Equal product: Inpro Custom Riser Stainless Steel Hygienic Cove - SCR-CUSTOM. Toe of base shall align to top of flooring.

2.6 ABUSE-RESISTANT WALL COVERINGS

A. Abuse-Resistant Sheet Wall Covering FRP1: Fabricated from semirigid, plastic sheet wall-covering material.
   1. Manufacturers: Basis of Design and Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
      a. InPro Corporation (IPC)- Equal Product Continuum Rigid Sheet.
   2. Size: As indicated on Drawings.
   3. Sheet Thickness: 0.080-inch.
   4. Color and Texture: As indicated by manufacturer's designations on Interior Material Legend in Drawings.
   5. Height: As indicated in Drawings.
   6. Trim and Joint Moldings: Extruded rigid plastic that matches wall-covering color.
   7. Mounting: Adhesive.

2.7 MATERIALS

A. Rigid Sheet:
   1. Material: 100 percent chemical and stain-resistant unplasticized polyvinyl chloride (uPVC)
   2. Extruded Vinyl trim: 100 percent chemical and stain-resistant unplasticized polyvinyl chloride (uPVC)
   3. Accessories: Top caps, inside corners, divider bars, and outside corners shall be made of extruded uPVC.
   4. Adhesives per Manufacturer with VOC less than 70 g/L or less.
B. Adhesive: As recommended by protection product manufacturer.
   1. Adhesives shall have a VOC content of 70 g/L or less.

2.8 FABRICATION

A. Fabricate wall and door protection according to requirements indicated for design, performance, dimensions, and member sizes, including thicknesses of components.
B. Quality: Fabricate components with uniformly tight seams and joints and with exposed edges rolled. Provide surfaces free of wrinkles, chips, dents, uneven coloration, and other imperfections. Fabricate members and fittings to produce flush, smooth, and rigid hairline joints.

2.9 FINISHES

A. Protect finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
B. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates and wall areas, with installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
B. Examine walls to which wall and door protection will be attached for blocking, grounds, and other solid backing that have been installed in the locations required for secure attachment of support fasteners.
    1. For wall and door protection attached with adhesive, verify compatibility with and suitability of substrates, including compatibility with existing finishes or primers.
C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Complete finishing operations, including painting, before installing wall and door protection.
B. Before installation, clean substrate to remove dust, debris, and loose particles.

3.3 INSTALLATION

A. Installation Quality: Install wall and door protection according to manufacturer's written instructions, level, plumb, and true to line without distortions. Do not use materials with chips, cracks, voids, stains, or other defects that might be visible in the finished Work.
B. Accessories: Provide splices, mounting hardware, anchors, trim, joint moldings, and other accessories required for a complete installation.
    1. Provide anchoring devices and suitable locations to withstand imposed loads.
    2. Where splices occur in horizontal runs of more than 20 feet, splice aluminum retainers and plastic covers at different locations along the run, but no closer than 12 inches apart.
C. Abuse-Resistant Wall Covering: Install top and edge moldings, corners, and divider bars as required for a complete installation.
D. Stainless steel base: install per manufactuer's written instructions.

3.4 CLEANING

A. Immediately after completion of installation, clean plastic covers and accessories using a standard ammonia-based household cleaning agent.
B. Remove excess adhesive using methods and materials recommended in writing by manufacturer.

END OF SECTION

SECTION 10 28 13 - TOILET ACCESSORIES

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Public-use washroom accessories.
   2. Hand dryers.
   3. Childcare accessories.
   4. Custodial accessories.

B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.
   2. Section 09 30 13 "Ceramic Tiling" for ceramic toilet and bath accessories.

1.2 COORDINATION

A. Coordinate accessory locations with other work to prevent interference with clearances required for access by people with disabilities, and for proper installation, adjustment, operation, cleaning, and servicing of accessories.

B. Deliver inserts and anchoring devices set into concrete or masonry as required to prevent delaying the Work.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.
   1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.
   2. Include anchoring and mounting requirements, including requirements for cutouts in other work and substrate preparation.
   3. Include electrical characteristics.

1.4 CLOSEOUT SUBMITTALS

A. Maintenance Data: For accessories to include in maintenance manuals.

1.5 WARRANTY

A. Manufacturer's Special Warranty for Mirrors: Manufacturer agrees to repair or replace mirrors that fail in materials or workmanship within specified warranty period.
   1. Failures include, but are not limited to, visible silver spoilage defects.

B. Manufacturer's Special Warranty for Toilet-Compartment Occupancy-Indicator Systems: Manufacturer agrees to repair or replace toilet-compartment occupancy-indicator systems that fail in materials or workmanship within specified warranty period.
   1. Warranty Period: Five years from date of Substantial Completion.

C. Manufacturer's Special Warranty for Hand Dryers: Manufacturer agrees to repair or replace hand dryers that fail in materials or workmanship within specified warranty period.
   1. Warranty Period: Five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

B. Structural Performance: Design accessories and fasteners to comply with the following requirements:

1. Grab Bars: Installed units are able to resist 250 lbf concentrated load applied in any direction and at any point.

2.2 PUBLIC-USE WASHROOM ACCESSORIES

A. Source Limitations: Obtain public-use washroom accessories from single source from single manufacturer.

B. Toilet Tissue (Jumbo-Roll) Dispenser TTD-1:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   a. American Specialties, Inc.
   b. Bobrick Washroom Equipment, Inc.
   c. Bradley Corporation.
2. Description: [One-roll unit.
3. Mounting: Surface mounted.
4. Capacity: 9- or 10-inch-diameter rolls.
5. Material and Finish: Stainless steel, ASTM A480 No. 4 finish (satin) ABS plastic, gray, with translucent front cover Insert material and finish.
6. Lockset: Tumbler type.
7. Refill Indicator: Pierced slots at front.

C. Waste Receptacle:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   a. American Specialties, Inc.
   b. Bobrick Washroom Equipment, Inc.
   c. Bradley Corporation.
   d. Tubular Specialties Manufacturing, Inc.
2. Basis of Design: Bobrick, Model No. B-35639, TrimlineSeries, Surface-Mounted Waste Receptacle with Disposal Door, Satin Finish, 3-Gallon, Stainless Steel Satin Finish.
3. Mounting: Surface mounted.
4. Minimum Capacity: 3-gal.
5. Material and Finish: Stainless steel, ASTM A480 No. 4 finish (satin) 18.8, Heavy Gauge, Type 304 Stainless Steel, all welded construction.
6. Lockset: Tumbler type for waste receptacle.

D. Combination Towel (Folded) Dispenser/Waste Receptacle PTDWR:
   1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
      a. American Specialties, Inc.
      b. Bobrick Washroom Equipment, Inc.
      c. Bradley Corporation.
   2. Basis-of-Design:
      a. Bobrick - Recessed Paper Towel Dispenser and Waste Receptacle, Satin Finish, 15-Gallon Waste.
   3. Description: Combination unit for dispensing C-fold or multifold towels, with removable waste receptacle.
   4. Mounting: Surface mounted Surface mounted with stainless steel collar Recessed Recessed with projecting receptacle Semirecessed Under vanity Insert mounting.
      a. Designed for nominal 4-inch wall depth.
   5. Minimum Towel-Dispenser Capacity: 600 C-fold or 800 multifold paper towels.
   6. Material and Finish: Stainless steel, ASTM A480 No. 4 finish (satin).
   7. Lockset: Tumbler type for towel-dispenser compartment and waste receptacle.

E. Automatic Soap Dispenser:
   1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
      a. American Specialties, Inc.
      b. Bradley Corporation.
      c. Sloan Valve Company.
   2. Description: Automatic dispenser with infrared sensor to detect presence of hands; electrically operated, with adapter for 110- to 240-V ac power supply battery powered; designed for dispensing soap in liquid or lotion lather form.
   3. Mounting: Surface mounted.
   4. Refill Indicator: LED indicator.
   5. Low-Battery Indicator: LED indicator.

F. Grab Bar GB:
   1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
      a. American Specialties, Inc.
      b. Bobrick Washroom Equipment, Inc.
      c. Bradley Corporation.
   2. Mounting: Flanges with concealed exposed fasteners.
   3. Material: Stainless steel, 0.05-inch-thick.
      a. Finish: Smooth, ASTM A480 No. 4 finish (satin) on ends and slip-resistant texture in grip area.
   4. Outside Diameter: 1-1/2 inches.
   5. Configuration and Length: As indicated on Drawings; straight, 36 inches long.

G. Sanitary-Napkin and Tampon Vendor:
   1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
      a. AJW Architectural Products.
      b. American Specialties, Inc.
      c. Bobrick Washroom Equipment, Inc.
      d. Bradley Corporation.
      e. GAMCO Specialty Accessories; a division of Bobrick.
      f. Tubular Specialties Manufacturing, Inc.
   2. Exposed Material and Finish: Stainless steel, ASTM A480 No. 4 finish (satin).
   3. Lockset: Tumbler type with separate lock and key for coin box.

H. Sanitary-Napkin Disposal Unit:
   1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
      a. American Specialties, Inc.
      b. Bobrick Washroom Equipment, Inc.
      c. Bradley Corporation.
   2. Mounting: Surface mounted.
   3. Door or Cover: Self-closing, disposal-opening cover and hinged face panel with tumbler lockset..
   4. Receptacle: Removable.
   5. Material and Finish: Stainless steel, ASTM A480 No. 4 finish (satin) ABS plastic, gray Insert material and finish.

I. Seat-Cover Dispenser:
   1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
      a. American Specialties, Inc.
      b. Bobrick Washroom Equipment, Inc.
      c. Bradley Corporation.
   2. Mounting: Surface mounted Recessed Partition mounted, dual access.
   3. Minimum Capacity: 500 seat covers.
   4. Exposed Material and Finish: Stainless steel, ASTM A480 No. 4 finish (satin) ABS plastic, gray Insert material and finish.
   5. Lockset: Tumbler type.

J. Purse Shelf :
   1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]:
      a. AJW Architectural Products.
      b. American Specialties, Inc.
      c. Bobrick Washroom Equipment, Inc.
      d. Bradley Corporation.
      e. Brey-Krause Manufacturing Co.
      f. GAMCO Specialty Accessories; a division of Bobrick.
      g. Tubular Specialties Manufacturing, Inc.
   2. Material and Finish: Stainless steel, ASTM A480 No. 4 finish (satin).

K. Mirror Unit:
1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
a. American Specialties, Inc.
b. Bobrick Washroom Equipment, Inc.
c. Bradley Corporation.
2. Size: As indicated on Drawings .

L. Pet Bag Dispenser:
1. Manufacturers: Subject to compliance with requirements, provide products by the following
a. Zero Waste USA12316 World Trade Drive, Suite 102, San Diego, California 92128, 800.789.2563.
2. Mounting: Surface mounted, per manufacturer's instructions.

2.3 HAND DRYERS

A. Multiple-Airflow Hand Dryer:
1. Manufacturers: Subject to compliance with requirements, provide products by the following available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
a. American Specialties, Inc.
b. Bradley Corporation.
c. Dyson Technologies Limited.
d. Mitsubishi Electric Corporation.
e. Saniflow Hand Dryer Corporation.
f. World Dryer Corporation.
2. Water Collection: Removable reservoir.
3. Filter: HEPA, replaceable.
4. Cover Materials and Finish: Steel, ASTM A480, No. 4 finish (satin).

2.4 CHILDCARE ACCESSORIES

A. Source Limitations: Obtain childcare accessories from single source from single manufacturer.

B. Diaper-Changing Station:
1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
a. American Specialties, Inc.
b. Bradley Corporation.
c. GAMCO Specialty Accessories; a division of Bobrick.
d. Koala Kare Products; a Division of Bobrick.
2. Description: Horizontal unit that opens by folding down from stored position and with child-protection strap.
3. Mounting: Surface mounted, with unit projecting not more than 4 inches from wall when closed.
4. Operation: By pneumatic shock-absorbing mechanism.
5. Material and Finish: HDPE in manufacturer's standard color Stainless steel, ASTM A480 No. 4 finish (satin), with replaceable insulated polystyrene tray liner and rounded plastic corners.

C. Diaper-Pack Vendor:
1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
a. Foundations Children's Products.
b. Foundations Worldwide.
c. Koala Kare Products; a Division of Bobrick.
2. Mounting: Surface mounted.
3. Minimum Capacity: 24 diaper packs.
4. Material and Finish: Stainless steel, ASTM A480 No. 4 finish (satin).

2.5 CUSTODIAL ACCESSORIES

A. Source Limitations: Obtain custodial accessories from single source from single manufacturer.
B. Custodial Utility Shelf:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
a. American Specialties, Inc.
b. Bobrick Washroom Equipment, Inc.
c. Bradley Corporation.
2. Description: With exposed edges turned down not less than 1/2-inch and supported by two triangular brackets welded to shelf underside.
3. Material and Finish: Not less than nominal 0.05-inch-thick stainless steel, ASTM A480 No. 4 finish (satin).
C. Custodial Paper Towel (Roll) Dispenser:
1. Manufacturers: Subject to compliance with requirements available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
a. Tubular Specialties Manufacturing, Inc.
2. Material and Finish: Stainless steel, ASTM A480 No. 4 finish (satin).
3. Lockset: Tumbler type.

2.6 MATERIALS

A. Stainless Steel: ASTM A240 or ASTM A666, Type 304, 0.031-inch-inimum nominal thickness unless otherwise indicated.
B. Steel Sheet: ASTM A1008, Designation CS (cold rolled, commercial steel), 0.036-inch-minimum nominal thickness.
C. Galvanized-Steel Sheet: ASTM A653, with G60 hot-dip zinc coating.
D. Galvanized-Steel Mounting Devices: ASTM A153, hot-dip galvanized after fabrication.
E. Fasteners: Screws, bolts, and other devices of same material as accessory unit, unless otherwise recommended by manufacturer or specified in this Section, and tamper and theft resistant where exposed, and of stainless or galvanized steel where concealed.
F. Mirrors: ASTM C1503, Mirror Glazing Quality, clear-glass mirrors, nominal 6.0 mm thick.

2.7 FABRICATION

A. General: Fabricate units with tight seams and joints, and exposed edges rolled. Hang doors and access panels with full-length, continuous hinges. Equip units for concealed anchorage and with corrosion-resistant backing plates.
B. Keys: Provide universal keys for internal access to accessories for servicing and resupplying. Provide minimum of six keys to Owner's representative.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install accessories according to manufacturers' written instructions, using fasteners appropriate to substrate indicated and recommended by unit manufacturer. Install units level, plumb, and firmly anchored in locations and at heights indicated.
   1. Remove temporary labels and protective coatings.
B. Grab Bars: Install to comply with specified structural-performance requirements.

3.2 ADJUSTING AND CLEANING

A. Adjust accessories for unencumbered, smooth operation. Replace damaged or defective items.
B. Clean and polish exposed surfaces according to manufacturer's written instructions.

END OF SECTION

SECTION 10 44 13 - FIRE PROTECTION CABINETS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
1. Fire-protection cabinets for the following:
a. Portable fire extinguisher.
B. Related Requirements:
1. Division 01 Specification Sections apply to Work of this Section.
2. Section 10 44 16 "Fire Extinguishers" for portable, hand-carried fire extinguishers accommodated by fire-protection cabinets

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.
1. Show door hardware, cabinet type, trim style, and panel style. Include roughing-in dimensions and details showing recessed-, semirecessed-, or surface-mounting method and relationships of box and trim to surrounding construction.
B. Shop Drawings: For fire-protection cabinets.
1. Include plans, elevations, sections, details, and attachments to other Work.

1.3 CLOSEOUT SUBMITTALS

A. Maintenance Data: For fire-protection cabinets to include in maintenance manuals.

1.4 COORDINATION

A. Coordinate size of fire-protection cabinets to ensure that type and capacity of fire extinguishers indicated are accommodated.
B. Coordinate sizes and locations of fire-protection cabinets with wall depths.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Source Limitations: Obtain fire-protection cabinets, accessories, and fire extinguishers from single source from single manufacturer.

2.2 PERFORMANCE REQUIREMENTS

A. Fire-Rated Fire-Protection Cabinets: Listed and labeled to comply with requirements in ASTM E814 for fire-resistance rating of walls where they are installed.

2.3 FIRE-PROTECTION CABINET (FEC)

A. Cabinet Type: Suitable for fire extinguisher.
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Activar Construction Products Group, Inc. - JL Industries.
      b. Larsens Manufacturing Company.
      c. Potter Roemer LLC; a Division of Morris Group International.

B. Fire-Rated Cabinets: Refer to drawings for fire ratings.

C. Cabinet Material: Cold-rolled steel sheet.

D. Semirecessed Cabinet: One-piece combination trim and perimeter door frame overlapping surrounding wall surface, with exposed trim face and wall return at outer edge (backbend).

E. Cabinet Trim and Door Material: Steel sheet.

F. Door Style: Fully glazed panel with frame.

G. Door Glazing: Tempered float glass (clear).

H. Door Hardware: Manufacturer's standard door-operating hardware of proper type for cabinet type, trim style, and door material and style indicated. Provide manufacturer's standard hinge, permitting door to open 180 degrees.

I. Accessories:
   1. Identification: Verify lettering with authorities having jurisdiction for letter style, size, spacing, and location.
      a. Identify fire extinguisher in fire-protection cabinet with the words "FIRE EXTINGUISHER."
         1) Location: Applied to cabinet door.
         2) Lettering Color: Red.
         3) Orientation: Vertical.

J. Materials:
   1. Cold-Rolled Steel: ASTM A1008, Commercial Steel (CS), Type B.
      a. Finish: Baked enamel, TGIC polyester powder coat, HAA polyester powder coat, epoxy powder coat, or polyester/epoxy hybrid powder coat, complying with AAMA 2603.
      b. Color: As selected by Architect from manufacturer's standard range.
   2. Tempered Float Glass: ASTM C1048, Kind FT, Condition A, Type I, Quality q3, 3 mm thick, Class 1 (clear).

2.4 FABRICATION

A. Fire-Protection Cabinets: Provide manufacturer's standard box (tub) with trim, frame, door, and hardware to suit cabinet type, trim style, and door style indicated.
   1. Weld joints and grind smooth.
   2. Miter corners and grind smooth.
   3. Provide factory-drilled mounting holes.

B. Cabinet Doors: Fabricate doors according to manufacturer's standards, from materials indicated and coordinated with cabinet types and trim styles.
   1. Fabricate door frames with tubular stiles and rails and hollow-metal design, minimum 1/2-inch-thick.
   2. Miter and weld perimeter door frames and grind smooth.

C. Cabinet Trim: Fabricate cabinet trim in one piece with corners mitered, welded, and ground smooth.

2.5 GENERAL FINISH REQUIREMENTS

A. Comply with NAAMM's AMP 500, "Metal Finishes Manual for Architectural and Metal Products," for recommendations for applying and designating finishes.
B. Protect mechanical finishes on exposed surfaces of fire-protection cabinets from damage by applying a strippable, temporary protective covering before shipping.
C. Finish fire-protection cabinets after assembly.
D. Appearance of Finished Work: Noticeable variations in same piece are unacceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine walls and partitions for suitable framing depth and blocking where semirecessed cabinets will be installed.
B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Prepare recesses for semirecessed fire-protection cabinets as required by type and size of cabinet and trim style.

3.3 INSTALLATION

A. General: Install fire-protection cabinets in locations and at mounting heights indicated in Drawings. If not indicated in Drawings, at height indicated below:
   1. General Fire-Protection Cabinet Mounting Height: 42 inches above finished floor to top of fire extinguisher.
B. Fire-Protection Cabinets: Fasten cabinets to structure, square and plumb.
   1. Fasten mounting brackets to inside surface of fire-protection cabinets, square and plumb.

3.4 ADJUSTING AND CLEANING

A. Remove temporary protective coverings and strippable films, if any, as fire-protection cabinets are installed unless otherwise indicated in manufacturer's written installation instructions.
B. Adjust fire-protection cabinet doors to operate easily without binding. Verify that integral locking devices operate properly.
C. On completion of fire-protection cabinet installation, clean interior and exterior surfaces as recommended by manufacturer.

D. Touch up marred finishes, or replace fire-protection cabinets that cannot be restored to factory-finished appearance. Use only materials and procedures recommended or furnished by fire-protection cabinet and mounting bracket manufacturers.

E. Replace fire-protection cabinets that have been damaged or have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

END OF SECTION

SECTION 10 44 16 - FIRE EXTINGUISHERS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes portable, hand-carried fire extinguishers.
B. Related Requirements:
   1. Divisions 01 Specification Sections apply to Work of this Section.
   2. Section 10 44 13 "Fire Protection Cabinets."

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product. Include rating and classification, material descriptions, dimensions of individual components and profiles, and finishes for fire extinguisher.
B. Product Schedule: For fire extinguishers. Coordinate final fire-extinguisher schedule with fire-protection cabinet schedule to ensure proper fit and function.

1.3 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For fire extinguishers to include in maintenance manuals.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. NFPA Compliance: Fabricate and label fire extinguishers to comply with NFPA 10, "Portable Fire Extinguishers."
B. Fire Extinguishers: Listed and labeled for type, rating, and classification by an independent testing agency acceptable to authorities having jurisdiction.

2.2 PORTABLE, HAND-CARRIED FIRE EXTINGUISHERS

A. Fire Extinguishers: Type, size, and capacity for each fire-protection cabinet (FEC) and mounting bracket (FEB) indicated.
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. JL Industries, Inc.; a division of the Activar Construction Products Group.
      b. Larsens Manufacturing Company.
      c. Potter Roemer LLC.
B. Multipurpose Dry-Chemical Type in Steel Container: UL-rated 4-A:60-B:C, 10-lb ominal capacity, with monoammonium phosphate-based dry chemical in enameled-steel container.

2.3 MOUNTING BRACKETS (FEB)

A. Mounting Brackets: Manufacturer's standard galvanized steel, designed to secure fire extinguisher to wall or structure, of sizes required for types and capacities of fire extinguishers indicated, with plated or red baked-enamel finish.
   1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
      a. JL Industries, Inc.; a division of the Activar Construction Products Group.
      b. Larsens Manufacturing Company.
      c. Potter Roemer LLC.

B. Identification: Lettering complying with authorities having jurisdiction for letter style, size, spacing, and location. Locate as indicated by Architect.
   1. Identify bracket-mounted fire extinguishers with the words "FIRE EXTINGUISHER" in red letter decals applied to mounting surface.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine fire extinguishers for proper charging and tagging.
   1. Remove and replace damaged, defective, or undercharged fire extinguishers.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. General: Install fire extinguishers and mounting brackets in locations indicated and in compliance with requirements of authorities having jurisdiction.
   1. Mounting Brackets:
      a. Fire extinguishers weighing 40 pounds or less: 54 inches above finished floor to top of cabinet.
      b. Fire extinguishers weighing more than 40 pounds: 42 inches above finished floor to top of cabinet.

B. Mounting Brackets: Fasten mounting brackets to surfaces, square and plumb, at locations indicated.

END OF SECTION

SECTION 10 75 16 - GROUND-SET FLAGPOLES

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes ground-set flagpoles made from:
   1. Aluminum.
B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.
   2. Section 03 30 00 "Cast-In-Place Concrete" for concrete footing for flagpoles.
   3. Section 07 92 00 "Joint Sealants" for elastomeric sealants filling the top of the foundation tube.

1.2 PERFORMANCE REQUIRMENTS

A. Structural Performance: Provide flagpole assemblies, including anchorages and supports, capable of withstanding the effects of wind loads, determined according to NAAMM FP 1001, "Guide Specifications for Design of Metal Flagpoles."
   1. Base flagpole design on polyester flags of maximum standard size suitable for use with flagpole or flag size indicated, whichever is more stringent.
   2. Basic Wind Speed: Three-second gust speed at 33 feet aboveground.

1.3 SUBMITTALS

A. Product Data: For each type of flagpole required.
B. Shop Drawings: Include elevations and details showing general arrangement, jointing, fittings and accessories, grounding, and anchoring and supporting systems.
   1. Include details of foundation system for ground-set flagpoles.

1.4 QUALITY ASSURANCE

A. Source Limitations: Obtain flagpole as a complete unit, including fittings, accessories, bases, and anchorage devices, from a single manufacturer.
   1. Obtain flagpoles through 1 source from a single manufacturer.

1.5 DELIVERY, STORAGE, AND HANDLING

A. General: Spiral wrap flagpoles with heavy paper and enclose in a hard fiber tube or other protective container.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Source Limitations: Obtain flagpoles as complete units, including fittings, accessories, bases, and anchorage devices, from single source from single manufacturer.

B. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   1. American Flagpole; a Kearney-National Inc. Company.
   2. Concord Industries, Inc.
   3. Eder Flag Manufacturing Company, Inc.
   4. Ewing International.
   5. PLP Composite Technologies, Inc.
   6. Pole-Tech Company Inc.
   7. Substitutions: In accordance with Division 01.

2.2 FLAGPOLES

A. Flagpole Construction, General: Construct flagpoles in 1-piece if possible. If more than 1-piece is necessary, comply with the following:
   1. Fabricate shop and field joints without using fasteners, screw collars, or lead calking.
   2. For tapered flagpoles, provide flush hairline joints using self-aligning, snug-fitting, internal sleeves.

B. Exposed Height: 35 feet (two).

C. Aluminum Flagpoles: Cone -tapered flagpoles fabricated from seamless extruded tubing complying with ASTM B241, Alloy 6063, with a minimum wall thickness of 0.188-inch.Heat treat after fabrication to comply with ASTM B 597, Temper T6.
   1. Thirty-five-foot Flagpole: Provide one 35-foot pole with an 8-inch butt diameter, with a 0.188-inch wall thickness. The finish shall be satin aluminum finish. Pole shall have a gold anodized ball top, a key based cleat box, and a heavy-duty spur aluminum collar.

D. Foundation Tube: Galvanized corrugated-steel foundation tube, 0.064-inch minimum nominal wall thickness. Provide with 3/16-inch steel bottom plate and support plate; 3/4-inch-diameter, steel ground spike; and steel centering wedges all welded together. Galvanize steel parts, including foundation tube, after assembly. Provide loose hardwood wedges at top of foundation tube for plumbing pole.

2.3 FITTINGS

A. Internal Halyard: Ball-bearing, nonfouling, revolving truck assembly of cast metal with continuous 5/16-inch-diameter, braided polypropylene halyard and 9-inch, cast-metal cleats with fasteners. Finish exposed metal surfaces to match flagpole.
   1. Provide one halyard and one cleat at each flagpole.
   2. Provide cast-metal cleat covers, finished to match flagpole, secured with cylinder locks.

B. Halyard Flag Snaps: Provide 4 stainless-steel swivel snap hooks per halyard.
   1. Provide with neoprene or vinyl covers.

2.4 MISCELLANEOUS MATERIALS

A. Concrete: Comply with requirements in Section 03 30 00 "Cast-in-Place Concrete" for normal-weight, air-entrained, ready-mix concrete with a minimum 28-day compressive strength of 3,000 psi.
B. Sand: ASTM C33, fine aggregate.
C. Elastomeric Joint Sealant: jJoint sealant complying with requirements in Section 07 92 00 "Joint Sealants" or Use NT (nontraffic) and for Use M, G, A, and, as applicable to joint substrates indicated, O-joint substrates.

2.5 FINISHES

A. Metal Finishes, General: Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
B. Aluminum: Finish designations prefixed by AA comply with the system established by the Aluminum Association for designating aluminum finishes.
    1. Light Bronze Anodized: Provide fine, directional, light bronze finish (AA-M32); buff complying with AA-M20; and seal aluminum surfaces with clear, hard-coat wax.

PART 3 - EXECUTION

3.1 PREPARATION

A. Foundation Excavation: Excavate to neat clean lines in undisturbed soil. Remove loose soil and foreign matter from excavation and moisten earth before placing concrete.
B. Provide forms where required due to unstable soil conditions and for perimeter of flagpole base at grade. Secure and brace forms to prevent displacement during concreting.
C. Place concrete immediately after mixing. Compact concrete in place by using vibrators. Moist-cure exposed concrete for no fewer than 7 days or use nonstaining curing compound.
D. Trowel exposed concrete surfaces to a smooth, dense finish, free of trowel marks, and uniform in texture and appearance. Provide positive slope for water runoff to perimeter of concrete base.

3.2 FLAGPOLE INSTALLATION

A. General: Install flagpoles where indicated and according to Shop Drawings and manufacturer's written instructions.
B. Foundation Tube Installation: Install flagpole in foundation tube, seated on bottom plate between steel centering wedges. Plumb flagpole and install hardwood wedges to secure flagpole in place. Place and compact sand in foundation tube and remove hardwood wedges. Seal top of foundation tube with a 2-inch layer of elastomeric joint sealant and cover with flashing collar.

END OF SECTION

SECTION 12 36 16 - METAL COUNTERTOPS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Stainless-steel countertops.
B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.
B. Shop Drawings: For metal fabrications.
   1. Include plans, sections, details, and attachments to other work. Detail fabrication and installation, including field joints.
   2. For countertops, show locations and sizes of cutouts and holes for items installed in metal countertops.

PART 2 - PRODUCTS

2.1 STAINLESS-STEEL FABRICATIONS

A. Countertops: Fabricate from 0.062-inch-thick, stainless-steel sheet. Provide smooth, clean exposed tops and edges in uniform plane, free of defects. Provide front and end overhang of 1 inch over the base cabinets.
   1. Joints: Fabricate countertops without field-made joints.
   2. Sound deaden the undersurface with heavy-build mastic coating.
   3. Extend the top down to provide a 1-inch-thick edge .

2.2 MATERIALS

A. Stainless-Steel Sheet: ASTM A240, Type 304.
B. Sealant for Countertops: Manufacturer's standard sealant that complies with applicable requirements in Section 07 92 00 "Joint Sealants" and the following:
   1. Mildew-Resistant Joint Sealant: Mildew resistant, single component, nonsag, neutral curing, silicone.
   2. Joint Sealant: Latex.
   3. Color: Clear.
   4. Sealant shall have a VOC content of 250 g/L or less.

2.3 STAINLESS-STEEL FINISH

A. Grind and polish surfaces to produce uniform, directional satin finish matching No. 4 finish, with no evidence of welds and free of cross scratches. Run grain with long dimension of each piece. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces clean.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install metal countertops level, plumb, and true; shim as required, using concealed shims.
B. Secure countertops with adhesive.
C. Seal junctures of countertops, splashes, and walls with sealant for countertops.
D. Protection: Provide 6-mil plastic or other suitable water-resistant covering over countertop surfaces. Tape to underside of countertop at a minimum of 48 inches o.c. Remove protection at Substantial Completion.

END OF SECTION

SECTION 12 36 23.13 - PLASTIC-LAMINATE-CLAD COUNTERTOPS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes: Plastic-laminate-clad countertops.
B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.

1.2 ACTION SUBMITTALS

A. Samples: Plastic laminates in each type, color, pattern, and surface finish required in manufacturer's standard size.
B. Samples for Verification: As follows:
   1. Plastic Laminates: For each type, color, pattern, and surface finish required, 8 by 10 inches in size.
   2. Wood-Grain Plastic Laminates: For each type, color, pattern, and surface finish required, [12 by 24 inches] [24 by 24 inches] in size.
   3. Fabrication Sample: For each type and profile of countertop required, provide one sample applied to core material with specified edge material applied to one edge.

1.3 QUALITY ASSURANCE

A. Fabricator Qualifications: Shop that employs skilled workers who custom fabricate products similar to those required for this Project and whose products have a record of successful in-service performance.
   1. Shop Certification: [AWI's Quality Certification Program accredited participant] [WI's Certified Compliance Program licensee].

1.4 DELIVERY, STORAGE, AND HANDLING

A. Deliver countertops only after casework and supports on which they will be installed have been completed in installation areas.
B. Store countertops in areas where environmental conditions comply with requirements specified in "Field Conditions" Article.
C. Keep surfaces of countertops covered with protective covering during handling and installation.

1.5 FIELD CONDITIONS

A. Environmental Limitations: Do not deliver or install countertops until building is enclosed, wet-work is complete, and HVAC system is operating and maintaining temperature and relative humidity at levels planned for building occupants during the remainder of the construction period.
B. Environmental Limitations: Do not deliver or install countertops until building is enclosed, wet-work is complete, and HVAC system is operating and maintaining temperature between 60 and 90 degrees F and relative humidity between 17 and 50 percent during the remainder of the construction period.

C. Established Dimensions: Where countertops are indicated to fit to other construction, establish dimensions for areas where countertops are to fit. Provide allowance for trimming at site, and coordinate construction to ensure that actual dimensions correspond to established dimensions.

PART 2 - PRODUCTS

2.1 PLASTIC-LAMINATE-CLAD COUNTERTOPS

A. Quality Standard: Unless otherwise indicated, comply with the "Architectural Woodwork Standards" for grades of plastic-laminate-clad countertops indicated for construction, finishes, installation, and other requirements.
B. Grade: Custom.
C. High-Pressure Decorative Laminate: NEMA LD 3, Grade HGS.
   1. Manufacturers: Subject to compliance with requirements, provide products by the following:
      a. As indicated on Interior Material Legend in Drawings.
D. Colors, Patterns, and Finishes: Provide materials and products that result in colors and textures of exposed laminate surfaces complying with the following requirements:
   1. As indicated by manufacturer's designations and as indicated on Interior Material Legend in Drawings.
E. Edge Treatment: 3.0-mm PVC edging.
F. Core Material: Particleboard or MDF.
G. Core Material at Sinks: Particleboard made with exterior glue.
H. Core Thickness: 3/4-inch.
   1. Build up countertop thickness to 1-1/2 inches at front, back, and ends with additional layers of core material laminated to top.

2.2 WOOD MATERIALS

A. Wood Products: Provide materials that comply with requirements of referenced quality standard unless otherwise indicated.
   1. Wood Moisture Content: 4 to 9 percent.
B. Composite Wood and Agrifiber Products: Provide materials that comply with requirements of referenced quality standard for each type of countertop and quality grade specified unless otherwise indicated.
   1. Recycled Content of MDF and Particleboard: Postconsumer recycled content plus one-half of preconsumer recycled content not less than <Insert value> percent.
   2. MDF: Medium-density fiberboard, ANSI A208.2, Grade 130.
   3. Particleboard: ANSI A208.1, Grade M-2.

2.3 ACCESSORIES

A. Wire-Management Grommets: Circular, molded-plastic grommets and matching plastic caps with slot for wire passage.
   1. Manufacturers: Subject to compliance with requirements, provide products by the following:
      a. Doug Mockett & Company, Inc.
   2. Outside Diameter: 2 inches.
   3. Color: As indicated on Interior Material Legend in Drawings.

2.4 MISCELLANEOUS MATERIALS

A. Adhesive for Bonding Plastic Laminate: Unpigmented contact cement.
   1. Adhesive for Bonding Edges: Hot-melt adhesive or adhesive specified above for faces.
B. Installation Adhesive:
   1. Adhesives shall have a VOC content of 70 g/L or less.

2.5 FABRICATION

A. Fabricate countertops to dimensions, profiles, and details indicated. Provide front and end overhang of 1 inch over base cabinets. Ease edges to radius indicated for the following:
   1. Solid-Wood (Lumber) Members: 1/16-inch unless otherwise indicated.
B. Complete fabrication, including assembly, to maximum extent possible before shipment to Project site. Disassemble components only as necessary for shipment and installation. Where necessary for fitting at site, provide ample allowance for scribing, trimming, and fitting.
   1. Notify Architect seven days in advance of the dates and times countertop fabrication will be complete.
   2. Trial fit assemblies at fabrication shop that cannot be shipped completely assembled. Install dowels, screws, bolted connectors, and other fastening devices that can be removed after trial fitting. Verify that various parts fit as intended, and check measurements of assemblies against field measurements before disassembling for shipment.
C. Shop cut openings to maximum extent possible to receive appliances, plumbing fixtures, electrical work, and similar items. Locate openings accurately, and use templates or roughing-in diagrams to produce accurately sized and shaped openings. Sand edges of cutouts to remove splinters and burrs.
   1. Seal edges of cutouts by saturating with varnish.

PART 3 - EXECUTION

3.1 PREPARATION

A. Before installation, condition countertops to average prevailing humidity conditions in installation areas.
B. Before installing countertops, examine shop-fabricated work for completion and complete work as required, including removal of packing.

3.2 INSTALLATION

A. Grade: Install countertops to comply with same grade as item to be installed.
B. Assemble countertops and complete fabrication at Project site to the extent that it was not completed in the shop.

C. Field Jointing: Where possible, make in the same manner as shop jointing, using dowels, splines, adhesives, and fasteners recommended by manufacturer. Prepare edges to be joined in shop so Project-site processing of top and edge surfaces is not required. Locate field joints where shown on Shop Drawings.
   1. Secure field joints in countertops with concealed clamping devices located within 6 inches of front and back edges and at intervals not exceeding 24 inches. Tighten according to manufacturer's written instructions to exert a constant, heavy-clamping pressure at joints.

D. Scribe and cut countertops to fit adjoining work, refinish cut surfaces, and repair damaged finish at cuts.

E. Countertop Installation: Anchor securely by screwing through corner blocks of base cabinets or other supports into underside of countertop.
   1. Install countertops level and true in line. Use concealed shims as required to maintain not more than a 1/8-inch in 96-inches variation from a straight, level plane.
   2. Secure backsplashes to walls with adhesive.
   3. Seal joints between countertop and backsplash, if any, and joints where countertop and backsplash abut walls with mildew-resistant silicone sealant or another permanently elastic sealing compound recommended by countertop material manufacturer.

3.3 ADJUSTING AND CLEANING

A. Repair damaged and defective countertops, where possible, to eliminate functional and visual defects. Where not possible to repair, replace countertops. Adjust joinery for uniform appearance.

B. Clean countertops on exposed and semiexposed surfaces.

C. Protection: Provide Kraft paper or other suitable covering over countertop surfaces, taped to underside of countertop at a minimum of 48 inches o.c. Remove protection at Substantial Completion.

END OF SECTION

SECTION 12 36 61.16 - SOLID SURFACING COUNTERTOPS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Solid surface material countertops.
   2. Solid surface material backsplashes.
   3. Solid surface material end splashes.
   4. Solid surface material sinks.

B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.

1.2 ACTION SUBMITTALS

A. Product Data: For countertop materials and sinks.

B. Shop Drawings: For countertops. Show materials, finishes, edge and backsplash profiles, methods of joining, and cutouts for plumbing fixtures.
   1. Show locations and details of joints.
   2. Show direction of directional pattern, if any.

C. Samples for Verification: For the following products:
   1. Countertop material, 6 inches square.

1.3 CLOSEOUT SUBMITTALS

A. Maintenance Data: For solid surface material countertops to include in maintenance manuals. Include Product Data for care products used or recommended by installer and names, addresses, and telephone numbers of local sources for products.

1.4 QUALITY ASSURANCE

A. Fabricator Qualifications: Shop that employs skilled workers who custom-fabricate countertops similar to that required for this Project, and whose products have a record of successful in-service performance.

1.5 FIELD CONDITIONS

A. Field Measurements: Verify dimensions of countertops by field measurements after base cabinets are installed but before countertop fabrication is complete.

1.6 COORDINATION

A. Coordinate locations of utilities that will penetrate countertops or backsplashes.

PART 2 - PRODUCTS

2.1 SOLID SURFACE COUNTERTOP MATERIALS

A. Solid Surface Material: Homogeneous-filled plastic resin complying with ISFA 2-01.
   1. Manufacturers: Basis of Designa and subject to compliance with requirements, provide products by the following:
      a. As indicated on Interior Material Legend in Drawings.
      b. Delete option in "Type" Subparagraph below if 1/4-inch-thick material is not used.
   2. Type: Provide Standard type unless Special Purpose type is indicated.
   3. Integral Sink Bowls: Comply with CSA B45.5/IAPMO Z124.
      a. Style and color per Interior Material Legend in Drawings.
   4. Colors and Patterns: As indicated on Interior Material Legend in Drawings.

B. Particleboard: ANSI A208.1, Grade M-2-Exterior Glue.

C. Plywood: Exterior softwood plywood complying with DOC PS 1, Grade C-C Plugged, touch sanded.

2.2 FABRICATION

A. Fabricate countertops according to solid surface material manufacturer's written instructions and to the AWI/AWMAC/WI's "Architectural Woodwork Standards."
   1. Grade: Custom.

B. Configuration:
   1. Front: Straight, slightly eased at top.
   2. Backsplash: Straight, slightly eased at corner.
   3. End Splash: Matching backsplash.

C. Countertops:
   1. 1/2-inch-thick, solid surface material with front edge built up with same material.

D. Backsplashes: 1/2-inch-thick, solid surface material.

E. Fabricate tops with shop-applied edges and backsplashes unless otherwise indicated. Comply with solid surface material manufacturer's written instructions for adhesives, sealers, fabrication, and finishing.
   1. Fabricate with loose backsplashes for field assembly.
   2. Install integral sink bowls in countertops in the shop.

F. Joints:
   1. Fabricate countertops in sections for joining in field.
      a. Joint Locations: Not within 18 inches of a sink and not where a countertop section less than 36 inches long would result, unless unavoidable.

2.3 INSTALLATION MATERIALS

A. Adhesive: Product recommended by solid surface material manufacturer.
   1. Adhesives shall have a VOC content of 70 g/L or less.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates to receive solid surface material countertops and conditions under which countertops will be installed, with installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of countertops.
B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Install countertops level to a tolerance of 1/8-inch in 8 feet, 1/4-inch maximum. Do not exceed 1/64-inch difference between planes of adjacent units.
B. Fasten subtops to cabinets by screwing through subtops into cornerblocks of base cabinets. Shim as needed to align subtops in a level plane.
C. Bond joints with adhesive and draw tight as countertops are set. Mask areas of countertops adjacent to joints to prevent adhesive smears.
    1. Clamp units to temporary bracing, supports, or each other to ensure that countertops are properly aligned and joints are of specified width.
D. Install backsplashes and end splashes by adhering to wall and countertops with adhesive. Mask areas of countertops and splashes adjacent to joints to prevent adhesive smears.
E. Apply sealant to gaps at walls; comply with Section 07 92 00 "Joint Sealants."

END OF SECTION

SECTION 14 24 00 - HYDRAULIC ELEVATORS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes: Hydraulic elevators.
B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.
   2. Section 31 20 00 "Earth Moving."

1.2 DEFINITIONS

A. Definitions in ASME A17.1/CSA B44 apply to work of this Section.
B. Service Elevator: A passenger elevator that is also used to carry freight.

1.3 DELIVERY, STORAGE, AND HANDLING

A. Deliver, store, and handle materials, components and equipment in manufacturer's protective packaging. Store materials, components, and equipment off of ground, under cover, and in a dry location.

1.4 COORDINATION

A. Coordinate installation of sleeves, block outs, elevator equipment with integral anchors, and other items that are embedded in concrete or masonry for elevator equipment. Furnish templates, sleeves, elevator equipment with integral anchors, and installation instructions and deliver to Project site in time for installation.
B. Furnish well casing and coordinate delivery with related excavation work.
C. Coordinate locations and dimensions of other work specified in other Sections that relates to hydraulic elevators, including pit ladders; sumps and floor drains in pits; entrance subsills; electrical service; and electrical outlets, lights, and switches in hoistways, pits, and machine rooms.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Regulatory Requirements: Comply with ASME A17.1/CSA B44.
B. Accessibility Standard: Comply with applicable provisions in the United States Access Board's ADA-ABA Accessibility Guidelines and ICC A117.1.

C. Seismic Performance: Elevator system withstands the effects of earthquake motions determined according to ASCE/SEI 7 and complies with elevator seismic requirements in ASME A17.1/CSA B44.
   1. Seismic Data:
      a. SS: 0.09.
      b. S1: 0.026.
      c. SMS: 0.12.
      d. SM1: 0.064.
      e. SDS: 0.081.
      f. SD1: 0.042.
      g. TL: 6.
      h. PGAM: 0.051.
      i. VS30: 260.
      j. Seismic Design Category: A.

D. Note Where values of the multi-period 5 percent damped MCER response spectrum are not available from the USGS Seismic Design Geodatabase, the design response spectrum shall be permitted to be determined in accordance with Section 11.4.
   1. The term "withstand" means "the system will remain in place without separation of any parts when subjected to the seismic forces specified and the system will be fully operational after the seismic event."
   2. Project Seismic Design Category: A.
   3. Elevator Component Importance Factor: 1.5.
   4. Design earthquake spectral response acceleration short period (Sds) for Project is 0.081.
   5. Provide earthquake equipment required by ASME A17.1/CSA B44.
   6. Provide seismic switch required by ASCE/SEI 7.

2.2 FINISH MATERIALS

A. Cold-Rolled Steel Sheet: ASTM A1008, commercial steel, Type B, exposed, matte finish.
B. Hot-Rolled Steel Sheet: ASTM A1011, commercial steel, Type B, pickled.
C. Stainless Steel Sheet: ASTM A240, Type 304.
D. Textured Stainless Steel Sheet: ASTM A240, Type 304, with embossed texture rolled into exposed surface.
   1. Product: Subject to compliance with requirements, provide by TK Elevators Americas, Frisco TX.
   2. Metal surface is satin polished after texturing.
E. Stainless-Steel Bars: ASTM A276, Type 304.
F. Stainless-Steel Tubing: ASTM A554, Grade MT 304.
G. Bronze Plate and Sheet: ASTM B36, Alloy UNS No. C28000 (muntz metal).
H. Bronze Extrusions: ASTM B455, Alloy UNS No. C38500 (architectural bronze).
I. Bronze Tubing: ASTM B135, Alloy UNS No. C23000 (red brass, 85 percent copper).
J. Aluminum Extrusions: ASTM B221, Alloy 6063.
K. Nickel Silver Extrusions: ASTM B151, Alloy UNS No. C74500 or No. C77600.
L. Plastic Laminate: High-pressure type complying with ISO 4586-3, Type HGS for flat applications.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine elevator areas, with installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work. Verify critical dimensions and examine supporting structure and other conditions under which elevator work is to be installed.
B. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.
C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION OF HYDRAULIC ELEVATORS

A. Excavation for Cylinder: Drill well hole in elevator pit to accommodate installation of cylinder; comply with applicable requirements in Section 31 20 00 "Earth Moving."
B. Provide waterproof well casing to retain well-hole walls.
C. Install cylinder in protective casing within well hole. Before installing protective casing, remove water and debris from well hole, and provide permanent waterproof seal at bottom of well casing.
    1. Fill void space between protective casing and cylinder with corrosion-protective filler.
    2. Align cylinder and fill space around protective casing with fine sand.
D. Install cylinder plumb and accurately centered for elevator car position and travel. Anchor securely in place, supported at pit floor. Seal between well casing and pit floor with 4 inches of nonshrink, nonmetallic grout.
E. Install cylinder plumb and accurately centered for elevator car position and travel. Anchor securely in place, supported at pit floor and braced at intervals as needed to maintain alignment. Anchor cylinder guides at spacing needed to maintain alignment and avoid overstressing guides.
F. Welded Construction: Provide welded connections for installing elevator work where bolted connections are not required for subsequent removal or for normal operation, adjustment, inspection, maintenance, and replacement of worn parts. Comply with AWS workmanship and welding operator qualification standards.
G. Sound Isolation: Mount rotating and vibrating equipment on vibration-isolating mounts to minimize vibration transmission to structure and structure-borne noise due to elevator system.
H. Install piping above the floor, where possible. Install underground piping in casing.
    1. Excavate for piping and backfill encased piping according to applicable requirements in Section 31 20 00 "Earth Moving."
I. Lubricate operating parts of systems as recommended by manufacturers.
J. Alignment: Coordinate installation of hoistway entrances with installation of elevator guide rails for accurate alignment of entrances with car. Where possible, delay installation of sills and frames until car is operable in shaft. Reduce clearances to minimum, safe, workable dimension at each landing.
K. Leveling Tolerance: 1/4-inch, up or down, regardless of load and travel direction.
L. Set sills flush with finished floor surface at landing. Fill space under sill solidly with nonshrink, nonmetallic grout.

M. Locate hall signal equipment for elevators as follows unless otherwise indicated:
   1. For groups of elevators, locate hall push-button stations between two elevators at center of group or at location most convenient for approaching passengers.
   2. Place hall lanterns either above or beside each hoistway entrance.
   3. Mount hall lanterns at a minimum of 72 inches above finished floor.

3.3 PROTECTION

A. Temporary Use: Limit temporary use of elevator for construction purposes. Comply with the following requirements for elevator used for construction purposes:
   1. Provide car with temporary enclosure, either within finished car or in place of finished car, to protect finishes from damage.
   2. Provide strippable protective film on entrance and car doors and frames.
   3. Provide padded wood bumpers on entrance door frames covering jambs and frame faces.
   4. Provide other protective coverings, barriers, devices, signs, and procedures as needed to protect elevator and elevator equipment.
   5. Do not load elevators beyond their rated weight capacity.
   6. Engage elevator Installer to provide full maintenance service. Include preventive maintenance, repair or replacement of worn or defective components, lubrication, cleanup, and adjustment as necessary for proper elevator operation at rated speed and capacity. Provide parts and supplies same as those used in the manufacture and installation of original equipment.
   7. Engage elevator Installer to restore damaged work, if any, so no evidence remains of correction. Return items that cannot be refinished in the field to the shop, make required repairs and refinish entire unit, or provide new units as required.

3.4 DEMONSTRATION

A. Engage a factory-authorized service representative to train Owner's maintenance personnel to operate elevator.
B. Check operation of elevator with Owner's personnel present before date of Substantial Completionand again not more than one month before end of warranty period. Determine that operation systems and devices are functioning properly.

3.5 MAINTENANCE

A. Initial Maintenance Service: Beginning at Substantial Completion, maintenance service includes (amount to be determined by Owner) months' full maintenance by skilled employees of elevator installer. Include monthly preventive maintenance, repair or replacement of worn or defective components, lubrication, cleaning, and adjusting as required for proper elevator operation. Parts and supplies are manufacturer's authorized replacement parts and supplies.
   1. Perform maintenance during normal working hours.
   2. Perform emergency callback service during normal working hours with response time of (amount to be determined by Owner) hours or less.
   3. Include 24-hour-per-day, 7-day-per-week emergency callback service with response time of (amount to be determined by Owner)hours or less.
B. Elevator maintenance agreement is to be determined by owner).

END OF SECTION

SECTION 14 31 00 - ESCALATORS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes: Escalators.
B. Related Requirements:
1. Division 01 Specification Sections apply to Work of this Section.

1.2 DEFINITIONS

A. High-Traffic Escalators: Escalators designed specifically for high-traffic-volume use that produces dense occupancy, resulting in structural, machinery, and brake loads much higher than normal.

1.3 DELIVERY, STORAGE, AND HANDLING

A. Deliver, store, and handle materials, components, and equipment in manufacturer's protective packaging. Store materials, components, and equipment off of ground, under cover, and in a dry location.

1.4 COORDINATION

A. Coordinate installation of sleeves, block outs, escalator equipment with integral anchors, and other items that are embedded in concrete or masonry for escalator equipment. Furnish templates, sleeves, escalator equipment with integral anchors, and installation instructions; deliver to Project site in time for installation.
B. Coordinate locations and dimensions of other work relating to escalators, including sumps and floor drains in pits; electrical outlets, lights, and switches in pits; and electrical service.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Regulatory Requirements: Comply with ASME A17.1/CSA B44.
B. Delegated Design: Engage a qualified professional engineer, as defined in Section 01 40 00 "Quality Requirements," to design escalators.
C. Drive System Energy Performance: Provide regenerative drive system and motor that complies with requirements of the International Green Construction Code (IgCC).
D. Step/Skirt Performance Index: Not more than 0.15.

E. Seismic Performance: Escalators shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.
   1. Seismic Data:
      a. SS: 0.09.
      b. S1: 0.026.
      c. SMS : 0.12.
      d. SM1: 0.064.
      e. SDS: 0.081.
      f. SD1: 0.042.
      g. TL: 6.
      h. PGAM: 0.051.
      i. VS30: 260.
      j. Seismic Design Category: A.
   2. Escalator Component Importance Factor: 1.5.

F. Structural and Mechanical Performance for High-Traffic Escalators: For the purposes of structural design and driving machine, power transmission, and brake calculations, design high-traffic escalators for loads of not less than two times the design loads required by ASME A17.1/CSA B44.

G. Structural Performance of Balustrades, Deck Barricades, and Handrails: Provide components and assemblies capable of withstanding the effects of loads indicated in ASCE/SEI 7 for handrail assemblies and guardrail systems.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine escalator areas, with installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Examine supporting structure, machine spaces, and pits; verify critical dimensions; and examine conditions under which escalators are to be installed.

C. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.

D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION OF ESCALATORS

A. Comply with manufacturer's written instructions.

B. Set escalators true to line and level, properly support, and anchor to building structure. Use established benchmarks, lines, and levels to ensure dimensional coordination of the Work.

C. Adjust installed components for smooth, efficient operation, complying with required tolerances and ensuring they are free of hazardous conditions. Lubricate operating parts, including bearings, tracks, chains, guides, and hardware. Test operating devices, equipment, signals, controls, and safety devices. Install oil drip pans and verify that no oil drips outside of pans.

D. Repair damaged finishes so no evidence remains of correction work. Return items to the shop that cannot be refinished in the field, make required repairs, and refinish entire unit, or provide new units as required.

3.3 DEMONSTRATION

A. Engage a factory-authorized service representative to train Owner's maintenance personnel to operate escalators.
B. Check operation of escalators with Owner's personnel present before date of Substantial Completion and not more than 1 month before end of warranty period. Determine that operation systems and devices are functioning properly.

END OF SECTION

SECTION 21 05 00 - COMMON WORK RESULTS FOR FIRE SUPPRESSION

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes pipe, fittings, valves, and connections for sprinkler systems.
B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.
   2. Section 09 91 23 "Interior Painting": Execution requirements for piping painting specified by this Section.
C. Fire Protection Contractor to match materials, devices, etc. already on-site concerning the existing fire sprinkler system to extend and provide fire sprinkler coverage of the terminal expansion. Not all materials, devices, etc. listed on the Specifications may apply to this Project. Contractor to verify at Project site.

1.2 REFERENCES

A. American Society of Mechanical Engineers:
   1. ASME B16.1 - Cast Iron Pipe Flanges and Flanged Fittings.
   2. ASME B16.11 - Forged Steel Fittings - Socket-Welding and Threaded.
   3. ASME B16.18 - Cast Copper Alloy Solder Joint Pressure Fittings.
   4. ASME B16.22 - Wrought Copper and Copper Alloy Solder Joint Pressure Fittings.
   5. ASME B16.25 - Buttwelding Ends.
   6. ASME B16.3 - Malleable Iron Threaded Fittings.
   7. ASME B16.4 - Gray Iron Threaded Fittings.
   8. ASME B16.5 - Pipe Flanges and Flanged Fittings.
   9. ASME B16.9 - Factory-Made Wrought Steel Buttwelding Fittings.
   10. ASME B36.10M - Welded and Seamless Wrought Steel Pipe.
B. ASTM International:
   1. ASTM A53 - Standard Specification for Pipe, Steel, Black and Hot-Dipped, Zinc-Coated, Welded, and Seamless.
   2. ASTM A135 - Standard Specification for Electric-Resistance-Welded Steel Pipe.
   3. ASTM A234 - Standard Specification for Piping Fittings of Wrought Carbon Steel and Alloy Steel for Moderate and High-Temperature Service.
   4. ASTM A795 - Standard Specification for Black and Hot-Dipped Zinc-Coated (Galvanized) Welded and Seamless Steel Pipe for Fire Protection Use.
   5. ASTM B32 - Standard Specification for Solder Metal.
   6. ASTM B75 - Standard Specification for Seamless Copper Tube.
   7. ASTM B88 - Standard Specification for Seamless Copper Water Tube.
   8. ASTM B251 - Standard Specification for General Requirements for Wrought Seamless Copper and Copper-Alloy Tube.
C. American Welding Society:
   1. AWS A5.8 - Specification for Filler Metals for Brazing and Braze Welding.
   2. AWS D1.1 - Structural Welding Code - Steel.

D. American Water Works Association:
   1. AWWA C110 - American National Standard for Ductile-Iron and Grey-Iron Fittings, 3 in. through 48 in. for Water and Other Liquids.
   2. AWWA C111 - American National Standard for Rubber-Gasket Joints for Ductile-Iron Pressure Pipe and Fittings.
   3. AWWA C151 - American National Standard for Ductile-Iron Pipe, Centrifugally Cast, for Water.
E. National Fire Protection Association:
   1. NFPA 13 - Installation of Sprinkler Systems.
   2. NFPA 14 - Standard for the Installation of Standpipe, Private Hydrants and Hose Systems.
   3. NFPA 24 - Installation of Private Fire Service Mains and Their Appurtenances.
F. Underwriter Laboratories, Inc.:
   1. UL 1887 - Fire Tests of Plastic Sprinkler Pipe for Visible Flame and Smoke Characteristics.

1.3 SUBMITTALS

A. Shop Drawings: Indicate pipe materials used, jointing methods, supports, floor, and wall penetration seals. Indicate installation, layout, weights, mounting and support details, and piping connections.
B. Product Data:
   1. Submit manufacturer's catalogue information. Indicate valve data and ratings.

1.4 CLOSEOUT SUBMITTALS

A. Project Record Documents: Record actual locations of components and tag numbering.
B. Operation and Maintenance Data: Submit spare parts lists.

1.5 QUALITY ASSURANCE

A. Provide fire sprinkler piping located in plenums with peak optical density not greater than 0.5, average optical density not greater than 0.15, and flame spread not greater than 5 feet when tested in accordance with UL 1887.
B. Perform Work in accordance with NFPA 13, State, and local standard.

1.6 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this Section with minimum 3 years' experience.
B. Installer: Company specializing in performing Work of this Section with minimum 3 years' experience.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Deliver and store valves in shipping containers, with labeling in place.
B. Furnish cast iron and steel valves with temporary protective coating.
C. Furnish temporary end caps and closures on piping and fittings. Maintain in place until installation.

1.8 WARRANTY

A. Furnish 5-year manufacturer warranty for basic fire suppression materials and methods.

PART 2 - PRODUCTS

2.1 VALVES

A. Gate Valves:
   1. Up to and including 2 inches: Bronze body and trim, rising stem, hand wheel, solid wedge or disc, threaded ends.
   2. Over 2 inches: Iron body, bronze trim, rising stem pre-grooved for mounting tamper switch, hand wheel, OS&Y, solid bronze or cast iron wedge, and flanged or grooved ends.
   3. Over 4 inches: Iron body, bronze trim, non-rising stem with bolted bonnet, solid bronze wedge, flanged ends, and iron body indicator post assembly.

B. Globe Valves:
   1. Up to and including 2 inches: Bronze body, bronze trim, rising stem and hand wheel, inside screw, renewable rubber disc, threaded ends, with back seating capacity packable under pressure.
   2. Over 2 inches: Iron body, bronze trim, rising stem, hand wheel, OS&Y, plug-type disc, flanged ends, renewable seat, and disc.

C. Ball Valves:
   1. Up to and including 2 inches: Bronze 2-piece body, brass, chrome plated bronze, or stainless steel ball, Teflon seats and stuffing box ring, lever handle, threaded ends with union.
   2. Over 2 inches: Manufacturers: Cast steel body, chrome plated steel ball, Teflon seat and stuffing box seals, lever handle or gear drive hand wheel for sizes 10 inches and over, flanged.

D. Butterfly Valves:
   1. Bronze Body: Stainless steel disc, resilient replaceable seat, threaded or grooved ends, extended neck, hand wheel, gear drive, and integral indicating device, and built-in tamper proof switch rated 10 amp at 115 volt AC.
   2. Cast or Ductile Iron Body: Cast or ductile iron, chrome or nickel plated ductile iron or aluminum bronze disc, resilient replaceable EPDM seat, wafer, lug, or grooved ends. With extended neck, hand wheel, gear drive, and integral indicating device, and internal tamper switch rated 10 amp at 115 volt AC.

E. Check Valves:
   1. Up to and including 2 inches: Bronze body and swing disc, rubber seat, threaded ends.
   2. Over 2 inches: Iron body, bronze trim, swing check with rubber disc, renewable disc and seat, flanged ends with automatic ball check.
   3. Four inches and Over: Iron body, bronze disc with stainless steel spring, resilient seal, threaded, wafer, or flanged ends.

F. Drain Valves:
   1. Compression Stop: Bronze with hose thread nipple and cap.
   2. Ball Valve: Brass with cap and chain; 3/4-inch hose thread.

2.2 ABOVE GROUND PIPING - WET SPRINKLER

A. Steel Pipe: ASTM A53, Grade B; ASTM A135; ASTM A795 Schedule 40 black.
   1. Steel Fittings: ASME B16.9, wrought steel, butt welded; ASME B16.25, butt weld ends; ASTM A234, wrought carbon steel and alloy steel; ASME B16.5, steel flanges and fittings; ASME B16.11, forged steel socket welded and threaded.
   2. Cast Iron Fittings: ASME B16.4, threaded fittings.
   3. Malleable Iron Fittings: ASME B16.3, threaded fittings (ASTM B47).
   4. Mechanical Grooved Couplings: Malleable iron housing clamps to engage and lock, "C" shaped elastomeric sealing gasket, steel bolts, nuts, and washers; galvanized for galvanized pipe.
   5. Mechanical Formed Fittings: Carbon-steel housing with integral pipe stop and O-ring pocked and O-ring uniformly compressed into permanent mechanical engagement onto pipe.

B. Mechanical Formed Fittings: Carbon-steel housing with integral pipe stop and O-ring pocked and O-ring uniformly compressed into permanent mechanical engagement onto pipe.

2.3 PIPE HANGERS AND SUPPORTS

A. Conform to NFPA 13.
B. Hangers for Pipe Sizes 1/2-to 1-1/2-Inch: Malleable iron, adjustable swivel, split ring.
C. Hangers for Pipe Sizes 2 Inches and Over: Carbon steel, adjustable, clevis.
D. Multiple or Trapeze Hangers: Steel channels with welded spacers and hanger rods.
E. Wall Support for Pipe Sizes to 3 Inches: Cast iron hook.
F. Wall Support for Pipe Sizes 4 Inches and Over: Welded steel bracket and wrought steel clamp.
G. Vertical Support: Steel riser clamp.
H. Floor Support: Cast iron adjustable pipe saddle, lock nut, nipple, floor flange, and concrete pier or steel support.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify openings are ready to receive sleeves.
B. Verify openings are ready to receive firestopping.

3.2 PREPARATION

A. Remove scale and foreign material, from inside and outside, before assembly.
B. Prepare piping connections to equipment with flanges or unions.
C. Do not drill or cut structural members.
D. Clean substrate surfaces of dirt, dust, grease, oil, loose material, or other matter affecting bond of firestopping material.

3.3 INSTALLATION

A. Install piping in accordance with NFPA 13 for sprinkler systems and NFPA 24 for service mains.
B. Install Work in accordance with State and local standards.
C. Route piping in orderly manner, plumb and parallel to building structure. Maintain gradient.
D. Install piping to conserve building space, to not interfere with use of space and other work.
E. Group piping whenever practical at common elevations.
F. Install pipe sleeve at piping penetrations through footings, partitions, walls, and floors. Seal pipe and sleeve penetrations to maintain fire resistance equivalent to fire separation.
G. Install piping to allow for expansion and contraction without stressing pipe, joints, or connected equipment.
H. Pipe Hangers and Supports:
    1. Install in accordance with NFPA 13.
    2. Install hangers to with minimum 1/2-inch space between finished covering and adjacent work.
    3. Place hangers within 12 inches of each horizontal elbow.
    4. Use hangers with 1-1/2-inch minimum vertical adjustment. Design hangers for pipe movement without disengagement of supported pipe.
    5. Support vertical piping at every floor. Support riser piping independently of connected horizontal piping.
    6. Where installing several pipes in parallel and at same elevation, provide multiple or trapeze hangers.
    7. Manufactured hangers are normally supplied in black steel.
    8. Prime coat exposed steel hangers and supports. Hangers and supports located in crawl spaces, pipe shafts, and suspended ceiling spaces are not considered exposed.
I. Prepare pipe, fittings, supports, and accessories for finish painting. Where pipe support members are welded to structural building framing, scrape, brush clean, and apply one coat of zinc-rich primer to welding. Refer to Section 09 91 23 "Interior Painting."
J. Do not penetrate building structural members unless indicated.
K. Where more than one piping system material is specified, install compatible system components and joints. Install flanges, union, and couplings at locations requiring servicing.
L. Die-cut threaded joints with full-cut standard taper pipe threads with red lead and linseed oil or other non-toxic joint compound applied to male threads only.
M. Install valves with stems upright or horizontal, not inverted. Remove protective coatings prior to installation.
N. Install ball or butterfly valves for shut-off or isolating service.
O. Install drain valves at main shut-off valves, low points of piping, and apparatus.
P. Where inserts are omitted, drill through concrete slab from below and install through-bolt with recessed square steel plate and nut flush with top of slab.

3.4 INTERFACE WITH OTHER PRODUCTS

A. Inserts:
   1. Install inserts for placement in concrete forms.
   2. Install inserts for suspending hangers from reinforced concrete slabs and sides of reinforced concrete beams.
   3. Install hooked rod to concrete reinforcement section for inserts carrying pipe over 4 inches.
   4. Where concrete slabs form finished ceiling, locate inserts flush with slab surface.

3.5 CLEANING

A. Clean entire system after other construction is complete.
B. Clean adjacent surfaces of firestopping materials.

END OF SECTION

SECTION 21 13 13 - WET-PIPE SPRINKLER SYSTEMS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Wet-pipe sprinkler system.
   2. System design, installation, and certification.

B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.

C. Fire Protection Contractor to match materials, devices, etc. already on-site concerning the existing fire sprinkler system to extend and provide fire sprinkler coverage of the terminal expansion. not all materials, devices, etc. listed in the Specifications may apply to this Project. Contractor to verify at Project site.

1.2 REFERENCE STANDARDS

A. National Electrical Manufacturers Association:
   1. NEMA 250 - Enclosures for Electrical Equipment (1,000 Volts Maximum).

B. National Fire Protection Association:
   1. NFPA 13 - Standard for the Installation of Sprinkler Systems.

1.3 PREINSTALLATION MEETINGS

A. Section 01 30 00 "Administrative Requirements" for requirements for preinstallation meeting.

1.4 SUBMITTALS

A. Section 01 33 00 "Submittal Procedures" for requirements for submittals.

B. Product Data:
   1. Submit manufacturer information regarding sprinklers, valves, and specialties.
   2. Submit performance ratings, rough-in details, weights, and requirements for supports and piping connections.

C. Shop Drawings:
   1. Indicate layout of finished-ceiling areas, indicating sprinkler locations to be coordinated with ceiling installation.
   2. Indicate detailed pipe layout, hangers and supports, sprinklers, components, and accessories.
   3. Indicate system controls.

D. Samples: Submit 1 of each style of specified sprinkler.

E. Manufacturer's Certificate: Certify that products meet or exceed specified requirements.

F. Delegated Design Submittals: Submit signed and sealed Shop Drawings with design calculations and assumptions for following items:
   1. Performance requirements and analysis data showing compliance with performance criteria.
   2. Data for water supply, hazard assessment, and system design concept.
   3. Hydraulic calculations to substantiate compliance with hydraulic design requirements.

4. Hydrant flow test report with static and residual pressures. Municipal calculated data from computer generated models are not allowed for static and residual pressure wet pipe fire sprinkler system hydraulic calculations.
5. Information provided in construction documents are for bidding purposes only, the final fire sprinkler system design, material selection, fire alarm integration, and installation directives shall be the responsibility of the fire sprinkler system design engineer of record.

G. Manufacturer Instructions: Submit detailed instructions on installation requirements, including storage and handling procedures.
H. Field Quality-Control Submittals: Indicate results of Contractor-furnished tests and inspections.
I. Manufacturer Reports: Certify that equipment has been installed according to manufacturer instructions.
J. Qualifications Statements:
1. Submit qualifications for manufacturer, installer, and licensed professional.
2. Submit manufacturer's approval of installer.
3. Submit fire sprinkler system drawings with approval stamp from the local authority having jurisdiction.

1.5 CLOSEOUT SUBMITTALS

A. Section 01 70 00 "Execution and Closeout Requirements" for requirements for submittals.
B. Project Record Documents:
1. Record actual locations of sprinklers and deviations of piping from Drawings.
2. Indicate drain and test locations.

1.6 MAINTENANCE MATERIAL SUBMITTALS

A. Section 01 70 00 "Execution and Closeout Requirements" for requirements for maintenance materials.
B. Extra Stock Materials: Furnish extra sprinklers according to NFPA 13.
C. Tools:
1. Furnish suitable operating wrenches for each sprinkler type.

1.7 QUALITY ASSURANCE

A. Perform Work according to NFPA 13.
B. Seismic Performance: Comply with NFPA 13.
C. Perform Work according to local fire marshal requirements.

1.8 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this Section with minimum 3 years' experience.
B. Installer: Company specializing in performing Work of this Section with minimum 3 years' experience.
C. Licensed Professional: Certified fire protection engineer experienced in design of specified Work and licensed in State of Texas. Upon final fire sprinkler system design and approval of design by local AHJ, the certified fire protection engineer will be the engineer of record for this system.

1.9 DELIVERY, STORAGE, AND HANDLING

A. Section 01 60 00 "Product Requirements" for requirements for transporting, handling, storing, and protecting products.
B. Inspection: Accept materials on Site in manufacturer's original packaging and inspect for damage.
C. Store materials according to manufacturer instructions.
D. Protection:
   1. Furnish piping with temporary inlet and outlet caps until installation.
   2. Protect materials from moisture and dust by storing in clean, dry location remote from construction operations areas.
   3. Provide additional protection according to manufacturer instructions.

1.10 EXISTING CONDITIONS

A. Field Measurements:
   1. Verify field measurements prior to fabrication.
   2. Indicate field measurements on Shop Drawings.

1.11 WARRANTY

A. Section 01 70 00 "Execution and Closeout Requirements" for requirements for warranties.

PART 2 - PRODUCTS

2.1 SYSTEM DESCRIPTION

A. Provide coverage for building areas as indicated on Drawings.
B. Volume and Pressure of Water Supply:
   1. Source: Hydrant water-flow test data.
   2. If data is not available, do not use system based on computer modeling.
C. Connection Interfaces: Building automatic fire-alarm system.
D. Fire-Department Connections: At locations as indicated on Drawings.
E. Fire sprinkler piping and head locations shall be coordinated with structural and architectural Drawings and architectural design features as described/detailed on architectural and interior design construction Drawings. Architect of record will have final say in main fire sprinkler piping visible from occupied public areas of the terminal.

2.2 SPRINKLERS

A. Manufacturers:
   1. Globe Fire Sprinkler Corporation.
   2. Reliable Automatic Sprinkler Co., Inc. (The).
   3. Tyco Fire Products LP.
   4. Venus Fire Protection Ltd.
   5. Victaulic Company.

6. Viking Corporation.
7. Grinnell Corp.
8. Substitutions: Refer to Section 22 05 00 "Hangers and Supports for Plumbing Piping and Equipment."

B. Suspended-Ceiling Type:
1. Type: Concealed pendant sprinklers, with matching push-on escutcheon plate.
2. Materials:
a. Sprinkler: Brass.
b. Escutcheon Plate: Enamel.
3. Fusible Link:
a. Type: Fusible solder or glass bulb.
b. Temperature Rating: As required for specific area hazard.
4. Finishes:
a. Sprinkler: Brass.
b. Color: To be determined by Architect.

C. Exposed-Area Type:
1. Type: Upright sprinklers with guard.
2. Material: Brass.
3. Fusible Link:
a. Type: Fusible solder or glass bulb.
b. Temperature Rating: As required for specific area hazard.
4. Finishes:
a. Sprinkler: Brass.

D. Sidewall Type:
1. Type: Semi-Recessed, horizontal sidewall with matching escutcheon plate, and guard.
2. Materials:
a. Sprinkler: Brass.
b. Escutcheon Plate: Chrome plated.
3. Fusible Link:
a. Type: Fusible solder or glass bulb.
b. Temperature Rating: As required for specific area hazard.
4. Finishes:
a. Sprinkler: Brass.

E. Sprinkler Guards: Corrosion-resistant wire cage with finish to match sprinkler.

2.3 PIPING SPECIALTIES

A. Wet-Pipe Sprinkler Alarm Check Valve with Trim:
1. Type: Alarm check.
2. Furnish divided-seat-ring, rubber-faced clapper to automatically actuate electric alarm, pressure retard chamber, pressure gages, pressure switches, and trim for variable water supply pressure with test and drain valve.

B. Electric Alarm: Electrically-operated, red-enameled gong, with pressure alarm switch.

C. Water-Flow Switch:
1. Description: Vane type for mounting horizontally or vertically.
2. Contacts:
a. Quantity: Two.
b. Rating: 10A at 125 V ac, and 2.5A at 24 V dc.

D. Fire-Department Connections:
   1. Description: Flush-mounted wall type, constructed of brass.
   2. Description: Freestanding type, with ductile-iron pedestal with cast-brass finish.
   3. Outlets:
      a. Type: Two-way.
      b. End Connections:
         1) Minimum Size: 2-1/2 inches.
         2) Fittings: Threaded swivel type to match fire-department hardware.
      c. Furnish threaded cap and chain of matching material and finish.
   4. Label: SPRINKLER - FIRE-DEPARTMENT CONNECTION.
   5. Provide Locking Fire Department Connection (FDC) cover with swivel-guard of appropriate size for each FDC indicated on Drawings. Contact Fire Department and knoxbox.com to determine necessary options.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Section 01 70 00 "Execution and Closeout Requirements" for requirements for installation examination.
B. Verify that water-flow, pressure, supervisory, and alarm devices are installed and connected to automatic fire-alarm and smoke-detection system.

3.2 INSTALLATION

A. Comply with NFPA 13.
B. Install buried shutoff valves in valve box and provide post indicator and fire-alarm supervision, where required by local AHJ.
C. Backflow Preventer:
   1. Install double-check backflow preventer assembly at sprinkler system water source connection.
   2. As specified in Section 22 11 00 "Facility Water Distribution."
D. Clearances:
   1. Locate fire-department connection, check valve, and automatic drip with sufficient clearance from walls, obstructions, or adjacent fire-department connections, to allow full swing of fire-department wrench handle.
   2. Provide for forward full-flow testing of backflow preventer.
E. Piping:
   1. Minimize obstructions with other Work.
   2. Install in concealed spaces above finished ceilings where possible.
F. Center sprinklers in 2 directions in ceiling tile and install piping offsets.
G. Install and connect to fire pump system according to NFPA 13.
H. Install guards on sprinklers.
I. Install sprinklers to accommodate architectural features as shown and described on architectural, structural, and interior design construction drawings and specifications.

3.3 CLEANING

A. Section 01 70 00 "Execution and Closeout Requirements" for requirements for cleaning.
B. Flush entire piping system of foreign matter.

3.4 PROTECTION

A. Section 01 70 00 "Execution and Closeout Requirements" for requirements for protecting finished Work.
B. Apply masking tape or paper cover to protect concealed sprinklers, cover plates, and sprinkler escutcheons not receiving field paint finish.
C. Remove protection after painting and replace painted sprinklers with new.

END OF SECTION

SECTION 22 05 29 - HANGERS AND SUPPORTS FOR PLUMBING PIPING AND EQUIPMENT

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Pipe hangers and supports.
   2. Hanger rods.
   3. Equipment bases and supports.

B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.

1.2 REFERENCES

A. American Society of Mechanical Engineers:
   1. ASME B31.1 - Power Piping.
   2. ASME B31.5 - Refrigeration Piping.
   3. ASME B31.9 - Building Services Piping.

B. ASTM International:
   1. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.
   2. ASTM E119 - Standard Test Methods for Fire Tests of Building Construction and Materials.
   3. ASTM E814 - Standard Test Method for Fire Tests of Through Penetration Fire Stops.
   4. ASTM F708 - Standard Practice for Design and Installation of Rigid Pipe Hangers.
   5. ASTM E1966 - Standard Test Method for Fire-Resistive Joint Systems.

C. American Welding Society:
   1. AWS D1.1 - Structural Welding Code - Steel.

D. FM Global:
   1. FM - Approval Guide, A Guide to Equipment, Materials & Services Approved By Factory Mutual Research For Property Conservation.

E. Manufacturers Standardization Society of the Valve and Fittings Industry:
   1. MSS SP 58 - Pipe Hangers and Supports - Materials, Design and Manufacturer.
   2. MSS SP 69 - Pipe Hangers and Supports - Selection and Application.
   3. MSS SP 89 - Pipe Hangers and Supports - Fabrication and Installation Practices.

1.3 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing Products specified in this Section with minimum 3 years' experience.

B. Installer: Company specializing in performing Work of this Section with minimum 3 years' experience.

1.4 DELIVERY, STORAGE, AND HANDLING

A. Accept materials on site in original factory packaging, labeled with manufacturer's identification.
B. Protect from weather and construction traffic, dirt, water, chemical, and damage, by storing in original packaging.

1.5 FIELD MEASUREMENTS

A. Verify field measurements prior to fabrication.

1.6 WARRANTY

A. Refer to Section 23 05 00 "General Mechanical Requirements" for product warranties.

PART 2 - PRODUCTS

2.1 PIPE HANGERS AND SUPPORTS

A. Plumbing Piping - DWV:
1. Conform to ASME B31.9, ASTM F708, MSS SP58, MSS SP69, or MSS SP89.
2. Hangers for Pipe Sizes 1/2-to 1-1/2-Inch: Malleable iron or Carbon steel, adjustable swivel, split ring.
3. Hangers for Pipe Sizes 2 Inches and Larger: Carbon steel, adjustable, clevis.
4. Multiple or Trapeze Hangers: Steel channels with welded spacers and hanger rods.
5. Wall Support for Pipe Sizes 3 Inches and Smaller: Cast iron hook.
6. Wall Support for Pipe Sizes 4 Inches and Larger: Welded steel bracket and wrought steel clamp.
7. Vertical Support: Steel riser clamp.
8. Floor Support: Cast iron adjustable pipe saddle, lock nut, nipple, floor flange, and concrete pier or steel support.
9. Copper Pipe Support: Copper-plated, carbon-steel adjustable, ring.

B. Plumbing Piping - Water:
1. Conform to ASME B31.9, ASTM F708, MSS SP58, MSS SP69, or MSS SP89.
2. Hangers for Pipe Sizes 1/2-to 1-1/2-Inch: Malleable iron or Carbon steel, adjustable swivel, split ring.
3. Hangers for Cold Pipe Sizes 2 Inches and Larger: Carbon steel, adjustable, clevis.
4. Hangers for Hot Pipe Sizes 2 to 4 Inches: Carbon steel, adjustable, clevis.
5. Hangers for Hot Pipe Sizes 6 Inches and Larger: Adjustable steel yoke, cast iron roll, double hanger.
6. Multiple or Trapeze Hangers: Steel channels with welded spacers and hanger rods.
7. Multiple or Trapeze Hangers for Hot Pipe Sizes 6 Inches and Larger: Steel channels with welded spacers and hanger rods, cast iron roll.
8. Wall Support for Pipe Sizes 3 Inches and Smaller: Cast iron hook.
9. Wall Support for Pipe Sizes 4 Inches and Larger: Welded steel bracket and wrought steel clamp.

10. Wall Support for Hot Pipe Sizes 6 Inches and Larger: Welded steel bracket and wrought steel clamp with adjustable steel yoke and cast iron roll.
11. Vertical Support: Steel riser clamp.
12. Floor Support for Cold Pipe: Cast iron adjustable pipe saddle, lock nut, nipple, floor flange, and concrete pier or steel support.
13. Floor Support for Hot Pipe Sizes 4 Inches and Smaller: Cast iron adjustable pipe saddle, lock nut, nipple, floor flange, and concrete pier or steel support.
14. Floor Support for Hot Pipe Sizes 6 Inches and Larger: Adjustable cast iron roll and stand, steel screws, and concrete pier or steel support.
15. Copper Pipe Support: Copper-plated, Carbon-steel ring.

2.2 ACCESSORIES

A. Hanger Rods: Mild steel threaded both ends, threaded on one end, or continuous threaded.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify openings are ready to receive sleeves.
B. Verify the existing conditions before starting Work.

3.2 PREPARATION

A. Obtain permission from Architect before using powder-actuated anchors.
B. Obtain permission from Architect before drilling or cutting structural members.

3.3 INSTALLATION - PIPE HANGERS AND SUPPORTS

A. Install in accordance with ASME B31.1, ASME B31.5, ASME 31.9, ASTM F708, MSS SP 58, MSS SP 69, or MSS SP 89.
B. Support horizontal piping as scheduled.
C. Install hangers with minimum 1/2-inch space between finished covering and adjacent work.
D. Place hangers within 12 inches of each horizontal elbow.
E. Use hangers with 1-1/2-inch minimum vertical adjustment.
F. Support horizontal cast iron pipe adjacent to each hub, with 5 feet maximum spacing between hangers.
G. Support vertical piping at every floor. Support vertical cast iron pipe at each floor at hub.
H. Where piping is installed in parallel and at same elevation, provide multiple pipe or trapeze hangers.
I. Support riser piping independently of connected horizontal piping.
J. Provide copper plated hangers and supports for copper piping.
K. Design hangers for pipe movement without disengagement of supported pipe.
L. Manufactured hangers are normally supplied in black steel.
M. Prime coat exposed steel hangers and supports. Refer to Division 09. Hangers and supports located in crawl spaces, pipe shafts, and suspended ceiling spaces are not considered exposed.
N. Provide clearance in hangers and from structure and other equipment for installation of insulation. Refer to Section 22 07 00 "Plumbing Insulation."

3.4 INSTALLATION - EQUIPMENT BASES AND SUPPORTS

A. Provide housekeeping pads of concrete, minimum 4 inches thick and extending 6 inches beyond supported equipment.
B. Using templates furnished with equipment, install anchor bolts, and accessories for mounting and anchoring equipment.
C. Construct supports of steel members, formed steel channel, or steel pipe and fittings. Brace and fasten with flanges bolted to structure.
D. Provide rigid anchors for pipes after vibration isolation components are installed.

3.5 INSTALLATION - FLASHING

A. Flashing for new construction is usually specified with walls, floor, and roofs.
B. Provide flexible flashing and metal counterflashing where piping penetrates weather or waterproofed walls, floors, and roofs.
C. Flash floor drains in floors with topping over finished areas with lead, 10 inches clear on sides with minimum 36- by 36-inch sheet size. Fasten flashing to drain clamp device.
D. Seal floor and mop sink drains watertight to adjacent materials.
E. Adjust storm collars tight to pipe with bolts; caulk around top edge. Use storm collars above roof jacks. Screw vertical flange section to face of curb.

3.6 CLEANING

A. Clean adjacent surfaces of firestopping materials.

3.7 PROTECTION OF FINISHED WORK

A. Protect adjacent surfaces from damage by material installation.

3.8 SCHEDULES

A. Pipe Hanger Spacing:

PIPE MATERIAL	MAXIMUM HANGER SPACING	HANGER ROD DIAMETER
Cast Iron, all pipe sizes	5 feet	5/8-inch
Copper tube, 1-1/4-inch and smaller	6 feet	1/2-inch
Copper tube, 1-1/2-inch and larger	10 feet	1/2-inch

END OF SECTION

SECTION 22 05 53 - IDENTIFICATION FOR PLUMBING PIPING AND EQUIPMENT

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Nameplates.
   2. Tags.
   3. Stencils.
   4. Pipe markers.
   5. Ceiling tacks.
   6. Labels.
   7. Lockout devices.

B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.
   2. Section 09 91 23 "Interior Painting": Execution requirements for painting specified by this section.

C. Contractor shall match the labeling and identification standard for plumbing systems as required by the Midland International Air & Space Port system.

1.2 REFERENCES

A. American Society of Mechanical Engineers:
   1. ASME A13.1 - Scheme for the Identification of Piping Systems.

1.3 CLOSEOUT SUBMITTALS

A. Section 01 70 00 "Execution and Closeout Requirements": Closeout procedures.

B. Project Record Documents: Record actual locations of tagged valves; include valve tag numbers.

1.4 QUALITY ASSURANCE

A. Conform to ASME A13.1 for color scheme for identification of piping systems and accessories.

B. Maintain 1 copy of each document on site.

1.5 FIELD MEASUREMENTS

A. Verify field measurements prior to fabrication.

PART 2 - PRODUCTS

2.1 NAMEPLATES

A. Product Description: Laminated three-layer plastic with engraved black letters on light contrasting background color.

2.2 TAGS

A. Plastic Tags:
   1. Laminated three-layer plastic with engraved black letters on light contrasting background color. Tag size minimum 1-1/2 inches diameter.
B. Metal Tags:
   1. Stainless Steel with stamped letters; tag size minimum 1-1/2 inches diameter with finished edges.
C. Information Tags:
   1. Clear plastic with printed "Danger," "Caution," or "Warning" and message; size 3-1/4 by 5-5/8 inches with grommet and self-locking nylon ties.
D. Tag Chart: Typewritten letter size list of applied tags and location plastic laminated.

2.3 STENCILS

A. Stencils: With clean cut symbols and letters of following size:
   1. Up to 2 inches Outside Diameter of Insulation or Pipe: 1/2-inch-igh letters.
   2. 2-1/2 to 6 inches Outside Diameter of Insulation or Pipe: 1-inch-high letters.
   3. Over 6 inches Outside Diameter of Insulation or Pipe: 1-3/4-inch-high letters.
   4. Ductwork and Equipment: four inches high letters.
B. Stencil Paint: As specified in Section 09 91 23 "Interior Painting," semi-gloss enamel, colors and lettering size conforming to ASME A13.1.

2.4 PIPE MARKERS

A. Color and Lettering: Conform to ASME A13.1.
B. Plastic Pipe Markers:
   1. Factory fabricated, flexible, semi-rigid plastic, preformed to fit around pipe or pipe covering. Larger sizes may have maximum sheet size with spring fastener.
C. Plastic Tape Pipe Markers:
   1. Flexible, vinyl film tape with pressure sensitive adhesive backing and printed markings.
D. Plastic Underground Pipe Markers:
   1. Bright colored continuously printed plastic ribbon tape, minimum 6 inches wide by 4 mil thick, manufactured for direct burial service.

2.5 CEILING TACKS

A. Description: Steel with 3/4-inch-diameter color-coded head.
B. Color code as follows:
   1. Plumbing valves: Green.
   2. Mechanical dampers and valves: Blue.

2.6 LABELS

A. Description: Aluminum, size 1.9 by 0.75 inches, adhesive backed with printed identification and bar code if required as owner standard labeling.

2.7 LOCKOUT DEVICES

A. Lockout Hasps:
   1. Anodized aluminum or Reinforced nylon hasp with erasable label surface; size minimum 7-1/4 by 3 inches.
B. Valve Lockout Devices:
   1. Nylon, Steel, or Plastic device preventing access to valve operator, accepting lock shackle.

PART 3 - EXECUTION

3.1 PREPARATION

A. Degrease and clean surfaces to receive adhesive for identification materials.
B. Prepare surfaces in accordance with Section 09 91 23 "Interior Painting" for stencil painting.

3.2 INSTALLATION

A. Apply stencil painting in accordance with Section 09 91 23 "Interior Painting."
B. Install identifying devices after completion of coverings and painting.
C. Install plastic nameplates with corrosive-resistant mechanical fasteners, or adhesive.
D. Install labels with sufficient adhesive for permanent adhesion and seal with clear lacquer. For unfinished canvas covering, apply paint primer before applying labels.
E. Install tags using corrosion resistant chain. Number tags consecutively by location.
F. Install underground plastic pipe markers 6 to 8 inches below finished grade, directly above buried pipe.
G. Identify water heaters, pumps, tanks, and water treatment devices with plastic nameplates or stencil painting. Identify in-line pumps and other small devices with tags.
H. Identify control panels and major control components outside panels with plastic nameplates.
I. Identify valves in main and branch piping with tags.
J. Identify piping, concealed or exposed, with plastic pipe markers or stenciled painting. Use tags on piping 3/4-inch-diameter and smaller. Identify service, flow direction, and pressure. Install in clear view and align with axis of piping. Locate identification not to exceed 20 feet on straight runs including risers and drops, adjacent to each valve and tee, at each side of penetration of structure or enclosure, and at each obstruction.
K. Provide ceiling tacks to locate valves and dampers above T-bar type panel ceilings. Locate in corner of panel closest to equipment.

END OF SECTION

SECTION 22 07 00 - PLUMBING INSULATION

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
1. Plumbing piping insulation, jackets, and accessories.
2. Plumbing equipment insulation, jackets, and accessories.

B. Related Requirements:
1. Division 01 Specification Sections apply to Work of this Section.

1.2 REFERENCES

A. ASTM International:
1. ASTM A240 - Standard Specification for Chromium and Chromium-Nickel Stainless Steel Plate, Sheet, and Strip for Pressure Vessels and for General Applications.
2. ASTM A666 - Standard Specification for Annealed or Cold-Worked Austenitic Stainless-Steel Sheet, Strip, Plate, and Flat Bar.
3. ASTM B209 - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate.
4. ASTM C195 - Standard Specification for Mineral Fiber Thermal Insulating Cement.
5. ASTM C449 - Standard Specification for Mineral Fiber Hydraulic-Setting Thermal Insulating and Finishing Cement.
6. ASTM C450 - Standard Practice for Fabrication of Thermal Insulating Fitting Covers for NPS Piping, and Vessel Lagging.
7. ASTM C533 - Standard Specification for Calcium Silicate Block and Pipe Thermal Insulation.
8. ASTM C534 - Standard Specification for Preformed Flexible Elastomeric Cellular Thermal Insulation in Sheet and Tubular Form.
9. ASTM C547 - Standard Specification for Mineral Fiber Pipe Insulation.
10. ASTM C553 - Standard Specification for Mineral Fiber Blanket Thermal Insulation for Commercial and Industrial Applications.
11. ASTM C578 - Standard Specification for Rigid, Cellular Polystyrene Thermal Insulation.
12. ASTM C585 - Standard Practice for Inner and Outer Diameters of Rigid Thermal Insulation for Nominal Sizes of Pipe and Tubing (NPS System).
13. ASTM C591 - Standard Specification for Unfaced Preformed Rigid Cellular Polyisocyanurate Thermal Insulation.
14. ASTM C612 - Standard Specification for Mineral Fiber Block and Board Thermal Insulation.
15. ASTM C795 - Standard Specification for Thermal Insulation for Use in Contact with Austenitic Stainless Steel.
16. ASTM C921 - Standard Practice for Determining the Properties of Jacketing Materials for Thermal Insulation.

17. ASTM C1136 - Standard Specification for Flexible, Low Permeance Vapor Retarders for Thermal Insulation.
18. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.
19. ASTM E96 - Standard Test Methods for Water Vapor Transmission of Materials.

1.3 SUBMITTALS

A. Product Data: Submit product description, thermal characteristics, and list of materials and thickness for each service, and location.

1.4 QUALITY ASSURANCE

A. Use smoke developed index of 50 within plenums.
B. Test pipe insulation for maximum flame spread index of 25 and maximum smoke developed index of not exceeding 50 in accordance with ASTM E84.

1.5 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this Section with minimum 3 years' experience.
B. Applicator: Company specializing in performing Work of this Section with minimum 3 years' experience.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Accept materials on Site in original factory packaging, labeled with manufacturer's identification, including product density and thickness.
B. Protect insulation from weather and construction traffic, dirt, water, chemical, and damage, by storing in original wrapping.

1.7 FIELD MEASUREMENTS

A. Verify field measurements prior to fabrication.

1.8 WARRANTY

A. Refer to and Section 23 05 00 "General Mechanical Requirements" for product warranties.
B. Piping Systems Conveying Fluids Below Ambient Temperature:
    1. Insulate entire system including fittings, valves, unions, flanges, strainers, flexible, connections, and expansion joints.
    2. Furnish factory-applied or field-applied vapor retarder jackets. Secure factory-applied jackets with pressure sensitive adhesive self-sealing longitudinal laps and butt strips. Secure field-applied jackets with outward clinch expanding staples and seal staple penetrations with vapor retarder mastic.
    3. Insulate fittings, joints, and valves with molded insulation of like material and thickness as adjacent pipe. Finish with glass cloth and vapor retarder adhesive.

PART 2 - PRODUCTS

2.1 MANUFACTURER

A. Glass Fiber and Mineral Fiber Insulation
   1. Manufacturers:
      a. Johns Manville; a Berkshire Hathaway companyCompany.
      b. Knauf Insulation.
      c. Owens Corning.
      d. Substitutions: Refer to Division 01 and Section 23 05 00 "General Mechanical Requirements."

B. Closed Cell Elastomeric Insulation:
   1. Manufacturers:
      a. Aeroflex USA, Inc.
      b. Armacell LLC.
      c. K-Flex USA.
      d. Substitutions: Refer to Division 01 and Section 23 05 00 "General Mechanical Requirements."

2.2 PIPE INSULATION

A. Type P-1: ASTM C547, molded glass fiber pipe insulation.
   1. Thermal Conductivity: 0.23 at 75 degrees F.
   2. Operating Temperature Range: 0 to 850 degrees F.
   3. Vapor Barrier Jacket: ASTM C1136, Type I, factory applied reinforced foil kraft with self-sealing adhesive joints.
   4. Jacket Temperature Limit: minus 20 to 150 degrees F.

B. Type P-2: ASTM C534, Type I, flexible, closed cell elastomeric insulation, tubular.
   1. Thermal Conductivity: 0.27 at 75 degrees F.
   2. Operating Temperature Range: Range: Minus 70 to 180 degrees F.

C. Type P-3: ASTM C1290, Type II, flexible glass fiber, commercial grade with factory-applied reinforced aluminum foil jacket meeting ASTM C1136, Type II.
   1. Thermal Conductivity: 0.25 at 75 degrees F.
   2. Maximum Operating Temperature: 250 degrees F.
   3. Density: 1.0 pound per cubic foot

2.3 PIPE INSULATION JACKETS

A. Aluminum Pipe Jacket:
   1. ASTM B209.
   2. Thickness: 0.020-inch-thick sheet.
   3. Finish: Embossed.
   4. Joining: Longitudinal slip joints and 2-inch laps.
   5. Fittings: 0.016-inch-thick die shaped fitting covers with factory attached protective liner.
   6. Metal Jacket Bands: 3/8-inch-wide; 0.015-inch-thick aluminum.

2.4 PIPE INSULATION ACCESSORIES

A. Vapor Retarder Lap Adhesive: Compatible with insulation.
B. Covering Adhesive Mastic: Compatible with insulation.
C. Closed Cell Elastomeric Insulation Pipe Hanger: Polyurethane insert with single piece construction with self-adhesive closure. Thickness to match pipe insulation.
D. Adhesives: Compatible with insulation.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify piping has been tested before applying insulation materials.
B. Verify surfaces are clean and dry, with foreign material removed.

3.2 INSTALLATION - PIPING SYSTEMS

A. Piping Exposed to View in Finished Spaces: Locate insulation and cover seams in least visible locations.
B. Piping Systems Conveying Fluids Below Ambient Temperature:
   1. Insulate entire system including fittings, valves, unions, flanges, strainers, flexible connections, and expansion joints.
   2. Furnish factory-applied or field-applied vapor retarder jackets. Secure factory-applied jackets with pressure sensitive adhesive self-sealing longitudinal laps and butt strips. Secure field-applied jackets with outward clinch expanding staples and seal staple penetrations with vapor retarder mastic.
   3. Insulate fittings, joints, and valves with molded insulation of like material and thickness as adjacent pipe. Finish with glass cloth and vapor retarder adhesive.
C. Hot Piping Systems Less Than 140 Degrees F:
   1. Furnish factory-applied or field-applied standard jackets. Secure with outward clinch expanding staples or pressure sensitive adhesive system on standard factory-applied jacket and butt strips or both.
   2. Insulate fittings, joints, and valves with insulation of like material and thickness as adjoining pipe. Finish with glass cloth and adhesive.
   3. Do not insulate unions and flanges at equipment, but bevel and seal ends of insulation at such locations.

D. Inserts and Shields:
   1. Piping 1-1/2 Inches Diameter and Smaller: Install galvanized steel shield between pipe hanger and insulation.
   2. Piping 2 Inches Diameter and Larger: Install insert between support shield and piping and under finish jacket.
      a. Insert Configuration: Minimum 6 inches long, of thickness and contour matching adjoining insulation; may be factory fabricated.
      b. Insert Material: Compression resistant insulating material suitable for planned temperature range and service.
   3. Piping Supported by Roller Type Pipe Hangers: Install galvanized steel shield between roller and inserts.

E. Insulation Terminating Points:
   1. Condensate Piping: Insulate entire piping system and components to prevent condensation.

F. Closed Cell Elastomeric Insulation:
   1. Push insulation on to piping.
   2. Miter joints at elbows.
   3. Seal seams and butt joints with manufacturer's recommended adhesive.
   4. When application requires multiple layers, apply with joints staggered.
   5. Insulate fittings and valves with insulation of like material and thickness as adjacent pipe.

G. Pipe Exposed in Mechanical Equipment Rooms or Finished Spaces: Finish with aluminum jacket and fitting covers.

H. Piping Exterior to Building: Provide vapor retarder jacket. Insulate fittings, joints, and valves with insulation of like material and thickness as adjoining pipe, and finish with glass mesh reinforced vapor retarder cement. Cover with aluminum jacket with seams located at 3 or 9 o'clock position on side of horizontal piping with overlap facing down to shed water or on bottom side of horizontal piping.

I. Buried Piping: Insulate only where insulation manufacturer recommends insulation product may be installed in trench, tunnel or direct buried. Install factory fabricated assembly with inner all-purpose service jacket with self-sealing lap, and asphalt impregnated open mesh glass fabric, with 1 milthick aluminum foil sandwiched between 3 layers of bituminous compound; outer surface faced with polyester film.

J. Prepare pipe insulation for finish painting. Refer to Division 09.

3.3 SCHEDULES

A. Water Supply Services Piping Insulation Schedule:
   1. Domestic Hot Water Supply and Recirculation:
      a. Type: P-1.
      b. Thickness:
         1) Pipe Size 1-1/4 Inches and Smaller: Required for R-6.0 installed value.
         2) Pipe Size 1-1/2 Inches and Larger: Required for R-6.0 installed value.
   2. Domestic Cold Water:
      a. Type: P-1.
      b. Thickness:
         1) Pipe Size all sizes: Required for R-6.0 installed value.

B. Drainage Services Piping Insulation Schedule:
   1. Storm Piping and Roof Drain bodies:
      a. Horizontal Above Ground Within Building:
         1) Type: P-3.
         2) Thickness: Required for R-6.0 installed value.
      b. Vertical:
         1) 2-inchExposed Areas:
            a) Type: P-1.
            b) Thickness: Required for R-6.0 installed value.

C. Cooling System Schedule:
   1. Interior Condensate:
      a. Type: P-2.
      b. Thickness: Required for R-6.0 installed value.

END OF SECTION

SECTION 22 08 00 - COMMISSIONING OF PLUMBING

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes Cx process requirements for the following plumbing systems, assemblies, and equipment:
   1. Domestic hot- and cold-water piping.
   2. Sanitary waste and vent piping.
   3. Storm drainage piping.
   4. Plumbing pumps.
   5. Plumbing equipment.

B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.

1.2 DEFINITIONS

A. Cx: Commissioning, as defined in Section 01 91 13 "General Commissioning Requirements."

B. CxA: Commissioning Authority, as defined in Section 01 91 13 "General Commissioning Requirements."

C. IAPMO: International Association of Plumbing and Mechanical Officials.

D. IgCC: International Green Construction Code.

E. "Systems," "Assemblies," "Subsystems," "Equipment," and "Components": Where these terms are used together or separately, they shall mean "as-built" systems, assemblies, subsystems, equipment, and components.

1.3 INFORMATIONAL SUBMITTALS

A. Qualification Data: For plumbing testing technician.

B. Construction Checklists:
   1. Draft Cx plan, including draft construction checklists to be prepared by CxA under Section 01 91 13 "General Commissioning Requirements." Contractor is to review Construction Checklist in accordance with requirements in Section 01 91 13 "General Commissioning Requirements" and ASHRAE 202 and to resolve any issues with the CxA.

1.4 QUALITY ASSURANCE

A. Plumbing Testing Technician Qualifications: Technicians to perform plumbing Construction Checklist verification tests. Construction Checklist verification test demonstrations, Cx tests, and Cx test demonstrations shall have the following minimum qualifications:
   1. Journey level or equivalent skill level with knowledge of plumbing system, electrical concepts, and building operations.
   2. Minimum three years' experience installing, servicing, and operating systems manufactured by approved manufacturer.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION

3.1 Cx PROCESS

A. Perform Cx process for plumbing systems in accordance with:
   1. IgCC, which requires compliance with ASHRAE 202.
   2. Commissioning standards acceptable to the authority having jurisdiction.

3.2 CONSTRUCTION CHECKLISTS

A. Preliminary detailed construction checklists are to be prepared under Section 01 91 13 "General Commissioning Requirements" for each plumbing system, assembly, subsystem, equipment, and component required to be commissioned, as detailed in IgCC. Contractor performs the following:
   1. Review plumbing preliminary construction checklists and provide written comments on Construction Checklist items where appropriate.
   2. Return preliminary Construction Checklist with review comments within 10 days of receipt.
   3. When review comments have been resolved, the CxA will provide final construction checklists marked "Approved for Use, (date)."

B. Systems Required to Be Commissioned under IgCC:
   1. Domestic hot-water systems and controls.

C. Additional Systems Required to Be Commissioned:
   1. Domestic water piping, including the following:
      a. Domestic cold- and hot-water piping, fittings, and specialties inside the building.
      b. Pumps, motors, accessories, and controls.
      c. Sleeves and sleeve seals.
      d. Meters and gauges.
      e. General-duty and specialty valves.
      f. Hangers and supports.
   2. Sanitary waste and vent piping, including the following:
      a. Gravity and forced-main sewerage piping, fittings, and specialties.
      b. Sanitary waste interceptors.
      c. Pumps, motors, accessories, and controls.
      d. Drains.
      e. Sleeves and sleeve seals.
      f. Meters and gauges.
      g. Hangers and supports.
   3. Storm-water piping, including the following:
      a. Drainage piping, fittings, and specialties.
      b. Drains and collection basins.
      c. Rainwater-collection and storage equipment.
      d. Sleeves and sleeve seals.
      e. Hangers and supports.

4. Plumbing fixtures, including the following:
    a. Water closets, supports and connections, supplies, and flush valves.
    b. Urinals, supports and connections, supplies, and flush valves.
    c. Lavatories, supports, supplies, drain connections, and faucets.
    d. Sinks, supports, supplies, drain connections, and faucets.
    e. Tubs, drain connections, and faucets.

3.3 Cx TESTING PREPARATION

A. Certify that plumbing systems, subsystems, and equipment have been installed, calibrated, and started and that they are operating in accordance with the Contract Documents and approved submittals.

B. Certify that plumbing system instrumentation and control systems have been completed and calibrated, point-to-point checkout has been successfully completed, and systems are operating in accordance with their design sequence of operation, Contract Documents, and approved submittals. Certify that all sensors are operating within specified accuracy and that all systems are set to and maintaining set points as required by the design documents.

C. Set systems, subsystems, and equipment into operating mode to be tested in accordance with approved test procedures (for example, normal shutdown, normal auto position, normal manual position, unoccupied cycle, emergency power, and alarm conditions).

3.4 Cx TEST CONDITIONS

A. Perform tests using design conditions, whenever possible.
    1. Simulated conditions may, with approval of Architect, be imposed using an artificial load when it is impractical to test under design conditions. Before simulating conditions, calibrate testing instruments. Provide equipment to simulate loads. Set simulated conditions as directed by CxA, and document simulated conditions and methods of simulation. After tests, return configurations and settings to normal operating conditions.
    2. Cx test procedures may direct that set points be altered when simulating conditions is impractical.
    3. Cx test procedures may direct that sensor values be altered with a signal generator when design or simulating conditions and altering set points are impractical.

B. If tests cannot be completed because of a deficiency outside the scope of the plumbing system, document the deficiency and report it to Architect. After deficiencies are resolved, reschedule tests.

C. If seasonal testing is specified, complete appropriate initial performance tests and documentation and schedule seasonal tests.

3.5 CONSTRUCTION CHECKLIST EXAMPLES

A. Supervision of Alarms in Plumbing Systems:
    1. Prerequisites: Acceptance of results of construction checklists for plumbing systems specified in the following Sections:
        a. Section 22 14 29 "Sump Pumps."
        b. Section 22 34 00 "Fuel-Fired, Domestic-Water Heaters."
    2. Test Scope:
        a. Monitored plumbing system alarms.

3. Test Purpose:
   a. Verify reporting of monitored plumbing alarm at building management system.
4. Test Conditions:
   a. Alarm monitoring systems operating in normal, automatic mode.
   b. Activate monitored plumbing alarms, one at a time.
5. Acceptance Criteria:
   a. Activation of monitored plumbing alarm generates alarm at building management systemcontrol panel.
6. Test Scope:
   a. Monitored plumbing system water meters.
7. Test Purpose:
   a. Verify accuracy of reporting of monitored plumbing system water meters at building management system.
8. Test Conditions:
   a. Plumbing system water meter recording systems operating in normal, automatic mode.
   b. Compare cumulative consumption data at plumbing system water meter recording systems with independent, calibrated, flow-measuring instrumentation under the following conditions:
      1) High Flow: 90 percent of maximum design flow rate for a period of 20 minutes.
   c. Activate monitored plumbing alarms, one at a time.
9. Acceptance Criteria:
   a. Cumulative flow reported for high-flow condition is within 1 percent flow recorded by calibrated flow-measuring instrumentation.

END OF SECTION

SECTION 22 10 00 - PLUMBING PIPING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes: Pipe and pipe fittings for the following systems:
   1. Domestic water piping, within 5 feet of building.
   2. Sanitary sewer piping, within 5 feet of building.
   3. Storm water piping.
   4. Equipment drains and over flows.
   5. Unions and flanges.

B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.
   2. Section 09 91 23 "Interior Painting": Product and execution requirements for painting specified by this Section.
   3. Section 22 05 29 "Hangers and Supports for Plumbing Piping and Equipment": Product requirements for pipe hangers and supports and firestopping for placement by this Section.
   4. Section 22 07 00 "Plumbing Insulation": Product requirements for piping insulation for placement by this Section.

2. AWWA C105 - American National Standard for Polyethylene Encasement for Ductile-Iron Pipe Systems.
3. AWWA C110 - American National Standard for Ductile-Iron and Grey-Iron Fittings, 3 in. through 48 in. for Water and Other Liquids.
4. AWWA C111 - American National Standard for Rubber-Gasket Joints for Ductile-Iron Pressure Pipe and Fittings.
5. AWWA C151 - American National Standard for Ductile-Iron Pipe, Centrifugally Cast, for Water.

E. Cast Iron Soil Pipe Institute:
1. CISPI 301 - Standard Specification for Hubless Cast Iron Soil Pipe and Fittings for Sanitary and Storm Drain, Waste, and Vent Piping Applications.
2. CISPI 310 - Specification for Coupling for Use in Connection with Hubless Cast Iron Soil Pipe and Fittings for Sanitary and Storm Drain, Waste, and Vent Piping Applications.

F. National Fire Protection Association:
1. NFPA 99 - Standard for Health Care Facilities.

1.3 SUBMITTALS

A. Product Data: Submit data on pipe materials and fittings. Submit manufacturers catalog information.

1.4 QUALITY ASSURANCE

A. Perform Work in accordance with ASME B31.9 code for installation of piping systems and ASME Section IX for welding materials and procedures.
B. Perform Work in accordance with State of Texas Public Works' standard.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Section 01 60 00 "Product Requirements": Requirements for transporting, handling, storing, and protecting products.
B. Furnish temporary end caps and closures on piping and fittings. Maintain in place until installation.
C. Protect piping from entry of foreign materials by temporary covers, completing sections of the Work, and isolating parts of completed system.

1.6 ENVIRONMENTAL REQUIREMENTS

A. Section 01 60 00 "Product Requirements": Environmental conditions affecting products on site.
B. Do not install underground piping when bedding is wet or frozen.

1.7 FIELD MEASUREMENTS

A. Verify field measurements prior to fabrication.

1.8 COORDINATION

A. Section 01 30 00 "Administrative Requirements": Requirements for coordination.
B. Coordinate installation of buried piping with trenching.

PART 2 - PRODUCTS

2.1 DOMESTIC WATER PIPING, BURIED WITHIN 5 FEET OF BUILDING

A. Ductile Iron Pipe: AWWA C151, C104.
   1. Fittings: AWWA C110, ductile iron, standard thickness.
   2. Joints: AWWA C111, rubber gasket with rods.
   3. Jackets: AWWA C105 polyethylene jacket Double layer, half lapped, 10 mil polyethylene tape.
B. Copper Tubing: ASTM B88, Type K annealed.
   1. Fittings: ASME B16.18, cast copper, or ASME B16.22, wrought copper.
   2. Joints: Compression connection or Brazed, AWS A5.8 BCuP silver/phosphorus/copper alloy with melting range 1,190 to 1,480 degrees F.

2.2 DOMESTIC WATER PIPING, ABOVE GRADE

A. Copper Tubing: ASTM B88, Type L drawn.
   1. Fittings: ASME B16.18, cast copper alloy or ASME B16.22, wrought copper and bronze.
   2. Joints: ASTM B32, Alloy Grade Sb5 tin-antimony, or Alloy Grade Sn95 tin-silver, lead free solder or AWS A5.8 Classification BCuP-3 or BCuP-4 silver braze.
B. Copper Tubing: ASTM B88, Type L drawn, rolled grooved ends.
   1. Fittings: ASME B16.18 cast copper alloy, or ASME B16.22 wrought copper and bronze, or ASTM B584 bronze sand castings, grooved ends.

2. Joints: Grooved mechanical couplings meeting ASTM F1476.
   a. Housing Clamps: ASTM A395 and ASTM A536 ductile iron, enamel coated, compatible with copper tubing sizes, to engage and lock designed to permit some angular deflection, contraction, and expansion.
   b. Gasket: Elastomer composition for operating temperature range from minus 30 degrees F to 180 degrees F.
   c. Accessories: Stainless steel bolts, nuts, and washers.

2.3 SANITARY SEWER PIPING, BURIED WITHIN 5 FEET OF BUILDING

A. Cast Iron Soil Pipe: ASTM A74, service weight, bell and spigot ends.
   1. Fittings: Cast iron, ASTM A74.
   2. Joints: Hub-and-spigot, CISPI HSN compression type with ASTM C564 neoprene gaskets or lead and oakum.
B. Cast Iron Pipe: CISPI 301, hub-less.
   1. Fittings: Cast iron, CISPI 301.
   2. Joints: CISPI 310, neoprene gasket and stainless steel clamp and shield assemblies.
C. PVC Pipe: ASTM D1785, Schedule 40, polyvinyl chloride (PVC) material, bell and spigot style solvent sealed joint ends.
   1. Fittings: ASTM D2466, Schedule 40, PVC.
   2. Joints: ASTM D2855, solvent weld with ASTM D2564 Solvent cement.

2.4 SANITARY SEWER PIPING, ABOVE GRADE

A. Cast Iron Pipe: ASTM A74, service weight.
   1. Fittings: Cast iron, ASTM A74.
   2. Joints: ASTM C564, rubber gasket joint devices or lead and oakum.
B. Cast Iron Pipe: CISPI 301, hub-less, service weight.
   1. Fittings: Cast iron, CISPI 301.
   2. Joints: CISPI 310, neoprene gaskets and stainless steel clamp-and-shield assemblies.

2.5 STORM WATER PIPING, BURIED WITHIN 5 FEET OF BUILDING

A. Cast Iron Pipe: ASTM A74, service weight, bell and spigot ends.
   1. Fittings: Cast iron, ASTM A74.
   2. Joints: ASTM C564, rubber gasket joint devices or lead and oakum.
B. Cast Iron Pipe: CISPI 301, hubless, service weight.
   1. Fittings: Cast iron, CISPI 301.
   2. Joints: Neoprene gaskets and stainless steel clamp-and-shield assemblies.
C. PVC Pipe: ASTM D2729, polyvinyl chloride (PVC) material, bell and spigot solvent sealed ends.
   1. Fittings: PVC, ASTM D2729.
   2. Joints: ASTM D2855, solvent weld with ASTM D2564 solvent cement.

2.6 STORM WATER PIPING, ABOVE GRADE

A. Cast Iron Pipe: ASTM A74 service weight, bell and spigot ends.
   1. Fittings: Cast iron, ASTM A74.
   2. Joints: ASTM C564, neoprene gasket system or lead and oakum.

B. Cast Iron Pipe: CISPI 301, hubless, service weight.
   1. Fittings: Cast iron, CISPI 301.
   2. Joints: Neoprene gaskets and stainless steel clamp-and-shield assemblies.

2.7 EQUIPMENT DRAINS AND OVERFLOWS

A. Copper Tubing: ASTM B88 Type L drawn.
   1. Fittings: ASME B16.18, cast brass, or ASME B16.22 solder wrought copper.
   2. Joints: ASTM B32, Alloy Grade Sb5 tin-antimony, or Alloy Grade Sn95 tin-silver, lead free solder.
   3. To be used for hot condensate or drain piping from equipment such as water heaters and gas-fired heater condensate, refer to Division 23 Specifications.

2.8 UNIONS AND FLANGES

A. Unions for Pipe 2 Inches and Smaller:
   1. Ferrous Piping: Class 250, malleable iron, threaded.
   2. Copper Piping: Class 150, bronze unions with soldered or brazed joints.
   3. Dielectric Connections: Union with galvanized or plated steel threaded end, copper solder end, water impervious isolation barrier.
B. Flanges for Pipe 2-1/2 Inches and Larger:
   1. Ferrous Piping: Class 250, forged steel, slip-on flanges.
   2. Copper Piping: Class 150, slip-on bronze flanges.
   3. Gaskets: 1/16-inch-thick preformed neoprene gaskets.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Section 01 30 00 "Administrative Requirements": Verification of existing conditions before starting work.
B. Verify excavations are to required grade, dry, and not over-excavated.
C. Verify trenches are ready to receive piping.

3.2 PREPARATION

A. Ream pipe and tube ends. Remove burrs. Bevel plain end ferrous pipe.
B. Remove scale and dirt on inside and outside before assembly.
C. Prepare piping connections to equipment with flanges or unions.
D. Keep open ends of pipe free from scale and dirt. Protect open ends with temporary plugs or caps.

3.3 INSTALLATION - BURIED PIPING SYSTEMS

A. Verify connection to existing piping system contractor to verify exact size, location, and inverts at the Project site.
B. Establish elevations of buried piping with not less than 3 feet of cover.
C. Establish minimum separation of domestic water from other services and sanitary sewer piping in accordance with local code.

D. Install pipe on prepared bedding.
E. Route pipe in straight line.
F. Install pipe to allow for expansion and contraction without stressing pipe or joints.

3.4 INSTALLATION - ABOVE GROUND PIPING

A. Route piping in orderly manner and maintain gradient. Route parallel and perpendicular to walls.
B. Install piping to maintain headroom without interfering with use of space or taking more space than necessary.
C. Group piping whenever practical at common elevations.
D. Sleeve pipe passing through partitions, walls and floors. Refer to Section 22 05 29 "Hangers and Supports for Plumbing Piping."
E. Install piping to allow for expansion and contraction without stressing pipe, joints, or connected equipment.
F. Provide clearance in hangers and from structure and other equipment for installation of insulation and access to valves and fittings. Refer to Section 22 07 00 "Plumbing Insulation."
G. Provide access where valves and fittings are not accessible. Coordinate size and location of access doors with Architectural Drawings.
H. Install non-conducting dielectric connections wherever jointing dissimilar metals.
I. Slope piping and arrange systems to drain at low points.
J. Protect piping systems from entry of foreign materials by temporary covers, completing sections of the Work, and isolating parts of completed system.
K. Install piping penetrating roofed areas to maintain integrity of roof assembly.
L. Insulate piping. Refer to Section 22 07 00 "Plumbing Insulation."
M. Install pipe identification in accordance with Section 22 05 53 "Indentification for Plumbing Piping and Equipment."

3.5 INSTALLATION - DOMESTIC WATER PIPING SYSTEMS

A. Install domestic water piping system in accordance with ASME B31.9.

3.6 INSTALLATION - SANITARY WASTE AND VENT PIPING SYSTEMS

A. Install sanitary waste and vent piping systems in accordance with local plumbing code.
B. Install bell and spigot pipe with bell end upstream.
C. Support cast iron drainage piping at every joint.

3.7 INSTALLATION - STORM DRAINAGE PIPING SYSTEMS

A. Install storm drainage piping systems piping in accordance with ASME B31.9.
B. Install bell and spigot pipe with bell end upstream.
C. Support cast iron drainage piping at every joint.

3.8 CLEANING

A. Section 01 70 00 "Execution and Closeout Requirements": Requirements for cleaning.

END OF SECTION

SECTION 22 14 29 - SUMP PUMPS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Sump pumps.
B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.
   2. Section 23 05 00 "General Mechanical Requirements."

1.2 SUBMITTALS

A. Division 01 and Section 23 05 00 "General Mechanical Requirements" for submittal procedures.
B. Product Data: Submit data for specified products.

1.3 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing Products specified in this Section with minimum 3 years' experience.
B. Installer: Company specializing in performing Work of this Section with minimum 3 years' experience.

1.4 DELIVERY, STORAGE AND HANDLING

A. Prepare pumps and accessories for shipment to prevent entry of foreign matter into product body.
B. Store products in areas protected from weather, moisture, or possible damage; do not store products directly on ground; handle products to prevent damage to interior or exterior surfaces.

PART 2 - PRODUCTS

2.1 SUMP PUMPS

A. Manufacturers:
   1. Grundfos Pumps Corporation U.S.A, Basis of Design: Model Unilift AP50B.50.08.A1V.
   2. Bell and Gossett.
   3. Taco.
   4. Substitutions: Refer to section 23 05 00 "General Mechanical Requirements."
B. Impeller: 304 Stainless-Steel, semi-open, non-clog.
C. Casing: 304 Stainless-Steel.
D. Double Shaft Seal: Intermediate oil chamber pre-filled with non-toxic special oil.

E. Shaft: Stainless-steel.
F. Designed for continuous operation.
G. Bearings: Upper and lower heavy duty ball bearings.
H. Level switch for automatic start and stop.
I. Discharge Port: 2-Inch.

2.2 PUMP MOTORS

A. Fully submerged in high-grade turbine oil for lubrication and efficient heat transfer.
B. Power Cable: Severe duty rated, oil and water resistant, epoxy seal on motor end.
C. Built-in overload with automatic reset.
D. Class B insulation.

2.3 BUILDING MANAGEMENT SYSTEM

A. DDC system to provide 1 low level wet sensor and one high level wet sensor in sump pump pit. Refer to DDC and Sequence of Operations Specifications for more information.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify connections, size, and location are as indicated on Drawings.

3.2 INSTALLATION

A. Install sump pumps according to Drawings and manufacturer instructions.
B. Provide necessary piping, fittings, and valves as indicated on Drawings.

END OF SECTION

SECTION 22 33 00 - ELECTRIC DOMESTIC WATER HEATERS

PART 1 - GENERAL

1.1 SUMMARY

A. Related Requirements:
1. Division 01 Specification Sections apply to Work of this Section.
2. Section 23 05 00 "General Mechanical Requirements."

1.2 REFERENCES

A. American Society of Heating, Refrigerating and Air-Conditioning Engineers:
1. ASHRAE 90.1 - Energy Standard for Buildings Except Low-Rise Residential Buildings.
B. American Society of Mechanical Engineers:
1. ASME PTC 25 - Pressure Relief Devices.
2. ASME Section VIII - Boiler and Pressure Vessel Code - Pressure Vessels.

1.3 SUBMITTALS

A. Division 01 and Section 23 05 00 "General Mechanical Requirements" for submittal procedures.
B. Product Data: Submit dimensioned drawings of water heaters indicating components and connections to other equipment and piping. Submit electrical characteristics and connection locations.

1.4 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this Section with minimum 3 years' experience.
B. Installer: Company specializing in performing Work of this Section with minimum 3 years' experience.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Accept water heaters on site in original labeled cartons. Inspect for damage.
B. Protect tanks with temporary inlet and outlet caps. Maintain caps in place until installation.

1.6 FIELD MEASUREMENTS

A. Verify field measurements prior to fabrication.

1.7 WARRANTY

A. Refer to Division 01 and Section 23 05 00 "General Mechanical Requirements."
B. Furnish 3-year manufacturer warranty for domestic water heaters.

PART 2 - PRODUCTS

2.1 COMMERCIAL ELECTRIC WATER HEATERS

A. Manufacturers:
   1. A. O. Smith Corporation.
   2. Rheem Manufacturing Company.
   3. State Industries.
   4. Substitutions: Division 01 and Section 23 05 00 "General Mechanical Requirements" for submittal procedures.
B. Type: Factory-assembled and wired, electric, vertical storage.
C. Tank: Glass-lined welded steel; 4-inch-diameter inspection port, thermally insulated with minimum 2 inches glass fiber encased in corrosion-resistant steel jacket; baked-on enamel finish.
D. Controls: Automatic immersion water thermostat; externally adjustable temperature range from 60 to 180 degrees F, flanged or screw-in nichrome elements, high temperature limit thermostat.
E. Accessories: Brass water connections and dip tube, drain valve, magnesium anode, and ASME rated temperature and pressure relief valve.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Maintain manufacturer's recommended clearances around and over water heaters.
B. Install water heater on concrete housekeeping pad, minimum 3-1/2 inches high and 6 inches larger than water heater base on each side.
C. Connect domestic hot and cold-water piping to supply and return water heater connections.
D. Install the following piping accessories.
   1. On Supply:
      a. Shutoff valve.
      b. Flexible Looped Heat Trap.
   2. On Return:
      a. Thermometer well and thermometer.
      b. Shutoff valve.
      c. Flexible Looped Heat Trap.
E. Install discharge piping from relief valves and drain valves to nearest floor drain.
F. Install water heater trim and accessories furnished loose for field mounting.
G. Install electrical devices furnished loose for field mounting.
H. Install control wiring between water heater control panel and field mounted control devices.
I. Install Work according to state and local standards.

END OF SECTION

SECTION 22 40 00 - PLUMBING FIXTURES

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Water closets.
   2. Urinals.
   3. Lavatories.
   4. Sinks.
   5. Service sinks.
   6. Electric water coolers.
   7. Drinking fountains.

B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.
   2. Section 23 05 00 "General Mechanical Requirements."

1.2 REFERENCES

A. American National Standards Institute:
   1. ANSI A117.1 - Accessible and Usable Buildings and Facilities.
   2. ANSI Z358.1 - Emergency Eyewash and Shower Equipment.

B. Air-Conditioning and Refrigeration Institute:
   1. ARI 1010 - Self-Contained, Mechanically Refrigerated Drinking-Water Coolers.

C. American Society of Mechanical Engineers:
   1. ASME A112.6.1 - Floor-Affixed Supports for Off-the-Floor Plumbing Fixtures for Public Use.
   2. ASME A112.18.1 - Plumbing Fixture Fittings.
   3. ASME A112.19.1M - Enameled Cast Iron Plumbing Fixtures.
   4. ASME A112.19.2M - Vitreous China Plumbing Fixtures.
   5. ASME A112.19.4 - Porcelain Enameled Formed Steel Plumbing Fixtures.
   6. ASME A112.19.5 - Trim for Water-Closet Bowls, Tanks and Urinals.

1.3 SUBMITTALS

A. Only request submittals needed to verify compliance with Project requirements.

B. Division 01 and Section 23 05 00 "General Mechanical Requirements" for submittal procedures.

C. Product Data: Submit catalog illustrations of fixtures, sizes, rough-in dimensions, utility sizes, trim, and finishes.

1.4 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this Section with minimum 3 years' experience

B. Installer: Company specializing in performing Work of this Section with minimum 3 years' experience.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Division 01 Section 23 05 00 "General Mechanical Requirements" for product storage and handling requirements.
B. Accept fixtures on site in factory packaging. Inspect for damage.
C. Protect installed fixtures from damage by securing areas and by leaving factory packaging in place to protect fixtures and prevent use.

1.6 WARRANTY

A. Division 01 Section 23 05 00 "General Mechanical Requirements" for product warranties and product bonds.

PART 2 - PRODUCTS

2.1 FIXTURES

A. Refer to Plumbing Fixture Schedule for make, model number, and type.
B. Manufacturers:
    1. Fixtures:
        a. American Standard.
        b. Sloan.
        c. Kohler.
        d. Bradley Corp.
        e. Zurn Industries.
        f. Symmons.
        g. Woodford.
        h. Stern Williams.
        i. Halsey Taylor.
    2. Stainless Steel Fixtures:
        a. Just mfg.
        b. Elkay.
        c. Acorn.
        d. Bradley Corp.
    3. Commercial Brass:
        a. Moen.
        b. Kohler.
        c. T & S Brass.
        d. Chicago Faucets.
        e. Sloan.
    4. Drainage Products:
        a. Watts.
        b. Wade.
        c. Josam.
        d. Sioux Chief.

e. J.R. Smith.
f. Zurn.
g. Proset Trap guard.
h. Green drain.

5. Mixing Valves:
   a. Armstrong.
   b. Bradley Corp.
   c. Leonard.
   d. Watts.
6. Separators:
   a. Vaughn Concrete.
   b. Schier Products.0
   c. Striem.
   d. Zurn-Green Turtle.
   e. Orion.

C. Substitutions: Division 01 and Section 23 05 00 "General Mechanical Requirements" for substitutions.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify walls and floor finishes are prepared and ready for installation of fixtures.
B. Verify electric power is available and of correct characteristics.
C. Confirm millwork is constructed with adequate provision for installation of counter top lavatories and sinks.

3.2 PREPARATION

A. Rough-in fixture piping connections according to minimum sizes indicated on the Plumbing fixture schedule for particular fixtures.

3.3 INSTALLATION

A. Install Work according to state and local codes.
B. Install each fixture with trap, easily removable for servicing and cleaning.
C. Provide chrome-plated rigid or flexible supplies to fixtures with quarter turn stops, reducers, and escutcheons.
D. Install components level and plumb.
E. Install and secure fixtures in place with wall supports or carriers and bolts.
F. Seal fixtures to wall and floor surfaces with sealant as specified, color to match fixture.
G. Solidly attach water closets to floor with lag screws. Lead flashing is not intended hold fixture in place.
H. For TAS or ADA accessible water closets, install flush valve with handle to wide side of stall.
I. For any plumbing fixture with an exposed p-trap provide a chrome plated cast brass p-trap with a cleanout plug, chrome plated outlet, and chrome plated cast brass escutcheon with set screw. Also provide a manufactured insulation kit made from molded closed cell vinyl that is anti-microbial and seamless. Each kit shall cover the tailpiece, p-trap, wall bend, both water supply stops, and both water risers.

3.4 INTERFACE WITH OTHER PRODUCTS

A. Review millwork shop-drawings. Confirm location and size of fixtures and openings before rough in and installation.

3.5 ADJUSTING

A. Adjust stops or valves for intended water flow rate to fixtures without splashing, noise, or overflow.

3.6 CLEANING

A. Clean plumbing fixtures and equipment.

3.7 PROTECTION OF INSTALLED CONSTRUCTION

A. Do not permit use of fixtures before final acceptance.

END OF SECTION

SECTION 23 05 00 - GENERAL MECHANICAL REQUIREMENTS

PART 1 - GENERAL

1.1 SUMMARY

A. Work covered by this Division consists of furnishing labor, equipment, supplies, and materials and in performing Work necessary for the installation of complete and operating mechanical systems as required by these Specifications and/or shown in the Drawings, subject to the terms and conditions of the Contract. The Work also includes completion of mechanical and electrical details not indicated that are necessary for the successful operation of systems described in the Drawings or required by these Specifications; including the furnishing materials for the filling the systems to make them operable, including water, refrigerant, oil, grease, and other lubrication. If requested, prove satisfactory operation of equipment and controls to Architect/Engineer.

B. Work Not Included: Certain labor, material, and equipment may be furnished and/or installed under other Divisions of these Specifications. Coordinate with other trades and arrange his Work to make the part fit together. The following items are to be accomplished under other Divisions of these Specifications:
   1. Temporary Heat: Refer to paragraph in this Section.
   2. Temporary Water and Toilet: Refer to General Conditions.
   3. Roof Curbs: Refer to paragraph in this Section.
   4. Electrical Equipment and Wiring: Refer to paragraph in this Section.
   5. Concrete: Refer to paragraph in this Section.

C. Equipment Furnished by Owner: Rough-in services to locations as required by Architectural and Mechanical Drawings and equipment shop drawings. Provide service valves on pipes except waste and vent pipes. Making final connections to equipment is included in this Contract.

D. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.
   2. Section 07 84 13 "Penetration Firestopping."
   3. Section 23 05 93 "Testing, Adjusting, and Balancing of HVAC."

1.2 BIDDING

A. Provide new mechanical equipment unless specified otherwise in the Specifications or in the Drawings.

B. Base bids or proposals only on the equipment and materials as scheduled in the Drawings and as specified or on approved equivalent equipment and materials. Contractors who assume equivalence of products and who base their proposal on this assumption do so at their own risk.

C. Listing of approved alternative manufacturers does not indicate that all products of a particular manufacturer are acceptable alternatives to scheduled items. Fixtures and devices are required to be submitted according to the prescribed procedures. In addition, some items that have an important visual affect, such as electric water coolers, may be required to receive Owner’s or Architect/Engineer's approval.

1.3 EXISTING UTILITIES

A. Drawings indicate the locations, type, and sizes of various utilities within the site where known. Known utilities are indicated as accurately as possible based on site surveys. If utilities are discovered during construction that are not shown in the Drawings and interfere with Work, obtain instructions from Architect prior to proceeding with Work. If required, a Change Order will address relocation or remodeling necessary. Contractor assumes responsibility for protection of utilities, shown or not, and for repair required by this construction.

B. Verify location, size, elevation, pressure, and any other pertinent data of the existing utilities. Additional costs incurred due to failure to verify such data and to coordinate associated work with respective utility providers will be borne by Contractor and not be Owner.

C. Include costs associated with providing utilities including, but not limited to, connection fees, boring under roads, etc., in proposal price, whether such costs are incurred by Contractor or charged by the utility company.

D. Submission of a Proposal by Contractor will be considered an acknowledgment by Contractor of their compliance with this Section.

1.4 CODES, PERMITS, AND FEES

A. Comply with local, state, and national codes and pay for applicable costs, fees, permits, licenses, and inspections for this Project.

1.5 TEMPORARY HEAT

A. General Contractor will furnish temporary heat. Use of the permanent heating system will not be allowed without written authorization from Architect/Engineer and Owner. In case the permanent heating system is used for temporary heat, the General Contractor will pay all the costs until acceptance by Owner. Warranties for equipment will not start until the date of Substantial Completion.

1.6 DRAWINGS

A. Contract Drawings are diagrammatic only and are not intended to be scaled for dimensions. Obtain dimensions from Architectural Drawings, certified equipment drawings, and from site conditions before fabricating and Work. Verify and coordinate space requirements and equipment locations with other trades. It is Contractors' responsibility to install the systems complete in the space provided at no additional cost to Owner.

B. It is intended that equipment or material, that is usually furnished as part of equipment specified and is necessary for operation, is furnished as part of the Contract without additional cost, whether shown or described.

C. Conceal piping in finished areas of the building except where otherwise noted in the Drawings.

D. Install equipment in accordance with manufacturer's recommendations unless approval is given in writing by Architect for deviation.

1.7 REQUIREMENTS OF REGULATORY AGENCIES

A. Provide mechanical Work in accordance with local and state codes, ordinances, and regulations governing the specified Work involved. Furnish, without extra charge, additional material and labor when and where required to comply with these Rules and Regulations, whether the Work is mentioned in the Specifications or shown in the Drawings or not. When the Specifications or Drawings indicate describe materials or construction of better quality or larger sizes than required by the above-mentioned Rules and Regulations, the provisions of these Specifications and accompanying Drawings will take precedence.

1.8 QUALIFICATIONS

A. Provide mechanics that are capable journeymen, skilled in the work assigned to them with licensing required by the inspecting authority. Welders must have been certified within the past 3 years to perform required welding.

1.9 WARRANTY

A. Warrant workmanship, material, and equipment and replace defective material, equipment, or systems, at no additional cost to Owner, for 1 year after the Date of Substantial Completion as defined in General Conditions.
B. Provide warranty durations over 1 year as described above (that covers equipment installed on this Project) to Owner in the Operation and Maintenance Manual, along with the start and end of warranty dates.
C. Refer to General Conditions for additional information regarding specific warranty requirements.

1.10 PROJECT RECORD DOCUMENTS

A. Prior to final payment, provide Architect/Engineer with set of Drawings and Specifications corrected up to date as job progresses. These documents will reflect the As-Built conditions. Refer to General Conditions for additional information.

1.11 SUBSTITUTED PRODUCTS

A. Material or equipment specified by manufacturer's name is being used as a basis of standard, unless otherwise noted. Architect will be the sole judge on the equivalence of substituted equipment and materials.
B. It is Contractor's responsibility to verify that submitted equipment will fit in space available. Contractor's submittal for requesting approval of the substitution will include a written statement of whether or not such acceptance would require any subsequent or associated changes to the Drawings or Specifications. Completely describe necessary changes in an Request for Information (RFI). Refer to Section 01 30 00 "Administrative Requirements" and 01 60 00 "Product Requirements."
C. Contractor will be responsible for the costs of Project modifications due to substitution of materials or equipment for what was specified or scheduled. The cost will be complete, including the costs necessary to accommodate modifications effecting other trades.
D. Architect may request detailed Shop Drawing or plan layouts of mechanical rooms or systems of the substituted equipment.

1.12 SAFETY

A. General: Contractor will be responsible for initiating, maintaining, and supervising all safety precautions and programs in connection with the Work, and Contractor will comply with all laws governing safety, specifically state and federal "Occupational Safety and Health Standards" and the "Safety and Health Regulations for Construction."

B. According to OSHA, a hazardous chemical is any chemical that is a physical hazard or a health hazard. This may include items such as paints, solvents, adhesives, sealants, cleaners, etc. If a Contractor produces, uses, or stores hazardous chemicals at the workplace, then Contractor will develop, implement, and maintain a hazard communication program in compliance with the latest OSHA requirements. Provide required methods of training, information, handling, ventilation, labeling, storing, disposal, and removal of hazardous chemicals.

1. In Projects with multiple tenants in which the building is partially occupied during all or part of the Project, Contractor will inform the Building Manager or Owner, according to OSHA guidelines, of any hazardous chemicals being produced, stored, or used in the building so that other tenants may be notified.

1.13 LABELING

A. Each device where an independent testing authority has established a standard will have affixed a label indicating its compliance and listing. Refer to Section 01 42 00 "References" for list of independent testing authorities.

1.14 SITE VISIT REPORTS

A. During the course of the Project, Architect/Engineer will make site visits to observe Work in progress and will subsequently prepare a written site visit report, that will be sent to Contractor and to other parties as necessary. Prepare a written response addressing items requiring clarifications or explanation within 7 calendar days of receiving the site visit report. Include in response the following information.

1. Date of site visit by Architect.
2. Date of receipt of the site visit report.
3. Name and title of the preparer of the response.
4. An item number referenced to the site report.
5. A brief 3- or 4-word description of the item.
6. Contractor or Subcontractor affected.
7. The proposed course of action.
8. An expected time of completion of the action.

1.15 CUTTING AND PATCHING

A. Do not cut, drill, or alter joists, beams, girders, columns, slabs, or other structural elements without first obtaining written permission and instructions from Architect.
B. Where it is necessary to cut through non-structural elements of walls, floors, or ceilings to permit the installation of Work under this Contract, or to repair defects that may appear during warranty duration, provide cutting with as little damage as possible to the construction being cut or to adjacent construction.
C. After the necessary Work has been completed, damage will be repaired by the respective Contractor, and pay all costs of such cutting, repairs, and patching. Patching or sealing of cuts, penetrations, and other alterations necessary, including final appearance of same, will be accomplished to the approval of Architect.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Materials will be new, free from defects, and of specified quality, unless specifically noted otherwise. Manufacturer names mentioned in the Specifications or in the Drawings are to establish a standard of quality, performance, and construction.
B. Contractor will be responsible for transportation of his material to and from the job site and for the storage and protection of his materials and Work until the date of Substantial Completion. At the end of each day of Work, each Contractor is responsible for covering or protecting their Work and/or materials that may be susceptible to damage even if damage is the result of unforeseen weather events. Failure to do so will be sufficient cause for rejection of items in question, and any such items will be replaced by Contractor at no additional cost to Owner.
C. Verify that all pieces of equipment will fit through available openings in the building and that all equipment can be installed without modification to the building structure.

2.2 EQUIPMENT SCHEDULE

A. Equipment specified in the equipment schedules on the Drawings will be new and furnished complete with all accessories normally supplied with the catalog item listed and all other accessories necessary for a complete and operational installation.
B. Indicated equipment will require start-up by factory-trained personnel. Equipment so noted will require factory-approved service personnel who will provide service, including parts and labor, during the warranty period of equipment.

2.3 EQUIPMENT RATINGS

A. Equipment capacities as scheduled in the Drawings are at Project site altitude. Capacities of submitted equipment must be corrected for Project site altitude unless otherwise noted.

2.4 WORKMANSHIP

A. Provide workmanship and construction according to the best practices of the trade. Conceal Piping, ducting, and conduit unless otherwise noted, and installed square to the building lines. Work not meeting this requirement will be replaced or rebuilt without extra expense to Owner.

2.5 V-BELT DRIVES

A. Provide V-belt drives of fabric and rubber construction approved by the manufacturer. Match multiple belts, adjusted to drive the apparatus properly, and to prevent slippage and undue wear in starting motor nameplate rating.

2.6 BELT GUARDS

A. Provide for each V-belt drive a painted steel belt guard, constructed around a steel angle frame, securely bolted to the floor or apparatus. Completely enclose drives and pulleys to comply with safety requirements. Provide hinged access doors not less than 6 by 6 inches for access to motors and fan shafts for test purposes.

2.7 ELECTRICAL WIRING AND CONTROL EQUIPMENT

A. Provide disconnects, motor starters, relays, wiring, etc., that comply with requirements of this Section.
B. Mechanical Contractor must refer to the electrical control equipment and wiring shown on the Electrical Drawings. Any changes or additions required by specified or substituted equipment furnished will be the complete responsibility of Contractor furnishing the equipment.
C. Verify electrical equipment characteristics (voltage, etc.) by Mechanical Contractor prior to ordering. It is imperative that voltage and phase characteristics are verified with the Electrical Drawings.
D. Provide motors that comply with current applicable IEEE, ASA, and NEMA standards. Provide general-purpose motors that are open drip-proof machines for installation indoors and/or in protected locations.
    1. Provide totally enclosed fan cooled (TEFC) motors used in areas of exposure to weather or other environmental contamination.
    2. Provide rated explosion-proof motors when located in hazardous atmospheres.
    3. Type II weather-protected motors may be used instead of TEFC motors on roof fan units and similar equipment.
    4. Provide shields for motors mounted in direct sun to prevent direct radiation from the sun when the sun is 45 degrees F or greater above the horizon.
E. Unless indicated otherwise, provide motors that are NEMA Design B with a service factor of 1.15 with 40 degrees C rise and total temperature rise of 65 degrees C ambient and when powered from the system voltage feeding the motor.
    1. Provide TEFC motors that have a service factor of 1.00 with total temperature rise of 65 degrees C in the above conditions.
    2. Provide single-phase motors that are NEMA Type N split-phase induction motors with built-in thermal protectors. Single-phase motors connected to loads requiring high starting torque will be capacitor-start induction motors.
F. Provide motors that are copper wound, high power factor rated. Electric motors will be an energy-efficient type as defined in the latest edition of ANSI/NEMA Document MG 1: Motors and Generators. Provide motor efficiency information if requested by Architect.
G. If there is not a separate "Controls Contractor" for this Project, Mechanical Contractor is responsible for providing and installing necessary control wiring. Wiring and conduit are to be provided and installed as indicated in Division 26 Specifications.

2.8 EQUIPMENT AND PIPING SUPPORTS

A. Supporting systems for piping, equipment, and materials supported by the building structure will be submitted to Architect for approval prior to purchase and installation.

B. Roof Supports: Provide and install roof supports for uninsulated piping routed on the roof.

1. For single pipes up to 5 inches in size, such as gas pipes, provide MAPA, MS-4RA or MS-5RA roof supports, that consist of a 1-piece combination roof deck base, adjustable height pipe supports, and hard cast rubber roller with nylon bushings. Provide walk pad under pipe support as recommended by the pipe support manufacturer. Anchor pad and support to roof as recommended by support manufacturer.
2. Manufacturer's installation recommendations may vary depending on roof types. Installer is responsible for verifying the roof type and adhering to the applicable installation instructions.
3. Space roof supports as recommended by the manufacturer.

2.9 ROOF PENETRATIONS

A. Piping: Provide penetrations with factory-made assemblies designed specifically for the purpose. The use of pitch pans or pitch pockets is not allowed. Provide a factory-made penetration assembly as follows:

1. For pipes and conduits up to 3 inches in diameter that can or are intended to be turned to horizontal after passing through the roof (e.g., small electrical conduit, gas piping, refrigerant lines, water pipes, etc.) provide a device consisting of a curb assembly with a welded 18-gauge galvanized steel shell and base, 1-1/2 inches thick 3 pcf rigid insulation, 0.50-inch aluminum or 20-gauge galvanized cap with minimum 3-inch overhang and 1-inch rigid insulation, and 2- by 6-inch treated wood nailer; Custom Curb Model CPC, ThyCurb Model RP-2 with TC-1, 2, or 3 curb, or approved equivalent.

B. Ductwork without Equipment: Provide penetrations with a factory-made insulated roof curb. Fabricate curb of welded 18-guage galvanized steel shell and base plate, lined with 1-1/2-inch 3 pcf rigid insulation, a minimum 2- by 2-inch treated wood nailer, and be reinforced with 1-inch by 1-inch by 1-ft.-8-in. steel angel on sides 24 inches and larger; Custom Curb, Inc., ThyCurb, Roof Products and Systems, Pate, or approved equivalent.

C. Ductwork with Equipment: Provide roof-mounted equipment such as exhaust or supply fans, relief or intake hoods, packaged rooftop air conditioners, air handlers, etc., with an insulated roof curb designed to mate with the equipment and include a weatherproof enclosure. If a pre-insulated curb is not available, an uninsulated curb is acceptable if Contractor provides and installs field insulation per manufacturer's instructions. Deliver roof curbs to Roofing Contractor for installation.

D. General:

1. Coordinate roof flashing assemblies and roof curbs with other Work through Roofing Contractor to ensure that flashing, canting, insulation type and location is correct and appropriate for the specified roof construction type.
2. Select and provide roof curb so that the top of the curb will be level after installation. Provide tapered curb as required to match roof slope. The curb will provide a minimum clearance of 10 inches between the top of the finished roof surface and the top of the wood nailer, continuous around the curb perimeter.

3. Curb Fabrication: Unless otherwise noted, provide welded 18-gauge galvanized steel shell and base, mitered 3-inch cant, variable step to match roof insulation, 1-1/2-inch-thick insulation, and factory-installed treated wood nailer. Provide tapered curbs to match roof slope.
4. Roof penetration location indicated on the Drawings is approximate. Refer to the Architectural and Structural Drawings for the structural openings. Refer to "Cutting and Patching" paragraph in this Section for more information.
5. Provide other options for roof curbs as scheduled in the Drawings.

2.10 ACCESSIBILITY

A. Access Panels: Provide access panels where necessary for possible future replacement, adjustment, or maintenance of operating devices such as machinery, valves, dampers, switches, relays, etc., or to other critical non-operating devices such as pull boxes, inspection parts, gauges, etc. Access panels will be provided and installed by Contractor, whether or not shown in the Drawings, and approved by Architect of type, color and application.
   1. Where access panels are installed in fire rated construction, provide panels that are UL rated to maintain rating of the construction penetrated.

B. Access to Equipment:
   1. Pipes, tubing, conduit, etc., including but not limited to draining piping, electrical conduit, wiring not in conduit, and pneumatic control tubing will be installed in such a way so as allow convenient and serviceable removal, operation, use, or maintenance of equipment, access panels or doors, pathways (especially in attics or crawlspaces), observation ports, measurement, balancing devices, or junction boxes.
   2. If access for these purposes is prevented or made unreasonably difficult in the opinion of Architect, make modifications or repairs at no additional cost. Modifications or repairs will be considered neither complete nor adequate until Architect is satisfied that access for the above purpose is achieved.

2.11 PROTECTION OF PENETRATION

A. Penetrations of fire or smoke barriers will be sealed, sleeves (if any), insulation (if any), and vibration isolation (if any) that maintain the fire or smoke resistance rating of the barrier in accordance with the latest edition of NFPA 101 Life Safety Code. Refer to Section 07 84 13 "Penetration Firestopping" for penetration requirements.

B. Verify locations and type of partition penetrations from the Drawings. Provide Sealing material and methods per UL requirements.

2.12 BEDDING COURSE

A. Bedding Course: A naturally or artificially graded mixture of natural or crushed gravel, crushed stone, and natural or crushed sand; ASTM D2940; except with 100 percent passing a 1-inch sieve and not more than 8 percent passing a No. 200 sieve.

PART 3 - EXECUTION

3.1 STORAGE

A. Provide for proper storage of all materials and equipment and assume responsibility for losses due to any cause. Storage will be within the contract limits of the building site or in a bonded warehouse. Cover, store, and protect equipment and materials from inclement or detrimental conditions. Items that have become damaged, rusted, or rendered unusable will not be permitted to be installed.

B. Provide temporary storage facilities suitable for equipment stored at the job site. Provide rainproof and lockable storage as required. Materials or equipment stored on site that is not in a lockable rainproof storage facility will be stored above ground or above slab. Take necessary precautions to prevent entry of and/or damage from dirt, trash, water, or vermin. Equipment not properly stored and protected will be, at the discretion of Architect/Engineer, replaced at no additional cost to Owner. Do not store equipment or material on roofs unless specifically allowed in by Architect.

3.2 INSTALLATION AND ARRANGEMENT

A. Install Work to permit removal (without damage to other parts) of coils, heat exchanger bundles, boiler tubes, fan shafts and wheels, filters, belt guards, sheaves, and drives, and all other parts that might require periodic replacement or maintenance. Arrange pipes, ducts, and equipment to permit ready access to valves, traps, starters, motors, control components, and to clear opens of doors and of access panels.

B. Offsets, transitions, and changes in direction in pipes and ducts will be made as required to maintain proper headroom and pitch of sloping pipes whether indicated in the Drawings or not. Furnish and install all traps, air vents, sanitary vents, etc., as required to affect these offsets, transitions, and changes in direction.

C. Duct transitions and offsets required to connect ductwork to equipment will be made as required whether or not indicated in the Drawings.

3.3 PROTECTION OF WORK AND PROPERTY

A. Protect existing facilities, whether or not such facility is to be removed or relocated or remain as installed. Move or remove facilities so as not to cause interruption to the Work or Owner's Operation.

B. Cover and protect pipe and duct openings with caps or plugs during installation. Cover and protect fixtures against damage. At final completion, clean and deliver Work in an unblemished condition or refinished and repainted at the discretion of Architect.

3.4 CONCEALED AND EXPOSED WORK

A. "Concealed" is intended to mean within such spaces as pipe chases, pipe trenches, above plaster ceilings, in walls and buried pipe is inaccessible when building is completed. "Exposed" is intended to be within equipment rooms, unfinished spaces, above "pushup" ceilings, accessible pipe tunnels, etc., where pipe is accessible.

3.5 CONCRETE

A. Mechanical Contractor will coordinate requirements for concrete supporting or necessary mechanical equipment. All concrete will be furnished under the Architectural Divisions of these Specifications.

3.6 FIELD MEASUREMENTS

A. Verify the dimensions and conditions governing Work at the Project site and examine adjoining Work on which Work is dependent, for Project efficiency. Report Project conditions that require correction to Architect.

3.7 LUBRICATION

A. Provide oil and grease for the operation of equipment until acceptance. Repair or replace damaged bearings operated prior to Date of Substantial Completion. Protect bearings and shafts during installation and thoroughly lubricate the steel shafts to prevent corrosion.

3.8 MANUFACTURER'S DIRECTION

A. Install equipment in accordance with directions and recommendations provided by the manufacturer. Where manufacturer’s instructions conflict with the Drawings and Specifications, report conflicts to Architect, who will determine changes deemed necessary and desirable.

3.9 FLUSHING, CLEANING, AND STERILIZING

A. Before final connections are made in the piping systems, blow-out piping with air and completely wash-out with cleaning compounds. Flush the systems for complete removal of foreign and deleterious materials. Furnish temporary connections, valves, etc., required for this purpose.
B. After flushing, sterilize domestic water systems with an approved chlorinating agent to provide a dosage of not less than 50 ppm. After a minimum contact period of 8 hours, flush the system with clean water until the residual chlorine is no greater than the municipal water supply.

3.10 TESTS

A. Test storm, vent, and waste lines with either a 5-psi air test or a standing water test of 10 feet of head pressure. Do not test plastic pipe with air. Hold test for a minimum of one hour, or as required by local code.
B. Test new domestic cold, hot, and recirculating hot water service lines as follows:
    1. Test hydrostatically at not less than the working pressure of the system or by an air test of 50 psig. Do not test plastic pipe with air. Hold test for a minimum of 1 hour, or as required by local code. Use potable water for the hydrostatic test.
C. Test new gas lines at 1-1/2 times the proposed maximum working pressure, but not less than 5 psig. Hold test a minimum of 2 hours, or as required by local code.
D. Test fire protection system at 200 psig. Hold test for a minimum of 2 hours, or as required by local code.
E. Repair leaks and defects with new materials and retest piping or portion thereof until satisfactory results are obtained.

F. Tests will be witnessed and approved by Architect and the local Authority Having Jurisdiction (AHJ) before covering or insulating. Demonstrate satisfactory operation of blowers, pumps, and other equipment with moving parts to Architect. Equipment without movable parts will have pressure or other tests performed by Contractor to demonstrate satisfactory operation.
G. Furnish instruments, pumps, blowers, and equipment required for the testing.
H. Provide test result reports for inclusion on the Operations and Maintenance Manuals and submit one copy to Architect.

3.11 PAINTING

A. Thoroughly clean, primed (if not factory primed), and finish coat surfaces of equipment and material not provided with a factory finish coat with a high-quality alkyd industrial enamel of a color selected by Architect or Owner.

3.12 SPECIAL OPENINGS

A. Schedule delivery of large equipment requiring special openings for installation before enclosing of area. Where this is not possible, written notice of required openings that must be provided will be listed by size and location and submitted to General Contractor prior to enclosing the areas involved. Work required to construct openings and the associated cost of enclosing them will be done at no additional cost to Owner.

3.13 PLACING IN OPERATION

A. Ducts, pipes, equipment, controls, etc., will be cleaned of foreign debris and other deleterious material.
B. Prior to Date of Substantial Completion, thoroughly clean or replace strainers, lubricate bearings, and clean-out and prime drains. Clean filters permanent filters. Replace throwaway-type filters with new filters.
C. Place systems in operation.
D. Verify that controls are set to meet specified operating conditions.
    1. Example: Boiler operating control set at 180 degrees F. Limit control set at 200 degrees F.
E. Verify that parts of equipment are operable and that sequences of controls are properly set.
F. Adjust seating through the first year as required by Architect/Engineer.

3.14 BALANCING, TESTING, AND ADJUSTING THE MECHANICAL SYSTEMS

A. Include in proposal the cost of testing, adjusting, and balancing (TAB). Refer to the TAB Specification (Section 23 05 93 "Testing, Adjusting, and Balancing of HVAC"). Coordinate with TAB Contractor to correct deficiencies noted by the TAB Contractor during TAB testing.
B. Commissioning:
    1. Mechanical Contractor will coordinate and cooperate with the Commissioning Agent to correct deficiencies noted by the Commissioning Agent.

3.15 OPERATION AND MAINTENANCE INSTRUCTIONS

A. Prepare operating and maintenance manuals and deliver O&M manuals to Architect/Engineer for approval. Index manuals with dividers for each Section. Delivery and approval of required documents is a condition for final acceptance and payment. Refer to Section 01 70 00 "Execution and Closeout Requirements."

B. Each manual will contain, but not limited to, the following general sections:
   1. Certificates of acceptance from the inspecting authorities.
   2. Waiver of liens.
   3. Warranties with starting dates and end dates for each piece of equipment and/or for each system (warranties will begin on the date of Substantial Completion and acceptance by Owner).
   4. Names, telephone, and fax numbers, and addresses of all subcontractors, vendors, manufacturer's representatives, and warranty providers.
   5. Certification letters from each Contractor that each system furnished and installed by that Contractor and/or subcontractors is started up, balanced, adjusted, and checked for proper operation in accordance with the intent of the Contract Documents.
   6. Spare parts lists for each piece of equipment.
   7. Lubrication charts showing types of lubrication and application methods and frequencies.
   8. Filter cleaning or replacement schedule (on Contractor's letterhead stationery).
   9. Preventative maintenance schedule for checking all items such as belt drives, safety controls, oil and refrigerant charges, and seasonal change over recommendations. Cleaning of all strainers, traps, coils, tower pans, tubes, sprays, etc. (on Contractor's letterhead stationery).
   10. Normal operating instructions including a sequence of operations (on Contractor's letterhead stationery).
   11. Instructions as to procedures to be followed for emergency situations, such as alarms or safety items being tripped (on Contractor's letterhead stationery).
   12. Instruction on who to call for service during guarantee period (on Contractor's letterhead stationery).
   13. As-Built Drawings.
   14. Copy of approved Shop Drawing submittals including nameplate date, design parameters, name, telephone and fax numbers, address of vendor, manufacturer's representative, and warranty provider.

C. Final payment approval will not be granted until tests, balancing, and operating instruction portions have been completed.

3.16 INSTRUCTIONS TO OWNER

A. Instruct Owner's operating personnel in the operations and maintenance of mechanical systems and equipment. Provide a minimum of 8 hours of training. Furnish special servicing tools required for maintenance.

B. Conduct a demonstration of the installation upon completion and final acceptance of the Work. Provide a minimum 8-hour demonstration. Prior to the demonstration, ensure that Work has been completed, tested, balanced, and placed in proper operation. Provide qualified personnel to be present at demonstrations to operate systems and prove the proper performance of equipment. Coordinate demonstration schedule with Architect and Owner.

3.17 EXCAVATION FOR PIPE AND CONDUIT

A. Excavate trenches to indicated gradients, lines, depths, and elevations.

B. Excavate trenches to uniform widths to provide a working clearance on each side of pipe or conduit. Excavate trench walls vertically from trench bottom to 12 inches higher than top of pipe or conduit, unless otherwise indicated.

1. Trench Bottoms: Excavate and shape trench bottoms to provide uniform bearing and support of pipes and conduit. Shape subgrade to provide continuous support for bells, joints, and barrels of pipes and for joints, fittings, and bodies of conduits. Remove projecting stones and sharp objects along trench subgrade. Level bottom of all trenches and cover all PVC pipe with processed chat (small gravel).
    a. For pipes and conduit less than 6 inches in nominal diameter and flat-bottomed, multiple-duct conduit units, hand excavate trench bottoms and support pipe and conduit on an undisturbed subgrade.
    b. For pipes and conduit 6 inches or larger in nominal diameter, shape bottom of trench to support bottom 90 degrees of pipe circumference. Fill depressions with tamped sand backfill.
    c. Excavate trenches 4 inches deeper than elevation required in rock or other unyielding bearing material to allow for bedding course.

C. Place backfill and fill materials in layers not more than 8 inches in loose depth for material compacted by heavy compaction equipment, and not more than 4 inches in loose depth for material compacted by hand-operated tampers.

D. Backfill piping and conduit trenches across pavement with 2-sack lean concrete fill to within 12 inches of finished grade.

E. Compact soil to not less than the following percentages of maximum dry unit weight according to ASTM D698:

1. Under structures, building slabs, steps, and pavements, scarify and recompact top 12 inches of existing subgrade and each layer of backfill or fill material at 95 percent.
2. Under walkways, scarify and recompact top 6 inches below subgrade and compact each layer of backfill or fill material at 92 percent.
3. Under lawn or unpaved areas, scarify and recompact top 6 inches below subgrade and compact each layer of backfill or fill material at 85 percent.

F. Install detectable warning tape above conduits and pipe, 12 inches below finished grade, except 6 inches below subgrade under pavements and slabs.

G. Protection:

1. Protecting Graded Areas: Protect newly graded areas from traffic, freezing, and erosion. Keep free of trash and debris.
2. Repair and reestablish grades to specified tolerances where completed or partially completed surfaces become eroded, rutted, settled, or where they lose compaction due to subsequent construction operations or weather conditions.
    a. Scarify or remove and replace soil material to depth as directed by Architect/Engineer; reshape and recompact.
3. Where settling occurs before Project correction period elapses, remove finished surfacing, backfill with additional soil material, compact, and reconstruct surfacing.
    a. Restore appearance, quality, and condition of finished surfacing to match adjacent work, and eliminate evidence of restoration to the greatest extent possible.

H. Disposal of Surplus and Waste Materials:
   1. Disposal: Remove surplus satisfactory soil and waste material, including unsatisfactory soil, trash, and debris, and legally dispose of it off Owner's property unless otherwise directed by Owner.
   2. Repair: Repair to original condition damage to shrubs, grass, or structures by Contractor at no additional expense to Owner.

I. Bracing and Sheeting: Sheet and brace open cut trenches as required by Federal OSHA and the requirements of the State of Texas as necessary for the safety of workers or the protection of property.

END OF SECTION

SECTION 23 05 00.20 - BASIC MECHANICAL MATERIALS AND METHODS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. The following basic mechanical materials and methods to complement other Division 23 Sections.
      a. Piping materials and installation instructions common to most piping systems.
      b. Concrete equipment base construction requirements.
      c. Equipment nameplate data requirements.
      d. Labeling and identifying mechanical systems and equipment is specified in Section 23 05 53 "Identification for HVAC Piping and Equipment."
      e. Nonshrink grout for equipment installations.
      f. Field-fabricated metal and wood equipment supports.
      g. Installation requirements common to equipment Specification Sections.
      h. Cutting and patching.
      i. Touch-up painting and finishing.
   2. Pipe and pipe fitting materials are specified in piping system Sections.

B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.
   2. Section 23 05 00 "General Mechanical Requirements."
   3. Section 23 05 53 "Identification for HVAC Piping and Equipment."

1.2 DEFINITIONS

A. Pipe, pipe fittings, and piping include tube, tube fittings, and tubing.

B. Finished Spaces: Spaces other than mechanical and electrical equipment rooms, furred spaces, pipe and duct shafts, unheated spaces immediately below the roof, spaces above ceilings, unexcavated spaces, crawl spaces, and tunnels.

C. Exposed Interior Installations: Exposed to view indoors. Examples include finished occupied spaces and mechanical equipment rooms.

D. Exposed Exterior Installations: Exposed to view outdoors, or subject to outdoor ambient temperatures and weather conditions. Examples include rooftop locations.

E. Concealed Interior Installations: Concealed from view and protected from physical contact by building occupants. Examples include above ceilings and duct shafts.

F. Concealed Exterior Installations: Concealed from view and protected from weather conditions and physical contact by building occupants, but subject to outdoor ambient temperatures. Examples include installations within unheated shelters.

1.3 SUBMITTALS

A. General: Submit the following according to the Conditions of the Contract and Division 01 and Section 23 05 00 "General Mechanical Requirements."

B. Product data for following piping specialties:
   1. Mechanical sleeve seals.
   2. Dielectric Fittings.
   3. Access Doors.

1.4 QUALITY ASSURANCE

A. Qualify welding processes and operators for piping according to ASME "Boiler and Pressure Vessel Code," Section IX, "Welding and Brazing Qualifications."
   1. Comply with provisions of ASME B31 Series "Code for Pressure Piping."
   2. Certify that each welder has passed AWS qualification tests for the welding processes involved and that certification is current.
B. ASME A13.1 for lettering size, length of color field, colors, and viewing angles of identification devices.
C. Equipment Selection: Equipment of greater or larger power, dimensions, capacities, and ratings may be furnished provided such proposed equipment is approved in writing and connecting mechanical and electrical services, circuit breakers, conduit, motors, bases, and equipment spaces are increased. No additional costs will be approved for these increases if larger equipment is approved. If minimum energy ratings or efficiencies of the equipment are specified, the equipment must meet the design requirements and commissioning requirements.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Deliver pipes and tubes with factory-applied endcaps. Maintain endcaps through shipping, storage, and handling to prevent pipe-end damage and prevent entrance of dirt, debris, and moisture.
B. Protect stored pipes and tubes from moisture and dirt. Elevate above grade. When stored inside, do not exceed structural capacity of the floor.
C. Protect flanges, fittings, and piping specialties from moisture and dirt.
D. Protect stored plastic pipes from direct sunlight. Support to prevent sagging and bending.

1.6 SEQUENCING AND SCHEDULING

A. Coordinate mechanical equipment installation with other building components.
B. Arrange for chases, slots, and openings in building structure during progress of construction to allow for mechanical installations.
C. Coordinate the installation of required supporting devices and set sleeves in poured-in-place concrete and other structural components as they are constructed.
D. Sequence, coordinate, and integrate installations of mechanical materials and equipment for efficient flow of the Work. Coordinate installation of large equipment requiring positioning before closing in the building.
E. Coordinate connection of electrical services.
F. Coordinate connection of mechanical systems with exterior underground and overhead utilities and services. Comply with requirements of governing regulations, franchised service companies, and controlling agencies.
G. Coordinate requirements for access panels and doors where mechanical items requiring access are concealed behind finished surfaces. Access panels and doors are specified in this Section and Division 08.
H. Coordinate installation of identifying devices after completing covering and painting where devices are applied to surfaces. Install identifying devices before installing acoustical ceilings and similar concealment.

PART 2 - PRODUCTS

2.1 PIPE AND PIPE FITTINGS

A. Refer to individual piping system Specification Sections for pipe and fitting materials and joining methods.
B. Pipe Threads: ASME B1.20.1 for factory-threaded pipe and pipe fittings.

2.2 JOINING MATERIALS

A. Refer to individual piping system Specification Sections in Division 23 for special joining materials not listed below.
B. Pipe Flange Gasket Materials: Suitable for the chemical and thermal conditions of the piping system contents.
   1. ASME B16.21, nonmetallic, flat, asbestos-free, 1/8-inch maximum thickness, except where thickness or specific material is indicated.
      a. Full-Face Type: For flat-face, Class 125 cast-iron and cast-bronze flanges.
      b. Narrow-Face Type: For raised-face, Class 250 cast-iron and steel flanges.
   2. ASME B16.20 for grooved, ring-joint, steel flanges.
   3. AWWA C110, rubber, flat face, 1/8-inch-thick, except where other thickness is indicated; and full-face or ring type, except where type is indicated.
C. Flange Bolts and Nuts: ASME B18.2.1, carbon steel, except where other material is indicated.
D. Plastic Pipe Flange Gasket, Bolts, and Nuts: Type and material recommended by piping system manufacturer, except where other type or material is indicated.
E. Solder Filler Metal: ASTM B32.
   1. Alloy Sn95 or Alloy Sn94: Tin (approximately 95 percent) and silver (approximately 5 percent), having 0.10 percent lead content.
F. Brazing Filler Metals: AWS A5.8.
   1. BCuP Series: Copper-phosphorus alloys.
   2. BAg1: Silver alloy.
G. Welding Filler Metals: Comply with AWS D10.12 for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.
H. Solvent Cements: Manufacturer's standard solvents complying with the following:
   1. Chlorinated Poly (Vinyl Chloride) (CPVC): ASTM F493.
   2. Poly (Vinyl Chloride) (PVC): ASTM D2564.
I. Plastic Pipe Seals: ASTM F477, elastomeric gasket.
J. Flanged, Ductile-Iron Pipe Gasket, Bolts, and Nuts: AWWA C110, rubber gasket, carbon steel bolts, and nuts.
K. Couplings: Iron body sleeve assembly, fabricated to match outside diameters of plain-end pressure pipes.
   1. Sleeve: ASTM A126, Class B, gray iron.
   2. Followers: ASTM A47, Grade 32510, or ASTM A536 ductile iron.
   3. Gaskets: Rubber.
   4. Bolts and Nuts: AWWA C111.
   5. Finish: Enamel paint.

2.3 PIPING SPECIALTIES

A. Escutcheons: Manufactured wall, ceiling, and floor plates; deep-pattern type where required to conceal protruding fittings and sleeves.
   1. Inside Diameter: Closely fit around pipe, tube, and insulation.
   2. Outside Diameter: Completely cover opening.
   3. Cast Brass: One-piece, with setscrew.
      a. Finish: Rough brass.
      b. Finish: Polished chrome plate.
   4. Cast Brass: Split casting, with concealed hinge and setscrew.
      a. Finish: Rough brass.
      b. Finish: Polished chrome plate.
   5. Stamped Steel: One-piece, with setscrew and chrome-plated finish.
   6. Stamped Steel: One-piece, with spring clips and chrome-plated finish.
   7. Stamped Steel: Split plate, with concealed hinge, setscrew, and chrome-plated finish.
   8. Stamped Steel: Split plate, with concealed hinge, spring clips, and chrome-plated finish.
   9. Stamped Steel: Split plate, with exposed-rivet hinge, setscrew, and chrome-plated finish.
   10. Stamped Steel: Split plate, with exposed-rivet hinge, spring clips, and chrome-plated finish.
   11. Cast-Iron Floor Plate: One-piece casting.

B. Dielectric Fittings: Assembly or fitting having insulating material isolating joined dissimilar metals to prevent galvanic action and stop corrosion.
   1. Description: Combination of copper alloy and ferrous; threaded, solder, plain, and weld neck end types and matching piping system materials.
   2. Insulating Material: Suitable for system fluid, pressure, and temperature.
   3. Dielectric Unions: Factory-fabricated, union assembly for 250-psig minimum working pressure at a 180 degrees F temperature.
   4. Dielectric Flanges: Factory-fabricated, companion-flange assembly for 150- or 300-psig minimum pressure to suit system pressures.
   5. Dielectric-Flange Insulation Kits: Field-assembled, companion-flange assembly, full-face or ring type. Components include neoprene or phenolic gasket, phenolic or polyethylene bolt sleeves, phenolic washers, and steel backing washers.
      a. Provide separate companion flanges and steel bolts and nuts for 150- or 300-psig minimum working pressure to suit system pressures.
   6. Dielectric Couplings: Galvanized-steel coupling, having inert and noncorrosive, thermoplastic lining, with threaded ends and 300-psig minimum working pressure at 225 degrees F temperature.
   7. Dielectric Nipples: Electroplated steel nipple, having inert and noncorrosive thermoplastic lining, with combination of plain, threaded, or grooved end types and 300-psig working pressure at 225 degrees F temperature.

C. Mechanical Sleeve Seals: Modular, watertight mechanical type. Components include interlocking synthetic rubber links shaped to continuously fill annular space between pipe and sleeve. Connecting bolts and pressure plates cause rubber-sealing elements to expand when tightened.

D. Sleeves: The following materials are for wall, floor, slab, and roof penetrations:

1. Steel Sheet Metal: 24-gauge or heavier galvanized sheet metal, round tube closed with welded longitudinal joint.
2. Steel Pipe: ASTM A53, Type E, Grade A, Schedule 40, galvanized, plain ends.
3. Cast-Iron: Cast or fabricated wall pipe equivalent to ductile-iron pressure pipe, having plain ends and integral water stop, except where other features are specified.
4. Wall Penetration Systems: Wall sleeve assembly, consisting of housing, gaskets, and pipe sleeve, with 1 mechanical-joint end conforming to AWWA C110 and 1 plain pipe-sleeve end.
   a. Penetrating Pipe Deflection: Five percent without leakage.
   b. Housing: Ductile-iron casting having waterstop and anchor ring, with ductile-iron gland, steel studs and nuts, and rubber gasket conforming to AWWA C111, of housing and gasket size as required to fit penetrating pipe.
   c. Pipe Sleeve: AWWA C151, ductile-iron pipe.
   d. Housing-to-Sleeve Gasket: Rubber or neoprene push-on type of manufacturer's design.
5. Cast-Iron Sleeve Fittings: Commercially made sleeve having an integral clamping flange, with clamping ring, bolts, and nuts for membrane flashing.
   a. Underdeck Clamp: Clamping ring with setscrews.

2.4 GROUT

A. Nonshrink, Nonmetallic Grout: ASTM C1107, Grade B.

1. Characteristics: Post-hardening, volume-adjusting, dry, hydraulic-cement grout, nonstaining, noncorrosive, nongaseous, and recommended for interior and exterior applications.
2. Design Mix: 5,000-psi, 28-day compressive strength.
3. Packaging: Premixed and factory packaged.

2.5 ACCESS DOORS

A. Flush-mounted steel access doors with 16-gauge frame and 14-gauge panel. Prime coat finish. Concealed spring hinges, screwdriver cam-lock. Provide doors in fire-rated construction that are UL listed and labeled. Doors to be Milcor or approved equivalent.

PART 3 - EXECUTION

3.1 PIPING SYSTEMS - COMMON REQUIREMENTS

A. General: Install piping as described below, except where system Sections specify otherwise. Individual piping system Specification Sections in Divisions 21, 22, and 23 specify piping installation requirements unique to the piping system.

B. General Locations and Arrangements: Drawings (plans, schematics, and diagrams) indicate general location and arrangement of piping systems. Indicated locations and arrangements were used to size pipe and calculate friction loss, expansion, pump sizing, and other design considerations. Install piping as indicated, except where deviations to layout are approved on Coordination Drawings.
C. Install piping at indicated slope.
D. Install components having pressure rating equal to or greater than system operating pressure.
E. Install piping in concealed interior and exterior locations, except in equipment rooms and service areas.
F. Install piping free of sags and bends.
G. Install exposed interior and exterior piping at right angles or parallel to building walls. Diagonal runs are prohibited, except where indicated.
H. Install piping tight to slabs, beams, joists, columns, walls, and other building elements. Allow sufficient space above removable ceiling panels to allow for ceiling panel removal.
I. Install piping to allow application of insulation plus 1-inch clearance around insulation.
J. Locate groups of pipes parallel to each other, spaced to permit valve servicing.
K. Install fittings for changes in direction and branch connections.
L. Install couplings according to manufacturer's printed instructions.
M. Install pipe escutcheons for pipe penetrations of concrete and masonry walls, wallboard partitions, and suspended ceilings according to the following:
    1. Chrome-Plated Piping: Cast-brass, one-piece, with setscrew, and polished chrome-plated finish. Use split-casting escutcheons, where required, for existing piping.
    2. Uninsulated Piping Wall Escutcheons: Cast-brass or stamped-steel, with setscrew.
    3. Uninsulated Piping Floor Plates in Utility Areas: Cast-iron floor plates.
    4. Insulated Piping: Cast-brass or stamped-steel, with concealed hinge, spring clips, and chrome-plated finish.
    5. Piping in Utility Areas: Cast-brass or stamped-steel, with setscrew or spring clips.
N. Sleeves are required for core-drilled holes.
O. Install sleeves for pipes passing through concrete and masonry walls, concrete floor, roof slabs, and where indicated.
P. Install sleeves for pipes passing through concrete and masonry walls, gypsum-board partitions, concrete floor, and roof slabs, and where indicated.
    1. Cut sleeves to length for mounting flush with both surfaces.
        a. Exception: Extend sleeves installed in floors of mechanical equipment areas or other wet areas 4 inches above finished floor level. Extend cast-iron sleeve fittings below floor slab as required to secure clamping ring where specified.
    2. Build sleeves into new walls and slabs as work progresses.
    3. Install large enough sleeves to provide 1/4-inch annular clear space between sleeve and pipe or pipe insulation. Use the following sleeve materials:
        a. Steel Pipe Sleeves: For pipes smaller than 6 inches.
        b. Steel Sheet-Metal Sleeves: For pipes 6 inches and larger that penetrate gypsum board partitions.
        c. Cast-Iron Sleeve Fittings: For floors having membrane waterproofing. Secure flashing between clamping flanges. Install section of cast-iron soil pipe to extend sleeve to 4 inches above finished floor level. Flashing is specified in Division 07.
            1) Seal space outside of sleeve fittings with nonshrink, nonmetallic grout.
    4. Except for below-grade wall penetrations, seal annular space between sleeve and pipe or pipe insulation, using elastomeric joint sealants specified in Division 07.

Q. Above Grade, Exterior Wall, and Pipe Penetrations: Seal penetrations using sleeves and mechanical sleeve seals. Size sleeve for 1-inch annular clear space between pipe and sleeve for installation of mechanical seals.
   1. Install steel pipe for sleeves smaller than 6 inches.
   2. Install cast-iron wall pipes for sleeves 6 inches and larger.
   3. Assemble and install mechanical seals according to manufacturer's printed instructions.

R. Below Grade, Exterior Wall, and Pipe Penetrations: Install cast-iron wall pipes for sleeves. Seal pipe penetrations using mechanical sleeve seals. Size sleeve for 1-inch annular clear space between pipe and sleeve for installation of mechanical seals.
   1. Below Grade, Exterior Wall, and Pipe Penetrations: Install ductile-iron wall penetration system sleeves according to manufacturer's printed installation instructions.

S. Fire Barrier Penetrations: Maintain indicated fire rating of walls, partitions, ceilings, and floors at pipe penetrations. Seal pipe penetrations with firestopping sealant material. Firestopping materials are specified in Division 07.

T. Verify final equipment locations for roughing in.

U. Refer to equipment specifications in other Sections for roughing-in requirements.

V. Piping Joint Construction: Join pipe and fittings as follows and as specifically required in individual piping system Sections.
   1. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.
   2. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.
   3. Soldered Joints: Construct joints according to AWS "Soldering Manual," in "The Soldering of Pipe and Tube" chapter.
   4. Brazed Joints: Construct joints according to AWS "Brazing Manual" in the "Pipe and Tube" chapter.
   5. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full inside diameter. Join pipe fittings and valves as follows:
      a. Note the internal length of threads in fittings or valve ends, and proximity of internal seat or wall, to determine how far pipe should be threaded into joint.
      b. Apply appropriate tape or thread compound to external pipe threads (except where dry seal threading is specified).
      c. Align threads at point of assembly.
      d. Tighten joint with wrench. Apply wrench to valve end into which pipe is being threaded.
      e. Damaged Threads: Do not use pipe or pipe fittings having threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.
   6. Welded Joints: Construct joints according to AWS D10.12 "Recommended Practices and Procedures for Welding Low Carbon Steel Pipe" using qualified processes and welding operators according to the "Quality Assurance" Article.
   7. Flanged Joints: Align flange surfaces parallel. Select appropriate gasket material, size, type, and thickness for service application. Install gasket concentrically positioned. Assemble joints by sequencing bolt tightening to make initial contact of flanges and gaskets as flat and parallel as possible. Use suitable lubricants on bolt threads. Tighten bolts gradually and uniformly using torque wrench.

W. Piping Connections: Except as otherwise indicated, make piping connections as specified below.
   1. Install unions in piping 2 inches and smaller adjacent to each valve and at final connection to each piece of equipment having a 2-inch or smaller threaded pipe connection.
   2. Install flanges in piping 2-1/2 inches and larger adjacent to flanged valves and at final connection to each piece of equipment having flanged pipe connection.
   3. Dry Piping Systems (Gas): Install dielectric unions and flanges to connect piping materials of dissimilar metals.
   4. Wet Piping Systems (Water): Install dielectric coupling and nipple fittings to connect piping materials of dissimilar metals.

3.2 EQUIPMENT INSTALLATION - COMMON REQUIREMENTS

A. Install equipment to provide the maximum possible headroom where mounting heights are not indicated.
B. Install equipment according to approved submittal data. Portions of the Work are shown only in diagrammatic form. Refer conflicts to Architect.
C. Install equipment level and plumb, parallel, and perpendicular to other building systems and components in exposed interior spaces, except where otherwise indicated.
D. Install mechanical equipment to facilitate servicing, maintenance, and repair or replacement of equipment components. Connect equipment for ease of disconnecting, with minimum of interference with other installations. Extend grease fittings to an accessible location.
E. Install equipment giving right-of-way to piping systems installed at a required slope.

3.3 ACCESS DOORS

A. Furnish an access door for each pipe chase for each floor. This includes both toilet plumbing chases and pipe riser chases. Access doors assembly to be 16 by 16 inches. Access doors are not shown on floor plans. Access door locations shall be field verified.
B. Also, furnish access doors in all non-removable ceilings and in partitions and walls where necessary access to plumbing cleanouts, shock absorbers, fire dampers, manual dampers, valves, and other mechanical devices requiring access. Size these as required for access with minimum of 12 by 12 inches.
C. Any access doors furnished for installation in fire-rated surfaces or assembly shall carry an approved fire rating for that use.
D. Any access doors furnished for installation in glued-on acoustical surfaces or assembly shall have recessed doors to allow installation of tiles.
E. Provide all access doors to General Contractor for them to construct into the building.

3.4 PAINTING AND FINISHING

A. Refer to Division 09 for field painting requirements.
B. Damage and Touch-Up: Repair marred and damaged factory-painted finishes with materials and procedures to match original factory finish.

3.5 CONCRETE BASES

A. Construct concrete equipment bases of dimensions indicated, but not less than 4 inches larger than supported unit in both directions. Follow supported equipment manufacturer's setting templates for anchor bolt and tie locations. Use 3,000-psi, 28-day compressive strength concrete and reinforcement use fibrillated or monofilament polypropylene fibers engineered and designed for use in concrete, complying with ASTM C1116, Type III, 1/2-inch to 1-1/2 inches long. Uniformly disperse in concrete mix at manufacturer’s recommended rate, but not less than 1.5 lb./cu. yd.

3.6 ERECTION OF METAL SUPPORTS AND ANCHORAGE

A. Cut, fit, and place miscellaneous metal supports accurately in location, alignment, and elevation to support and anchor mechanical materials and equipment.
B. Field Welding: Comply with AWS D1.1 "Structural Welding Code - Steel."

3.7 ERECTION OF WOOD SUPPORTS AND ANCHORAGE

A. Cut, fit, and place wood grounds, nailers, blocking, and anchorage to support and anchor mechanical materials and equipment.
B. Select fastener sizes that will not penetrate members where opposite side will be exposed to view or will receive finish materials. Make tight connections between members. Install fasteners without splitting wood members.
C. Attach to substrates as required to support applied loads.

3.8 CUTTING AND PATCHING

A. Cut, channel, chase, and drill floors, walls, partitions, ceilings, and other surfaces necessary for mechanical installations. Perform cutting by skilled mechanics of the trades involved.
B. Repair cut surfaces to match adjacent surfaces.

3.9 GROUTING

A. Install non-metallic, non-shrink grout for mechanical equipment base bearing surfaces, pump and other equipment base plates, and anchors. Mix grout according to manufacturer's printed instructions.
B. Clean surfaces that will come into contact with grout.
C. Provide forms for placement of grout, as required.
D. Avoid air entrapment when placing grout.
E. Place grout to completely fill equipment bases.
F. Place grout on concrete bases to provide a smooth bearing surface for equipment.
G. Place grout around anchors.
H. Cure placed grout according to manufacturer's printed instructions.

3.10 DEMOLITION

A. Disconnect, demolish, and remove work specified under Divisions 21, 22, and 23 and as indicated.
B. Where pipe, ductwork, insulation, or equipment to remain is damaged or disturbed, remove damaged portions and install new products of equal capacity and quality.
C. Accessible Work: Remove indicated exposed pipe and ductwork in its entirety.
D. Abandoned Work: Cut and remove buried pipe abandoned in place, 2 inches beyond the face of adjacent construction. Cap and patch surface to match existing finish.
E. Removal: Remove indicated equipment from the Project site.
F. Temporary Disconnection: Remove, store, clean, reinstall, reconnect, and make operational equipment indicated for relocation.

END OF SECTION

SECTION 23 05 29 - HANGERS AND SUPPORTS FOR HVAC PIPING AND EQUIPMENT

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Pipe hangers and supports.
   2. Hanger rods.
   3. Equipment bases and supports.

B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.
   2. Section 03 30 00 "Cast-in-Place Concrete."
   3. Section 23 05 00 "General Mechanical Requirements."

1.2 REFERENCE STANDARDS

A. American Welding Society:
   1. AWS D1.1 - Structural Welding Code - Steel.

B. ASME International:
   1. ASME B31.1 - Power Piping.
   2. ASME B31.5 - Refrigeration Piping and Heat Transfer Components.
   3. ASME B31.9 - Building Services Piping.

C. ASTM International:
   1. ASTM E119 - Standard Test Methods for Fire Tests of Building Construction and Materials.
   2. ASTM E814 - Standard Test Method for Fire Tests of Penetration Firestop Systems.
   3. ASTM E1966 - Standard Test Method for Fire-Resistive Joint Systems.
   4. ASTM F708 - Standard Practice for Design and Installation of Rigid Pipe Hangers.

D. FM Global:
   1. FM - Approval Guide.

E. Manufacturers Standardization Society of the Valve and Fittings Industry:
   1. MSS SP-58 - Pipe Hangers and Supports - Materials, Design, Manufacture, Selection, Application, and Installation.

F. UL:
   1. UL - Fire-resistance-rated Systems and Products.
   2. UL 263 - Fire Tests of Building Construction and Materials.
   3. UL 1479 - Fire Tests of Through-Penetration Firestops.
   4. UL 2079 - Tests for Fire Resistance of Building Joint Systems.

1.3 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this Section with minimum 3 years' experience.

B. Installer: Company specializing in performing Work of this Section with minimum 3 years' experience.

C. Welders: AWS qualified within previous 12 months for employed weld types.

1.4 DELIVERY, STORAGE, AND HANDLING

A. Inspection: Accept materials on site in manufacturer's original packaging and inspect for damage.
B. Store materials according to manufacturer instructions.
C. Protection:
1. Protect materials from moisture and dust by storing in clean, dry location remote from construction operations areas.
2. Provide additional protection according to manufacturer instructions.

1.5 EXISTING CONDITIONS

A. Field Measurements:
1. Verify field measurements prior to fabrication.

1.6 WARRANTY

A. Refer to Division 01 and Section 23 05 00 "General Mechanical Requirements."

PART 2 - PRODUCTS

2.1 PIPE HANGERS AND SUPPORTS

A. Refrigerant Piping:
1. Conform to ASME B31.5, ASTM F708, or MSS SP-58.
2. Hangers for Pipe Sizes 1/2-Inch to 1-1/2 Inches: Carbon steel, adjustable swivel, split ring.
3. Hangers for Pipe Sizes 2 Inches and Larger: Carbon steel, adjustable, clevis.
4. Multiple or Trapeze Hangers: Steel channels with welded spacers and hanger rods.
5. Wall Support for Pipe Sizes 3 Inches and Smaller: Cast iron hook.
6. Vertical Support: Steel riser clamp.
7. Floor Support: Cast iron adjustable pipe saddle, lock nut, nipple, floor flange, and concrete pier or steel support.
8. Copper Pipe Support: Copper-plated carbon-steel ring.
B. Accessories:
1. Hanger Rods: Mild steel continuously threaded.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify that openings are ready to receive sleeves.
B. Verify that openings are ready to receive firestopping.

3.2 INSTALLATION

A. Pipe Hangers and Supports:
1. Comply with ASME B31.1, B31.5, or B31.9.
2. Comply with ASTM F708, or MSS SP-58.
3. Support horizontal piping as scheduled.
4. Minimum Hanger Spacing: 1/2-inch between finished covering and adjacent Work.
5. Place hangers within 12 inches of each horizontal elbow.
6. Minimum Vertical Hanger Adjustment: 1-1/2 inches.
7. Support vertical piping at every floor.
8. If piping is installed in parallel and at same elevation, provide multiple-pipe or trapeze hangers.
9. Support riser piping independently of connected horizontal piping.
10. Provide copper-plated hangers and supports for copper piping.
11. Design hangers for pipe movement without disengagement of supported pipe.
12. Painting and Coating:
a. Prime coat exposed steel hangers and supports.
b. Hangers and supports located in crawl spaces, pipe shafts, and suspended ceiling spaces are not considered exposed.
13. Insulation:
a. Provide clearance in hangers and from structure and other equipment for installation of insulation.

B. Equipment Bases and Supports:
1. Provide housekeeping pads of concrete as specified in Section 03 30 00 "Cast-in-Place Concrete."
2. Minimum Size: Four inches thick and extending 6 inches beyond supported equipment.
3. Use templates furnished with equipment to install equipment anchor bolts and accessories.

3.3 FIELD QUALITY CONTROL

A. Inspect installed fire-stopping for compliance with Specifications and submitted schedule.

3.4 CLEANING

A. Clean adjacent surfaces of firestopping materials.

3.5 PROTECTION

A. Protect adjacent surfaces from damage by material installation.

3.6 SCHEDULES

A. Hydronic Piping Hanger Spacing:

PIPE MATERIAL	MAXIMUM HANGER SPACING	HANGER ROD DIAMETER
Copper tube, 1-1/4-inch and smaller	6 feet	1/2-inch
Copper tube, 1-1/2-inch and larger	10 feet	1/2-inch
Steel, 3 inches and smaller	12 feet	1/2-inch
Steel, 4 inches and larger	12 feet	5/8-inch

END OF SECTION

SECTION 23 05 53 - IDENTIFICATION FOR HVAC PIPING AND EQUIPMENT

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Nameplates.
   2. Tags.
   3. Stencils.
   4. Pipe Markers.
   5. Ceiling Tacks.
   6. Labels.

B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.
   2. Section 23 05 00 "General Mechanical Requirements."

C. Contractor shall match the labeling and identification standard for HVAC systems as required by the Midland International Air & Space Port system.

1.2 REFERENCES

A. American Society of Mechanical Engineers:
   1. ASME A13.1 - Scheme for the Identification of Piping Systems.

1.3 FIELD MEASUREMENTS

A. Verify field measurements prior to fabrication.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Seton Identification Products
B. Brimar Industries
C. Substitutions: Refer to Section 23 05 00 "General Mechanical Requirements."

2.2 NAMEPLATES

A. Product Description: Laminated 3-layer plastic with engraved black letters on light contrasting background color.

2.3 TAGS

A. Metal Tags:
   1. Brass with stamped letters; tag size minimum 1-1/2 inches diameter with finished edges.

B. Information Tags:
   1. Clear plastic with printed "Danger," "Caution," or "Warning" and message; size 3-1/4 by 5-5/8 inches with grommet and self-locking nylon ties.

C. Tag Chart: Typewritten letter size list of applied tags and location in anodized aluminum frame.

2.4 STENCILS

A. Stencils: With clean-cut symbols and letters of following size:
   1. Up to 2 Inches Outside Diameter of Insulation or Pipe: 1/2-inch-high letters.
   2. 2-1/2 to 6 Inches Outside Diameter of Insulation or Pipe: 1-inch-high letters.
   3. Over 6 Inches Outside Diameter of Insulation or Pipe: 1-3/4-inch-high letters.
   4. Ductwork and Equipment: 1-3/4-inch-high letters.

B. Stencil Paint: As specified in Division 09, semi-gloss enamel, colors, and lettering size conforming to ASME A13.1.

2.5 PIPE MARKERS

A. Color and Lettering: Conform to ASME A13.1.
   1. Factory fabricated, flexible, semi-rigid plastic, preformed to fit around pipe or pipe covering. Larger sizes may have maximum sheet size with spring fastener.

B. Plastic Tape Pipe Markers
   1. Flexible, vinyl film tape with pressure sensitive adhesive backing and printed markings.

C. Plastic Underground Pipe Markers
   1. Bright colored continuously printed plastic ribbon tape, minimum 6 inches wide by 4 milsthick, manufactured for direct burial service.

2.6 CEILING TACKS

A. Description: Steel with 3/4-inch-diameter color-coded head.

B. Color code as follows:
   1. HVAC Equipment: Yellow.
   2. Plumbing valves: Green.

2.7 LABELS

A. Description: Aluminum size 1.9- by 0.75-inch, adhesive-backed, with printed identification.

PART 3 - EXECUTION

3.1 PREPARATION

A. Degrease and clean surfaces to receive adhesive for identification materials.

B. Prepare surfaces per Division 09 for stencil painting.

3.2 INSTALLATION

A. Apply stencil painting per Division 09.
B. Install identifying devices after completion of coverings and painting.
C. Install plastic nameplates with corrosive-resistant mechanical fasteners, or adhesive.
D. Install labels with sufficient adhesive for permanent adhesion and seal with clear lacquer. For unfinished canvas covering, apply paint primer before applying labels.
E. Install tags using corrosion resistant chain. Number tags consecutively by location.
F. Install underground plastic pipe markers 6 to 8 inches below finished grade, directly above buried pipe.
G. Identify air handling units, pumps, heat transfer equipment, tanks, and water treatment devices with plastic nameplates. Identify in-line pumps and other small devices with tags.
H. Identify control panels and major control components outside panels with plastic nameplates.
I. Identify valves in main and branch piping with tags.
J. Identify air terminal units and radiator valves with numbered tags.
K. Tag automatic controls, instruments, and relays. Key to control schematic.
L. Identify piping, concealed, or exposed, with plastic pipe markers, plastic tape pipe markers, or stenciled painting. Use tags on piping 3/4-inch-diameter and smaller. Identify service, flow direction, and pressure. Install in clear view and align with axis of piping. Locate identification not to exceed 20 feet on straight runs including risers and drops, adjacent to each valve and tee, at each side of penetration of structure or enclosure, and at each obstruction.
M. For exposed natural gas lines other than steel pipe, attach yellow pipe labels with "GAS" in black lettering, at maximum 5-foot spacing.
N. Identify ductwork with plastic nameplates or stenciled painting. Identify with air handling unit identification number and area served. Locate identification at air handling unit, at each side of penetration of structure or enclosure, and at each obstruction.
O. Provide ceiling tacks to locate valves or dampers above T-bar type panel ceilings. Locate in corner of panel closest to equipment.

END OF SECTION

SECTION 23 05 93 - TESTING, ADJUSTING, AND BALANCING FOR HVAC

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Testing, adjusting, and balancing of air systems.
   2. Testing, adjusting, and balancing of hydronic and refrigerating systems.
   3. Measurement of final operating condition of HVAC systems.

B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.
   2. Section 23 05 00 "General Mechanical Requirements."

1.2 REFERENCES

A. Associated Air Balance Council:
   1. AABC MN-1 - National Standards for Testing and Balancing Heating, Ventilating, and Air Conditioning Systems.

B. American Society of Heating, Refrigerating and Air-Conditioning Engineers:
   1. ASHRAE 111 - Practices for Measurement, Testing, Adjusting and Balancing of Building Heating, Ventilation, Air-Conditioning and Refrigeration Systems.

C. Natural Environmental Balancing Bureau:
   1. NEBB - Procedural Standards for Testing, Adjusting, and Balancing of Environmental Systems.

D. Testing Adjusting and Balancing Bureau:
   1. TABB - International Standards for Environmental Systems Balance.

1.3 SUBMITTALS

A. Division 01 and Section 23 05 00 "General Mechanical Requirements."

B. Prior to commencing Work, submit proof of latest calibration date of each instrument.

C. Test Reports: Indicate data on AABC MN-1 National Standards for Total System Balance forms or NEBB Report forms.

D. Field Reports: Indicate deficiencies preventing proper testing, adjusting, and balancing of systems and equipment to achieve specified performance.

E. Prior to commencing Work, submit report forms or outlines indicating adjusting, balancing, and equipment data required. Include detailed procedures, agenda, sample report forms and copy of AABC National Project Performance Guaranty or NEBB Certificate of Conformance Certification.

F. Submit draft copies of report for review before final acceptance of Project.

G. Furnish reports in pdf electronic format, complete with table of contents page and indexing tabs, with cover identification at front and side. Include set of reduced drawings with air outlets and equipment identified to correspond with data sheets and indicating thermostat locations.

1.4 CLOSEOUT SUBMITTALS

A. Project Record Documents: Record actual locations of balancing valves and rough setting.
B. Operation and Maintenance Data: Furnish final copy of testing, adjusting, and balancing report inclusion in operating and maintenance manuals.

1.5 QUALITY ASSURANCE

A. Perform Work in accordance with AABC MN-1 National Standards for Field Measurement and Instrumentation, Total System Balance or NEBB Procedural Standards for Testing, Balancing and Adjusting of Environmental Systems.

1.6 QUALIFICATIONS

A. Perform Work under supervision of AABC Certified Test and Balance Engineer or NEBB Certified Testing, Balancing, and Adjusting Supervisor registered professional engineer experienced in performance of this Work and licensed in State of Texas.

1.7 SEQUENCING

A. Sequence balancing between completion of systems tested and date of Substantial Completion.

1.8 SCHEDULING

A. Schedule and provide assistance in final adjustment.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify systems are complete and operable before commencing work. Verify the following:
1. Systems are started and operating in safe and normal condition.
2. HVAC control systems are installed complete and operable.
3. Proper thermal overload protection is in place for electrical equipment.
4. Final filters are clean and in place. If required, install temporary media in addition to final filters.
5. Duct systems are clean of debris.
6. Fans are rotating correctly.
7. Fire and volume dampers are in place and open.
8. Air coil fins are cleaned and combed.
9. Access doors are closed, and duct end caps are in place.
10. Air outlets are installed and connected.
11. Duct system leakage is minimized.

12. Hydronic systems are flushed, filled, and vented.
13. Pumps are rotating correctly.
14. Proper strainer baskets are clean and in place or in normal position.
15. Service and balancing valves are open.

3.2 PREPARATION

A. Furnish instruments required for testing, adjusting, and balancing operations.
B. Make instruments available to Architect/Engineer to facilitate spot checks during testing.

3.3 INSTALLATION TOLERANCES

A. Air Handling Systems: Adjust to within plus or minus 10 percent of design.
B. Air Outlets and Inlets: Adjust total to within plus 10 percent and minus 5 percent of design to space. Adjust outlets and inlets in space to within plus or minus 10 percent of design.
C. Hydronic Systems: Adjust to within plus or minus 10 percent of design.

3.4 ADJUSTING

A. Verify recorded data represents actual measured or observed conditions.
B. Permanently mark settings of valves, dampers, and other adjustment devices allowing settings to be restored. Set and lock memory stops.
C. After adjustment, take measurements to verify balance has not been disrupted. If disrupted, verify correcting adjustments have been made.
D. Report defects and deficiencies noted during performance of services, preventing system balance.
E. Leave systems in proper working order, replacing belt guards, closing access doors, closing doors to electrical switch boxes, and restoring thermostats to specified settings.
F. At final inspection, recheck random selections of data recorded in report. Recheck points or areas as selected and witnessed by Owner.
G. Check and adjust systems approximately 6 months after final acceptance and submit report.

3.5 AIR SYSTEM PROCEDURE

A. Adjust air handling and distribution systems to obtain required or design supply, return, and exhaust air quantities at site altitude.
B. Make air flow rate measurements in main ducts by Pitot tube traverse of entire cross-sectional area of duct.
C. Measure air quantities at air inlets and outlets.
D. Use volume control devices to regulate air quantities only to extent adjustments do not create objectionable air motion or sound levels. Effect volume control by using volume dampers located in ducts.
E. Vary total system air quantities by adjustment of fan speeds. Provide sheave drive changes to vary fan speed. Vary branch air quantities by damper regulation.
F. Provide system schematic with required and actual air quantities recorded at each outlet or inlet.
G. Measure static air pressure conditions on air supply units, including filter and coil pressure drops, and total pressure across fan. Make allowances for 50 percent loading of filters.
H. Adjust outside air automatic dampers, outside air, return air, and exhaust dampers for design conditions.
I. Measure temperature conditions across outside air, return air, and exhaust dampers to check leakage.

J. At modulating damper locations, take measurements and balance at extreme conditions.
K. For variable air volume system powered units set volume controller to airflow setting indicated. Confirm connections properly made and confirm proper operation for automatic variable-air-volume temperature control.

3.6 WATER SYSTEM PROCEDURE

A. Adjust water systems, after air balancing, to obtain design quantities.
B. Use calibrated Venturi tubes, orifices, or other metered fittings and pressure gauges to determine flow rates for system balance. Where flow-metering devices are not installed, base flow balance on temperature difference across various heat transfer elements in system.
C. Confirm air bleeds indicate system is full of water.
D. Adjust systems to obtain specified pressure drops and flows through heat transfer elements before thermal testing. Perform balancing by measurement of temperature differential in conjunction with air balancing.
E. Perform system balance with automatic control valves fully open triple duty valves fully open, and pump VFDs at 100 percent speed.
F. Confirm pump rotation and differential pressure at full flow.
G. Perform adjustment of water distribution systems by the following measures:
    1. Reduce total system flow rate first by reducing speed of VFD.
    2. Use balancing cocks, valves, and fittings.
H. Do not use service or shut-off valves for balancing unless designed for balancing and shut-off functions. Where available pump capacity is less than total flow requirements or individual system parts, simulate full flow in one part by temporary restriction of flow to other parts.

3.7 SCHEDULES

A. Equipment Requiring Testing, Adjusting, and Balancing:
    1. Plumbing Pumps.
    2. HVAC Pumps.
    3. Air-Cooled Refrigerant Condensers.
    4. Computer Room Air Conditioning Units.
    5. Air Handling Units.
    6. All New Exhaust Fan Systems.
    7. Air Inlets and Outlets.
    8. Refrigerant Leakage Detection System.
    9. CO2 Detection System.
    10. New Boilers and Associated Pumps (Refer to renovation/HVAC Upgrades portion of construction Drawings).
B. Report Forms:
    1. Title Page:
        a. Name of Testing, Adjusting, and Balancing Agency.
        b. Address of Testing, Adjusting, and Balancing Agency.
        c. Telephone and facsimile numbers of Testing, Adjusting, and Balancing Agency.
        d. Project name.
        e. Project location.
        f. Project Architect.
        g. Project Engineer.
        h. Project Contractor.

i. Project altitude.
j. Report date.

2. Summary Comments:
   a. Design versus final performance.
   b. Notable characteristics of system.
   c. Description of systems operation sequence.
   d. Summary of outdoor and exhaust flows to indicate building pressurization.
   e. Nomenclature used throughout report.
   f. Test conditions.
3. Instrument List:
   a. Instrument.
   b. Manufacturer.
   c. Model number.
   d. Serial number.
   e. Range.
   f. Calibration date.
4. Electric Motors:
   a. Manufacturer.
   b. Model/Frame.
   c. HP/BHP and kW.
   d. Phase, voltage, amperage; nameplate, actual, no load.
   e. RPM.
   f. Service factor.
   g. Starter size, rating, heater elements.
   h. Sheave Make/Size/Bore.
5. V-Belt Drive:
   a. Identification/location.
   b. Required driven RPM.
   c. Driven sheave, diameter, and RPM.
   d. Belt, size, and quantity.
   e. Motor sheave diameter and RPM.
   f. Center-to-center distance, maximum, minimum, and actual.
6. Pump Data:
   a. Identification/number.
   b. Manufacturer.
   c. Size/model.
   d. Impeller.
   e. Service.
   f. Design flow rate, pressure drop, BHP and kW.
   g. Actual flow rate, pressure drop, BHP and kW.
   h. Discharge pressure.
   i. Suction pressure.
   j. Total operating head pressure.
   k. Shut off, discharge, and suction pressures.
   l. Shut off, total head pressure.
7. Air Cooled Condenser:
   a. Identification/number.
   b. Location.
   c. Manufacturer.
   d. Model number.
   e. Serial number.

f. Entering DB air temperature, design and actual.
g. Leaving DB air temperature, design and actual.
h. Number of compressors.

8. Cooling Coil Data:
   a. Identification/number.
   b. Location.
   c. Service.
   d. Manufacturer.
   e. Air flow, design and actual.
   f. Entering air DB temperature, design and actual.
   g. Entering air WB temperature, design and actual.
   h. Leaving air DB temperature, design and actual.
   i. Leaving air WB temperature, design and actual.
   j. Saturated suction temperature, design and actual.
   k. Air pressure drop, design and actual.
9. Heating Coil Data:
   a. Identification/number.
   b. Location.
   c. Service.
   d. Manufacturer.
   e. Airflow, design and actual.
   f. Entering air temperature, design and actual.
   g. Leaving air temperature, design and actual.
   h. Air pressure drop, design and actual.
10. Air Moving Equipment:
   a. Location.
   b. Manufacturer.
   c. Model number.
   d. Serial number.
   e. Arrangement/class/discharge.
   f. Air flow, specified and actual.
   g. Return air flow, specified and actual.
   h. Outside air flow, specified and actual.
   i. Total static pressure (total external), specified and actual.
   j. Inlet pressure.
   k. Discharge pressure.
   l. Sheave make/size/bore.
   m. Number of belts/make/size.
   n. Fan RPM.
11. Return Air/Outside Air Data:
   a. Identification/location.
   b. Design airflow.
   c. Actual air flow.
   d. Design return airflow.
   e. Actual return airflow.
   f. Design outside airflow.
   g. Actual outside airflow.
   h. Return air temperature.
   i. Outside air temperature.
   j. Required mixed air temperature.
   k. Actual mixed air temperature.

l. Design outside/return air ratio.
m. Actual outside/return air ratio.

12. Exhaust Fan Data:
    a. Location.
    b. Manufacturer.
    c. Model number.
    d. Serial number.
    e. Air flow, specified and actual.
    f. Total static pressure (total external), specified and actual.
    g. Inlet pressure.
    h. Discharge pressure.
    i. Sheave make/size/bore.
    j. Number of belts/make/size.
    k. Fan RPM.
13. Duct Traverse:
    a. System zone/branch.
    b. Duct size.
    c. Area.
    d. Design velocity.
    e. Design air flow.
    f. Test velocity.
    g. Test air flow.
    h. Duct static pressure.
    i. Air temperature.
    j. Air correction factor.
14. Duct Leak Test:
    a. Description of ductwork under test.
    b. Duct design operating pressure.
    c. Duct design test static pressure.
    d. Duct capacity, air flow.
    e. Maximum allowable leakage duct capacity times leak factor.
    f. Test apparatus.
        1) Blower.
        2) Orifice, tube size.
        3) Orifice size.
        4) Calibrated.
    g. Test static pressure.
    h. Test orifice differential pressure.
    i. Leakage.
15. Air Monitoring Station Data:
    a. Identification/location.
    b. System.
    c. Size.
    d. Area.
    e. Design velocity.
    f. Design air flow.
    g. Test velocity.
    h. Test air flow.
16. Flow Measuring Station:
    a. Identification/number.
    b. Location.

c. Size.
d. Manufacturer.
e. Model number.
f. Serial number.
g. Design flow rate.
h. Design pressure drop.
i. Actual/final pressure drop.
j. Actual/final flow rate.
k. Station calibrated setting.

17. Air Distribution Test Sheet:
a. Air terminal number.
b. Room number/location.
c. Terminal type.
d. Terminal size.
e. Area factor.
f. Design velocity.
g. Design air flow.
h. Test (final) velocity.
i. Test (final) air flow.
j. Percent of design air flow.

END OF SECTION

SECTION 23 07 00 - HVAC INSULATION

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. HVAC piping insulation, jackets, and accessories.
   2. HVAC ductwork insulation, jackets, and accessories.

B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.
   2. Section 07 84 13 "Penetration Firestopping."
   3. Section 23 05 00 "General Mechanical Requirements."

1.2 REFERENCES

A. ASTM International:
   1. ASTM A240 - Standard Specification for Chromium and Chromium-Nickel Stainless Steel Plate, Sheet, and Strip for Pressure Vessels and for General Applications.
   2. ASTM A666 - Standard Specification for Annealed or Cold-Worked Austenitic Stainless-Steel Sheet, Strip, Plate, and Flat Bar.
   3. ASTM B209 - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate.
   4. ASTM C195 - Standard Specification for Mineral Fiber Thermal Insulating Cement.
   5. ASTM C449 - Standard Specification for Mineral Fiber Hydraulic-Setting Thermal Insulating and Finishing Cement.
   6. ASTM C450 - Standard Practice for Fabrication of Thermal Insulating Fitting Covers for NPS Piping, and Vessel Lagging.
   7. ASTM C533 - Standard Specification for Calcium Silicate Block and Pipe Thermal Insulation.
   8. ASTM C534 - Standard Specification for Preformed Flexible Elastomeric Cellular Thermal Insulation in Sheet and Tubular Form.
   9. ASTM C547 - Standard Specification for Mineral Fiber Pipe Insulation.
   10. ASTM C553 - Standard Specification for Mineral Fiber Blanket Thermal Insulation for Commercial and Industrial Applications.
   11. ASTM C578 - Standard Specification for Rigid, Cellular Polystyrene Thermal Insulation.
   12. ASTM C585 - Standard Practice for Inner and Outer Diameters of Rigid Thermal Insulation for Nominal Sizes of Pipe and Tubing (NPS System).
   13. ASTM C591 - Standard Specification for Unfaced Preformed Rigid Cellular Polyisocyanurate Thermal Insulation.
   14. ASTM C612 - Standard Specification for Mineral Fiber Block and Board Thermal Insulation.
   15. ASTM C795 - Standard Specification for Thermal Insulation for Use in Contact with Austenitic Stainless Steel.

16. ASTM C921 - Standard Practice for Determining the Properties of Jacketing Materials for Thermal Insulation.
17. ASTM C1071 - Standard Specification for Thermal and Acoustical Insulation (Glass Fiber, Duct Lining Material).
18. ASTM C1136 - Standard Specification for Flexible, Low Permeance Vapor Retarders for Thermal Insulation.
19. ASTM C1290 - Standard Specification for Flexible Fibrous Glass Blanket Insulation Used to Externally Insulate HVAC Ducts.
20. ASTM D1785 - Standard Specification for Poly (Vinyl Chloride) (PVC) Plastic Pipe, Schedules 40, 80, and 120.
21. ASTM D4637 - Standard Specification for EPDM Sheet Used in Single-Ply Roof Membrane.
22. ASTM E96 - Standard Test Methods for Water Vapor Transmission of Materials.
23. ASTM E162 - Standard Test Method for Surface Flammability of Materials Using a Radiant Heat Energy Source.

B. Sheet Metal and Air Conditioning Contractors Association:
1. SMACNA - HVAC Duct Construction Standard - Metal and Flexible.

C. Underwriters Laboratories Inc.:
1. UL 1978 - Standard for Safety for Grease Ducts.

1.3 SUBMITTALS

A. Division 01 and Section 23 05 00 "General Mechanical Requirements" for submittal procedures.
B. Product Data: Submit product description, thermal characteristics and list of materials and thickness for each service, and location.

1.4 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this Section with minimum 3 years' experience.
B. Applicator: Company specializing in performing Work of this Section with minimum 3 years' experience.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Division 01 and Section 23 05 00 "General Mechanical Requirements" for product storage and handling requirements.
B. Accept materials on site in original factory packaging, labeled with manufacturer's identification, including product density and thickness.
C. Protect insulation from weather and construction traffic, dirt, water, chemical, and damage, by storing in original wrapping.

1.6 FIELD MEASUREMENTS

A. Verify field measurements prior to fabrication.

1.7 WARRANTY

A. Division 01 and Section 23 05 00 "General Mechanical Requirements" for product warranties and product bonds.

PART 2 - PRODUCTS

2.1 MANUFACTURER

A. Glass Fiber and Mineral Fiber Insulation:
   1. Manufacturers:
      a. Johns Manville.
      b. Knauf Insulation.
      c. Manson Insulation Inc.
      d. Owens Corning.
      e. Substitutions: Division 01 and Section 23 05 00 "General Mechanical Requirements" for substituted products.

B. Closed Cell Elastomeric Insulation:
   1. Manufacturers:
      a. Aeroflex USA, Inc.
      b. Armacell LLC.
      c. Substitutions: Division 01 and Section 23 05 00 "General Mechanical Requirements" for substituted products.

2.2 PIPE INSULATION

A. Type P-1: ASTM C547, molded glass fiber pipe insulation.
   1. Thermal Conductivity: 0.23 at 75 degrees F.
   2. Operating Temperature Range: 0 to 850 degrees F.
   3. Vapor Barrier Jacket: ASTM C1136, Type I, factory-applied reinforced foil kraft with self-sealing adhesive joints.
   4. Jacket Temperature Limit: minus 20 to 150 degrees F.

B. Type P-4: ASTM C534, Type I, flexible, closed cell elastomeric insulation, tubular.
   1. Thermal Conductivity: 0.27 at 75 degrees F.
   2. Operating Temperature Range: Range: Minus 70 to 180 degrees F.

2.3 DUCTWORK INSULATION

A. Type D-1: ASTM C1290, Type II, flexible glass fiber, commercial grade with factory applied reinforced aluminum foil jacket meeting ASTM C1136, Type II.
   1. Thermal Conductivity: 0.25 at 75 degrees F.
   2. Maximum Operating Temperature: 250 degrees F.
   3. Density: 1.0 pound per cubic foot.

2.4 DUCTWORK INSULATION JACKETS

A. Aluminum Duct Jacket:
   1. ASTM B209.
   2. Thickness: 0.025-inch-thick sheet.
   3. Finish: Embossed.
   4. Joining: Longitudinal slip joints and 2-inch laps.
   5. Fittings: 0.016-inch-thick die shaped fitting covers with factory-attached protective liner.
   6. Metal Jacket Bands: 3/8-inch-wide; 0.015-inch-thick aluminum.

2.5 DUCTWORK INSULATION ACCESSORIES

A. Vapor Retarder Tape:
   1. Kraft paper reinforced with glass fiber yarn and bonded to aluminized film, with pressure sensitive rubber-based adhesive.
B. Vapor Retarder Lap Adhesive: Compatible with insulation.
C. Adhesive: Waterproof, ASTM E162 fire-retardant type.
D. Liner Fasteners: Galvanized steel, impact applied with press-on head.
E. Tie Wire: 0.048-inchstainless steel with twisted ends on maximum 12-inchcenters.
F. Lagging Adhesive: Fire retardant type with maximum 25/450 flame spread/smoke developed index when tested in accordance with ASTM E84.
G. Impale Anchors: Galvanized steel, 12-gauge self-adhesive pad.
H. Adhesives: Compatible with insulation.
I. Membrane Adhesives: As recommended by membrane manufacturer.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify piping, and ductwork has been tested before applying insulation materials.
B. Verify surfaces are clean and dry, with foreign material removed.

3.2 INSTALLATION - PIPING SYSTEMS

A. Piping Exposed to View in Finished Spaces: Locate insulation and cover seams in least visible locations.
B. Continue insulation through penetrations of building assemblies or portions of assemblies having fire resistance rating of 1 hour or less. Provide intumescent firestopping when continuing insulation through assembly. Finish at supports, protrusions, and interruptions. Refer to Section 07 84 13 "Penetration Firestopping" for penetrations of assemblies with fire resistance rating greater than 1-hour.
C. Piping Systems Conveying Fluids Below Ambient Temperature:
   1. Insulate entire system including fittings, valves, unions, flanges, strainers, flexible connections, and expansion joints.
   2. Furnish factory-applied or field-applied vapor retarder jackets. Secure factory-applied jackets with pressure sensitive adhesive self-sealing longitudinal laps and butt strips. Secure field-applied jackets with outward clinch expanding staples and seal staple penetrations with vapor retarder mastic.
   3. Insulate fittings, joints, and valves with molded insulation of like material and thickness as adjacent pipe. Finish with glass cloth and vapor retarder adhesive or PVC fitting covers.
D. Glass Fiber Board Insulation:
   1. Apply insulation close to equipment by grooving, scoring, and beveling insulation. Fasten insulation to equipment with studs, pins, clips, adhesive, wires, or bands.
   2. Fill joints, cracks, seams, and depressions with bedding compound to form smooth surface. On cold equipment, use vapor retarder cement.
   3. Cover wire mesh or bands with cement to a thickness to remove surface irregularities.

E. Hot Piping Systems Less Than 140 Degrees F:
   1. Furnish factory-applied or field-applied standard jackets. Secure with outward clinch expanding staples or pressure sensitive adhesive system on standard factory-applied jacket and butt strips or both.
   2. Insulate fittings, joints, and valves with insulation of like material and thickness as adjoining pipe. Finish with glass cloth and adhesive or PVC fitting covers.
   3. Do not insulate unions and flanges at equipment, but bevel and seal end of insulation at such locations.

F. Inserts and Shields:
   1. Piping 1-1/2 Inches Diameter and Smaller: Install galvanized steel shield between pipe hanger and insulation.
   2. Piping 2 inchesDiameter and Larger: Install insert between support shield and piping and under finish jacket.
      a. Insert Configuration: Minimum 6 inches long, of thickness and contour matching adjoining insulation; may be factory fabricated.
      b. Insert Material: Compression resistant insulating material suitable for planned temperature range and service.
   3. Piping Supported by Roller Type Pipe Hangers: Install galvanized steel shield between roller and inserts.

G. Insulation Terminating Points:
   1. Condensate Piping: Insulate entire piping system and components to prevent condensation.

H. Closed Cell Elastomeric Insulation:
   1. Push insulation on to piping.
   2. Miter joints at elbows.
   3. Seal seams and butt joints with manufacturer's recommended adhesive.
   4. When application requires multiple layers, apply with joints staggered.
   5. Insulate fittings and valves with insulation of like material and thickness as adjacent pipe.

I. Pipe Exposed in Mechanical Equipment Rooms or Finished Spaces: Finish with PVC jacket and fitting covers.

J. Piping Exterior to Building: Provide vapor retarder jacket. Insulate fittings, joints, and valves with insulation of like material and thickness as adjoining pipe, and finish with glass mesh reinforced vapor retarder cement. Cover with aluminum jacket with seams located at 3 or 9 o’clock position on side of horizontal piping with overlap facing down to shed water or on bottom side of horizontal piping.

K. Buried Piping: Insulate only where insulation manufacturer recommends insulation product may be installed in trench, tunnel or direct buried. Install factory fabricated assembly with inner all-purpose service jacket with self-sealing lap, and asphalt impregnated open mesh glass fabric, with 1 mil thick aluminum foil sandwiched between 3 layers of bituminous compound; outer surface faced with polyester film.

L. Prepare pipe insulation for finish painting. Refer to Division 09.

3.3 INSTALLATION - DUCTWORK SYSTEMS

A. Duct dimensions indicated on Drawings are finished inside dimensions.
B. Insulated ductwork conveying air below ambient temperature:
   1. Provide insulation with vapor retarder jackets.
   2. Finish with tape and vapor retarder jacket.
   3. Continue insulation through walls, sleeves, hangers, and other duct penetrations.
   4. Insulate entire system including fittings, joints, flanges, fire dampers, flexible connections, and expansion joints.
C. Insulated ductwork conveying air above ambient temperature:
   1. Provide with or without standard vapor retarder jacket.
   2. Insulate fittings and joints. Where service access is required, bevel and seal ends of insulation.
D. External Glass Fiber Duct Insulation:
   1. Secure insulation with vapor retarder with wires and seal jacket joints with vapor retarder adhesive or tape to match jacket.
   2. Secure insulation without vapor retarder with staples, tape, or wires.
   3. Install without sag on underside of ductwork. Use adhesive or mechanical fasteners where necessary to prevent sagging. Lift ductwork off trapeze hangers and insert spacers.
   4. Seal vapor retarder penetrations by mechanical fasteners with vapor retarder adhesive.
   5. Stop and point insulation around access doors and damper operators to allow operation without disturbing wrapping.
E. External Elastomeric Duct Insulation:
   1. Adhere to clean oil-free surfaces with full coverage of adhesive.
   2. Seal seams and butt joints with manufacturer's recommended adhesive.
   3. When application requires multiple layers, apply with joints staggered.
   4. Insulate standing metal duct seams with insulation of like material and thickness as adjacent duct surface. Apply adhesive at joints with flat duct surfaces.
   5. Lift ductwork off trapeze hangers and insert spacers.
F. Duct and Plenum Liner:
   1. Adhere insulation with adhesive for 100 percent coverage.
   2. Secure insulation with mechanical liner fasteners. Comply with SMACNA Standards for spacing.
   3. Seal and smooth joints. Seal and coat transverse joints.
   4. Seal liner surface penetrations with adhesive.
   5. Cut insulation for tight overlapped corner joints. Support top pieces of liner at edges with side pieces.
G. Prepare duct insulation for finish painting. Refer to Division 09.

3.4 SCHEDULES

A. Cooling Services Piping Insulation Schedule:
   1. Condenser Water:
      a. Type: P-1.
      b. Thickness: Size required for R-6.0 installed value.

2. Condensate Piping from Cooling Coils:
   a. Type: P-4.
   b. Thickness: min. 0.75-inch.
3. Refrigerant Suction and Liquid:
   a. Type: P-4.
   b. Thickness: 1-inch.

B. Ductwork Insulation Schedule:
1. Supply Ducts - Externally Insulated, Installed Thickness:
   a. Type: D-1.
   b. Thickness: As required to meet minimum R-6 installed value.
2. Return Ducts - Externally Insulated, Installed Thickness:
   a. Type: D-1.
   b. Thickness: As required to meet minimum R-6 installed value.
3. Exhaust Ducts:
   a. Type: None.
4. Transfer Air Ducts - Internally Insulated:
   a. Type: D-1.
   b. Thickness: 1.0 inches.

END OF SECTION

SECTION 23 08 00 - COMMISSIONING OF HVAC

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
1. HVAC commissioning description.
2. HVAC commissioning responsibilities.

B. Related Requirements:
1. Division 01 Specification Sections apply to Work of this Section.
2. Section 23 05 93 "Testing, Adjusting, and Balancing for HVAC" for requirements and procedures concerning testing, adjusting, and balancing of mechanical systems.
3. Section 23 09 23 "Direct-Digital Control System for HVAC" for submittal, training, and programming requirements.
4. Section 23 33 00 "Air Duct Accessories" for product requirements for ductwork test holes.
5. Section 22 08 00 "Commissioning of Plumbing" systems commissioning requirements.

1.2 REFERENCES

A. American Society of Heating, Refrigerating and Air-Conditioning Engineers:
1. ASHRAE Guideline 1 - The HVAC Commissioning Process.

B. Building Commissioning Association:
1. BCA - Commissioning Handbook.

C. National Environmental Balancing Bureau:
1. NEBB - Procedural Standards for Building Systems Commissioning.

D. Testing Adjusting and Balancing Bureau:
1. TABB - Commissioning Manual.

1.3 COMMISSIONING DESCRIPTION

A. HVAC commissioning process includes the following tasks:
1. Testing and startup of HVAC equipment and systems.
2. Equipment and system verification checks.
3. Assistance in functional performance testing to verify testing and balancing, and equipment and system performance.
4. Provide qualified personnel to assist in commissioning tests, including seasonal testing.
5. Complete and endorse functional performance test checklists provided by Commissioning Authority to assure equipment and systems are fully operational and ready for functional performance testing.
6. Provide equipment, materials, and labor necessary to correct deficiencies found during commissioning process to fulfill contract and warranty requirements.

7. Provide operation and maintenance information and record drawings to Commissioning Authority for review verification and organization, prior to distribution.
8. Provide assistance to Commissioning Authority to develop, edit, and document system operation descriptions.
9. Provide training for systems specified in this Section with coordination by Commissioning Authority.

B. Equipment and Systems to Be Commissioned:
1. New HVAC systems that were installed under this Contract.
2. Existing HVAC systems that were modified, adjusted, upgraded, or affected by the work performed under this Contract.

C. The following is a partial list of equipment that may be included in this HVAC Commissioning:
1. Air-Cooled Condensing Units.
2. Piping systems.
3. Ductwork.
4. Variable frequency drives.
5. Air handling units.
6. Unit heaters.
7. IT room units.
8. Fans.
9. Automatic HVAC control system.
10. Testing, Adjusting and Balancing work.
11. Pet area drainage wash-down system.
12. Refrigerator leakage detection system.
13. CO2 detection system.

D. Perform seasonal function performance tests for the following equipment and systems:
1. Heating equipment during heating season.
2. Cooling equipment during cooling season.

1.4 COMMISSIONING SUBMITTALS

A. Section 01 91 13 "General Commissioning Requirements": Requirements for commissioning submittals.
B. Draft Forms: Submit draft of system verification form and functional performance test checklist.
C. Test Reports: Indicate data on system verification form for each piece of equipment and system as specified. Use submit data in metric units.
D. Field Reports: Indicate deficiencies preventing completion of equipment or system verification checks equipment or system to achieve specified performance.

1.5 QUALITY ASSURANCE

A. Perform Work in accordance with ASHRAE Guideline 1, NEBB, AABC, or TABB requirements.

1.6 COMMISSIONING RESPONSIBILITIES

A. Equipment or System Installer Commissioning Responsibilities:
   1. Attend commissioning meetings.
   2. Ensure temperature controls installer performs assigned commissioning responsibilities as specified below.
   3. Ensure testing, adjusting, and balancing agency performs assigned commissioning responsibilities as specified.
   4. Provide instructions and demonstrations for Owner's personnel.
   5. Ensure subcontractors perform assigned commissioning responsibilities.
   6. Ensure participation of equipment manufacturers in appropriate startup, testing, and training activities when required by individual equipment specifications.
   7. Develop startup and initial checkout plan using manufacturer's startup procedures and functional performance checklists for equipment and systems to be commissioned.
   8. During verification check and startup process, execute HVAC related portions of checklists for equipment and systems to be commissioned.
   9. Perform and document completed startup and system operational checkout procedures, providing copy to Commissioning Authority.
   10. Provide manufacturer's representatives to execute starting of equipment. Ensure representatives are available and present during agreed upon schedules and are in attendance for duration to complete tests, adjustments and problem-solving.
   11. Coordinate with equipment manufacturers to determine specific requirements to maintain validity of warranties.
   12. Provide personnel to assist Commissioning Authority during equipment or system verification checks and functional performance tests.
   13. Prior to functional performance tests, review test procedures to ensure feasibility, safety and equipment protection and provide necessary written alarm limits to be used during tests.
   14. Prior to startup, inspect, check, and verify correct and complete installation of equipment and system components for verification checks included in commissioning plan. When deficient or incomplete work is discovered, ensure corrective action is taken and re-check until equipment or system is ready for startup.
   15. Perform verification checks and startup on equipment and systems as specified.
   16. Assist Commissioning Authority in performing functional performance tests on equipment and systems as specified.
   17. Perform operation and maintenance training sessions scheduled by Commissioning Authority.
   18. Conduct HVAC system orientation and inspection.

B. Temperature Controls Installer Commissioning Responsibilities:
   1. Attend commissioning meetings.
   2. Review design for ability of systems to be controlled including the following:
      a. Confirm proper hardware requirements exists to perform functional performance testing.
      b. Confirm proper safeties and interlocks are included in design.
      c. Confirm proper sizing of system control valves and actuators and control valve operation will result capacity control identified in Contract Documents.

d. Confirm proper sizing of system control dampers and actuators and damper operation will result in proper damper positioning.
e. Confirm sensors selected are within device ranges.
f. Review sequences of operation and obtain clarification from Architect.
g. Indicate delineation of control between packaged controls and building automation system, listing BAS monitor points and BAS adjustable control points.
h. Provide written sequences of operation for packaged controlled equipment. Equipment manufacturers' stock sequences may be included, when accompanied by additional narrative to reflect Project conditions.

3. Inspect, check, and confirm proper operation and performance of control hardware and software provided in other HVAC Sections.
4. Submit proposed procedures for performing automatic temperature control system point-to-point checks to Commissioning Authority and Architect/Engineer.
5. Inspect check and confirm correct installation and operation of automatic temperature control system input and output device operation through point-to-point checks.
6. Perform training sessions to instruct Owner's personnel in hardware operation, software operation, programming, and application in accordance with commissioning plan.
7. Demonstrate system performance and operation to Commissioning Authority during functional performance tests including each mode of operation.
8. Provide control system technician to assist during Commissioning Authority verification check and functional performance testing.
9. Provide control system technician to assist testing, adjusting, and balancing agency during performance of testing, adjusting, and balancing work.
10. Assist in performing operation and maintenance training sessions scheduled by Commissioning Authority.

C. Testing, Adjusting, and Balancing Agency Commissioning Responsibilities:
1. Attend commissioning meetings.
2. Participate in verification of testing, adjusting, and balancing report for verification or diagnostic purposes. Repeat sample of 10 percent of measurements contained in testing, adjusting, and balancing report as selected by Commissioning Authority.
3. Assist in performing operation and maintenance training sessions scheduled by Commissioning Authority.

1.7 COMMISSIONING MEETINGS

A. Section 01 91 13 "General Commissioning Requirements" for commissioning meetings.
B. Attend initial commissioning meeting and progress commissioning meetings as required by Commissioning Authority.

1.8 SCHEDULING

A. Section 01 30 00 "Administrative Requirements" for requirements for scheduling.
B. Prepare schedule indicating anticipated start dates for the following:
1. Piping system pressure testing.
2. Piping system flushing and cleaning.
3. Ductwork cleaning.
4. Ductwork pressure testing.

5. Equipment and system startups.
6. Automatic temperature control system checkout.
7. Testing, adjusting, and balancing.
8. HVAC system orientation and inspections.
9. Operation and maintenance manual submittals.
10. Training sessions.

C. Schedule seasonal tests of equipment and systems during peak weather conditions to observe full-load performance.

D. Schedule occupancy sensitive tests of equipment and systems during conditions of both minimum and maximum occupancy or use.

1.9 COORDINATION

A. Section 01 30 00 "Administrative Requirements" for requirements for coordination.

B. Notify Commissioning Authority minimum of 4 weeks in advance of the following:
1. Scheduled equipment and system startups.
2. Scheduled automatic temperature control system checkout.
3. Scheduled start of testing, adjusting, and balancing work.

C. Coordinate programming of automatic temperature control system with construction and commissioning schedules.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install additional balancing dampers, balancing valves, access doors, test ports, and pressure and temperature taps required to meet performance requirements.

B. Place HVAC systems and equipment into full operation and continue operation during each working day of commissioning.

C. Install replacement sheaves and belts to obtain system performance, as requested by Commissioning Authority.

D. Install test holes in ductwork and plenums as requested by Commissioning Authority for taking air measurements. Refer to Section 23 33 00 "Air Duct Accessories."

E. Prior to start of functional performance test, install replacement filters in equipment.

3.2 FIELD TESTS AND INSPECTIONS

A. Seasonal Sensitive Functional Performance Tests:
1. Test heating equipment at winter design temperatures.
2. Test cooling equipment at summer design temperatures.
3. Participate in testing delayed beyond Final Completion to test performance at peak seasonal conditions.

B. Be responsible to participate in initial and alternate peak season test of systems required to demonstrate performance.

C. Occupancy Sensitive Functional Performance Tests:
   1. Test equipment and systems affected by occupancy variations at minimum and peak loads to observe system performance.
   2. Participate in testing delayed beyond Final Completion to test performance with actual occupancy conditions.

END OF SECTION

SECTION 23 09 23 - DIRECT-DIGITAL CONTROL SYSTEM FOR HVAC

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes control equipment and software.
B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.
   2. Section 23 05 00 "General Mechanical Requirements."
   3. Section 23 09 93 "Sequence of Operations for HVAC/Plumbing Controls" for sequences of operation implemented using products specified in this Section.

1.2 REFERENCES

A. American National Standards Institute:
   1. ANSI MC85.1 - Terminology for Automatic Control.

1.3 SYSTEM DESCRIPTION

A. Provide equipment, devices, and programming required to add new terminal addition HVAC and plumbing equipment to the existing DDC/BMS system. Coordinate with Owner to verify exact system and devices required to provide control and monitoring of all new HVAC and plumbing systems described in Section 29 09 23 "Sequence of Operations for HVAC/Plumbing Controls." Not all items contained within this Specification may be required for a complete and operational DDC/BMS system extension of the existing DDC/BMS system currently being utilized at the Midland International Airport. Automatic temperature controls field monitoring and controls system using field programmable microprocessor based units. Mechanical contractor to provide devices, such as dampers, integral manufacturer-supplied controllers, and internal controls, that are integral to HVAC equipment, with DDC contractor to provide actuators, variable frequency drives (does not apply to AHUs; these are ingegral to each AHU), sensors, relays, etc., required for achieving the required Sequence of Operations for each system and piece of HVAC/Plumbing equipment called out in Section 23 09 93 "Sequence of Operations for HVAC/Plumbing Controls." Mechanical contractors, manufacturer representatives, and DDC controls contractor to coordinate to provide a complete and operational HVAC/Plumbing system for the Midland International Air & Space Port.
B. Base system on distributed system of fully intelligent, stand-alone controllers, operating in a multi-tasking, multi-user environment on token passing network, with central and remote hardware, software, and interconnecting wire and conduit.
C. Provide computer software and hardware, operator input/output devices, control units, local area networks (LAN), sensors, control devices, actuators.
D. Provide control systems consisting of thermostats, control valves, dampers and operators, indicating devices, interface equipment and other apparatus and accessories to operate mechanical systems, and to perform functions specified.
E. Provide installation and calibration, supervision, adjustments, and fine tuning necessary for complete and fully operational system.

1.4 SUBMITTALS

A. Section 01 33 00 "Submittal Procedures" for Submittal procedures.
B. Shop Drawings: Indicate the following:
   1. Trunk cable schematic showing programmable control-unit locations and trunk data conductors.
   2. Connected data points, including connected control unit and input device.
   3. System graphics showing monitored systems, data (connected and calculated) point addresses, and operator notations.
   4. System configuration with peripheral devices, batteries, power supplies, diagrams, modems, routers, and interconnections.
   5. Description and sequence of operation for operating, user, and application software.
   6. Use terminology in submittals conforming to ASME MC85.1.
   7. Coordinate submittals with information requested in Section 23 09 93 "Sequence of Operations for HVAC/Plumbing Controls."
C. Product Data: Submit data for each system component and software module.

1.5 QUALIFICATIONS

A. Installer: Company specializing in performing Work of this Section with minimum 3 years' documented experience.

1.6 FIELD MEASUREMENTS

A. Verify field measurements prior to fabrication.

1.7 WARRANTY

A. Section 01 70 00 "Execution and Closeout Requirements" for product warranties and product bonds.
B. Furnish 5-year manufacturer warranty for direct digital controls.

1.8 MAINTENANCE SERVICE

A. Section 01 70 00 "Execution and Closeout Requirements": Requirements for maintenance service.
B. Furnish service and maintenance of control systems for 1-year from date of Substantial Completion.
C. Include systematic examination, adjustment, and lubrication of unit, and controls checkout and adjustments. Repair or replace parts in accordance with manufacturer's operating and maintenance data. Use parts produced by manufacturer of original equipment.
D. Perform Work without removing units from service during building normal occupied hours.
E. Provide emergency call back service during working hours for this maintenance period.
F. Maintain locally, near place of the Work, adequate stock of parts for replacement or emergency purposes. Have personnel available to ensure fulfillment of this maintenance service, without unreasonable loss of time.

G. Perform maintenance work using competent and qualified personnel under supervision and in direct employ of manufacturer or original installer.
H. Do not assign or transfer maintenance service to agent or subcontractor without prior written consent of Owner.

PART 2 - PRODUCTS

2.1 DIRECT DIGITAL CONTROLS

A. Existing DDC system is by Control Technologies, Inc., no exceptions.
   1. Products: Electric, Electronic, and Direct Digital Control system field controllers and devices to be provided by Schneider-Electric and Schneider-Electric BACnet MSTP Nework protocol to integrate into existing DDC system. Provide required infrastructure to expand existing system to accommodate new terminal expansion.
B. All HVAC equipment manufacturers must be compatible and fully integrability with the existing DDC/BMS system without the loss of data point information.
C. Refer to Division 23 equipment Specifications, details, and schematics for more DDC information.

2.2 OPERATOR WORKSTATION

A. Coordinate with owners existing workstation/server and provide devices, equipment, programming required to add terminal addition HVAC and Plumbing equipment to existing BMS system.

2.3 CONTROL UNITS

A. Units: Modular in design and consisting of processor board with programmable RAM memory, local operator access and display panel, and integral interface equipment.
B. Battery Backup: For minimum of 48 hours for complete system including RAM without interruption, with automatic battery charger.
C. Control Units Functions:
   1. Monitor or control each input/output point.
   2. Completely independent with hardware clock/calendar and software to maintain control independently.
   3. Acquire, process, and transfer information to operator station or other control units on network.
   4. Accept, process, and execute commands from other control unit's or devices or operator stations.
   5. Access both data base and control functions simultaneously.
   6. Record, evaluate, and report changes of state or value occurring among associated points. Continue to perform associated control functions regardless of status of network.
   7. Perform in stand-alone mode:
      a. Start/stop.
      b. Duty cycling.
      c. Automatic Temperature Control.
      d. Demand control via a sliding window, predictive algorithm.
      e. Event initiated control.

f. Calculated point.
g. Scanning and alarm processing.
h. Full direct digital control.
i. Trend logging.
j. Global communications.
k. Maintenance scheduling.

D. Global Communications:
1. Broadcast point data onto network, making information available to other system controls units.
2. Transmit input/output points onto network for use by other control units and use data from other control units.

E. Input/output Capability:
1. Discrete/digital input (contact status).
2. Discrete/digital output.
3. Analog input.
4. Analog output.
5. Pulse input (5 pulses/second minimum).
6. Pulse output (0-655 seconds in duration with 0.01-second resolution minimum).

F. Monitor, control, or address data points. Include analog inputs, analog outputs, pulse inputs, pulse outputs and discrete inputs/outputs. Furnish control units with minimum 30 percent spare capacity.

G. Point Scanning: Set scan or execution speed of each point to operator selected time from 1 to 250 seconds.

H. Upload/Download Capability: Download from or upload to operator station. Upload/Download time for entire control unit database maximum 10 seconds on hard-wired LAN or 60 seconds over voice grade phone lines.

I. Test Mode Operation: Place input/output points in test mode to allow testing and developing of control algorithms on line without disrupting field hardware and controlled environment. In test mode:
1. Inhibit scanning and calculation of input points. Issue manual control to input points (set analog or digital input point to operator determined test value) from workstation.
2. Control output points but change only database state or value; leave external field hardware unchanged.
3. Enable control-actions on output points but change only data base state or value.

J. Local display and adjustment panel: Portable or Integral to control-unit containing digital display, and numerical keyboard. Display and adjust:
1. Input/output point information and status.
2. Controller set points.
3. Controller tuning constants.
4. Program execution times.
5. High and low limit values.
6. Limit differential.
7. Set/display date and time.
8. Control outputs connected to the network.
9. Automatic control outputs.
10. Perform control unit diagnostic testing.

K. Points in "Test" mode.

2.4 LOCAL AREA NETWORKS (LAN):

A. Furnish communication between control units over local area network (LAN).
B. LAN Capacity: As required to provide a complete and operational DDC / BMS system.
C. Break in Communication Path: Alarm and automatically initiate LAN reconfiguration.
D. Communication Techniques: Allow interface into network by multiple operation stations and by auto-answer/auto-dial modems. Support communication over high speed internet access utilizing devices approved by owner IT systems department.
E. Network Support: Time for global point to be received by any station, less than 3 seconds. Furnish automatic reconfiguration when station is added or lost. In event transmission cable is cut, reconfigure two sections with no disruption to system's operation, without operator intervention.

2.5 OPERATING SYSTEM SOFTWARE

A. Input/output Capability From Operator Station:
1. Request display of current values or status in tabular or graphic format.
2. Command selected equipment to specified state.
3. Initiate logs and reports.
4. Change analog limits.
5. Add, delete, or change points within each control unit or application routine.
6. Change point input/output descriptors, status, alarm descriptors, and unit descriptors.
7. Add new control units to system.
8. Modify and set up maintenance scheduling parameters.
9. Develop, modify, delete or display full range of color graphic displays.
10. Automatically archive select data even when running third party software.
11. Capability to sort and extract data from archived files and to generate custom reports.
12. Support two printer operations.
13. Alarm printer: Print alarms, operator acknowledgments, action messages, system alarms, operator sign-on and sign-off.
14. Data printer: Print reports, page prints, and data base prints.
15. Select daily, weekly or monthly as scheduled frequency to synchronize time and date in digital control units. Accommodate daylight savings time adjustments.
16. Print selected control unit database.
B. Data Base Creation and Support: Use standard procedures for changes. Control unit automatically checks workstation data base files upon connection and verify data base match. Include the following minimum capabilities:
1. Add and delete points.
2. Modify point parameters.
3. Change, add, or delete English language descriptors.
4. Add, modify, or delete alarm limits.
5. Add, modify, or delete points in start/stop programs, trend logs, and other items.
6. Create custom relationship between points.
7. Create or modify DDC loops and parameters.
8. Create or modify override parameters.
9. Add, modify, and delete applications programs.
10. Add, delete, develop, or modify dynamic color graphic displays.

C. Dynamic Color Graphic Displays:
   1. Utilizes custom symbols or system supported library of symbols.
   2. Sixteen colors.
   3. Sixty outputs of real-time live dynamic data for each graphic.
   4. Dynamic graphic data.
   5. 1,000 separate graphic pages.
   6. Modify graphic screen refresh rate between 1 and 60 seconds.
   7. Integrate new HVAC systems for this terminal expansion into existing graphical user interface.

D. Alarm Processing:
   1. Off normal condition: Cause alarm and appropriate message, including time, system, point descriptor, and alarm condition. Select alarm state or value and alarms causing automatic dial-out.
   2. Critical alarm or change-of-state: Display message, stored on disk for review and sort, or print.
   3. Display alarm reports on video. Display multiple alarms in order of occurrence.
   4. Define time delay for equipment start-up or shutdown.
   5. Allow unique routing of specific alarms.
   6. Operator specifies when alarm requires acknowledgment.
   7. Continue to indicate unacknowledged alarms after return to normal.
   8. Alarm notification:
   9. Print automatically.
   10. Display indicating alarm condition.
   11. Selectable audible alarm indication.

E. Event Processing: Automatically initiate commands, user defined messages, take specific control actions or change control strategy and application programs resulting from event condition. Event condition may be value crossing operator defined limit, change of state, specified state, or alarm occurrence or return to normal.

F. Automatic Restart: Automatically start field equipment on restoration of power. Furnish time delay between individual equipment restart and time of day start/stop.

G. Messages:
   1. Automatically display or print user-defined message subsequent to occurrence of selected events.
   2. Compose, change, or delete message.
   3. Display or log message at any time.
   4. Assign any message to event.

H. Reports:
   1. Manually requested with time and date.
   2. Long term data archiving to hard disk.
   3. Automatic directives to download to transportable media including floppy diskettes for storage.
   4. Data selection methods to include data base search and manipulation.
   5. Data extraction with mathematical manipulation.
   6. Data reports to allow development of XY curve plotting, tabular reports (both statistical and summary), and multi-point timed based plots with not less than 4 variables displayed.
   7. Generating reports either normally at operator direction, or automatically under workstation direction.

8. Either manually display or print reports. Automatically print reports on daily, weekly, monthly, yearly or scheduled basis.
9. Include capability for statistical data manipulation and extraction.
10. Capability to generate four types of reports: Statistical detail reports, summary reports, trend graphic plots, x-y graphic plots.

I. Parameter Save/Restore: Store most current operating system, parameter changes, and modifications on disk or diskette.

J. Data Collection:
1. Automatically collect and store in disk files.
2. Daily electrical energy consumption, peak demand, and time of peak demand for up to electrical meters over a 2 year period.
3. Daily consumption for up to 30 meters over a 2 year period.
4. Daily billable electrical energy consumption and time for up to 1,024 zones over a 10 year period.
5. Archiving of stored data for use with system supplied custom reports.

K. Graphic Display: Support graphic development on work station with software features:
1. Page linking.
2. Generate, store, and retrieve library symbols.
3. Single or double height characters.
4. Sixty dynamic points of data for each graphic page.
5. Pixel level resolution.
6. Animated graphics for discrete points.
7. Analog bar graphs.
8. Display real time value of each input or output line diagram fashion.
9. Integrate new HVAC systems for this terminal expansion into existing graphical user interface and label new equipment per Owner requested nomenclature.

L. Maintenance Management:
1. Run time monitoring, for each point.
2. Maintenance scheduling targets with automatic annunciation, scheduling and shutdown.
3. Equipment safety targets.
4. Display of maintenance material and estimated labor.
5. Target point reset, for each point.

M. Advisories:
1. Summary containing status of points in locked out condition.
2. Continuous operational or not operational report of interrogation of system hardware and programmable control units for failure.
3. Report of power failure detection, time and date.
4. Report of communication failure with operator device, field interface unit, point and programmable control unit.

2.6 LOAD CONTROL PROGRAMS

A. General: Support inch-pounds units of measurement.

B. Demand Limiting:
1. Monitor total power consumption for each power meter and shed associated loads automatically to reduce power consumption to an operator set maximum demand level.
2. Input: Pulse count from incoming power meter connected to pulse accumulator in control unit.

3. Forecast demand (kW): Predicted by sliding window method.
4. Automatically shed loads throughout the demand interval selecting loads with independently adjustable on and off time of between one and 255 minutes.
5. Demand Target: Minimum of 3 for each demand meter; change targets based upon (1) time, (2) status of pre-selected points, or (3) temperature.
6. Load: Assign load shed priority, minimum "ON" time and maximum "OFF" time.
7. Limits: Include control band (upper and lower limits).
8. Output advisory when loads are not available to satisfy required shed quantity, advise shed requirements and requiring operator acknowledgment.

C. Duty Cycling:
1. Periodically stop and start loads, based on space temperature, and according to various On/Off patterns.
2. Modify off portion of cycle based on operator specified comfort parameters. Maintain total cycle time by increasing on portion of cycle by equal quantity off portion is reduced.
3. Set and modify following parameters for each individual load.
   a. Minimum and maximum off time.
   b. On/Off time in one-minute increments.
   c. Time period from beginning of interval until cycling of load.
   d. Manually override the DDC program and place a load in an On or Off state.
   e. Cooling Target Temperature and Differential.
   f. Heating Target Temperature and Differential.
   g. Cycle off adjustment.

D. Automatic Time Scheduling:
1. Self-contained programs for automatic start/stop/scheduling of building loads.
2. Support up to 7 normal day schedules, 7 "special day" schedules and 2 temporary day schedules.
3. Special days schedule supporting up to 30 unique date/duration combinations.
4. Number of loads assigned to time program; with each load having individual time program.
5. Each load assigned at least 16 control actions for each day with 1 minute resolution.
6. Furnish the following time schedule operations:
   a. Start.
   b. Optimized Start.
   c. Stop.
   d. Optimized Stop.
   e. Cycle.
   f. Optimized Cycle.
7. Capable of specifying minimum of 30 holiday periods up to 100 days in length for the year.
8. Create temporary schedules.
9. Broadcast temporary "special day" date and duration.

E. Start/Stop Time Optimization:
1. Perform optimized start/stop as function of outside conditions, inside conditions, or both.
2. Adaptive and self-tuning, adjusting to changing conditions unattended.
3. For each point under control, establish and modify:
   a. Occupancy period.
   b. Desired temperature at beginning of occupancy period.
   c. Desired temperature at end of occupancy period.

F. Night Setback/Setup Program: Reduce heating space temperature set point or raise cooling space temperature set-point during unoccupied hours; in conjunction with scheduled start/stop and optimum start/stop programs.

G. Calculated Points: Define calculations and totals computed from monitored points (analog/digital points), constants, or other calculated points.
   1. Employ arithmetic, algebraic, Boolean, and special function operations.
   2. Treat calculated values like any other analog value; use for any function where a "hard wired point" might be used.

H. Event Initiated Programming: Any data point capable of initiating event, causing series of controls in a sequence.
   1. Define time interval between each control action between 0 to 3,600 seconds.
   2. Output may be analog value.
   3. Provide for "skip" logic.
   4. Verify completion of one action before proceeding to next action. When not verified, program capable of skipping to next action.

I. Direct Digital Control: Furnish with each control unit Direct Digital Control software so operator is capable of customizing control strategies and sequences of operation by defining appropriate control loop algorithms and choosing optimum loop parameters.
   1. Control loops: Defined using "modules" are analogous to standard control devices.
   2. Output: Paired or individual digital outputs for pulse width modulation, and analog outputs.
   3. Firmware:
      a. PID with analog or pulse-width modulation output.
      b. Floating control with pulse-width modulated outputs.
      c. Two-position control.
      d. Primary and secondary reset schedule selector.
      e. Hi/Low signal selector.
      f. Single pole double-throw relay.
      g. Single pole double throw time delay relay with delay before break, delay before make and interval time capabilities.
   4. Direct Digital Control loop: Downloaded upon creation or on operator request. On sensor failure, program executes user defined failsafe output.
   5. Display: Value or state of each of lines interconnecting DDC modules.

J. Fine Tuning Direct Digital Control PID or floating loops:
   1. Display information:
      a. Control loop being tuned.
      b. Input (process) variable.
      c. Output (control) variable.
      d. Set-point of loop.
      e. Proportional band.
      f. Integral (reset) Interval.
      g. Derivative (rate) Interval.
   2. Display format: Graphic, with automatic scaling; with input and output variable superimposed on graph of "time" versus "variable".

K. Trend logging:
   1. Each control unit capable of storing samples of control unit's data points.
   2. Update file continuously at operator assigned intervals.
   3. Automatically initiate upload requests and then stores data on hard disk.

4. Time synchronize sampling at operator specified times and intervals with sample resolution of one minute.
5. Co-ordinate sampling with specified on/off point- state.
6. Display trend samples on workstation in graphic format. Automatically scale trend graph with minimum 60 samples of data in plot of time versus data.

2.7 HVAC CONTROL PROGRAMS

A. General:
   1. Support Inch-pounds and S.I. metric units of measurement.
   2. Identify each HVAC Control system.

B. Optimal Run Time:
   1. Control start-up and shutdown times of HVAC equipment for both heating and cooling.
   2. Base on occupancy schedules, outside air temperature, seasonal requirements, and interior room mass temperature.
   3. Start-up systems by using outside air temperature, room mass temperatures, and adaptive model prediction for how long building takes to warm up or cool down under different conditions.
   4. Use outside air temperature to determine early shut down with ventilation override.
   5. Analyze multiple building mass sensors to determine seasonal mode and worse case condition for each day.
   6. Operator commands:
      a. Define term schedule.
      b. Add/delete fan status point.
      c. Add/delete outside air temperature point.
      d. Add/delete mass temperature point.
      e. Define heating/cooling parameters.
      f. Define mass sensor heating/cooling parameters.
      g. Lock/unlock program.
      h. Request optimal run-time control summary.
      i. Request optimal run-time mass temperature summary.
      j. Request HVAC point summary.
      k. Request HVAC saving profile summary.
   7. Control Summary:
      a. HVAC Control system begin/end status.
      b. Optimal run time lock/unlock control status.
      c. Heating/cooling mode status.
      d. Optimal run time schedule.
      e. Start/Stop times.
      f. Selected mass temperature point ID.
      g. Optimal run-time system normal start-times.
      h. Occupancy and vacancy times.
   8. Mass temperature summary:
      a. Mass temperature point type and ID.
      b. Desired and current mass temperature values.
      c. Calculated warm-up/cool-down time for each mass temperature.
      d. Heating/cooling season limits.
      e. Break point temperature for cooling mode analysis.

9. HVAC point summary:
    a. Control system identifier and status.
    b. Point ID and status.
    c. Outside air temperature point ID and status.
    d. Mass temperature point ID and status.
    e. Calculated optimal start and stop times.
    f. Period start.

2.8 PROGRAMMING APPLICATION FEATURES

A. Trend Point:
1. Output trend logs as line-graphs or bar graphs. Output graphic on terminal, with each point for line and bar graphs designated with a unique pattern or color, vertical scale either actual values or percent of range, and horizontal scale time base. Print trend logs up to 12 columns of 1 point/column.

B. Alarm Messages:
1. Assign alarm messages to system messages including point's alarm condition, point's off-normal condition, totaled point's warning limit, hardware elements advisories.
2. Output assigned alarm with "message requiring acknowledgment."
3. Operator commands include define, modify, or delete; output summary listing current alarms and assignments; output summary defining assigned points.

C. Weekly Scheduling:
1. Automatically initiate equipment or system commands, based on selected time schedule for points specified.
2. Automatically generate alarm output for points not responding to command.
3. Operator commands:
    a. System logs and summaries.
    b. Start of stop point.
    c. Lock or unlock control or alarm input.
    d. Add, delete, or modify analog limits and differentials.
    e. Adjust point operation position.
    f. Change point operational mode.
    g. Open or close point.
    h. Enable/disable, lock/unlock, or execute interlock sequence or computation profile.
    i. Begin or end point totals.
    j. Modify total values and limits.
    k. Access or secure point.
    l. Begin or end HVAC or load control system.
    m. Modify load parameter.
    n. Modify demand limiting and duty cycle targets.
4. Output summary: Listing of programmed function points, associated program times, and respective day of week programmed points by software groups or time of day.

D. Interlocking:
1. Permit events to occur, based on changing condition of one or more associated master points.
2. Binary contact, high/low limit of analog point or computed point capable of being used as master. Master capable of monitoring or commanding multiple slaves.

3. Operator commands:
    a. Define single master/multiple master interlock process.
    b. Define logic interlock process.
    c. Lock/unlock program.
    d. Enable/disable interlock process.
    e. Execute terminate interlock process.
    f. Request interlock type summary.

2.9 ELECTRICAL CHARACTERISTICS AND COMPONENTS

A. Electrical Characteristics: In accordance with Division 26.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Section 01 30 00 "Administrative Requirements" for coordination and Project conditions.
B. Verify conditioned power supply is available to control units and to operator workstation.
C. Verify field end devices and wiring is installed prior to installation proceeding.

3.2 INSTALLATION

A. Install control units and other hardware in position on permanent walls where not subject to excessive vibration.
B. Install software in control units and in operator workstation. Implement features of programs to specified requirements and appropriate to sequence of operation. Refer to Section 23 09 93 "Sequence of Operations for HVAC/Plumbing Controls."
C. Install with 120 volts alternating current, 15 amp dedicated emergency power circuit to each programmable control unit.
D. Install conduit and electrical wiring in accordance with Division 26.
E. Install electrical material and installation in accordance with appropriate requirements of Division 26.

3.3 MANUFACTURER'S FIELD SERVICES

A. Section 01 40 00 "Quality Requirements" for manufacturers field services.
B. Start and commission systems. Allow adequate time for start-up and commissioning prior to placing control systems in permanent operation.
C. Furnish service technician employed by system installer to instruct Owner's representative in operation of systems plant and equipment for 3 day period.

3.4 DEMONSTRATION AND TRAINING

A. Section 01 70 00 "Execution and Closeout Requirements": Requirements for demonstration and training.
B. Furnish basic operator training for 3 persons on data display, alarm and status descriptors, requesting data, execution commands and log requests. Include a minimum of 40 hours instructor time. Furnish training on site.
C. Demonstrate complete and operating system to Owner.

3.5 SCHEDULES

A. Alarm Schedule:
1. Types:
a. A1: High Limit.
b. A2: Low Limit.
c. A3: Run Time.
d. A4: Maintenance.
e. A5: Status.
f. A6: Override.
g. A7: Freeze.
h. A8: Low Pressure.

END OF SECTION

SECTION 23 09 93 - SEQUENCE OF OPERATIONS FOR HVAC/PLUMBING CONTROLS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes sequence of operation for:
   1. Air Handling Units.
   2. Air-Cooled DX Condensing Units.
   3. Exhaust fans.
   4. Radiant Electric Unit Heaters.
   5. Pet Area Wash-Down System.
   6. IT Room AC Unit System.
   7. Refrigerant Leak System.
   8. Draft-Inducing Exhaust Fan System.
   9. Sump Pump Pit Systems.

B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.
   2. Section 23 09 23 "Direct-Digital Control System for HVAC" for equipment, devices, system components, and software to implement sequences of operation.

C. The existing HVAC and Plumbing systems currently operating at the Airport terminal are not contained within this Specification. The renovation of the existing air handling units, water-cooled chillers, cooling towers, and new gas-fired boilers (replacing the existing boilers), and all associated pumps and devices shall be restored to their current control and sequence of operations once required renovations have been finished.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION

3.1 AIR HANDLING UNITS

A. Standard Operations: The expansion HVAC system is designed to be 100 percent redundant; AHU-15-25 and AHU-16-25 and their associated air-cooled condensing units will not operate at the same time. AHU-17-25 and AHU-18-25 and their associated air-cooled condensing units will not operate at the same time. System is designed to allow either AHU-15-25 or AHU-16-25 to operate with either AHU-17-25 or AHU-18-25 and their associated air-cooled condensing units. Coordinate with owner to determine their preferred system rotation time schedule. Each AHU has corresponding control air dampers for the supply air, outside air (minimum and economizer), return air, and relief air dampers. For each system, open the unit dampers for system being operated and close the corresponding control air dampers on the unit not currently operating. Log run-times for each system to provide historical data for owner. In heating mode, DIF-1-25 shall operate with either AHU-15-25 or AHU-16-25 and DIF-2-25 shall operate with either AHU-17-25 or AHU-18-25. Exhaust fans EF-1, EF-2, and EF-3 shall operate continuously. Intake air louver (IL-1) shall be divided into four quadrants, modulate the two upper quadrants to provide minimum outside air for new expansion AHU's and for the six AHU's serving the existing portions of the south side of the terminal. All 4 quadrants shall open when the existing and new AHU's are in economizer mode.

B. In Cooling Mode: Multiple room temperature sensors (for averaging zone temperatures) shall provide input to DDC / BMS system to maintain a constant space temperature (75 degrees F, owner adjustable) by cycling the air-cooled condensing unit, by staging the various refrigeration stages on each air-cooled condensing unit associated with its air handling unit. The minimum outside air damper shall open, the relief air damper shall modulate to minimum relief air position. "Weighted" averaging zone temperature sensors allow Owner to provide percentages for each temperature sensor to make up 100 percent input to unit or allow room sensors to be turned OFF/ON by Owner to maintain desired zone temperature.

C. In Heating Mode: Multiple room temperature sensors (for averaging zone temperatures) shall provide input to DDC / BMS system to maintain a constant space temperature (70 degrees F, owner adjustable) by staging the indirect gas-fired heating section as needed. Provide constant draft induced exhaust flue fan operation to maintain required CFM for proper flue exhaust differential pressure in the heating section. Refer to Induced Draft Exhaust Fan Schedule. Coordinate with air-handling unit manufacturer for pressure differential required for proper gas-fired heater operation. Provide variable speed controller and pressure differential sensors to operate and maintain ductwork pressure system.

D. Dry-Bulb Economizer Mode: During periods of time when the outside air dry bulb temperature is capable of sustaining the interior zone average temperature, the relief air damper shall fully open, the economizer outside air damper shall fully open with minimum OA damper fully open, and the air handling unit shall operate to maintain set-point zone temperatures.

E. Provide "Occupied" and "Unoccupied" Modes: The sequences stated above shall be for both occupied and unoccupied modes. The occupied modes shall modulate the air handling units and associated air-cooled condensing units shall maintain 75 degrees F (in cooling) and 70 degrees F (in heating). The unoccupied modes shall modulated the air handling units and associated air-cooled condensing units to maintain 85 degrees F (in cooling) and 65 degrees F (in heating). Occupied and Unoccupied mode temperatures shall be Owner adjustable.

F. Display:
   1. System graphic.
   2. Air Handling Unit - on/off indication.
   3. Unit supply air temperature.
   4. Unit return air temperature.
   5. Unit outside air temperature.
   6. Indirect Gas-Fired Heater Section - Chamber Pressure Differential.
   7. Induced Draft Exhaust Fan (DEF-#) Status.
   8. Pre-Filter Status.
   9. Final Filter Status.
   10. Outside Air Flow Measuring Station.
   11. Return Air Flow Measuring Station.
   12. Supply Air Flow Measuring Station.

3.2 AIR-COOLED DXCONDENSING UNIT SYSTEMS

A. Based on the average zone requirements, engage each AHU's associated air-cooled condensing unit to maintain zone temperature set-point. The internal condensing unit controls shall govern the modulation and activation of each compressor circuits to maintain the average zone temperature.

B. Display:
   1. System graphic.
   2. Air-Cooled Condensing unit on/off indication.
   3. Unit Suction temperature/pressure.
   4. Unit Liquid temperature/pressure.
   5. Current percent level of Air-Cooled Condensing unit operation.
   6. Provide standard unit alarms/errors from manufacturer to DDC/BMS system.

3.3 EXHAUST FANS

A. Refer to Exhaust Fan Schedule notes on Sheet M-601 for each exhaust fan sequence of operation.

B. Refer to Induced Draft Exhaust Fan Schedule notes and Air-Handling Units sequence of operations for sequence of operation.

C. Exhaust Fan (EF-4) shall operate based on the Refrigerant Leak Detection System and on the CO2 Detection System. If a refrigerant leak or high levels of CO2 is detected, EF-4 shall engage, associated control damper (CD-1) shall close, and audible / visible alarms shall engage and report to DDC front-end.

3.4 RADIATION UNIT HEATERS

A. Average the temperature room with multiple thermostat sensors set at 45 degrees F(owner adjustable) to maintain constant space temperature by staging electric unit heaters to engage as described on Radiant Electric Unit Heater Schedule.

3.5 ELECTRIC UNIT HEATER

A. Integral thermostat on unit heater to maintain room temperature at minimum 45 degrees. F. Provide sensor to DDC front-end to allow for monitoring of riser room temperature. If room temperature falls below 35 degrees F, alarm front-end of potential freezing conditions.

3.6 SUMP PUMPS

A. Elevator Sump Pump: Pump shall operate based on integral float switch provided by manufacturer. DDC controls shall monitor if pump is operational, turn off operational notification when pump is not operating, wet sensor shall alarm DDC front-end that pit is 3/4 full.
B. Condensate Sump Pump: Pump shall operate based on integral float switch provided by manufacturer. DDC controls shall monitor pump operational status, no alarm require. Pump is designed to operate intermittently as needed to remove condensate from basement. Provide wet sensor to alarm DDC front-end if pit becomes 80 percent full.

3.7 DOMESTIC WATER HEATER SYSTEM

A. DDC to monitor outlet domestic hot water temperature, alarm DDC front-end if temperature falls below 120 degrees F and if temperature goes above 140 degrees F.
B. Monitor the domestic hot water recirculation pump, alarm front-end if pump is not operational.

3.8 PET AREA WASHDOWN SYSTEM

A. DDC front-end shall monitor system operation with flow switch to packaged wash-down system. DDC to monitor and record time and duration of system operation via domestic water flow to system.

3.9 IT ROOM AC UNIT SYSTEM

A. Ductless split system manufacturers integral controls shall control the system to maintain the set-point required be the owner. DDC front-end shall monitor room temperature via DDC supplied temperature sensor and alarm DDC front-end if room temperature rises above 80 degrees F, Owner adjustable.

END OF SECTION

SECTION 23 11 23 - FACILITY NATURAL-GAS PIPING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
1. Natural gas piping beyond 5 feet of building.
2. Natural gas piping buried within 5 feet of building.
3. Natural gas piping above grade.
4. Unions and flanges.
5. Valves.
6. Press-Connect fittings.

B. Related Requirements:
1. Division 01 Specification Sections apply to Work of this Section.
2. Section 07 84 13 "Penetration Firestopping."
3. Section 09 91 13 "Interior Painting."
4. Section 23 05 00 "General Mechanical Requirements."
5. Section 23 05 29 "Hangers and Supports for Plumbing Piping and Equipment."

1.2 REFERENCES

A. American National Standards Institute:

1.3 SYSTEM DESCRIPTION

A. Where more than one piping system material is specified, provide compatible system components and joints. Use non-conducting dielectric connections when joining dissimilar metals in systems.
B. Provide flanges, unions, or couplings at locations requiring servicing. Use unions, flanges, or couplings downstream of valves and at equipment connections. Do not use direct welded or threaded connections to valves, equipment.
C. Provide pipe hangers and supports in accordance with ASME B31.9, ASTM F708, MSS SP 58, MSS SP 69, and MSS SP 89.
D. Use plug, ball, or butterfly valves for shut-off and to isolate equipment, part of systems, or vertical risers.

1.4 SUBMITTALS

A. Division 01 and Section 23 05 00 "General Mechanical Requirements" for submittal procedures.
B. Product Data:
   1. Piping: Submit data on pipe materials, fittings, and accessories. Submit manufacturers catalog information.
   2. Valves: Submit manufacturers catalog information with valve data and ratings for each service.
   3. Piping Specialties: Submit manufacturers catalog information including capacity, rough-in requirements, and service sizes for the following:
      a. Natural gas pressure regulators.

1.5 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: Submit for valves and gas pressure regulators installation instructions, spare parts lists, and exploded assembly views.

1.6 QUALITY ASSURANCE

A. Perform natural gas Work in accordance with NFPA 54.
B. Furnish shutoff valves complying with ASME B16.33 or ANSI Z21.15.

1.7 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this Section with minimum 3 years' experience.
B. Installer: Company specializing in performing Work of this Section with minimum 3 years' experience.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Accept valves on site in shipping containers with labeling in place. Inspect for damage.
B. Protect piping and fittings from soil and debris with temporary end caps and closures. Maintain in place until installation. Furnish temporary protective coating on cast iron and steel valves.

1.9 FIELD MEASUREMENTS

A. Verify field measurements prior to fabrication.

1.10 WARRANTY

A. Section 23 05 00 "General Mechanical Requirements" for product warranties.
B. Warranty period for Viega MegapressG fittings: Fifteen years from date of installation.

PART 2 - PRODUCTS

2.1 NATURAL GAS PIPING, BURIED BEYOND 5 FEET OF BUILDING

A. Steel Pipe: ASTM A53 Schedule 40 black.
   1. Fittings: ASTM A234 forged steel welding type.
   2. Joints: ASME B31.9, welded.
   3. Jacket: AWWA C105 polyethylene jacket or double layer, half-lapped 10-mil polyethylene tape.

2.2 NATURAL GAS PIPING, BURIED WITHIN 5 FEETOF BUILDING

A. Steel Pipe: ASTM A53 Schedule 40 black.
   1. Fittings: ASTM A234 forged steel welding type.
   2. Joints: ASME B31.9, welded.
   3. Jacket: AWWA C105 polyethylene jacket or double layer, half-lapped 10-mil polyethylene tape.

2.3 NATURAL GAS PIPING, ABOVE GRADE

A. Steel Pipe: ASTM A53 Schedule 40 black.
   1. Fittings: ASME B16.3, malleable iron, or ASTM A234 forged steel welding type.
   2. Joints: Threaded for pipe 2 inchand smaller; welded for pipe 2-1/2 inchesnd larger.

2.4 UNIONS AND FLANGES

A. Unions for Pipe 2 Inches and Smaller:
   1. Ferrous Piping: Class 150, malleable iron, threaded.
   2. Dielectric Connections: Union with galvanized or plated steel threaded end, copper solder end, water impervious isolation barrier.
B. Flanges for Pipe 2-1/2 Inches and Larger:
   1. Ferrous Piping: Class 150, forged steel, slip-on flanges.
   2. Gaskets: 1/16-inch-thick preformed neoprene gaskets.

2.5 BALL VALVES

A. Substitutions: Division 01 and Section 23 05 00 "General Mechanical Requirements" for substituted Products.
B. 1/4-Inch to 1-Inch: MSS SP 110, Class 125, 2-piece, threaded ends, bronze body, chrome plated bronze ball, reinforced Teflon seats, blow-out proof stem, lever handle, UL 842 listed for flammable liquids and LPG, full port.
C. 1-1/4 Inches to 3 Inches: MSS SP 110, Class 125, 2-piece, threaded ends, bronze body, chrome plated bronze ball, reinforced Teflon seats, blow-out proof stem, lever handle, UL 842 listed for flammable liquids and LPG, conventional port.

2.6 PLUG VALVES

A. Substitutions: Division 01 and Section 23 05 00 "General Mechanical Requirements" for substituted Products.
B. Two Inches and Smaller: MSS SP 78, Class 150 semi-steel construction, rectangular port, regular opening, pressure lubricated, Teflon packing, threaded ends. Furnish 1 plug valve wrench for every 10 plug-valves with minimum of 1 wrench.
C. PL-2 2-1/2 Inches and Larger: MSS SP 78, Class 150 semi-steel construction, rectangular port, regular opening, pressure lubricated, Teflon packing, flanged ends. Furnish valve wrench.

2.7 NATURAL GAS PRESSURE REGULATORS

A. Product Description: Spring loaded, general purpose, self-operating service regulator including internal relief type diaphragm assembly and vent valve. Diaphragm case can be rotated 360 degrees in relation to body.
   1. Comply with ANSI Z21.80.
   2. Temperatures: -20 degrees F to 150 degrees F.
   3. Body: Cast iron steel.
   4. Spring case, lower diaphragm casing, union ring, seat ring and disk holder: Aluminum.
   5. Disk, diaphragm, and O-ring: Nitrile.
   6. Maximum inlet pressure: 150 psig.
   7. Furnish sizes 2 inches and smaller with threaded ends. Furnish sizes 2-1/2 inches and larger with flanged ends.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify excavations are to required grade, dry, and not over-excavated.

3.2 PREPARATION

A. Ream pipe and tube ends. Remove burrs. Bevel plain end ferrous pipe**.**
B. Remove scale and dirt, on inside and outside, before assembly.
C. Prepare piping connections to equipment with flanges or unions.

3.3 INSTALLATION - PIPE HANGERS AND SUPPORTS

A. Install hangers and supports in accordance with ASME B31.9, ASTM F708, and MSS SP 89.
B. Support horizontal piping hangers as scheduled.
C. Install hangers to provide minimum 1/2-inchspace between finished covering and adjacent work.
D. Place hangers within 12 inches of each horizontal elbow.
E. Install hangers to allow 1-1/2-inch minimum vertical adjustment. Design hangers for pipe movement without disengagement of supported pipe.
F. Support vertical piping at every floor. Support riser piping independently of connected horizontal piping.
G. Where installing several pipes in parallel and at same elevation, provide multiple pipe hangers or trapeze hangers.
H. Prime coat exposed steel hangers and supports in accordance with Section 09 91 23 "Interior Painting." Hangers and supports located in crawl spaces, pipe shafts, and suspended ceiling spaces are not considered exposed.
I. Provide clearance in hangers and from structure and other equipment for installation of insulation and access to valves and fittings.
J. Install pipe hangers and supports in accordance with Section 23 05 29 "Hangers and Supports for Plumbing Piping and Equipment."
K. Refer to Section 23 05 00 "General Mechanical Requirements" for roof-mounted pipping supports.

3.4 INSTALLATION - BURIED PIPING SYSTEMS

A. Install natural gas piping in accordance with NFPA 54.
B. Verify connection size, location, and invert are as indicated on Drawings.
C. Establish elevations of buried piping with not less than 2 feetof cover.
D. Establish minimum separation of from other services piping in accordance with applicable code.
E. Remove scale and dirt on inside of piping before assembly.
F. Excavate pipe trench in accordance with Section 23 05 00 "General Mechanical Requirements."
G. Install pipe to elevation as indicated on Drawings.

H. Install pipe on prepared bedding.
I. Route pipe in straight line.
J. Install pipe to allow for expansion and contraction without stressing pipe or joints.
K. Install plastic ribbon tape continuous over top of pipe; 12 inches above pipeline.
L. Non-metallic pipe: Install trace wire continuous over top of pipe; 12 inches below finish grade, above pipeline.
M. Pipe Cover and Backfilling: In accordance with Section 23 05 00 "General Mechanical Requirements."

3.5 INSTALLATION - ABOVE GROUND PIPING SYSTEMS

A. Install natural gas piping in accordance with NFPA 54.
B. Provide non-conducting dielectric connections wherever joining dissimilar metals.
C. Route piping in orderly manner and maintain gradient.
D. Where required, bend pipe with pipe bending tools in accordance with procedures intended for that purpose.
E. Install piping to conserve building space and not interfere with use of space.
F. Size and install gas piping to provide sufficient gas to supply maximum appliance demand at pressure higher than appliance minimum inlet pressure.
G. Group piping whenever practical at common elevations.
H. Install piping to allow for expansion and contraction without stressing pipe, joints, or connected equipment.
I. Sleeve pipe passing through partitions, walls and floors. Refer to Section 23 05 00 "General Mechanical Requirements."
J. Install firestopping at fire rated construction perimeters and openings containing penetrating sleeves and piping. Refer to Section 07 84 13 "Penetration Firestopping."
K. Provide clearance for installation of insulation and access to valves and fittings.
L. Provide access where valves and fittings are not exposed.
M. Where pipe support members are welded to structural building framing, scrape, brush clean, weld, and apply 1 coat of zinc rich primer.
N. Provide support for utility meters in accordance with requirements of utility company.
O. Install vent piping from gas pressure reducing valves to outdoors and terminate in weatherproof hood. Protect vent against entry of insects and foreign material.
    1. Minimum Vent Size: Connection size at regulator vent connection.
    2. Run individual vent line from each relief device, independent of breather vents.
    3. Do not terminate vent within 10 feet of any outside air intake.
P. Breather vents may be manifolded together with piping sized for combined appliance vent requirements.
Q. Prepare pipe, fittings, supports, and accessories not pre-finished, ready for finish painting. Refer to Section 09 91 13 "Interior Painting."
R. Install identification on piping systems including underground piping.
S. Install valves with stems upright or horizontal, not inverted.
T. Protect piping systems from entry of foreign materials by temporary covers, completing sections of the Work, and isolating parts of completed system.
U. Contractor shall paint all exposed natural gas piping visible above grade from public areas both inside and outside the building.

3.6 FIELD QUALITY CONTROL

A. Where gas appliance will be damaged by test pressure, disconnect appliance and cap piping during pressure test. Reconnect appliance after pressure test and leak test connection.
B. Pressure test natural gas piping in accordance with NFPA 54.
C. Inspect, test and purge gas piping in accordance with applicable code and local gas company requirements.
D. When pressure tests do not meet specified requirements, remove defective Work, replace and retest.
E. Immediately after gas is applied to a new system, or a system has been restored after gas service interruption, check pipe for leakage.
    1. Where leakage is detected, shut off gas supply until necessary repairs are complete.
F. Do not place appliances in service until leak testing and repairs are complete.

END OF SECTION

SECTION 23 23 00 - REFRIGERANT PIPING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
1. Refrigerant piping.
2. Unions, flanges, and couplings.
3. Valves.
4. Refrigerant strainers.

B. Related Requirements:
1. Division 01 Specification Sections apply to Work of this Section.
2. Section 23 05 00 "General Mechanical Requirements."
3. Section 23 07 00 "HVAC Insulation."

1.2 REFERENCES

A. Air-Conditioning and Refrigeration Institute:
1. ARI 495 - Refrigerant Liquid Receivers.
2. ARI 710 - Liquid-Line Driers.
3. ARI 730 - Flow-Capacity Rating and Application of Suction-Line Filters and Filter Dryers.
4. ARI 750 - Thermostatic Refrigerant Expansion Valves.
5. ARI 760 - Solenoid Valves for Use with Volatile Refrigerants.

B. American Society of Heating, Refrigerating and Air-Conditioning Engineers:
1. ASHRAE 15 - Safety Code for Mechanical Refrigeration.

C. American Society of Mechanical Engineers:
1. ASME B16.22 - Wrought Copper and Copper Alloy Solder Joint Pressure Fittings.
2. ASME B16.26 - Cast Copper Alloy Fittings for Flared Copper Tubes.
3. ASME B31.5 - Refrigeration Piping.
4. ASME Section VIII - Boiler and Pressure Vessel Code - Pressure Vessels.

D. ASTM International:
1. ASTM B88 - Standard Specification for Seamless Copper Water Tube.
2. ASTM B280 - Standard Specification for Seamless Copper Tube for Air Conditioning and Refrigeration Field Service.
3. ASTM F708 - Standard Practice for Design and Installation of Rigid Pipe Hangers.

E. American Welding Society:
1. AWS A5.8 - Specification for Filler Metals for Brazing and Braze Welding.
2. AWS D1.1 - Structural Welding Code - Steel.

3. MSS SP 89 - Pipe Hangers and Supports - Fabrication and Installation Practices.

G. Underwriters Laboratories Inc.:
1. UL 429 - Electrically Operated Valves.

1.3 SYSTEM DESCRIPTION

A. Where more than one piping system material is specified, provide compatible system components and joints. Use non-conducting dielectric connections when joining dissimilar metals in systems.
B. Provide flanges, unions, or couplings at locations requiring servicing. Use unions, flanges, or couplings downstream of valves and at equipment connections. Do not use direct welded or threaded connections to valves or equipment.
C. Provide pipe hangers and supports in accordance with ASME B31.5, ASTM F708, MSS SP 58, MSS SP 69, and MSS SP 89.

1.4 SUBMITTALS

A. Division 01 and Section 23 05 00 "General Mechanical Requirements" for submittal procedures.
B. Product Data:
   1. Piping: Submit data on pipe materials, fittings, and accessories.
   2. Valves: Submit manufacturer's catalog information with valve data and ratings for each service.

1.5 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this Section with minimum 3 years; experience.
B. Fabricator or Installer: Company specializing in performing Work of this Section with minimum 3 years' experience.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Dehydrate and charge refrigeration components including piping and receivers, seal prior to shipment. Maintain seal until connected into system.
B. Accept valves on site in shipping containers with labeling in place. Inspect for damage.
C. Provide temporary end caps and closures on piping and fittings. Maintain in place until installation.
D. Protect piping systems from entry of foreign materials by temporary covers, completing sections of the Work, and isolating parts of completed system.

1.7 ENVIRONMENTAL REQUIREMENTS

A. Do not install underground piping when bedding is wet or frozen.

1.8 FIELD MEASUREMENTS

A. Verify field measurements prior to fabrication.

1.9 WARRANTY

A. Division 01 and Section 23 05 00 "General Mechanical Requirements."

PART 2 - PRODUCTS

2.1 REFRIGERANT PIPING (ABOVE GRADE AND UNDERGROUND)

A. Copper Tubing: ASTM B280, drawn.
   1. Fittings: ASME B16.22 wrought copper.
   2. Joints: Braze, AWS A5.8 BCuP silver/phosphorus/copper alloy with melting range 1,190 to 1,480 degrees F.
   3. Provide polyethylene jacket or double layer, half-lapped 10-mil polyethylene tape on all underground refrigerant piping for all underground refrigerant piping.

2.2 UNIONS, FLANGES, AND COUPLINGS

A. Two inches and Smaller:
   1. Copper Pipe: Bronze, soldered joints.
B. Dielectric Connections: Union with galvanized or plated steel threaded end, copper solder end, water impervious isolation barrier.

2.3 VALVES

A. Ball Valves:
   1. Two-piece bolted forged brass body with Teflon ball seals and copper tube extensions, brass bonnet and seal cap, chrome plated ball, stem with neoprene ring stem seals, soldered ends.
   2. Maximum working pressure: 500 psig.
   3. Maximum working temperature: 325 degrees F.
B. Service Valves:
   1. Forged brass body with copper stubs, brass caps, removable valve core, integral ball check valve, flared or solder ends.
   2. Maximum working pressure: 500 psig.
C. Refrigerant Check Valves:
   1. Straight Through Type:
      a. Spring, neoprene seat.
      b. Maximum working pressure: 500 psig.
      c. Maximum working temperature: 250 degrees F.

2.4 REFRIGERANT STRAINERS

A. Straight Line or Angle Line Type:
   1. Brass or steel shell, steel cap and flange, and replaceable cartridge, with screen of stainless steel wire or monel reinforced with brass.
   2. Maximum working pressure: 430 psig.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify excavations are to required grade, dry, and not over-excavated.

3.2 PREPARATION

A. Ream pipe and tube ends. Remove burrs.
B. Remove scale and dirt on inside and outside before assembly.
C. Prepare piping connections to equipment with flanges or unions.
D. Keep open ends of pipe free from scale and dirt. Protect open ends with temporary plugs or caps.

3.3 INSTALLATION - INSERTS

A. Provide inserts for placement in concrete forms.
B. Provide inserts for suspending hangers from reinforced concrete slabs and sides of reinforced concrete beams.
C. Provide hooked rod to concrete reinforcement section for inserts carrying pipe 4 inches and larger.
D. Where concrete slabs form finished ceiling, locate inserts flush with slab surface.
E. Where inserts are omitted, drill through concrete slab from below and provide through-bolt with recessed square steel plate and nut recessed into and grouted flush with slab.

3.4 INSTALLATION - BURIED PIPING SYSTEMS

A. Establish elevation of buried piping with not less that 2 feet 0 inches of cover.
B. Remove scale and dirt on inside of piping before assembly.
C. Excavate pipe trench in accordance with Section 23 05 00 "General Mechanical Requirements."
D. Install piping on prepared bedding and route piping in as straight a line as possible.
E. Provide polyethylene jacket or double layer, half-lapped 10-mil polyethylene tape on all underground refrigerant piping.

3.5 INSTALLATION - ABOVE GROUND PIPING SYSTEMS

A. Route piping parallel to building structure and maintain gradient.
B. Install piping to conserve building space, and not interfere with use of space.
C. Group piping whenever practical at common elevations.
D. Sleeve pipe passing through partitions, walls and floors. Refer to Section 23 05 00 "General Mechanical Requirements."
E. Install piping to allow for expansion and contraction without stressing pipe, joints, or connected equipment.
F. Provide access where valves and fittings are not exposed.
G. Arrange refrigerant piping to return oil to compressor. Provide traps and loops in piping, and provide double risers as required. Slope horizontal piping 0.40 percent in direction of flow.
H. Flood refrigerant piping system with nitrogen when brazing.
I. Where pipe support members are welded to structural building framing, scrape, brush clean, and apply one coat of zinc rich primer to welds.
J. Install valves with stems upright or horizontal, not inverted.

K. Insulate piping; refer to Section 23 07 00 "HVAC Insulation." Both liquid and suction piping lines shall be insulated with aluminum jacketing on both suction and liquid piping runs. THIS APPLIES TO BOTH OUTSIDE AND INSIDE ABOVE GRADE APPLICATIONS.
L. Fully charge completed system with refrigerant after testing.
M. Follow ASHRAE 15 procedures for charging and purging of systems and for disposal of refrigerant.
N. Install refrigerant piping in accordance with ASME B31.5.

3.6 FIELD QUALITY CONTROL

A. Test refrigeration system in accordance with ASME B31.5.
B. Pressure test refrigeration system with dry nitrogen to 200 psig.
C. Repair leaks.
D. Retest until no leaks are detected.

3.7 SCHEDULES

A. Copper Tube Hanger Spacing:
   1. Pipe Size 1/2-Inch:
      a. Maximum Hanger Spacing: 5 feet.
      b. Hanger Rod Diameter: 3/8-inch.
   2. Pipe Size 3/4-Inch:
      a. Maximum Hanger Spacing: 5 feet.
      b. Hanger Rod Diameter: 3/8-inch.
   3. Pipe Size 1-Inch:
      a. Maximum Hanger Spacing: 6 feet.
      b. Hanger Rod Diameter: 3/8-inch.
   4. Pipe Size 1-1/4 Inches:
      a. Maximum Hanger Spacing: 7 feet.
      b. Hanger Rod Diameter: 3/8-inch
   5. Pipe Size 1-1/2 Inches:
      a. Maximum Hanger Spacing: 8 feet.
      b. Hanger Rod Diameter: 3/8-inch.
   6. Pipe Size 2 Inches:
      a. Maximum Hanger Spacing: 8 feet.
      b. Hanger Rod Diameter: 3/8-inch.
   7. Pipe Size 2-1/2 Inches:
      a. Maximum Hanger Spacing: 9 feet.
      b. Hanger Rod Diameter: 1/2-inch.
   8. Pipe Size 3 Inches:
      a. Maximum Hanger Spacing: 10 feet.
      b. Hanger Rod Diameter: 1/2-inch.
   9. Pipe Size 4 Inches:
      a. Maximum Hanger Spacing: 10 feet.
      b. Hanger Rod Diameter: 1/2-inch.

END OF SECTION

SECTION 23 31 00 - HVAC DUCTS AND CASINGS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Duct materials.
   2. Insulated flexible ducts.
   3. Casings.
   4. Ductwork fabrication.
   5. Duct cleaning.
   6. Fabric ductwork.

B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.

1.2 REFERENCE STANDARDS

A. American Society of Heating, Refrigerating and Air-Conditioning Engineers:
   1. ASHRAE Handbook - Fundamentals.

B. American Welding Society:
   1. AWS D1.1 - Structural Welding Code - Steel.
   2. AWS D1.2 - Structural Welding Code - Aluminum.
   3. AWS D9.1 - Sheet Metal Welding Code.

C. ASTM International:
   1. ASTM A36 - Standard Specification for Carbon Structural Steel.
   2. ASTM A90 - Standard Test Method for Weight Mass of Coating on Iron and Steel Articles with Zinc or Zinc-Alloy Coatings.
   3. ASTM A240 - Standard Specification for Chromium and Chromium-Nickel Stainless Steel Plate, Sheet, and Strip for Pressure Vessels and for General Applications.
   4. ASTM A568 - Standard Specification for Steel, Sheet, Carbon, Structural, and High-Strength, Low-Alloy, Hot-Rolled and Cold-Rolled, General Requirements for.
   5. ASTM A653 - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.
   6. ASTM A666 - Standard Specification for Annealed or Cold-Worked Austenitic Stainless Steel Sheet, Strip, Plate, and Flat Bar.
   7. ASTM A1008 - Standard Specification for Steel, Sheet, Cold-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy with Improved Formability, Solution Hardened, and Bake Hardenable.
   8. ASTM A1011 - Standard Specification for Steel, Sheet and Strip, Hot-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy with Improved Formability, and Ultra-High Strength.
   9. ASTM B209 - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate.

10. ASTM C14 - Standard Specification for Nonreinforced Concrete Sewer, Storm Drain, and Culvert Pipe.
11. ASTM C443 - Standard Specification for Joints for Concrete Pipe and Manholes, Using Rubber Gaskets.
12. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.

D. International Code Council:
1. International Energy Conservation Code (IECC).
2. International Mechanical Code (IMC).

E. NFPA:
1. NFPA 90A - Standard for the Installation of Air-Conditioning and Ventilating Systems.
2. NFPA 90B - Standard for the Installation of Warm Air Heating and Air-Conditioning Systems.
3. NFPA 96 - Standard for Ventilation Control and Fire Protection of Commercial Cooking Operations.

F. Sheet Metal and Air Conditioning Contractors' National Association:
1. SMACNA 016 - HVAC Air Duct Leakage Test Manual.
2. SMACNA 1767 - Kitchen Ventilation Systems and Food Service Equipment Guidelines.
3. SMACNA 1884 - Fibrous Glass Duct Construction Standards.
4. SMACNA 1966 - HVAC Duct Construction Standards - Metal and Flexible.

G. UL:
1. UL 181 - Factory-Made Air Ducts and Air Connectors.
2. UL 181A - Closure Systems for Use With Rigid Air Ducts.
3. UL 1978 - Grease Ducts.

1.3 SUBMITTALS

A. Division 01 33 00 "Submittal Procedures" for requirements for submittals.
B. Product Data: Submit manufacturer information for duct materials.

1.4 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this Section with minimum 3 years ' experience.
B. Installer: Company specializing in performing Work of this Section with minimum 3 years' experience.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Inspection: Accept materials on site in manufacturer's original packaging and inspect for damage.
B. Store materials according to manufacturer instructions.
C. Protection:
1. Protect materials from moisture and dust by storing in clean, dry location remote from construction operations areas.
2. Provide additional protection according to manufacturer instructions.

1.6 AMBIENT CONDITIONS

A. Minimum Conditions: Do not install duct sealant when temperatures are less than those recommended by sealant manufacturer.
B. Subsequent Conditions: Maintain temperatures during and after installation of duct sealant.

1.7 EXISTING CONDITIONS

A. Field Measurements:
1. Verify field measurements prior to fabrication.
2. Indicate field measurements on Shop Drawings.

PART 2 - PRODUCTS

2.1 DUCTS

A. Performance and Design Criteria:
1. Variation of duct configuration or sizes other than those of equivalent or lower loss coefficient is not permitted except by written permission of Engineer.
2. Size round ducts installed in place of rectangular ducts according to ASHRAE Handbook - Fundamentals.
B. Galvanized-Steel Ducts:
1. Material: ASTM A653 galvanized-steel sheet.
2. Quality: Lock forming.
3. Finish: G90 zinc coating according to ASTM A90.
C. Stainless-Steel Ducts: Comply with ASTM A240, Type 304.
D. Fasteners: Rivets, bolts, or sheet metal screws.
E. Hanger Rod:
1. Material: Galvanized steel.
2. Comply with ASTM A36.
3. Type: Threaded continuously.

2.2 INSULATED FLEXIBLE DUCTS

A. Description:
1. Two-ply vinyl film supported by helical-wound spring steel wire.
2. Insulation: Fiberglass.
3. Vapor Barrier Film: Polyethylene (PE) or Aluminized.
4. Pressure Rating: 10-inch wg positive and 1.0-inch wg negative.
5. Maximum Velocity: 4,000 fpm.
6. Temperature Range: Minus 10 to plus 160 degrees F .
7. Thermal Resistance: R-6 installed value or greater.

2.3 DOUBLE WALL METAL STACKS (FLUE VENT AIR DUCT FROM AIR HANDLING UNITS)

A. Manufacturers:
   1. Simpson Dura-Vent Co.: Model DuraStack Pro-DIS, Basis of Design
   2. Industrial Chimney Company.
   3. HeatFab.
   4. Selkirk Corporation.
   5. Substitutions: Division 01 and Section 23 05 00 “General Mechanical Requirements” for substitutions.

B. Furnish double wall metal stacks, tested to UL 103 and UL listed, for use with building heating equipment, in compliance with NFPA 211.

C. Fabricate with 2-inch minimum insulation between walls. Construct inner jacket of 20 gage ASTM A240 or ASTM A666 Type 316 stainless steel. Construct outer jacket of Type 304 stainless steel 24 gage for sizes 10 inches up to 24 inches and 20 gage for sizes 28 inches to 48 inches.

D. The pre-fabricated chimney, breeching and components shall be listed as an Industrial Chimney by Intertek in the United States and Canada according to UL/ULC standard for use with building heating appliances which produce exhausted flue gases at a maximum temperature of 1,000 degrees F under continuous firing. The chimney shall be listed for temperatures of 1,000 degrees F under continuous firing and 1,400 degrees F in brief forced firing according to UL-103, ULC-S604, and ULC/ORD-C959. The factory-built breeching system shall be made in accordance with NFPA 211. This stack system shall be designed and installed to be gas tight. It shall be listed by Intertek in accordance with UL103 to withstand up to 60-inch internal water column pressure. Each duct section shall be made of 2 steel cylinders separated by 2-inch of high temperature fiber insulation. The published clearance of 1 inch to combustible shall be the result of UL/ULC standard. Each duct section shall be made of two steel cylinders separated by 2 inches of air. The published clearance of 4 inches to combustible shall be the result of UL/ULC standard. The inner wall (flue) shall be constructed from 304 or 316 stainless steel, 0.035-inch-hick. The outer wall (casing) shall be constructed from galvalume, 304 stainless or 316 stainless steel, 0.018-inch-thick for diameter 5-inch to 24-inch and 0.024-inch for diameter 26-inch to 36-inch. Non-stainless steel surfaces exposed outside shall be protected by a minimum of one base coat of primer and one finish coat of corrosion resistant paint suitable for high temperature. All primer and paint must be supplied by the contractor and shall be equivalent to series 4100 or 9400 as manufactured by Rust-Oleum. n outer wall made of 304 or 316 stainless steel doesn’t need to be painted. The inner wall (flue) shall be laser or plasma welded. All section joints shall be self-centering to ensure proper spacing between the inner wall (flue) and the outer wall (casing). All section joints are connected and sealed with factory supplied locking bands at the outer wall (casing) only. Use appropriate sealant as specified in the manufacturer’s installation manual. The chimney shall be designed to compensate for thermal expansion.

E. Accessories, UL labeled.

2.4 CASINGS

A. Fabricate casings according to SMACNA 1966 and construct for indicated operating pressures.
B. Doors:
   1. Reinforce access door frames with steel angles tied to horizontal and vertical plenum supporting angles.
   2. Furnish hinged access doors where indicated or required for access to equipment for cleaning and inspection.
C. Acoustic Casings:
   1. Fabricate acoustic casings with reinforcing turned inward.
   2. Furnish 16-gauge back facing and 22-gauge perforated front facing, with 3/32-inch-diameter holes at 5/32-inch o.c.
   3. Construct panels 3 inches thick and packed with 4.5-pcf inimum glass-fiber media, on 16-gauge inverted channels.

2.5 FABRICATION

A. Rectangular Ducts:
   1. According to SMACNA 1966.
   2. Provide duct material, gauges, reinforcing, and sealing for indicated operating pressures.
B. Round Ducts:
   1. According to SMACNA 1966 and as indicated on Drawings.
   2. Seams: Longitudinal.
   3. Provide duct material, gauges, reinforcing, and sealing for indicated operating pressures.
C. Tees, Bends, and Elbows:
   1. Minimum Radius:
      a. 1-1/2 times centerline duct width.
      b. If not possible or if rectangular elbows are used, provide single thickness airfoil turning vanes.
   2. If acoustical lining is indicated, furnish turning vanes of perforated metal with glass-fiber insulation.
D. Divergence:
   1. Increase duct sizes gradually, not exceeding 15 degrees of divergence wherever possible.
   2. Upstream of Equipment: Maximum 30 degrees.
   3. Downstream of Equipment: Maximum 45 degrees.
E. Welding:
   1. Continuously Welded Round and Oval Duct Fittings: Two gauges heavier than duct gauges according to SMACNA 1966.
   2. Cemented Slip Joints:
      a. Minimum 4 inches.
      b. Brazed or electric welded.
   3. Prime coat welded joints.

F. Takeoffs:
   1. Provide standard 45-degree lateral wye takeoffs.
   2. If not possible due to space limitations, provide 90-degree conical tee connections.

G. Sealing:
   1. Seal joints between duct sections and duct seams with welds, gaskets, mastic adhesives, mastic plus embedded fabric systems, or tape.
   2. Sealants, Mastics, and Tapes: Comply with UL 181A and provide products bearing appropriate UL 181A markings.

2.6 FABRIC DUCTWORK

A. Air diffusers shall be constructed with internal framing to provide cylindrical tension textile along the entire length of textile duct, including all fittings. System shall include full 360 degree tensioning of duct runs. Interior structure to include multiple mechanically adjustable tension devices. Textile components supported solely by metal cylindrical rings. Each cylindrical ring shall require a vertical metal to metal cable safety attachment.
   1. Vertical galvanized steel supports available lengths of 5 feet (standard), 10 feet, 15 feet, and 30 feet. Fabric ductwork to be available for diameters from 8 inches to 84 inches.
   2. Approved Fabric Ductwork manufacturers and models:
      a. DuctSox - Sedona - XM with SkeleCore Inner Frames.
      b. Prihoda - NMI/Prihoda Premium with internal ring supports suspension system.
      c. KE Fibertec - KE-DireJet Hybrid with Safetrack 360 Arch suspension system.

B. Textile Construction: Filament/filament twill polyester treated with a machine washable anti-microbial agent by the fabric manufacturer, fire retardant in accordance with UL 2518. Air Permeability: 2 (+2/-1) CFM/ft^2 per ASTM D737. The air permeability of the fabric must NOT be created by perforating the fabric. The air permeability must be confirmed third party tested to eliminate the formation of condensate on the fabric. Weight: 6.8 oz. /yd^2 per ASTM D3776.
   1. Warranty: Minimum 10 years with standard inlet velocity.

C. Textile Color: To be determined by architectural interior design, provide physical fabric duct samples of manufacturer colors. Physical samples to be returned to manufacturer's representative or manufacturer.

D. Minimum Fabrication Requirements: Textile system to be constructed in modular lengths (zippered) with proper radial securing clips (inlets, end-caps and mid-sections) and top access zippers for vertical cable safety attachment. Integrated air dispersion shall be specified and approved by manufacturer.
   1. Linear Vents:
      a. Air dispersion accomplished by linear vent and permeable fabric. Linear vents must be sized in 1 CFM per linear foot increments (based on .5-inch SP), starting at 1 CFM through 90 CFM per linear foot. Linear vent is to consist of an array of open orifices rather than a mesh style vent to reduce maintenance requirements of mesh style vents. Linear vents should also be designed to minimize dusting on fabric surface.
      b. Size of vent openings and location of linear vents to be specified and approved by manufacturer.

2. Orifices (where applicable):
    a. Air dispersion and extended throws are accomplished by reinforced orifices and permeable fabric. Reinforced laser-cut orifices retain the integrity of the opening and withstand laundry processes.
    b. Diameter, quantity, and location of reinforced orifices to be specified and approved by manufacturer.
3. Fixed Nozzles (where applicable):
    a. Air dispersion accomplished by using conical aerodynamic nozzles and permeable fabric. Diameter of nozzles height to be minimum 1/2-inch. Due to exact requirements of throw and maximum level of noise alternative flow models are not acceptable. Color of nozzles must match color of fabric.
    b. Location and number of nozzles to be specified and approved by manufacturer. Provide orifices at 135 degrees, 180 degrees, and 225 degrees.
4. Inlet connection to metal duct via fabric draw band with anchor patches as supplied by manufacturer. Anchor patches to be secured to metal duct via. zip screw fastener supplied by Contractor.
    a. Inlet connection includes zipper for easy removal / maintenance.
    b. Lengths to include required intermediate zippers as specified by manufacturer.
    c. System to include Adjustable Flow Devices to balance turbulence, airflow, and distribution as needed. Flow restriction device shall include ability to adjust the airflow resistance from 0.06 to 0.60 in w.g. static pressure.
    d. End cap includes zipper for easy maintenance.
    e. Each section of the textile shall include identification labels documenting order number, section diameter, section length, piece number, code certifications, and other pertinent information.
5. Ductwork track mounting material system, single row. Mounting rails made of extruded aluminum with a 10-micron anodized finish. The length of the rails must correspond to the Drawings or be adapted for the installation of textile ducts. The manufacturer must cut the rails to the required length. The textile ducts are suspended in the rails by means of an integrated flexible bulb that slides into the extruded aluminum rails. The rails are mounted to the ceiling using vertical strap-ups either galvanized threaded rod or steel cable. The strap-ups are clicked onto the rails with an aluminum suspension profile.

E. Installation of Fabric Ductwork System:
1. Install chosen suspension system in accordance with the requirements of the manufacturer. Instructions for installation shall be provided by the manufacturer with product. Contractor to install fabric ductwork suspension system at height as shown on architectural elevation drawings. Coordinate all vertical supports with respect to architectural hanging features and lighting fixtures.
2. Clean air handling unit and ductwork prior to the fabric ductwork system unit-by-unit as it is installed. Clean external surfaces of foreign substance which may cause corrosive deterioration of facing.
3. Temporary Closure: At ends of ducts which are not connected to equipment or distribution devices at time of ductwork installation, cover with polyethylene film or other covering which will keep the system clean until installation is completed.
4. If fabric ductwork systems become soiled, dirty, or damaged during installation, they should be removed and cleaned or replaced following the manufacturers standard terms of installation.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify sizes of equipment connections before fabricating transitions.

3.2 PREPARATION

A. Obtain manufacturer's inspection and acceptance of fabrication and installation at beginning of installation.
B. Install temporary closures of metal or taped PE on open ductwork to prevent construction dust from entering ductwork system.

3.3 INSTALLATION

A. Install and seal ducts according to SMACNA 1966.
B. Glass-Fiber-Reinforced Ducts: Comply with SMACNA 1884.
C. Insulated Flexible Duct Fittings:
    1. Join each flexible duct section to main trunk duct through sheet metal fittings.
    2. Equip fittings with factory-installed volume damper having positive locking regulator.
    3. Provide insulation guard with fittings installed in lined ductwork.
D. Use crimp joints with or without bead or beaded sleeve couplings for joining round duct sizes 8 inches and smaller.
E. Hanger and Supports:
    1. Fabricate and support ducts according to SMACNA 1966.
    2. Threaded Rods: Provide double nuts and lock washers.
    3. Building Attachments:
        a. Provide concrete inserts or structural-steel fasteners appropriate for construction materials to which hangers are attached.
        b. If possible, install concrete inserts before placing concrete.
        c. Powder-Actuated Concrete Fasteners:
            1) Use only for slabs more than 4 inches thick.
            2) Install after concrete is placed and completely cured.
            3) Do not use powder-actuated concrete fasteners for seismic restraints.
    4. Hanger Spacing:
        a. Comply with SMACNA 1966.
        b. Install hangers and supports within 24 inches of each elbow and within 48 inches of each branch intersection.
        c. Extend strap supports down both sides of ducts and turn under bottom at least 1 inch.
        d. Secure hanger to sides and bottom of ducts with sheet metal screws.
    5. Hangers Exposed to View: Provide threaded rod and angle or channel supports.
    6. Vertical Ducts:
        a. Support with steel angles or channel secured to sides of duct with welds, bolts, sheet metal screws, or blind rivets.
        b. Support at each floor and at maximum intervals of 16 feet.

7. Upper Attachments:
    a. Attach to structures.
    b. Selection and Sizing: Provide pull-out, tension, and shear capacities as required for supported loads and building materials.
8. Penetrations:
    a. Avoid penetrations of ducts with hanger rods.
    b. If unavoidable, provide airtight rubber grommets at penetrations.

F. Connect flexible ducts to metal ducts with adhesive plus sheet metal screws.

G. Plenum Doors:
1. Location: 6 to 12 inches above floor.
2. Arrange door swing such that fan static pressure holds door in closed position.

H. Casings:
1. Floor Mounting:
    a. Install on 4-inch-high concrete curbs.
    b. At floor, rivet panels to angles 8 inches o.c.

I. Outdoor Ductwork: Protect ductwork and ductwork supports, linings, and coverings from weather.

J. Exhaust Outlet Locations:
1. Minimum Distance from Property Lines: Three feet.
2. Minimum Distance from Building Openings: Three feet.
3. Minimum Distance from Outside Air Intakes: Ten feet.

K. Interface with Other Work:
1. Install openings in ductwork as required to accommodate thermometers and controllers.
2. Install pitot tube openings for testing of systems, complete with metal can with spring device or screw to prevent air leakage.
3. If openings are provided in insulated ductwork, install insulation material inside metal ring.
4. Connect diffusers or light troffer boots to low-pressure ducts directly or with 5-footmaximum length of flexible duct held in place with strap or clamp.
5. Connect air terminal units and/or air outlets and inlets to supply ducts directly or with 5-footmaximum length of flexible duct; do not use flexible duct to change direction.

3.4 INSTALLATION OF DOUBLE WALLED FLUE VENT PIPE (FLUE VENT AIR DUCT FROM AIR HANDLING UNITS)

A. Install in accordance with NFPA 54 and SMACNA Guide for Free Standing Steel Stack Construction.

B. Install double walled flue vent with minimum of joints. Align accurately at connections, with internal surfaces smooth.

C. Support double walled flue vent from building structure, rigidly with suitable ties, braces, hangers and anchors to hold to shape and prevent buckling. Support vertical breeching, chimneys, and stacks at 12 foot spacing, to adjacent structural surfaces, or at floor penetrations. Refer to SMACNA HVAC Duct Construction Standards - Metal and Flexible for equivalent duct support configuration and size.

D. Pitch breeching with positive slope up from fuel-fired equipment to vertical stack.

E. Coordinate installation of dampers, and induced draft fans.

F. Insulate double walled flue vent in accordance with Section 23 07 00.
G. Assemble and install stack sections in accordance with NFPA 82, industry practices, and in compliance with UL listing. Join sections with acid-resistant joint cement. Connect base section to foundation using anchor lugs.
H. Level and plumb chimney and stacks.
I. Clean breeching, chimneys, and stacks during installation, removing dust and debris.
J. Install slip joints allowing removal of appliances without removal or dismantling of double walled flue vent insulation or vertical stacks.
K. Where appliance requires induced draft hood fans, install manufacturer furnished listed devices in accordance with manufacturer's instructions and applicable

3.5 FIELD QUALITY CONTROL

A. Testing:
   1. Ductwork designed for 2-inch wg or less, above ambient pressure:
      a. Pressure test minimum 25 percent of ductwork after duct cleaning but before duct insulation is applied or ductwork is concealed.
      b. Comply with SMACNA 016.
      c. Maximum Allowable Leakage: According to IECC.

3.6 CLEANING

A. Clean duct system and force air at high velocity through duct to remove accumulated dust.
B. To obtain sufficient airflow, clean one half of system completely before proceeding to other half.
C. Protect sensitive equipment with temporary filters or bypass during cleaning.

3.7 ATTACHMENTS

A. Ductwork Material Schedule:
   1. Supply: Steel.
   2. Return and Relief: Steel.
   3. General Exhaust: Steel .
   4. Flue Vent Exhaust: Stainless steel.
   5. Outside Air Intake: Steel.
B. Ductwork Pressure Class Schedule:
   1. Constant Volume Supply: 1-inch wg, regardless of velocity.
   2. Return and Relief: 1/2-inch wg.
   3. General Exhaust: 1/2-inch wg.

END OF SECTION

SECTION 23 33 00 - AIR DUCT ACCESSORIES

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Back-draft dampers.
   2. Duct access doors.
   3. Volume control dampers.
   4. Flexible duct connections.
   5. Duct test holes.

B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.
   2. Section 23 05 00 "General Mechanical Requirements."
   3. Section 23 31 00 "HVAC Ducts and Casings."

1.2 REFERENCES

A. Air Movement and Control Association International, Inc.:
   1. AMCA 500 - Test Methods for Louvers, Dampers, and Shutters.

B. ASTM International:
   1. ASTM E1 - Standard Specification for ASTM Thermometers.

C. National Fire Protection Association:
   1. NFPA 90A - Standard for the Installation of Air Conditioning and Ventilating Systems.
   2. NFPA 92A - Recommended Practice for Smoke-Control Systems.

D. Sheet Metal and Air Conditioning Contractors:
   1. SMACNA - HVAC Duct Construction Standard - Metal and Flexible.

E. Underwriters Laboratories Inc.:
   1. UL 555 - Standard for Safety for Fire Dampers.
   2. UL 555C - Standard for Safety for Ceiling Dampers.
   3. UL 555S - Standard for Safety for Smoke Dampers.

1.3 SUBMITTALS

A. Division 01 and Section 23 05 00 "General Mechanical Requirements" for submittal procedures.

B. Product Data: Submit data for shop fabricated assemblies and hardware used.

C. Product Data: Submit for the following. Include where applicable electrical characteristics and connection requirements.
   1. Backdraft dampers.
   2. Flexible duct connections.
   3. Volume control dampers.
   4. Duct access doors.
   5. Duct test holes.

1.4 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this Section with minimum 3 years' experience.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Protect dampers from damage to operating linkages and blades.
B. Delivery: Deliver materials to site in manufacturer's original, unopened containers and packaging, with labels clearly indicating manufacturer and material.
C. Storage: Store materials in a dry area indoor, protected from damage.
D. Handling: Handle and lift dampers in accordance with manufacturer's instructions. Protect materials and finishes during handling and installation to prevent damage.

1.6 FIELD MEASUREMENTS

A. Verify field measurements prior to fabrication.

1.7 COORDINATION

A. Coordinate Work where appropriate with building control Work.

1.8 WARRANTY

A. Section 23 05 00 "General Mechanical Requirements" for product warranties.

PART 2 - PRODUCTS

2.1 BACK-DRAFT DAMPERS

A. Product Description: Multi-Blade, back-draft dampers: Parallel-action, gravity-balanced, Galvanized 16-gauge thick steel, or extruded aluminum. Blades, maximum 6-inch width, with felt or flexible vinyl sealed edges. Blades linked together in rattle-free manner with 90-degree stop, steel ball bearings, and plated steel pivot pin. Furnish dampers with adjustment device to permit setting for varying differential static pressure.

2.2 DUCT ACCESS DOORS

A. Fabricate in accordance with SMACNA HVAC Duct Construction Standards - Metal and Flexible, and as indicated on Drawings.
B. Fabrication: Rigid and close fitting of galvanized steel with sealing gaskets and quick fastening locking devices. For insulated ductwork, furnish minimum 1-inch-hick insulation with sheet metal cover.
    1. Less than 12 inches square, secure with sash locks.
    2. Up to 18 inches Square: Furnish 2 hinges and 2 sash locks.
    3. Up to 24 by 48 inches: Three hinges and 2 compression latches.
    4. Larger Sizes: Furnish additional hinge.
    5. Access panels with sheet metal screw fasteners are not acceptable.

2.3 VOLUME CONTROL DAMPERS

A. Fabricate in accordance with SMACNA HVAC Duct Construction Standards - Metal and Flexible, and as indicated on Drawings.
B. Multi-Blade Damper: Fabricate of opposed blade pattern with maximum blade sizes 8 by 72 inch. Assemble center and edge crimped blades in prime coated or galvanized frame channel with suitable hardware.
C. End Bearings: Except in round ductwork 12 inches and smaller, furnish end bearings. On multiple blade dampers, furnish oil-impregnated nylon or sintered bronze bearings. Furnish closed end bearings on ducts having pressure classification over 2 inches wg.
D. Quadrants:
    1. Furnish locking, indicating quadrant regulators on single and multi-blade dampers.
    2. On insulated ducts mount quadrant regulators on standoff mounting brackets, bases, or adapters.
    3. Where rod lengths exceed 30 inchesfurnish regulator at both ends.

2.4 FLEXIBLE DUCT CONNECTIONS

A. Fabricate in accordance with SMACNA HVAC Duct Construction Standards - Metal and Flexible.
B. Connector: Fabric crimped into metal edging strip.
    1. Fabric: UL listed fire-retardant neoprene coated woven glass fiber fabric conforming to NFPA 90A, minimum density 30 oz per sq yd.
    2. Net Fabric Width: Approximately 6 inches wide.
    3. Metal: Three inches wide, 24 gauge thick galvanized steel.

2.5 DUCT TEST HOLES

A. Permanent Test Holes: Factory fabricated, air tight flanged fittings with screw cap. Furnish extended neck fittings to clear insulation.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify rated walls are ready for fire damper installation.
B. Verify ducts and equipment installation are ready for accessories.
C. Check location of air outlets and inlets and make necessary adjustments in position to conform to architectural features, symmetry, and lighting arrangement.

3.2 INSTALLATION.

A. Install in accordance with NFPA 90A, and follow SMACNA HVAC Duct Construction Standards - Metal and Flexible. Refer to Section 23 31 00 "HVAC Ducts and Casings" for duct construction and pressure class.
B. Install Work in accordance with State and local standards.
C. Install back-draft dampers on exhaust fans or exhaust ducts nearest to outside and where indicated on Drawings.

D. Access Doors: Install access doors at the following locations and as indicated on Drawings.
   1. Before and after each duct mounted filter.
   2. Before and after each duct mounted coil.
   3. Before and after each duct mounted fan.
   4. Before and after each automatic control damper.
   5. Before and after each fire damper, smoke damper, or combination fire and smoke damper.
   6. Install at locations for cleaning kitchen exhaust ductwork in accordance with NFPA 96.

E. Access Door Sizes: Install minimum 8- by 8-inch size for hand access, 18- by 18-inch size for shoulder access, and as indicated on Drawings. Review locations prior to fabrication.

F. Install temporary duct test holes and required for testing and balancing purposes. Cut or drill in ducts. Cap with neat patches, neoprene plugs, threaded plugs, or threaded or twist-on metal caps.

END OF SECTION

SECTION 23 34 00 - HVAC FANS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Downblast centrifugal roof fans.
   2. Flue Vent Draft Inducer Fans.

B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.
   2. Section 23 05 00 "General Mechanical Requirements."
   3. Section 23 33 00 "Air Duct Accessories."

1.2 REFERENCES

   2. NEMA 250 - Enclosures for Electrical Equipment (1,000 Volts Maximum).

F. Underwriters Laboratories Inc.:
   1. UL 705 - Power Ventilators.

1.3 SUBMITTALS

A. Division 01 and Section 23 05 00 "General Mechanical Requirements."

B. Product Data: Submit data on each type of fan and include accessories, fan curves with specified operating point plotted, power, RPM, sound power levels for both fan inlet and outlet at rated capacity, electrical characteristics and connection requirements.

1.4 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this Section with minimum 3 years' experience.
B. Installer: Company specializing in performing Work of this Section with minimum 3 years' experience.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Protect motors, shafts, and bearings from weather and construction dust.

1.6 FIELD MEASUREMENTS

A. Verify field measurements prior to fabrication.

PART 2 - PRODUCTS

2.1 DOWNBLAST CENTRIFUGAL ROOF FANS

A. Manufacturers:
   1. Greenheck Fan Corporation.
   2. Loren Cook Company.
   3. Substitutions: Section Refer to Section 23 05 00 "General Mechanical Requirements."
B. General Description:
   1. Downblast fan will be for roof mounted applications.
   2. Maximum continuous operating temperature is 180 degrees F.
   3. Each fan will bear a permanently affixed manufacturer's engraved metal nameplate containing the model number and individual serial number.
C. Wheel:
   1. Constructed of aluminum.
   2. Non-overloading, backward inclined centrifugal.
   3. Statically and dynamically balanced in accordance with AMCA Standard 204-05.
   4. The wheel cone and fan inlet will be matched and will have precise running tolerances for maximum performance and operating efficiency.
D. Electronically Commutated Motor:
   1. Motor Enclosure: ODP.
   2. Motor to be a DC electronic commutation type motor (ECM) specifically designed for fan applications. AC induction type motors are not acceptable. Examples of unacceptable motors are: Shaded Pole, Permanent Split Capacitor (PSC), Split Phase, Capacitor Start and 3-phase induction type motors.
   3. Motor will be speed controllable down to 20 percent full speed (80 percent turndown). Speed will be controlled by either a potentiometer dial mounted to the motor or by a 0-10 VDC signal.

E. Housing:
   1. Motor cover, shroud, curb cap, and lower windband will be constructed of heavy gauge aluminum.
   2. Shroud will have an integral rolled bead for extra strength.
   3. Shroud will be drawn from a disc and direct air downward.
   4. Lower windband will have a formed edge for added strength.
   5. Motor cover will be drawn from a disc.
   6. All housing components will have final thicknesses equal to or greater than preformed thickness.
   7. Curb cap will have pre-punched mounting holes to ensure correct attachment.
   8. Rigid internal support structure.
   9. Leak proof.

F. Housing Supports and Drive Frame: Drive frame assemblies will be constructed of heavy gauge steel and mounted on vibration isolators.

G. Vibration Isolation:
   1. Rubber isolators,
   2. Sized to match the weight of each fan.

H. Disconnect Switches: Refer to Division 26.

2.2 FLUE VENT DRAFT INDUCER FANS

A. Manufacturers:
   1. Tjernlund Products, Inc. - Model RT750, Basis of Design.
   2. Enervex.
   3. Substitutions: Refer to Section 23 05 00 "General Mechanical Requirements."

B. Product Description: Exterior mount, rooftop inducer is ETL Listed for vertical venting of gas, oil, solid fuel, dryer venting and general ventilation. Manual speed control adjustment with optional controls. Keeps the entire vent system under a negative pressure. Patented thermally actuated motor cooling system extends motor life. Hinged housing with removable hinge pins simplifies installation and provides quick access to impeller and chimney interior. 4” x 4” weatherproof junction box with 4’ conduit, PSA-1 fan proving switch, mounting plates and hardware for metal chimney, DH series discharge hood with damper.

C. Housing Construction: High temperature powder coated, heavy gauge aluminized steel.

D. Impeller Construction: High performance, backward inclined, material handling type 304 stainless steel impeller.

E. Motor: PSC, 115 VAC, 60 Hz, permanently lubricated with minus 40 degrees F lubricant, sealed ball bearings. Speed adjustable.

F. Temperature Rating: 1,000 degrees F

G. Listings: ETL # 56826, UL 378 - Draft Equipment, ANSI/UL 705-2004 Power Ventilators.

H. Warranty: 2 - year mechanical.

I. Controls:
   1. UC1 Universal Control.
   2. UCRT Universal Control with speed control.
   3. COP2 Constant Operating Pressure Control.
   4. MAC1E, MAC4E Multiple Appliance controls.
   5. WHKE Millivolt Interlock kit.

J. Roof Curb: 12-inch-high self-flashing of galvanized steel construction with continuously welded seams , built-in cant strips, 1-inch insulation and curb bottom, hinged curb adapter, and factory installed nailer strip.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify roof curbs are installed and dimensions are as instructed by manufacturer.

3.2 INSTALLATION

A. Secure roof fans with cadmium plated steel lag screws to roof curb.
B. Suspended Fans: Install flexible connections specified in Section 23 33 00 "Air Duct Accessories" between fan and ductwork. Ensure metal bands of connectors are parallel with minimum 1-inch flex between ductwork and fan while running.
C. Install backdraft dampers on inlet to roof exhaust fans.
D. Provide backdraft dampers on outlet from cabinet and ceiling fans and as indicated on Drawings.
E. Install safety screen where inlet or outlet is exposed.
F. Pipe scroll drains to nearest floor drain.
G. Install backdraft dampers on discharge of exhaust fans**.**
H. Provide sheaves required for final air balance.

3.3 CLEANING

A. Vacuum clean coils and inside of fan cabinet.

3.4 DEMONSTRATION

A. Demonstrate fan operation and maintenance procedures.

3.5 PROTECTION OF FINISHED WORK

A. Do not operate fans until ductwork is clean, filters in place, bearings lubricated, and fan has been test run under observation.

END OF SECTION

SECTION 23 37 00 - AIR OUTLETS AND INLETS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Diffusers.
   2. Registers
   3. Grilles.
   4. Louvers.
B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.
   2. Section 23 05 00 "General Mechanical Requirements."

1.2 REFERENCES

A. Air Movement and Control Association International, Inc.:
   1. AMCA 500 - Test Methods for Louvers, Dampers, and Shutters.
B. American Society of Heating, Refrigerating, and Air-Conditioning Engineers:
   1. ASHRAE 70 - Method of Testing for Rating the Performance of Air Outlets and Inlets.
C. Sheet Metal and Air Conditioning Contractors:
   1. SMACNA - HVAC Duct Construction Standard - Metal and Flexible.

1.3 SUBMITTALS

A. Division 01 and Section 23 05 00 "General Mechanical Requirements" for submittal procedures.
B. Product Data: Submit sizes, finish, and type of mounting. Submit schedule of outlets and inlets showing type, size, location, application, and noise level.

1.4 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this Section with minimum 3 years' documented experience.

1.5 WARRANTY

A. Section 01 70 00 "Execution and Closeout Requirements" for product warranties and product bonds.

PART 2 - PRODUCTS

2.1 DIFFUSERS, GRILLES, AND REGISTERS: Refer to Drawings for Air Distribution Schedules.

A. Manufacturers:
1. Nailor Industries Inc.
2. Price Industries.
3. Titus.
4. Substitutions: Section 23 05 00 "General Mechanical Requirements."

2.2 LOUVERS: Refer to Drawings for Louver Schedules.

A. Manufacturers:
1. Greenheck Fan Corporation.
2. Ruskin Company.
3. Pottorff
4. Substitutions: Section 23 05 00 "General Mechanical Requirements."

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify inlet and outlet locations.
B. Verify ceiling or wall systems are ready for installation.

3.2 INSTALLATION

A. Install diffusers to ductwork with airtight connection.
B. Install balancing dampers on duct take-off to diffusers, grilles, and registers, whether or not dampers are furnished as part of diffuser, grille, and register assembly. All supply and exhaust air diffusers, grilles, and registers require MBD's.
C. Paint visible portion of ductwork behind air outlets and inlets matte black.
D. Do not locate air registers, diffusers or grilles in floors of toilet or bathing rooms.

3.3 INTERFACE WITH OTHER PRODUCTS

A. Check location of outlets and inlets and make necessary adjustments in position to conform to architectural features, symmetry, and lighting arrangement.

3.4 SCHEDULES

A. Refer to Drawings for all Schedules.

END OF SECTION

SECTION 23 63 13 - AIR-COOLED REFRIGERANT CONDENSERS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes refrigerant condenser package, charge of refrigerant and oil, controls and control connections, refrigerant piping and connections, motor starters, electrical power connections

B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.
   2. Section 23 05 00 "General Mechanical Requirements."
   3. Section 23 23 00 "Refrigerant Piping."

1.2 REFERENCES

A. Air-Conditioning and Refrigeration Institute:
   1. ARI 210/240 - Unitary Air-Conditioning and Air-Source Heat Pump Equipment.
   2. ARI 365 - Commercial and Industrial Unitary Air-Conditioning Condensing Units.
   3. ARI 460 - Remote Mechanical-Draft Air-Cooled Refrigerant Condensers.

B. American Society of Heating, Refrigerating, and Air-Conditioning Engineers:
   1. ASHRAE 15 - Safety Code for Mechanical Refrigeration.
   2. ASHRAE 20 - Method of Testing for Rating Remote Mechanical-Draft Air-Cooled Refrigerant Condensers.
   3. ASHRAE 90.1 - Energy Standard for Buildings Except Low-Rise Residential Buildings.

C. National Electrical Manufacturers Association:
   1. NEMA 250 - Enclosures for Electrical Equipment (1,000 Volts Maximum).

D. Underwriters Laboratories Inc.:
   1. UL 207 - Refrigerant-Containing Components and Accessories, Nonelectrical.

1.3 SUBMITTALS

A. Division 01 and Section 23 05 00 "General Mechanical Requirements" for submittal procedures.

B. Shop Drawings: Indicate components, assembly, dimensions, weights and loading, required clearances, and location and size of field connections. Include schematic layouts showing condenser, refrigeration compressors, cooling coils, refrigerant piping and accessories required for complete system.

C. Product Data: Submit rated capacities, weights, accessories, electrical requirements, and wiring diagrams.

1.4 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this Section with minimum 3 years' experience.

B. Installer: Company specializing in performing Work of this Section with minimum 2 years' experience.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Division 01 and Section 23 05 00 "General Mechanical Requirements" for product storage and handling requirements.
B. Comply with manufacturer's installation instruction for rigging, unloading and transporting units.
C. Protect units on site from physical damage.

1.6 FIELD MEASUREMENTS

A. Verify field measurements prior to fabrication.

1.7 WARRANTY

A. Division 01 and Section 23 05 00 "General Mechanical Requirements" for product warranties and product bonds.
B. Furnish 5 year manufacturer warranty for compressors.

1.8 MAINTENANCE SERVICE

A. Division 01 and Section 23 05 00 "General Mechanical Requirements" for requirements for maintenance service.
B. Perform maintenance work using competent and qualified personnel under supervision and in direct employ of manufacturer or original installer.
C. Do not assign or transfer maintenance service to agent or subcontractor without prior written consent of Owner.

PART 2 - PRODUCTS

2.1 CONDENSING UNITS

A. Manufacturers:
1. Trane, Model RAUKC604E-13BBDF0001111110.
2. Carrier Corporation.
3. York.
4. Substitutions: Refer to Section 23 05 00 "General Mechanical Requirements" for substitute or acceptable alternate manufacturers information.

B. Product Description:
1. All air-cooled condensing units shall have scroll compressors and are factory assembled and wired. Each unit shall ship from the factory with a nitrogen holding charge. Units shall be constructed of 14-gauge welded galvanized steel frame with 14- and 16-gauge galvanized steel panels and access doors. Units shall have factory mounted, louvered, full-length steel grilles to protect the condenser coils and piping. Unit surface shall be finished with an air-dry paint. This air-dry paint finish shall be durable enough to withstand a minimum of 672-consecutive-hour salt spray application in accordance with standard ASTM B117.2.2

C. Refrigeration Circuits.
   1. Units shall be dual circuited.
   2. Unit shall be listed for use with R454B only. Equipment shall be dry shipped and charged in the field by a qualified technician.
   3. Manufacturer shall provide balanced condensing unit to air handler selection to meet scheduled performance values. Manufacturer shall confirm refrigerant velocities, volume and proper coil sizing to reduce concerns of premature equipment failure and optimize compressor operation. Manufacturer shall provide recommended parts list, available TXV options, coordination notes and example component layout.
   4. Equipment manufacturer shall provide piping layout and recommendations for component pairing.
   5. Pressure Gauges - shall be provided for monitoring suction and discharge pressure. One set shall be provided for each circuit. The gauges shall be ship-with for field installation.
   6. Frostat - Provide with Frostat to protect the evaporator coil from frosting under part load conditions.
   7. Refrigerant Specialties - TXV and refrigerant specialties to be supplied by manufacturer. Provide Bleed Thermal Expansion Valves. Installation shall require use of 30 percent or 15 percent bleed, Thermal Expansion Valves. Valves shall be manufacturer supplied and contractor installed.

D. Symbio 800 Unit Controller:
   1. The SymbioTM 800 controller is an application-specific, programmable controller that is factory installed and designed to control packaged HVAC equipment. A 7–inch user interface features a touch-sensitive color screen that provides facility managers with at-a-glance operating status, performance monitoring, scheduling changes, and operating adjustments. Other advanced features include automated controller backup and optional features such as secure remote connectivity, wireless building communications, mobile device connectivity, and custom programming with expandable I/O.
   2. Unit shall have flexible and secure access for multiple users allows monitoring, overriding/releasing points, release of all overrides, custom report editing, and tracking changes by user
   3. Provide with real time refrigerant monitoring that can be viewed via the touch screen display and Symbio app.
   4. To protect compressors from running with unsafe refrigerant charge levels, unit shall calculate an estimated refrigerant charge using a combination of measured temperatures, calculated saturated temperatures, refrigerant mass flow and the expansion valve opening. At the touch screen interface, a warning diagnostic shall be displayed when a low charge has been detected on the circuit, but is not critical enough to force a circuit shutdown. When a critical low charge has been detected on a circuit, shut down shall be triggered, and a shutdown diagnostic shall be displayed at the touch screen interface.
   5. Upon loss of power and changeover to emergency backup generator, the Rapid Restart shall provide full cooling in 120 seconds or less after regaining electrical power. Rapid restart shall be fully integrated into the controls logic via the standard human interface. Field installed solutions shall be tested and documented by the emergency generator vendor to demonstrate full cooling within 120 seconds of changeover.

6. BACnet Communication Protocol - Remote condenser controller communication interface shall use the BACnet® protocol with an Ethernet (IEEE 802.3) or RS485 (EIA-485) physical interface and an appropriate data link technology as defined in ANSI®/ASHRAE® Standard 135-2012 (for example, BACnet/IP, BACnet/MSTP). The rooftop controller shall be BTL listed as a BACnet Advanced Application Controller (B-AAC) as defined in ANSI/ ASHRAE Standard 135-2012.
7. Leak Detection - The condenser section shall accept an isolated closure input suitable for customer connection to hard wire the leak detection system in the paired air handler or mechanical room.
8. User Interface - A 7-inch user interface features a touch-sensitive color screen that provides operating status, performance monitoring, and scheduling changes, and operating adjustments.
9. WiFi Connectivity – Unit control shall be configurable via wifi connection to mobile device.
10. The controller shall have the ability to expand the factory controller up to 19 points. This shall be accomplished with a combination of a factory installed XM70 plus a XM30 and a XM32 expansion modules. The IO points shall have editable renamable write custom control loops customizable by field technicians by Trane

E. Unit control:
1. Factory shall provide 115-volt control circuit which includes fusing and control power transformer. The unit shall be wired with magnetic contactors for compressor and condenser motors and high-pressure cutouts. Charge isolation, reset relay and anti-recycle compressor timer shall be provided. Across-the-line start is standard.
2. System shall allow direct control of compressor staging while providing refrigerant system oversight.

F. Phase Monitor:
1. The unit shall be equipped with a phase monitor in the control box. The phase monitor shall protect against phase loss, imbalance and reversal of the line voltage.

G. Compressors:
1. Scroll type compression shall provide low vibration. Compressors shall provide a completely enclosed compression chamber with no leakage paths. The compressor shall be suction gas cooled, direct drive, with 3600 RPM hermetic motors. The Scroll compressor shall include a centrifugal oil pump, oil level sight glass, and an oil charging valve.
2. Each compressor shall have crankcase heaters installed, properly sized to minimize the amount of liquid refrigerant present in the oil sump during off cycles. Additionally, the condensing unit shall have controls to initiate refrigerant Isolation at system shut down on each refrigerant circuit. To be operational, the refrigerant Isolation cycle requires a field-installed isolation solenoid valve on the common liquid line near the evaporator.
3. Suction Service Valve - shall consist of a refrigerant shutoff valve to isolate the compressor for servicing.

H. Condenser Coils:
1. Condenser coils shall have all aluminum microchannel coils. All coils shall be leak tested at the factory to ensure pressure integrity. The condenser coil shall be pressure tested to 650 psig.

I. Condenser Fans:
   1. All condenser fans shall be vertical discharge, direct drive fans, statically balanced, with aluminum blades and zinc plated steel hubs. Condenser fan motors shall be three-phase motors with permanently lubricated ball bearings, built in current and thermal overload protection and weather-tight slingers over motor bearings.
   2. Wide Ambient Control - Allow operation From 0 degrees F to 125 degrees F ambient through the use of fan cycling and head pressure control dampers. The control shall consist of a heavy gauge damper assembly that is modulated by an actuator. The actuator shall be controlled by measured head pressure. All components are factory-mounted.

J. Electrical:
   1. Provide Non-Fused Unit Disconnect Switch - shall be mounted in the control box and provides for interruption of power for servicing the unit. Lugs shall be suitable for copper wires only. No overcurrent or short circuit protection shall be provided for unit by this switch. Option shall include external handle to allow power disconnection without having to open the control box door.
   2. Provide Powered convenience outlet - shall include a factory installed 15 amp, 115 volt ground fault interrupter convenience outlet with a single point power entry from a factory mounted transformer. Option shall meet NEC 210-63 requirements. This outlet shall include a separate disconnect switch so that the outlet is powered when the unit disconnect switch is off. The unit mounted non-fused disconnect switch option with external handle is required when ordering the convenience outlet.
   3. Low voltage control cabinet shall be separately accessible from the high voltage control cabinet application.

K. Refer to Division 26 for more electrical information.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install in accordance with ASHRAE 15.
B. Install refrigerant piping from unit to condensing unit. Install refrigerant specialties furnished with unit specified in Section 23 23 00 "Refrigerant Piping."
C. Install connection to electrical power wiring in accordance with Division 26.

3.2 INTERFACE WITH OTHER PRODUCTS

A. Install units on vibration isolators on concrete foundations.

3.3 MANUFACTURER'S FIELD SERVICES

A. Division 01 and Section 23 05 00 "General Mechanical Requirements" for manufacturer's field services.
B. Provide startup by a technician employed by the equipment manufacturer. Startup provided by mechanical contractor or a technician from equipment rep firm is not permitted. Provide cooling season start-up and winter season shutdown service, for first year of operation. If initial start-up and testing takes place in winter and machines are to remain inoperative. Repeat start-up and testing operation at beginning of first cooling season.

3.4 ADJUSTING

A. Section 01 70 00 "Execution and Closeout Requirements" for testing, adjusting, and balancing.

3.5 DEMONSTRATION AND TRAINING

A. Division 01 requirements for demonstration and training.
B. Demonstrate starting, maintenance, and operation of unit.
C. Demonstrate low ambient operation during winter testing or service specified above.

3.6 SCHEDULES

A. Refer to Drawings for Schedule.

END OF SECTION

SECTION 23 73 00 - INDOOR CENTRAL-STATION AIR-HANDLING UNITS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes modular factory-fabricated air-handling units and accessories.
B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.
   2. Section 23 05 00 "General Mechanical Requirements."
   3. Section 23 23 00 "Refrigerant Piping."

1.3 SUBMITTALS

A. Division 01 and Section 23 05 00 "General Mechanical Requirements" for submittal procedures.
B. Shop Drawings: Indicate assembly, unit dimensions, weight loading, required clearances, construction details, field connection details, electrical characteristics, and connection requirements.

C. Product Data, Submit the following:
   1. Published Literature: Indicate capacities, ratings, gauges and finishes of materials, and electrical characteristics and connection requirements.
   2. Filters: Data for filter media, filter performance data, filter assembly, and filter frames.
   3. Fans: Performance and fan curves with specified operating point plotted, power, RPM.
   4. Sound Power Level Data: Fan outlet and casing radiation at rated capacity.
   5. Dampers: Include leakage, pressure drop, and sample calibration curves. Indicate materials, construction, dimensions, and installation details.
   6. Electrical Requirements: Power supply wiring including wiring diagrams for interlock and control wiring. Indicate factory installed and field installed wiring.

1.4 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this Section with minimum 3 years' experience.
B. Installer: Company specializing in performing Work of this Section with minimum 2 years' experience.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Division 01 and Section 23 05 00 "General Mechanical Requirements" for storage and handling requirements.
B. Accept units and components on site in factory protective containers, with factory shipping skids and lifting lugs. Inspect for damage.
C. Protect units from weather and construction traffic by storing in dry, roofed location.

1.6 WARRANTY

A. Division 01 for product warranties and product bonds.

PART 2 - PRODUCTS

2.1 AIR HANDLING UNITS

A. Manufacturers:
   1. Trane: Basis of Design
   2. AAON.
   3. Carrier Corporation.
   4. Thermal Corporation.
   5. Marcraft Custom HVAC Systems.
   6. Temtrol.
   7. Substitutions: Refer to Section 23 05 00 "General Mechanical Requirements."

2.2 GENERAL

A. Unit layout and configuration shall be as defined in project plans and schedule.
B. Manufacturer to provide a full perimeter 6-inch integral base frame to support and raise all sections of the unit for proper trapping. Contractor will be responsible for providing a housekeeping pad when unit base frame is not of sufficient height to properly trap unit. Unit base frames not constructed of galvanized steel shall be chemically cleaned and coated with both a rust-inhibiting primer and finished coat of rust-inhibiting enamel. Unit base height to be included in total height required for proper trap height.

2.3 UNIT CASING

A. Unit manufacturer shall ship unit in segments as specified by the contractor for ease of installation in tight spaces. The entire air handler shall be constructed of galvanized steel except the internal liner in wet sections (cooling coil, humidifier, etc) shall be stainless steel. Casing finished to meet ASTM B117 125-hour salt-spray test. The removal of access panels or access doors shall not affect the structural integrity of the unit. All removable panels shall be gasketed. All doors shall have gasketing around full perimeter to prevent air leakage. Contractor shall be responsible to provide connection flanges and all other framework that is needed to properly support the unit.
B. Casing performance - Casing air leakage shall not exceed leak class 6 (CL equals 6) per ASHRAE 111 at specified casing pressure, where maximum casing leakage (cfm/100 ft^2 of casing surface area) equal to CL X P0.65.
C. Air leakage shall be determined at 1.00 times maximum casing static pressure up to 8 inches w.g. Specified air leakage shall be accomplished without the use of caulk. Total estimated air leakage shall be reported for each unit in CFM, as a percentage of supply air, and as an ASHRAE 111 Leakage Class.
D. Under 50 degrees F supply air temperature and design conditions on the exterior of the unit of 87 degrees F dry bulb and 73 degrees F wet bulb, condensation shall not form on the casing exterior. The AHU manufacturer shall provide tested casing thermal performance for the scheduled supply air temperature plotted on a psychrometric chart. The design condition on the exterior of the unit shall also be plotted on the chart. If tested casing thermal data is not available, AHU manufacturer shall provide, in writing to the Engineer and Owner, a guarantee against condensation forming on the unit exterior at the stated design conditions above. The guarantee shall note that the AHU manufacturer will cover all expenses associated with modifying units in the field should external condensate form on them. In lieu of AHU manufacturer providing a written guarantee, the installing contractor must provide additional external insulation on AHU to prevent condensation.
E. Unit casing (wall/floor/roof panels and doors) shall be able to withstand up to 1.5 times design static pressure, or 8-inch w.g., whichever is less, and shall not exceed 0.0042 per inch of panel span (L/240).
F. Floor panels shall be double-wall construction and designed to support a 300-lb load during maintenance activities and shall deflect no more than 0.0042 per inch of panel span.
G. Unit casing panels (roof, walls, floor) and doors shall be provided with a minimum thermal resistance (R-value) of 13 Hr by Ft^2 by degrees F/BTU.
H. Unit casing panels (roof, walls, floor) and external structural frame members shall be completely insulated filling the entire panel cavity in all directions so that no voids exist. Panel insulation shall comply with NFPA 90A.

I. Casing panel inner liners must not extend to the exterior of the unit or contact the exterior frame. A mid-span, no-through-metal, internal thermal break shall be provided for all unit casing panels.
J. Access panels and/or access doors shall be provided in all sections to allow easy access to drain pan, coil(s), motor, drive components and bearings for cleaning, inspection, and maintenance.
K. Access panels and doors shall be fully removable without the use of specialized tools to allow complete access of interior surfaces.

2.4 ACCESS DOORS

A. Access doors shall be 2-inch double-wall construction. Interior and exterior shall be of the same construction as the interior and exterior wall panels.
B. All doors shall be provided with a thermal break construction of door panel and door frame.
C. Gasketing shall be provided around the full perimeter of the doors to prevent air leakage.
D. Door hardware shall be surface-mounted to prevent through-cabinet penetrations that could likely weaken the casing leakage and thermal performance.
E. Handle hardware shall be designed to prevent unintended closure.
F. Access doors shall be hinged and removable without the use of specialized tools.
G. Hinges shall be interchangeable with the door handle hardware to allow for alternating door swing in the field to minimize access interference due to unforeseen job site obstructions.
H. Hinges shall be stainless steel.
I. Door handle hardware shall be adjustable and visually indicate locking position of door latch external to the section.
J. All doors shall be a 60-inch-high when sufficient unit height is available, or the maximum height allowed by the unit height.
K. A single door handle shall be provided for each door linking multiple latching points necessary to maintain the specified air leakage integrity of the unit.
L. Provide dual pane, shatterproof window on all access doors. Window shall be capable of withstanding unit operating pressures and shall be safe for viewing UV-C lamps.
M. Test ports shall be supplied in access doors as defined in the unit schedule to facilitate the field commissioning by the test and balance contractor. Test ports shall not compromise the ASHRAE leakage class of the unit.

2.5 PRIMARY DRAIN PANS

A. All cooling coil sections shall be provided with an insulated, double-wall, stainless steel drain pan.
B. The drain pan shall be designed in accordance with ASHRAE 62.1 being of sufficient size to collect all condensation produced from the coil and sloped in 2 planes, pitched toward drain connections, promoting positive drainage to eliminate stagnant water conditions when unit is installed level and trapped per manufacturer's requirements.
C. The outlet shall be located at the lowest point of the pan and shall be sufficient diameter to preclude drain pan overflow under any normally expected operating condition.
D. All drain pan threaded connections shall be visible external to the unit. Threaded connections under the unit floor shall not be accepted.
E. Drain connections shall be of the same material as the primary drain pan and shall extend a minimum 2-1/2 inches beyond the base to ensure adequate room for field piping of condensate traps.

F. The installing contractor is responsible to ensure the unit is installed level, trapped in accordance with the manufacturer's requirements, and visually inspected to ensure proper drainage of condensate.

G. Coil support members inside the drain pan shall be of the same material as the drain pan and coil casing.

2.6 FANS

A. Fan sections shall have a minimum of one hinged and latched access door located on the drive side of the unit to allow inspection and maintenance of the fan, motor, and drive components.

B. Provide fans of type and class as specified on the schedule. All fans shall be statically and dynamically tested by the manufacturer for vibration and alignment as an assembly at the operating RPM to meet design specifications. Fans that are selected with inverter balancing shall first be dynamically balanced at design RPM. The fans then will be checked in the factory from 25 percent to 100 percent of design RPM to insure they are operating within vibration tolerance specifications, and that there are no resonant frequency issues throughout this operating range. Inverter balancing that requires lockout frequencies inputted into a variable frequency drive to in order to bypass resonant frequencies shall not be acceptable. If supplied in this manner by the unit manufacturer, the contractor will be responsible for rebalancing in the field after unit installation. Fans selected with inverter balancing shall have a maintenance free grounding assembly installed on the fan motor to discharge both static and induced shaft currents to ground.

C. Direct drive plenum fans with integral frame motors, shall be mounted on isolation bases. Fan shall be dynamically balanced throughout the operating range to a BV-3 (0.20 in/s) per AMCA 204 test standard. Fan and motor shall be internally isolated with spring isolators. A flexible connection shall be installed between fan and unit casing to ensure complete isolation. Flexible connection shall comply with NFPA 90A and UL 181 requirements. If fans and motors are not internally isolated, then the entire unit shall be externally isolated from the building, including supply and return duct work, piping, and electrical connections. External isolation shall be furnished by the installing contractor in order to avoid transmission of noise and vibration through the ductwork and building structure.

D. Exhaust fans - Direct plenum fans provided with electronically commutated external- rotor motor with integrated control electronics, radial aluminum impeller with backward curved, continuously welded blades.

1. Individual Fan Assemblies shall be statically and dynamically balanced in two planes as per DIN / ISO 1940 to balancing grade G 6.3.
2. Fan-to-fan interaction can cause a significant increase in individual fan vibration when mounted to the same structure. Fans applied in an array shall be tested as a system and the total fan vibration shall be less that 0.42 (in/s) RMS including all fan-to-fan interaction. This system effect shall be accounted for by the air handler manufacturer. Individual fan vibration performance values shall not be acceptable.
3. Fan performance shall be rated in accordance with AHRI 430-2020. Fan shall be spaced to minimize aerodynamic fan interaction. Minimum center-to-center spacing between fans shall be 1.6 diameter ratio to ensure proper performance.
4. Fan wheels shall be constructed of materials that comply with UL 1995 requirements of flame and smoke spread per NFPA 90A. The flame spread index not exceeding 25 and a smoke-developed index not, exceeding 50.

5. Fan Electrical Power (FEP) rated in accordance with AHRI 430-2020.
6. Motor shall contain integrated PID controller and accept a 0-10VDC input signal for variable speed control.
7. Motorized impeller fan section shall include expanded metal door guard(s) supplied on the access door(s) to the fan. Door guard is intended to deter unauthorized entry and incidental contact with rotating components.
8. Motor efficiency class shall comply with IE4
9. Fan system manufacturer must stock replacement parts in North America
10. Fan array shall be designed and constructed for easy field assembly and maintenance. Fan shall be assembled to bulkhead wall with minimal fasteners and the fan shall have quick disconnects for the high voltage and low voltage connections.

E. Each horizontal direct drive fan in a multiple-fan array shall be provided with integral back flow prevention: a backdraft damper that prohibits recirculation of air in the event a fan or multiple fans become disabled. Dampers are tested and rated based on AMCA Standard 500. Dampers to be heavy duty type capable of a maximum back pressure that exceeds the design total static pressure with minimal leakage. The dampers should have a minimal total effect on airflow performance both pressure drop when open and system effect on the fan. The damper blades and frame shall be extruded aluminum with blade edge seals locked into the blade edge. Adhesive type seals are unacceptable. AHU manufacturer responsible for providing proper spacing upstream of dampers to ensure full, uniform airflow through upstream components. For units where the damper(s) are supplied at the jobsite, the installing contractor shall contract a certified TAB contractor to verify uniform airflow thru upstream components.

2.7 MOTORS AND DRIVES

A. Motors shall meet or exceed all NEMA Standards Publication MG 1 - 2006 requirements and comply with NEMA Premium efficiency levels when applicable. Motors shall comply with applicable requirements of NEC and shall be UL Listed.
B. Fan Motors shall be heavy duty, open drip-proof operable at scheduled voltage. If applicable, motor efficiency shall meet or exceed NEMA Premium efficiencies.
C. Direct driven fans utilizing integral frame motors shall use 2-pole (3,600 rpm), 4-pole (1,800 rpm) or 6-pole (1,200 rpm) motors, NEMA Design B, with Class B insulation capable to operate continuously at 104 degrees F without tripping overloads.
D. Motors shall have a plus or minus 10 percent voltage utilization range to protect against voltage variation.

2.8 COILS

A. Coils section header end panel shall be removable to allow for removal and replacement of coils without impacting the structural integrity of the unit.
B. Install coils such that headers and return bends are enclosed by unit casing to ensure that if condensate forms on the header or return bends, it is captured by the drain pan under the coil.
C. Coils shall be manufactured with plate fins to minimize water carryover and maximize airside thermal efficiency. Fin tube holes shall have drawn and belled collars to maintain consistent fin spacing to ensure performance and air pressure drop across the coil as scheduled. Tubes shall be mechanically expanded and bonded to fin collars for maximum thermal conductivity. Use of soldering or tinning during the fin-to-tube bonding process is not acceptable due to the inherent thermal stress and possible loss of bonding at that joint.

D. All coils shall be completely cleaned prior to installation into the air handling unit. Complete fin bundle in direction of airflow shall be degreased and steam cleaned to remove any lubricants used in the manufacturing of the fins, or dirt that may have accumulated, in order to minimize the chance for water carryover.

E. When two or more cooling coils are stacked in the unit, an intermediate drain pan shall be installed between each coil. The intermediate drain pan shall be designed being of sufficient size to collect all condensation produced from the coil and sloped to promote positive drainage to eliminate stagnant water conditions. The intermediate drain pan shall be constructed of the same material as the sections primary drain pan.

F. The intermediate drain pan shall begin at the leading face of the water-producing device and be of sufficient length extending downstream to prevent condensate from passing through the air stream of the lower coil.

G. Intermediate drain pan shall include downspouts to direct condensate to the primary drain pan. The intermediate drain pan outlet shall be located at the lowest point of the pan and shall be sufficient diameter to preclude drain pan overflow under any normally expected operating condition.

H. Refrigerant Cooling Coils:

1. Coils shall be proof tested to 450 psig and leak tested to 300 psig air pressure under water. After testing, insides of tubes shall be air dried, charged with dry nitrogen or dry air, and sealed to prevent contamination.
2. Refrigerant suction and liquid headers shall be constructed of copper tubing. Suction and liquid connections shall penetrate unit casings to allow for sweat connections to refrigerant lines.
3. Tubes shall be 1/2-inch with aluminum fins.
4. Coils shall have equalizing type vertical distributors sized in conjunction with capacities of coils.
5. Manufacturer shall provide balanced condensing unit to air handler selection to meet scheduled performance values. Manufacturer shall confirm refrigerant velocities, volume and proper coil sizing to reduce concerns of premature equipment failure and optimize compressor operation. Manufacturer shall provide recommended parts list, available TXV options, coordination notes and example component layout.

2.9 FILTERS

A. Provide factory-fabricated filter section of the same construction and finish as unit casings. Filter section shall be provided with front loading filter frames. Filter holding frames shall be constructed of galvanized steel and equipped with foam gaskets to seal filters against filter frames. Frame seams shall be sealed to eliminate air bypass. Access door(s) shall be provided to facilitate filter removal. Construct doors in accordance with Section 2.04. Manufacturer to provide necessary filter clips to lock primary and secondary prefilters (if ordered) tightly to filter frame without the need for special tools, bolts or nuts. Filter holding frames shall be of a universal type to accommodate standard filters of 12 by 24 and 24 by 24 nominal size as well as appropriate fasteners.

B. Provide 4-inch MERV 8 pre-filter.

C. Provide 12-inch MERV 15 Carbon final filter.

1. Air filters shall be compact adsorber type with combination sorbent/particulate removal media, impact-resistant plastic end caps, plastic vertical support channels, and a nominal 1-inch header for front access applications.

2. Manufacturer shall provide evidence of facility certification to ISO 9001:2008. Filters shall be Camfil CityCarb I pleated V-Cell Cartridges or equal.
3. Filter media shall be specifically manufactured for the removal of molecular and particulate contaminants. Sorbent shall be broad spectrum grade of carbon incorporating Rapid Adsorption Dynamics (RAD) designed for the removal of a wide range of odors and VOCs.
4. Total media area shall be at least 0.038 square feet per rated cfm of filter.
5. Initial resistance to airflow shall not exceed 0.6 inches w.g. (plus or minus 10 percent) at 500 feet per minute velocity.

2.10 DAMPERS

A. All dampers shall be internally mounted. Dampers shall be premium ultra low leak and located as indicated on the schedule and plans. Blade arrangement (opposed) shall be provided as indicated on the schedule and drawings. Dampers shall be Ruskin CD60 double-skin airfoil design or equivalent for minimal air leakage and pressure drop. Leakage rate shall not exceed 3 CFM/square foot at one inch water gauge complying with ASHRAE 90.1 maximum damper leakage and shall be AMCA licensed for Class 1A. All leakage testing and pressure ratings shall be based on AMCA Standard 500-D. Manufacturer shall submit brand and model of damper(s) being furnished, if not Ruskin CD60.

B. Airflow measuring stations shall be provided and located in the outside and/or return air paths as indicated on the schedule and plans to measure airflow. Airflow measuring stations shall be tested per AMCA Standard 611 and licensed to bear the AMCA Ratings Seal for airflow measurement performance. Integral control damper blades shall be provided as galvanized steel and housed in a galvanized steel frame. Leakage rate shall not exceed 4 CFM/square foot at one inch water gauge complying with ASHRAE 90.1 maximum damper leakage.
   1. The airflow measurement station shall measure up to 100 percent of the total outside air and/or return air. The airflow measurement station shall be capable of measuring down to 300 fpm. The airflow measuring device shall adjust for temperature variations. Output shall be provided from the station as a 2-10 VDC signal. Signal shall be proportional to air velocity. The accuracy of the measuring station shall be no greater than plus or minus 5 percent. Airflow measuring stations shall be mounted on the AHU interior.
   2. Airflow measuring station shall automatically correct for temperature effects on air density. Station shall also operate from 0 to 100 percent RH over the complete temperature range (negative 40 degrees F to 158 degrees F). Programmable altitude adjustment to be included.
   3. The installing contractor shall provide duct-mounted pleated media MERV 8 filtration upstream of airflow monitoring stations requiring air straightening vanes to prevent blockage of vanes. A filter access door shall be provided for filter replacement that does not degrade the specified duct leakage class. Duct-mounted filtration section with access door for filter removal shall be tested for compliance to specified duct leakage class on the schedule and plans.
   4. AHU must be provided with factory openings to match locations and dimensions per mechanical Drawings. Openings shall not be field cut or utilize complex duct transitions to match standard openings.

2.11 ACCESS SECTIONS

A. Access sections shall be provided where indicated in the schedule and plans to allow additional access for inspection, cleaning, and maintenance of unit components. he unit shall be installed for proper access. Procedure for proper access, inspection and cleaning of the unit shall be provided in the AHU manufacturer's maintenance manual.

2.12 DIFFUSER SECTIONS

A. Diffuser sections shall be provided immediately downstream of the fan section as indicated in the schedule and plans. The diffuser shall provide equal air distribution to blow-thru components immediately downstream of the diffuser.

2.13 INDIRECT GAS HEAT SECTION

A. Indirect-fired gas heaters shall be provided as indicated on the schedule and drawings. Indirect-fired gas heaters shall be completely factory assembled, piped, and operationally fire tested at the factory prior to shipment. The heat exchanger primary drum and secondary tubes shall constructed from 14-gage, 409 stainless steel. The industrial / commercial burner shall be UL listed, forced draft, and fully modulating. The control panel shall be equipped with Honeywell RM7800 flame management controls and appropriate safeties. The gas heat section construction shall match the rest of the air handling unit and be an integral part of the unit. All burner and control components shall be housed in a burner vestibule with a large access door. The entire section shall bear a UL or CUL label for Commercial-Industrial Gas Heating Equipment (ANSI / UL Standard 795) and Industrial Gas-Fired Package Furnaces (CGA Standard 3.2-1976).
B. Gas heaters shall be fueled by natural gas with 20:1 turndown as indicated on the schedule. Burner combustion shall be clean and odor-free throughout the entire operating range. Nitrogen oxide emissions levels shall not exceed 75 ppm. Gas train shall be FM Heater shall include force draft exhaust fan on heaters of 1250 output MBH or higher.
C. Field connection requirements include 9- to 14-inch wc gas pressure in appropriate volume, high voltage power as specified 460v/3ph, start / stop dry contact, modulating 0 to 10v dc control signal, condensate drain, recommended hard wired fan interlock.
D. Flue Stack shall be field provided and field installed.

2.14 MARINE LIGHTS

A. Marine lights shall be provided throughout AHUs as indicated on the schedule and plans. Lights shall be instant-on, light-emitting diode (LED) type to minimize amperage draw and shall produce lumens equivalent to a minimum 75W incandescent bulb (1,200 lumens). LED lighting shall provide instant-on, white light and have a minimum 25,000 hr life.
B. Light fixture shall be weather-resistant, enclosed and gasketed to prevent water and dust intrusion.
C. Fixtures shall be designed for flexible positioning during maintenance and service activities for best possible location providing full light on work surface of interest and not being blocked by technician.

D. All lights on a unit shall be wired in the factory to a single on-off switch.
E. Installing contractor shall be responsible for providing 115V supply to the factory-mounted marine light circuit (unless single-point power is specified to be provided by AHU manufacturer).

2.15 CONVENIENCE OUTLETS

A. A 15-amp, 115V GFCI convenience outlet shall be provided by the AHU manufacturer. The outlet shall be separate from the load side of the equipment per NEC requirements. Installing contractor shall be responsible for providing 115V supply to the factory-mounted GFCI outlet circuit per NEC (even when single-point power is specified to be provided by AHU manufacturer).
B. Motorized Impeller Controller Panel.
C. The fan section shall be provided with a factory installed NEMA 1 or NEMA 3R motorized impeller motor control panel. The control panel provides a common externally accessible disconnect means, motor over current protection for each fan and a terminal block for ease of control wiring. The box shall include:
    1. Individual motor protection with individual disconnecting means with lockable feature. Fusible motor protection is not permissible.
    2. Fused main panel disconnect with lock out tag out capability
    3. Common control terminal block for common signal wiring. Single 0-10vdc signal used for fan speed control. Control panel box shall be UL508a compliant and manufactured by a UL508a approved manufacturer or UL certified during air handler installation.
    4. Control panel box shall be UL508a compliant and manufactured by a UL508a approved manufacturer or UL certified during air handler installation.
D. VFD per Fan:
    1. Multiple VFDs on a common panel, shall be provided for each fan array to provide redundancy in case of loss of function of one of the VFDs or motors. Individual VFD shall be sized based on motor FLA to reduce overall panel input current. In the event of a VFD failure, the remaining VFDs must be capable of compensating and maintaining normal fan array operation.
    2. VFD panel shall have a common disconnect that is accessible from the outside of the unit. Disconnect shall open input power to all VFDs simultaneously. Disconnect shall be lockable in the off position. Disconnect shall utilize circuit breaker to provide overcurrent and short circuit protection.
    3. VFD panel shall be provided with a common point connection for speed input signal, start/stop signal, fault status, and field interlock connection.
    4. VFD panel shall be provided with a single point of field connection for field input power. Each VFD shall be supplied with independent input fusing, as required. Panel shall be provided with short circuit current of 5kA RMS symmetrical.
    5. VFD panel shall be provided with a single point of field connection for field input power. Each VFD shall be supplied with independent input fusing, as required. Panel shall be provided with short circuit current of 65kA RMS symmetrical.
    6. Externally mounted VFDs shall be provided with independent keypad.
    7. Factory Wiring of Lights, VFDs, Motorized Impeller Control Panels, and Combination Starters/Disconnects.

E. VFDs shall be wired per NEC, UL, and NFPA 90A requirements. Units with factory-mounted controls shall also include power wiring from the VFD or starter/disconnect control transformer to the control system transformers. Units with VFDs and factory-mounted controls shall have a binary start-stop signal and an analog speed signal wired from the direct digital controller to the VFD.

F. All power wiring for voltages greater than 24V and traveling through multiple unit sections shall be contained in an enclosed, metal, power-wiring raceway or EMT. Sections less than 6-inch in length may be contained in FMC.

G. After mounting and wiring of VFDs, on the AHUs, trained factory personnel shall ensure proper operation of each VFD, through a thorough factory test. Testing shall include a Hypot test of unit wiring to ensure that no weaknesses exist in wiring or motor. Each VFD shall be energized and the fan run to ensure the VFD will operate throughout the usable range of the drive and that the fan rotation is correct. Each VFD with bypass shall also be tested in the bypass position to ensure the bypass is operational.

H. After mounting and wiring of the motorized impeller control panel (MICP), on the AHUs, trained factory personnel shall ensure proper operation of each MICP, through a thorough factory test. Testing shall include a Hypot test of unit wiring to ensure that no weaknesses exist in wiring or motor. Each MICP shall be energized and the fan run to ensure the MICP and MI fan will operate throughout the usable range of the drive and that the fan rotation is correct.

2.16 SHIPPING

A. Paper copies of the IOM shall also be shipped with each AHU.

B. The AHU manufacturer shall identify all shipments with the order number. Enough information shall be provided with each shipment to enable the Mechanical Contractor to confirm the receipt of units when they are received. For parts too small to mark individually, the AHU manufacturer shall place them in containers. Contractor to coordinate with AHU manufacturer to provide units broke down to allow installation though available areaway and louver opening, verify exact sizes with structural and architectural Drawings.

C. To protect equipment during shipment and delivery, all indoor units shall be completely stretch or shrink wrapped. Wrap shall be a minimum of 7 mil plastic. Pipe ends and pipe connection holes in the casing shall be capped or plugged prior to shipment

D. After loading the equipment for shipment, the AHU manufacturer shall contact the shipping contact on the order and provide the name of the carrier, description of equipment, order number, shipping point, and date of shipment.

2.17 ON-SITE STORAGE

A. If equipment is to be stored for a period of time prior to installation, the Mechanical Contractor shall remove all stretch or shrink wrap from units upon receipt to prevent unit corrosion and shall either place the units in a controlled indoor environment or shall cover the units with canvas tarps and place them in a well-drained area. Covering units with plastic tarps shall not be acceptable.

2.18 FIELD EXAMINATION

A. Mechanical Contractor shall verify that the mechanical room and/or roof are ready to receive work and the opening dimensions are as indicated on the Shop Drawings and Contract Documents.
B. Mechanical Contractor shall verify that the proper power supply is available prior to starting of the fans.

2.19 INSTALLATION

A. Mechanical Contractor shall be responsible to coordinate ALL of his installation requirements with the Owner and the Owner's selected Mechanical Contractor to ensure that a complete installation for each unit is being provided. Coordination efforts shall include such items as unloading and hoisting requirements, field wiring requirements, field piping requirements, field ductwork requirements, requirements for assembly of field-bolted or welded joints, and all other installation and assembly requirements.
B. The AHU manufacturer shall provide all screws and gaskets for joining of sections in the field.
C. The Mechanical Contractor shall verify that the following items have been completed prior to scheduling the AHU manufacturer's final inspection and start up:
    1. All spring-isolated components have had their shipping restraints removed and the components have been leveled.
    2. On all field-joined units, that all interconnections have been completed, i.e., electrical and control wiring, piping, casing joints, bolting, welding, etc.
    3. All water and steam piping connections have been completed and hydrostatically tested and all water flow rates have been set in accordance with the capacities scheduled on the Drawings.
    4. All ductwork connections have been completed and all ductwork has been pressure tested for its intended service.
    5. All power wiring, including motor starters and disconnects, serving the unit has been completed.
    6. All automatic temperature and safety controls have been completed.
    7. All dampers are fully operational.
    8. All shipping materials have been removed.
    9. All (clean) filter media has been installed in the units.

2.20 LEVELING

A. Mechanical Contractor shall level all unit sections in accordance with the unit manufacturer's instructions. Mechanical Contractor shall provide and install all necessary permanent shim material to ensure individual sections and entire assembled units are level.

2.21 FINAL INSPECTION AND START UP SERVICE

A. After Mechanical Contractor has provided all water and steam piping connections, ductwork connections, and field control wiring, and Electrical Contractor has provided all the field power wiring, Mechanical Contractor shall inspect the installation. Mechanical Contractor shall then perform startup of the equipment.

B. Automatic Temperature Control (Building Direct Digital Control) Contractor shall be scheduled to be at the job site at the time of the equipment start up.
C. Mechanical Contractor, shall perform the following tests and services and submit a report outlining the results:
   1. Record date, time, and person(s) performing service.
   2. Lubricate all moving parts.
   3. Check all motor and starter power lugs and tighten as required.
   4. Verify all electrical power connections.
   5. Conduct a start up inspection per the AHU manufacturer's recommendations.
   6. Record fan motor voltage and amperage readings.
   7. Check fan rotation and spin wheel to verify that rotation is free and does not rub or bind.
   8. Check fan for excessive vibration.
   9. Remove all foreign loose material in ductwork leading to and from the fan and in the fan itself.
   10. Disengage all shipping fasteners on vibration isolation equipment.
   11. Check safety guards to insure they are properly secured.
   12. Secure all access doors to the fan, the unit and the ductwork.
   13. Switch electrical supply "on" and allow fan to reach full speed.
   14. Physically check each fan at start up and shut down to insure no abnormal or problem conditions exist.
   15. Check entering and leaving air temperatures (dry bulb and wet bulb) and simultaneously record entering and leaving chilled water temperatures and flow, steam pressures and flow, and outside air temperature.
   16. Check all control sequences.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install in accordance with ARI 430.
B. Install flexible connections between unit and inlet and discharge ductwork. Install metal bands of connectors parallel with minimum 1-inchflex between ductwork and fan while running.
C. Install assembled units with vibration isolators. Install isolated fans with resilient mountings and flexible electrical leads. Install restraining snubbers as required. Adjust snubbers to prevent tension in flexible connectors when fan is operating.
D. Install floor mounted units on concrete housekeeping pads at least 3-1/2 inches high and 6 inches wider than unit.
E. Provide fixed sheaves required for final air balance.
F. Insulate coil headers located outside airflow as specified for piping.
G. Install condensate piping with trap and route from drain pan to nearest floor drain.
H. Install heating section condensate drain piping through a neutralizing unit, then route to nearest floor drain.

3.2 INSTALLATION - REFRIGERANT COILS

A. Install sight glass in liquid line within 12 inches of coil.
B. Install piping specialties in accordance with Section 23 23 00 "Refrigerant Piping."

3.3 INSTALLATION - INDIRECT GAS-FIRED HEATING COIL

A. Make connections to coils with unions or flanges.
B. Install natural gas piping to unit with minimum 12 inches flexible piping connection.
C. Install the following piping accessories on steam piping connections.
    1. On natural gas supply:
        a. Shutoff valve.
        b. 6-Inch Dirt Leg.
        c. Control valve.

3.4 MANUFACTURER'S FIELD SERVICES

A. Section 01 40 00 "Quality Requirements" for requirements for manufacturer's field services.
B. Furnish services of factory trained representative for minimum of 1 day to leak test, refrigerant pressure test, evacuate, dehydrate, charge, start-up, calibrate controls, and instruct Owner on operation and maintenance.

3.5 CLEANING

A. Section 01 70 00 "Execution and Closeout Requirements" for requirements for cleaning.
B. Vacuum clean coils and inside of unit cabinet.
C. Install new throwaway filters in units at Substantial Completion.

3.6 DEMONSTRATION

A. Section 01 70 00 "Execution and Closeout Requirements" for requirements for demonstration and training.
B. Demonstrate unit operation and maintenance.
C. Furnish services of manufacturer's technical representative for one 8-hour day to instruct Owner's personnel in operation and maintenance of units. Schedule training with Owner.

3.7 PROTECTION OF FINISHED WORK

A. Section 01 70 00 "Execution and Closeout Requirements" for requirements for protecting finished Work.
B. Do not operate units until ductwork is clean, filters are in place, bearings lubricated, and fan has been test run under observation.

END OF SECTION

SECTION 23 81 26.10 - DUCTLESS-SPLIT SYSTEM AIR CONDITIONERS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes mini-split system air conditioners, with remote air-cooled condensing units.
B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.
   2. Section 23 05 00 "General Mechanical Requirements."

1.2 REFERENCES

A. ARI 210/240 - Unitary Air-Conditioning and Air-Source Heat Pump Equipment.
B. ARI 270 - Sound Rating of Outdoor Unitary Equipment.
C. ARI 340/360 - Commercial and Industrial Unitary Air-Conditioning and Heat Pump Equipment.
D. ASHRAE 52.1 - Gravimetric and Dust-Spot Procedures for Testing Air-Cleaning Devices Used in General Ventilation for Removing Particulate Matter.
E. NFPA 90A - Standard for the Installation of Air Conditioning and Ventilating Systems.

1.3 SUBMITTALS

A. Refer to Division 01 and Section 23 05 00 "General Mechanical Requirements" for submittals.
B. Product Data: Submit data indicating:
   1. Cooling and heating capacities.
   2. Dimensions.
   3. Rough-in connections and connection requirements.
   4. Electrical requirements with electrical characteristics and connection requirements.
   5. Controls.
   6. Accessories.

1.4 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this Section with minimum 3 years' experience.
B. Installer: Company specializing in performing Work of this Section with minimum 3 years' experience.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Accept equipment on site in factory packaging. Inspect for damage.
B. Protect equipment from damage by providing temporary covers until construction is complete in adjacent space.

1.6 WARRANTY

A. Furnish 5-year manufacturer’s warranty for compressors.

PART 2 - PRODUCTS

2.1 MINI SPLIT SYSTEM AIR CONDITIONERS

A. Manufacturers:
1. Carrier.
2. Daikin.
3. Mitsubishi Electric - Basis of Design.
4. L.G.
5. Trane.
6. Substitutions: Refer to Section 23 05 00 "General Mechanical Requirements."

B. Wall-Mounted Indoor Unit:
1. Provide indoor unit that is factory assembled, wired, and run tested. Provide within the unit all necessary factory wiring, piping, control circuit board, and fan motor.
   a. Provide units with a self-diagnostic function, 3-minute time-delay mechanism, an auto restart function, an emergency operation function, and a test run switch.
   b. Charge indoor unit and refrigerant pipes with dry air instead of refrigerant before shipment from the factory.
2. Unit Cabinet - Provide:
   a. Casings with a white finish.
   b. Standard multi-directional drain and refrigerant piping offering four directions for refrigerant piping and two directions for draining.
   c. A separate back plate that secures the unit firmly to the wall.
3. Fan - Provide:
   a. Evaporator fan assembly with a line-flow fan direct driven by a single motor.
   b. Statically and dynamically balance fan and run on a motor with permanently lubricated bearings.
   c. A manually adjustable guide vane with the ability to change the airflow from side to side (left to right).
   d. A motorized air sweep flow louver with an automatic change in airflow by directing the air up and down to provide for uniform air distribution.
   e. Indoor fan consisting of three speeds: High, Medium, and Low.
4. Filter: Filter return air using an easily removable washable filter.
5. Coil - Provide:
   a. Evaporator coil of nonferrous construction with smooth plate fins on copper tubing.
   b. Tubing with inner grooves for high-efficiency heat exchange.
   c. Brazed tube joints with phos copper or silver alloy.
   d. Pressure testing of coils at the factory.
   e. Condensate pan and drain under the coil.
6. Electrical:
   a. Power indoor unit from the outdoor unit.
   b. Indoor units with supplemental electrical heat elements is not acceptable.

7. Controls Provide:
    a. A wireless controller to perform input functions necessary to operate the system.
    b. Controller consisting of a power on-off switch, mode selector, temperature setting, timer control, fan speed select, and auto vane selector.
    c. Temperature changes by 2 degrees F increments with a range of 59 to 89 degrees F.
    d. Microprocessor located in the indoor unit with the capability of sensing return air temperature and indoor coil temperature, receiving and processing commands from the wireless controller, providing emergency operation, and controlling the outdoor unit.
    e. System will be capable of automatic restart when power is restored after power interruption.
    f. Control system will control the continued operation of the air sweep louvers, as well as provide on/off and system/mode function switching. Provide control modules to allow DDC / BMS system to monitor room temperature, set temperature set-points, set schedules, and report alarms.

C. Outdoor Unit - Provide:
1. Unit designed specifically for use with the indoor unit, completely factory assembled, piped and wired. Run-test units at the factory.
2. Cabinet casing fabricated of corrosion-resistant galvanized steel, bonderized, and a powder-coated baked enamel finish. Supply units with manufacturer's standard hail guard.
3. Fan - Provide:
    a. Units with a direct drive propeller type fan.
    b. Inherent protection motors, and permanently lubricated bearings.
    c. Designed and mounted for quiet operation.
    d. A raised guard to prevent contact with moving parts.
    e. Horizontal discharge airflow for outdoor units.
4. Coils - Provide:
    a. Condenser coils of nonferrous construction with lanced or corrugated plate fins on copper tubing.
    b. Protected with an integral metal guard.
    c. Control refrigerant flow from the condenser using a metering orifice.
    d. Either a factory or field-installed hail screen.
5. Compressor - Provide :
    a. High-performance rotary compressors.
    b. An accumulator for outdoor units.
    c. Compressor equipped with an internal thermal overload.
    d. Outdoor unit with the ability to operate with a maximum height difference of 25 feet and have refrigerant tubing length of 49 feet between indoor and outdoor units without the need for line size changes, traps or additional oil.
    e. Compressor mounted to avoid the transmission of vibration.
6. Electrical:
    a. Provide unit electrical power as scheduled.
    b. Control outdoor unit by the microprocessor located in the indoor unit.

2.2 ELECTRICAL CHARACTERISTICS AND COMPONENTS

A. Electrical Characteristics: In accordance with Division 26 Electrical.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify piping rough-in is at correct location.
B. Verify electrical rough-in is at correct location.

3.2 INSTALLATION

A. Install refrigerant piping from unit to remote condensing unit. Install refrigerant specialties furnished with unit.
B. Pipe condensate from drain pan to condensate drainage system. Refer to Drawings.
C. Install accessories furnished loose for field mounting.
D. Install electrical devices furnished loose for field mounting.
E. Install control wiring between unit control panel and field-mounted control devices.

3.3 CLEANING

A. After construction is completed, clean exposed surfaces of units.
B. Vacuum clean coils and inside of cabinets.
C. Touch-up marred or scratched surfaces of factory-finished cabinets, using finish materials furnished by manufacturer.

3.4 DEMONSTRATION

A. Demonstrate unit operation and maintenance.
B. Furnish services of manufacturer's technical representative for 2 hours to instruct Owner's personnel in operation and maintenance of units. Schedule and coordinate training date with Owner.

3.5 PROTECTION OF FINISHED WORK

A. Protect finished surfaces of cabinets with protective covers during remainder of construction.

⚠ Warning

Indicates presence of a hazard which can cause severe personal injury, death or substantial property damage if ignored.

⚠ Caution

Indicates presence of a hazard which will or can cause personal injury or property damage if ignored.

Note

Indicates special instructions on installation, operation or maintenance which are important but not related to personal injury hazards.

Installation

The Marley QuadraFlow cooling tower purchased for this installation represents the current state of the art in corrosion resistant cooling tower design and construction. The QuadraFlow represents a major step forward in low-maintenance, long-life cooling towers.

These instructions–as well as those offered separately on motors, fans, Geareducers, driveshafts, float valves, etc.–are intended to assure that the tower serves you properly for the maximum possible time. Since the QuadraFlow's warrantability may well depend upon your actions, please read these instructions thoroughly prior to operation.

If you have questions about the operation and/or maintenance of this tower, and you don't find the answers in this manual, please contact your Marley sales engineer. When writing for information, or when ordering parts, please mention tower serial number shown on the tower's nameplate.

Tower Location

Space available around the tower should be as generous as possible to promote ease of maintenance–and to permit freedom of airflow into and through the tower. If you have questions about the adequacy of the available space and the intended configuration of the tower, please contact your Marley sales engineer for guidance.

Prepare a stable, level support foundation for the tower, utilizing weight, wind load, and dimensional information appearing on appropriate Marley submittal drawings. Supports must be level to insure proper operation of the tower.

⚠ Warning

The cooling tower must be located at such distance and direction to avoid the possibility of contaminated tower discharge air being drawn into building fresh air intake ducts. The purchaser should obtain the services of a Licensed Professional Engineer or Registered Architect to certify that the location of the tower is in compliance with applicable air pollution, fire, and clean air codes.

Tower Shipment

QuadraFlow towers ship by truck (on flat bed trailers) in an unassembled condition. Single cell towers ship on one truck. Multicell towers, depending on their size, may require more than one truck. Responsibility for the condition of the tower upon its arrival belongs to the trucker–as does the coordination of multiple shipments, if required.

Installation

Receiving Tower

Prior to unloading the tower from the delivering carrier, inspect the shipment for evidence of damage in shipment. If damage is apparent, note the freight bill accordingly. This will support your future recovery claim.

Tower Assembly

Your Marley sales representative is able to provide for the tower assembly by SPX's construction division or through a qualified subcontractor. Our subcontractors provide safe, efficient assembly which complies with all requirements for five-year warranty protection of your tower by SPX.

Motor Wiring

Wire motor leads as shown on the motor nameplate matching the supply voltage. Do not deviate from the motor nameplate wiring.

Either of following symbols may be shown on the motor nameplate – Δ, Δ Δ, Y, or YY. These symbols represent how the motor is constructed on the inside and in no way have anything to do with a Delta or Wye electrical distribution system serving the motor.

When using a starter:

- Set motor overload protection to 110% of motor nameplate amps. This setting allows the fan motor to operate during cooler weather. During cooler weather it is common for the motor to draw 6 to 10% higher than the nameplate amps. High amps are common during tower commissioning when the tower is dry and the ambient air temperature is cool.

Note

Do not start the motor more than four to five times per hour. Short cycling the tower will cause fuses, breakers or O.L.s to operate and will decrease motor life.

When using a *two-speed* starter:

- Motor rotation must be the same at slow speed and high speed.
- Single winding motor requires a starter with a shorting contactor.
- Two-winding motor requires a starter with out a shorting contactor.
- All two-speed starters must have a 20 second time delay relay when switching from high speed to low speed.

Installation

Note

Do not start the motor more than four to five times per hour (each low speed start and each high speed start count as one start).

When using a VFD:

Note

Before beginning, ensure that the motor is rated for "Inverter Duty" per NEMA MG-1, part 31.

- Set the VFD solid state overload protection to 119% of motor nameplate amps and set "maximum current parameter" in the VFD to motor nameplate amps. "Maximum current parameter" will reduce fan speed and limit amp draw to nameplate amps during cold weather operation. If furnished with a mechanical O.L. set this at 110% over motor nameplate amps.
- Motor rotation must be the same in both VFD mode and By-pass mode.
- If cable distance between the VFD and motor is greater than 100 feet a DV/DT output filter is recommended to avoid damage to the motor. 100 feet distance is based on our field experience, the VFD manufacture may state different distances and distance does vary depending on the VFD manufacture.
- Program the VFD for variable torque output. Flux vector and constant torque modes may damage the gearbox.
- Do not start and stop the motor using the safety switch at the motor. If the drive is being commanded to run and the load side is cycled ON and OFF with the safety switch this may damage the VFD.

Using a VFD in cooling applications has advantages over traditional single or two speed motor control. A VFD can reduce the cost of electrical energy being used and provide better temperature control. In addition, it reduces the mechanical and electrical stress on the motor and mechanical equipment. Electrical savings can be large during periods of low ambient temperature when the cooling requirement can be satisfied at reduced speeds. To benefit from these advantages, it is important that the drive be installed correctly.

Marley supplies VFD and VFD controls specifically designed for our cooling products. If you have purchased a Marley VFD and/or controls package, please follow the instructions in the *User Manual* for that system. Most VFD

problems can be avoided by purchasing the Marley drive system. If you are installing a VFD other than the Marley drive, please refer to that drives installation manual.

⚠ Warning

Improper use of a VFD may cause damage to equipment or personal injury. Failure to correctly install the VFD drive will automatically void all warranties associated with the motor and any equipment that is either electrically or mechanically (directly) attached to the VFD drive system. The length of this warranty avoidance will be contingent on properly installing the VFD system and repairing any damage that may have occurred during its operation. SPX Cooling Technologies does not assume responsibility for any technical support or damages for problems associate with non-Marley brand VFD systems.

⚠ Warning

Changing the operational fan speed from the factory settings could cause the fan to operate in an unstable region which may result in damage to the equipment and possible injury.

Mechanical Equipment

⚠ Warning

Always make certain that mechanical equipment is inoperable during periods of maintenance–or during any situation of possible endangerment to personnel. If your electrical system contains a disconnect switch, lock it out until the period of exposure to injury is over.

1. Check the Geareducer oil level at the sight glass near the motor. If oil is required, fill to the proper level.
2. Spin the fan manually to assure that all fan blades properly clear the inside of the fan cylinder. Observe the action of the driveshaft couplings to be sure that the motor and Geareducer are properly aligned. If necessary, correct the alignment in accordance with the included driveshaft manual.
3. Momentarily energize ("bump") the motor and observe rotation of the fan. The fan should rotate in a counterclockwise direction when viewed from below. If rotation is backwards, shut off the fan and reverse two of the three primary leads supplying power to the motor.

Installation

⚠ Caution

If tower is equipped with a two-speed motor, check for proper rotation at both speeds. Check also to see that starter is equipped with a 20-second time delay which prevents direct switching from high speed to low speed. This delay will allow the fan to slow down and will prevent abnormal stress from being applied to the mechanical equipment and the electrical circuit components.

4. Run the motor and observe the operation of the mechanical equipment. Operation should be stable, and there should be no evidence of oil leakage.

Note

If the water supply system is not being operated–or if there is no heat load on the system–motor amps read at this time may indicate an apparent overload of as much as 10–20%. This is because of the increased density of unheated air flowing through the fan. Determination of an accurate motor load should await the application of the design heat load.

General

The cold water temperature obtained from an operating cooling tower will vary with the following influences:

1. **Heat Load:** With the fan in full operation, if the heat load increases, the cold water temperature will rise. If the heat load reduces, the cold water temperature will reduce.

$$\text{Range (°F)} = \frac{\text{Heat Load (Btu/hr)}}{\text{GPM x 500}}$$

   Note that the number of degrees ("range") through which the tower cools the water is established by the system heat load and the amount of water being circulated, in accordance with the following formula:

   The cooling tower establishes only the cold water temperature attainable under any operating circumstance.

2. **Air Wet-Bulb Temperature:** Cold water temperature will also vary with the wet-bulb temperature of the air entering the louvered faces of the tower. Reduced wet-bulb temperatures will result in colder water temperatures. However, the cold water temperature will not vary to the same extent as the wet-bulb. For example, a 20°F reduction in wet-bulb may result in only a 15°F reduction in cold water temperature.

3. **Water Flow Rate:** Increasing the water flow rate (GPM) will cause a slight elevation in cold water temperature, while reducing the water flow rate will cause the cold water temperature to lower slightly. However, at a given heat load (see formula above), GPM reductions also cause an increase in the incoming hot water temperature. Use care to prevent the hot water from exceeding 125°F, in order to prevent damage to the tower components.
4. **Airflow Rate:** Reducing airflow through the tower causes the cold water temperature to rise. This is the approved method by which to control leaving water temperature.

   If your tower is equipped with a single-speed motor, the motor may be shut off when the water temperature becomes too cold. This will cause the water temperature to rise. When the water temperature then becomes too warm for your process, the motor can be restarted.

Fan cycling limits:

Note

Considering the normal fan and motor sizes utilized on MCW towers, anticipate that approximately 4 to 5 starts per hour are allowable.

If your tower is equipped with a two-speed motor, greater opportunity for temperature control is afforded you. When the water temperature becomes too cold, switching the fan to half-speed will cause the cold water temperature to rise–stabilizing at a temperature a few degrees higher than before. With a further reduction in water temperature, the fan may be cycled alternately from half-speed to off.

Note

Do not start the motor more than four to five times per hour (each low speed start and each high speed start count as one start).

If your tower consists of two or more cells, cycling of motors may be shared between cells, increasing your steps of operation accordingly. For greater insight on cold water temperature control, please read *Marley Technical Report #H-001-A*, "Cooling Tower Energy and its Management" available for download at spxcooling.com.

Operation

Tower Start-Up

⚠ **Warning**

Among other sources, outbreaks of Legionnaires' Disease have reportedly been traced to cooling towers. Maintenance and water treatment procedures that prevent amplification and dissemination of Legionella and other airborne bacteria should be formulated and implemented BEFORE systems are operated and continued regularly thereafter to avoid the risk of sickness or death.

Water System

1. New installations should be cleaned and treated with biocides by a water treatment expert before startup.
2. Remove any and all accumulated debris from tower. Pay particular attention to inside areas of cold water basin, entire hot water basin, and hot water inlet. Make sure that cold water suction screens are clear and installed in place.
3. Fill the water system to an approximate depth of 3" in the elevated section of the cold water basin. This is the recommended operating water level. Adjust the float valve so that it is essentially closed at that level. Continue filling the system until the water reaches a level approximately ⅛" **below the lip of the overflow.**
4. Start your pump(s). Observe system operation. Since the water system external to the tower will have been filled only to the level achieved in the cold water basin, a certain amount of "pump-down" of the basin water level will occur before water completes the circuit and begins to fall from the fill. The amount of initial pump-down may be insufficient to cause the float valve to open. However, you can check its operation by pressing down on the operating lever to which the stem of the float valve is attached.
5. Continue pump operation for about 15 minutes, after which it is recommended that the water system be drained, flushed, and refilled in order to clean the system.
6. While operating the condensing water pump(s) and prior to operating the cooling tower fan, execute one of the two alternative biocidal treatment programs described in the following:
   - Resume treatment with the biocide which had been used prior to shutdown. Utilize the services of the water treatment supplier. Maintain the maximum recommended biocide residual (for the specific biocide) for

a sufficient period of time (residual and time will vary with the biocide) to bring the system under good biological control

or

- Treat the system with sodium hypochlorite to a level of 4 to 5 mg/L (ppm) free chlorine residual at a pH of 7.0 to 7.6. The chlorine residual must be held at 4 to 5 mg/L (ppm) for six hours, measurable with standard commercial water test kits.

If the cooling tower has been in operation and then shut down for a duration of time and not drained, perform one of the two previous biocidal treatment programs directly to the cooling water storage vessel (cooling tower sump, drain down tank, etc.) without circulating stagnant water over the cooling tower fill or operating the cooling tower fan.

After biocidal pretreatment has been successfully completed, cooling water may be circulated over the tower fill with the fan off.

When biocidal treatment has been maintained at a satisfactory level for at least six hours, the fan may be turned on and the system returned to service. Resume the standard water treatment program, including biocidal treatment.

Wintertime Operation

During operation in subfreezing weather, the opportunity exists for ice to form in the colder regions of the tower. Your primary concern is to prevent the formation of destructive ice on the cooling tower fill. Your understanding of cold weather operation will be enhanced if you read *Marley Technical Report #H-003*, "Operating Cooling Towers in Freezing Weather," available for download at spxcooling.com, augmented by the following guidelines:

1. ***Do not allow the tower's leaving water temperature to drop below a minimum allowable level–about 40°F–established as follows:***

   During the coldest days of the first winter of operation, observe whether any ice is forming on the louver face, particularly near the bottom of the louver face. If hard ice is present on the louvers, an appropriate elevation in the allowable cold water temperature is mandatory. If the coldest possible water is beneficial to your process, ice of a mushy consistency can be tolerated–but routine periodic observation is advisable.

   If the minimum allowable cold water temperature is established at or near minimum heat load, it should be safe for all operating conditions.

Having established the minimum allowable cold water temperature, maintaining that temperature can be accomplished by fan manipulation, as outlined in **Item 4** under **Tower Operation** on page 8. *However, in towers of more than one cell, the limiting temperature established applies to the water temperature of the cell or cells operating at the highest fan speed–not necessarily the net cold water temperature produced by the entire tower.*

2. As cold air enters the louvers, it causes the falling water to be drawn inward toward the center of the tower. Thus, under fan operation, the louvers and lower periphery of the tower structure remain partly dry, seeing only random splashing from within the tower–plus normal atmospheric moisture from the entering air. Such lightly wetted areas are most subject to freezing.

   Although ice is unlikely to cause structural damage to the fill, it may build up sufficiently to restrict the free flow of air through the louvers. This will have the effect of reducing the tower's thermal performance efficiency. When excessive ice forms on the louvers, stop the fan for a few minutes. With the fan off, the increase in the water temperature and the action of the cascading water will reduce the ice buildup on the louvers.

Intermittent Wintertime Operation

If periods of shutdown (nights, weekends, etc.) occur during freezing weather, measures must be taken to prevent the water in the cold water basin –and all exposed pipework–from freezing. Several methods are used to combat this, including automatic basin heater systems available from Marley. It is recommended that you discuss your freeze prevention options with your local Marley sales representative.

⚠ Caution

Unless some means of freeze prevention is incorporated into your system, the tower basin and exposed pipework should be drained at the beginning of each wintertime shutdown period.

⚠ Warning

If tower basin is drained, verify that all basin heaters have been shut off either by automatic cutoff or disconnect switch.

Maintenance

Water Treatment and Blowdown

Maintaining Water Quality:

The materials used in the QuadraFlow tower are selected to offer long, corrosion-free service in a "normal" cooling tower environment, defined as follows:

- Circulating water with a pH between 6 and 8; a chloride content (as NaCl) below 750 ppm; a sulfate content (SO_4) below 1200 ppm; a maximum inlet water temperature not to exceed 125°F; no significant contamination with unusual chemicals or foreign substances; and adequate water treatment to minimize scaling.
- Chlorine (if used) shall be added intermittently, with a free residual not to exceed 1 ppm – maintained for short periods. Excessive chlorine levels may deteriorate sealants and other materials of construction.
- An atmosphere surrounding the tower no worse than "moderate industrial," where rainfall and fog are no more than slightly acid, and they do not contain significant chlorides or hydrogen sulfide (H_2S).

Cooling Tower Cleaning

⚠ Warning

Any evaporative-type cooling tower must be thoroughly cleaned on a regular basis to minimize the growth of bacteria, including Legionella Pneumophila, to avoid the risk of sickness or death. Service personnel must wear proper personal protective equipment during decontamination. Do NOT attempt any service unless the fan motor is locked out.

Operators of evaporative cooling equipment, such as water cooling towers, should follow maintenance programs which will reduce to an absolute minimum the opportunity for bacteriological contamination. US Public Health Service publications have recommended that "good housekeeping" procedures be followed, such as: regular inspections for concentrations of dirt, scale, and algae; periodic flushing and cleaning; and the following of a complete water treatment program including biocidal treatment. See Tower start-up instructions on page 10.

Maintenance

The visual inspection should take place at least once a week during the operating season. The periodic flushing and cleaning should be done before and after each cooling season, but in any event at least twice a year. The louvers, drift eliminators, and easily accessible fill surfaces should be flushed by use of a moderate-pressure water nozzle, being careful not to cause physical damage. A reliable water treatment program should be installed and maintained. Filtration devices may be employed to reduce the suspended solids concentrations, thus increasing the effectiveness of the water treatment program.

Blowdown

A cooling tower cools water by continuously causing a portion of it to evaporate. Although the water lost by evaporation is replenished by the makeup system, it exits the tower as pure water–leaving behind its burden of dissolved solids to concentrate in the remaining water. Given no means of control, this increasing concentration of contaminants can reach a very high level.

In order to achieve water quality which is acceptable to the cooling tower (as well as the remainder of your circulating water system), the selected water treatment company must work from a relatively constant level of concentrations. This stabilization of contaminant concentrations is usually accomplished by blowdown, which is the constant discharge of a portion of the circulating water to waste. As a rule, acceptable levels on which to base a treatment schedule will be in the range of 2-4 concentrations. The following table gives approximate rates of blowdown (percent of total water flow rate constantly wasted) to achieve those concentrations at various cooling ranges.*

	Blowdown Rate	
Cooling	Two	Four
Range (°F)	Concentrations	Concentrations
10	0.7%	0.17%
15	1.1%	0.30%
20	1.5%	0.43%

*Range = Difference between hot water temperature entering the tower and cold water temperature leaving the tower.

Note

When water treatment chemicals are added, they should not be introduced into the circulating water system via the cold water basin of the cooling tower. Water velocities are lowest at that point, which results in inadequate mixing.

Maintenance

Schedule of Tower Maintenance

Included with this instruction packet are separate Service Manuals on each major operating component of the tower, and it is recommended that you read them thoroughly. Where discrepancies may exist, the separate Service Manuals will take precedence.

⚠ Warning

Do not use the top horizontal surface of the tower as a working platform. The tower is designed so that all maintenance can be performed from the exterior and interior of the tower. Do not use the upper basin covers as a walking surface or working platform. Remove basin covers and use portable ladders whenever performing service on the hot water basin. Use of ladder should be in accord with manufacturer's recommendations

The following is recommended as a minimum routine of scheduled maintenance:

⚠ Warning

Always shut off electrical power to the tower fan motor prior to performing any inspections that may involve physical contact with the mechanical or electrical equipment in or on the tower. Lock out and tag out any electrical switches to prevent others from turning the power back on. Service personnel must wear proper personal protective clothing and equipment.

Weekly: Inspect for bacterial growth and general operation conditions. Bacterial growth should be reported to your water treatment expert for immediate attention.

Monthly (Weekly at Start-up): Observe, touch, and listen to the tower. Become accustomed to its normal appearance, sound, and level of vibration. Abnormal aspects relating to the rotating equipment should be considered reason to shut down the tower until the problem can be located and corrected. Observe operation of the motor, driveshaft, Geareducer and fan. Become familiar with the normal operating temperature of the motor, as well as the sight and sound of all components as a whole.

Check Geareducer oil level. Shut down the unit and allow 5 minutes for the oil level to stabilize. Add oil if required. Check system for leaks if the amount of oil required appears unusual. (If oil is added at the external fill port, allow adequate time for the level to stabilize before reading final level.)

Maintenance

Inspect louvers, drift eliminators and basin trash screens and remove any debris or scale which may have accumulated. Replace any damaged or worn out components. Use of high-pressure water may damage the eliminator and louver material.

Observe operation of the float valve. Depress the operating lever to make sure that the valve is operating freely. Inspect the suction screen for plugging. Remove any debris that may have accumulated.

Check for any buildup of silt on the floor of the cold water basin. Mentally note the amount, if any, so future inspections will enable you to determine the rate at which it is forming.

Semi-Annually: Relubricate motor according to the manufacturer's instructions. See instructions on page 19.

Check to see that all bolts are tight in the fan and mechanical equipment region, including the fan guard. Use torque settings prescribed on the fan nameplate.

Clean and disinfect cooling tower with biocides. Systems with biofouling, high general bacterial counts, or positive cultures of legionella may require additional cleaning. Refer to "Cooling Tower Cleaning" section on page 13. Consult your water treatment expert as to prudent biological evaluation testing..

Note

To maintain five-year change intervals, use only oil designed specifically for these Geareducers. If, after five years, turbine-type mineral oil is used, the oil must be changed semiannually. Refer to *Geareducer User Manual* for oil recommendations and further instructions.

Annually: Inspect the tower thoroughly, making maximum use of instructions given in the separate service manuals. Check structural bolted connections and tighten as required. Make preventive maintenance repairs as necessary.

Every 5 Years: Change Geareducer oil. Refer to *Geareducer User Manual* for instructions.

Maintenance Schedule

Maintenance Service	Monthly	Semi-annually	Seasonal Startup or Annually
Inspect General Condition and Operation	x		x
Observe Operation of:			
Mechanical–motor, fan and drive mechanism	x		x
Makeup valve (if equipped)	x		x
Inspect for unusual noise or vibration	x		x
Inspect and Clean:			
Air inlet	x		x
PVC drift eliminators	x		x
Distribution basin, nozzles and collection basin	x		x
Fan motor exterior	x		x
Check:			
Collection water basin level	x		x
Blowdown–adjust as required	x		x
Geareducer Drive			
Check for loose fasteners including oil drain plug			x
Check for / repair oil leaks	x		x
Check oil level	x		x
Change oil		R	
Make sure vent is open			x
Check driveshaft alignment			x
Check for loose driveshaft or coupling fasteners			x
Check driveshaft flex element for unusual wear		x	x
Lube lines:			
Check for oil leaks in hoses or fittings	x		x
Fan:			
Check and tighten blade and hub fasteners			x
Check fan blade pitch and tip clearance			x
Check fan cylinder for loose fasteners			x
Motor:			
Lubricate (grease as required)			R
Check mounting bolts for tightness			x
Operate at least	3 hours a month	3 hours a month	3 hours a month
Basin Heater (if equipped):			
Check for proper operation of temp/low water level sensor			x
Inspect/clean buildup of contaminant from sensor		x	x
Structure:			
Inspect/tighten all fasteners		x	x
Inspect and touch up all metal surfaces			x

R – Refer to Component User Manual

Note: It is recommended at least weekly, that the general operation and condition be observed. Pay attention to any changes in sound or vibration that may signify a need for closer inspection.

Maintenance

Seasonal Shutdown Instructions

When the system is to be shut down for an extended period of time, it is recommended that the entire system (cooling tower, system piping, heat exchangers, etc.) be drained. Leave the basin drain open.

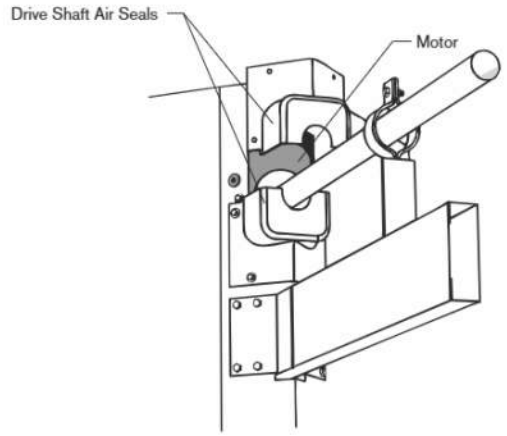
During shutdown, clean the tower and make any necessary repairs. Pay particular attention to mechanical equipment supports and driveshafts.

Tower Framework: Check structural bolted connections and tighten as required.

Driveshaft: Check driveshaft alignment, tightness of cap screws and set screws, and condition of all components. Refer to driveshaft service manual.

Fan: Check fan assembly bolting and tighten as required. Use torque settings prescribed on the fan nameplate. Refer to fan service manual.

Electric Motor: Clean and lubricate motor at close of each operating season. (Refer to motor manufacturer's recommendations.) Check motor anchor bolts and tighten as required. See Page 19 for motor lubrication instructions.



⚠ Warning

Do not start motor before determining that there will be no interference with free rotation of the fan drive.

The motor should be operated for three hours at least once a month. This serves to dry out windings and re-lubricate bearing surfaces. Refer to "Marley Electric Motor User Manual" *Manual 92-1475*.

At start of new operating season, make sure bearings are adequately lubricated before returning motor to service.

Maintenance

Motor Lubrication Instructions

⚠ **Warning**

Open and lock out disconnect switch to make certain motor cannot be started.

1. Remove interior driveshaft air seals as shown above. Opposite end motor bearing is accessible by removing motor cover (24000 models do not have a motor cover) on the exterior of the tower.
2. Relubricate motor according to the manufacturer's instructions.

Fiberglass Components: Check all fiberglass parts for exposed glass fibers. If found, the affected surfaces should be roughened up and solvent wiped. Surfaces must be clean and dry and free of oil, grease or other contaminants before applying new coating. The best coating system requires using a two-part polyamide epoxy primer to promote adhesion and a two-part acrylic polyurethane enamel for the topcoat. Contact your Marley sales representative if additional information is required.

Prolonged Shutdown

If shutdown period is longer than seasonal, contact your Marley sales engineer for additional information.

Maintenance

Additional Services

SPX's interest in your Marley QuadraFlow cooling tower does not end with the sale. Having conceived, designed, and manufactured the most reliable and longest lasting cooling tower of its class, we want to make sure that you gain the maximum possible benefit from its purchase.

Therefore, the following services are available which are intended to assure the maximum possible service life under your operating conditions, tailor the operating characteristics to your specific needs, and maintain consistent optimum thermal performance capability. They are available by contacting your Marley sales representative.

Replacement Parts

With the exception of the motor, every component of your tower is designed and manufactured by SPX Cooling Technologies. We do this because commercially available components have not proved capable of withstanding the harsh environment of a cooling tower– nor do they contribute their share to the thermal capability and operating characteristics intended.

A complete stock of all parts and components is maintained at one or more of the various Marley plants. In cases of emergency, they can normally be shipped within 24 hours–by air freight, if necessary. However, you would obviously benefit from anticipating your need in advance, thus avoiding the cost of special handling.

Be sure to mention your tower serial number (from the tower nameplate) when ordering parts. Refer to assembly manual for part identification.

Periodic Maintenance

You may wish to contract with Marley for regularly scheduled visits–for the purpose of inspecting and reporting your tower's condition–to make recommendations intended to prevent emergencies–and to perform maintenance considered outside the norm.

This service is not intended to replace the important function performed by your maintenance staff. Their attention assures the tower's routine operating performance, and is invaluable. However, Marley recognizes that the unusual manner in which a cooling tower performs its function–as well as the unique forces which act upon it–may be considerations which occasionally require the services of an expert technician.

Additional Information

Increased Load Requirements: QuadraFlow towers are designed such that cells of either equal or unequal capacity can be added in the future. This allows you to compensate for the load increases that normally occur with the replacement or addition of production equipment–and still retain continuity with respect to your cooling tower system.

Tower Renewal: Marley routinely rebuilds and upgrades cooling towers of all materials and manufacture. If your tower ever reaches the limit of its service life, we recommend that you investigate the cost of rebuilding before you routinely order a new replacement tower.

Each QuadraFlow tower includes a document package containing general orientation drawings and manuals to accomplish field assembly and installation. ***These drawings and manuals contain important information relating to safe installation and operation of the cooling tower.*** A separate installation drawing for each purchased option is included in the document package. If you have purchased an option and can't find the appropriate installation drawing, contact your local Marley sales representative before proceeding.

SPX also provides several sets of a separate packet of pertinent operating and maintenance manuals. The manuals vary somewhat depending on the tower model purchased.

In addition, SPX publishes numerous technical reports including more detailed information on a variety of cooling tower operation and service topics available to download at spxcooling.com. For complete parts and service assistance, contact the Marley sales or representative office in your area. If you need help locating the office nearest you, please phone 913 664 7400 or check the web at spxcooling.com.

Troubleshooting

Trouble	Cause	Remedy
Motor will not start	Power not available at motor terminals	1. Check power at starter. Correct any bad connections between the control apparatus and the motor. 2. Check starter contacts and control circuit. Reset overloads, close contacts, reset tripped switches or replace failed control switches. 3. If power is not on all leads at starter, make sure overload and short circuit devices are in proper condition.
	Wrong connections	Check motor and control connections against wiring diagrams.
	Low voltage	Check nameplate voltage against power supply. Check voltage at motor terminals.
	Open circuit in motor winding	Check stator windings for open circuits.
	Motor or fan drive stuck	Disconnect motor from load and check motor and Geareducer for cause of problem.
	Rotor defective	Look for broken bars and rings.
Unusual motor noise	Motor running single-phase	Stop motor and attempt to start it. Motor will not start if single-phased. Check wiring, controls and motor.
	Motor leads connected incorrectly	Check motor connections against wiring diagram on motor.
	Bad bearings	Check lubrication. Replace bad bearings.
	Electrical unbalance	Check voltage and currents of all three lines. Correct if required.
	Air gap not uniform	Check and correct bracket fits or bearing.
	Rotor unbalance	Rebalance.
	Cooling fan hitting end bell guard	Reinstall or replace motor fan.
Fan noise	Blade rubbing inside of fan cylinder	Adjust cylinder to provide blade tip clearance.
	Loose bolts in blade clamps	Check and tighten if necessary. Check fan blade pitch. Refer to Fan Service Manual.
Scale or foreign substance in water system	Lack of or insufficient bleed-off	See "Water Treatment" section of this manual.
	Water treatment	Consult competent water treating specialist. See "Water Treatment" section of this manual.
Motor does not come up to speed	Voltage too low at motor terminals because of line drop	Check transformer and setting of taps. Use higher voltage on transformer terminals or reduce loads. Increase wire size or reduce inertia.
	Broken rotor bars	Look for cracks near the rings. A new rotor may be required. Have motor service center check motor.
Wrong rotation (Motor)	Wrong sequence of phases	Switch any two of the three motor leads.
Excessive water drift	Faulty drift elimination	1. See if all louvers and eliminators are in place and clean. 2. Check to see that nozzles are in place and clean of debris.
	Overpumping	Reduce water flow rate to tower to design conditions.
Cold water too warm (See "Tower Operation")	Overpumping	Reduce water flow rate to tower to design conditions.
	Not enough air	Check motor current and voltage to be sure of correct contract horsepower. Clean louvers, fill and eliminators.

Troubleshooting

Trouble	Cause	Remedy
Unusual fan drive vibration	Loose bolts and cap screws	Tighten all bolts and cap screws on all mechanical equipment and supports.
	Unbalanced driveshaft or worn couplings	Make sure motor and Geareducer shafts are in proper alignment and "match marks" properly matched. Repair or replace worn couplings. Rebalance driveshaft by adding or removing weights from balancing cap screws. See Driveshaft Service Manual.
	Unbalanced fan	Be sure blades are properly positioned in correct sockets. (See match numbers.) Make certain all blades are as far from center of hub as safety devices permit. All blades must be pitched the same. See Fan User Manual. Clean off deposit buildup on blades.
	Worn Geareducer bearings	Check fan and pinion shaft endplay. Replace bearings as necessary.
	Unbalanced motor	Disconnect load and operate motor. If motor still vibrates, rebalance rotor.
	Bent Geareducer shaft	Check fan and pinion shafts with dial indicator. Replace if necessary.
Motor runs hot	Motor overload, wrong voltage or unbalanced voltage	Check voltage and current of all three lines against nameplate values.
	Wrong motor RPM	Check nameplate against power supply. Check RPM of motor and gear ratio.
	Bearings overgreased	Remove grease reliefs. Run motor up to speed to purge excessive grease.
	Wrong lubricant in bearings	Change to proper lubricant. See motor manufacturer's instructions.
	One phase open	Stop motor and attempt to start it. Motor will not start if single-phased. Check wiring, controls and motor.
	Poor ventilation	Clean motor and check ventilation openings. Allow ample ventilation around motor.
	Winding fault	Check with Ohmmeter.
	Bent motor shaft	Straighten or replace shaft.
	Insufficient grease	Remove plugs and regrease bearings.
	Too frequent starting	Limit cumulative starting time to a total of 30 seconds each hour.
	Deterioration of or foreign material in grease	Flush bearings and re-lubricate.
	Bearings damaged	Replace bearings.
	Incorrect fan blade pitch	Measure actual fan pitch and compare to that recommended. Correct, if necessary. See Fan User Manual.
Geareducer noise	Geareducer bearings	If new, see if noise disappears after one week of operation. Refer to Geareducer User Manual.
	Gears	Correct tooth engagement. Replace badly worn gears. Replace gears with imperfect tooth spacing or form.

SECTION 26 05 00 - BASIC ELECTRICAL METHODS

PART 1 - GENERAL

1.1 SUMMARY

A. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.

1.2 REQUIREMENTS OF REGULATORY AGENCIES AND STANDARDS

A. Regulatory Agencies: Installation, materials, equipment and workmanship shall conform to the applicable provisions of the following:
B. National Electrical Code (NEC).
C. National Electrical Safety Code (NESC).
D. Terms and conditions of the electrical utility and other authorities having lawful jurisdiction pertaining to the work required.
E. All temperature control wiring and associated conduit and boxes, shall be provided under other Sections of the Specifications. All power and control wiring, not identified under Divisions 22 and 23, shall be provided under Division 26.
F. The work covered by Division 26 of the Specifications includes the furnishing of all materials, labor, transportation, tools, permits, and fees for the complete installation of all electrical work required in the Contract Drawings.
G. In the event that additional or special construction is required, Contractor is responsible for providing all material and equipment which are usually furnished with such construction in order to complete the installation, whether indicated or not.
H. Contractor shall familiarize himself with the existing conditions of the site and advise Architect of any discrepancy or conflict prior to bidding.
I. Contractor shall be responsible for all permits, fees, and licenses required for the Project. All cost of such permits or fees shall be included in the bid.
J. All equipment and material shall be installed in accordance with applicable manufacturer's recommendations and standards.
K. Install sleeves, sealant pans, and roof penetrations as required for the installation of the electrical work. All such work is subject to the approval of Architect.
L. Contractor shall be responsible for coordinating with the utility service provider to verify all locations, routing, equipment and labor that will be furnished as a part of this Contract.
M. Any fees or charges associated with delivering permanent power for the Project shall be included in Contractor's bid.

1.3 SUBMITTALS

A. The intent of this Section is to give general submittal information; refer to specific submittal information in the subsequent Mechanical Sections.
B. Within 10 days after award of the Contract, and before orders are placed, Contractor shall submit specific information on list of equipment and principal materials specified. Contractor shall indicate and/or provide names of manufacturers, catalog and model numbers, cut sheets, and such other supplementary information as necessary for evaluation. Minimum of six copies, or as directed by Architect, of each shall be submitted and shall include all items mentioned by model number and/or manufacturer's name in the Specifications or in schedules on the Drawings.

C. Requirements for Each Submittal:
   1. Bear a dated stamp or specific written indication that Contractor has reviewed and approved all submittal prior to submission to Architect.
   2. Have all information deleted by Contractor that pertains to the means and methods of construction or to fabrication, assembly, installation, or erection (approval by Architect shall not extend to these areas unless specifically noted by Architect).
   3. Be clearly and SPECIFICALLY marked as to which specific piece of equipment is being submitted, by use of a permanent marker, stamp, etc., so as to distinguish it from other pieces of equipment that may occur on the same page.
   4. Be clearly marked as to which available options are being submitted that are associated with a piece of equipment.
   5. Be complete with respect to quantities, dimensions, specific performance, materials, and similar data to enable Architect to review the proposed equipment.

D. Omission by Contractor of any of the above requirements or submittals will subject submittal to automatic rejection without review.

E. Any submittals received by Architect that were not requested shall be returned without review of any kind.

PART 2 - PRODUCTS

2.1 EQUIPMENT REQUIREMENTS

A. The electrical requirements for equipment specified or indicated on the Drawings are based on information available at the time of design. If equipment furnished for installation has electrical requirements other than indicated on the Electrical Drawings, Contractor shall make any required changes to wire and conduit size, controls, overcurrent protection, and installation as required to accommodate the equipment supplied, without additional charge to Owner. The complete responsibility and costs for such adjustments shall be assigned to the respective Section of this Specification under which the equipment is furnished.

2.2 MATERIALS

A. All similar materials and equipment shall be the product of the same manufacturer unless specified otherwise.

B. Materials and equipment shall be the standard products of manufacturers regularly engaged in the production of such material and shall be the manufacturer's current and standard design.

C. Altitude: Equipment affected by altitude shall perform satisfactorily for the function intended at the altitude of the Project site.

D. Detectable Warning Tape: Acid and alkali-resistant polyethylene film warning tape manufactured for marking and identifying underground utilities, minimum 6-inch-wide and 4 mils thick, continuously inscribed with a description of utility, with metallic core encased in a protective jacket for corrosion protection, detectable by metal detector when tape is buried up to 30 inch deep; colored as follows:
   1. Red: Electric.
   2. Yellow: Gas, oil, steam, and dangerous materials.
   3. Orange: Telephone and other communications.
   4. Blue: Water systems.
   5. Green: Sewer systems.

E. Backfill Material:
   1. Material 4 inches below and 12 inches above pipes and conduit shall be natural or manufactured sand complying to ASTM C 33.
   2. Material more than 12 inches above pipes and conduits shall be sand indicated above or native fill free of rock or gravel larger than 3/8 inches in any dimension, debris, waste, frozen materials, vegetation, and other deleterious matter.

PART 3 - EXECUTION

3.1 GENERAL

A. Fabrication, erection, and installation of the complete electrical system shall be done in accordance with accepted good practice by qualified personnel experienced in such work and shall proceed in an orderly manner so as not to impede the progress of the Project. Electrical Contractor shall check all areas and surfaces where electrical equipment material is to be installed, removed, or relocated and report any unsatisfactory conditions before starting work. Commencement of work signifies this Contractor's acceptance of existing conditions. In the acceptance or rejection of the finished installation, no allowance will be made for lack of skill on the part of workers. Surfaces requiring coatings will be completed prior to installation of any electrical work on these surfaces.

B. The Electrical Drawings are diagrammatic. The installation requirements shall be carefully coordinated with structural, architectural, and mechanical conditions and shall be adjusted to avoid conflict.

C. All work shall be concealed in walls, ceilings, and chases unless specifically noted to be exposed or otherwise approved.

D. The locations of electrical equipment are approximate and are not intended to convey the exact details and mounting of location of outlets, equipment, and other items. Exact locations are to be field determined by actual measurements.

E. The location height and projection of fixtures illuminating signs or special features shall be approved by Architect prior to installation.

F. Contractor shall coordinate the location of all exterior fixtures with architectural Drawings and Specifications.

G. Consult architectural Drawings to determine wall finishes and locations of wall-mounted equipment, countertop splashes, and similar items to avoid conflict with electrical equipment. At locations where surface or pendant mounted light fixtures are noted, provide for all necessary framing channels, pendants, chains, canopies, and other hardware as required for a complete and operable system.

H. Protect subgrades and foundation soils against freezing temperatures or frost. Provide protective insulating materials as necessary.

I. Excavation for Pipe and Conduit:
   1. Excavate trenches to indicated gradients, lines, depths, and elevations.
   2. Excavate trenches to uniform widths to provide a working clearance on each side of pipe or conduit. Excavate trench walls vertically from trench bottom to 12 inches higher than top of pipe or conduit, unless otherwise indicated.
   3. Trench Bottoms: Excavate and shape trench bottoms to provide uniform bearing and support of pipes and conduit. Shape subgrade to provide continuous support for bells, joints, and barrels of pipes and for joints, fittings, and bodies of conduits. Remove projecting stones and sharp objects along trench subgrade.
      a. For pipes and conduit less than 6 inches in nominal diameter and flat-bottomed, multiple-duct conduit units, hand excavate trench bottoms and support pipe and conduit on an undisturbed subgrade.

b. For pipes and conduit 6 inches or larger in nominal diameter, shape bottom of trench to support bottom 90 degrees of pipe circumference. Fill depressions with tamped sand backfill.
c. Excavate trenches 4 inches deeper than elevation required in rock or other unyielding bearing material to allow for bedding course.

4. Place backfill and fill materials in layers not more than 8 inches in loose depth for material compacted by heavy compaction equipment, and not more than 4 inches in loose depth for material compacted by hand-operated tampers.

J. Compact soil to not less than the following percentages of maximum dry unit weight according to ASTM D698:
a. Under structures, building slabs, steps, and pavements, scarify and recompact top 12 inch of existing subgrade and each layer of backfill or fill material at 95 percent.
b. Under walkways, scarify and recompact top 6 inches below subgrade and compact each layer of backfill or fill material at 92 percent.
c. Under lawn or unpaved areas, scarify and recompact top 6 inches below subgrade and compact each layer of backfill or fill material at 85 percent.

2. Install detectable warning tape above conduits and pipe, 12 inches below finished grade, except 6 inches below subgrade under pavements and slabs.
3. Protection:
a. Protecting Graded Areas: Protect newly graded areas from traffic, freezing, and erosion. Keep free of trash and debris.
b. Repair and reestablish grades to specified tolerances where completed or partially completed surfaces become eroded, rutted, settled, or where they lose compaction due to subsequent construction operations or weather conditions.
1) Scarify or remove and replace soil material to depth as directed by Architect; reshape and recompact.
c. Where settling occurs before Project correction period elapses, remove finished surfacing, backfill with additional soil material, compact, and reconstruct surfacing.
1) Restore appearance, quality, and condition of finished surfacing to match adjacent work, and eliminate evidence of restoration to the greatest extent possible.

4. Disposal of Surplus and Waste Materials:
a. Disposal: Remove surplus satisfactory soil and waste material, including unsatisfactory soil, trash, and debris, and legally dispose of it off Owner's property unless otherwise directed by Owner.
b. Repair: Any damage to shrubs, grass or structures shall be repaired to previous condition by Contractor at no additional expense to Owner.

K. It shall be the responsibility of Division 26 Contractor to provide for all disconnecting and motor control devices for all equipment. Contractor shall coordinate to determine voltage, phase, and configurations. Any changes necessary to coordinate these items between Divisions 22, 23, and 26 shall be considered part of this Contract.

L. Division 26 Contractor shall be responsible for providing for all power requirements associated with the mechanical systems including power, control devices, smoke dampers, etc. Refer to Division 22 and 23 Drawings for locations and requirements. Connect all smoke dampers to the fire alarm control panel.

3.2 PERFORMANCE TESTS

A. Thoroughly test all control circuits, fixtures, services, and all circuits for proper operating condition and freedom from grounds and short circuits before acceptance is requested. All equipment, appliances, and devices shall be operated under load conditions.
B. After the interior wiring system installation is complete conduct operating tests for approval. When requested, test all the wire, cable, devices, and equipment after installation, to assure that all material continues to possess all the original characteristics as required by governing codes and standards listed in these Specifications.
C. After motor operation has been verified make voltage readings at all panelboards and starters. Based on these readings, make final adjustments of primary taps on all transformers in the building as directed, or coordinate with the utility proper building voltage.
D. Perform such other tests as required by other Sections of these Specifications or as requested to prove acceptability.
E. Furnish all instruments and labor for testing.
F. All material installed shall be listed, inspected, and approved by a nationally accepted testing laboratory such as UL and/or ETL. All material shall bear the UL or ETL label where available.

3.3 SUBMITTAL AND APPROVAL OF MATERIALS

A. All requirements for submittals shall comply with the applicable provisions included in the individual Specification Sections.
B. Unless identified as a sole source item, the listing of product manufacturers, catalog numbers, etc., on Drawings is intended to establish a standard of quality of the product. It is the responsibility of Contractor to review all items he intends to submit. If equipment other than that indicated on Drawings is proposed by Contractor, the information will be reviewed at the time of the submission of the submittal.

END OF SECTION

SECTION 26 05 13 - BUILDING WIRE AND CABLE

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Building wire and cable.
   2. Wiring connectors and connections.
B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.
   2. Section 01 40 00 "Quality Requirements" for requirements for references and standards.
   3. Section 26 05 53 "Electrical Identification."

1.2 REFERENCES

A. NECA Standard of Installation (National Electrical Contractors Association).
B. NETA ATS - Acceptance Testing Specifications for Electrical Power Distribution Equipment and Systems (International Electrical Testing Association).
C. NFPA 70 - National Electrical Code.

1.3 SUBMITTALS FOR REVIEW

A. Refer to Section 01 33 00 "Submittal Procedures" for procedures for submittals.
B. Product Data: Provide for each cable assembly type.

1.4 SUBMITTALS FOR INFORMATION

A. Refer to Section 01 33 00 "Submittal Procedures" for procedures for submittals.
B. Test Reports: Indicate procedures and values obtained.
C. Manufacturer's Installation Instructions: Indicate application conditions and limitations of use stipulated by product testing agency specified under Regulatory Requirements.

1.5 SUBMITTALS AT PROJECT CLOSEOUT

A. Refer to Section 01 70 00 "Execution and Closeout Requirements" for procedures for submittals.
B. Project Record Documents: Record actual locations of components and circuits.

1.6 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this Section with minimum 3 years' documented experience.

1.7 REGULATORY REQUIREMENTS

A. Conform to NFPA 70.
B. Furnish products listed and classified by UL as suitable for the purpose specified and indicated.

1.8 FIELD SAMPLES

A. Provide under provisions of Section 01 40 00 "Quality Requirements."

1.9 PROJECT CONDITIONS

A. Refer to Section 01 30 00 "Administrative Requirements."
B. Verify that field measurements are as indicated.
C. Conductor sizes are based on copper.
D. Wire and cable routing indicated is approximate unless dimensioned.

1.10 COORDINATION

A. Coordinate Work under provisions of Section 01 30 00 "Administrative Requirements."
B. Where wire and cable destination is indicated and routing is not shown, determine exact routing and lengths required.

PART 2 - PRODUCTS

2.1 BUILDING WIRE

A. Manufacturers:
   1. American Cable.
   2. Houston Wire and Cable.
   3. Southwire.
   4. Substitutions: Refer to Section 01 60 00 "Product Requirements."
B. Description: Single conductor insulated wire.
C. Conductor: Copper.
D. Insulation Voltage Rating: 600 volts.
E. Insulation: NFPA 70, Type indicated herein.
F. MC Cable: Shall not be utilized on this Project.

2.2 WIRING CONNECTORS

A. Split Bolt Connectors:
   1. Buchanan.
   2. Burndy.
   3. Ilsco.
   4. Substitutions: Refer to Section 01 60 00 "Product Requirements."

B. Solderless Pressure Connectors:
   1. Buchanan.
   2. Burndy.
   3. Ilsco.
   4. Substitutions: Refer to Section 01 60 00 "Product Requirements."
C. Spring Wire Connectors:
   1. Ideal.
   2. Substitutions: Refer to Section 01 60 00 "Product Requirements."
D. Compression Connectors:
   1. Buchanan.
   2. Burndy.
   3. Ilsco.
   4. Substitutions: Refer to Section 01 60 00 "Product Requirements."

PART 3 - EXECUTION

3.1 EXAMINATION

A. Refer to Section 01 30 00 "Administrative Requirements" for verification of existing conditions before starting Work.
B. Verify that interior of building has been protected from weather.
C. Verify that mechanical work likely to damage wire and cable has been completed.
D. Verify that raceway installation is complete and supported.

3.2 PREPARATION

A. Completely and thoroughly swab raceway before installing wire.

3.3 WIRING METHODS

A. Concealed Dry Interior Locations: Use only building wire, Type THHN/THWN insulation, in raceway.
B. Exposed Dry Interior Locations: Use only building wire, Type THHN/THWN insulation, in raceway.
C. Above Accessible Ceilings: Use only building wire, Type THHN/THWN insulation, in raceway.
D. Wet or Damp Interior Locations: Use only building wire, Type THHN/THWN insulation, in raceway.
E. Exterior Locations: Use only building wire, Type THHN/THWN insulation, in raceway.
F. Use wiring methods indicated.

3.4 INSTALLATION

A. Refer to Section 01 40 00 "Quality Requirements" for manufacturer's instructions.
B. Route wire and cable as required to meet Project Conditions.
C. Install cable in accordance with the NECA "Standard of Installation."
D. Use solid conductor for feeders and branch circuits 10 AWG and smaller.
E. Use stranded conductors for control circuits.

F. Use conductor not smaller than 12 AWG for power and lighting circuits with the exception of pre-manufactured fixture whips, listed for such use and not exceeding 6 feet in length.
G. Use conductor not smaller than 14 AWG for control circuits.
H. Use 10 AWG conductors for 20 ampere, 120 volt branch circuits longer than 100 feet and as indicated on the Drawings.
I. Install all conductors in conduit.
J. Pull all conductors into raceway at same time.
K. Use suitable wire pulling lubricant for building wire 4 AWG and larger.
L. Protect exposed cable from damage.
M. All cables shall be neatly supported.
N. Use suitable cable fittings and connectors.
O. Neatly train and lace wiring inside boxes, equipment, and panelboards.
P. Clean conductor surfaces before installing lugs and connectors.
Q. Make splices, taps, and terminations to carry full ampacity of conductors with no perceptible temperature rise.
R. Use split bolt connectors for copper conductor splices and taps, 6 AWG and larger. Tape uninsulated conductors and connector with electrical tape to 150 percent of insulation rating of conductor.
S. Use solderless pressure connectors with insulating covers for copper conductor splices and taps, 8 AWG and smaller.
T. Use insulated spring wire connectors with plastic caps for copper conductor splices and taps, 10 AWG and smaller.
U. Identify and color code wire and cable under provisions of Section 26 05 53 "Electrical Identification." Identify each conductor with its circuit number or other designation indicated.
V. The number of conductors in each conduit run shall be limited to the requirements as indicated on the Drawings and indicated in Article 310 of the National Electrical Code.

3.5 FIELD QUALITY CONTROL

A. Refer to Section 01 40 00 "Quality Requirements" for field inspection, testing, and adjusting.
B. Inspect and test in accordance with NETA ATS, except Section 4.
C. Perform inspections and tests listed in NETA ATS, Section 7.3.1.

END OF SECTION

SECTION 26 05 19 - EQUIPMENT WIRING SYSTEMS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes basic electrical connections to equipment specified under other Sections.
B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.
   2. Section 26 05 00 "Basic Electrical Methods."

1.2 REFERENCES

A. NEMA WD 1 - General Purpose Wiring Devices.
B. NEMA WD 6 - Wiring Device Configurations.
C. ANSI/NFPA 70 - National Electrical Code.

1.3 SUBMITTALS

A. Submit under provisions of Section 01 33 00 "Submittal Procedures."
B. Product Data: Provide wiring device manufacturer's catalog information showing dimensions, configurations, and construction.
C. Manufacturer's Instructions: Indicate application conditions and limitations of use stipulated by product testing agency specified under Regulatory Requirements. Include instructions for storage, handling, protection, examination, preparation, installation, and starting of product.

1.4 REGULATORY REQUIREMENTS

A. Conform to requirements of ANSI/NFPA 70.
B. Furnish products listed and classified by UL as suitable for purpose specified and shown.

1.5 COORDINATION

A. Coordinate work under provisions of Section 01 30 00 "Submittal Procedures."
B. Obtain and review shop drawings, product data, and manufacturer's instructions for equipment furnished under other Sections.
C. Determine connection locations and requirements.
D. Sequence rough-in of electrical connections to coordinate with installation schedule for equipment.
E. Sequence electrical connections to coordinate with startup schedule for equipment.

PART 2 - PRODUCTS

2.1 CORDS AND CAPS

A. Attachment Plug Construction: Conform to NEMA WD 1.
B. Configuration: NEMA WD 6; match receptacle configuration at outlet provided for equipment.
C. Cord Construction: ANSI/NFPA 70, multiconductor flexible cord with identified equipment grounding conductor, suitable for use in damp locations.
D. Size: Suitable for connected load of equipment, length of cord, and rating of branch circuit overcurrent protection.

E. Division 26 Contractor shall be responsible for providing matching cord/receptacle for all equipment not furnished with such equipment.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify conditions under provisions of Section 01 30 00 "Submittal Procedures."
B. Verify that equipment is ready for electrical connection, wiring, and energization.

3.2 ELECTRICAL CONNECTIONS

A. Make electrical connections in accordance with equipment manufacturer's instructions.
B. Make conduit connections to equipment using flexible conduit. Use liquidtight flexible conduit with watertight connectors in damp or wet locations.
C. Make wiring connections using wire and cable with insulation suitable for temperatures encountered in heat producing equipment.
D. Provide receptacle outlet where connection with attachment plug is indicated. Provide cord and cap where field-supplied attachment plug is indicated.
E. Provide suitable strain-relief clamps and fittings for cord connections at outlet boxes and equipment connection boxes.
F. Install disconnect switches, controllers, control stations, and control devices as indicated.
G. Modify equipment control wiring with terminal block jumpers as indicated.
H. Provide interconnecting conduit and wiring between devices and equipment where indicated.
I. Check and modify phase connections as required for proper motor rotation.
J. Provide power to equipment only after equipment supplier verifies acceptance to receive and approves.
K. Contractor shall coordinate with all equipment to verify exact power and control wiring as required to properly serve equipment.

END OF SECTION

SECTION 26 05 26 - GROUNDING AND BONDING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Rod electrodes.
   2. Mechanical connectors.
   3. Exothermic connections.
   4. Wire.

B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.
   2. Section 01 40 00 "Quality Requirements" for requirements for references and standards.

1.2 REFERENCES

A. NETA ATS - Acceptance Testing Specifications for Electrical Power Distribution Equipment and Systems (International Electrical Testing Association).
B. NFPA 70 - National Electrical Code.

1.3 GROUNDING SYSTEM DESCRIPTION

A. Metal underground water pipe.
B. Metal frame of the building.
C. Rod electrodes.

1.4 PERFORMANCE REQUIREMENTS

A. Grounding System Maximum Resistance: 10 ohms.

1.5 SUBMITTALS FOR REVIEW

A. Refer to Section 01 33 00 "Submittal Procedures."
B. Product Data: Provide for grounding electrodes and connections.

1.6 SUBMITTALS FOR CLOSEOUT

A. Refer to Section 01 70 00 "Execution and Closeout Requirements" for procedures for submittals.
B. Project Record Documents: Record actual locations of components and grounding electrodes.
C. Certificate of Compliance: Indicate approval of installation by authority having jurisdiction.

1.7 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this Section with minimum three years' documented experience, and with service facilities within 100 miles of Project.

1.8 REGULATORY REQUIREMENTS

A. Conform to requirements of NFPA 70.
B. Products: Listed and classified by UL as suitable for the purpose specified and indicated.

PART 2 - PRODUCTS

2.1 ROD ELECTRODES

A. Material: Copper.
B. Diameter: 3/4-inch.
C. Length: 10 feet.

2.2 MECHANICAL CONNECTORS

A. Description: In lieu of exothermic connections, high compression type as manufactured by Burndy using the 12 ton Hy-Ground series.

2.3 EXOTHERMIC CONNECTIONS

A. Manufacturers: Cadweld.

2.4 WIRE

A. Material: Stranded copper.
B. Grounding Electrode Conductor: Minimum size to meet NFPA 70 requirements or as indicated on the Drawings.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Refer to Section 01 30 00 "Administrative Requirements" for verification of existing conditions prior to beginning Work.
B. Verify that final backfill and compaction has been completed before driving rod electrodes.

3.2 INSTALLATION

A. Refer to Section 01 40 00 "Quality Requirements" for manufacturer's instructions.
B. Install rod electrodes. Install additional rod electrodes as required to achieve a resistance to ground of 10 ohms or less. Rods shall be installed with a minimum separation of 6 feet.
C. Provide bonding to meet Regulatory Requirements.
D. Bond together metal siding not attached to grounded structure; bond to ground.
E. Equipment Grounding Conductor: Provide separate, insulated conductor within each feeder and branch circuit raceway. Terminate each end on suitable lug, bus, or bushing.
F. Grounding Electrode System: The new grounding electrode system shall consist of the common bonding of building steel, underground steel water piping and supplemental ground rods, concrete re-enforcing bar, as detailed on the Drawings.
G. Provide proper bonding of the electrical system's grounded conductor (neutral) and the grounding electrode system sized in accordance with NEC Article 250. This bonding shall occur at all locations where there are separately derived systems.

3.3 FIELD QUALITY CONTROL

A. Refer to Section 01 40 00 "Quality Requirements" for field inspection, testing, and adjusting.
B. Inspect and test in accordance with NETA ATS, except Section 4.
C. Perform inspections and tests listed in NETA ATS, Section 7.13.

END OF SECTION

SECTION 26 05 29 - SUPPORTING DEVICES

PART 1 - GENERAL

1.1 SUMMARY

A. Related Requirements:
1. Division 01 Specification Sections apply to Work of this Section.

1.2 REFERENCES

A. NECA - National Electrical Contractors Association.
B. NFPA 70 - National Electrical Code.

1.3 REGULATORY REQUIREMENTS

A. Conform to requirements of NFPA 70.
B. Furnish products listed and classified by UL as suitable for purpose specified and shown.

PART 2 - PRODUCTS

2.1 MATERIALS AND FINISHES

A. Provide adequate corrosion resistance.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install products in accordance with manufacturer's instructions.
B. Provide anchors, fasteners, and supports in accordance with NECA "Standard of Installation."
C. Do not fasten supports to pipes, ducts, mechanical equipment, and conduit.
D. Obtain permission from Architect before drilling or cutting structural members.
E. Fabricate supports from structural steel as indicated on drawings. Rigidly weld members or use hexagon head bolts to present neat appearance with adequate strength and rigidity. Use lock washers under all nuts.
F. Install surface-mounted cabinets and panelboards with minimum of four anchors.
G. In wet and damp locations, use steel channel supports to stand cabinets and panelboards 1 inch off wall.
H. Install conduit supports a maximum spacing specified in the NEC.

END OF SECTION

SECTION 26 05 33 - CONDUIT

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Metal conduit.
   2. Flexible metal conduit.
   3. Liquidtight flexible metal conduit.
   4. Electrical metallic tubing.
   5. Fittings and conduit bodies.

B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.
   2. Section 26 05 33.16 "Boxes."
   3. Section 26 05 53 "Electrical Identification."

1.2 REFERENCES

A. ANSI C80.1 - Rigid Steel Conduit, Zinc Coated.
B. ANSI C80.3 - Electrical Metallic Tubing, Zinc Coated.
C. ANSI/NEMA FB 1 - Fittings, Cast Metal Boxes, and Conduit Bodies for Conduit and Cable Assemblies.
D. NECA "Standard of Installation."
E. NEMA TC 3 - PVC Fittings for Use with Rigid PVC Conduit and Tubing.
F. NFPA 70 - National Electrical Code.

1.3 DESIGN REQUIREMENTS

A. Conduit Size: NFPA 70.

1.4 SUBMITTALS

A. Submit under provisions of Section 01 33 00 "Submittal Procedures."
B. Product Data: Provide for metallic conduit, flexible metal conduit, liquidtight flexible metal conduit, nonmetallic conduit, fittings and conduit bodies.

1.5 PROJECT RECORD DOCUMENTS

A. Submit under provisions of Section 01 70 00 "Execution and Closeout Requirements."
B. Accurately record actual routing of conduits.

1.6 REGULATORY REQUIREMENTS

A. Conform to requirements of ANSI/NFPA 70.
B. Furnish products listed and classified by UL as suitable for purpose specified and shown.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Deliver, store, protect, and handle products to site under provisions of Section 01 60 00 "Product Requirements."
B. Accept conduit on site. Inspect for damage.
C. Protect conduit from corrosion and entrance of debris by storing above grade. Provide appropriate covering.
D. Protect PVC conduit from sunlight.

1.8 PROJECT CONDITIONS

A. Verify that field measurements are as shown on Drawings.
B. Verify routing and termination locations of conduit prior to rough-in.
C. Conduit routing is shown on Drawings in approximate locations unless dimensioned. Route as required to complete wiring system.

PART 2 - PRODUCTS

2.1 CONDUIT REQUIREMENTS

A. Minimum Size: 3/4-inch for all branch circuits located above ceiling. Contractor may use 1/2-inch conduit down the wall to receptacles and light switches.
B. Wet and Damp Locations above grade: Use rigid steel or liquid tight flexible conduit.
C. Dry Locations: Use electrical metallic tubing for concealed and exposed locations.
D. Below Slab: Non-metallic PVC conduit is acceptable within limitations specified.
E. Below Grade: Use only PVC coated rigid galvanized steel, wrapped rigid steel, or non-metallic PVC conduit within limitations specified.
F. MC Cable: Shall not be utilized on this Project.

2.2 METAL CONDUIT

A. Manufacturers:
   1. Allied.
   2. Wheatland.
   3. Substitutions: Under provisions of Section 01 60 00 "Product Requirements."
B. Rigid Steel Conduit: ANSI C80.1.
C. Fittings and Conduit Bodies: ANSI/NEMA FB 1; all steel fittings.

2.3 FLEXIBLE METAL CONDUIT

A. Manufacturers:
   1. Allied Tube.
   2. Electri-Flex.
   3. Greenfield.
   4. Substitutions: Under provisions of Section 01 60 00 "Product Requirements."

B. Description: Interlocked steel construction. Aluminum is not permitted.
C. Fittings: ANSI/NEMA FB 1 with fittings approved for steel flex.
D. Applications: Use for final connections to motorized equipment, connections to recessed lighting fixtures located in accessible ceilings, and connections to dry type transformers. Utilization of 3/8 inch in lieu of the minimum 1/2 inch is acceptable under the limitations of the National Electrical Code.

2.4 LIQUIDTIGHT FLEXIBLE METAL CONDUIT

A. Manufacturers:
1. Electri-flex.
2. Ultratite.
3. Substitutions: Under provisions of Section 01 60 00 "Product Requirements."
B. Description: Interlocked steel construction with PVC jacket.
C. Fittings: ANSI/NEMA FB 1.
D. Applications: Use for final connections to motorized equipment in exterior locations and areas subjected to moisture (kitchen).

2.5 ELECTRICAL METALLIC TUBING (EMT)

A. Manufacturers:
1. Allied.
2. Substitutions: Under provisions of Section 01 60 00 "Product Requirements."
B. Description: ANSI C80.3; galvanized tubing.
C. Fittings and Conduit Bodies: ANSI/NEMA FB 1; all steel, compression or set screw type.
D. Applications: Do not use below grade or in exterior locations. Use only in interior locations.

2.6 PVC COATED METAL CONDUIT

A. Manufacturers:
1. Levy.
2. Robroy Industries.
3. Substitutions: Under provisions of Section 01 60 00 "Product Requirements."
B. Description: NEMA RN-1, rigid steel conduit with external PVC coating, 20 mil thick.
C. General: Protective layer may be factory applied or galvanized rigid steel conduit may be applied with two layers of corrosion resistant tape.
D. Fittings and Conduit Bodies: ANSI/NEMA FB 1; steel fittings with external PVC coatings to match conduit.

2.7 NON-METALLIC PVC CONDUIT

A. Manufacturers:
1. Allied.
2. Carlon.
3. Substitutions: Under provisions of Section 01 60 00 "Product Requirements."
B. Description: NEMA TC2; Schedule 40 PVC. Flame retardant type resistant to bending and cracking.

C. Fittings and conduit bodies: NEMA TC3.
D. Vertical risers and ells installed below grade shall be rigid steel with wrapping.
E. Do not use above grade.
F. Joints made with PVC fittings shall be applied with solvent compound after thorough cleaning.
G. Refer to Part 3. Do not use PVC conduit for conduits passing vertically through the slab.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install conduit in accordance with NECA "Standard of Installation."
B. Install nonmetallic conduit in accordance with manufacturer's instructions.
C. Arrange supports to prevent misalignment during wiring installation.
D. Support conduit using coated steel or malleable iron straps, lay-in adjustable hangers, clevis hangers, and split hangers.
E. Group related conduits; support using conduit rack. Construct rack using steel channel.
F. Fasten conduit supports to building structure and surfaces under provisions of Section 26 05 29 "Supporting Devices."
G. Do not support conduit with wire or perforated pipe straps. Remove wire used for temporary supports.
H. Do not attach conduit to ceiling support wires.
I. Arrange conduit to maintain headroom and present neat appearance.
J. Route exposed conduit parallel and perpendicular to walls.
K. Route conduit installed above accessible ceilings parallel and perpendicular to walls.
L. Maintain adequate clearance between conduit and piping.
M. Maintain 12-inch clearance between conduit and surfaces with temperatures exceeding 104 degrees F.
N. Cut conduit square using saw or pipecutter; de-burr cut ends.
O. Bring conduit to shoulder of fittings; fasten securely.
P. Use conduit hubs or sealing locknuts to fasten conduit to sheet metal boxes in damp and wet locations and to cast boxes.
Q. Install no more than equivalent of three 90-degree bends between boxes. Use conduit bodies to make sharp changes in direction, as around beams. Use factory elbows for bends in metal conduit larger than 2-inch size.
R. Avoid moisture traps; provide junction box with drain fitting at low points in conduit system.
S. Provide suitable fittings to accommodate expansion and deflection where conduit crosses control and expansion joints.
T. Provide suitable pull string in each empty conduit except sleeves and nipples.
U. Use suitable caps to protect installed conduit against entrance of dirt and moisture.
V. Ground and bond conduit under provisions of Section 26 05 26 "Grounding and Bonding."
W. Identify conduit under provisions of Section 26 05 53 "Electrical Identification."
X. Ducts shall be cleaned with a flexible mandrel assembly.
Y. All conduits passing vertically through slabs or through earth on grade shall be PVC-coated, rigid steel. Rigid steel conduits shall be applied with protective coatings as indicated herein. All transitions from PVC to rigid steel shall occur below the slab.

Z. Underground branch circuit extensions to parking lot lighting fixtures and other branch circuits may be direct buried PVC conduit. Service entrance PVC conduit shall be concrete encased in accordance with the Drawings unless otherwise approved by Primary Designer.

AA. Minimum cover for underground conduits shall be 24 inches unless otherwise noted.

BB. All conduit shall be routed concealed as much as possible including conduit serving roof-mounted equipment. Roof penetrations for conduits shall adhere to the requirements and details as indicated on the Architectural Drawings.

3.2 INTERFACE WITH OTHER PRODUCTS

A. Install conduit to preserve fire resistance rating of partitions and other elements, using materials and methods under the provisions of Section 07 84 13 "Penetration Firestopping."

B. Route conduit through roof openings for piping and ductwork or through suitable roof jack with pitch pocket. Coordinate location with roofing installation.

END OF SECTION

SECTION 26 05 33.16 - BOXES

PART 1 - GENERAL

1.1 SUMMARY

A. Related Requirements:
1. Division 01 Specification Sections apply to Work of this Section.

1.2 REFERENCES

A. NECA - Standard of Installation.
B. NEMA FB 1 - Fittings and Supports for Conduit and Cable Assemblies.
C. NEMA OS 1 - Sheet-Steel Outlet Boxes, Device Boxes, Covers, and Box Supports.
D. NEMA 250 - Enclosures for Electrical Equipment (1,000 Volts Maximum).
E. NFPA 70 - National Electrical Code.

1.3 REGULATORY REQUIREMENTS

A. Conform to requirements of NFPA 70.
B. Provide Products listed and classified by UL as suitable for the purpose specified and indicated.

PART 2 - PRODUCTS

2.1 WALL AND CEILING OUTLET BOXES

A. Sheet Metal Outlet Boxes: NEMA OS 1, galvanized steel.
B. Luminaire and Equipment Supporting Boxes: Rated for weight of equipment supported; include 1/2-inch male fixture studs where required.
C. Cast Boxes: NEMA FB 1, Type FD, cast feralloy. Provide gasketed cover by box manufacturer.
D. Wall Plates for Finished Areas: As specified in Section 26 27 26 "Wiring Devices."
E. Boxes for 15A and 20A, 125V, and 250V receptacles installed in interior or exterior "Wet" locations shall be provided with "While-In-Use" shield and shall be listed as "extra-duty" in accordance with the N.E.C Article 406.9.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify locations of outlets in all locations areas prior to rough-in.

3.2 INSTALLATION

A. Install boxes in accordance with NECA "Standard of Installation."
B. Install in locations as shown on Drawings, and as required for splices, taps, wire pulling, equipment connections and compliance with regulatory requirements.
C. Set wall mounted boxes at elevations to accommodate mounting heights specified in Section for outlet device.
D. Electrical boxes are shown on Drawings in approximate locations unless dimensioned. Adjust box location up to 10 feet if required to accommodate intended purpose.
E. Orient boxes to accommodate wiring devices oriented as specified in Section 26 27 26 "Wiring Devices."
F. Maintain headroom and present neat mechanical appearance.
G. Install pull boxes and junction boxes above accessible ceilings and in unfinished areas only.
H. Inaccessible Ceiling Areas: Install outlet and junction boxes no more than 6 inches from ceiling access panel or from removable recessed luminaire.
I. Install boxes to preserve fire resistance rating of partitions and other elements, using materials and methods specified in Section 07 84 13 "Penetration Firestopping."
J. Coordinate mounting heights and locations of outlets mounted above counters, benches, and backsplashes with Architectural Drawings and other trades.
K. Locate outlet boxes to allow luminaires positioned as shown on reflected ceiling plan.
L. Align adjacent wall mounted outlet boxes for switches, thermostats, and similar devices.
M. Use flush mounting outlet box in finished areas.
N. Locate flush mounting box in masonry wall to require cutting of masonry unit corner only. Coordinate masonry cutting to achieve neat opening.
O. Do not install flush mounting box back-to-back in walls; provide minimum 6-inch separation. Provide minimum 24-inch separation in acoustic rated walls.
P. Secure flush mounting box to interior wall and partition studs. Accurately position to allow for surface finish thickness.
Q. Use stamped steel bridges to fasten flush mounting outlet box between studs.
R. Install flush mounting box without damaging wall insulation or reducing its effectiveness.
S. Use adjustable steel channel fasteners for hung ceiling outlet box.
T. Do not fasten boxes to ceiling support wires.
U. Support boxes independently of conduit.
V. Use gang box where more than one device is mounted together. Do not use sectional box.
W. Use gang box with plaster ring for single device outlets.
X. Use cast outlet box in exterior locations exposed to the weather and wet locations and at all locations serving kitchen equipment.
Y. Large Pull Boxes: Use hinged enclosure in interior dry locations, surface-mounted cast metal box in other locations.
Z. Coordinate with other trades for box rough-in, such that control devices are grouped (i.e., thermostats, wall switches, volume controls, etc.).

3.3 INTERFACE WITH OTHER PRODUCTS

A. Coordinate installation of outlet box for equipment connected under Section 26 05 19 "Equipment Wiring Systems."

3.4 ADJUSTING

A. Refer to Section 01 70 00 "Execution and Closeout Requirements" for adjusting installed Work.
B. Adjust flush-mounting outlets to make front flush with finished wall material.
C. Install knockout closures in unused box openings.

3.5 CLEANING

A. Refer to Section 01 70 00 "Execution and Closeout Requirements" for cleaning installed Work.
B. Clean interior of boxes to remove dust, debris, and other material.
C. Clean exposed surfaces and restore finish.

3.6 REPAIR

A. Repair any areas or surfaces damaged during conduit installation.
B. Paint (resurface) to original condition.

END OF SECTION

SECTION 26 05 36 - CABLE TRAYS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Wire basket.
B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.

1.2 REFERENCES

A. UL.
B. AISI.
C. ASTM.

1.3 DELIVERY, STORAGE, AND HANDLING

A. Deliver, store, and protect on-site.
B. Accept wire management products on-site and inspect for damage.

1.4 PROJECT CONDITIONS

A. Verify field measurements to determine actual length, fittings, and offsets.
B. Indicated routing is approximate.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify that the building is ready to accept application.
B. Verify mechanical work that is likely to damage the wire basket has been completed.
C. Verify wire basket system has been supported along its entire length.

3.2 PREPARATION

A. Verify that bend radii of turns are in compliance with all information provided on the Drawings.
B. Verify there are no sharp edges to damage cable.

3.3 INSTALLATION

A. Install wire baskets in accordance with manufacturer's requirements.
B. Supports shall be as recommended by the manufacturer to provide for the maximum loading. Manufacturer's span loading criteria shall represent the maximum spacing between supports.
C. Utilize approved hangers attached to the building structure.
D. Utilize grounding/bonding connectors for attaching sections at basket to provide a continuous grounding path.
E. At locations where wire basket sections penetrate rated walls, provide UL classified fiberglass pillows with mineral fill. Provide insertion plates and retaining screen as recommended by fire stop manufacturer. Fire stop bags shall be as manufactured by IPC, Model KBS Sealbags.
F. Contractor shall carefully review the Architectural Drawings and field conditions to verify changes in elevation and locations with high ceilings that may require conduit extensions.

END OF SECTION

SECTION 26 05 53 - ELECTRICAL IDENTIFICATION

PART 1 - GENERAL

1.1 SUMMARY

A. Related Requirements:
1. Division 01 Specification Sections apply to Work of this Section.

1.2 REFERENCES

A. ANSI/NFPA 70 - National Electrical Code.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION

3.1 PREPARATION

A. Degrease and clean surfaces to receive nameplates and labels.

3.2 APPLICATION

A. Install nameplate and label parallel to equipment lines.
B. Secure nameplate to equipment front using screws or rivets.
C. Identify underground conduits using underground warning tape. Install one tape per trench at 12 inches below finished grade. Identify all conduit at exposed locations into all boxes, cabinets, etc. (see Specification Section 26 05 00 "Basic Electrical Methods").
D. Identify all conductors at every termination indicating endpoints of termination and tag identification as required.
E. Color Coding for Phase Identification:

120/208 Volts	Phase	277/480 Volts
Black	A	Brown
Red	B	Orange
Blue	C	Yellow
White	Neutral	Gray
Green	Ground	Green

F. Conductor phase and voltage identification shall be made by color-coded insulation for all conductors smaller than No. 6 AWG. For conductors No. 6 AWG and larger, identification shall be made by color-coded insulation, or conductors with black insulation may be furnished and identified by colored electrical tape. Conductor identification shall be provided within each enclosure where a tap, splice, or termination is made.

END OF SECTION

SECTION 26 05 73 - POWER SYSTEM STUDIES

PART 1 - GENERAL

1.1 SUMMARY

A. Related Requirements:
1. Division 01 Specification Sections apply to Work of this Section.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION

SECTION 26 09 24 - LIGHTING CONTROLS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Lighting control system and components:
      a. Low voltage wall stations.
      b. Power interfaces.
      c. Wired sensors.

B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.

1.2 REFERENCES

A. Underwriters Laboratories (UL):
   1. UL 508 - Industrial Control Equipment American National Standards Institute (ANSI)
   2. UL 924 - Emergency Lighting and Power Equipment

B. National Fire Protection Association (NFPA):
   1. NFPA 70 - National Electric Code

C. IEC 61000-4-2 Electromagnetic Compatibility (EMC) - Part 4-2: Testing and Measurement Techniques-Electrostatic Discharge Immunity Test; 2008

1.3 ADMINISTRATIVE REQUIREMENTS

A. Coordination:
   1. Coordinate placement of daylight and occupancy sensors to achieve optimum performance. Proper sensor placement should be coordinated with others in order to avoid obstructions that would interfere with maintaining prescribed light levels.
   2. Coordinate the Work to provide luminaires and lamps that are compatible with the lighting controls to be installed.
   3. Notify Architect of any conflicts or deviations from the Contract Documents to obtain direction prior to proceeding with Work.

1.4 PROJECT CLOSEOUT DOCUMENTATION

A. Section 01 70 00 "Execution and Closeout Requirements": Submittals for Project closeout.

B. Provide a factory published manual:
   1. Warranty.
   2. Technical support contact.
   3. Submit manufacturer's operation and maintenance instructions for each product.

1.5 PROJECT CONDITIONS

A. Only install equipment after the following site conditions are maintained:
   1. Ambient Temperature 14 to 105 degrees F.
   2. Relative Humidity less than 90 percent non-condensing.
B. Standard electrical enclosures are permanently installed.
C. Equipment is protected from dust, debris, and moisture.

1.6 WARRANTY

A. Refer to Section 01 70 00 "Execution and Closeout Requirements" for additional warranty requirements.
B. Five year 100 percent parts replacement.

1.7 MAINTENANCE AND SUSTAINABILITY

A. Provide new parts, upgrades, and/or replacements available for a minimum of 5 years available to the end user.
B. Provide free telephone technical support.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify that field measurements are as shown on Drawings.
B. Verify that ratings and configurations of system components are consistent with indicated requirements.
C. Verify that mounting surfaces are ready to receive system components.
D. Verify that conditions are satisfactory for installation prior to starting Work.

3.2 INSTALLATION

A. Follow manufacturer's instructions for all installation steps.
B. Provide a complete installation per Contract Documents.
C. Ensure sensor locations provide complete coverage of associated areas and are placed to avoid conflicts with equipment and appurtenances of other trades.
D. Ensure daylight sensor placement minimizes sensor view of electric light sources. Locate ceiling-mounted and luminaire-mounted daylight sensors to avoid direct view of luminaires.
E. Identify system components in accordance with Section 26 05 53 "Electrical Identification."

3.3 CLEANING

A. Clean exposed surfaces to remove dirt, paint, or other foreign material and restore to match original factory finish.

3.4 CLOSEOUT ACTIVITIES

A. Refer to Section 01 70 00 "Execution and Closeout Requirements" for closeout submittals.
B. Demonstration:
   1. Demonstrate proper operation of lighting control devices to Owner and correct deficiencies or make adjustments as directed.
   2. On-Site Performance-Verification Walkthrough: Provide on-site demonstration of system functionality to commissioning agent.
C. Training:
   1. Include services of manufacturer's certified service representative to perform on-site training of Owner's personnel on operation, adjustment, and maintenance of lighting control system as part of on-site start-up services.

3.5 STARTUP AND PROGRAMMING

A. Provide telephone support via toll free line.
B. Factory trained service.

3.6 MAINTENANCE

A. Refer to Section 01 70 00 "Execution and Closeout Requirements," for additional related maintenance service.
B. Factory trained service technicians available within the continental US.
C. Offer integrated help on-screen and via online videos.
D. Factory telephone support via toll free line.

3.7 PROTECTION

A. Protect installed products from subsequent construction operations.

END OF SECTION

SECTION 26 12 16 - DRY TYPE TRANSFORMERS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes dry type two-winding transformers.
B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.

1.2 REFERENCES

A. ANSI/NEMA ST 1 - Specialty Transformers.
B. ANSI/NEMA ST 20 - Dry Type Transformers for General Applications.

1.3 PRODUCT DELIVERY, STORAGE AND HANDLING

A. Store transformers in a clean and dry space and protected from weather.
B. Transformer shall not be used as work tables, scaffolds or ladders.
C. Handle transformers carefully to avoid damage to material components, enclosure, and finish. Use only lifting eyes and brackets provided for that purpose. Damaged transformers shall be rejected and not be installed on Project.

PART 2 - PRODUCTS

2.1 MATERIALS AND EQUIPMENT

A. Transformers shall be of dry type complying with the design function requirements of the Project. Design characteristics shall be as noted in manufacturer's submittal data.
B. Provide barrel type coils vacuum impregnated with high-grade insulating varnish, non-hydroscopic thermo-setting type.
C. Furnish copper windings, continuous without splice.
D. Use non-aging silicon steel cores held together with steel channels or angles, with low flux density, quiet operating, and vibration isolated from enclosure and support channels.

PART 3 - EXECUTION

3.1 INSPECTION

A. Installer shall examine the areas and conditions under which dry type transformers are to be installed and notify Contractor in writing of conditions detrimental to the proper and timely completion of the work. Do not proceed with the work until unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Install dry type transformers as indicated, in accordance with the applicable requirements of the NEC and the National Electrical Contractors Association's "Standard of Installation."
B. Check for damage and tight connections prior to energizing transformer.
C. Measure primary and secondary voltages and make appropriate tap adjustments.
D. Set transformer plumb and level.
E. Use flexible conduit, 2-foot minimum length, for connections to transformer case. Make conduit connections to side panel of enclosure.
F. Mount transformers on vibration isolating pads suitable for isolating the transformer noise from the building structure.
    1. For floor transformer installations, use one pad type Korfund Elasto-Grip, waffle, or equal, at each corner of the transformer, sized for load of 50 lbs./sq. in.
    2. For wall hung transformer installations, use spring type Korfund Series P, or equal. Provide sound pads at each corner of the transformer, sized for 1/2-inch deflection.
G. Exact transformer mounting type and location shall be determined by actual field conditions.

END OF SECTION

SECTION 26 18 39 - ENCLOSED MOTOR CONTROLLERS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Manual controllers.
   2. Automatic controllers.
   3. Disconnects.

B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.

1.2 REFERENCES

A. NFPA 70 - National Electrical Code.
B. UL 1 98C - High-Interrupting Capacity Fuses; Current Limiting Type.
C. UL 1 98E - Class R Fuses.
D. NECA "Standard of Installation," published by National Electrical Contractors Association.
E. NEMA ICS 2 - Industrial Control Devices, Controllers, and Assemblies.
F. NEMA ICS 6 - Enclosures for Industrial Controls and Systems.
G. NEMA KS 1 - Enclosed Switches.

1.3 SUBMITTALS

A. Submit under provisions of Section 01 33 00 "Submittal Procedures."
B. Product Data: Provide catalog sheets showing voltage, controller size, ratings and size of switching and overcurrent protective devices, short circuit ratings, dimensions, and enclosure details.
C. Test Reports: Indicate field test and inspection procedures and test results.
D. Manufacturer's Installation Instructions: Indicate application conditions and limitations of use stipulated by product testing agency specified under Regulatory Requirements. Include instructions for storage, handling, protection, examination, preparation, installation, and starting of product.

1.4 QUALITY ASSURANCE

A. Perform Work in accordance with NECA Standard of Installation.
B. Maintain one copy of each document on-site.

1.5 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this Section with minimum 3 years' documented experience.

1.6 REGULATORY REQUIREMENTS

A. Conform to requirements of NFPA 70.
B. Furnish products listed and classified by UL as suitable for purpose specified and indicated.

PART 2 - PRODUCTS

2.1 MANUAL CONTROLLERS

A. Manual Motor Controller: NEMA ICS 2, AC general-purpose Class A manually operated, full-voltage controller with overload element, NO auxiliary contact, and toggle operator.
B. Fractional Horsepower Manual Controller: NEMA ICS 2, AC general-purpose Class A manually operated, full-voltage controller for fractional horsepower induction motors, with thermal Overload unit, and toggle operator.
C. Enclosure: NEMA ICS 6; Type 1.

2.2 AUTOMATIC CONTROLLERS

A. Magnetic Motor Controllers: NEMA ICS 2, AC general-purpose Class A magnetic controller for induction motors rated in horsepower.
B. Coil Operating Voltage: 120 volts, 60 Hertz.
C. Overload Relay: NEMA ICS; electronic type; with phase loss and unbalance protection.
D. Enclosure: NEMA ICS 6, Type 1.

2.3 PRODUCT OPTIONS AND FEATURES

A. Auxiliary Contacts: NEMA ICS 2, 2 each field convertible contacts in addition to seal-in contact.
B. Cover Mounted Pilot Devices: NEMA ICS 2, heavy duty type.
C. Pushbuttons: Recessed type.
D. Indicating Lights: LED type.
E. Selector Switches: Rotary type.
F. Relays: NEMA ICS 2.
G. Control Power Transformers: 120 volt secondary. Provide fused primary and secondary, and bond unfused leg of secondary to enclosure.

2.4 DISCONNECTS

A. Combination Controllers: Combine motor controllers with fusible switch disconnect in common enclosure.
B. Fusible Switch Assemblies: NEMA KS 1, enclosed knife switch with externally operable handle. Fuse clips: Designed to accommodate Class R fuses.

2.5 FUSES

A. Description: Dual element, current limiting, time delay, one-time fuse, 250V volt, UL 198E, Class RK 5.
B. Interrupting Rating: 200,000 rms amperes.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install enclosed controllers where indicated, in accordance with manufacturer's instructions. Provide a motor controller for all equipment not furnished as integral with equipment. Coordinate actual motor loads with overload protection.
B. Install enclosed controllers plumb. Provide supports in accordance with Section 26 05 29 "Supporting Devices."
C. Height: 5 feet to operating handle.
D. Install fuses in fusible switches.
E. Select and install overload heater elements in motor controllers to match installed motor characteristics.
F. Provide engraved plastic nameplates under the provisions of Section 26 05 53 "Electrical Identification."
G. Provide neatly typed label inside each motor controller door identifying motor served, nameplate horsepower, full load amperes, code letter, service factor, and voltage/phase rating.

3.2 FIELD QUALITY CONTROL

A. Field inspection and testing will be performed under provisions of other Sections.
B. Inspect and test each enclosed controller to NEMA ICS 2.

END OF SECTION

SECTION 26 24 16 - SWITCHBOARDS AND PANELBOARDS

PART 1 - GENERAL

1.1 SUMMARY

A. Related Requirements:
1. Division 01 Specification Sections apply to Work of this Section.

1.2 REFERENCES

A. NECA (National Electrical Contractors Association) "Standard of Installation."
B. NEMA AB 1 - Molded Case Circuit Breakers.
C. NEMA ICS 2 - Industrial Control Devices, Controllers, and Assemblies.
D. NEMA KS 1 - Enclosed Switches.
E. NEMA PB 1 - Panelboards.
F. NEMA PB-2 - Switchboards.
G. NEMA PB 1.1 - Instructions for Safe Installation, Operation and Maintenance of Panelboards Rated 600 Volts or Less.
H. NFPA 70 - National Electrical Code.

1.3 QUALITY ASSURANCE

A. Perform Work in accordance with NECA Standard of Installation.

1.4 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this Section with minimum 5 years' experience.

1.5 REGULATORY REQUIREMENTS

A. Conform to requirements of NFPA 70. Furnish products listed and classified by UL as suitable for purpose specified and indicated.

1.6 FIELD MEASUREMENTS

A. Verify that field measurements are as indicated.

1.7 MAINTENANCE MATERIALS

A. Provide maintenance materials under provisions of General Conditions. Provide 2 of each panelboard key if required.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install panelboards in accordance with NEMA PB 1.1. Install panelboards plumb. Provide supports in accordance with drawings and Section 26 05 29 "Supporting Devices." Height: 6 feet maximum to top of panelboard. Provide filler plates for unused spaces in panelboards. Provide typed circuit directory for each branch circuit panelboard. Revise directory to reflect circuiting changes required to balance phase loads. Spare slots shall be labeled as such in erasable pencil on directory. Provide engraved plastic nameplates under the provisions of Section 26 05 53 "Electrical Identification."

B. Provide two empty 1-inch conduits from each recessed panelboard to an accessible location above and label as "spare."

C. Ground each panelboard in accordance with Section 26 05 26 "Grounding and Bonding."

D. Prove a 4-inch concrete housekeeping pad for switchboard.

END OF SECTION

SECTION 26 27 26 - WIRING DEVICES

PART 1 - GENERAL

1.1 SUMMARY

A. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.

1.2 REFERENCES

A. NECA - Standard of Installation.
B. NEMA WD 1 - General Requirements for Wiring Devices.
C. NEMA WD 6 - Wiring Device - Dimensional Requirements.
D. NFPA 70 - National Electrical Code.

1.3 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this Section with minimum 3 years' documented experience.

1.4 REGULATORY REQUIREMENTS

A. Conform to requirements of NFPA 70.
B. Provide products listed and classified by UL as suitable for the purpose specified and indicated.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION

3.1 EXAMINATION

A. Refer to Section 01 30 00 "Administrative Requirements" for verification of existing conditions prior to beginning Work.
B. Verify that outlet boxes are installed at proper height.
C. Verify that wall openings are neatly cut and will be completely covered by wall plates.
D. Verify that branch circuit wiring installation is completed, tested, and ready for connection to wiring devices.
E. Verify installation location of all boxes to be installed in millwork with Architect.

3.2 PREPARATION

A. Provide extension rings to bring outlet boxes flush with finished surface.
B. Clean debris from outlet boxes.

3.3 INSTALLATION

A. Install in accordance with NECA "Standard of Installation."
B. Install devices plumb and level.
C. Install switches with OFF position down.
D. Do not share neutral conductor on load side of dimmers.
E. Install receptacles with grounding pole located on the bottom as required by Owner.
F. Connect wiring device grounding terminal to branch circuit equipment grounding conductor.
G. Install decorative plates on switch, receptacle, and blank outlets in finished areas.
H. Connect wiring devices by wrapping conductor around screw terminal.
I. Use jumbo size plates for outlets installed in masonry walls.
J. Install galvanized steel plates on outlet boxes and junction boxes in unfinished areas, above accessible ceilings, and on surface mounted outlets.
K. Install blank cover plate to match other wall plates on all unused boxes.

3.4 INTERFACE WITH OTHER PRODUCTS

A. Coordinate locations of outlet boxes provided under Section 26 05 33.16 "Boxes" to obtain mounting heights specified and indicated on drawings.
B. Install all wall switches, thermostats, and fire alarm pull stations at 48 inches above finished floor.
C. Install convenience receptacle 18 inches above finished floor.
D. Install convenience receptacle 6 inches above backsplash of counter unless otherwise directed by Architect.
E. Install telephone jack 18 inches above finished floor.
F. Install telephone for jack wall telephone to position top of telephone at 48 inches above finished floor.

3.5 ADJUSTING

A. Refer to Section 01 70 00 "Execution and Closeout Requirements" for adjusting installed work.
B. Adjust devices and wall plates to be flush and level.

3.6 CLEANING

A. Refer to Section 01 70 00 "Execution and Closeout Requirements" for cleaning installed Work.
B. Clean exposed surfaces to remove splatters and restore finish.

END OF SECTION

SECTION 26 28 16.16 - ENCLOSED SWITCHES

PART 1 - GENERAL

1.1 SUMMARY

A. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.

1.2 REFERENCES

A. NEMA KS 1 - Enclosed Switches.
B. NFPA 70 - National Electrical Code.
C. UL 198C - High-Interrupting Capacity Fuses; Current Limiting Type.
D. UL 198E - Class R Fuses.
E. NEMA AB 1 - Molded Case Circuit Breakers.
F. NECA - Standard of Installation.

1.3 QUALITY ASSURANCE

A. Perform Work in accordance with NECA Standard of Installation.

1.4 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this Section with minimum 3 years' documented experience.

1.5 REGULATORY REQUIREMENTS

A. Conform to requirements of NFPA 70.
B. Furnish products listed and classified by UL as suitable for purpose specified and shown.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install in accordance with NECA Standard of Installation.
B. Install fuses in all fusible disconnects.
C. Apply adhesive tag on the inside door of all disconnects indicating the NEMA class fuse and size installed.
D. Provide a disconnect switch for all equipment where indicated or required by the National Electrical Code. Coordinate with other disciplines to determine where disconnects are furnished with equipment.

END OF SECTION

SECTION 26 31 00 - PHOTOVOLTAIC COLLECTORS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. PV system description.
   2. Mounting structures.
B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.

1.2 DEFINITIONS

A. CEC: California Energy Commission.
B. ETFE: Ethylene tetrafluoroethylene.
C. FEP: Fluorinated ethylene propylene.
D. IP Code: Required ingress protection to comply with IEC 60529.
E. MPPT: Maximum power point tracking.
F. PTC: PVUSA Test Condition. Commonly regarded as a "real-world" measure of PV output. See below for definition of "PVUSA."
G. PV: Photovoltaic.
H. PVUSA: Photovoltaics for Utility Systems Applications.
I. STC: Standard Test Conditions defined in IEC 61215.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.
   1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for PV panels.
   2. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
B. Shop Drawings: For PV modules.
   1. Include plans, elevations, sections, and mounting details.
   2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
   3. Detail fabrication and assembly.
   4. Include diagrams for power, signal, and control wiring.

1.4 INFORMATIONAL SUBMITTALS

A. Field quality-control reports.
B. Sample Warranty: For manufacturer's special materials and workmanship warranty and minimum power output warranty.

1.5 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For PV modules to include in operation and maintenance manuals.

1.6 WARRANTY

A. Manufacturer's Special Warranty: Manufacturer agrees to repair or replace components of PV modules that fail in materials or workmanship within specified warranty period.
   1. Warranty Period: Five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
B. Hazardous Locations: FM Global approved for NFPA 70, Class 1, Division 2, Group C and Group D.

2.2 PV CAPACITIES AND CHARACTERISTICS

A. Minimum Electrical Characteristics:
   1. Rated Open-Circuit Voltage: 90 V (plus or minus 3 percent).
   2. Maximum System Voltage: 1500 V IEC and 1500 V UL.
   3. Rated Short-Circuit Current (Isc): 6.55 A (plus or minus 3 percent).
   4. Rated Operation Current (Imp): 6.00 A.
   5. Maximum Power at STC (Pmax): 470 to 485 W.
B. Additional Electrical Characteristics:
   1. Tolerance of Pmax: 5 percent.
   2. Wind Loading or Surface Pressure: 3,600 Pa, 367 kg/m^2.
   3. Hailstone Impact Withstand: 45 mm diameter at 30 m/s wind velocity.
   4. Series Fuse Rating: 15 A.
C. Normal Operating Temperature Characteristics (NOTC):
   1. Temperature at Nominal Operating Cell Temperature: Minus 40 degrees C to plus 85 degrees C.

2.3 PV SYSTEMS DESCRIPTION

A. Stand-Alone PV System: Collectors connected to provide power to Project dc and ac loads through an energy storage system.
   1. System Components:
      a. PV modules.
      b. Array frame.
      c. Charge controller.
      d. Inverter.
      e. Overcurrent protection, disconnect, and rapid shutdown devices.
      f. Mounting structure.

2.4 MOUNTING STRUCTURES

A. Roof Mount: Extruded aluminum, four rails, tilt legs, and roof standoffs.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrate areas and conditions, with installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
B. Do not begin installation until mounting surfaces have been properly prepared.
C. If preparation of mounting surfaces is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.
D. Examine modules and array frame before installation. Reject modules and arrays that are wet, moisture damaged, or mold damaged.
E. Examine roofs, supports, and supporting structures for suitable conditions where PV system will be installed.
F. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Comply with NECA 1.
B. Coordinate layout and installation of PV panels with roof assembly and other construction.
C. Support PV panel assemblies independent of supports for other elements such as roof and support assemblies, enclosures, vents, pipes, and conduits. Support assembly to prevent twisting from eccentric loading.
D. Install weatherseal fittings and flanges where PV panel assemblies penetrate exterior elements such as walls or roofs. Seal around openings to make weathertight. See Section 07 92 00 "Joint Sealants" for materials and application.
E. Wiring Method: Install cables in raceways.
F. Wiring within Enclosures: Bundle, lace, and train conductors to terminal points with no excess and without exceeding manufacturer's limitations on bending radii. Install lacing bars and distribution spools.

3.3 CONNECTIONS

A. Coordinate PV panel cabling to equipment enclosures to ensure proper connections.
B. Coordinate installation of utility-interactive meter with utility.
C. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A-486B.
D. Make splices, terminations, and taps that are compatible with conductor material and that possess equivalent or better mechanical strength and insulation ratings than unspliced conductors.

END OF SECTION

SECTION 26 51 00 - INTERIOR LIGHTING

PART 1 - GENERAL

1.1 SUMMARY

A. Related Requirements:
1. Division 01 Specification Sections apply to Work of this Section.

1.2 REFERENCES

A. NEMA WD 6 - Wiring Devices-Dimensional Requirements.
B. NFPA 70 - National Electrical Code.
C. NFPA 101 - Life Safety Code.

1.3 SUBSTITUTIONS

A. Refer to Section 26 05 00 "Basic Electrical Methods" for requirements.

1.4 CLOSEOUT SUBMITTALS

A. Refer to Section 01 70 00 "Execution and Closeout Requirements" for submittals for Project closeout.

1.5 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this Section with minimum 3 years' documented experience.

1.6 REGULATORY REQUIREMENTS

A. Conform to requirements of NFPA 70.
B. Conform to requirements of NFPA 101.
C. Products: Listed and classified by UL as suitable for the purpose specified and indicated.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install suspended luminaires using pendants supported from swivel hangers. Provide pendant length required to suspend luminaire at indicated height.
B. Locate recessed ceiling luminaires as indicated on reflected ceiling plan.
C. Install surface mounted luminaires and exit signs plumb and adjust to align with building lines and with each other. Secure to prevent movement.

D. Exposed Grid Ceilings: Support surface mounted luminaires on grid ceiling directly from building structure.
E. Install recessed luminaires to permit removal from below.
F. Install recessed luminaires using accessories and firestopping materials to meet regulatory requirements for fire rating in locations where fire rated ceilings are present.
G. Install clips to secure recessed grid-supported luminaires in place.
H. Install wall mounted luminaires, emergency lighting units and exit signs at height as indicated on the Drawings or as scheduled.
I. Install accessories furnished with each luminaire.
J. Make wiring connections to branch circuit using building wire with insulation suitable for temperature conditions within luminaire.
K. Bond products and metal accessories to branch circuit equipment grounding conductor.
L. Install specified lamps in each emergency lighting unit, exit sign, and luminaire.

3.2 ADJUSTING

A. Refer to Section 01 70 00 "Execution and Closeout Requirements" for adjusting installed work.
B. Aim and adjust luminaires as directed.
C. Position exit sign directional arrows as indicated.

3.3 CLEANING

A. Refer to Section 01 70 00 "Execution and Closeout Requirements" for cleaning installed Work.
B. Clean electrical parts to remove conductive and deleterious materials.
C. Remove dirt and debris from enclosures.
D. Clean photometric control surfaces as recommended by manufacturer.
E. Clean finishes and touch up damage.

3.4 DEMONSTRATION AND INSTRUCTIONS

A. Refer to Section 01 70 00 "Execution and Closeout Requirements" for demonstrating installed Work.

3.5 PROTECTION OF FINISHED WORK

A. Refer to Section 01 70 00 "Execution and Closeout Requirements" for protecting installed Work.
B. Relamp luminaires that have failed lamps at Substantial Completion.

END OF SECTION

SECTION 28 35 00 - EMERGENCY RADIO COMMUNICATION ENHANCEMENT SYSTEMS

PART 1 - GENERAL

1.1 SUMMARY

A. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.

1.2 REQUIREMENTS OF REGULATORY AGENCIES AND STANDARDS

A. Regulatory Agencies: Installation, materials, equipment, and workmanship shall conform to the applicable provisions of the following:
   1. U.L., Inc.
   2. National Fire Protection Association (NFPA)
   3. International Fire Code (IFC).

B. Terms and conditions of the authorities having lawful jurisdiction pertaining to Work required.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION

3.1 GENERAL

A. As a part of base bid of this Project, provide for testing of radio frequency signal throughout building to determine if Emergency Radio Communication Enhancement System (ERCES) is required. Testing shall be done at direction of Authority Having Jurisdiction. This testing shall include documentation of qualifications of person performing tests, signal strength measurements documented on a building floor plan for both internal to rooms of building as well as areas surrounding building. All testing methods, qualifications, and other requirements shall be in accordance with International Fire Code-2015 (IFC-2015).

B. If testing proves that the system is required, provide and install a complete and operational Emergency Radio Communication Enhancement System (ERCES) for coverage throughout building and surrounding areas around building. Contractor shall provide design, installation and certification of the system. This Work shall be done in accordance with the International Fire Code-2015 (IFC-2015).
   1. Provide submittal documentation of all correspondence with AHJ, product data, certification of compliance with standards, and a plan layout of all system components on building floor plan. Include wiring diagrams and equipment diagrams.
   2. All power, conduit, controls, etc. required for ERCES shall be included in Project.

END OF SECTION

SECTION 28 51 29.10 - TWO-WAY COMMUNICATION SYSTEM

PART 1 - GENERAL

1.1 SUMMARY

A. Related Requirements:
1. Division 01 Specification Sections apply to Work of this Section.

1.2 GENERAL

A. The IP Command Center is to be located at a central control point on the first floor or as determined by local authority having jurisdiction. Command Center IP Call Boxes are to be located on all floors above and below the first floor, ideally next to a stairwell emergency exit or elevator landing on each floor.
B. The IP Command Center must be capable of connecting to an existing Network and providing inputs for the IP Call Boxes. Visual indicators on the IP Command Center allow rescue personnel to know which IP Call Box needs assistance. The IP Command Center must allow rescue personnel to speak to each IP Call Box individually. The IP Command Center must include both a handset and speakerphone to communicate back to the IP Call Boxes.
C. The emergency communication hardware shall comply with the Americans with Disabilities Act (ADA). The IP Call Box shall have the ability to be programmed with up to two emergency phone numbers (either both off-site or Base Station and off-site). Upon activation of the emergency push button, a call will be automatically placed to the IP Command Center. If no one answers at the IP Command Center, the IP Call Box must dial a secondary location (911) outside the building to activate two-way, off-site, person-to-person voice communications.

1.3 WARRANTY

A. Command center and call boxes shall be warranted for a period of three years.

PART 2 - PRODUCTS

2.1 CONSTRUCTION

A. The IP Command Center (2500 series) shall include both the Base Station and Distribution Module. The Base Station must have a powder coated steel housing (surface or flush mount) or be desk mounted, include a black handset with coil cord and be powered from the Distribution Module.
B. Distribution Module must be a surface mount enclosure, include connections for the IP Call Boxes and power the Base Station. The Distribution Module shall be powered from 120vac power with a battery backup that provides power for a minimum of four hours (RP7700104).

C. The IP Call Boxes must be in full compliance with the ADA. IP Call Boxes require a hands-free speakerphone with an LED to indicate status of call.
D. The IP Call Boxes must allow the programming in of a specific location message of the unit. This allows rescue personnel to know the location of the activated IP Call Box.
E. The IP Call Boxes are to be located no higher than 48-inch front reach or 54-inch side reach to the center of the push button above ground level to ensure conformance with ADA requirements.
F. The IP Call Boxes must have a Braille faceplate to ensure conformance with ADA requirements.
G. The IP Command Center must provide an audible and visual indicator that an IP Call Box has been activated.
H. The 120vac Power Supply model RP7700104 must be capable of supplying power to a minimum of one Base Station and one Distribution Module.

2.2 MOUNTING

A. The IP Command Center is to be mounted on a flat wall surface or a desk top.
B. The IP Call Boxes are to be wall surface or flush mounted.

2.3 ELECTRICAL

A. The IP Command Center is to be powered by the Distribution Module. The IP Call Boxes are to be powered by PoE at 802.3af or a separate battery backed up 12v source.
B. Distribution Module shall be powered by the Rath model RP7700104 Power Supply. It shall require 120vac power and provide battery backup capable of providing a minimum of 4 hours of electrical backup in case of building power failure.
C. The Base Station shall connect to the Distribution Module with a single wire pair (10 zone) 2-wire pairs (16-64 zone) or three-wire pairs (80-Up).
D. Each IP Call Box shall connect to the Distribution Module through an Ethernet connection. Maximum run is 300 feet between Network Switches.
E. System shall be in compliance with all state and local Electrical Codes.

2.4 COMMUNICATIONS

A. The IP Call Boxes shall be an ADA-compliant and vandal-resistant speakerphone.
B. The IP Call Boxes shall be hands-free and be a push-button-once to talk system. Once the button has been pushed, the IP Call Box will call the Base Station. If no answer at the Base Station, it will automatically call a preprogrammed emergency number. The IP Call Box must be capable of being programmed with up to TWO emergency phone numbers (either both off-site or Base Station and off-site).
C. The IP Call Box shall have location message capability. The IP Call Box must have a minimum 18 second recordable message capability, programmable to play one or two times. IP Call Box shall notify called party of the location of the call upon being received at the emergency dispatch center.
D. The IP Call Box shall be capable of allowing the called party to replay the location message if necessary to ensure an understanding of the caller location.
E. If system is not attended to 24 hours a day, the IP Call Box must dial a secondary location (911) outside the building to activate two-way, off-site, person-to-person voice communications.

F. Once call has been made (button pushed), the call can only be terminated by the called party.
G. The IP Call Box must have a red LED that will light up upon push of the button. The light shall be a solid color when the IP Call Box is activated, and will flash when call has been answered.
H. The IP Call Box must be capable of being programmed and reprogrammed on-site.
I. Standard IP Call Box features:
    1. Two number programming (either both off-site or Base Station and off-site).
    2. Operating temperature of between minus 40 degrees F to plus 150 degrees F.
    3. On-site programmable.
    4. Powered from PoE at 802.3af or separate battery backed up 12v source.
    5. EEPROM memory to protect programming.

2.5 GRAPHICS

A. IP Command Center must include wording identifying the location of each IP Call Box and light an LED when a particular IP Call Box has been activated.
B. The IP Call Box wording must include "Emergency Phone," International Phone symbol, and raised Braille lettering.

PART 3 - EXECUTION (Not Used)

END OF SECTION

SECTION 31 10 00 - SITE CLEARING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Removing surface debris.
   2. Removing above- and below-grade site improvements.
   3. Removing designated trees, shrubs, and other plant life.
   4. Disconnecting, capping or sealing, and removing site utilities.

B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.
   2. Section 01 50 00 "Temporary Facilities and Controls" for temporary erosion- and sedimentation-control measures."
   3. Section 02 41 19 "Selective Demolition" for partial demolition of buildings, structures, and site improvements.
   4. Section 31 20 00 "Earth Moving" for excavating and backfilling for controlling surface-water runoff and ponding, and for dewatering excavations.

1.2 DEFINITIONS

A. Subsoil: Soil beneath the level of subgrade; soil beneath topsoil layers of a naturally-occurring soil profile, typified by less than 1 percent organic matter and few soil organisms.

B. Surface Soil: Soil present at the top layer of existing soil profile. In undisturbed areas, surface soil is typically called "topsoil," but in disturbed areas such as urban environments, surface soil can be subsoil.

C. Topsoil: Top layer of soil profile consisting of existing native surface topsoil or existing in-place surface soil; zone where plant roots grow. Appearance is generally friable, pervious, and black or darker shade of brown, gray, or red than underlying subsoil; reasonably free of subsoil, clay lumps, gravel, and other objects larger than 2 inches in diameter; free of weeds, roots, toxic materials, or other nonsoil materials.

D. Vegetation: Trees, shrubs, groundcovers, grass, and other plants.

1.3 MATERIAL OWNERSHIP

A. Except for materials indicated to stockpile or otherwise remain Owner property, cleared materials shall become Contractor property and removed from Project site.

1.4 SUBMITTALS

A. Section 01 33 00 "Submittal Procedures" for requirements for submittals.

1.5 INFORMATIONAL SUBMITTALS

A. Existing Conditions: Contractor shall document existing trees, plantings, adjoining construction, and site improvements to document preconstruction conditions that might be misconstrued as damage caused by site clearing.
   1. Use sufficiently detailed photographs or video recordings.
   2. Include plans and notations to indicate specific wounds and damage conditions of each tree or other plant designated to remain.

B. Record Drawings: Identifying and accurately showing locations of capped utilities and other subsurface structural, electrical, and mechanical conditions.

1.6 QUALITY ASSURANCE

A. Conform to applicable code for environmental requirements, disposal of debris, and use of herbicides.

1.7 FIELD CONDITIONS

A. Traffic: Minimize interference with adjoining roads, streets, walks, and other adjacent occupied or used facilities during site-clearing operations.
   1. Do not close or obstruct streets, walks, or other adjacent occupied or used facilities without permission from Owner and authorities having jurisdiction.
   2. Provide alternate routes around closed or obstructed traffic ways if required by Owner or authorities having jurisdiction.

B. Improvements on Adjoining Property: Authority for performing site clearing indicated on property adjoining Owner's property obtained by Owner before award of Contract.
   1. Do not proceed with work on adjoining property until directed by Architect.

C. Salvageable Improvements: Carefully remove items indicated to salvage and store on Owner premises where indicated.

D. Utility Locator Service: Contractor shall notify utility locator service for area where Project is located before site clearing.

E. Do not commence site-clearing operations until temporary erosion- and sedimentation-control measures are in place.

F. Soil Stripping, Handling, and Stockpiling: Perform only when soil is dry or slightly moist.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Satisfactory Soil Material: Requirements for satisfactory soil material are specified in Section 31 20 00 "Earth Moving."
   1. Obtain approved borrow soil material off-site when satisfactory soil material not available on-site.

B. Antirust Coating: Fast-curing, lead- and chromate-free, self-curing, universal modified-alkyd primer complying with MPI #23 (surface-tolerant, anticorrosive metal primer)or SSPC-Paint 20 or SSPC-Paint 29 zinc-rich coating.

PART 3 - EXECUTION

3.1 PREPARATION

A. Call Local Utility Line Information service at not less than 3 working days before performing Work.
   1. Request underground utilities to be located and marked within and surrounding construction areas.

3.2 PROTECTION

A. Protect and maintain benchmarks and survey control points from disturbance during construction.
B. Protect existing site improvements to remain from damage during construction.
   1. Restore damaged improvements to original condition, as acceptable to Owner.
C. Identify salvage area for placing removed materials.

3.3 TEMPORARY EROSION AND SEDIMENTATION CONTROL

A. Provide temporary erosion- and sedimentation-control measures to prevent soil erosion and discharge of soil-bearing water runoff or airborne dust to adjacent properties and walkways, according to erosion- and sedimentation-control Drawings and requirements of authorities having jurisdiction.
B. Verify flows of water redirected from construction areas or generated by construction activity do not enter or cross protection zones.
C. Inspect, maintain, and repair erosion- and sedimentation-control measures during construction until permanent vegetation is established.
D. Remove erosion and sedimentation controls. Restore and stabilize areas disturbed during removal.

3.4 EXISTING UTILITIES

A. Owner will arrange for disconnecting and sealing indicated utilities that serve existing structures before site clearing, when requested by Contractor. Verify utilities are disconnected and capped before proceeding with site clearing.
B. Locate, identify, disconnect, seal or cap, cut, and plug utilities indicated to remove or be abandoned in place.
   1. Arrange with utility companies to shut off indicated utilities.
   2. Owner will arrange to shut off indicated utilities when requested by Contractor.
C. Locate, identify, disconnect, cut, and plug utilities indicated to abandon in place.
D. Interrupting Existing Utilities: Do not interrupt utilities serving facilities occupied by Owner or others, unless permitted under the following conditions, then only after arranging to provide temporary utility services according to requirements indicated:
   1. Notify Architect not less than 2 days in advance of proposed utility interruptions.
   2. Do not proceed with utility interruptions without Architect's written permission.
E. Excavate for and remove underground utilities indicated to remove.
F. Removal of underground utilities is included in earthwork sections, applicable fire suppression, plumbing, HVAC, electrical, communications, electronic safety and security, and utilities sections, and Section 02 41 19 "Selective Demolition."

3.5 CLEARING AND GRUBBING

A. Remove obstructions, trees, shrubs, and other vegetation to permit installation of new construction.
   1. Do not remove trees, shrubs, and other vegetation indicated to remain or be relocated.
   2. Grind down or remove stumps and remove roots larger than 2 inches in diameter, obstructions, and debris to a depth of 18 inches below exposed subgrade.
   3. Use only hand methods or air spade for grubbing within protection zones.
   4. Chip removed tree branches and dispose off-site.
   5. Clear undergrowth and deadwood without disturbing subsoil.
   6. Apply herbicide to remaining stumps to inhibit growth.

B. Fill depressions caused by clearing and grubbing operations with satisfactory soil material unless further excavation or earthwork is indicated.
   1. Place fill material in horizontal layers not exceeding a loose depth of 8 inches, and compact each layer to a density equal to adjacent original ground.

3.6 SITE IMPROVEMENTS

A. Remove existing above- and below-grade improvements as indicated and necessary to facilitate new construction.

B. Remove slabs, paving, curbs, gutters, and aggregate base as indicated.
   1. Unless existing full-depth joints coincide with line of demolition, neatly saw-cut along line of existing pavement to remain before removing adjacent existing pavement. Saw-cut faces vertically.
   2. Paint cut ends of steel reinforcement in concrete to remain with two coats of antirust coating, following coating manufacturer's written instructions. Keep paint off surfaces remaining exposed.

3.7 DISPOSE SURPLUS AND WASTE MATERIALS

A. Remove surplus soil material, unsuitable topsoil, obstructions, demolished materials, and waste materials including trash and debris, and legally dispose off Owner property.

B. Burning tree, shrub, and other vegetation waste permitted per burning requirements and permitting of authorities having jurisdiction. Control such burning to produce least smoke or air pollutants and minimum annoyance to surrounding properties. Burning other waste and debris is prohibited.

C. Separate recyclable materials produced during site clearing from other nonrecyclable materials. Store or stockpile without intermixing with other materials, and transport to recycling facilities. Do not interfere with other Project work.

END OF SECTION

SECTION 31 20 00 - EARTH MOVING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Excavating and filling for rough grading the Site.
   2. Preparing subgrades for walks and pavements .

B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.
   2. Section 31 10 00 "Site Clearing" for site stripping, grubbing, stripping topsoil, and removal of above- and below-grade improvements and utilities.

C. Attachments:
   1. Geotechnical Engineering Report prepared by Terracon for this Project. Terracon Project No. A4245183.

1.2 DEFINITIONS

A. Backfill: Soil material or controlled low-strength material used to fill an excavation.
   1. Initial Backfill: Backfill placed beside and over pipe in a trench, including haunches to support sides of pipe.
   2. Final Backfill: Backfill placed over initial backfill to fill a trench.

B. Base Course: Aggregate layer placed between the subbase course and hot-mix asphalt paving.

C. Bedding Course: Aggregate layer placed over the excavated subgrade in a trench before laying pipe.

D. Borrow Soil: Satisfactory soil imported from off-site for use as fill or backfill.

E. Excavation: Removal of material encountered above subgrade elevations and to lines and dimensions indicated.
   1. Unauthorized Excavation: Excavation below subgrade elevations or beyond indicated lines and dimensions without direction by Architect. Unauthorized excavation, as well as remedial work directed by Architect, shall be without additional compensation.

F. Fill: Soil materials used to raise existing grades.

G. Rock: Rock material in beds, ledges, unstratified masses, conglomerate deposits, and boulders of rock material 3/4 cu. yd. or more in volume that exceed a standard penetration resistance of 100 blows/2 inches when tested by a geotechnical testing agency, according to ASTM D1586.

H. Structures: Buildings, footings, foundations, retaining walls, slabs, tanks, curbs, mechanical and electrical appurtenances, or other man-made stationary features constructed above or below the ground surface.

I. Subbase Course: Aggregate layer placed between the subgrade and base course for hot-mix asphalt pavement, or aggregate layer placed between the subgrade and a cement concrete pavement or a cement concrete or hot-mix asphalt walk.

J. Subgrade: Uppermost surface of an excavation or the top surface of a fill or backfill immediately below subbase, drainage fill, drainage course, or topsoil materials.

K. Utilities: On-site underground pipes, conduits, ducts, and cables.

1.3 INFORMATIONAL SUBMITTALS

A. Qualification Data: For qualified testing agency.
B. Material Test Reports: For each on-site and borrow soil material proposed for fill and backfill as follows:
   1. Classification according to ASTM D2487.
   2. Laboratory compaction curve according to ASTM D698.

1.4 QUALITY ASSURANCE

A. Geotechnical Testing Agency Qualifications: Qualified according to ASTM E329 and ASTM D3740 for testing indicated.

1.5 FIELD CONDITIONS

A. Traffic: Minimize interference with adjoining roads, streets, walks, and other adjacent occupied or used facilities during earth-moving operations.
   1. Do not close or obstruct streets, walks, or other adjacent occupied or used facilities without permission from Owner and authorities having jurisdiction.
   2. Provide alternate routes around closed or obstructed traffic ways if required by Owner or authorities having jurisdiction.
B. Utility Locator Service: Notify utility locator service for area where Project is located before beginning earth-moving operations.
C. Do not commence earth-moving operations until temporary site fencing and erosion- and sedimentation-control measures specified in Section 01 50 00 "Temporary Facilities and Controls" and Section 31 10 00 "Site Clearing" are in place.

PART 2 - PRODUCTS

2.1 SOIL MATERIALS

A. General: Provide borrow soil materials when sufficient satisfactory soil materials are not available from excavations.
B. Satisfactory Soils: Acceptable fill materials should be classified as 'structural fill' and 'general fill.' Structural fill is material used for below, or within, 10-feet of structures, pavements, or constructed slopes. General fill material is used outside of these areas. For all applications, fill shall be free of organic matter and debris. Frozen materials should not be used, and fill should not be placed on frozen subgrade.
   1. Structural fill:
      a. On-site material can generally be reused as structural fill, as long as it meets the following requirements.
         1) Free of deleterious material.
         2) Maximum particle size: 4 inches.
         3) Maximum liquid limit: 40.
         4) Maximum plasticity index: 20.

b. Imported material used for structural fill shall meet the following requirements:
1) Free of deleterious material.
2) Maximum particle size: 4 inches.
3) For low-plasticity cohesive import soils (CL, CL-ML), the liquid limit shall be less than 40 and the plasticity index shall be less than 20.
4) For granular import soils (GW, GP, GM, GC, SW, SP, SM, SC) shall have 10 to 50 percent passing the No. 200 sieve.

2. General fill:
a. On-site material can be reused as general fill, as long as it meets the following requirements.
1) Free of deleterious material.
2) Maximum particle size: 6 inches.
3) Plasticity: Not limited.

C. Unsatisfactory Soils: Soils that do not meet the requirements listed for satisfactory soils.
1. Unsatisfactory soils also include satisfactory soils not maintained within 2 percent of optimum moisture content at time of compaction.
2. Soil satisfactory for general fill is unsatisfactory for use in areas requiring structural fill if it does not also meet the requirements for structural fill. Soil satisfactory for structural fill is also satisfactory for use as general fill.

D. Bedding Course: ASTM C33, Grade #8, or approved equal.

2.2 ACCESSORIES

A. Detectable Warning Tape: Acid- and alkali-resistant, polyethylene film warning tape manufactured for marking and identifying underground utilities, a minimum of 6 inches wide and 4 mils thick, continuously inscribed with a description of the utility, with metallic core encased in a protective jacket for corrosion protection, detectable by metal detector when tape is buried up to 30 inches deep; colored as follows:
1. Red: Electric.
2. Yellow: Gas, oil, steam, and dangerous materials.
3. Orange: Telephone and other communications.
4. Blue: Water systems.
5. Green: Sewer systems.

PART 3 - EXECUTION

3.1 PREPARATION

A. Protect structures, utilities, sidewalks, pavements, and other facilities from damage caused by settlement, lateral movement, undermining, washout, and other hazards created by earth-moving operations.
B. Protect and maintain erosion and sedimentation controls during earth-moving operations.
C. Protect subgrades and foundation soils from freezing temperatures and frost. Remove temporary protection before placing subsequent materials.

3.2 DEWATERING

A. Prevent surface water and ground water from entering excavations, from ponding on prepared subgrades, and from flooding Project site and surrounding area.
B. Protect subgrades from softening, undermining, washout, and damage by rain or water accumulation.
   1. Reroute surface water runoff away from excavated areas. Do not allow water to accumulate in excavations. Do not use excavated trenches as temporary drainage ditches.

3.3 EXPLOSIVES

A. Explosives: Do not use explosives.

3.4 EXCAVATION, GENERAL

A. Unclassified Excavation: Excavate to subgrade elevations regardless of the character of surface and subsurface conditions encountered. Unclassified excavated materials may include rock, soil materials, and obstructions. No changes in the Contract Sum or the Contract Time will be authorized for rock excavation or removal of obstructions.
   1. If excavated materials intended for fill and backfill include unsatisfactory soil materials and rock, replace with satisfactory soil materials.
B. Classified Excavation: Excavate to subgrade elevations.

3.5 EXCAVATION FOR WALKS AND PAVEMENTS

A. Excavate surfaces under walks and pavements to indicated lines, cross sections, elevations, and subgrades.

3.6 EXCAVATION FOR UTILITY TRENCHES

A. Excavate trenches to indicated gradients, lines, depths, and elevations.
   1. Beyond building perimeter, excavate trenches to allow installation of top of pipe below frost line.
B. Excavate trenches to uniform widths to provide the following clearance on each side of pipe or conduit. Excavate trench walls vertically from trench bottom to 12 inches higher than top of pipe or conduit unless otherwise indicated.
   1. Clearance: 12 inches each side of pipe or conduit.
C. Trench Bottoms: Excavate and shape trench bottoms to provide uniform bearing and support of pipes and conduit. Shape subgrade to provide continuous support for bells, joints, and barrels of pipes and for joints, fittings, and bodies of conduits. Remove projecting stones and sharp objects along trench subgrade.
   1. For pipes and conduit less than 6 inches in nominal diameter, hand-excavate trench bottoms and support pipe and conduit on an undisturbed subgrade.
   2. For pipes and conduit 6 inches or larger in nominal diameter, shape bottom of trench to support bottom 90 degrees of pipe or conduit circumference. Fill depressions with tamped sand backfill.

3. For flat-bottomed, multiple-duct conduit units, hand-excavate trench bottoms and support conduit on an undisturbed subgrade.
4. Excavate trenches 6 inches deeper than elevation required in rock or other unyielding bearing material to allow for bedding course.

D. Trench Bottoms: Excavate trenches 4 inches deeper than bottom of pipe and conduit elevations to allow for bedding course. Hand-excavate deeper for bells of pipe.
1. Excavate trenches 6 inches deeper than elevation required in rock or other unyielding bearing material to allow for bedding course.

3.7 SUBGRADE INSPECTION

A. Notify Architect when excavations have reached required subgrade.
B. If Architect determines that unsatisfactory soil is present, continue excavation and replace with compacted backfill or fill material as directed.
C. Proof-roll subgrade with a pneumatic-tired and loaded 10-wheel, tandem-axle dump truck weighing not less than 15 tons to identify soft pockets and areas of excess yielding. Do not proof-roll wet or saturated subgrades.
1. Completely proof-roll subgrade in one direction, repeating proof-rolling in direction perpendicular to first direction. Limit vehicle speed to 3 mph.
2. Excavate soft spots, unsatisfactory soils, and areas of excessive pumping or rutting, as determined by Architect, and replace with compacted backfill or fill as directed.
D. Reconstruct subgrades damaged by freezing temperatures, frost, rain, accumulated water, or construction activities, as directed by Architect, without additional compensation.

3.8 STORAGE OF SOIL MATERIALS

A. Stockpile borrow soil materials and excavated satisfactory soil materials without intermixing. Place, grade, and shape stockpiles to drain surface water. Cover to prevent windblown dust.
1. Stockpile soil materials away from edge of excavations. Do not store within drip line of remaining trees.

3.9 BACKFILL

A. Place and compact backfill in excavations promptly, but not before completing the following:
1. Construction below finish grade including, where applicable, subdrainage, dampproofing, waterproofing, and perimeter insulation.
2. Surveying locations of underground utilities for Record Documents.
3. Testing and inspecting underground utilities.
4. Removing concrete formwork.
5. Removing trash and debris.
6. Removing temporary shoring, bracing, and sheeting.
7. Installing permanent or temporary horizontal bracing on horizontally supported walls.
B. Place backfill on subgrades free of mud, frost, snow, or ice.

3.10 SOIL FILL

A. Plow, scarify, bench, or break up sloped surfaces steeper than 1 vertical to 4 horizontal so fill material will bond with existing material.
B. Place and compact fill material in layers to required elevations as follows:
   1. Under building slabs, see Sections prepared by others.
   2. Under and 10 feet beyond pavement areas, use satisfactory structural fill.
   3. For utility trench backfill, use satisfactory structural fill.
   4. For all other areas, use satisfactory general fill.
C. Place soil fill on subgrades free of mud, frost, snow, or ice.

3.11 SOIL MOISTURE CONTROL

A. Uniformly moisten or aerate subgrade and each subsequent fill or backfill soil layer before compaction to within 2 percent of optimum moisture content.
   1. Do not place backfill or fill soil material on surfaces that are muddy, frozen, or contain frost or ice.
   2. Remove and replace, or scarify and air dry, otherwise satisfactory soil material that exceeds optimum moisture content by 2 percent and is too wet to compact to specified dry unit weight.

3.12 COMPACTION OF SOIL BACKFILLS AND FILLS

A. Place backfill and fill soil materials in layers not more than 8 inches in loose depth for material compacted by heavy compaction equipment and not more than 4 inches in loose depth for material compacted by hand-operated tampers.
B. Compact soil materials to not less than the following percentages of maximum dry unit weight according to ASTM D698:
   1. For all fill areas, compact to at least 95 percent of the material's maximum dry density.

3.13 GRADING

A. General: Uniformly grade areas to a smooth surface, free of irregular surface changes. Comply with compaction requirements and grade to cross sections, lines, and elevations indicated.
   1. Provide a smooth transition between adjacent existing grades and new grades.
   2. Cut out soft spots, fill low spots, and trim high spots to comply with required surface tolerances.
B. Site Rough Grading: Slope grades to direct water away from buildings and to prevent ponding. Finish subgrades to elevations required to achieve indicated finish elevations, within the following subgrade tolerances:
   1. Turf or Unpaved Areas: Plus or minus 1-inch.
   2. Walks: Plus or minus 1/4- inch.
   3. Pavements: Plus or minus 1/4-inch.

3.14 SUBBASE AND BASE COURSES UNDER PAVEMENTS AND WALKS

A. See Section 32 11 23 "Aggregate Base Courses."

3.15 FIELD QUALITY CONTROL

A. Testing Agency: Owner will engage a qualified geotechnical engineering testing agency to perform tests and inspections.
B. Allow testing agency to inspect and test subgrades and each fill or backfill layer. Proceed with subsequent earth moving only after test results for previously completed work comply with requirements.
C. Testing agency will test compaction of soils in place according to ASTM D1556, ASTM D2167, ASTM D2937, and ASTM D6938, as applicable. Tests will be performed at the following locations and frequencies:
    1. Each lift of fill material shall be tested for density and water content at a frequency of one test for every 2,500 square feet.
    2. Trench backfill: One density and water content test shall be performed for every 50 linear feet, per lift, of compacted utility trench backfill.
D. When testing agency reports that subgrades, fills, or backfills have not achieved degree of compaction specified, scarify and moisten or aerate, or remove and replace soil materials to depth required; recompact and retest until specified compaction is obtained.

3.16 PROTECTION

A. Protecting Graded Areas: Protect newly graded areas from traffic, freezing, and erosion. Keep free of trash and debris.
B. Repair and reestablish grades to specified tolerances where completed or partially completed surfaces become eroded, rutted, settled, or where they lose compaction due to subsequent construction operations or weather conditions.
    1. Scarify or remove and replace soil material to depth as directed by Architect; reshape and recompact.
C. Where settling occurs before Project correction period elapses, remove finished surfacing, backfill with additional soil material, compact, and reconstruct surfacing.
    1. Restore appearance, quality, and condition of finished surfacing to match adjacent work, and eliminate evidence of restoration to greatest extent possible.

3.17 DISPOSAL OF SURPLUS AND WASTE MATERIALS

A. Remove surplus satisfactory soil and waste materials, including unsatisfactory soil, trash, and debris, and legally dispose of them off Owner's property.
B. Transport surplus satisfactory soil to designated storage areas on Owner's property. Stockpile or spread soil as directed by Architect.
    1. Remove waste materials, including unsatisfactory soil, trash, and debris, and legally dispose of them off Owner's property.

END OF SECTION

SECTION 31 23 16.13 - TRENCHING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
1. Excavating trenches for utilities from 5 feet outside building to utility service.
2. Compacted fill from top of utility bedding to subgrade elevations.
3. Backfilling and compaction.

B. Related Requirements:
1. Division 01 Specification Sections apply to Work of this Section.
2. Section 31 20 00 "Earth Moving": Soils for fill.
3. Section 33 14 16 "Site Water Utility Distribution": Water piping and bedding from building to utility service.
4. Section 33 31 00 "Sanitary Sewerage Piping": Sanitary sewer piping and bedding from building to utility service.
5. Section 33 42 00 "Stormwater Conveyance": Storm sewer piping and bedding from building connection to main tie-in point.

C. Attachments:
1. Geotechnical Engineering Report prepared by Terracon for this Project. Terracon Project No. A4245183.

4. ASTM D2167 - Standard Test Method for Density and Unit Weight of Soil in Place by the Rubber Balloon Method.
5. ASTM D2922 - Standard Test Method for Density of Soil and Soil-Aggregate in Place by Nuclear Methods (Shallow Depth).
6. ASTM D3017 - Standard Test Method for Water Content of Soil and Rock in Place by Nuclear Methods (Shallow Depth).

1.3 DEFINITIONS

A. Utility: Any buried pipe, duct, conduit, or cable.

1.4 QUALITY ASSURANCE

A. Perform Work in accordance with City of Midland standards.

1.5 FIELD MEASUREMENTS

A. Verify field measurements prior to fabrication.

1.6 COORDINATION

A. Section 01 30 00 "Administrative Requirements": Coordination and project conditions.
B. Verify Work associated with lower elevation utilities is complete before placing higher elevation utilities.

PART 2 - PRODUCTS

2.1 FILL MATERIALS

A. Provide pipe bedding and encasement per municipality details in the Plans.
B. Bedding material shall be ASTM C33, Grade #8 or approved equal.
C. Provide trench backfill using satisfactory structural fill as defined in 31 20 00 "Earth Moving" in accordance with the utility details in the Plans.

PART 3 - EXECUTION

3.1 LINES AND GRADES

A. Lay pipes to lines and grades indicated on Drawings.
   1. Architect/Engineer reserves right to make changes in lines, grades, and depths of utilities when changes are required for Project conditions.
B. Use laser-beam instrument with qualified operator to establish lines and grades, as Contractor's option.
C. Maintain grade alignment of pipe using string line parallel with grade line and vertically above centerline of pipe.
   1. Establish string line on level batter boards at intervals of not more than 25 feet.
   2. Install batter boards spanning trench, rigidly anchored to posts driven into ground on both sides of trench.
   3. Set 3 adjacent batter boards before laying pipe to verify grades and line.
   4. Determine elevation and position of string line from elevation and position of offset points or stakes located along pipe route.
   5. Do not locate pipe using side lines for line or grade.

3.2 PREPARATION

A. Call Local Utility Line Information service not less than 3 working days before performing Work.
   1. Request underground utilities to be located and marked within and surrounding construction areas.
B. Identify required lines, levels, contours, and datum locations.
C. Protect plant life, lawns, and other features remaining as portion of final landscaping.
D. Protect bench marks, existing structures, fences, sidewalks, paving, and curbs from excavating equipment and vehicular traffic.
E. Maintain and protect above and below grade utilities indicated to remain.
F. Establish temporary traffic control and detours when trenching is performed in public right-of-way. Relocate controls and reroute traffic as required during progress of Work.

3.3 TRENCHING

A. Excavate subsoil required for utilities to utility service.
B. Remove lumped subsoil, boulders, and rock.
C. Do not advance open trench more than 200 feet ahead of installed pipe.
D. Cut trenches sufficiently wide to enable installation and allow inspection. Remove water or materials that interfere with Work.
E. Excavate bottom of trenches maximum 2 feet wider than outside diameter of pipe.
F. Excavate trenches to depth indicated on Drawings. Provide uniform and continuous bearing and support for bedding material and pipe.
G. Do not interfere with 45 degree bearing splay of foundations.
H. When Project conditions permit, slope side walls of excavation starting 2 feet above top of pipe. When side walls can not be sloped, provide sheeting and shoring to protect excavation as specified in this section.
I. When subsurface materials at bottom of trench are loose or soft, excavate to greater depth as directed by Engineer until suitable material is encountered.
J. Cut out soft areas of subgrade not capable of compaction in place. Backfill with satisfactory structural fill and compact to density equal to or greater than requirements for subsequent backfill material.
K. Trim excavation. Hand trim for bell and spigot pipe joints. Remove loose matter.
L. Correct areas over excavated areas with compacted backfill as specified for authorized excavation or replace with fill concrete as directed by Architect/Engineer.
M. Excavate trenches 6 inches deeper than elevation required in rock or other unyielding bearing material to allow for bedding course.
N. Remove excess subsoil not intended for reuse, from site.

3.4 BACKFILLING

A. Backfill trenches to contours and elevations with unfrozen fill materials.
B. Systematically backfill to allow maximum time for natural settlement. Do not backfill over porous, wet, frozen, or spongy subgrade surfaces.
C. Place fill material in continuous layers and compact in equal layers not exceeding 8 inches compacted depth.

D. Employ placement method that does not disturb or damage existing or planned facilities.
E. Maintain optimum moisture content of fill materials to attain required compaction density.
F. Do not leave more than 50 feet of trench open at end of working day.
G. Protect open trench to prevent danger to the public.

3.5 TOLERANCES

A. Section 01 40 00 "Quality Requirements": Tolerances.
B. Top Surface of Backfilling Under Paved Areas: Plus or minus 1/2-inch from required elevations.
C. Top Surface of General Backfilling: Plus or minus 1 inch from required elevations.

3.6 FIELD QUALITY CONTROL

A. Section 01 40 00 "Quality Requirements": Field inspecting, testing, adjusting, and balancing.
B. Testing agency: Owner will engage a qualified geotechnical engineering testing facility to perform tests and inspections.
C. Perform laboratory material tests in accordance with ASTM D698.
D. Perform in place compaction tests in accordance with the following:
E. When tests indicate Work does not meet specified requirements, remove Work, replace, compact, and retest.
F. Frequency of Tests: 1 density and water content test per 50 linear feet of trench, per lift, unless otherwise allowed by Engineer or the municipality inspector.

3.7 PROTECTION OF FINISHED WORK

A. Section 01 70 00 "Execution and Closeout Requirements": Protecting finished work.
B. Reshape and re-compact fills subjected to vehicular traffic during construction.

END OF SECTION

SECTION 32 11 23 - AGGREGATE BASE COURSES

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Aggregate subbase.
B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.
   2. Section 31 23 16.13 "Trenching": Compacted fill under base course.
   3. Section 32 12 16 "Asphalt Paving": Binder and finish asphalt courses.
   4. Section 32 13 13 "Concrete Paving": Finish concrete surface course.
   5. Section 33 05 61 "Concrete Manholes": Manholes including frames.

1.2 UNIT PRICE - MEASUREMENT AND PAYMENT

A. Aggregate Subbase:
   1. Basis of Measurement: By the square yard to elevations indicated on Drawings.
   2. Basis of Payment: Includes supplying fill material, stockpiling, scarifying substrate surface, placing where required, and compacting.

1.3 REFERENCES

A. ASTM International:
   1. ASTM D1556 - Standard Test Method for Density and Unit Weight of Soil in Place by the Sand-Cone Method.
   2. ASTM D2167 - Standard Test Method for Density and Unit Weight of Soil in Place by the Rubber Balloon Method.
   3. ASTM D2922 - Standard Test Method for Density of Soil and Soil-Aggregate in Place by Nuclear Methods (Shallow Depth).
   4. ASTM D2940 - Standard Specification for Graded Aggregate Material For Bases or Subbases for Highways or Airports.
   5. ASTM D3017 - Standard Test Method for Water Content of Soil and Rock in Place by Nuclear Methods (Shallow Depth).
B. Texas Department of Transportation - Standard Specifications for Construction and Maintenance of Highways, Streets, and Bridges, adopted September 1, 2024.
   1. Item 247 - Flexible Base
C. Texas Department of Transportation - Material Test Procedures

1.4 SUBMITTALS

A. Section 01 33 00 "Submittal Procedures": Requirements for submittals.
B. Samples: Submit, in air-tight containers, each type of aggregate fill to testing laboratory.
C. Materials Source: Submit name of aggregate materials suppliers.
D. Submit all product information and quality test results.
E. Submit all haul tickets after each day's delivery of materials to the job site.

1.5 QUALITY ASSURANCE

A. Furnish each aggregate material from single source throughout the Work.

PART 2 - PRODUCTS

2.1 AGGREGATE MATERIALS

A. Subbase Aggregate: 2024 TxDOT Item 247 - Flexible Base, Type A, Grade 1-2.
   1. When called for in the Drawings for new or supplementary base material, the material will conform to 2024 TxDOT, Item 247, Type A, Grade 1-2.
   2. When properly slaked and tested using TxDOT standard material test procedures, the flexible base material shall meet the following requirements:
      a. Cumulative Percent Retained per Sieve Size (Tex-110-E):
         1) 2-1/2-inch: 0 percent.
         2) 1-3/4-inch: 0 to 10 percent.
         3) 7/8-inch: 10 to 35 percent.
         4) 3/8-inch: 30 to 65 percent.
         5) No. 4: 45 to 75 percent.
         6) No. 40: 65 to 90 percent.
         7) No. 200: 85 to 95 percent.
      b. Material Properties:
         1) Liquid Limit, Percent Maximum (Tex-104-E): 40.
         2) Plasticity Index, Maximum (Tex-106-E): 10.
         3) Wet Ball Mill, Percent Maximum (Tex-116-E): 40.
         4) Wet Ball Mill, Percent Max Increase Passing No. 40 Sieve (Tex-116-E): 20.
      c. Minimum Compressive Strength (Tex-117-E):
         1) Lateral Pressure 0 psi: 35 psi.
         2) Lateral Pressure 15 psi: 175 psi.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Section 01 30 00 "Administrative Requirements": Verification of existing conditions before starting Work.
B. Verify compacted substrate is dry and ready to support paving and imposed loads.
   1. Proof roll substrate in minimum two perpendicular passes to identify soft spots.
   2. Remove soft substrate and replace with compacted fill as specified in Section 31 20 00 "Earth Moving."
C. Verify substrate has been inspected, gradients and elevations are correct.

3.2 PREPARATION

A. Correct irregularities in substrate gradient and elevation by scarifying, reshaping, and re-compacting.
B. Do not place fill on soft, muddy, or frozen surfaces.

3.3 AGGREGATE PLACEMENT

A. Spread aggregate over prepared substrate to total compacted thickness indicated on Drawings.
B. Roller compact aggregate to density indicated on Drawings.
C. Level and contour surfaces to elevations, profiles, and gradients indicated.
D. Maintain optimum moisture content of fill materials to attain specified compaction density.
E. Use mechanical tamping equipment in areas inaccessible to compaction equipment.

3.4 TOLERANCES

A. Section 01 40 00 "Quality Requirements": Tolerances.
B. Maximum Variation From Flat Surface: 1/4-inch measured with 10-foot straight edge.
C. Maximum Variation From Thickness: 1/4-inch.
D. Maximum Variation From Elevation: 1/4-inch.

3.5 FIELD QUALITY CONTROL

A. Compaction testing will be performed according to ASTM D1557.
B. When tests indicate Work does not meet specified requirements, remove Work, replace and retest.
C. Frequency of Tests: One test for every 300 sq. yd.of each layer compacted aggregate.

END OF SECTION

SECTION 32 12 16 - ASPHALT PAVING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Asphalt materials.
B. Related Requirement:
   1. Division 01 Specification Sections apply to Work of this Section.
   2. Section 32 11 23 "Aggregate Base Courses," compacted subbase for paving.

1.2 REFERENCE STANDARDS

A. AASHTO M17 - Standard Specification for Mineral Filler for Bituminous Paving Mixtures.
B. AASHTO M29 - Standard Specification for Fine Aggregate for Bituminous Paving Mixtures.
C. AASHTO M140 - Standard Specification for Emulsified Asphalt.
D. AASHTO M208 - Standard Specification for Cationic Emulsified Asphalt.
E. AASHTO M288 - Standard Specification for Geotextile Specification for Highway Applications.
F. AASHTO M320 - Standard Specification for Performance-Graded Asphalt Binder.
G. AASHTO M324 - Standard Specification for Joint and Crack Sealants, Hot Applied, for Concrete and Asphalt Pavements.
H. AASHTO MP1a - Standard Specification for Performance-Graded Asphalt Binder.

W. ASTM D3515 - Standard Specification for Hot-Mixed, Hot-Laid Bituminous Paving Mixtures.
X. ASTM D3549 - Standard Test Method for Thickness or Height of Compacted Bituminous Paving Mixture Specimens.
Y. ASTM D3910 - Standard Practices for Design, Testing, and Construction of Slurry Seal.
Z. ASTM D6690 - Standard Specification for Joint and Crack Sealants, Hot Applied, for Concrete and Asphalt Pavements.
AA. Texas Department of Transportation
    1. 2024 Standard Specifications for Construction and Maintenance of Highways, Streets, and Bridges.
        a. Item 300 - Asphalts, Oils, and Emulsions.
        b. Item 341 - Dense-Graded Hot-Mix Asphalt.
    2. TxDOT Materials Test Procedures.

1.3 SUBMITTALS

A. Section 01 33 00 "Submittal Procedures."
B. Product Data:
    1. Submit product information for asphalt and aggregate materials.
    2. Submit mix design with laboratory test results supporting design.
C. Manufacturer's Certificate: Certify Products meet or exceed specified requirements.

1.4 QUALITY ASSURANCE

A. Mixing Plant: Certified by State of Texas.
B. Obtain materials from same source throughout.
C. Perform Work in accordance with City of Midland standards.

1.5 AMBIENT CONDITIONS

A. Section 01 50 00 "Temporary Facilities and Controls," for ambient conditions control facilities for product storage and installation.
B. Do not place asphalt mixture when ambient air or base surface temperature is less than 50 degrees F, or surface is wet or frozen.
C. Place asphalt mixture when temperature is not more than 15 degrees F less than initial mixing temperature.

PART 2 - PRODUCTS

2.1 ASPHALT PAVING

A. Asphalt Materials:
    1. Asphalt Cement: ASTM D3381; viscosity grade AC-10.
    2. Primer: ASTM D2027, MC-30; medium curing, cutback asphalt. In accordance with 2024 TxDOT Item 300, Table 5.
    3. Tack Coat: RC-250; rapid curing, cutback asphalt. In accordance with 2024 TxDOT Item 300, Table 4.
    4. Reclaimed Asphalt Pavement (RAP): Processed material obtained by milling or full depth removal of existing asphalt paving.

B. Aggregate Materials:
   1. Coarse Aggregate: Crushed stone, gravel, or blast furnace slag, in accordance with TxDOT Item 341, Section 2.1 and 2.1.1.
      a. Coarse aggregate shall meet the quality requirements given in TxDOT Item 341, Table 1.
   2. Fine Aggregate: Natural sand or sand manufactured from stone, gravel, or blast furnace slag, in accordance with TxDOT Item 341, Section 2.1 and 2.1.3.
      a. Fine aggregate shall meet the quality requirements given in TxDOT Item 341, Table 1.
      b. Fine aggregate shall meet the gradation requirements according to TxDOT Item 341, Table 3.
   3. Mineral Filler: Finely ground mineral particles, free of foreign matter, in accordance with TxDOT Item 341, Section 2.2.
      a. Mineral filler shall meet the gradation requirements according to TxDOT Item 341, Table 3.

C. Aggregate Subbase: Specified in Section 32 11 23 "Aggregate Base Courses."

2.2 MIXES

A. Use dry material to avoid foaming. Mix uniformly.
B. Asphalt Paving Mixtures: Designed in accordance with 2024 TxDOT Item 341.
   1. Wearing Course: Type DG-D.
   2. Where multiple lifts are required, Type DG-B or DG-C will be used under the wearing course.

2.3 SOURCE QUALITY CONTROL

A. Section 01 40 00 "Quality Requirements," for testing, inspection and analysis requirements.
B. Submit proposed mix design of each class of mix for review prior to beginning of Work.
C. Test samples in accordance with 2024 TxDOT Item 341.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Section 01 70 00 "Execution and Closeout Requirements," for installation.
B. Verify utilities indicated under paving are installed with excavations and trenches backfilled and compacted.
C. Verify compacted subbase is dry and ready to support paving and imposed loads.
   1. Proof roll subbase in minimum 2 perpendicular passes to identify soft spots.
   2. Remove soft subbase and replace with compacted fill as specified in Section 32 11 23 "Aggregate Base Courses".
D. Verify gradients and elevations of base are correct.

3.2 DEMOLITION

A. Saw cut and notch existing paving as indicted on Drawings.
B. Clean existing paving to remove foreign material, excess joint sealant and crack filler from paving surface.
C. Repair surface defects in existing paving to provide uniform surface to receive new paving.

3.3 INSTALLATION

A. Subbase:
   1. Aggregate Subbase: Install as specified in Section 32 11 23 "Aggregate Base Courses."
B. Primer:
   1. Apply primer on aggregate subbase at residual rate of 0.20 to 0.30 gal/sq.yd.
   2. Use clean sand to blot excess primer.
C. Tack Coat:
   1. Apply tack coat on asphalt and concrete surfaces over subgrade surface at uniform rate.
      a. New Surfaces: 0.04 to 0.10 residual gal/sq. yd.
   2. Apply tack coat to contact surfaces of curbs, gutters and <_____>.
   3. Coat surfaces of manhole and catch basin frames with oil to prevent bond with asphalt paving. Do not tack coat these surfaces.
D. Single Course Asphalt Paving:
   1. Install Work in accordance with TxDOT Item 341.
   2. Place asphalt within 24 hours of applying primer or tack coat.
   3. Place asphalt wearing course to thickness indicated on Drawings.
   4. Compact paving by rolling to specified density. Do not displace or extrude paving from position. Hand compact in areas inaccessible to rolling equipment.
   5. Pavement to be compacted to contain between 3.8 and 8.5 percent in-place air voids.
   6. Perform rolling with consecutive passes to achieve even and smooth finish without roller marks.

3.4 TOLERANCES

A. Section 01 40 00 "Quality Requirements."
B. Flatness: Maximum variation of 1/8-inch measured with 10-foot straight edge.
C. Scheduled Compacted Thickness: Within 1/4-inch.
D. Variation from Indicated Elevation: Within 1/4-inch.

3.5 FIELD QUALITY CONTROL

A. Take samples and perform tests including mat density tests in accordance with TxDOT standards.
B. Asphalt Paving Mix Temperature: Measure temperature at time of placement.

C. Asphalt Paving Thickness: ASTM D3549; test 1 core sample from every lot, with a lot being the amount of surface laid in one day.
   1. No lot shall exceed 10,000 square yards. If a day's laying exceeds 10,000 square yards, that day's laying shall be divided into 2 approximately equal lots.
   2. For testing, each lot shall be subdivided into 4 equal sublots.
   3. One sample shall be taken from each sublot using Tex-225-F to determine a random location within the sublot.

D. Asphalt Paving Density: Tex-207-F and Tex-227-F; test 1 core sample from each sublot.
   1. In place air voids shall be between 3.8 and 8.5 percent.
   2. Pavement with in-place air voids less than 2.7 percent or greater than 9.9 percent shall be removed and replaced, at Contractor's expense.

3.6 PROTECTION

A. Section 01 70 00 "Execution and Closeout Requirements," for protecting finished Work.
B. Immediately after placement, protect paving from mechanical injury until surface temperature is less than 140 degrees F.

END OF SECTION

SECTION 32 13 13 - CONCRETE PAVING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes Concrete Paving Including the Following:
   1. Parking lots.
   2. Curbs and gutters.
   3. Walks.
B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.

1.2 DEFINITIONS

A. Cementitious Materials: Portland cement alone or in combination with one or more of blended hydraulic cement, fly ash, slag cement, and other pozzolans.
B. W/C Ratio: The ratio by weight of water to cementitious materials.

1.3 INFORMATIONAL SUBMITTALS

A. Qualification Data: For qualified ready-mix concrete manufacturer and testing agency.
B. Material Certificates: For the following, from manufacturer:
   1. Cementitious materials.
   2. Steel reinforcement and reinforcement accessories.
   3. Fiber reinforcement.
   4. Admixtures.
   5. Curing compounds.
   6. Applied finish materials.
   7. Bonding agent or epoxy adhesive.
   8. Joint fillers.
C. Material Test Reports: For each of the following:
   1. Aggregates: Include service-record data indicating absence of deleterious expansion of concrete due to alkali-aggregate reactivity.

1.4 QUALITY ASSURANCE

A. Ready-Mix-Concrete Manufacturer Qualifications: A firm experienced in manufacturing ready-mixed concrete products and that complies with ASTM C94 requirements for production facilities and equipment.
B. Testing Agency Qualifications: Qualified according to ASTM C1077 and ASTM E329 for testing indicated.
   1. Personnel conducting field tests shall be qualified as ACI Concrete Field Testing Technician, Grade 1, according to ACI CP-1 or an equivalent certification program.

1.5 PRECONSTRUCTION TESTING

A. Preconstruction Testing Service: Engage a qualified independent testing agency to perform preconstruction testing on concrete paving mixtures.

1.6 FIELD CONDITIONS

A. Traffic Control: Maintain access for vehicular and pedestrian traffic as required for other construction activities.
B. Cold-Weather Concrete Placement: Protect concrete work from physical damage or reduced strength that could be caused by frost, freezing, or low temperatures. Comply with ACI 306.1 and the following:
   1. When air temperature has fallen to or is expected to fall below 40 degrees F, uniformly heat water and aggregates before mixing to obtain a concrete mixture temperature of not less than 50 degrees F and not more than 80 degrees F at point of placement.
   2. Do not use frozen materials or materials containing ice or snow.
   3. Do not use calcium chloride, salt, or other materials containing antifreeze agents or chemical accelerators unless otherwise specified and approved in design mixtures.
C. Hot-Weather Concrete Placement: Comply with ACI 301 and as follows when hot-weather conditions exist:
   1. Cool ingredients before mixing to maintain concrete temperature below 90 deg F at time of placement. Chilled mixing water or chopped ice may be used to control temperature, provided water equivalent of ice is calculated in total amount of mixing water. Using liquid nitrogen to cool concrete is Contractor's option.
   2. Cover steel reinforcement with water-soaked burlap, so steel temperature will not exceed ambient air temperature immediately before embedding in concrete.
   3. Fog-spray forms, steel reinforcement, and subgrade just before placing concrete. Keep subgrade moisture uniform without standing water, soft spots, or dry areas.

PART 2 - PRODUCTS

2.1 CONCRETE, GENERAL

A. ACI Publications: Comply with ACI 301 unless otherwise indicated.

2.2 FORMS

A. Form Materials: Plywood, metal, metal-framed plywood, or other approved panel-type materials to provide full-depth, continuous, straight, and smooth exposed surfaces.
   1. Use flexible or uniformly curved forms for curves with a radius of 100 feet or less. Do not use notched and bent forms.
B. Form-Release Agent: Commercially formulated form-release agent that will not bond with, stain, or adversely affect concrete surfaces and that will not impair subsequent treatments of concrete surfaces.

2.3 STEEL REINFORCEMENT

A. Plain-Steel Welded-Wire Reinforcement: ASTM A1064, fabricated from as-drawn steel wire into flat sheets.
B. Deformed-Steel Welded-Wire Reinforcement: ASTM A1064, flat sheet.
C. Epoxy-Coated Welded-Wire Reinforcement: ASTM A884, Class A, plain steel.
D. Reinforcing Bars: ASTM A615, Grade 60; deformed.
E. Epoxy-Coated Reinforcing Bars: ASTM A775 or ASTM A934; with ASTM A615, Grade 60 deformed bars.
F. Steel Bar Mats: ASTM A184; with ASTM A615, Grade 60 deformed bars; assembled with clips.
G. Plain-Steel Wire: ASTM A1064, as drawn.
H. Deformed-Steel Wire: ASTM A1064.
I. Epoxy-Coated-Steel Wire: ASTM A884, Class A; coated, plain.
J. Joint Dowel Bars: ASTM A615, Grade 60 plain-steel bars. Cut bars true to length with ends square and free of burrs.
K. Epoxy-Coated, Joint Dowel Bars: ASTM A775; with ASTM A615, Grade 60 plain-steel bars.
L. Tie Bars: ASTM A615, Grade 60; deformed
M. Hook Bolts: ASTM A307, Grade A, internally and externally threaded. Design hook-bolt joint assembly to hold coupling against paving form and in position during concreting operations, and to permit removal without damage to concrete or hook bolt.
N. Bar Supports: Bolsters, chairs, spacers, and other devices for spacing, supporting, and fastening reinforcing bars, welded-wire reinforcement, and dowels in place. Manufacture bar supports according to CRSI's "Manual of Standard Practice" from steel wire, plastic, or precast concrete of greater compressive strength than concrete specified, and as follows:
    1. Equip wire bar supports with sand plates or horizontal runners where base material will not support chair legs.
    2. For epoxy-coated reinforcement, use epoxy-coated or other dielectric-polymer-coated wire bar supports.
O. Epoxy Repair Coating: Liquid, two-part, epoxy repair coating, compatible with epoxy coating on reinforcement.

2.4 CONCRETE MATERIALS

A. Cementitious Materials: Use the following cementitious materials, of same type, brand, and source throughout Project:
    1. Portland Cement: ASTM C150, gray portland cement Type I.
B. Normal-Weight Aggregates: ASTM C33, uniformly graded. Provide aggregates from a single source with documented service-record data of at least 10 years' satisfactory service in similar paving applications and service conditions using similar aggregates and cementitious materials.
    1. Coarse-Aggregates:
        a. Provide coarse aggregates graded according to the following percentages by weight passing each listed sieve size.
            1) 2-inch: 100 percent.
            2) 1-1/2-inch: 95 to 100 percent.
            3) 3/4-inch: 35 to 70 percent.
            4) 3/8-inch: 10 to 30 percent.
            5) No. 4: 0 to 5 percent.

b. The aggregate shall have a maximum loss of 18 percent when subjected to 5 cycles of the Magnesium Sulfate Soundness Test (ASTM C88).

2. Fine Aggregate: Free of materials with deleterious reactivity to alkali in cement.
   a. Provide fine aggregates acoording to the following percentages by weight passing each listed sieve size.
      1) 3/8-inch: 100 percent.
      2) No. 4: 95 to 100 percent.
      3) No. 8: 80 to 100 percent.
      4) No. 16: 50 to 85 percent.
      5) No. 30: 25 to 60 percent.
      6) No. 50: 10 to 30 percent
      7) No. 100: 2 to 10 percent.

C. Air-Entraining Admixture: ASTM C260.

D. Chemical Admixtures: Admixtures certified by manufacturer to be compatible with other admixtures and to contain not more than 0.1 percent water-soluble chloride ions by mass of cementitious material.
   1. Water-Reducing Admixture: ASTM C494, Type A.
   2. Water-Reducing and Retarding Admixture: ASTM C494, Type D.
   3. High-Range, Water-Reducing Admixture: ASTM C494, Type F.
   4. High-Range, Water-Reducing and Retarding Admixture: ASTM C494, Type G.

E. Water: Potable and complying with ASTM C94.

2.5 FIBER REINFORCEMENT

A. Synthetic Fiber: Monofilament polypropylene fibers engineered and designed for use in decorative concrete paving, complying with ASTM C1116, Type III, 1/2-inch to 1-1/2 inches long.
   1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
      a. Euclid Chemical Company (The); an RPM company; PSI Fiberstrand 100.
      b. FORTA Corporation; .
      c. Grace Construction Products; W.R. Grace & Co. -- Conn.; Grace MicroFiber.
      d. Metalcrete Industries; Polystrand 1000.
      e. Nycon, Inc.; ProCon-M.
      f. Propex; Fibermesh 150.
      g. QC Construction Products; QC FIBERS.
      h. Sika Corporation; .

2.6 CURING MATERIALS

A. Moisture-Retaining Cover: ASTM C171, polyethylene film or white burlap-polyethylene sheet.

B. Water: Potable.

C. White, Waterborne, Membrane-Forming Curing Compound: ASTM C309, Type 2, Class B, dissipating.

2.7 RELATED MATERIALS

A. Joint Fillers: ASTM D1751, asphalt-saturated cellulosic fiber or ASTM D1752, cork or self-expanding cork in preformed strips.

2.8 CONCRETE MIXTURES

A. Prepare design mixtures, proportioned according to ACI 301, for each type and strength of normal-weight concrete, and as determined by either laboratory trial mixtures or field experience.
   1. Use a qualified independent testing agency for preparing and reporting proposed concrete design mixtures for the trial batch method.
   2. When automatic machine placement is used, determine design mixtures and obtain laboratory test results that comply with or exceed requirements.

B. Cementitious Materials:**[Use fly ash, pozzolan, slag cement, and silica fume as needed to reduce the total amount of portland cement, which would otherwise be used, by not less than 40 percent.][Limit percentage, by weight, of cementitious materials other than portland cement in concrete as follows:]**

C. Limit water-soluble, chloride-ion content in hardened concrete to 0.15 percent by weight of cement.

D. Synthetic Fiber: Uniformly disperse in concrete mixture at manufacturer's recommended rate, but not less than 1.5 lb/cu. yd.

E. Concrete Mixtures:
   1. Concrete Paving:
      a. Flexural Strength (28 Days): 650 psi.
      b. W/C Ratio: As follows.
         1) 5.5 sacks of cement per cubic yard.
         2) 5.5 gallons of water per sack of cement.
      c. Slump Limit: 1 to 2-1/2 inches, 5 inches if high-range water-reducing admixture is used.
      d. Entrained Air: 5.5 percent, plus or minus 1.5 percent.
   2. Curbs & Sidewalks
      a. Compressive Strength (28 Days): 4,000 psi.
      b. Max W/C Ratio: 0.45.
      c. Slump Limit: 3 to 5 inches, plus or minus 1 inch.
      d. Entrained Air: 5.5 percent, plus or minus 1.5 percent.

2.9 CONCRETE MIXING

A. Ready-Mixed Concrete: Measure, batch, and mix concrete materials and concrete according to ASTM C94 and ASTM C1116. Furnish batch certificates for each batch discharged and used in the Work.
   1. When air temperature is between 85 and 90 degrees F, reduce mixing and delivery time from 1-1/2 hours to 75 minutes; when air temperature is above 90 degrees F, reduce mixing and delivery time to 60 minutes.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine exposed subgrades and subbase surfaces for compliance with requirements for dimensional, grading, and elevation tolerances.
B. Proof-roll prepared subbase surface below concrete paving to identify soft pockets and areas of excess yielding.
   1. Completely proof-roll subbase in one direction and repeat in perpendicular direction. Limit vehicle speed to 3 mph.
   2. Proof-roll with a pneumatic-tired and loaded, 10-wheel, tandem-axle dump truck weighing not less than 15 tons.
   3. Correct subbase with soft spots and areas of pumping or rutting exceeding depth of 1/2-inch according to requirements in Section 31 20 00 "Earth Moving."
C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Remove loose material from compacted subbase surface immediately before placing concrete.

3.3 EDGE FORMS AND SCREED CONSTRUCTION

A. Set, brace, and secure edge forms, bulkheads, and intermediate screed guides to required lines, grades, and elevations. Install forms to allow continuous progress of work and so forms can remain in place at least 24 hours after concrete placement.
B. Clean forms after each use and coat with form-release agent to ensure separation from concrete without damage.

3.4 STEEL REINFORCEMENT INSTALLATION

A. General: Comply with CRSI's "Manual of Standard Practice" for fabricating, placing, and supporting reinforcement.
B. Clean reinforcement of loose rust and mill scale, earth, ice, or other bond-reducing materials.
C. Arrange, space, and securely tie bars and bar supports to hold reinforcement in position during concrete placement. Maintain minimum cover to reinforcement.
D. Install welded-wire reinforcement in lengths as long as practicable. Lap adjoining pieces at least one full mesh, and lace splices with wire. Offset laps of adjoining widths to prevent continuous laps in either direction.
E. Epoxy-Coated Reinforcement: Use epoxy-coated steel wire ties to fasten epoxy-coated reinforcement. Repair cut and damaged epoxy coatings with epoxy repair coating according to ASTM D3963.
F. Install fabricated bar mats in lengths as long as practicable. Handle units to keep them flat and free of distortions. Straighten bends, kinks, and other irregularities, or replace units as required before placement. Set mats for a minimum 2-inch overlap of adjacent mats.

3.5 JOINTS

A. Construction Joints: Set construction joints at side and end terminations of paving and at locations where paving operations are stopped for more than one-half hour unless paving terminates at isolation joints.
   1. Continue steel reinforcement across construction joints unless otherwise indicated. Do not continue reinforcement through sides of paving strips unless otherwise indicated.
   2. Provide tie bars at sides of paving strips where indicated.
   3. Butt Joints: Use bonding agent at joint locations where fresh concrete is placed against hardened or partially hardened concrete surfaces.
   4. Doweled Joints: Install dowel bars and support assemblies at joints where indicated. Lubricate or coat with asphalt one-half of dowel length to prevent concrete bonding to one side of joint.

B. Contraction Joints: Form weakened-plane contraction joints, sectioning concrete into areas as indicated. Construct contraction joints for a depth equal to at least one-fourth of the concrete thickness, as follows, to match jointing of existing adjacent concrete paving:
   1. Sawed Joints: Form contraction joints with power saws equipped with shatterproof abrasive or diamond-rimmed blades. Cut 1/8-inch-wide joints into concrete when cutting action will not tear, abrade, or otherwise damage surface and before developing random contraction cracks.
      a. Tolerance: Ensure that sawed joints are within 3 inches either way from centers of dowels.
   2. Doweled Contraction Joints: Install dowel bars and support assemblies at joints where indicated. Lubricate or coat with asphalt one-half of dowel length to prevent concrete bonding to one side of joint.

C. Edging: After initial floating, tool edges of paving, gutters, curbs, and joints in concrete with an edging tool to a 1/4-inch radius. Repeat tooling of edges after applying surface finishes. Eliminate edging-tool marks on concrete surfaces.

3.6 CONCRETE PLACEMENT

A. Before placing concrete, inspect and complete formwork installation, steel reinforcement, and items to be embedded or cast-in.

B. Remove snow, ice, or frost from subbase surface and steel reinforcement before placing concrete. Do not place concrete on frozen surfaces.

C. Moisten subbase to provide a uniform dampened condition at time concrete is placed. Do not place concrete around manholes or other structures until they are at required finish elevation and alignment.

D. Comply with ACI 301 requirements for measuring, mixing, transporting, and placing concrete.

E. Do not add water to concrete during delivery or at Project site. Do not add water to fresh concrete after testing.

F. Deposit and spread concrete in a continuous operation between transverse joints. Do not push or drag concrete into place or use vibrators to move concrete into place.

G. Consolidate concrete according to ACI 301 by mechanical vibrating equipment supplemented by hand spading, rodding, or tamping.
   1. Consolidate concrete along face of forms and adjacent to transverse joints with an internal vibrator. Keep vibrator away from joint assemblies, reinforcement, or side forms. Use only square-faced shovels for hand spreading and consolidation. Consolidate with care to prevent dislocating joint devices.

H. Screed paving surface with a straightedge and strike off.

I. Commence initial floating using bull floats or darbies to impart an open-textured and uniform surface plane before excess moisture or bleedwater appears on the surface. Do not further disturb concrete surfaces before beginning finishing operations or spreading surface treatments.

J. Curbs and Gutters: Use design mixture for automatic machine placement. Produce curbs and gutters to required cross section, lines, grades, finish, and jointing.

K. Slip-Form Paving: Use design mixture for automatic machine placement. Produce paving to required thickness, lines, grades, finish, and jointing.
   1. Compact subbase and prepare subgrade of sufficient width to prevent displacement of slip-form paving machine during operations.

3.7 FLOAT FINISHING

A. General: Do not add water to concrete surfaces during finishing operations.

B. Float Finish: Begin the second floating operation when bleedwater sheen has disappeared and concrete surface has stiffened sufficiently to permit operations. Float surface with power-driven floats or by hand floating if area is small or inaccessible to power units. Finish surfaces to true planes. Cut down high spots and fill low spots. Refloat surface immediately to uniform granular texture.
   1. Burlap Finish: Drag a seamless strip of damp burlap across float-finished concrete, perpendicular to line of traffic, to provide a uniform, gritty texture; or
   2. Coarse-Textured Broom Finish: Provide a coarse finish by striating float-finished concrete surface 1/8-inch-deep with a stiff-bristled broom, transverse to largest dimension.

3.8 CONCRETE PROTECTION AND CURING

A. General: Protect freshly placed concrete from premature drying and excessive cold or hot temperatures.

B. Comply with ACI 306.1 for cold-weather protection.

C. Begin curing after finishing concrete but not before free water has disappeared from concrete surface.

D. Curing Methods: Cure concrete by moisture curing moisture-retaining-cover curing curing compound or a combination of these as follows:
   1. Moisture Curing: Keep surfaces continuously moist for not less than seven days with the following materials:
      a. Continuous water-fog spray.
      b. Absorptive cover, water saturated and kept continuously wet. Cover concrete surfaces and edges with 12-inch lap over adjacent absorptive covers.
   2. Moisture-Retaining-Cover Curing: Cover concrete surfaces with moisture-retaining cover, placed in widest practicable width, with sides and ends lapped at least 12 inches, and sealed by waterproof tape or adhesive. Immediately repair any holes or tears occurring during installation or curing period, using cover material and waterproof tape.

3. Curing Compound: Apply uniformly in continuous operation by power spray or roller according to manufacturer's written instructions. Recoat areas subjected to heavy rainfall within three hours after initial application. Maintain continuity of coating, and repair damage during curing period.

3.9 PAVING TOLERANCES

A. Comply with tolerances in ACI 117 and as follows:
   1. Elevation: 3/4-inch. However, all pavements shall be graded to drain. Depressions resulting in standing water over 1/8-inch-deep shall be repaired.
   2. Thickness: Plus 3/8-inch, minus 1/4-inch.
   3. Surface: Gap below 10-feet-long; unleveled straightedge not to exceed 1/8inch.
   4. Joint Spacing: 3 inches.
   5. Joint Width: Plus 1/8-inch, no minus.

3.10 FIELD QUALITY CONTROL

A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.
B. Testing Services: Testing and inspecting of composite samples of fresh concrete obtained according to ASTM C172 shall be performed according to the following requirements:
   1. Testing Frequency: Obtain at least 1 composite sample for each **[**100 cu. yd.**] [**5,000 sq. ft.**]** or fraction thereof of each concrete mixture placed each day.
      a. When frequency of testing will provide fewer than five compressive-strength tests for each concrete mixture, testing shall be conducted from at least five randomly selected batches or from each batch if fewer than five are used.
   2. Flexural Strength Testing: ASTM C78.
      a. For concrete pavement, flexural strength testing will be performed on a lot basis. A lot will consist of each day's production.
      b. Two sets of 4 beams will be made for each lot, molded in accordance with ASTM C31. Random samples will be taken from the plastic concrete at the site in accordance with accepted statistical procedures.
   3. Slump: ASTM C143; 1 test at point of placement for each composite sample, but not less than 1 test for each day's pour of each concrete mixture. Perform additional tests when concrete consistency appears to change.
   4. Air Content: ASTM C231, pressure method; 1 test for each composite sample, but not less than 1 test for each day's pour of each concrete mixture.
   5. Concrete Temperature: ASTM C1064; 1 test hourly when air temperature is 40 degrees F and below and when it is 80 degrees F and above, and 1 test for each composite sample.
   6. Compression Test Specimens: ASTM C31; cast and laboratory cure 1 set of 3 standard cylinder specimens for each composite sample.
   7. Compressive-Strength Tests: ASTM C39; test 1 specimen at seven days and 2 specimens at 28 days.
      a. A compressive-strength test shall be the average compressive strength from two specimens obtained from same composite sample and tested at 28 days.
C. Strength of the pavement concrete mixture will be satisfactory if the average of the flexural strength tests meets or exceeds the specified flexural strength.

D. Strength of the curb/sidewalk concrete mixture will be satisfactory if average of any three consecutive compressive-strength tests equals or exceeds specified compressive strength and no compressive-strength test value falls below specified compressive strength by more than 500 psi.

E. Test results shall be reported in writing to Architect, concrete manufacturer, and Contractor within 48 hours of testing. Reports of compressivestrength and flexural strength tests shall contain Project identification name and number, date of concrete placement, name of concrete testing and inspecting agency, location of concrete batch in Work, design strength at 28 days, concrete mixture proportions and materials, breaking strength, and type of break for both 7- and 28-day tests.

F. Nondestructive Testing: Impact hammer, sonoscope, or other nondestructive device may be permitted by Architect but will not be used as sole basis for approval or rejection of concrete.

G. Additional Tests: Testing and inspecting agency shall make additional tests of concrete when test results indicate that slump, air entrainment, compressive strengths, or other requirements have not been met, as directed by Architect.

H. Concrete paving will be considered defective if it does not pass tests and inspections.

I. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

J. Prepare test and inspection reports.

3.11 REPAIR AND PROTECTION

A. Remove and replace concrete paving that is broken, damaged, or defective or that does not comply with requirements in this Section. Remove work in complete sections from joint to joint unless otherwise approved by Architect.

B. Drill test cores, where directed by Architect, when necessary to determine magnitude of cracks or defective areas. Fill drilled core holes in satisfactory paving areas with portland cement concrete bonded to paving with epoxy adhesive.

C. Protect concrete paving from damage. Exclude traffic from paving for at least 14 days after placement. When construction traffic is permitted, maintain paving as clean as possible by removing surface stains and spillage of materials as they occur.

D. Maintain concrete paving free of stains, discoloration, dirt, and other foreign material. Sweep paving not more than two days before date scheduled for Substantial Completion inspections.

END OF SECTION

SECTION 32 18 13 - SYNTHETIC GRASS SURFACING

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes synthetic grass surfacing.
B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.
   2. Section 31 20 00 "Earth Moving" for preparation, compaction, and grading of granular base.

1.2 ACTION SUBMITTALS

A. Product Data: For each size of pet relief station.
B. Shop Drawings: For synthetic grass surfacing.
   1. Include sections and details.
   2. Show locations of seams and method of seaming.
   3. Show locations of trench drain, and flushing system piping.
   4. Show location of nailer board, concrete anchor, and aluminum tack strip.

1.3 QUALITY ASSURANCE

A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer.

1.4 DELIVERY, STORAGE, AND HANDLING

A. Store materials in location and manner to allow installation of synthetic grass surfacing without excess disturbance of granular base.

1.5 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace synthetic grass surfacing that fails in materials or workmanship within specified warranty period.
   1. Failures include, but are not limited to, the following:
      a. Deterioration and excessive wear.
      b. Deterioration from UV light.
      c. Excessive loss of shock attenuation.
      d. Seam separation, including game lines and markings.
   2. Warranty Period: 10 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 SYNTHETIC GRASS SURFACING

A. Synthetic Grass Surfacing: Complete surfacing system, consisting of synthetic yarns bound to water-permeable backing and infill indicated, suitable for indoor pet relief areas.
   1. PManufacturers: Provide as indicated on drawings:
      a. K9Grass by Forever Lawn
         1) Model: Classic
         2) Installation: Over K9Grass Flushing System and Air Grid.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine base and other conditions, with installer present, for compliance with requirements for installation tolerances, permeability, and other conditions affecting performance of the Work.
B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Contact local dealer for installation. Avoid disturbance of base during installation of shock-attenuation pad and turf fabric.
B. Shock-Attenuation Pad Installation: Roll out pad and allow to relax a minimum of 6 hours prior to final fit and trim. Stagger head seams between adjacent rows. Fit seams snugly without stretching or forcing.
C. Provide seams flat and snug, with no gaps or fraying. Remove yarns that are trapped within seams. Attach turf fabric to perimeter restraint system as recommended by the manufacturer.
D. Install inlaid game lines and markings by cutting through turf fabric and installing snugly fitting game line turf fabric. Provide seaming tape that extends minimum 6 inches beyond seam.
E. Repair loose seams and bubbles formed due to expansion of turf fabric prior to installation of infill.
F. Evenly broadcast and groom infill by machine in proportions and depth after settling as recommended by the manufacturer, and to meet indicated performance requirements. Rake fibers trapped by infill to surface.

3.3 DEMONSTRATION

A. Train Owner's maintenance personnel in proper maintenance procedures for synthetic grass surfacing.

END OF SECTION

SECTION 32 33 00 - SITE FURNISHINGS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
1. Seating
2. Vinyl Gates

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

1.3 INFORMATIONAL SUBMITTALS

A. Material Certificates: For site furnishings manufactured with preservative-treated wood.

1.4 CLOSEOUT SUBMITTALS

A. Maintenance Data: For site furnishings to include in maintenance manuals.

1.5 MAINTENANCE MATERIAL SUBMITTALS

PART 2 - PRODUCTS

2.1 SEATING

A. Products: Subject to compliance with requirements, provide the following:
1. Manufacterer: Robinson Steel Company, Norristown, Pennsylvania.
2. Product Name: ADA Plastic Wall Mounted Locker Room Bench.
3. Color: Grey - Stock.
4. SKU: ADAWMB-P.

2.2 VINYL GATES

A. Products: Subject to compliance with requirements, provide 1 of the following:
1. Manufacterer: Superior Plastic 1296 West 2550 South Ogden, Utah 84401.
2. Product Name: Vinyl Fencing, Picket Fence.
3. Style: Classic.
4. Color: White.
5. Product Type: Gate and hardware for installation.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas and conditions, with installer present, for compliance with requirements for correct and level finished grade, mounting surfaces, installation tolerances, and other conditions affecting performance of the Work.
B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Comply with manufacturer's written installation instructions unless more stringent requirements are indicated. Complete field assembly of site furnishings where required.
B. Install site furnishings level, plumb, true, and securely anchored at locations indicated on Drawings.

END OF SECTION

SECTION 32 84 00 - PLANTING IRRIGATION

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Piping.
   2. Manual valves.
   3. Automatic control valves.
   4. Transition fittings.
   5. Dielectric fittings.
   6. Miscellaneous piping specialties.
   7. Sprinklers.
   8. Quick couplers.
   9. Drip irrigation specialties.
   10. Controllers.
   11. Boxes for automatic control valves.

B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.

1.2 DEFINITIONS

A. Lateral Piping: Downstream from control valves to sprinklers, specialties, and drain valves. Piping is under pressure during flow.

B. Drain Piping: Downstream from circuit-piping drain valves. Piping is not under pressure.

C. Main Piping: Downstream from point of connection to water distribution piping to, and including, control valves. Piping is under water-distribution-system pressure.

D. Low Voltage: As defined in NFPA 70 for circuits and equipment operating at less than 50 V or for remote-control, signaling power-limited circuits.

1.3 PERFORMANCE REQUIREMENTS

A. Irrigation zone control shall be automatic operation with controller and automatic control valves.

B. Location of Sprinklers and Specialties: Design location is approximate. Make minor adjustments necessary to avoid plantings and obstructions such as signs and light standards. Maintain 100 percent irrigation coverage of areas indicated.

C. Minimum Working Pressures: The following are minimum pressure requirements for piping, valves, and specialties unless otherwise indicated:
   1. Irrigation Main Piping: 200 psig.
   2. Circuit Piping: 200 psi.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product indicated. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.

B. Wiring Diagrams: For power, signal, and control wiring.

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For qualified Installer.
B. Zoning Chart: Show each irrigation zone and its control valve.
C. Controller Timing Schedule: Indicate timing settings for each automatic controller zone.
D. Field quality-control reports.

1.6 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For sprinklers controllers and automatic control valves to include in operation and maintenance manuals.

1.7 QUALITY ASSURANCE

A. Installer Qualifications: An employer of workers that include a Licensed Irrigator by the State of Texas.
B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Deliver piping with factory-applied end caps. Maintain end caps through shipping, storage, and handling to prevent pipe-end damage and to prevent entrance of dirt, debris, and moisture.
B. Store plastic piping protected from direct sunlight. Support to prevent sagging and bending.

1.9 PROJECT CONDITIONS

A. Interruption of Existing Water Service: Do not interrupt water service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary water service according to requirements indicated:
   1. Notify Owner no fewer than two days in advance of proposed interruption of water service.
   2. Do not proceed with interruption of water service without Owner's written permission.

PART 2 - PRODUCTS

2.1 PIPES, TUBES, AND FITTINGS

A. Comply with requirements in the piping schedule for applications of pipe, tube, and fitting materials, and for joining methods for specific services, service locations, and pipe sizes.
B. Ductile-Iron Pipe with Mechanical Joints: AWWA C151, with mechanical-joint bell and spigot ends.
   1. Mechanical-Joint, Ductile-Iron Fittings: AWWA C110, ductile- or gray-iron standard pattern or AWWA C153, ductile-iron compact pattern.
      a. Glands, Gaskets, and Bolts: AWWA C111, ductile- or gray-iron glands, rubber gaskets, and steel bolts.

C. PVC Pipe: ASTM D1785, PVC 1120 compound, Schedules 40 and 80.
   1. PVC Socket Fittings: ASTM D2466, Schedules 40 and 80.
   2. PVC Threaded Fittings: ASTM D2464, Schedule 80.
   3. PVC Socket Unions: Construction similar to MSS SP-107, except both headpiece and tailpiece shall be PVC with socket ends.

D. PVC Pipe, Pressure Rated: ASTM D2241, PVC 1120 compound, SDR 21.
   1. PVC Socket Fittings: ASTM D2467, Schedule 80.
   2. PVC Socket Unions: Construction similar to MSS SP-107, except both headpiece and tailpiece shall be PVC with socket or threaded ends.

2.2 PIPING JOINING MATERIALS

A. Pipe-Flange Gasket Materials: AWWA C110, rubber, flat face, 1/8-inch-thick unless otherwise indicated; full-face or ring type unless otherwise indicated.

B. Metal, Pipe-Flange Bolts and Nuts: ASME B18.2.1, carbon steel unless otherwise indicated.

C. Solvent Cements for Joining PVC Piping: ASTM D2564. Include primer according to ASTM F656.

D. Plastic, Pipe-Flange Gasket, Bolts, and Nuts: Type and material recommended by piping system manufacturer unless otherwise indicated.

2.3 MANUAL VALVES

A. Bronze Ball Valves:
   1. Description:
      a. Standard: MSS SP-110.
      b. SWP Rating: 150 psi.
      c. CWP Rating: 600 psi.
      d. Body Design: Two piece.
      e. Body Material: Bronze.
      f. Ends: Threaded or solder joint if indicated.
      g. Seats: PTFE or TFE.
      h. Stem: Bronze.
      i. Ball: Chrome-plated brass.
      j. Port: Full.

B. Plastic Ball Valves:
   1. Description:
      a. Standard: MSS SP-122.
      b. Pressure Rating: 150 psi.
      c. Body Material: PVC.
      d. Type: Union.
      e. End Connections: Socket or threaded.
      f. Port: Full.

C. Bronze Gate Valves:
   1. Description:
      a. Standard: MSS SP-80, Type 2.
      b. Class: 125.
      c. CWP Rating: 200 psi.
      d. Body Material: ASTM B 62 bronze with integral seat and screw-in bonnet.
      e. Ends: Threaded or solder joint.
      f. Stem: Bronze, nonrising.
      g. Disc: Solid wedge; bronze.
      h. Packing: Asbestos free.
      i. Handwheel: Malleable iron, bronze, or aluminum.

2.4 AUTOMATIC CONTROL VALVES

A. Plastic, Automatic Control Valves:
   1. Rainbird XCZ-PRB-100-COM, 120 mesh filter, drip control zone values.
   2. Description: Molded-plastic body, normally closed, diaphragm type with manual-flow adjustment, and operated by 24-V ac solenoid.

2.5 TRANSITION FITTINGS

A. General Requirements: Same size as, and with pressure rating at least equal to and with ends compatible with, piping to be joined.
B. Plastic-to-Metal Transition Fittings:
   1. Description: PVC one-piece fitting with manufacturer's Schedule 80 equivalent dimensions; one end with threaded brass insert, and one solvent-cement-socket or threaded end.

2.6 DIELECTRIC FITTINGS

A. General Requirements: Assembly of copper alloy and ferrous materials or ferrous material body with separating nonconductive insulating material suitable for system fluid, pressure, and temperature.

2.7 MISCELLANEOUS PIPING SPECIALTIES

A. Pressure Gages: ASME B40.1. Include 4-1/2-inch- diameter dial, dial range of two times system operating pressure, and bottom outlet. Install downstream of backflow prevention.

2.8 SPRINKLERS

A. Not Used.

2.9 DRIP IRRIGATION SPECIALTIES

A. Rainbird XFS-09-12-NP:
B. Drip Tubes with Integral Emitters:
   1. Tubing: Flexible PE.
   2. Emitters: Devices to deliver water at approximately 40 psi.
      a. Body Material: PE, with flow control and check valve.
      b. Mounting: Integral with tubing at set intervals.

3. Capacities and Characteristics:
   a. Tubing Size: 17 mm.
   b. Emitter Spacing: 12 inches.
   c. Emitter Flow: 0.9 GPH.

C. Application Pressure Regulators: Plastic housing, with corrosion-resistant internal parts; capable of controlling outlet pressure to approximately 40 psi.
D. Filter Units: Plastic housing, with corrosion-resistant internal parts; of size and capacity required for devices downstream from unit.
E. Air Relief Valves: Brass or plastic housing, with corrosion-resistant internal parts.
F. Vacuum Relief Valves: Brass or plastic housing, with corrosion-resistant internal parts.
G. Steel Ground Stakes: Install as per manufacturer's specifications.

2.10 CONTROLLERS

A. Utilize existing controllers on-site as indicated on the Drawings.

2.11 BOXES FOR AUTOMATIC CONTROL VALVES

A. Plastic Boxes:
   1. Description: Box and cover, with open bottom and openings for piping; designed for installing flush with grade.
      a. Size: As required for valves and service.
      b. Shape: Rectangular.
      c. Sidewall Material: PE.
      d. Cover Material: PE.
         1) Lettering: "IRRIGATION."
B. Drainage Backfill: Cleaned gravel or crushed stone, graded from 3/4-inch minimum to 3 inches maximum.

PART 3 - EXECUTION

3.1 EARTHWORK

A. Excavating, trenching, and backfilling are specified in Section 31 23 16.13 "Trenching."
B. Install warning tape directly above pressure piping, 12 inches below finished grades, except 6 inches below subgrade under pavement and slabs.
C. Provide minimum cover over top of underground piping according to the following:
   1. Irrigation Main Piping: Minimum depth of 18 inches below finished grade, or not less than 18 inches below average local frost depth, whichever is deeper.
   2. Lateral Piping: 12 inches.
   3. Drain Piping: 12 inches.
   4. Sleeves: 18 inches.

3.2 PREPARATION

A. Set stakes to identify locations of proposed irrigation system. Obtain Architect's approval before excavation.

3.3 PIPING INSTALLATION

A. Location and Arrangement: Drawings indicate location and arrangement of piping systems. Install piping as indicated unless deviations are approved on Coordination Drawings.
B. Install piping free of sags and bends.
C. Install groups of pipes parallel to each other, spaced to permit valve servicing.
D. Install fittings for changes in direction and branch connections.
E. Install unions adjacent to valves and to final connections to other components with NPS 2 or smaller pipe connection.
F. Install flanges adjacent to valves and to final connections to other components with NPS 2-1/2 or larger pipe connection.
G. Lay piping on solid subbase, uniformly sloped without humps or depressions.
H. Install ductile-iron piping according to AWWA C600.
I. Install PVC piping in dry weather when temperature is above 40 degrees F. Allow joints to cure at least 24 hours at temperatures above 40 degrees F before testing.
J. Install piping in sleeves under parking lots, roadways, and sidewalks.
K. Install sleeves made of Schedule 40 PVC pipe and socket fittings, and solvent-cemented joints.
L. Install transition fittings for plastic-to-metal pipe connections according to the following:
    1. Underground Piping:
        a. NPS 1-1/2 and Smaller: Plastic-to-metal transition fittings.
        b. NPS 2 and Larger: AWWA transition couplings.
    2. Aboveground Piping:
        a. NPS 2 and Smaller: Plastic-to-metal transition fittings.
        b. NPS 2 and Larger: Use dielectric flange kits with one plastic flange.
M. Install dielectric fittings for dissimilar-metal pipe connections according to the following:
    1. Underground Piping:
        a. NPS 2 and Smaller: Dielectric coupling or dielectric nipple.
        b. NPS 2-1/2 and Larger: Prohibited except in control-valve box.
    2. Aboveground Piping:
        a. NPS 2 and Smaller: Dielectric union.
        b. NPS 2-1/2 to NPS 4: Dielectric flange.
        c. NPS 5 and Larger: Dielectric flange kit.
    3. Piping in Control-Valve Boxes:
        a. NPS 2 and Smaller: Dielectric union.
        b. NPS 2-1/2 to NPS 4: Dielectric flange.
        c. NPS 5 and Larger: Dielectric flange kit.

3.4 JOINT CONSTRUCTION

A. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.
B. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.
C. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:
    1. Apply appropriate tape or thread compound to external pipe threads unless dry seal threading is specified.
    2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.

D. Flanged Joints: Select rubber gasket material, size, type, and thickness for service application. Install gasket concentrically positioned. Use suitable lubricants on bolt threads.
E. Ductile-Iron Piping Gasketed Joints: Comply with AWWA C600 and AWWA M41.
F. Copper-Tubing Brazed Joints: Construct joints according to CDA's "Copper Tube Handbook," using copper-phosphorus brazing filler metal.
G. Copper-Tubing Soldered Joints: Apply ASTM B813 water-flushable flux to tube end unless otherwise indicated. Construct joints according to ASTM B828 or CDA's "Copper Tube Handbook," using lead-free solder alloy (0.20 percent maximum lead content) complying with ASTM B32.
H. PVC Piping Solvent-Cemented Joints: Clean and dry joining surfaces. Join pipe and fittings according to the following:
    1. Comply with ASTM F402 for safe-handling practice of cleaners, primers, and solvent cements.
    2. PVC Pressure Piping: Join schedule number, ASTM D1785, PVC pipe and PVC socket fittings according to ASTM D2672. Join other-than-schedule-number PVC pipe and socket fittings according to ASTM D2855.
    3. PVC Nonpressure Piping: Join according to ASTM D2855.

3.5 VALVE INSTALLATION

A. Underground Gate Valves, Resilient Seat: Comply with AWWA C600 and AWWA M44. Install in valve casing with top flush with grade.
    1. Install valves and PVC pipe with restrained, gasketed joints.
B. Aboveground Valves: Install as components of connected piping system.

3.6 SPRINKLER INSTALLATION

A. Install sprinklers after hydrostatic test is completed.
B. Install sprinklers at manufacturer's recommended heights.
C. Locate part-circle sprinklers to maintain a minimum distance of 4 inches from walls and 2 inches from other boundaries unless otherwise indicated.

3.7 DRIP IRRIGATION SPECIALTY INSTALLATION

A. Install drip tubes with integral emitters on ground below mulch and weed barrier fabric.
B. Install application pressure regulators and filter units in control-valve boxes.
C. Install air relief valves in piping, and in control-valve boxes.

3.8 AUTOMATIC IRRIGATION-CONTROL SYSTEM INSTALLATION

A. Equipment Mounting: Install interior controllers on wall.
    1. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
    2. Install anchor bolts to elevations required for proper attachment to supported equipment.
B. Equipment Mounting: Install exterior freestanding controllers on precast concrete bases.
    1. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
    2. Install anchor bolts to elevations required for proper attachment to supported equipment.

C. Install control cable in same trench as irrigation piping and at least 2 inches below piping. Provide conductors of size not smaller than recommended by controller manufacturer. Install cable in separate sleeve under paved areas.

3.9 CONNECTIONS

A. Comply with requirements for piping for water supply from exterior water service piping, water meters, protective enclosures, and backflow preventers. Drawings indicate general arrangement of piping, fitting and special ties.
B. Install piping adjacent to equipment, valves, and devices to allow service and maintenance.
C. Connect wiring between controllers and automatic control valves.

3.10 IDENTIFICATION

A. Equipment Nameplates and Signs: Install engraved plastic-laminate equipment nameplates and signs on each automatic controller.
   1. Text: In addition to identifying unit, distinguish between multiple units, inform operator of operational requirements, indicate safety and emergency precautions, and warn of hazards and improper operations.
B. Warning Tapes: Arrange for installation of continuous, underground, detectable warning tapes over underground piping during backfilling of trenches.

3.11 FIELD QUALITY CONTROL

A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections.
B. Perform tests and inspections.
   1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.
C. Tests and Inspections:
   1. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
   2. Operational Test: After electrical circuitry has been energized, operate controllers and automatic control valves to confirm proper system operation.
   3. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
D. Any irrigation product will be considered defective if it does not pass tests and inspections.
E. Prepare test and inspection reports.

3.12 STARTUP SERVICE

A. Perform startup service.
   1. Complete installation and startup checks according to manufacturer's written instructions.
   2. Verify that controllers are installed and connected according to the Contract Documents.
   3. Verify that electrical wiring installation complies with manufacturer's submittal.

3.13 ADJUSTING

A. Adjust settings of controllers.
B. Adjust automatic control valves to provide flow rate at rated operating pressure required for each sprinkler circuit.
C. Adjust sprinklers and devices, except those intended to be mounted aboveground, so they will be flush with, or not more than 1/2-inch above, finish grade.

3.14 CLEANING

A. Flush dirt and debris from piping before installing sprinklers and other devices.

3.15 DEMONSTRATION

A. Train Owner's maintenance personnel to adjust, operate, and maintain automatic control valves and controllers.

3.16 PIPING SCHEDULE

A. Install components having pressure rating equal to or greater than system operating pressure.
B. Piping in control-valve boxes and aboveground may be joined with flanges or unions instead of joints indicated.
C. Underground irrigation main piping, NPS 4 and smaller, shall be the following:
   1. Schedule 40, PVC pipe and socket fittings, and solvent-cemented joints.
D. Underground irrigation main piping, NPS 5 and larger, shall be the following:
   1. SDR 21, PVC, pressure-rated pipe; Schedule 80, PVC socket fittings; and solvent-cemented joints.
E. Lateral piping, NPS 2 shall be the following:
   1. Schedule 40, PVC pipe and socket fittings; and solvent-cemented joints.
F. Lateral piping, NPS 2-1/2 to NPS 4, shall be the following:
   1. Schedule 40, PVC pipe and socket fittings; and solvent-cemented joints.
G. Underground Branches and Offsets at Sprinklers and Devices:
   1. Flex Nipples: Plastic assemblies, with offsets for flexible joints, manufactured for this application.

3.17 VALVE SCHEDULE

A. Underground, Shutoff-Duty Valves: Use the following:
   1. NPS 2 and Smaller: PVC Ball Valve.
   2. NPS 3 and Larger: Iron gate valve, resilient seated; iron gate valve casing; and operating wrench(es).

3.18 FINAL ACCEPTANCE

A. When Contractor is satisfied that the system is operating properly, that it is balanced and adjusted, and that all work and clean-up is completed, he shall issue notice of completion to Owner's Representative requesting a final inspection. Owner's Representative will respond to the notice of completion by Contractor and shall appear with Owner for an inspection of the Project. At that time, Contractor shall demonstrate the operation of each system in its entirety. In judging the Work, no allowance for deviation from the original Drawings and Specifications will be made unless prior approval has been obtained.

B. Any inconsistency to the Specifications or the Drawings shall be noted by Owner's Representative and a written copy of required corrections shall be given to Contractor.

3.19 SYSTEM MAINTENANCE AND GUARANTEE

A. Maintenance of the irrigation system shall begin immediately following the installation of the system and shall continue until the entire Project is accepted. Maintenance shall include repair of defects or damages, and adjustments and fine tuning of the system, and repairs of damages resulting from vandalism, erosion, weather, and the like.

B. For a period of one year from Final Acceptance of the system, Contractor shall promptly furnish and install, without cost to Owner, any and all parts or materials which prove defective in material or workmanship. Damage due to irrigation system line breaks shall be repaired and brought to original condition by Contractor at no expense to Owner.

C. In the fall, at Owner's request, Contractor shall drain the system, and otherwise prepare the system for winter. In the spring, at Owner's request, Contractor will reactivate the system, repair any defects or damage, and adjust the system. As these services are performed, Contractor shall instruct Owner.

D. For a period of one year from final acceptance of the system, Contractor shall repair any settlement of trenches by one of the following methods as directed by Owner's Representative:
   1. Bring to grade by top-dressing (raking topsoil into the planting bed).
   2. Bring to grade with topsoil.
   3. Remove existing plant material, fill depression with topsoil, and replace with new plant material to match original plantings.
   4. Repair by any of the above methods shall result in a smooth, level area. Maintenance of repaired areas shall be the responsibility of Owner.

END OF SECTION

PART 1 - SECTION 32 91 15 - SOIL PREPARATION (PERFORMANCE SPECIFICATION) GENERAL

1.1 SUMMARY

A. Section includes planting soils specified according to performance requirements of the mixes.
B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.
   2. Section 31 10 00 "Site Clearing" for topsoil stripping and stockpiling.
   3. Section 32 93 00 "Plants" for placing planting soil for plantings.

1.2 DEFINITIONS

A. AAPFCO: Association of American Plant Food Control Officials.
B. Backfill: The earth used to replace or the act of replacing earth in an excavation. This can be amended or unamended soil as indicated.
C. CEC: Cation exchange capacity.
D. Compost: The product resulting from the controlled biological decomposition of organic material that has been sanitized through the generation of heat and stabilized to the point that it is beneficial to plant growth.
E. Duff Layer: A surface layer of soil, typical of forested areas, that is composed of mostly decayed leaves, twigs, and detritus.
F. Imported Soil: Soil that is transported to Project Site for use.
G. Layered Soil Assembly: A designed series of planting soils, layered on each other, that together produce an environment for plant growth.
H. Manufactured Soil: Soil produced by blending soils, sand, stabilized organic soil amendments, and other materials to produce planting soil.
I. NAPT: North American Proficiency Testing Program. An SSSA program to assist soil-, plant-, and water-testing laboratories through interlaboratory sample exchanges and statistical evaluation of analytical data.
J. Organic Matter: The total of organic materials in soil exclusive of undecayed plant and animal tissues, their partial decomposition products, and the soil biomass; also called "humus" or "soil organic matter."
K. Planting Soil: Existing, on-site soil; imported soil; or manufactured soil that has been modified as specified with soil amendments and perhaps fertilizers to produce a soil mixture best for plant growth.
L. RCRA Metals: Hazardous metals identified by the EPA under the Resource Conservation and Recovery Act.
M. SSSA: Soil Science Society of America.
N. Subgrade: Surface or elevation of subsoil remaining after excavation is complete, or the top surface of a fill or backfill before planting soil is placed.
O. Subsoil: Soil beneath the level of subgrade; soil beneath the topsoil layers of a naturally occurring soil profile, typified by less than 1 percent organic matter and few soil organisms.

P. Surface Soil: Soil that is present at the top layer of the existing soil profile. In undisturbed areas, surface soil is typically called "topsoil"; but in disturbed areas such as urban environments, the surface soil can be subsoil.
Q. USCC: U.S. Composting Council.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project Site.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.
   1. Include recommendations for application and use.
   2. Include test data substantiating that products comply with requirements.
   3. Include sieve analyses for aggregate materials.
   4. Material Certificates: For each type of imported soil, soil amendment, and fertilizer before delivery to the site, according to the following:
      a. Manufacturer's qualified testing agency's certified analysis of standard products.
      b. Analysis of fertilizers, by a qualified testing agency, made according to AAPFCO methods for testing and labeling and according to AAPFCO's SUIP #25.
      c. Analysis of nonstandard materials, by a qualified testing agency, made according to SSSA methods, where applicable.
B. Samples: For each bulk-supplied material, 1-quart volume of each in sealed containers labeled with content, source, and date obtained. Each Sample shall be typical of the lot of material to be furnished; provide an accurate representation of composition, color, and texture.

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For each testing agency.
B. Preconstruction Test Reports: For preconstruction soil nalyses specified in "Preconstruction Testing" Article.
C. Field quality-control reports.

1.6 QUALITY ASSURANCE

A. Testing Agency Qualifications: An independent, state-operated, or university-operated laboratory; experienced in soil science, soil testing, and plant nutrition; with the experience and capability to conduct the testing indicated; and that specializes in types of tests to be performed.
   1. Laboratories: Subject to compliance with requirements, provide testing by one of the following:
      a. A & L Plains Agricultural Laboratories, Lubbock, Texas 79408-1590, 806.763.4278.
      b. Texas A&M Soil, Water and Forage Testing Laboratory, College Station, Texas 77843-2478, 979.845.4816.
   2. Multiple Laboratories: At Contractor's option, Work may be divided among qualified testing laboratories specializing in physical testing, chemical testing, and fertility testing.

1.7 PRECONSTRUCTION TESTING

A. Preconstruction Testing Service: Engage a qualified testing agency to perform preconstruction soil analyses on existing, on-site soil, and any imported soil required.
   1. Notify Architect 7 days in advance of the dates and times when laboratory samples will be taken.
B. Preconstruction Soil Analyses: For each unamended soil type, perform testing on soil samples and furnish soil analysis and a written report containing soil-amendment and fertilizer recommendations by a qualified testing agency performing the testing according to "Soil-Sampling Requirements" and "Testing Requirements" articles.
   1. Have testing agency identify and label samples and test reports according to sample collection and labeling requirements.

1.8 SOIL-SAMPLING REQUIREMENTS

A. General: Extract soil samples according to requirements in this article.
B. Sample Collection and Labeling: Have samples taken and labeled by Contractor in presence of Architect or state-certified, -licensed, or -registered soil scientist under the direction of the testing agency.
   1. Number and Location of Samples: Minimum of three representative soil samples from varied locations for each soil to be used or amended for landscaping purposes.
   2. Procedures and Depth of Samples: According to USDA-NRCS's "Field Book for Describing and Sampling Soils."
   3. Division of Samples: Split each sample into 2, equal parts. Send half to the testing agency and half to Owner for its records.
   4. Labeling: Label each sample with the date, location keyed to a Site Plan or other location system, visible soil condition, and sampling depth.

1.9 TESTING REQUIREMENTS

A. General: Perform tests on soil samples according to requirements in this article.
B. Physical Testing:
   1. Soil Texture: Soil-particle, size-distribution analysis by one of the following methods according to SSSA's "Methods of Soil Analysis - Part 1-Physical and Mineralogical Methods":
      a. Sieving Method: Report sand-gradation percentages for very coarse, coarse, medium, fine, and very fine sand; and fragment-gradation (gravel) percentages for fine, medium, and coarse fragments; according to USDA sand and fragment sizes.
      b. Hydrometer Method: Report percentages of sand, silt, and clay.
   2. Bulk Density: Analysis according to core method of SSSA's "Methods of Soil Analysis - Part 1-Physical and Mineralogical Methods."
   3. Total Porosity: Calculate using particle density and bulk density according to SSSA's "Methods of Soil Analysis - Part 1-Physical and Mineralogical Methods."
   4. Water Retention: According to SSSA's "Methods of Soil Analysis - Part 1-Physical and Mineralogical Methods."
   5. Saturated Hydraulic Conductivity: According to SSSA's "Methods of Soil Analysis - Part 1-Physical and Mineralogical Methods"; at 85 percent compaction according to ASTM D698 (Standard Proctor).

C. Chemical Testing:
   1. CEC: Analysis by sodium saturation at pH 7 according to SSSA's "Methods of Soil Analysis - Part 3- Chemical Methods."
   2. Clay Mineralogy: Analysis and estimated percentage of expandable clay minerals using CEC by ammonium saturation at pH 7 according to SSSA's "Methods of Soil Analysis - Part 1-Physical and Mineralogical Methods."
   3. Metals Hazardous to Human Health: Test for presence and quantities of RCRA metals including aluminum, arsenic, barium, copper, cadmium, chromium, cobalt, lead, lithium, and vanadium. If RCRA metals are present, include recommendations for corrective action.
   4. Phytotoxicity: Test for plant-available concentrations of phytotoxic minerals including aluminum, arsenic, barium, cadmium, chlorides, chromium, cobalt, copper, lead, lithium, mercury, nickel, selenium, silver, sodium, strontium, tin, titanium, vanadium, and zinc.

D. Fertility Testing: Soil fertility analysis according to standard laboratory protocol of SSSA NAPT SERA-6, including the following:
   1. Percentage of organic matter.
   2. CEC, calcium percent of CEC, and magnesium percent of CEC.
   3. Soil reaction (acidity/alkalinity pH value).
   4. Buffered acidity or alkalinity.
   5. Nitrogen parts per million.
   6. Phosphorous parts per million.
   7. Potassium parts per million.
   8. Manganese parts per million.
   9. Manganese-availability parts per million.
   10. Zinc parts per million.
   11. Zinc availability parts per million.
   12. Copper parts per million.
   13. Sodium parts per million and sodium absorption ratio.
   14. Soluble-salts parts per million.
   15. Presence and quantities of problem materials including salts and metals cited in the Standard protocol. If such problem materials are present, provide additional recommendations for corrective action.
   16. Other deleterious materials, including their characteristics and content of each.

E. Organic-Matter Content: Analysis using loss-by-ignition method according to SSSA's "Methods of Soil Analysis - Part 3-Chemical Methods."

F. Recommendations: Based on the test results, state recommendations for soil treatments and soil amendments to be incorporated to produce satisfactory planting soil suitable for healthy, viable plants indicated. Include, at a minimum, recommendations for nitrogen, phosphorous, and potassium fertilization, and for micronutrients.
   1. Fertilizers and Soil Amendment Rates: State recommendations in weight per 1,000 square feet for 6-inch depth of soil.
   2. Soil Reaction: State the recommended liming rates for raising pH or sulfur for lowering pH according to the buffered acidity or buffered alkalinity in weight per 1,000 square feet for 6-inch depth of soil.

1.10 DELIVERY, STORAGE, AND HANDLING

A. Packaged Materials: Deliver packaged materials in original, unopened containers showing weight, certified analysis, name and address of manufacturer, and compliance with state and federal laws if applicable.
B. Bulk Materials:
   1. Do not dump or store bulk materials near structures, utilities, walkways and pavements, or on existing turf areas or plants.
   2. Provide erosion-control measures to prevent erosion or displacement of bulk materials, discharge of soil-bearing water runoff, and airborne dust reaching adjacent properties, water conveyance systems, or walkways.
   3. Do not move or handle materials when they are wet or frozen.
   4. Accompany each delivery of bulk fertilizers and soil amendments with appropriate certificates.

PART 2 - PRODUCTS

2.1 PLANTING SOILS SPECIFIED ACCORDING TO PERFORMANCE REQUIREMENTS

A. Planting-Soil Type (Existing Topsoil on Site Harvested and Stockpiled during Site Clearing/Grading Operations): Existing, on-site surface soil, with the duff layer, if any, retained; and stockpiled on-site; modified to produce viable planting soil. Using preconstruction soil analyses and materials specified in other articles of this Section, amend existing, on-site surface soil to become planting soil complying with the following requirements:
   1. Soil Reaction: pH of 6 to 7.
   2. Soluble-Salt Content: 5 to 10 dS/m measured by electrical conductivity.

2.2 INORGANIC SOIL AMENDMENTS

A. Lime: ASTM C602, agricultural liming material containing a minimum of 80 percent calcium carbonate equivalent and as follows:
   1. Class: T, with a minimum of 99 percent passing through a No. 8 sieve and a minimum of 75 percent passing through a No. 60 sieve.
   2. Class: O, with a minimum of 95 percent passing through No. 8 sieve and a minimum of 55 percent passing through a No. 60 sieve.
   3. Form: Provide lime in form of ground dolomitic limestone or calcitic limestone.
B. Sulfur: Granular, biodegradable, and containing a minimum of 90 percent elemental sulfur, with a minimum of 99 percent passing through a No. 6 sieve and a maximum of 10 percent passing through a No. 40 sieve.
C. Iron Sulfate: Granulated ferrous sulfate containing a minimum of 20 percent iron and 10 percent sulfur.
D. Agricultural Gypsum: Minimum 90 percent calcium sulfate, finely ground with 90 percent passing through a No. 50 sieve.
E. Sand: Clean, washed, natural or manufactured, free of toxic materials, and according to ASTM C33.

2.3 ORGANIC SOIL AMENDMENTS

A. Compost: Well-composted, stable, and weed-free organic matter produced by composting feedstock, and bearing USCC's "Seal of Testing Assurance," and as follows:
   1. Feedstock: Cotton burrs.
   2. Reaction: pH of 5.5 to 8.
   3. Soluble-Salt Concentration: Less than 4 dS/m.
   4. Moisture Content: 35 to 55 percent by weight.
   5. Organic-Matter Content: 50 to 60 percent of dry weight.
   6. Particle Size: Minimum of 98 percent passing through a 1/2-inch sieve.

B. Wood Derivatives: Shredded and composted, nitrogen-treated sawdust, ground bark, or wood waste; of uniform texture and free of chips, stones, sticks, soil, or toxic materials.
   1. Partially Decomposed Wood Derivatives: In lieu of shredded and composted wood derivatives, mix shredded and partially decomposed wood derivatives with ammonium nitrate at a minimum rate of 0.15 pounds per cubic feet of loose sawdust or ground bark, or with ammonium sulfate at a minimum rate of 0.25 pounds per cubic feet of loose sawdust or ground bark.

C. Manure: Well-rotted, unleached, stable or cattle manure containing not more than 25 percent by volume of straw, sawdust, or other bedding materials; free of toxic substances, stones, sticks, soil, weed seed, debris, and material harmful to plant growth.

2.4 FERTILIZERS

A. Superphosphate: Commercial, phosphate mixture, soluble; a minimum of 20 percent available phosphoric acid.

B. Commercial Fertilizer: Commercial-grade complete fertilizer of neutral character, consisting of fast- and slow-release nitrogen, 50 percent derived from natural organic sources of urea formaldehyde, phosphorous, and potassium in the following composition:
   1. Composition: Nitrogen, phosphorous, and potassium in amounts recommended in soil reports from a qualified testing agency.

C. Slow-Release Fertilizer: Granular or pelleted fertilizer consisting of 50 percent water- insoluble nitrogen, phosphorus, and potassium in the following composition:
   1. Composition: Nitrogen, phosphorous, and potassium in amounts recommended in soil reports from a qualified testing agency.

D. Chelated Iron: Commercial-grade FeEDDHA for dicots and woody plants, and commercial-grade FeDTPA for ornamental grasses and monocots.

PART 3 - EXECUTION

3.1 GENERAL

A. Place planting soil and fertilizers according to requirements in other Specification Sections.

B. Verify that no foreign or deleterious material or liquid such as paint, paint washout, concrete slurry, concrete layers or chunks, cement, plaster, oils, gasoline, diesel fuel, paint thinner, turpentine, tar, roofing compound, or acid has been deposited in planting soil.

C. Proceed with placement only after unsatisfactory conditions have been corrected.

3.2 PREPARATION OF UNAMENDED, ON-SITE SOIL BEFORE AMENDING

A. Excavation: Excavate soil from designated area(s) to a depth of 6 inches and stockpile until amended.
B. Unacceptable Materials: Clean soil of concrete slurry, concrete layers or chunks, cement, plaster, building debris, oils, gasoline, diesel fuel, paint thinner, turpentine, tar, roofing compound, acid, and other extraneous materials that are harmful to plant growth.
C. Unsuitable Materials: Clean soil to contain a combined maximum of 8 percent by dry weight of stones, roots, plants, sod, clay lumps, and pockets of coarse sand.

3.3 PLACING AND MIXING PLANTING SOIL OVER EXPOSED SUBGRADE

A. General: Apply and mix unamended soil with amendments on-site to produce required planting soil. Do not apply materials or till if existing soil or subgrade is frozen, muddy, or excessively wet.
B. Subgrade Preparation: Till subgrade to a minimum depth of 4 inches. Remove stones larger than 1-1/2 inches in any dimension and sticks, roots, rubbish, and other extraneous matter and legally dispose of them off Owner's property.
C. Mixing: Spread unamended soil to total depth of 6 inches, but not less than required to meet finish grades after mixing with amendments and natural settlement. Do not spread if soil or subgrade is frozen, muddy, or excessively wet.
    1. Amendments: Apply soil amendments and fertilizer, if required, evenly on surface, and thoroughly blend them with unamended soil to produce planting soil.
        a. Mix lime and sulfur with dry soil before mixing fertilizer.
        b. Mix fertilizer with planting soil no more than seven days before planting.
    2. Lifts: Apply and mix unamended soil and amendments in lifts not exceeding 8 inches in loose depth for material compacted by compaction equipment, and not more than 4 inches in loose depth for material compacted by hand-operated tampers.
D. Compaction: Compact each blended lift of planting soil to 82 percent of maximum standard proctor density according to ASTM D698 except where a different compaction value is indicated on Drawings.
E. Finish Grading: Grade planting soil to a smooth, uniform surface plane with loose, uniformly fine texture. Roll and rake, remove ridges, and fill depressions to meet finish grades.

3.4 BLENDING PLANTING SOIL IN PLACE

A. General: Mix amendments with in-place, unamended soil to produce required planting soil. Do not apply materials or till if existing soil or subgrade is frozen, muddy, or excessively wet.
B. Preparation: Till unamended, existing soil in planting areas to a minimum depth of 4 inches. Remove stones larger than 1-1/2 inches in any dimension and sticks, roots, rubbish, and other extraneous matter and legally dispose of them off Owner's property.
C. Mixing: Apply soil amendments and fertilizer, if required, evenly on surface, and thoroughly blend them into full depth of unamended, in-place soil to produce planting soil.
    1. Mix lime and sulfur with dry soil before mixing fertilizer.
    2. Mix fertilizer with planting soil no more than seven days before planting.

D. Compaction: Compact blended planting soil to 82 percent of maximum Standard Proctor density according to ASTM D698 except where a different compaction value is indicated on Drawings.
E. Finish Grading: Grade planting soil to a smooth, uniform surface plane with loose, uniformly fine texture. Roll and rake, remove ridges, and fill depressions to meet finish grades.

3.5 FIELD QUALITY CONTROL

A. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.
B. Perform the following tests:
   1. Compaction: Test planting-soil compaction after placing each lift and at completion using a densitometer or soil-compaction meter calibrated to a reference test value based on laboratory testing according to ASTM D698. Space tests at no less than one for each 10,000 square feet of in-place soil or part thereof.
   2. Performance Testing: For each amended planting-soil type, demonstrating compliance with specified performance requirements. Perform testing according to "Soil-Sampling Requirements" and "Testing Requirements" articles.
   3. Testing shall include the following as a minimum: pH, NO3-N, P, K, Ca, Mg, Na, S, conductivity, and organic matter analysis.
C. Soil will be considered defective if it does not meet or exceed fertility levels recommended in preconstruction test reports.
D. Prepare test and inspection reports.
E. Label each sample and test report with the date, location keyed to a Site Plan or other location system, visible conditions when and where sample was taken, and sampling depth.

3.6 PROTECTION

A. Protect areas of in-place soil from additional compaction, disturbance, and contamination. Prohibit the following practices within these areas except as required to perform planting operations:
   1. Storage of construction materials, debris, or excavated material.
   2. Parking vehicles or equipment.
   3. Vehicle traffic.
   4. Foot traffic.
   5. Erection of sheds or structures.
   6. Impoundment of water.
   7. Excavation or other digging unless otherwise indicated.
B. If planting soil or subgrade is overcompacted, disturbed, or contaminated by foreign or deleterious materials or liquids, remove the planting soil and contamination; restore the subgrade as directed by A/E and replace contaminated planting soil with new planting soil.

3.7 CLEANING

A. Protect areas adjacent to planting-soil preparation and placement areas from contamination. Keep adjacent paving and construction clean and work area in an orderly condition.

B. Remove surplus soil and waste material including excess subsoil, unsuitable materials, trash, and debris and legally dispose of them off Owner's property unless otherwise indicated.

1. Dispose of excess subsoil and unsuitable materials on-site where directed by Owner.

END OF SECTION

SECTION 32 93 00 - PLANTS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Plants.
   2. Tree stabilization.
   3. Landscape edgings.
B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.

1.2 DEFINITIONS

A. Backfill: The earth used to replace or the act of replacing earth in an excavation.
B. Balled and Burlapped Stock: Plants dug with firm, natural balls of earth in which they were grown, with a ball size not less than diameter and depth recommended by ANSI Z60.1 for type and size of plant required; wrapped with burlap, tied, rigidly supported, and drum laced with twine with the root flare visible at the surface of the ball as recommended by ANSI Z60.1.
C. Container-Grown Stock: Healthy, vigorous, well-rooted plants grown in a container, with a well-established root system reaching sides of container and maintaining a firm ball when removed from container. Container shall be rigid enough to hold ball shape and protect root mass during shipping and be sized according to ANSI Z60.1 for type and size of plant required.
D. Finish Grade: Elevation of finished surface of planting soil.
E. Pesticide: A substance or mixture intended for preventing, destroying, repelling, or mitigating a pest. Pesticides include insecticides, miticides, herbicides, fungicides, rodenticides, and molluscicides. They also include substances or mixtures intended for use as a plant regulator, defoliant, or desiccant. Some sources classify herbicides separately from pesticides.
F. Pests: Living organisms that occur where they are not desired or that cause damage to plants, animals, or people. Pests include insects, mites, grubs, mollusks (snails and slugs), rodents (gophers, moles, and mice), unwanted plants (weeds), fungi, bacteria, and viruses.
G. Planting Area: Areas to be planted.
H. Planting Soil: Existing, on-site soil; imported soil; or manufactured soil that has been modified with soil amendments and perhaps fertilizers to produce a soil mixture best for plant growth. See Section 32 91 13 "Soil Preparation" for drawing designations for planting soils.
I. Plant; Plants; Plant Material: These terms refer to vegetation in general, including trees, shrubs, vines, ground covers, ornamental grasses, bulbs, corms, tubers, or herbaceous vegetation.
J. Root Flare: Also called "trunk flare." The area at the base of the plant's stem or trunk where the stem or trunk broadens to form roots; the area of transition between the root system and the stem or trunk.
K. Stem Girdling Roots: Roots that encircle the stems (trunks) of trees below the soil surface.
L. Subgrade: The surface or elevation of subsoil remaining after excavation is complete, or the top surface of a fill or backfill before planting soil is placed.

1.3 COORDINATION

A. Coordination with Turf Areas (Lawns): Plant trees, shrubs, and other plants after finish grades are established and before planting turf areas unless otherwise indicated.
   1. When planting trees, shrubs, and other plants after planting turf areas, protect turf areas, and promptly repair damage caused by planting operations.

1.4 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.5 ACTION SUBMITTALS

A. Product Data: For each type of product.
   1. Plant Materials: Include quantities, sizes, quality, and sources for plant materials.
   2. Plant Photographs: Include color photographs in digital format of each required species and size of plant material as it will be furnished to Project. Take photographs from an angle depicting true size and condition of the typical plant to be furnished. Include a scale rod or other measuring device in each photograph. For species where more than 20 lants are required, include a minimum of three photographs showing the average plant, the best quality plant, and the worst quality plant to be furnished. Identify each photograph with the full scientific name of the plant, plant size, and name of the growing nursery.

1.6 INFORMATIONAL SUBMITTALS

A. Qualification Data: For landscape Installer. Include list of similar projects completed by Installer demonstrating Installer's capabilities and experience. Include project names, addresses, and year completed, and include names and addresses of owners' contact persons.
B. Pesticides and Herbicides: Product label and manufacturer's application instructions specific to Project.

1.7 QUALITY ASSURANCE

A. Installer Qualifications: A qualified landscape installer whose work has resulted in successful establishment of plants.
   1. Experience: Three years' experience in landscape installation in addition to requirements in Section 01 40 00 "Quality Requirements."
   2. Installer's Field Supervision: Require Installer to maintain an experienced full-time supervisor on Project site when work is in progress.
   3. Pesticide Applicator: State licensed, commercial.
B. Provide quality, size, genus, species, and variety of plants indicated, complying with applicable requirements in ANSI Z60.1.

C. Measurements: Measure according to ANSI Z60.1. Do not prune to obtain required sizes.
   1. Trees and Shrubs: Measure with branches and trunks or canes in their normal position. Take height measurements from or near the top of the root flare for field-grown stock and container-grown stock. Measure main body of tree or shrub for height and spread; do not measure branches or roots tip to tip. Take caliper measurements 6 inches above the root flare for trees up to 4-inch caliper size, and 12 inches above the root flare for larger sizes.
   2. Other Plants: Measure with stems, petioles, and foliage in their normal position.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Packaged Materials: Deliver packaged materials in original, unopened containers showing weight, certified analysis, name and address of manufacturer, and indication of compliance with state and Federal laws if applicable.
B. Bulk Materials:
   1. Do not dump or store bulk materials near structures, utilities, walkways and pavements, or on existing turf areas or plants.
   2. Provide erosion-control measures to prevent erosion or displacement of bulk materials; discharge of soil-bearing water runoff; and airborne dust reaching adjacent properties, water conveyance systems, or walkways.
   3. Accompany each delivery of bulk materials with appropriate certificates.
C. Do not prune trees and shrubs before delivery. Protect bark, branches, and root systems from sun scald, drying, wind burn, sweating, whipping, and other handling and tying damage. Do not bend or bind-tie trees or shrubs in such a manner as to destroy their natural shape. Provide protective covering of plants during shipping and delivery. Do not drop plants during delivery and handling.
D. Handle planting stock by root ball.
E. Wrap trees and shrubs with burlap fabric over trunks, branches, stems, twigs, and foliage to protect from wind and other damage during digging, handling, and transportation.
F. Deliver plants after preparations for planting have been completed, and install immediately. If planting is delayed more than six hours after delivery, set plants and trees in their appropriate aspect (sun, filtered sun, or shade), protect from weather and mechanical damage, and keep roots moist.
   1. Set balled stock on ground and cover ball with soil, peat moss, sawdust, or other acceptable material.
   2. Do not remove container-grown stock from containers before time of planting.
   3. Water root systems of plants stored on-site deeply and thoroughly with a fine-mist spray. Water as often as necessary to maintain root systems in a moist, but not overly wet condition.

1.9 FIELD CONDITIONS

A. Field Measurements: Verify actual grade elevations, service and utility locations, irrigation system components, and dimensions of plantings and construction contiguous with new plantings by field measurements before proceeding with planting work.
B. Weather Limitations: Proceed with planting only when existing and forecasted weather conditions permit planting to be performed when beneficial and optimum results may be obtained. Apply products during favorable weather conditions according to manufacturer's written instructions and warranty requirements.

1.10 WARRANTY

A. Special Warranty: Installer agrees to repair or replace plantings and accessories that fail in materials, workmanship, or growth within specified warranty period.
   1. Failures include, but are not limited to, the following:
      a. Death and unsatisfactory growth, except for defects resulting from abuse, lack of adequate maintenance, or neglect by Owner.
      b. Structural failures including plantings falling or blowing over.
      c. Faulty performance of tree stabilization and edgings .
      d. Deterioration of metals, metal finishes, and other materials beyond normal weathering.
   2. Warranty Periods: From date of Substantial Completion.
      a. Trees, Shrubs, Vines, and Ornamental Grasses: 12 months.
      b. Ground Covers, Biennials, Perennials, and Other Plants: 12 months.
      c. Annuals: Two months.
   3. Include the following remedial actions as a minimum:
      a. Immediately remove dead plants and replace unless required to plant in the succeeding planting season.
      b. Replace plants that are more than 25 percent dead or in an unhealthy condition at end of warranty period.
      c. A limit of one replacement of each plant is required except for losses or replacements due to failure to comply with requirements.
      d. Provide extended warranty for period equal to original warranty period, for replaced plant material.

PART 2 - PRODUCTS

2.1 PLANT MATERIAL

A. General: Furnish nursery-grown plants true to genus, species, variety, cultivar, stem form, shearing, and other features indicated in Plant List, Plant Schedule, or Plant Legend indicated on Drawings and complying with ANSI Z60.1; and with healthy root systems developed by transplanting or root pruning. Provide well-shaped, fully branched, healthy, vigorous stock, densely foliated when in leaf and free of disease, pests, eggs, larvae, and defects such as knots, sun scald, injuries, abrasions, and disfigurement.
   1. Trees with damaged, crooked, or multiple leaders; tight vertical branches where bark is squeezed between two branches or between branch and trunk ("included bark"); crossing trunks; cut-off limbs more than 3/4-inch in diameter; or with stem girdling roots are unacceptable.
   2. Collected Stock: Do not use plants harvested from the wild, from native stands, from an established landscape planting, or not grown in a nursery unless otherwise indicated.

B. Provide plants of sizes, grades, and ball or container sizes complying with ANSI Z60.1 for types and form of plants required. Plants of a larger size may be used if acceptable to Architect, with a proportionate increase in size of roots or balls.

C. Root-Ball Depth: Furnish trees and shrubs with root balls measured from top of root ball, which begins at root flare according to ANSI Z60.1. Root flare shall be visible before planting.

D. Labeling: Label at least one plant of each variety, size, and caliper with a securely attached, waterproof tag bearing legible designation of common name and full scientific name, including genus and species. Include nomenclature for hybrid, variety, or cultivar, if applicable for the plant.

E. If formal arrangements or consecutive order of plants is indicated on Drawings, select stock for uniform height and spread, and number the labels to assure symmetry in planting.

2.2 FERTILIZERS

A. Planting Tablets: Tightly compressed chip-type, long-lasting, slow-release, commercial-grade planting fertilizer in tablet form. Tablets shall break down with soil bacteria, converting nutrients into a form that can be absorbed by plant roots.
   1. Size: 10-gram tablets.
   2. Nutrient Composition: 20 percent nitrogen, 10 percent phosphorous, and 5 percent potassium, by weight plus micronutrients.

2.3 MULCHES

A. Organic Mulch: Free from deleterious materials and suitable as a top dressing of trees and shrubs, consisting of one of the following:
   1. Type: Shredded hardwood.
   2. Size Range: 3 inches maximum, 1/2-inch minimum.
   3. Color: Natural.

B. Mineral Mulch: Hard, durable stone, washed free of loam, sand, clay, and other foreign substances, of the following type, size range, and color:
   1. Type: Rounded riverbed gravel or smooth-faced stone.
   2. Size Range: 1-1/2 inches maximum, 3/4-inch minimum.
   3. Color: Uniform tan-beige color range acceptable to Architect.

2.4 WEED-CONTROL BARRIERS

A. Nonwoven Geotextile Filter Fabric: Polypropylene or polyester fabric, 3 oz./sq. yd. minimum, composed of fibers formed into a stable network so that fibers retain their relative position. Fabric shall be inert to biological degradation and resist naturally encountered chemicals, alkalis, and acids.

2.5 PESTICIDES

A. General: Pesticide registered and approved by the EPA, acceptable to authorities having jurisdiction, and of type recommended by manufacturer for each specific problem and as required for Project conditions and application. Do not use restricted pesticides unless authorized in writing by authorities having jurisdiction.

B. Pre-Emergent Herbicide (Selective and Nonselective): Effective for controlling the germination or growth of weeds within planted areas at the soil level directly below the mulch layer.

C. Post-Emergent Herbicide (Selective and Nonselective): Effective for controlling weed growth that has already germinated.

2.6 TREE-STABILIZATION MATERIALS

A. Root-Ball Stabilization Materials:
1. Proprietary Root-Ball Stabilization Devices: Proprietary at- or below-grade stabilization systems to secure each new planting by root ball and that do not encircle the trunk; sized according to manufacturer's written recommendations unless otherwise indicated.
a. Products: Subject to compliance with requirements, provide one of the following:
1) Tree Stake Solutions; Root Anchor.

2.7 LANDSCAPE EDGINGS

A. Steel Edging: Standard commercial-steel edging, fabricated in sections of standard lengths, with loops stamped from or welded to face of sections to receive stakes.
1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
a. Russell, J. D. Company (The).
b. Sure-loc Edging Corporation.
2. Edging Size: 1/4-inch-thick by 5 inches deep.
3. Stakes: Tapered steel, a minimum of 12 inches long.
4. Accessories: Standard tapered ends, corners, and splicers.
5. Finish: Manufacturer's standard paint.
a. Paint Color: Black.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas to receive plants, with installer present, for compliance with requirements and conditions affecting installation and performance of the Work.
1. Verify that no foreign or deleterious material or liquid such as paint, paint washout, concrete slurry, concrete layers or chunks, cement, plaster, oils, gasoline, diesel fuel, paint thinner, turpentine, tar, roofing compound, or acid has been deposited in soil within a planting area.
2. Verify that plants and vehicles loaded with plants can travel to planting locations with adequate overhead clearance.
3. Suspend planting operations during periods of excessive soil moisture until the moisture content reaches acceptable levels to attain the required results.
4. Uniformly moisten excessively dry soil that is not workable or which is dusty.
B. If contamination by foreign or deleterious material or liquid is present in soil within a planting area, remove the soil and contamination as directed by Architect and replace with new planting soil.
C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Protect structures, utilities, sidewalks, pavements, and other facilities and turf areas and existing plants from damage caused by planting operations.
B. Install erosion-control measures to prevent erosion or displacement of soils and discharge of soil-bearing water runoff or airborne dust to adjacent properties and walkways.
C. Lay out individual tree and shrub locations and areas for multiple plantings. Stake locations, outline areas, adjust locations when requested, and obtain Architect's acceptance of layout before excavating or planting. Make minor adjustments as required.
D. Lay out plants at locations directed by Architect. Stake locations of individual trees and shrubs and outline areas for multiple plantings.

3.3 PLANTING AREA ESTABLISHMENT

A. General: Prepare planting area for soil placement and mix planting soil according to Section 32 91 13 "Soil Preparation."
B. Placing Planting Soil: Place manufactured planting soil over exposed subgrade.
C. Before planting, obtain Architect's acceptance of finish grading; restore planting areas if eroded or otherwise disturbed after finish grading.

3.4 EXCAVATION FOR TREES AND SHRUBS

A. Planting Pits and Trenches: Excavate circular planting pits.
    1. Excavate planting pits with sides sloping inward at a 45-degree angle. Excavations with vertical sides are unacceptable. Trim perimeter of bottom leaving center area of bottom raised slightly to support root ball and assist in drainage away from center. Do not further disturb base. Ensure that root ball will sit on undisturbed base soil to prevent settling. Scarify sides of planting pit smeared or smoothed during excavation.
    2. Excavate approximately three times as wide as ball diameter for balled and burlapped and container-grown stock.
    3. Excavate at least 12 inches wider than root spread and deep enough to accommodate vertical roots for bare-root stock.
    4. Do not excavate deeper than depth of the root ball, measured from the root flare to the bottom of the root ball.
    5. If area under the plant was initially dug too deep, add soil to raise it to the correct level and thoroughly tamp the added soil to prevent settling.
    6. Maintain angles of repose of adjacent materials to ensure stability. Do not excavate subgrades of adjacent paving, structures, hardscapes, or other new or existing improvements.
    7. Maintain supervision of excavations during working hours.
    8. Keep excavations covered or otherwise protected after working hours.
    9. If drain tile is indicated on Drawings or required under planting areas, excavate to top of porous backfill over tile.
B. Backfill Soil: Subsoil and topsoil removed from excavations may be used as backfill soil unless otherwise indicated.

C. Obstructions: Notify Architect if unexpected rock or obstructions detrimental to trees or shrubs are encountered in excavations.
   1. Hardpan Layer: Drill 6-inch-diameter holes, 24 inches sapart, into free-draining strata or to a depth of 10 feet, whichever is less, and backfill with free-draining material.

D. Drainage: Notify Architect if subsoil conditions evidence unexpected water seepage or retention in tree or shrub planting pits.

E. Fill excavations with water and allow to percolate away before positioning trees and shrubs.

3.5 TREE, SHRUB, AND VINE PLANTING

A. Inspection: At time of planting, verify that root flare is visible at top of root ball according to ANSI Z60.1. If root flare is not visible, remove soil in a level manner from the root ball to where the top-most root emerges from the trunk. After soil removal to expose the root flare, verify that root ball still meets size requirements.

B. Roots: Remove stem girdling roots and kinked roots. Remove injured roots by cutting cleanly; do not break.

C. Balled and Burlapped Stock: Set each plant plumb and in center of planting pit or trench with root flare 1 inch above djacent finish grades.
   1. Backfill: Planting soil - Manufactured Planting Bed Mix. For trees, use excavated soil for backfill.
   2. After placing some backfill around root ball to stabilize plant, carefully cut and remove burlap, rope, and wire baskets from tops of root balls and from sides, but do not remove from under root balls. Remove pallets, if any, before setting. Do not use planting stock if root ball is cracked or broken before or during planting operation.
   3. Backfill around root ball in layers, tamping to settle soil and eliminate voids and air pockets. When planting pit is approximately one-half filled, water thoroughly before placing remainder of backfill. Repeat watering until no more water is absorbed.
   4. Place planting tablets equally distributed around each planting pit when pit is approximately one-half filled. Place tablets beside the root ball about 1 inch from root tips; do not place tablets in bottom of the hole.
      a. Quantity: Two per plant.
   5. Continue backfilling process. Water again after placing and tamping final layer of soil.

D. Container-Grown Stock: Set each plant plumb and in center of planting pit or trench with root flare 1 inch above adjacent finish grades.
   1. Backfill: Planting soil - Manufactured Planting Bed Mix. For trees, use excavated soil for backfill.
   2. Carefully remove root ball from container without damaging root ball or plant.
   3. Backfill around root ball in layers, tamping to settle soil and eliminate voids and air pockets. When planting pit is approximately one-half filled, water thoroughly before placing remainder of backfill. Repeat watering until no more water is absorbed.
   4. Place planting tablets equally distributed around each planting pit when pit is approximately one-half filled. Place tablets beside the root ball about 1 inch from root tips; do not place tablets in bottom of the hole.
      a. Quantity: Two per plant.
   5. Continue backfilling process. Water again after placing and tamping final layer of soil.

E. Slopes: When planting on slopes, set the plant so the root flare on the uphill side is flush with the surrounding soil on the slope; the edge of the root ball on the downhill side will be above the surrounding soil. Apply enough soil to cover the downhill side of the root ball.

3.6 MECHANIZED TREE-SPADE PLANTING

A. Trees may be planted with an approved mechanized tree spade at the designated locations. Do not use tree spade to move trees larger than the maximum size allowed for a similar field-grown, balled-and-burlapped root-ball diameter according to ANSI Z60.1, or larger than manufacturer's maximum size recommendation for the tree spade being used, whichever is smaller.
B. Use the same tree spade to excavate the planting hole as will be used to extract and transport the tree.
C. When extracting the tree, center the trunk within the tree spade and move tree with a solid ball of earth.
D. Cut exposed roots cleanly during transplanting operations.
E. Plant trees following procedures in "Tree, Shrub, and Vine Planting" Article.
F. Where possible, orient the tree in the same direction as in its original location.

3.7 TREE, SHRUB, AND VINE PRUNING

A. Remove only dead, dying, or broken branches. Do not prune for shape.
B. Do not apply pruning paint to wounds.

3.8 TREE STABILIZATION

A. Root-Ball Stabilization: Install at- or below-grade stabilization system to secure each new planting by the root ball unless otherwise indicated.
    1. Proprietary Root-Ball Stabilization Device: Install root-ball stabilization system sized and positioned as recommended by manufacturer unless otherwise indicated and according to manufacturer's written instructions.

3.9 GROUND COVER AND PLANT PLANTING

A. Set out and space ground cover and plants other than trees, shrubs, and vines as indicated on Drawingsin even rows with triangular spacing.
B. Use planting soil - Manufactured Planting Bed Mixfor backfill.
C. Dig holes large enough to allow spreading of roots.
D. For rooted cutting plants supplied in flats, plant each in a manner that minimally disturbs the root system but to a depth not less than two nodes.
E. Work soil around roots to eliminate air pockets and leave a slight saucer indentation around plants to hold water.
F. Water thoroughly after planting, taking care not to cover plant crowns with wet soil.
G. Protect plants from hot sun and wind; remove protection if plants show evidence of recovery from transplanting shock.

3.10 PLANTING AREA MULCHING

A. Install weed-control barriers before mulching according to manufacturer's written instructions. Completely cover area to be mulched, overlapping edges a minimum of 12 inches and secure seams with galvanized pins.
B. Mulch backfilled surfaces of planting areas and other areas indicated.
   1. Trees and Treelike Shrubs in Turf Areas: Apply mineral mulch ring of 3-inch average thickness, with 36-inch radius around trunks or stems. Do not place mulch within 3 inches of trunks or stems.
   2. Organic Mulch in Planting Areas: Apply 3-inch average thickness of organic mulch over whole surface of planting area, and finish level with adjacent finish grades. Do not place mulch within 3 inches of trunks or stems.
   3. Mineral Mulch in Planting Areas: Apply 3-inch average thickness of mineral mulch over whole surface of planting area, and finish level with adjacent finish grades. Do not place mulch within 3 inches of trunks or stems.

3.11 EDGING INSTALLATION

A. Steel Edging: Install steel edging where indicated according to manufacturer's written instructions. Anchor with steel stakes spaced approximately 30 inches apart, driven below top elevation of edging.
B. Mow-Strip Installation:
   1. Excavate for mow strip.
   2. Compact subgrade uniformly beneath mow strip.
   3. Apply nonselective, pre-emergent herbicide that inhibits growth of grass and weeds.
   4. Install steel edging, delineating the edge of mow strip.
   5. Install weed-control barrier before mulching, covering area of mow strip, and overlapping and pinning edges of barrier at least 6 inches and according to manufacturer's written instructions.
   6. Place indicated thickness of organic mulch, fully covering weed barrier.
   7. Rake mulch to a uniform surface level with adjacent finish grades.

3.12 PLANT MAINTENANCE

A. Maintain plantings by pruning, cultivating, watering, weeding, fertilizing, mulching, restoring planting saucers, adjusting and repairing tree-stabilization devices, resetting to proper grades or vertical position, and performing other operations as required to establish healthy, viable plantings.
B. Fill in, as necessary, soil subsidence that may occur because of settling or other processes. Replace mulch materials damaged or lost in areas of subsidence.
C. Apply treatments as required to keep plant materials, planted areas, and soils free of pests and pathogens or disease. Use integrated pest management practices when possible to minimize use of pesticides and reduce hazards. Treatments include physical controls such as hosing off foliage, mechanical controls such as traps, and biological control agents.

3.13 PESTICIDE APPLICATION

A. Apply pesticides and other chemical products and biological control agents according to authorities having jurisdiction and manufacturer's written recommendations. Coordinate applications with Owner's operations and others in proximity to the Work. Notify Owner before each application is performed.
B. Pre-Emergent Herbicides (Selective and Nonselective): Apply to tree, shrub, and ground-cover areas according to manufacturer's written recommendations. Do not apply to seeded areas.
C. Post-Emergent Herbicides (Selective and Nonselective): Apply only as necessary to treat already-germinated weeds and according to manufacturer's written recommendations.

3.14 REPAIR AND REPLACEMENT

A. General: Repair or replace existing or new trees and other plants that are damaged by construction operations, in a manner approved by Architect.
   1. Submit details of proposed pruning and repairs.
   2. Perform repairs of damaged trunks, branches, and roots within 24 hours, if approved.
   3. Replace trees and other plants that cannot be repaired and restored to full-growth status, as determined by Architect.
B. Remove and replace trees that are more than 25 percent dead or in an unhealthy condition before the end of the corrections period or are damaged during construction operations that Architect determines are incapable of restoring to normal growth pattern.
   1. Provide new trees of same size as those being replaced for each tree of 4 inches or smaller in caliper size.
   2. Provide one new tree of 6-inch caliper size for each tree being replaced that measures more than 4 inches in caliper size.
   3. Species of Replacement Trees: Species selected by Architect.

3.15 CLEANING AND PROTECTION

A. During planting, keep adjacent paving and construction clean and work area in an orderly condition. Clean wheels of vehicles before leaving site to avoid tracking soil onto roads, walks, or other paved areas.
B. Remove surplus soil and waste material including excess subsoil, unsuitable soil, trash, and debris and legally dispose of them off Owner's property.
C. Protect plants from damage due to landscape operations and operations of other contractors and trades. Maintain protection during installation and maintenance periods. Treat, repair, or replace damaged plantings.
D. After installation and before Substantial Completion, remove nursery tags, nursery stakes, tie tape, labels, wire, burlap, and other debris from plant material, planting areas, and Project site.

END OF SECTION

SECTION 33 01 10.58 - DISINFECTION OF WATER UTILITY PIPING SYSTEMS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Disinfection of potable water distribution and transmission system.
   2. Testing and reporting of results.
B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.
   2. Section 22 40 00 "Plumbing Fixtures."

1.2 UNIT PRICE - MEASUREMENT AND PAYMENT

A. Section 01 20 00 "Price and Payment Procedures."
B. Disinfection:
   1. Basis of Measurement: Include costs for disinfection in unit cost for installing pipe.
   2. Basis of Payment: Includes labor, equipment, and materials necessary for disinfecting all potable water lines.

1.3 REFERENCE STANDARDS

A. AWWA B300 - Hypochlorites.
B. AWWA C651 - Disinfecting Water Mains.
C. AWWA C655 - Field Dechlorination.
D. Texas Commission on Environmental Quality (TCEQ), Title 30 Texas Administrative Code (30 TAC) Chapter 290 Subchapter D, Rules and Regulations for Public Water Systems.

1.4 SUBMITTALS

A. Section 01 33 00 "Submittal Procedures."
B. Product Data: Submit manufacturer information for proposed chemicals and treatment doses.
C. Manufacturer's Certificate: Certify that products meet or exceed specified requirements.
D. Certify that final water complies with disinfectant quality standards of TCEQ.
E. Test and Evaluation Reports: Indicate testing results comparative to specified requirements.
F. Field Quality-Control Submittals: Indicate results of Contractor-furnished tests and inspections.
G. Qualifications Statements:
   1. Submit qualifications for manufacturer and applicator.

1.5 CLOSEOUT SUBMITTALS

A. Section 01 70 00 "Execution and Closeout Requirements."
B. Submit a Disinfection Report to include:
   1. Type and form of disinfectant used.
   2. Date and time of disinfectant injection start and completion.
   3. Time, date, and test location.
   4. Field Quality Control Test Results.
   5. Name of person collecting samples.
   6. Initial and 24-hour disinfectant residuals in treated water in ppm for each outlet tested.
   7. Date and time of flushing start and completion.
   8. Disinfectant residual after flushing in ppm for each outlet tested.

1.6 QUALITY ASSURANCE

A. Perform Work according to AWWA C651.

1.7 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this Section with minimum 3 years' documented experience and approved by Engineer.
B. Applicator: Company specializing in manufacturing products specified herein with minimum 3 years' documented experience and approved by Engineer.

PART 2 - PRODUCTS

2.1 DISINFECTION CHEMICALS

A. Forms of Chlorine for Disinfection:
   1. Liquid Chlorine, AWWA B301, Section 4.2 Chemical Requirements:
      a. Liquid Chlorine shall not be less than 99.5 percent pure by volume.
   2. Hypochlorites, AWWA B300, Section 4.2 Chemical Requirements:
      a. Chlorinated Lime shall contain no less than 25 percent available chlorine by weight.
      b. Calcium Hypochlorite shall contain no less than 65 percent available chlorine by weight when shipped.
      c. Sodium Hypochlorite shall contain no less than 100g/L available chlorine.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Section 01 70 00 "Execution and Closeout Requirements."
B. Before placing any water line into service and after completing pressure tests, thoroughly flush all pipes with water until all entrained dirt and mud is removed before introducing chlorinating material.

3.2 INSTALLATION

A. Provide required equipment to perform Work of this Section.
B. Methods for Disinfection:
   1. Tablet/Granule Method: Per AWWA C651 Disinfecting Water Mains, Section 4.3.
   2. Continuous-Feed Method: Per AWWA C651 Disinfecting Water Mains, Section 4.4.
   3. Slug Method: Per AWWA C651 Disinfecting Water Mains, Section 4.5.
   4. Spray Disinfection: Per AWWA C651 Disinfecting Water Mains, Section 4.6.
C. Open and close all valves on lines disinfected several times during contact period.
D. Flush line with clean water until residual chlorine is reduced to no less than 0.5 ppm.
E. Flush pipeline until chlorine concentration in water leaving pipeline is no higher than that generally prevailing in existing system or is acceptable for domestic use.

3.3 FIELD QUALITY CONTROL

A. Section 01 40 00 "Quality Requirements."
B. Take 1 sample of water per 1,000 linear feet of water line, minimum 1 sample for each section disinfected, in properly sterilized containers.
C. Repeat disinfection until 3 consecutive-day tests (second taken 24 hours after first and third taken 24 hours after second) indicate absence of coliform organisms.
D. Bacterial examinations shall be made by a Texas Department of Health-certified laboratory.
E. RPR shall verify certified laboratory will accept 3 consecutive-day samples without charging a weekend testing fee. If weekend testing fee is charged, RPR shall notify party responsible for payment.
F. Do not accept water line Work until satisfactory bacteriological results are obtained.
G. If first round of bacterial examinations does not pass TCEQ standards, Contractor shall pay for all bacterial examinations until 3 consecutive-day tests pass and are recorded in a Disinfection Report issued by certified laboratory.
H. Arrange for satisfactory disposal of water flushed from lines, using pipe, dikes, or channels to adequately drain, so no nuisance is created. If chlorinated discharge may cause damage to environment, apply neutralizing chemical to chlorinated water to neutralize chlorine residual remaining in water in accordance with AWWA C655 Field Dechlorination.

PACKET 7-837 September 9, 2025

SECTION 33 05 09.33 - THRUST RESTRAINT FOR UTILITY PIPING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
B. Related Requirements:
1. Division 01 Specification Sections apply to Work of this Section.
2. Section 31 23 16.13 "Trenching": Trenching and backfilling requirements for Site utilities.
3. Section 33 14 16 "Site Water Utility Distribution Piping": Requirements for piping Work as required by this Section.

1.2 UNIT PRICE - MEASUREMENT AND PAYMENT

A. Section 01 20 00 "Price and Payment Procedures": Contract Sum/Price modification procedures.
B. Tied Joint Restraint System:
1. Basis of Measurement: By unit.
2. Basis of Payment: Includes tied joint restraint system and accessories.

1.3 REFERENCE STANDARDS

A. American Water Works Association:
1. AWWA C600 - Installation of Ductile-Iron Water Mains and Their Appurtenances.
B. ASME International:
1. ASME B1.1 - Unified Inch Screw Threads, UN and UNR Thread Form.
C. ASTM International:
1. ASTM A36 - Standard Specification for Carbon Structural Steel.
2. ASTM A123 - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products.
3. ASTM A153 - Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware.
4. ASTM A307 - Standard Specification for Carbon Steel Bolts, Studs, and Threaded Rod 60 000 PSI Tensile Strength.
5. ASTM A325 - Standard Specification for Structural Bolts, Steel, Heat Treated, 120/105 ksi Minimum Tensile Strength.
6. ASTM A563 - Standard Specification for Carbon and Alloy Steel Nuts.
7. ASTM A588 - Standard Specification for High-Strength Low-Alloy Structural Steel, up to 50 ksi Minimum Yield Point, with Atmospheric Corrosion Resistance.
8. ASTM B633 - Standard Specification for Electrodeposited Coatings of Zinc on Iron and Steel.
9. ASTM F436 - Standard Specification for Hardened Steel Washers.

1.4 COORDINATION

A. Section 01 30 00 "Administrative Requirements": Requirements for coordination.
B. Coordinate Work of this Section with installation of fittings and joints that require restraint.

1.5 SUBMITTALS

A. Section 01 33 00 "Submittal Procedures": Requirements for submittals.
B. Product Data: Submit manufacturer catalog information for restrained joint details and installation instructions.
C. Shop Drawings:
    1. Indicate restrained joint details and materials being used.
    2. Submit layout drawings showing piece numbers and locations.
    3. Indicate restrained joint locations.
D. Manufacturer's Certificate: Certify that products meet or exceed specified requirements.
E. Manufacturer Instructions: Submit detailed instructions on installation requirements, including storage and handling procedures.

1.6 QUALITY ASSURANCE

A. Perform Work according to City of Midland standards.
B. Perform Work according to AWWA C600 - Installation of Ductile-Iron Water Mains and Their Appurtenances.
C. Perform concrete work according to ACI 301 standards.
D. Conform to ACI 305R when concreting during hot weather.
E. Conform to ACI 306R when concreting during cold weather.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Section 01 60 00 "Product Requirements": Requirements for transporting, handling, storing, and protecting products.
B. Inspection: Accept materials on site in manufacturer's original packaging and inspect for damage.
C. Store materials according to manufacturer instructions.
D. Protection:
    1. Protect materials from moisture and dust by storing in clean, dry location remote from construction operations areas.
    2. Provide additional protection according to manufacturer instructions.

1.8 EXISTING CONDITIONS

A. Field Measurements:
    1. Verify field measurements prior to fabrication.
    2. Indicate field measurements on Shop Drawings.

PART 2 - PRODUCTS

2.1 PERFORMANCE AND DESIGN CRITERIA

A. Provide pressure pipeline with restrained joints at each bend, tee, and change in direction.

2.2 TIED JOINT RESTRAINT SYSTEMS

A. Manufacturers:
   1. Bulldog Restraint System; S&B Technical Products.
   2. Substitutions: As specified in Section 01 60 00 "Product Requirements."

B. Tie Bolts:
   1. Mechanical and Flanged Joints on 4- to 12-Inch Pipe:
      a. Size: 3/4-inch.
      b. Comply with ASTM A588, Grade B.
      c. Comply with ASTM A325, Type 3, except increase tensile strength of full-body threaded section to 40,000 lb. minimum for 5/8-inch and 60,000 lb. minimum for 3/4-inch by heat-treating (quenching and tempering) to manufacturer's reheat and hardness specifications.

C. Tie Nut:
   1. Description: Hex nut for each tie bolt and tie rods.
   2. Comply with ASTM A563, Grade C3.

D. Tiepin:
   1. Bends and Hydrants: 3/4-inch round bar stock.
   2. Size and Shape: 6-inch hairpin.
   3. Comply with ASME B1.1 and ASTM A588.

E. Tie Coupling:
   1. Description: Extension of continuous-threaded rods.
   2. Provide with center stop to aid installation.
   3. Comply with ASTM A588.

F. Tie Clamp:
   1. Description: Retainer clamp for ductile iron, asbestos-cement, and PVC push-on pipe.
   2. Location: In front of bell.
   3. Comply with ASTM A36, ASTM A307, Grade A, and ASTM A563, Grade A.

G. Tie Rod:
   1. Description: Continuous-threaded rod for cutting to desired lengths.
   2. Comply with ASTM A588, Grade B, ASTM A325, Type 3, and ASME B1.1.

H. Tie Bar:
   1. Description: Steel bar used to restrain push-in plugs.
   2. Comply with ASTM A36.

I. Tie Washer:
   1. Description: Round flat washers.
   2. ASTM A588, ASTM F436, Type 1.

2.3 MATERIALS

A. Steel:
   1. Carbon Steel: Comply with ASTM A36.
B. Concrete:
   1. Cement: ASTM C150, Portland Cement, Type I/II.
      a. All cement shall be from the same manufacturer unless approved by Engineer.
   2. Fine and Coarse Aggregates: ASTM C33.
   3. Water: Potable, not detrimental to concrete.
C. Admixtures:
   1. Air Entrainment: ASTM C260.
   2. Chemical: ASTM C494.
      a. Type A - Water Reducing.
      b. Type B - Retarding.
      c. Type C - Accelerating.
      d. Type D - Water Reducing and Retarding.
      e. Type E - Water Reducing and Accelerating.
   3. Fly Ash: ASTM C618.
D. Concrete Mix:
   1. Mix and deliver concrete in accordance with ASTM C94, Alternative No. 2 and 3.
   2. Select proportions for normal weight concrete in accordance with ACI 301 Methods 1, 2, and 3.
   3. Provide concrete to the following criteria:
      a. 28-Day Compressive Strength: 3,000 psi.
      b. Slump: 1 to 4 inches.
      c. Use fly ash only when approved.
      d. Minimum Water/Cement Ratio: 3 sacks/yard.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify that pipe and fittings are ready to receive Work.
B. Field measure and verify conditions for installation of Work.

3.2 PREPARATION

A. Section 01 70 00 "Execution and Closeout Requirements": Requirements for installation preparation.
B. Clean surfaces of pipe and fittings that are to receive tied joint restraint systems.
C. In locations where new concrete is dowelled to existing work, drill holes in existing concrete, insert steel dowels, and pack solid with non-shrink grout.

3.3 INSTALLATION

A. According to AWWA C600.
B. Install joint restraint system such that joints are mechanically locked together to prevent joint separation.
C. Utility Piping:
   1. According to AWWA C600.
   2. Install joint restraint system such that joints are mechanically locked together to prevent joint separation.
D. Concrete:
   1. Place concrete in accordance with ACI 304.
   2. Ensure reinforcement, inserts, embedded parts, formed joint fillers are not disturbed during concrete placement.

3.4 TOLERANCES

A. Section 01 40 00 "Quality Requirements": Requirements for tolerances.
B. Torque 5/8-inch nuts on mating threaded fasteners from 45 to 60 ft.-lbf.
C. Torque 3/4-inch nuts on mating threaded fasteners from 75 to 90 ft.-lbf.
D. Torque 1-inch nuts from 100 to 120 ft.-lbf.

END OF SECTION

SECTION 33 05 61 - CONCRETE MANHOLES

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Modular precast concrete manholes and structures with tongue-and-groove joints and transition to cover frame, covers, anchorage, and accessories.
   2. Cast-in-place concrete manholes and structures with transition to cover frame, covers, anchorage, and accessories.
   3. Doghouse manhole connections to existing storm sewer lines.
   4. Vertical adjustment of existing manholes and structures.

B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.
   2. Section 33 42 00 "Stormwater Conveyance": Piping connections to manholes and structures.

1.2 DEFINITIONS

A. Bedding: Specialized material placed under manhole prior to installation and subsequent backfill operations.

1.3 REFERENCE STANDARDS

A. American Association of State Highway Transportation Officials:
   1. AASHTO M91 - Standard Specification for Sewer and Manhole Brick (Made from Clay or Shale).
   2. AASHTO M288 - Standard Specification for Geotextile Specification for Highway Applications.
   3. AASHTO M306 - Standard Specification for Drainage, Sewer, Utility, and Related Castings.

B. American Concrete Institute:
   1. ACI 530/530.1 - Building Code Requirements and Specification for Masonry Structures.

C. ASTM International:
   1. ASTM A48 - Standard Specification for Gray Iron Castings.
   2. ASTM A123 - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products.
   3. ASTM C32 - Standard Specification for Sewer and Manhole Brick (Made from Clay or Shale).
   4. ASTM C55 - Standard Specification for Concrete Building Brick.
   5. ASTM C361 - Standard Specification for Reinforced Concrete Low-Head Pressure Pipe.
   6. ASTM C478 - Standard Specification for Circular Precast Reinforced Concrete Manhole Sections.
   7. ASTM C497 - Standard Test Methods for Concrete Pipe, Manhole Sections, or Tile.

8. ASTM C877 - Standard Specification for External Sealing Bands for Concrete Pipe, Manholes, and Precast Box Sections.
9. ASTM C913 - Standard Specification for Precast Concrete Water and Wastewater Structures.
10. ASTM C923 - Standard Specification for Resilient Connectors between Reinforced Concrete Manhole Structures, Pipes, and Laterals.
11. ASTM C990 - Standard Specification for Joints for Concrete Pipe, Manholes, and Precast Box Sections Using Preformed Flexible Joint Sealants.
12. ASTM F593 - Standard Specification for Stainless Steel Bolts, Hex Cap Screws, and Studs.
13. ASTM F1554 - Standard Specification for Anchor Bolts, Steel, 36, 55, and 105-ksi Yield Strength.

1.4 COORDINATION

A. Section 01 30 00 "Administrative Requirements": Requirements for coordination.
B. Coordinate Work of this Section with connection to municipal sewer utility service and trenching.

1.5 SUBMITTALS

A. Section 01 33 00 "Submittal Procedures": Requirements for submittals.
B. Product Data: Submit manufacturer information for manhole covers, component construction, features, configuration, and dimensions.
C. Shop Drawings:
    1. Indicate structure locations and elevations.
    2. Indicate sizes and elevations of piping, penetrations, and entry.
D. Manufacturer's Certificate: Certify that products meet or exceed specified requirements.

1.6 QUALITY ASSURANCE

A. Perform Work according to City of Midland standards.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Section 01 60 00 "Product Requirements": Requirements for transporting, handling, storing, and protecting products.
B. Inspection: Accept materials on Site in manufacturer's original packaging and inspect for damage.
C. Handling: Comply with precast concrete manufacturer instructions and ASTM C913 for unloading and moving precast manholes and drainage structures.
D. Storage:
    1. Store materials according to manufacturer instructions.
    2. Store precast concrete manholes and drainage structures to prevent damage to Owner's property or other public or private property.
    3. Repair property damaged from materials storage.
E. Protection:
    1. Protect materials from moisture and dust by storing in clean, dry location remote from construction operations areas.
    2. Provide additional protection according to manufacturer instructions.

1.8 AMBIENT CONDITIONS

A. Section 01 50 00 "Temporary Facilities and Controls": Requirements for ambient condition control facilities for product storage and installation.
B. Maintain materials and surrounding air temperature to minimum 50 degrees F prior to, during, and 48 hours after completion of masonry Work.
C. Cold Weather Requirements: Comply with ACI 530/530.1.

1.9 EXISTING CONDITIONS

A. Field Measurements:
1. Verify field measurements prior to fabrication.
2. Indicate field measurements on Shop Drawings.

PART 2 - PRODUCTS

2.1 CONCRETE AND MASONRY MANHOLES

A. Manufacturers:
1. Armorcast Products Company.
2. Hanson Pipe & Precast.
3. Monarch Products, Inc.
4. Oldcastle Precast, Inc.
5. Substitutions: As specified in Section 01 60 00 "Product Requirements."
B. Manhole Sections:
1. Materials:
a. Reinforced Precast Concrete: Comply with ASTM C478.
b. Gaskets: Comply with ASTM C923.
2. Joints:
a. Comply with ASTM C913.
b. Maximum Leakage: 0.025 gallons per hour per foot of joint at 3 feet of head.
C. Reinforcement:
1. Formed steel reinforcing rods.
2. Finish: Unfinished.
D. Shaft and Concentric Cone Top Sections:
1. Pipe Sections: Reinforced precast concrete.
2. Joints:
a. Lipped male/female.
b. Dry.
3. Sleeved to receive pipe sections.
E. Clear Inside Dimensions:
1. As indicated on Drawings.
F. Design Depth:
1. As indicated on Drawings.

G. Clear Cover Opening:
   1. As indicated on Drawings.
H. Pipe Entry: Furnish openings as indicated on Drawings.
I. Structure Joint Gaskets:
   1. Comply with ASTM C361.
   2. Material: Rubber.

2.2 FRAMES AND COVERS

A. Manufacturers:
   1. EJ.
   2. Neenah Foundry Company.
   3. Substitutions: As specified in Section 01 60 00 "Product Requirements."
   4. Furnish materials according to City of Midland standards.
B. Description:
   1. Material:
      a. Cast iron.
      b. Comply with ASTM A48, Class 30B.
   2. Lid:
      a. Bearing Surface: Machined flat.
      b. Configuration: Removable.
   3. Cover Design: Closed.
   4. Live-Load Rating: 18,000 psf, AASHTO HS-20.
   5. Furnish sealing gasket.
   6. Cover: Molded with City of Midland name and logo.

2.3 RISER RINGS

A. Manufacturers:
   1. EJ.
   2. Neenah Foundry Company.
   3. Substitutions: As specified in Section 01 60 00 "Product Requirements."
   4. Furnish materials according to City of Midland standards.
B. Riser Rings:
   1. Thickness of 4 to 6 Inches:
      a. Precast concrete.
      b. Comply with ASTM C478.
   2. Thickness Less Than 4 Inches:
      a. Cast iron.
      b. Comply with AASHTO M306.
   3. Rubber Seal Wraps:
      a. Wraps and Band Widths: Comply with ASTM C877, Type III.
      b. Cone/Riser Ring Joint: Minimum 3-inch overlap.
      c. Frame/Riser Ring Joint: 2-inch overlap.
      d. Additional Bands: Overlap upper band by 2 inches.
   4. As specified in Section 31 20 00 "Earth Moving" and Section 31 23 16.13 "renching."

2.4 FINISHES

A. Bituminous Interior Manhole Coating:
   1. Manufacturers:
      a. Polyglass USA, Inc.
      b. Substitutions: As specified in Section 01 60 00 "Product Requirements."

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify that items provided by other Sections of Work are properly sized and located.
B. Verify that built-in items are in proper location and are ready for roughing into Work.
C. Verify that excavation base is ready to receive Work and excavations and that dimensions and elevations are as indicated on Drawings.

3.2 PREPARATION

A. Mark each precast structure by indentation or waterproof paint showing date of manufacture, manufacturer, and identifying symbols and numbers as indicated on Drawings to indicate its intended use.
B. Coordinate placement of inlet and outlet pipe or duct sleeves as required by other Sections.
C. Do not install manholes and structures where site conditions induce loads exceeding structural capacity of manholes or structures.
D. Inspect precast concrete manholes and structures immediately prior to placement in excavation to verify that they are internally clean and free from damage; remove and replace damaged units.

3.3 INSTALLATION

A. Conduct operations not to interfere with, interrupt, damage, destroy, or endanger integrity of surface structures or utilities in immediate or adjacent areas.
B. Correct over-excavation with fine aggregate.
C. Remove large stones or other hard matter impeding consistent backfilling or compaction.
D. Protect manhole from damage or displacement while backfilling operation is in progress.
E. Excavating:
   1. As specified in Section 31 23 16.13 "Trenching," and in indicated locations and depths.
   2. Provide clearance around sidewalls of manhole or structure for construction operations and granular backfill.
   3. If ground water is encountered, prevent accumulation of water in excavations; place manhole or structure in dry trench.
   4. Where possibility exists of watertight manhole or structure becoming buoyant in flooded excavation, anchor manhole or structure to avoid flotation as approved by Architect/Engineer.

F. Base and Alignment:
   1. Install manholes supported at proper grade and alignment on compacted crushed-stone bedding.
   2. Grout base of shaft sections to achieve slope to exit piping, trowel smooth, and contour to form continuous drainage channel.
   3. Form and place manhole or structure cylinders plumb and level, to correct dimensions and elevations.

G. Attachments:
   1. Cut and fit for pipe.
   2. Set cover frames and covers level to correct elevations without tipping.

H. Backfilling: As specified in Section 31 23 16.13 "Trenching."

I. Coating: Paint interior with two coats of bituminous interior coating at rate of 120 sq. ft./gal. for each coat.

J. Precast Concrete Manholes:
   1. Lift precast components at lifting points designated by manufacturer.
   2. When lowering manholes and structures into excavations and joining pipe to units, take precautions to ensure that interior of pipeline and structure remains clean.
   3. Assembly:
      a. Assemble multisection manholes and structures by lowering each section into excavation.
      b. Install rubber gasket joints between precast sections according to manufacturer recommendations.
      c. Lower, set level, and firmly position base section before placing additional sections.
   4. Remove foreign materials from joint surfaces and verify that sealing materials are placed properly.
   5. Maintain alignment between sections by using guide devices affixed to lower section.
   6. Joint sealing materials may be installed on Site or at manufacturer's plant.
   7. Verify that installed manholes and structures meet required alignment and grade.
   8. Remove knockouts or cut structure to receive piping without creating openings larger than required to receive pipe; fill annular spaces with mortar.
   9. Cut pipe flush with interior of structure.
   10. Shape inverts through manhole and structures as indicated on Drawings.

K. Doghouse Manholes and Structures:
   1. Stake out location and burial depth of existing sewer line in area of proposed manhole or structure.
   2. Carefully excavate around existing sewer line to adequate depth for foundation slab installation.
   3. Protect existing pipe from damage.
   4. Cut out soft spots and replace with granular fill compacted to 95 percent maximum density.
   5. Bear firmly and fully on support system as indicated on Drawings.
   6. Install precast concrete manhole or structure around existing pipe according to applicable Paragraphs in this Section.
   7. Grout pipe entrances.
   8. Block upstream flow at existing manhole or structure with expandable plug.

9. Use hydraulic saw to cut existing pipe at manhole or structure entrance and exit and along pipe length at a point halfway up OD on each side of pipe.
10. Bottom half of pipe is to remain as manhole flow channel.
11. Saw cut to smooth finish with top half of pipe flush with interior of manhole or structure.
12. Grout base of manhole or structure to achieve slope to manhole or structure channel.

L. Sanitary Manhole Drop Connections: As indicated on Drawings.

M. Installation Standards: Install Work according to City of Midland standards.

3.4 ADJUSTING

A. Vertical Adjustment of Existing Manholes and Structures:
1. If required, adjust top elevation of existing manholes and structures to finished grades as indicated on Drawings.
2. Frames, Grates, and Covers:
   a. Remove frames, grates, and covers cleaned of mortar fragments.
   b. Reset to required elevation according to requirements specified for installation of castings.
3. Reinforcing Bars:
   a. Remove concrete without damaging existing vertical reinforcing bars if removal of existing concrete wall is required.
   b. Clean vertical bars of concrete and bend into new concrete top slab or splice to required vertical reinforcement as indicated on Drawings.
4. Clean and apply sand-cement bonding compound on existing concrete surfaces to receive cast-in-place concrete.

END OF SECTION

SECTION 33 14 16 - SITE WATER UTILITY DISTRIBUTION PIPING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Pipe and fittings for Site water line, including , fire water line.
   2. Valves and boxes.
   3. Fire hydrants.

B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.
   2. Section 31 23 16.13 "Trenching": Execution requirements for trenching.
   3. Section 33 01 10.58 "Disinfection of Water Utility Piping Systems": Disinfection of water mains and appurtenances.
   4. Section 33 05 09.33 "Thrust Restraint for Utility Piping": Tied joint- restraint system to anchor and resist forces developed in underground closed pipeline systems.

1.2 REFERENCE STANDARDS

A. American Association of State Highway and Transportation Officials:
   1. AASHTO T 180 - Standard Method of Test for Moisture- Density Relations of Soils Using a 4.54- kg (10- lb) Rammer and a 457- mm (18- in.) Drop.

B. American Society of Mechanical Engineers:
   1. ASME B16.1 - Gray Iron Pipe Flanges and Flanged Fittings: Classes 25, 125, and 250.
   2. ASME B16.18 - Cast Copper Alloy Solder- Joint Pressure Fittings.
   3. ASME B16.22 - Wrought Copper and Copper Alloy Solder- Joint Pressure Fittings.

C. American Society of Sanitary Engineering:
   1. ASSE 1012 - Performance Requirements for Backflow Preventers with an Intermediate Atmospheric Vent.
   2. ASSE 1013 - Performance Requirements for Reduced Pressure Principle Backflow Preventers and Reduced Pressure Principle Fire Protection Backflow Preventers.

D. ASTM International:
   1. ASTM B88 - Standard Specification for Seamless Copper Water Tube.
   2. ASTM D698 - Standard Test Methods for Laboratory Compaction Characteristics of Soil Using Standard Effort (12 400 ft- lbf/ft3 (600 kN- m/m3).
   3. ASTM D1557 - Standard Test Methods for Laboratory Compaction Characteristics of Soil Using Modified Effort (56,000 ft- lbf/ft3 (2,700 kN- m/m3).
   4. ASTM D1785 - Standard Specification for Poly(Vinyl Chloride) (PVC) Plastic Pipe, Schedules 40, 80, and 120.
   5. ASTM D2241 - Standard Specification for Poly(Vinyl Chloride) (PVC) Pressure-Rated Pipe (SDR Series).
   6. ASTM D2466 - Standard Specification for Poly(Vinyl Chloride) (PVC) Plastic Pipe Fittings, Schedule 40.

7. ASTM D2855 - Standard Practice for the Two- Step (Primer and Solvent Cement) Method of Joining Poly (Vinyl Chloride) (PVC) or Chlorinated Poly (Vinyl Chloride) (CPVC) Pipe and Piping Components with Tapered Sockets.
8. ASTM D3035 - Standard Specification for Polyethylene (PE) Plastic Pipe (DR- PR) Based on Controlled Outside Diameter.
9. ASTM D3139 - Standard Specification for Joints for Plastic Pressure Pipes Using Flexible Elastomeric Seals.
10. ASTM D6938 - Standard Test Method for In- Place Density and Water Content of Soil and Soil- Aggregate by Nuclear Methods (Shallow Depth).

E. American Water Works Association:
1. AWWA C104 - Cement- Mortar Lining for Ductile- Iron Pipe and Fittings.
2. AWWA C105 - Polyethylene Encasement for Ductile- Iron Pipe Systems.
3. AWWA C111 - Rubber- Gasket Joints for Ductile- Iron Pressure Pipe and Fittings.
4. AWWA C151 - Ductile- Iron Pipe, Centrifugally Cast.
5. AWWA C200 - Steel Water Pipe, 6 In. and Larger.
6. AWWA C203 - Coal- Tar Protective Coatings and Linings for Steel Water Pipe.
7. AWWA C205 - Cement- Mortar Protective Lining and Coating for Steel Water Pipe - 4 In. and Larger - Shop Applied.
8. AWWA C206 - Field Welding of Steel Water Pipe.
9. AWWA C207 - Steel Pipe Flanges for Waterworks Service, Sizes 4 In. Through 144 In..
10. AWWA C208 - Dimensions for Fabricated Steel Water Pipe Fittings.
11. AWWA C213 - Fusion- Bonded Epoxy Coatings and Linings for Steel Water Pipe and Fittings.
12. AWWA C300 - Reinforced Concrete Pressure Pipe, Steel- Cylinder Type.
13. AWWA C301 - Prestressed Concrete Pressure Pipe, Steel- Cylinder Type.
14. AWWA C500 - Metal- Seated Gate Valves for Water Supply Service.
15. AWWA C600 - Installation of Ductile- Iron Mains and Their Appurtenances.
16. AWWA C606 - Grooved and Shouldered Joints.
17. AWWA C900 - Polyvinyl Chloride (PVC) Pressure Pipe and Fabricated Fittings, 4 In. Through 12 In., for Water Transmission and Distribution.
18. AWWA C901 - Polyethylene (PE) Pressure Pipe and Tubing, 1/2 In.(13 mm) Through 3 In. for Water Service.
19. AWWA C906 - Polyethylene (PE) Pressure Pipe and Fittings, 4 In. Through 63 In., for Waterworks.

F. American Welding Society:
1. AWS A5.8 - Specification for Filler Metals for Brazing and Braze Welding.

G. Manufacturers Standardization Society of the Valve and Fittings Industry:
1. MSS SP- 60 - Connecting Flange Joints between Tapping Sleeves and Tapping Valves.

H. NSF International:
1. NSF 61 - Drinking Water System Components - Health Effects.
2. NSF 372 - Drinking Water System Components - Lead Content.

1.3 SUBMITTALS

A. Section 01 33 00 "Submittal Procedures": Requirements for submittals.
B. Product Data: Submit manufacturer information regarding pipe materials, pipe fittings, valves, and hydrants.
C. Manufacturer's Certificate: Certify that products meet or exceed specified requirements.
D. Qualifications Statements:
    1. Submit qualifications for manufacturer and installer.

1.4 CLOSEOUT SUBMITTALS

A. Section 01 70 00 "Execution and Closeout Requirements": Requirements for submittals.
B. Project Record Documents: Record actual locations of piping mains, valves, connections, thrust restraints, and invert elevations.
C. Identify and describe unexpected variations to subsoil conditions or discovery of uncharted utilities.

1.5 QUALITY ASSURANCE

A. Valves: Mark valve body with manufacturer's name and pressure rating.
B. Materials in Contact with Potable Water: Certified according to NSF 61 and NSF 372.
C. Perform Work according to City of Midland standards.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Section 01 60 00 "Product Requirements": Requirements for transporting, handling, storing, and protecting products.
B. Inspection: Accept materials on Site in manufacturer's original packaging and inspect for damage.
C. Storage:
    1. Store materials according to manufacturer instructions.
    2. Block individual and stockpiled pipe lengths to prevent moving.
    3. Do not place pipe or pipe materials on private property or in areas obstructing pedestrian or vehicle traffic.
    4. Store PE and PVC materials out of sunlight.
D. Protection:
    1. Protect materials from moisture and dust by storing in clean, dry location remote from construction operations areas.
    2. Provide additional protection according to manufacturer instructions.

1.7 EXISTING CONDITIONS

A. Field Measurements:
    1. Verify field measurements prior to fabrication.
    2. Indicate field measurements on Shop Drawings.

PART 2 - PRODUCTS

2.1 PIPING

A. PVC Pipe:
1. Comply with AWWA C900, Class 305.
2. Fittings:
a. Material: Cast iron.
b. Comply with AWWA C111.
3. Joints:
a. Comply with ASTM D3139.
b. Furnish compression gasket ring.

2.2 VALVES AND HYDRANTS

A. Valves and Valve Boxes:
1. General:
a. Valves 12-inch and smaller shall be gate valves.
b. Valves 14-inch and larger shall be butterfly valves, unless otherwise noted on the Plans or specified herein.
c. All valves shall be designed for a working pressure of at least 150 psi.
2. Gate Valves:
a. All gate valves shall be resilient seat, iron body, bronze mounted throughout and shall meet all requirements of AWWA C509.
b. All valves shall open by turning to the left. Valves shall be furnished with a 2-inch operating nut when outside of buildings. Valves inside of buildings or valve vaults shall have a hand wheel. Gate valves shall be furnished with O-ring stem packing.
c. All valves shall be Mueller Company A-2370 of approved equal.
d. All interior cast iron surfaces shall be epoxy coated in accordance with the appropriate paragraphs of this Section.
3. Tapping Sleeves and Valves:
a. Tapping sleeves shall be mechanical joint, or as required to make the connection. Tapping sleeves shall be Mueller, ductile iron, with duck-tipped gaskets or approved equal.
4. Valve Boxes and Extension Stems:
a. Extension stems shall be furnished on buried valves where the top of the operation nut is more than 36-inches below finished grade. Top of the extension stem shall not be more than 9-inches below the top of the valve box.
b. Buried valves shall be provided with cast iron valve boxes. The boxes shall be designed to fit over a section of 6-inch C900 PVC riser pipe which will be used as an extension from the top of the valve to within 8-inches of the ground surface. The box shall have a heavy cast iron cover. The box shall have a flange type base, with the base being approximately 4-inches larger in diameter than the outside diameter of the barrel of the box. The necessary length of riser pipe required for the extension shall be considered as a part of the box.

5. Internal Epoxy Coating:
    a. All interior wetted ferrous surfaces of all types of valves will be coated with a 2-part, thermal setting, epoxy protective coating.
    b. The coating shall be nontoxic and shall not impart taste of water. The coating shall be forumated from material deemed acceptable per the Food and Drug Administration document Title 21 of the Federal Regulations on Food Additives, Section 121.2514, Resin and Polymeric Coatings.
    c. The coating shall have a satin finish and shall be suitable for field overcoating and touch-up without sanding or special surface preparation.
    d. The coating shall have a successful record of performance in valves, pipe, or other related equipment for a minimum of 2 years.
    e. The coating adhesion to the substrate shall exceed the cohesion of the coating film as demonstrated by the following test:
        1) Prepare test panel and apply coating per manufacturer's instructions.
        2) After sample has properly cured, scribe an "X" through the coating, to the metal substrate, using a sharp knife or scalpel.
        3) At the juncture of the two scribes, use the point of the knife to attempt to lift off the coating. The coating should not lift off the substrate or between coats readily, but should break up, leaving coating material on the substrate of this damaged area.
        4) No disbondment of the film shall be noted as tested above after immersion in tap water for 1,500 hours at 100 degrees Fahrenheit.
    f. A falling sand abrasion test using ASTM D968 shall produce an abrasion coefficient of 25.30 liters per mil. As an alternative, a Taber Abrader Test should find 3.5-3.7 milligrams of coating loss per 100 cylces when using a CSFS #10 wheel (1,000-gram weight).

B. Fire Hydrants:
1. All hydrants shall be AWWA C-502 dry-barrel type and shall be Mueller Centurion Hydrants or approved equal.
    a. Hydrants shall have self-oiling reservoirs.
    b. Hydrants shall be epoxy coated as described in "Valves and Valve Boxes" section above.
    c. Hydrants shall have a 5-1/4-inch valve opening, two 2-1/2-inch hose nozzles, and a 4-1/2-inch pumper nozzle. A swivel flange shall be used to face the hydrant nozzles in any position.
    d. Hydrants shall have National Standard Threads.
    e. Operating nut shall be standard 1-1/2-inch pentagon opening counter-clockwise.
    f. Hydrants shall be painted in accordance with the standards of the local municipality.
    g. The hydrants shall be designed for a bury length of 5 feet. Contractor to provide extensions where field conditions require more than 5 feet to achieve the top of flange elevation note on the Plans.
    h. The base of the hydrant shall have placed around the base not less than 7-cubic feet of sound broken stone or gravel.
    i. Hydrants shall have a breakable safety flange, located approximately 2-inches above the ground, and a breakable stem coupling and barrel.

j. Each hydrant shall be connected to the main with a 6-inch PVC branch controlled by an independent 6-inch resilient seat gate valve.
k. Each hydrant shall be set on a stone or a concrete slab not less than 4-inches thickand not less than 1-square foot of surface area.
l. All hydrants shall be set plumb to the grade as established by Engineer. Nozzles shall be set parallel with and/or at right angles to the curb, with the pumper nozzle facing the curb according to the details in the Plans.

2.3 MATERIALS

A. Bedding and Cover:
1. As specified in Section 31 23 16.13 "Trenching."

2.4 ACCESSORIES

A. Thrust Restraints: As specified in Section 33 05 09.33 "Thrust Restraint for Utility Piping."

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify that building service connections and municipal utility water main sizes, locations, and elevations are as indicated on Drawings.

3.2 PREPARATION

A. Cut pipe ends square, ream pipe and tube ends to full pipe diameter, and remove burrs.
B. Remove scale and dirt on inside and outside before assembly.
C. Prepare pipe connections to equipment with flanges or unions.
D. Protect and support existing distribution piping and appurtenances as Work progresses.

3.3 INSTALLATION

A. Bedding:
1. Excavate pipe trench as specified in Section 31 23 16.13 "Trenching."
2. Placement:
a. Place bedding material as indicated on Drawings.
b. Level fill materials in one continuous layer not exceeding 8 inches of compacted depth.
c. Compact to 95 percent maximum density.
3. Backfill around sides and to top of pipe with cover fill, tamp in place, and compact to 95 percent maximum density.
4. Maintain optimum moisture content of fill material to attain required compaction density.
B. Pipe and Fittings:
1. Maintain separation of water main from sewer piping according to TCEQ code.
2. Group piping with other Site piping work whenever practical.

3. Install pipe to elevations indicated on Drawings.
4. Install ductile- iron piping and fittings according to AWWA C600.
5. Route pipe in straight line.
6. Install access fittings to permit disinfection of water system performed under Section 33 01 10.58 "Disinfection of Water Utility Piping Systems."
7. Thrust Restraints:
    a. Form and place concrete for pipe thrust restraints at each elbow or change of pipe direction.
    b. Place concrete to permit full access to pipe and pipe accessories.
    c. Provide bearing area as indicated on Drawings.
8. Establish elevations of buried piping with not less than 3.5 feet of cover.
9. Installation Standards: Install Work according to City of Midland standards.

C. Disinfection: As specified in Section 33 01 10.58 "Disinfection of Water Utility Piping Systems."

3.4 TOLERANCES

A. Section 01 40 00 "Quality Requirements": Requirements for tolerances.
B. Install pipe within tolerance of 5/8-inch.

3.5 FIELD QUALITY CONTROL

A. Section 01 40 00 "Quality Requirements": Requirements for inspecting and testing.
B. Section 01 70 00 "Execution and Closeout Requirements": Requirements for testing, adjusting, and balancing.
C. Testing:
    1. Pressure test piping system according to AWWA C600 and following:
        a. Test Pressure: Not less than 200 psig or 50 psi in excess of maximum static pressure, whichever is greater.
        b. Conduct hydrostatic test for a minimum of 2 hours.
        c. Slowly fill section to be tested with water; expel air from piping at high points.
        d. Install corporation cocks at high points.
        e. Close air vents and corporation cocks after air is expelled.
        f. Raise pressure to specified test pressure.
        g. Observe joints, fittings, and valves under test.
        h. Remove and renew cracked pipes, joints, fittings, and valves showing visible leakage, and retest.
        i. Correct visible deficiencies and continue testing at same test pressure for additional two hours to determine leakage rate.
        j. Maintain pressure within plus or minus 5 psi of test pressure.
        k. Leakage is defined as quantity of water supplied to piping necessary to maintain test pressure during period of test.
        l. Compute maximum allowable leakage using following formula:
            1) L = SD x sqrt(P)/C.
            2) L = testing allowance, gph.
            3) S = length of pipe tested, feet.
            4) D = nominal diameter of pipe, inches.
            5) P = average test pressure during hydrostatic test, psig.
            6) C = 148,000.

m. If pipe under test contains sections of various diameters, calculate allowable leakage from sum of computed leakage for each size.

n. Leakage:

1) If test of pipe indicates leakage greater than allowed, locate source of leakage, make corrections, and retest until leakage is within allowable limits.

2) Correct visible leaks regardless of quantity of leakage.

2. Compaction Testing:

a. Comply with ASTM D1557 and ASTM D698.

b. Frequency of Compaction Tests: 1 density and water content test, each lift, for every 50 linear feet of compacted utility trench backfill.

c. If tests indicate Work does not meet specified requirements, remove Work, replace, and retest.

END OF SECTION

SECTION 33 31 00 - SANITARY SEWERAGE PIPING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
1. Sanitary sewerage piping.
B. Related Requirements:
1. Division 01 Specification Sections apply to Work of this Section.
2. Section 31 23 16.13 "Trenching": Requirements for trenching as required by this Section.

1.2 DEFINITIONS

A. Bedding: Fill placed under, beside, and directly over pipe, prior to subsequent backfill operations.

1.3 REFERENCE STANDARDS

A. American Association of State Highway and Transportation Officials:
1. AASHTO T 180 - Standard Method of Test for Moisture-Density Relations of Soils Using a 4.54-kg (10-lb) Rammer and a 457-mm (18-in.) Drop.
B. American Water Works Association:
1. AWWA C104 - Cement-Mortar Lining for Ductile-Iron Pipe and Fittings.
2. AWWA C105 - Polyethylene Encasement for Ductile-Iron Pipe Systems.
3. AWWA C110 - Ductile-Iron and Gray-Iron Fittings.
4. AWWA C111 - Rubber-Gasket Joints for Ductile-Iron Pressure Pipe and Fittings.
5. AWWA C150 - Thickness Design of Ductile-Iron Pipe.
6. AWWA C151 - Ductile-Iron Pipe, Centrifugally Cast.
7. AWWA C153 - Ductile-Iron Compact Fittings.
C. ASTM International:
1. ASTM A74 - Standard Specification for Cast Iron Soil Pipe and Fittings.
2. ASTM C14 - Standard Specification for Nonreinforced Concrete Sewer, Storm Drain, and Culvert Pipe.
3. ASTM C76 - Standard Specification for Reinforced Concrete Culvert, Storm Drain, and Sewer Pipe.
4. ASTM C443 - Standard Specification for Joints for Concrete Pipe and Manholes, Using Rubber Gaskets.
5. ASTM C564 - Standard Specification for Rubber Gaskets for Cast Iron Soil Pipe and Fittings.
6. ASTM C923 - Standard Specification for Resilient Connectors Between Reinforced Concrete Manhole Structures, Pipes, and Laterals.
7. ASTM D698 - Standard Test Methods for Laboratory Compaction Characteristics of Soil Using Standard Effort (12,400 ft-lbf/ft3 (600 kN-m/m3).
8. ASTM D1557 - Standard Test Methods for Laboratory Compaction Characteristics of Soil Using Modified Effort (56,000 ft-lbf/ft3 (2,700 kN-m/m3).

9. ASTM D1785 - Standard Specification for Poly(Vinyl Chloride) (PVC) Plastic Pipe, Schedules 40, 80, and 120.
10. ASTM D2321 - Standard Practice for Underground Installation of Thermoplastic Pipe for Sewers and Other Gravity-Flow Applications.
11. ASTM D2466 - Standard Specification for Poly(Vinyl Chloride) (PVC) Plastic Pipe Fittings, Schedule 40.
12. ASTM D2564 - Standard Specification for Solvent Cements for Poly(Vinyl Chloride) (PVC) Plastic Piping Systems.
13. ASTM D2729 - Standard Specification for Poly(Vinyl Chloride) (PVC) Sewer Pipe and Fittings.
14. ASTM D2855 - Standard Practice for Making Solvent-Cemented Joints with Poly(Vinyl Chloride) (PVC) Pipe and Fittings.
15. ASTM D3034 - Standard Specification for Type PSM Poly(Vinyl Chloride) (PVC) Sewer Pipe and Fittings.
16. ASTM D6938 - Standard Test Method for In-Place Density and Water Content of Soil and Soil-Aggregate by Nuclear Methods (Shallow Depth).
17. ASTM F477 - Standard Specification for Elastomeric Seals (Gaskets) for Joining Plastic Pipe.

1.4 COORDINATION

A. Section 01 30 00 "Administrative Requirements": Requirements for coordination.
B. Coordinate Work of this Section with termination of sanitary sewer connection outside building, connection to existing sewer utility service, and trenching.

1.5 SUBMITTALS

A. Section 01 33 00 "Submittal Procedures": Requirements for submittals.
B. Product Data: Submit manufacturer information indicating pipe material to be used and pipe accessories.
C. Source Quality-Control Submittals: Indicate results of shop tests and inspections.
D. Field Quality-Control Submittals: Indicate results of Contractor-furnished tests and inspections.
E. Qualifications Statement:
    1. Submit qualifications for manufacturer and installer.

1.6 CLOSEOUT SUBMITTALS

A. Section 01 70 00 "Execution and Closeout Requirements": Requirements for submittals.
B. Project Record Documents: Record finished locations of pipe runs, connections, manholes, cleanouts, and invert elevations.

1.7 QUALITY ASSURANCE

A. Perform Work according to City of Midland standards.

1.8 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this Section with minimum three years' documented experience.
B. Installer: Company specializing in performing Work of this Section with minimum three years' documented experience.

1.9 DELIVERY, STORAGE, AND HANDLING

A. Section 01 60 00 "Product Requirements": Requirements for transporting, handling, storing, and protecting products.
B. Inspection: Accept materials on site in manufacturer's original packaging and inspect for damage.
C. Storage:
    1. Store materials according to manufacturer instructions.
    2. Store valves in shipping containers with labeling in place.
D. Protection:
    1. Protect materials from moisture and dust by storing in clean, dry location remote from construction operations areas.
    2. Block individual and stockpiled pipe lengths to prevent moving.
    3. Provide additional protection according to manufacturer instructions.

1.10 EXISTING CONDITIONS

A. Field Measurements:
    1. Verify field measurements prior to fabrication.
    2. Indicate field measurements on Shop Drawings.

PART 2 - PRODUCTS

2.1 SANITARY SEWERAGE PIPING

A. Plastic Pipe:
    1. Material: PVC.
    2. Comply with ASTM D3034, SDR-35.
    3. Inside Nominal Diameter: 4 inches,
    4. End Connections: Bell and spigot with rubber-ring-sealed gasket joint.
    5. Fittings: PVC.
    6. Joints:
        a. Elastomeric gaskets.
        b. Comply with ASTM F477.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify that trench cut is ready to receive Work of this Section.
B. Verify that excavations, dimensions, and elevations are as indicated on Drawings.

3.2 PREPARATION

A. Correct over-excavation with fine aggregate.
B. Remove large stones or other hard materials that could damage pipe or impede consistent backfilling or compaction.
C. Protect and support existing sewer lines, utilities, and appurtenances.
D. Utilities:
   1. Maintain profiles of utilities.
   2. Coordinate with other utilities to eliminate interference.
   3. Notify Architect/Engineer if crossing conflicts occur.

3.3 INSTALLATION

A. Bedding:
   1. Excavate pipe trench as specified in Section 31 23 16.13 "Trenching."
   2. Place bedding material at trench bottom.
   3. Level materials in continuous layer not exceeding 8 inches.
   4. Maintain optimum moisture content of bedding material to attain required compaction density.
B. Piping:
   1. Install pipe, fittings, and accessories according to ASTM D2321, and seal joints watertight.
   2. Lay pipe to slope gradients as indicated on Drawings.
   3. Begin at downstream end of system and progress upstream.
   4. Bedding: As indicated on Drawings.
   5. Lay bell-and-spigot pipe with bells upstream.
   6. Backfill and compact as specified in Section 31 23 16.13 "Trenching."
   7. Do not displace or damage pipe when compacting.
   8. Connect to building sanitary sewer outlet through installed sleeves.
C. Backfilling:
   1. Backfill around sides and to top of pipe with cover fill in minimum lifts of 8 inches.
   2. Tamp fill in place, and compact to 95 percent of maximum density.
   3. Place and compact material immediately adjacent to pipes to avoid damage to pipe and prevent pipe misalignment.
   4. Maintain optimum moisture content of bedding material as required to attain specified compaction density.

3.4 TOLERANCES

A. Section 01 40 00 "Quality Requirements": Requirements for tolerances.
B. Maximum Variation from Indicated Slope: 1/8-inch in 10 feet.

3.5 FIELD QUALITY CONTROL

A. Section 01 40 00 "Quality Requirements": Requirements for inspecting and testing.
B. Section 01 70 00 "Execution and Closeout Requirements": Requirements for testing, adjusting, and balancing.

C. Testing:
1. If tests indicate that Work does not meet specified requirements, remove Work, replace, and retest.
2. Perform testing on site sanitary sewage system according to City of Midland standards.
3. Pipe Testing: Testing shall not be performed on piping until all backfill has been placed and allowed to densify for a period of 30 days.
   a. Pressure Testing:
      1) Perform air test in accordance with City of Midland standards and ANSI/ASTM C828, latest revision.
   b. Deflection Testing:
      1) Deflection test shall be performed in accordance with City of Midland standards.
      2) Deflection test shall be run using a rigid Go/No-Go mandrel with a diameter equal to 95 percent of the inside diameter of the pipe.
      3) No mechanical pulling device shall be used for the test. Whenever possible, testing shall be done from downstream to upstream.
4. Compaction Testing:
   a. Comply with ASTM D1557 ASTM D6938.
   b. Testing Frequency: One density and water content test, per lift, for each 50 linear feet of compacted utility trench.

3.6 PROTECTION

A. Section 01 70 00 "Execution and Closeout Requirements": Requirements for protecting finished Work.
B. Protect pipe and aggregate cover from damage or displacement until backfilling operation is in progress.
C. Cap open ends of piping during periods of Work stoppage.

END OF SECTION

SECTION 33 42 00 - STORMWATER CONVEYANCE

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Stormwater drainage piping.

B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.
   2. Section 31 23 16.13 "Trenching": Execution requirements for trenching as required by this Section.
   3. Section 33 05 61 "Concrete Manholes": Manholes and accessories as required by this Section.

1.2 REFERENCE STANDARDS

A. American Association of State Highway and Transportation Officials:
   1. AASHTO M036 - Standard Specification for Corrugated Steel Pipe, Metallic-Coated, for Sewers and Drains.
   2. AASHTO M196 - Standard Specification for Corrugated Aluminum Pipe for Sewers and Drains.
   3. AASHTO M218 - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized), for Corrugated Steel Pipe.
   4. AASHTO M245 - Standard Specification for Corrugated Steel Pipe, Polymer-Precoated, for Sewers and Drains.
   5. AASHTO M246 - Standard Specification for Steel Sheet, Metallic-Coated and Polymer-Precoated, for Corrugated Steel Pipe.
   6. AASHTO M252 - Standard Specification for Corrugated Polyethylene Drainage Pipe.
   7. AASHTO M274 - Standard Specification for Steel Sheet, Aluminum-Coated (Type 2), for Corrugated Steel Pipe.
   8. AASHTO M288 - Standard Specification for Geotextile Specification for Highway Applications.
   9. AASHTO M289 - Standard Specification for Aluminum-Zinc Alloy Coated Sheet Steel for Corrugated Steel Pipe.
   10. AASHTO M294 - Standard Specification for Corrugated Polyethylene Pipe, 300- to 1500-mm (12- to 60-in.) Diameter.
   11. AASHTO T241 - Standard Method of Test for Helical Continuously Welded Seam Corrugated Steel Pipe.
   12. AASHTO T 180 - Standard Method of Test for Moisture-Density Relations of Soils Using a 4.54-kg (10-lb) Rammer and a 457-mm (18-in.) Drop.

B. ASTM International:
   1. ASTM A74 - Standard Specification for Cast Iron Soil Pipe and Fittings.
   2. ASTM A123 - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products.

3. ASTM A153 - Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware.
4. ASTM A746 - Standard Specification for Ductile Iron Gravity Sewer Pipe.
5. ASTM B745 - Standard Specification for Corrugated Aluminum Pipe for Sewers and Drains.
6. ASTM C14 - Standard Specification for Nonreinforced Concrete Sewer, Storm Drain, and Culvert Pipe.
7. ASTM C76 - Standard Specification for Reinforced Concrete Culvert, Storm Drain, and Sewer Pipe.
8. ASTM C443 - Standard Specification for Joints for Concrete Pipe and Manholes, Using Rubber Gaskets.
9. ASTM C564 - Standard Specification for Rubber Gaskets for Cast Iron Soil Pipe and Fittings.
10. ASTM D698 - Standard Test Method for Laboratory Compaction Characteristics of Soil Using Standard Effort (12,400 ft-lbf/ft3).
11. ASTM D1557 - Standard Test Methods for Laboratory Compaction Characteristics of Soil Using Modified Effort (56,000 ft-lbf/ft3).
12. ASTM D2235 - Standard Specification for Solvent Cement for Acrylonitrile-Butadiene-Styrene (ABS) Plastic Pipe and Fittings.
13. ASTM D2321 - Standard Practice for Underground Installation of Thermoplastic Pipe for Sewers and Other Gravity-Flow Applications.
14. ASTM D2564 - Standard Specification for Solvent Cements for Poly(Vinyl Chloride) (PVC) Plastic Piping Systems.
15. ASTM D2680 - Standard Specification for Acrylonitrile-Butadiene-Styrene (ABS) and Poly(Vinyl Chloride) (PVC) Composite Sewer Piping.
16. ASTM D2729 - Standard Specification for Poly(Vinyl Chloride) (PVC) Sewer Pipe and Fittings.
17. ASTM D2855 - Standard Practice for the Two-Step (Primer and Solvent Cement) Method of Joining Poly (Vinyl Chloride) (PVC) or Chlorinated Poly (Vinyl Chloride) (CPVC) Pipe and Piping Components with Tapered Sockets.
18. ASTM D3034 - Standard Specification for Type PSM Poly(Vinyl Chloride) (PVC) Sewer Pipe and Fittings.
19. ASTM D6938 - Standard Test Method for In-Place Density and Water Content of Soil and Soil-Aggregate by Nuclear Methods (Shallow Depth).
20. ASTM F405 - Standard Specification for Corrugated Polyethylene (PE) Pipe and Fittings.
21. ASTM F477 - Standard Specification for Elastomeric Seals (Gaskets) for Joining Plastic Pipe.
22. ASTM F667 - Standard Specification for 3 through 24 in. Corrugated Polyethylene Pipe and Fittings.

1.3 COORDINATION

A. Section 01 30 00 "Administrative Requirements": Requirements for coordination.
B. Coordinate Work of this Section with termination of storm sewer connection outside building, trenching, connection to building storm drainage network.

1.4 SUBMITTALS

A. Section 01 33 00 "Submittal Procedures": Requirements for submittals.
B. Product Data: Submit manufacturer information describing pipe and pipe accessories.
C. Manufacturer's Certificate: Certify that products meet or exceed specified requirements.
D. Manufacturer Instructions: Submit special procedures required to install specified products.
E. Field Quality-Control Submittals: Indicate results of Contractor-furnished tests and inspections.
F. Qualifications Statement:
    1. Submit qualifications for manufacturer.

1.5 CLOSEOUT SUBMITTALS

A. Section 01 70 00 "Execution and Closeout Requirements": Requirements for submittals.
B. Project Record Documents: Record actual locations of pipe runs, connections, catch basins, cleanouts, and invert elevations.
C. Identify and describe unexpected variations to subsoil conditions or discovery of uncharted utilities.

1.6 QUALITY ASSURANCE

A. Perform Work according to City of Midland standards.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Section 01 60 00 "Product Requirements": Requirements for transporting, handling, storing, and protecting products.
B. Inspection: Accept materials on site in manufacturer's original packaging and inspect for damage.
C. Store materials according to manufacturer instructions.
D. Protection:
    1. Protect materials from moisture and dust by storing in clean, dry location remote from construction operations areas.
    2. Provide additional protection according to manufacturer instructions.

1.8 EXISTING CONDITIONS

A. Field Measurements:
    1. Verify field measurements prior to fabrication.
    2. Indicate field measurements on Shop Drawings.

PART 2 - PRODUCTS

2.1 STORM DRAINAGE PIPING

A. Reinforced Concrete Piping:
1. Pipe:
a. Comply with ASTM C76, Class III, with Wall Type B.
b. Reinforcement: Bar.
c. Inside Nominal Diameter: 15 inches.
d. End Connections: Bell and spigot.
2. Fittings: Reinforced concrete.
3. Joints:
a. Comply with ASTM C443.
b. Gaskets: Rubber, compression.

B. PVC Piping:
1. Pipe:
a. Comply with ASTM D3034; SDR 35.
b. Inside Nominal Diameter: 10 inches.
c. Style: Bell and spigot with rubber-ring sealed gasket joint.
2. Fittings: PVC.
3. Joints:
a. Comply with ASTM F477.
b. Gaskets: Elastomeric.

2.2 MANHOLES

A. As specified in Section 33 05 61 "Concrete Manholes."

2.3 MATERIALS

A. Bedding and Cover:
1. As specified in Section 31 20 00 "Earth Moving and Section 31 23 16.13 "Trenching."

2.4 MIXES

A. Mortar: Mixture of 1 part portland cement and 2 parts mortar sand, by volume.
1. Portland cement shall conform to the requirements of AASHTO M85, Type 1.
2. Sand shall conform to the requirements of AASHTO M45.
3. Hydrated lime may be added to the mixture of sand and cement in an amount equal to 15 percent of the weight of cement used.
a. Hydrated lime shall meet the requirements of ASTM C6.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify that trench cut is ready to receive Work of this Section.
B. Verify that excavations, dimensions, and elevations are as indicated on Drawings.

3.2 PREPARATION

A. Correct over-excavation with fine aggregate.
B. Remove large stones and other hard matter that could damage piping or impede consistent backfilling or compaction.

3.3 INSTALLATION

A. Excavation and Bedding:
   1. Excavate trench to as specified in Section 31 23 16.13 Trenching."
   2. Hand trim excavation for accurate placement of piping to indicated elevations.
   3. Place bedding material at trench bottom.
   4. Level materials in continuous layers not exceeding 8-inch compacted depth.
   5. Maintain optimum moisture content of bedding material to attain required compaction density.
   6. Level fill materials in continuous layers not exceeding 8 inches in depth, and compact to 95 percent maximum density.
   7. Install pipe on compacted subgrade meeting bedding requirements, and cradle bottom 20 percent of diameter.
B. Piping:
   1. Seal joints watertight.
   2. Place pipe on bedding course.
   3. Cradle bottom 20 percent of pipe diameter to avoid point load.
   4. Backfilling and Compaction:
      a. As specified in Section 31 23 16.13 "Trenching."
      b. Do not displace or damage pipe while compacting.
   5. Connect to building sewer outlet.
   6. Install Site storm drainage system piping to within 5 feet of building.

3.4 TOLERANCES

A. Section 01 40 00 "Quality Requirements": Requirements for tolerances.
B. Maximum Variation from Indicated Pipe Slope: 1/8-inch in 10 feet.

3.5 FIELD QUALITY CONTROL

A. Section 01 40 00 "Quality Requirements": Requirements for inspecting and testing.
B. Testing:
   1. Compaction Test:
      a. Comply with ASTM D1557 and ASTM D698.
   2. Manholes: As specified in Section 33 05 61 "Concrete Manholes."
   3. Piping:
      a. Infiltration and Exfiltration Testing:
         1) Air Test Methods; ANSI/ASTM C828 (latest revision), on each section of storm line.
         2) Water test shall be done to test leakage in manhole.
            a) Allowable leakage in manhole shall not be more than the allowable leakage for the smallest diameter pipe connected into the manhole being tested.
      b. Deflection Testing: Test shall not be made until all backfill on that section has been placed and allowed to densify for a period of 30 days, unless allowed by Engineer.
         1) Deflection test shall be perfomed with a Go/No-Go mandel with a diameter equal to 95 percent of the base inside diameter of the pipe.
         2) The test shall be performed without using mechanical pulling devices.
         3) When possible, testing shall be performed from downstream to upstream.
         4) No pipe shall exceed 5 percent deflection. All excess deflection shall be corrected and retested. If the pipe falls the retest, the pipe shall be replaced.
         5) All testing and repair work shall be done at Contractor's expense.
         6) Contractor shall submit shop drawings of the mandrel to the Architect prior to testing.
   4. If tests indicate that Work does not meet specified requirements, remove Work, replace, and retest.

3.6 PROTECTION

A. Protect pipe and aggregate cover from damage or displacement until backfilling operation is in progress.

PACKET 7.868 September 9, 2025

City Council Meeting

Item Number: 8

Meeting Date: September 9, 2025

To: City Council / City Manager

From: Britton Murry, Planner

Subject: MOTION APPROVING, WITH STAFF'S RECOMMENDED CONDITIONS, A PRELIMINARY PLAT OF DAHLIA WAREHOUSE DISTRICT, BEING A PLAT OF A 131.00-ACRE TRACT OF LAND OUT OF SECTIONS 25 AND 36, BLOCK 41, T-1-S, T&P RR CO. SURVEY, MIDLAND COUNTY, TEXAS (GENERALLY LOCATED ON THE WEST SIDE OF NORTH FARM-TO-MARKET ROAD 1788, APPROXIMATELY 200 FEET SOUTH OF WEST COUNTY ROAD 60) (EXTRATERRITORIAL JURISDICTION) (DEVELOPMENT SERVICES) (QUALITY OF LIFE AND PLACE)

Recommended Planning and Zoning Commission Action:

__X__ **Approve** _____ **Deny** _____ **Directional/Informational**

Details of Request:

Magrym Consulting, on behalf of DWD 1788, LLC, is requesting to plat a 131.00-acre tract of land located on the west side of North Farm to Market Road 1788 into 35 lots in order to obtain addressing and septic permits.

Current Zoning:

ETJ, Extraterritorial Jurisdiction

This request has been routed to all respective departments for internal review. The comments are below.

BUILDING CODE: (Approved)

ETJ, no jurisdiction

ENGINEERING: (Approved with Conditions)

IMPACT FEES: There are no impact fees associated with this plat. Plat outside designated service areas. [For Applicant’s Information Only.]

ROW: Refer to transportation's comments, if any. [For Applicant’s Information Only.]

PAVING: FM 1788 Frontage road is TxDOT facility, built and maintained by TxDOT, no improvements required. [For Applicant’s Information Only.]

WATER: 48” water exists south of tract, okay as is. No public water improvements required. [For Applicant’s Information Only.]

FIRE HYDRANTS: Required as needed to meet NFPA, IFC & City Fire Code; and/or comply with directives of City Fire Marshal. After January 14, 2020 - Fire hydrants shall be spaced no more than 500' apart, Pressure Indicator Rings are to be installed and will require the developers/contractors to pay for the flow test. [For Applicant’s Information Only.]

PRO RATA: None. [For Applicant’s Information Only.] SEWER: Deferral request for sewer improvements were administratively approved on 8/9/2025. [For Applicant’s Information Only.]

DRAINAGE: Drainage report mark-ups/comments were sent back on 8/9/2025. [For Applicant’s Information Only.]

EASEMENTS: Show existing and proposed. [For Applicant’s Information Only.]

DIMENSION: * * *

OTHER: * * *

TRANSPORTATION: (Approved)

No additions or changes to site access are approved with plat or zoning review. Driveways or other access points are approved only with construction drawing review. [For the Applicant’s information only.] No objections to plat. [For the Applicant’s information only.]

FIRE: (Approved)

No comments or objections.

OIL AND GAS: (Approved with Conditions)

Not in the City limits- no oil or gas jurisdiction. Plugged and Abandoned (P&A) well ST NW #2501 API # 32936036 needs to be identified. Include language in plat notes- No structure shall be built over Plugged and Abandoned well. Plugged and Abandoned (P&A) well ST NW #2509 API # 32938079 shows to a P&A well via TRRC GIS. If so then no 135’ radius is required. Include language in plat notes- No structure shall be built over Plugged and

Abandoned well. If this well is actually active, leave it as is.

GIS: (Approved)

Access easements need County names. (Confirm with County) For donation deed, depict it's use. Label private access and utility as easement. Label Craddick Hwy. Depict easement for 2018-1638. (if being vacated, consult Planning)

ADDRESSING: (Approved)

County Plat - To be addressed by MECD

CRMWD: (Approved)

We do not have any comments on this plat.

HEALTH DEPARTMENT: (Approved)

Yes, the health department will review applications from the 35 proposed lots of Dahlia Warehouse District, PLAT OF A 131 ACRE TRACT OF LAND OUT OF SECTION 25 AND SECTION 36, BLOCK 41, T-1-S, T. & P. RR. CO. SURVEY each lot is 1 acres and above property owner must contact the pipeline company to get the setback to their pipeline before any excavation can occur to ensure the proposed plans on the application for the septic system will meet the setbacks from the water well on the property and the water wells on the adjacent properties.

PLANNING: (Approved)

Include the following note: "Approval of a site plan by the City of Midland may be required before these lot(s) may be developed and before a building permit may be obtained." [11-2-5(B)8(b)]

MCAD shows the owner as Cumberland & Western Resources LLC. Provide title document showing proof of ownership at final submittal. [Midland City Code 11-2-3(H)3(e)]

The plat is over 25 acres and will need to be approved City Council [Informational]

Remove the “R” numbers from the surrounding subdivisions [Informational]

Provide the owners phone number [Midland City Code 11-2-3(A)1(a)(2)]

Label the acknowledgement and the owner’s certificate [Informational]

Staff recommends approval of the Preliminary Plat of Dahlia Warehouse District, subject to the following conditions.

Conditions:

A. **All certificates must be written as detailed in Section 11-2-3 Platting Procedures by Final Plat submittal. [11-2-3(H)3(m)(1)]**

B. **Proof of ownership must be provided at final plat submittal. [11-2-3(H)3(m)(1)]**

C. **Approval by the City Council shall be required prior to consideration of a final plat by the Commission on which any preliminary plat is ten hectares (25 acres) or more in area and is located in any survey section (approximately one square mile) which does not contain a publicly owned site or sites intended for both a public school and park, or public site reservation therefor; [11-2-3(D)11(a)(6)].**

D. **Approval of this preliminary plat is subject to the Final plat including all plat comments, conditions, and requirements must be satisfied by all pertinent City departments before filing for recording with the County Clerk of Midland County, Texas. [11-2]**

MIDLAND
Be the Energy!

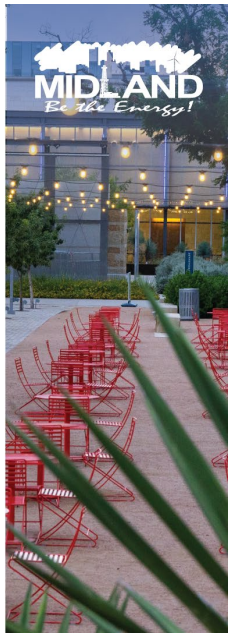
RELATED ITEMS

- This preliminary plat was approved at the September 2, 2025, Planning and Zoning Commission Meeting.

6

STAFF'S RECOMMENDATION

- Staff recommends approval of this request with the following conditions:



A. Proof of ownership must be provided at final plat submittal. [11-2-3(H)3(m)(1)]

B. Approval by the City Council shall be required prior to consideration of a final plat by the Commission on which any preliminary plat is ten hectares (25 acres) or more in area and is located in any survey section (approximately one square mile) which does not contain a publicly owned site or sites intended for both a public school and park, or public site reservation therefor; [11-2-3(D)11(a)(6)].

STAFF'S RECOMMENDATION

C. Approval of this preliminary plat is subject to the Final plat including all plat comments, conditions, and requirements must be satisfied by all pertinent City departments before filing for recording with the County Clerk of Midland County, Texas. [11-2]

8

MISSION
Deliver exceptional services and promote a high quality of life and place for ALL our citizens.

City Council Meeting

Item Number: 10

Meeting Date: September 9, 2025

To: City Council / City Manager

From: Carl Craigo, Director

Subject: MOTION AUTHORIZING THE EXECUTION OF AN AMENDMENT TO THAT CERTAIN MAY 15, 1975, SURFACE LEASE AND RIGHT-OF-WAY AGREEMENT WITH MRC TORO, LLC, SUCCESSOR-IN-INTEREST TO ATLANTIC RICHFIELD COMPANY; SAID AMENDMENT PROVIDING FOR THE EXTENSION OF THE TERM FOR AN ADDITIONAL PERIOD OF FOUR (4) MONTHS (DISTRICT: NONE) (UTILITIES) (PROVIDE SOUND GOVERNANCE & FISCAL MANAGEMENT)

Purpose:

AMENDMENT TO SURFACE USE AND RIGHT-OF-WAY AGREEMENT

State:	**Texas**
County:	**Winkler and Loving**
Lessor:	**City of Midland** **300 N. Loraine** **Midland, TX 79701**
Lessee:	**MRC TORO, LLC** **(successor-in-interest to Atlantic Richfield Company)** **5400 LBJ Fwy, Suite 1500** **Dallas, TX 75240**
Effective Date:	**May 15, 1975**

On May 15, 1975, Lessor, named above, a municipal corporation acting by and through its Mayor pursuant to appropriate resolutions of its City Council, executed a certain Surface Lease and Right-of-Way Agreement dated effective May 15, 1975 (the "Lease") in favor of Lessee's predecessor in interest, that covered certain lands the county and state named above, as more particularly described in the Lease:

Sections 7, 10, 11, 12, 13, 14, 17 through 27, Block C-23, PSL;
Sections 1 through 7, 12, 17 and 18, Block C-24, PSL;
Sections 8 through 11 and Section 27, Block 74, PSL; and
Section 1, Block 75, PSL

The Lease is recorded in Volume 280, page 475 of the Deed Records of Winkler County. Reference is made to the Lease for all purposes.

The Lease provides for a term of fifty (50) years from the Effective Date.

The Lease was previously amended to extend the primary term of the Lease for a period of four (4) months beyond the date of the primary term stated in the Lease.

Lessor desires to extend the primary term of the Lease for an additional period of four (4) months, for a total of eight (8) months beyond the date of the primary term stated in the Lease.

Lessor, for adequate consideration, grants, leases, and lets: (i) extends the Lease for an additional primary term of eight (8) months beginning at the expiration of the primary term stated in the Lease, on the same terms, conditions, and provisions as contained in the Lease. Paragraph 1 of the Lease is hereby amended and modified so that it will state the following:

"TO HAVE AND TO HOLD the leased premises, easements, rights and privileges to Lessee, its successors and assigns, for a term of fifty (50) years and eight (8) months from the date hereof (to and through January 15, 2026), subject to the further terms and provisions hereof."

The Lease, as amended, modified, and extended, is in all other respects confirmed, ratified, and acknowledged by Lessor to be in full force and effect.

This Amendment may be executed in multiple counterparts by each of the current parties to the Lease. Each of the counterparts, when executed and delivered shall be deemed an original and shall be binding and effective immediately upon execution.

This Amendment is signed by Lessor as of the date of acknowledgment of Lessor's signature, but is effective for all purposes as of the Effective Date stated above.

City Council Meeting

Item Number: 11

Meeting Date: August 26, 2025, September 9, 2025

To: City Council / City Manager

From: Alexis M. Martinez, Associate Planner

Subject: AN ORDINANCE AMENDING THE ZONING DISTRICT MAP OF THE CITY OF MIDLAND TO GRANT A SPECIFIC USE DESIGNATION WITH TERM FOR LOT 2, BLOCK 6, CLAYDESTA PLAZA, SECTION 5, CITY AND COUNTY OF MIDLAND, TEXAS (GENERALLY LOCATED AT THE NORTHEAST CORNER OF THE INTERSECTION OF DESTA DRIVE AND WEST WADLEY AVENUE), WHICH IS PRESENTLY ZONED PD, PLANNED DEVELOPMENT DISTRICT FOR AN OFFICE AND RETAIL DEVELOPMENT, ALLOWING SAID PROPERTY TO BE USED FOR THE SALE OF ALL ALCOHOLIC BEVERAGES IN A RESTAURANT FOR ON-PREMISES CONSUMPTION; MAKING SAID DESIGNATION SUBJECT TO CERTAIN CONDITIONS AND RESTRICTIONS CONTAINED HEREIN; CONTAINING A CUMULATIVE CLAUSE; CONTAINING A SAVINGS AND SEVERABILITY CLAUSE; PROVIDING FOR A MAXIMUM PENALTY OR FINE OF TWO THOUSAND DOLLARS ($2,000.00); AND ORDERING PUBLICATION (DISTRICT 3) (DEVELOPMENT SERVICES) (QUALITY OF LIFE AND PLACE)

Purpose:

Jorge Ramos is requesting a Specific Use Designation with term, for the sale of all alcoholic beverages for on-premises consumption, on a property located at 418 West Wadley Avenue for Santomar.

Recommended City Council Action:

Approve

Fiscal Impact:

This proposal does not have a significant financial impact to the City.

Strategic Priority:

(Quality of Life & Place)

Current Zoning:

PD, Planned District (5837)

Surrounding Zoning and Land Use:

The properties to the north and west are zoned PD, Planned District, and are office spaces. The properties to the south are zoned PD, Planned District for a Shopping Center are the locations of cleaners and salon. The property to the west is zoned PD, Planned District for a Transitional District and is the location of a restaurant.

Analysis:

The subject property is located at 418 West Wadley Avenue is zoned PD, Planned Development District, which permits the sale of all alcoholic beverages for on-premises consumption. The total area of the restaurant, Santomar, is 7,633 square feet and the proposed alcohol serviceable Area is 3,960 square feet. The new business Santomar is attempting to obtain their TABC license but must first obtain their SUD.

The proposed days and hours of operation are:

Monday through Thursday from 11 a.m. to 10 p.m.
Friday through Sunday from 11 a.m. to 12 a.m. (midnight)

The applicant is requesting the following alcohol serviceable hours.

Monday through Thursday from 11 a.m. to 10 p.m.
Friday through Sundays from 11 a.m. to 12 a.m. (midnight)

Per Midland City Code, Section 5-4-4, Prohibited Places of Business:

The sale of any alcoholic beverage is hereby prohibited by any person, where the place of business of any such dealer is within 300 feet of any church, public-school, public-school ground, athletic stadium used by any public school or public hospital, the measurements to be along the property lines of the street fronts and from front door to front door and in a direct line across intersections where they occur.

There are no schools or churches within 300 feet of the property using the front door to door distance measurement.

This request has been circulated to and reviewed by respective City departments for internal review and their comments, conditions, and requirements are as follows:

Fire: (Approved)

No comments or objections.

Engineering: (Approved)

No objection. [For Applicant's Information Only.]

Transportation: (Approved)

No objection. [For Applicant's Information Only.]

Building Code: (Approved)

The SUD for Santomar is acceptable. The property must adhere to the maximum occupant load of 264 persons for the alcohol serviceable area. Occupancy loads must be posted in accordance with section 1004.3 of the 2015 International Fire Code.

Planning: (Approved with Conditions)

This request meets all requirements; therefore, staff recommends approval of the request of the Specific Use Designation with Term for the sale of all alcoholic beverages, for on-premises consumption, in a Restaurant, subject to Condition A through G.

Conditions:

A. That the serviceable area of the establishment shall be limited to approximately 3,960 square feet as shown in Exhibit "A", which is attached hereto and incorporated herein for all purposes.

B. That the sale and on-premises consumption of alcoholic beverages shall conform to applicable state and local laws.

C. That the days and hours of alcoholic beverages sales and consumption shall be limited to Monday through Thursday from 11 a.m. to 10 p.m.
Friday through Sundays from 11 a.m. to 12 a.m. (midnight)

D. That the establishment shall meet all requirements of the Fire Department and Code Administration

E. That the occupancy of the establishment shall not exceed the maximum occupancy determined by the Building Code and Fire Code.

F. That the operator of the establishment shall obtain a Certificate of Occupancy prior to commencement of the sale of alcohol beverages for on premises consumption to ensure that the conditions of this Specific Use Designation with Term are satisfied.

G. That in accordance with section 9.07.E.3 of the Zoning Ordinance, the establishment shall be in operation within 120 days from the final adoption date of this ordinance.

Letters of Objection:

As of August 15, 2025 staff has not received any letters of objections.

ORDINANCE NO. _____

AN ORDINANCE AMENDING THE ZONING DISTRICT MAP OF THE CITY OF MIDLAND TO GRANT A SPECIFIC USE DESIGNATION WITH TERM FOR LOT 2, BLOCK 6, CLAYDESTA PLAZA, SECTION 5, CITY AND COUNTY OF MIDLAND, TEXAS (GENERALLY LOCATED AT THE NORTHEAST CORNER OF THE INTERSECTION OF DESTA DRIVE AND WEST WADLEY AVENUE), WHICH IS PRESENTLY ZONED PD, PLANNED DEVELOPMENT DISTRICT FOR AN OFFICE AND RETAIL DEVELOPMENT, ALLOWING SAID PROPERTY TO BE USED FOR THE SALE OF ALL ALCOHOLIC BEVERAGES IN A RESTAURANT FOR ON-PREMISES CONSUMPTION; MAKING SAID DESIGNATION SUBJECT TO CERTAIN CONDITIONS AND RESTRICTIONS CONTAINED HEREIN; CONTAINING A CUMULATIVE CLAUSE; CONTAINING A SAVINGS AND SEVERABILITY CLAUSE; PROVIDING FOR A MAXIMUM PENALTY OR FINE OF TWO THOUSAND DOLLARS ($2,000.00); AND ORDERING PUBLICATION

WHEREAS, the City Planning and Zoning Commission and the Governing Body of the City of Midland, Texas, in compliance with the City Charter, the City Code, and State law, have given the requisite notices by United States mail, publication and otherwise; and after holding due hearings affording a full and fair hearing to all of the property owners generally, and particularly to those interested persons situated in the affected area and in the vicinity thereof, the Governing Body of the City of Midland finds that the public convenience will be best served by granting a Specific Use Designation With Term for Lot 2, Block 6, Claydesta Plaza, Section 5, City and County of Midland, Texas (the "Property"), as set out hereinafter;

NOW, THEREFORE, BE IT ORDAINED BY THE CITY COUNCIL OF THE CITY OF MIDLAND, TEXAS:

SECTION ONE. That the Zoning District Map of the City of Midland, Texas, is hereby amended to grant the Property a Specific Use Designation With Term for the sale of all alcoholic beverages in a restaurant (the "Establishment") for on-premises consumption, together with the uses permitted in the present PD, Planned Development District for an Office and Retail Development.

SECTION TWO. That the Property shall be subject to the following conditions and restrictions:

A. That the serviceable area of the Establishment shall be limited to approximately 3,960 square feet as shown in Exhibit A, which is attached hereto and incorporated herein for all purposes.

B. That the sale and on-premises consumption of alcoholic beverages shall conform to all applicable state and local laws.

C. That the days and hours of alcoholic beverage sales and consumption shall be limited to the following:

Monday through Thursday from 11:00 a.m. to 10:00 p.m.; and
Friday through Sunday from 11:00 a.m. to 12:00 a.m. (midnight).

D. That the occupancy of the Establishment shall not exceed the maximum occupancy determined by the Building Code and Fire Code.

E. That the Establishment shall meet the requirements of the Fire Department and the Code Administration Division.

F. That the operator of the Establishment shall obtain a Certificate of Occupancy prior to the commencement of the sale of alcoholic beverages for on-premises consumption to ensure that the conditions of this Specific Use Designation With Term are satisfied.

G. That in accordance with Section 11-1-9.07.E.3 of the City Code, the Establishment shall be in operation within 120 days from the final adoption date of this ordinance.

SECTION THREE. The provisions of this ordinance are to be cumulative of all other ordinances or parts of ordinances governing or regulating the same subject matter as that covered herein; provided, however, that all prior ordinances or parts of ordinances, inconsistent with or in conflict with any of the provisions of this ordinance are hereby expressly repealed to the extent of any such inconsistency or conflict.

SECTION FOUR. If any section, subsection, sentence, clause or phrase of this ordinance is, for any reason, held to be unconstitutional or invalid, such holding shall not affect the validity of the remaining portions of this ordinance. The Council of the City of Midland hereby declares that it would have passed this ordinance and each section, subsection, sentence, clause, or phrase hereof irrespective of the fact that any one or more sections, subsections, sentences, clauses, or phrases be declared unconstitutional or invalid.

SECTION FIVE. The penalty for violation of this ordinance shall be in accordance with the general penalty provisions contained in Section 1-3-1 of the City Code of Midland, Texas, which provides for a fine not exceeding two thousand dollars ($2,000.00).

SECTION SIX. The City Secretary is hereby authorized and directed to publish the descriptive caption of this ordinance in the manner and for the length of time prescribed by the law as an alternative method of publication.

The above and foregoing ordinance was duly proposed, read in full and adopted on first reading, the _____ day of _____, A.D., 2025; and passed to second reading on motion of Council member _____, seconded by Council member _____, by the following vote:

Council members voting "AYE":

City Council Meeting

Item Number: 12

Meeting Date: August 26, 2025, September 9, 2025

To: City Council / City Manager

From: Britton Murry, Senior Planner

Subject: AN ORDINANCE AMENDING THE ZONING DISTRICT MAP OF THE CITY OF MIDLAND TO REZONE A 302.39-ACRE TRACT OF LAND OUT OF SECTION 18, BLOCK 38, T-1-S, T&P RR CO. SURVEY, CITY AND COUNTY OF MIDLAND, TEXAS, FROM PD, PLANNED DEVELOPMENT DISTRICT FOR A HOUSING DEVELOPMENT TO AN AMENDED PD, PLANNED DEVELOPMENT DISTRICT FOR A HOUSING DEVELOPMENT (GENERALLY LOCATED AT THE NORTHEAST CORNER OF THE INTERSECTION OF NORTH FAIRGROUNDS ROAD AND FIREWHEEL ROAD); CONTAINING A CUMULATIVE CLAUSE; CONTAINING A SAVINGS AND SEVERABILITY CLAUSE; PROVIDING FOR A MAXIMUM PENALTY OR FINE OF TWO THOUSAND DOLLARS ($2,000.00); AND ORDERING PUBLICATION (DISTRICT 1) (DEVELOPMENT SERVICES) (QUALITY OF LIFE AND PLACE)

Purpose:

Maverick Engineering, on behalf of Betenbough Homes, LLC, is requesting to amend the current PD, Planned Development District for Housing Development (Ordinance No. 10564) to modify the lot sizes and lot configuration of the proposed housing development and revise the previously approved preliminary plat.

Recommended City Council Action:

Approve

Fiscal Impact:

None

Strategic Priority:

Quality of Life and Place

Discussion:

Current Zoning:

PD, Planned Development District for a Housing Development

Surrounding Zoning and Land Use:

The surrounding zoning to the north is SF-3, Single-Family Dwelling District and AE, Agricultural Estate District. The zoning to the east consists of LR, Local Retail District, MF-16, Multiple-Family Dwelling District, and 2F, Two-Family Dwelling (Duplex) District. The properties to the south are zoned PD, Planned Development District for Housing Development. The properties to the west are zoned PD, Planned Development District for Housing Development and SF-3, Single-Family Dwelling District. Surrounding land use consists of single-family housing, and vacant land.

Analysis:

Maverick Engineering, on behalf of Betenbough Homes LLC, is requesting a Zone Change for the development of multi-use site including single family housing, cottage housing, and greenspace uses. This proposed subdivision will have a total of one thousand two hundred and ninety-one (1,291) residential lots and approximately 60 acres of greenspace/detention pond that is composed of parks, trails, common areas, and drainage ponds.

The current zoning is PD, Planned Development District for a Housing Development and land use consists of single-family dwellings and vacant land.

The applicant is proposing the development to be executed in fifteen (12-26) phases. The lots width will vary anywhere from 45 to 75 feet and the minimum depth would be 83 feet. Below is a chart with the lot class tabulation, representing them by phases and percentage by lot widths.

Product Class		Smallest Lot Area SF	Smallest Lot Depth LF	Phase # 12	13	14	15	16	17	18	19	20	21	22	23	24	25	26	Percent of Total
Core	45'	4825	96'	46	30	50	22	25	45	27	38	31	30	46	26	29	20	35	38.7%
	50'	4851	90'	53	20	64	46	35	17	25	65	19	25	31	25	11	24	17	36.9%
Reserve	50'	5261	95'									5	7			10			1.7%
	60'	6095	95'									26	20			34			6.2%
	75'	11335	95'									1				1			0.2%
Cottages	50'	4120	83'	1	49	0	41	12	37	47	2	0	0	21	0	0	0	0	16.3%
PHASE TOTAL				100	99	114	109	72	99	99	105	82	82	98	51	85	44	52	100%
OVERALL TOTAL				1291															

These lots will have an underlying zoning of SF-3, Single Family Dwelling District but with the following amendments. The minimum dimensions are as follows:

For core dwellings:

1. The minimum lot Width shall be 45 feet.
2. The minimum lot Depth be 90 feet.
3. The minimum lot Area shall be 4,825 square feet.

For cottages:

1. A minimum lot Width shall be 50 feet.
2. A minimum lot Depth shall be 83 feet.
3. A minimum lot Area shall be 4,120 square feet.

For reserve dwellings:
1. The minimum lot Width shall be 50 feet.
2. The minimum lot depth shall be 95 feet.
3. The minimum lot Area shall be 5,261 feet.

The proposed uses consist of three product classes which are:

- 977 - Core (SF-3, Single-Family Dwelling District lots);
- 104 - Reserve (SF-3, Single-Family Dwelling District lots);
- 210 - Cottages (SF-3, Single-Family District lots);

The appropriate setbacks and maximum height of future development must meet the regulations described in Section 5.04 Residential Zoning District Dimensional Regulations chart. Not all the proposed lots meet the minimum lot depth, minimum lot width, and minimum lot area requirements of the SF-3 district. However, the new PD Ordinance will allow reduced depth, width, and areas as outlined above.

This proposed zone change has been circulated to the respective City departments for internal review and their comments, conditions, and requirements are as follows:

Fire: (Approved)

No comments or objections.

Oil and Gas: (Approved)

No Oil & Gas issues with Zoning.

Engineering: (Approved)

No objections to zone change. [For Applicant's Information Only.] Site drainage, utilities, driveway access, and traffic circulation may be adjusted during construction drawing review as necessary to receive building permit approval from Engineering and Traffic Operations. [For Applicant's Information Only.]

Code: (Approved)

No issues. All future structures must adhere to the 2018 International Building Codes, the 2015 International Energy Code, the 2023 NEC requirements, the 2015 International Fire Codes, local city ordinances, zoning requirements, established setbacks, oil and gas considerations, and floodplain requirements if necessary. Code versions are subject to change depending on the time of new code editions adopted in the City of Midland and date of permit application.

Transportation: (Approved)

Site drainage, utilities, driveway access, and traffic circulation may be adjusted during construction drawing review as necessary to receive building permit approval from Engineering and Traffic Operations. [For the Applicant's information only.] No objection to zone change. [For the Applicant's information only.]

Planning:

The area is classified as Urban Residential-Low, in part, which calls for restrictive land use, emphasizing single-family detached development. The area is also classified as Urban Medium which calls for a mix of complementary uses, including single-family housing, multi-family housing, schools, mid-sized parks and churches, commercial and mixed use. The plan also calls for a parkway that would run through the property which is identified on the amenity plan. All of these uses are compatible with the Low and Medium designations.

The Tall City Tomorrow Comprehensive Plan, Chapter 3 An Integrated Land Use Vision, "Development Policy Areas" labels this area as part of the "Current Development Area" which seeks to address the compatibility of uses, "specifically between different housing intensities," As shown in the proposed site plan, the applicant is planning to create a gradual transition from existing housing developments at the western edge of the property in question which is consistent with this statement.

Principle 4 of Chapter 3 of the Tall City Tomorrow Plan seeks to increase the diversity of the housing stock in Midland specifically including the need of smaller lot homes. This proposal works in compliance since the development will be introducing a neighborhood with a mix of housing intensities to include single-family sized lots of varying in size. Additionally, Principle 8 of the Chapter 3 requests that land use policies and regulations support the creation of more balanced neighborhoods, which include "a variety of housing options, access to open space, and contain activity centers such as parks…" The applicant is proposing to develop more specifically delineated park space and trails in the development which will help give the residents a diversity of recreation allowing for a more balance feel.

Principle 5 of Chapter 3 requests planning for community amenities such as parks and open space to support "community activity, personal interaction a sense of place, and ultimately a sense of ownership in the community." The applicant is proposing to include parks, green space, and trails, all of which will contribute to creating a sense of place for new residents.

Staff recommends approval of this request subject to conditions A through C.

Conditions:

A. **That the Property, including the minimum dimensions of each lot and the minimum area of each lot contained therein, shall significantly conform to the site plan attached hereto as Exhibit "B".**

B. **That the Property shall significantly conform to the amenity plan, which is attached hereto as Exhibit "C" and incorporated herein for all purposes.**

C. **That all signage shall conform to the regulations set forth in Title XI, Chapter 7a of the City Code.**

Letters of Objection:

As of August 15, 2025, staff has received no letters of objection for this request.

ORDINANCE NO. _____

AN ORDINANCE AMENDING THE ZONING DISTRICT MAP OF THE CITY OF MIDLAND TO REZONE A 302.39-ACRE TRACT OF LAND OUT OF SECTION 18, BLOCK 38, T-1-S, T&P RR CO. SURVEY, CITY AND COUNTY OF MIDLAND, TEXAS, FROM PD, PLANNED DEVELOPMENT DISTRICT FOR A HOUSING DEVELOPMENT TO AN AMENDED PD, PLANNED DEVELOPMENT DISTRICT FOR A HOUSING DEVELOPMENT (GENERALLY LOCATED AT THE NORTHEAST CORNER OF THE INTERSECTION OF NORTH FAIRGROUNDS ROAD AND FIREWHEEL ROAD); CONTAINING A CUMULATIVE CLAUSE; CONTAINING A SAVINGS AND SEVERABILITY CLAUSE; PROVIDING FOR A MAXIMUM PENALTY OR FINE OF TWO THOUSAND DOLLARS ($2,000.00); AND ORDERING PUBLICATION

WHEREAS, the City Planning and Zoning Commission and the Governing Body of the City of Midland, in compliance with the City Charter, the City Code, and State law, have given the requisite notices by United States mail, publication and otherwise; and after a full and fair hearing to all of the property owners generally and particularly to those interested persons situated in the affected area and in the vicinity thereof, the Governing Body finds that the public health, safety and general welfare will be best served by rezoning a 302.39-acre tract of land out of Section 18, Block 38, T-1-S, T&P RR Co. Survey, City and County of Midland, Texas, said tract being more specifically described by metes and bounds in Exhibit A, which is attached hereto and incorporated herein (the "Property") to an amended PD, Planned Development District for a Housing Development and adopting a site plan therefor, as set out hereinafter;

NOW, THEREFORE, BE IT ORDAINED BY THE CITY COUNCIL OF THE CITY OF MIDLAND, TEXAS:

SECTION ONE. That the Zoning District Map of the City of Midland, Texas, is hereby amended to rezone the Property from PD, Planned Development District for a Housing Development to an amended PD, Planned Development District for a Housing Development.

SECTION TWO. That the base zoning district to which the use and development of the Property shall conform, except as modified by Section Three of this ordinance, is the SF-3, Single-Family Dwelling District.

SECTION THREE. That a site plan, which is attached hereto as Exhibit B and incorporated herein for all purposes, is hereby adopted, and the use and development of the Property shall be subject to the following conditions and restrictions:

A. That the Property, including the minimum dimensions of each lot and the minimum area of each lot contained therein, shall significantly conform to the site plan attached hereto as Exhibit B.

B. That the Property shall significantly conform to the amenity plan, which is attached hereto as Exhibit C and incorporated herein for all purposes.

C. That all signage shall conform to the regulations set forth in Title XI, Chapter 7a of the City Code.

SECTION FOUR. That the definitions given in the zoning regulations contained in the City Code of the City of Midland, Texas, shall be applicable to such of those terms as are used herein.

SECTION FIVE. The provisions of this ordinance are to be cumulative of all other ordinances or parts of ordinances governing or regulating the same subject matter as that covered herein; provided, however, that all prior ordinances or parts of ordinances inconsistent with or in conflict with any of the provisions of this ordinance are hereby expressly repealed to the extent of any such inconsistency or conflict.

SECTION SIX. If any section, subsection, sentence, clause or phrase of this ordinance is, for any reason, held to be unconstitutional or invalid, such holding shall not affect the validity of the remaining portions of this ordinance. The Council of the City of Midland hereby declares that it would have passed this ordinance and each section, subsection, sentence, clause, or phrase hereof irrespective of the fact that any one or more sections, subsections, sentences, clauses, or phrases be declared unconstitutional or invalid.

SECTION SEVEN. The penalty for violation of this ordinance shall be in accordance with the general penalty provisions contained in Section 1-3-1 of the City

Code of Midland, Texas, which provides for a fine not exceeding two thousand dollars ($2,000.00).

SECTION EIGHT. The City Secretary is hereby authorized and directed to publish the descriptive caption of this ordinance in the manner and for the length of time prescribed by the law as an alternative method of publication.

The above and foregoing ordinance was duly proposed, read in full and adopted on first reading, the _____ day of _____, A.D., 2025; and passed to second reading on motion of Council member _____, seconded by Council member _____, by the following vote:

Council members voting "AYE":

Council members voting "NAY":

The above and foregoing ordinance was read in full and finally adopted by the following vote upon motion of Council member _____, seconded by Council member _____, on the _____ day of _____, A.D., 2025, at a regular meeting of the City Council:

Council members voting "AYE":

Council members voting "NAY":

PASSED AND APPROVED THIS _____ day of _____, A.D., 2025.

FIELD NOTE DESCRIPTION OF A 302.39 ACRE TRACT OF LAND, SITUATED IN SECTION 18, BLOCK 38, TOWNSHIP 1 SOUTH, ABSTRACT NUMBER 734, GLO FILE NUMBER 66103, TEXAS and PACIFIC RAILWAY COMPANY SURVEY, MIDLAND COUNTY, TEXAS, AND BEING A PORTION OF THAT SAME TRACT CALLED FOR IN DOCUMENT NUMBER 2018-20726 OF THE OFFICIAL PUBLIC RECORDS (OPR) OF SAID MIDLAND COUNTY, AND BEING MORE PARTICULARLY DESCRIBED AS FOLLOWS;

BEGINNING AT N.(y): 10723537.29, E.(x): 1758089.19, A ONE HALF INCH IRON ROD WITH A PLASTIC CAP MARKED "ASB 5689", FOUND ON THE NORTH LINE OF SAID SECTION 18, AT THE NORTHEAST CORNER OF A CALLED 22.96 ACRE TRACT DESCRIBED IN DOCUMENT NUMBER 2019-3532 OF SAID PUBLIC RECORDS, FROM WHICH A ONE HALF INCH IRON ROD FOUND AT A FENCE CORNER AND ACCEPTED AS BEING IN THE POSITION OF THE PATENTED IRON PIPE AT THE COMMON WEST CORNER OF SAID SECTION 18 AND SECTION 7 OF THE SAME BLOCK BEARS S.75°19'52"W., ALONG THE COMMON LINE OF SAID SECTIONS 7 AND 18, 156.42 FEET, AND BEING THE NORTHWEST CORNER HEREOF;

THENCE N.75°19'52"E., ALONG THE COMMON LINE OF SAID SECTIONS 7 AND 18, 4899.40 FEET TO A RED PLASTIC CAP MARKED "MAVERICK FIRM#10194014" (RPC) SET AT A POINT OF DEFLECTION RIGHT FOR A CURVE TO THE LEFT HAVING A RADIUS OF 1040.00 FEET AND A CHORD BEARING AND DISTANCE OF S.00°5'159"E., 431.04 FEET BEING ON THE EAST LINE OF PROPOSED "TODD DRIVE" FOR THE NORTHEAST CORNER HEREOF;

THENCE ALONG SAID TODD DRIVE AND THE ARC OF SAID CURVE BEING CONCAVE TO THIS TRACT 434.18 FEET TO THE POINT OF TANGENCY;

THENCE S.18°49'35"E., CONTINUING ALONG SAID TODD DRIVE, 1868.51 FEET TO A POINT OF CURVATURE FOR A CURVE TO THE RIGHT HAVING A RADIUS OF 3560.00 FEET AND A CHORD BEARING AND DISTANCE OF S.16°37'01"E., 197.40 FEET;

THENCE ALONG THE ARC OF SAID CURVE BEING CONVEX TO THIS TRACT, 197.45 FEET TO A POINT OF DEFLECTION RIGHT FOR THE SOUTHEAST CORNER HEREOF;

THENCE THE FOLLOWING 9 COURSES AND DISTANCES ALL TO AN "RPC" FOUND, TO A POINT OF DEFLECTION LEFT FOR A CURVE TO THE RIGHT HAVING A RADIUS OF 1305.00 FEET AND A CHORD BEARING AND DISTANCE OF S.43°21'40"W., 886.78 FEET;

1. S.75°20'52"W., 265.00 FEET;
2. S.80°51'01"W., 60.26 FEET;
3. S.75°20'52"W., 115.00 FEET;
4. S.14°25'02"E., 7.06 FEET;
5. S.75°20'52"W., 115.00 FEET;
6. S.81°18'37"W., 60.27 FEET;
7. S.69°08'15"W., 114.62 FEET;
8. S.14°39'08"E., 46.14 FEET;
9. S.77°16'15"W., 15.51 FEET;

THENCE ALONG THE ARC OF SAID CURVE BEING CONVEX TO THIS TRACT 904.79 FEET TO A POINT OF DEFLECTION RIGHT;

THENCE N.26°46'36"W., 115.00 FEET TO AN "RPC" FOUND.

THENCE N.29°45'59"W., 80.11 FEET TO AN "RPC" FOUND;

THENCE N.26°33'48"W., 115.00 FEET TO AN "RPC" FOUND AT A POINT OF DEFLECTION LEFT FOR A CURVE TO THE RIGHT HAVING A RADIUS OF 995.00 FEET AND A CHORD BEARING AND DISTANCE OF S.66°52'14"W., 119.20 FEET;

THENCE ALONG THE ARC OF SAID CURVE BEING CONVEX TO THIS TRACT 119.27 FEET TO A POINT OF TANGENCY;

THENCE S.72°23'25"W., 72.42 FEET TO A POINT OF CURVATURE FOR A CURVE TO THE RIGHT HAVING A RADIUS OF 995.00 FEET AND A CHORD BEARING AND DISTANCE OF S.78°25'37"W., 137.13 FEET;

THENCE ALONG THE ARC OF SAID CURVE BEING CONVEX TO THIS TRACT 137.24 FEET TO A POINT OF DEFLECTION LEFT;

THENCE S.07°37'18"E., 115.00 FEET TO AN "RPC" FOUND AT A POINT OF DEFLECTION RIGHT FOR A CURVE TO THE RIGHT HAVING A RADIUS OF 1110.00 FEET AND A CHORD BEARING AND DISTANCE OF N.88°33'08"W., 349.94 FEET;

THENCE ALONG THE ARC OF SAID CURVE BEING CONVEX TO THIS TRACT 351.41 FEET TO A POINT OF REVERSE CURVATURE FOR A CURVE TO THE LEFT HAVING A RADIUS OF 1950.00 FEET AND A CHORD BEARING AND DISTANCE OF N.81°45'01"W., 154.30 FEET;

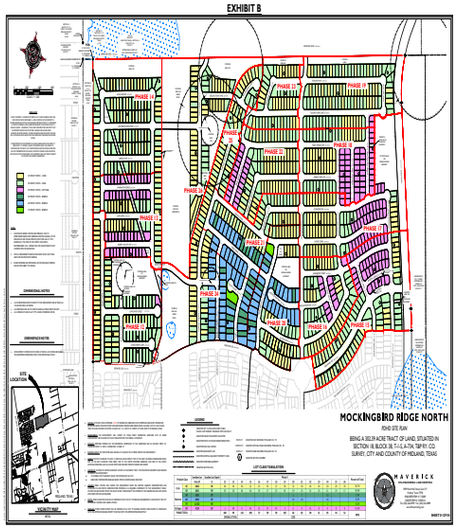
THENCE ALONG THE ARC OF SAID CURVE BEING CONCAVE TO THIS TRACT 154.34 FEET TO A POINT OF DEFLECTION RIGHT;

THENCE THE FOLLOWING 3 COURSES AND DISTANCES TO A POINT OF DEFLECTION RIGHT FOR A CURVE TO THE LEFT HAVING A RADIUS OF 1950.00 FEET AND A CHORD BEARING AND DISTANCE OF S.73°17'02"W., 1317.88 FEET;

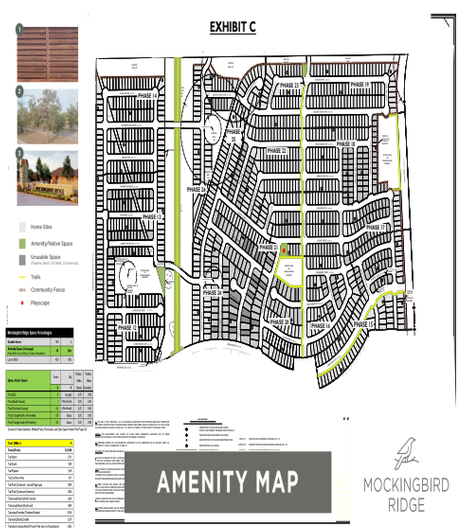
1. N.42°57'36"W., 30.03 FEET;
2. N.85°29'51"W., 60.34 FEET;
3. S.45°51'35"W., 27.04 FEET;

THENCE ALONG THE ARC OF SAID CURVE BEING CONCAVE TO THIS TRACT 1344.34 FEET TO A POINT OF REVERSE CURVATURE FOR A CURVE TO THE RIGHT HAVING A RADIUS OF 920.00 FEET AND A CHORD BEARING AND DISTANCE OF S.64°37'59"W., 354.22 FEET;

THENCE ALONG THE ARC OF SAID CURVE BEING CONVEX TO THIS TRACT 356.44 FEET TO THE POINT OF TANGENCY;



THENCE THE FOLLOWING 5 COURSES AND DISTANCES;



1. S.75°43'57"W., 651.20 FEET;
2. N.59°20'03"W., 28.32 FEET;
3. S.74°47'34"W., 79.96 FEET;
4. S.75°43'57"W., 95.07 FEET TO AN "RPC" FOUND FOR THE SOUTHWEST CORNER HEREOF;
5. N.14°24'01"W., 2733.97 FEET TO THE **POINT OF BEGINNING**, CONTAINING 302.39 ACRES OF LAND.

FIELD NOTE DESCRIPTION OF A 302.39 ACRE TRACT OF LAND, SITUATED IN SECTION 18, BLOCK 38, TOWNSHIP 1 SOUTH, ABSTRACT NUMBER 734, GLO FILE NUMBER 66103, TEXAS and PACIFIC RAILWAY COMPANY SURVEY, MIDLAND COUNTY, TEXAS, AND BEING A PORTION OF THAT SAME TRACT CALLED FOR IN DOCUMENT NUMBER 2018-20726 OF THE OFFICIAL PUBLIC RECORDS (OPR) OF SAID MIDLAND COUNTY, AND BEING MORE PARTICULARLY DESCRIBED AS FOLLOWS;

BEGINNING AT N.(y). 10723537.29, E.(x). 1758089.19, A ONE HALF INCH IRON ROD WITH A PLASTIC CAP MARKED "ASB 5689", FOUND ON THE NORTH LINE OF SAID SECTION 18, AT THE NORTHEAST CORNER OF A CALLED 22.96 ACRE TRACT DESCRIBED IN DOCUMENT NUMBER 2019-3532 OF SAID PUBLIC RECORDS, FROM WHICH A ONE HALF INCH IRON ROD FOUND AT A FENCE CORNER AND ACCEPTED AS BEING IN THE POSITION OF THE PATENTED IRON PIPE AT THE COMMON WEST CORNER OF SAID SECTION 18 AND SECTION 7 OF THE SAME BLOCK BEARS S.75°19'52"W., ALONG THE COMMON LINE OF SAID SECTIONS 7 AND 18, 156.42 FEET, AND BEING THE NORTHWEST CORNER HEREOF;

THENCE N.75°19'52"E., ALONG THE COMMON LINE OF SAID SECTIONS 7 AND 18, 4894.40 FEET TO A RED PLASTIC CAP MARKED "MAVERICK FIRM#10194514" (RPC) SET AT A POINT OF DEFLECTION RIGHT FOR A CURVE TO THE LEFT HAVING A RADIUS OF 1040.00 FEET AND A CHORD BEARING AND DISTANCE OF S.06°5'19"E., 431.04 FEET BEING ON THE EAST LINE OF PROPOSED "TODD DRIVE" FOR THE NORTHEAST CORNER HEREOF;

THENCE ALONG SAID TODD DRIVE AND THE ARC OF SAID CURVE BEING CONCAVE TO THIS TRACT 434.18 FEET TO THE POINT OF TANGENCY;

THENCE S.18°49'35"E., CONTINUING ALONG SAID TODD DRIVE, 1868.51 FEET TO A POINT OF CURVATURE FOR A CURVE TO THE RIGHT HAVING A RADIUS OF 3560.00 FEET AND A CHORD BEARING AND DISTANCE OF S.16°37'01"E., 197.40 FEET;

THENCE ALONG THE ARC OF SAID CURVE BEING CONVEX TO THIS TRACT, 197.45 FEET TO A POINT OF DEFLECTION RIGHT FOR THE SOUTHEAST CORNER HEREOF;

THENCE THE FOLLOWING 9 COURSES AND DISTANCES ALL TO AN "RPC" FOUND, TO A POINT OF DEFLECTION LEFT FOR A CURVE TO THE RIGHT HAVING A RADIUS OF 1305.00 FEET AND A CHORD BEARING AND DISTANCE OF S.43°21'40"W., 886.78 FEET;

1. S.75°20'52"W., 265.00 FEET;
2. S.80°51'01"W., 60.26 FEET;
3. S.75°20'52"W., 115.00 FEET;
4. S.14°25'02"E., 7.06 FEET;
5. S.75°20'52"W., 115.00 FEET;
6. S.81°18'37"W., 60.27 FEET;
7. S.69°08'15"W., 114.62 FEET;
8. S.14°39'08"E., 46.14 FEET;
9. S.77°16'15"W., 15.51 FEET;

THENCE ALONG THE ARC OF SAID CURVE BEING CONVEX TO THIS TRACT 904.79 FEET TO A POINT OF DEFLECTION RIGHT;

THENCE N.26°46'36"W., 115.00 FEET TO AN "RPC" FOUND.

THENCE N.29°45'59"W., 80.11 FEET TO AN "RPC" FOUND;

THENCE N.26°33'48"W., 115.00 FEET TO AN "RPC" FOUND AT A POINT OF DEFLECTION LEFT FOR A CURVE TO THE RIGHT HAVING A RADIUS OF 995.00 FEET AND A CHORD BEARING AND DISTANCE OF S.66°52'14"W., 119.20 FEET;

THENCE ALONG THE ARC OF SAID CURVE BEING CONVEX TO THIS TRACT 119.27 FEET TO A POINT OF TANGENCY;

THENCE S.72°23'25"W., 72.42 FEET TO A POINT OF CURVATURE FOR A CURVE TO THE RIGHT HAVING A RADIUS OF 995.00 FEET AND A CHORD BEARING AND DISTANCE OF S.78°25'37"W., 137.13 FEET;

THENCE ALONG THE ARC OF SAID CURVE BEING CONVEX TO THIS TRACT 137.24 FEET TO A POINT OF DEFLECTION LEFT;

THENCE S.07°37'18"E., 115.00 FEET TO AN "RPC" FOUND AT A POINT OF DEFLECTION RIGHT FOR A CURVE TO THE RIGHT HAVING A RADIUS OF 1110.00 FEET AND A CHORD BEARING AND DISTANCE OF N.88°33'08"W., 349.94 FEET;

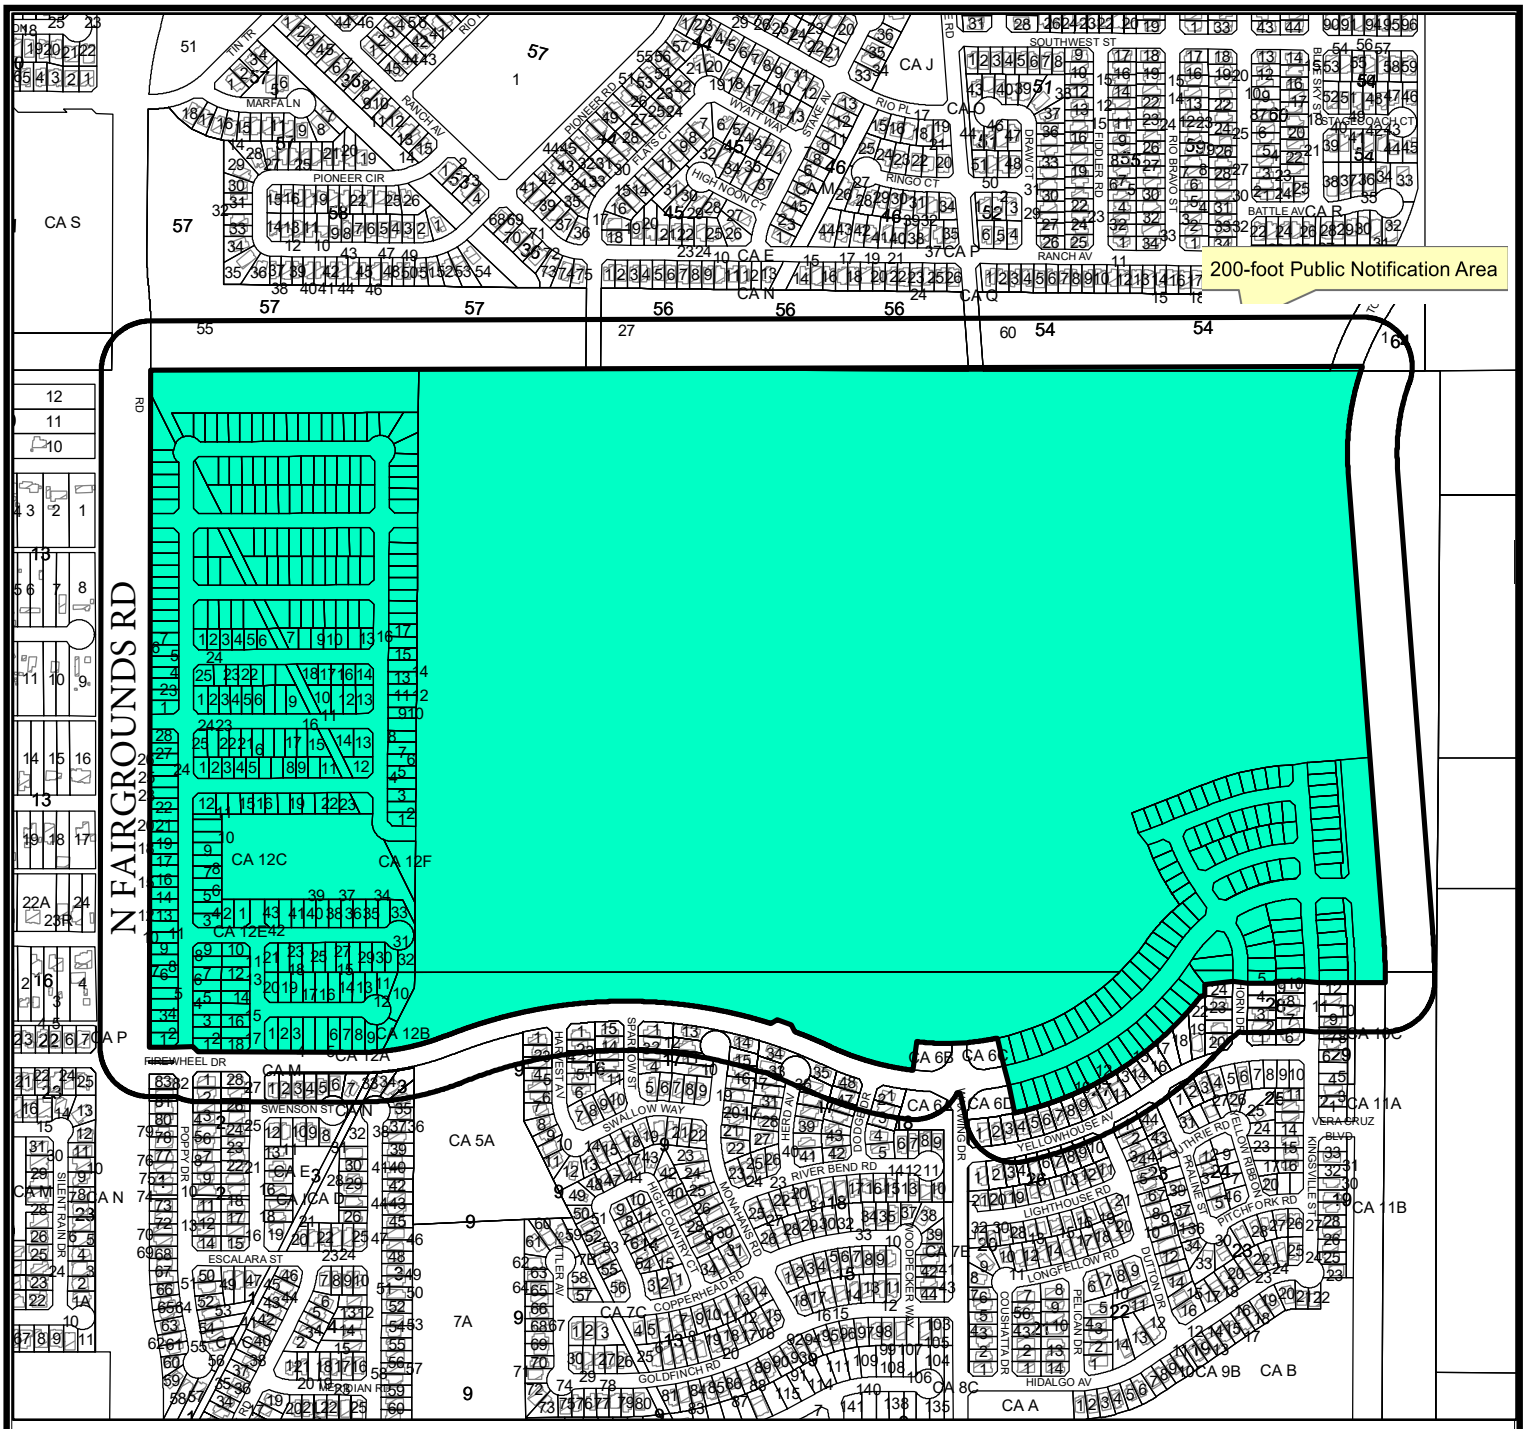
THENCE ALONG THE ARC OF SAID CURVE BEING CONVEX TO THIS TRACT 351.41 FEET TO A POINT OF REVERSE CURVATURE FOR A CURVE TO THE LEFT HAVING A RADIUS OF 1950.00 FEET AND A CHORD BEARING AND DISTANCE OF N.81°45'01"W., 154.30 FEET;

THENCE ALONG THE ARC OF SAID CURVE BEING CONCAVE TO THIS TRACT 154.34 FEET TO A POINT OF DEFLECTION RIGHT;

THENCE THE FOLLOWING 3 COURSES AND DISTANCES TO A POINT OF DEFLECTION RIGHT FOR A CURVE TO THE LEFT HAVING A RADIUS OF 1950.00 FEET AND A CHORD BEARING AND DISTANCE OF S.73°17'02"W., 1317.88 FEET;

1. N.42°57'36"W., 30.03 FEET;
2. N.85°29'51"W., 60.34 FEET;
3. S.45°51'35"W., 27.04 FEET;

THENCE ALONG THE ARC OF SAID CURVE BEING CONCAVE TO THIS TRACT 1344.34 FEET TO A POINT OF REVERSE CURVATURE FOR A CURVE TO THE RIGHT HAVING A RADIUS OF 920.00 FEET AND A CHORD BEARING AND DISTANCE OF S.64°37'59"W., 354.22 FEET;



THENCE ALONG THE ARC OF SAID CURVE BEING CONVEX TO THIS TRACT 356.44 FEET TO THE POINT OF TANGENCY;

THENCE THE FOLLOWING 5 COURSES AND DISTANCES;

1. S.75°43'57"W., 651.20 FEET;
2. N.59°20'03"W., 28.32 FEET;
3. S.74°47'34"W., 79.96 FEET;
4. S.75°43'57"W., 95.07 FEET TO AN "RPC" FOUND FOR THE SOUTHWEST CORNER HEREOF;
5. N.14°24'01"W., 2733.97 FEET TO THE **POINT OF BEGINNING**, CONTAINING 302.39 ACRES OF LAND.

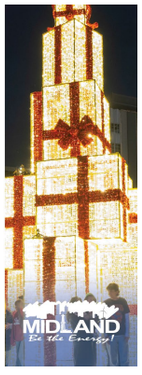
- **Core:**
  - Minimum lot width of 45 feet, minimum lot depth of 90 feet, and minimum lot area of 4,825 square feet.
- **Reserve:**
  - Minimum lot width of 50 feet, minimum lot depth of 95 feet, and minimum lot area of 5,261 square feet.
- **Cottage:**
  - Minimum lot width of 50 feet, minimum lot depth of 83 feet, and minimum lot area of 4,120 square feet.

STAFF'S RECOMMENDATION

- No objections were received.
- The Planning and Zoning Commission recommended approval of this request on August 18, 2025.
- Staff recommends approval of this request with the following conditions:

A. That the Property, including the minimum dimensions of each lot and the minimum area of each lot contained therein, shall significantly conform to the site plan attached hereto as Exhibit "B".



10

STAFF'S RECOMMENDATION

B. That the Property shall significantly conform to the amenity plan, which is attached hereto as Exhibit "C" and incorporated herein for all purposes.

C. That all signage shall conform to the regulations set forth in Title XI, Chapter 7a of the City Code.

MISSION
Deliver exceptional services and promote a high quality of life and place for ALL our citizens.

ORDINANCE NO. 10564

AN ORDINANCE AMENDING THE ZONING DISTRICT MAP OF THE CITY OF MIDLAND TO REZONE A 302.39-ACRE TRACT OF LAND OUT OF SECTION 18, BLOCK 38, T-1-S, T&P RR CO. SURVEY, CITY AND COUNTY OF MIDLAND, TEXAS, FROM SF-1, SINGLE-FAMILY DWELLING DISTRICT, IN PART, SF-2, SINGLE-FAMILY DWELLING DISTRICT, IN PART, SF-3, SINGLE-FAMILY DWELLING DISTRICT, IN PART, TH, TOWNHOUSE (ATTACHED) DWELLING DISTRICT, IN PART, 2F, TWO-FAMILY DWELLING (DUPLEX) DISTRICT, IN PART, MF-16, MULTIPLE-FAMILY DWELLING DISTRICT, IN PART, AND LR, LOCAL RETAIL DISTRICT, IN PART, TO PD, PLANNED DEVELOPMENT DISTRICT FOR A HOUSING DEVELOPMENT (GENERALLY LOCATED AT THE NORTHEAST CORNER OF THE INTERSECTION OF FAIRGROUNDS ROAD AND FIREWHEEL ROAD); CONTAINING A CUMULATIVE CLAUSE; CONTAINING A SAVINGS AND SEVERABILITY CLAUSE; PROVIDING FOR A MAXIMUM PENALTY OR FINE OF TWO THOUSAND DOLLARS ($2,000.00); AND ORDERING PUBLICATION

WHEREAS, the City Planning and Zoning Commission and the Governing Body of the City of Midland, in compliance with the City Charter, the City Code, and State law, have given the requisite notices by United States mail, publication and otherwise; and after a full and fair hearing to all of the property owners generally and particularly to those interested persons situated in the affected area and in the vicinity thereof, the Governing Body finds that the public health, safety and general welfare will be best served by rezoning a 302.39-acre tract of land out of Section 18, Block 38, T-1-S, T&P RR Co. Survey, City and County of Midland, Texas, said tract being more specifically described by metes and bounds in Exhibit "A", which is attached hereto and incorporated herein (the "Property") to PD, Planned Development District for a Housing Development and adopting a site plan therefor, as set out hereinafter;

NOW, THEREFORE, BE IT ORDAINED BY THE CITY COUNCIL OF THE CITY OF MIDLAND, TEXAS:

SECTION ONE. That the Zoning District Map of the City of Midland, Texas, is hereby amended to rezone the Property from SF-1, Single-Family Dwelling District, in part,

SF-2, Single-Family Dwelling District, in part, SF-3, Single-Family Dwelling District, in part, TH, Townhouse (Attached) Dwelling District, in part, 2F, Two-Family Dwelling (Duplex) District, in part, MF-16, Multiple-Family Dwelling District, in part, and LR, Local Retail District, in part, to PD, Planned Development District for a Housing Development.

SECTION TWO. That the base zoning district to which the use and development of the Property shall conform, except as modified by Section Three of this ordinance, is the SF-3, Single-Family Dwelling District.

SECTION THREE. That a site plan, which is attached hereto as Exhibit "B" and incorporated herein for all purposes, is hereby adopted, and the use and development of the Property shall be subject to the following conditions and restrictions:

A. That the Property, including the minimum dimensions of each lot and the minimum area of each lot contained therein, shall significantly conform to the site plan attached hereto as Exhibit "B".

B. That the Property shall significantly conform to the amenity plan, which is attached hereto as Exhibit "C" and incorporated herein for all purposes.

C. That all signage shall conform to the regulations set forth in Title XI, Chapter 7a of the City Code.

SECTION FOUR. That the definitions given in the zoning regulations contained in the City Code of the City of Midland, Texas, shall be applicable to such of those terms as are used herein.

SECTION FIVE. The provisions of this ordinance are to be cumulative of all other ordinances or parts of ordinances governing or regulating the same subject matter as that covered herein; provided, however, that all prior ordinances or parts of ordinances inconsistent with or in conflict with any of the provisions of this ordinance are hereby expressly repealed to the extent of any such inconsistency or conflict.

SECTION SIX. If any section, subsection, sentence, clause or phrase of this ordinance is, for any reason, held to be unconstitutional or invalid, such holding shall not affect the validity of the remaining portions of this ordinance. The Council of the City of

Midland hereby declares that it would have passed this ordinance and each section, subsection, sentence, clause, or phrase hereof irrespective of the fact that any one or more sections, subsections, sentences, clauses, or phrases be declared unconstitutional or invalid.

SECTION SEVEN. The penalty for violation of this ordinance shall be in accordance with the general penalty provisions contained in Section 1-3-1 of the City Code of Midland, Texas, which provides for a fine not exceeding two thousand dollars ($2,000.00).

SECTION EIGHT. The City Secretary is hereby authorized and directed to publish the descriptive caption of this ordinance in the manner and for the length of time prescribed by the law as an alternative method of publication.

The above and foregoing ordinance was duly proposed, read in full and adopted on first reading, the 10th day of September, A.D., 2024; and passed to second reading on motion of Council member Ladd, seconded by Council member Dufford, by the following vote:

Council members voting "AYE": Davidson, Stretcher Burkes, Poole, Blong, Dufford, Ladd, Norman

Council members voting "NAY": None

The above and foregoing ordinance was read in full and finally adopted by the following vote upon motion of Council member Ladd, seconded by Council member Norman, on the 24th day of September, A.D., 2024, at a regular meeting of the City Council:

Council members voting "AYE": Davidson, Stretcher Burkes, Poole, Blong, Dufford, Ladd, Norman

Council members voting "NAY": None

PASSED AND APPROVED THIS 24th day of September, A.D., 2024.

Lori Merritt Blong, Mayor

City Council Meeting

Item Number: 13

Meeting Date: September 9, 2025

To: City Council / City Manager

From: Beatriz Quezada, Planner

Subject: AN ORDINANCE GRANTING A SPECIAL EXCEPTION FOR A 1.0-ACRE TRACT OF LAND OUT OF SECTION 23, BLOCK 40, T-1-S, T&P RR CO. SURVEY, CITY AND COUNTY OF MIDLAND, TEXAS (GENERALLY LOCATED ON THE NORTH SIDE OF GLADIOLA AVENUE, APPROXIMATELY 465 FEET EAST OF GOLDEN GATE DRIVE), BY PERMITTING A REDUCED MINIMUM LOT AREA; CONTAINING A CUMULATIVE CLAUSE; CONTAINING A SAVINGS AND SEVERABILITY CLAUSE; PROVIDING FOR A MAXIMUM PENALTY OR FINE OF TWO THOUSAND DOLLARS ($2,000.00); ORDERING RECORDATION BY THE CITY SECRETARY IN THE DEED RECORDS OF MIDLAND COUNTY, TEXAS; AND ORDERING PUBLICATION (DISTRICT 4) (DEVELOPMENT SERVICES) (QUALITY OF LIFE AND PLACE)

Purpose:

Maverick Engineering, on behalf of Brandon McMorries and Adrian Hernandez, is requesting a Special Exception from the City of Midland Zoning Ordinance, Section 5.04 – Residential Zoning District Dimensional Regulations Chart, to permit a reduced minimum lot area for the property located on 6500 Gladiola Avenue in order to develop two residential lots.

Recommended City Council Action:

Approve

Fiscal Impact:

None

Discussion:

The subject property, located at 6500 Gladiola Avenue, is currently the site of a single-family

residence. The applicant is requesting a special exception to reduce the minimum lot area to allow the property to be subdivided into two lots with both being 0.50 acres. The proposed parcel exceeds this requirement, comprising approximately 21,774 square feet.

Per the City of Midland Zoning Ordinance, Section 5.04 – Residential Zoning District Dimensional Regulations Chart, the minimum lot area required within the CE, Country Estate District, is 43,560 square feet (1.00 acre). The property located at 6500 Gladiola currently consists of a 1.00-acre parcel. In addition to the special exception request, the property is currently being replatted. The proposed subdivision would create two lots, each comprising approximately 21,774 square feet (0.50 acres), which does not meet the minimum lot size requirement for the district. In addition, pursuant to the Restrictive Covenants, Article IV – Building Restrictions, a minimum lot size of 10,000 square feet is required.

It is also noted that several properties located directly south of the subject parcel are existing nonconforming lots, each with a lot area below the minimum threshold established by the CE zoning district.

This request has been circulated to all pertinent City departments for review. Below are the departments' comments.

Fire: (Approved)

No comments or objections.

Building: (Approved)

No issues. All future structures must adhere to the 2018 International Building Codes, the 2015 International Energy Code, the 2023 NEC requirements, the 2015 International Fire Codes, local city ordinances, zoning requirements, established setbacks, oil and gas considerations, and floodplain requirements if necessary. Code versions are subject to change depending on the time of new code editions adopted in the City of Midland and date of permit application.

Oil & Gas Review (Approved)

No Oil & Gas issue for Zoning.

Engineering: (Approved)

No objection. [For Applicant's Information Only.]

Transportation: (Approved)

No objection. [For the Applicant's information only.]

Planning (Approved):

Staff recommends approval of this request, as it will not adversely impact the safety, comfort, or

well-being of the area's occupants, who currently benefit from the same allowances regarding the number of secondary structures.

Staff recommends approval of this request subject to condition A.

Condition:

A. That said special exception shall be of no force or effect unless the Property is subdivided into no more than two lots after the final adoption of this ordinance; provided, however, that each lot shall have an area of 0.5 acres.

Letters of Objection:

Staff has received three letters of objection as of September 5, 2025.

ORDINANCE NO. _____

AN ORDINANCE GRANTING A SPECIAL EXCEPTION FOR A 1.0-ACRE TRACT OF LAND OUT OF SECTION 23, BLOCK 40, T-1-S, T&P RR CO. SURVEY, CITY AND COUNTY OF MIDLAND, TEXAS (GENERALLY LOCATED ON THE NORTH SIDE OF GLADIOLA AVENUE, APPROXIMATELY 465 FEET EAST OF GOLDEN GATE DRIVE), BY PERMITTING A REDUCED MINIMUM LOT AREA; CONTAINING A CUMULATIVE CLAUSE; CONTAINING A SAVINGS AND SEVERABILITY CLAUSE; PROVIDING FOR A MAXIMUM PENALTY OR FINE OF TWO THOUSAND DOLLARS ($2,000.00); ORDERING RECORDATION BY THE CITY SECRETARY IN THE DEED RECORDS OF MIDLAND COUNTY, TEXAS; AND ORDERING PUBLICATION

WHEREAS, the City Council modified the authority of the Board of Adjustment in Title XI, Chapter 1, Section 7 ("Section 11-1-7") of the Midland City Code; and

WHEREAS, Section 11-1-7 provides for the consideration of requests for special exceptions to the Midland Zoning Ordinance; and

WHEREAS, the Council finds that satisfactory evidence has been presented that the use to be authorized by the granting of the special exception will not be detrimental to the health, safety, comfort and welfare of the occupants of the land area near the tract on which the use to be allowed by special exception will be located; and

WHEREAS, the Council finds that it is clearly and specifically authorized by the terms of Section 11-1-7 to grant such a special exception, and said exception will be in harmony with the general purposes and intent of the zoning provisions of the Midland City Code; and

WHEREAS, after a full and fair public hearing at which all parties in interest were offered an opportunity to be heard, all pursuant to law, the Council finds it to be in the public interest to grant a special exception to the Zoning Ordinance, pursuant to Section 11-1-7, for the purposes herein stated, subject to special conditions;

NOW, THEREFORE, BE IT ORDAINED BY THE CITY COUNCIL OF THE CITY OF MIDLAND, TEXAS:

SECTION ONE. That a special exception is hereby granted for the property described as a 1.0-acre tract of land out of Section 23, Block 40, T-1-S, T&P RR Co.

Survey, City and County of Midland, Texas (the "Property"), said Property being more fully described by metes and bounds in Exhibit A, which is attached hereto and incorporated herein for all purposes. Said special exception shall allow a reduced minimum lot area for all lots on the Property.

SECTION TWO. Said special exception is subject to the following special conditions:

> That said special exception shall be of no force or effect unless the Property is subdivided into no more than two lots after the final adoption of this ordinance; provided, however, that each lot shall have an area of 0.5 acres.

SECTION THREE. The provisions of this ordinance are to be cumulative of all other ordinances or parts of ordinances governing or regulating the same subject matter as that covered herein; provided, however, that all prior ordinances or parts of ordinances inconsistent with or in conflict with any of the provisions of this ordinance are hereby expressly repealed to the extent of any such inconsistency or conflict.

SECTION FOUR. If any section, subsection, sentence, clause or phrase of this ordinance is, for any reason, held to be unconstitutional or invalid, such holding shall not affect the validity of the remaining portions of this ordinance. The Council of the City of Midland hereby declares that it would have passed this ordinance and each section, subsection, sentence, clause, or phrase hereof irrespective of the fact that any one or more sections, subsections, sentences, clauses, or phrases be declared unconstitutional or invalid.

SECTION FIVE. The penalty for violation of this ordinance shall be in accordance with the general penalty provisions contained in Section 1-3-1 of the City Code of Midland, Texas, which provides for a fine not exceeding two thousand dollars ($2,000.00).

SECTION SIX. The City Secretary is hereby authorized and directed to file this ordinance with the Office of the County Clerk for purposes of recordation.

SECTION SEVEN. The City Secretary is hereby authorized and directed to publish the descriptive caption of this ordinance in the manner and for the length of time prescribed by the law as an alternative method of publication.

The above and foregoing ordinance was duly proposed, read in full and adopted on first reading, the _____ day of _____, A.D., 2025; and passed to second reading

on motion of Council member _____, seconded by Council member _____, by the following vote:

Council members voting “AYE”:

Address 1909 W. Wall Street Suite K	City Midland	State TX	Zip 79701

Street Address: 6500 Gladiola Ave

Legal Description
Lot: 123 Block: Subdivision: Llano Estacado (see also attached proposed replat)

Current Zoning: CE

This property qualifies as an exception to the City Code because:

- ■ It is an expansion of a nonconforming use.
- ☐ There are existing nonconforming structures in the area.
- ☐ The addition of architectural or other projections of a minor extent.

Reason for Request: Applicant is seeking to replat Tract 123 of Llano Estacado (1.00-acre) into 2 lots less that are less than the 1-acre min required by existing zoning. Other areas directly south are also non conforming lots. Restrictive covenants allow for a min lot size of 10,000 sf

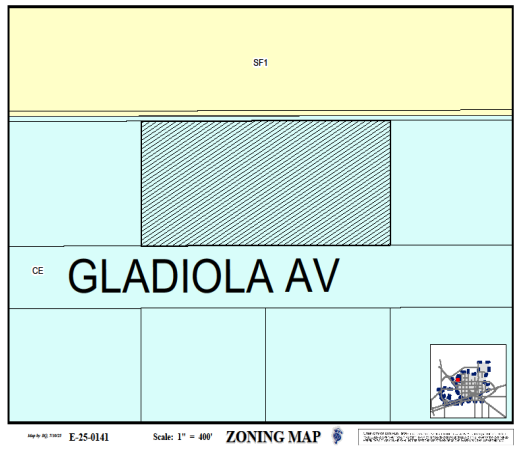
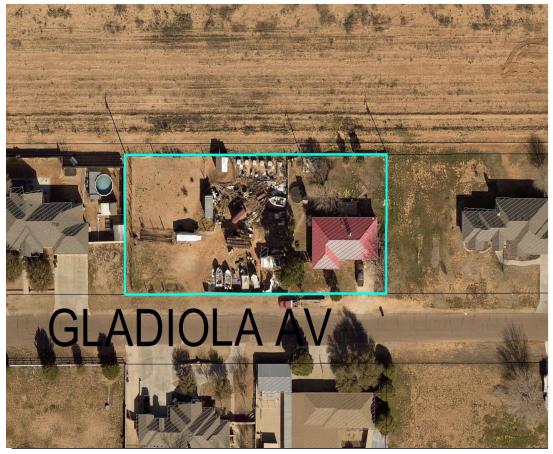
APPLICATION SUMMARY



- **Property Owner:** Brandon McMorries & Adrian Hernandez
- **Representative:** Ashlee Devine, with Maverick Engineering
- **Location:** 6500 Gladiola Ave (District 4)
- **Reason for Request:** To be able to **subdivide the property into two lots, each approximately 0.5 acres**

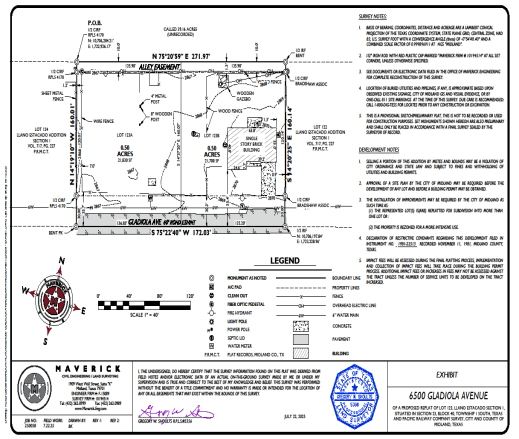
MIDLAND
Be the Energy!

ZONING



- **Current Zoning:** Country Estate District, CE
- **Surrounding Zoning:**
  - **North:** Single-Family Dwelling District, SF-1
  - **South/East/West:** Country Estate District, CE

MIDLAND
Be the Energy!

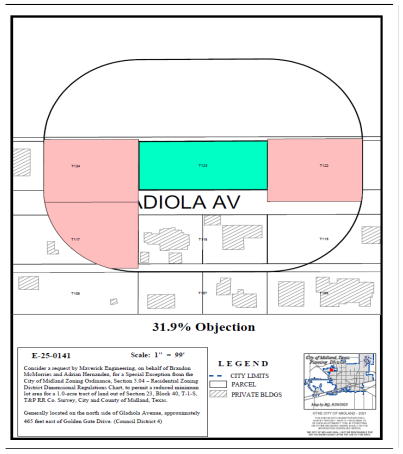


LAND USE

- **Current Use:** Residential
- **Surrounding Uses:**
  - **North:** Vacant
  - **South/East/West:** Residential

DETAILS OF REQUEST

- **Code Requirement:** Lot size must be at least 1 acre
- **Variance Requested:** Two lots measuring 0.5 acres
- Nearby properties do not meet the standard required by the zoning district



On Gladiola Avenue, Looking East

OBJECTIONS

- 3 objections have been received resulting in a 31.9% objection percentage. Supermajority vote is not required for approval.
- Protestors voiced concerns about the size of the proposed lots and an increase of traffic in the neighborhood.

STAFF'S RECOMMENDATION

- Three objections were received.
- Staff recommends approval of this request with the following condition:

A. That said special exception shall be of no force or effect unless the **Property is subdivided into no more than two lots** after the final adoption of this ordinance; provided, however, that **each lot shall have an area of 0.5 acres**.

City Council Meeting

Item Number: 14

Meeting Date: September 9, 2025

To: City Council / City Manager

From: Christy Weakland, Director

Subject: **GATHER PUBLIC INPUT ON THE PROPOSED 2025-2026 BUDGET; AND CONSIDER AN ORDINANCE OF THE CITY OF MIDLAND PROVIDING FUNDS FOR THE FISCAL YEAR BEGINNING OCTOBER 1, 2025, AND ENDING SEPTEMBER 30, 2026, BY APPROVING THE BUDGET FOR SAID PERIOD AND APPROPRIATING AND SETTING ASIDE THE NECESSARY FUNDS OUT OF THE GENERAL AND OTHER REVENUES AND UNAPPROPRIATED FUND BALANCE OF THE CITY OF MIDLAND FOR SAID FISCAL YEAR FOR THE MAINTENANCE AND OPERATION OF THE VARIOUS DEPARTMENTS AND FOR VARIOUS ACTIVITIES AND IMPROVEMENTS TO THE CITY; AND ORDERING PUBLICATION: (DISTRICT: ALL) (FINANCE) (PROVIDE SOUND GOVERNANCE & FISCAL MANAGEMENT)**

TAXPAYER IMPACT STATEMENT:

FOR THE FISCAL YEAR 2024-2025 MEDIAN-VALUED HOMESTEAD PROPERTY IN THE CITY OF MIDLAND, (1) THE CITY PROPERTY TAX BILL FOR THE CURRENT FISCAL YEAR ($0.348662 PER $100 OF TAXABLE VALUE) IS $907.49, (2) THE ESTIMATED CITY PROPERTY TAX BILL FOR THE UPCOMING FISCAL YEAR IF THE PROPOSED BUDGET IS ADOPTED ($0.347999 PER $100 OF TAXABLE VALUE) IS $909.22, AND (3) THE ESTIMATED CITY PROPERTY TAX BILL FOR THE UPCOMING FISCAL YEAR IF A BALANCED BUDGET FUNDED AT THE NO-NEW-REVENUE TAX RATE AS CALCULATED UNDER CHAPTER 26, TAX CODE, IS ADOPTED ($0.336458 PER $100 OF TAXABLE VALUE) IS $877.40.

FOR THE FISCAL YEAR 2025-2026 MEDIAN-VALUED HOMESTEAD PROPERTY IN THE CITY OF MIDLAND, (1) THE CITY PROPERTY TAX BILL FOR THE CURRENT FISCAL YEAR ($0.348662 PER $100 OF TAXABLE VALUE) IS $922.41, (2) THE ESTIMATED CITY PROPERTY TAX BILL FOR THE UPCOMING FISCAL YEAR IF THE PROPOSED BUDGET IS ADOPTED ($0.347999 PER $100 OF TAXABLE VALUE) IS $924.16, AND (3) THE ESTIMATED CITY PROPERTY TAX BILL FOR THE UPCOMING FISCAL YEAR IF A BALANCED BUDGET FUNDED AT THE NO-NEW-REVENUE TAX RATE AS CALCULATED UNDER CHAPTER 26, TAX CODE, IS ADOPTED ($0.336458 PER $100 OF TAXABLE VALUE) IS $891.82.

Purpose:

Compliance with the Texas Local Government Code requires a public hearing on the proposed budget more than 15 days after the proposed budget is filed with the city Secretary. The budget was filed with the City Secretary on August 15, 2025.

Recommended City Council Action:

Approve

Fiscal Impact:

The proposed budget is submitted as the City of Midland's general operating plan for the fiscal year beginning October 1, 2025, and ending September 30, 2026.

Strategic Priority:

(Provide Sound Governance & Fiscal Management)

Discussion:

The City Council established a Proposed Tax Rate of 0.347999 cents on August 13, 2025. At this tax rate the General Fund will have a budget appropriated of $187,458,359 for FY26.

The budgets of the other funds total $273,401,261.

Morris William Jr.

City Manager's Office

ORDINANCE NO. _____

AN ORDINANCE OF THE CITY OF MIDLAND PROVIDING FUNDS FOR THE FISCAL YEAR BEGINNING OCTOBER 1, 2025, AND ENDING SEPTEMBER 30, 2026, BY APPROVING THE BUDGET FOR SAID PERIOD AND APPROPRIATING AND SETTING ASIDE THE NECESSARY FUNDS OUT OF THE GENERAL AND OTHER REVENUES AND UNAPPROPRIATED FUND BALANCE OF THE CITY OF MIDLAND FOR SAID FISCAL YEAR FOR THE MAINTENANCE AND OPERATION OF THE VARIOUS DEPARTMENTS AND FOR VARIOUS ACTIVITIES AND IMPROVEMENTS TO THE CITY; AND ORDERING PUBLICATION

WHEREAS, as required by Article IV, Section 14, of the City Charter, the City Manager has prepared and submitted to the City Council a Budget Estimate of expenditures and revenues of all City departments, activities, and offices for the year beginning October 1, 2025, and ending September 30, 2026; and

WHEREAS, said Budget has been filed with the City Secretary of the City of Midland, Texas, as required; and

WHEREAS, notices of a public hearing upon said Budget have been duly and legally made; and

WHEREAS, said public hearing has been held and full and final consideration given said Budget;

NOW, THEREFORE, BE IT ORDAINED BY THE CITY COUNCIL OF THE CITY OF MIDLAND, TEXAS:

SECTION ONE. That for the purpose of providing the funds necessary and proposed to be expended in the Budget of the City of Midland for the fiscal year beginning October 1, 2025, and ending September 30, 2026, the Budget prepared by the City Manager and submitted to the City Council for its consideration and approval is hereby approved, and the available resources and revenues of the City of Midland as set forth in said Budget for said fiscal year, are hereby appropriated and set aside for the maintenance and operation of the various departments of the Government of the City of Midland, together with the various

activities and improvements as set forth in said Budget; and the appropriations shall be strictly applied for the uses and purposes in the respective departments as provided for in said Budget.

SECTION TWO. That the said Budget for the fiscal year beginning October 1, 2025, and ending September 30, 2026, approved herein shall be attached to and made a part of this ordinance the same as if copied in full herein, said Budget being on file in the City Secretary's office referenced by the number and date of this Ordinance.

SECTION THREE. That expenditures during the fiscal year beginning October 1, 2025, and ending September 30, 2026, shall be made in accordance with the summary Budget approved by this ordinance unless otherwise authorized by a duly enacted resolution or ordinance of the City of Midland and subject to the following provisions and conditions, to wit:

1. That no expenditure may be made without Council approval which shall increase the total appropriation for any one Fund.
2. That the City Manager may make transfers to and between departments and divisions unless such transfers would increase the total appropriation within a Fund.
3. That department managers are hereby authorized to approve transfers of amounts between line items within their departments if such transfers do not significantly change the work program contemplated in the approved Budget.

SECTION FOUR. During each year while there is any liability by reason of the City's Personnel Policies or Employment Agreements, the City Council shall compute and ascertain the rate and amount of ad valorem tax, based on the latest approved tax rolls with full allowance being made for tax collection, which will be sufficient to raise the money required to pay any sums which may be or become due during any such year, in no instance to be less than two percent (2%) of such obligation, together with all interest thereon, because of the obligations assumed by the City's Personnel Policies or Employment

Agreements. Said rate and amount of ad valorem tax will be ordered to be levied against all taxable property in the City for each year while any liability exists by reason of the obligations undertaken by the City's Personnel Policies or Employment Agreements, and said ad valorem tax shall be assessed and collected each year until all of the obligations incurred in the City's Personnel Policies or Employment Agreements shall have been discharged and all liability discharged.

SECTION FIVE. For the purpose of this ordinance, certain words as used herein are defined as follows:

1. The term "agency" wherever used in the said Budget shall mean the same and be synonymous with the term "department" as used in the Charter, ordinances, resolutions, and other official documents and policies of the City of Midland, Texas.
2. The term "organization" wherever used in the said Budget shall mean the same and be synonymous with the term "division" as used in the Charter, ordinances, resolutions and other official documents and policies of the City of Midland, Texas.

SECTION SIX. All departments of the City required to be established by the City Charter, state law, or federal law are deemed to be created.

SECTION SEVEN. That all transfers from the Water and Sewer Fund and Sanitation Fund are made in compliance with Sections 1502.057, 1502.058 and 1502.059 of the Texas Government Code.

SECTION EIGHT. That the City Manager shall give notice of water rate increases to appropriate individuals and entities as required by state law.

SECTION NINE. That the City Manager is hereby authorized and directed to execute contracts for grants of Hotel/Motel Tax funds to the extent that said grants are included in the Budget.

The above and foregoing ordinance was duly proposed, read in full and adopted on first reading, the _____ day of _____, A.D., 2025; and passed to second reading on motion of Council member _____, seconded by Council member _____, by the following vote:

NOTICE OF PUBLIC HEARING
2025-2026
CITY OF MIDLAND
ANNUAL OPERATING BUDGET

Notice is hereby given that the Mayor and City Council will conduct a Public Hearing at 10:00 A.M. on Tuesday, September 9, 2025, and Tuesday, September 16, 2025, in the City Hall Council Chamber located at 300 North Loraine, Midland, Texas.

THIS BUDGET WILL RAISE MORE REVENUE FROM PROPERTY TAXES THAN LAST YEAR'S BUDGET BY AN AMOUNT OF $3,664,292, WHICH IS A 4.80 PERCENT INCREASE FROM LAST YEAR'S BUDGET. THE PROPERTY TAX REVENUE TO BE RAISED FROM NEW PROPERTY ADDED TO THE TAX ROLL THIS YEAR IS $1,141,762.

The Public Hearing is for the purpose of allowing the public and other interested groups to make comments regarding the 2025-2026 City of Midland Budget.

(Publish August 26, 2025, or prior)

City of Midland
Fiscal Year 2025-2026
Budget Cover Page
September 16, 2025

This budget will raise more revenue from property taxes than last year's budget by an amount of $3,664,292, which is a 4.80 percent increase from last year's budget. The property tax revenue to be raised from new property added to the tax roll this year is $1,141,762.

The members of the governing body voted on the budget as follows:

FOR:

AGAINST:

PRESENT and not voting:

ABSENT:

Property Tax Rate Comparison

	2025-2026	2024-2025
Property Tax Rate:	$0.347999/100	$0.348662/100
No-New-Revenue Tax Rate:	$0.336458/100	$0.344045/100
No-New-Revenue Maintenance & Operations Tax Rate:	$0.280518/100	$0.284887/100
Voter-Approval Tax Rate:	$0.366479/100	$0.353201/100
Debt Rate:	$0.064451/100	$0.058342/100

Total debt obligation for City of Midland secured by property taxes: $14,491,138

Steps Required for Proposal and Adoption of Budget

Entity Name: City of Midland **Date: 08/19/2025 02:55 PM**

Steps for the Proposal of the Budget:

This year's property tax levy will raise more revenue from property taxes than in the preceding year. The governing body must hold a separate vote to ratify the property tax increase reflected in the budget. This vote must be in addition to and separate from the vote to adopt the budget or the vote to set the tax rate. Counties that maintain a website must post the proposed budget when it is filed with the county clerk. The adopted budget must also be posted on the website when it is filed with the county clerk.

The following statement must be included on the notices of public hearing on proposed budget. It must also be included on the cover page of the proposed budget, in 18-point type or larger.

THIS BUDGET WILL RAISE MORE TOTAL PROPERTY TAXES THAN LAST YEAR'S BUDGET BY $3,664,292 OR 4.80%, AND OF THAT AMOUNT, $1,141,762 IS TAX REVENUE TO BE RAISED FROM NEW PROPERTY ADDED TO THE TAX ROLL THIS YEAR.

Steps for the Adoption of the Budget:

-A vote to adopt the budget must be a record vote.
-An adopted budget must contain a cover page stating a record vote of each member of the governing body by name, the property tax rates for the current and preceding fiscal year, the total amount of debt obligations, and the following statement in 18 point font:
This budget will raise more revenue from property taxes than last year's budget by an amount of $3,664,292, which is a 4.80 percent increase from last year's budget. The property tax revenue to be raised from new property added to the tax roll this year is $1,141,762.
-The budget and cover page must be filed with the clerk and posted on the entity's website at least until the date of the first anniversary the budget is adopted.

City Council Meeting

Item Number: 15

Meeting Date: September 9, 2025

To: City Council / City Manager

From: Christy Weakland, Director

Subject: TAX RATE INCREASE FOR FISCAL YEAR 2025-2026; AN ORDINANCE FIXING THE TAX LEVY FOR THE CITY OF MIDLAND, TEXAS, FOR THE FISCAL YEAR BEGINNING ON OCTOBER 1, 2025, AND ENDING ON SEPTEMBER 30, 2026 (DISTRICT: NONE) (FINANCE)

Purpose:

The purpose of this item is to provide notification to the public and to allow a public forum for citizen input on the tax increase.

Recommended City Council Action:

Approve

Fiscal Impact:

The proposed Ad Valorem Tax Rate of 0.347999 per $100 valuation for the fiscal year 2025-2026 operating budget will generate approximately $65,234,095 in revenue for the General Fund.

Discussion:

The proposed rate of 0.347999 is composed of a voter-approval maintenance and operations rate (0.283548 per $100 valuation) and a debt service levy (0.064451 per $100 valuation).

This budget will raise more total property taxes than last year’s budget by $3,664,292 or 4.8%, and of that amount, $1,141,762 is tax revenue to be raised from new property added to the tax roll this year.

Attached are the Chief Appraiser's 2025 Certified Estimates of Taxable Value for the City of Midland, the "Notice of Public Hearing on Tax Increase," and the "Notice of Tax Rates."

Morris Williams Jr.

City Manager’s Office

ORDINANCE NO. _____

AN ORDINANCE FIXING THE TAX LEVY FOR THE CITY OF MIDLAND, TEXAS, FOR THE FISCAL YEAR BEGINNING OCTOBER 1, 2025, AND ENDING SEPTEMBER 30, 2026

WHEREAS, the Midland City Council voted to propose a tax rate of $0.347999 for each one hundred dollar valuation of taxable property for the fiscal year beginning October 1, 2025, and ending September 30, 2026; and

WHEREAS, the Midland City Council finds and determines that the City of Midland has fully and timely complied with all notice, hearing and other legal requirements relative to the adoption of this ordinance; and

WHEREAS, THIS TAX RATE WILL RAISE MORE TAXES FOR MAINTENANCE AND OPERATIONS THAN LAST YEAR'S TAX RATE; AND

WHEREAS, THE TAX RATE WILL EFFECTIVELY BE RAISED BY 1.08 PERCENT AND WILL RAISE TAXES FOR MAINTENANCE AND OPERATIONS ON A $100,000.00 HOME BY APPROXIMATELY $-6.77.

NOW, THEREFORE, BE IT ORDAINED BY THE CITY COUNCIL OF THE CITY OF MIDLAND, TEXAS:

SECTION ONE. That to pay interest and principal on outstanding bonds as they mature, a tax levy of $0.064451 on each $100.00 valuation of all taxable property in the City of Midland, Texas is hereby made and levied for the year 2025 to be credited to the Interest and Sinking Fund of the City.

SECTION TWO. That to raise funds to help defray current General expenses of the City, a levy of $0.283548 on each $100.00 valuation of all taxable property within the City is hereby made and levied for the year 2025. The collections from these levies are to be apportioned and deposited as follows:

Interest and Sinking Fund	$0.064451
General Fund	$0.283548
TOTAL TAX LEVY FOR ALL PURPOSES	$0.347999

The above and foregoing ordinance was duly proposed, read in full and adopted on first reading, the _____ day of _____, A.D., 2025; and passed to second reading on motion of Council member _____, seconded by Council member _____, with the motion being stated as "I move that the property tax rate be increased by the adoption of a tax rate of $0.347999, which is effectively a 3.43 percent increase in the tax rate", by the following vote:

Council members voting "AYE":

Council members voting "NAY":

2025 Tax Rate Calculation Worksheet

Taxing Units Other Than School Districts or Water Districts

CTM-CITY OF MIDLAND (2025) Phone (area code and number)

City of Midland, 300 N Loraine, Midland, TX 79701 Taxing Unit's Website Address

GENERAL INFORMATION: Tax Code Section 26.04(c) requires an officer or employee designated by the governing body to calculate the no-new-revenue (NNR) tax rate and voter-approval tax rate for the taxing unit. These tax rates are expressed in dollars per $100 of taxable value calculated. The calculation process starts after the chief appraiser delivers to the taxing unit the certified appraisal roll and the estimated values of properties under protest. The designated officer or employee shall certify that the officer or employee has accurately calculated the tax rates and used values shown for the certified appraisal roll or certified estimate. The officer or employee submits the rates to the governing body by Aug. 7 or as soon thereafter as practicable.

School districts do not use this form, but instead use Comptroller Form 50-859 Tax Rate Calculation Worksheet, School District without Chapter 313 Agreements or Comptroller Form 50-884 Tax Rate Calculation Worksheet, School District with Chapter 313 Agreements.

Water districts as defined under Water Code Section 49.001(1) do not use this form, but instead use Comptroller Form 50-858 Water District Voter-Approval Tax Rate Worksheet for Low Tax Rate and Developing Districts or Comptroller Form 50-860 Developed Water District Voter-Approval Tax Rate Worksheet.

The Comptroller's office provides this worksheet to assist taxing units in determining tax rates. The information provided in this worksheet is offered as technical assistance and not legal advice. Taxing units should consult legal counsel for interpretations of law regarding tax rate preparation and adoption

SECTION 1: No-New-Revenue Tax Rate

The NNR tax rate enables the public to evaluate the relationship between taxes for the prior year and for the current year based on a tax rate that would produce the same amount of taxes (no new taxes) if applied to the same properties that are taxed in both years. When appraisal values increase, the NNR tax rate should decrease.

The NNR tax rate for a county is the sum of the NNR tax rates calculated for each type of tax the county levies. While uncommon, it is possible for a taxing unit to provide an exemption for only maintenance and operations taxes. In this case, the taxing unit will need to calculate the NNR tax rate separately for the maintenance and operations tax and the debt tax, then add the two components together.

Line	No-New-Revenue Tax Rate Worksheet		Amount/Rate
1.	**Prior year total taxable value.** Enter the amount of the prior year taxable value on the prior year tax roll today. Include any adjustments since last year's certification; exclude Tax Code Section 25.25(d) one-fourth and one-third over-appraisal corrections from these adjustments. Exclude any property value subject to an appeal under Chapter 42 as of July 25 (will add undisputed value in Line 6). This total includes the taxable value of homesteads with tax ceilings (will deduct in Line 2) and the captured value for tax increment financing (adjustment is made by deducting TIF taxes, as reflected in Line 17).[1] Tex. Tax Code § 26.012(14)		**$21,767,992,608**
2.	**Prior year tax ceilings.** Counties, cities and junior college districts. Enter the prior year total taxable value of homesteads with tax ceilings. These include the homesteads of homeowners age 65 or older or disabled. Other taxing units enter 0. If your taxing unit adopted the tax ceiling provision last year or a prior year for homeowners age 65 or older or disabled, use this step.[2] Tex. Tax Code § 26.012(14)		**$0**
3.	**Preliminary prior year adjusted taxable value.** Subtract Line 2 from Line 1.		**$21,767,992,608**
4.	**Prior year total adopted tax rate.**		**0.34866200**
5.	**Prior year taxable value lost because court appeals of ARB decisions reduced the prior year's appraised value.**		
	A. Original prior year ARB values:	**$349,137,753**	
	B. Prior year values resulting from final court decisions:	**$312,115,066**	
	C. Prior year value loss. Subtract B from A.[3] Tex. Tax Code § 26.012(13)		**$37,022,687**
6.	**Prior year taxable value subject to an appeal under Chapter 42, as of July 25.**		
	A. Prior year ARB certified value:	**$333,550,191**	
	B. Prior year disputed value:	**$316,872,681**	
	C. Prior year undisputed value. Subtract B from A.[4] Tex. Tax Code § 26.012(13)		**$16,677,510**
7.	**Prior year Chapter 42 related adjusted values**. Add Line 5C and Line 6C.		**$53,700,197**

19.	**Total value of properties under protest or not included on certified appraisal roll.** [13] Tex. Tax Code § 26.01(c) and (d)		
	A. Current year taxable value of properties under protest. The chief appraiser certifies a list of properties still under ARB protest. The list shows the appraisal district's value and the taxpayer's claimed value, if any, or an estimate of the value if the taxpayer wins. For each of the properties under protest, use the lowest of these values. Enter the total value under protest. [14] Tex. Tax Code § 26.01(c)	$41,315,028	* Please contact Chief Apprasier to obtain estimated Recognizable values of property under protest
	B. Current year value of properties not under protest or included on certified appraisal roll. The chief appraiser gives taxing units a list of those taxable properties that the chief appraiser knows about but are not included in the appraisal roll certification. These properties also are not on the list of properties that are still under protest. On this list of properties, the chief appraiser includes the market value, appraised value and exemptions for the preceding year and a reasonable estimate of the market value, appraised value and exemptions for the current year. Use the lower market, appraised or taxable value (as appropriate). Enter the total value of property not on the certified roll. [15] Tex. Tax Code § 26.01(d)	$0	
	C.Total value under protest or not certified. Add A and B.		$41,315,028
20.	**Current year tax ceilings.** Counties, cities and junior colleges enter current year total taxable value of homesteads with tax ceilings. These include the home- steads of homeowners age 65 or older or disabled. Other taxing units enter 0. If your taxing unit adopted the tax ceiling provision in the prior year or a previous year for homeowners age 65 or older or disabled, use this step.[16] Tex. Tax Code § 26.012(6)(B)		$0
21.	**Current year total taxable value.** Add Lines18Eand19C.Subtract Line 20[17] Tex. Tax Code § 26.012(6)		$22,994,597,644
22.	**Total current year taxable value of properties in territory annexed after Jan. 1, of the prior year.** Include both real and personal property. Enter the current year value of property in territory annexed. [18] Tex. Tax Code § 26.012(17)		$0
23.	**Total current year taxable value of new improvements and new personal property located in new improvements.** New means the item was not on the appraisal roll in the prior year. An improvement is a building, structure, fixture or fence erected on or affixed to land. New additions to existing improvements may be included if the appraised value can be determined. New personal property in a new improvement must have been brought into the taxing unit after Jan. 1, of the prior year and be located in a new improvement. New improvements **do** include property on which a tax abatement agreement has expired for the current year. [19] Tex. Tax Code § 26.012(17)		$328,093,308.00
24.	**Total adjustments to the current year taxable value.** Add Lines 22 and 23.		$328,093,308.00
25.	**Adjusted current year taxable value.** Subtract Line 24 from Line 21.		$22,666,504,336
26.	**Current year NNR tax rate.**Divide Line 17 by Line 25 and multiply by $100[20] Tex. Tax Code § 26.04(c)		0.3364581
27.	**COUNTIES ONLY.** Add together the NNR tax rates for each type of tax the county levies. The total is the current year county NNR tax rate. [21] Tex. Tax Code § 26.04(d)		0.00000000

Texas Comptroller of Public Accounts Form **50-856**

SECTION 2: Voter-Approval Tax Rate

The voter-approval tax rate is the highest tax rate that a taxing unit may adopt without holding an election to seek voter approval of the rate. The voter-approval tax rate is split into two separate rates:

1. Maintenance and Operations (M&O) Tax Rate: The M&O portion is the tax rate that is needed to raise the same amount of taxes that the taxing unit levied in the prior year plus the applicable percentage allowed by law. This rate accounts for such things as salaries, utilities and day-to-day operations.

2. Debt Rate: The debt rate includes the debt service necessary to pay the taxing unit's debt payments in the coming year. This rate accounts for principal and interest on bonds and other debt secured by property tax revenue.

The voter-approval tax rate for a county is the sum of the voter-approval tax rates calculated for each type of tax the county levies. In most cases the voter-approval tax rate exceeds the no-new-revenue tax rate, but occasionally decreases in a taxing unit's debt service will cause the NNR tax rate to be higher than the voter-approval tax rate.

Line	Voter-Approval Tax Rate Worksheet		Amount/Rate
28.	Prior year M&O tax rate. Enter the prior year M&O tax rate.		0.29032000
29.	**Prior year taxable value, adjusted for actual and potential court-ordered adjustments.** Enter the amount in Line 8 of the No-New-Revenue Tax Rate Worksheet.		$21,821,692,805
30.	**Total prior year M&O levy.** Multiply Line 28 by Line 29 and divide by $100		$63,352,739
31.	**Adjusted prior year levy for calculating NNR M&O rate.**		
	A. M&O taxes refunded for years preceding the prior tax year. Enter the amount of M&O taxes refunded in the preceding year for taxes before that year. Types of refunds include court decisions, Tax Code Section 25.25(b) and (c) corrections and Tax Code Section 31.11 payment errors. Do not include refunds for tax year 2024. This line applies only to tax years preceding the prior tax year.	$238,769	
	B. Prior year taxes in TIF. Enter the amount of taxes paid into the tax increment fund for a reinvestment zone as agreed by the taxing unit. If the taxing unit has no current year captured appraised value in Line 18D, enter 0.	$7,813	
	C. Prior year transferred function. If discontinuing all of a department, function or activity and transferring it to another taxing unit by written contract, enter the amount spent by the taxing unit discontinuing the function in the 12 months preceding the month of this calculation. If the taxing unit did not operate this function for this 12-month period, use the amount spent in the last full fiscal year in which the taxing unit operated the function. The taxing unit discontinuing the function will subtract this amount in D below. The taxing unit receiving the function will add this amount in D below. Other taxing units enter 0.	$0	
	SELECT TRANSFERRING FUNCTION STATE (NA, DISCONTINUED, RECEIVED)	NA	
	D. Prior year M&O levy adjustments. Subtract B from A. For taxing unit with C, subtract if discontinuing function and add if receiving function.	$230,956	
	E. Add Line 30 to 31D.		$63,583,695
32.	**Adjusted current year taxable value.** Enter the amount in Line 25 of the No-New-Revenue Tax Rate Worksheet		$22,666,504,336
33.	**Current year NNR M&O rate (unadjusted).** Divide Line 31E by Line 32 and multiply by $100.		0.28051831
34.	**Rate adjustment for state criminal justice mandate.** [23] Tex. Tax Code § 26.044		
	A. Current year state criminal justice mandate. Enter the amount spent by a county in the previous 12 months providing for the maintenance and operation cost of keeping inmates in county-paid facilities after they have been sentenced. Do not include any state reimbursement received by the county for the same purpose.	$0	
	B. Prior year state criminal justice mandate. Enter the amount spent by a county in the 12 months prior to the previous 12 months providing for the maintenance and operation cost of keeping inmates in county-paid facilities after they have been sentenced. Do not include any state reimbursement received by the county for the same purpose. Enter zero if this is the first time the mandate applies.	$0	
	C. Subtract B from A and divide by Line 32 and multiply by $100	0.00000000	
	D. Enter the rate calculated in C. If not applicable, enter 0.		0.00000000
35.	**Rate adjustment for indigent health care expenditures.** [24] Tex. Tax Code § 26.0442		
	A. Current year indigent health care expenditures. Enter the amount paid by a taxing unit providing for the maintenance and operation cost of providing indigent health care for the period beginning on July 1, of the prior tax year and ending on June 30, of the current tax year, less any state assistance received for the same purpose.	$0	
	B. Prior year indigent health care expenditures. Enter the amount paid by a taxing unit providing for the maintenance and operation cost of providing indigent health care for the period beginning on July 1, 2023 and ending on June 30, 2024, less any state assistance received for the same purpose.	$0	
	C. Subtract B from A and divide by Line 32 and multiply by $100	0.00000000	
	D. Enter the rate calculated in C. If not applicable, enter 0.		0.00000000

2025 Tax Rate Calculation Worksheet – Taxing Units Other Than School Districts or Water Districts Form **50-856**

Line	Voter-Approval Tax Rate Worksheet		Amount/Rate
36.	**Rate adjustment for county indigent defense compensation.** [25 Tex. Tax Code § 26.0442]		
	A. Current year indigent defense compensation expenditures. Enter the amount paid by a county to provide appointed counsel for indigent individuals and fund the operations of a public defender's office under Article 26.044, Code of Criminal Procedure for the period beginning on July 1, of the prior tax year and ending on June 30,of the current tax year, less any state grants received by the county for the same purpose.	**$0**	
	B. Prior year indigent defense compensation expenditures. Enter the amount paid by a county to provide appointed counsel for indigent individuals and fund the operations of a public defender's office under Article 26.044, Code of Criminal Procedure for the period beginning on July 1,2023 and ending on June 30,2024 less any state grants received by the county for the same purpose.	**$0**	
	C. Subtract B from A and divide by Line 32 and multiply by $100	**0.00000000**	
	D. Multiply B by 0.05 and divide by Line 32 and multiply by $100	**0**	
	E. Enter the lesser of C and D. If not applicable, enter 0.		**0.00000000**
37.	**Rate adjustment for county hospital expenditures.** [26 Tex. Tax Code § 26.0443]		
	A. Current year eligible county hospital expenditures. Enter the amount paid by the county or municipality to maintain and operate an eligible county hospital for the period beginning on July 1, of the prior tax year and ending on June 30, of the current tax year.	**$0**	
	B. Prior year eligible county hospital expenditures. Enter the amount paid by the county or municipality to maintain and operate an eligible county hospital for the period beginning on July 1, 2023 and ending on June 30, 2024.	**$0**	
	C. Subtract B from A and divide by Line 32 and multiply by $100	**0.00000000**	
	D. Multiply B by 0.08 and divide by Line 32 and multiply by $100	**0**	
	E. Enter the lesser of C and D, if applicable. If not applicable, enter 0.		**0.00000000**
38.	**Rate adjustment for defunding municipality.** This adjustment only applies to a municipality that is considered to be a defunding municipality for the current tax year under Chapter 109, Local Government Code. Chapter 109, Local Government Code only applies to municipalities with a population of more than 250,000 and includes a written determination by the Office of the Governor. See Tax Code Section 26.0444 for more information.		
	A. Amount appropriated for public safety in the prior year. Enter the amount of money appropriated for public safety in the budget adopted by the municipality for the preceding fiscal year	**$0**	
	B. Expenditures for public safety in the prior year. Enter the amount of money spent by the municipality for public safety during the preceding fiscal year	**$0**	
	C. Subtract B from A and divide by Line 32 and multiply by $100	**0.00000000**	
	D. Enter the lesser of C If not applicable, enter 0.	**0**	
			0.00000000
39.	**Adjusted current year NNR M&O rate.** Add Lines 33, 34D, 35D, 36E, and 37E. Subtract Line 38D.		**0.28051831**
40.	**Adjustment for prior year sales tax specifically to reduce property taxes.** Cities, counties and hospital districts that collected and spent additional sales tax on M&O expenses in the prior year should complete this line. These entities will deduct the sales tax gain rate for the current year in Section 3. Other taxing units, enter zero.		
	A. Enter the amount of additional sales tax collected and spent on M&O expenses in the prior year, if any. Counties must exclude any amount that was spent for economic development grants from the amount of sales tax spent	**$0**	
	B. Divide Line 40A by Line 32 and multiply by $100	**0.00000000**	
	C. Add Line 40B to Line 39.		**0.28051831**
41.	**Current year voter-approval M&O rate.** Enter the rate as calculated by the appropriate scenario below **Special Taxing Unit.** If the taxing unit qualifies as a special taxing unit, multiply Line 40C by 1.08. - or - **Other Taxing Unit.** If the taxing unit does not qualify as a special taxing unit, multiply Line 40C by 1.035.		**0.29033645**

D41.	**Disaster Line 41 (D41): Current year voter-approval M&O rate for taxing unit affected by disaster declaration.** If the taxing unit is located in an area declared a disaster area and at least one person is granted an exemption under Tax Code Section 11.35 for property located in the taxing unit, the governing body may direct the person calculating the voter-approval tax rate to calculate in the manner provided for a special taxing unit. The taxing unit shall continue to calculate the voter-approval tax rate in this manner until the earlier of 1) the first year in which total taxable value on the certified appraisal roll exceeds the total taxable value of the tax year in which the disaster occurred, or 2) the third tax year after the tax year in which the disaster occurred If the taxing unit qualifies under this scenario, multiply Line 40C by 1.08. [27] Tex. Tax Code § 26.042(a) If the taxing unit does not qualify, do not complete Disaster Line 41 (Line D41).	**0.00000000**
42.	**Total current year debt to be paid with property taxes and additional sales tax revenue**. Debt means the interest and principal that will be paid on debts that: (1) are paid by property taxes, (2) are secured by property taxes, (3) are scheduled for payment over a period longer than one year, and (4) are not classified in the taxing unit's budget as M&O expenses. **A. Debt** also includes contractual payments to other taxing units that have incurred debts on behalf of this taxing unit, if those debts meet the four conditions above. Include only amounts that will be paid from property tax revenue. Do not include appraisal district budget payments. If the governing body of a taxing unit authorized or agreed to authorize a bond, warrant, certificate of obligation, or other evidence of indebtedness on or after Sept. 1, 2021, verify if it meets the amended definition of debt before including it here. [28] Tex. Tax Code § 26.012(7)	
	Enter debt amount **$19,102,876**	
	B. Subtract **unencumbered fund amount** used to reduce total debt. **$0**	
	C. Subtract **certified amount spent from sales tax to reduce debt** (enter zero if none) **$0**	
	D. Subtract **amount paid** from other resources **$4,611,738**	
	E. Adjusted debt. Subtract B, C and D from A.	**$14,491,138**
43.	**Certified prior year excess debt collections.** Enter the amount certified by the collector. [29] Tex. Tax Code § 26.012(10) and 26.04(b)	**$0**

2025 Tax Rate Calculation Worksheet – Taxing Units Other Than School Districts or Water Districts Form **50-856**

Line	Voter-Approval Tax Rate Worksheet	Amount/Rate
44.	**Adjusted current year debt.** Subtract Line 43 from Line 42E.	**$14,491,138**
45.	**Current year anticipated collection rate.**	
	A. Enter the current year anticipated collection rate certified by the collector. [30] Tex. Tax Code § 26.04(b) **95.86%**	
	B. Enter the prior year actual collection rate. **97.78%**	
	C. Enter the 2023 actual collection rate **98.37%**	
	D. Enter the 2022 actual collection rate. **98.66%**	
	E. If the anticipated collection rate in A is lower than actual collection rates in B, C and D, enter the lowest collection rate from B, C and D. If the anticipated rate in A is higher than at least one of the rates in the prior three years, enter the rate from A. Note that the rate can be greater than 100%. [31] Tex. Tax Code § 26.04(h), (h-1) and (h-2)	**97.78%**
46.	**Current year debt adjusted for collections.** Divide Line 44 by Line 45E.	**14820145.22**
47.	**Current year total taxable value.** Enter the amount on Line 21 of the No-New-Revenue Tax Rate Worksheet	**22,994,597,644**
48.	**Current year debt rate.** Divide Line 46 by Line 47 and multiply by $100.	**0.06445055**
49.	**Current year voter-approval M&O rate plus current year debt rate.** Add Lines 41 and 48.	**0.35478700**
D49.	**Disaster Line 49 (D49): Current year voter-approval tax rate for taxing unit affected by disaster declaration.** Complete this line if the taxing unit calculated the voter-approval tax rate in the manner provided for a special taxing unit on Line D41. Add Line D41 and 48.	**0.06445055**
50.	**COUNTIES ONLY.** Add together the voter-approval tax rates for each type of tax the county levies. The total is the current year county voter-approval tax rate.	**0.00000000**

SECTION 3: NNR Tax Rate and Voter-Approval Tax Rate Adjustments for Additional Sales Tax to Reduce Property Taxes

Cities, counties and hospital districts may levy a sales tax specifically to reduce property taxes. Local voters by election must approve imposing or abolishing the additional sales tax. If approved, the taxing unit must reduce its NNR and voter-approval tax rates to offset the expected sales tax revenue.
This section should only be completed by a county, city or hospital district that is required to adjust its NNR tax rate and/or voter-approval tax rate because it adopted the additional sales tax.

Line	Additional Sales and Use Tax Worksheet	Amount/Rate
51.	**Taxable Sales.** For taxing units that adopted the sales tax in November of the prior tax year or May of the current tax year, enter the Comptroller's estimate of taxable sales for the previous four quarters.[32] Tex. Tax Code § 26.041(d) Estimates of taxable sales may be obtained through the Comptroller's Allocation Historical Summary webpage. Taxing units that adopted the sales tax before November of the prior year, enter 0.	$0
52.	**Estimated sales tax revenue.** Counties exclude any amount that is or will be spent for economic development grants from the amount of estimated sales tax revenue.[33] Tex. Tax Code § 26.041(i) **Taxing units that adopted the sales tax in November of the prior tax year or in May of the current tax year.** Multiply the amount on Line 51 by the sales tax rate (.01, .005 or .0025, as applicable) and multiply the result by .95.[34] Tex. 57.	**Current year voter-approval tax rate, unadjusted for sales tax.**[36] Enter the rate from Line 49, Line D49 (disaster) or Line 50 (counties) as applicable, of the Voter-Approval Tax Rate Worksheet.	0.35478700

Line	Additional Sales and Use Tax Worksheet	Amount/Rate
58.	**Current year voter-approval tax rate, adjusted for sales tax.** Subtract Line 54 from Line 57	0.35478700

SECTION 4: Voter-Approval Rate Adjustment for Pollution Control

A taxing unit may raise its rate for M&O funds used to pay for a facility, device or method for the control of air, water or land pollution. This includes any land, structure, building, installation, excavation, machinery, equipment or device that is used, constructed, acquired or installed wholly or partly to meet or exceed pollution control requirements. The taxing unit's expenses are those necessary to meet the requirements of a permit issued by the Texas Commission on Environmental Quality (TCEQ). The taxing unit must provide the tax assessor with a copy of the TCEQ letter of determination that states the portion of the cost of the installation for pollution control.
This section should only be completed by a taxing unit that uses M&O funds to pay for a facility, device or method for the control of air, water or land pollution.

Line	Voter-Approval Rate Adjustment for Pollution Control Requirements Worksheet	Amount/Rate
59.	**Certified expenses from the Texas Commission on Environmental Quality (TCEQ).** Enter the amount certified in the determination letter from TCEQ.[37] Tex. Tax Code § 26.045(d) The taxing unit shall provide its tax assessor-collector with a copy of the letter.[38] Tex. Tax Code § 26.045(i)	$0
60.	**Current year total taxable value.** Enter the amount from Line 21 of the No-New-Revenue Tax Rate Worksheet	$22,994,597,644
61.	**Additional rate for pollution control.** Divide Line 59 by Line 60 and multiply by $100.	0
62.	**Current year voter-approval tax rate, adjusted for pollution control.** Add Line 61 to one of the following lines (as applicable): Line 49, Line D49 (disaster), Line 50 (counties) or Line 58 (taxing units with the additional sales tax).	0.35478700

SECTION 5: Voter-Approval Tax Rate Adjustment for Unused Increment Rate

The unused increment rate is the rate equal to the sum of the prior 3 years Foregone Revenue Amounts divided by the current taxable value. [39] The Foregone Revenue Amount for each year is equal to that year's adopted tax rate subtracted from that year's voter-approval tax rate adjusted to remove the unused increment rate multiplied by that year's current total value. [40] The difference between the adopted tax rate and voter-approval tax rate is considered zero in the following scenarios:

- a tax year in which a taxing unit affected by a disaster declaration calculates the tax rate under Tax Code Section 26.042; [41]
- a tax year in which the municipality is a defunding municipality, as defined by Tax Code Section 26.0501(a); [42] or
- after Jan. 1, 2022, a tax year in which the comptroller determines that the county implemented a budget reduction or reallocation described by Local Government Code Section 120.002(a) without the required voter approval. [43]

This section should only be completed by a taxing unit that does not meet the definition of a special taxing unit. [44]

SECTION 7: Voter-Approval Tax Rate Adjustment for Emergency Revenue Rate

In the tax year after the end of the disaster calculation time period detailed in Tax Code Section 26.042(a), a taxing unit that calculated its voter-approval tax rate in the manner provided for a special taxing unit due to a disaster must calculate its emergency revenue rate and reduce its voter-approval tax rate for that year.[47] Tex. Tax Code §26.042(b)

Similarly, if a taxing unit adopted a tax rate that exceeded its voter-approval tax rate, calculated normally, without holding an election to respond to a disaster, as allowed by Tax Code Section 26.042(d), in the prior year, it must also reduce its voter-approval tax rate for the current tax year.[48] Tex. Tax Code §26.042(f)

This section will apply to a taxing unit other than a special taxing unit that:

• directed the designated officer or employee to calculate the voter-approval tax rate of the taxing unit in the manner provided for a special taxing unit in the prior year; and

• the current year is the first tax year in which the total taxable value of property taxable by the taxing unit as shown on the appraisal roll for the taxing unit submitted by the assessor for the taxing unit to the governing body exceeds the total taxable value of property taxable by the taxing unit on January 1 of the tax year in which the disaster occurred or the disaster occurred four years ago. This section will apply to a taxing unit in a disaster area that adopted a tax rate greater than its voter-approval tax rate without holding an election in the prior year.Note: This section does not apply if a taxing unit is continuing to calculate its voter-approval tax rate in the manner provided for a special taxing unit because it is still within the disaster calculation time period detailed in Tax Code Section 26.042(a) because it has not met the conditions in Tax Code Section 26.042(a)(1) or (2).

Line	Emergency Revenue Rate Worksheet	Amount/Rate
74.	**2024 adopted tax rate.** Enter the rate in Line 4 of the No-New-Revenue Tax Rate Worksheet.	**0.34866200**
75.	**Adjusted 2024 voter-approval tax rate.** Use the taxing unit's Tax Rate Calculation Worksheets from the prior year(s) to complete this line. [49 Tex. Tax Code §26.042(c)] If a disaster occurred in 2024 and the taxing unit calculated its 2024 voter-approval tax rate using a multiplier of 1.08 on Disaster Line 41 (D41) of the 2024 worksheet due to a disaster, complete the applicable sections or lines of Form 50-856-a, Adjusted Voter-Approval Tax Rate for Taxing Units in Disaster Area Calculation Worksheet. **- or -** If a disaster occurred prior to 2024 for which the taxing unit continued to calculate its voter-approval tax rate using a multiplier of 1.08 on Disaster Line 41 (D41) in 2024, complete form 50-856-a, Adjusted Voter-Approval Tax Rate for Taxing Units in Disaster Area Calculation Worksheet to recalculate the voter-approval tax rate the taxing unit would have calculated in 2024 if it had generated revenue based on an adopted tax rate using a multiplier of 1.035 in the years following the disaster. [50 Tex. Tax Code §26.042(b)] Enter the final adjusted 2024 voter-approval tax rate from the worksheet. - or - If the taxing unit adopted a tax rate above the 2024 voter-approval tax rate without calculating a disaster tax rate or holding an election due to a disaster, no recalculation is necessary. Enter the voter-approval tax rate from the prior year's worksheet.	**0.00000000**
76.	**Increase in 2024 tax rate due to disaster.** Subtract Line 75 from Line 74.	**-0.34866200**

NOTICE OF PUBLIC HEARING ON TAX INCREASE

A tax rate of $0.347999 per $100 valuation has been proposed by the governing body of City of Midland.

PROPOSED TAX RATE	$0.347999 per $100
NO-NEW-REVENUE TAX RATE	$0.336458 per $100
VOTER-APPROVAL TAX RATE	$0.366479 per $100

The no-new-revenue tax rate is the tax rate for the 2025 tax year that will raise the same amount of property tax revenue for City of Midland from the same properties in both the 2024 tax year and the 2025 tax year.

The voter-approval rate is the highest tax rate that City of Midland may adopt without holding an election to seek voter approval of the rate.

The proposed tax rate is greater than the no-new-revenue tax rate. This means that City of Midland is proposing to increase property taxes for the 2025 tax year.

A PUBLIC HEARING ON THE PROPOSED TAX RATE WILL BE HELD ON September 9, 2025 AT 10:00 AM AT City Hall Council Chambers, 300 N Loraine St. Midland TX 79701.

The proposed tax rate is not greater than the voter-approval tax rate. As a result, City of Midland is not required to hold an election at which voters may accept or reject the proposed tax rate. However, you may express your support for or opposition to the proposed tax rate by contacting the members of the of City of Midland at their offices or by attending the public hearing mentioned above.

YOUR TAXES OWED UNDER ANY OF THE RATES MENTIONED ABOVE CAN BE CALCULATED AS FOLLOWS:

Property tax amount= (tax rate) x (taxable value of your property)/100

ABSENT:

DO NOT REPRODUCE

Visit Texas.gov/PropertyTaxes to find a link to your local property tax database on which you can easily access information regarding your property taxes, including information about proposed tax rates and scheduled public hearings of each entity that taxes your property.

The 86th Texas Legislature modified the manner in which the voter-approval tax rate is calculated to limit the rate of growth of property taxes in the state.

The following table compares the taxes imposed on the average residence homestead by City of Midland last year to the taxes proposed to be imposed on the average residence homestead by City of Midland this year.

	2024	2025	Change
Total tax rate (per $100 of value)	$0.348662	$0.347999	decrease of -0.000663 per $100, or -0.19%
Average homestead taxable value	$299,195	$302,016	increase of 0.94%
Tax on average homestead	$1,043.18	$1,051.01	increase of 7.83, or 0.75%
Total tax levy on all properties	$76,356,678	$80,020,970	increase of 3,664,292, or 4.80%

For assistance with tax calculations, please contact the tax assessor for City of Midland at or , or visit . for more information.

§26.05(b) of Property Tax Code

New Steps Required for Adoption of Tax Rate

Entity Name: City of Midland Date: 8/15/25

Language Required in the Motion Setting This Year's Tax Rate:

This year's proposed tax rate exceeds the effective tax rate. The vote on the ordinance, resolution, or order setting the tax rate must be a record vote. A motion to adopt the ordinance, resolution, or order must be made in the following form:

> *I move that the property tax rate be increased by the adoption of a tax rate of 0.347999 percent, which is effectively a 3.43% percent increase in the tax rate.*

Statement Required in the Ordinance, Resolution, or Order Setting:

This year's levy to fund maintenance and operations expenditures exceeds last year's maintenance and operations tax levy. Also, this year's M&O tax rate is higher than the effective maintenance and operations tax rate. The following statements must be included in the ordinance, resolution, or order setting this year's tax rate. The statements must be in larger type than the type used in any other portion of the document.

> *THIS TAX RATE WILL RAISE MORE TAXES FOR MAINTENANCE AND OPERATIONS THAN LAST YEAR'S TAX RATE.*
>
> *THE TAX RATE WILL EFFECTIVELY BE RAISED BY 1.08 PERCENT AND WILL RAISE TAXES FOR MAINTENANCE AND OPERATIONS ON A $100,000 HOME BY APPROXIMATELY $-6.77.*

Statement That Must be Posted on the Home Page of Any Internet Website Operated by the Taxing Unit:

This year's tax levy to fund maintenance and operations expenditures exceeds last year's maintenance and operations tax levy. Also, this year's M&O tax rate is higher than the effective maintenance and operations tax rate. The following statements must be included on the home page of any Internet website operated by City of Midland:

> *City of Midland ADOPTED A TAX RATE THAT WILL RAISE MORE TAXES FOR MAINTENANCE AND OPERATIONS THAN LAST YEAR'S TAX RATE.*
>
> *THE TAX RATE WILL EFFECTIVELY BE RAISED BY 1.08 PERCENT AND WILL RAISE TAXES FOR MAINTENANCE AND OPERATIONS ON A $100,000 HOME BY APPROXIMATELY $-6.77.*

City Council Meeting

Item Number: 16

Meeting Date: September 9, 2025

To: City Council / City Manager

From: Garrick Clayton, Oil and Gas Officer

Subject: **THE PROPOSED GRANTING OF OIL AND GAS WELL PERMITS TO PIONEER NATURAL RESOURCES, USA, INC. (“OPERATOR”) FOR THE DRILLING OF THE FOLLOWING OIL AND GAS WELLS: NAIL-TILLMAN E1G 507H; NAIL-TILLMAN E1H 508H; NAIL-TILLMAN E1I 509H; NAILTILLMAN E1J 510H; AND NAIL-TILLMAN E1K 511H; SAID WELLS BEING GENERALLY LOCATED 7,122 FEET NORTH OF OCCIDENTAL PARKWAY AND BETWEEN 1,182 FEET AND 1,262 FEET EAST OF STATE HIGHWAY 349 (PUBLIC HEARING ONLY) (District 1) (Development Services) (Set the Standard for a Safe and Secure City)**

Purpose:

The proposed granting of oil and gas well permits to Pioneer Natural Resources, USA, Inc. (“Operator”) for the drilling of the following oil and gas wells: NAIL-TILLMAN E1G 507H; NAIL-TILLMAN E1H 508H; NAIL-TILLMAN E1I 509H; NAIL-TILLMAN E1J 510H; and NAIL-TILLMAN E1K 511H; said wells being generally located 7,122 feet north of occidental parkway and between 1,182 feet and 1,262 feet east of State Highway 349 (public hearing only). Council may consider these permits following a 30-day public comment period and at a regularly scheduled meeting. No notices of objection received.

Recommended City Council Action:

Direction/Informational

Fiscal Impact:

There is no cost to the City to process this application.

Discussion:

The Oil and Gas Advisory Committee has reviewed the well sites in detail and recommends

approval. Pioneer Natural Resources, USA Inc. will be using a 24’ sound barrier along the entire length of the south side of the pad with the remaining 3 sides facing undeveloped land and oil field which will remain for the duration of drilling and fracing. A quiet type frac system will be used to complete the wells. A closed loop system will be used during drilling operations so no reserve pits will be used and drill cuttings will be removed from the property. The use of compression is requested which will also be behind sound dampening enclosures. The Tank Battery for these wells will be located in the county. Pioneer Natural Resources, USA Inc. is requesting the following variances:

(1) No Road Repair Agreement be required because no City streets will be used to access the well site.

(2) No landscaping or irrigation be required due to no access to city water.

(3) Twenty-four hour hydraulic fracturing operations be permitted.

(4) Drill cuttings be allowed to be removed from the surface location.

(5) Allow for compressors to be used for gas lift during the production phase

APPLICATION FOR OIL AND GAS PERMIT

(Pursuant to Midland City Ordinance No. 8769)

I. General Information

Date	Operator Name (must match W-1)	Operator Address
7/1/2025	Pioneer Natural Resources, USA, Inc.	777 Hidden Ridge Lane Irving, Texas 75038

Representative Name	Representative Address (within Midland City Limits)	Rep. Tele.
BJ Laechelin, Operations Manager	3617 N Big Spring St. Midland, TX 79705	713-446-1628 (Mobile) Rep. Fax
Fee: $4,000.00 Rec'd Yes___ No___	NOTE: All attachments need to bound and put in a binder before submitting.	Pages 1-4

Permit Compliance Contact (Choose 1):

Option A: Laura Wallace, Regulatory Advisor
777 Hidden Ridge Lane Irving, Texas 75038

24/7 Answering Services - No. 1 (Tele.): 432-571-2666 **No. 2 (Tele.):**

Option B:

Company Compliance Representative (Name, Address, Local Telephone) ***(ATTACH STATEMENT AS EXHIBIT A):***

Emergency Contact Representative (Name, Address, 24-Hour Tele. No.):
Pioneer Remote Operations Hub
3617 N Big Spring St. Midland, Texas 79705
432-571-2666 (Available 24/7)

Other Permitted Wells in City ***(ATTACH EXHIBIT B*** **[see § J(26)]).** Attached as Exhibit B

II. Mineral Ownership

Name(s) and Address(es) of Mineral Estate Lessors (under applicable lease):

1. Attached as Exhibit C
2.
3.

ATTACHED AS EXHIBIT C **is (a** ***Title Opinion by*** Brashier, Crosby PLLC ***, a licensed Texas Attorney/Title Commitment by Abstract Company/a Take-off from , a Certified Petroleum Landman/an opinion letter from ,*** ***a licensed Texas Attorney)*** **indicating that [Operator] has a legal right to develop the mineral estate that is the subject of this Application. [See § J(5)].**

III. Surface Ownership & Use

General Description of Current Surface Use (within 860 feet of proposed surface location):

Located in Section 1, Block 39, T1S, T&P RR Co., Abstract 314, Martin County, Texas.

Pad location is owned by Jones Bros Dirt & Paving. Other properties within 860' are: City of Midland (See Exhibit D for details.)

Currently undeveloped.

ATTACHED AS EXHIBIT D **is (a** ***Title Opinion by , a licensed Texas Attorney/a Take-off from , a Certified Petroleum Landman/Current Tax Roll from Midland Central Appraisal District),*** **which lists the name(s) and address(es) of all surface owners within 860 feet of the surface well location. [See § J(7)].**

***ATTACHED AS EXHIBIT E* is a *(map/p lat/satellite/aerial photo)* depicting all Residences, commercial structures, public buildings, all publicly dedicated Streets and alleys, Rights of Way, and permanent accessory structures surrounding the proposed Drill Site. The *(map/p lat/satellite/aerial photo)* includes two circles, as required by the Ordinance—one depicting a 500 foot radius and one depicting an 860 foot radius from the proposed well's surface location. [See § J(10)].**

***ATTACHED AS EXHIBIT F* is a copy of the notification letter(s) sent to 100 percent of the surface owners, Certified Mail, Return Receipt Requested. [See § J(36)].**

IV. Well & Operations Information

Proposed Well Name: Nail-Tillman E1G 507H

Proposed Hole Size, Casing Program and Cementing Program (attach Exhibit as Necessary)[See § J(11) and § L(4)]:

A wellbore schematic with the applicable information is attached as Exhibit G

Legal Description of Proposed Well Site:

850' FNL, 1467' FEL, Section 1, Block 39, T1S, T&P RR Co., Abstract 314, Martin County, Texas

***ATTACHED AS EXHIBIT G* is the Location Site Plan [See § J(9)].**

***ATTACHED AS EXHIBIT H* is the Map with the proposed transportation route(s) and road(s) for equipment, chemicals, or refuse products used or produced in the proposed oil and gas operations. [See § J(12)].**

***ATTACHED AS EXHIBIT I* is a copy of the approved Texas Railroad Commission permit to drill (Form W-1), together with all attachments *(also file copy of W-1 with City Secretary before commencement of drilling operations).* [See § J(16) and (20)].**

***ATTACHED AS EXHIBIT J* is a copy of the required TCEQ report as to depth of usable quality ground water. [See § J(17)].**

***ATTACHED AS EXHIBIT K (if applicable)* is the list of alternative locations developed in consultation with the Oil & Gas Advisory Committee. [See § J(27)].**

***ATTACHED AS EXHIBIT L* is the Fencing and Irrigation Plan. [See § J(30)].**

***ATTACHED AS EXHIBIT M* is the Road Repair Agreement and *Letter of Credit/Certificate of Deposit/Surety Bond* in the amount of at least $25,000. *Option (if applicable): Applicant would further state that no City-owned streets or alleys will be used by the Operator in connection with its oil and gas operations and as a result, requests a waiver from the Council of this requirement. Option B (if applicable):* Because Applicant has three Road Repair Agreements in effect that have been approved by the Council, Applicant requests that the Council consolidate all agreements into one and is filing the necessary $75,000 *letter of credit/certificate of deposit/surety bond* in conjunction with this request. [See § J(31)].**

***ATTACHED AS EXHIBIT N* is the Concept Plan depicting the proposed Operations Site (which includes tanks, roads, power lines, and pipeline routes). [See § J(32)].**

Description of Public Utilities required during (1) drilling and (2) operations:

(1) Drilling: N/A

(2) Operations: Electric is required to support production operations for this well. Due to transmission constraints from Oncor, requesting a variance for on-site power generation until that time. See Exhibits N and V for details.

Description of water source to be used during Drilling:

The water source used during drilling can be found on Exhibit N

Description of all electric lines to production facilities (reference exhibits as necessary) [See § L(10)]:

The route for electric lines can be found on Exhibit N

Plan detailing construction, location, and closure of pits used for Drilling and Completion operations (attach exhibit if necessary) [See § J(35)]:

Reserve pits will not be used. Freshwater pits will be used. Please see Exhibit O for closure details.

V. Additional Required Exhibits

***ATTACHED AS EXHIBIT P* is the *Letter of Credit/Certificate of Deposit* in accordance with Subsection (K)(2). [See § J(18)].**

***ATTACHED AS EXHIBIT Q* are Tax certificates from Midland Central Appraisal District to be submitted indicating that all taxes on personal and real property, including minerals, owned by Applicant are current. [See § J(29)].**

***ATTACHED AS EXHIBIT R* is the required Insurance Certificate. [See § J(19) and § K(3)].**

***ATTACHED AS EXHIBIT S (if applicable)* is the Drainage Plan approved by the City Engineer relating to Applicant's proposed operations. [See § J(21)].**

***ATTACHED AS EXHIBIT T* is Applicant's Emergency Action Response Plan. [See § J(22)].**

***ATTACHED AS EXHIBIT U* is Applicant's Hazardous Materials Management Plan, a copy of which has been submitted and is on file with the Midland Fire Department. [See § J(23)].**

APPLICATION FOR OIL AND GAS PERMIT

(Pursuant to Midland City Ordinance No. 8769)

I. General Information

Date	Operator Name (must match W-1)	Operator Address
7/1/2025	Pioneer Natural Resources, USA, Inc.	777 Hidden Ridge Lane Irving, Texas 75038

Representative Name	Representative Address (within Midland City Limits)	Rep. Tele.
BJ Laechelin, Operations Manager	3617 N Big Spring St. Midland, TX 79705	713-446-1628 (Mobile) Rep. Fax
Fee: $4,000.00 Rec'd Yes___ No___	NOTE: All attachments need to bound and put in a binder before submitting.	Pages 1-4

Permit Compliance Contact (Choose 1):

Option A: Laura Wallace, Regulatory Advisor
777 Hidden Ridge Lane Irving, Texas 75038

24/7 Answering Services - No. 1 (Tele.): 432-571-2666 **No. 2 (Tele.):**

Option B:

Company Compliance Representative (Name, Address, Local Telephone) ***(ATTACH STATEMENT AS EXHIBIT A):***

Emergency Contact Representative (Name, Address, 24-Hour Tele. No.):
Pioneer Remote Operations Hub
3617 N Big Spring St. Midland, Texas 79705
432-571-2666 (Available 24/7)

Other Permitted Wells in City ***(ATTACH EXHIBIT B*** **[see § J(26)]).** Attached as Exhibit B

II. Mineral Ownership

Name(s) and Address(es) of Mineral Estate Lessors (under applicable lease):

1. Attached as Exhibit C
2.
3.

ATTACHED AS EXHIBIT C **is (a** ***Title Opinion by*** Brashier, Crosby PLLC ***, a licensed Texas Attorney/Title Commitment by Abstract Company/a Take-off from , a Certified Petroleum Landman/an opinion letter from ,*** ***a licensed Texas Attorney)*** **indicating that [Operator] has a legal right to develop the mineral estate that is the subject of this Application. [See § J(5)].**

III. Surface Ownership & Use

General Description of Current Surface Use (within 860 feet of proposed surface location):

Located in Section 1, Block 39, T1S, T&P RR Co., Abstract 314, Martin County, Texas.

Pad location is owned by Jones Bros Dirt & Paving. Other properties within 860' are: City of Midland (See Exhibit D for details.)

Currently undeveloped.

ATTACHED AS EXHIBIT D **is (a** ***Title Opinion by , a licensed Texas Attorney/a Take-off from , a Certified Petroleum Landman/Current Tax Roll from Midland Central Appraisal District),*** **which lists the name(s) and address(es) of all surface owners within 860 feet of the surface well location. [See § J(7)].**

***ATTACHED AS EXHIBIT E* is a *(map/p lat/satellite/aerial photo)* depicting all Residences, commercial structures, public buildings, all publicly dedicated Streets and alleys, Rights of Way, and permanent accessory structures surrounding the proposed Drill Site. The *(map/p lat/satellite/aerial photo)* includes two circles, as required by the Ordinance—one depicting a 500 foot radius and one depicting an 860 foot radius from the proposed well's surface location. [See § J(10)].**

***ATTACHED AS EXHIBIT F* is a copy of the notification letter(s) sent to 100 percent of the surface owners, Certified Mail, Return Receipt Requested. [See § J(36)].**

IV. Well & Operations Information

Proposed Well Name: Nail-Tillman E1H 508H

Proposed Hole Size, Casing Program and Cementing Program (attach Exhibit as Necessary)[See § J(11) and § L(4)]:

A wellbore schematic with the applicable information is attached as Exhibit G

Legal Description of Proposed Well Site:

850' FNL, 1447' FEL, Section 1, Block 39, T1S, T&P RR Co., Abstract 314, Martin County, Texas

***ATTACHED AS EXHIBIT G* is the Location Site Plan [See § J(9)].**

***ATTACHED AS EXHIBIT H* is the Map with the proposed transportation route(s) and road(s) for equipment, chemicals, or refuse products used or produced in the proposed oil and gas operations. [See § J(12)].**

***ATTACHED AS EXHIBIT I* is a copy of the approved Texas Railroad Commission permit to drill (Form W-1), together with all attachments *(also file copy of W-1 with City Secretary before commencement of drilling operations).* [See § J(16) and (20)].**

***ATTACHED AS EXHIBIT J* is a copy of the required TCEQ report as to depth of usable quality ground water. [See § J(17)].**

***ATTACHED AS EXHIBIT K (if applicable)* is the list of alternative locations developed in consultation with the Oil & Gas Advisory Committee. [See § J(27)].**

***ATTACHED AS EXHIBIT L* is the Fencing and Irrigation Plan. [See § J(30)].**

***ATTACHED AS EXHIBIT M* is the Road Repair Agreement and *Letter of Credit/Certificate of Deposit/Surety Bond* in the amount of at least $25,000. *Option (if applicable): Applicant would further state that no City-owned streets or alleys will be used by the Operator in connection with its oil and gas operations and as a result, requests a waiver from the Council of this requirement. Option B (if applicable):* Because Applicant has three Road Repair Agreements in effect that have been approved by the Council, Applicant requests that the Council consolidate all agreements into one and is filing the necessary $75,000 *letter of credit/certificate of deposit/surety bond* in conjunction with this request. [See § J(31)].**

***ATTACHED AS EXHIBIT N* is the Concept Plan depicting the proposed Operations Site (which includes tanks, roads, power lines, and pipeline routes). [See § J(32)].**

Description of Public Utilities required during (1) drilling and (2) operations:

(1) Drilling: N/A

(2) Operations: Electric is required to support production operations for this well. Due to transmission constraints from Oncor, requesting a variance for on-site power generation until that time. See Exhibits N and V for details.

Description of water source to be used during Drilling:

The water source used during drilling can be found on Exhibit N

Description of all electric lines to production facilities (reference exhibits as necessary) [See § L(10)]:

The route for electric lines can be found on Exhibit N

Plan detailing construction, location, and closure of pits used for Drilling and Completion operations (attach exhibit if necessary) [See § J(35)]:

Reserve pits will not be used. Freshwater pits will be used. Please see Exhibit O for closure details.

V. Additional Required Exhibits

***ATTACHED AS EXHIBIT P* is the *Letter of Credit/Certificate of Deposit* in accordance with Subsection (K)(2). [See § J(18)].**

***ATTACHED AS EXHIBIT Q* are Tax certificates from Midland Central Appraisal District to be submitted indicating that all taxes on personal and real property, including minerals, owned by Applicant are current. [See § J(29)].**

***ATTACHED AS EXHIBIT R* is the required Insurance Certificate. [See § J(19) and § K(3)].**

***ATTACHED AS EXHIBIT S (if applicable)* is the Drainage Plan approved by the City Engineer relating to Applicant's proposed operations. [See § J(21)].**

***ATTACHED AS EXHIBIT T* is Applicant's Emergency Action Response Plan. [See § J(22)].**

***ATTACHED AS EXHIBIT U* is Applicant's Hazardous Materials Management Plan, a copy of which has been submitted and is on file with the Midland Fire Department. [See § J(23)].**

432-571-2666 (Available 24/7)

Other Permitted Wells in City ***(ATTACH EXHIBIT B*** **[see § J(26)]).** Attached as Exhibit B

II. Mineral Ownership

Name(s) and Address(es) of Mineral Estate Lessors (under applicable lease):

1. Attached as Exhibit C
2.
3.

ATTACHED AS EXHIBIT C **is (a** ***Title Opinion by*** Brashier, Crosby PLLC ***, a licensed Texas Attorney/Title Commitment by Abstract Company/a Take-off from , a Certified Petroleum Landman/an opinion letter from ,*** ***a licensed Texas Attorney)*** **indicating that [Operator] has a legal right to develop the mineral estate that is the subject of this Application. [See § J(5)].**

III. Surface Ownership & Use

General Description of Current Surface Use (within 860 feet of proposed surface location):

Located in Section 1, Block 39, T1S, T&P RR Co., Abstract 314, Martin County, Texas.

Pad location is owned by Jones Bros Dirt & Paving. Other properties within 860' are: City of Midland (See Exhibit D for details.)

Currently undeveloped.

ATTACHED AS EXHIBIT D **is (a** ***Title Opinion by , a licensed Texas Attorney/a Take-off from , a Certified Petroleum Landman/Current Tax Roll from Midland Central Appraisal District),*** **which lists the name(s) and address(es) of all surface owners within 860 feet of the surface well location. [See § J(7)].**

***ATTACHED AS EXHIBIT E* is a *(map/p lat/satellite/aerial photo)* depicting all Residences, commercial structures, public buildings, all publicly dedicated Streets and alleys, Rights of Way, and permanent accessory structures surrounding the proposed Drill Site. The *(map/p lat/satellite/aerial photo)* includes two circles, as required by the Ordinance—one depicting a 500 foot radius and one depicting an 860 foot radius from the proposed well's surface location. [See § J(10)].**

***ATTACHED AS EXHIBIT F* is a copy of the notification letter(s) sent to 100 percent of the surface owners, Certified Mail, Return Receipt Requested. [See § J(36)].**

IV. Well & Operations Information

Proposed Well Name: Nail-Tillman E1I 509H

Proposed Hole Size, Casing Program and Cementing Program (attach Exhibit as Necessary)[See § J(11) and § L(4)]:

A wellbore schematic with the applicable information is attached as Exhibit G

Legal Description of Proposed Well Site:

849' FNL, 1427' FEL, Section 1, Block 39, T1S, T&P RR Co., Abstract 314, Martin County, Texas

***ATTACHED AS EXHIBIT G* is the Location Site Plan [See § J(9)].**

***ATTACHED AS EXHIBIT H* is the Map with the proposed transportation route(s) and road(s) for equipment, chemicals, or refuse products used or produced in the proposed oil and gas operations. [See § J(12)].**

***ATTACHED AS EXHIBIT I* is a copy of the approved Texas Railroad Commission permit to drill (Form W-1), together with all attachments *(also file copy of W-1 with City Secretary before commencement of drilling operations).* [See § J(16) and (20)].**

***ATTACHED AS EXHIBIT J* is a copy of the required TCEQ report as to depth of usable quality ground water. [See § J(17)].**

***ATTACHED AS EXHIBIT K (if applicable)* is the list of alternative locations developed in consultation with the Oil & Gas Advisory Committee. [See § J(27)].**

***ATTACHED AS EXHIBIT L* is the Fencing and Irrigation Plan. [See § J(30)].**

***ATTACHED AS EXHIBIT M* is the Road Repair Agreement and *Letter of Credit/Certificate of Deposit/Surety Bond* in the amount of at least $25,000. *Option (if applicable): Applicant would further state that no City-owned streets or alleys will be used by the Operator in connection with its oil and gas operations and as a result, requests a waiver from the Council of this requirement. Option B (if applicable):* Because Applicant has three Road Repair Agreements in effect that have been approved by the Council, Applicant requests that the Council consolidate all agreements into one and is filing the necessary $75,000 *letter of credit/certificate of deposit/surety bond* in conjunction with this request. [See § J(31)].**

***ATTACHED AS EXHIBIT N* is the Concept Plan depicting the proposed Operations Site (which includes tanks, roads, power lines, and pipeline routes). [See § J(32)].**

Description of Public Utilities required during (1) drilling and (2) operations:

(1) Drilling: N/A

(2) Operations: Electric is required to support production operations for this well. Due to transmission constraints from Oncor, requesting a variance for on-site power generation until that time. See Exhibits N and V for details.

Description of water source to be used during Drilling:

The water source used during drilling can be found on Exhibit N

Description of all electric lines to production facilities (reference exhibits as necessary) [See § L(10)]:

The route for electric lines can be found on Exhibit N

Plan detailing construction, location, and closure of pits used for Drilling and Completion operations (attach exhibit if necessary) [See § J(35)]:

Reserve pits will not be used. Freshwater pits will be used. Please see Exhibit O for closure details.

V. Additional Required Exhibits

***ATTACHED AS EXHIBIT P* is the *Letter of Credit/Certificate of Deposit* in accordance with Subsection (K)(2). [See § J(18)].**

***ATTACHED AS EXHIBIT Q* are Tax certificates from Midland Central Appraisal District to be submitted indicating that all taxes on personal and real property, including minerals, owned by Applicant are current. [See § J(29)].**

***ATTACHED AS EXHIBIT R* is the required Insurance Certificate. [See § J(19) and § K(3)].**

***ATTACHED AS EXHIBIT S (if applicable)* is the Drainage Plan approved by the City Engineer relating to Applicant's proposed operations. [See § J(21)].**

***ATTACHED AS EXHIBIT T* is Applicant's Emergency Action Response Plan. [See § J(22)].**

***ATTACHED AS EXHIBIT U* is Applicant's Hazardous Materials Management Plan, a copy of which has been submitted and is on file with the Midland Fire Department. [See § J(23)].**

APPLICATION FOR OIL AND GAS PERMIT

(Pursuant to Midland City Ordinance No. 8769)

I. General Information

Date	Operator Name (must match W-1)	Operator Address
7/1/2025	Pioneer Natural Resources, USA, Inc.	777 Hidden Ridge Lane Irving, Texas 75038

Representative Name	Representative Address (within Midland City Limits)	Rep. Tele.
BJ Laechelin, Operations Manager	3617 N Big Spring St. Midland, TX 79705	713-446-1628 (Mobile) Rep. Fax
Fee: $4,000.00 Rec'd Yes___ No___	NOTE: All attachments need to bound and put in a binder before submitting.	Pages 1-4

Permit Compliance Contact (Choose 1):

Option A: Laura Wallace, Regulatory Advisor
777 Hidden Ridge Lane Irving, Texas 75038

24/7 Answering Services - No. 1 (Tele.): 432-571-2666 **No. 2 (Tele.):**

Option B:

Company Compliance Representative (Name, Address, Local Telephone) ***(ATTACH STATEMENT AS EXHIBIT A):***

Emergency Contact Representative (Name, Address, 24-Hour Tele. No.):
Pioneer Remote Operations Hub
3617 N Big Spring St. Midland, Texas 79705
432-571-2666 (Available 24/7)

Other Permitted Wells in City ***(ATTACH EXHIBIT B*** **[see § J(26)]).** Attached as Exhibit B

II. Mineral Ownership

Name(s) and Address(es) of Mineral Estate Lessors (under applicable lease):

1. Attached as Exhibit C
2.
3.

ATTACHED AS EXHIBIT C **is (a** ***Title Opinion by*** Brashier, Crosby PLLC ***, a licensed Texas Attorney/Title Commitment by Abstract Company/a Take-off from , a Certified Petroleum Landman/an opinion letter from ,*** ***a licensed Texas Attorney)*** **indicating that [Operator] has a legal right to develop the mineral estate that is the subject of this Application. [See § J(5)].**

III. Surface Ownership & Use

General Description of Current Surface Use (within 860 feet of proposed surface location):

Located in Section 1, Block 39, T1S, T&P RR Co., Abstract 314, Martin County, Texas.

Pad location is owned by Jones Bros Dirt & Paving. Other properties within 860' are: City of Midland (See Exhibit D for details.)

Currently undeveloped.

ATTACHED AS EXHIBIT D **is (a** ***Title Opinion by , a licensed Texas Attorney/a Take-off from , a Certified Petroleum Landman/Current Tax Roll from Midland Central Appraisal District),*** **which lists the name(s) and address(es) of all surface owners within 860 feet of the surface well location. [See § J(7)].**

***ATTACHED AS EXHIBIT E* is a *(map/p lat/satellite/aerial photo)* depicting all Residences, commercial structures, public buildings, all publicly dedicated Streets and alleys, Rights of Way, and permanent accessory structures surrounding the proposed Drill Site. The *(map/p lat/satellite/aerial photo)* includes two circles, as required by the Ordinance—one depicting a 500 foot radius and one depicting an 860 foot radius from the proposed well's surface location. [See § J(10)].**

***ATTACHED AS EXHIBIT F* is a copy of the notification letter(s) sent to 100 percent of the surface owners, Certified Mail, Return Receipt Requested. [See § J(36)].**

IV. Well & Operations Information

Proposed Well Name: Nail-Tillman E1J 510H

Proposed Hole Size, Casing Program and Cementing Program (attach Exhibit as Necessary)[See § J(11) and § L(4)]:

A wellbore schematic with the applicable information is attached as Exhibit G

Legal Description of Proposed Well Site:

849' FNL, 1407' FEL, Section 1, Block 39, T1S, T&P RR Co., Abstract 314, Martin County, Texas

***ATTACHED AS EXHIBIT G* is the Location Site Plan [See § J(9)].**

***ATTACHED AS EXHIBIT H* is the Map with the proposed transportation route(s) and road(s) for equipment, chemicals, or refuse products used or produced in the proposed oil and gas operations. [See § J(12)].**

***ATTACHED AS EXHIBIT I* is a copy of the approved Texas Railroad Commission permit to drill (Form W-1), together with all attachments *(also file copy of W-1 with City Secretary before commencement of drilling operations).* [See § J(16) and (20)].**

***ATTACHED AS EXHIBIT J* is a copy of the required TCEQ report as to depth of usable quality ground water. [See § J(17)].**

***ATTACHED AS EXHIBIT K (if applicable)* is the list of alternative locations developed in consultation with the Oil & Gas Advisory Committee. [See § J(27)].**

***ATTACHED AS EXHIBIT L* is the Fencing and Irrigation Plan. [See § J(30)].**

***ATTACHED AS EXHIBIT M* is the Road Repair Agreement and *Letter of Credit/Certificate of Deposit/Surety Bond* in the amount of at least $25,000. *Option (if applicable): Applicant would further state that no City-owned streets or alleys will be used by the Operator in connection with its oil and gas operations and as a result, requests a waiver from the Council of this requirement. Option B (if applicable):* Because Applicant has three Road Repair Agreements in effect that have been approved by the Council, Applicant requests that the Council consolidate all agreements into one and is filing the necessary $75,000 *letter of credit/certificate of deposit/surety bond* in conjunction with this request. [See § J(31)].**

***ATTACHED AS EXHIBIT N* is the Concept Plan depicting the proposed Operations Site (which includes tanks, roads, power lines, and pipeline routes). [See § J(32)].**

Description of Public Utilities required during (1) drilling and (2) operations:

(1) Drilling: N/A

(2) Operations: Electric is required to support production operations for this well. Due to transmission constraints from Oncor, requesting a variance for on-site power generation until that time. See Exhibits N and V for details.

Description of water source to be used during Drilling:

The water source used during drilling can be found on Exhibit N

Description of all electric lines to production facilities (reference exhibits as necessary) [See § L(10)]:

The route for electric lines can be found on Exhibit N

Plan detailing construction, location, and closure of pits used for Drilling and Completion operations (attach exhibit if necessary) [See § J(35)]:

Reserve pits will not be used. Freshwater pits will be used. Please see Exhibit O for closure details.

V. Additional Required Exhibits

***ATTACHED AS EXHIBIT P* is the *Letter of Credit/Certificate of Deposit* in accordance with Subsection (K)(2). [See § J(18)].**

***ATTACHED AS EXHIBIT Q* are Tax certificates from Midland Central Appraisal District to be submitted indicating that all taxes on personal and real property, including minerals, owned by Applicant are current. [See § J(29)].**

***ATTACHED AS EXHIBIT R* is the required Insurance Certificate. [See § J(19) and § K(3)].**

***ATTACHED AS EXHIBIT S (if applicable)* is the Drainage Plan approved by the City Engineer relating to Applicant's proposed operations. [See § J(21)].**

***ATTACHED AS EXHIBIT T* is Applicant's Emergency Action Response Plan. [See § J(22)].**

***ATTACHED AS EXHIBIT U* is Applicant's Hazardous Materials Management Plan, a copy of which has been submitted and is on file with the Midland Fire Department. [See § J(23)].**

City Council Meeting

Item Number: 17

Meeting Date: September 9, 2025

To: City Council / City Manager

From: Garrick Clayton, Oil and Gas Officer

Subject: **THE PROPOSED GRANTING OF OIL AND GAS WELL PERMITS TO PIONEER NATURAL RESOURCES, USA, INC. (“OPERATOR”) FOR THE DRILLING OF THE FOLLOWING OIL AND GAS WELLS: NAIL-BURLEY 6L 712H; NAIL-BURLEY 6M 713H; NAIL-BURLEY 6N 714H; NAILBURLEY 6O 715H; NAIL-BURLEY 6P 716H; AND NAIL-BURLEY 6Q 717H; SAID WELLS BEING GENERALLY LOCATED BETWEEN 6,660 FEET AND 6,669 FEET NORTH OF OCCIDENTAL PARKWAY AND BETWEEN 6,627 FEET AND 6,727 FEET EAST OF STATE HIGHWAY 349 (PUBLIC HEARING ONLY) (District 1) (Development Services) (Set the Standard for a Safe and Secure City)**

Purpose:

The proposed granting of oil and gas well permits to Pioneer Natural Resources, USA, Inc. (“Operator”) for the drilling of the following oil and gas wells: NAIL-BURLEY 6L 712H; NAIL-BURLEY 6M 713H; NAIL-BURLEY 6N 714H; NAIL-BURLEY 6O 715H; NAIL-BURLEY 6P 716H; and NAIL-BURLEY 6Q 717H; said wells being generally located between 6,660 feet & 6,669 feet north of occidental parkway and between 6,627 feet and 6,727 feet east of State Highway 349 (public hearing only). Council may consider these permits following a 30-day public comment period and at a regularly scheduled meeting. No notices of objection received.

Recommended City Council Action:

Direction/Informational

Fiscal Impact:

There is no cost to the City to process this application.

Discussion:

The Oil and Gas Advisory Committee has reviewed the well sites in detail and recommends approval. Pioneer Natural Resources, USA Inc. will be using a 24' sound barrier along the entire length of the south side of the pad with the remaining 3 sides facing undeveloped land and oil field which will remain for the duration of drilling and fracing. A quiet type frac system will be used to complete the wells. A closed loop system will be used during drilling operations so no reserve pits will be used and drill cuttings will be removed from the property. The use of compression is requested which will also be behind sound dampening enclosures. The Tank Battery for these wells will be located in the county. Pioneer Natural Resources, USA Inc. is requesting the following variances:

(1) No Road Repair Agreement be required because no City streets will be used to access the well site.

(2) No landscaping or irrigation be required due to no access to city water.

(3) Twenty-four hour hydraulic fracturing operations be permitted.

(4) Drill cuttings be allowed to be removed from the surface location.

(5) Allow for compressors to be used for gas lift during the production phase

Attachments: Applications; Location maps; Exhibit - Drill site maps, Exhibit – Overall Location

MIDLAND Planning Division

APPLICATION FOR OIL AND GAS PERMIT

(Pursuant to Midland City Ordinance No. 8769)

I. General Information

Date	Operator Name (must match W-1)	Operator Address
7/1/2025	Pioneer Natural Resources, USA, Inc.	777 Hidden Ridge Lane Irving, Texas 75038

Representative Name	Representative Address (within Midland City Limits)	Rep. Tele.
BJ Laechelin, Operations Manager	3617 N Big Spring St. Midland, TX 79705	713-446-1628 (Mobile) Rep. Fax
Fee: $4,000.00 Rec'd Yes___ No___	NOTE: All attachments need to bound and put in a binder before submitting.	Pages 1-4

Permit Compliance Contact (Choose 1):

Option A: Laura Wallace, Regulatory Advisor
777 Hidden Ridge Lane Irving, Texas 75038

24/7 Answering Services - No. 1 (Tele.): 432-571-2666 **No. 2 (Tele.):**

Option B:

Company Compliance Representative (Name, Address, Local Telephone) ***(ATTACH STATEMENT AS EXHIBIT A):***

Emergency Contact Representative (Name, Address, 24-Hour Tele. No.):
Pioneer Remote Operations Hub
3617 N Big Spring St. Midland, Texas 79705
432-571-2666 (Available 24/7)

Other Permitted Wells in City ***(ATTACH EXHIBIT B*** **[see § J(26)]).** Attached as Exhibit B

II. Mineral Ownership

Name(s) and Address(es) of Mineral Estate Lessors (under applicable lease):

1. Attached as Exhibit C
2.
3.

ATTACHED AS EXHIBIT C **is (a** ***Title Opinion by*** Brashier, Crosby PLLC ***, a licensed Texas Attorney/Title Commitment by Abstract Company/a Take-off from , a Certified Petroleum Landman/an opinion letter from ,*** ***a licensed Texas Attorney)*** **indicating that [Operator] has a legal right to develop the mineral estate that is the subject of this Application. [See § J(5)].**

III. Surface Ownership & Use

General Description of Current Surface Use (within 860 feet of proposed surface location):

Located in Section 6, Block 38, T1S, T&P RR Co., Abstract 671, Martin County, Texas.

Pad location is owned by Jones Bros Dirt & Paving. Other properties within 860' are: City of Midland (See Exhibit D for details.)

Currently undeveloped.

ATTACHED AS EXHIBIT D **is (a** ***Title Opinion by , a licensed Texas Attorney/a Take-off from , a Certified Petroleum Landman/Current Tax Roll from Midland Central Appraisal District),*** **which lists the name(s) and address(es) of all surface owners within 860 feet of the surface well location. [See § J(7)].**

***ATTACHED AS EXHIBIT E* is a *(map/p lat/satellite/aerial photo)* depicting all Residences, commercial structures, public buildings, all publicly dedicated Streets and alleys, Rights of Way, and permanent accessory structures surrounding the proposed Drill Site. The *(map/p lat/satellite/aerial photo)* includes two circles, as required by the Ordinance—one depicting a 500 foot radius and one depicting an 860 foot radius from the proposed well's surface location. [See § J(10)].**

***ATTACHED AS EXHIBIT F* is a copy of the notification letter(s) sent to 100 percent of the surface owners, Certified Mail, Return Receipt Requested. [See § J(36)].**

IV. Well & Operations Information

Proposed Well Name: Nail-Burley 6L 712H

Proposed Hole Size, Casing Program and Cementing Program (attach Exhibit as Necessary)[See § J(11) and § L(4)]:

A wellbore schematic with the applicable information is attached as Exhibit G

Legal Description of Proposed Well Site:

674' FNL, 1901' FEL, Section 6, Block 38, T1S, T&P RR Co., Abstract 671, Martin County, Texas

***ATTACHED AS EXHIBIT G* is the Location Site Plan [See § J(9)].**

***ATTACHED AS EXHIBIT H* is the Map with the proposed transportation route(s) and road(s) for equipment, chemicals, or refuse products used or produced in the proposed oil and gas operations. [See § J(12)].**

***ATTACHED AS EXHIBIT I* is a copy of the approved Texas Railroad Commission permit to drill (Form W-1), together with all attachments *(also file copy of W-1 with City Secretary before commencement of drilling operations).* [See § J(16) and (20)].**

***ATTACHED AS EXHIBIT J* is a copy of the required TCEQ report as to depth of usable quality ground water. [See § J(17)].**

***ATTACHED AS EXHIBIT K (if applicable)* is the list of alternative locations developed in consultation with the Oil & Gas Advisory Committee. [See § J(27)].**

***ATTACHED AS EXHIBIT L* is the Fencing and Irrigation Plan. [See § J(30)].**

***ATTACHED AS EXHIBIT M* is the Road Repair Agreement and *Letter of Credit/Certificate of Deposit/Surety Bond* in the amount of at least $25,000. *Option (if applicable): Applicant would further state that no City-owned streets or alleys will be used by the Operator in connection with its oil and gas operations and as a result, requests a waiver from the Council of this requirement. Option B (if applicable):* Because Applicant has three Road Repair Agreements in effect that have been approved by the Council, Applicant requests that the Council consolidate all agreements into one and is filing the necessary $75,000 *letter of credit/certificate of deposit/surety bond* in conjunction with this request. [See § J(31)].**

***ATTACHED AS EXHIBIT N* is the Concept Plan depicting the proposed Operations Site (which includes tanks, roads, power lines, and pipeline routes). [See § J(32)].**

Description of Public Utilities required during (1) drilling and (2) operations:

(1) Drilling: N/A

(2) Operations: Electric is required to support production operations for this well. Due to transmission constraints from Oncor, requesting a variance for on-site power generation until that time. See Exhibits N and V for details.

Description of water source to be used during Drilling:

The water source used during drilling can be found on Exhibit N

Description of all electric lines to production facilities (reference exhibits as necessary) [See § L(10)]:

The route for electric lines can be found on Exhibit N

Plan detailing construction, location, and closure of pits used for Drilling and Completion operations (attach exhibit if necessary) [See § J(35)]:

Reserve pits will not be used. Freshwater pits will be used. Please see Exhibit O for closure details.

V. Additional Required Exhibits

***ATTACHED AS EXHIBIT P* is the *Letter of Credit/Certificate of Deposit* in accordance with Subsection (K)(2). [See § J(18)].**

***ATTACHED AS EXHIBIT Q* are Tax certificates from Midland Central Appraisal District to be submitted indicating that all taxes on personal and real property, including minerals, owned by Applicant are current. [See § J(29)].**

***ATTACHED AS EXHIBIT R* is the required Insurance Certificate. [See § J(19) and § K(3)].**

***ATTACHED AS EXHIBIT S (if applicable)* is the Drainage Plan approved by the City Engineer relating to Applicant's proposed operations. [See § J(21)].**

***ATTACHED AS EXHIBIT T* is Applicant's Emergency Action Response Plan. [See § J(22)].**

***ATTACHED AS EXHIBIT U* is Applicant's Hazardous Materials Management Plan, a copy of which has been submitted and is on file with the Midland Fire Department. [See § J(23)].**

Option A: Laura Wallace, Regulatory Advisor
777 Hidden Ridge Lane Irving, Texas 75038

24/7 Answering Services - No. 1 (Tele.): 432-571-2666 **No. 2 (Tele.):**

Option B:

Company Compliance Representative (Name, Address, Local Telephone) ***(ATTACH STATEMENT AS EXHIBIT A):***

Emergency Contact Representative (Name, Address, 24-Hour Tele. No.):
Pioneer Remote Operations Hub
3617 N Big Spring St. Midland, Texas 79705
432-571-2666 (Available 24/7)

Other Permitted Wells in City ***(ATTACH EXHIBIT B*** **[see § J(26)]).** Attached as Exhibit B

II. Mineral Ownership

Name(s) and Address(es) of Mineral Estate Lessors (under applicable lease):

1. Attached as Exhibit C
2.
3.

ATTACHED AS EXHIBIT C **is (a** ***Title Opinion by*** Brashier, Crosby PLLC ***, a licensed Texas Attorney/Title Commitment by Abstract Company/a Take-off from , a Certified Petroleum Landman/an opinion letter from ,*** ***a licensed Texas Attorney)*** **indicating that [Operator] has a legal right to develop the mineral estate that is the subject of this Application. [See § J(5)].**

III. Surface Ownership & Use

General Description of Current Surface Use (within 860 feet of proposed surface location):

Located in Section 6, Block 38, T1S, T&P RR Co., Abstract 671, Martin County, Texas.

Pad location is owned by Jones Bros Dirt & Paving. Other properties within 860' are: City of Midland (See Exhibit D for details.)

Currently undeveloped.

ATTACHED AS EXHIBIT D **is (a** ***Title Opinion by , a licensed Texas Attorney/a Take-off from , a Certified Petroleum Landman/Current Tax Roll from Midland Central Appraisal District),*** **which lists the name(s) and address(es) of all surface owners within 860 feet of the surface well location. [See § J(7)].**

***ATTACHED AS EXHIBIT E* is a *(map/p lat/satellite/aerial photo)* depicting all Residences, commercial structures, public buildings, all publicly dedicated Streets and alleys, Rights of Way, and permanent accessory structures surrounding the proposed Drill Site. The *(map/p lat/satellite/aerial photo)* includes two circles, as required by the Ordinance—one depicting a 500 foot radius and one depicting an 860 foot radius from the proposed well's surface location. [See § J(10)].**

***ATTACHED AS EXHIBIT F* is a copy of the notification letter(s) sent to 100 percent of the surface owners, Certified Mail, Return Receipt Requested. [See § J(36)].**

IV. Well & Operations Information

Proposed Well Name: Nail-Burley 6M 713H

Proposed Hole Size, Casing Program and Cementing Program (attach Exhibit as Necessary)[See § J(11) and § L(4)]:

A wellbore schematic with the applicable information is attached as Exhibit G

Legal Description of Proposed Well Site:

674' FNL, 1881' FEL, Section 6, Block 38, T1S, T&P RR Co., Abstract 671, Martin County, Texas

***ATTACHED AS EXHIBIT G* is the Location Site Plan [See § J(9)].**

***ATTACHED AS EXHIBIT H* is the Map with the proposed transportation route(s) and road(s) for equipment, chemicals, or refuse products used or produced in the proposed oil and gas operations. [See § J(12)].**

***ATTACHED AS EXHIBIT I* is a copy of the approved Texas Railroad Commission permit to drill (Form W-1), together with all attachments *(also file copy of W-1 with City Secretary before commencement of drilling operations).* [See § J(16) and (20)].**

***ATTACHED AS EXHIBIT J* is a copy of the required TCEQ report as to depth of usable quality ground water. [See § J(17)].**

***ATTACHED AS EXHIBIT K (if applicable)* is the list of alternative locations developed in consultation with the Oil & Gas Advisory Committee. [See § J(27)].**

***ATTACHED AS EXHIBIT L* is the Fencing and Irrigation Plan. [See § J(30)].**

***ATTACHED AS EXHIBIT M* is the Road Repair Agreement and *Letter of Credit/Certificate of Deposit/Surety Bond* in the amount of at least $25,000. *Option (if applicable): Applicant would further state that no City-owned streets or alleys will be used by the Operator in connection with its oil and gas operations and as a result, requests a waiver from the Council of this requirement. Option B (if applicable):* Because Applicant has three Road Repair Agreements in effect that have been approved by the Council, Applicant requests that the Council consolidate all agreements into one and is filing the necessary $75,000 *letter of credit/certificate of deposit/surety bond* in conjunction with this request. [See § J(31)].**

***ATTACHED AS EXHIBIT N* is the Concept Plan depicting the proposed Operations Site (which includes tanks, roads, power lines, and pipeline routes). [See § J(32)].**

Description of Public Utilities required during (1) drilling and (2) operations:

(1) Drilling: N/A

(2) Operations: Electric is required to support production operations for this well. Due to transmission constraints from Oncor, requesting a variance for on-site power generation until that time. See Exhibits N and V for details.

Description of water source to be used during Drilling:

The water source used during drilling can be found on Exhibit N

Description of all electric lines to production facilities (reference exhibits as necessary) [See § L(10)]:

The route for electric lines can be found on Exhibit N

Plan detailing construction, location, and closure of pits used for Drilling and Completion operations (attach exhibit if necessary) [See § J(35)]:

Reserve pits will not be used. Freshwater pits will be used. Please see Exhibit O for closure details.

V. Additional Required Exhibits

***ATTACHED AS EXHIBIT P* is the *Letter of Credit/Certificate of Deposit* in accordance with Subsection (K)(2). [See § J(18)].**

***ATTACHED AS EXHIBIT Q* are Tax certificates from Midland Central Appraisal District to be submitted indicating that all taxes on personal and real property, including minerals, owned by Applicant are current. [See § J(29)].**

***ATTACHED AS EXHIBIT R* is the required Insurance Certificate. [See § J(19) and § K(3)].**

***ATTACHED AS EXHIBIT S (if applicable)* is the Drainage Plan approved by the City Engineer relating to Applicant's proposed operations. [See § J(21)].**

***ATTACHED AS EXHIBIT T* is Applicant's Emergency Action Response Plan. [See § J(22)].**

***ATTACHED AS EXHIBIT U* is Applicant's Hazardous Materials Management Plan, a copy of which has been submitted and is on file with the Midland Fire Department. [See § J(23)].**

APPLICATION FOR OIL AND GAS PERMIT

(Pursuant to Midland City Ordinance No. 8769)

I. General Information

Date	Operator Name (must match W-1)	Operator Address
7/21/2025	Pioneer Natural Resources, USA, Inc.	777 Hidden Ridge Lane Irving, Texas 75038

Representative Name	Representative Address (within Midland City Limits)	Rep. Tele.
BJ Laechelin, Operations Manager	3617 N Big Spring St. Midland, TX 79705	713-446-1628 (Mobile) Rep. Fax
Fee: $4,000.00 Rec'd Yes___ No___	NOTE: All attachments need to bound and put in a binder before submitting.	Pages 1-4

Permit Compliance Contact (Choose 1):

Option A: Laura Wallace, Regulatory Advisor
777 Hidden Ridge Lane Irving, Texas 75038

24/7 Answering Services - No. 1 (Tele.): 432-571-2666 **No. 2 (Tele.):**

Option B:

Company Compliance Representative (Name, Address, Local Telephone) ***(ATTACH STATEMENT AS EXHIBIT A):***

Emergency Contact Representative (Name, Address, 24-Hour Tele. No.):
Pioneer Remote Operations Hub
3617 N Big Spring St. Midland, Texas 79705
432-571-2666 (Available 24/7)

Other Permitted Wells in City ***(ATTACH EXHIBIT B*** **[see § J(26)]).** Attached as Exhibit B

II. Mineral Ownership

Name(s) and Address(es) of Mineral Estate Lessors (under applicable lease):

1. Attached as Exhibit C
2.
3.

ATTACHED AS EXHIBIT C **is (a** ***Title Opinion by*** Brashier, Crosby PLLC ***, a licensed Texas Attorney/Title Commitment by Abstract Company/a Take-off from , a Certified Petroleum Landman/an opinion letter from ,*** ***a licensed Texas Attorney)*** **indicating that [Operator] has a legal right to develop the mineral estate that is the subject of this Application. [See § J(5)].**

III. Surface Ownership & Use

General Description of Current Surface Use (within 860 feet of proposed surface location):

Located in Section 6, Block 38, T1S, T&P RR Co., Abstract 671, Martin County, Texas.

Pad location is owned by Jones Bros Dirt & Paving. Other properties within 860' are: City of Midland (See Exhibit D for details.)

Currently undeveloped.

ATTACHED AS EXHIBIT D **is (a** ***Title Opinion by , a licensed Texas Attorney/a Take-off from , a Certified Petroleum Landman/Current Tax Roll from Midland Central Appraisal District),*** **which lists the name(s) and address(es) of all surface owners within 860 feet of the surface well location. [See § J(7)].**

***ATTACHED AS EXHIBIT E* is a *(map/p lat/satellite/aerial photo)* depicting all Residences, commercial structures, public buildings, all publicly dedicated Streets and alleys, Rights of Way, and permanent accessory structures surrounding the proposed Drill Site. The *(map/p lat/satellite/aerial photo)* includes two circles, as required by the Ordinance—one depicting a 500 foot radius and one depicting an 860 foot radius from the proposed well's surface location. [See § J(10)].**

***ATTACHED AS EXHIBIT F* is a copy of the notification letter(s) sent to 100 percent of the surface owners, Certified Mail, Return Receipt Requested. [See § J(36)].**

IV. Well & Operations Information

Proposed Well Name: Nail-Burley 6M 714H

Proposed Hole Size, Casing Program and Cementing Program (attach Exhibit as Necessary)[See § J(11) and § L(4)]:

A wellbore schematic with the applicable information is attached as Exhibit G

Legal Description of Proposed Well Site:

674' FNL, 1861' FEL, Section 6, Block 38, T1S, T&P RR Co., Abstract 671, Martin County, Texas

***ATTACHED AS EXHIBIT G* is the Location Site Plan [See § J(9)].**

***ATTACHED AS EXHIBIT H* is the Map with the proposed transportation route(s) and road(s) for equipment, chemicals, or refuse products used or produced in the proposed oil and gas operations. [See § J(12)].**

***ATTACHED AS EXHIBIT I* is a copy of the approved Texas Railroad Commission permit to drill (Form W-1), together with all attachments *(also file copy of W-1 with City Secretary before commencement of drilling operations).* [See § J(16) and (20)].**

***ATTACHED AS EXHIBIT J* is a copy of the required TCEQ report as to depth of usable quality ground water. [See § J(17)].**

***ATTACHED AS EXHIBIT K (if applicable)* is the list of alternative locations developed in consultation with the Oil & Gas Advisory Committee. [See § J(27)].**

***ATTACHED AS EXHIBIT L* is the Fencing and Irrigation Plan. [See § J(30)].**

***ATTACHED AS EXHIBIT M* is the Road Repair Agreement and *Letter of Credit/Certificate of Deposit/Surety Bond* in the amount of at least $25,000. *Option (if applicable): Applicant would further state that no City-owned streets or alleys will be used by the Operator in connection with its oil and gas operations and as a result, requests a waiver from the Council of this requirement. Option B (if applicable):* Because Applicant has three Road Repair Agreements in effect that have been approved by the Council, Applicant requests that the Council consolidate all agreements into one and is filing the necessary $75,000 *letter of credit/certificate of deposit/surety bond* in conjunction with this request. [See § J(31)].**

***ATTACHED AS EXHIBIT N* is the Concept Plan depicting the proposed Operations Site (which includes tanks, roads, power lines, and pipeline routes). [See § J(32)].**

Description of Public Utilities required during (1) drilling and (2) operations:

(1) Drilling: N/A

(2) Operations: Electric is required to support production operations for this well. Due to transmission constraints from Oncor, requesting a variance for on-site power generation until that time. See Exhibits N and V for details.

Description of water source to be used during Drilling:

The water source used during drilling can be found on Exhibit N

Description of all electric lines to production facilities (reference exhibits as necessary) [See § L(10)]:

The route for electric lines can be found on Exhibit N

Plan detailing construction, location, and closure of pits used for Drilling and Completion operations (attach exhibit if necessary) [See § J(35)]:

Reserve pits will not be used. Freshwater pits will be used. Please see Exhibit O for closure details.

V. Additional Required Exhibits

***ATTACHED AS EXHIBIT P* is the *Letter of Credit/Certificate of Deposit* in accordance with Subsection (K)(2). [See § J(18)].**

***ATTACHED AS EXHIBIT Q* are Tax certificates from Midland Central Appraisal District to be submitted indicating that all taxes on personal and real property, including minerals, owned by Applicant are current. [See § J(29)].**

***ATTACHED AS EXHIBIT R* is the required Insurance Certificate. [See § J(19) and § K(3)].**

***ATTACHED AS EXHIBIT S (if applicable)* is the Drainage Plan approved by the City Engineer relating to Applicant's proposed operations. [See § J(21)].**

***ATTACHED AS EXHIBIT T* is Applicant's Emergency Action Response Plan. [See § J(22)].**

***ATTACHED AS EXHIBIT U* is Applicant's Hazardous Materials Management Plan, a copy of which has been submitted and is on file with the Midland Fire Department. [See § J(23)].**

APPLICATION FOR OIL AND GAS PERMIT

(Pursuant to Midland City Ordinance No. 8769)

I. General Information

Date	Operator Name (must match W-1)	Operator Address
7/21/2025	Pioneer Natural Resources, USA, Inc.	777 Hidden Ridge Lane Irving, Texas 75038

Representative Name	Representative Address (within Midland City Limits)	Rep. Tele.
BJ Laechelin, Operations Manager	3617 N Big Spring St. Midland, TX 79705	713-446-1628 (Mobile) Rep. Fax
Fee: $4,000.00 Rec'd Yes___ No___	NOTE: All attachments need to bound and put in a binder before submitting.	Pages 1-4

Permit Compliance Contact (Choose 1):

Option A: Laura Wallace, Regulatory Advisor
777 Hidden Ridge Lane Irving, Texas 75038

24/7 Answering Services - No. 1 (Tele.): 432-571-2666 **No. 2 (Tele.):**

Option B:

Company Compliance Representative (Name, Address, Local Telephone) ***(ATTACH STATEMENT AS EXHIBIT A):***

Emergency Contact Representative (Name, Address, 24-Hour Tele. No.):
Pioneer Remote Operations Hub
3617 N Big Spring St. Midland, Texas 79705
432-571-2666 (Available 24/7)

Other Permitted Wells in City ***(ATTACH EXHIBIT B*** **[see § J(26)]).** Attached as Exhibit B

II. Mineral Ownership

Name(s) and Address(es) of Mineral Estate Lessors (under applicable lease):

1. Attached as Exhibit C
2.
3.

ATTACHED AS EXHIBIT C **is (a** ***Title Opinion by*** Brashier, Crosby PLLC ***, a licensed Texas Attorney/Title Commitment by Abstract Company/a Take-off from , a Certified Petroleum Landman/an opinion letter from ,*** ***a licensed Texas Attorney)*** **indicating that [Operator] has a legal right to develop the mineral estate that is the subject of this Application. [See § J(5)].**

III. Surface Ownership & Use

General Description of Current Surface Use (within 860 feet of proposed surface location):

Located in Section 6, Block 38, T1S, T&P RR Co., Abstract 671, Martin County, Texas.

Pad location is owned by Jones Bros Dirt & Paving. Other properties within 860' are: City of Midland (See Exhibit D for details.)

Currently undeveloped.

ATTACHED AS EXHIBIT D **is (a** ***Title Opinion by , a licensed Texas Attorney/a Take-off from , a Certified Petroleum Landman/Current Tax Roll from Midland Central Appraisal District),*** **which lists the name(s) and address(es) of all surface owners within 860 feet of the surface well location. [See § J(7)].**

***ATTACHED AS EXHIBIT E* is a *(map/p lat/satellite/aerial photo)* depicting all Residences, commercial structures, public buildings, all publicly dedicated Streets and alleys, Rights of Way, and permanent accessory structures surrounding the proposed Drill Site. The *(map/p lat/satellite/aerial photo)* includes two circles, as required by the Ordinance—one depicting a 500 foot radius and one depicting an 860 foot radius from the proposed well's surface location. [See § J(10)].**

***ATTACHED AS EXHIBIT F* is a copy of the notification letter(s) sent to 100 percent of the surface owners, Certified Mail, Return Receipt Requested. [See § J(36)].**

IV. Well & Operations Information

Proposed Well Name: Nail-Burley 6O 715H

Proposed Hole Size, Casing Program and Cementing Program (attach Exhibit as Necessary)[See § J(11) and § L(4)]:

A wellbore schematic with the applicable information is attached as Exhibit G

Legal Description of Proposed Well Site:

674' FNL, 1841' FEL, Section 6, Block 38, T1S, T&P RR Co., Abstract 671, Martin County, Texas

***ATTACHED AS EXHIBIT G* is the Location Site Plan [See § J(9)].**

***ATTACHED AS EXHIBIT H* is the Map with the proposed transportation route(s) and road(s) for equipment, chemicals, or refuse products used or produced in the proposed oil and gas operations. [See § J(12)].**

***ATTACHED AS EXHIBIT I* is a copy of the approved Texas Railroad Commission permit to drill (Form W-1), together with all attachments *(also file copy of W-1 with City Secretary before commencement of drilling operations).* [See § J(16) and (20)].**

***ATTACHED AS EXHIBIT J* is a copy of the required TCEQ report as to depth of usable quality ground water. [See § J(17)].**

***ATTACHED AS EXHIBIT K (if applicable)* is the list of alternative locations developed in consultation with the Oil & Gas Advisory Committee. [See § J(27)].**

***ATTACHED AS EXHIBIT L* is the Fencing and Irrigation Plan. [See § J(30)].**

***ATTACHED AS EXHIBIT M* is the Road Repair Agreement and *Letter of Credit/Certificate of Deposit/Surety Bond* in the amount of at least $25,000. *Option (if applicable): Applicant would further state that no City-owned streets or alleys will be used by the Operator in connection with its oil and gas operations and as a result, requests a waiver from the Council of this requirement. Option B (if applicable):* Because Applicant has three Road Repair Agreements in effect that have been approved by the Council, Applicant requests that the Council consolidate all agreements into one and is filing the necessary $75,000 *letter of credit/certificate of deposit/surety bond* in conjunction with this request. [See § J(31)].**

***ATTACHED AS EXHIBIT N* is the Concept Plan depicting the proposed Operations Site (which includes tanks, roads, power lines, and pipeline routes). [See § J(32)].**

Description of Public Utilities required during (1) drilling and (2) operations:

(1) Drilling: N/A

(2) Operations: Electric is required to support production operations for this well. Due to transmission constraints from Oncor, requesting a variance for on-site power generation until that time. See Exhibits N and V for details.

Description of water source to be used during Drilling:

The water source used during drilling can be found on Exhibit N

Description of all electric lines to production facilities (reference exhibits as necessary) [See § L(10)]:

The route for electric lines can be found on Exhibit N

Plan detailing construction, location, and closure of pits used for Drilling and Completion operations (attach exhibit if necessary) [See § J(35)]:

Reserve pits will not be used. Freshwater pits will be used. Please see Exhibit O for closure details.

V. Additional Required Exhibits

***ATTACHED AS EXHIBIT P* is the *Letter of Credit/Certificate of Deposit* in accordance with Subsection (K)(2). [See § J(18)].**

***ATTACHED AS EXHIBIT Q* are Tax certificates from Midland Central Appraisal District to be submitted indicating that all taxes on personal and real property, including minerals, owned by Applicant are current. [See § J(29)].**

***ATTACHED AS EXHIBIT R* is the required Insurance Certificate. [See § J(19) and § K(3)].**

***ATTACHED AS EXHIBIT S (if applicable)* is the Drainage Plan approved by the City Engineer relating to Applicant's proposed operations. [See § J(21)].**

***ATTACHED AS EXHIBIT T* is Applicant's Emergency Action Response Plan. [See § J(22)].**

***ATTACHED AS EXHIBIT U* is Applicant's Hazardous Materials Management Plan, a copy of which has been submitted and is on file with the Midland Fire Department. [See § J(23)].**

APPLICATION FOR OIL AND GAS PERMIT

(Pursuant to Midland City Ordinance No. 8769)

I. General Information

Date	Operator Name (must match W-1)	Operator Address
7/1/2025	Pioneer Natural Resources, USA, Inc.	777 Hidden Ridge Lane Irving, Texas 75038

Representative Name	Representative Address (within Midland City Limits)	Rep. Tele.
BJ Laechelin, Operations Manager	3617 N Big Spring St. Midland, TX 79705	713-446-1628 (Mobile) Rep. Fax
Fee: $4,000.00 Rec'd Yes___ No___	NOTE: All attachments need to bound and put in a binder before submitting.	Pages 1-4

Permit Compliance Contact (Choose 1):

Option A: Laura Wallace, Regulatory Advisor
777 Hidden Ridge Lane Irving, Texas 75038

24/7 Answering Services - No. 1 (Tele.): 432-571-2666 **No. 2 (Tele.):**

Option B:

Company Compliance Representative (Name, Address, Local Telephone) ***(ATTACH STATEMENT AS EXHIBIT A):***

Emergency Contact Representative (Name, Address, 24-Hour Tele. No.):
Pioneer Remote Operations Hub
3617 N Big Spring St. Midland, Texas 79705
432-571-2666 (Available 24/7)

Other Permitted Wells in City ***(ATTACH EXHIBIT B*** **[see § J(26)]).** Attached as Exhibit B

II. Mineral Ownership

Name(s) and Address(es) of Mineral Estate Lessors (under applicable lease):

1. Attached as Exhibit C
2.
3.

ATTACHED AS EXHIBIT C **is (a** ***Title Opinion by*** Brashier, Crosby PLLC ***, a licensed Texas Attorney/Title Commitment by Abstract Company/a Take-off from , a Certified Petroleum Landman/an opinion letter from ,*** ***a licensed Texas Attorney)*** **indicating that [Operator] has a legal right to develop the mineral estate that is the subject of this Application. [See § J(5)].**

III. Surface Ownership & Use

General Description of Current Surface Use (within 860 feet of proposed surface location):

Located in Section 6, Block 38, T1S, T&P RR Co., Abstract 671, Martin County, Texas.

Pad location is owned by Jones Bros Dirt & Paving. Other properties within 860' are: City of Midland (See Exhibit D for details.)

Currently undeveloped.

ATTACHED AS EXHIBIT D **is (a** ***Title Opinion by , a licensed Texas Attorney/a Take-off from , a Certified Petroleum Landman/Current Tax Roll from Midland Central Appraisal District),*** **which lists the name(s) and address(es) of all surface owners within 860 feet of the surface well location. [See § J(7)].**

***ATTACHED AS EXHIBIT E* is a *(map/p lat/satellite/aerial photo)* depicting all Residences, commercial structures, public buildings, all publicly dedicated Streets and alleys, Rights of Way, and permanent accessory structures surrounding the proposed Drill Site. The *(map/p lat/satellite/aerial photo)* includes two circles, as required by the Ordinance—one depicting a 500 foot radius and one depicting an 860 foot radius from the proposed well's surface location. [See § J(10)].**

***ATTACHED AS EXHIBIT F* is a copy of the notification letter(s) sent to 100 percent of the surface owners, Certified Mail, Return Receipt Requested. [See § J(36)].**

IV. Well & Operations Information

Proposed Well Name: Nail-Burley 6P 716H

Proposed Hole Size, Casing Program and Cementing Program (attach Exhibit as Necessary)[See § J(11) and § L(4)]:

A wellbore schematic with the applicable information is attached as Exhibit G

Legal Description of Proposed Well Site:

674' FNL, 1821' FEL, Section 6, Block 38, T1S, T&P RR Co., Abstract 671, Martin County, Texas

***ATTACHED AS EXHIBIT G* is the Location Site Plan [See § J(9)].**

***ATTACHED AS EXHIBIT H* is the Map with the proposed transportation route(s) and road(s) for equipment, chemicals, or refuse products used or produced in the proposed oil and gas operations. [See § J(12)].**

***ATTACHED AS EXHIBIT I* is a copy of the approved Texas Railroad Commission permit to drill (Form W-1), together with all attachments *(also file copy of W-1 with City Secretary before commencement of drilling operations).* [See § J(16) and (20)].**

***ATTACHED AS EXHIBIT J* is a copy of the required TCEQ report as to depth of usable quality ground water. [See § J(17)].**

***ATTACHED AS EXHIBIT K (if applicable)* is the list of alternative locations developed in consultation with the Oil & Gas Advisory Committee. [See § J(27)].**

***ATTACHED AS EXHIBIT L* is the Fencing and Irrigation Plan. [See § J(30)].**

***ATTACHED AS EXHIBIT M* is the Road Repair Agreement and *Letter of Credit/Certificate of Deposit/Surety Bond* in the amount of at least $25,000. *Option (if applicable): Applicant would further state that no City-owned streets or alleys will be used by the Operator in connection with its oil and gas operations and as a result, requests a waiver from the Council of this requirement. Option B (if applicable):* Because Applicant has three Road Repair Agreements in effect that have been approved by the Council, Applicant requests that the Council consolidate all agreements into one and is filing the necessary $75,000 *letter of credit/certificate of deposit/surety bond* in conjunction with this request. [See § J(31)].**

***ATTACHED AS EXHIBIT N* is the Concept Plan depicting the proposed Operations Site (which includes tanks, roads, power lines, and pipeline routes). [See § J(32)].**

Description of Public Utilities required during (1) drilling and (2) operations:

(1) Drilling: N/A

(2) Operations: Electric is required to support production operations for this well. Due to transmission constraints from Oncor, requesting a variance for on-site power generation until that time. See Exhibits N and V for details.

Description of water source to be used during Drilling:

The water source used during drilling can be found on Exhibit N

Description of all electric lines to production facilities (reference exhibits as necessary) [See § L(10)]:

The route for electric lines can be found on Exhibit N

Plan detailing construction, location, and closure of pits used for Drilling and Completion operations (attach exhibit if necessary) [See § J(35)]:

Reserve pits will not be used. Freshwater pits will be used. Please see Exhibit O for closure details.

V. Additional Required Exhibits

***ATTACHED AS EXHIBIT P* is the *Letter of Credit/Certificate of Deposit* in accordance with Subsection (K)(2). [See § J(18)].**

***ATTACHED AS EXHIBIT Q* are Tax certificates from Midland Central Appraisal District to be submitted indicating that all taxes on personal and real property, including minerals, owned by Applicant are current. [See § J(29)].**

***ATTACHED AS EXHIBIT R* is the required Insurance Certificate. [See § J(19) and § K(3)].**

***ATTACHED AS EXHIBIT S (if applicable)* is the Drainage Plan approved by the City Engineer relating to Applicant's proposed operations. [See § J(21)].**

***ATTACHED AS EXHIBIT T* is Applicant's Emergency Action Response Plan. [See § J(22)].**

***ATTACHED AS EXHIBIT U* is Applicant's Hazardous Materials Management Plan, a copy of which has been submitted and is on file with the Midland Fire Department. [See § J(23)].**

APPLICATION FOR OIL AND GAS PERMIT

(Pursuant to Midland City Ordinance No. 8769)

I. General Information

Date	Operator Name (must match W-1)	Operator Address
7/1/2025	Pioneer Natural Resources, USA, Inc.	777 Hidden Ridge Lane Irving, Texas 75038

Representative Name	Representative Address (within Midland City Limits)	Rep. Tele.
BJ Laechelin, Operations Manager	3617 N Big Spring St. Midland, TX 79705	713-446-1628 (Mobile) Rep. Fax
Fee: $4,000.00 Rec'd Yes___ No___	NOTE: All attachments need to bound and put in a binder before submitting.	Pages 1-4

Permit Compliance Contact (Choose 1):

Option A: Laura Wallace, Regulatory Advisor
777 Hidden Ridge Lane Irving, Texas 75038

24/7 Answering Services - No. 1 (Tele.): 432-571-2666 **No. 2 (Tele.):**

Option B:

Company Compliance Representative (Name, Address, Local Telephone) ***(ATTACH STATEMENT AS EXHIBIT A):***

Emergency Contact Representative (Name, Address, 24-Hour Tele. No.):
Pioneer Remote Operations Hub
3617 N Big Spring St. Midland, Texas 79705
432-571-2666 (Available 24/7)

Other Permitted Wells in City ***(ATTACH EXHIBIT B*** **[see § J(26)]).** Attached as Exhibit B

II. Mineral Ownership

Name(s) and Address(es) of Mineral Estate Lessors (under applicable lease):

1. Attached as Exhibit C
2.
3.

ATTACHED AS EXHIBIT C **is (a** ***Title Opinion by*** Brashier, Crosby PLLC ***, a licensed Texas Attorney/Title Commitment by Abstract Company/a Take-off from , a Certified Petroleum Landman/an opinion letter from ,*** ***a licensed Texas Attorney)*** **indicating that [Operator] has a legal right to develop the mineral estate that is the subject of this Application. [See § J(5)].**

III. Surface Ownership & Use

General Description of Current Surface Use (within 860 feet of proposed surface location):

Located in Section 6, Block 38, T1S, T&P RR Co., Abstract 671, Martin County, Texas.

Pad location is owned by Jones Bros Dirt & Paving. Other properties within 860' are: City of Midland (See Exhibit D for details.)

Currently undeveloped.

ATTACHED AS EXHIBIT D **is (a** ***Title Opinion by , a licensed Texas Attorney/a Take-off from , a Certified Petroleum Landman/Current Tax Roll from Midland Central Appraisal District),*** **which lists the name(s) and address(es) of all surface owners within 860 feet of the surface well location. [See § J(7)].**

***ATTACHED AS EXHIBIT E* is a *(map/p lat/satellite/aerial photo)* depicting all Residences, commercial structures, public buildings, all publicly dedicated Streets and alleys, Rights of Way, and permanent accessory structures surrounding the proposed Drill Site. The *(map/p lat/satellite/aerial photo)* includes two circles, as required by the Ordinance—one depicting a 500 foot radius and one depicting an 860 foot radius from the proposed well's surface location. [See § J(10)].**

***ATTACHED AS EXHIBIT F* is a copy of the notification letter(s) sent to 100 percent of the surface owners, Certified Mail, Return Receipt Requested. [See § J(36)].**

IV. Well & Operations Information

Proposed Well Name: Nail-Burley 6Q 717H

Proposed Hole Size, Casing Program and Cementing Program (attach Exhibit as Necessary)[See § J(11) and § L(4)]:

A wellbore schematic with the applicable information is attached as Exhibit G

Legal Description of Proposed Well Site:

674' FNL, 1801' FEL, Section 6, Block 38, T1S, T&P RR Co., Abstract 671, Martin County, Texas

***ATTACHED AS EXHIBIT G* is the Location Site Plan [See § J(9)].**

***ATTACHED AS EXHIBIT H* is the Map with the proposed transportation route(s) and road(s) for equipment, chemicals, or refuse products used or produced in the proposed oil and gas operations. [See § J(12)].**

***ATTACHED AS EXHIBIT I* is a copy of the approved Texas Railroad Commission permit to drill (Form W-1), together with all attachments *(also file copy of W-1 with City Secretary before commencement of drilling operations).* [See § J(16) and (20)].**

***ATTACHED AS EXHIBIT J* is a copy of the required TCEQ report as to depth of usable quality ground water. [See § J(17)].**

***ATTACHED AS EXHIBIT K (if applicable)* is the list of alternative locations developed in consultation with the Oil & Gas Advisory Committee. [See § J(27)].**

***ATTACHED AS EXHIBIT L* is the Fencing and Irrigation Plan. [See § J(30)].**

***ATTACHED AS EXHIBIT M* is the Road Repair Agreement and *Letter of Credit/Certificate of Deposit/Surety Bond* in the amount of at least $25,000. *Option (if applicable): Applicant would further state that no City-owned streets or alleys will be used by the Operator in connection with its oil and gas operations and as a result, requests a waiver from the Council of this requirement. Option B (if applicable):* Because Applicant has three Road Repair Agreements in effect that have been approved by the Council, Applicant requests that the Council consolidate all agreements into one and is filing the necessary $75,000 *letter of credit/certificate of deposit/surety bond* in conjunction with this request. [See § J(31)].**

***ATTACHED AS EXHIBIT N* is the Concept Plan depicting the proposed Operations Site (which includes tanks, roads, power lines, and pipeline routes). [See § J(32)].**

Description of Public Utilities required during (1) drilling and (2) operations:

(1) Drilling: N/A

(2) Operations: Electric is required to support production operations for this well. Due to transmission constraints from Oncor, requesting a variance for on-site power generation until that time. See Exhibits N and V for details.

Description of water source to be used during Drilling:

The water source used during drilling can be found on Exhibit N

Description of all electric lines to production facilities (reference exhibits as necessary) [See § L(10)]:

The route for electric lines can be found on Exhibit N

Plan detailing construction, location, and closure of pits used for Drilling and Completion operations (attach exhibit if necessary) [See § J(35)]:

Reserve pits will not be used. Freshwater pits will be used. Please see Exhibit O for closure details.

V. Additional Required Exhibits

***ATTACHED AS EXHIBIT P* is the *Letter of Credit/Certificate of Deposit* in accordance with Subsection (K)(2). [See § J(18)].**

***ATTACHED AS EXHIBIT Q* are Tax certificates from Midland Central Appraisal District to be submitted indicating that all taxes on personal and real property, including minerals, owned by Applicant are current. [See § J(29)].**

***ATTACHED AS EXHIBIT R* is the required Insurance Certificate. [See § J(19) and § K(3)].**

***ATTACHED AS EXHIBIT S (if applicable)* is the Drainage Plan approved by the City Engineer relating to Applicant's proposed operations. [See § J(21)].**

***ATTACHED AS EXHIBIT T* is Applicant's Emergency Action Response Plan. [See § J(22)].**

***ATTACHED AS EXHIBIT U* is Applicant's Hazardous Materials Management Plan, a copy of which has been submitted and is on file with the Midland Fire Department. [See § J(23)].**

City Council Meeting

Item Number: 18

Meeting Date: September 9, 2025

To: City Council / City Manager

From: Alexis M. Martinez, Associate Planner

Subject: **AN ORDINANCE AMENDING THE CONDITIONS AND RESTRICTIONS OF ORDINANCE NO. 10619, WHICH GRANTED A SPECIFIC USE DESIGNATION WITH TERM FOR THE EAST 50 FEET OF LOTS 10 THROUGH 12, BLOCK 61, ORIGINAL TOWN ADDITION, CITY AND COUNTY OF MIDLAND, TEXAS (GENERALLY LOCATED ON THE SOUTH SIDE OF WEST WALL STREET, APPROXIMATELY 110 FEET EAST OF SOUTH CARRIZO STREET), WHICH IS PRESENTLY ZONED CB, CENTRAL BUSINESS DISTRICT, ALLOWING SAID PROPERTY TO BE USED FOR THE SALE OF ALL ALCOHOLIC BEVERAGES IN A LOUNGE FOR ON-PREMISES CONSUMPTION; REQUIRING THE OPERATOR OF THE LOUNGE TO PROVIDE A MINIMUM OF TWO SECURITY GUARDS WHO ARE LEVEL II CERTIFIED ON THE PREMISES ON TUESDAY THROUGH SATURDAY FROM 9:00 P.M. TO 2:30 A.M. OF THE FOLLOWING DAY; CONTAINING A CUMULATIVE CLAUSE; CONTAINING A SAVINGS AND SEVERABILITY CLAUSE; AND PROVIDING FOR A MAXIMUM PENALTY OR FINE OF TWO THOUSAND DOLLARS ($2,000.00); AND ORDERING PUBLICATION (DISTRICT 3) (DEVELOPMENT SERVICES) (QUALITY OF LIFE AND PLACE)**

Purpose:

This is to consider an ordinance amending Ordinance 10619 which granted an Specific Use Designation With Term for the sale of all alcoholic beverages for on-premises consumption in a lounge known as Hot Shots, located at 615 West Wall Street.

Recommended City Council Action:

Approve

Fiscal Impact:

This proposal does not have a significant financial impact to the City.

Strategic Priority:

Quality of Life & Place

Analysis:

The property is zoned CB, Central Business District. CB zoning allows Alcoholic Beverages Sales for On-Premises Consumption in a lounge with the approval of an SUD. The total area of the Lounge, Hot Shots, is 4,200 square feet and the proposed alcohol serviceable area is 4,000 square feet.

The proposed hours of operation:

Tuesday through Saturday from 6 p.m. to 1:45 a.m.

The proposed hours of alcohol service:

Tuesday through Saturday from 6 p.m. to 1:45 a.m.

Per Midland City Code, Section 5-4-4, Prohibited Places of Business:

The sale of any alcoholic beverage is hereby prohibited by any person, where the place of business of any such dealer is within 300 feet of any church, public-school, public-school ground, athletic stadium used by any public school or public hospital, the measurements to be along the property lines of the street fronts and from front door to front door and in a direct line across intersections where they occur.

There are no churches, private schools, public schools, public school grounds, athletic stadium, public hospital within 300 feet measurement along the property lines of the street fronts, and from the front door in a direct line across intersection where they occur within this site.

The request is in compliance with the Tall City Tomorrow Comprehensive Plan, Chapter 6-Character Plan Goal 4, which is to “Encourage the development of places where Midland residents can gather and socialize to build connections.” Hot Shots, is a destination where Midland residents will gather and socialize.

Hot Shots submitted an application for a Specific Use Designation (SUD) on March 11, 2025, following notification of non-compliance with the Midland City Code. The establishment has been in operation since 2005 but has not previously held a specific use designation authorizing the sale of alcohol. The application proceeded through the required meetings and received a recommendation for approval from the Planning and Zoning Commission. The request was then forwarded to City Council, which approved the SUD but imposed conditions not typically associated with standard SUD cases. These conditions can be seen in Ordinance No. 10619 which is attached.

On April 7, 2025, the Planning and Zoning Commission formally recommended approval of the SUD. Subsequently, City Council held a public hearing on April 22, 2025, where the request was approved with the following conditions: (1) the operator must provide two certified peace officers as security personnel on Fridays and Saturdays between 9:00 p.m. and 1:45 a.m., and (2) the SUD would be subject to review by City Council within 60 days, and again in seven months. A second reading of the item was held on June 10, 2025, during which Council amended the conditions to require two Level II certified security guards in place of peace officers and scheduled the matter for review in both 60 days and seven months.

During the 60-day review, which took place at the August 12, 2025 City Council meeting, staff presented data showing a summary of the incidents report from 2024 to present as well as a monthly average of the incidents during said time frame which can be seen in Figure 1 below. The most up to date table which includes the incidents for August so far can be seen in Figure 2.

Figure 1

	2024	2025 (through July)	Total
Double Bar	34	40	74
Hot Shots	41	36	77
The Bar	53	14	67
Total	**128**	**90**	**218**

Hot Shots incident summary:

- 11 incidents reported between May and July; or **3.7 average monthly incidents**.
- Prior to security, monthly incidents averaged 4.5 between August and April (excluding March).
- Monthly average of 3.7 incidents between May and July is slightly higher than the 3.3 monthly average during the same months last year.

Figure 2

	2024	2025 (Through August)	Total
Double Bar	34	40	74
Hot Shots	41	37	78
The Bar	53	18	71
Total	**128**	**95**	**223**

Based on the above data staff recommended that Condition D of Ordinance No. 10619 read as follows:

“The operator of the Establishment shall provide a minimum of two security guards who are Level II certified, as required by the State of Texas for a security officer commission or a license as a noncommissioned security officer, on the premises of the establishment during hours of

operation from Tuesday through Saturday, between 9:00 p.m. and 2:30 a.m. of the following day."

Based on staff's report and recommendation, City Council directed staff to begin the process of amending the ordinance as described above. The process for making the above amendment required that the proposed amendment be considered by the Planning & Zonin Commission by holding a public hearing and providing a recommendation to City Council. It must then be considered by Council in two readings with one being a public hearing.

Staff recommends approval of this proposed amendment.

Letters of Objection:

As of August 28, 2025, Staff has received one letter of objection.

City Manager's Office

ORDINANCE NO. 10619

AN ORDINANCE AMENDING THE ZONING DISTRICT MAP OF THE CITY OF MIDLAND TO GRANT A SPECIFIC USE DESIGNATION WITH TERM FOR THE EAST 50 FEET OF LOTS 10 THROUGH 12, BLOCK 61, ORIGINAL TOWN ADDITION, CITY AND COUNTY OF MIDLAND, TEXAS (GENERALLY LOCATED ON THE SOUTH SIDE OF WEST WALL STREET, APPROXIMATELY 110 FEET EAST OF SOUTH CARRIZO STREET), WHICH IS PRESENTLY ZONED CB, CENTRAL BUSINESS DISTRICT, ALLOWING SAID PROPERTY TO BE USED FOR THE SALE OF ALL ALCOHOLIC BEVERAGES IN A LOUNGE FOR ON-PREMISES CONSUMPTION; MAKING SAID DESIGNATION SUBJECT TO CERTAIN CONDITIONS AND RESTRICTIONS CONTAINED HEREIN; CONTAINING A CUMULATIVE CLAUSE; CONTAINING A SAVINGS AND SEVERABILITY CLAUSE; PROVIDING FOR A MAXIMUM PENALTY OR FINE OF TWO THOUSAND DOLLARS ($2,000.00); AND ORDERING PUBLICATION

WHEREAS, the City Planning and Zoning Commission and the Governing Body of the City of Midland, Texas, in compliance with the City Charter, the City Code, and State law, have given the requisite notices by United States mail, publication and otherwise; and after holding due hearings affording a full and fair hearing to all of the property owners generally, and particularly to those interested persons situated in the affected area and in the vicinity thereof, the Governing Body of the City of Midland finds that the public convenience will be best served by granting a Specific Use Designation With Term for the east 50 feet of Lots 10 through 12, Block 61, Original Town Addition, City and County of Midland, Texas (the "Property"), as set out hereinafter;

NOW, THEREFORE, BE IT ORDAINED BY THE CITY COUNCIL OF THE CITY OF MIDLAND, TEXAS:

SECTION ONE. That the Zoning District Map of the City of Midland, Texas, is hereby amended to grant the Property a Specific Use Designation With Term for the sale of all alcoholic beverages in a lounge (the "Establishment") for on-premises consumption, together with the uses permitted in the present CB, Central Business District.

SECTION TWO. That the Property shall be subject to the following conditions and restrictions:

A. That the serviceable area of the Establishment shall be limited to approximately 4,000 square feet as shown in Exhibit A, which is attached hereto and incorporated herein for all purposes.

B. That the sale and on-premises consumption of alcoholic beverages shall conform to all applicable state and local laws.

C. That the days and hours of alcoholic beverage sales and consumption shall be limited to Tuesday through Saturday from 6:00 p.m. to 1:45 a.m. of the following day.

D. That the operator of the Establishment shall provide a minimum of two security guards who are Level II certified, as required by the State of Texas for a security officer commission or for a license as a noncommissioned security officer, on the premises of the Establishment during hours of operation on Friday and Saturday that occur between 9:00 p.m. and 1:45 a.m. of the following day.

E. That the occupancy of the Establishment shall not exceed the maximum occupancy determined by the Building Code and Fire Code.

F. That the Establishment shall meet the requirements of the Fire Department and the Code Administration Division.

G. That the operator of the Establishment shall obtain a Certificate of Occupancy prior to the commencement of the sale of alcoholic beverages for on-premises consumption to ensure that the conditions of this Specific Use Designation With Term are satisfied.

H. That in accordance with Section 11-1-9.07.E.3 of the City Code, the Establishment shall be in operation within 120 days from the final adoption date of this ordinance.

I. That the Specific Use Designation With Term granted herein will be reviewed by the City Council within 60 days. In conducting the review, the City Council may consider factors including, but not limited to, (1) whether the conditions and restrictions of this Specific Use Designation With Term have been satisfied and (2) the volume and types of incidents reported to have occurred on the premises of the Establishment. Based upon such review, the City Council may direct staff to begin the process to amend the conditions and restrictions of the Specific Use Designation With Term or to repeal this ordinance.

J. That in addition to the review specified in Subsection I, the Specific Use Designation With Term granted herein will be reviewed by the City Council within seven months. In conducting the review, the City Council may consider factors including, but not limited to, (1) whether the conditions and restrictions of this Specific Use Designation With Term have been satisfied and (2) the volume and types of incidents reported to have occurred on the premises of the Establishment. Based upon such review, the City Council may direct staff to begin the process to amend the conditions and restrictions of the Specific Use Designation With Term or to repeal this ordinance.

SECTION THREE. The provisions of this ordinance are to be cumulative of all other ordinances or parts of ordinances governing or regulating the same subject matter as that covered herein; provided, however, that all prior ordinances or parts of ordinances,

inconsistent with or in conflict with any of the provisions of this ordinance are hereby expressly repealed to the extent of any such inconsistency or conflict.

SECTION FOUR. If any section, subsection, sentence, clause or phrase of this ordinance is, for any reason, held to be unconstitutional or invalid, such holding shall not affect the validity of the remaining portions of this ordinance. The Council of the City of Midland hereby declares that it would have passed this ordinance and each section, subsection, sentence, clause, or phrase hereof irrespective of the fact that any one or more sections, subsections, sentences, clauses, or phrases be declared unconstitutional or invalid.

SECTION FIVE. The penalty for violation of this ordinance shall be in accordance with the general penalty provisions contained in Section 1-3-1 of the City Code of Midland, Texas, which provides for a fine not exceeding two thousand dollars ($2,000.00).

SECTION SIX. The City Secretary is hereby authorized and directed to publish the descriptive caption of this ordinance in the manner and for the length of time prescribed by the law as an alternative method of publication.

The above and foregoing ordinance was duly proposed, read in full and adopted on first reading, the 22nd day of April, A.D., 2025; and passed to second reading on motion of Council member Norman, seconded by Council member Ladd, by the following vote:

Council members voting "AYE": Burkholder, Stretcher Burkes, Poole, Blong, Stubbs, Ladd, Norman

Council members voting "NAY": None

The above and foregoing ordinance was read in full and finally adopted by the following vote upon motion of Council member Norman, seconded by Council member Stubbs, on the 10th day of June, A.D., 2025, at a regular meeting of the City Council:

Council members voting "AYE": Burkholder, Stretcher Burkes, Blong, Stubbs, Ladd, Norman

Council members voting "ABSTAIN": Poole

Council members voting "NAY": None

PASSED AND APPROVED THIS 10th day of June, A.D., 2025.

Lori Merritt Blong, Mayor

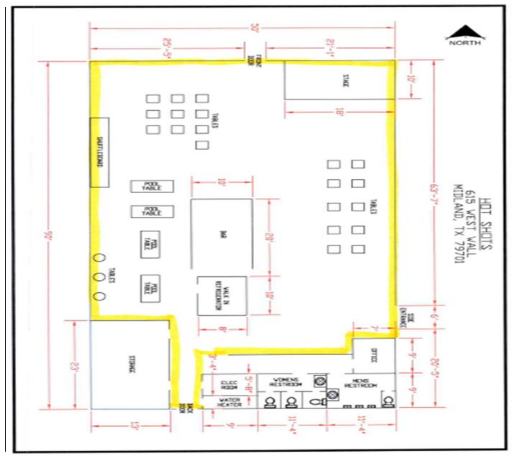
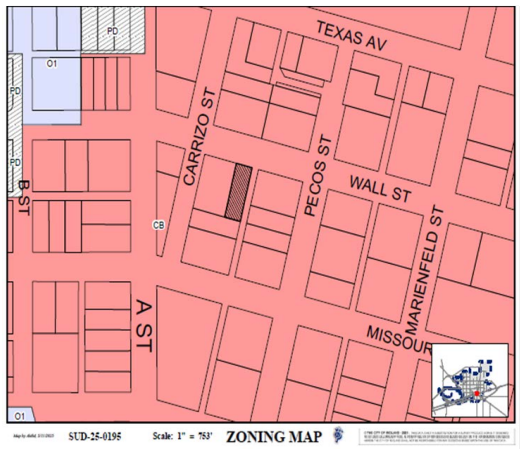
APPLICATION SUMMARY



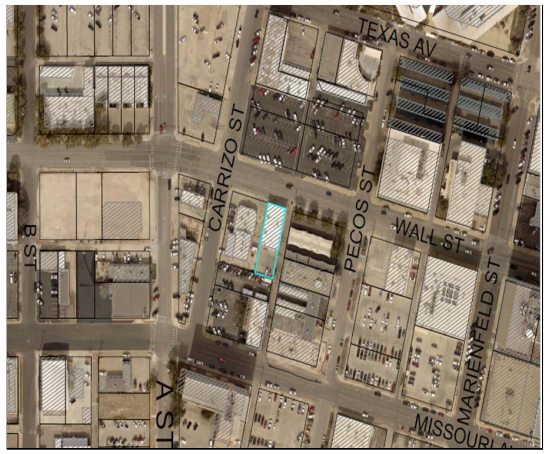
- **Property owner & applicant:** David Chin
- **Location**: 615 West Wall Street (Council District 3)
- **Type of Business:** Lounge/Bar
- SUD allowing for on-site sale and consumption of alcohol **approved June 10, 2025, with conditions**

MIDLAND
Be the Energy!



DETAILS OF SUD

- For existing lounge
- **Area of Business:** 4,200 SF
- **Serviceable Area:** 4,000 SF
- **Hours of Operation and Alcohol Sales:** Tuesday through Saturday from 6 p.m. to 1:45 a.m.

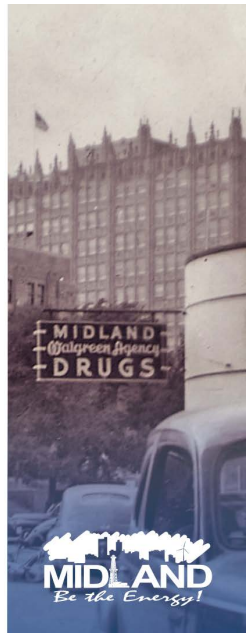


ZONING

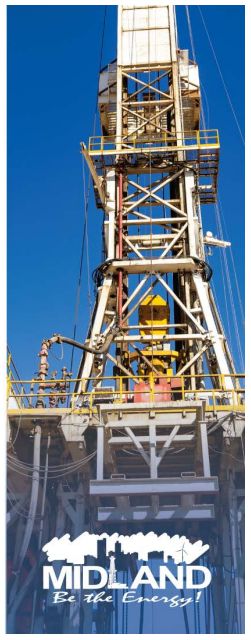
- **Current Zoning:** CB, Central Business
- **Surrounding Zoning:**
  - **North/South/East/West:** CB, Central Business District
- The use of an SUD for the sale and on-premises consumption is allowed in this zoning.

LAND USE

- **Current Use:** Lounge
- **Surrounding Uses:**
  - **North:** Commercial Building
  - **South:** The Bar
  - **East:** BTA Oil Building
  - **West:** Double Bar Saloon



On West Wall Street, Looking South



COMPREHENSIVE PLAN

This request is compatible with the *Tall City Tomorrow Comprehensive Plan* as it is consistent *Chapter 6-Character Plan, Goal 4*, which is to "Encourage the development of places where Midland residents can gather and socialize to build connections."

PROHIBITED PLACES OF BUSINESS

There is no church, public school, public school ground, athletic stadium used by any public school, or public hospital within 300 feet of the building of the subject property as required by *Section 5-4-4 Prohibited Places of Business.*

10

BALANCING IMPACT & COMPATIBILITY THROUGH SUDS (11-1-9.07)

- An SUD allows **case-by-case** review of certain land uses that may have greater impacts than typical uses in a zoning district
- It ensures these uses are only approved where appropriate, based on location and context
- **Council can require conditions** (e.g., screening, hours of operation) to reduce impacts on surrounding properties

MIDLAND
Be the Energy!

KEY CONSIDERATIONS FOR SUDS

- To protect public safety and surrounding properties, City council may evaluate:
  - Pedestrian and traffic safety
  - Access and circulation
  - Drainage and fire protection
  - Adequate parking and loading
  - Noise, lighting and visual impacts
  - Building height and compatibility with surroundings
- Council may also set conditions- such as time limits or screening- to reduce impacts on nearby properties and safeguard the public.

APPROVAL AND CONDITIONS

- The Planning & Zoning Commission recommended approval of this request on April 7, 2025.
- **City Council approved this SUD with term on June 10, 2025, with the below conditions:**

A. That the serviceable area of the Establishment shall be **limited to approximately 4,000 square feet** as shown in Exhibits A, which are attached hereto and incorporated herein for all purposes.

14

APPROVAL AND CONDITIONS

B. That the sale and on-premises consumption of alcoholic beverages shall **conform to all applicable state and local laws**.

C. That the days and hours of alcoholic beverage sales and consumption shall be limited to the following:

Tuesday through Saturday from 6 p.m. to 1:45 a.m. of the following day.

APPROVAL AND CONDITIONS

D. That the operator of the Establishment shall **provide a minimum of two certified security guards** on the premises of the establishment during hours of operation on **Tuesday through Saturday that occur between 9 p.m. and 2:30 a.m. of the following day**.

E. That the **occupancy of the Establishment shall not exceed the maximum occupancy** determined by the Building Code and Fire Code.

16

APPROVAL AND CONDITIONS

F. That the Establishment shall **meet the requirements of the Fire Department and the Code Administration Division**.

G. That the operator of the Establishment **shall obtain a Certificate of Occupancy prior to the commencement of the sale of alcoholic beverages** for on-premises consumption to ensure that the conditions of this Specific Use Designation With Term are satisfied.

17

APPROVAL AND CONDITIONS

H. That in accordance with Section 11-1-9.07.E.3 of the City Code, the **Establishment shall be in operation within 120 days from the final adoption date of this ordinance**.

18

APPROVAL AND CONDITIONS

I. That in addition to the review specified in subsection I, the Specific Use Designation With Term granted herein **will be reviewed by the City Council within seven months**. The City Council may consider factors including, but not limited to, (1) whether the conditions and restrictions of this Specific Use Designation With Term have been satisfied and (2) the volume and types of incidents reported to have occurred on the premises of the establishment. Based upon such review, the City Council may direct staff to begin the process to amend the conditions and restrictions of the Specific Use Designation With Term or to repeal this ordinance.

ORDINANCE NO. _____

AN ORDINANCE AMENDING THE CONDITIONS AND RESTRICTIONS OF ORDINANCE NO. 10619, WHICH GRANTED A SPECIFIC USE DESIGNATION WITH TERM FOR THE EAST 50 FEET OF LOTS 10 THROUGH 12, BLOCK 61, ORIGINAL TOWN ADDITION, CITY AND COUNTY OF MIDLAND, TEXAS (GENERALLY LOCATED ON THE SOUTH SIDE OF WEST WALL STREET, APPROXIMATELY 110 FEET EAST OF SOUTH CARRIZO STREET), WHICH IS PRESENTLY ZONED CB, CENTRAL BUSINESS DISTRICT, ALLOWING SAID PROPERTY TO BE USED FOR THE SALE OF ALL ALCOHOLIC BEVERAGES IN A LOUNGE FOR ON-PREMISES CONSUMPTION; REQUIRING THE OPERATOR OF THE LOUNGE TO PROVIDE A MINIMUM OF TWO SECURITY GUARDS WHO ARE LEVEL II CERTIFIED ON THE PREMISES ON TUESDAY THROUGH SATURDAY FROM 9:00 P.M. TO 2:30 A.M. OF THE FOLLOWING DAY; CONTAINING A CUMULATIVE CLAUSE; CONTAINING A SAVINGS AND SEVERABILITY CLAUSE; AND PROVIDING FOR A MAXIMUM PENALTY OR FINE OF TWO THOUSAND DOLLARS ($2,000.00); AND ORDERING PUBLICATION

WHEREAS, the City Planning and Zoning Commission and the Governing Body of the City of Midland, Texas, in compliance with the City Charter, the City Code, and State law, have given the requisite notices by United States mail, publication and otherwise; and after holding due hearings affording a full and fair hearing to all of the property owners generally, and particularly to those interested persons situated in the affected area and in the vicinity thereof, the Governing Body of the City of Midland finds that the public convenience will be best served by amending the conditions and restrictions of Ordinance No. 10619, which granted a Specific Use Designation With Term for the east 50 feet of Lots 10 through 12, Block 61, Original Town Addition, City and County of Midland, Texas (the "Property"), as set out hereinafter;

NOW, THEREFORE, BE IT ORDAINED BY THE CITY COUNCIL OF THE CITY OF MIDLAND, TEXAS:

SECTION ONE. That Section Two D of Ordinance No. 10619, which granted the Property a Specific Use Designation With Term for the sale of all alcoholic beverages in a lounge (the "Establishment") for on-premises consumption, together with the uses

permitted in the present CB, Central Business District, is hereby amended to read in its entirety as follows:

D. That the operator of the Establishment shall provide a minimum of two security guards who are Level II certified, as required by the State of Texas for a security officer commission or for a license as a noncommissioned security officer, on the premises of the Establishment on Tuesday through Saturday from 9:00 p.m. to 2:30 a.m. of the following day.

SECTION TWO. That Ordinance No. 10619, as amended by Section One hereof, shall remain in full force and effect.

SECTION THREE. The provisions of this ordinance are to be cumulative of all other ordinances or parts of ordinances governing or regulating the same subject matter as that covered herein; provided, however, that all prior ordinances or parts of ordinances, inconsistent with or in conflict with any of the provisions of this ordinance are hereby expressly repealed to the extent of any such inconsistency or conflict.

SECTION FOUR. If any section, subsection, sentence, clause or phrase of this ordinance is, for any reason, held to be unconstitutional or invalid, such holding shall not affect the validity of the remaining portions of this ordinance. The Council of the City of Midland hereby declares that it would have passed this ordinance and each section, subsection, sentence, clause, or phrase hereof irrespective of the fact that any one or more sections, subsections, sentences, clauses, or phrases be declared unconstitutional or invalid.

SECTION FIVE. The penalty for violation of this ordinance shall be in accordance with the general penalty provisions contained in Section 1-3-1 of the City Code of Midland, Texas, which provides for a fine not exceeding two thousand dollars ($2,000.00).

SECTION SIX. The City Secretary is hereby authorized and directed to publish the descriptive caption of this ordinance in the manner and for the length of time prescribed by the law as an alternative method of publication.

The above and foregoing ordinance was duly proposed, read in full and adopted on first reading, the _____ day of _____, A.D., 2025; and passed to second reading on motion of Council member _____, seconded by Council member _____, by the following vote:

Council members voting “AYE”:

City Council Meeting

Item Number: 19

Meeting Date: September 9, 2025

To: City Council / City Manager

From: Alexis M. Martinez, Associate Planner

Subject: **AN ORDINANCE AMENDING THE ZONING DISTRICT MAP OF THE CITY OF MIDLAND TO GRANT A SPECIFIC USE DESIGNATION WITH TERM FOR LOT 3, BLOCK 45, FAIRMONT PARK ADDITION, SECTION 13, CITY AND COUNTY OF MIDLAND, TEXAS (GENERALLY LOCATED ON THE EAST SIDE OF WEST LOOP 250 NORTH, APPROXIMATELY 450 FEET SOUTH OF HENRY KOONTZ BOULEVARD), WHICH IS PRESENTLY ZONED RR, REGIONAL RETAIL DISTRICT, ALLOWING SAID PROPERTY TO BE USED FOR THE SALE OF ALL ALCOHOLIC BEVERAGES IN A MOVIE THEATER FOR ON-PREMISES CONSUMPTION; MAKING SAID DESIGNATION SUBJECT TO CERTAIN CONDITIONS AND RESTRICTIONS CONTAINED HEREIN; CONTAINING A CUMULATIVE CLAUSE; CONTAINING A SAVINGS AND SEVERABILITY CLAUSE; PROVIDING FOR A MAXIMUM PENALTY OR FINE OF TWO THOUSAND DOLLARS ($2,000.00); AND ORDERING PUBLICATION (DISTRICT 3) (DEVELOPMENT SERVICES) (QUALITY OF LIFE AND PLACE)**

Purpose:

Cinergy 108, LLC is requesting a Specific Use Designation with term, for the sale of all alcoholic beverages for on-premises consumption, on a property located at 4915 West Loop 250 North for Cinergy Entertainment.

Recommended City Council Action:

Approve

Fiscal Impact:

This proposal does not have a significant financial impact to the City.

Strategic Priority:

(Quality of Life & Place)

Current Zoning:

RR, Regional Retail District

Surrounding Zoning and Land Use:

The properties to the north are zoned PD, Planned Development District for a Shopping Center, TH, Townhouse Dwelling District, with uses that include a car dealership and townhomes. The zoning to the east and west is PD, Planned Development District for a Shopping Center with a restaurant and a hotel as current uses. Zoning to the south includes PD, Planned Development District for a Shopping Center and SF-2, Single-Family Dwelling District, with storage units and single-family residential dwellings for current uses.

Analysis:

The subject property is located at 4915 West Loop 250 North is zoned RR, Regional Retail District, which permits the sale of all alcoholic beverages for on-premises consumption. The total area of the movie theatre is 96,397 square feet and the proposed alcohol serviceable Area is 50,567 square feet. The new business Cinergy Entertainment is attempting to obtain their TABC license but must first obtain their SUD.

The proposed days and hours of operation are:

Sunday through Thursday from 10 a.m. to 11 p.m.
Friday through Saturday from 10 a.m. to 12 a.m. (midnight)

The applicant is requesting the following alcohol serviceable hours.

Sunday through Thursday from 10 a.m. to 11 p.m.
Friday through Saturday from 10 a.m. to 12 a.m. (midnight)

Per Midland City Code, Section 5-4-4, Prohibited Places of Business:

The sale of any alcoholic beverage is hereby prohibited by any person, where the place of business of any such dealer is within 300 feet of any church, public-school, public-school ground, athletic stadium used by any public school or public hospital, the measurements to be along the property lines of the street fronts and from front door to front door and in a direct line across intersections where they occur.

There are no schools or churches within 300 feet of the property using the front door to door distance measurement.

This request has been circulated to and reviewed by respective City departments for internal review and their comments, conditions, and requirements are as follows:

Fire: (Approved)

No comments or objections.

Engineering: (Approved)

No objection. [For Applicant's Information Only.]

Transportation: (Approved)

No objection. [For Applicant's Information Only.]

Building Code: (Approved)

The SUD for Cinergy Entertainment is acceptable. The property must adhere to the maximum occupant load of 3,370 persons for the alcohol serviceable area. Occupancy loads must be posted in accordance with section 1004.3 of the 2015 International Fire Code.

Planning: (Approved with Conditions)

This request meets all requirements; therefore, staff recommends approval of the request of the Specific Use Designation with Term for the sale of all alcoholic beverages, for on-premises consumption, in a Movie Theatre, subject to Condition A through G.

Conditions:

A. That the serviceable area of the establishment shall be limited to approximately 50,567 square feet as shown in Exhibit "A", which is attached hereto and incorporated herein for all purposes.

B. That the sale and on-premises consumption of alcoholic beverages shall conform to applicable state and local laws.

C. That the days and hours of alcoholic beverages sales and consumption shall be limited to Sunday through Thursday from 10 a.m. to 11 p.m.
Friday through Saturday from 10 a.m. to 12 a.m. (midnight)

D. That the occupancy of the Establishment shall not exceed the maximum occupancy determined by the Building Code and Fire Code.

E. That the establishment shall meet all requirements of the Fire Department and Code Administration

F. That the operator of the establishment shall obtain a Certificate of Occupancy prior to commencement of the sale of alcohol beverages for on premises consumption to ensure that the conditions of this Specific Use Designation with Term are satisfied.

G. That in accordance with section 9.07.E.3 of the Zoning Ordinance, the establishment shall be in operation within 120 days from the final adoption date of this ordinance.

Letters of Objection:

As of August 28, 2025 staff has not received any letters of objection.

ORDINANCE NO. _____

AN ORDINANCE AMENDING THE ZONING DISTRICT MAP OF THE CITY OF MIDLAND TO GRANT A SPECIFIC USE DESIGNATION WITH TERM FOR LOT 3, BLOCK 45, FAIRMONT PARK ADDITION, SECTION 13, CITY AND COUNTY OF MIDLAND, TEXAS (GENERALLY LOCATED ON THE EAST SIDE OF WEST LOOP 250 NORTH, APPROXIMATELY 450 FEET SOUTH OF HENRY KOONTZ BOULEVARD), WHICH IS PRESENTLY ZONED RR, REGIONAL RETAIL DISTRICT, ALLOWING SAID PROPERTY TO BE USED FOR THE SALE OF ALL ALCOHOLIC BEVERAGES IN A MOVIE THEATER FOR ON-PREMISES CONSUMPTION; MAKING SAID DESIGNATION SUBJECT TO CERTAIN CONDITIONS AND RESTRICTIONS CONTAINED HEREIN; CONTAINING A CUMULATIVE CLAUSE; CONTAINING A SAVINGS AND SEVERABILITY CLAUSE; PROVIDING FOR A MAXIMUM PENALTY OR FINE OF TWO THOUSAND DOLLARS ($2,000.00); AND ORDERING PUBLICATION

WHEREAS, the City Planning and Zoning Commission and the Governing Body of the City of Midland, Texas, in compliance with the City Charter, the City Code, and State law, have given the requisite notices by United States mail, publication and otherwise; and after holding due hearings affording a full and fair hearing to all of the property owners generally, and particularly to those interested persons situated in the affected area and in the vicinity thereof, the Governing Body of the City of Midland finds that the public convenience will be best served by granting a Specific Use Designation With Term for Lot 3, Block 45, Fairmont Park Addition, Section 13, City and County of Midland, Texas (the "Property"), as set out hereinafter;

NOW, THEREFORE, BE IT ORDAINED BY THE CITY COUNCIL OF THE CITY OF MIDLAND, TEXAS:

SECTION ONE. That the Zoning District Map of the City of Midland, Texas, is hereby amended to grant the Property a Specific Use Designation With Term for the sale of all alcoholic beverages in a movie theater (the "Establishment") for on-premises consumption, together with the uses permitted in the present RR, Regional Retail District.

SECTION TWO. That the Property shall be subject to the following conditions and restrictions:

A. That the serviceable area of the Establishment shall be limited to approximately 50,567 square feet as shown in Exhibit A, which is attached hereto and incorporated herein for all purposes.

B. That the sale and on-premises consumption of alcoholic beverages shall conform to all applicable state and local laws.

C. That the days and hours of alcoholic beverage sales and consumption shall be limited to the following:

Sunday through Thursday from 10:00 a.m. to 11:00 p.m.; and
Friday and Saturday from 10:00 a.m. to 12:00 a.m. (midnight).

D. That the occupancy of the Establishment shall not exceed the maximum occupancy determined by the Building Code and Fire Code.

E. That the Establishment shall meet the requirements of the Fire Department and the Code Administration Division.

F. That the operator of the Establishment shall obtain a Certificate of Occupancy prior to the commencement of the sale of alcoholic beverages for on-premises consumption to ensure that the conditions of this Specific Use Designation With Term are satisfied.

G. That in accordance with Section 11-1-9.07.E.3 of the City Code, the Establishment shall be in operation within 120 days from the final adoption date of this ordinance.

SECTION THREE. The provisions of this ordinance are to be cumulative of all other ordinances or parts of ordinances governing or regulating the same subject matter as that covered herein; provided, however, that all prior ordinances or parts of ordinances, inconsistent with or in conflict with any of the provisions of this ordinance are hereby expressly repealed to the extent of any such inconsistency or conflict.

SECTION FOUR. If any section, subsection, sentence, clause or phrase of this ordinance is, for any reason, held to be unconstitutional or invalid, such holding shall not affect the validity of the remaining portions of this ordinance. The Council of the City of Midland hereby declares that it would have passed this ordinance and each section, subsection, sentence, clause, or phrase hereof irrespective of the fact that any one or more sections, subsections, sentences, clauses, or phrases be declared unconstitutional or invalid.

SECTION FIVE. The penalty for violation of this ordinance shall be in accordance with the general penalty provisions contained in Section 1-3-1 of the City Code of Midland, Texas, which provides for a fine not exceeding two thousand dollars ($2,000.00).

SECTION SIX. The City Secretary is hereby authorized and directed to publish the descriptive caption of this ordinance in the manner and for the length of time prescribed by the law as an alternative method of publication.

The above and foregoing ordinance was duly proposed, read in full and adopted on first reading, the _____ day of _____, A.D., 2025; and passed to second reading on motion of Council member _____, seconded by Council member _____, by the following vote:

Council members voting "AYE":

City Council Meeting

Item Number: 20

Meeting Date: September 9, 2025

To: City Council / City Manager

From: Angelina Bettanini, Planner

Subject: AN ORDINANCE AMENDING THE ZONING DISTRICT MAP OF THE CITY OF MIDLAND TO REZONE LOT 8A, BLOCK 28, GREENWOOD ADDITION, SECTION 12, CITY AND COUNTY OF MIDLAND, TEXAS, FROM MF-22, MULTIPLE-FAMILY DWELLING DISTRICT TO SF-3, SINGLE-FAMILY DWELLING DISTRICT (GENERALLY LOCATED ON THE EAST SIDE OF SOUTH WEBSTER STREET, APPROXIMATELY 70 FEET SOUTH OF EAST NEW YORK AVENUE); CONTAINING A CUMULATIVE CLAUSE; CONTAINING A SAVINGS AND SEVERABILITY CLAUSE; PROVIDING FOR A MAXIMUM PENALTY OR FINE OF TWO THOUSAND DOLLARS ($2,000.00); AND ORDERING PUBLICATION (DISTRICT 2) (DEVELOPMENT SERVICES) (QUALITY OF LIFE AND PLACE)

Purpose:

Jorge Chavez is requesting a Zone Change from MF-22, Multiple-Family Dwelling District to SF-3, Single-Family Dwelling District for the construction of single-family housing on a property located at 603 South Webster Street.

Recommended City Council Action:

Approve

Fiscal Impact:

The request has no significant impact on the City’s budget.

Strategic Priority:

Quality of Life and Place

Discussion:

Current Zoning:

MF-22. Multiple-Family Dwelling District

Surrounding Zoning and Land Use:

The properties to the north, south, and west are all zoned MF-22, Multiple-Family Dwelling District, and consists of single-family housing. The properties to the east are zoned SF-3, Single-Family Dwelling District, and C, Commercial District, and consists of single-family housing and vacant lots.

Analysis:

The applicant is seeking this zone change in order to construct single-family housing, which is not allowed in the MF-22, Multiple-Family Dwelling District. This vacant lot is located in a residential neighborhood that is developed with single-family homes. Changing this zoning would help the future residential development of this area. This lot does meet the requirements for the SF-3, Single-Family Dwelling District. The property owner also has a plat in-process right now that will subdivide the property into two lots, both being 50 feet wide and approximately 140 feet deep which also meets the requirements of SF-3.

This request is consistent with the Tall City Tomorrow Comprehensive Plan, which designated this area as Urban Residential-Medium (UR-M). This designation calls for any single-family zoning district.

This proposed zone change has been circulated to the respective City departments for internal review and their comments, conditions, and requirements are as follows:

Fire: (Approved)

No comments or objections.

Oil and Gas: (Approved)

No Oil & Gas issues with Zoning.

Engineering: (Approved)

No objection to zone change. [For Applicant’s Information Only.]

Site drainage, utilities, driveway access, and traffic circulation may be adjusted during construction drawing review as necessary to receive building permit approval from Engineering and Traffic Operations. [For Applicant’s Information Only.]

Code: (Approved)

No issues. All future structures must adhere to the 2018 International Building Codes, the 2015 International Energy Code, the 2023 NEC requirements, the 2015 International Fire Codes, local city ordinances, zoning requirements, established setbacks, oil and gas considerations, and floodplain requirements if necessary. Code versions are subject to change depending on the time of new code editions adopted in the City of Midland and date of permit application.

Transportation: (Approved)

Site drainage, utilities, driveway access, and traffic circulation may be adjusted during construction drawing review as necessary to receive building permit approval from Engineering and Traffic Operations. [For the Applicant's information only.]

No objection to zone change. [For the Applicant's information only.]

Planning:

Therefore, staff recommends approval of this Zone Change from MF-22, Multiple-Family Dwelling District to SF-3, Single-Family Dwelling District.

Letters of Objection:

As of August 28, 2025, staff has received no letters of objection for this request.

City Manager's Office

ORDINANCE NO. _____

AN ORDINANCE AMENDING THE ZONING DISTRICT MAP OF THE CITY OF MIDLAND TO REZONE LOT 8A, BLOCK 28, GREENWOOD ADDITION, SECTION 12, CITY AND COUNTY OF MIDLAND, TEXAS, FROM MF-22, MULTIPLE-FAMILY DWELLING DISTRICT TO SF-3, SINGLE-FAMILY DWELLING DISTRICT (GENERALLY LOCATED ON THE EAST SIDE OF SOUTH WEBSTER STREET, APPROXIMATELY 70 FEET SOUTH OF EAST NEW YORK AVENUE); CONTAINING A CUMULATIVE CLAUSE; CONTAINING A SAVINGS AND SEVERABILITY CLAUSE; PROVIDING FOR A MAXIMUM PENALTY OR FINE OF TWO THOUSAND DOLLARS ($2,000.00); AND ORDERING PUBLICATION

WHEREAS, the City Planning and Zoning Commission and the Governing Body of the City of Midland, in compliance with the City Charter, the City Code, and State law, have given the requisite notices by United States mail, publication and otherwise; and after a full and fair hearing to all of the property owners generally and particularly to those interested persons situated in the affected area and in the vicinity thereof, the Governing Body finds that the public health, safety and general welfare will be best served by rezoning Lot 8A, Block 28, Greenwood Addition, Section 12, City and County of Midland, Texas (the "Property"), to SF-3, Single-Family Dwelling District, as set out hereinafter;

NOW, THEREFORE, BE IT ORDAINED BY THE CITY COUNCIL OF THE CITY OF MIDLAND, TEXAS:

SECTION ONE. That the Zoning District Map of the City of Midland, Texas, is hereby amended to rezone the Property from MF-22, Multiple-Family Dwelling District to SF-3, Single-Family Dwelling District.

SECTION TWO. That the definitions given in the zoning regulations contained in the City Code of the City of Midland, Texas, shall be applicable to such of those terms as are used herein.

SECTION THREE. The provisions of this ordinance are to be cumulative of all other ordinances or parts of ordinances governing or regulating the same subject matter as that covered herein; provided, however, that all prior ordinances or parts of ordinances

inconsistent with or in conflict with any of the provisions of this ordinance are hereby expressly repealed to the extent of any such inconsistency or conflict.

SECTION FOUR. If any section, subsection, sentence, clause or phrase of this ordinance is, for any reason, held to be unconstitutional or invalid, such holding shall not affect the validity of the remaining portions of this ordinance. The Council of the City of Midland hereby declares that it would have passed this ordinance and each section, subsection, sentence, clause, or phrase hereof irrespective of the fact that any one or more sections, subsections, sentences, clauses, or phrases be declared unconstitutional or invalid.

SECTION FIVE. The penalty for violation of this ordinance shall be in accordance with the general penalty provisions contained in Section 1-3-1 of the City Code of Midland, Texas, which provides for a fine not exceeding two thousand dollars ($2,000.00).

SECTION SIX. The City Secretary is hereby authorized and directed to publish the descriptive caption of this ordinance in the manner and for the length of time prescribed by the law as an alternative method of publication.

The above and foregoing ordinance was duly proposed, read in full and adopted on first reading, the _____ day of _____, A.D., 2025; and passed to second reading on motion of Council member _____, seconded by Council member _____, by the following vote:

Council members voting "AYE":

Council members voting "NAY":

The above and foregoing ordinance was read in full and finally adopted by the following vote upon motion of Council member _____, seconded by Council member _____, on the _____ day of _____, A.D., 2025, at a regular meeting of the City Council:

Council members voting "AYE":

Council members voting "NAY":

- Staff recommends approval of this request.

8

MISSION
Deliver exceptional services and promote a high quality of life and place for ALL our citizens.

City Council Meeting

Item Number: 21

Meeting Date: September 9, 2025

To: City Council / City Manager

From: Angelina Bettanini, Planner

Subject: AN ORDINANCE AMENDING THE ZONING DISTRICT MAP OF THE CITY OF MIDLAND TO REZONE LOTS 1 THROUGH 6, BLOCK 6, QUAIL RIDGE ADDITION, SECTION 5, CITY AND COUNTY OF MIDLAND, TEXAS, FROM PD, PLANNED DEVELOPMENT DISTRICT FOR A HOUSING DEVELOPMENT TO AN AMENDED PD, PLANNED DEVELOPMENT DISTRICT FOR A HOUSING DEVELOPMENT (GENERALLY LOCATED AT THE SOUTHEAST CORNER OF THE INTERSECTION OF BEACHWOOD STREET AND CHAPARRAL STREET); CONTAINING A CUMULATIVE CLAUSE; CONTAINING A SAVINGS AND SEVERABILITY CLAUSE; PROVIDING FOR A MAXIMUM PENALTY OR FINE OF TWO THOUSAND DOLLARS ($2,000.00); AND ORDERING PUBLICATION (DISTRICT 2) (DEVELOPMENT SERVICES) (QUALITY OF LIFE AND PLACE)

Purpose:

Maverick Engineering is requesting a Zone Change from PD, Planned Development District for Housing Development to an amended PD, Planned Development District for a Housing Development to remove an easement from original site plan. One of the properties on which the easement is located is 914 Chaparral Street.

Recommended City Council Action:

Approve

Fiscal Impact:

None

Strategic Priority:

Quality of Life and Place

Discussion:

Current Zoning:

PD, Planned Development District for a Housing Development

Surrounding Zoning and Land Use:

All surrounding zoning is PD, Planned Development District for a Housing Development and surrounding uses consist of single-family housing.

Analysis:

The subject property is zoned PD, Planned Development District for a Housing Development. Maverick Engineering is seeking this zone change in order to amend the current Planned Development District by removing an easement. The applicant plans to build single-family housing. The current PD has an established site plan that the property must significantly conform to. In order to change the site plan, the PD has to be amended to no longer show the existing easement. This area has been developed into a residential neighborhood and the applicant plans to develop single family housing.

This request is consistent with the Tall City Tomorrow Comprehensive Plan, Chapter 3; which designated this area as Urban Medium (U-M). This designation calls for a mix of residential use, schools, churches, and low-dense commercial.

This proposed zone change has been circulated to the respective City departments for internal review and their comments, conditions, and requirements are as follows:

Fire: (Approved)

No comments or objections.

Oil and Gas: (Approved)

No Oil & Gas issues with Zoning.

Engineering: (Approved)

No objections to zone change. [For Applicant’s Information Only.]

Site drainage, utilities, driveway access, and traffic circulation may be adjusted during construction drawing review as necessary to receive building permit approval from Engineering and Traffic Operations. [For Applicant’s Information Only.]

Code: (Approved)

No issues. All future structures must adhere to the 2018 International Building Codes, the 2015 International Energy Code, the 2023 NEC requirements, the 2015 International Fire Codes, local city ordinances, zoning requirements, established setbacks, oil and gas considerations, and floodplain requirements if necessary. Code versions are subject to change depending on the time of new code editions adopted in the City of Midland and date of permit application.

Transportation: (Approved)

Site drainage, utilities, driveway access, and traffic circulation may be adjusted during construction drawing review as necessary to receive building permit approval from Engineering and Traffic Operations. [For the Applicant's information only.]

No objection to zone change. [For the Applicant's information only.]

Planning: (Approved with Conditions)

Therefore, staff recommends approval of this Zone Change from PD, Planned Development District for a Housing Development to amendment PD, Planned Development District for a Housing Development subject to the following conditions:

Conditions:

A. **That the Property shall significantly conform to the site plan attached hereto as Exhibit A; provided, however, that the building footprints shown on the site plan shall be considered illustrative.**

B. **That the minimum front yard setback shall be 15 feet.**

C. **That a minimum of two off-street parking spaces shall be provided on each lot.**

D. **That Ordinance No. 9732 shall remain in full force and effect except to the extent that it is superseded by this ordinance.**

Letters of Objection:

As of August 28, 2025, staff has received no letters of objection for this request.

Ordinance 9732

ORDINANCE NO. _____

AN ORDINANCE AMENDING THE ZONING DISTRICT MAP OF THE CITY OF MIDLAND TO REZONE LOTS 1 THROUGH 6, BLOCK 6, QUAIL RIDGE ADDITION, SECTION 5, CITY AND COUNTY OF MIDLAND, TEXAS, FROM PD, PLANNED DEVELOPMENT DISTRICT FOR A HOUSING DEVELOPMENT TO AN AMENDED PD, PLANNED DEVELOPMENT DISTRICT FOR A HOUSING DEVELOPMENT (GENERALLY LOCATED AT THE SOUTHEAST CORNER OF THE INTERSECTION OF BEACHWOOD STREET AND CHAPARRAL STREET); CONTAINING A CUMULATIVE CLAUSE; CONTAINING A SAVINGS AND SEVERABILITY CLAUSE; PROVIDING FOR A MAXIMUM PENALTY OR FINE OF TWO THOUSAND DOLLARS ($2,000.00); AND ORDERING PUBLICATION

WHEREAS, the City Planning and Zoning Commission and the Governing Body of the City of Midland, in compliance with the City Charter, the City Code, and State law, have given the requisite notices by United States mail, publication and otherwise; and after a full and fair hearing to all of the property owners generally and particularly to those interested persons situated in the affected area and in the vicinity thereof, the Governing Body finds that the public health, safety and general welfare will be best served by rezoning Lots 1 through 6, Block 6, Quail Ridge Addition, Section 5, City and County of Midland, Texas (the "Property"), to an amended PD, Planned Development District for a Housing Development and adopting a site plan therefor, as set out hereinafter;

NOW, THEREFORE, BE IT ORDAINED BY THE CITY COUNCIL OF THE CITY OF MIDLAND, TEXAS:

SECTION ONE. That the Zoning District Map of the City of Midland, Texas, is hereby amended to rezone the Property from PD, Planned Development District for a Housing Development to an amended PD, Planned Development District for a Housing Development.

SECTION TWO. That the base zoning district to which the use and development of the Property shall conform, except as modified by Section Three of this ordinance, is the SF-3, Single-Family Dwelling District.

SECTION THREE. That a site plan, which is attached hereto as Exhibit A and incorporated herein for all purposes, is hereby adopted, and the use and development of the Property shall be subject to the following conditions and restrictions:

A. That the Property shall significantly conform to the site plan attached hereto as Exhibit A; provided, however, that the building footprints shown on the site plan shall be considered illustrative.

B. That the minimum front yard setback shall be 15 feet.

C. That a minimum of two off-street parking spaces shall be provided on each lot.

D. That Ordinance No. 9732 shall remain in full force and effect except to the extent that it is superseded by this ordinance.

SECTION FOUR. That the definitions given in the zoning regulations contained in the City Code of the City of Midland, Texas, shall be applicable to such of those terms as are used herein.

SECTION FIVE. The provisions of this ordinance are to be cumulative of all other ordinances or parts of ordinances governing or regulating the same subject matter as that covered herein; provided, however, that all prior ordinances or parts of ordinances inconsistent with or in conflict with any of the provisions of this ordinance are hereby expressly repealed to the extent of any such inconsistency or conflict.

SECTION SIX. If any section, subsection, sentence, clause or phrase of this ordinance is, for any reason, held to be unconstitutional or invalid, such holding shall not affect the validity of the remaining portions of this ordinance. The Council of the City of Midland hereby declares that it would have passed this ordinance and each section, subsection, sentence, clause, or phrase hereof irrespective of the fact that any one or more sections, subsections, sentences, clauses, or phrases be declared unconstitutional or invalid.

SECTION SEVEN. The penalty for violation of this ordinance shall be in accordance with the general penalty provisions contained in Section 1-3-1 of the City Code of Midland, Texas, which provides for a fine not exceeding two thousand dollars ($2,000.00).

SECTION EIGHT. The City Secretary is hereby authorized and directed to publish the descriptive caption of this ordinance in the manner and for the length of time prescribed by the law as an alternative method of publication.

The above and foregoing ordinance was duly proposed, read in full and adopted on first reading, the _____ day of _____, A.D., 2025; and passed to second reading on motion of Council member _____, seconded by Council member _____, by the following vote:

Council members voting "AYE":

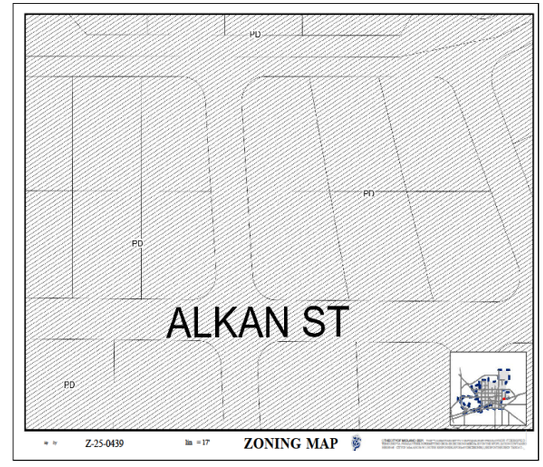
APPLICATION SUMMARY



- **Representative:** Andrew Mellen, with Maverick Engineering
- **Location:** Generally located at the southeast corner of the intersection of Beachwood Street and Chaparral Street. (Council District 2)
- **Reason for Request:** To adjust the site plan associated with the current Planned Development District

2

ZONING

- **Current Zoning:** PD, Planned Development District for a Housing Development
- **Surrounding Zoning:**
  - **North, East, South, & West:** PD, Planned Development District for a Housing Development
- **Proposed Zoning:** An amended PD, Planned Development District for a Housing Development

3

LAND USE

- **Current Use:** Vacant Land and Single-Family Housing
- **Surrounding Uses:**
  - **North/South/West/East:** Single-Family Housing and Vacant Land
- **Proposed Use:** Single-Family Housing

4

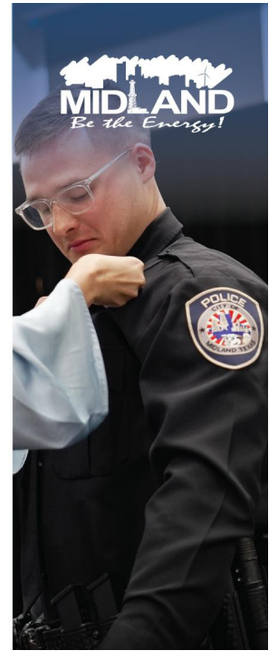
On Beachwood Street, Looking South

5

COMPREHENSIVE PLAN

- **Land Use Designation:** Urban-Medium (U-M)
- **Supported Uses:** Supporting uses include a mix of residential use, schools, churches, and low-dense commercial.
- The request is compatible with the *Tall City Tomorrow Comprehensive Plan.*

MIDLAND
Be the Energy!



STAFF'S RECOMMENDATION

- No objections were received.
- The Planning & Zoning Commission approved of this request on September 2, 2025.
- Staff recommends approval of this request with the following conditions:

A. That the Property shall significantly conform to the site plan attached hereto as Exhibit A; provided, however, that the building footprints shown on the site plan shall be considered illustrative.

B. That the minimum front yard setback shall be 15 feet.

7

STAFF'S RECOMMENDATION

C. That a minimum of two off-street parking spaces shall be provided on each lot.

D. That Ordinance No. 9732 shall remain in full force and effect except to the extent that it is superseded by this ordinance.

8

MISSION
Deliver exceptional services and promote a high quality of life and place for ALL our citizens.

ORDINANCE NO. 9732

AN ORDINANCE CHANGING THE ZONING CLASSIFICATION BY AMENDING CHAPTER ONE, TITLE XI, OF THE CITY CODE OF MIDLAND, TEXAS, BY PERMITTING LOTS 10-13, BLOCK 3, COMMON AREA A, BLOCK 4, LOTS 16 AND 17, BLOCK 5, AND COMMON AREA B, BLOCK 6, QUAIL RIDGE ADDITION, SECTION 2, CITY AND COUNTY OF MIDLAND, TEXAS, WHICH IS PRESENTLY ZONED PD, PLANNED DISTRICT FOR A HOUSING DEVELOPMENT, TO BE USED AS AN AMENDED PLANNED DISTRICT (GENERALLY LOCATED ON THE NORTH SIDE OF EAST BUSINESS INTERSTATE 20, APPROXIMATELY 300 FEET WEST OF CHUKAR LANE); CONTAINING A CUMULATIVE CLAUSE; CONTAINING A SAVINGS AND SEVERABILITY CLAUSE; PROVIDING FOR A MAXIMUM PENALTY OR FINE OF TWO THOUSAND DOLLARS ($2,000.00); AND ORDERING PUBLICATION

WHEREAS, the City Planning and Zoning Commission and the Governing Body of the City of Midland, in compliance with the City Charter and the State law with reference to the creation of "Planned Districts" under the zoning ordinance regulations and zoning map, have given the requisite notices by United States mail, publication and otherwise; and after a full and fair hearing to all of the property owners generally and particularly to those interested persons situated in the affected area and in the vicinity thereof, the Governing Body finds that the public health, safety and general welfare will be best served by the creation of an Amended Planned District, set out hereinafter and subject to the conditions and restrictions set out hereinafter;

NOW, THEREFORE, BE IT ORDAINED BY THE CITY COUNCIL OF THE CITY OF MIDLAND, TEXAS:

SECTION ONE. That Chapter 1, Title XI, of the City Code of Midland, Texas, and the official zoning map of the City of Midland, Texas, are hereby amended insofar as the hereinafter described property is concerned, which is presently zoned PD, Planned District for a Housing Development, and it shall be used as an Amended Planned District, said property being described as follows:

Lots 10-13, Block 3, Common Area A, Block 4, Lots 16 and 17, Block 5, and

Common Area B, Block 6, Quail Ridge Addition, Section 2, City and County of Midland, Texas.

SECTION TWO. That said property shall be subject to the following special conditions and restrictions:

A. That the use and development of this property shall conform to the regulations of the 1F-3, One-Family Dwelling District, except as otherwise stated below.

B. That this property shall significantly conform to Exhibit "A", which is attached hereto and incorporated herein.

C. That the locations designated on Exhibit "A" as Common Area A and Common Area B shall be developed as recreational areas.

D. That the minimum front yard setback shall be 15 feet.

E. That a minimum of two off-street parking spaces shall be provided on each lot.

F. That the perimeter landscaping shall be irrigated with an underground sprinkler system and maintained in a healthy, growing condition by a homeowners' association.

SECTION THREE. That the definitions given in the zoning regulations contained in the City Code of the City of Midland, Texas, shall be applicable to such of those terms as are used herein.

SECTION FOUR. The provisions of this ordinance are to be cumulative of all other ordinances or parts of ordinances governing or regulating the same subject matter as that covered herein; provided, however, that all prior ordinances or parts of ordinances inconsistent with or in conflict with any of the provisions of this ordinance are hereby expressly repealed to the extent of any such inconsistency or conflict.

SECTION FIVE. If any section, subsection, sentence, clause or phrase of this ordinance is, for any reason, held to be unconstitutional or invalid, such holding shall not affect the validity of the remaining portions of this ordinance. The Council of the City of Midland hereby declares that it would have passed this ordinance and each section, subsection, sentence, clause, or phrase hereof irrespective of the fact that any one or more sections, subsections, sentences, clauses, or phrases be declared unconstitutional or invalid.

SECTION SIX. The penalty for violation of this ordinance shall be in accordance with the general penalty provisions contained in Section 1-3-1 of the City Code of Midland, Texas, which provides for a fine not exceeding two thousand dollars ($2,000.00).

SECTION SEVEN. The City Secretary is hereby authorized and directed to publish the descriptive caption of this ordinance in the manner and for the length of time prescribed by the law as an alternative method of publication.

The above and foregoing ordinance was duly proposed, read in full and adopted on first reading, the 23rd day of January, A.D., 2018; and passed to second reading on motion of Council member Love, seconded by Council member Hotchkiss, by the following vote:

Council members voting "AYE": Hotchkiss, Love, Sparks, Morales, Dufford, Lacy, Robnett

Council members voting "NAY": None

The above and foregoing ordinance was read in full and finally adopted by the following vote upon motion of Council member Lacy, seconded by Council member Hotchkiss, on the 13th day of February, A.D., 2018, at a regular meeting of the City Council:

Council members voting "AYE": Hotchkiss, Love, Sparks, Morales, Lacy

Council members voting "NAY": None

PASSED AND APPROVED THIS 13th day of February, A.D., 2018.

City Council Meeting

Item Number: {{}}

Meeting Date: September 9, 2025

To: City Council / City Manager

From: Lori Elliott, Planner

Subject: AN ORDINANCE AMENDING THE ZONING DISTRICT MAP OF THE CITY OF MIDLAND TO REZONE LOT 4, BLOCK 62, PARK AVENUE HEIGHTS ADDITION, SECTION 2, CITY AND COUNTY OF MIDLAND, TEXAS, FROM MF-22, MULTIPLE-FAMILY DWELLING DISTRICT TO SF-3, SINGLE-FAMILY DWELLING DISTRICT (GENERALLY LOCATED ON THE WEST SIDE OF SOUTH MADISON STREET, APPROXIMATELY 190 FEET SOUTH OF EAST CALIFORNIA AVENUE); CONTAINING A CUMULATIVE CLAUSE; CONTAINING A SAVINGS AND SEVERABILITY CLAUSE; PROVIDING FOR A MAXIMUM PENALTY OR FINE OF TWO THOUSAND DOLLARS ($2,000.00); AND ORDERING PUBLICATION (DISTRICT 2) (DEVELOPMENT SERVICES) (QUALITY OF LIFE AND PLACE)

Purpose:

Jorge Chavez is requesting a Zone Change from MF-22, Multiple-Family Dwelling District, to SF-3, Single-Family Dwelling District for the development of a single-family residential dwelling unit on a property located at 806 South Madison Street.

Recommended City Council Action:

Approve

Fiscal Impact:

None.

Strategic Priority:

Quality of Life and Place

Discussion:

Current Zoning:

MF-22, Multiple-Family Dwelling District

Surrounding Zoning and Land Use:

The properties to the north, east, and west are zoned as MF-22, Multiple-Family Dwelling District, and consist of single-family dwellings and vacant lots. The properties to the south are zoned MF-22, Multiple-Family Dwelling District, and SF-3, Single-Family Dwelling District, and consist of single-family dwellings and vacant lots.

Analysis:

The subject property is located at 806 South Madison Street. The property is currently zoned MF-22, Multiple-Family Dwelling District. This zoning district does not permit a single-family detached dwelling. The property is currently a vacant lot. The applicant has requested a zone change to SF-3, Single-Family Dwelling District, which would allow for the construction of a single-family residence. The property meets the minimum lot dimension requirements of the SF-3, Single-Family Dwelling District, zoning [Midland City Code 11-1-5.04]. Many nearby properties have transitioned to SF-3 zoning, aligning with the evolving character of the neighborhood and its single-family residential development.

This request is consistent with the Tall City Tomorrow Comprehensive Plan, Chapter 3, which designates this area as Urban-Medium (UR-M). Potential zoning for this designation calls for Single-Family Dwelling Districts, making this request compatible.

This proposed zone change has been circulated to the respective City departments for internal review and their comments, conditions, and requirements are as follows:

Departmental Review:

Fire: (Approved)

No comments or objections.

Oil and Gas: (Approved)

No Oil & Gas issues with Zoning.

Engineering: (Approved)

No objections to zone change. [For Applicant's Information Only.] Site drainage, utilities, driveway access, and traffic circulation may be adjusted during construction drawing review as necessary to receive building permit approval from Engineering and Traffic Operations. [For Applicant's Information Only.]

Building Code: (Approved)

No issues. All future structures must adhere to the 2018 International Building Codes, the 2015 International Energy Code, the 2023 NEC requirements, the 2015 International Fire Codes, local city ordinances, zoning requirements, established setbacks, oil and gas considerations, and floodplain requirements if necessary. Code versions are subject to change depending on the time of new code editions adopted in the City of Midland and date of permit application.

Transportation: (Approved)

Site drainage, utilities, driveway access, and traffic circulation may be adjusted during construction drawing review as necessary to receive building permit approval from Engineering and Traffic Operations. [For the Applicant's information only.] No objection to zone change. [For the Applicant's information only.]

Planning:

Therefore, staff recommends approval of this Zone Change from MF-22, Multiple-Family Dwelling District, to SF-3, Single-Family Dwelling District.

Letters of Objection:

As of August 28, 2025, staff has received no letters of objection for this request.

ORDINANCE NO. _____

AN ORDINANCE AMENDING THE ZONING DISTRICT MAP OF THE CITY OF MIDLAND TO REZONE LOT 4, BLOCK 62, PARK AVENUE HEIGHTS ADDITION, SECTION 2, CITY AND COUNTY OF MIDLAND, TEXAS, FROM MF-22, MULTIPLE-FAMILY DWELLING DISTRICT TO SF-3, SINGLE-FAMILY DWELLING DISTRICT (GENERALLY LOCATED ON THE WEST SIDE OF SOUTH MADISON STREET, APPROXIMATELY 190 FEET SOUTH OF EAST CALIFORNIA AVENUE); CONTAINING A CUMULATIVE CLAUSE; CONTAINING A SAVINGS AND SEVERABILITY CLAUSE; PROVIDING FOR A MAXIMUM PENALTY OR FINE OF TWO THOUSAND DOLLARS ($2,000.00); AND ORDERING PUBLICATION

WHEREAS, the City Planning and Zoning Commission and the Governing Body of the City of Midland, in compliance with the City Charter, the City Code, and State law, have given the requisite notices by United States mail, publication and otherwise; and after a full and fair hearing to all of the property owners generally and particularly to those interested persons situated in the affected area and in the vicinity thereof, the Governing Body finds that the public health, safety and general welfare will be best served by rezoning Lot 4, Block 62, Park Avenue Heights Addition, Section 2, City and County of Midland, Texas (the "Property"), to SF-3, Single-Family Dwelling District, as set out hereinafter;

NOW, THEREFORE, BE IT ORDAINED BY THE CITY COUNCIL OF THE CITY OF MIDLAND, TEXAS:

SECTION ONE. That the Zoning District Map of the City of Midland, Texas, is hereby amended to rezone the Property from MF-22, Multiple-Family Dwelling District to SF-3, Single-Family Dwelling District.

SECTION TWO. That the definitions given in the zoning regulations contained in the City Code of the City of Midland, Texas, shall be applicable to such of those terms as are used herein.

SECTION THREE. The provisions of this ordinance are to be cumulative of all other ordinances or parts of ordinances governing or regulating the same subject matter as that covered herein; provided, however, that all prior ordinances or parts of ordinances

inconsistent with or in conflict with any of the provisions of this ordinance are hereby expressly repealed to the extent of any such inconsistency or conflict.

SECTION FOUR. If any section, subsection, sentence, clause or phrase of this ordinance is, for any reason, held to be unconstitutional or invalid, such holding shall not affect the validity of the remaining portions of this ordinance. The Council of the City of Midland hereby declares that it would have passed this ordinance and each section, subsection, sentence, clause, or phrase hereof irrespective of the fact that any one or more sections, subsections, sentences, clauses, or phrases be declared unconstitutional or invalid.

SECTION FIVE. The penalty for violation of this ordinance shall be in accordance with the general penalty provisions contained in Section 1-3-1 of the City Code of Midland, Texas, which provides for a fine not exceeding two thousand dollars ($2,000.00).

SECTION SIX. The City Secretary is hereby authorized and directed to publish the descriptive caption of this ordinance in the manner and for the length of time prescribed by the law as an alternative method of publication.

The above and foregoing ordinance was duly proposed, read in full and adopted on first reading, the _____ day of _____, A.D., 2025; and passed to second reading on motion of Council member _____, seconded by Council member _____, by the following vote:

Council members voting "AYE":

Council members voting "NAY":

The above and foregoing ordinance was read in full and finally adopted by the following vote upon motion of Council member _____, seconded by Council member _____, on the _____ day of _____, A.D., 2025, at a regular meeting of the City Council:

Council members voting "AYE":

Council members voting "NAY":

PASSED AND APPROVED THIS _____ day of _____, A.D., 2025.

MISSION
Deliver exceptional services and promote a high quality of life and place for ALL our citizens.

City Council Meeting

Item Number: 23

Meeting Date: September 9, 2025

To: City Council / City Manager

From: Jamie Barton,

Subject: AN ORDINANCE ADOPTING A FEE SCHEDULE; CONTAINING A SAVINGS AND SEVERABILITY CLAUSE; PROVIDING AN APPEAL PROCESS; ESTABLISHING AN EFFECTIVE DATE OF OCTOBER 1, 2025; AND ORDERING PUBLICATION (DISTRICT: ALL) (FINANCE) (DISTRICT: ALL) (FINANCE) (PROVIDE SOUND GOVERNANCE & FISCAL MANAGEMENT)

Purpose:

Revise an ordinance establishing regulatory and user fees collected by the City of Midland to adequately cover the costs and expenses incurred by the City in connection with providing the services associated with said fees.

Recommended City Council Action:

Approve

Fiscal Impact:

Regulatory and User Fees generate revenue designed to cover the cost of the service being provided by the City of Midland. No funding language necessary.

Strategic Priority:

(Provide Sound Governance & Fiscal Management)

Discussion:

Updates were made to 12 departments, as outlined below. Corresponding exhibits are attached.

1. City Secretary – In the Limo or Motorbus Operating Fee (each) line item, the term “Motorbus” was replaced with “Shuttle.” (Exhibit A)

2. Parks & Recreation – Parks (Exhibit B) Show Mobile Rental Fee was increased by $12.50, Artificial Turf Fields Rental Fee was increased by $10, and all Tournament Fees were slightly increased. Updates were made to the Recreation (Exhibit C) services and rates. The Cart Fee – Tournament Spectator Cart (full cart) in Golf Course (Exhibit F) was replaced with two new fees, Cart Fee - Spectator Cart (limited availability) and Cart Fee - Youth Tournament Spectator Cart (full cart). For Sports Complex (Exhibit N), two new fees were added, and others were increased.

3. Fire Department – New fees were added to the Environmental Section (Exhibit D) while new travel vaccines were also added to the Clinical Section (Exhibit D) and rate increases to the existing ones. HIV Testing was removed and combined with the STD Testing service and rate.

4. Development Services – The Oil and Gas section of Planning (Exhibit G) added a new Appeal Fee (takings).

5. Engineering – Street name and Traffic Control Sign Fee (Exhibit I) increased by $150 per intersection.

6. Water & Sewer – All fees were increased by 2.5% (Exhibit J and K).

7. Sanitation – Sanitation Fees for Inside and Outside City Limits (Exhibit L) were all increased. The Litter Abatement Fee was increased by $1. New fees were added and updates to existing ones were made.

8. Airport – Landing fees, Maximum per 24-hour Period and Annual Employee Parking Media (Exhibit M) was increased. Public Aircraft Parking was changed to being based on rates and charges.

9. Miscellaneous – New business regulation fees were added pertaining to door to door solicitors. A new section for fire regulations was created, with perspective fees transferred from police regulations. New fees were added while existing services and rates were updated. A new fee was added for police regulations for copy of collision report.

10. Credit Card Fee - The City of Midland will apply a 3.5% fee to all transactions paid by credit card, based on the total amount being paid.

Morris Williams Jr.

City Manager’s Office

ORDINANCE NO. _____

AN ORDINANCE ADOPTING A FEE SCHEDULE; CONTAINING A SAVINGS AND SEVERABILITY CLAUSE; PROVIDING AN APPEAL PROCESS; ESTABLISHING AN EFFECTIVE DATE OF OCTOBER 1, 2025; AND ORDERING PUBLICATION

WHEREAS, the City Council finds it to be in the public interest to establish fees collected by the City of Midland in order to adequately cover the costs and expenses incurred by the City in connection with providing the services associated with said fees; and

WHEREAS, the City Manager's designees have prepared Exhibits A through R, which are attached hereto and incorporated herein for all purposes, identifying said fees (collectively, the "Fee Schedule"); and

WHEREAS, the City Council of the City of Midland, Texas, finds it to be in the public interest to adopt the Fee Schedule and to establish the fees identified therein as the fees to be collected by the City of Midland, said fees being reasonably related to the costs and expenses incurred by the City in connection with providing the services associated with said fees;

NOW, THEREFORE, BE IT ORDAINED BY THE CITY COUNCIL OF THE CITY OF MIDLAND, TEXAS:

SECTION ONE. That the facts and recitations contained in the preamble of this ordinance are hereby found and declared to be true and correct and are adopted as part of this ordinance for all purposes.

SECTION TWO. That the Fee Schedule is hereby approved and adopted. The fees identified in the Fee Schedule are hereby established as the fees to be collected by the City of Midland except for the following types of fees: a fee charged to a requestor who submits a request for information under the Texas Public Information Act; a fee assessed by the Municipal Court that is not identified in the Fee Schedule; a fee established by a contract, to the extent that the fee established by the contract conflicts with or is not identified in the Fee Schedule; a drainage charge; an impact fee; a fee prescribed by a state law, rule, or regulation; or a fee for which a state law, rule, or regulation, or the City Charter requires a

procedure to be followed to establish the fee other than the procedure that was followed to adopt the Fee Schedule.

To the extent that a fee identified in the Fee Schedule conflicts with a fee that was previously established by ordinance (including an ordinance that has been codified in the City Code), resolution, or other City of Midland instrument, this ordinance shall supersede such previous ordinance, resolution, or other instrument, and the fee identified in the Fee Schedule shall be the applicable fee.

To the extent that a fee identified in the Fee Schedule conflicts with a fee prescribed by a state law, rule, or regulation, the fee prescribed by the state law, rule, or regulation shall be the applicable fee.

To the extent that a fee identified in the Fee Schedule is a fee for which a state law, rule, or regulation, or the City Charter requires a procedure to be followed to establish the fee other than the procedure that was followed to adopt the Fee Schedule, such fee that was previously established by following the applicable procedure shall be the applicable fee.

SECTION THREE. That any person wishing to appeal the payment of a fee identified in the Fee Schedule may do so in accordance with the law, rule, regulation, or ordinance that established the procedure for appealing such fee. To the extent that no such appeal procedure has been established for a fee identified in the Fee Schedule that is not a fee assessed by the Municipal Court, the following appeal procedure shall apply:

A. Any person may appeal in writing to the City Manager, or the City Manager's designee, prior to paying the fee or after paying the fee. Any person may appeal in writing to the City Manager, or the City Manager's designee, if the person believes that he or she cannot afford the fee. The person may seek an exemption from all or part of the fee. The City Manager, or the City Manager's designee, shall make certain that the fee is not paid under duress. If a person wishes to appeal after payment of the fee, the person shall appeal in writing to the City Manager, or the City Manager's designee, within ten (10) calendar days of paying the fee.

B. During the pendency of the appeal, the City shall not file criminal charges against any person related to non-payment of the fee if the fee is not paid. Additionally, the City shall not file criminal charges against a person in an attempt to collect the fee.

C. The City Manager, or the City Manager's designee, shall provide a full and meaningful review process. The City Manager, or the City Manager's designee, shall provide a fair opportunity for a person to challenge the accuracy and legal validity of his or her fee obligation. The City Manager, or the City Manager's designee, shall also provide a clear and certain remedy for any erroneous or unlawful fee collection to ensure that the opportunity to contest the fee is a meaningful one. Options that the City Manager, or the City Manager's designee, shall consider in providing a clear and certain remedy are a refund of any excess fee paid, as well as other factors, such as ensuring that a person may continue the operation of his or her business.

D. The City Manager, or the City Manager's designee, shall make his or her decision within ten (10) days of receiving the written notice of appeal. The City Manager, or the City Manager's designee, shall ensure that a person has all rights under any applicable law. A person shall incur no financial hardship by exercising his or her right to appeal.

SECTION FOUR. That the provisions of this ordinance are to be cumulative of all other ordinances or parts of ordinances governing or regulating the same subject matter as that covered herein; provided, however, that all prior ordinances or parts of ordinances inconsistent with or in conflict with any of the provisions of this ordinance are hereby expressly repealed to the extent of any such inconsistency or conflict.

SECTION FIVE. That if any section, subsection, sentence, clause or phrase of this ordinance is, for any reason, held to be unconstitutional or invalid, such holding shall not affect the validity of the remaining portions of this ordinance. The Council of the City of Midland hereby declares that it would have passed this ordinance and each section,

subsection, sentence, clause, or phrase hereof irrespective of the fact that any one or more sections, subsections, sentences, clauses, or phrases be declared unconstitutional or invalid.

SECTION SIX. That this ordinance shall become effective on October 1, 2025.

SECTION SEVEN. That the City Secretary is hereby authorized and directed to publish the descriptive caption of this ordinance in the manner and for the length of time prescribed by the law as an alternative method of publication.

The above and foregoing ordinance was duly proposed, read in full and adopted on first reading, the _____ day of _____, A.D., 2025; and passed to second reading on motion of Council member _____, seconded by Council member _____, by the following vote:

Council members voting "AYE":

Council members voting "NAY":

The above and foregoing ordinance was read in full and finally adopted by the following vote upon motion of Council member _____, seconded by Council member _____, on the _____ day of _____, A.D., 2025, at a regular meeting of the City Council:

Council members voting "AYE":

SPECIAL ASSESSMENTS

1. Should any person upon driving a vehicle from the paid parking areas of the airport not be able to present an officially issued ticket indicating where that person's vehicle was parked and at what time, then the charge assessed for the parking of that vehicle shall be at least $12.00. In addition to that fee, there shall also be a fee assessed for the parking of that vehicle equal to the amount of the daily rate, times number of days, for the area in which that vehicle was parked as is indicated by the daily lot inventory taken by the airport administration.

2. Whenever a person or an entity shall pay for the parking fees assessed by this Section with a check or draft, and that check or draft is dishonored, then there shall be an additional $25.00 assessed against that person or entity.

1. Should any person upon driving a vehicle from the paid parking areas of the airport not be able to present an officially issued ticket indicating where that person's vehicle was parked and at what time, then the charge assessed for the parking of that vehicle shall be at least $12.00. In addition to that fee, there shall also be a fee assessed for the parking of that vehicle equal to the amount of the daily rate, times number of days, for the area in which that vehicle was parked as is indicated by the daily lot inventory taken by the airport administration.

2. Whenever a person or an entity shall pay for the parking fees assessed by this Section with a check or draft, and that check or draft is dishonored, then there shall be an additional $25.00 assessed against that person or entity.
