24. MOTION MAKING APPOINTMENTS TO VARIOUS BOARDS AND COMMISSIONS

PUBLIC COMMENT

25. Receive public comments where individuals may address the City Council on City related issues and projects not on the present agenda. Any deliberation of or decision by the City Council regarding the item being discussed shall be limited to a motion to place the item on the agenda for a subsequent meeting. (Please limit comments to three minutes or less.)

STAFF PRESENTATIONS

26. "Targeted Safety Action Plan”

27. “Closing the Gap with Savings and Efficiencies”

28. Training Session: AMMS - CivicPlus for City Council Members

EXECUTIVE SESSION

29. Pursuant to Texas Government Code § 551.101, the City Council will hold an Executive Session, which is closed to the public, to discuss the following matters as permitted under the following sections of the Texas Government Code:

    a. Section 551.071, Consultation with Attorney

    a.1. Discuss matters in which the duty of the attorney(s) to the governmental body under the Texas Disciplinary Rules of Professional Conduct of the State Bar of Texas clearly conflicts with Chapter 551 of the Texas Government Code

a.2. Discuss pending or contemplated litigation.

b. Section 551.072, Deliberation Regarding Real Property

b.1. Discuss the purchase, exchange, lease or value of real property.

c. Section 551.074, Personnel Matters

c.1. Deliberate the employment, evaluation, and duties of the City Manager, Interim City Attorney, City Secretary, Municipal Court Presiding Judge, and Municipal Court Associate Judge.

c.2. Deliberate the appointment of members to the Midland Development Corporation Board of Directors and the Planning and Zoning Commission.

d. Section 551.087, Deliberate Economic Development Negotiations

d.1. Discuss business prospects that the City seeks to have locate, stay, or expand in or near the City of Midland, Texas, and discuss possible incentives.

Respectfully Submitted,

Tommy Gonzalez
City Manager

MIDLAND CITY COUNCIL
MINUTES
August 13, 2025

The City Council convened in regular session in the Council Chamber, City Hall, Midland, Texas, at 9:00 a.m., August 13, 2025.

Council Members present:	John Burkholder, Amy Stretcher Burkes, Robin Poole, Lori Blong, Brian Stubbs, Jack Ladd, John Norman
Council Members absent:	None
Staff members present:	City Manager Tommy Gonzalez, Deputy City Manager Morris Williams Jr., Deputy City Manager Jose Ortiz, City Governance Officer/City Secretary Marcia Bentley-German, Interim City Attorney Nicholas Toulet-Crump

The meeting was called to order at 9:10 a.m.

MISCELLANEOUS

1. 2025-115 – RESOLUTION RECORDING A VOTE ON A PROPOSAL TO CONSIDER AN AD VALOREM TAX RATE FOR THE FISCAL YEAR 2025-2026 AND TO ESTABLISH A DATE TO HOLD A PUBLIC HEARING ON THE PROPOSED TAX RATE; ESTABLISHING DATES WHEN THERE WILL BE A RECORD VOTE ON THE TAX RATE; AND AUTHORIZING AND DIRECTING THE CITY MANAGER TO POST ALL APPROPRIATE NOTICES **(DISTRICT: NONE) (FINANCE) (PROVIDE SOUND GOVERNANCE & FISCAL MANAGEMENT)**

   City Manager Tommy Gonzalez gave a brief overview of the budget meeting and what to expect with regard to the budget process.

   Mayor Pro Tem Poole spoke about the annual percentage increase outpacing inflation and not being sustainable. City Manager Tommy Gonzalez reported he has consulted with staff and is doing something about it.

   Chief Financial Officer Christy Weakland provided a detailed presentation of the City of Midland budget.

   Planning & Development Officer Elizabeth Triggs provided a presentation on Goal One (Strong Economy with More Quality Jobs). Mrs. Triggs reviewed vision block connections, strategic alignment and covered Airports & Development Services.

DRAFT

Managing Director of Public Safety Chuck Blumenauer and Police Chief Greg Snow reviewed Goal Two (Set the Standard for a Safe and Secure City). They reported on the High Intensity Drug Traffic Area (HIDTA), Texas Anti-Gang (TAG) Center, Animal Shelter, Health Department and Code Enforcement.

Planning & Development Officer Elizabeth Triggs reported on Goal Three (Quality of Life and Place for Recruitment and Retention). Mrs. Triggs reported on the Parks and Recreation general fund, golf course, sports complex and parks oil and gas.

Chief of Staff Taylor Novak & Chief Information Officer Gorgees Eskander reported on Goal Four (Transparent & Consistent Communication). They reviewed the Vision Block Connections, Strategic/Organizational Alignment, Information Technology Services and FY 2026 Priorities, public-facing dashboards, use of AI to support long-term urban planning, creating a digital twin of Midland, upgrade of the fire dispatch alerting system and updating IT policies.

Ms. Novack, reported on Strategic Communications, social media growth and reach, Alert Midland (geofencing), improved ratings on external platforms, more proactive and deliberate messaging, video production, public service announcements and proactive communication.

Deputy City Manager Morris Williams Jr., Chief Financial Officer Christy Weakland and Assistant Human Relations and Development Manager, Nicole Weaverling reported on Goal Five; Provide Sound Governance and Fiscal Management, Zero Findings on audit, Human Relations and Development, creation of the in-house CDL program, City-wide awards, recognitions, recruiting and retaining a skilled and diverse workforce.

Utilities Director Carl Craigo and Engineering Services Director Gabriel McClelland reported on Goal Six; (Strengthen and Sustain our Infrastructure). Mr. Craigo reported on the need to provide reliable and sustainable utilities, secured long-term water supply flexibility and cost savings. Mr. Craigo reported on the leak detection program for system longevity, the expansion of the pressure monitoring network, delivering services timely and efficiently and environmental compliance. Mr. Craigo also reported that water main breaks are decreasing and repairs are down from 206 to 150.

Engineering Services Director Gabriel McClelland reported that Solid Waste litter and large item collection increased; collecting 360 tons of litter.

City Manager Tommy Gonzalez reported the current tax rate is .348662 and they are recommending .347999 for the tax rate ceiling.

The entire presentation may be heard at www.midlandtexas.gov.

DRAFT

John Norman moved to approve Resolution No. 2025-115; seconded by Jack Ladd.

The motion passed by the following vote:
AYE: Burkholder, Stretcher Burkes, Poole, Blong, Stubbs, Ladd, Norman
NAY: None
ABSTAIN: None
ABSENT: None

All the business at hand having been completed, the meeting adjourned at 1:41 p.m.

PASSED AND APPROVED September 9, 2025.

City Council Meeting

Item Number: 5

Meeting Date: September 9, 2025

To: City Council / City Manager

From: Erika Martinez, Manager, Purchasing

Subject: **RESOLUTION AUTHORIZING THE EXECUTION OF AN AMENDMENT TO THAT CERTAIN PROFESSIONAL SERVICES AGREEMENT WITH DUNAWAY ASSOCIATES LLC, FOR PROFESSIONAL SERVICES RELATED TO THE CONSTRUCTION OF PHASES 2 AND 3 OF THE BEAL PARK RENOVATION PROJECT; SAID AMENDMENT PROVIDING FOR ADDITIONAL SERVICES ASSOCIATED WITH THE INCREASED PROJECT SCOPE AND A NEW TOTAL COST OF $2,660,750.00 AND AUTHORIZING PAYMENT THEREFOR (DISTRICT 4) (GENERAL SERVICES) (STRENGTHEN AND SUSTAIN OUR INFRASTRUCTURE)**

Purpose:

Resolution authorizing the execution of an amendment to that certain Professional Services Agreement with Dunaway Associates LLC, for Professional Services related to the construction of Phases 2 and 3 of the Beal Park Renovation Project; said amendment providing for additional services associated with the increased project scope and a new total cost of $2,660,750.00 and authorizing payment therefor.

Recommended City Council Action:

Approve

Fiscal Impact:

Funding is available in the Beal Park Renovation Project.

Strategic Priority:

(Strengthen and Sustain our Infrastructure)

Discussion:

Resolution 2024-086 authorized a professional services agreement for Landscape Architectural/Engineering Services for the Plans, Specifications and Estimate for Beal Park Phase 2 and 3 Renovation and Construction services from Dunaway Associates LCC. Dunaway Associates LLC was selected through the RFQ process to develop the Beal Park Phased Master Plan, and is currently managing Phase I construction and preparing Plans, Specifications, and Estimates for Phases 2 and 3, with $7.5 million in private donations recently secured to enhance Phase 2 amenities. To support this elevated scope, Dunaway has proposed an additional services fee of $1,484,000 to bring on specialized consultants, with Phase 2 still expected to be completed by the end of 2027. Please see the attached memo from Laurie Williams, Parks and Recreation Director, for additional information.

Therefore, please consider a resolution authorizing the execution of an amendment to that certain Professional Services Agreement with Dunaway Associates LLC, for Professional Services related to the construction of Phases 2 and 3 for Beal Park Renovation Project; said amendment providing for additional services associated with the increased project scope and a new total cost of $2,660,750.00 and authorizing payment therefor.

City Manager's Office

Parks Divisions
Interoffice Memorandum

Date: Aug 26, 2025
To: Jose Ortiz, Deputy City Manager
From: Laurie M. Williams, Parks and Recreation Director
Subject: Professional Services Agreement for Landscape Architectural/Engineering Additional Services for the Plans, Specifications and Estimates for Beal Park Phase 2 Construction

Through the Request for Qualifications process, Dunaway was selected to develop the Beal Park Phased Master Plan. They are currently overseeing Phase I Construction as well as Plans, Specifications, and Estimates for Phases 2 and 3. The Professional Services Agreement for Phases 2 and 3 was approved by City Council in May 2024. Since that time, an additional $7,500,000 in private donations has been acquired to elevate the amenities in Phase 2. The splash park, restrooms, amphitheater, and playground are all being custom designed to provide outstanding additions to the park with the completion of Phase 2.

In order to elevate these amenities, specialized consultants are required to partner in the customization needed to provide the plans. The Professional Services Agreement states that if additional consultants are needed to do the design work, additional fees will be negotiated with the City to provide the necessary expertise. Dunaway has submitted an additional services quote in the amount of $1,484,000. The consultants they will add to the design team include architects, structural and electrical engineers, water feature designers, and lighting designers. Additional work by the Dunaway team's landscape architects and civil engineers will also be required.

The time frame for the completion of Phase 2 has not been changed. Completion is still expected by the end of 2027.

Funds for the additional design work and preparation of plans is available in the Beal Park Renovation Project (900464-097).

RESOLUTION NO. _____

RESOLUTION AUTHORIZING THE EXECUTION OF AN AMENDMENT TO THAT CERTAIN PROFESSIONAL SERVICES AGREEMENT WITH DUNAWAY ASSOCIATES LLC FOR PROFESSIONAL SERVICES RELATED TO THE CONSTRUCTION OF PHASES 2 AND 3 OF THE BEAL PARK RENOVATION PROJECT; SAID AMENDMENT PROVIDING FOR ADDITIONAL SERVICES ASSOCIATED WITH THE INCREASED PROJECT SCOPE AND A NEW TOTAL COST OF $2,660,750.00; AND AUTHORIZING PAYMENT THEREFOR

WHEREAS, the City of Midland, Texas, and Dunaway Associates LLC entered into that certain Professional Services Agreement effective as of May 28, 2024, for professional services related to the construction of Phases 2 and 3 of the Beal Park Renovation Project (the "Project"); and

WHEREAS, the scope of the Project has increased since the execution of the Professional Services Agreement due to an influx of certain grant funds from generous community members and organizations, which are dedicated to the Project; and

WHEREAS, the increased Project scope requires that certain amendments be made to the Professional Services Agreement to provide for additional professional services to be rendered by Dunaway Associates LLC and a new total cost of $2,660,750.00; and

WHEREAS, the City Council finds that the professional fees proposed by Dunaway Associates LLC are consistent with and not higher than the recommended practices and fees published by the applicable professional associations and do not exceed any maximum provided by law; and

WHEREAS, the City Council finds that Dunaway Associates LLC provides professional services for a fair and reasonable price; and

WHEREAS, the City Council finds it to be in the public interest to execute an amendment to the Professional Services Agreement with Dunaway Associates LLC to provide for additional professional services to be rendered by Dunaway Associates LLC related to the increased Project scope and a new total cost of $2,660,750.00;

NOW, THEREFORE, BE IT RESOLVED BY THE CITY COUNCIL OF THE CITY OF MIDLAND, TEXAS:

SECTION ONE. That the City Manager and City Secretary are hereby authorized and directed to execute and attest, respectively, on behalf of the City of Midland, an amendment to the Professional Services Agreement with Dunaway Associates LLC for professional services associated with the construction of Phases 2 and 3 of the Project; said amendment providing for additional professional services to be rendered by Dunaway Associates LLC related to the increased Project scope and a new total cost of $2,660,750.00. Said amendment to be kept on file in the office of the City Secretary and referenced by the date and number of this resolution.

SECTION TWO. That the City Comptroller is hereby authorized and directed to pay Dunaway Associates LLC in accordance with the terms of the Professional Services Agreement, as amended, from funds available in the project established by Beal Park Renovation Project upon receipt of proper invoices or statements approved by the City Manager or his designee.

On motion of Council member _____, seconded by Council member _____, the above and foregoing resolution was adopted by the City Council of the City of Midland at a regular meeting on the _____ day of _____, A.D., 2025, by the following vote:

City Council Meeting

Item Number: 6

Meeting Date: September 9, 2025

To: City Council / City Manager

From: Erika Martinez, Manager, Purchasing

Subject: **RESOLUTION AWARDING A CONTRACT FOR THE BRIARWOOD AVENUE PHASE II PROJECT TO REECE ALBERT, INC. OF SAN ANGELO, TEXAS, AT A TOTAL COST OF $9,020,270.27; APPROVING $1,804,052.73 FOR CONTINGENCIES; APPROPRIATING FUNDS; AND AUTHORIZING PAYMENT (DISTRICT 4) (GENERAL SERVICES) (STRENGTHEN AND SUSTAIN OUR INFRASTRUCTURE)**

Purpose:

Resolution awarding a contract for Briarwood Ave Phase II Project to Reece Albert, Inc. of San Angelo, Texas, for a cost of $9,020,270.27 plus $1,804,052.73 in contingences, for a project cost of $10,824,323.00; and authorizing payment.

Recommended City Council Action:

Approve

Fiscal Impact:

Funding of $6,748,163.27 is available in the Paving of Briarwood Ave Project. $2,272,106.48 is available in the Impact Fee NW Fund, with remaining $1,804,053.95 provided from the 2017 Road Bond, which will be appropriated to a project/s for this purpose.

Strategic Priority:

(Strengthen and Sustain our Infrastructure)

Discussion:

Requests for bids were sent to three hundred twenty-five (325) contractors, and sixty (60) contractors viewed the bid. We received three (3) bids. Staff recommends awarding the Briarwood Paving Phase II Project, including the traffic signal at Briarwood and Avalon, to Reece Albert, Inc. of San Angelo, Texas, the lowest responsible bidder with a proven track record on similar city projects. Please see the attached memo from Gabe McClelland, Engineering Services Director, for more information.

Therefore, please consider a resolution awarding a contract for Briarwood Ave Phase II Project to Reece Albert, Inc. of San Angelo, Texas, for a cost of $9,020,270.27 plus $1,804,052.73 in contingences, for a project cost of $10,824,323.00; and authorizing payment.

Morris Williams Jr.

City Manager's Office

INTEROFFICE MEMORANDUM

TO: Erika Martinez; City of Midland, Purchasing Manager

FROM: Gabe McClelland; City of Midland, Director – Engineering Services

SUBJECT: Briarwood Paving Phase II ♦ Recommend to Award ♦ Eng. Project No. P21-06

DATE: September 09, 2025

Staff recommends awarding the Briarwood Paving Phase II Project, including the additive alternate for the traffic signal at the Briarwood and Avalon intersection, to the lowest responsible bidder, Reece Albert, Inc. of Midland, Texas.

Engineering staff have reviewed the bid tabulation for the Briarwood Paving Phase II project. Reece Albert, Inc. submitted the apparent lowest bid and has a proven track record with the City of Midland, successfully completing projects of similar scale and scope.

Funding of $6,748,163.27 is available in the Paving of Briarwood Ave Project. $2,272,106.48 is available in the Impact Fee NW Fund, with remaining $1,804,053.95 provided from the 2017 Road Bond, which will be appropriated to a project/s for this purpose..

The apparent successful bidder was selected based on the base bid amount of **$9,020,270.27** as outlined in the bidding documents. In addition, we would like to request that a 20% contingency in the amount of **$1,804,052.73** be allowed for value added changes to the project during construction. The total amount made available for the project would be **$10,824,323.00**.

RESOLUTION NO. _____

RESOLUTION AWARDING A CONTRACT FOR THE BRIARWOOD AVENUE PHASE II PROJECT TO REECE ALBERT, INC. OF SAN ANGELO, TEXAS, AT A TOTAL COST OF $9,020,270.27; APPROVING $1,804,052.73 FOR CONTINGENCIES; APPROPRIATING FUNDS; AND AUTHORIZING PAYMENT

WHEREAS, the City Manager approved the plans and specifications and advertised for competitive bids for the Briarwood Avenue Phase II Project (the "Project"); and

WHEREAS, Bid No. 25006037 was opened on August 15, 2025, with the lowest responsible bidder being Reece Albert, Inc. of San Angelo, Texas ("Contractor"), having submitted a bid of $9,020,270.27 for the base bid and additive alternate, as shown on the bid tabulation attached hereto as Exhibit A and incorporated herein for all legal purposes; and

WHEREAS, the total cost of the work to be completed, according to the previously advertised plans and specifications and the unit prices in Exhibit A, shall not exceed $9,020,270.27; and

WHEREAS, the City Council finds it to be in the public interest to execute a contract with Contractor for said Project;

NOW, THEREFORE, BE IT RESOLVED BY THE CITY COUNCIL OF THE CITY OF MIDLAND, TEXAS:

SECTION ONE. That the Mayor and City Secretary are hereby authorized and directed to execute and attest, respectively, on behalf of the City of Midland, a contract with Contractor for said Project at a total cost of $9,020,270.27, said contract being on file in the office of the City Secretary, referenced by the date and number of this resolution.

SECTION TWO. That the City Manager is hereby authorized and directed to execute, on behalf of the City of Midland, change orders to said contract if (1) each change order involves a decrease or an increase of $50,000.00 or less and (2) the change orders, in total, do not increase the original contract price by more than $1,804,052.73. The sum of $1,804,052.73 is approved for such contract contingencies.

SECTION THREE. That the sum of $6,748,163.27 is available in the Paving of Briarwood Ave Project, the sum of $2,272,106.48 is available in the Impact Fee NW Fund, and the sum of $1,804,053.95 is available in the 2017 Road Bond, which shall be appropriated to a project account for said Project.

SECTION FOUR. That the City Comptroller is hereby authorized and directed to pay Contractor pursuant to the terms of said contract and change orders executed in accordance with this resolution in an amount not to exceed $10,824,323.00 from funds available or appropriated as provided in Section Three hereof upon receipt of proper invoices or statements approved by the City Manager.

On motion of Council member _____, seconded by Council member _____, the above and foregoing resolution was adopted by the City Council of the City of Midland at a regular meeting on the _____ day of _____, A.D., 2025, by the following vote:

A Message for Our Vendors

The City of Midland, Texas has developed a strategic plan with long-term objectives, new mission and vision statements, and a course of action to carry out goals established by and for our community. This includes strategic priorities that will address our economy, infrastructure, quality of life, standards for a safe and secure city, plus much more that's detailed below. We hope you join us on this exciting journey and to be part of the energy toward a successful and prosperous Midland!

Vision Statement

The City of Midland will be the premier and safest city in West Texas by providing world-class municipal services through operational excellence and a culture of innovation.

Mission Statement

Deliver exceptional services and promote a high quality of life and place for ALL our citizens.

Guiding Principles: I-FORCE

Integrity
Financial Stewardship
Outstanding Service
Respect
Collaboration
Excellence

City Council Key Focus Areas

Communication • Customer Service
Economic Development
Fiscal Responsibility & Accountability
High-Performing City Team • Legislation
Quality of Place • Technology Improvements

Core Values

Commitment: Duty to the public good.
Engagement: Foster partnerships and collaboration.
Excellence: Practice continuous improvement.
Innovation: Embrace creativity and cutting-edge solutions.
Integrity: Operate with transparency and accountability.
Inclusivity: Ensure all voices are heard and valued.

Strategic Goals

1. Strong Economy with More Quality Jobs

1.1 Increase the Midland Sales Tax Base: Develop strategies to expand the tax base by attracting businesses and supporting local commerce.
1.2 Enhance Visitor Revenue Opportunities: Boost tourism through marketing and infrastructure improvements.
1.3 Continue Downtown and West Midland Redevelopment: Promote revitalization efforts for a vibrant downtown.
1.4 Nurture Development Districts: Establish key action plans honed to enhance Development Districts.
1.5 Grow the Core Business of Air Transportation: Develop and transform the Midland airport system.
1.6 Diversify Midland's Economy: Support initiatives that diversify the local economy and enhance resilience.
1.7 Expand Opportunities and Programming for General and Small Business: Foster the growth, retention, and expansion of local small businesses as well as business in general.
1.8 Improve Speed to Market for Citizens, Builders, Developers, and Contractors: Reduce wait times for permit review/approval and inspection process of permitted work.
1.9 Establish Our Community as a Premier Destination for Retail and Entertainment: Offer unique and compelling experiences that draw visitors, ultimately driving economic growth and community vibrancy, while increasing tourism and business development.

2. **Set the Standard for a safe and secure City**
   2.1 Enhance public safety programs.
   2.2 Improve Pedestrian and Motorist Safety: Invest in traffic management and infrastructure.
   2.3 Implement Effective Code Enforcement Strategies: Address nuisances to improve overall health and safety.
   2.4 Revitalize Neighborhoods: Utilize best practices to support the redevelopment of neighborhoods.
   2.5 Enhance Animal Services: Ensure the welfare of pets and wildlife in the city.
   2.6 Grow and Retain Public Safety Resources: Expand law enforcement presence as well as fire reduction and prevention programs while reducing attrition.
3. **Quality of Life and Place**
   3.1 Enhance Community Engagement: Champion innovative recreational, educational, and cultural programs that enrich residents' lives in partnership with the business community.
   3.2 Foster Relationships with Foundations and Outside Businesses: Collaborate to create world-class facilities and amenities.
   3.3 Create an Attractive and Inclusive Living Environment: Develop and enhance live, work, and play opportunities for our citizens.
   3.4 Establish Beautification Programs: Implement initiatives to make the community clean and bright.
   3.5 Nurture and Promote a Healthy Community: Increase healthy community living and education opportunities for citizens of all ages.
   3.6 Build the Best Parks System in Our Region: Offer diverse, accessible, and enjoyable green spaces, tournament-ready ball fields, safe playgrounds, and unique recreational opportunities that enhance the quality of life/quality of place for our community.
4. **Transparent and Consistent Communication**
   4.1 Set a Climate of Respect, Collaboration, and Team Spirit: Cultivate a culture of openness and respect.
   4.2 Enhance Communication Efficiency and Effectiveness: Leverage and expand the use of technology to facilitate the exchange of information.
   4.3 Elevate Internal Communication and Employee Engagement: Strengthen information flow and collaboration among city staff.
   4.4 Advance Two-Way Communication of Key Messages: Engage effectively with external stakeholders; foster community engagement.
   4.5 Strengthen Messaging Opportunities Through Various Media Outlets: Communicate the city's achievements and initiatives.
5. **Provide Sound Governance and Fiscal Management**
   5.1 Recruit and Retain a Skilled and Diverse Workforce: Invest in talent and diversity; grow our local pipeline of skilled employees.
   5.2 Enhance Citizen Experience: Improve employee working conditions to better serve citizens.
   5.3 Hone Public Servant Proficiency: Cultivate a culture of professional growth, skilled mastery, and information exchange.
   5.4 Implement Cutting-Edge Practices: Harness automation and Artificial Intelligence technology for efficient resource utilization.
   5.5 Promote a Well-Balanced Customer Service Philosophy: Consistently deliver excellent service to residents.
   5.6 Deliver Services Timely and Efficiently: Prioritize continuous improvement.
   5.7 Ensure Continued Financial Stability and Accountability: Maintain financial transparency.
   5.8 Deliver Effective and Efficient Processes: Maximize value in procurement.
   5.9 Ensure Reliability and Safety: Maintain existing assets and develop new city asset opportunities, including parks and other facilities, with a standard of excellence.
   5.10 Create a Work Environment that Supports Bleeding-Edge Practices: Encourage bleeding-edge practice that then cultivates an environment where employees can learn from their experiences and improve processes; thus, becoming a learning organization.
6. **Strengthen and Sustain Our Infrastructure**
   6.1 Provide Reliable and Sustainable Utilities: Guarantee water supply and distribution systems security and longevity.
   6.2 Enhance Infrastructure for Economic Growth: Improve competitiveness through infrastructure investments that includes collaboration with neighboring jurisdictions and exemplary peer agencies.
   6.3 Streamline and Consolidate City Facilities: Create synergy for improved services.
   6.4Standardize Infrastructure Processes Across the City: Ensure consistency, timeliness, and accountability in infrastructure development.
   6.5 Implement a Funding Stream for Infrastructure: Establish reliable funding for continual improvements.
   6.6 Strategize for and Monitor City Growth: Develop proactive responses to growth rather than reactive.
   6.7 Develop and Implement Comprehensive Road Planning and Maintenance Initiatives: Ensure safe and maintained roads for existing and new developing areas and main thoroughfares.

BID NOTICE

ATTENTION: All bidders who choose to submit bids digitally for this project must submit their bids through the City of Midland's online procurement portal. The City of Midland's online procurement portal can be accessed at:

https://midlandtexas.bonfirehub.com/

ATTENTION: All bidders who choose to mail bid packets must address them to one of the addresses below:

USPS Mailing Address:		***Physical Address for mail carriers other than USPS:***
City of Midland, Texas		**City of Midland, Texas**
Attn: City Secretary's Office	**OR**	**Attn: City Secretary's Office**
P O Box 1152		**300 North Loraine St, Suite 330**
Midland, TX 79702		**Midland, TX 79701**

ATTENTION: All bidders who choose to deliver bid packets in person must drop the bid packets off at the first-floor front desk of City Hall before the bid opening deadline.

Sealed proposals, addressed to the Mayor and City Council of the City of Midland, Texas, for the furnishing of materials and labor together with other miscellaneous and appurtenant work will be received at the office of the City Secretary, City Hall, Midland, Texas, until 2:00 p.m. on the 16th day of July 2025, and publicly opened and read aloud at that time.

Delivery of Submittals

Bid packets must be received in the City Secretary's Office no later than July 16, 2025, at 2:00 p.m. Bidders are responsible for the means of timely delivering the bid packet. Delays due to any instrumentality used to transmit the bid packet (e.g., delay occasioned by a bidder, City's internal mailing system, etc.) are the sole responsibility of the bidder. **Late bid packets will not be accepted under any circumstances.**

ATTENTION: The public bid opening will be in the City Council Meeting Chambers.

The Proposed Work provides for the furnishing of materials and labor for BRIARWOOD PAVING PHASE II together with other miscellaneous and appurtenant work.

ATTENTION: A NON-MANDATORY PRE-BID MEETING will be held at 3:00 p.m. on Tuesday, July 9th, 2025, in the basement conference room of City Hall, 300 N. Loraine Street, Midland, Texas.

ATTENTION: All questions submitted before or after the Non-Mandatory Pre-Bid Meeting must be submitted via email to the following email address:

purchasing@midlandtexas.gov

The deadline for submitting additional questions after the Non-Mandatory Pre-Bid Meeting is Noon on Friday, July 11, 2025. Questions submitted before the Noon deadline will be included in the Addendum that will go

out that same day along with all discussion items, questions, answers, and any new information resulting from the Non-Mandatory Pre-Bid Meeting. Questions submitted after the Noon deadline will not receive any additional information and will instead only be directed to the information already provided.

Bids will be received on a unit price basis.

No Bid may be withdrawn within a period of 60 days after the date fixed for opening Bids.

"FAX" or telephone bids or modifications will not be accepted.

Bid Envelopes shall be plainly marked "Proposal for City of Midland".

ATTENTION: Information for bidders, proposal forms, specifications, and plans may be obtained by emailing purchasing@midlandtexas.gov.

A bid bond or proposal guaranty is to accompany the bid, thereby guaranteeing the good faith of the bidder and that the bidder will enter into the written contract. The guaranty is to amount to five percent (5%) of the total bid and must be in the form of cash or certified check, issued by a bank satisfactory to the City of Midland, or bid bond. If in the form of cash or certified check, it is expressly understood and agreed that the City of Midland is given the right to retain such as liquidated damages if such bidder withdraws its bid anytime after such bid is opened and before official rejection of such bid, or if successful in securing the awarded thereof, such bidder fails to enter into the contract and furnish satisfactory performance and payment bonds. If a bid bond is submitted, it shall be executed on forms contained in these contract documents by a corporate surety authorized to do business in the State of Texas and acceptable to the City of Midland.

WAIVER OF ATTORNEY FEES

BY SUBMITTING A BID, BIDDER AGREES TO WAIVE AND DOES HEREBY KNOWINGLY, CONCLUSIVELY, VOLUNTARILY AND INTENTIONALLY WAIVE ANY CLAIM IT HAS OR MAY HAVE IN THE FUTURE AGAINST THE OWNER, REGARDING THE AWARD OF ATTORNEY'S FEES, WHICH ARE IN ANY WAY RELATED TO THE CONTRACT, OR THE CONSTRUCTION, INTERPRETATION OR BREACH OF THE CONTRACT. THE BIDDER SPECIFICALLY AGREES THAT IF THE BIDDER BRINGS OR COMMENCES ANY LEGAL ACTION OR PROCEEDING RELATED TO THIS CONTRACT, THE CONSTRUCTION, INTERPRETATION, VALIDITY OR BREACH OF THIS CONTRACT, INCLUDING BUT NOT LIMITED TO ANY ACTION PURSUANT TO THE PROVISIONS OF THE TEXAS UNIFORM DECLARATORY JUDGMENTS ACT (TEXAS CIVIL PRACTICE AND REMEDIES CODE SECTION 37.001, ET. SEQ., AS AMENDED), OR CHAPTER 271 OF THE TEXAS LOCAL GOVERNMENT CODE, THE BIDDER AGREES TO ABANDON, WAIVE AND RELINQUISH ANY AND ALL RIGHTS TO THE RECOVERY OF ATTORNEY'S FEES TO WHICH BIDDER MIGHT OTHERWISE BE ENTITLED.

BIDDER AGREES THAT THIS IS THE VOLUNTARY AND INTENTIONAL RELINQUISHMENT AND ABANDONMENT OF A PRESENTLY EXISTING KNOWN RIGHT. THE BIDDER ACKNOWLEDGES THAT IT UNDERSTANDS ALL TERMS AND CONDITIONS OF THE CONTRACT. THE BIDDER FURTHER ACKNOWLEDGES AND AGREES THAT THERE WAS AND IS NO DISPARITY OF BARGAINING POWER BETWEEN THE OWNER AND THE BIDDER. THIS SECTION SHALL NOT BE CONSTRUED OR INTERPRETED AS A WAIVER OF SOVEREIGN IMMUNITY.

THE BIDDER AND OWNER ARE RELYING ON THEIR OWN JUDGMENT. EACH PARTY HAD THE OPPORTUNITY TO DISCUSS THIS CONTRACT WITH COMPETENT LEGAL COUNSEL PRIOR TO ITS EXECUTION.

WAIVER

BIDDER'S WAIVER:

BY SUBMITTING A BID, THE BIDDER AGREES TO WAIVE AND DOES HEREBY VOLUNTARILY AND INTENTIONALLY WAIVE, ABANDON AND RELINQUISH ANY CLAIM THE BIDDER HAS OR MAY HAVE IN THE FUTURE AGAINST THE CITY OF MIDLAND, TEXAS, AND THE CITY'S EMPLOYEES, AGENTS AND OFFICERS, ARISING OUT OF OR IN ANY WAY CONNECTED WITH THE FOLLOWING:

1. **THE ADMINISTRATION, EVALUATION OR RECOMMENDATION OF ANY BID;**

2. **WAIVER OR DELETION OF ANY OF THE REQUIREMENTS UNDER THE BID DOCUMENTS OR THE CONTRACT DOCUMENTS;**

3. **ACCEPTANCE OR REJECTION OF ANY BIDS; OR**

4. **AWARD OF THE CONTRACT**

BY SUBMITTING A BID, THE BIDDER ACKNOWLEDGES THAT THE BIDDER UNDERSTANDS ALL OF THE TERMS OF THE BIDDING DOCUMENTS AND CONSENTS TO THE BIDDING PROCESS AND THE POSSIBILITY OF A NEGATIVE ASSESSMENT. BY SUBMITTING A BID, THE BIDDER ACKNOWLEDGES AND AGREES THAT THERE WAS AND IS NO DISPARITY OF BARGAINING POWER BETWEEN THE BIDDER AND THE CITY OF MIDLAND, TEXAS. THE BIDDER AGREES THAT THIS IS THE INTENTIONAL RELINQUISHMENT OF A PRESENTLY EXISTING KNOWN RIGHT. BY SIGNING THE REQUEST FOR BID AND/OR BELOW, YOUR COMPANY AGREES TO THE ABOVE WAIVER(S).

City of Midland

Marcia Bentley-German
City Secretary

Revised June 2025

INSTRUCTION AND INFORMATION FOR BIDDERS

1. LOCATION AND EXTENT OF WORK

The work and construction contemplated to be accomplished under this Contract is located in the City of Midland, Texas, and consists of municipal public works projects as set forth in the proposal.

The location and details for the construction and related work are shown on a set of drawings named Briarwood Ave Phase II set dated 06/16/2025 and numbered from 001 (1) through 183 (187) inclusive, and a set of drawings named Avalon Drive & Briarwood Ave. Traffic Signal Project set dated 05/19/25 and numbered C100 (1) through C223 (32) inclusive. These drawings and plans, together with the specifications, form a part of the Contract. Where figures are shown on the drawings, they shall take precedence over scaled distances and dimensions.

2. TIME AND PLACE OF RECEIVING BIDS

All bids shall be sealed, addressed to the Mayor and City Council of the City of Midland, Texas, and will be received by the City Secretary in her office at City Hall, 300 N. Loraine Street, Midland, Texas, mailing address is P.O. Box 1152, Midland, Texas 79702, until time stated on the Advertisement for Bids.

3. PREPARATION OF BID FORM

Bids shall be submitted only on the forms provided therefore in the Contract Documents, and must not be submitted in letter form or in any other form. They shall be filled out in ink in both script and figures. The Proposal form provided in the Contract Documents sets forth in detail the various items and approximate quantities thereof contained in the Project. Bids submitted in any other form will be considered irregular and will be returned to the Bidder without receiving consideration by the Owner.

All bids must be submitted in sealed envelopes bearing on the outside the name of the Bidder, his address, and the name of the Project for which the bid is submitted. It is the sole responsibility of the Bidder to see that his bid is received in proper time. Any bid received after the scheduled closing time for receipt of bids will be returned to the Bidder unopened.

The bid must be signed in the name of the Bidder and must bear the signature in longhand of the persons duly authorized to sign the bid.

Changes in or additions to the bid form, recapitulations of the work bid upon, alternative proposals, or any other modification of the bid form which is not specifically called for in the Contract Documents may result in the Owner's rejection of the bid as not being responsive to the invitation. No oral or telephonic modification of any bid submitted will be considered and a telegraphic modification may be considered only if the postmark evidences that a confirmation of the telegram duly signed by the Bidder was placed in the mail prior to the opening of bids.

The bid submitted must not contain any erasures, interlineations or other corrections unless each such correction is suitably authenticated by affixing in the margin immediately opposite the correction the surnames of the person or persons signing the bid.

4. EXAMINATION OF SITE, DRAWINGS, ETC

Each Bidder is requested to visit the site of the proposed work and fully acquaint himself with the conditions relating to the construction and labor so that he may fully understand the facilities, difficulties and restrictions attending the execution of the work under the Contract. Bidders shall thoroughly examine and be familiar with the Plans and the Specifications. The failure or omission of any Bidder to receive or examine any form, instrument, addendum or other document or to visit the site and acquaint himself with conditions there existing shall in no way relieve any Bidder from obligations with respect to his bid or to the Contract. The submission of a bid shall be taken as prima-facie evidence of compliance with this section.

5. WITHDRAWAL OF BIDS

Any Bidder may withdraw his bid, either personally, by written request, or by telegraphic request confirmed in the manner specified above, at any time prior to the scheduled closing time for receipt of bids.

6. AGREEMENT AND BONDS

The successful Bidder will be required to furnish a Performance Bond, and a Payment Bond, in an amount equal to one hundred percent (100%) of the total Contract price, such bond to be executed in five (5) original counterparts by a Corporate Surety authorized to do business in the State of Texas, and acceptable to the City of Midland. All Bonds must be executed on forms contained in these Contract Documents. The form of Agreement which the successful Bidder, and Contractor will be required to execute is also included herewith. The form of Agreement and the form of the Bonds should be carefully examined by the Bidder.

7. INTERPRETATION OF PLANS AND DOCUMENTS

If any person contemplating submitting a bid for the proposed Contract is in doubt as to the true meaning of any part of the Plans, Specifications, or other Contract Documents or finds discrepancies in, or omissions from the Plans or Specifications, he may submit to the Owner written request for an interpretation or correction thereof. The person submitting the request will be responsible for its prompt delivery. Any interpretation or correction of the Contract Documents will be made only by Addendum duly issued and a copy of such addendum will be mailed or delivered to each person receiving a set of such Contract Documents. The Owner will not be responsible for any other explanations or interpretations of the Contract Documents. No oral interpretations of any provision in the Contract Documents will be made to any Bidder.

8. BIDDERS INTERESTED IN MORE THAN ONE BID

No person, firm or corporation shall be allowed to make, or file more than one bid for the same work unless alternate bids are specifically called for. A person, firm or corporation that has submitted a sub-proposal to a Bidder, or that has quoted prices of materials to a Bidder is not thereby disqualified from submitting a sub-proposal or quoting prices to other Bidders or making a prime proposal.

9. AWARD OF CONTRACT

The Owner reserves the right to reject any or all bids submitted and not make an award. The Owner also reserves the privilege of accepting any item as a separate contract or the combination of items of a contract. The Owner and Bidder agree that, if the Contract is awarded, that it will be awarded to either the lowest responsible bidder/proposer, or to the bidder/proposer who provides goods or services at the best value for the

City of Midland. In determining the best value for the City of Midland, the City of Midland may consider the criteria enumerated in Section 252.043 of the Texas Local Government Code. Further, the Owner reserves all rights granted by Section 271.027 of the Texas Local Government Code. The Owner reserves the right to award the bid to the lowest responsible bidder.

10. OPENING OF BIDS

Bidders are invited to be present at the opening of the Proposals. All Proposals shall be made and received with the understanding that the Bidder accepts the terms and conditions contained in the Contract Documents.

11. COMPARISON OF BIDS

All bids will be compared on the basis of the Proposal.

12. BID GUARANTY

A Certified Check, Bank Money Order, issued by a bank satisfactory to the Owner, or a Bidder's Bond on the form provided and approved by the City Attorney, in the amount of five percent (5%) of the largest possible lump sum bid submitted, payable without recourse to the Owner, must accompany the Bidder's Proposal, as a guaranty that the Bidder will enter into a Contract and execute the required Performance Bond and Guaranty in the forms provided within fifteen (15) days after notice of award of Contract to him. Bids or Proposals without the required Bid Guaranty will not be considered. All Proposals shall remain in effect for a period of thirty (30) days after date of bid opening.

13. CONTRACT DOCUMENTS

The complete Contract Documents may include the following: (1) Notice to Bidders, (2) Instructions and Information for Bidders, (3) Proposal, (4) Experience Record, (5) Bid Bond, (6) Contract Agreement, (7) Performance Bond, (8) Payment Bond, (9) Insurance Certificate, (10) General Conditions, (11) Special Conditions, (12) Detailed Specifications all of which are bound together, and/or (13) Certificate of Payment. The Contract Documents shall also include Drawings or Detailed Plans for the proposed work. A complete set of the Contract Documents and the detailed plans are on file in the Office of the City Secretary.

14. TIME ELEMENT

The work to be done under this Contract shall be commenced within fifteen (15) days from the date of the notice from the City to the Contractor to commence work. The Contractor shall commence performance of the Contract on the date stated in the City's notice to the Contractor to proceed and shall complete the performance of the Contract without delay.

15. PAYMENTS

Payments to the Contractor will be based upon the prices stated in the proposal and upon basis of the work performed as determined by the Engineer. The Engineer's determination shall be considered as final unless changes are authorized by the City in writing which shall affect the work. Upon issuance of the Certificate of Completion, the Engineer shall proceed to take final measurements and prepare a final statement of the value of all work performed and materials furnished under the terms of the agreement and shall certify same to the Owner who shall pay to the Contractor on or after the 30th day, and before the 35th day, after the date of the

Certificate of Completion, the balance due the Contractor under the terms of this agreement, provided he has fully performed his contractual obligations under the terms of this Contract, and said payment shall become due in any event upon said performance by the Contractor. Notwithstanding any provision of these Contract documents to the contrary, it is expressly understood and agreed by the parties hereto that neither the Certificate of Acceptance, nor the final or any other payment hereunder, nor any partial or total occupancy or possession of the project by the Owner, shall relieve the Contractor of his responsibility for completion of the entire project in a good workmanlike manner and in full compliance with the plans and specifications and the fulfillment of any warranties which may be required in the Contract documents.

Revised June 2025

NOTICE TO BIDDERS

IF THIS PURCHASE REQUIRES A CONTRACT, THE ATTACHED **CONTRACT AND INSURANCE REQUIREMENTS ARE NON-NEGOTIABLE**. MODIFICATIONS BY BIDDER/CONTRACTOR OF ANY MATERIAL TERM(S) TO THE CONTRACT DOCUMENTS WILL BE DEEMED A NON-RESPONSIVE BID. NON-RESPONSIVE BIDS WILL BE REJECTED. BIDDER/CONTRACTOR MUST BE WILLING TO SIGN THE CONTRACT AS IS AND WITHOUT MODIFICATIONS, PROVIDE PROPERLY EXECUTED BONDS (IF APPLICABLE) AND PROVIDE INSURANCE SPECIFICALLY AS REQUIRED WITHIN THE CONTRACT DOCUMENTS **WITHIN 21 DAYS** OF THE DATE OF THE TRANSMITTAL LETTER.

IF THE SELECTED BIDDER/CONTRACTOR CANNOT MEET THE ABOVE REQUIREMENTS, THEN **THE CITY RESERVES THE RIGHT TO AWARD THIS PURCHASE TO ANOTHER BIDDER**.

IMPORTANT NOTICE – IF THE CONTRACT DOCUMENTS REQUIRE WORKER'S COMPENSATION INSURANCE, BIDDER/CONTRACTOR MUST CARRY WORKER'S COMPENSATION INSURANCE TO BE ELIGIBLE FOR THIS CONTRACT. IF YOU CANNOT PROVIDE WORKER'S COMPENSATION INSURANCE AS REQUIRED BY STATE OF TEXAS STATUTE, WE RESPECTFULLY REQUEST THAT YOU "NO BID" THIS WORK.

COMPLIANCE: Company agrees that it shall comply with Texas Government Code Section 2252.908, *et seq.*, as amended. Company agrees that it shall comply with Texas Local Government Code Section 176.006, *et seq.*, as amended. For further instructions on how to comply with Texas Government Code Section 2252.908 and Texas Local Government Code Section 176.006,

please go to https://www.ethics.state.tx.us/whatsnew/elf_info_form1295.htm and https://www.ethics.state.tx.us/filinginfo/conflict_forms.htm.

ANY VENDOR WHO FAILS TO COMPLY WITH THE TERMS OF THE AWARD **MAY BE DECLARED AN IRRESPONSIBLE VENDOR**. BIDS SUBMITTED BY SAID VENDOR SHALL NOT BE CONSIDERED AGAIN FOR A MINIMUM PERIOD OF SIX MONTHS AS DETERMINED BY THE CITY MANAGER.

CITY OF MIDLAND

Consideration of Location of Bidder's Principal Place of Business
For Bids of $50,000 up to $100,000 for Services and $500,000 for Commodities
Affidavit of Eligibility

Pursuant to Texas Local Government Code 271.9051, in purchasing real property, personal property that is not affixed to real property, or services, if the City receives one or more bids from a bidder whose principal place of business is in the City of Midland and whose bid is within five percent (5%) of the lowest bid price received by the City from a bidder who is not a resident of the City of Midland, the City may enter into a contract with:

(1) the lowest bidder; or

(2) the bidder whose principal place of business is in the City of Midland if the City Council determines, in writing, that the local bidder offers the City the best combination of contract price and additional economic development opportunities for the City of Midland created by the contract award, including the employment of residents of the City of Midland and increased tax revenues to the City of Midland.

In order to receive consideration, bidders must submit this affidavit to:

Erika Martinez
Purchasing Manager
City of Midland
300 N. Loraine St.,
PO BOX 1152
Midland, TX 79702-1152

Complete all areas below. Incomplete affidavits may be rejected.

PROPOSAL

Project Name: BRIARWOOD AVE PHASE II
Project Number: P21-06

TO: Honorable Mayor and City Council
City of Midland
Midland, Texas

Gentlemen: The undersigned bidder, having examined the drawings, specifications, and contract documents, the location of the proposed work, and being fully advised as to the extent and character of the work, proposes to furnish all material, equipment, and to perform all labor and work necessary for the completion of the construction of the work described by and in accordance with the attached drawings, specifications, and contract, for the following prices, to wit:

(See Bid Items sheets for Proposal's item breakdowns, descriptions, quantities, units, unit prices, total amounts, and Pay Notes references.)

For the sum of Nine Million Twenty Thousand Two Hundred Seventy _____ dollars
and Twenty Seven _____ cents total.

The undersigned bidder hereby declares that he has visited the site of the work and has carefully examined the contract documents pertaining to the work covered by the above bid. The selected contractor will receive written notice to proceed.

Bidders agree to substantially complete all work within 540 calendar days after reciept of notice to proceed.

PUBLIC INFORMATION

To the extent that Bidder is submitting a bid for a contract described by Section 552.371 of the Texas Government Code, Bidder agrees as follows in accordance with Section 552.372(b) of the Texas Government Code: The requirements of Subchapter J, Chapter 552, Government Code, may apply to this this bid, and the contractor or vendor agrees that the contract can be terminated if the contractor or vendor knowingly or intentionally fails to comply with a requirement of that subchapter.

Enclosed herewith in this proposal is a cashier's check, cash or bid bond on a form approved by the City Attorney, for Five percent (5%) of the Largest Possible Lump Sum Bid Submitted _____ dollars
and _____ cents total. ($ 5% of Largest Lump Sum bid) which it is agreed shall be collected and retained by the owner as liquidated damages in the event this proposal is accepted by the Owner within thirty days (30) after the date advertised for the reception of bids and the undersigned fails to execute the contract and required bonds with the owner, under the conditions thereof, within (15) days after the date said proposal is accepted; otherwise said check or bond shall be returned to the undersigned on demand.

5)	Knox Lock, furnished, installed, complete and in place.	1	EA	ST5	$1,094.19	$1,094.19
6)	Relocate Mailbox Foundation, furnished, installed, complete and in place.	4	EA	ST6	$503.83	$2,015.32
Total Structural Items 1 - 6		$59,750.83				

Paving Items						
Item No.	Description	Quantity	Unit	Pay Note	Unit Price	Total Amount
1)	Subgrade Preparation (Depth :: 6"), furnished, installed, complete and in place.	86159	SY	P1	$2.03	$174,902.77
2)	Unclassified Embankment (Density Controlled), furnished, installed, complete and in place.	11500	CY	P2	$5.10	$58,650.00
3)	8" Jointed Concrete Pavement, furnished, installed, complete and in place.	2276	SY	P3	$111.07	$252,795.32
4)	2" Type D HMAC Asphalt Pavement Surface Course (PG70-22, 110 LBS / SY @ 1" Thick), furnished, installed, complete and in place.	65536	SY	P4	$16.09	$1,054,474.24
5)	3" Type C HMAC Asphalt Pavement Surface Course (PG64-22, 110 LBS / SY @ 1" Thick), furnished, installed, complete and in place.	65536	SY	P5	$23.84	$1,562,378.24
6)	6" Temporary Type B HMAC Asphalt Pavement Surface Course (PG64-22, 110 LBS / SY @ 1" Thick), furnished, installed, complete and in place.	3427	SY	P6	$43.15	$147,875.05
7)	10" Flexible Base (Type A, Grade 4), furnished, installed, complete and in place.	82732	SY	P7	$13.33	$1,102,817.56
8)	Bituminous Prime Coat (MC-30, 0.20 Gal / SY), furnished, installed, complete and in place.	22421	GAL	P8	$5.37	$120,400.77
9)	Tack Coat (MC-30, 0.10 Gal / SY), furnished, installed, complete and in place.	6554	GAL	P9	$2.80	$18,351.20
10)	4" Stamped Concrete Median, furnished, installed, complete and in place.	10633	SY	P10	$66.48	$706,881.84
11)	4" Concrete Median, furnished, installed, complete and in place.	995	SY	P11	$12.83	$12,765.85
12)	8" Concrete Fillet, furnished, installed, complete and in place.	815	SY	P12	$97.62	$79,560.30
13)	8" Concrete Valley Gutter, furnished, installed, complete and in place.	641	SY	P13	$96.90	$62,112.90
14)	6" Concrete Driveway Approach, furnished, installed, complete and in place.	1700	SY	P14	$64.15	$109,055.00
15)	Type A Concrete Curb & Gutter, furnished, installed, complete and in place.	18154	LF	P15	$18.74	$340,205.96
16)	Type C Concrete Curb & Gutter, furnished, installed, complete and in place.	15784	LF	P15	$19.47	$307,314.48
17)	Type I Concrete Curb & Gutter, furnished, installed, complete and in place.	629	LF	P15	$31.94	$20,090.26
18)	Concrete Pedestrian Access Ramp, furnished, installed, complete and in place.	327	SY	P16	$109.34	$35,754.18
19)	Manhole Ring & Cover Adjustment, furnished, installed, complete and in place.	18	EA	P17	$1,467.74	$26,419.32
20)	Water Valve Box Ring & Cover Adjustment, furnished, installed, complete and in place.	28	EA	P17	$830.15	$23,244.20
21)	6" Temporary Flexible Base (Type A, Grade 4), furnished, installed, complete and in place.	356	SY	P7	$19.96	$7,105.76
Total Paving Items 1 - 21		$6,223,155.20				

Traffic Control Items						
Item No.	Description	Quantity	Unit	Pay Note	Unit Price	Total Amount
1)	Eliminate Existing Pavement Markings and Markers (Line Markings), furnished, installed, complete and in place.	66995	LF	T1	$0.89	$59,625.55
2)	Retroreflectorized Pavement Markings, TxDOT Item 666 (24" White, Solid), furnished, installed, complete and in place.	318	LF	T2	$17.78	$5,654.04
3)	Retroreflectorized Pavement Markings, TxDOT Item 666 (8" White, Solid), furnished, installed, complete and in place.	2813	LF	T2	$1.48	$4,163.24
4)	Retroreflectorized Pavement Markings, TxDOT Item 666 (12" Yellow, Solid), furnished, installed, complete and in place.	112	LF	T2	$11.85	$1,327.20
5)	Retroreflectorized Pavement Markings, TxDOT Item 666 (8" White, LNDP), furnished, installed, complete and in place.	250	LF	T2	$2.37	$592.50
6)	Thermoplastic Pavement Markings, TxDOT Item 666 (6" White, Solid), furnished, installed, complete and in place.	17857	LF	T3	$1.16	$20,714.12
7)	Thermoplastic Pavement Markings, TxDOT Item 666 (6" White, Broken), furnished, installed, complete and in place.	4630	LF	T3	$1.16	$5,370.80
8)	Thermoplastic Pavement Markings, TxDOT Item 666 (6" Yellow, Solid), furnished, installed, complete and in place.	2027	LF	T3	$1.16	$2,351.32
9)	Prefabricated Pavement Markings, TxDOT Item 666 (White, Arrow Symbol), furnished, installed, complete and in place.	27	EA	T4	$444.55	$12,002.85
10)	Prefabricated Pavement Markings, TxDOT Item 666 (White, Bike Lane Symbol), furnished, installed, complete and in place.	36	EA	T4	$355.64	$12,803.04
11)	In Road Sign Assembly (SUP&AM [Type S80(1)SB(p)]), furnished, installed, complete and in place.	45	EA	T5	$1,023.07	$46,038.15
12)	Remove Sign Assembly, furnished, installed, complete and in place.	12	EA	T6	$88.91	$1,066.92
13)	Retroreflective Raised Pavement Marker (Type II-C-R), furnished, installed, complete and in place.	463	EA	T7	$8.89	$4,116.07
14)	Utility Duct Bank, furnished, installed, complete and in place.	288	LF	T8	$195.48	$56,298.24
15)	Type C Ground Box (162911) With Apron, furnished, installed, complete and in place.	4	EA	T9	$2,667.32	$10,669.28
16)	Delineator Assembly (OM-2Y)(WC)GND(BI), furnished, installed, complete and in place.	10	EA	T10	$67.57	$675.70
17)	Delineator Assembly (8' Permenant Type III Barricade), furnished, installed, complete and in place.	6	EA	T10	$749.22	$4,495.32
18)	Temporary Workzone Pavement Markings, furnished, installed, complete and in place.	1	LS	T11	$69,812.73	$69,812.73
Total Traffic Control Items 1 - 18		$317,777.07				

Price For:	
1. Miscellaneous Items	$1,002,838.16
2. Demolition Items	$511,307.06
3. Storm Drain Items	$491,027.43
4. Structural Items	$59,750.83

PAY QUANTITY NOTES

M1 Includes the necessary equipment, labor, materials, and incidentals for all Mobilization to the job site complete and in place. Measurement and payment to be made per lump sum.

M2

Pay Note Removed

M3 Includes the necessary equipment, labor, materials, and incidentals for the installation of Pipe Conduit per the construction drawings and City of Midland standards and specifications, including all trenching, embedment, backfill, and appurtenances. Measurement and payment to be per linear foot measured along the ground surface following the pipe centerline through all boxes, fittings, structures, and appurtenances.

M4 Includes the necessary equipment, labor, materials, and incidentals to implement the Erosion Control Plan per the construction drawings and City of Midland standards and specifications. Measurement and payment to be made per lump sum.

M5 Includes the necessary equipment, labor, materials, and incidentals to implement the Traffic Control per the approved Traffic Control Plan. Any required traffic control devices are to meet the City of Midland Traffic Division Standards. Measurement and payment to be made per lump sum.

M6 Includes the necessary equipment, labor, materials, and incidentals to implement Job Site Safety and to provide a safe work environment for the project work area (including all personal protection equipment, trench safety, etc.) per the construction drawings and in compliance with all applicable Federal, State, and Local requirements or regulations including those of OSHA and the City of Midland. JOB SITE SAFETY IS THE RESPONSABILITY OF THE CONTRACTOR. Measurement and payment to be made per lump sum.

M7 Includes the necessary equipment, labor, materials, and incidentals for Seeded Erosion Control Mats per the construction drawings and City of Midland standards and specifications, including all removal, storage, and replacement of existing topsoil as well as all mats, seeding, staking, and appurtenances. Watering is addressed in a separate pay note. Measurement and payment to be made per square yard measured along the ground surface.

M8 Includes the necessary equipment, labor, materials, and incidentals for Seeding & Stabilization per the construction drawings and City of Midland standards and specifications, including all removal, storage, and replacement of existing topsoil as well as all seeding and appurtenances. Watering is addressed in a separate pay note. Measurement and payment to be made per square yard measured along the ground surface.

M9 Includes the necessary equipment, labor, materials, and incidentals for Spray Watering per the construction drawings and City of Midland standards and specifications, including all appurtenances. Measurement and payment to be made per lump sum.

D1 Includes the necessary equipment, labor, materials, and incidentals for Preparation of Right-of-Way per the construction drawings and City of Midland standards and specifications including removal and disposal of all obstructions from the right-of-way and easements where removal of such obstructions is not indicated in the consturction drawings, all scraping and preservation of top soil, and including all clearing, grubbing, and appurtenances. Measurement and payment to be made per acre measured along the ground surface.

D2 Includes the necessary equipment, labor, materials, and incidentals for Unclassified Excavation per the construction drawings and City of Midland standards and specifications including all existing sub-structure removal, unclassified excavation, material removal, and appurtenances. Measurment and payment to be per square yard measured along the ground surface.

D3 Includes the necessary equipment, labor, materials, and incidentals for Unclassified Excavation per the construction drawings and City of Midland standards and specifications including all existing sub-structure removal, unclassified excavation, material removal, and appurtenances. Measurment and payment to be per square yard of material removed.

D4 Includes the necessary equipment, labor, materials, and incidentals for Unclassified Excavation per the construction drawings and City of Midland standards and specifications including all existing pavement and sub-structure removal, unclassified excavation, material removal, and appurtenances. Measurment and payment to be per cubic yard of material removed.

D5 Includes the necessary equipment, labor, materials, and incidentals for the Removal & Disposal of Existing Unclassified Pavement per the construction drawings and City of Midland standards and specifications including all pavement removal, saw-cutting, and appurtenances. Depths given are approximate and pavement material is to be removed in its entirety. No additional compensation will be made for increased pavement depth removal. Measurement and payment to be made per square yard measured along the ground surface.

D6 Includes the necessary equipment, labor, materials, and incidentals for the Removal & Disposal of Existing Miscellaneous Concrete per the construction drawings and City of Midland standards and specifications, including all appurtenances. Measurement and payment to be made per square yard measured along the ground surface.

D7 Includes the necessary equipment, labor, materials, and incidentals to Remove & Dispose of Existing Fence And Gate per the construction drawings and City of Midland standards and specifications, including removal of all, columns, posts, foundations, anchors, gates, frames, and structures as well as all excavation, backfill, cutting, and appurtenances. Measurement and payment to be made per linear foot measures along the ground surface following the fence centerline through all structures and appurtenances.

SD1 Includes the necessary equipment, labor, materials, and incidentals for the installation of Reinforced Concrete Box Culvert per the construction drawings and City of Midland standards and specifications, including all embedment, detector wire, tracer tape, necessary testing, and appurtenances. Measurement and payment to be made per linear foot measured along the ground surface following the box culvert centerline through all structures and appurtenances.

SD2 Includes the necessary equipment, labor, materials, and incidentals for the installation of Storm Drains per the construction drawings and City of Midland standards and specifications, including all embedment, detector wire, tracer tape, necessary testing, and appurtenances. Measurement and payment to be made per linear foot measured along the ground surface following the pipe centerline through all structures and appurtenances.

SD3 Includes the necessary equipment, labor, materials, and incidentals for the installation of a Reinforced Concrete Headwall per the construction drawings and City of Midland standards and specifications, including all forms, reinforcment, placement, sealing, finishing, and appurtenances. Measurement and payment to be made per each concrete headwall installed.

SD4 Includes the necessary equipment, labor, materials, and incidentals for the installation of a Headwall Safety End Treatment per the construction drawings and City of Midland standards and specifications, including all forms, reinforcment, placement, sealing, finishing, and appurtenances. Measurement and payment to be made per each headwall safety end treatment installed.

SD5 Includes the necessary equipment, labor, materials, and incidentals for Open Trenching of Storm Drain per the construction drawings and City of Midland standards and specifications, including all unclassified excavation, backfill not including flowable fill backfill, providing trench safety and protection for workers to install pipe, structures, and appurtenances. Measurement and payment to be made per linear foot measured along the ground surface following the pipe centerline through all structures, fittings, and appurtenances.

SD6 Includes the necessary equipment, labor, materials, and incidentals for the installation of Concrete Rip-Rap per the consturction drawings and City of Midland standards and specifications, including all excavation, forms, reinforcement, placement, jointing, sealing, finishing, and appurtenances. Measurement and payment to be made per square yard measured along the ground surface.

ST1 Includes the necessary equipment, labor, materials, and incidentals to install a Fence per the construction drawings and City of Midland standards and specifications, including all columns, posts, foundations, anchors, and structures as well as all excavation, backfill, cutting, and appurtenances. Measurement and payment to be made per linear foot measured along the ground surface following the fence centerline through all structures and appurtenances.

ST2 Includes the necessary equipment, labor, materials, and incidentals to install a Fence Gate per the construction drawings and City of Midland standards and specifications, including all columns, posts, foundations, anchors, frames, attachments, and structures as well as all excavation, backfill, cutting, and appurtenances. Measurement and payment to be made per each gate installed.

ST3

Pay Note Removed

ST4 Includes the necessary equipment, labor, materials, and incidentals to relocate a Cattle Guard per the construction drawings and City of Midland standards and specifications, including all beams, foundations, anchors, frames, attachments, and structures as well as all excavation, backfill, cutting, and appurtenances. Measurement and payment to be made per each cattle guard installed.

ST5 Includes the necessary equipment, labor, materials, and incidentals to install a Knox Lock per the construction drawings and City of Midland standards and specifications, including all posts, foundations, anchors, frames, safe or box, attachments, and structures as well as all appurtenances. Measurement and payment to be made per each knox lock installed.

ST6 Includes the necessary equipment, labor, materials, and incidentals to Relocate Mailbox Foundation per the construction drawings and City of Midland standards and specifications, including all structure removal, foundation placement, and appurtenances. Measurement and payment to be made per each existing mailbox foundation removed and new mailbox foundation set.

P1 Includes the necessary equipment, labor, materials, and incidentals for Subgrade Preparation per the construction drawings and City of Midland standards and specifications, including all proof-rollling, sub-grade reworking, scarifying, compaction, and appurtenances. Measurement and payment to be made per square yard measured along the ground surface.

P2 Includes the necessary equipment, labor, materials, and incidentals for placement of Unclassified Embankment per the construction drawings and City of Midland standards and specifications, including all sprinkling, rolling, correction of soft spots, grading, sloping, compaction, and appurtenances. Measurement and payment to be made per each cubic yard placed.

P3 Includes the necessary equipment, labor, materials, and incidentals for placement of Jointed Concrete Pavement per the construction drawings and City of Midland standards and specifications, including all forming, reinforcement, placement, jointing, sealing, finishing, and appurtenances. Measurement and payment to be made per square yard of material placed measured along the ground surface.

P4 Includes the necessary equipment, labor, materials, and incidentals for the placement of Type "D" HMAC Asphalt Pavement Surface Course (PG 70-22, 110 LBS / SY at 1" thick) per the construction drawings and City of Midland standards and specifications, including all placement, compaction, and appurtenances. Measurement and payment to be made per square yard of material placed measured along the ground surface.

P5 Includes the necessary equipment, labor, materials, and incidentals for the placement of Type "C" HMAC Asphalt Pavement Surface Course (PG 64-22, 110 LBS / SY at 1" thick) per the construction drawings and City of Midland standards and specifications, including all placement, compaction, and appurtenances. Measurement and payment to be made per square yard of material placed measured along the ground surface.

P6 Includes the necessary equipment, labor, materials, and incidentals for the placement of Type "B" HMAC Asphalt Pavement Surface Course (PG 64-22, 110 LBS / SY at 1" thick) per the construction drawings and City of Midland standards and specifications, including all placement, compaction, and appurtenances. Measurement and payment to be made per square yard of material placed measured along the ground surface.

P7 Includes the necessary equipment, labor, materials, and incidentals for placement of Flexible Base compacted to 95% Density, ASTM D1557, per the construction drawings and City of Midland standards and specifications including all placement, compaction, and appurtenances. Measurement and payment to be made per square yard of material placed measured along the ground surface.

P8 Includes the necessary equipment, labor, materials, and incidentals for application of Bituminous Prime Coat (MC-30, 0.20 GAL / SY) per the construction drawings and City of Midland standards and specifications, including all appurtenances. Measurement and payment to be made per gallon of material applied at the designated rate.

P9 Includes the necessary equipment, labor, materials, and incidentals for application of Tack Coat (MC-30, 0.10 GAL / SY) per the construction drawings and City of Midland standards and specifications, including all appurtenances. Measurement and payment to be made per gallon of material applied at the designated rate.

P10 Includes the necessary equipment, labor, materials, and incidentals for placement of Stamped Concrete Median per the construction drawings and City of Midland standards and specifications including all forming, reinforcement, placement, jointing, sealing, finishing, and appurtenances. Measurement and payment to be made per square yard of material placed measured along the ground surface.

P11 Includes the necessary equipment, labor, materials, and incidentals for placement of Concrete Median per the construction drawings and City of Midland standards and specifications including all forming, reinforcement, placement, jointing, sealing, finishing, and appurtenances. Measurement and payment to be made per square yard of material placed measured along the ground surface.

P12 Includes the necessary equipment, labor, materials, and incidentals for placement of Concrete Fillet per the construction drawings and City of Midland standards and specifications including all forming, reinforcement, placement, jointing, sealing, finishing, and appurtenances. Curb section is formed and poured monolithically with fillet and is not a separate bid item. Measurement and payment to be made per square yard of material placed measured along the ground surface.

P13 Includes the necessary equipment, labor, materials, and incidentals for placement of Concrete Valley Gutter per the construction drawings and City of Midland standards and specifications including all forming, reinforcement, placement, jointing, sealing, finishing, and appurtenances. Measurement and payment to be made per square yard of material placed measured along the ground surface.

P14 Includes the necessary equipment, labor, materials, and incidentals for placement of Concrete Driveway Approach per the construction drawings and City of Midland standards and specifications including all forming, reinforcement, placement, jointing, sealing, finishing, and appurtenances. Pedestrian access ramps at the driveway approach are considered part of the approach and are not a separate bid item. Measurement and payment to be made per square yard of material placed measured along the ground surface.

P15 Includes the necessary equipment, labor, materials, and incidentals for placement of Concrete Curb & Gutter per the construction drawings and City of Midland standards and specifications including all forming, reinforcement, placement, jointing, finishing, and appurtenances. Measurement and payment to be made per linear foot of material placed measured along the back-of-curb.

P16 Includes the necessary equipment, labor, materials, and incidentals for placement of Concrete Pedestrian Access Ramp per the construction drawings and City of Midland standards and specifications, including all forming, reinforcement, placement, jointing, finishing, and appurtenances. Measurement and payment to be made per square yard of material placed measured along the ground surface.

P17 Includes the necessary equipment, labor, materials, and incidentals for Ring & Cover Adjustment per the construction drawings and City of Midland standards and specifications including all forming, reinforcement, placement, flowable fill, jointing, sealing, finishing, and appurtenances. This includes a minimum 1.0' wide concrete collar whose width is measured from the outer edge of the cover to the outer edge of the concrete ring. Measurement and payment to be made per each adjustment made.

T1 Includes the necessary equipment, labor, materials, and incidentals to Eliminate Existing Pavement Markings and Markers (Line Marking) per the construction drawings and City of Midland standards and specifications, including all appurtenances. Measurement and payment to be made per linear foot eliminated.

T2 Includes the necessary equipment, labor, materials, and incidentals for the placement of Retroreflectorized Pavement Markings per the construction drawings and City of Midland standards and specifications, including all appurtenances. Measurement and payment to be made per linear foot placed.

T3 Includes the necessary equipment, labor, materials, and incidentals for the placement of Thermoplastic Pavement Markings per the construction drawings and City of Midland standards and specifications, including all appurtenances. Measurement and payment to be made per linear foot placed.

T4 Includes the necessary equipment, labor, materials, and incidentals for the placement of Prefabricated Pavement Markings per the construction drawings and City of Midland standards and specifications, including all appurtenances. Measurement and payment to be made per each marking placed.

T5 Includes the necessary equipment, labor, materials, and incidentals for In Road Sign Assembly per the construction drawings and City of Midland standards and specifications, including all appurtenances. Measurement and payment to be made per each sign assembled.

T6 Includes the necessary equipment, labor, materials, and incidentals to Remove Sign Assembly per the construction drawings and City of Midland standards and specifications, including all excavation, backfill, stabilization, foundations, bases, and appurtenances. Measurement and payment to be made per each existing sign assembly removed.

T7 Includes the necessary equipment, labor, materials, and incidentals for the placement of Retroreflective Raised Pavement Markers per the construction drawings and City of Midland standards and specifications, including all appurtenances. Measurement and payment to be made per each marker placed.

T8 Includes the necessary equipment, labor, materials, and incidentals for the placement and installation of Utility Duct Bank improvements per the construction drawings and City of Midland standards and specifications, including all appurtenances. Measurement and payment to be made per linear foot placed measured along the ground surface.

T9 Includes the necessary equipment, labor, materials, and incidentals for the placement and installation of Ground Box With Apron improvements per the construction drawings and City of Midland standards and specifications, including all appurtenances. Measurement and payment to be made per each ground box with apron placed.

T10 Includes the necessary equipment, labor, materials, and incidentals for the placement and installation of Delineator Assembly improvements per the construction drawings and City of Midland standards and specifications, including all appurtenances. Measurement and payment to be made per each delineator assembly placed.

T11 Includes the necessary equipment, labor, materials, and incidentals for the placement and installation of Temporary Workzone Pavement Markings improvements per the construction drawings and City of Midland standards and specifications, including all appurtenances. Measurement and payment to be made per lump sum.

BID ITEMS

(See Proposal sheet for additional information.)

Project Name: BRIARWOOD AVE PHASE II

BID BOND

THE STATE OF TEXAS §

COUNTY OF MIDLAND §

SURETY NO BID BOND

KNOW ALL MEN BY THESE PRESENTS, THAT Rocco Albert, Inc. (Hereinafter called the Principal), as Principal, and Continental Casualty Company (Hereinafter called the Surety, as Surety, are held and firmly bound unto the City of Midland, Texas a home rule municipal corporation of Midland County, Texas, (hereinafter called the Obligee), in the amount of Five Percent Total Amount Bid Dollars ($ 5%) for the payment whereof the said Principal and surety bind themselves, and their heirs, administrators, executors, successors and assigns, jointly and severally, firmly by these presents.

WHEREAS, the Principal has submitted a Bid or Proposal to enter into a certain written contract for the construction of BRIARWOOD AVE PHASE II.

NOW, THEREFORE, THE CONDITION OF THIS OBLIGATION IS SUCH, that if the said Principal shall faithfully, enter into such written Contract, then this obligation shall be void; otherwise to remain in full force and effect.

IT IS EXPRESSLY UNDERSTOOD AND AGREE that if said Principal should withdraw its Bid anytime after such Bid is opened and before official rejection to such Bid or, if successful in securing the award thereof, said Principal should fail to enter into the Contract and furnish satisfactory Performance Bond and Payment Bond, the Obligee, in either of such events, shall be entitled and is hereby given the right to collect the full amount of this Bid Bond as liquidated damage.

BidB 1

PROVIDED, further that if any legal action be filed upon this Bond venue shall lie in Midland County, Texas.

IN WITNESS WHEREOF, the said Principal and surety do sign and seal this instrument, this 16th day of July, 2025.

Form Revised June 2025

POWER OF ATTORNEY APPOINTING INDIVIDUAL ATTORNEY-IN-FACT

Know All Men By These Presents, That Continental Casualty Company, an Illinois insurance company, National Fire Insurance Company of Hartford, an Illinois insurance company, and American Casualty Company of Reading, Pennsylvania, a Pennsylvania insurance company (herein called "the CNA Companies"), are duly organized and existing insurance companies having their principal offices in the City of Chicago, and State of Illinois, and that they do by virtue of the signatures and seals herein affixed hereby make, constitute and appoint

John A Martinez, Paul Michael Messenger, Alyson Carmichael, Individually

of The Woodlands, TX, their true and lawful Attorney(s)-in-Fact with full power and authority hereby conferred to sign, seal and execute for and on their behalf bonds, undertakings and other obligatory instruments of similar nature

- In Unlimited Amounts -

and to bind them thereby as fully and to the same extent as if such instruments were signed by a duly authorized officer of their insurance companies and all the acts of said Attorney, pursuant to the authority hereby given is hereby ratified and confirmed.

This Power of Attorney is made and executed pursuant to and by authority of the By-Laws and Resolutions, printed below, duly adopted, as indicated, by the Boards of Directors of the insurance companies.

In Witness Whereof, the CNA Companies have caused these presents to be signed by their Vice President and their corporate seals to be hereto affixed on this 9th day of January, 2025.

Continental Casualty Company
National Fire Insurance Company of Hartford
American Casualty Company of Reading, Pennsylvania

Larry Kasten — Vice President

State of South Dakota, County of Minnehaha, ss:

On this 9th day of January, 2025, before me personally came Larry Kasten to me known, who, being by me duly sworn, did depose and say: that he resides in the City of Sioux Falls, State of South Dakota; that he is a Vice President of Continental Casualty Company, an Illinois insurance company, National Fire Insurance Company of Hartford, an Illinois insurance company, and American Casualty Company of Reading, Pennsylvania, a Pennsylvania insurance company described in and which executed the above instrument; that he knows the seals of said insurance companies; that the seals affixed to the said instrument are such corporate seals; that they were so affixed pursuant to authority given by the Boards of Directors of said insurance companies and that he signed his name thereto pursuant to like authority, and acknowledges same to be the act and deed of said insurance companies.

CERTIFICATE

I, Paula Kolsrud, Assistant Secretary of Continental Casualty Company, an Illinois insurance company, National Fire Insurance Company of Hartford, an Illinois insurance company, and American Casualty Company of Reading, Pennsylvania, a Pennsylvania insurance company do hereby certify that the Power of Attorney herein above set forth is still in force, and further certify that the By-Laws and Resolutions of the Board of Directors of the insurance companies printed below are still in force. In testimony whereof I have hereunto subscribed my name and affixed the seal of the said insurance companies this 16th day of July , 2025 .

Continental Casualty Company
National Fire Insurance Company of Hartford
American Casualty Company of Reading, Pennsylvania

Paula Kolsrud — Assistant Secretary

Authorizing By-Laws and Resolutions

ADOPTED BY THE BOARD OF DIRECTORS OF EACH OF CONTINENTAL CASUALTY COMPANY, NATIONAL FIRE INSURANCE COMPANY OF HARTFORD, and AMERICAN CASUALTY COMPANY OF READING, PENNSYLVANIA (as defined above, the "CNA Companies"):

This Power of Attorney is made and executed pursuant to and by authority of the following resolution duly adopted by the Board of Directors of each of the above CNA Companies at a meeting held on May 12, 1995:

"RESOLVED: That any Senior or Group Vice President may authorize an officer to sign specific documents, agreements and instruments on behalf of the Company provided that the name of such authorized officer and a description of the documents, agreements or instruments that such officer may sign will be provided in writing by the Senior or Group Vice President to the Secretary of the Company prior to such execution becoming effective."

This Power of Attorney is signed by Larry Kasten, Vice President, who has been authorized pursuant to the above resolution to execute power of attorneys on behalf of each of the CNA Companies.

This Power of Attorney is signed and sealed by facsimile under and by the authority of the following Resolution adopted by the Board of Directors of each of the above Companies by unanimous written consent dated the 25th day of April, 2012:

"Whereas, the bylaws of the Company or specific resolution of the Board of Directors has authorized various officers (the "Authorized Officers") to execute various policies, bonds, undertakings and other obligatory instruments of like nature; and

Whereas, from time to time, the signature of the Authorized Officers, in addition to being provided in original, hard copy format, may be provided via facsimile or otherwise in an electronic format (collectively, "Electronic Signatures"); Now therefore be it resolved: that the Electronic Signature of any Authorized Officer shall be valid and binding on the Company."

This Power of Attorney may be signed by digital signature and sealed by a digital or otherwise electronic-formatted corporate seal under and by the authority of the following Resolution adopted by the Board of Directors of each of the above CNA Companies by unanimous written consent dated the 27th day of April, 2022:

"RESOLVED: That it is in the best interest of the Company to periodically ratify and confirm any corporate documents signed by digital signatures and to ratify and confirm the use of a digital or otherwise electronic-formatted corporate seal, each to be considered the act and deed of the Company."

CONTRACT

THE STATE OF TEXAS §

COUNTY OF MIDLAND §

THIS CONTRACT, made and entered into this 10 day of September, 20 25, by and between the City of Midland of the County of Midland and State of Texas, acting through its Mayor thereunto duly authorized so to do, Party of the First Part, hereinafter termed OWNER, and Reece Albert, Inc. of the City San Angelo, County of Tom Green, State of TX, Party of the Second Part, herein-after termed CONTRACTOR.

WITNESSETH: That for and in consideration of the payments and agreements hereinafter mentioned, to be made and performed by the Party of the first Part (OWNER), and under the conditions expressed in the bond bearing even date herewith, the said Party of the Second Part (CONTRACTOR), hereby agrees with the said Party of the First Part (OWNER) to commence and complete the construction of certain improvements described as follows: BRIARWOOD AVE PHASE II together with appurtenances and incidentals.

Conditions of the Contract and at his (or their) own proper cost and expense to furnish all the materials, supplies, machinery, equipment, tools, superintendent, labor, insurance and other accessories and services necessary to complete the said construction in accordance with the conditions and prices stated in the Proposal attached hereto, and in accordance with the Notice to the Contractors, General and Special Conditions of Agreement, Plans and other drawings and printed or written explanatory matter thereof, and the Specifications and addenda therefore as prepared by Engineering and Transportation Department of the City of Midland, Texas, herein entitled the ENGINEER, together with the CONTRACTOR'S written Proposal, the General Conditions of the Contract, and the Performance and Payment Bonds hereto attached; all of which are made a part hereof and collectively evidence and constitute the entire Contract.

The CONTRACTOR hereby agrees to commence work within fifteen (15) calendar days after the written notice to do so and to substantially complete the same within 540 calendar days after receipt of notice to proceed, subject to such extensions of time as are provided by the General and Special Conditions.

The OWNER agrees to pay the CONTRACTOR in current funds the price or prices shown in the proposal, which forms a part of this Contract, such payments to be subject to the General and Special Conditions of the Contract.

The SUM TOTAL of this Contract shall be: $9,020,270.27.

INSURANCE

Contractor shall at all times during the term of this Contract maintain and keep in full force and effect insurance in the following types and minimum amounts with companies authorized to do business in the State of Texas:

Commercial General Liability (including Contractual liability):		
	— Personal Injury:	$1,000,000.00 per person
		$1,000,000.00 per occurrence
	— Property Damage:	$500,000.00 per occurrence
Business Automobile Liability:		$250,000.00 combined single limit - Personal Injury and Property Damage
Workers' Compensation:		Statutory limits
Employers' Liability:		$500,000.00 per accident or occurrence

The Commercial General Liability shall be on a per project aggregate, including completed operations, and shall be on an occurrence basis. This insurance shall name the City as an additional insured and waive subrogation in favor of the City.

The Business Automobile Liability insurance provided by Contractor shall cover any auto for bodily injury and property damage, including owned vehicles, hired and non-city vehicles, and employee non-ownership, and the amount of such policy shall be a minimum of $250,000.00 covering any vehicle used for the execution of the work that is the subject of this Contract. The insurance shall name the City as an additional insured and waive subrogation in favor of the City.

The Workers' Compensation coverage provided by Contractor shall inure to the benefit of employees injured during the course and scope of their employment by Contractor pursuant to this Contract. The Workers' Compensation shall waive all rights of subrogation in favor of the City.

All insurance required pursuant to this Contract shall provide for a waiver of subrogation in favor of the City. All insurance required pursuant to this Contract, except for Workers' Compensation Insurance, shall name the City as an additional insured on a claims occurred basis. City shall be provided the notice by Contractor's insurance provider not later than thirty (30) days prior to any reduction or termination of such coverage.

Contractor shall contractually require all contractors, subcontractors, and sub-subcontractors that work on any portion of the work that is the subject of this Contract to obtain insurance coverage that meets or exceeds the policy requirements and minimum amounts specified herein. All contractors, subcontractors, and sub-subcontractors shall obtain insurance policies that provide blanket waivers of subrogation in favor of the City of Midland and policies that name the City of Midland as an additional insured on a claims occurred basis (except workers' compensation).

The parties agree that, prior to the execution of the Contract, Contractor shall provide one or more certificates of insurance specifically stating that these requirements have been met and subject to the approval of the City. The City shall not be required to provide any insurance whatsoever pursuant to this Contract.

The Contractor certifies that the certificate of insurance provided as required herein complies with the requirements of Senate Bill 425, passed during the 82nd regular session of the Texas Legislature, and effective January 1, 2012. The Contractor shall not use an unapproved certificate of insurance or insert inappropriate language on a certificate. Compliance with state law is the sole responsibility of the Contractor.

WAIVER OF ATTORNEY FEES

WAIVER OF ATTORNEY FEES: BY EXECUTING THIS CONTRACT, CONTRACTOR AGREES TO WAIVE AND DOES HEREBY KNOWINGLY, CONCLUSIVELY, VOLUNTARILY AND INTENTIONALLY WAIVE ANY CLAIM IT HAS OR MAY HAVE IN THE FUTURE AGAINST THE OWNER, REGARDING THE AWARD OF ATTORNEY'S FEES, WHICH ARE IN ANY WAY RELATED TO THE CONTRACT, OR THE CONSTRUCTION, INTERPRETATION OR BREACH OF THE CONTRACT. THE CONTRACTOR SPECIFICALLY AGREES THAT IF THE CONTRACTOR BRINGS OR COMMENCES ANY LEGAL ACTION OR PROCEEDING RELATED TO THIS CONTRACT, THE CONSTRUCTION, INTERPRETATION, VALIDITY OR BREACH OF THIS CONTRACT, INCLUDING BUT NOT LIMITED TO ANY ACTION PURSUANT TO THE PROVISIONS OF THE TEXAS UNIFORM DECLARATORY JUDGMENTS ACT (TEXAS CIVIL PRACTICE AND REMEDIES CODE SECTION 37.001, ET. SEQ., AS AMEDED), OR CHAPTER 271 OF THE TEXAS LOCAL GOVERNMENT CODE, THE CONTRACTOR AGREES TO ABANDON, WAIVE AND RELINQUISH ANY AND ALL RIGHTS TO THE RECOVERY OF ATTORNEY'S FEES TO WHICH CONTRACTOR MIGHT OTHERWISE BE ENTITLED.

CONTRACTOR AGREES THAT THIS IS THE VOLUNTARY AND INTENTIONAL RELINQUISHMENT AND ABANDONMENT OF A PRESENTLY EXISTING KNOWN RIGHT. THE CONTRACTOR ACKNOWLEDGES THAT IT UNDERSTANDS ALL TERMS AND CONDITIONS OF THE CONTRACT. THE CONTRACTOR FURTHER ACKNOWLEDGES AND AGREES THAT THERE WAS AND IS NO DISPARITY OF BARGAINING POWER BETWEEN THE OWNER AND THE CONTRACTOR. THIS SECTION SHALL NOT BE CONSTRUED OR INTERPRETED AS A WAIVER OF SOVEREIGN IMMUNITY.

THE CONTRACTOR AND OWNER ARE RELYING ON THEIR OWN JUDGMENT. EACH PARTY HAD THE OPPORTUNITY TO DISCUSS THIS CONTRACT WITH COMPETENT LEGAL COUNSEL PRIOR TO ITS EXECUTION.

SOVEREIGN IMMUNITY

By executing this Contract, the City is not waiving its right of sovereign immunity. The City is retaining its immunity from suit. The City is not granting consent to be sued by legislative resolution or action.

THERE IS NO WAIVER OF SOVEREIGN IMMUNITY.

GOVERNING LAW AND VENUE

This Contract shall be governed by the laws of the State of Texas. All performance and payment made pursuant to this Contract shall be deemed to have occurred in Midland County, Texas. Exclusive venue for any claims, suits or any other action arising from or connected in any way to this Contract or the performance of this Contract shall be in Midland County, Texas. The obligations and undertakings of each of the parties to this Contract shall be deemed to have occurred in Midland County, Texas.

COMPLIANCE – Contractor agrees that it shall comply with Texas Government Code Section 2252.908, *et seq.*, as amended. Contractor agrees that it shall comply with Texas Local Government Code Section 176.006, *et seq.*, as amended.

VERIFICATION

To the extent that Sections 2271.002, 2274.002, and 2276.002 of the Texas Government Code (collectively, the "Anti-Boycott Statutes") apply to this Contract, Contractor hereby verifies:

- that Contractor does not boycott Israel and will not boycott Israel during the term of this Contract;
- that Contractor does not boycott energy companies and will not boycott energy companies during the term of this Contract; and
- that Contractor does not have a practice, policy, guidance, or directive that discriminates against a firearm entity or firearm trade association and will not discriminate during the term of this Contract against a firearm entity or firearm trade association.

To the extent that the Anti-Boycott Statutes do not apply to this Contract, such verification is not required, and Contractor shall be deemed to have not made such verification.

RECORDS RETENTION AND PRODUCTION OF INFORMATION

To the extent that this Contract is a contract described by Section 552.371 of the Texas Government Code, Contractor shall (1) preserve all contracting information related to the Contract as provided by the records retention requirements applicable to the City of Midland for the duration of the contract, (2) promptly provide to the City of Midland any contracting information related to the Contract that is in the custody or possession of Contractor on request of the City of Midland, and (3) on completion of the Contract, either (i) provide at no cost to the City of Midland all contracting information related to the Contract that is in the custody or possession of Contractor, or (ii) preserve the contracting information related to the Contract as provided by the records retention requirements applicable to the City of Midland.

PUBLIC INFORMATION

To the extent that this Contract is a contract described by Section 552.371 of the Texas Government Code, Contractor agrees as follows in accordance with Section 552.372(b) of the Texas Government Code: The requirements of Subchapter J, Chapter 552, Government Code, may apply to this contract, and the contractor or vendor agrees that the contract can be terminated if the contractor or vendor knowingly or intentionally fails to comply with a requirement of that subchapter.

IN WITNESS WHEREOF, the parties to these presents have executed this Agreement in the year and day first above written.

CERTIFICATE OF PAYMENT

THE STATE OF TEXAS §

COUNTY OF MIDLAND §

BRIARWOOD AVE PHASE II

The undersigned states that all debts, bills, and expenses that were incurred by the undersigned, his agents, or subcontractors employed by him, for labor, wages, materials and other purposes furnished for the above project have been paid and satisfied in full.

The undersigned, as general contractor for the above described project agrees to indemnify, hold harmless and defend the City, its officers, agents, and employees, from and against all claims and suits for damages, expenses, including court costs and attorney fees, arising out of or resulting from the undersigned contractor, his agents or subcontractors employed by him for expenses, warranties for items furnished, or labor performed and for any party that has supplied materials in connection with the repair or construction of the above referenced premises.

The undersigned contractor agrees to waive any and all claims it may have against the City, associated with, resulting from or arising out of the work performed at the above premises.

Further, the undersigned states that all labor performed by the undersigned, his agents, and subcontractors employed by him, has been completed in the usual and customary workmanlike manner and all work performed is accompanied with the usual and appropriate warranties for such work or repair, absent any disclaimer previously approved by the City of Midland.

I, the undersigned, release and relinquish unto the City of Midland, and their assigns the above described lien upon the above referenced property and hereby certify that all debts, bills, and expenses incurred by the undersigned, his agents, or subcontractors employed by him in connection with work done at the above

premises have been fully paid, in exchange for payment in full to be made by the City of Midland for the performance on the above described premises.

Form Revised June 2025

GENERAL CONDITIONS AND PROVISIONS

1. DEFINITIONS

The following terms as used in this contract shall be defined and interpreted as follows:

(a) “Contract” or “This Contract” or “Agreement”: The particular Contract executed by the Contractor and the Owner of which these general conditions are integral parts.

(b) “Contractor”: The person, firm or corporation to whom this Contract is awarded by the Owner and who is a party thereto.

(c) “Owner”, “City”, or pronouns instead: The entity that is a party to this Contract, contracting under the official name of the City of Midland, Texas or the City Council of the City of Midland.

(d) The words "as directed", "as required", "as permitted", "acceptable to", "satisfactory", and the words of like import, shall mean that the direction, requirement or permission of the Engineer is intended.

(e) “Engineer”: The word “Engineer” used in these specifications or in this Contract means the duly authorized representative or agent of the Owner supervising the performance of the Contract and representing the Owner in his Contractual relations and negotiations with the Contractor during the period of construction. The Engineer will be represented by assistants and inspectors authorized to act for him. On all questions concerning the acceptability of material or equipment, the classifications of material, the execution of the work, conflicting interest of Contractors performing related work and the determination of costs, the decision of the Engineer shall be final, but shall not relieve the Contractor of his responsibility for completion of the entire work in a good and workmanlike manner and in full compliance with the plans and specifications.

Inspectors are required to see that all the provisions of the Contract specifications are faithfully adhered to. Any inspector may, if authorized by the Engineer, stop the work entirely if there is not sufficient quantity of suitable and approved material on the ground to carry it on properly, or for any other good and sufficient cause. Any work done in the absence of an inspector may be ordered opened up for thorough examination, and must be rebuilt or replaced at the Contractors sole expense if found to be deficient or not in accordance with the plans and specifications. But no approval by an inspector shall be construed as an acceptance of defective or improper work or material, which must be rebuilt or properly replaced whenever discovered. Inspectors have not the power to give orders or directions under any possible circumstances, except as herein defined and provided, and on authority of the Engineer

(f) "Subcontractor": Any person, firm or corporation other than an employee of the contractor, supplying, for and under agreement either with the Contractor or any subcontractor of the Contractor, labor or material, or both, at the site of the project in connection with this Contract.

(g) "Project": The structure or improvement to be constructed in whole or in part through the performance of this Contract.

(h) "Work on the Project": Such work as is performed or ordinarily would be performed at the site of the project.

(i) "Surety": Any firm or corporation executing a Surety Bond or Bonds payable to the Owner securing the performance of the Contract either in whole or in part.

(j) Whenever certain articles are specifically mentioned, by brand name or name of the manufacturer, such materials shall be taken as standard and guide for quality, operation, capacity, etc. The term "or equal" shall mean that articles of equal characteristics as required, but of different brand or manufacturer, may be substituted and accepted, subject in all instances to the approval of the Engineer.

(k) "Special Provisions", "Special Conditions", "Project Specific Specification" or "Job Specific Specifications" are included as amendment of and/or additions to the General Conditions and/or Standard Specifications for the particular project in which they are included and will take precedence over the General Conditions and Standard Specifications only in so far as the amendments and/or additions. All other provisions in the General Conditions and/or Standard Specifications will not be affected.

(l) "Drawings" "Contract Drawings", "Plans" "Detail Drawings" "Detail Sheets" or "Plans and Details" refers to the set of drawings which show the details for the construction and related work anticipated on this project and upon which bids are being solicited.

2. CONFLICT OF PROVISIONS

Unless it is specifically provided otherwise, any provision in any other part of this Contract which may be in conflict or inconsistent with any provision in the General Conditions and Provisions shall be void to the extent only of such conflict or inconsistency.

3. DUTIES AND RESPONSIBILITIES OF THE CONTRACTOR

The Contractor shall have charge of and shall be responsible for the entire work under this Contract until its completion and acceptance by the city. A competent superintendent, foreman or other representative, invested with sufficient authority to conduct the work properly, shall be maintained on the work at all times.

It is expressly agreed and understood that no decision of the Engineer or any certificate issued nor payment made to the Contractor nor partial or entire use or occupancy of the work by the Owner, shall be an acceptance of any work or materials not in accordance with this Contract, nor constitute a waiver of the Contractor's responsibility to perform the entire work in a good and workmanlike manner and in accordance with the plans and specifications.

4. TIME ELEMENT

The work shall be commenced and finished within the time set out in the Form of Contract.

The time of completion of this Contract is an essential element and consideration. Since, therefore, time is of the essence thereof, and in the event of delay in the completion of the entire work required hereunder beyond the period prescribed, or beyond the period for which time may be extended by authority of the Owner for good cause shown, the Owner shall be paid damages for such delay. Inasmuch as the amount of such damages is difficult to ascertain, it is hereby stipulated and agreed that such damages shall be liquidated and the Owner shall be paid damages at the rate as set forth in the Special Provisions, said damages to be paid to the Owner for each and every day that the Contractor be in default in completing the entire work required under this Contract. The Owner shall have the right to deduct such amounts from any monies due, or which may become due, under

this Contract. In the event that no amount for such damages is shown in the Special Provisions of these specifications, it is agreed that the amount of damages shall be Five Hundred dollars ($500.00) per day.

If during the progress of the work weather conditions, or other circumstances beyond the control of the Contractor should prevail to the extent that the work cannot be prosecuted and completed within the time specified in the Contract, the Contractor shall file with the Engineer within one week of the occurrence of such delay a request for a credit on the time of completion. Unless the Contractor files such request, the liquidated damages specified above will be enforced.

5. PAYMENT TO CONTRACTOR

ESTIMATED QUANTITIES:

This Contract, including the specifications, plans and estimate, is intended to show clearly all work to be done and material to be furnished hereunder. Where the estimated quantities are shown for the various classes of work to be done and material to be furnished under this Contract, they are approximate and are to be used only as a basis for estimating the probable cost of the work and for comparing the proposals offered for the work. It is understood and agreed that the actual amount of work to be done and material to be furnished under this Contract may differ somewhat from these estimates, and that where the basis for payment under this Contract is the unit price method, payment shall be for the actual amount of such work done and the material furnished.

Where payment is based on the unit price method, the Contractor agrees that he will make no claim for damages, anticipated profits or otherwise on account of any differences which may be found between the quantities of work actually done, the material actually furnished under this Contract and the estimated quantities contemplated and contained in the proposal provided, however, that in case the actual quantity of any major item should become as much as twenty percent (20%) more than, or twenty percent (20%) less than the estimated or contemplated quantity for such items, then either party of this agreement, upon demand, shall be entitled to a revised consideration upon the portion of the work above or below twenty percent (20%) of the estimated quantity.

A "Major Item" shall be construed to be any individual item incurred in the proposal that has a total cost equal to or greater than five percent (5%) of the total Contract cost, computed on the basis of the proposal quantities and the Contract unit price.

Any revised consideration is to be determined by agreement between the parties, otherwise by the terms of this Contract, as provided under "Extra Work".

PAYMENT; RETAINAGE:

On or before the 1st day of each month the Contractor shall prepare an itemized statement showing the total value of the work completed by the Contractor up to and including the 25th day of the preceding month; said statement shall also include the value of all sound materials delivered on the site of the work that are to be fabricated into the work. NO ESTIMATE WILL BE MADE ON UNCOMPLETED PORTIONS OF THE WORK.

After all work is completed by Contractor, including all Change Orders altering the original scope and amount of the contract are completed, and the City has inspected and approved that the work is completed and in compliance with the contract and all subsequent Change Orders, the City may thereafter issue payment to Contractor in the amount of the contract and all Change Orders. The City shall be the final judge of when the

work is completed by Contractor. The City, in its sole discretion, shall determine if the work under the contract and under any Change Orders has been done to the City's requirements.

The City may make periodic payments to Contractor; provided, however, such periodic payments may only be made pursuant to this section, and only after all work and all Change Orders are completed by Contractor and approved by the City. The approval shall be in the City's sole discretion. Requests for progress payments may be made to the extent of the materials and labor completed at the end of each month. Upon approval by the City or the City's representative, the request and invoice shall be forwarded for payment less 5% retainage. The total of these payments shall not exceed 95% of the total contract amount.

FINAL COMPLETION AND ACCEPTANCE:

Within ten (10) days after the Contractor has given the Engineer written notice that the work has been completed, or substantially completed, the Engineer and the Owner shall inspect the work and within said time, if the work be found to be completed or substantially completed in accordance with the Contract documents, the Engineer shall issue to the Owner and the Contractor his Certificate of Completion.

FINAL PAYMENT:

Upon the issuance of the Certificate of Completion, the Engineer shall proceed to make final measurements and prepare final statement of the value of all work performed and materials furnished under the terms of the Contract and shall certify same to the Owner, who shall pay to the Contractor the balance due the Contractor under the terms of this Contract, provided he has fully performed his obligations under the terms of this Contract. Notwithstanding any provision of these Contract Documents to the contrary, it is expressly understood and agreed by the parties hereto that neither the certificate of acceptance, nor the final or any other payment hereunder, nor any partial or total occupancy or possession of the project by the Owner, shall relieve the Contractor of his responsibility for completion of the entire project in a good and workmanlike manner and a full compliance with the plans and specifications and the fulfillment of any warranties which may be required in the Contract Documents.

6. OWNER'S RIGHT TO WITHHOLD CERTAIN AMOUNTS AND MAKE APPLICATION THEREOF

In addition to the amount which the Owner may otherwise retain under the Contract, the Owner may withhold a sufficient amount or amounts of any payment or payment otherwise due to the Contractor, as in this judgment may be necessary to cover:

(a) Payments which may be past due and payable for just claims against the Contractor or any subcontractor for labor or materials furnished for the performance of this Contract.

(b) For defective work not remedied.

(c) For failure of the Contractor to make proper payments to his subcontractors.

7. CERTIFICATE OF PAYMENT

Contractor shall, prior to issuance of final payment pursuant to the terms herein stated, provide proof satisfactory to the owner that all debts, bills and expenses incurred by the Contractor, his agents, employees or subcontractors employed by him, for labor, wages, materials and other purposes, in the furtherance of this

project, have been paid and satisfied in full. Satisfactory proof shall consist of an executed Certificate of Payment.

8. EXTRA, ADDITIONAL OR OMITTED WORK PAYMENT

The Owner, upon proper action by its governing body, may require changes in this Contract, or additions to, or deductions from the work to be performed or the materials to be furnished pursuant to this Contract. No employee, agent or representative of the Owner, with the exception of the governing body authorized to award this Contract, has any power to approve any change in this Contract and it is the responsibility of the Contractor before proceeding with any change to satisfy himself that the change has been properly authorized on behalf of the Owner. No charge for any extra work or other change in the Contract will be allowed unless the extra work or change has been authorized in writing by the Owner, or its duly authorized representative, and the price therefore is stated in such written authority.

Adjustments, if any, in the amounts to be paid the Contractor where such adjustments are made by reason of additions to or deductions from the quantities of units or items bid upon in the proposal schedules, shall be paid for in accordance with the provisions of the Specifications, at the unit and/or lump sum prices bid in such proposal schedules.

Adjustments, if any, in the amounts to be paid the Contractor where such adjustments are made by reason of additions of items not appearing in the proposal schedules, or addition of work of such a nature that unit and/or lumps sum prices contained in the proposal schedules cannot reasonably or equitably be applied to provide proper payment therefore, the payment to the Contractor for such work shall be determined by one or more of the following methods:

(a) By an acceptable lump sum proposal from the Contractor.

(b) By unit prices contained in the Contractor's proposal and incorporated in the Contract or fixed by subsequent agreement between the Owner and the Contractor.

(c) By a cost method pursuant to which the Contractor shall be paid the costs of the change or addition. He shall be required to keep and present in such form as the Owner may direct, a correct account of the cost of the change or addition, together with all vouchers therefore. The cost may include an allowance for overhead and profit not to exceed fifteen percent (15%) of the net cost.

In computing the cost, there shall be considered reasonable and proper net expenditures for labor, materials, power tools and equipment, pro rata charges for foremen, deductions for social security, old age and unemployment benefits and workmen's compensation insurance and surety bond premium. In computing cost of machinery and equipment involved in additional work, the amount to be paid shall be not more than one hundred percent (100%) of the latest schedule of "Equipment Ownership Expense" adopted by Associated General Contractors of America. No overhead and profit shall be allowed on the deductions for Social Security, old age and unemployment benefits. All other expenditures shall be treated as overhead costs.

No extra work shall be performed or change made unless in pursuance of a written order from the Owner stating that the extra work or change is authorized and no claim for an addition to the Contract sum shall be valid unless so ordered; provided, however, that nothing in this Article shall excuse the Contractor from proceeding with the prosecution of the work so changed.

The Contractor shall, when required by the Owner, furnish an itemized breakdown of the quantities and prices used in computing the value of any change, addition or deduction that might be ordered.

If the Contractor should claim that any instruction, request, drawing, specification, action, condition, omission, default, or other situation obligated or may obligate the Owner to pay additional compensation to the Contract, or constitutes a waiver of any provision in the Contract, he shall notify the Owner in writing of such claim within ten (10) days from the date he has actual or constructive notice of the factual basis supporting the claim. The Contractor's failure to notify the Owner within such ten (10) days period shall be deemed a waiver and relinquishment of any such claim against the Owner. The procedure for consideration of such claims shall be as stated in this Article.

9. ASSIGNMENT OF CONTRACT

The Contractor shall not assign this Contract or any part thereof, nor any monies due or to become due thereunder without the prior written consent of the Owner. No assignment of this Contract shall be valid unless it shall contain a provision that the funds to be paid to the assignee under the assignment are subject to a prior lien for services rendered or material supplied for performance of the work called for under this Contract in favor of all persons, firms, or corporations rendering such services or supplying such materials.

10. SUBCONTRACTORS

Specialty subcontractors may be utilized for the performance of such parts of the work under this Contract as, under normal practices, are performed by Specialty subcontractors, unless the Owner determines that the Contractor has heretofore customarily performed such specialty work with his own organization and is equipped to do so, or unless the Owner determines that performance of the specialty work by Specialty subcontractors will result in increased costs or inordinate delays.

The Contractor shall not subcontract any work to be performed or any materials to be furnished in the performance of this Contract without the prior written consent of the Owner. If the Contractor shall subcontract any part of this Contract, the Contractor shall be as fully responsible to the Owner for the acts and omissions of his subcontractor and of the persons either directly or indirectly employed by the subcontractor as he is for the acts and omissions of persons directly employed by himself. Nothing contained in this Contract shall create any Contractual relations between any subcontractor and the Owner. The Contractor shall ensure that the sub contractor has the insurance coverage required by this contract.

The Owner's consent to or approval of any subcontract under this Contract shall not in any way relieve the Contractor of his obligations under this Contract and no such consent or approval shall be deemed to waive any provisions of this Contract.

11. SUSPENSION OF WORK

Pending settlement of disputes on any point of controversy, the Engineer may suspend action on all or any part of the work. The Contractor shall not be entitled to any claim for loss or damage by reason of such, nor shall he be entitled to extension of time, although such extension of time may be granted by the Engineer if he deems it in the interest of the work.

12. RIGHT OF OWNER TO TERMINATE CONTRACT

If, in the opinion of the Engineer, the Contractor shall be improperly performing the work under this Contract, or shall neglect or refuse to take out or rebuild such work as shall have been rejected by the Engineer as being defective or unsuitable, or if, any time, the Engineer shall be of the opinion that the work is unnecessarily delayed and will not be finished within the prescribed time, or if the Contractor shall abandon the work, or shall neglect or refuse to comply with the instructions of the Engineer relative thereto, or shall fail in any manner to comply with the Specifications or Stipulations herein contained, the Engineer shall notify the Contractor to that effect in writing, and if the Contractor shall not within five (5) days thereafter take such measures as will, in the judgment of the Engineer, insure the satisfactory performance or construction of the work, the City may annul and cancel the Contract, in which event it shall notify the Contractor to discontinue all work under this Contract, and the Contractor shall immediately respect such notice and stop work and cease to have any rights to the possession of the ground and shall forfeit his Contract. Such annulment shall not entitle the Contractor to any claim for damages on account thereof, nor shall it affect the right of the City of Midland to recover damages on account of such failure. The City Council may thereupon advertise and re-let a new Contract for the uncompleted work without further ordinance, in the same manner as was followed in the letting of this Contract, and any excess of cost arising there from over and above what would have resulted from the prices set forth in this Contract will be charged against the Contractor and his surety or sureties hereto, who shall be liable therefore.

13. RIGHT OF CONTRACTOR TO TERMINATE CONTRACT

If the work should be stopped under an order of any court or other public authority for a period of three (3) months, through no act or fault of the Contractor or of anyone employed by him, or if the City should fail to make payment to the Contractor within thirty (30) days after such payment is due, as set out in the Contract, then the Contractor may, upon seven (7) days written notice to the City and the Engineer, stop work or terminate his Contract and recover from the City payment for all work executed and for any loss sustained upon any plant or materials and reasonable profit and damages.

14. INCIDENTAL WORK

Any and all minor details of the work not specifically mentioned in the Specifications but obviously necessary for the proper completion of the work, such as the proper connection of new work to old, shall be considered as incidental to and a part of and included with the work for which the prices are named in the Contract Documents. The Contractor will not be entitled to any extra or additional compensation therefore, unless specifically stated otherwise.

15. PERMITS – COMPLIANCE WITH LAW

The Contractor shall, at his expense, obtain all permits and licenses necessary for the performance of this Contract, and give all necessary notices, pay all fees required by law, and comply with all laws, ordinances, rules and regulations governing the Contractor's performance of the Contract.

Portions of this contract qualify for exemption pursuant to the provisions of the Texas Limited Sales, Excise and Use Tax Act. The Contractor shall obtain a sales tax exemption certificate from the City. All labor performed on the project and all materials incorporated into the project qualify for such tax exemption. However, equipment and parts for equipment purchased to be used on the project, but are not incorporated into the project; do not qualify for said tax exemption. Contractor shall issue a resale certificate in lieu of paying such sales tax for all

materials incorporated into the project. Further Contractor shall separate the charges for materials incorporated into the project from the charges for labor.

16. INSPECTION BY OWNER

The Owner and its representatives shall at all times have access to all parts of the work and to the shops wherein the work is in preparation for the purpose of inspection, and the Contractor shall at all times maintain proper facilities and provide safe access for such inspection.

The Owner shall have the right to reject materials and workmanship which are defective, or to require their correction. Rejected workmanship shall be satisfactorily corrected and rejected materials shall be removed from the premises without charge to the Owner. If the Contractor does not correct such rejected work within a reasonable time, fixed by written notice, the Owner may correct same and charge the expense to the Contractor. No inspector shall have the power to waive the obligation resting upon the Contractor to furnish good material or do work as herein prescribed, and any failure or omission of any inspector or the Engineer to condemn any defective material or work shall not release the Contractor from the obligation to at once tear out, remove and properly rebuild the same at any time upon discovery of the defect and upon receipt of notice of the Engineer to do so.

Should it be considered necessary or advisable by the Owner at any time before final acceptance of the entire work to make an examination of work already completed by removing or tearing out any portion thereof, the Contractor shall on request promptly furnish all necessary facilities, labor and materials. If such work is found to be defective in any respect due to the fault of the Contractor or his subcontractor, he shall defray all the expenses of such examinations and of satisfactory reconstruction. If, however, such work is found to meet the requirements of the Contract, the additional cost of labor and materials necessarily involved in such examination and replacement, plus fifteen percent (15%) for overhead and profit, shall be allowed the Contractor.

Where the Specifications require work to be specifically tested or approved, it shall not be tested or covered up without timely notice to the Owner of its readiness for inspection and without the approval or consent thereto by the Owner. Should any such work be covered up without such notice, approval or consent, it must, if required by the Owner, be uncovered for examination at the Contractor's expense.

17. PATENTS

The Contractor shall hold and save the Owner and its officers, agents, servants, and employees harmless from liability of any nature or kind, including all costs and legal expenses, for or on account of, any patented or unpatented invention, process, article or appliance, manufactured for or used in the performance of the Contract, including its use by the Owner, unless otherwise specifically stipulated in the Contract.

18. MUTUAL RESPONSIBILITY OF CONTRACTORS

If, through acts of neglect on the part of the Contractor, any other Contractor or any subcontractor shall suffer loss or damage on the work, the Contractor agrees to settle with such other Contractor or subcontractor by agreement or arbitration, if such other Contractor or subcontractor will so settle. If such other Contractor or subcontractor shall assert any claim against the Owner on account of any damage alleged to have been so sustained, the Owner shall notify the Contractor, who shall indemnify and save harmless the Owner against any such claim.

The Contractor must ascertain to his own satisfaction the scope of the project and the nature of any other Contracts that have been or may be awarded by the Owner in the prosecution of the project to the end that the Contractor may perform this Contract in the light of such other Contract, if any.

Nothing herein contained shall be interpreted as granting the Contractor exclusive occupancy of the site of the project. The Contractor shall not cause any unnecessary hindrance or delay to any other Contractor working on the project. If the performance of any Contract for the project is likely to be interfered with by the simultaneous execution of some other Contract or Contracts, the Owner shall decide which Contractor shall cease work temporarily and which shall continue, or whether the work under the Contracts can be coordinated so that the Contractors may proceed simultaneously. The Owner shall not be responsible for any damages suffered or extra costs incurred by the Contractor, resulting directly or indirectly from the award or performance or attempted performance of any other Contract or Contracts on the project, or caused by any decision or omission of the Owner respective to the order of precedence in the performance of Contracts.

19. NOTICE AND SERVICE THEREOF

Any notice from one party to another under the Contract shall be in writing and shall be dated and signed by the party giving such notice or by duly authorized representative of such party. Any such notice shall not be effective for any purpose whatsoever unless served in the following manner; namely, if the notice is given to the Owner, (a) by personal delivery thereof to the individual duly authorized to direct and supervise the project of the Owner, or (b) by depositing the same in the United States Mail, enclosed in a sealed envelope, addressed to the City of Midland, 300 North Loraine Street, Midland, Texas, 79701, postage prepaid and certified; or if the notice is given to the contractor (a) by personal delivery thereof to the project superintendent or other person authorized to act for the contractor, or (b) by depositing the same in the United States Mail, enclosed in a sealed envelope, addressed to the Contractor at his regular place of business or at such other address as may have been established for the conduct of the work under this Contract, postage prepaid and certified; or (c) if the notice is given to the Surety or any other person by personal delivery to such Surety or other person, or by depositing the same in the United States Mail, enclosed in a sealed envelope addressed to such Surety or other person, at the address of such surety or other person last communicated by him to the party giving the notice, postage prepaid and certified.

20. QUALITY OF MATERIALS AND WORKMANSHIP

It is the intention of this Contract to have only first class materials and the best workmanship throughout, and the methods and appliances adopted by the Contractor must be such as will secure a satisfactory quality of work and will enable him to complete the work in the time agreed upon. If at any time such methods and appliances appear inadequate, the Engineer may order the Contractor to improve their character or increase their efficiency, and the Contractor must conform to such order; but the failure of the Engineer to order such improvement of methods or increase of efficiency will not relieve the Contractor from his obligations to perform good work or finish it in the time agreed upon. The Contractor shall submit samples or specimens of any and all materials proposed to be used in the work when required to do so by the Engineer. All materials must be of specified quality and fully equal to approved samples. All work must be done and completed in a thorough and workmanlike manner. All materials furnished and all work done must be satisfactory to the Engineer and will be subject to rigid inspection, and if not in accordance with the Specifications in the opinion of the Engineer, shall be made to conform thereto.

It is understood that except as otherwise specifically stated in the Contract, the Contractor shall provide and pay for all materials, labor, tools, equipment, water, light, power, transportation, superintendence of temporary

construction of every nature, and all other services and facilities required for the completion of the Contract within the specified time.

21. SPECIAL METHODS

The Engineer may consent to special methods for carrying out the work in difficult cases, but the Contractor will not be relieved of responsibility for the result. The Contractor shall be responsible for the result of all work performed by him whether directed by the Engineer or not.

22. REMOVAL OR REPLACEMENT OF WORK DONE WITHOUT LINES OR GRADES

Any work done without lines or grades given by the Engineer or under his direction or without the supervision of an inspector, may be ordered removed and replaced by the Engineer at the Contractor's expense.

23. COVERING WORK

No work shall be covered until it has been examined and approved by the Engineer.

24. UNFAVORABLE WEATHER

During unfavorable weather and other adverse conditions, only such portions of the work may be done which will not be damaged thereby, unless by special means or precautions approved by the Engineer.

25. ALL WORK SUBJECT TO FINAL INSPECTION

Failure to neglect on the part of the Engineer or his inspectors to condemn or reject bad or inferior work or materials shall not be construed to imply his acceptance of such work or materials if it becomes evident at any time prior to the final acceptance of the work and the release of the Contractor.

26. PUBLIC CONVENIENCE

When materials for construction are brought on the work site they shall be neatly piled so as to cause as little obstruction to travel as possible, and so that they may be conveniently inspected.

No material or other obstruction shall be placed within five (5) feet of fire hydrants, which must at all times be readily accessible to the fire department, nor shall any material be piled within two (2) feet of any trees.

The Contractor shall be responsible for all damages to persons or property that occur as a result of his fault or negligence in connection with the prosecution of the Contract and shall be responsible for the proper care and protection of all materials delivered and work performed until completion, and final acceptance by the Owner.

The Contractor shall provide such heat, covering and enclosures as are necessary to protect all work and materials against damage by weather conditions.

The Contractor shall take adequate precautions to protect existing sidewalks, curbs, pavement, utilities, adjoining property, and structures, and avoid damage thereto, and he shall at his own expense completely repair any damage thereto caused by his operations.

If required by the Engineer, the Contractor shall shore up, brace, underpin, and protect as may be necessary, all foundations, and other parts of all existing structures adjacent and adjoining the site of the Project, which are in any way affected by the excavations or other operations connected with the completion of the work under this Contract. Whenever any notice is required to be given by the Owner or the Contractor to any adjoining or adjacent landowner or other party before commencement of any work under this Contract, such notice shall be given by the Contractor. The Contractor shall indemnify the Owner and save it harmless from any damages on account of settlement or the loss of lateral support of adjoining property and from all loss or expense and all damages for which the Owner may become liable in consequence of such injury or damage to adjoining and adjacent structures and their premises.

During the progress of the work the convenience of the public and of the residents along streets must be provided as far as practicable. Convenient access to driveways, houses and buildings along streets must be maintained whenever possible.

Temporary approaches and crossings of streets and sidewalks must be provided and kept in good condition whenever practicable.

The Contractor shall provide and maintain such fences, barriers, "Street Closed" signs, red lights and watchmen as may be necessary to prevent avoidable accidents to residents and to the public.

The Contractor alone shall be held responsible for all injuries to persons, and for all damages to property of the City or others, caused by or resulting from the negligence of himself, his employees or agents during the progress of or connected with the prosecution of the work, whether within the limits of the work or elsewhere. He must restore all injured public or private property to a condition as good as it was when he entered upon the work, purchasing new materials to replace all that which is injured or destroyed during the course of the work.

In an emergency affecting the safety of life or property, including adjoining property, the Contractor, without special instructions or authorization from the Owner is authorized to act at his discretion to prevent such threatened loss or injury and he shall so act.

27. TRAFFIC CONTROL

It is the policy of the City of Midland to keep at least two travel lanes open to traffic at all times and where possible to have three travel lanes between 7:30 a.m. and 9:00 a.m. and 4 p.m. and 6 p.m. (Two (2) lanes in the direction of peak travel).

At least 48 hours before beginning work the contractor shall present a traffic control and/or barricade plan prepared as per the approved Barricading Standards to the Traffic Engineering Division for review and approval. When approved and barricades are in place, they shall be inspected by the Traffic Engineering Division prior to beginning work.

Traffic control signs, such as stop signs, yield signs, etc., are placed in various intersections for the safety and protection of the traveling public. The contractor shall not move, alter or damage said signs for any reason. If said signs must be removed for construction purposes, contractor shall notify the City of Midland, Traffic Division Operations Superintendent at least 48 hours (not including weekends) before construction activities are scheduled to begin. All construction barricading, warning signs, and other construction traffic control devices shall be in place and shall be in accordance with the Texas Manual on Uniform Traffic Control Devices and approved Barricading Standards included in plans before traffic signs can be removed. The contractor shall notify the Traffic Division Operations Superintendent at least 72 hours (not including weekends) before

scheduled removal of construction barricades, warning signs, and traffic control devices. But in all cases the contractor shall not remove said barricades, warning signs, and traffic control devices until the City of Midland's Traffic Department has replaced stop signs, yield signs, etc., in their proper location. The Contractor shall notify Traffic Engineering Division at least 24 hours in advance of any Traffic Signal modification due to construction (i.e. eliminating left turn phases). Notice shall also be given to the Traffic Engineering Division at least 24 hours prior to removing barricades at signalized intersections.

28. PROTECTION OF NEW WORK

All new work shall be carefully protected by the Contractor, and any work injured from any cause before the completion of the whole project must be rebuilt by the Contractor at his own expense.

29. MONUMENTS OR STAKES

The Contractor must carefully protect from disturbance or injury all monuments, stakes and bench marks, of City County, State or Federal Government and shall not excavate nearer than five (5) feet to any of them without the permission of the Engineer, or until they have been removed, witnessed or otherwise disposed of by the Engineer.

30. USE OF COMPLETED PORTIONS

The City shall have the right to take possession of and use any completed or partially completed portions of the work notwithstanding the time for completing the entire work on such portions may not have expired; but such taking possession and use shall not be deemed an acceptance of any work not completed in accordance with the Contract Documents. If such prior use increases the cost of, or delays the work, the Contractor shall be entitled to such extra compensation or extension of time, or both as the Engineer may determine.

The Owner, in taking possession of completed portions, shall agree to accept the decision of the Engineer on matters relating to responsibility for damages that may occur to any portions of the work during the period of possession preceding acceptance and final payment.

31. USE OF PREMISES

The Contractor shall confine his apparatus, storage of materials and construction operations to such limits as may be directed by the Owner, and shall not unreasonably encumber the premises with his materials.

The Contractor shall enforce any instructions of the Owner regarding advertising, fires, danger signals, barricades and smoking, and shall require all persons employed on the work to comply with all building, post or institutional regulations while on the premises.

32. SAFETY RESTRICTIONS

The following procedures will be followed regarding the subject item on this contract:

A warning sign painted yellow with black letters that are legible at twelve feet shall be placed inside and outside vehicles such as cranes, cranes, derricks, power shovels, drilling rigs, pile drivers, hoisting equipment or similar apparatus. The warning sign shall read as follows:

"WARNING - UNLAWFUL TO OPERATE THIS EQUIPMENT WITHIN SIX FEET OF HIGH VOLTAGE LINES."

Equipment that may be operated within ten feet of high voltage lines shall have an insulating cage type of guard about the boom or arm, except back hoes or dippers, and insulator links on the lift hook connections.

When necessary to work within six feet of high voltage electric lines, notification shall be given to the power company who will erect temporary mechanical barriers, de – energize the line, or raise or lower the line. The notifying department

The Contractor is required to make arrangements with the Power Company for the temporary relocation or raising of high voltage lines at the Contractor's sole cost and expense.

No person shall work within six feet of high voltage line without precautions having been taken and protection provided as outlined in Paragraph (3) above.

33. INSURANCE REQUIREMENTS AND WORKERS COMPENSATION

INSURANCE REQUIREMENTS

Contractor shall at all times during the term of this Contract maintain and keep in full force and effect insurance in the following types and minimum amounts with companies authorized to do business in the State of Texas:

Commercial General Liability (including Contractual liability):	
— Personal Injury:	$1,000,000.00 per person
	$1,000,000.00 per occurrence
— Property Damage:	$500,000.00 per occurrence
Business Automobile Liability:	$250,000.00 combined single limit -
	Personal Injury and Property Damage
Workers' Compensation:	Statutory limits
Employers' Liability:	$500,000.00 per accident or occurrence

The Commercial General Liability shall be on a per project aggregate, including completed operations, and shall be on an occurrence basis. This insurance shall name the City as an additional insured and waive subrogation in favor of the City.

The Business Automobile Liability insurance provided by Contractor shall cover any auto for bodily injury and property damage, including owned vehicles, hired and non-city vehicles, and employee non-ownership, and the amount of such policy shall be a minimum of $250,000.00 covering any vehicle used for the execution of the

work that is the subject of this Contract. This insurance shall name the City as an additional insured and waive subrogation in favor of the City.

The Workers' Compensation coverage provided by Contractor shall inure to the benefit of employees injured during the course and scope of their employment by Contractor pursuant to this Contract. The Workers' Compensation shall waive all rights of subrogation in favor of the City.

All insurance required pursuant to this Contract shall provide for a waiver of subrogation in favor of the City. All insurance required pursuant to this Contract, except for Workers' Compensation Insurance, shall name the City as an additional insured on a claims occurred basis. City shall be provided the notice by Contractor's insurance provider not later than thirty (30) days prior to any reduction or termination of such coverage.

Contractor shall contractually require all contractors, subcontractors, and sub-subcontractors that work on any portion of the work that is the subject of this Contract to obtain insurance coverage that meets or exceeds the policy requirements and minimum amounts specified herein. All contractors, subcontractors, and sub-subcontractors shall obtain insurance policies that provide blanket waivers of subrogation in favor of the City of Midland and policies that name the City of Midland as an additional insured on a claims occurred basis (except workers' compensation).

The parties agree that, prior to the execution of the Contract, Contractor shall provide one or more certificates of insurance specifically stating that these requirements have been met and subject to the approval of the City. The City shall not be required to provide any insurance whatsoever pursuant to this Contract.

The Contractor certifies that the certificate of insurance provided as required herein complies with the requirements of Senate Bill 425, passed during the 82nd regular session of the Texas Legislature, and effective January 1, 2012. The Contractor shall not use an unapproved certificate of insurance or insert inappropriate language on a certificate. Compliance with state law is the sole responsibility of the Contractor.

34. INDEMNIFICATION

INDEMNITY: THE CONTRACTOR SHALL INDEMNIFY AND HOLD HARMLESS AND DEFEND THE OWNER AND ALL OF THE OWNER'S OFFICERS, AGENTS AND EMPLOYEES FROM ALL SUITS, ACTIONS, CLAIMS, DAMAGES, PERSONAL INJURIES, LOSSES, PROPERTY DAMAGE AND EXPENSES OF ANY CHARACTER WHATSOEVER, INCLUDING ATTORNEY'S FEES, BROUGHT FOR OR ON ACCOUNT OF ANY INJURIES OR DAMAGES RECEIVED OR SUSTAINED BY ANY PERSON OR PERSONS OR PROPERTY, ON ACCOUNT OF ANY NEGLIGENT ACT OF THE CONTRACTOR, THEIR AGENTS OR EMPLOYEES, OR ANY SUBCONTRACTOR, IN THE EXECUTION, SUPERVISION AND OPERATIONS GROWING OUT OF OR IN ANY WAY CONNECTED WITH THE PERFORMANCE OF THIS

CONTRACT, AND CONTRACTOR WILL BE REQUIRED TO PAY ANY JUDGMENT WITH COSTS WHICH MAY BE OBTAINED AGAINST THE OWNER OR ANY OF ITS OFFICERS, AGENTS OR EMPLOYEES, INCLUDING ATTORNEY'S FEES.

THE CONTRACTOR SHALL INDEMNIFY AND HOLD HARMLESS AND DEFEND THE OWNER AND ALL OF THE OWNER'S OFFICERS, AGENTS AND EMPLOYEES FROM ALL SUITS, ACTIONS, CLAIMS, DAMAGES, PERSONAL INJURIES, ACCIDENTAL DEATH, PROPERTY DAMAGE, LOSSES, AND EXPENSES OF ANY CHARACTER WHATSOEVER INCLUDING ATTORNEY'S FEES, BROUGHT FOR OR ON ACCOUNT OF ANY INJURIES OR DAMAGES RECEIVED OR SUSTAINED BY ANY PERSON OR PERSONS OR PROPERTY, ON ACCOUNT OF ANY NEGLIGENT ACT OF THE OWNER, THE OWNER'S OFFICERS, AGENTS AND EMPLOYEES, WHETHER SUCH NEGLIGENT ACT WAS THE SOLE PROXIMATE CAUSE OF THE INJURY OR DAMAGE OR A PROXIMATE CAUSE JOINTLY AND CONCURRENTLY WITH THE CONTRACTOR OR THE CONTRACTOR'S EMPLOYEES, AGENTS OR SUBCONTRACTORS NEGLIGENCE IN THE EXECUTION, SUPERVISION AND OPERATIONS GROWING OUT OF OR IN ANY WAY CONNECTED WITH THE PERFORMANCE OF THIS CONTRACT, AND CONTRACTOR WILL BE REQUIRED TO PAY ANY JUDGMENT WITH COSTS WHICH MAY BE OBTAINED AGAINST THE OWNER OR ANY OF ITS OFFICERS, AGENTS OR EMPLOYEES, INCLUDING ATTORNEY'S FEES.

THE CONTRACTOR AGREES THAT HE WILL INDEMNIFY AND SAVE THE OWNER HARMLESS FROM ALL CLAIMS GROWING OUT OF ANY DEMANDS OF SUBCONTRACTORS, LABORERS, WORKMEN, MECHANICS, MATERIALMEN, AND FURNISHERS OF MACHINERY AND PARTS THEREOF, EQUIPMENT, POWER TOOLS, ALL SUPPLIES, INCLUDING COMMISSARY INCURRED IN THE FURTHERANCE OF THE PERFORMANCE OF THIS CONTRACT. WHEN OWNER SO DESIRES, THE CONTRACTOR SHALL FURNISH SATISFACTORY EVIDENCE THAT ALL OBLIGATIONS OF THE NATURE HEREINABOVE DESIGNATED HAVE BEEN PAID, DISCHARGED OR WAIVED. THE CONTRACTOR, ITS SURETIES AND INSURANCE CARRIERS SHALL DEFEND, INDEMNIFY AND SAVE HARMLESS THE OWNER AND ALL OF ITS OFFICERS, AGENTS AND EMPLOYEES FROM ALL SUITS, ACTIONS, OR CLAIMS OF ANY CHARACTER WHATSOEVER, BROUGHT FOR OR ON ACCOUNT OF ANY INJURIES OR DAMAGES RECEIVED OR SUSTAINED BY ANY PERSON OR PERSONS OR PROPERTY, ARISING FROM ANY ACT OF THE CONTRACTOR OR ANY SUBCONTRACTOR, THEIR AGENTS OR EMPLOYEES, IN THE EXECUTION AND SUPERVISION OF THIS CONTRACT, AND WILL BE REQUIRED TO PAY ANY JUDGMENT WITH COSTS WHICH MAY BE OBTAINED AGAINST THE OWNER OR ANY OF ITS OFFICERS, AGENTS, OR EMPLOYEES INCLUDING ATTORNEY'S FEES.

35. RELEASE

NOTWITHSTANDING ANY OTHER PROVISION, CONTRACTOR HEREBY RELEASES, ACQUITS, RELINQUISHES AND FOREVER DISCHARGES OWNER, OWNER'S EMPLOYEES AND OFFICERS, FROM ANY AND ALL DEMANDS, CLAIMS, DAMAGES OR CAUSES OF ACTION OF ANY KIND WHATSOEVER WHICH CONTRACTOR HAS OR MIGHT HAVE IN THE FUTURE, INCLUDING BUT NOT LIMITED TO BREACH OF CONTRACT, QUANTUM MERUIT, CLAIMS UNDER THE DUE PROCESS AND TAKING CLAUSES OF THE TEXAS AND UNITED STATES CONSTITUTIONS, TORT CLAIMS OR OWNER'S NEGLIGENCE.

36. INDEPENDENT CONTRACTOR

It is expressly understood and agreed that Contractor shall perform all work and services described herein as an independent contractor and not as an officer, agent, servant or employee of the Owner; that Contractor shall have exclusive control of and the exclusive right to control the details of the services and work performed hereunder, and all persons performing the same; and shall be solely responsible for the acts and omissions of its officers, agents, employees, contractors and subcontractors; that the doctrine of respondent superior shall not apply as between Owner and Contractor, its officers, agents, employees, contractors and subcontractors; and

that nothing herein shall be construed as creating a partnership or joint enterprise between Owner and Contractor. No person performing any of the work and services described hereunder by Contractor shall be considered an officer, agent, servant or employee of the Owner. Further, it is specifically understood and agreed that nothing in this Contract is intended or shall be construed as creating a "Community of Pecuniary Interest" or "An Equal Right of Control" which would give rise to vicarious liability. Contractor shall be an independent contractor under this Contract and shall assume all of the rights, obligations and liabilities, applicable to it as such independent contractor hereunder. The Owner does not have the power to direct the order in which the work is done. The Owner shall not have the right to control the means, methods or details of the Contractor's work. Contractor shall assume exclusive responsibility for the work. Contractor is entirely free to do the work in its own way.

37. QUALIFICATIONS FOR EMPLOYMENT

Preference shall be given to qualified local residents in the employment of laborers and mechanics for work on the Project under this Contract. No person under the age of sixteen (16) years shall be employed on the project under this Contract. No person whose age or physical condition is such as to make his employment dangerous to his health or safety or to the health or safety of others shall be employed on the Project under this Contract: Provided, that this shall not operate against the employment of physically handicapped persons, otherwise employable, where such persons may be safely assigned to work which they can ably perform. No person currently serving sentence in a penal or correctional institution and no inmate of an institution for mentally defective shall be employed on the project under this contract.

38. PAYROLLS OF CONTRACTOR AND SUBCONTRACTORS

The Contractor and each of his subcontractors shall prepare payrolls for the workers on the Project. Not later than the seventh (7th) day following the payment of wages, the Contractor shall transmit to the Owner, if requested, a certified legible copy and two confirmed copies of such payroll.

Such copies of payrolls shall be accompanied by substantial proof that all bills for services rendered and materials supplied have been duly paid and by such other data as the Owner may require.

39. POSTING WAGE RATES

The Contractor shall post at appropriate conspicuous points at the site of the Project a schedule showing the wage rates for the various classes of laborers and mechanics to be engaged in work on the Project under this Contract and all deductions, if any, required by law to be made from unpaid wages actually earned by the laborers and mechanics so engaged.

40. PAYMENT OF EMPLOYEES

The Contractor shall post at appropriate conspicuous points at the site of the Project a schedule showing the wage rates for the various classes of laborers and mechanics to be engaged in work on the Project under this Contract and all deductions, if any, required by law to be made from unpaid wages actually earned by the laborers and mechanics so engaged.

41. WAGE UNDERPAYMENT AND ADJUSTMENTS

The Contractor agrees that, in case of underpayment of wages to any worker on the project under this Contract by the Contractor or any subcontractor, the Owner shall withhold from the Contractor out of payments due, an amount sufficient to pay such worker the difference between the wages required to be paid under this Contract and the wages actually paid such worker for the total number of hours worked and that the Owner may disburse such amount so withheld by it for and on account of the Contractor to the employee to whom such amount is due. The Contractor further agrees that the amounts to be withheld pursuant to this Article may be in addition to other amounts that may be retained by the Owner pursuant to other provisions of this Contract.

42. COMPUTATION OF WAGES ON 8 – HOUR DAY

The wages of each laborer and mechanic engaged in work on the project under this Contract shall be computed on a basis of eight (8) hours per day, eight (8) hours continuous employment except for lunch periods, constituting a day's work.

Legal holiday work shall be paid for at the regular governing per diem wage rates.

Work in excess of 40 hours per week shall be paid for at 1 ½ times the basic rate of pay.

43. OVERTIME WORK AND WORK ON SUNDAYS AND LEGAL HOLIDAYS

The Contractor will not be permitted to work on Sundays or legal holidays except in an emergency and then only upon written permission of the Engineer.

Any work necessary to be performed after regular working hours and when permitted on Sundays or legal holidays, shall be performed without additional expense to the Owner.

No work on any Contract item will be permitted before daylight or later than one hour after sundown.

44. CONTRACT SECURITY

The Contractor shall furnish a performance bond and payment bond in an amount equal to one hundred percent (l00%) of the amount of the Contract as security for the faithful performance of the Contract, including the payment of all persons performing labor on the project and furnishing of materials in connection with this Contract. All Bonds must be executed in five (5) original counterparts by a corporate surety authorized to do business in the State of Texas. Bonds executed by individuals or any other than recognized and authorized corporate surety companies will not be acceptable.

45. DELAYS

The Contractor shall receive no compensation for delays or hindrances to the work, except when, in the judgment of the Engineer, direct or unavoidable extra cost to the Contractor is caused by such hindrances or delays. When such extra compensation is claimed, a written statement thereof shall be presented by the Contractor, as provided in Paragraph 18 hereof. Such claim, if found correct, will be approved, and the decision of the Engineer whether extra cost has been incurred and the amount thereof, shall be final. If delays are caused by specific orders to stop work, given by the Engineer, or by the performance of extra work, or by unforeseen causes beyond the control of the Contractor, or by the failure of the Owner to provide materials or necessary instructions for carrying on the work, or to provide the necessary right-of-way or site for installation,

then delay will entitle the Contractor to an equivalent extension of time. Application for extension of time must be approved by the Owner and, shall not release the Sureties from their obligations, which shall remain in full force until the discharge of the Contract.

LATE COMPLETION; LIQUIDATED DAMAGES:

It is hereby understood and mutually agreed, by and between Contractor and the City, that the date of beginning and the time for completion as specified in the contract of the work to be done hereunder are ESSENTIAL CONDITIONS of this contract; and it is further mutually understood and agreed that the work embraced in this contract shall be commenced on a date to be specified in the "Notice to Proceed." Contractor agrees that said work shall be prosecuted regularly, diligently, and uninterruptedly at such rate of progress as will insure full completion thereof within the time specified. It is expressly understood and agreed, by and between Contractor and the City, that the time for the completion of the work described herein is a reasonable time for the completion of the same, taking into consideration the average climatic range and usual industrial conditions prevailing in this locality.

In the event Contractor shall neglect, fail or refuse to complete the work within the time herein specified, or any proper extension thereof granted by the City, then Contractor and Contractor's surety, if any, shall be liable for and does hereby agree, as a part consideration for the awarding of this contract, to pay to the City $500.00, not as a penalty but as liquidated damages for such breach of contract as hereinafter set forth, for each and every calendar day that Contractor shall be in default after the time stipulated in the contract for completing the work. Further, the City shall have the right to cancel this contract for such delay. In the event the City cancels this contract pursuant to the terms of this section, the City shall pay to Contractor only those monies deemed appropriate by the City, in its sole discretion, to compensate Contractor for any work actually performed, less any liquidated damages Contractor owes the City.

The said amount is fixed and agreed upon by and between Contractor and the City because of the impracticability and extreme difficulty of fixing and ascertaining the actual damages the City would in such event sustain, and said amount is agreed to be the amount of damages which the City would sustain and said amount shall be retained from time to time by the City from current periodical estimates.

It is further agreed that time is of the essence of each and every portion of this contract and of the specifications wherein a definite and certain length of time is fixed for the performance of any act whatsoever; and where under the contract an additional time is allowed for the completion of any work, the new time limit fixed by such extension shall be of the essence of this contract. Provided, that Contractor shall not be charged with liquidated damages or any excess cost when the City determines, in its sole discretion, that Contractor is without fault and Contractor's reasons for the time extension are acceptable to the City. Provided, further, that Contractor shall not be charged with liquidated damages of any excess cost when the delay in completion of the work is due:

a. To any preference, priority or allocation order duly issued by the Government;

b. To unforeseeable cause beyond the control and without the fault or negligence of Contractor, including, but not restricted to, acts of God, or of the public enemy, acts of the City, acts of another contractor in the performance of a contract with the City, fires, floods, epidemics, quarantine restrictions, strikes, freight embargoes, and severe weather; and

c. To any delays of subcontractors or suppliers occasioned by any of the causes specified in subsections (a) and (b) of this article.

Provided, further, that Contractor shall, within ten (10) calendar days from the beginning of such delay, unless the City shall, in its sole discretion grant a further period of time prior to the date of final settlement of the contract, notify the City, in writing, of the causes of the delay, who shall ascertain the facts and extent of the delay and notify Contractor within a reasonable time of its decision in the matter.

CONTRACTOR AGREES THAT THE PAYMENT OF SUCH LIQUIDATED DAMAGES MAY BE RECOVERED BY THE CITY FROM RETAINAGE HELD BY THE CITY. NOTWITHSTANDING ANY OTHER PROVISION HEREOF, CONTRACTOR HEREBY RELEASES, ACQUITS, RELINQUISHES AND FOREVER DISCHARGES CITY, CITY'S EMPLOYEES AND OFFICERS FROM ANY AND ALL DEMANDS, CLAIMS, DAMAGES, OR CAUSES OF ACTION OF ANY KIND WHATSOEVER ARISING FROM THE CITY WITHHOLDING PAYMENT FROM CONTRACTOR AS LIQUIDATED DAMAGES FOR CONTRACTOR'S FAILURE TO COMPLETE THE WORK WITHIN THE TIME SPECIFIED HEREIN, INCLUDING BUT NOT LIMITED TO BREACH OF CONTRACT, QUANTUM MERUIT, CLAIMS UNDER THE DUE PROCESS AND TAKINGS CLAUSES OF THE TEXAS AND UNITED STATES CONSTITUTIONS, TORT CLAIMS, OR CITY'S NEGLIGENCE.

CONTRACTOR SHALL RECEIVE NO FINANCIAL COMPENSATION FOR DELAY OR HINDRANCE TO THE WORK. IN NO EVENT SHALL THE CITY BE LIABLE TO CONTRACTOR OR ANY SUBCONTRACTOR OR SUPPLIER, ANY OTHER PERSON OR ANY SURETY FOR OR ANY EMPLOYEE OR AGENT OF ANY OF THEM, FOR ANY DAMAGES ARISING OUT OF OR ASSOCIATED WITH ANY DELAY OR HINDRANCE TO THE WORK, REGARDLESS OF THE SOURCE OF THE DELAY OR HINDRANCE, INCLUDING EVENTS OF FORCE MAJEURE, AND EVEN IF SUCH DELAY OR HINDRANCE RESULTS FROM, ARISES OUT OF OR IS DUE, IN WHOLE OR IN PART, TO THE NEGLIGENCE OF THE CITY. CONTRACTOR'S SOLE REMEDY IN ANY SUCH CASE SHALL BE AN EXTENSION OF TIME.

46. ERRORS AND OMISSIONS

The Contractor will not be permitted to take advantage of any error or omission in these specifications. Suitable instructions will be given by the Engineer when such error or omission is discovered.

47. SPECIFICATIONS AND DRAWINGS

The Contractor shall keep on the work a copy of the Specifications and Drawings, and shall at all times give the Engineer access thereto. Any drawings or plans listed in the detailed specifications shall be regarded as part thereof and of the Contract. Anything mentioned in these specifications and not mentioned or shown in the drawings, or shown in the drawings and not mentioned in these specifications, shall be done as though shown or mentioned in both. The Engineer will furnish from time to time, such detailed drawings, plans, profiles and information as he may consider necessary for the Contractor's guidance.

In the event of any discrepancy between the plans and these specifications, the decisions of the Engineer will be decisive thereon. The written dimensions on the plans are to be taken as correct, but the Contractor is required to check carefully all dimensions before beginning work thereon. Should any errors or omissions be discovered, the Engineer's attention shall be called to the same, and the proper corrections made. All notes on the plans shall be carefully observed by the Contractor and are a part of the Contract.

48. CONSTRUCTION STAKING

The Engineer will furnish a complete set of plans and profiles and set control stakes at fifty foot (50') intervals along the entire length of the project and at such control points he deems necessary for proper execution of the work. The Contractor will thereafter be required to lay out the work accurately and furnish at his own expense, all lines, levels, and dimensions necessary to the proper and correct execution of the entire work and be responsible for any errors resulting from his own work.

The Contractor shall give the Engineer at least 36 hours notice in writing before requiring stakes to be set on any new portion of the work, and he shall state clearly in such notice the exact locality or localities where such stakes are needed for immediate use.

The Contractor must satisfy himself, before commencing work, as to the meaning or correctness of all stakes or marks, and no claim will be entertained by the Owner for or on account of any alleged inaccuracies, or for the alterations subsequently rendered necessary on account of such alleged inaccuracies unless the Contractor notifies the Engineer thereof in writing before commencing to work thereon.

The Contractor will at all times conduct the work in such a manner as to prevent damage to construction stakes set by the Engineer. When construction stakes are damaged to such extent that they must be reset, as a result of carelessness or negligence on the part of the Contractor or his workmen, the costs thereof shall be kept by the Engineer and shall be deducted from the moneys due or to become due the Contractor under the terms of his contract.

Benchmark and survey stakes shall be preserved by the Contractor, and in case of their destruction or removal by him or his employees, they will be replaced by the Engineer at the Contractor's expense.

49. SANITATION

The Contractor shall provide suitable drinking water receptacles or containers equipped with dust-tight covers and spigots or faucets. A supply of sanitary paper drinking cups shall be kept on hand for general use near the drinking water containers. The use of common drinking cups or tin cups will not be permitted.

The Contractor shall furnish "Porta-Johns" or other approved sanitary facilities for use by all workers on the Project. Such facilities shall be placed and kept in close proximity of the site where work is being performed. Such facilities shall be properly serviced and maintained.

The Engineer may establish such other sanitary rules and regulations as may seem necessary and desirable to the safe prosecution of the work, such rules and regulations to apply to all forces employed under this Contract, and if, the Contractor fails to observe and enforce these rules, the Engineer may enforce them at the expense of the Contractor.

50. WATER FOR CONSTRUCTION

The Contractor may obtain all water necessary for construction purposes from the Municipal Waterworks System at the regular customer service rate, but the Contractor must make all necessary arrangements with the Director of Utilities for necessary connections and meters. The Contractor must make his own provisions and provide such equipment as is necessary for conveying water from point of service to point of use. No extra compensation will be allowed and the Contractor shall anticipate the expense connected herewith and absorb said expense in the prices bid for the various bid items.

51. SEQUENCE AND SPEED OF WORK

The Engineer shall direct the order and sequence of the work. If at any time before the commencement or during the progress of the work, the materials and appliances used appear to the Engineer as insufficient and improper for securing the quality of work required or the required rate of progress, he may order the Contractor to increase their efficiency or to improve their character and the Contractor shall conform to such order. The

failure of the Engineer to demand any increase of such efficiency or improvement shall not release the Contractor from his obligations to secure the quality of work or the rate of progress specified.

52. INSPECTION AND TESTING OF MATERIAL

The sampling and testing of materials used or proposed to be used in the construction of this project will be made by the Engineer, his designated representative or certified testing laboratory personnel in accordance with methods prescribed by the American Society of Testing Materials and/or the American Association of State Highway Officials, with subsequent approved revisions made prior to the date of the Proposal. The selection of the method of test shall be designated by the Engineer. The Contractor shall bear the cost of all tests required before a material or a method is approved for use on the job, unless the Owner specifically agrees to bear the cost of these tests.

All tests required by the Owner after materials and/or methods have been approved and after they have been incorporated or used in the job will be paid for by the Owner, except if the Owner's tests reveal non-conformance with the specifications, subsequent tests on that part of the work required to determine if the replaced or reworked material meets the specifications, will be paid for by the Contractor. The City will pay only one time for any required testing.

The following is a summary of test required for the approval of materials or methods:

Material	**Test**
Subgrade	Maximum density, optimum moisture
Caliche Base:	Maximum density, optimum moisture, hardness, gradation, liquid limit, plasticity index, Texas Triaxial Classification
Aggregates for hot-mix:	Gradation, unit weight, abrasion, soundness, liquid limit, plasticity index, density
Asphalt, emulsions and tars:	Certified plant test and certificates of compliance with each shipment
Hot- Mix asphaltic concrete:	Design mix, swell test, stripping test
Portland cement concrete pavement:	Design mix with test cylinders

Any materials shipped by the Contractor from the factory prior to having satisfactorily passed such testing and inspection by the Owner’s representative or prior to the receipt of notice from said representative that such testing and inspection will not be required, shall not be incorporated in the work.

The Owner may, at its discretion, approve materials and/or methods for use on this project without testing when they are from sources previously tested and approved for City of Midland projects.

53. CONSTRUCTION SCHEDULE

It shall be the responsibility of the Contractor to furnish the Construction Engineer prior to construction a schedule out – lining the anticipated time each phase of construction will begin and be completed, including sufficient time being allowed for clean – up.

54. PROFILES AND ELEVATIONS

Profiles and elevations of the ground are shown on the plans hereto attached. These profiles and elevations are believed to be reasonably correct, but are not guaranteed to be absolutely so, and are represented only as an approximation. Elevations are referred to datum given by the Engineer.

55. CLEANUP

During the progress of the work, the Contractor shall maintain the work area in a reasonably clean and safe condition. Dirt, debris, excess excavation and other objectionable materials shall be removed from the site and disposed of on a daily basis.

After completion of all the work contemplated to be done in accordance with the detailed plans and these specifications, the premises and area along the entire line of the work shall be thoroughly cleaned up and all remaining structural materials, excess or surplus excavation and debris of any nature shall be removed and disposed of in a satisfactory manner and as directed by the Engineer. The site of all work shall appear neat and finished. All portions of the project when completed shall be ready for use or occupancy.

No compensation or payment shall be made for any cleanup work. The price for such cleanup work shall be absorbed in the items covered in the proposal.

56. GUARANTEE

The contractor shall and hereby does guarantee: (1) all work performed by him directly and all work performed by his subcontractors; (2) that all material specified; and (3) that any defect due to improper workmanship or material discovered and made known to him within one year (1) f the date of final acceptance of the improvements shall be repaired, replaced, corrected or otherwise made good by him without additional expense to the Owner. The Contractor shall, in case of work performed by his subcontractors and where guarantees are required, secure guarantees from said subcontractors and deliver copies of same to the Engineer upon completion of the work.

57. WAIVER OF ATTORNEY FEES:

BY EXECUTING THIS CONTRACT, CONTRACTOR AGREES TO WAIVE AND DOES HEREBY KNOWINGLY, CONCLUSIVELY, VOLUNTARILY AND INTENTIONALLY WAIVE ANY CLAIM IT HAS OR MAY HAVE IN THE FUTURE AGAINST THE OWNER, REGARDING THE AWARD OF ATTORNEY'S FEES, WHICH ARE IN ANY WAY RELATED TO THE CONTRACT, OR THE CONSTRUCTION, INTERPRETATION OR BREACH OF THE CONTRACT. THE CONTRACTOR SPECIFICALLY AGREES THAT IF THE CONTRACTOR BRINGS OR COMMENCES ANY LEGAL ACTION OR PROCEEDING RELATED TO THIS CONTRACT, THE CONSTRUCTION, INTERPRETATION, VALIDITY OR BREACH OF THIS CONTRACT, INCLUDING BUT NOT LIMITED TO ANY ACTION PURSUANT TO THE PROVISIONS OF THE TEXAS UNIFORM DECLARATORY JUDGMENTS ACT (TEXAS CIVIL PRACTICE AND REMEDIES CODE SECTION 37.001, ET. SEQ., AS AMENDED), OR CHAPTER 271 OF THE TEXAS LOCAL GOVERNMENT CODE, THE CONTRACTOR AGREES TO ABANDON, WAIVE AND RELINQUISH ANY AND ALL RIGHTS TO THE RECOVERY OF ATTORNEY'S FEES TO WHICH CONTRACTOR MIGHT OTHERWISE BE ENTITLED.

CONTRACTOR AGREES THAT THIS IS THE VOLUNTARY AND INTENTIONAL RELINQUISHMENT AND ABANDONMENT OF A PRESENTLY EXISTING KNOWN RIGHT. THE CONTRACTOR ACKNOWLEDGES THAT IT UNDERSTANDS ALL TERMS AND CONDITIONS OF THE CONTRACT. THE CONTRACTOR FURTHER ACKNOWLEDGES AND AGREES THAT THERE WAS AND IS NO DISPARITY OF BARGAINING POWER BETWEEN

THE OWNER AND THE CONTRACTOR. THIS SECTION SHALL NOT BE CONSTRUED OR INTERPRETED AS A WAIVER OF SOVEREIGN IMMUNITY.

THE CONTRACTOR AND OWNER ARE RELYING ON THEIR OWN JUDGMENT. EACH PARTY HAD THE OPPORTUNITY TO DISCUSS THIS CONTRACT WITH COMPETENT LEGAL COUNSEL PRIOR TO ITS EXECUTION.

58. GOVERNING LAW AND VENUE

This Contract shall be governed by the laws of the State of Texas. All performance and payment made pursuant to this Contract shall be deemed to have occurred in Midland County, Texas. Exclusive venue for any claims, suits or any other action arising from or connected in any way to this Contract or the performance of this Contract shall be in Midland County, Texas. The obligations and undertakings of each of the parties to this Contract shall be deemed to have occurred in Midland County, Texas. This Contract shall be governed by, interpreted, enforced and construed under the law of the State of Texas. The laws of the State of Texas shall govern, construe and enforce all the rights and duties of the parties, including but not limited to tort claims and any and all contractual claims or disputes, arising from or relating in any way that would direct application of the laws of another jurisdiction.

59. SOVEREIGN IMMUNITY

By executing this Contract, the City is not waiving its right of sovereign immunity. The City is retaining its immunity from suit. The City is not granting consent to be sued by legislative resolution or action.

THERE IS NO WAIVER OF SOVEREIGN IMMUNITY.

60. NO THIRD – PARTY BENEFICIARY

The City's approval of this contract does not create a third party beneficiary. There is no third party beneficiary to this contract. No person or entity who is not a party to this contract shall have any third party beneficiary or other rights hereunder.

61. NOTICE OF ALLEGED BREACH; STATUTORY PREREQUISITES

As a condition precedent to filing suit for alleged damages incurred by an alleged breach of an express or implied provision of this agreement, Contractor or his legal representative, shall give the City Manager or any other reasonable official of the City, notice in writing (consisting of one original and seven copies of notice attached to a copy of this agreement) of such damages, duly verified, within one hundred and twenty (120) days after the same has been sustained. The discovery rule does not apply to the giving of this notice. The notice shall include when, where and how the damages occurred, the apparent extent thereof, the amount of damages sustained, the amount for which the Contractor will settle, the physical and mailing addresses of Contractor at the time and date the claim was presented and the physical and mailing addresses of Contractor for the six months immediately preceding the occurrence of such damages, and the names and addresses of the witnesses upon whom the Contractor relies to establish its claim; and a failure to so notify the City Manager within the time and manner provided herein shall exonerate, excuse and except the City from any liability whatsoever. The City is under no obligation to provide notice to Contractor that Contractor's notice is insufficient. City reserves the right to request additional information regarding the claim. Said additional information shall be supplied within thirty (30) days after receipt of notice.

The statutory prerequisites outlined herein constitute jurisdictional requirements pursuant to Section 271.154 of the Texas Local Government Code and Section 311.034 of the Texas Government Code. Notwithstanding any other provision, Contractor's failure to comply with the requirements herein shall perpetually bar Contractor's claim for damages under Chapter 271 of the Texas Local Government Code, and Section 311.034 of the Texas Government Code, regardless if City has actual or constructive notice or knowledge of said claim or alleged damages. Contractor agrees that the requirements of this entire Agreement are reasonable.

62. ASSIGNMENT

Contractor shall not, either directly or indirectly, assign all or any part of this contract or any interest, right or privilege herein, without the prior written consent of the owner. The issue on whether or not to grant consent to an assignment is in the sole discretion of the owner.

63. FEDERAL WAGE REQUIREMENTS

If applicable, the Davis-Bacon Act, 29 CFR 5.5, and any related acts or regulations are hereby incorporated by reference and made a part of this Contract, and all terms and requirements under said laws, by such incorporation, are made terms and requirements of this Contract, to which the parties to this Contract have agreed to be bound.

64. PROMPT PAY ACT

The owner and contractor agree that Texas Government Code, Chapter 2251, Payment for Goods and Services (the "Prompt Pay Act") does not waive governmental immunity.

65. OTHER FEDERAL REQUIREMENTS

Company agrees that all iron or steel products produced through a manufacturing process and used in the project that is the subject of this Contract shall be produced in the United States in accordance with Government Code § 2252.202, et seq., as amended.

IMPORTANT NOTICE

Conflict Of Interest Reporting Requirements

Compliance with LOCAL GOVERNMENT CODE TITLE 5. MATTERS AFFECTING PUBLIC OFFICERS AND EMPLOYEES SUBTITLE C. MATTERS AFFECTING PUBLIC OFFICERS AND EMPLOYEES OF MORE THAN ONE TYPE OF LOCAL GOVERNMENT CHAPTER 176. DISCLOSURE OF CERTAIN RELATIONSHIPS WITH LOCAL GOVERNMENT OFFICERS; PROVIDING PUBLIC ACCESS TO CERTAIN INFORMATION.

Form CIQ: This questionnaire reflects changes made to the law by H.B. 23, 84th Leg., Regular Session. This questionnaire shall be filed in accordance with Chapter 176, Local Government Code, by a vendor who has a business relationship as defined by Section 176.001(1-a) with a local governmental entity and the vendor meets requirements under Section 176.006(a). By law this questionnaire must be filed with the records administrator of the local governmental entity not later than the 7th business day after the date the vendor becomes aware of facts that require the statement to be filed. See Section 176.006(a-1), Local Government Code. A vendor commits an offense if the vendor knowingly violates Section 176.006, Local Government Code. An offense under this section is a misdemeanor.

Bidders are responsible for filing Conflict of Interest form "CIQ" in accordance with the above referenced statute. Failure to do so is a class C Misdemeanor. Contracts or Purchase Orders awarded to a vendor that has violated this law is subject to termination at such time that the violation is discovered with no recourse to the City of Midland. The bidder will be subsequently removed from the bidders list for a minimum of one year.

When there is no known conflict of interest as defined by the statute, it is not necessary to file/submit the Form CIQ. The form must be submitted if a conflict is subsequently discovered.

By submitting a response to this request, vendor represents that it complies with the requirements of Chapter 176 of the Texas Local Government Code.

For a current list of the local government officers go to: http://www.midlandtexas.gov/

Upon completion of the form, sign and submit with bid or mail to:

CONFLICT OF INTEREST QUESTIONNAIRE

FORM CIQ

For vendor doing business with local governmental entity

This questionnaire reflects changes made to the law by H.B. 23, 84th Leg., Regular Session.

This questionnaire is being filed in accordance with Chapter 176, Local Government Code, by a vendor who has a business relationship as defined by Section 176.001(1-a) with a local governmental entity and the vendor meets requirements under Section 176.006(a).

By law this questionnaire must be filed with the records administrator of the local governmental entity not later than the 7th business day after the date the vendor becomes aware of facts that require the statement to be filed. *See* Section 176.006(a-1), Local Government Code.

A vendor commits an offense if the vendor knowingly violates Section 176.006, Local Government Code. An offense under this section is a misdemeanor.

OFFICE USE ONLY

Date Received

1 **Name of vendor who has a business relationship with local governmental entity.**

NOT APPLICABLE

2 ☐ **Check this box if you are filing an update to a previously filed questionnaire.** (The law requires that you file an updated completed questionnaire with the appropriate filing authority not later than the 7th business day after the date on which you became aware that the originally filed questionnaire was incomplete or inaccurate.)

3 **Name of local government officer about whom the information is being disclosed.**

_____

Name of Officer

4 **Describe each employment or other business relationship with the local government officer, or a family member of the officer, as described by Section 176.003(a)(2)(A). Also describe any family relationship with the local government officer. Complete subparts A and B for each employment or business relationship described. Attach additional pages to this Form CIQ as necessary.**

A. Is the local government officer or a family member of the officer receiving or likely to receive taxable income, other than investment income, from the vendor?

☐ Yes ☐ No

B. Is the vendor receiving or likely to receive taxable income, other than investment income, from or at the direction of the local government officer or a family member of the officer AND the taxable income is not received from the local governmental entity?

☐ Yes ☐ No

5 **Describe each employment or business relationship that the vendor named in Section 1 maintains with a corporation or other business entity with respect to which the local government officer serves as an officer or director, or holds an ownership interest of one percent or more.**

6 ☐ Check this box if the vendor has given the local government officer or a family member of the officer one or more gifts as described in Section 176.003(a)(2)(B), excluding gifts described in Section 176.003(a-1).

CONFLICT OF INTEREST QUESTIONNAIRE
For vendor doing business with local governmental entity

A complete copy of Chapter 176 of the Local Government Code may be found at http://www.statutes.legis.state.tx.us/Docs/LG/htm/LG.176.htm. For easy reference, below are some of the sections cited on this form.

Local Government Code § 176.001(1-a): "Business relationship" means a connection between two or more parties based on commercial activity of one of the parties. The term does not include a connection based on:

(A) a transaction that is subject to rate or fee regulation by a federal, state, or local governmental entity or an agency of a federal, state, or local governmental entity;

(B) a transaction conducted at a price and subject to terms available to the public; or

(C) a purchase or lease of goods or services from a person that is chartered by a state or federal agency and that is subject to regular examination by, and reporting to, that agency.

Local Government Code § 176.003(a)(2)(A) and (B):

(a) A local government officer shall file a conflicts disclosure statement with respect to a vendor if:

***

(2) the vendor:

(A) has an employment or other business relationship with the local government officer or a family member of the officer that results in the officer or family member receiving taxable income, other than investment income, that exceeds $2,500 during the 12-month period preceding the date that the officer becomes aware that

(i) a contract between the local governmental entity and vendor has been executed; or

(ii) the local governmental entity is considering entering into a contract with the vendor;

(B) has given to the local government officer or a family member of the officer one or more gifts that have an aggregate value of more than $100 in the 12-month period preceding the date the officer becomes aware that:

(i) a contract between the local governmental entity and vendor has been executed; or

(ii) the local governmental entity is considering entering into a contract with the vendor.

Local Government Code § 176.006(a) and (a-1)

(a) A vendor shall file a completed conflict of interest questionnaire if the vendor has a business relationship with a local governmental entity and:

(1) has an employment or other business relationship with a local government officer of that local governmental entity, or a family member of the officer, described by Section 176.003(a)(2)(A);

(2) has given a local government officer of that local governmental entity, or a family member of the officer, one or more gifts with the aggregate value specified by Section 176.003(a)(2)(B), excluding any gift described by Section 176.003(a-1); or

(3) has a family relationship with a local government officer of that local governmental entity.

(a-1) The completed conflict of interest questionnaire must be filed with the appropriate records administrator not later than the seventh business day after the later of:

(1) the date that the vendor:

(A) begins discussions or negotiations to enter into a contract with the local governmental entity; or

(B) submits to the local governmental entity an application, response to a request for proposals or bids, correspondence, or another writing related to a potential contract with the local governmental entity; or

(2) the date the vendor becomes aware:

(A) of an employment or other business relationship with a local government officer, or a family member of the officer, described by Subsection (a);

(B) that the vendor has given one or more gifts described by Subsection (a); or

(C) of a family relationship with a local government officer.

Form provided by Texas Ethics Commission www.ethics.state.tx.us Revised 11/30/2015

SPECIAL PROVISIONS

ATTENTION: All Bidders are directed to pay special attention to the NOTICE TO BIDDERS section of the bid packet. Bidders have sole responsibility for complying with the current bid process requirements. Bidders also have sole responsibility for verifying that any bid submitted is completed correctly and includes all of the required documentation, including addendums.

1. SCOPE OF WORK:

This project includes the BRIARWOOD AVE PHASE II project to be performed as outlined in the Plans and Specifications, which are necessary to satisfactorily complete the work.

The project will include the removal, replacement, relocation, placement, and installation of existing and proposed paving, sidewalk, and appurtenances including all necessary mobilization, saw-cutting, pavement removal, excavation, embankment, embedment, backfill, compaction, form work, pavement repair, pavement placement, sidewalk repair, sidewalk placement, concrete joint sealing, erosion control, traffic control, stabilization, utility cover adjustments, as well as coordination with City of Midland staff and organizations such as OSHA, franchise utilities, etc. as needed, One Call (Texas 811) notifications for pending work, notifications to adjacent property owners as directed by City of Midland Staff, and all other work to be performed as outlined in the Construction Drawings and Specifications, to satisfactorily complete the work.

The Owner reserves the right to abandon, without obligation to the Contractor, any part of the project, or the entire project, at any time before the Contractor begins any construction work authorized by the Owner.

Standard Specifications for Construction of the City of Midland will govern all construction, except as modified by these Special Provisions.

2. ORDER OF PRECEDENCE:

The Special Provisions take precedence over the General Conditions in this bid packet anywhere these two sections are not in agreement.

The Special Provisions take precedence over the City of Midland Specifications in this bid packet anywhere these two sections are not in agreement.

The Contractor is to bid the quantities in the Proposal section of the bid packet even if there is a discrepancy between the Proposal quantities and those noted or measured in the construction drawing set.

In the Proposal the long-hand dollar amount written in the Description column for each bid item will take precedence over the numerical dollar amount listed in the Unit Price column if there is a discrepancy between the two.

In the construction drawing set any written or noted dimension takes precedence over dimensions measured based on the drawing scale unless otherwise directed by the Engineer.

Any changes or revisions made as part of an Addendum for this project take precedence over the original bid packet and construction drawing set where the documents are in conflict.

3. EXAMINATION OF SITE:

Prospective bidders are to make a careful examination of the entire site of the project and are to make such explorations as may be necessary to determine the subsoil and/or water conditions to be encountered; improvements and obstructions which may be encountered; methods of providing ingress-egress to private as well as public property; methods of handling traffic during construction and maintenance of the entire project as well as any section thereof, protection of all existing structures both above and below ground; and how the plans fit the proposed project and especially if any discrepancies exist.

4. PAYMENT:

Payment and retainage (five percent, 5%) shall be per the General Conditions.

Payment will be made for material installed, not for material delivery.

5. SAFETY REQUIREMENTS:

It is the responsibility of the Contractor to follow and comply at all times with Occupational Safety and Health Administration (OSHA) and all other applicable safety regulations and requirements throughout the course of the project's work. The City of Midland reserves the right to require additional safety measures on the project site at any time if they are needed in the opinion of the Engineer for the safety of the work crews or public.

6. SAFETY RESTRICTIONS – WORK NEAR HIGH VOLTAGE LINES:

The following procedure will be followed regarding the subject item on this contract:

1) A warning sign painted yellow with black letters that are legible at twelve feet shall be placed inside and outside vehicles such as cranes, derricks, power shovels, drilling rigs, pile drivers, hoisting equipment or similar apparatus. The warning sign shall read as follows:

   "**WARNING – UNLAWFUL TO OPERATE THIS EQUIPMENT WITHIN SIX FEET OF HIGH VOLTAGE LINES"**

2) Equipment that may be operated within ten feet of high voltage lines shall have an insulation cage-type of guard about the boom or arm, except back hoes or dippers, and insulator links on the lift hook connections.

3) When necessary to work within six feet of high voltage electric lines, notification shall be given to the power company of who will erect temporary mechanical barriers, de-energize the line, or raise or lower the line. The notifying department shall maintain an accurate log of all such calls to the Power Company, and shall record action taken in each case.

4) The Contractor is required to make arrangements with the Power Company for the temporary relocation or raising of high voltage lines at the Contractor's sole cost and expense.

5) No person shall work within six feet of a high voltage line without protection having been taken as outlined in Paragraph (3).

7. TRAFFIC CONTROL:

All proposed traffic control shall be approved by the City where applicable. All traffic control plans must be submitted to and approved by the Construction Manager no less than two (2) business days prior to starting the construction work. Traffic control for each phase of work must be approved prior to starting that work.

Generic traffic control plans or typical details may be submitted for shoulder work on any class of roadway, or for work on local or collector streets that does not require the closure of any travel lanes (i.e., all lanes are open to traffic on striped roadways, or adequate width remains available for two-way traffic on unstriped roadways). Once a generic traffic control plan or typical detail for a certain type of setup has been approved one time, the Contractor shall only be responsible for notifying the Construction Manager of the location, type of setup, and dates on which they intend to utilize the pre-approved traffic control for the duration of the contract. No additional plan submittals will be required in these cases, except that the City reserves the right to suspend this exception at its discretion. For any work not fitting the above exception, or in the event that the exception is suspended by the City, a site-specific traffic control plan will be required for each work location and time period.

1. All temporary traffic control shall be in general conformance with the *Texas Manual on Uniform Traffic Control Devices* (TMUTCD) (latest edition as adopted by the Texas Department of Transportation), except as specifically directed by the City Engineer or City Traffic Engineer.
2. All temporary traffic control shall be designed, installed, and maintained by competent and qualified personnel with adequate experience in traffic control.
3. All temporary traffic control involving multiple lane closures or traffic shifts, full closures of collector or arterial streets, traffic control extending through a railroad crossing, or any setup reasonably determined by the City to be "complex", shall be implemented only by a contractor with specific experience and expertise in the field of traffic control (i.e., a qualified "barricade company").
4. A Traffic Control Plan (TCP) shall be submitted to the Engineering Services Department, Construction Manager, in advance of any work in the right-of-way that impacts traffic. No work shall occur until an approved TCP has been returned to the Contractor.
5. A copy of the approved TCP shall be kept in the possession of the person responsible for supervising the traffic control at all times while working in the right-of-way. The approved TCP shall be presented to City staff or law enforcement upon demand at any time.
6. Depending on site conditions and the nature of the work, temporary traffic control may be approved by the City for either of the following:
    a. All Times – All traffic control, including closures, may remain in place 24 hours per day until expiration of the approved TCP.
    b. Off-Peak Only – Lane or road closures are NOT permitted from 6:00-9:00 AM and 4:00-7:00 PM on weekdays (Monday through Friday). Other traffic control not related to lane or road closures may remain in place 24 hours per day until expiration of the approved TCP.
7. The contractor setting the temporary traffic control shall be responsible for the maintenance and upkeep of all signs, barricades, and other devices, at all times.
    a. All temporary traffic control setups shall be maintained at least one time per day, including weekends and holidays.
    b. More frequent maintenance shall be performed as needed, with particular emphasis to following up after severe weather events or during times of high winds.

c. Maintenance shall include:
    i. Verifying and correcting the location and orientation of all signs, barricades, and other devices;
    ii. Keeping signs and reflective areas of barricades and other devices clean and free of dirt buildup so as to maintain appropriate visibility and legibility; and
    iii. Ensuring the proper location, orientation, and operation of arrow boards or message boards, if present.

8. Arrow boards shall be required for lane closures under the following conditions:
    a. On roadways with a posted speed limit of 55 MPH or greater, for closures lasting more than one (1) hour;
    b. On roadways with a posted speed limit of 45 MPH or greater, for closures lasting more than four (4) hours;
    c. On any roadway if lanes will remain open to traffic travelling in the same direction on both sides of a closed lane during any overnight hours (from 7:00 PM to 6:00 AM); and

At other times as shown on the approved TCP, or as otherwise directed by the City.

8. DETOURS:

The Contractor is to prosecute his work in such a manner as to create a minimum of interruption to traffic and pedestrian facilities and to the flow of vehicular and pedestrian traffic within the project area.

9. PROPERTY AND RIGHT-OF-WAY ACCESS:

Access to adjacent properties must be maintained at all times unless otherwise directed by the Engineer. If the contractor will not be working in an area for a period of one week or more, special care is to be taken to address any unsafe conditions such as excavated areas or obstructions outside the worked area that could be tripping hazards, etc. Contractor must notify affected properties no less than two (2) business days prior to any planned access interruptions.

Contractor must coordinate with the City of Midland regarding any planned access interruptions for public Right-of-Way, or to restore any public infrastructure damaged during construction activities.

No equipment or construction materials are to be stored within the State Highway 158 Right-of-Way.

10. PROPERTY AND RIGHT-OF-WAY SERVICE:

Service to adjacent properties must be maintained at all times unless otherwise directed by the Engineer. Such services include water, wastewater, fiber, cable, electric, and gas. Contractor must notify affected properties no less than two (2) business days prior to any planned service interruption.

Contractor must coordinate with the City of Midland regarding any planned service interruptions for public water or wastewater, or to restore any public infrastructure damaged during construction activities.

Contractor must coordinate with private service providers for any necessary service interruptions to their infrastructure or to restore service to their infrastructure in the event that a private service is disrupted, damaged, etc. during construction.

11. CONSTRUCTION SCHEDULE:

It is the responsibility of the Contractor to furnish the Construction Engineer, prior to construction, with a schedule outlining the anticipated time each phase of construction will begin and be completed, including sufficient time being allowed for clean-up.

12. CONSTRUCTION STAKING:

It is the responsibility of the Contractor to provide the project construction staking at fifty-foot (50’) intervals along the entire length of the project as well as at such control points as the Contractor deems necessary for proper execution of the work. Construction staking is to include grading and cuts as well as horizontal alignments and construction control points. Cut sheets are to be provided to the Engineer by the Contractor for review and approval.

13. SURVEY:

The Contractor is to provide GPS survey shots for all meters replaced to the City of Midland with each completed work order submittal. Survey data is to be shot in Texas Central Zone with 1983 NAD at 1.0' accuracy or better. Survey data is to be provided in Excel csv. file format with all rounding functions turned off.

14. CONSTRUCTION MATERIALS:

The Contractor is to only provide new materials for permanent installation in any and all parts of this project, and all such materials must comply with the General Conditions, the Bid Packet Specifications, and all applicable City of Midland Standards and Specifications.

For this project, the Standard Specification is hereby amended to read:

> Qualifications of Material Sources – Contractor is only to use pavement mixtures that have a proven record of acceptance by the City of Midland, or another Texas municipality, or have a proven record of meeting similar standards for state highway projects.

Concrete is only to be placed when the ambient temperature is between 40 degrees and 95 degrees Fahrenheit and the ambient temperature in the shade is higher than 40 degrees Fahrenheit or is 40 degrees Fahrenheit and rising.

All concrete pavement joints are to be sealed with Texas Department of Transportation (TxDOT) DMS-6310 SL-2 sealant, an American Society for Testing and Materials (ASTM) D 1190 Hot-Applied Single Component Joint Sealant, or a City of Midland approved equal. This will not apply to curb or sidewalk joints.

No construction materials are to be placed or installed during rain events unless they are necessary to resolve an emergency situation or to facilitate the project site erosion control measures.

15. EROSION CONTROL:

Erosion control is the responsibility of the Contractor and erosion control measures are to be implemented so as to prevent sediment erosion from wind, rain, and other elements from the project site. Should the Owner feel that supplementary erosion control measures are required in addition to those implemented by the Contractor

then the Contractor will include additional erosion control measures within reason to the Owner's satisfaction and/or TCEQ requirements.

Reasonable erosion control measures include but are not limited to: construction entrance(s), concrete washout(s), perimeter silt fence or fiber wattle, rock rip-rap dams for concentrated runoff control, gutter and inlet protection measures such as sand bags, and stabilization of the construction area surfaces when construction work is not actively occurring by means of vegetative cover or seeded erosion control blankets.

Supplemental erosion control measures are ancillary to the project and not paid as a separate item, unless otherwise noted in the Proposal or Pay Notes.

Site cleanup work is to be done for this project as soon as possible as per the General Conditions and will be ancillary to the project and not paid as a separate item, unless otherwise noted in the Proposal or Pay Notes. Site cleanup is to take place throughout the project's construction as needed to maintain a clean and professional looking work area. No more than three calendar days are to elapse after completion of construction before the final roadway and right-of-way cleanup has been completed to the satisfaction of the Engineer.

16. WASTE MATERIAL:

Excess material from excavation and other construction or demolition activity will become the property of the Contractor. Excess excavation will be disposed of at locations secured by the Contractor and if necessary, approved by the Engineer. No material is to be placed on private property or City property without the approval of the Engineer and the property owner. Removal of excess material, excavation, and waste material are ancillary to the project and not paid as a separate item, unless otherwise noted in the Proposal or Pay Notes.

Excess concrete material must be washed out in a concrete washout within the project's job site area, or else any and all other concrete material washout must occur away from the job site area in the Contractor's or concrete Supplier's own operation yards or properties. Under no circumstances are concrete trucks allowed to washout in any job site excavations, channels, public right-of-way, or on private property.

17. TESTING:

It is the Contractor's responsibility to perform all required testing for any and all materials and workmanship performed or installed as part of the project's work. The cost of all such testing is to be borne solely by the Contractor unless required by the Engineer for work or materials that had previously been tested and approved and had not experienced any change in condition since that time as a result of the Contractor's work or actions; or unless additional testing outside of the project scope is performed at the request of the Engineer.

Required testing includes:

Concrete Pavement – A Slump Test is required for every cylinder set (3 test cylinders) taken, and no less than 1 cylinder set per day is to be taken for testing when concrete is placed. Test results are to be given to the engineer upon completion of each test, with 1 cylinder set taken for:

A. Every 50 cubic yards of concrete placed for concrete pavement between street intersections.

B. Every 50 cubic yards of concrete placed for concrete pavement at a street intersection.

C. Every 2 sets of fillets and valley gutters at street approaches. (1 set = 2 fillets and 1 valley gutter)

D. Every 4 alley approaches or driveway approaches.

E. There will be no testing for curb, ramps, and sidewalks.

Asphalt Hot-Mix Pavement – A Nuclear Gauge Density Test is required for either each day that asphalt hot-mix is placed or for every 250 linear feet of asphalt hot-mix pass, whichever results in more frequent testing. The laboratory density limits will be a minimum limit of 96%, a maximum limit of 98%, and an optimum limit of 97%. The acceptable field density range for construction of this project is 93% - 98% with a target density of 95%. Test results are to be given to the Engineer upon completion of each test.

18. COMPLIANCE:

The said Contractor further agrees to comply with all applicable provisions of the laws and building and construction codes of the City of Midland and the State of Texas, and with any regulations for the protection of workers which may be promulgated by the Government, and will protect such work with all necessary lights, barriers, safeguards, and warnings as provided for in said specifications and the Ordinance regulations.

Contractor is to comply with all accepted industry standards for means, methods, and details of work to be performed, as well as with any specific requirements of the City of Midland.

Contractor is to comply with any specific order of construction as directed by the City of Midland, but is otherwise free to conduct the work in the order which the Contractor sees fit.

Contractor agrees to comply with any specific direction or requirement of the City of Midland for the construction of this project, but is otherwise free to perform the work in its own way.

19. PERSONNEL:

It is the Contractor's responsibility to have a supervising representative of the Contractor on the construction site any time that construction work is taking place. The Contractor's representative must be on the Contractor's direct payroll. Sub-contractors or paid consultants will not satisfy this requirement.

It is also the Contractor's responsibility to provide the City with a reliable contact for issue escalation coordination. Such contacts would include the Contractor's site foreman, the Contractor's construction project manager, etc.

20. INTENT OF THE PROPOSAL:

The intent of the proposal is to determine the lowest responsible bidder based on the total of the quantities and unit prices. Once the lowest responsible bidder is selected, the project will be awarded based on the terms and requirements of the contract outlined in the bid packet and construction drawings.

21. CONTRACT DEADLINE:

The deadline for substantial completion of this project is _540_ calendar days total starting from the Notice to Proceed date.

Extensions of the project deadline may be requested by the Contractor for documented excepting conditions such as weather days, delays due to conflicts with existing franchise lines, etc. which are reasonably beyond the

Contractor's control. Any and all deadline extensions must be submitted by the Contractor in writing to Engineer for review, and the approval or denial of the request rests solely with the Engineer.

Unless specifically granted in writing by the Engineer, there will be no suspension of project time between phases of construction.

22. WARRANTY PERIOD:

There is a one (1) year calendar warranty period on this project for all work performed or materials installed effective immediately upon acceptance of the improvements by the Owner. The warranty period will be based on the acceptance date of the project as a whole, and not any individual phases of the project.

23. BID PACKET COMPLETION ITEMS OF NOTE:

Bidders must be willing to sign the Contract as is if a bid is submitted. Revisions, alterations, deletions, additions, or any other changes of any kind by the bidder to the bid packet or other bid documents (such as the construction drawing set, addendums, etc.) will result in the bid submittal being deemed 'Non-Responsive' and the bid will not be accepted.

Bidders are reminded to make sure that the Conflict of Interest forms are completed if applicable before submitting a bid.

All bid items in the Proposal section must be completed for a bid submittal to be considered complete. Any bid item left blank, only partially completed, or that the bidder indicates they chose to not provide a bid for will be considered incomplete, and the entire bid submittal will also be deemed incomplete, the bid submittal will be deemed 'Non-Responsive', and the bid will not be accepted. Bidders bear sole responsibility for making sure that the Proposal is complete and in accordance with the instructions provided to bidders in the bid packet.

All acknowledgement forms for all addendums that are issued during the bid process for this project must be filled out and be included with any bid submittal for that bid submittal to be considered complete. Any bid submittal lacking these completed addendum acknowledgement forms will be deemed 'Non-Responsive' and the bid will not be accepted. Bidders bear sole responsibility for making sure that they have obtained all addendums issued prior to submitting their bid.

Refer to
City of Midland
Specifications

PREPARATION OF RIGHT OF WAY

1. GENERAL

Includes the preparation of right-of-way for construction by clearing, grubbing, removing and disposing of all obstructions and objectionable material from the right-of-way and designated easements, which is not specifically provided for on the plans.

Obstructions and objectionable material refer to all objects or material that do not meet the quality of standards for the courses of pavement to be constructed or which protrude into the excavation for slopes.

Measurement and Payment - Measurement and payment will be at the units and prices for the applicable bid item in the proposal.

When no specific bid items are included in the bid proposal for work specified under this section this work shall be considered as incidental to other items of work and the cost shall be included in the bid for these items. No separate payment will be made.

2. CONSTRUCTION METHODS

Removal - Obstructions and objectionable material to be removed by blading, plowing, bulldozing, or other methods approved in writing by the Engineer. The use of explosives will not be permitted. Solid objects must be removed to a depth of at least one (1) foot below the finished slope or subgrade elevation. Hollow objects must be removed entirely.

Disposal - Material to be removed from the right-of-way becomes the property of the Contractor. If disposal areas are available, they will be indicated on the plans.

Preservation of Trees and Shrubs - Trees and shrubs to be preserved in the right of way are shown on the plans and must be protected from injury during construction.

Removal of Concrete - Cut concrete at the right-of-way line straight and vertical by sawing or other approved methods prior to the removal of concrete in the right-of-way.

EXCAVATION, EMBANKMENT AND PREPARATION OF SUBGRADE 1
1. GENERAL 2
2. CONSTRUCTION METHODS 2

EXCAVATION, EMBANKMENT AND PREPARATION OF SUBGRADE

1. GENERAL

Includes the excavation, embankment and preparation of subgrade determined by the lines, grades and sections shown on the plans and in accordance with the provisions of the specifications.

Excavation - Includes excavation to planned grade, disposal of the material, removal of unsuitable subgrade material and borrow material when required in the construction. All excavation to be classified as common.

Embankment - Consists of excavated or borrow materials placed and compacted in horizontal layers in accordance with the specifications.

Subgrade - The upper eight inches (8") of embankment or the upper eight inches (8") below the roadway excavation finished grade. The subgrade shall extend from six inches (6") back of curb to six inches (6") back of curb where curb and gutter is to be constructed.

Measurement and Payment - Measurement and payment to be at the units and prices for the applicable bid items in the proposal.

2. CONSTRUCTION METHODS

Excavation - Made at the location and to the lines and grades shown on the plans in areas previously prepared in accordance with provisions of Section 2A. Dispose of excess material not required in the embankment and material that is unsuitable for subgrade. Excavation tolerance to be plus or minus 1/10 foot from the plan grade.

The area between the curb and property line shall be excavated or filled, whichever is necessary, to curb height at back of curb and finished to a straight even surface to the property line. The minimum elevation at the property line shall be the elevation of the top of the curb. The maximum elevation at the property line shall be equal to a rise of 1/4 inch per foot from the back of the curb to the property line.

During the excavation of this project, it will be required that all parkways be excavated and shaped at the same time the roadway is excavated. Excess excavation will be disposed of at locations approved by the Engineer.

Embankment shall be constructed at the locations and to the lines and grades shown on the plans in areas previously prepared in accordance with Section 2A of these specifications. Top eight inches (8") of natural ground to be compacted

to embankment density requirements. Embankment shall be constructed from suitable material obtained from the excavation or borrow free of roots, rocks in excess of three inches (3"), debris and other objectionable material. Excavation deficiencies shall be supplemented from a borrow source approved by the Engineer. Embankment shall be constructed in uniform horizontal layers not to exceed eight inches (8") of loose depth and compact with suitable equipment to a minimum of ninety percent (90%) AASHTO T180. The materials shall be processed by aeration or watering to bring the material to the approximate optimum moisture. Dry layers will not be permitted. Soft spots that develop in the embankment shall be removed and replaced with suitable material. No payment will be made for removal of soft spots. Tolerance for embankment grading shall be one-half foot (1/2) plus or minus the plan grade.

Preparation of Subgrade - Eight inches (8") of the upper portion of the embankment or excavation shall be shaped and compacted to a minimum density of 95 percent (95%) AASHTO T180 and finished within a tolerance of one-half inch (1/2") in ten feet (10'). The finished subgrade shall be protected and maintained in a satisfactory condition until covered by succeeding construction.

Compaction Tests - Field density tests will be made by the Owner or by a laboratory selected by the Owner. The Contractor shall notify the Engineer when compaction has been achieved. The Contractor shall allow 24 hours for scheduling of test. Prior to the taking of subgrade density test, the entire subgrade will be tested by proof-rolling using a pneumatic roller weighing not less than 50,000 lbs. gross with tire pressure being not less than 110 psi. Any soft spots, pumping, or other evidence of weakness shall be remedied before density tests are made. Proof rolling shall be in the presence of the Engineer or his duly authorized representative.

The City will pay the cost of initial density tests made on the subgrade. If the subgrade fails to meet the density requirements on the first test, the contractor will be required to have subsequent density tests made by the commercial lab selected by owner. The cost of all subsequent density tests will be born by the contractor.

08/07

CONCRETE CURB AND GUTTER, SIDEWALKS AND DRIVEWAYS,

VALLEY GUTTERS, CENTER DRAINS AND RIP RAP

1. GENERAL

Includes the construction of concrete curb and gutter, sidewalks, driveways, valley gutters, center drains and rip rap in accordance with lines, grades and the sections shown on the plans and constructed in full compliance with provisions of the specifications.

A proven performance record by the Texas Highway Department shall be supplied by material producers for all materials supplied by them.

2. MATERIALS

Concrete - All concrete other than rip rap shall be Class "A" concrete in accordance with Texas Highway Department specifications Item No. 421. Concrete for rip rap shall be the class as shown on the plans and detail drawings. When no concrete class is shown the plans concrete for rip rap shall be Class "B" concrete.

Concrete batch designs shall be furnished for each project and shall include all classes of concrete proposed for use on the project.

Reinforcing Steel - Reinforcing steel shall be deformed bars or wire mesh fabric conforming to the requirements of "Texas State Department of Highways and Public Transportation 1982 Standard Specifications for Construction of Highways, Streets and Bridges" Item No. 440 and shall be of the sizes and grades as shown on the plans.

The contractor, at his option, may use fiber reinforcing in lieu of the wire mesh for all concrete slab on grade. When fiber reinforcing is used, it shall be "Fiber Mesh" or "Caprolan RC" or approved equal. The material and rate of application shall be approved by the Engineer prior to its use.

Expansion Joints - Bituminous pre-molded joint filler shall be composed of top grade fiber, treated by special impregnation system with water repellent bituminous materials. It shall be a non-extruding type, resilient, expanding on release of compression, preventing open joint crevices. The pre-molded joint filler shall be of such character, that it will not be deformed by handling during hot weather, nor shall it become brittle in cold weather. It shall be free from visible external defects such as holes, ragged or untrue edges, breaks, cracks or tears. It may be covered on both sides with paper to facilitate handling.

The joint filler shall be accurately cut to the dimensions and shapes required. It shall be of the thickness required by the plans, or as specified elsewhere.

3. CONSTRUCTION METHODS

GENERAL

No concrete shall be placed when, in the Engineers opinion, weather or other conditions would be detrimental to the structure placed. No concrete shall be placed on grade when the ground temperature is 35^{o} F or lower. Concrete may be placed when the ground temperature is rising from 35^{o} F. Concrete placed in cold weather shall be protected from freezing for 72 hours after being placed.

CURB AND GUTTER

EXCAVATION AND SUBGRADE - Excavation for curb, gutter, and combined curb and gutter shall be done with the subgrade excavation for the street. Street subgrade shall extend from six inches (6") back of curb to (6") back of curb and shall be compacted for a full width to a minimum of 95% AASHTO T180-61. Where subgrade is more than three inches (3") below bottom of curb, fill shall be compacted caliche base constructed from six inches (6") back of curb to six inches (6") back of curb as specified for base course.

Whenever subgrade or base is dry or dusty, it shall be thoroughly moistened, not made muddy, before the concrete is placed.

Forms - Forms shall be of steel, of a type to be approved by the Engineer, except that curves may be formed with wood sections built up or laminated, upon prior approval by the Engineer.

The forms shall be attached securely to stakes, shall be set true to line and grade, and braced sufficiently to remain true during the placing and tamping of the concrete. Forms shall be thoroughly cleaned and oiled before each use.

Curves - All changes in direction of the curbs shall be by means of true circular curves of the radii as shown on the plans.

Expansion Joints - Expansion joints shall be placed between curb and gutter sections at the tangent points of all curves, at each side of the inlet boxes, drives, alleyways, and at intervals of not more than forty feet (40') in straight runs. The expansion material shall be pre-molded three-fourths inch (3/4") in thickness, and shall conform to the requirements of expansion material as specified herein. It shall be cut to the full size and shape or the cross section of the curb and gutter, less one-half inch (1/2") from the finished surface thereof. The edges of sections against the joint shall be finished with an edging tool and the joint raked clean of concrete.

Finishing - There shall be provided on the job a metal screed or mule designed to give proper shape to the curb and gutter. It shall be bent to the exact shape of the finished curb and gutter and the forward edge turned up slightly to prevent disturbing the mortar. It shall be designed to ride on the forms and when properly manipulated shall leave the curb and gutter in its proper shaped condition. An "S" trowel shall be used to finish the surface and minor imperfections shall be corrected with a mason's trowel. Care shall be taken to finish

the gutter flow line to a true, uniform grade. All edges shall be finished with an edging tool, and joints marked with a jointer. Joint marks shall coincide with actual joints and shall be straight and true.

Curing - The completed curb and gutter, shall be cured in accordance with the requirements of the item "Membrane Curing", Texas Highway Department Item 531.

DRIVEWAYS AND ALLEY RETURNS

Driveways and alley returns shall be constructed of Class "A" concrete to the lines and grades as shown on the plans and detail sheets. All driveways and alley returns shall be reinforced as shown on the detail drawings.

Excavation and Subgrade - Excavation shall be accomplished in the same manner as for streets and curbs. The subgrade for all driveways and alley returns shall be compacted to 95% modified proctor density for 8 inches depth.

Driveways for single family residences and property used for two family residential purposes (duplexes) may be placed on the compacted subgrade. All other driveways shall be considered as commercial driveways and shall be constructed on 6 inches compacted flexible base.

Flexible Base - Commercial driveways and alley returns shall be constructed on 6 inches of flexible base conforming to Section 2-C- Flexible Base, Caliche.

Forms - Forms shall be constructed of steel or, when approved by the engineer, wood conforming to the requirements for curb and gutter forms.

Expansion Joints - Expansion joints shall be placed at the ends of abutting curb and gutter at the end of radii for all driveways and alley returns. In addition, expansion joints shall be placed at the ends of abutting sidewalk sections and at any point where the driveway or alley return abuts another concrete structure. Expansion joint material shall be pre-molded three fourths inch (3/4") in thickness, cut to the shape and dimensions required and shall extend the full depth of the concrete.

Finishing - Shaping and finishing of driveways and alley returns shall be accomplished by using a screed to shape the driveway or alley return to the lines and grade required. Finishing shall be accomplished by use of wooden floats and stiff bristled brushes or brooms. The last finish shall be by brushing or brooming in
A direction transverse to the direction of traffic.

During the entire finishing process care shall be taken to maintain the true gutter invert in line with the street curb and gutter.

Curing - Finished driveways and alley returns shall be cured in accordance with the requirements "membrane curing" "Texas Department of Highways and Public Transportation, 1982 Standard Specifications for Highways, Streets and Bridges", Item Number 531.

CONCRETE VALLEY GUTTERS, CENTER DRAINS AND DRAINWAYS

Concrete slab type street drainage structures with or without curbs, shall be constructed of Class "A" concrete to the lines and grades as shown on the plans and detail sheets or as may be established in the field by the engineer.

Subgrade excavation preparation and compaction and flexible base shall be the same as specified for street construction. All drainage structures within the roadway shall be constructed on a flexible caliche base so that the thickness of the concrete slab plus base is equal to the thickness of the hot mix asphaltic concrete surface plus base.

Forms - Forms shall be as specified for curb and gutter.

Reinforcing - All slab type drainage structures shall be reinforced as shown on the plans and detail drawings. Care shall be taken to maintain all reinforcing in good condition and at its proper location within the slab.

Expansion Joints - Expansion joint material shall be as specified for curb and gutter and for driveways and alley returns.

Expansion joints for valley gutter shall be placed at the ends of radii and at the juncture between the fillet and the cross valley as shown on the detail sheet.

For center drains, expansion joints shall be placed at the ends of widened or transition sections and at each end of a section containing a manhole or other structure and at intervals of sixty feet (60') measured along the center line of the drain.

Additional expansion joints shall be placed where drainage slabs abut backs of curbs, sidewalks and at contact points with other concrete structures.

Contraction Joints - Contraction joints shall be spaced at 15' intervals along the center line of center drains. These contraction joints shall be saw cut 3/8" wide minimum and 1/4 the depth of the slab using an approved concrete saw.

Saw cut contraction joints shall be made after the concrete has set sufficiently to prevent excessive raveling during sawing and shall be completed before the concrete is 48 hours old.

Finishing - Finishing shall be the same as for alley returns and driveways with the last finishing operation for structures subject to vehicular traffic being by broom or stiff brush in a direction transverse to the direction of traffic.

Curing - Curing shall be the same as for curb and gutter and driveways and alley returns.

SIDEWALKS

Sidewalks shall be constructed of Class A" concrete to the lines and grades as shown on the plans and detail drawings or as may be established in the field by the engineer. Sidewalks shall be constructed parallel to the back of the curb and on a grade parallel to

the top of curb grade. The minimum thickness for any sidewalk is 4 inches. The minimum width of any sidewalk is 4 feet.

Excavation and Subgrade - Excavation for sidewalk shall be made with street excavation where applicable. Care shall be exercised in excavating for sidewalks. Any over excavation or any fill required for sidewalk must be brought to grade in lifts not to exceed two inches (2") and thoroughly tamped. Subgrade for sidewalks shall be compacted to at least the density of the adjacent soil or to 85% modified proctor whichever is greater.

When a sidewalk is to be constructed on an embankment the fill must extend at least 3 feet beyond the edge of the sidewalk.

If the subgrade is dry or dusty it must be thoroughly moistened but not made muddy before concrete is placed.

Forms - Forms for sidewalks may be either steel or wood. Forms must be in good shape and true to line and grade. If nominal 2" x 4" lumber is used the subgrade must be finished one half inch (1/2") below the bottom of the form to provide the required 4 inch thickness.

Expansion Joints - Expansion joint material shall be pre-molded conforming to these specifications and shall be one half inch (1/2") thick. The expansion joint shall extend the full depth of the sidewalk.

Expansion joints shall be placed at points where the sidewalk contacts the back of curb, at all junctures between sidewalks all directions, and at all points where the sidewalk abuts a driveway, alley return or other concrete structure including fence foundations.

Transverse expansion joints shall be constructed in the sidewalk at intervals not exceeding twenty eight feet (28') as measured along the centerline of the walk except for sidewalks that are constructed wider than four feet (4') in which case expansion joints may be placed at intervals that are multiples of the width but not exceeding thirty feet (30').

Contraction Joints - Contraction joints consisting of trowel cuts one and one half inches (1-1/2") deep shall be spaced at four foot (4') intervals along the sidewalk. Contraction joints shall be edged using an edging tool with a 1/4 inch or 3/8 inch radius.

For sidewalks wider than four feet (4') contraction joints may be placed at intervals equal to the width of the walk up to but not exceeding ten feet (10').

Finishing - Sidewalks shall be "struck off" with a screed to provide an even surface and float finished using a wooden float.

The final finish on the sidewalk shall be accomplished by brooming or brushing using a stiff bristled brush or broom with the final strokes being in the transverse direction.

Curing - Curing shall be as specified for curb and gutter and driveways and alley returns.

CONCRETE RIP RAP

Concrete rip rap shall be constructed of concrete of the class and to the line and grades as shown on the plans.

Excavation and Subgrade - Care shall be taken not to over excavate for rip rap. The subgrade for rip rap shall be compacted to at least the density of the adjacent undisturbed soil or 85% modified proctor whichever is higher.

Forms - Forms, where required, may be either steel or wood. Forms must be in good condition and true to line and grade.

Expansion Joints - Expansion joints, where required, will meet the requirements of expansion joints materials as specified herein and will be placed as shown on the plans or directed by the engineer.

Finishing - Finishing shall be by screed and wooden float to produce true uniform surface.

Curing - Curing shall be as specified for other concrete herein.

Slope Paving - Slope paving may be required behind the curb or behind sidewalks where street paving requires deeper cuts in developed areas. Slope paving shall be constructed of Class "A" concrete and shall be constructed to the lines and grades as shown on the plans or as established in the field. Slope pavement shall be four inches (4") thick and shall be constructed in accord with the specifications for sidewalks.

When no slope grade is given on the plans the slope gradient shall be l:l.

Unless listed separately on the bid proposal, slope pavement shall be measured and paid for as sidewalk.

4. BACKFILL AND CLEANUP

GENERAL

Backfill and clean up are an integral part of the various items covered by this specification and must be completed for each item before that item will be considered for payment.

CONCRETE STRUCTURES WITHIN THE PAVED AREA OF STREETS

Backfill and clean up for concrete structures within the paved areas of streets, alleys, etc. shall receive special attention to assure the integrity of the street pavement.

Structures constructed in previously paved areas shall have sufficient surface removed along with base and subgrade where necessary to set full face forms for the concrete. As soon as the forms are removed all loose material shall be removed from the form trench and the trench filled to the base level with Portland cement stabilized backfill material

consisting of two (2) sacks Portland cement to one (l) cubic yard of caliche base material or one (l) cubic yard "blow sand". When the cement stabilized backfill has cured the pavement edge shall be saw cut to provide true and straight lines and the pavement restored to its original or revised grade using Hot mix asphaltic concrete conforming to the requirements of Section 2-F of these specifications.

For structures constructed on previously prepared subgrade or base course, clean up and backfill shall be considered complete when the subgrade or base course has been made ready to receive the next course.

When a structure is constructed on a finished base course and it is necessary to remove base material to set forms, backfill and cleanup shall be as described for previously paved areas and shall be considered complete when the base course is made ready to receive the surface course or courses.

BACKFILL BEHIND CURBS AND ALONG SIDEWALKS

Backfill behind curbs and along sidewalks that is to be grassed shall be made using good top soil. Top soil shall be free of caliche, rocks, clods, lumps, debris and other objectionable material. This backfill shall be compacted to at least the density of undisturbed adjacent soil but not less than 85% modified proctor.

Backfill behind curbs and along sidewalks that is to receive paving shall be constructed to conform to the base and subgrade of the adjacent paving and shall be compacted to 95% modified proctor. Or the contractor may elect to backfill to the top of the base with two (2) sack cement stabilized backfill.

In undeveloped areas and in areas where no sidewalks exist the contractor shall slope from the back of the curb to a maximum height of 1/4 inch per foot rise from the top of the curb to the property line on a straight line grade. The minimum elevation at the property lines shall be top of curb elevation.

In deeper cut areas slope paving may be required. When slope paving is required it shall be constructed to the lines and grades shown on the plans. Backfill and shaping beyond the slope paving shall be in accord with the applicable portions of this specification.

CONCRETE STRUCTURES

1. GENERAL

This specification covers concrete structures including but not limited to junction boxes, culverts, head walls, cast in place manholes, valve vaults, meter vaults and retaining walls.

2. MATERIALS

CONCRETE

Concrete for cast in place manholes, junction boxes, storm sewer inlet boxes, valve vaults and direct traffic culvert and bridge decks shall be a modified class "C" concrete using a minimum of 6 sacks cement per cubic yard with a maximum water content of 5 gallons per sack of cement and producing a concrete with 4000 psi 28 day compressive strength.

Concrete for other structures shall be class "A" as specified in "Texas State Department of Highways and Public Transportation 1982 Standard Specifications for Construction of Highways, Streets and Bridges" item number 421. Concrete for riprap shall be class "B".

Reinforcing steel shall conform to the requirements of item number 440 or "Texas State Department of Highways and Public Transportation 1982 Standard Specifications for Construction of Highways, Streets and Bridges" and shall be of the sizes and grades as shown on the plans.

3. CONSTRUCTION

Construction of concrete structures shall be in accordance with the provisions of item 420 "Texas State Department of Highways and Public Transportation 1982 Standard Specifications for Construction of Highways, Streets and Bridges".

8/07

FLEXIBLE BASE, CALICHE 1
1. GENERAL 2
2. MATERIALS 2
3. CONSTRUCTION 3
4. TESTING 3

FLEXIBLE BASE, CALICHE

1. GENERAL

This item consists of the construction of a caliche flexible base course to the lines, grades and thickness shown on the plans and in accordance with the provisions of the specifications.

Qualification of Material Source - There will be no designated material sources, but the source proposed by the Contractor must be approved by the Engineer. The contractor shall furnish evidence of capability to crush and screen the material with suitable equipment.

Measurement and Payment - Measurement and payment to be at the units and price for the applicable bid item in the proposal.

2. MATERIALS

Material from the approved source shall meet the following requirements when tested in accordance with the referenced testing standards:

Gradation - Tested by ASTM C 136-67 to meet the following gradation limits:

Sieve Size	Percent Passing
1-3/4"	100.0
7/8"	65-90
3/8"	50-70
No. 4	30-60
No. 40	15-35

Liquid Limit and Plasticity Index **-** Tested by ASTM D423-66 and D 424-59.

Liquid Limit - 30.0 Maximum
Plasticity Index - 10.0 Maximum
Triaxial Classification - Tested by Texas Highway Department Method TEX 117-E, Part II - minimum class 3.0.

Source Quality Control - The contractor shall exercise caution in the operation of the material source to prevent the inclusion of inferior materials.

3. CONSTRUCTION

A. The subgrade shall be finished true to the lines and grades as shown on the plans or as established by the Engineer and finished within specified tolerances and properly maintained to prevent drying and/or loosening of the surface.

No base material may be dumped on any subgrade until it has been tested and approved by the Engineer.

B. Flexible caliche base material shall be placed in uniform courses and processed to provide a uniformly mixed base course of the proper moisture content for compaction. The processing and compaction procedure used shall provide a uniform base course compacted to ninety-five percent (95%) modified proctor density (YACHT T180) minimum. The minimum thickness of any one compacted course shall be three inches (3"). The maximum thickness of any one compacted course shall be eight inches (8").

Any soft or segregated spots that appear in the base shall be removed, replaced or reprocessed and recompacted prior to final finishing of the base. The finished base shall conform to the lines and grades as shown on the plans or established by the Engineer. Finished tolerances shall not exceed one half inch (1/2") in ten feet (10').

The finished base shall be primed as soon after finishing as practical and shall be protected until the hot mix asphaltic concrete surface is applied. In no case will prime be applied until the finished base has been approved by the Engineer.

4. TESTING

A. All test for approval of the source shall be performed by a commercial lab selected by the owner and shall be paid for by the contractor.

B. Gradation and soil constants tests (ASTM C-136, D423 and D424) and THD Triaxial Test (THD TEX117-E Part II) will be performed for source approval. Should the appearance, workability or other visual checks indicate a possible change in the material being furnished, the Engineer may require the contractor to retest the material for source approval.

C. Field quality control test will consist of the finish tolerance test and density test.

The finish tolerance test will be performed by the contractor at his expense using a 10' rolling straight edge. This test shall be performed at the direction of the Engineer or his representative. When required, the test shall consist of checking one path in each lane with the rolling straight edge.

Density test will be made by the City or a commercial laboratory chosen by the City using Troxler 3411-B nuclear density gauges or approved equal at the minimum rate of one test for each 1000 square yards of base. In no case shall less than three tests be run on any one area processed as a unit. The City will bear the cost of the first test or set of tests only. If the base fails the first test the contractor, at his own expense, will be required to have all subsequent tests performed by the commercial laboratory chosen by the city.

8/07

BITUMINOUS PRIME

1. GENERAL

This item consists of the application of a bituminous prime coat to the finished caliche base in accordance with the provisions of the Specifications.

Qualification of Material Source - Material shall be supplied by a producer with a proven performance record of acceptance by the Texas Highway Department.

Measurement and Payment - Measurement and payment will be at the units and price for the applicable bid item in the proposal.

2. MATERIALS

Cut-back asphalt grade MC-30, Texas Highway Department Item 300.

Source Quality Control - Certificates of compliance to be furnished by the producer to the Engineer.

3. CONSTRUCTION METHODS

Condition of Base - The surface of the base shall be tightly compacted to the line and grade shown on the plans and within the tolerances of the specifications. The surface shall be clean and the base shall contain sufficient moisture to assure the proper penetration of the prime.

The prime shall be applied with an approved distributor to the surface of the base at a rate of between 0.15 and 0.40 gallon per square yard. The application rate shall be varied to meet field conditions and to obtain uniform coverage, and adequate penetration. Properly applied prime coat should penetrate from 3/8" to 1/2" into the base and should cure in approximately 72 hours with ambient temperatures at or near 70 degrees F. The prime shall be applied at a temperature within the range of temperatures recommended in Item 300 of Texas Highway Department Standard Specifications. The temperature shall be varied within this range to provide a viscosity that will assure even spreading and penetration of the base. Air Temperatures at the time of application shall be above 50'F.

BITUMINOUS TACK

1. GENERAL

This item consists of the application of a bituminous tack coat to the primed base or existing asphaltic concrete or Portland cement concrete pavement in accordance with the provisions of the specification.

Qualification of Material Source - Material shall be supplied by producer with a proven performance record of acceptance by the Texas Highway Department.

Measurement and Payment - Measurement and payment will be at the units and price for the applicable bid item in the proposal.

2. MATERIALS

Cut-back asphalt grade RC-250, Texas Highway Department Item 300.

3. CONSTRUCTION METHODS

Conditions of Surface - Prior to application of tack to the base course the prime must be completely penetrated into the base and the surface cleaned of foreign objects.

The tack shall be applied with an approved distributor at a rate of between 0.05 and 0.10 gallons per square yard. The temperature of application shall be within the range recommended by the Texas Highway Department in Item 300. The surface temperature to which tack is being applied shall be above 50 degrees F. at the time of application.

When the asphaltic concrete surface is being placed on primed caliche base, use of the tack coat may be waived by the Engineer if the contractor can show that adequate adhesion of the surface being placed to the base course is achieved without it.

Tack coat shall be placed on all asphaltic concrete or portland cement concrete surfaces on which an additional course of asphaltic concrete surfacing is to be placed. The tack coat shall be rolled with a pneumatic roller to assure even distribution over the entire surface and to achieve proper penetration into and adhesion to the surface being overlayed.

HOT MIX ASPHALTIC CONCRETE

I. GENERAL

Includes the construction of the hot mix asphaltic concrete surface in accordance with lines, grades and the sections shown on the plans and with the provisions of the specifications.

Qualification of Material Sources - Producers of oil asphaltic concrete mixture to have a proven record of acceptance by the Texas Highway Department.

Measurement and Payment - Measurement and payment to be at the units and price for the applicable bid item in the proposal.

2. MATERIALS

Oil Asphalt - Oil asphalt grade AC-l0 or AC-20, Texas Highway Department Item 300. When no asphalt grade is shown on the plans, and unless directed otherwise by the Engineer, asphalt for this project shall be grade AC-10.

Coarse Aggregate - Crushed stone or crushed gravel with a minimum of 75 percent of the aggregates having two or more crushed faces. Additional requirements:

(a) Los Angeles Abrasion: ASTM C l3l, Wear not to exceed 40.

(b) Decantation: Maximum 2.0 percent by weight

Fine Aggregates - Natural sand and screenings crushed from the same or similar material meeting the requirements of the course aggregates. Additional requirements.

(a) Plasticity Index: Maximum of 6.

(b) Sand Equivalents: Minimum of 50 for each individual fine aggregate.

Paving Mixtures - The paving mixture(s) shall be as shown on the plans and details. If no mixtures are shown on the plans surface or wearing courses up to l-3/4 inches thick shall be Type D, base courses up to 2 inches thick shall be Type C and base courses over 2 inches thick shall be Type B or Type A.

(a) Gradation: The master gradations for the paving mixtures are:

TYPE "A" (Coarse Graded Base Course):	Percent Aggregate by weight or volume
Passing 2" sieve	100
Passing l-3/4" sieve	95 to 100
Passing l-3/4" sieve, retained on 7/8" sieve	16 to 42
Passing 7/8" sieve, retained on 3/8" sieve	16 to 42
Passing 3/8" sieve, retained on No. 4 sieve	10 to 26
Passing No. 4 sieve, retained on No. l0 sieve	5 to 21
Total retained on No. l0 sieve	68 to 84
Passing No. l0 sieve, retained on No. 40 sieve	5 to 21
Passing No. 40 sieve, retained on No. 80 sieve	3 to 16
Passing No. 80 sieve, retained on No. 200 sieve	2 to 16
Passing No. 200 sieve	1 to 8

The asphaltic material shall form from 3.5 to 7 percent of the mixture by weight.

TYPE "B" (Fine graded Base or Leveling-up course)	Percent Aggregate by Weight or Volume
Passing l" sieve	100
Passing 78" sieve	95 to 100
Passing 7/8" sieve, retained on 3/8" sieve	21 to 53
Passing 3/8" sieve, retained on No. 4 sieve	11 to 42
Passing No. 4 sieve, retained on No. l0 sieve	5 to 26
Total retained on No. l0 sieve	58 to 74
Passing No. l0 sieve, retained on No. 40 sieve	6 to 32
Passing No. 40 sieve, retained on No. 80 sieve	4 to 21
Passing No. 80 sieve, retained on No. 200 sieve	3 to 21
Passing No. 200 sieve	1 to 8

The asphaltic material shall form from 3.5 to 7 percent of the mixture by weight.

Type "C" (Coarse Graded Surface Course):	Percent Aggregate by Weight or Volume
Passing 7/8" sieve	100
Passing 5/8" sieve	95 to 100
Passing 5/8" sieve, retained on 3/8" sieve	16 to 42
Passing No. 4 sieve, retained on No. l0 sieve	11 to 37
Total retained on No. l0 sieve	54 to 74
Passing No. l0 sieve, retained on No. 40 sieve	6 to 32
Passing No. 40 sieve, retained on No. 80 sieve	4 to 27
Passing No. 80 sieve, retained on No. 200 Sieve	3 to 27
Passing No. 200 sieve	1 to 8

The asphaltic material shall form from 3.5 to 7 percent of the mixture by weight.

TYPE "D" (Fine Graded Surface Course):	Percent Aggregate by Weight or Volume
Passing l/2" sieve	100
Passing 3/8" sieve	85 to 100
Passing 3/8" sieve, retained on 4" sieve	21 to 53
Passing No. 4 sieve, retained on No. l0 sieve	54 to 74
Total retained on No. l0 sieve	54 to 74
Passing No. l0 sieve, retained on No. 40 sieve	6 to 32
Passing No. 40 sieve, retained on No. 80 sieve	4 to 27
Passing No. 80 sieve, retained on No. 200 sieve	3 to 27
Passing No. 200 sieve	1 to 8

The asphaltic material shall form from 4 to 8 percent of the mixture by weight.

TYPE "F" (Fine Graded Surface Course):	Percent Aggregate by Weight or Volume
Passing 3/8" sieve	100
Passing No. 4 sieve	95 to 100
Passing No. 4 sieve, retained on No. l0 sieve	58 to 73
Passing No. l0 sieve, retained on No. 40 sieve	6 to 26
Passing No. 40 sieve, retained on No. 80 sieve	3 to 13
Passing No. 80 sieve, retained on No. 200 sieve	2 to 11
Passing No. 200 sieve	1 to 8

The asphaltic material shall form from 3.5 to 6.5 percent of the mixture by weight.

(b) Tolerances: Deviations from job mix formula limited to:

(l) Sizes larger than the l0 sieve- Plus or Minus 4 percent.

(2) No. l0 sieve and smaller - Plus or Minus 3 percent.

(3) The deviation from the job mix formula shall be further limited in that the total deviation from the job mix formula between any two adjacent aggregate grades shall not exceed the allowable deviation for either one.

(4) Asphalt - Plus or Minus 0.3 percent.

(c) Density - The mixture shall be designed to produce an acceptable mixture within tolerance, at or near optimum density. The mixture molded in the laboratory should have the following percent of maximum theoretical density:

Minimum	Maximum	Optimum
96	98	97

(d) Stability: Minimum of 35 Hveem

Source Quality Control - Paving mixture and plant tests to be performed by laboratory selected and paid by the Owner, except as noted.

Job Mix Formula - The contractor shall submit a job mix formula, prepared by laboratory chosen by the owner, at least l0 days in advance of laying operations to allow time for review by the engineer. Substitution of one or more materials will require a new job mix formula and must be approved by the engineer.

The design of job mix formula whether for original submittal or revisions shall be paid for by the contractor.

Plant Tests - Check of raw material uniformity, quality and flow, hot bin gradations, temperature of mixture, mixture tests for density, stability and percent asphalt and other necessary tests to be performed bythe laboratory selected by the owner for each day's production.

Oil Asphalt - Producer to furnish certificates of compliance to the Engineer.

3. CONSTRUCTION METHODS

A. GENERAL

Condition of Base - The surface of the base shall be tight and free of debris. The prime coat shall be uniformly distributed, well penetrated and completely cured prior to application of the tack coat. If the mixture will adhere to the surface of the base without the application of a tack coat, the tack coat can be eliminated. If the surface of the base is one half (l/2") inch or more lower than the proposed bottom of the asphaltic concrete it shall be corrected by placing and compacting a level up course of the asphaltic concrete before the mat is placed on it.

Stockpiling, Storage, Batching and Mixing - Shall meet the requirements of Item 340, "Texas Highway Department l982 Standard Specifications for Road and Bridge Construction.

Weather Limitations - Shall be the requirements of Item 340,"Texas Highway Department l982 Standard Specifications for Road and Bridge Construction." With the added provision that no asphaltic concrete shall be placed when the surface on which the mat is to be placed is below 50 degrees F.

Thickness - Shall be as shown on plans. Unless shown otherwise on the plans, the maximum compacted thickness of any one course of asphaltic concrete shall be two and one-half (2-l/2) times the maximum aggregate size of the mixture being placed. The minimum shall be one (l) inch or one and one fourth (1-1/4) times the maximum particle size which ever is greater.

B. PLACING

Placing of Asphaltic Concrete shall be accomplished using an approved self propelled spreading and finishing machine with a heated vibrating screed capable of producing a surface that will meet the requirements of the typical cross section and the surface test, and when the mixture is dumped directly into the finishing machine shall have adequate power to propel the delivery vehicles in a satisfactory manner. The finishing machine shall be equipped with a flexible spring and/or hydraulic type hitch sufficient in design and capacity to maintain contact between the rear wheels of the hauling equipment and the pusher rollers of the finishing machine while the mixture is being unloaded.

The use of any vehicle which requires dumping directly into the finishing machine and which the finishing machine cannot push or propel in such a manner as to obtain the desired lines and grades without resorting to hand finishing will not be allowed. Vehicles dumping directly or indirectly into the finishing machine shall be so designed and equipped that unloading into the finishing machine can be mechanically and/or automatically operated in such a manner that overloading the finishing machine being used cannot occur and the required lines and grades shall be obtained without resorting to hand finishing.

Automatic screed controls will be required and shall meet the requirements item, 528 "automatic screed controls for asphaltic concrete spreading and finishing machines "Texas Department of Highways and Public Transportation 1982 Specifications for Construction of Highways, Streets and Bridges".

The screed shall be ski controlled using a ski of not less than l8' in length. Curb shoe control will not be allowed.

The spreading and finishing machine shall be maintained in good working order and operated by competent trained personnel.

The Engineer may require the contractor to place a test strip to prove the capability of the machine and the competency of the operating personnel to produce a satisfactory finished surface.

In dips and on curved surfaces where the ski control cannot be used, the surface will be controlled using a l0' straight edge.

Fillet areas, turn outs and other areas not accessible to the spreading machine may be hand laid provided a satisfactory surface is produced.

C. COMPACTION AND FINISHING

Compaction Requirements - The asphaltic concrete surface shall be compacted so that the compacted mixture will contain not more than seven percent (7%) nor less than three percent (3%) air voids.

The surface of the pavement, after compaction, shall be smooth and true to the established line, grade and cross section, and when tested with a l0 foot rolling straightedge, except as provided herein, the maximum deviation shall not exceed l/8 inch in l0 feet, and any surface not meeting this requirement shall be corrected as directed by the engineer.

Raking and Leveling - Minor leveling may be accomplished using asphalt rakes prior to compacting the surface. The surface shall be leveled by loosening the surface of the asphaltic concrete using an asphalt rake then adding or removing material and smoothing the surface. Any large aggregate worked to the surface in this process shall be removed before compaction. The large aggregate shall not be spread over the new asphaltic concrete surface.

Edges and joints with compacted asphalt or concrete gutters shall be carefully squared and excess material removed before compaction. Care shall be taken to see that NO excess material laps over onto the surface of existing asphaltic concrete paving or concrete gutters. Large aggregate worked to the surface in this process shall be removed. It shall not be spread over the new asphaltic concrete surface.

Rolling - In general rolling shall conform to the requirements of item 340 of the Texas Department of Highways and Transportation 1982 Specifications for Construction of Highways, Streets an Bridges except as modified herein.

It shall be the responsibility of the contractor to have rolling equipment available on the job to properly compact the paving mixture in place as required without delay to the lay down operation. Rollers provided shall meet the qualifications for their type as follows:

PNEUMATIC TIRE ROLLERS: The rollers shall be acceptable medium pneumatic tire rollers conforming to the requirements of the item, "Rolling (pneumatic tire)", Type B, unless otherwise specified on plans.

TWO AXLE TANDEM ROLLER: This roller shall be an acceptable power driven tandem roller weighing not less than 8 tons.

THREE WHEEL ROLLER: This roller shall be an acceptable power driven three wheel roller weighing not less than l0 tons.

THREE AXLE TANDEM ROLLER: This roller shall be an acceptable power driven three axle roller weighing not less than l0 tons.

Vibrating rollers will not be used without prior written approval of the engineer. Written approval will be granted only upon demonstration by the contractor that the roller and operator can produce a satisfactory surface within the tolerances of these specifications. Only the operator or operators thus approved will be allowed to operate the vibrating roller on this project.

Areas not accessible to standard rollers shall be compacted using trench rollers, impact tampers, hand tamps or other approved means that will produce the density and surface required.

JOINTS- Shall be carefully rolled to provide compaction of the asphalt against the existing surface or face of the concrete gutter. Joints between concrete gutters and Hot Mix Asphaltic Concrete shall be placed so that the HMAC will be approximately l/2 inch higher than the concrete when compaction is completed. At transverse joints such as valley gutters and fillet areas where finishing asphalt paving 1/2 inch above the edge of concrete will adversely affect ride quality the asphalt shall be finished 1/4 inch above the edge of the concrete.

Transverse joints shall be rolled in the transverse direction with the first pass extending approximately six (6") inches onto the new asphalt each additional pass shall extend approximately twelve (12") inches further onto the new asphalt until the full width of the roller is on the new asphalt. Longitudinal rolling may begin then.

All transverse joints shall be checked with a l0" straight edge while the material is

still hot enough to roll. Any corrections shall be made by loosening the material using an asphalt rake and adding or removing material and recompacting the surface. The surface shall be rechecked and when the joint is acceptable the asphalt spreading machine may proceed with the pass.

Final or finish rolling shall be accomplished using a two axle tandem roller to remove roller marks. This rolling shall be accomplished after the surface has cooled sufficient to minimize further marking but before it is too cool to respond to rolling.

STRAIGHTEDGES AND TEMPLATES - The contractor shall provide acceptable l0 foot straightedge for surface testing. Satisfactory templates shall be provided as required by the Engineer.

4. FIELD QUALITY CONTROL

Test Lots - Field Quality Control Tests shall be made by lot with a lot being the amount of contiguous surface laid in one day. No lot shall exceed l0,000 S.Y. If a days laying exceeds l0,000 S.Y., that days laying shall be divided into two approximately equal lots. The same lot divisions shall be used for all Quality Control Tests. Each separate block or combination of contingeous (blocks) of paving shall be considered as a separate lot even though they may be placed in a single day and do not comprise l0,000 S.Y. of surface.

Surface Tests - Surface tolerance tests will be performed in both longitudinal and transverse directions. The test for longitudinal surface tolerance will be performed with a ten-foot rolling straightedge furnished by the contractor, and calibrated and used in accordance with the manufacturer's recommendation or other approved method.

The maximum allowable deviation in surface shall be 1/8 inch in 10 feet. Tests for longitudinal surface tolerance will be performed by the contractor, accompanied by the engineer within 24 hours of the completion of a lot. One path in each lane for the length of the entire lot will be tested. The location of the test path (Distance from centerline or pavement edge) will be determined by the engineer through the use of random numbers. Any deviations in the surface finish of a roadway wearing course which exceeds l/4 inch must be corrected. After corrections have been made, the entire lot must meet the l/8 inch surface tolerance.

Thin course "scab on" patching will NOT be permitted. Corrections may be made by planning, milling and patching or by removing and replacing affected surface area.

When milling and patching is used to correct surface defects the minimum depth of removal shall be l".

For milling and patching or surface removal the area removed or milled shall be sufficiently large to avoid the appearance of patching.

When planning is used to correct defects the thickness of the remaining paving shall meet the thickness requirements as shown on the plans.

Surface tolerance test will be performed on the last or wearing course only.

Asphaltic concrete pavement constructed under these specifications that does not meet the surface tolerance requirements and is allowed to remain in place will be paid for at a reduced rate determined by multiplying the price bid for the wearing surface course by a surface tolerance quality factor. This rate shall apply to the entire lot.

Lower courses will not be affected by this quality factor but will be paid for at the price bid or such price as it may be affected by other quality factors.

The surface tolerance quality factor will be determined according to the following schedule:

Linear % of pavement exceeding 1/8 inch surface tolerance			Surface tolerance quality factor
0.0	to	1.0	1.0
1.1	to	1.5	0.9
1.6	to	2.5	0.8
over		2.5	0.5

Roadway surface requirements will not be applied for paved drives, aprons, turnouts, and other irregular sections, however, asphaltic concrete shall be placed in such a manner as to provide a neat and uniform appearance and shall be compacted by methods satisfactory to the engineer.

The contractor may request permission to reconstruct a portion of the pavement when, in his opinion, the surface tolerance quality factor can be improved. Upon approval of the engineer, the contractor shall take sufficient tests to isolate the portion or portions of pavement to be pre- constructed and remove and reconstruct the pavement. All costs in connection with this reconstruction are to be born by the contractor. The minimum width of this reconstruction shall be l/2 the street width unless approved otherwise in writing by the engineer. The portions reconstructed shall be re-tested and the surface tolerance quality factor recomputed using the new information along with the test from the area within the portion of the lot not reconstructed.

When other quality factor reductions are provided for on the plans or in the specifications the effect shall be cumulative ie: QFl x QF2 x QF3 x ....x QFn x unit price.

No payment will be made for pavement with a combined quality factor of less than 0.5.

Thickness Test - Thickness test will be made by the engineer on each course of asphaltic concrete laid. Test specimens shall be made by a commercial laboratory selected by the owner. Test specimens shall be cores having a minimum nominal diameter of 6". These cores shall be made in the presence of the inspector at locations designated by the inspector using an approved power operated coring machine.

For thickness and compaction test, each lot shall be divided into approximately equal sublots corresponding in width to each pass of the lay down machine and containing up to but not exceeding 2,000 square yards each. If a lot contains less than 2,000 square yards the engineer may, at his option, divide the lot into two equal sublots, or, if the contractor has a record of satisfactory workmanship, the engineer may waive tests on said lots.

The engineer will locate one test spot for each l,000 S.Y. and/or fraction thereof in each sub-lot using random numbers. If a spot thus located falls within one foot of a longitudinal joint or lip of gutter or within two feet of an unsupported edge or within l5 feet of the beginning or ending edge of a pass, the engineer will relocate the spot using random numbers. The commercial laboratory chosen by the owner will remove the test specimen from each designated spot, mark the specimen and the adjacent pavement for future reference and perform the required tests. Test specimens shall be removed with special caliper type tongs having circular jaws of the diameter of the specimen being removed. These jaws shall grip at least 1/2 of the circumference of the specimen. Screw drivers or other type of prying instruments shall not be used to remove the specimens.

The thickness of a specimen shall be determined by averaging four (4) measurements made at ninety degree (90) intervals around the specimen. Any thickness less than design thickness shall be considered as deficient.

For hot mix asphaltic concrete pavement less than 2 inches thick the maximum allowable deficiency in any one test specimen is l/8 inch provided that no more than twenty five percent (25%) of the specimens tested show a deficiency. For pavement in excess of 2 inches in thickness the maximum allowable deficiency in any one specimen shall be l/8 inch plus l/l6 inch for each additional inch of thickness provided that no more than twenty five percent (25%) of the test specimens show a deficiency.

When a test specimen has a greater deficiency and less than (25%) of the test specimens show a deficiency the contractor shall, at his own expense, determine the extent of the deficiency and correct it by removing and replacing the surface. The minimum width for such correction will be the full width of the pass or passes of the lay down machine in which the deficiency occurs.

The minimum length of such correction shall be three times the width removed. When more than (25%) of the test specimens show a deficiency the surface may at

the engineers option be declared uniformly deficient and the contractor shall correct the deficiency by removing and reconstructing the surface or by constructing an overlay of not less than l inch thickness over the deficient area. The construction of an overlay will require milling at lip lines and dips.

The corrected surface shall meet all the requirements of these specifications.

Asphaltic concrete pavement constructed under these specifications that is less than design thickness, if allowed to remain in place, will be paid for at a reduced rate determined by multiplying the unit price bid in the bid proposal by a thickness quality factor. This rate shall apply to the entire lot in which the deficiency is found.

The thickness quality factor for hot mix asphaltic concrete pavement less than 2 inches in thickness shall be:

Thickness Deficiency	Quality Factor
Maximum l/8" for any one specimen with no more than 25% of the specimens showing a deficiency.	l.0
Pavement not meeting the 25% limitation with an average specimen deficiency up to l/8 inch.	0.75
Average specimen deficiency of l/8 inch to l/4 inch	.55
Average deficiency of more than l/4 inch	0.0

The thickness quality factor for hot mix asphaltic concrete more than 2 inches thick will be l.0 if the maximum deficiency for any one specimen is l/8 inch plus l/l6 inch for each additional inch of thickness over 2 inches and not more than twenty five percent (25%) of the test specimens in the lot are deficient. For thickness test that fall outside this area either by single specimen thickness deficiency or more than twenty five percent (25%) of the specimens showing deficiency the thickness quality factor shall be computed as follows:

$$\text{Thickness Quality Factor} = \frac{1}{\left(\frac{1}{\text{Thickness Ratio}}\right)^2}$$

The thickness ratio for a lot is the average specimen thickness for that lot, with no allowance for thickness in excess of design, divided by the design thickness. For determining the average specimen thickness, those specimens in excess of design thickness shall be considered at design thickness.

The minimum thickness quality factor for which payment will be allowed is .55. Any pavement with a thickness quality factor below .55 will be considered as having a thickness quality factor of 0. This shall apply only if the contractor requests, in writing, to have this paving remain in place and this request is approved in writing by the engineer.

When the deficient area is in a lower course of a multi-course paving structure the contractor may reduce or correct the deficiency by increasing the thickness of the subsequent course or courses as follows:

When subsequent course is	Maximum increase in course thickness
Type B	1/2"
Type C	3/8"
Type D	1/4"

When corrected in this manner the thickness quality factor shall be determined using the combined thickness of the corrected courses and shall apply to all unit prices applicable to this lot.

The contractor may request permission to reconstruct a portion of the pavement when, in his opinion, the thickness quality factor can be improved. Upon approval of the engineer, the contractor shall take sufficient tests to isolate the portion or portions of pavement to be reconstructed and remove and reconstruct the pavement. All cost in connection with this reconstruction are to be born by the contractor. The minimum width of this reconstruction shall be l/2 the street width unless approved otherwise in writing by the engineer. The portions reconstructed shall be retested and the thickness quality factor recomputed using the new information along with the test from the area within the portion of the lot not reconstructed.

When other quality factor reductions are provided for on the plans or in the specifications the effect shall be cumulative ie: QFl x QF2 x QF3 x....x QFn x unit price.

No payment will be made for pavement with a combined quality factor of less than 0.5.

Compaction Test: Compaction test will be made by the commercial laboratory chosen by the owner on the core samples removed from the paving for thickness testing.

The percent air voids will be calculated using maximum theoretical specific gravity of the mixture.

The contractor may attempt to correct deficiencies in compaction by additional pneumatic rolling upon written permission of the engineer. Requests for permission to conduct additional rolling shall be submitted, in writing, to the engineer no later than three days following notification of the deficiency by the commercial laboratory and the additional rolling shall be completed within ten (l0) days following said notification weather permitting.

In no case shall the additional rolling be delayed beyond thirty (30) days from the date the surface was laid. All cost for additional rolling and additional coring and testing of the re-rolled surface shall be born by the contractor.

Asphaltic concrete pavement not meeting this specification and that is allowed to remain in place shall be paid for at a reduced rate determined by multiplying the price bid in the bid proposal by a compaction quality factor determined according to the following schedule:

Percent air voids (average of all specimens for the lot)	Compaction Quality factor	
less than 3	0	
3.0 to 8.0	1.0	
8.1 to 9.0	0.9	
9.1 to 10.0	0.7	
10.1 to 11.0	0.5	and the engineer may require a chip seal to be applied at the contractor's expense
More than 11		0 and the engineer may require a chip seal to be applied at the contractor's expense.

NOTE: HMAC surfacing with between 11% and 15% air voids may, upon written request by the Contractor, be reviewed by the Engineer to determine if it may be left in place. The Engineer's review will consider the type of street and expected traffic conditions among other factors and a written determination will be issued. If the surface is allowed to remain in place, a chip seal will be required at the Contractor's expense. The quality factor for this paving will remain at 0.

The reduced rate shall apply to the entire lot.

The effect of compaction quality factors shall be cumulative and shall be applied as described for surface quality factors and thickness quality factors.

Cost for Field Quality Control - The surface tolerance test shall be made by the contractor at his expense.

The initial thickness and compaction test will be made at no cost to the contractor except for the cost of materials and labor to repair the holes left when cores are removed.

The cost of all thickness test to isolate a deficient area and the cost of retesting the corrected area shall be born by the contractor.

The cost of all retesting of compaction after additional rolling to correct compaction deficiencies shall be born by the contractor.

Areas reconstructed to remedy deficiencies shall meet all the requirements of these specifications and shall be tested in the same manner as original construction. The cost of all tests on reconstructed areas shall be born by the contractor.

5. ADDITIVES

Anti-stripping: An approved liquid anti-stripping agent shall be added to the asphalt used in the hot mix asphaltic concrete. The rate of application shall be in accordance with the manufacturer's recommendation. The minimum anti-stripping agent added shall be one-half (l/2) of l%.

The anti-stripping agent used shall have a proven record when used with similar aggregate and shall be approved by the engineer in writing prior to the date set for reception of bids.

08/07

P.V.C. PIPE CASINGS

1. SCOPE

   This item consists of furnishing and installing PVC pipe for casing for future water and electric lines at locations shown on the plans or as directed by the Engineer.

2. MATERIAL

   Pipe shall be ASTM D 1785 schedule 40 PVC pipe or ASTM D 2241 PVC SDR 32.5 pressure pipe. The ASTM designation and schedule or SDR shall be clearly marked on the outside of the pipe.

3. CONSTRUCTION

   Pipe shall be laid in straight alignment and grade in trenches as narrow as the diameter of the pipe can be laid. Pipe shall be placed after the sub grade is prepared but before base material is placed. Bedding under the pipe shall be a minimum of 2 inches in thickness and shall be carefully graded and leveled before pipe is placed. Joints shall be water tight. They may be solvent cement welded using approved materials, or may be made using a gasketed collars or push on gasketed bell and spigot. When collars are used care shall be exercised to assure that the collar is centered over the joint. All joints shall be made in accord with the manufacturer's recommendations. After pipe has been joined and inspected the pipe shall be encased in bedding/encasement material to a thickness of 3 inches above the pipe. Care shall be exercised to be sure the encasement material is worked in under the haunches of the pipe and compacted along the side of the pipe to assure adequate lateral support. The balance of the trench shall be back filled using cement stabilized backfill consisting of 2 sacks of Portland cement to 1 cubic yard of blow sand or crushed caliche mixed with sufficient water to form a stiff place able mixture that can be consolidated in the trench by rodding or vibrating. The back fill shall be "struck off" at the finished sub grade level using square point shovels or suitable screeds. The ends of the pipe shall be tightly plugged to prevent the entrance of water debris or other foreign material. These plugs shall be PVC or rubber stoppers designed to endure until the water lines and/ or electric lines are places.

4. MEASUREMENT AND PAYMENT

   Casing pipe shall be measured by the linear foot along the center of the pipe and shall be paid for at the unit price in the bid proposal.

WATER LINE SPECIFICATIONS

1. SCOPE OF WORK

The work covered by this section consists of all water pipe lines and piping, including valves, valve boxes, tapping sleeves, fire hydrants and other accessories, required to complete the project. The contractor shall furnish all materials, labor, superintendence, tools, equipment and incidentals necessary for the complete construction of this work in accordance with the drawings and these specifications.

2. PIPE AND MATERIAL

2.1 General

Pipe shall be polyvinyl chloride (PVC) AWWA C900, ductile iron AWWA C-151 or steel cylinder concrete pipe AWWA C-303.

2.2 Polyvinyl Chloride (PVC) Pipe

A. PVC pipe furnished for use on this project shall conform to the requirements of AWWA C900 Polyvinyl Chloride (PVC) Pressure Pipe, 4 in. through 12 in., for water distribution pressure class 150, DR18. and shall be NSF approved for potable water supply.

B. The pipe furnished shall have an integral bell designed for joint assembly using elastomeric seals.

C. Markings for the pipe shall include all the requirements of AWWA C900 and the MSF approval stamp.

D. Elastomeric seals shall be furnished by the pipe manufacturer. Seals shall be manufactured to conform with the requirements of ASTM F4 77 and shall be specifically designed for use with the pipe furnished.

E. Lubricants intended for use with PVC pipe and seals (gaskets) shall be compatible with both PVC and the seal material. Lubricant shall not support growth of bacteria and shall not adversely affect the potable quality of the water that is to be transported.

F. Pipe laying lengths shall be 20'.

G. Service taps on PVC water lines shall be made using hinged type or double strap type saddles. Tapping saddles shall support the full circumference of the pipe and shall have a bearing area of sufficient width along the axis of the pipe to prevent distortion of the pipe when saddle is tightened.

No direct taps into the wall of PVC pipe will be permitted.

Seals for tapping saddles shall be recessed into the body of the saddle and shall be

a rubber - compound conforming to the requirements of ASTM F477.

Tapping saddles shall be SMITH-BLAIR Taper Seal Style 313 or DMD Dresser style 194 or approved equal.

H. Tapped connections for water mains and fire lines made on PVC water mains shall be accomplished using full bodied ductile iron tapping sleeves of a pressure rating equal to or greater than the pressure rating of the pipe specified.

I. Bedding for AWWA C900 PVC water pipe shall extend from a minimum depth of 4 inches below the outside of the water line to a minimum cover of 6 inches over the top outside of the water line.

J. AWWA C900 PVC water pipe shall be installed in accord with the applicable requirements for installing ductile iron pipe.

Care shall be taken to install each joint of PVC water pipe to, but not beyond the factory insertion mark on the pipe.

When a joint of PVC water pipe must be cut, the end of the pipe shall be carefully beveled to match the factory bevel on the uncut pipe. An insertion mark matching the factory insertion mark on the uncut pipe must be made before the pipe is inserted into the bell.

When PVC water pipe is to be inserted into a ductile iron fitting or valve, the factory bevel must be removed to form a square plain end pipe.

2.2 (a) Metallic Marking Tape (For PVC Water Pipe)

2.2(a).1 General

When non-metallic pipelines are to be installed, then the Contractor shall furnish and lay, above the pipeline, a continuous strip of metallic identification tape.

2.2 (a).2 Tape Material

The metallic identification tape shall be at least two inches (2”) in width and shall be of corrosive resistant metal of sufficient thickness to be stable and reflect electronic signals to electronic pipeline detector when buried to a dept of twenty-four (24”) below normal ground level.

The metallic tape shall be painted blue on one side and shall have 1-inch high letters painted continuously on the same side of the tape which read, “CAUTION: BURIED WATER LINE BELOW” or other words to this effect.

The marking tape shall be “Detectable Warning Tape”, as manufactured by the Omega Marking Company, or equal approved by the Engineer.

2.2(a).3 Construction Methods

The Contractor shall backfill over non-metallic pipelines to a depth which is less than twenty-four (24”) and not more than twelve inches (12) from the top of the cut of the ditch section in which the pipeline is laid. Contractor shall stop the backfilling material to a generally uniform level. All machine tamping, jetting and other compaction activities shall be accomplished up to this point of height in the backfilling the marking tape is placed in the trench.

The Contractor shall then lay the marking tape in the pipe trench and shall be held in position by the spot placement of backfill materials over it to keep it from sliding t the sides and/or from being blown about in the ditch by the wind. The tape shall be lid with the painted side, which shall also be the side with the identification lettering on it, in the “up” position. The tape shall be laid in the flat position and kept there until backfill is accomplished.

The Contractor shall then complete the backfilling operation in such a manner that the marking tape is not cut, crimped, ruptured or separated by the backfilling work.

2.2(a).4 Measurement and Payment

No separate pay item will be provided for furnish and placing the marking tape. This item shall be considered subsidiary to the non-metallic pipe being placed.

2.3 Ductile Iron Pipe

A. All ductile iron pipe used in the construction of water works improvements shall be Cement Lined and shall be manufactured in accordance with and shall meet the requirements of AWWA Specification C-l5l.

B. Pipe shall be cast in lengths of not less than l2 feet and shall be designed for a working pressure of l50 pounds per square inch. Thickness of ductile iron pipe shall be as shown on the plans and bid proposal or shall be computed in accordance with AWWA Specification C-l50, based on l50 pounds per square inch working pressure for 10 feet of cover and laying condition 2.

C. All ductile iron pipe shall have an exterior, bituminous coating and an inside cement-mortar lining in accordance with the requirements of AWWA Specification C-l04.

2.4 Polyethylene Plastic Tubing

Service lines shall be constructed with polyethylene plastic tubing as specified in ASTM D 2737 with a rating of l60 psi.

2.5 Ductile Iron Pipe Fittings

All fittings for ductile iron pipe and PVC pipe shall be ductile iron and shall be mechanical joint all connections except tees for fire hydrant leads unless shown otherwise on the plans. Tees for connecting fire hydrant leads shall be MJ- with a flange outlet.

All ductile iron fittings shall conform to AWWA Specification C-110, designed for a working pressure of 250 psi. All ductile iron fittings shall have an external coating and shall be cement lined in accordance with the specifications for coating and lining the pipe.

2.6 Pretensioned Concrete Cylinder Pipe

A. The contractor shall furnish and install all concrete cylinder pipe and fittings, including connections and appurtenances complete as shown on the plans and specified herein.

B. The contractor shall submit six (6) sets of full and complete shop drawings on the concrete cylinder pipe and fittings. All of the drawings and data shall be complete and shall include a complete description of the pipe offered, including cuts, tabulated layout and all pertinent engineering data required for a complete evaluation of the submittal. Submittal data shall be in such form and so presented that the Engineer may readily review the data.

C. Prior to delivery of the pipe to the project site, the manufacturer shall furnish an affidavit certifying that all pipe, fittings, and specials, and other products and materials furnished, comply with the applicable provisions of this specification.

D. The pipe manufacturer shall furnish a factory trained, job experienced field representative who shall visit the project periodically during the course of installation. He shall also be subject to call by the contractor and/or engineer to advise and assist with the solution of field problems.

During visits, the representative shall observe all phases of the project including location and condition of pipe strung ahead of the contractor, trench width, if applicable, bedding and backfill, assembly of pipe joints and protection of steel. If, in the opinion of the representative any phase of the installation is unsatisfactory, he shall so advise the contractor's superintendent and also advise the owner or engineer's representative on the job site.

E. All closure sections shall be the jack on type and "field welding" will not be permitted without the written permission of the engineer.

F. Pipe manufacturer will install all necessary taps for the contractor to disinfect and field hydrostatic test the pipe.

G. Pretensioned concrete cylinder pipe, fittings and specials shall be designed, fabricated and tested in accordance with the latest requirements of AWWA C-303, "Reinforced Concrete Pressure Pipe Steel Cylinder Type, Pretensioned, for Water and Other Liquids" with additional requirements or modifications as described herein.

H. Pretensioned concrete cylinder pressure pipe shall be designed for l50 psi, working pressure and manufactured in 32 foot nominal lengths in accordance with the provisions of AWWA Standard C-303.

I. Inspection and Testing

(1) The owner reserves the option to have an independent testing laboratory, at the owner's expense, inspect pipe and fittings at the pipe manufacturer's plant to ensure compliance with the applicable specifications. The owner's testing laboratory and Engineer shall have free access to those parts of the manufacturer's plant that are necessary to ensure compliance with the governing standard. The pipe manufacturer shall notify the owner, in writing, at least two weeks ahead of pipe fabrication as to start of fabrication and fabricating schedule so that the owner can advise the manufacturer as to owners' decision regarding tests to be performed by an independent testing laboratory. In event the owner elects to retain an independent testing laboratory to make material tests and weld test, it is the intent that the tests be limited to one spot testing of each category unless the tests do not show compliance with the standard. If these tests do not show compliance, the owner reserves the right to have the laboratory make additional tests and observations to ensure compliance of the finished product with the standard.

(2) In any event, the manufacturer shall perform the tests described in AWWA C 303, and furnish the owner with a copy of the test reports, if requested, at the expense of the pipe manufacturer. The pipe manufacturer shall furnish the owner with affidavit of compliance as outlined in the standard.

(3) All welds for water tightness in special pipe and fittings that have not been hydrostatically tested may be examined by use of visible dye penetrant system meeting requirement of ASTM El65; however, collar reinforcement and all other lap welds shall be tested by introducing air under l0 psi pressure between the collar and cylinder and checking for leaks around and through the welds with soap solution.

The area to receive the dye penetrant shall be cleaned free from contaminants that might interfere with the penetrant process. The temperature of the steel in the weld area shall be between 60 and l25 degrees F. when the penetrant is applied. Dwell time of six hours shall be allowed after application of the penetrant and developer before interpreting the results.

Defects that are found shall be repaired and the test repeated until all defects

are eliminated. Colored penetrant shall be removed before fittings are lined.

2.7 Casing Pipe

Casing pipe to be installed in bore or open cut may be limited service pipe, corrugated galvanized steel pipe or new straight seam or spiral welded steel pipe. Casing pipe shall be furnished in thickness or gage as shown on the plans.

Limited service pipe proposed for use on this project must be approved a minimum of four (4) working days prior to the time of opening bids and shall be in good condition and shall meet the same service requirements as the corrugated galvanized steel or welded steel pipe.

Welded steel casing pipe shall be coated inside and out using a coal tar epoxy or shall be bituminous coated in side and out by the hot dip method.

2.8 Bedding Materials

A. All water pipelines placed on this project shall be bedded with crushed stone bedding materials to the minimum as shown on the plans and in the Detail Drawings.

B. Granular material furnished for foundation, bedding, encasement, backfill, or other purposes as may be specified, shall consist of any natural or synthetic mineral aggregate such as, crushed gravel, crushed rock, crushed stone, or slag, and shall conform to the following specifications and/or gradation.

Note, all materials used for these purposes shall be crushed and shall have at least two broken faces. Pea gravel will NOT be allowed.

	Foundation	Bedding	Encasement	Backfill
ASTM c33 Grade #57	X			
ASTM C33 Grade #67	X			
ASTM C33 Grade #8		X	X	
THD 1982 ITEM 302 Type "D" Grade #4		X	X	
THD 1982 Item 302 Type "D" Grade #5			X	
Crusher Fines**			*X	X

* 100 percent of crusher fines that are to be used within 12 inches of the top of pipe must pass the 3/4" sieve.

** Approximate Gradation for Crusher Fines

Sieve Size	% Passing
2 inch	100
#4	35 - 100
#10	20 - 100
#40	5 - 35
#200	4 - 10

Crushed stone material proposed as an alternate for use on this project and not meeting the above specifications must be approved in writing at least 48 hours prior to the time scheduled for opening bids.

C. Granular materials provided for Foundation, Bedding, Encasement, or backfill use as required by the contract, either as part of the pipe item work unit or as a separate contract item, shall be classified as to use in accordance with the following:

MATERIAL USE DESIGNATION	ZONE DESIGNATION
Granular Foundation	Placed below the bottom of pipe grade as replacement for unsuitable or unstable soils, to achieve better foundation support.
Granular Bedding	Placed below the midpoint of the pipe prior to pipe installation, to facilitate proper shaping and achieve uniform pipe support. Also for Class B Bedding where specified.
Granular Encasement	Placed below an elevation one half (6") foot above the top of pipe, after pipe installation, for protection of the pipe and to assure proper filling of voids and thorough consolidation of backfill.
Granular Backfill	Placed below the surface base course, if any, as the second stage of backfill, to minimize trench settlement and provide support for surface improvements.

In each case above, unless otherwise indicated, the lower limits of any particular zone shall be the top surface of the next lower course as constructed. The upper limits of each zone are established to define variable needs for material gradation and compaction or void content, taking into consideration the sequence of construction and other conditions. The material use and zone designations described above shall only serve to fulfill the objectives and shall not be construed to restrict the use of any particular material in other zones where the gradation requirements are met.

3. **VALVES AND VALVE BOXES**

3.1 General

A. Valves 4" through l2" shall be resilient seated gate valves with non-rising stems and shall open by turning to the left (counter clock wise).

B. Valves l4" and larger shall be resilient seated butterfly valves and have operators suitable for direct burial and shall open by turning to the left (counter clock wise).

All valves except valves for use in fire hydrant leads shall have mechanical joint ends unless shown otherwise on the plans. Valves for use in fire hydrant leads shall be flange by mechanical joint.

C. All valves and fire hydrants shall be spray coated with a two component thermal setting epoxy to cover all interior wetted ferrous surfaces. Finished coating shall have a minimum thickness of 4 mils. The coating shall conform to the coating section of these specifications.

D. All valves for buried service shall be equipped with 2" square AWWA operating nuts.

3.2 Gate Valves

A. Gate valves shall be iron body, resilient **wedge gate** and shall be in compliance with AWWA Standard C-509-80 or latest revision thereof and shall have the following design features:

B. All valves shall have a working pressure of 200 psi and shall be bottle tight tested at this pressure from both directions. The gate body shall also be hydrostatically tested at 400 psi. Zero leakage will be required in all tests. The body, bonnet, and stuffing box shall be flange together with ASTM A-307 Grade B bolts and nuts to insure repairability.

C. Stems shall be machined from modified manganese bronze rod with an integral forged thrust collar machined to size.

D. Stem seals shall be dual "O" ring type.

E. Valve discs shall be rubber encapsulated or have disc seat rings molded of natural rubber, internally steel reinforced retained to the disc by self-locking type 304 stainless steel screws. Valve gates shall seat against a machined epoxy coated mating surface in the body of the valve.

F. All internal ferrous metal surfaces (machined or cast) shall be factory spray coated with a two component thermosetting epoxy to a nominal thickness of 4 mils and the exterior shall be coated with asphalt varnish as specified for coating of the pipe. (See Sec. 3.4 of these specifications for epoxy coating).

G. Valves shall be Mueller A-**2360** or Dresser-M&H **4067** or approved equal. Any alternate (approved equal) to these specifications **shall have completely interchangeable parts with either of the specified valves.**

3.3 Butterfly Valves

A. General - All butterfly valves shall be of the rubber seated tight-closing type. They shall meet or exceed AWWA Standard C-504, Class l50B. Both valve ends shall be mechanical-joint per AWWA Standard C-lll. Accessories (bolts, glands, and gaskets) shall be supplied by the valve manufacturer.

B. All valves must use full AWWA C-504 Class l50 B valve shaft diameter, and full Class l50 B underground service operator torque rating throughout entire travel, to provide capability for operation in emergency service.

C. Valve body shall be high strength cast iron ASTM A 126 Class B with l8-8 type 304 stainless steel body seat. Valve vane shall be high strength cast iron ASTM A 48 Class 40 or ASTM A 536, Grade 65-45-l2 ductile iron having rubber seat mechanically secured with an integral l8-8 stainless steel clamp ring and l8-8 stainless steel self locking screws.

D. Rubber seat shall be a full circle 360^{o} seat not penetrated by the valve shaft. Valve shall have permanently set two way thrust bearing. Packing shall be designed for permanent duty in underground service.

E. Valve operator shall be of the traveling nut type, sealed, gasketed and lubricated for underground service. It shall be capable of withstanding an overload input torque of 450 ft. lbs. at full open or closed position without damage to the valve or valve operator. It shall be designed to resist submergence in water to 25 ft. head pressure. Number of turns to operate valve shall be as listed below in order to closely resemble conventional distribution valve practices and to minimize water hammer:

Pipe and Valve Size	Turns to close	Pipe and Valve Size	Turns to Close
4" - 6"	16-1/2	14" - 16"	48"
8"	24	18" - 20"	72
10" - 12"	36	24"	90

F. Valves shall be capable of easy closure by one man using standard valve key, even under emergency line-break conditions as severe as those that would - cause a valve maximum opening torque requirement of as much as two times AWWA Class l50 B.

G. All valves shall be tested bottle-tight at rated working pressure by the manufacturer as follows:

l4" up. . . . . l50 psi

In addition a hydrostatic test with vane partially open shall be given to the assembled valve as follow:

l4" up. . . . . 300 psi

H. Valve shafts shall be l8-8 type 304 stainless steel. Shaft bearings shall be of the self lubricating sleeve type.

I. Valve discs or vanes for valves 30" and larger shall be the flow through (bridge or truss) type.

J. Butterfly valves shall be Dresser-M&H Model "450", "4500" or "l450" or Mueller line seal III or approved equal. Alternates (approved equal) to these specifications must be approved in writing 48 hours prior to time bids are received.

3.4 Coating

A. The coating shall be a two part thermosetting epoxy protective coating and shall function as a physical, chemical and electrical barrier between the base metal to which it is applied and the surroundings.

B. The coating shall be non-toxic and shall not impart taste to water. The coating must be formulated from materials deemed acceptable per the FOOD AND DRUG ADMINISTRATION DOCUMENT TITLE 2l of the FEDERAL REGULATIONS ON FOOD ADDITIVES SECTION l2l.25l4 entitled, RESINS AND POLYMERIC COATINGS.

C. The coating shall have a satin finish and shall be suitable for field over coating and touchup with same coating material without sanding or special surface preparation, or application of heat in excess of room temperature.

D. The coating shall have a successful record of performance in valves, pipe or other allied equipment for a minimum of two years.

E. The coating adhesion to the substrate shall exceed cohesion of the coating film as demonstrated by the following test:

(1) Prepare test panel and apply coating per manufacturer's recommendation.

(2) After sample has properly cured per manufacturer's recommendation, scribe an "X" using a sharp knife or scalpel through the coating to the metal substrate.

(3) Then with the point of the knife at the juncture of two scribes, attempt to lift off coating. Coating should not lift off substrate or between coats readily, but should break up leaving coating material on the substrate of this damaged area.

(4) No disbandment of the film shall be noted as tested above after immersion in tap water for l500 hours at l00`F.

F. A falling sand abrasion test using ASTM D968 shall produce an abrasion coefficient of 25-30 liters/mil. As an alternative, a Taber Abrader Test should find 3.5 - 3.7 milligrams coating loss per l00 cycles when using a CSF l0 Wheel (l000 gram weight).

3.5 Valve Boxes

All valves to be used in buried service shall be enclosed in cast iron valve boxes. Care shall be taken to place and maintain the 2" square operating nut in the center of the valve box. The valve box shall be two piece cast iron suitable for use with PVC pipe box risers. The 6 inch diameter cover shall be marked " Water". The PVC riser pipe shall be furnished in lengths as required (minimum pipe cover 42") PVC pipe for valve box riser may be ASTM C-900, ASTM D1785 schedule 40, ASTM D2241 pressure class 125 or ASTM D3034 DR 35. Valve boxes shall have a concrete ring 8" thick and having a radius equal to the radius of the valve box plus one foot (1') cast around them. Valve boxes placed in unpaved areas shall be set level with or slightly higher than the finished ground elevation. Valve boxes set in paved areas shall match the finished pavement surface.

3.6 Fire Hydrants

A. Fire hydrants shall conform to the requirements of AWWA C 502 dry barrel type. The fire hydrants shall be designed for a depth of bury of 4.5 feet, however the depth of bury may vary according to field conditions and extensions or shorter bury depth may be required.

B. The hydrants shall have a 5-l/4 inch valve opening, two 2-l/2 inch hose nozzles and one 4-l/2 inch pumper nozzle.

C. Hose threads shall be National Standard threads.

D. The hydrants shall be sized for 6-inch mains and shall have an inlet connection compatible with the type pipe used. All gaskets, nuts, bolts and other jointing materials shall be considered part of the fire hydrant installation.

E. Operating nut shall be standard l-l/2 inch pentagon opening counter-clockwise. The hydrant shall close with the pressure.

F. Hydrants shall be painted Federal Safety Yellow.

G. Fire hydrants shall have all interior wetted ferrous surfaces epoxy coated as required in the general and coating section of this item.

H. The hydrants shall have a minimum of two (2) drain holes located on opposite sides of the hydrant. The entire drainage channel must be made of non-corrosive material and sealed by acceptable resilient material (metal and/or leather seals are not acceptable).

I. The hydrants shall have a breakable safety flange and breakable stem coupling which breaks cleanly upon impact.

J. The hydrants shall be AWWA improved type hydrants and shall have self-oiling reservoirs.

K. Fire hydrants shall be the Mueller Centurion, the Dresser -M & H 929 Reliant, or The American Darling.

4. EXCAVATION, TRENCHING BEDDING AND BACKFILLING

4.l Trenching

A. The trench shall be excavated to the lines and grades as established by the engineer and as shown on the plans. The depth of cover for all main lines on which the grades and elevations are not shown on the plans, shall in general be Forty-two (42) inches. The amount of cover may vary over or under 42 inches as directed by the engineer but in no case will the amount of cover be less than thirty-six (36) inches. Depth of cover for service lines shall be as shown on the detail drawings.

B. Water lines constructed in proposed streets and service drives shall have the depth of cover measured from the finished grade. The contractor is hereby cautioned that proposed street finished grades are sometimes cut below the existing ground elevation.

C. The minimum width of the trench shall be the outside diameter of the pipe plus twelve (l2) inches for pipe diameter through l8", the outside diameter of the pipe plus eighteen (l8) inches for pipe diameters over l8". The trenching equipment shall be maintained on a sufficiently level road bed to provide substantially vertical trench walls. The maximum horizontal offset of the trench wall from bottom of trench to the top of the trench (under-cutting) shall be four (4) inches.

D. The trench shall be over excavated to an even grade to the depth of required bedding so that the bottom of the pipe will rest on a uniform thickness of bedding material on the bottom of trench throughout the entire length of the pipe. In order to obtain a true even grade, the bedding material shall be fine graded by hand. On lines that are to be laid to established grades batter boards shall be set at fifty foot intervals and the trench graded to the established grade.

E. Any part of the trench excavated below grade shall be corrected by filling with bedding material. The bedding material shall be thoroughly compacted.

E. If large rock, rock fragments or other unyielding materials are encountered in the bottom of the trench they shall be removed to a depth of six inches below grade, and the void filled with thoroughly compacted approved bedding material.

G. Bell holes of ample dimensions shall be dug at each joint to permit the jointing of pipe to be made properly and of sufficient depth to prevent the bell of the pipe from resting on undisturbed materials.

H. Wherever necessary to prevent caving, the trench shall be adequately braced and sheeted. Trench safety shall be in accordance with item l4 "Shoring and Sheeting of this specification.

I. Trench digging machinery may be used to make the trench excavations except in places where operation of same would cause damages to trees, buildings or other existing structures either above or below ground. In such instances hand trenching methods shall be employed.

J. All excavated material shall be stockpiled in a manner that will not endanger the work or existing structures and that will cause the least amount of obstructions to walks and driveways.

K. There will be no classification of the excavated materials and the term excavation shall include all materials encountered in excavating the trenches or structural excavations.

L. The contractor shall take all necessary precautions for protecting paved areas from being damaged by the trenching and backfilling equipment. Any damage done to any paved area, outside of the area set forth in the plans, as a result of the construction work shall be repaired by the contractor at his own expense.

M. Where the lines are located behind curbs, the contractor shall take special precautions to protect trees and shrubs. Care shall be exercised to cause as little damage to lawns as possible.

Where lines cross under curbs, gutters or curbs and gutters, tunneling will be required.

N. Blasting for excavation of solid rock will be permitted only after securing the

approval of the Director of Engineering and Transportation and the engineer and only when proper precautions are taken for protection of persons and property. The hours of blasting will be fixed by the engineer. Any damage caused by blasting shall be paid for by the contractor. The method or procedure relative to blasting shall conform to all state laws and local ordinances.

O. The contractor will be required to locate all known utility lines, including consumer service lines, far enough in advance of the trenching to make proper provisions for protecting the lines and to allow for any deviations that may be required from the established lines and grades.

P. The contractor shall not be allowed to disrupt the service on any utility lines except consumers service lines, which may be taken out of service for short periods of time, if the contractor obtains permission from the engineer and from the owner of the premises being served by the utility.

Q. The contractor shall immediately notify the proper utility company of any damage to utility lines, in order that service may be reestablished with the least possible delay. Repair of any damage to existing lines and the repair of consumer lines which are authorized to be cut or temporarily taken out of service shall be made by the contractor at his own expense, and as directed by an official representative of the utility company involved.

R. All utility lines shall be properly supported to prevent settlement or damage to the line both during and after construction.

S. Any permanent relocations of existing utility lines shall be done by the proper utility company without expense to the contractor.

4.2 Backfill General

A. All pipeline excavations shall be backfilled in a manner that will restore pre-existing conditions as the minimum requirement and fulfill all supplementary requirements indicated in the Plans and Specifications. The backfilling operations shall be started as soon as conditions will permit on each section of pipeline to provide continuity in subsequent operations and restore normal public service as soon as practicable on a section-by- section basis. All operations shall be pursued diligently, with proper and adequate equipment, to assure acceptable results.

B. Depositing of the backfill shall be done so the shock of falling material will not injure the structure. Grading over and around all parts of the work shall be done as directed by the Engineer.

C. Whenever soil types which are determined by the Inspector to be undesirable for backfill are excavated from the trench, such material shall be hauled away and deposited where directed by the Inspector at no additional compensation.

D. In the absence of special work item requirements the backfilling shall be accomplished with the use of suitable materials selected from the excavated

materials to the extent available and practical. Should the materials available from the trench section be unsuitable or insufficient, the required additional materials shall be furnished from outside sources at the Owners expense.

E. Suitable material shall be defined as a mineral soil reasonable free of foreign materials (rubbish, debris, etc.) frozen clumps, oversize stone, rock, concrete or bituminous chunks and other unsuitable materials, that may damage the pipe installation, prevent thorough compaction, or increase the risks of after settlement unnecessarily. Material selection shall be such as to make the best and fullest utilization of what is available, taking into consideration particular needs of different backfill zones. Material containing stone, rock, or chunks of any sort shall only be utilized where and to the extent there will be no detrimental effects.

F. Backfill materials shall be carefully placed in relatively uniform depth layers spread over the full width and length of the trench section in a manner and/or sequence that will provide simultaneous support on both sides of the pipeline. Each layer shall be compacted effectively, by approved mechanical of hand methods, until there is no further visual evidence of increased consolidation. Compaction of the in place layer shall be completed acceptably before placing material for a succeeding layer thereon. The manner of placement, layer thickness, compaction equipment, and procedure effectiveness shall be subject to approval of the Engineer. Water jetting or flooding shall NOT be used to compact trench backfill.

G. Within the pipe bedding and encasement zones described as that portion of the trench which is below an elevation one foot above the top of the pipe, the materials placed shall be limited in particular size to 3/4 inch maximum. For larger pipe in access of 18 inches in diameter the Engineer may allow particle sizes up to 2 inches maximum if it can be shown that the backfill can be satisfactorily compacted without leaving voids or damaging pipe or joints. Above these zones, the placement of material containing stones, boulders, chunks, etc. shall be governed by the layer thickness and compaction equipment capabilities.

H. Compaction of materials placed within the pipe bedding and encasement zones shall be accomplished with portable or hand equipment methods to achieve thorough consolidation under and around the pipe and avoid damage to the pipe. Above the pipe zone material, the use of heavy roller type compaction equipment shall be limited to safe pipe loading.

I. The maximum loose thickness of each backfill layer shall be l2 inches, except that l6 inches will be permitted for Granular Materials placed above an elevation one foot above the top of pipe, and with the provision that, by authority of the Engineer in consideration of the demonstrated capability of special type vibratory compactors, these maximums may be increased at his discretion. "Hydro tamps" or "vibra tamp: or other heavy vibrating equipment shall not be used until the backfill has reached a depth of four (4) feet above the top of the pipe.

J. All surplus or waste materials remaining after completion of the backfilling operations shall be disposed of in an acceptable manner within 24 hours after

completing the backfill work on each particular pipeline section. Disposal at any location within the project limits shall be as specified, or as approved by the Engineer; otherwise, disposal shall be accomplished outside the project limits at the Contractor's discretion. The backfilling and surplus or waste disposal operations shall be a part of the work required under the pipeline installation items, not as work that may be delayed until final cleanup.

K. Until final acceptance of the project, the Contractor shall assume full Responsibility and expense for all backfill settlement and shall refill and restore the work as directed to maintain an acceptable surface condition. All additional materials required shall be furnished without additional cost to the Owner.

4.3 Backfill Procedure above Pipe Zone, in Public Rights-of-way and other areas where settlement is important.

A. Backfill above the pipe zone shall be made using Portland cement stabilized backfill or crushed stone screening (crusher fines).

B. Backfill around structures such as manholes, junction boxes, transformer boxes and valve boxes shall be made using portland cement stabilized backfill material or crushed stone screening (crusher fines).

C. The minimum depth of stabilized backfill or crusher fines shall be twelve (12") inches.

When utilities are being constructed under existing paving, the stabilized backfill or crusher fines shall extend from top of the pipe zone to the top of the base course.

When utilities are being constructed under existing unpaved streets that are not scheduled for immediate pavement construction, the stabilized backfill or crusher fines shall extend from the top of the pipe zone to the existing roadway surface.

When utilities are being constructed in new streets that are scheduled for immediate paving or in streets in a new subdivision for which a paving contract with the property developer has been approved the stabilized backfill or crusher fines shall extend from the top of the pipe zone to the bottom edge of the eight (8") inches of subgrade, or, if the paving contractor has constructed a portion of the roadway prior to the construction of the utilities stabilized backfill shall extend to the top of the course the contractor has finished. In no case shall the backfill extend above the top of the base course.

If the final course of asphaltic concrete has been placed, the street or alley surface shall **NOT** be cut for utility installation.

In new streets where stabilized backfill is required only to the bottom of the subgrade course, the minimum depth of stabilized backfill may be reduced to six (6") inches in which case the maximum depth of the "pipe zone" shall be limited to six (6") inches above the top of the utility line or conduit.

D. Backfill Materials

(1) Portland cement stabilized backfill shall consist of caliche base material, blow sand or native soil stabilized by the addition of Portland cement. Crushed stone or concrete aggregate shall **NOT** be used.

The Contractor shall submit a mix design prepared by an approved Commercial Laboratory that will produce a minimum 7 day compressive strength of 150 psi. In no case shall the minimum cement content of the mix be less than 1 sack per cubic yard.

(2) Cement used in Portland cement stabilized backfill shall be Type I or Type II conforming to the requirements of ASTM Designation C150.

(3) Caliche used for Portland cement stabilized backfill shall be crushed material con-forming to Texas State Department of Highways and Transportation 1982Standard Specifications for Construction of Highways, Streets and Bridges Item 248 Type F, Grade 2.

(4) Blow sand used for Portland cement stabilized backfill shall be clean, free from organic matter, clay lumps, rock and other deleterious matter.

(5) Native soil used for Portland cement stabilized backfill shall be clean, free from clods and organic matter, and rock in excess of 2".

(6) Crushed stone screening (crusher fines) used for back fill shall be sharp grained particles of crushed stone conforming to the following gradation

Sieve Size	% Passing
2"	100
#4	35-100
#10	20-100
#40	5-35
#200	4-10

and may be the by product of crushing stone for other purposes or may be stone specifically crushed for use in backfill. Crusher fines not meeting these specifications may be approved for backfill upon demonstration that the desired results will be obtained.

E. Backfill Construction

(1) Portland cement stabilized caliche backfill or Portland cement stabilized native soil backfill may be constructed using either the "dry" method or the "wet" method.

(a) The dry method of stabilized backfill construction consists of dry mixing of the cement and caliche, sand or soil to produce a homogenous mixture then adding and mixing sufficient water for proper compaction and hydration of the cement. The water content of the mixture will be approximately one to two percent above the optimum moisture for soil compaction. The mixing may be accomplished by using batch mixers or on the job site by "blade Mixing" or other suitable method to produce the desired backfill material. The mixed material shall be placed in lifts of up to a maximum of 12 inches and compacted to ninety five (95%) modified proctor density by use of suitable compacting equipment.

(b) In the "wet" method of cement stabilized backfill construction, the materials shall be mixed in an approved concrete batching plant or mixer to the consistency of concrete and placed as concrete would be placed. The slump of the backfill material shall be such that all voids will be filled, approximately four (4") to six (6") inches. The backfill shall be consolidated by rodding or by the use of mechanical vibrators.

(c) The mix design used must be for the method of placement chosen.

(2) Portland cement stabilized blow sand backfill shall be mixed and placed by the "wet" method as described above.

(3) Crushed stone screening (crusher fines) shall be wetted uniformly throughout with sufficient moisture to assure proper compaction before being placed in the trench.

The moistened crushed stone screening (crusher fines) shall be placed in maximum lifts of twelve (12") inches and consolidated using vibratory type compaction equipment except when it has been demonstrated that the compaction equipment employed will adequately compact deeper lifts in which case the maximum depth of a lift shall be limited by the capabilities of the equipment used.

Tests to determine the compacted density of the backfill shall be ordered by the Engineer if in his opinion the compaction is not adequate. Test showing a minimum compacted density of 90% modified proctor will be deemed adequate compaction.

5. INSTALLATION OF DUCTILE IRON PIPE

5.1 Pipe Laying - General

A. All pipe and accessories shall be unloaded, handled, laid, jointed, tested for defects and for leakage and chlorinated in the manner herein specified.

B. The pipe, fittings, valves, and accessories shall be inspected upon delivery and during the progress of the work and any material found to be defective will be rejected by the engineer and the contractor shall remove such defective material from the site of the work.

C. The contractor shall be responsible for all material furnished by him and he shall replace at his own expense all such material that is found to be defective in manufacturer or has become damaged in handling after delivery.

D. All pipe, fittings, valves, and other accessories shall, unless otherwise directed, be unloaded at the point of delivery, hauled to and distributed at the site of the work by the contractor. Loading and unloading, of pipe and fittings shall be by hoisting or by sliding, or rolling on skidways in such a manner as to avoid shock or damage to the material. Under no circumstances shall pipe or fittings be dropped. Pipe handled on skidways must not be skidded or rolled against pipe already on the ground.

The pipe, fittings and accessories shall be placed along the site in such a manner as to be kept as free as possible from dirt, sand, mud, and other foreign matter.

E. All pipe shall be laid and maintained to the lines and grades shown on the plans
or as established on the ground by the engineer.

F. Wherever it is necessary to deflect pipe from a straight line either in a vertical or horizontal plane to avoid obstructions, to plumb valves and hydrants, or where vertical or horizontal curves are shown or permitted, the degree of deflection at each joint shall not exceed the maximum deflection recommended by the manufacturer of the particular kind of pipe being laid and the degree of deflection shall be approved by the engineer.

G. After the trench grade has been completed and all bell holes dug and the grade inspected, the pipes and accessories my be placed in the trench. All pipe, fittings, valves, and hydrants shall be carefully lowered into the trench piece by piece by means of derricks, ropes, or other suitable tools or equipment, in such a manner as to prevent damage to the material in any way. Under no circumstances shall pipe or accessories be dropped or dumped in the trench.

H. Before lowering into trench the pipe shall be again inspected for defects and the pipe while suspended shall be lightly hammered to detect cracks. Any defective, damaged or unsound pipe and materials shall be rejected.

I. All foreign matter or dirt shall be removed from the inside of the pipe and from all bells, spigots or parts of the pipe used in forming the joint, before the pipe is lowered into the trench, and it shall be kept clean by approved means during and after laying.

5.2 Laying and Jointing Ductile Iron Pipe

A. Unless otherwise directed, pipe shall be laid with bells facing in direction of laying; and for lines on appreciable slopes, bells shall, at the discretion of the engineer, face up grade. Cutting of pipe for inserting valves, fittings or closure pieces shall be done in a neat and workmanlike manner without damage to the pipe or the cement lining.

B. The jointing shall be completed for all pipe laid each day. No open joints will be left in the trench overnight. At times when pipe laying is not in progress, the open ends of pipe shall be closed by approved means. No trench water shall be permitted to enter the pipe.

C. No pipe shall be laid in water, or when the trench conditions or weather is unsuitable for such work, except by written permission of the engineer.

D. Rubber Gasket joints for cast iron or ductile iron pressure pipe and fittings shall conform to AWWA Standard C-lll.

E. Before laying the pipes, all lumps, blisters and excess coal tar coating shall be removed from the bell and spigot ends of each pipe; the outside of the spigot and the inside of the bell shall be wire brushed and wiped clean and dry. Pipe ends shall be kept clean until joints are made.

F. The pipe and fittings shall be properly aligned and free to move in any direction while bolting, and the bolts shall be gradually tightened at a uniform rate around the entire flange.

G. Flange joints where used shall be bolted with flange bolts of best quality mild steel and of the size and length required by AWWA C-ll5: Bolts and nuts shall be provided with standard hexagonal heads. Gasket rings shall be used and shall be made of best quality rubber composition sheet packing one-eighth (l/8) inch thick, of a brand and quality approved by the engineer.

H. Standard plugs shall be inserted into the bells of all dead end pipes, tees, or crosses and spigot ends shall be capped. Plugs or caps shall be jointed to the pipe or fittings in the same manner used in joining the pipe.

6. SPECIFICATIONS FOR INSTALLING PRETENSIONED CONCRETE CYLINDER PIPE

6.l General

The applicable portions of the specifications for installing ductile iron pipe shall apply except as amended or supplemented herein.

6.2 Pipe Laying

A. Pipe and fittings shall be handled with care at all times to avoid damage. They shall be lifted by hoists or slide or rolled on skid-ways in such manner as to avoid shock. Under no circumstances shall they be dropped. Pipe must not be skidded or rolled against other pipe or object.

B. Just before making the joint, the bell and spigot rings shall be thoroughly cleaned by wire-brushing until clean and dry. The gasket and the inside surface of the bell shall be lubricated with a light film or soft vegetable soap compound (flax soap) to facilitate telescoping the joint. The rubber gasket shall be stretched uniformly as it is placed in the spigot groove to insure a uniform volume of rubber around the circumference of the groove.

C. The joint shall be telescoped by pulling directly along the centerline of the pipe so that the spigot enters squarely into the bell. After the spigot has been telescoped into the bell, the bell end of the pipe being laid shall be moved in accordance with the plans to secure proper grade and alignment. After the joint is in place, a thin metal feeler gauge shall be used to check the position of the rubber gasket around the circumference of the joint.

D. The inside joint recess shall be filled immediately prior to placing the pipe together by buttering the bell end with mortar. After the joint is engaged, the joint mortar of pipe l8" in diameter and larger shall be finished off smooth by hand. The mortar in pipe smaller than l8" in diameter shall be smoothed and cleaned with a swab.

E. After the spigot has been telescoped into the bell, the joint checked and found satisfactory, a canvas wrapper shall be placed around the pipe, covering the joint. The canvas type wrapper shall be of the quality manufactured by the Mar-Mac Manufacturing Company or approved equal burlap type, and shall be hemmed at each edge to allow threading with a steel strap to securely fasten the wrapper around the pipe by means of a stretcher and sealer.

The wrapper shall have a minimum width of 7" and sufficient length to encircle the pipe leaving enough space between the ends at the top to allow the cement mortar to be poured. The entire joint shall be poured with cement mortar and rodded or agitated to eliminate voids and settlement. Prior to pouring the cement mortar the joint shall be thoroughly cleaned and saturated with clean water. Any joint showing shrinkage or excessive cracking shall be cleaned and remade. In hot weather,

additional measures may be required to obtain the best quality of joint, such as additional wet burlap, curing membrane, or immediate careful and well controlled backfilling of the joint with damp earth.

F. The mortar used at the exterior joint shall consist of one part Portland cement to 2-l/2 parts fine, sharp, clean sand and mixed with water to the consistency of thick cream. Mortar required at the joint shall not be placed in freezing weather unless adequately protected from freezing.

G. The joints for pipe to be installed in casing shall be made as for pipe laid in trench except that the outside portion of the joint shall be wrapped in a special polyurethane wrap impregnated with unhydrated cement manufactured for this purpose, prior to being jacked into the casing pipe. The wrap shall be "Flex-Protex" as manufactured by Mar-Mag Mfg. Corporation or approved equal. The interior of the joints shall be mortared after the pipe to be installed in casing has been jacked into place. The pipe shall not be moved after interior mortaring is completed. After the water line has been installed in the casing the ends of the casing shall be sealed using concrete or cement mortar.

H. Steel cylinder reinforced concrete pipe shall not be pressure tested until it has been in place a minimum of l4 days.

I. The contractor shall fill the steel cylinder reinforced concrete pipe under slight pressure and allow approximately 24 hours for water absorption by concrete lining before performing pressure test.

7. SETTING VALVES, VALVE BOXES, FIRE HYDRANTS AND FITTINGS

7.1 General

Valves and fittings shall be set at the locations shown on the plans or at locations as established by the engineer, and shall be set and jointed to the pipe in the manner heretofore specified for pipe installation. All valves buried in the ground shall have a cast iron valve box set over the valve and set to grade. All valves shall be set vertical, unless otherwise specified, and shall be thoroughly inspected and checked for operation before installation.

7.2 Valve Boxes

Cast Iron valve boxes shall be firmly supported and maintained centered and plumb over the wrench nut of the valve, with box cover flush with the surface of the ground or street paving.

Valve boxes shall be supported by a ring of concrete as shown on the plans and Detail Drawings. This ring shall be Class "A" concrete having a minimum thickness of six (6") inches and shall extend a minimum of twelve (12") inches in all directions from the outside diameter of the valve box and shall be supported on thoroughly compacted backfill.

7.3 Setting Fire Hydrants

A. Fire hydrants shall be located at points shown on the plans, the exact location of the hydrant to be established by the engineer. All hydrants shall be set plumb, to the grade as established by the engineer, and shall have their nozzles parallel with and/or at right angles to the curb, with the pumper nozzle facing the curb. The hydrants shall be supported in such a manner as not to cause a strain on the fire hydrant lead or branch.

The bowl of the hydrant shall be well braced against unexcavated earth at the end of the trench with concrete blocking. The concrete blocking shall be placed so as not to interfere with the hydrant drains and so that the joints or flanges are accessible.

B. Each hydrant shall be connected to the main with a six (6) inch ductile iron branch controlled by an independent six (6) inch gate valve. Each hydrant shall be set upon a stone or concrete slab not less than four (4) inches thick and not less than one square foot of surface area. Where solid rock exists in the bottom of the trench and same is excavated to the proper depth to form a foundation for the hydrant, the slab of stone or concrete may be omitted.

C. There shall be placed around the base of the hydrant not less than seven (7) cubic feet of sound broken stone or clean gravel, or other suitable material to provide reservoir capacity so that the hydrant will completely drain when closed. The gravel or broken stone shall reach from the bottom of the trench to at least six (6) inches above the waste opening in the hydrant. Each hydrant shall be operated by the contractor to prove to the inspector that the drain hole has not been plugged with concrete or other material.

8. **ANCHORAGE OF BENDS, TEES AND PLUGS, ETC.**

Reaction or thrust blocking shall be applied to all pipe lines at all tees, plugs, caps, valves, fire hydrants, and at bends deflecting ll-1/4 degrees or more. Concrete shall be used for blocking the pipe and fittings. Concrete for thrust block shall have a minimum compressive strength of 3,000 psi and shall conform to Texas Highway Department Class "A" concrete. Before thrust blocking is placed the element to be blocked shall be carefully wrapped in polyethylene sheeting having a minimum thickness of 3 mils. The blocking shall be placed between solid ground and the fitting to be anchored; the area of bearing on pipe and on the ground in each instance shall be that required by the engineer. The blocking shall be so placed that the pipe and fitting joints will be accessible for repair.

9. DISINFECTION OF PIPE LINES

The contractor shall furnish all labor, equipment, and materials necessary to the disinfecting of the new pipe lines which shall be disinfected before being placed in service. The lines shall be disinfected by the application of a chlorinating agent. The chlorinating agent may be a liquid chlorine, liquid chlorine gas water mixture, or a calcium hypochlorite solution, which shall be fed into the lines through a suitable solution feed device, or other methods approved by the engineer. The chlorinating agent shall be readily dissolvable and of a type that will rapidly mix with the water as it is loaded into the water line. Tablets or other solid form shall not be used unless they are dissolved before being placed into the line. The chlorinating agent shall be applied at or near the point from which the line is being filled, and through a corporation stop or other approved connection inserted in the horizontal axis of the newly laid pipe. The water being used to fill the line shall be controlled to flow into the section to be disinfected very slowly, and the rate of application of the chlorinating agent shall be in such proportion to the rate of water entering the pipe that the chlorine dose applied to the water entering the line shall be at least 50 parts per million. The treated water shall be retained in the pipe lines for a period of not less than twenty four (24) hours. At the end of the retention period all treated water shall be thoroughly flushed from the lines until the replacement water in the lines shall have a chlorine residual of not more than 0.2 parts per million. Where it is necessary to place the new lines in service in less than 24 hours, the concentration of chlorine may be increased to 300 ppm and the lines flushed and placed in service in 3 hours. Disinfecting procedures shall conform to AWWA C 60l.

l0. HYDROSTATIC TESTS

All pipe lines constructed under this contract before being accepted, shall be tested at l20% design pressure as described in the following paragraphs. This test shall apply to all newly laid pipe or any valved sections thereof.

The required test pressure (l80 pounds per square inch) shall be maintained over a continuous period of not less than eight (8) hours.

Each valved section of pipe shall be slowly filled with water, being certain that all air is expelled from the pipe by using hydrants, blow-offs or taps at points of highest elevation in the line. The specified pressure shall be applied by means of a pump and flow meter (gpm and amount) connected to the pipe in a manner satisfactory to the engineer. The contractor shall furnish all necessary equipment, materials and labor to satisfactorily make the hydrostatic tests.

After the line section to be tested has been brought to pressure, a visual inspection shall be made of all joints, fittings, valves, and appurtenance. Any leaks thus located shall be corrected before continuing with the test.

If the test indicates a leakage in excess of a rate equal to twenty-five (25) gallons per inch of nominal diameter of pipe line per mile per day (maximum 600 gallon per mile per day total leakage) the cause of such leaks shall be determined and corrected and the line retested until satisfactory results are obtained.

11. **REMOVING AND REPLACING PAVEMENT**

A. When it is necessary to cut existing paving to install utilities the paving shall be repaired as soon after the backfill is consolidated or the cement stabilized backfill has reached sufficient strength as practical. The repair shall be made using Texas Highway Department Type "D" Hot Mix Asphaltic Concrete and shall have a minimum thickness equal to the thickness of the existing surface.

B. Edges along the trenches and around pits shall be saw cut to remove damaged edges and/or surface. Saw cuts shall be straight and parallel to or at right angles to the street or alley center line in so far as practical. Meandering, zig-zag or notched saw lines will not be permitted. The saw cuts shall be such that a minimum of 6" of surface is removed beyond the edges of the trench.

C. The edges of the saw cut and surface of the backfill material shall be tack coated prior to the placing of hot mix asphaltic concrete. The tack coat shall be either RC-250 cut back asphalt or RS2h emulsified asphalt or approved equal. When emulsified asphalt is used for tack coat the asphaltic concrete shall not be placed until the break of the emulsion is complete and all free water has evaporated or has been removed.

D. After the tack coat is cured the hot mix asphaltic concrete shall be placed uniformly throughout the repair area. The edges of the repair shall be squared up and the hot mix asphaltic concrete thoroughly compacted. Any large aggregate that is separated from the mix during the leveling process shall be removed from the surface and disposed of off the project. Care shall be taken that none of the mix over laps the old paving. Any mix that has "scabbed" onto the paving shall be removed before the section is reopened to traffic.

Sufficient mix shall be placed so that the finished repair is from one eight (1/8") inch to one quarter (1/4") inch above the old paving surface to allow for further consolidation by traffic.

12. **TUNNELING UNDER UTILITY LINES, ETC**.

Where pipes, conduits or concrete curbs, gutters or other obstructions are encountered in the construction, the cost of tunneling under such obstructions shall be included as a part of the cost of the pipe line, or other pay items, complete in place.

13. **HIGHWAY CROSSING**

A. The City of Midland will obtain any required permits from the State Highway Department for installation of the water line along and across the highway right-of-way. It shall be the contractor's duty and responsibility to coordinate the time of making the crossing and the manner of handling traffic.

B. Installations of the casing pipe shall be accomplished by boring or open cut trench as indicated on the drawings and in accordance with the Texas Department of Transportation permit and requirements. Equipment used shall be of such size and capacity as to allow the placement of the casing to proceed in a safe and expeditions manner. Installation of the casing and the excavation and removal of the materials

within the casing shall proceed simultaneously.

The boring shall proceed from a pit provided for the boring equipment and workmen. Excavation and location of the pit shall be approved by the Engineer. Boring without the concurrent installation of the casing pipe will not be permitted. The use of water or other fluids in connection with the boring operation will be permitted only to the extent of lubricating cuttings. Jetting will not be permitted. Overcutting in excess of one inch shall be remedied by concrete pressure grouting the entire length of the installation. All joints for casing pipe installed in bore shall be welded. Care shall be taken to keep the casing pipe on the proper line and grade.

C. After the casing pipe has been installed and is accepted by the Engineer, the pipe shall be shoved through the casing. The pipe shall be pushed or pulled through the casing by exerting pressure on the barrel of the pipe and not on the bell, and shall be done in such a manner that the joint is always in compression during the shoving operation. Hardwood, or other suitable material skids shall be banded with stainless steel bands to each joint of pipe In accordance with the pipe manufacturers recommendation. The hardwood skids shall be of sufficient dimensions to allow the bell of the pipe to clear the casing pipe by at least one-half inch. The length of the skid shall be in accordance with the pipe manufacturers recommendations. A minimum of three bands shall be used to secure the skids to the pipe. The skids shall be such that the carrier pipe will be centered in the casing pipe. The design of skids and bonding techniques shall be submitted to the Engineer for approval prior to use.

In general waterline installation in the casing pipe shall conform to AWWA C 600-Section 6 requirements.

After completion of pipe installation in casing, the ends of the casing shall be sealed off by use of concrete grout. The minimum compressive strength of the grout shall be 2,000 psi in 28 days.

14. **SHORING & SHEETING**

14.1 Description

This item shall govern for the Trench Safety Systems required for the construction of all trench excavation to be utilized in the project and including all additional excavation and backfill necessitated by the safety system. A trench shall be defined as a narrow excavation (in relation to its length) made below the surface of the ground. In general, the depth is greater than the width, but the width of a trench (measured at the bottom) is not greater than 15 feet. The depth is five feet or more.

Trench Safety Systems include but are not limited to sloping, sheeting, trench boxes or trench shields, sheet piling, cribbing, bracing, shoring, dewatering or diversion of water to provide adequate drainage.

l4.2 Construction Methods

Trench safety systems shall be accomplished in accordance with the detailed specifications set out in the provisions of Excavation, Trench, and Shoring, Federal Occupational Safety and Health Administration (OSHA) Standards, 29CFR, Part 1926, Subpart P, as amended, including Proposed Rules published in the Federal Register (Vol. 52, No. 72) on Tuesday, October 31, l989. The sections that are incorporated into these specifications by reference include Sections 1926-650 through 1926-652. Legislation that has been enacted by the Texas Legislature, being Tex. Rev. Civ. Stat. Ann. arts. 1015q, 2368a.6 (Vernon Supp. 1988) with regard to Trench Safety Systems, is hereby incorporated, by reference into these specifications.

A reproduction of the OSHA Publication 2226 is attached for the convenience of the Contractor. The City assumes no responsibility for the accuracy of the reproduction or that it reflects current law. The Contractor is responsible for obtaining a copy of this section of the Federal Register for his use.

If the contractor elects to use a trench protective system that, in the Proposed Rules, requires "Design by a qualified person or a qualified engineer," [For example see 1926.652(b) (3) and 1926.652(c) (4)], "a qualified person or qualified engineer" shall be a Professional Engineer registered in the State of Texas. The Contractor is responsible for obtaining boring and soil analysis as required for the planned design. The trench excavation is to be designed in conformance with OSHA standards and regulations.

14.3 Safety Program

The Contractor shall submit a safety program specifically for the construction of trench excavation. The trench safety program shall be in accordance with OSHA standards governing the presence and activities of individuals working in and around trench excavation.

14.4 Inspection

The Contractor shall make daily inspections of the Trench Safety Systems to ensure that the systems meet OSHA requirements. Daily inspection is to be made by a "competent person" provided by the Contractor. If evidence of possible cave-ins, or slides, is apparent, all work in the trench shall cease until the necessary precautions have been taken by the Contractor to safeguard personnel entering the trench. It is the sole duty, responsibility and prerogative of the Contractor, not the owner or the Engineer, to determine the specific applicability of the designed trench safety systems to each field condition encountered on the project. The Contractor shall maintain a permanent record of daily inspections.

14.5. Safety Restrictions - work near high voltage lines

The following procedures will be followed regarding the subject item on this contract:

A. Warning signs painted yellow with black letters that are legible at twelve feet shall be placed inside and outside vehicles such as cranes, derricks, power shovels, drilling rigs, pile drivers, hoisting equipment or similar apparatus. The warning sign shall read as follows:

"WARNING - UNLAWFUL TO OPERATE THIS EQUIPMENT WITHIN SIX FEET OF HIGH VOLTAGE LINES."

B. All equipment except back hoes or dippers that may be operated within ten feet of high voltage lines shall have an insulating cage-type of guard about the boom or arm and insulator links on the lift hook connections.

C. When necessary to work within six feet of high voltage electric lines, notification shall be given the power company who will erect temporary mechanical barriers, de-energize the line, or raise or lower the line. The notifying department shall maintain an accurate log of all such calls to the Power Company, and shall record action taken in each case.

D. The Contractor is required to make arrangements with the Power Company for the temporary relocation or raising of high voltage lines at the Contractor's sole cost and expense.

l5. MEASUREMENT AND PAYMENT

l5.l General

The unit price or lump sum price bid on each item, as stated in the proposal, shall include furnishing all labor, superintendence, machinery, equipment, and materials necessary to complete the various items of work in accordance with the plans and specifications. Cost of work or materials shown on the plans and called for in the specifications and on which no separate payment is made shall be included in the bid price on the various pay items.

l5.2 Water Lines

A. Measurement

The length of pipe lines for the various sizes, classes and types to be paid for will be determined by measurement along the center lines of the pipe installed, measurement being made from the center of fitting to center of fitting or end of pipe, without any deduction for the length of intermediate fittings or valves including pipe installed in casing.

B. Payment

Furnishing and installing approved type pipe of the various sizes and classes shown on the plans or as required will be paid for at the unit price bid per linear foot for furnishing and installing the various sizes and classes of approved pipe complete in place. The unit price bid shall be complete compensation for furnishing and installing the pipe complete in place including all excavation, backfilling, testing and disinfection of lines and shall include any and all incidental work not otherwise included in the bid items or otherwise provided for in the specifications.

l5.3 Solid Rock Excavation

All excavation for pipe trenches shall be unclassified and no extra compensation will be made for solid rock excavation. The contractor is expected to make boring of his own and satisfy himself to the character of material which will be encountered.

l5.4 Gate Valves or Butterfly Valves

A. Measurement

Gate valves or butterfly valves will be counted in the field after installation by the size and type specified and actually installed.

B. Payment

The unit price bid for each type and size valve shall be complete compensation for furnishing and installing the valves, complete in place, including the furnishing and installation of cast iron valve boxes on all valves to the finished grade of the adjacent surface. All valves in paved areas shall be set to finish pavement grades

l5.5 Fire Hydrants

A. Measurement

Fire hydrants will be counted in the field after installation in accordance with the plans and specifications.

B. Payment

The unit price bid shall be complete compensation for furnishing and installing the fire hydrants, complete in place, each, including lead pipe the gravel drain, concrete blocking, extension or additional bury depth as required for a complete installation.

I5.6 Service Connections

A. Measurement

The number of service connections of the type and size specified to be paid for will be counted in the field after complete installation.

B. Payment

The unit price bid shall be complete compensation for furnishing and installing the service connections, complete in place, including the meter box and lid, service line, corporation stop, meter stop and incidentals required for a complete installation.

I5.7 Ductile Iron Fittings

A. Measurement

The weight of the various ductile iron fittings and specials were estimated by using the standard weights for cast iron fittings as established by the American Water Works Association or American Standard Association. Measurement of ductile iron fittings will be made by counting the actual number of fittings installed and multiplying the number of fittings by the catalog weights for those types of fittings actually installed. Allowance will be made for glands and bolts.

B. Payment

The ductile iron fittings or specials required in the construction of the various size pipe lines as shown on the plans or as required will be paid for at the unit price bid per ton for furnishing and installing the ductile iron fittings complete in place. The unit price shall also include all materials, excavation, backfilling, concrete blocking and other incidental work required for the complete installation.

I5.8 Steel Cylinder Concrete Pipe Fittings

A. Measurement

No separate measurement or count of fittings and specials for steel cylinder concrete pipe will be made.

B. Payment

No separate payment will be made for fittings or specials for steel cylinder concrete pipe used on this project, but the cost of same shall be included in the price bid per linear foot for the various classes and sizes of pipe in the bid proposal.

l5.9 Casing Pipe In Bored Hole Or Open Cut

A. Measurement

Measurement of the casing pipe, of the type and size specified, shall be made by the linear foot of casing installed complete in bored hole or installed complete in open cut.

B. Payment

The unit price bid per linear foot for casing in bored hole or for casing in open cut shall be complete compensation for furnishing and installing the casing, complete in place, including all pits, boring equipment, materials and labor required for a complete installation. Payment for carrier pipe installed in the casing will be made as stated under Waterlines above.

l5.l0 Paving Cut and Repair

A. Measurement

Measurement of paving cut and repair will be made by the square yard for replacing pavement of the type specified. The area of the pavement replaced shall be determined by actual measurements on the ground; however, measurement will be limited to areas within widths of cuts as shown on the plans unless additional widths are authorized by the engineer. Any pavement removed or damaged outside of the aforementioned limits shall be replaced as prescribed with these specifications, but will not be measured for payment.

B. Payment

The unit price bid, per square yard, shall be complete compensation for cutting and removing the pavement, and constructing the concrete base and surfacing of the type specified, all as specified herein and as shown on the plans.

15.ll Trench Safety Systems, Sheeting and Shoring

A. Measurement

Trench Safety Systems shall be measured by the linear foot along the centerline of trench including manholes and other line structures.

B. Payment

Payment for Trench Safety Systems, measured as prescribed above, shall be made at the unit price bid per linear foot of "Trench Safety Systems: Payment of all work prescribed under this item shall be full compensation for the Trench Safety Systems including all Engineering cost and any additional excavation and backfill required, for furnishing, placing, maintaining and removing all shoring, sheeting, or bracing; for dewatering or diversion of water; for all jacking and jack removal; and for all other labor, materials, tools, equipment and incidentals necessary to complete the work.

Revised 08/07

GRAVITY FLOW PIPE SEWERS AND FITTINGS
FOR WASTE WATER AND STORM WATER

PART I – GENERAL

1.01 SCOPE

A. The work covered by this specification shall include the furnishing of all material, labor and equipment to construct, complete in place, all Gravity sewers including jointing, gaskets, fittings, castings, mortar, concrete, the placing of sewer pipe, and the construction of manholes and other appurtenance, all in accordance with the details shown on the plans and these specifications for the drainage of sanitary and/or storm sewage.

B. Sanitary and storm sewer lines constructed under these specifications shall be straight in grade and alignment between manholes. Manholes shall be constructed at any change in grade and at any change in alignment. In general manholes are to be constructed at 300 feet intervals or less with the maximum distance between manholes being 350 feet when approved by the Engineer.

1.02 QUALITY ASSURANCE

A. The Contractor, at the Engineer's request, shall furnish a certificate from the manufacturer of the pipe and fittings that the manufacturer is fully competent and capable of manufacturing sewer pipe, fittings, and accessories of the type, size and grade proposed for use in this project that are of uniform texture and strength that will fully comply with these specifications and have so manufactured this class of pipe in sufficient quantities to be certain that it will meet all normal field conditions of usage. The manufacturer must have adequate equipment and quality control facilities to be sure that each extrusion casting or run of pipe is uniform in texture, dimensions, and strength.

B. All PVC, HDPE, or plastic resin based pipe and fittings shall be covered during storage to protect them from excessive heat and direct sunlight.

C. All pipe and accessories shall be stored above ground and fully supported so that they will not bend or deflect excessively under their own weight.

D. Pipe in any way damaged or deformed during storage shall not be incorporated into this project, but at the direction of the Engineer, shall be permanently removed from the job site and project area.

1.03 TYPE OF PIPE

A. Pipe for sanitary sewers 15 inches in diameter and less shall be PVC. Pipe for storm drains 15 inches in diameter and less may be corrugated steel pipe when called for on the plans and in the bid proposal. Pipe 18 inches in diameter and larger shall be of the type shown on the plans and bid proposal.

B. The contractor may be allowed to bid a choice of two or more of the pipe materials when pipe 18 inches in diameter and larger are proposed for use on a project. When such choice is allowed the permissible choices will be clearly stated on the plans and/or bid proposal and a blank space will be provided for the contractor to write in the type of pipe proposed for use on the project. When such blank spaces are provided, the contractor must choose one of the permitted pipe materials as specified in part 2 “Materials” of these specifications and write in the type of pipe bid. Failure to write in the type of pipe bid may be reason to disqualify the bid. One or more types of pipe 18 inches in diameter and larger may be excluded from consideration on any given project by notes on the plans and/or the bid proposal.

PART 2 – MATERIALS

2.01 POLYVINYL CHLORIDE (PVC) PIPE AND FITTINGS FOR SANITARY AND STORM SEWERS

A. GRAVITY SEWERS

(1) Pipe and fittings in nominal diameters from 4-inch through 15-inch shall be manufactured in accordance with ASTM D3034, “Type PSM Polyvinyl Chloride (PVC) Sewer Pipe and Fittings” and pipe and fittings in diameter 18” through 36” shall be manufactured in accordance with ASTM F-679 or ASTM F-794, closed profile, subject to the modifications and limitations below.

B. MODIFICATIONS AND LIMITATIONS

(1) The concrete slab manhole tops shall be reinforced with number 4 steel reinforcing bars spaced at 12 inches on center each way. Additional diagonal bars shall be placed on 4 sides around the manway opening. The diagonal bars shall be number 4 rebar with a minimum length equal to the diameter of the manway opening plus 4 inches. The steel reinforcing mat shall be placed in the bottom of the slab with 1-1/2 inches protective covering.

(2) The term Dimension Ratio (DR) or standard dimension ratio (SDR) is the ratio of the average outside pipe diameter to the minimum wall thickness rounded to the nearest 0.5. The maximum DR for PVC sewer pipe shall be 35. PVC pipe sewers that will have less than 4 feet of cover shall be DR26.

(3) PVC pipe manufactured under ASTM F679 or F794 shall have a wall thickness that will meet or exceed the D.R. and stiffness specified herein. The minimum pipe stiffness for pipe having a DR of 26 shall be 115 psi. The minimum pipe stiffness for DR 35 pipe shall be 46 psi.

(4) Where DR 26 pipe is specified, all necessary fittings shall be the same as for SDR 35 PVC pipe.

(5) Minimum wall thickness for ASTM D-3034 PVC pipe shall be as follows:

Nominal Size (in.)	Min. Wall Thickness (in.)	
	DR 26	DR 35
4	0.162	0.120
6	0.241	0.180
8	0.323	0.240
10	0.404	0.300
12	0.481	0.360
15	0.588	0.437

The minimum wall thickness for PVC pipe meeting ASTM F-679 or F-794 requirements shall be the thickness as set forth in said ASTM specification that will meet or exceed the pipe stiffness and DR required.

(5) The identification markings as shown in Section 12 of ASTM 3034 shall note the specified DR of 26 where applicable.

(6) All pipe and fittings shall have the dimensions for inside diameter, outside diameter, etc. as shown in ASTM D3034 and/or ASTM F-679 except that the inside diameter DR 26 may be reduced by the added wall thickness.

(7) The pipe and fittings shall be homogeneous throughout and free from visible cracks, holes, foreign inclusions, or other injurious defects. The pipe shall be as uniform as commercially practical in color, opacity, density, and other physical properties.

(8) The Contractor shall provide wyes, tees, bends, adapters, and any other fittings called for in the specifications and/or shown on the plans or directed by the Engineer.

(9) The standard length of ASTM, D-3034 SDR 35 or SDR 26 PVC pipe under this specification shall be 20 feet with a minimum of 10 feet, except that all pipe used in service lines shall not exceed 10 feet in length unless otherwise approved by the Engineer. The standard laying length for ASTM F-679 PVC pipe shall be 13 feet. The Engineer must approve other laying lengths.

C. SEWER LATERALS AND CONNECTIONS

Pipe and fittings for service lines shall be the same material and thickness class as required for the main sewer. Schedule 40 PVC pipe may be used for 4” service lines when PVC pipe meeting requirements of ASTM 3034, SDR 35 is required.

D. JOINING SYSTEMS

(1) PIPE JOINTS

The pipe shall be joined with an integral bell, bell and spigot type rubber gasket joint. Each integral bell joint shall consist of a formed bell complete with a single rubber o-ring gasket. Gaskets shall be manufactured in accordance with ASTM F477 and shall be installed in accordance with the pipe manufacturer's instructions using all the necessary materials, lubricants and equipment recommended by the manufacturer.

For pipe 18" through 36" gaskets shall be factory installed and chemically bonded to the bell end of the pipe.

Lubricant shall be water soluble, non-toxic and have no deteriorating effects on gasket or pipe materials and shall not support the growth of bacteria. Lubricant shall be suitable for use at temperatures from 5^{o} to 120^{o} F (-15^{o} to 50^{o} C). Containers shall be labeled with the manufacturer's name and identified as PVC pipe joint lubricant. Each lubricant container shall have printed instructions for usage and joint assembly.

Field welded joints will not be allowed.

(2) FITTING JOINTS

All fittings shall utilize rubber gasket joints of the same type design and specifications as pipe joints.

(3) PIPE SPIGOT

The pipe spigot shall have a bevel and an insertion stop mark. The assembled joint shall be designed so the gasket shall be radially compressed to assure a positive water-tight seal for all installation conditions recommended by the manufacturer and under all combinations of production tolerances for the joint components. Each size joint shall be qualified to no leakage under various test conditions in conformance with ASTM Specification D-3212, "Joints for Drain and Sewer Plastic Pipes Using Flexible Elastomeric Seals."

E. INSPECTION AND TESTING

(1) INSPECTION REQUIREMENTS

Certification: as the basis of the acceptance of the material, the manufacturer will furnish a certificate of conformance to these specifications. The manufacturer will furnish other conformance certification in the form of affidavit of conformances, test results, and copies of test reports.

(2) PHYSICAL TEST REQUIREMENTS

For each 4,000 linear feet of pipe manufactured of each class and size of pipe, the following certified test data shall be required:

1. The basic dimensions shall be measured.
2. The allowable crush load (lbs/ft ^{2}) shall be calculated.
3. Impact resistance, fusion quality and ductility shall be tested.

F. MARKING AND DELIVERY

Each pipe shall be identified with the name of manufacturer, nominal size, cell classification, ASTM designation F794, Uni-Bell Plastic Pipe Association designation Uni-B-9, the pipe stiffness designation “PS-46 psi” and manufacturer’s date code.

1. MANHOLE CONNECTIONS

The Contractor shall provide smooth pieces of pipe for connecting sewer line into manholes. The Contractor shall be required to assist the manhole gasket supplier with the nominal outside diameter of these smooth pieces of pipe, as manufactured. There shall be only one plain end thickness for each diameter of pipe specified for the project.

2. DELIVERY

All pipe couplings and fittings shall be prepared for standard commercial shipment.

The pipe shall be inspected upon delivery to the job site for final acceptance. The contractor shall be responsible for all material furnished by him and he shall replace, at his own expense, all such material that is found to be defective in manufacture or which has become damaged in handling until final acceptance has been made. Pipe, which exhibits excessive ovalty or curvature, shall be rejected.

PVC pipe and fittings shall be covered during storage to protect them from excessive heat and direct sunlight.

All pipe and accessories shall be stored above ground and fully supported so as not to bend or deflect excessively under its own weight.

2.01(a) Metallic Marking Tape (For PVC Sewer Pipe)

2.01 (a).1 General

When non-metallic pipelines are to be installed, then the Contractor shall furnish and lay, above the pipeline, a continuous strip of metallic identification tape.

2.01 (a).2 Tape Material

The metallic identification tape shall be at least two inches (2”) in width and shall be of corrosive resistant metal of sufficient thickness to be stable and reflect electronic signals to electronic pipeline detector when buried to a dept of twenty-four (24”) below normal ground level.

The metallic tape shall be painted green on one side and shall have 1-inch high letters painted continuously on the same side of the tape which read, “CAUTION: BURIED SEWER LINE BELOW” or other words to this effect.

The marking tape shall be “Detectable Marking Tape”, as manufactured by the Omega Marking Company, or equal approved by the Engineer.

2.01(a).3 Construction Methods

The Contractor shall backfill over non-metallic pipelines to a depth which is less than twenty-four (24”) and not more than twelve inches (12) from the top of the cut of the ditch section in which the pipeline is laid. Contractor shall stop the backfilling material to a generally uniform level. All machine tamping, jetting and other compaction activities shall be accomplished up to this point of height in the backfilling the marking tape is placed in the trench.

The Contractor shall then lay the marking tape in the pipe trench and shall be held in position by the spot placement of backfill materials over it to keep it from sliding t the sides and/or from being blown about in the ditch by the wind. The tape shall be lid with the painted side, which shall also be the side with the identification lettering on it, in the “up” position. The tape shall be laid in the flat position and kept there until backfill is accomplished.

The Contractor shall then complete the backfilling operation in such a manner that the marking tape is not cut, crimped, ruptured or separated by the backfilling work.

2.01(a).4 Measurement and Payment

No separate pay item will be provided for furnish and placing the marking tape. This item shall be considered subsidiary to the non-metallic pipe being placed.

2.02 CORRUGATED STEEL PIPE (CSP) FOR STORM SEWERS AND CULVERTS ONLY

1. PIPE

A. STEEL SHEET STOCK

(1) Corrugated steel pipe shall be manufactured using galvanized steel sheet AASHTO M 218 or aluminized steel sheet AASHTO M 274.

(2) The lining for smooth lined corrugated steel pipe shall be polymer coated on both sides. The minimum thickness of the polymer coating shall be 10 mils.

B. PIPE DESIGNATION

(1) Pipe furnished shall be manufactured in accordance with AASHTO Specification M 36.

(2) Corrugated steel pipe shall be one or more of the following type as designated in AASHTO M 36.

Type I - Full circular cross section having helical corrugations.

Type IA - Full circular smooth lined pipe constructed of an outer shell having helical corrugations with a smooth sheet lining attached to the outer shell at helical lock seams.

Type IR - Full circular cross section with helical rib protruding outward.

Type II - Type I pipe formed into a pipe arch.

Type IIA - Type IA pipe formed into a pipe arch.

The type of pipe furnished on this project will be as shown on the plans and in the bid proposal.

When no type of pipe is called for on the plans or in the bid proposal helically corrugated circular single wall pipe (Type I or Type IR) shall be furnished.

C. MANUFACTURERS CERTIFICATION

(1) The pipe manufacturer will be required to certify the adequacy of the pipe furnished for the application and design life of the project.

(2) The design life for storm sewers constructed under this specification is 50 years.

(3) The pipe manufacturer will be required to run soil pH, soil resistivity and such other test as they deem necessary to design pipe thickness and protective coatings required to assure the adequacy of the pipe supplied.

D. CORRUGATION AND MINIMUM THICKNESS

(1) Thickness used in this specification refers to the bare steel thickness before coating is applied. The minimum thickness for any single wall corrugated steel pipe furnished under this specification is 16 gage.

(2) All corrugated steel pipe furnished under these specifications shall have helical corrugations.

(3) Circular corrugated steel pipe 48” in diameter and smaller shall have 2-2/3” x ½” corrugation and shall be a minimum of 16 gage in thickness.

Circular corrugated steel pipe larger than 48” in diameter may have either 2-2/3 x ½” or 3” x 1” corrugations. The minimum thickness for corrugated steel pipe larger than 48” in diameter and having 2-2/3 x ½” corrugation shall be as follows:

54” Diameter - 12 gage
60” Diameter - 10 gage
66” through 90” Diameter - 8 gage

The minimum thickness for circular corrugated steel pipe having 3” x 1” corrugation and diameters of 54” through 90” shall be 14 gage.

(4) For smooth lined corrugated steel pipe the minimum thickness for the lining shall be 20 gage and the minimum thickness for the outer shell shall be 18 gage.

The corrugations for the outer shell shall be 2-2/3” x ½” for pipe 48” diameter and smaller. Larger diameter pipe may use 3” x 1” corrugations in the outer shell. The sum of the thickness for the outer shell and the liner shall be a minimum of one thickness unit greater than the thickness that would be required for single wall pipe of the same diameter or span.

(5) Spiral rib steel pipe (Type IR) shall have outward projecting spiral corrugations of ¾” x 1” at 11-1/2” on center in accord with AASHTO specification M 36 or ¾” x ¾” at 7-1/2” on center as described in AASHTO specification M 196.

The minimum thickness for spiral rib pipe 48” in diameter and smaller shall be 16 gage.

The minimum thickness for spiral rib pipe 54” and 60” in diameter shall be 14 gage.

The minimum thickness for spiral rib pipe 66” and 72” in diameter shall be 12 gage.

The minimum thickness for spiral rib pipe larger than 72” in diameter shall be as shown on the plans.

(6) The corrugations and minimum thickness of corrugated steel pipe arch shall be in accord with the following table:

EQUIV. Dia. (in.)	2-2/3" x ½" Corrugations Span (in.)	Rise (in.)	Gage	3" x 1" Nominal Size Span (in.)	Rise (in.)	Gage
15"	17	13	14			
18"	21	15	14			
24"	28	20	14			
30"	35	24	14			
36"	42	29	14	40	31	16
42"	49	33	12	40	36	14
48"	57	38	10	53	41	12
54"	64	43	10	60	46	12
60"	71	47	8	66	51	12
66"	77	52	8	73	55	12
72"	83	57	8	81	59	12
78"				87	63	12
84"				95	67	12
90"				103	71	12

When 2-2/3" x ½" corrugations are called for on the plans and/or on the bid schedule the substitution of 3" x 1" corrugations will be allowed only upon the demonstration by the contractor that there is sufficient head room to accommodate the higher rise for arch pipe of this cross section.

E. END TREATMENT AND JOINING

(1) The ends of all corrugated steel pipe furnished for this project shall be rolled to provide circumferential corrugations for coupling. The end corrugations for all pipe 48" in diameter and less shall be 2-2/3 x ½". The end corrugations for single wall helically corrugated steel pipe or for smooth lined corrugated steel pipe 54" in diameter and larger shall be the same pitch as the pipe furnished and may be either 2-2/3" x ½" or 3" x 1". The end corrugations for spiral rib (Type IR) corrugated steel pipe shall be 2-2/3" x ½" or 3" x 1" for pipe 54" and larger in diameter.

(2) Coupling bands shall be made of the same material as the pipe and shall be not more than 3 nominal sheet thicknesses lighter than the pipe joined and in no case less than .052 inch.

Jointing devices for joining corrugated steel pipe shall have a gasket and shall produce a joint meeting the infiltration/exfiltration requirements of these specifications.

If it should be necessary to cut a joint of Helically corrugated pipe and join the unreformed end to another section of pipe or fitting extra width bands will be required and special care must be taken to insure a water tight connection.

Locking bands shall be corrugated and shall securely fit into at least one full annular corrugation. The corrugations on the locking band must match the corrugations on the pipe being joined.
The minimum width for locking bands is as follows:

for 2-2/3 x ½ inch corrugations	10-1/2 inches
3 x 1 inch corrugation	12 inches

For helical corrugations that have not been reformed the coupling bands must be at least 2 inches wider than the widths listed above.

Unless shown otherwise on the plans all bolts for coupling or locking bands shall be ½ inch in diameter. Bands 12 inches wide or less shall have a minimum of 2 bolts. Bands wider than 12 inches shall have a minimum of 3 bolts.

Bolts must be galvanized in accordance with AASHTO Designation M232 or ASTM A164 Type RS.

(3) Gaskets for corrugated steel pipe shall be closed cell expanded rubber and shall be formed into a continuous band. Gaskets may be either “O” ring or flat band as recommended by the pipe manufacturer. Flat band gaskets shall be a minimum of 7” wide and 3/8” thick. “O” ring gaskets shall be 13/16” diameter minimum for pipe 36” in diameter or less and 7/8” for pipe larger than 36” diameter and having ½” deep corrugations. “O” ring gaskets shall be a minimum of 1-3/8” diameter for pipe having 1” deep corrugations. When “O” ring gaskets are furnished, an additional flat gasket shall be furnished and placed between the overlapping ends of the coupling band. This flat gasket shall completely fill the gap between the “O” rings. All gasket materials shall be capable of producing a water tight joint that will meet the leakage requirements of these specifications.

2. CORRUGATED STEEL MANHOLE FITTINGS, AND CLEAN OUTS

A. FABRICATION

(1) Corrugated steel manholes and fittings shall be constructed of the same material and type of pipe furnished for the storm sewer line with the exception that manhole risers shall be helical corrugated single wall circular pipe when used with pipe arch sewers or smooth lined corrugated steel pipe. The thickness of the manhole riser shall be the same as would be required for the same type and diameter pipe if it were used for the storm sewer.

(2) Cleanouts for use on shallow storm sewer and inlet leads shall be manufactured from pipe meeting the requirements of these specifications. Cleanouts shall be constructed to the dimensions and in accord with the details shown on the plans.

B. CONNECTION TO MANHOLES AND CLEANOUTS

(1) Stub outs from manholes and cleanouts for connection to storm sewers and inlet leads shall have annular corrugations and shall be compatible with the type and size of pipe being connected. Stub outs provided for connection to PVC pipe storm sewers and inlet leads shall be sized so that the PVC pipe can be inserted into the stub leaving the least amount of annular space between the PVC pipe and the CSP practical. The PVC pipe shall be connected using an approved molded rubber or PVC sleeve connector clamped to both pipes with stainless steel straps.

The connector shall be a flexible coupling as manufactured by Fernco, 300 S. Dayton St., Davison, MI., or approved equal.

.

C. LEAKAGE

Manholes, fittings and cleanouts shall meet the leakage requirements of these specifications.

D. SHOP DRAWINGS

The contractor shall submit shop drawings of all manholes, fittings and cleanouts for approval prior to their fabrication. A minimum of 5 sets of drawings for each manhole, each fitting and each cleanout shall be submitted.

E. CONCRETE SLAB TOPS

A reinforced concrete slab top shall be constructed for each manhole and cleanout. The slab shall extend to one foot (1') outside the riser section on all sides and shall have an eccentric 2' diameter opening for the manway located at the outside edge of the riser section. For manholes and cleanouts designated for standard manhole rings and covers the concrete top shall be 8 inches thick and shall be finished smooth to receive the manhole ring.

For manholes designated to receive pressure type manhole rings and covers the concrete slab top shall be a minimum of 12 inches thick and shall have L bolts imbedded in the concrete to fit the requirements of the manhole ring furnished. The slab shall be finished smooth to receive the manhole ring. The manhole ring shall be securely bolted to the slab and sealed using "Ram Nek" or an approved equal bitumastic sealer between the manhole ring and the concrete slab.

The concrete slab manhole tops shall be reinforced with number 4 steel reinforcing bars spaced at 12 inches on center each way. Additional diagonal bars shall be placed on 4 sides around the manway opening. The diagonal bars shall be number 4 rebar with a minimum length equal to the diameter of the manway opening plus 4 inches. The steel reinforcing mat shall be placed in the bottom of the slab with 1-1/2 inches protective covering.

F. PRESSURE MANHOLE RING AND COVER

(1) Pressure type manhole rings and covers shall be Western Iron Works No. 380-24P or approved equal. The manhole cover shall be sealed with an “O” ring gasket in a ring groove and shall be secured to the ring by six (6) 5/8-inch stainless steel bolts.

(2) The ring shall have six (6) 1-1/4 inch bolt holes in the flange for securing the ring to the concrete slab top on the manhole.

3. CORRUGATED STEEL PIPE SLOTTED DRAIN

(1) Corrugated steel pipe slotted drains shall be fabricated from full circle corrugated steel pipe conforming to these specifications.

(2) C.S.P. Slotted drains shall be of a type as manufactured by “Contech Construction Products, Inc.”, “Texas Corrugators”, “Caldwell Culvert Company” or approved equal.

(3) The upstream end of CSP slotted drains shall be equipped with a bend and a ring and cover of the some size as the pipe from which the slotted drain was fabricated to allow cleaning equipment to be inserted into the slotted drain. The ring and cover shall be Nenah Foundry Co. R-5901 open grate or R-5900 solid lid or approved equal. Unless shown otherwise on the plans the open grate shall be furnished.

(4) When slotted drain is to be connected to PVC leads, molded rubber or PVC flexible connector as specified for connections to manholes and cleanouts shall be furnished.

4. DAMAGED COATING

A. PROTECTION OF PIPE

(1) Pipe fittings and specials shall be handled and stored in a manner that will minimize damage to the coating.

(2) The fabrication process shall be designed to minimize the burning of coatings during welding.

(3) Pipe and/or fittings showing excessive abuse or damage will be rejected.

B. REPAIRING DAMAGE

(1) Pipe on which the metallic coating has been burned by welding or has been otherwise damaged in fabricating or handling, shall be repaired. The repair shall be done so that the completed pipe shall show careful finished workmanship in all particulars.

(2) The damaged area shall be cleaned to bright metal by blast cleaning, power disk sanding, or wire brushing. The cleaned area shall extend at least ½ inch into the undamaged section of the coating. The cleaned area shall be coated within 24 hours and before any rusting or soiling.

(3) Zinc-rich paint shall be applied to a dry film thickness of at least 0.005 inches over the damaged section and surrounding cleaned area. Zinc-rich paint shall be used for repair of damage to all types of metallic coating -zinc, aluminum, and aluminum-zinc alloy.

2.03 CAST-IN-PLACE CONCRETE SEWER PIPE (NON-REINFORCED) FOR STORM SEWERS ONLY

1. DESCRIPTION

This item shall cover machine cast-in-place monolithic non-reinforced concrete pipe, which shall consist of Portland cement concrete placed in a prepared trench at such locations and grades shown on the plans and intended to be used for the conveyance of storm water. Items and item numbers referred to in this specification are the items as given in the "Texas State Department of Highways and Public Transportation 1982 Standard Specifications for Construction of Highways, Streets and Bridges."

2. MATERIALS

The cast-in-place pipe shall be constructed of Class "C" concrete. The concrete shall meet the requirements of Item 421, "Concrete for Structures," and Special Provision thereto, except as otherwise noted herein or on the plans. Type III Portland Cement shall be used.

The minimum compressive strength for concrete used in this item is 4000 psi. Backfilling operations may proceed when the concrete has reached 2000 psi compressive strength.

The coarse aggregate grading for pipe diameters 48 inches or less shall conform to that of Aggregate Grade No. 3, one inch (1") maximum size aggregate under Item 421. For pipe diameters over 48 inches, Coarse Aggregate No. 2, one and one third inch (1-1/3") maximum size aggregate shall be used.

No concrete having a slump in excess of 2" will be permitted for use in pipes with diameters of 48 inches and over. For pipes with diameters less than 48 inches, no concrete having a slump in excess of 3" will be permitted for use. At the option of the Contractor, sections of precast reinforced concrete pipe (D-load) may be substituted for cast-in-place concrete pipe. Pipe and installation shall conform to the requirements of Item 465, "Pipe Sewers." Backfill shall be in accordance with the requirements for other storm sewers in these specifications using crusher fines (chat).

3. PIPE MAKING EQUIPMENT

The pipe shall be constructed with equipment specially designed for constructing cast-in-place monolithic concrete pipe. The equipment shall be acceptable to the Engineer and the Contractor may be required to furnish evidence of successful operation in other work of the equipment he proposes to use. Equipment not suitable to produce the quality of work required for the pipeline will not be permitted to operate on the project.

4. DIMENSIONS AND TOLERANCES

The design shell thickness shall be as specified in Table 1.

TABLE I

Internal Diameter inches	Min. Shell Thickness inches
18	2
24	2-1/2
30	3
36	3-1/2
42	4
48	5
54	5-1/2
60	6
66	6-1/2
72	7
84	8
96	9
108	10
120	11

Variation in the internal diameter shall not exceed plus or minus 3 percent. The maximum allowable deviation form the true grade of the design invert of the pipe shall not exceed ½ inch either side of true grade. Where deviation from true grade occurs, true grade shall be re-established at a maximum departure of one-eighth inch per foot.

5. EXCAVATION AND BACKFILL

Excavation shall be in accordance with the requirement for other types of storm drains, except as modified herein. The trench shall be excavated in the lines and grades shown on the plans or as directed by the Engineer. The width of the trench shall be sufficient to accommodate travel of the pipe machine only. The bottom of the trench shall be shaped to the nominal outside circumference of the pipe. Excavation shall be performed from the outlet to the inlet. If the trench is over-excavated for the bottom 210 degrees of the pipe the excess area shall be filled with concrete. If rock is encountered, it will be removed at least 6 inches below the bottom of the pipe and the trench refilled with material sufficiently compacted to

allow operation of the machine and provide a smooth firm surface. The sidewall of the pipe shall be placed against undisturbed material.

Backfill material will be a crusher fine (chat) as described elsewhere in these Specifications. No backfill other than permitted for curing purposes shall be placed until the line has been inspected and approved by the Engineer. The trench may be completely backfilled after the pipe has been in place at least 24 hours and concrete strength requirements have been reached. Light traffic, axle load less than 6,000 pounds, may be routed over the pipe after backfill has been completed for twenty-four (24) hours. Unrestricted traffic may be permitted over the pipe after the backfill has been in place for forty-eight (48) hours.

All backfill material shall be mechanically compacted to 95% modified proctor or as directed by the Engineer.

6. CONSTRUCTION

All surfaces against which concrete are to be placed shall be free from standing water, mud, and debris. Absorptive surfaces against which concrete are to be placed shall be moistened thoroughly so that moisture will not be drawn from the freshly placed concrete.

The concrete shall be placed in one operation around the full circumference of the pipe by means of a traveling form. The forms shall be of sufficient strength to withstand vibrating or tamping the concrete and to permit workmen to walk on the forms without causing springing or bulging at any point.

As the traveling form moves forward, forms shall be placed inside the newly formed pipe to support a minimum of 230 degrees of the upper portion of the pipe.

The concrete shall be vibrated, rammed, tamped or worked with suitable appliances until the concrete has been consolidated to the maximum practicable density, free of rock pockets, and closes snugly against all surfaces or forms and provides a bond between the pipe shell and supporting earth.

When placing operations cease for any reason, the end of the pipe shall be left rough with a slope of approximately 45 degrees. The ends of the pipeline shall be covered with canvas or other suitable cover material to prevent excessive loss of moisture from the interior of the pipe already placed.

When starting pipe laying operation from a previously laid cast-in-place pipe or section of pre-cast pipe, a construction joint shall be made by excavating a “bell” completely around the end of the existing pipe and constructing a concrete collar to extend at least one foot either side of the joint with a minimum thickness equal to that of the wall of the pipe. The end of the existing pipe shall be clean and damp before continuing pipe making operations. Cleaning of the construction joint shall consist of removing all latency, loose or defective concrete, coatings, and any other deleterious materials.

All forms shall be clean and shall be placed at the trench side at the location of their proposed use for inspection by the Engineer. Forms, which are defective in any way, will not be used, and upon condemnation they shall be removed from the site of the work. The forms shall not vary more than ½ inch from the lower edge of a straightedge laid parallel to the centerline of the form, and shall be free of any holes larger than 5/8 inch in greatest dimension. The pipe machine shall be thoroughly clean and serviced prior to the placing of the concrete. Particular attention will be given to all parts of the machine with which concrete comes into contact.

Concrete chutes or trunks shall be provided to reach within 1 foot of the pipe machine hopper. The end of the chute or trunk shall discharge the concrete at the center of the hopper. Provisions shall be maintained to minimize segregation of the concrete mix in all phases of the operation.

Delays in placing shall be handled as follows or as otherwise directed. The concrete hopper on the pipe laying machine shall be kept ½ full at all times, provided, however, that when placing operations cease or are delayed for any reason for more than 20 minutes, the pipe machine shall be pulled forward until all the concrete is exhausted and until the top troweling skirt is clear of the concrete. If the pipe laying operation proceeds within one hour of the time of the last placement, no further steps need to be taken. However, if longer than one hour has elapsed, then a construction joint must be made as previously described. The end of the pipe shall be left rough and at the natural slope when the machine is moved forward.

All junctions of pipe shall be provided for at the time the cast-in-place pipe is placed.

Inside forms shall be removed from the pipe not sooner than 4 hours nor longer than 24 hours after placement of the concrete. Care shall be taken when removing forms to prevent damage to the pipe. The inside of the pipe shall be carefully inspected for imperfections in placement, and any required repairs or smoothing shall be made immediately to provide a uniform interior surface. No wash, mortar or concrete shall be applied to a surface not properly moistened or cleaned. Visible cracks shall be brushed with cement paste or chipped out and pointed up with cement mortar. Any cracks that appear to go through the shell shall be grooved and filled with mortar. All construction operations and methods for providing a watertight pipeline shall be the responsibility of the Contractor. Mortar shall consist of one part cement; two parts well graded sand passing 1/8-inch sieve. Wash shall consist of four parts cement, one part fire clay. The finished surface of the concrete pipe shall be substantially free of fractures, cracks and surface roughness.

7. CURING CONCRETE

Immediately after the concrete is placed the exposed surface of the concrete shall be cured by covering the top with a sheet of polyethylene film sealed with dirt along the edges. During the curing period following the placement of the concrete, the ends of the pipeline and all other openings into the pipeline shall be covered with canvas or other suitable material, except at locations where work is actually in progress. The inside surface of the pipeline shall not be cured.

8. MANHOLES AND BENDS

Manhole bases shall be hand formed on top of the pipe as soon as the pipe-placing machine has passed. Where required, the extra width for manholes shall be excavated ahead of the pipe placing operation. The base for the manhole shall be formed to receive a standard precast concrete barrel section and shall be shaped and smoothed so that the joint can be sealed water tight by use of “Ram Nek” or other approved joint sealing material.

Bends may be formed and cast in place or fabricated using precast reinforced concrete pipe (load D). Design and shop drawings shall be submitted to and approved by the Engineer before the bends are fabricated or cast.

9. MEASUREMENT

Measurement of manholes shall be as specified elsewhere in these specifications. Measurement of bends shall be as for other storm sewer pipe. The method of pipe measurement shall conform to that for other types of storm drainpipe in the section or storm drains in these specifications.

10. PAYMENT

Payment for cast-in-place non-reinforced pipe sewers, measured as prescribed above, will be made at the unit price bid per linear foot for the various sizes of “Pipe Sewers (Cast-in-Place)” complete in place. Payment for manholes shall be as specified elsewhere in these specifications.

Such payment shall be full compensation for furnishing all concrete materials, precast reinforced concrete pipe used in place of cast-in-place pipe, and for all other materials, tools, labor, equipment, and incidentals required to perform the applicable work prescribed herein.

When precast reinforced concrete pipe at the Contractor’s option is used in a line of cast-in-place pipe the additional excavation for the pipe will be subsidiary.

2.04 CENTRIFUGALLY CAST FIBERGLASS REINFORCED RESIN PIPE SEWERS

A. DIRECT BURY PIPES

1. GENERAL

All pipes, joints and fittings shall be manufactured in accordance with the requirements of the applicable standard given below except as noted herein:

Service	Standard
Non pressure Sanitary Sewer	ASTM D3262
Sewer Force Main and Effluent Lines	ASTM D3754

Pipes shall be centrifugally cast, fiberglass-reinforced polyester resin as manufactured by Hobas USA, Inc. or approved equal.

Minimum pipe stiffness when tested in accordance with ASTM D2412 shall be 46 psi.

2. MATERIALS

The manufacturer shall use only approved polyester resin systems for which he can provide a proven history of performance in these particular applications. The historical data shall have been acquired from a composite material of similar construction and composition as the proposed product.

The reinforcing glass fibers used to manufacture the components shall be of highest quality commercial grade of E-glass filaments with binder and sizing compatible with impregnating resins. Sand shall be minimum 98% silica with a maximum moisture content of 0.2%

3. DIMENSIONS

Pipe outside diameters shall be in accordance with AWWA Standard C151 and C950. For diameters larger than covered in those documents, OD's shall be as shown in Table 1.

TABLE I

*WP/s		0/46		50/46		100/46		150/46		200/46	
Nomin Pipe Sz. (in.)	Pipe OD (in.)	Min. wall (in.)	Wgt. (lb/ ft)	Min. Wall (in.)	Wgt. (lb/ ft)	Min. Wall (in.)	Wgt. (lb/ ft)	Min. Wall (in.)	Wgt. (lb/ ft)	Min. Wall (in.)	Wgt (lb/ ft.)

96	100.6	1.98	531	1.94	520	1.87	501				

- **Maximum nominal working pressure in psi/pipe stiffness in psi**

Pipe shall be supplied in nominal lengths of 20 feet. Actual laying length shall be the nominal plus or minus 2 inches. At least 90% of the total footage of each size and class of pipe, excluding special order lengths, shall be furnished in nominal length sections.

4. **PRESSURE CLASS & TESTING FOR SEWER FORCE MAINS AND EFFLUENT LINES**

The pipe nominal pressure class (PN) shall be equal to or greater than the maximum sustained operating pressure of the line. The minimum pressure rating for non-pressure pipe shall be 15 psi.

The maximum transient (operating plus surge) pressure of the line shall not exceed the pipe nominal pressure class by more than 40%.

Pipe hoop tensile strength for pressure pipe shall be verified as specified in the applicable standard (D3754 or C950) or by random burst testing at the same sampling frequency. All pipes shall be capable of withstanding a test pressure of 2 times the maximum sustained operating pressure of the line without leaking or cracking. This performance shall be periodically verified at the factory for pressure pipe at least once per lot as defined in D3754, section 7.1.

A. JOINTS

Unless otherwise specified, the pipe shall be field connected with fiberglass sleeve couplings that utilize elastomeric sealing gaskets made of EPDM rubber compound as the sole means to maintain joint water tightness. The joints must meet the performance requirements of ASTM D4161.

B. FITTINGS

Flanges, elbows, reducers, tees, wyes, laterals and other fittings shall, when installed, be capable of withstanding all operating conditions. Acceptable configurations include contact molded or metered fiberglass or properly protected standard ductile iron.

Unbalanced thrust forces shall be restrained with thrust blocks or other approved suitable methods. Fiberglass tees, wyes, laterals, or other similar fittings shall be fully encased in reinforced concrete designed to withstand the pressure forces.

2.05 POLYETHYLENE SEWER PIPE

A. SCOPE

(1) This specification covers Polyethylene (PE) pipe with a corrugated outer wall and a smooth interior wall, for use with non-pressure sanitary sewer systems. The PVC fittings and joints are included in the specification.

B. MATERIAL AND MANUFACTURING

1. PIPE MATERIALS

The pipe shall be made from clean virgin Polyethylene compounds having a cell classification of 324420C as defined by ASTM D-3350.

2. FITTING MATERIALS

The fittings shall be made from clean virgin polyvinyl chloride (PVC) compounds having a cell classification of 12454B, 1245C or 13343C as defined by ASTM D-1784.

Pipe shall be manufactured by simultaneous extrusion of the corrugated and smooth walls with the smooth inner wall fused to the outer corrugated wall.

Fittings shall be molded or fabricated.

3. JOINING MATERIALS

a. Gaskets
b. Elastomeric gaskets shall meet the requirements of ASTM F-477.
c. Lubricants

The lubricants used for assembly shall have no detrimental effect on the gasket or the pipe, and shall be per published recommendations of the pipe manufacture.

4. MATERIAL CERTIFICATION

A manufacture's or an independent laboratory certification shall be furnished to the purchaser/engineer that the products were manufactured, sampled, tested, and inspected at the time of manufacture in accordance with this specification.

C. PIPE DIMENSIONS

Pipe dimensions shall meet the following requirements when tested in accordance with ASTM D-2122.

Nominal Size	Avg. O.D.	Avg. I.D.
4	4.790 (121.7)	4.00 (101.6)
6	6.930 (176.0)	6.00 (152.4)
8	9.145 (232.2)	8.00 (203.2)
10	11.405 (289.7)	10.00 (254.0)
12	14.450 (367.0)	12.00 (304.8)
15	17.530 (445.3)	15.00 (381.0)
18	21/150 (537.2)	18.00 (457.2)

D. INSTALLATION

1. Joint Tightness

Minimum joint performance shall show no leakage when tested in accordance with ASTM D-3212.

2. Supplier Assistance

A manufacturers representative of the above referenced pipe material shall be present at the beginning of the installation as required by the Design Engineer or Contractor and shall remain on site until released by the Design Engineer or Field Inspector/Engineer.

2.06 INLETS FOR STORM SEWERS

A. CURB TYPE INLETS

(1) Curb inlets shall be constructed at the locations and to the lines and grades or shown on the plans or as directed by the Engineer.

(2) Curb inlets shall be constructed of reinforced class “C” concrete in accordance with Section 1-B “Concrete Structures” and the plans and detail drawings.

(3) The curb section and the curb inlet shall conform to the curb and gutter section in which it is placed in so far as it is possible.

B. GRATE TYPE INLETS

(1) Grate inlets shall be constructed at the locations and the lines and grades as shown on the plans or as directed by the Engineer.

(2) Concrete boxes for grate inlets shall be constructed of reinforced Class “C” concrete in accordance with Section 1-B “concrete Structures” and the plans and detail drawings.

(3) Grates shall be constructed of ASTM A-48 gray iron having minimum tensile strength of 35,000 psi or ductile iron having a minimum tensile strength of 60,000 psi and a yield strength of 40,000 psi.

The size, style, shape, type, weight and class shall be as shown on the plans.

Grate frames shall be as manufactured for the grate by the grate fabricator. If more than one type or style or frame is available, the type and/or style shall be as indicated on the plans.

C. COMBINATION INLETS

(1) Combination curb and grate inlets shall be constructed at the locations and to the lines and grades as shown on the plans or as directed by the Engineer.

(2) Combination inlets shall be constructed in accordance with the applicable requirements for “Curb type inlets” and “Grate type inlets” above.

D. INLET LEADS

(1) Inlet leads may be PVC pipe or CSP as shown on the plans and called for in the bid proposal.

(2) Inlet leads shall be constructed in accordance with the specifications for type of material used and the plans and detail drawings.

(3) Where two or more leads are joined together to form a single lead to the storm sewer they shall be joined at a cleanout unless shown otherwise on the plans.

(4) Inlet leads shall be connected to the storm sewer at a manhole. The leads shall enter the manhole at a point that will match the .8 points of the two pipes as near as practical.

E. CLEANOUT FOR STORM SEWER INLET LEADS

Cleanouts at the juncture of inlet leads shall be constructed in accordance with the dimensions and requirements shown on the plans and detail drawings.

F. CORRUGATED STEEL SLOTTED DRAINS

(1) Corrugated steel slotted drains shall be as specified in section 2.02-3 of these specifications and shall be furnished in the lengths and diameters as shown on the drawings and in the bid proposal.

(2) Corrugated steel slotted drains are approved for nuisance water inlets only and are sized to allow for considerable clogging before they will cease to function in this capacity.

2.07 MANHOLES

1. GENERAL

A. **CONCRETE MANHOLES ARE NOT TO BE USED FOR SANITARY SEWERS AFTER DECEMBER 31, 2002. FIBERGLASS MANHOLES ARE TO BE USED FOR ALL SANITARY SEWERS**. Concrete manholes can be used for storm water sewers.

All manholes furnished for this project shall be precast unless noted otherwise on the plans and or bid proposal.

Precast manholes shall conform to the requirements of ASTM Specification C-478 with the modifications given in this article.

Concrete used for precast manholes shall have a minimum 28-day compressive strength of 4,000 psi and shall have a minimum cement content of 7 sacks per cubic yards.

All manhole sections shall be furnished with tongue and groove type joints suitable for sealing water tight with rubber or bituminous joint sealer or gaskets.

B. When cast in place components for manholes are called for on the plans the concrete used shall have a minimum 28 day compressive strength of 4,000 psi and a minimum cement content of 7 sacks per cubic yard and shall conform to the requirements of ASTM Specification C-478 with wall thickness as shown on the plans and detail drawings.

Aggregate for the concrete shall meet the sodium sulfate and magnesium sulfate test as required in ASTM Specification C-33.

C. Mortar for filling and shaping the inverts in precast manhole bases and for mortaring precast grade rings and cast iron rings and covers shall consist of one part Portland cement ASTM C150 Type 1 to 3 parts washed sand mixed with just enough water to make a workable mix.

D. Manholes for corrugated steel pipe may be precast concrete or corrugated steel as described in Article 2.02. The type and material shall be as shown on the plans and called for on the bid proposal.

2. PRECAST MANHOLES

A. Manhole base sections shall be cast with an integral floor and shall be constructed in accordance with the details shown on the plans.

B. Manhole riser sections shall be constructed in accordance with the plans and details and these specifications. When pipe openings are required in manhole riser sections they shall be of the same type and meet the same requirements as the pipe openings in the precast bases.

Manhole riser sections for each manhole shall be furnished in the proper combination of lengths to construct the manhole in conjunction with the other components to the finished grade shown on the plans.

C Eccentric cone sections shall be constructed in the same manner as other components except the top of the cone will have a flat surface to accommodate the manhole ring and cover or grade adjusting rings instead of a tongue or groove.

Generally openings will not be required in the wall of the cone section of the manhole.

D. Manhole grade rings shall comply with all the requirements for manhole riser sections except they shall be cast smooth both sides without tongues and/or grooves.

Manhole grade rings shall be sized to fit the smooth small end of the cone section and shall be cast in heights of 2", 4" or 6".

E. Joint seals for precast concrete manholes shall be a bitumastic sealer such as Ram-Nek or approved equal, a soft rubber sealer such as Butyl-Lok or approved equal or an approved "O" ring gasket or a combination of the above if required to achieve a water tight joint.

F. All water tight Storm Sewer Manholes constructed on this project shall have Neenah R-1755-C watertight manhole rings and covers or approved equal.

No separate payment will be made for the protective plastic manhole linings or for the water tight manhole rings and covers but the cost of these items shall be included in the price bid for water tight Storm Sewer Manholes.

In addition to the markings required by ASTM Specification C-478, all components of each manhole shall be, marked with location identifying information such as manhole number or line number and station value where manhole is to be installed. If the manhole has openings for installation of branch lines above the base section, each manhole section shall be clearly marked with the sequence of installation to assure the branch opening will be at the correct elevation.

3. FIBERGLASS MANHOLES

A. SCOPE

Fiberglass reinforced polyester manholes shall be manufactured from commercial grade polyester resin or other suitable polyester or vinyl resins, with fiberglass reinforcements and in accordance with the latest edition of ASTM D 3 753 (Standard Specification for Glass-Fiber Reinforced Polyester Manholes). Fiberglass manholes shall be used with fiberglass or plastic sewer pipe.

B. MATERIALS

1. **Resin:** The resins used shall be a commercial grade unsaturated polyester resin.

2. **Reinforcing Materials**: The reinforcing materials shall be commercial Grade "E" type glass in the form of mat, continuous roving, chopped roving, roving fabric, or a combination of the above, having a coupling agent that will provide a suitable bond with the resin and leave a resin rich surface.

3. **Surfacing Materials**: If reinforcing materials are used on the surface exposed to the contained substance, they shall be a commercial grade chemical-resistant glass organic surfacing mat having a coupling agent that will provide a suitable bond with the resin and leave a resin rich surface.

4. **Fillers and Additives**: Fillers, when used, shall be inert to the environment and wet well construction. Additives, such as thixotropic agents, catalysts, promoters, etc., may be added as required by the specific manufacturing process to be used. The resulting reinforced plastic material must meet the requirement of this specification.

C. FABRICATION

1. **Exterior Surface**: The exterior surface shall be relatively smooth with no sharp projections. Handwork finish is acceptable if enough resin is present to eliminate fiber show. The exterior surface shall be free of blisters larger than ½ inch in diameter, de-lamination and fiber show.

2. **Interior Surface**: The interior surface shall be resin rich with no exposed fibers. The surface shall be free of crazing, de-lamination, blisters larger than ½ inch in diameter, and wrinkles of 1/8 inch or greater in depth. Surface pits shall be permitted up to 6 per square foot if they are less than ¾ inch in diameter and less than 1/16 inch deep.

3. **Defects not permitted**:

Exposed fibers: glass fibers not wet out with resin.
Resin runs: runs of resin and sand on the surface
Dry areas: areas with glass not wet out with resin.
De-lamination: separation in the laminate.
Blisters: light colored areas larger than ½ inch in diameter.
Crazing: cracks caused by sharp objects
Pits or Voids: air pockets.
Wrinkles: smooth irregularities in the surface.
Sharp projection: fiber or resin projection necessitation gloves for handling.

D. PHYSICAL REQUIREMENTS

1. **Load Rating**: The complete manholes shall have a minimum dynamic-load rating of 16,000 ft-lbs. when tested in accordance with this standard. In order to establish this rating, the complete manhole shall not leak, crack, or suffer other damage when load

tested to 40,000 ft-lbs. and shall not deflect vertically downward more than ¼ inch at the point of load application when loaded to 24,000 lbs.

2. **Stiffness**: The manhole cylinder shall have a minimum pipe stiffness value as shown below when tested in accordance with A.S.T.M. 3753 8.5 (note 1)

Depth Ft.	F/dy.psi
3 – 6.5	0.75
7 – 12.5	1.26
13 – 20.5	2.01
21 – 25.5	3.02
26 – 35	5.24

3. **Soundness:** In order to determine soundness, apply an air or water pressure test to the manhole test sample. Test pressure shall not be less than 3 psig or greater than 5 psig. While holding at the established pressure, inspect the entire manhole for leaks. Any leakage through the laminate is cause for failure of the test. Refer to A.S.T.M. 3753 8.6.

4. **Chemical Resistance**: The fiberglass manhole and all related components shall be fabricated from corrosion proof material suitable for atmospheres containing hydrogen sulfide and dilute sulfuric acid as well as other gases associated with the wastewater collection.

5. **Physical Properties**:

	Hoop Direction	Axial Direction
a. Tensile Strength (pi)	18,000	5,000
b. Tensile Modulus (pi)	0.6×10^6	0.7×10^6
c. Flexural Strength (psi)	26,000	4,500
d. Flexural Modulus (psi)	1.4×10^6	0.7×10^6
e. Compressive (psi)	18,000	10,000

6. **Minimum Wall Thickness**: Shall be 0.48” nominal at all depths of the manholes.

E. TEST METHODS: All tests shall be performed as specified in A.S.T.M 3753 latest edition, section 8. Test method D-790 (see note 5) and test method D-695.

F. QUALITY CONTROL: Each completed manhole shall be examined for dimensional requirements, hardness, and workmanship. All required A.S.T.M 3753 testing shall be completed and records of all testing shall be kept and copies of test records shall be presented to customer upon formal written request within a reasonable time period.

G. CERTIFICATIONS: As a basis of acceptance the manufacturer shall provide a independent certification which consist of a copy of the manufacturer’s test report and accompanied by a copy of the test results that the manhole has been sampled, tested,

and inspected in accordance with the provisions of this specification and meets all requirements.

H. SHIPPING AND HANDLING: Do not drop or impact the fiberglass manhole. Fiberglass manhole may be lifted by inserting a 4" x 4" x 30" timber into the top of manhole with cable attached or by a sling or "choker" connection around center of manhole, lift as required. Use of chains or cables in contact with the manhole surface is prohibited.

I. CONCRETE:

1. **Fiberglass Bottom**: Manholes may have fiberglass bottoms that are a minimum of 6" below the OD of the pipe invert when concrete is used to form the invert. Manufactured fiberglass inverts and bench areas are allowed, or concrete may be used to form bench area and invert. Concrete is to be used on top of anti-flotation ring and around the reducer section as required for buoyancy.

2. **Concrete Bottom**: Lower manhole into wet concrete until it rests at the proper elevation, with a minimum of 4 inches of fiberglass manhole inserted into the wet concrete below flow line, then move manhole to plumb. The concrete shall extend a minimum of one foot from the outside wall of the manhole and a minimum of 6 inches above incoming lines. On the inside concrete shall form the bench and invert area and rise a minimum of 4 inches above incoming lines. If required by Engineer concrete may be used around reducer section for buoyancy control.

BACKFILL:

1. **Backfill Material**: Unless shown otherwise on drawings and approved by the Engineer, sand, crushed stone, or crushed gravel shall be used for backfill around the manhole for a minimum distance of one foot from the outside surface and extending from the bottom of the excavation to the top of the reducer section. Suitable material chosen from the excavation may be used for the remainder of the backfill. The material chosen shall be free of large lumps or clods, which will not readily break down under compaction. This material will be subject to approval by Engineer.

2. **Backfill Procedure**: Backfill shall be placed in layers of not more than 12 loose measure inches and mechanically tamped to 95% Modified Proctor Density, unless otherwise approved by Engineer. Backfill shall be placed in such a manner as to prevent any wedging action against the fiberglass manhole structure.

K. MARKING and IDENTIFICATION: Each manhole shall be marked on the inside and outside with the following information:

Manufacturer's name or trademark
Manufacturer's factory location
Manufacturer's serial number
Total length

4. MANHOLE RINGS AND COVERS

A. Manhole rings and covers furnished for this project shall be pattern No. 300-24 as produced by Western Iron Works, Inc., 21 E. 6th St., San Angelo, Texas 76903-5493 or Bass and Hays Foundry, Inc., 238 South Bagdad Rd., Grand Prairie, Texas 75050, or approved equal.

B. WATER TIGHT MANHOLE COVERS

(1) Water tight manhole rings and covers furnished for this project shall be number R-1755-C as manufactured by Neenah Foundry Company, P.O. Box 729, Neenah, Wisconsin 54957, or approved equal.

(2) When watertight replacement sanitary sewer manhole rings and covers are called for on the plans and in the bid proposal they shall be Neenah Foundry Co. No. R-1755-C or approved equal.

No separate payment will be made for adjusting to grade of the replacement watertight manhole rings and covers. The contractor shall schedule this work to coincide with other manhole and water valve adjustments and any costs that might be involved shall be included in the price bid for replacement water tight manhole rings and covers.

(3) Manhole vents shall be used in conjunction with watertight rings and covers spaced every third manhole or as indicated on the plans. Vents shall be constructed as indicated on City design and construction standards.

C. Pressure type manhole rings and covers may be required for certain storm sewer applications. When pressure type manhole rings and covers are called for on the plans and/or bid schedule they shall be Western Iron Works Pattern #380-24P or approved equal. The manhole cover shall be sealed with an “O” ring gasket in a ring groove and shall be secured to the ring by six (6) five-eighths inch (5/8”) stainless steel bolts. The ring shall have six (6) one and one quarter inch (1-1/4”) bolt holes in the flanges for securing the ring to the concrete slab top on the manhole.

D. All manhole covers except grate type shall have two blind pick holes or pick bar cast into them. The blind pick holes or pick bars shall be placed on opposite sides of the cover.

E. All manhole covers except grate type shall have cast into their tops in letters 2 inches high minimum one of the following:

CITY OF MIDLAND
SANITARY SEWER
OR
CITY OF MIDLAND
STORM DRAIN

which ever is applicable.

2.08 GRANULAR MATERIALS

A. GRANULAR MATERIAL GRADATION CLASSIFICATIONS:

Granular materials furnished for foundation, bedding, encasement, backfill, or other purposes as may be specified, shall consist of any natural or synthetic mineral aggregate such as sharp grained sand, crushed gravel, crushed rock, crushed stone, or slag, and shall conform to the following specifications and/or gradation.

Note all materials used for these purposes shall be crushed and shall have at least two broken faces. Pea gravel will NOT be allowed.

	Foundation	Bedding	Encasement	Backfill
ASTM C33 Grade #57	x			
ASTM C33 Grade #67	x			
ASTM C33 Grade #8		x	x	
THD 1982 Item 302 Type D Grade 4		x	x	
THD 1982 Item 302 Type D Grade 5			x	
Crusher fines**			*x	x

*100 percent of crusher fines that are to be used within 12 inches of the top of pipe must pass the ¾" sieve.

** Approximate Gradation for Crusher Fines.

Sieve Size	% Passing
2 inch	100
# 4	35 - 100
# 10	20 - 100
# 40	5 - 35
#200	4 - 10

Crushed stone material proposed as an alternate for use on this project and not meeting the above specifications must be approved in writing at least 48 hours prior to the time scheduled for opening bids.

B. GRANULAR MATERIAL USE DESIGNATIONS:

Granular materials provided for Foundation, Bedding, Encasement, or Backfill use as required by the contract, either as part of the pipe item work unit or as a separate contract item, shall be classified as to use in accordance with the following:

MATERIAL USE DESIGNATION	ZONE DESIGNATION
Granular Foundation	Placed below the bottom of pipe grade as replacement for unsuitable or unstable soils, to achieve better foundation support.
Granular Bedding	Placed below the midpoint of the pipe prior to pipe installation, to facilitate proper shaping and achieve uniform pipe support. Also for Class B bedding where specified.
Granular Encasement	Placed below an elevation one half foot (6") above the top of pipe, after pipe installation, for protection of the pipe and to assure proper filling of voids and thorough consolidation of backfill.

In each case above, unless otherwise indicated, the lower limits of any particular zone shall be the top surface of the next lower course as constructed. The upper limits of each zone are established to define variable needs for material gradation and compaction or void content, taking into consideration the sequence of construction and other conditions. The material use and zone designations described above shall only serve to fulfill the objectives and shall not be construed to restrict the use of any particular material in other zones where the gradation requirements are met.

PART 3 – EXECUTION

3.01 LOCATION OF WORK

A. The work will be located as shown on the plans.

B. It may be necessary for the Engineer to shift lines as reasonable amount to avoid an obstruction to the construction or to reduce right of way difficulties. The Contractor will not be allowed any additional compensation due to shift of lines. Additional compensation will be allowed only for lengthening of lines.

3.02 PROTECTION OF SURFACE STRUCTURES

A. All surface structures and features located outside the permissible excavation limits for underground installations, together with those within the construction areas which are indicated in the Plans as being saved, shall be properly protected against damage and shall not be disturbed or removed without approval by the Engineer.

B. Obstructions such as street signs, guard posts, mail boxes and other items of prefabricated construction may be temporarily removed during construction provided that essential service is maintained in a relocated setting as

approved by the Engineer and that non-essential items are properly stored for the duration of construction. Upon completion of the underground work, all such items shall be replaced in their proper setting. This removal, relocation and replacement shall be at the sole expense of the Contractor.

In the event of damage to any surface structures or improvements, either privately or publicly owned, in the absence of construction necessity, the Contractor will be required to replace or repair the damaged property to the satisfaction of the Engineer and without cost to the Owner.

3.03 INTERFERENCE OF UNDERGROUND STRUCTURES

A. When any underground structure interferes with the planned placement of the pipeline or appurtenances to such an extent that alterations in the work are necessary to eliminate the conflict or avoid endangering effects on either the existing or proposed facilities, the Contractor shall immediately notify the Engineer and the Owner of the affected structure. When any existing facilities are endangered by the Contractor's operations, he shall cease his operations at the site and take such precautions as may be necessary to protect the in place structures until a decision is made as to how the conflict will be resolved.

B. Without specific authorization from the Engineer, no essential utility service shall be disrupted, nor shall any change be made in either the existing structures or the planned installations to overcome the interference. Alterations in existing facilities will be allowed only to the extent that service will not be curtailed unavoidably and then only when the encroachment or relocation will satisfy all applicable regulations and conditions.

C. Wherever alterations are required as a result of unforeseen underground interference not due to any fault or negligence of the Contractor, the Engineer will issue a written order covering any additional or extra work involved and specifying the revised basis of payment, if any. Any alterations made strictly for the convenience of the Contractor shall be subject to prior approval and shall be at the Contractor's expense.

D. No extra compensation will be allowed for delays caused by the interference of underground structures.

3.04 SEPARATION BETWEEN SANITARY SEWERS AND WATER MAINS

A. Sanitary sewers and service lines shall be installed so that the separation between the sewer and water mains is not less than 9 feet in all directions. The 9 feet shall be measured between the nearest outside edges of the pipe.

B. When the required 9 foot minimum separation cannot be maintained and a sanitary sewer must be constructed parallel to a water main, the sanitary sewer shall be constructed of ductile iron or PVC pipe meeting AWWA specification or having NSF approval for potable water pipe, with a pressure rating of 100 psi for both the pipe and the joint. The sanitary sewer line shall

be installed in a separate trench and may be placed no closer than 2 feet vertically and 4 feet horizontally from the water main, with the separation being measured from the nearest outside walls of the pipes. The sanitary sewer shall be constructed lower than the water main.

C. When a sanitary sewer must cross a water main and the 9 feet required separation cannot be maintained, the sanitary sewer may be constructed with a minimum clear separation between the outside diameters of the two pipes of 6 inches if that part of the sanitary sewer within 9 feet of the water main is constructed of ductile iron pipe or PVC pipe meeting AWWA specifications, having a 150 psi pressure rating and equipped with pressure type joints. One length of the sewer pipe must be centered on the water main and where possible, the sanitary sewer should pass under the water line.

D. When the 9 foot required separation cannot be maintained and a sanitary sewer force main must be constructed parallel to a water main, the sanitary sewer force main shall be constructed of ductile iron or PVC pipe meeting AWWA specifications and having a pressure rating of 150 psi and equipped with pressure type joints. The force main must be constructed with a minimum vertical separation of 2 feet and a minimum horizontal separation of 4 feet measured between the outside diameters of the pipes. The force main must be constructed lower than water main.

Table I showing separation of water and sewer lines and construction materials allowed:

TABLE 1
SEPARATION OF WATER AND SEWER LINES

Condition	Location	Material		Separation (Min.)		Comments
		Water	Sewer	Vert.	Horiz.	
NEW WATER AND NEW SEWER SYSTEM						
New Water & New Sewer Gravity Sanitary Sewer Parallel to Water Main	Water above Sewer	Std.	CI DI PVC 150 PSI	2’	4’	Separate Trenches
Gravity Sanitary Sewer Crossing Water Main	Water above Sewer or Sewer above Water	Std	CI DI PVC. 150 PSI	6”	NA	Center one joint of sewer pipe on water main
Gravity Sewer Crossing Water Main	Water above Sewer	Std	ABS, Clay Conc. composite	2’	NA	Cement stabilize sand initial backfill zone each side of crossing. Center of sewer for 9 ft one joint of sewer pipe on water Main
NEW WATER AND EXISTING SANITARY SEWER						
New Water Parallel Existing Sewer	Water above Sewer	Std.	Clay, Conc. ABS CI DI PVC	2’	4’	If sewer shows no sign of leakage, then leave sewer alone. If Sewer shows signs of leakage, then repair or replace.
New Water Crossing Existing Sewer	Water above Sewer	Std	Clay, ABS Conc. composite	2”	NA	If sewer shows no sign of leakage, then leave sewer alone if sewer shows signs of leakage then repair or replace.
New Water Crossing Existing Sewer	Sewer above Water	Std	Clay, ABS Conc. composite	2’	NA	Replace existing sewer with one joint CI,DI,PVC-150 Centering over waterline
New Water Parallel to Existing Sewer	Sewer above Water	Std	Clay, ABS Conc. composite	2’	4’	Replace existing sewer with CI, DI, PVC – 150 PSI or Cement Stabilized sand back- fill initial Backfill none of sewer where parallel closer than 9 ft., or Encase the water in 150 PSI Pipe two nominal sizes larger.

EXISTING WATER AND NEW SANITARY SEWER						
New Sewer parallel Existing Water	Water above Sewer Or Sewer above Water	Std	CI DI PVC 150 PSI	2'	4'	Separate trenches
New Sewer crossing Existing Water	Water above Sewer or Sewer above water	Std	CI DI PVC 150 PSI	6"	NA	Center one joint of sewer pipe on water main.
New Sewer crossing Existing Water	Water Above Sewer	Std	Clay, ABS Conc. composite	2'	NA	Cement Stabilize sand initial backfill zone of sewer for 9 ft each side of crossing. Center one joint of sewer pipe on water main.

3.05 EXCAVATION

A. Excavation of every description and of whatever materials encountered shall be made to the alignment and depth shown on the plans or as directed by the Engineer. Excavation shall be made by open cut. Sides of trenches shall be kept as nearly vertical as possible and the trench shall be so braced, sheeted and drained that workmen may work safely and efficiently therein. The trenches shall be sufficiently straight between designated angle points to permit the pipe to be laid true to line in the approximate center of the trench.

B. The trench width may vary with and depend upon the depth of trench, the diameter of pipe to be laid and the nature of the material to be excavated; but in any case shall be of ample width to permit the pipe to be laid and jointed properly and the backfill to be placed and compacted properly. The minimum width of unsheeted trench shall be 18 inches. The maximum clear width of trench at the top of the pipe shall be not more than two (2) feet greater than the outside diameter of the pipe for pipes up to 33" diameter except by consent of the Engineer. Whenever, for any reason, the maximum trench width is exceeded, the Contractor shall provide, at his own expense, pipe of higher class and/or bedding adequate to sustain the increased soil load as calculated by the Engineer.

C. Trenches shall be undercut to provide for the class bedding specified and/or shown on the plans. Bell holes shall be excavated to insure the pipe resting for its entire length upon the bedding material. Where trenches are under-cut beyond the depth required for bedding the trench shall be brought to grade by using crushed aggregate as specified for foundation herein. The use of loose native soil will NOT be permitted for this purpose.

D. No pipe shall be laid in water. Where the ground water table is at or above trench bottom, the Contractor shall de-water the trench to permit the pipe to be laid on a solid foundation.

   Costs for de-watering by whatever method selected shall be considered incidental to the price bid per foot of pipe.

   The Contractor shall discharge pumps to the natural drainage channels, or if permitted, to other sewer or drains.

Where sewer pipelines are located in or across streambeds or drainage ditches, the Contractor shall divert the stream flow and de-water each section as the work progresses.

E. Temporary support, adequate protection and maintenance of all underground and surface utility structures, drains, sewers, and other obstructions encountered in the progress of the work shall be furnished by the Contractor at his own expense under the direction of the Engineer.

F. Whenever wet, soft or unstable soil, incapable of properly supporting the pipe, manholes or other structure is encountered in the trench, a further depth and/or width shall be excavated and refilled to trench bottom grade with gravel or other approved suitable material thoroughly compacted to assure a firm foundation for the pipe.

G. Rock, boulders and large stones shall be removed to provide a clearance of at least six (6) inches below the outside barrel of the pipes, valves, or fittings and to a clear width of six (6) inches on each side of all pipe and appurtenances for pipe 15 inches in diameter or less, and a clear width of nine (9) inches on each side of all pipe and appurtenances for pipe larger than 15 inches in diameter. Adequate clearance for properly joining pipe laid in rock trenches shall be provided at bell holes. The space between the rock at the bottom of the trench and the bottom of the pipe barrel shall be filled with compacted bedding material.

H. The Engineer shall be notified of any need for blasting to remove materials which cannot be broken up mechanically, and there shall be no blasting operations conducted until the Engineer's approval has been secured. Blasting operations will be allowed only when proper precautions are taken to protect life and property, and then shall be restricted as the Engineer directs. The Contractor shall assume full responsibility for any damage caused by blasting, regardless of the requirements for notification and approval. The Contractor shall secure any required permits for blasting and shall conduct blasting operations in conformance with all applicable State and local laws, regulations and ordinances.

I. In the event the Contractor desires to employ tunneling in locations other than as shown on the Plans in order to avoid replacement of sidewalks, etc., he shall do so only upon receipt of specific permission from the Engineer. Tunneling of this nature shall be considered incidental.

J. Excavated materials will be classified for reuse as being either suitable or unsuitable for backfill or other specified use.

3.06 SPECIAL SAFETY PROVISIONS

1. TRENCH SAFETY SYSTEMS

A. DESCRIPTION

This item shall govern for the Trench Safety Systems required for the construction of all trench excavation to be utilized in the project and including all additional excavation and backfill necessitated by the safety system. A trench shall be defined as a narrow excavation (in relation to its length) made below the surface of the ground. In general, the depth is greater than the width, but the width of a trench (measured at the bottom) is not greater than 15 feet. The depth is five feet or more. Trench Safety Systems include but are not limited to sloping, sheeting, trench boxes or trench shields, sheet piling, cribbing, bracing, shoring, de-watering or diversion of water to provide adequate drainage.

B. CONSTRUCTION METHODS

Trench safety systems shall be accomplished in accordance with the detailed specifications set out in the provisions of Excavation, Trench, and Shoring, Federal Occupational Safety and Health Administration (OSHA) Standards, 29CFR, Part 1926, Subpart P, as amended, including Proposed Rules published in the Federal Register (Vol. 52, No. 72) on Tuesday, October 31, 1989. The sections that are incorporated into these specifications by reference include Sections 1926-650 through 1926-652. Legislation that has been enacted by the Texas Legislature, being Tex. Rev. Civ. Stat. Ann. Arts. 1015q, 2368a.6 (Vernon Supp. 1988) with regard to Trench Safety Systems, is hereby incorporated, by reference into these specifications.

A reproduction of the OSHA Publication 2226 is attached for the convenience of the Contractor. The City assumes no responsibility for the accuracy of the reproduction or that it reflects current law. The Contractor is responsible for obtaining a copy of this section of the Federal Register for his use.

If the contractor elects to use a trench protective system that, in the Proposed Rules, requires “Design by a qualified person or a qualified engineer,” [For example see 1926.652 (b) (3) and 1926.652 (c) (4)], a “qualified person or qualified engineer” shall be a Professional Engineer registered in the State of Texas. The Contractor is responsible for obtaining boring and soil analysis as required for the planned design. The trench excavation is to be designed in conformance with OSHA standards and regulations.

C. TRENCH SAFETY PROGRAM

The Contractor shall submit a safety program specifically for the construction of trench excavation. The trench safety program shall be in accordance with OSHA standards governing the presence and activities of individuals working in and around trench excavation.

D. INSPECTION

The Contractor shall make daily inspections of the Trench Safety Systems to ensure that the systems meet OSHA requirements. Daily inspection is to be made by a "competent person" provided by the Contractor. If evidence of possible cave-ins, or slides, is apparent, all work in the trench shall cease until the necessary precautions have been taken by the Contractor to safeguard personnel entering the trench. It is the sole duty, responsibility and prerogative of the Contractor, not the owner or the Engineer, to determine the specific applicability of the designed trench safety systems to each field condition encountered on the project. The Contractor shall maintain a permanent record of daily inspections.

2. SAFETY RESTRICTIONS - work near high voltage lines

The following procedures will be followed regarding the subject item on this contract:

A. Warning signs painted yellow with black letters that are legible at twelve feet shall be placed inside and outside vehicles such as cranes, derricks, power shovels, drilling rigs, pile drivers, hoisting equipment or similar apparatus. The warning sign shall read as follows:

"WARNING - UNLAWFUL TO OPERATE THIS EQUIPMENT WITHIN SIX FEET OF HIGH VOLTAGE LINES."

B. All equipment except back hoes or dippers that may be operated within ten feet of high voltage lines shall have an insulating cage-type of guard about the boom or arm and insulator links on the lift hook connections.

C. When necessary to work within six feet of high voltage electric lines, notification shall be given the power company who will erect temporary mechanical barriers, de-energize the line, or raise or lower the line. The notifying department shall maintain an accurate log of all such calls to the Power Company, and shall record action taken in each case.

D. The Contractor is required to make arrangements with the Power Company for the temporary relocation or raising of high voltage lines at the Contractor's sole cost and expense.

3.07 PIPE LAYING

A. All gravity pipe shall be laid using approved grade boards, furnished and set by the Contractor at no additional cost to the Owner, according to the grade stakes established by the Engineer. The maximum spacing of grade boards shall be fifty (50) feet. No sewer shall be laid unless there is a minimum of three grade boards set to check the proper grade and alignment ahead. The Contractor shall provide and use a suitable grade rod to insure the proper grade of the pipe.

B. The Contractor may use the laser beam method of setting a line and grade for the sewer by using the laser beam coaxially through the center of the sewer being laid. The laser beam projector is to be rigidly mounted to its support platforms, with a two-point suspension, or equivalent, assuring that all ground and equipment vibrations are kept to an absolute minimum. The Contractor shall furnish all equipment including equipment necessary to control atmospheric conditions in the pipe to keep line and grade to acceptable standards of accuracy. Competent experienced people who have been properly trained to operate the equipment used must operate the laser beam system.

C. The Contractor shall stake check pegs at all manholes throughout the job. Check pegs midway between manholes and any other checkpoints deemed necessary to assure accuracy of the equipment shall be provided by the contractor.

D. Each piece of pipe and special fitting shall be carefully inspected before it is placed and no defective pipe shall be laid in the trench. Pipe laying shall proceed upgrade, starting at the lower end of the grade and with the bells uphill. No pipe shall be laid except in the presence of an inspector representing the Engineer. Any pipe laid except in the presence of an inspector representing the Engineer shall be subject, at the contractor's expense, to a television camera inspection and survey by the city. Trench bottoms found to be unsuitable for foundations after pipe laying operations have started shall be corrected and brought to exact line and grade with approved compacted granular material as specified for foundation in Item 2.07 A. of these specifications.

E. Pipe laying shall proceed up-grade with spigot or tongue ends pointing in the direction of flow. The spigot shall be centered in the bell, and pipe shoved into position, and brought into true alignment. It shall be secured there with bedding material carefully tamped under and on each side of it, excepting at bell holes. Care shall be taken to prevent dirt from entering the joint space.

F. Any defective or damaged pipe discovered after the line is laid or any gravity pipe, which has had its grade or joint, disturbed after laying shall be removed and replaced or relayed. The section of line in which such damaged or displaced section is discovered shall be retested after corrections are made.

G. Where excavation for buildings or other portions of the work have been carried below the line and grades of the pipe, thorough tamping of approved crushed stone backfill and the use of adequate bracing and blocking under the pipe will be required to insure against settling and shearing of the pipe. In areas where noted on plans, Portland cement stabilized material or concrete shall be used for backfill to provide adequate bracing for pipe and protection of structures.

H. All manhole connections for PVC or other Polymer based pipe shall be made using "A Lok Gaskets" or "Kor-N-Seal" boots or other approved water stop devices. Only Portland cement grout that expands upon curing or approved non-shrink grout will be incorporated into any manhole connection.

I. Connections to manholes for other types of pipe shall be in accord with the pipe manufacturers specifications and other applicable requirements of these specifications. The resulting joint shall meet the leakage test requirements of these specifications.

J. The exposed end of all pipes shall be fully protected with a stopper or bulkhead at the end of each day's work to prevent earth, debris, small animals, or other substances from entering the pipe. The interior of the sewer shall be carefully freed from all dirt, jointing compound, or superfluous material of every description as the work progresses.

3.08 CONNECTION AND ASSEMBLY OF JOINTS

1. JOINING PVC OR OTHER POLYMER BASED PIPE

A. The type of joint and the material to be used shall be as shown on the plans or specified herein. Factory cast compression joints shall be free of dirt and lubricated before inserting the barrel into the bell. After the spigot is centered in the bell, the pipe shall be shoved home solidly by using a wood block and bar. The Contractor shall keep the ends of the pipe closed to prevent dirt and other material from entering the pipe during placement. All joints must be water tight, and any leaks or defects discovered must be repaired immediately. Any pipe, which has been disturbed after being laid, must be taken up, the joint cleaned and properly relayed as directed by the Engineer.

Lubricant used shall be as recommended by the pipe manufacturer.

B. Field-cut pipe must be beveled for insertion into the gasketed bell or coupling. Bevels can be made with a hand or power tool. Bevels shall be made to pipe manufacturer's specifications. If pipe manufacturers specifications are not available the bevel may be made at 15 degrees to the longitudinal axis of the pipe through one half (l/2) the wall thickness.

C. After pipe has been cut and beveled, a new full insertion mark located as recommended by the pipe manufacture shall be made using a felt tip pen. The contractor may determine the location of the insertion mark by measuring the mark location on a factory marked joint of pipe if manufacturer's specifications are not available.

2. JOINTING CORRUGATED STEEL PIPE

A. Gaskets for corrugated steel pipe shall be "O" Ring or sleeve types. Sleeve gasket shall be carefully placed on one joint of pipe. When the pipe is aligned and brought end to end the gasket shall be carefully centered over the joint between the ends of the pipe. "O" ring gasket shall be installed in accordance with the manufacturer's recommendation.

B. When "O" ring gaskets are furnished a flat gasket shall be furnished and placed between the overlapping portions of the band. The gasket shall extend the full width of the band and shall be of sufficient depth to assure a watertight joint.

C. The coupling band shall be carefully centered over the joints and tightened to the pipe manufacturer specifications. Care shall be taken during the tightening process to assure a snug uniform fit for the entire circumference of the pipe.

3. PROTECTING AND COVERING JOINTS

A. The contractor shall keep the ends of the pipe closed during the time of construction to prevent the entry of dirt, debris, small animals and other foreign objects.

B. Joints shall not be covered until approved by Engineer or his representative. Connections, which are for future use, shall be properly capped.

3.09 CONNECTIONS TO EXISTING STRUCTURES

A. Where shown on the plans, the contractor shall connect the new sewer to existing manholes. If no stub out is present in the existing manhole for such connection, the contractor shall construct such connection by making a hole in the side of the existing manhole using a coring machine or other approved method and installing a “KOR N Seal” boot as manufactured by N.P.C. Systems, Inc. or other approved water tight manhole connector.

The contractor shall use caution in constructing the connection to the existing manhole. Damage to the manhole that, in the opinion of the Engineer, would impair the use and/or function of the manhole shall be just cause to require the contractor to reconstruct the manhole at contractor’s expense. Such damage shall include but not be limited to cracking of the manhole riser section, spalling around the connection significantly reducing manhole wall thickness or excessive oversize in the opening for the new connection requiring any filler other than the manhole connector and/or non-shrink grout specified.

The contractor shall make such changes in the invert of the manhole as may be necessary to provide a smooth flow of the water through the manhole. Any connection to existing structures required in the Plans shall be accomplished by the Contractor and shall be incidental item with no direct compensation being made unless listed as a pay item in the bid proposal.

B. If the work consists of the construction of a sewer that is to replace an existing sewer, all of the existing service lines shall be kept in operation and connected to the new line.

C. Connections shall be made to all existing sewer lines in the vicinity of the work by removing a section of the sewer for the existing line and inserting in the space a tee branch of proper size, or by the construction of a manhole, regulator chamber of other structure as shown on the Drawings.

D. Connections to building services shall be made in a neat and workman like manner. Clean out plugs shall be installed wherever feasible, by making the connections with a standard wye or tee-wye. When clean out plugs are installed they should be located as near the right of way line as practical.

3.10 BACKFILL OPERATIONS

1. GENERAL

A. All pipeline excavations shall be backfilled in a manner that will restore pre-existing conditions as the minimum requirement and fulfill all supplementary requirements indicated in the Plans and Specifications. The backfilling operations shall be started as soon as conditions will permit on each section of pipeline, so as to provide continuity in subsequent operations and restore normal public service as soon as practicable on a section-by-section basis. All operations shall be pursued diligently, with proper and adequate equipment, to assure acceptable results.

B. For this specification backfill is defined as any material placed in the trench above the bedding zone other than the pipe or conduit and appurtenance.

For flexible pipe the backfill between the bedding material and the crown of the pipe shall be crushed stone suitable for encasement as specified in article 2.07 of the specifications. When Portland cement stabilized backfill is used above the pipe zone; the crushed stone encasement shall extend to 1' above the crown of the pipe.

C. Depositing of the backfill shall be done so the shock of falling material will not injure the structure. Grading over and around all parts of the work shall be done as directed by the Engineer.

D. Whenever soil types which are determined by the Inspector to be undesirable for backfill are excavated from the trench, such material shall be hauled away and deposited at locations shown on the plans or as directed by the Engineer at no additional compensation.

E. Backfill materials placed in the pipe zone shall be carefully placed in relatively uniform depth layers spread over the full width and length of the trench section in a manner and/or sequence that will provide simultaneous support on both sides of the pipeline. Each layer shall be compacted effectively, by approved mechanical of hand methods, until there is no further visual evidence of increased consolidation. Above the pipe zone the backfill material shall be placed uniformly across and along the trench in depth suitable for the compaction method used and compacted to a minimum of the density specified for the material used and the trench location. Compaction of the in place layer shall be completed acceptably before placing material for a succeeding layer thereon.

The manner of placement, layer thickness, compaction equipment, and procedure effectiveness shall be subject to approval of the Engineer. Water jetting or flooding shall NOT be used to compact trench backfill.

F. Compaction of materials placed within the pipe bedding and encasement zones shall be accomplished with portable or hand equipment methods, so as to achieve thorough consolidation under and around the pipe and avoid damage to the pipe. Above the pipe zone, the use of heavy roller type compaction equipment shall be limited to safe pipe loading.

G. The maximum loose thickness of each backfill layer placed above the pipe zone shall be 12 inches, except that 16 inches will be permitted for Granular Materials placed above an elevation one foot above the top of pipe, and with the provision that, by authority of the Engineer and in consideration of the demonstrated capability of special type vibratory compactors, these maximums may be increased at his discretion. “Hydro tamps”, “vibra tamps” or other heavy compacting equipment shall not be used until the backfill has reached a depth of four (4) feet above the top of the pipe.

H. All surplus or waste materials remaining after completion of the backfilling operations shall be disposed of in an acceptable manner within 24 hours after completing the backfill work on each particular pipeline section. Disposal at any location within the project limits shall be as specified, or as approved by the Engineer; otherwise, disposal shall be accomplished outside the project limits at the Contractor’s discretion. The backfilling and surplus or waste disposal operations shall be a part of the work required under the pipeline installation items, not as work that may be delayed until final cleanup.

I. For the duration of the warranty period of the project, the Contractor shall assume full responsibility and expense for all backfill settlement and shall refill and restore the work as directed to maintain an acceptable surface condition. All additional materials required shall be furnished without additional cost to the Owner.

2. BACKFILL IN PUBLIC RIGHTS-OF-WAY AND OTHER AREAS WHERE SETTLEMENT IS CRITICAL

A. GENERAL REQUIREMENTS

(1). Backfill above the pipe zone in public rights-of-way and under paved parking lots, near structures or other utilities where settlement can cause damage shall be made using Portland cement stabilized backfill or crushed stone screenings (crusher fines).

The pipe zone is defined as that portion of the trench extending from the bottom of the trench to 12” above the crown of the pipe or conduit.

(2) Backfill around structures such as manholes, junction boxes, transformer boxes and valve boxes shall be made using Portland cement stabilized backfill material or crushed stone screening (crusher fines).

(3) The minimum depth of stabilized backfill or crusher fines shall be twelve (12”) inches.

When utilities are being constructed under existing paving, the stabilized backfill or crusher fines shall extend from top of the pipe zone to the top of the base course.
When utilities are being constructed under existing unpaved streets that are not scheduled for immediate pavement construction, the stabilized backfill or crusher fines shall extend from the top of the pipe zone to the existing roadway surface.

When utilities are being constructed in streets that are scheduled for immediate paving, the stabilized backfill or crusher fines shall extend from the top of the pipe zone to the bottom edge of the eight (8”) inches of subgrade, or, if the paving contractor has constructed a portion of the roadway prior to the construction of the utilities the backfill shall extend to the top of the course the contractor has finished, or the top of the base course, which ever is lower.

If the final course of asphaltic concrete has been placed, the street or alley surface shall not be cut for utility installation.

In streets where stabilized backfill is required only to the bottom of the subgrade course, the minimum depth of stabilized backfill may be reduced to six (6”) inches in which case the maximum depth of the “pipe zone” shall be limited to six (6”) inches above the top of the utility line or conduit.

B. BACKFILL MATERIALS

(1) Portland cement stabilized backfill shall consist of caliche base material, blow sand or native soil stabilized by the addition of Portland cement. Crushed stone or concrete aggregate shall NOT be used.

When Portland cement stabilized backfill is to be used, the contractor shall submit a mix design prepared by an approved commercial laboratory for approval before the trenching operation is begun. When native soil is to be used samples may be taken along the proposed route by boring or other approved means. Samples must be representative of the full trench depth.

The mix design shall be such that the minimum 7-day compressive strength is 150 psi when tested according to test method Tex 418-A.

The minimum cement content for Portland cement stabilized backfill shall be 1 sack per cubic yard.

Cement used in Portland cement stabilized backfill shall be Type I or Type II conforming to the requirements of ASTM Designation C150.

Caliche used for Portland cement stabilized backfill shall be crushed material conforming to Texas State Department of Highways and Transportation 1982 Standard Specifications for Construction of Highways, Streets and Bridges Item 248 Type F, Grade 2.

Blow sand used for Portland cement stabilized backfill shall be clean, free from organic matter, clay lumps, rock and other deleterious matter.

Native soil used for Portland cement stabilized backfill shall be clean, free of clods and organic matter, and free of rock in excess of 2”.

(2) Crushed stone screening (crusher fines) used for back fill shall be sharp grained particles of crushed stone conforming to the requirements of Article 2.07 of these specifications.

(3) Trencher excavated rock material shall be screened so that the largest diameter material is less than 2". The screened rock material used for backfill shall have sufficient moisture added so that the backfill will bind with the fines. The rock material backfill shall be tamped or compacted in two (2) foot lifts. A sheeps foot roller shall not be used unless there is two (2) feet or more compacted backfill above the pipe bedding.

C. BACKFILL CONSTRUCTION

(1) Portland cement stabilized caliche backfill or Portland cement stabilized native soil backfill may be constructed using either the "dry" method or the "wet" method.

(a) The dry method of stabilized backfill construction consists of dry mixing of the cement and caliche or soil to produce a homogenous mixture then adding and mixing sufficient water for proper compaction and hydration of the cement. The water content of the mixture will be approximately one to two percent above the optimum moisture for soil compaction. The mixing may be accomplished by using batch mixers or on the job site by "blade mixing" or other suitable method to produce the desired backfill material. The mixed material shall be placed in lifts of up to a maximum of 12 inches and compacted to ninety-five (95%) modified proctor densities by use of suitable compacting equipment.

(b) In the "wet" method of cement stabilized backfill construction, the materials shall be mixed in an approved concrete batching plant or mixer to the consistency of concrete and placed as concrete would be placed. The slump of the backfill material shall be such that all voids will be filled, approximately four (4") to six (6") inches. The backfill shall be consolidated by rodding or by the use of mechanical vibrators.

Portland cement stabilized blow sand backfill shall be mixed and placed by the "wet" method as described above.

Crushed stone screening (crusher fines) shall be wetted uniformly throughout with sufficient moisture to assure proper compaction before being placed in the trench. The moistened crushed stone screening (crusher fines) shall be placed in maximum lifts of twelve inches and consolidated using vibratory type compaction equipment except when it has been demonstrated that the compaction equipment employed will adequately compact deeper lifts in which case the maximum depth of a lift shall be limited by the capabilities of the equipment used.

Tests to determine the compacted density of the backfill shall be ordered by the Engineer if in his opinion the compaction is not adequate. Test showing a minimum compacted density of 90%-modified proctor will be deemed adequate.

3. BACKFILL OUTSIDE OF PUBLIC RIGHTS-OF-WAY WHERE SETTLEMENT IS NOT CRITICAL

A. In areas outside of public rights-of-way and in the absence of special work item requirements the backfilling shall be accomplished with the use of suitable materials selected from the excavated materials to the extent available and practical. Should the materials available from the trench section be unsuitable or insufficient, the required additional materials shall be furnished from outside sources at the Owners expense.

B. Suitable material shall be defined as a mineral soil reasonably free of foreign materials (rubbish, debris, etc.) frozen clumps, oversize stone, rock, concrete or bituminous chunks and other unsuitable materials, that may damage the pipe installation, prevent thorough compaction, or increase the risks of after settlement unnecessarily. Material selection shall be such as to make the best and fullest utilization of what is available, taking into consideration particular needs of different backfill zones. Material containing stone, rock, or chunks of any sort shall only be utilized where and to the extent there will be no detrimental effects.

C. The backfill material placed in this area shall be compacted by suitable means to a minimum density equal to the density of the undisturbed surrounding soil. City Engineer MUST approve water flooding as a means of compaction.

4. TRENCH BACKFILL BEHIND CURB AND GUTTER

A. When utilities are placed behind the curb in paved streets and other landscaped areas the backfill shall be the same as elsewhere in the right-of-way or other applicable location except that in grassed areas and in flower beds the top six (6”) inches of backfill shall be good quality top soil. When utilities are placed behind the curb in grassed or landscaped areas where no sidewalk is to be constructed and the edge of the trench is a minimum of 2 feet from the back of curb or where sidewalk is to be constructed and the minimum distance from both the back of curb and the edge of the sidewalk to the edge of the trench is 2 feet the contractor may elect to use suitable native soil for backfill. The native soil backfill shall be compacted to 95% modified proctor density to within 6” of the top of curb height. The top 6” of backfill shall be good topsoil and shall be compacted to the density of the adjacent soil.

B. Sidewalks shall be repaired by removing and replacing the complete section or sections that have been damaged. Strip patching through sidewalks will not be permitted.

The replacement sidewalk shall be of the same design and section as the walk removed and shall be of equal or better workmanship.

C. When utilities are placed in paved areas behind curbs the pavement shall be repaired as specified for street pavement.

D. Grassed areas and flowerbeds shall be restored as nearly as possible to the original condition. Care shall be taken to avoid damage to sprinkler systems.

Mail boxes and other appurtenance in the construction area. Any damage to said items shall be repaired immediately.

E. All repairs made behind the curb shall be to the satisfaction of the property owner responsible for their maintenance and/or to the satisfaction to the City Engineer.

3.11 INLET STRUCTURES AND LEADS AND CLEANOUTS FOR STORM SEWERS

A. Corrugated Galvanized Steel Slotted Drains for Nuisance water inlets only.

(1) Slotted drains shall be the sizes and lengths as shown on the plans and constructed at the locations as shown on the plans or at locations to be established on the job site.

(2) Slotted drains shall not be installed under asphalt pavement but shall have a section of concrete gutter constructed around it as shown on the detail drawings.

Slotted drains shall be protected from the entrance of debris, concrete or HMAC by closing the slot with one or two layers of heavy duct tape or similar material. In addition, the slot for slotted drain shall have a 2-½ inch or ¾ inch board attached to use as a guide for placing and edging the concrete.

Unless otherwise approved or directed by the Engineer the removal of tape and planking from the slotted drain should be accomplished as part of the final clean up.

B. Curb inlets, grate inlets and combination inlets

(1) General

Curb inlets, grate inlets and combination inlets may be pre-cast or cast-in-place at the contractor's option unless specifically shown otherwise on the plans and bid proposal.

(2) Pre-cast inlet boxes

(a) Construction and finish for pre-cast inlet boxes shall conform to details shown on the plans and all applicable requirements for pre-cast manholes.

(b) Tops for curb inlets and combination inlets may be cast in place or pre-cast. Extra care will be required in setting pre-cast tops to assure curb and gutter match.

(c) Pipe connections, bedding, setting and backfill for pre-cast inlets shall be in accord with the applicable requirements for pre-cast manholes article 3.12 of these specifications.

(3) Cast in place inlets

(a) Cast in place inlets shall be constructed of class "C" reinforced concrete as specified in item 1-B "Concrete for Structure" in these specifications.

(b) Forms for cast in place inlets shall be straight, clean and in good condition. Forms shall be properly cleaned and oiled before concrete is placed.

(c) Construction joints may be placed in cast in place inlets at locations shown on the plans. When construction joints are used, extra care will be required to assure that the joints are watertight.

(d) Cast in place inlets may be cast without outside forms if the soil conditions are such that true vertical walls can be cut and will stand during construction without sloughing or otherwise incorporation foreign materials into the concrete.

(e) When inlets are cast without outside forms, a plastic sheet lining may be required to prevent excessive loss of moisture from the concrete and/or to prevent incorporation of foreign material into the concrete.

A. Inlet Leads

(1) Inlet leads shall be constructed of corrugated steel pipe, PVC pipe or other material as called for on the plans and in the bid proposal.

(2) Construction of inlet leads shall be in accord with the applicable requirements for the type of pipe used.

(3) Junctions where two or more inlet leads are joined shall be made at clean outs or manholes.

B. Cleanouts

(1) Clean outs shall be constructed in accord with the plans and detail drawings.

(2) Construction and connections shall be in accord with the applicable specifications for construction of corrugated steel pipe manholes.

3.12 SANITARY SEWER SERVICES AND PLUGGED STUBS

A. Sanitary Sewer Services:

(1) On new sewer main construction all sewer laterals shall be constructed as part of the initial installation. Sewer wye fittings for sewer laterals in new construction shall be molded or fabricated with all gasketed connections. Four (4”) inch laterals shall be installed at all single-family residences and duplex. Laterals installed for apartment complexes, commercial and industrial areas shall be a minimum of six (6”) inches. Depth of laterals will be determined by depth of sewer main and applicable building codes. Laterals shall be installed using tee wyes or wyes and bends so that they will be at 90 degrees to the sewer main. Laterals shall extend to 3’ minimum beyond the property line of the served lot or tract. The contractor shall install sewer laterals according to the typical sewer lateral detail and the most current revisions of the Plumbing Code.

(2) Taps into existing lines shall use a gasketed fitting in conjunction with a full circle repair sleeve coupling, except that taps into existing ductile iron sewer may be made using the Genco Model DF sewer pipe saddle (The General Engineering Co., Frederic, MD Drawing No. R-3220-D dated 12/29/82) or approved equal.

(3) Cemented mitered connections without socket reinforcement shall not be permitted. The contractor will be permitted to use fittings, which are prefabricated, using pipe sections, molded saddles and PVC solvent cement, provided the solvent cement used in fabrication has cured for at least 24 hours prior to the installation. All solvent cement fittings shall e manufactured in the shop under controlled conditions.

(4) All caps and plugs shall be braced, staked, anchored, wired on or otherwise secured to the pipe to prevent leakage under maximum anticipated thrust from internal abnormal operating conditions or test pressures from water or air.

(5) It shall be the duty of the Contractor to keep a record of sewer service wye locations with respect to the nearest downstream manhole, but the Engineer will record ties on the end of all sewer services at the property line. When installing sewer services the Contractor shall, before backfilling, contact the Engineer or his representatives, and assist him in making ties to the end of the service in the open trench. At least two ties shall be made for each service, and if backfilling proceeds before such ties are made, the Contractor shall dig up the end of all such services, with no additional compensation, for the purpose of making ties. During backfilling the Contractor shall furnish and place a vertical steel post or 2 inch by 2 inch wooden stake set flush with finished ground surface, and extending down to the end of the sewer service, a nail shall be placed in the top of the stake to allow location of the service by metal finder.

(6) The main sewer service connection shall consist of installing an in-line wye section in the main sewer line at designated locations. Saddle wye installations will be permitted only when specifically called for. Orientation of service connection fittings shall be as shown in the standard drawings unless otherwise directed by the Engineer.

(7) Where the depth of cover over the main sewer invert is greater than 8 feet (or such other maximum as may be indicated), the service connection shall be extended outward then upward by use of bends to prevent excess loading on the sewer main in accordance with the details shown in the drawings.

(8) The Contractor shall provide the necessary wyes, tees and bends to bring the service to the proper place at the property line.

(9) Wherever service line connections to the main sewer are permitted or required to be made by the open cutout method in the absence of a built-in tee or wye fitting, the connection shall be made by using an approved type coring machine or by other approved methods producing a uniform, smooth circular cut-out as required for proper fit. The cutout discs shall be retrieved and shall not be allowed to remain within the main sewer pipe. The saddle tee shall be securely fastened to the main sewer pipe by means of epoxy resin or other approved adhesive. The entire connection fitting shall be encased in concrete to a minimum thickness of six inches and as may be shown in the standard drawings.

(10)Wherever service line connections to the main sewer are required to be made by means of built-in branch tee or wye fittings, the Contractor shall, in the absence of such fitting, remove a section of the main sewer pipe and replace it with the required branch tee wye or wye section connected by means of an approved sleeve coupling.

(11)Connections of service lines to the main sewer are required to be made by means of built-in branch tee or wye fittings, the Contractor shall, in the absence of such fitting, remove a section of the main sewer pipe and replace it with the required branch tee wye or wye section connected by means of an approved sleeve coupling.

(12)The end of all service connections shall be plugged with PVC plug and sealed with plastic joint material.

(13)Crushed stone bedding and backfill material, concrete encasement and protection, etc., for service line installation shall be the same as for the sewer lines.

(14)No service connections or laterals shall be covered until they have been inspected and located by the Engineer.

B. INSTALLATION OF PLUGGED STUBS ON SANITARY SEWERS

Plugged pipe stubs for future connections to manholes and sewerage structures shall be installed where shown on the Drawings or directed by the Engineer. The pipe stubs shall be installed in accordance with the specifications and details shown on the Drawings for connecting the type of pipe used to manholes.

3.13 MANHOLES

1. General

The manholes shall be constructed at the locations shown on the plans or as directed by the Engineer and in accordance with the details shown on the plans and as specified herein. After the excavation has been completed, the subgrade for the manhole base shall be graded and leveled. A crushed stone foundation having a minimum thickness of 6 inches shall then be placed on the subgrade. The crushed stone foundation shall be leveled and consolidated before the section of the manhole is placed. Pre-cast base sections shall sit in place level and plumb and to the lines and grade as shown on the plans. Cast in place bases shall be placed around the existing sewer line in accord with the plans and detail sheet. When pre-cast manhole bases are used, riser construction may proceed when the base is set on line and grade. When cast in place manhole bases are used, riser construction may proceed when the base has set sufficiently to support the weight of the riser.

Manholes shall be of the type and material shown on the plans and called for in the bid proposal and shall conform to these specifications.

All lift holes shall be filled with approved non shrink grout and bituminous material before final acceptance. Use of bituminous material or other flowable material alone to plug lift holes will not be permitted. Voids in the invert around the sewer pipe on the

inside wall of the manhole shall be grouted with cement rich grout, to conform to the rest of the wash, in accordance with the standard manhole details.

The backfill around the manhole shall be done in accordance with the details shown on the plans and trench backfill specifications.

The Contractor shall take whatever precautions necessary to protect the manholes that are under construction. At the end of the day or at such time as the Contractor deems necessary, all manholes not completed shall be covered, sealed, plugged, etc. to prevent the inflow of storm water or other objectionable material, and to prevent animals and humans from getting into the manhole.

2. PRE-CAST CONCRETE

A. Pre-cast tub bottom sections of manholes shall be set on a crushed stone foundation or bedding according to the details shown on the plans. Care shall be exercised to assure true alignment and grade for the pipe openings.

The invert of the manhole shall be constructed of cement rich grout and shall be formed to true lines; grades and curvature to assure smooth flow through the manhole. The invert shall have a steel trowel finish.

Joints for pre-cast concrete manhole riser sections shall be made Watertight by use of bitumastic or rubber sealers or “O” ring gaskets. Both sides of the tongue and groove joint shall be painted with a bitumastic primer before assembly.

The bitumastic or rubber sealer shall be clean and pliable and shall deform under the pressure of joint closure to assure a complete water tight seal. Care shall be exercised to assure proper alignment of the joint. The walls of the completed manhole shall be straight and vertical.

B. Pre-cast eccentric cone sections and precast slab manhole tops with eccentrically located manway shall be set with the manway adjacent to the up stream side of the manhole. The joints between the cone or slab top and the manhole riser shall be sealed in the same manner as the joints between the riser section. Care shall be taken in placing the cone and or slab tops to assure the manhole ring and cover can be set to match the finished paving.

C. Pre-cast grade rings will be used, when required, to bring the manhole ring and cover up to the finished grade. Grade rings may be set using cement rich grout or bitumastic seal and such as Ram-Nek or approved equal. When cement rich grout is used, care shall be taken that the space between the cone or slab top and the first grade ring and between the grade rings are completely filled without voids.

When bitumastic sealer is used the joints shall be constructed in the same manner as the joints between the riser sections.

When pre-cast manholes with PVC or other approved polymer lining are called for on the plans and bid proposal and are furnished under this contract they shall be constructed as other pre-cast concrete manholes.

In addition the joints in the lining shall be sealed by hot air welding, use of epoxy coating, or other approved means.

3. CAST IN PLACE MANHOLE BASES

A. Cast in place manhole bases shall be used only where shown on the plans or as directed by the Engineer and shall be constructed in accord with the details shown on the plans.

B. Special care shall be taken in casting the surfaces that will mate with the first risersection to assure a smooth even fit and a watertight joint.

C. The first riser section to be used with cast in place manhole bases shall be castwithout tongue or groove. The joint between the riser section and the cast in place base shall be sealed with a bitumastic or rubber sealant in the same manner as the joints in the pre-cast riser sections.

D. Care shall be taken in forming the invert of the manhole around existing sewers to assure adequate opening for the insertion of a “go – no go” mandrel or other testing equipment and cleaning tools.

4. MANHOLE RING AND COVER

A. The tops of the manhole frame and cover (ring) shall be built to the grade shown on the plans. The cast iron frame shall be firmly embedded in mortar.

B. When pressure type manhole rings and cover are specified on storm sewer manholes they shall be bolted to the concrete slab top using the “L” bolts cast into the slab for this purpose. The joint between the ring and the concrete slab top shall be made watertight using a bitumastic or rubber seal and conforming to the requirements of these specifications.

5. CORRUGATED STEEL MANHOLES

A. Corrugated steel manholes shall be constructed in accord with the details shown on the plans and in accord with the applicable requirements for the construction of corrugated steel pipe sewers.

B. Care shall be taken during the placing of backfill around corrugated steel pipe manholes to maintain the horizontal and vertical alignment of the manhole.

C. Since full contact of the flat top slab with the cement stabilized backfill is critical the backfill shall be finished smooth and to the proper grade. A thin layer of cement rich grout shall be placed on the cement stabilized backfill immediately prior to placing the concrete slab top. The grout shall be sufficient t fill all voids between the backfill and the slab and of a consistency to be forced into the voids under the weight of the slab.

3.14 TESTING GRAVITY SEWER MAINS AND MANHOLES

A. Upon completion of the sewer construction including all wyes and service laterals and before any house drains or services are connected, all sewers shall be cleaned and lamped. All runs of sewer between manholes shall be straight and true. Leakage tests shall be made to determine the amount of ground water infiltration into the sewers. Infiltration tests shall be made when groundwater level is 18 inches or more above the top of the outside of the pipe. Measurement will be taken by means of a weir placed in the lines. The maximum allowable rate of leakage shall be 25 gallons per inch diameter per mile of pipe per 24 hours, for any section of pipe with a maximum total leakage of 200 gallons per mile per 24 hours for sanitary sewers with the exception that the maximum leakage for storm drains shall be 200 gallons per inch of diameter per mile per 24 hours with a total maximum leakage of 6,000 gallons per mile per 24 hours.

When the groundwater is not at sufficient height for infiltration testing the Contractor shall use exfiltration to test the sewer lines.

B. In lieu of the infiltration or exfiltration tests the Contractor may perform air tests on the sewers.

C. If the infiltration, exfiltration, or air tests fail to meet requirements specified herein, the Engineer reserves the right to request television work to be done to locate leaks. The Contractor shall furnish all materials and equipment necessary to accomplish all infiltration, exfiltration, air or television testing.

The Contractor shall receive no additional compensation for this testing or inspection work or for repairs of corrective work required to be done to the sewers. The exfiltration tests shall be used in areas where no ground water is present.

D. Test Procedure Hydrostatic (Exfiltration)

(1) The test section shall be bulk headed and the pipe subject to a hydrostatic pressure produced by a head of water at a depth of three (3) feet above the invert of the sewer at the upper manhole under test. In areas where ground water exists, this head of water shall be three feet above the existing water table.

(2) This head of water shall be maintained for a period of one hour during which it is presumed that full absorption of the concrete manhole body has taken place and thereafter for a further period of one (1) hour for the actual test of leakage. Fiber glass manholes are exempt from the one hour absorption requirement. During this one (1) hour test period, the measured maximum allowable rate of exfiltration for any section of sewer shall be the same as allowed for the infiltration test.

E. TEST PROCEDURE AIR

(1) Where the Contractor elects to air test, he shall perform these tests with equipment similar to Air-Loc equipment manufactured by Cherne Industrial, Inc. Hopkins, Minnesota.

(2) The air test shall be made when the sewer is clean. The line shall be plugged at each manhole with pneumatic balls. Low pressure air shall be introduced into the plugged line until the internal air pressure reaches 4.0 psig greater than the average

back pressure of any ground water pressure that may submerge the pipe. At least two (2) minutes shall be allowed for the air temperature to stabilize before readings are taken and the timing started.

(3) When testing pipes 14 inches and less in diameter between consecutive manholes, the portion being tested shall pass if it does not lose air at a rate to cause the pressure to drop from 4.0 to 3.0 psig (greater than the average back pressure of any groundwater that may submerge the pipe) in less time than listed as calculated from Table 1.

When testing pipes greater than 15 inches in diameter between consecutive manholes the portion being tested shall pass if it does not lose air at a rate to cause the pressure to drop from 3.5 psig 3.0 psig (greater than the average back pressure of any groundwater that may submerge the pipe) in less time than that shown in or calculated from Table II.

TABLE I
Specification Time Required for a 1.0 PSIG Pressure Drop for Size and Length of Pipe indicated for Q = 0.0015

Specification Time for Length (L) Shown (min: sec)

1 Pipe Diameter (in.)
2 Minimum Time (min:sec)
3 Length for Minimum Time (ft.)
4 Time for Longer Length (sec)

NOTE: When using column 4 multiply the number in column 4 opposite the pipe diameter by the length of pipe of that diameter and sum the times for the various pipe size in the run being tested. Computations shall include lengths for service connection laterals. All service plugs shall be secured in place to prevent displacement during testing operation.

F: DEFLECTION TEST

Deflection tests shall be performed on all flexible pipe, the tests shall be conducted after the backfill has been in place at least 30 days. No pipe shall exceed a deflection of 5 percent. The deflection tests shall be run using a Go-No-Go mandrel having a diameter equal to 95 percent of the inside diameter of the pipe. The tests shall be performed without mechanical pulling device, any pipe not meeting the deflection test shall be excavated and re-bedded at no cost to the owner.

The Contractor at no additional cost to the owner shall furnish the Go-No-GO Mandrel.

Upon completion of all tests, the Contractor shall provide personnel to remove each manhole cover in the presence of the Engineer's representative for inspection and depth measurement.

G. TESTING SANITARY SEWER MANHOLES

All sanitary sewer manholes shall be tested for water tightness by one of the following methods.

Manholes, except those in streets scheduled for immediate paving, shall be complete, having all adjusting rings and cover rings in place and shall be backfilled prior to testing.

Manholes in streets scheduled for immediate paving shall be complete as described above except those acceptance tests shall be made at the top of the cone section.

(1.) Vacuum Test

a. General

This item will govern the testing of all sanitary sewer manholes. All connections to manholes including drop connections shall be in place before testing.

b. Equipment

Equipment for vacuum testing manholes shall be:
MANHOLE VACUUM TESTER as manufactured by:

P.A. Glazier, Inc.
P.O. Box 1002
Worcester, MA. 01613

Or

THE CHERNE AIR-LOC MANHOLE TESTER as manufactured by:

Cherne Industries, Inc.
5700 Lincoln Dr.
Minneapolis, MN 55436-1695

Or approved equal.

c. Preparation for Testing

All connections to the manhole; except plugged stubs for future line extensions, shall be plugged using suitable pneumatic plugs. Line plugs shall be placed at a point outside of the manhole wall (approximately 8" to 10" into the sewer pipe). Drop connections shall be plugged at a point up stream from the drop.
All plugs, pipe connections and plugged stub outs shall be adequately braced to prevent them being drawn into the manhole when vacuum is applied.

d. Testing

The contractor shall set the test equipment in place and operate it in accord with the manufacturer instructions. A copy of these instructions shall be kept on the job site and shall be available to the inspector when tests are performed. When equipment is properly set up a vacuum of 10" of mercury (Hg) shall be drawn and the vacuum line valve closed. After the vacuum pump is shut off the hose shall be disconnected before the test is started.

Note: Vacuum must be at 10" Hg when test is started. The contractor may wish to draw up to 10.5" Hg vacuum and then bleed back to 10" Hg before starting the test. The test shall pass when the minimum time for the vacuum to drop from 10" Hg to 9" Hg is greater than the time shown in the following table:

TABLE 1: Minimum test times for various manhole diameters.

	DIAMETER		
Depth Feet	48"	60"	72"
8'	0:20	0:26	0:33
10'	0:25	0:33	0:41
12'	0:30	0:39	0:49
14'	0:35	0:46	0:57
16'	0:40	0:52	1:05
18'	0:45	0:59	1:13
20'	0:50	1:05	1:21
* ADD	0:05	0:06.5	0:08

Any manhole that fails the test shall be repaired and retested until it passes the test.

e. Contractors Optional Test

The contractor, at his option may wish to test manholes before they are backfilled to assure himself that the manhole is sound.
Manholes that fail the test prior to being backfilled may be repaired under vacuum by coating the area of the leak with a liquid quick setting grout allowing the grout to be drawn into the opening until the leak is stopped.

Manholes will not be accepted on the bases of this test.

f. Fiberglass Manholes

Fiberglass manholes may be tested in the same manner as concrete manholes except that all repairs to the fiberglass body of the manhole shall be made using materials furnished by the manufacturer. Repairs shall be made in accord with the manufacturer instructions.

g. No separate payment will be made for vacuum testing of manholes, but the cost shall be considered incidental to furnishing and construction of manholes as bid in the bid proposal.

2. HYDROSTATIC TESTING

a. General

This item shall govern the hydrostatic testing of manholes and may be used as an alternative to vacuum testing by the contractor.

All connections to manholes including drop connections shall be in place prior to testing manholes.

b. Testing

All connections to the manhole, except plugged stubs installed for future line extensions, shall be plugged upstream from the drop.

Plugs in pipe connections must be placed outside the manhole wall (approximately 8” to 10” into the pipe).

The manhole shall then be filled to the top of the cast iron ring (or top of the cone section for manholes in streets scheduled for immediate paving) and allowed to stand for a minimum of one hour to allow for absorption by the components of the manhole. The inspector may extend the absorption period if it appears that the manhole has not reached a stable state.

The manhole shall then be refilled to the top of the ring (or cone) and allowed to stand for up to 24 hours.

The manhole shall be checked at the end of 4 hours and will be deemed to have passed if no perceptible loss has occurred – if loss has occurred the manhole will be checked after the 24 hour period and will be considered to have passed if loss does not exceed the following schedule

Depth Ft.	Loss Inches
0 - 10’	.2
10 – 20’	.4
20 - 30’	.6

c. No separate payment will be made for Hydrostatic Testing of manholes but the cost shall be considered as incidental to furnishing and constructing manholes as bid in the bid proposal.

H. TELEVISING NEW SEWER LINES

It is the city’s intention to televise all new sanitary sewer lines for record purposes.

Immediately after the contractor completes all testing of sanitary sewer lines and manholes he shall leave all manholes accessible for televising and make allowances for the city’s camera crews working on the project site.

The contractor at his own expense before final acceptance must correct any defects discovered during the televising of sanitary sewers.

3.15 RESTORATION

A. Whenever any surface improvements such as pavement, curbing, pedestrian walks, fencing, or turf have been removed, damaged or otherwise disturbed by the Contractor’s operations, they shall be repaired or replaced to the Engineers satisfaction, to restore the improvement in kind and structure to the pre-existing condition. Each item of restoration work shall be done as soon as practicable after completion of installation and backfilling operations on each section of pipeline.

B. In absence of specific payment provisions, as separate Contract Items, the restoration work shall be compensated for as part of the work required under those Contract Items, which necessitated the destruction and replacement or repair, and there will be no separate payment therefor. If separate pay items are provided for restoration work, only that portion of the repair or reconstruction, which was necessitated by the contract, will be measured for payment. Any improvements removed or damaged unnecessarily shall be replaced or repaired at the Contractor’s expense.

C. Turf restoration shall be accomplished by sod replacement except where seeding is specifically allowed or required.

Caliche or gravel surfaced streets and driveway shall be restored to their original condition by salvaging and replacing the pre-existing caliche or gravel. If the Contractor does not salvage sufficient material during excavation operation, he will be required to furnish material to restore the surface to the depth of the original section. This caliche or gravel restoration shall be considered a part of excavation and backfill and no extra compensation will be made.

E. Bituminous and concrete surfaced streets and driveways will be restored to equal or better condition than existed prior to sewer construction. Measurement will be made of the actual quantities required to be replaced by the sewer construction and paid for at the price bid in the appropriate bid items in the proposal.

No measurement or payment will be made for work done outside the lines considered necessary for sewer construction. The Contractor will be required to replace damage outside these lines at his own expense.

F. Reconstruction of caliche base courses and concrete or bituminous surface courses shall be in substantial compliance with all applicable City of Midland Specifications pertaining to the item being restored.

3.16 CLEANUP

After completing each section of the sewer line, the Contractor shall remove all debris, construction materials, and equipment from the site of the work, grade and smooth over the surface on both sides of the line and leave the entire right-of-way in a clean, neat, and serviceable condition. No separate compensation shall be made for clean up.

3.17 PAYMENT

A. General

Payment in accordance with the following items, at the unit price bid for the work, shall constitute full and complete payment for the entire project including all incidental terms necessary for the complete and successful prosecution of the work in accordance with the intent of the plans and specifications.

Materials and work required to complete the project for which there is no bid item in the bid proposal shall be considered as incidental and the cost shall be included in the prices bid for the various items in the bid proposal.

Where payment is to be made on a unit price basis, it shall be made on the actual measured quantities as constructed in the work.

B. Sewer Pipe in Place

Unit prices bid shall cover furnishing and installation of pipe and jointing materials, including tests and all other necessary work and material to install the pipe complete in place at the depth specified. The unit of work shall be the lineal foot of the various types and sizes as shown in the proposal form. The pipe installation shall be measured

along the centerline of the sewer from center to center of manholes with no deduction in footage for manholes, wye branches, riser bases or other structure.

C. Foundation Corrections Materials

Payment for foundation correction materials shall be made at the unit price bid per cubic yard for material furnished and placed to pro vide adequate pipe base in unstable soil. The unit price shall include extra excavation below pipe grade, the material, placing and tamping.

Additional material required to backfill excess depth of excavation caused by neglect or error on the part of the Contractor or wet conditions, shall be furnished and placed at his own expense.

Removal of Street Surfacing

The Contractor shall receive no extra compensation for the removal of street surfacing including cutting of a straight edge.

E. Trench Safety Systems, Sheeting and Shoring

Measurement: Trench Safety Systems shall be measured by the linear foot of "Trench Safety Systems": Payment for work prescribed under this item shall be full compensation for the Trench Safety Systems including any Engineering and/or consulting fees and any additional excavation and backfill required, for furnishing, placing, maintaining and removing all shoring, sheeting, or bracing; for de-watering or diversion of water; for all jacking and jack removal; and for all other labor, materials, tools, equipment and incidentals necessary to complete the work.

F. Manholes

Payment will be made for the various types of manholes at the unit prices bid for the various types of manholes 0 to 6' deep which price shall include excavation, furnishing and installing all materials pumping where necessary, and backfilling and all incidentals for the complete manhole in place. Measurement for manholes over 6 feet in depth shall be made of the depth of manhole in excess of six (6) feet. Manholes will be measured from the invert to the top of the casting as set.

Payment will be made for the manhole depth in excess of 6 feet at the vertical foot price bid in the bid proposal for extra depth of manhole over 6 feet for each type of manhole furnished.

G. Drop Connections to Manholes

Payment shall be made for drop connections to manhole for each drop connection made as counted in the field at the price bid in the proposal.

Said payment shall be complete compensation for furnishing all materials and fittings and making all connections to the manhole including 2' of vertical depth as measured from the invert of the incoming line to the invert of the manhole.

H. Drop Section for Manholes

Drop sections shall be paid for on a vertical footage basis as measured from the invert of the incoming line to the invert of the manhole less 2 feet and shall be paid for at the price bid per vertical foot for the various size drop connections in the bid proposal.

The price bid per vertical foot includes all fittings, granular material, if used and concrete and shall be full compensation for the complete in service drop connection.

I. Service Lines

Service lines will be measured from centerline of the sewer main to the plug end and paid for at the unit price bid per linear foot of each type of pipe as specified and as shown on the typical details.

J. Barricading and Traffic Control

The lump sum price bid in the bid proposal shall be full compensation for furnishing flag persons when required and all barricades, signs and other barricading and traffic control devices and for furnishing barricading plans and erecting and maintaining all such devices and signs as required for the duration of the period.

ADDENDUM #01
Project Number P21-06

TO ALL BIDDERS ON THE SUBJECT BID: Briarwood Paving Phase II

ADDENDUM #01

DATE: July 9, 2025

1. The Bid Opening has been moved to Wednesday, July 23, 2025, at 2:00 PM in the City Hall Council Chamber located on the 1st Floor of Midland's City Hall.
2. The deadline to submit questions has been moved to Wednesday, July 16, 2025, by noon.

Clarification: All addendum acknowledgement forms must be included with the bid for the bid to be considered complete. Bidders have sole responsibility for making sure they have and acknowledge all addendums provided for this project bid.

PLEASE RETURN THIS ADDENDUM WITH YOUR BID BY THE CLOSING DATE.

All other terms and conditions shall remain the same.

Briarwood Paving Phase II
Project Number PD21-06

Q/A and Clarification

During the Pre-Bid Meeting, the following questions were raised by one or more bidders. Below is a list of the questions along with the answers and clarifications.

1. Is it possible to push the bid date at least a week? Yes. See Addendum 01
2. The bid item for Tack Coat shows MC-30. This product won't work for tack. The plans specify a trackless tack. Can the bid item be shown as Tack Coat (Trackless Tack)? We want MC-30
3. Shouldn't the Flowable Fill bid item (item 5-21) be by the CY and not SY? This bid item has been removed and is now considered subsidiary to the bid items for "Manhole Ring & Cover Adjustment" and the bid item for "Water Valve Box Ring & Cover Adjustment". The corresponding Pay Note for the manhole and water valve cover adjustments has been revised to account for this change.
4. Item 400 in the General Notes states that flowable fill will be subsidiary, yet there's a bid item for flowable fill? See response to Question 3.
5. The proposed typical sections show a one-course surface treatment but there are no bid items for the one course? Has been removed
6. Can the City provide the stamped concrete pattern, color, and whether the dye is cast on top or monolithic? The stamped concrete will be colored, with a Herringbone pattern and the Butterfield U31 Weathered Terra Cotta integral color with a dark grey release.
7. Will the award of the project be based on the base bid or the base bid and the alternate? Base bid
8. What Knox Lock make, and model will be required? See attached Knox Box Spec Sheet
9. Where are the locations to stockpile the excavated base and paving (Per item 105 in the General Notes)? The only city ROW is in the easement on the NE corner of Avalon and Briarwood. Possible work something out with the bus barn like TEC did.
10. Please verify that the only bid documents required to be turned in with the Bid are the following documents listed as such on the City's Bonfire site:
    - Excel Bid Table- Required
    - Proposal form pdf- Required
    - PreAfft form pdf- Optional
    - Bid Items from pdf- Required
    - Additive Alternate Bid item form pdf- Required
    - Bid Bond pdf- Required
    - Certificate of Payment pdf- Not Required
    - Form CIQ pdf- Required
11. Why is the Certificate of Payment form required to be submitted with the bid? This form is applicable for when the project is completed. The Certificate of Payment has been removed as a required document.
12. Why is the PreAfft form Required to be submitted with the bid? This form should be an Optional submittal, if the bidder qualifies for the Preferred Consideration. The document has been changed to optional.
13. What type of fiber is required in concrete? See general notes 531

14. Cattle Guard: I see 3 locations on the plans that say to remove and relocate the cattle guard. The bid item says furnish and install 4 each. How many are there? Are existing cattle guards reused and are there any new ones? Is there a detail for installation and/or new fabrication? The cattle guard bid item description has been revised to read "24' Cattle Guard Relocation, furnished, complete and in place." There are no new cattle guard installations as part of this project. The corresponding Pay Note has been revised to reflect this change.
15. Median Nose: How is the median nose paid? Is the 8" concrete paving underneath the median nose paid as concrete paving? There are 3 large median noses at Trobaugh, Tumbleweed, and Roadrunner that conflict with the median nose detail. Can you provide a detail for these 3 large noses? P11. Yes. See attached revised enlarged median detail
16. Does there need to be irrigation sleeves going to the median if they are filled with stamped concrete? No
17. Does the stamped concrete fill up the entirety of the medians except for the median noses? Yes
18. How are the 2 drainage flumes at RSP Playa and the 2 at 1248 paid? Is the detail the same for all 4? These are paid under the Storm Drain Bid Item for "5" Concrete Riprap". Cross-Section details for the flumes and other concrete rip-rap structures can be found on Sheets 124, 125, 126, 129, 130, and 131 of the design drawing set.
19. How is the sidewalk paid? If it is in the riprap quantity, will it be reinforced the same? No sidewalk in plans
20. Storm drain Item 6 is for 24" SET and it should be 2 each for the quantity instead of 3 each. Correct
21. Would you consider allowing precast SETs on item 6 and include the SETP-PD Precast detail? Precast SETs will be allowed if the contractor chooses to use them. Details for the SETs can be found on Sheets 138 – 140 of the design drawing set.
22. Structure #3 shows 6:1 slope on the BCS but 7:1 on the culvert layout. Which is correct? 6:1
23. What is the purpose of the 6" mow strip adjacent to the 8" concrete paving at Coyote Trail and Golden Gate? There is no mow strip on Tumbleweed. To add stabilization b/c of grade elevation
24. Where does paving item 21- flowfill go and how is it calculated? See response to Question 3.
25. What is Storm Drain Item 7 – Open Trenching of Storm Drain, where is it located and how is it measured? This is the trenching quantity for the culverts and is based on the total length of all culverts being installed.
26. Please check Storm Drain Item 8-5" Riprap Quantity and confirm if it includes 5" riprap, Curbed Drainage Flumes, and sidewalk. There is no sidewalk in this project. The concrete rip-rap quantity includes all quantities for 5" rip-rap and flumes. Can you please provide a detail for the cattle guard and electrical gate required? Cattle guards will be relocated, and electrical gate has been removed.
27. Can you please provide a detail for the cattle guard and electrical gate required? The cattle guard bid item description has been revised to read "24' Cattle Guard Relocation, furnished, complete and in place." There are no new cattle guard installations as part of this project. The corresponding Pay Note has been revised to reflect this change. The electrical gate item has been removed.
28. How are the 6" temporary base drives paid for in Phase 2? A new bid item has been added to address this.
29. Do the HMAC portions of the CR 1255 and N CR 1250 get the same pavement structure as Briarwood? Yes
30. Can we get cross sections or electronic data to figure the earthwork quantities? Yes. See attached cross sections.

31. On previous projects the contractor only paid for concrete testing. The Pre-Bid meeting documents states the contractor will pay for all testing. Is this correct? Yes, correct
32. Would it be possible to have the work zone pavement markings as separate bid items like the permanent pavement markings? That way they would get paid as they are installed. Bid item has been added and corresponding pay note
33. It appears there is a bust in the 5" concrete riprap quantity (14,515 SY) (Actually about 10% of this quantity)? The quantity for this bid item has been corrected to be 1,300 SY.
34. The quantity for drive approaches is about double what it should be. The quantity has been corrected to 1,700 S
35. Bid item 6-11 Road Sign Assembly should be 45 EA in lieu of SF per Sheet 148. Correct
36. Can you provide what type of mailbox foundation (sheet 94) is required for bid item 4-6? Type II – TXDOT Spec 94
37. Which median nose should we figure (Type 1 or 2)(Sheet 91)? How are these paid for? Type 1 & Item P11
38. The standard for the drives only includes fiber reinforcement (I'm assuming 3# per CY). Does the city want rebar as well? No Rebar
39. It appears from the proposed typical sections that all the concrete median is colored and stamped. Where does the 995 SY of 4" plain concrete median (bid item 5-11) go? Median Nose Qty
40. Is the 4" concrete median (stamped or plain) get reinforcement (rebar and/or fiber)? No rebar, yes fiber
41. There's a bid item for new cattle guards (4 EA)(bid item 4-4). There's also three to be relocated (no bid item). Should the bid item be for relocating the cattle guards at 3 each? The cattle guard bid item description has been revised to read "24' Cattle Guard Relocation, furnished, complete and in place." There are no new cattle guard installations as part of this project. The corresponding Pay Note has been revised to reflect this change.
42. Bid item SET (Ty-2) (Bid item 3-6) should be 2 EA. They go on driveway 10 that has a single barrel 24" culvert. The quantity for this bid item has been corrected to be 2 EA.

Clarification: The Bid Opening has been moved to Friday, July 25, 2025, at 2:00 PM in the City Hall Council Chamber located on the 1st Floor of Midland's City Hall.

Clarification: All sections listed as revised in this addendum should be removed from all previous versions of the project manual and replaced with the revised versions attached to this addendum.

Clarification: All information provided in Addendum 01 for this project remains in effect unless specifically addressed in Addendum 02.

Clarification: All addendum acknowledgement forms must be included with the bid for the bid to be considered complete. Bidders have sole responsibility for making sure they have and acknowledge all addendums provided for this project bid.

Clarification: Contractor must be willing to sign contract as is.

Clarification: Check that all insurance forms are in order when submitting bids.

Clarification: Check that all conflict-of-interest forms are completed if applicable.

Clarification: Contractor must fill out all bid items in the Proposal for the bid to be considered complete.

Clarification: Contractor is responsible for all traffic control during this project.

BID ITEMS

(See Proposal sheet for additional information.)

Project Name: BRIARWOOD AVE PHASE II
Project Number: P21-06
BASE BID

Miscellaneous Items						
Item No.	Description	Quantity	Unit	Pay Note	Unit Price	Total Amount
1)	Mobilization, furnished, installed, complete and in place.	1	LS	M1	$_____	$_____
2)	4" PVC Pipe Casing (Irrigation Sleeve, SDR 26 ASTM), furnished, installed, complete and in place.	252	LF	M2	$_____	$_____
3)	3" PVC Pipe Conduit (Schedule 40 Electric), furnished, installed, complete and in place.	501	LF	M3	$_____	$_____
4)	Erosion/Sediment Control, furnished, installed, complete and in place.	1	LS	M4	$_____	$_____
5)	Traffic Control, furnished, installed, complete and in place.	1	LS	M5	$_____	$_____
6)	Job Site Safety, furnished, installed, complete and in place.	1	LS	M6	$_____	$_____
7)	Seeded Erosion Control Mats, furnished, installed, complete and in place.	10577	SY	M7	$_____	$_____
8)	Seeding & Stabilization, furnished, installed, complete and in place.	10000	SY	M8	$_____	$_____
9)	Spray Watering, furnished, installed, complete and in place.	1	LS	M9	$_____	$_____
Total Miscellaneous Items 1 - 9		$_____				

Demolition Items						
Item No.	Description	Quantity	Unit	Pay Note	Unit Price	Total Amount
1)	Preparation of Right-of-Way, furnished, installed, complete and in place.	30	ACRE	D1	$_____	$_____
2)	Unclassified Roadway Excavation (Base Removal, Depth ≤ 14”), complete and in place.	45890	SY	D2	$_____	$_____
3)	Unclassified Roadway Excavation (Non Pavement & Base Removal), complete and in place.	37500	SY	D3	$_____	$_____
4)	Unclassified Basin & Channel Excavation, complete and in place.	4300	CY	D4	$_____	$_____
5)	Removal & Dispose of Existing Unclassified Pavement, complete and in place.	45890	SY	D5	$_____	$_____
6)	Removal & Disposal of Existing Miscellaneous Concrete, complete and in place.	1095	SY	D6	$_____	$_____
7)	Removal & Disposal of Existing Fence And Gate, complete and in place.	10854	LF	D7	$_____	$_____

PAY QUANTITY NOTES

M1 Includes the necessary equipment, labor, materials, and incidentals for all Mobilization to the job site complete and in place. Measurement and payment to be made per lump sum.

M2 Includes the necessary equipment, labor, materials, and incidentals for the installation of Pipe Casing per the construction drawings and City of Midland standards and specifications, including all spacers, grout, embedment, detector wire, tracer tape, and appurtenances. Measurement and payment to be per linear foot measured along the ground surface following the pipe centerline through all valves, fittings, structures, and appurtenances.

M3 Includes the necessary equipment, labor, materials, and incidentals for the installation of Pipe Conduit per the construction drawings and City of Midland standards and specifications, including all trenching, embedment, backfill, and appurtenances. Measurement and payment to be per linear foot measured along the ground surface following the pipe centerline through all boxes, fittings, structures, and appurtenances.

M4 Includes the necessary equipment, labor, materials, and incidentals to implement the Erosion Control Plan per the construction drawings and City of Midland standards and specifications. Measurement and payment to be made per lump sum.

M5 Includes the necessary equipment, labor, materials, and incidentals to implement the Traffic Control per the approved Traffic Control Plan. Any required traffic control devices are to meet the City of Midland Traffic Division Standards. Measurement and payment to be made per lump sum.

M6 Includes the necessary equipment, labor, materials, and incidentals to implement Job Site Safety and to provide a safe work environment for the project work area (including all personal protection equipment, trench safety, etc.) per the construction drawings and in compliance with all applicable Federal, State, and Local requirements or regulations including those of OSHA and the City of Midland. JOB SITE SAFETY IS THE RESPONSABILITY OF THE CONTRACTOR. Measurement and payment to be made per lump sum.

M7 Includes the necessary equipment, labor, materials, and incidentals for Seeded Erosion Control Mats per the construction drawings and City of Midland standards and specifications, including all removal, storage, and replacement of existing topsoil as well as all mats, seeding, staking, and appurtenances. Watering is addressed in a separate pay note. Measurement and payment to be made per square yard measured along the ground surface.

M8 Includes the necessary equipment, labor, materials, and incidentals for Seeding & Stabilization per the construction drawings and City of Midland standards and specifications, including all removal, storage, and replacement of existing topsoil as well as all seeding and appurtenances. Watering is addressed in a separate pay note. Measurement and payment to be made per square yard measured along the ground surface.

M9 Includes the necessary equipment, labor, materials, and incidentals for Spray Watering per the construction drawings and City of Midland standards and specifications, including all appurtenances. Measurement and payment to be made per lump sum.

D1 Includes the necessary equipment, labor, materials, and incidentals for Preparation of Right-of-Way per the construction drawings and City of Midland standards and specifications including removal and disposal of all obstructions from the right-of-way and easements where removal of such obstructions is not indicated in the consturction drawings, all scraping and preservation of top soil, and including all clearing, grubbing, and appurtenances. Measurement and payment to be made per acre measured along the ground surface.

D2 Includes the necessary equipment, labor, materials, and incidentals for Unclassified Excavation per the construction drawings and City of Midland standards and specifications including all existing sub-structure removal, unclassified excavation, material removal, and appurtenances. Measurment and payment to be per square yard measured along the ground surface.

D3 Includes the necessary equipment, labor, materials, and incidentals for Unclassified Excavation per the construction drawings and City of Midland standards and specifications including all existing sub-structure removal, unclassified excavation, material removal, and appurtenances. Measurment and payment to be per cubic yard of material removed.

D4 Includes the necessary equipment, labor, materials, and incidentals for Unclassified Excavation per the construction drawings and City of Midland standards and specifications including all existing pavement and sub-structure removal, unclassified excavation, material removal, and appurtenances. Measurment and payment to be per cubic yard of material removed.

D5 Includes the necessary equipment, labor, materials, and incidentals for the Removal & Disposal of Existing Unclassified Pavement per the construction drawings and City of Midland standards and specifications including all pavement removal, saw-cutting, and appurtenances. Depths given are approximate and pavement material is to be removed in its entirety. No additional compensation will be made for increased pavement depth removal. Measurement and payment to be made per square yard measured along the ground surface.

D6 Includes the necessary equipment, labor, materials, and incidentals for the Removal & Disposal of Existing Miscellaneous Concrete per the construction drawings and City of Midland standards and specifications, including all appurtenances. Measurement and payment to be made per square yard measured along the ground surface.

D7 Includes the necessary equipment, labor, materials, and incidentals to Remove & Dispose of Existing Fence And Gate per the construction drawings and City of Midland standards and specifications, including removal of all, columns, posts, foundations, anchors, gates, frames, and structures as well as all excavation, backfill, cutting, and appurtenances. Measurement and payment to be made per linear foot measures along the ground surface following the fence centerline through all structures and appurtenances.

SD1 Includes the necessary equipment, labor, materials, and incidentals for the installation of Reinforced Concrete Box Culvert per the construction drawings and City of Midland standards and specifications, including all embedment, detector wire, tracer tape, necessary testing, and appurtenances. Measurement and payment to be made per linear foot measured along the ground surface following the box culvert centerline through all structures and appurtenances.

SD2 Includes the necessary equipment, labor, materials, and incidentals for the installation of Storm Drains per the construction drawings and City of Midland standards and specifications, including all embedment, detector wire, tracer tape, necessary testing, and appurtenances. Measurement and payment to be made per linear foot measured along the ground surface following the pipe centerline through all structures and appurtenances.

SD3 Includes the necessary equipment, labor, materials, and incidentals for the installation of a Reinforced Concrete Headwall per the construction drawings and City of Midland standards and specifications, including all forms, reinforcment, placement, sealing, finishing, and appurtenances. Measurement and payment to be made per each concrete headwall installed.

SD4 Includes the necessary equipment, labor, materials, and incidentals for the installation of a Headwall Safety End Treatment per the construction drawings and City of Midland standards and specifications, including all forms, reinforcment, placement, sealing, finishing, and appurtenances. Measurement and payment to be made per each headwall safety end treatment installed.

SD5 Includes the necessary equipment, labor, materials, and incidentals for Open Trenching of Storm Drain per the construction drawings and City of Midland standards and specifications, including all unclassified excavation, backfill not including flowable fill backfill, providing trench safety and protection for workers to install pipe, structures, and appurtenances. Measurement and payment to be made per linear foot measured along the ground surface following the pipe centerline through all structures, fittings, and appurtenances.

SD6 Includes the necessary equipment, labor, materials, and incidentals for the installation of Concrete Rip-Rap per the consturction drawings and City of Midland standards and specifications, including all excavation, forms, reinforcement, placement, jointing, sealing, finishing, and appurtenances. Measurement and payment to be made per square yard measured along the ground surface.

ST1 Includes the necessary equipment, labor, materials, and incidentals to install a Fence per the construction drawings and City of Midland standards and specifications, including all columns, posts, foundations, anchors, and structures as well as all excavation, backfill, cutting, and appurtenances. Measurement and payment to be made per linear foot measured along the ground surface following the fence centerline through all structures and appurtenances.

ST2 Includes the necessary equipment, labor, materials, and incidentals to install a Fence Gate per the construction drawings and City of Midland standards and specifications, including all columns, posts, foundations, anchors, frames, attachments, and structures as well as all excavation, backfill, cutting, and appurtenances. Measurement and payment to be made per each gate installed.

ST3 Includes the necessary equipment, labor, materials, and incidentals to install an Electric Gate per the construction drawings and City of Midland standards and specifications, including all columns, posts, foundations, anchors, frames, attachments, and structures as well as all excavation, backfill, cutting, and appurtenances. Measurement and payment to be made per each gate installed.

ST4 Includes the necessary equipment, labor, materials, and incidentals to relocate a Cattle Guard per the construction drawings and City of Midland standards and specifications, including all beams, foundations, anchors, frames, attachments, and structures as well as all excavation, backfill, cutting, and appurtenances. Measurement and payment to be made per each cattle guard installed.

ST5 Includes the necessary equipment, labor, materials, and incidentals to install a Knox Lock per the construction drawings and City of Midland standards and specifications, including all posts, foundations, anchors, frames, safe or box, attachments, and structures as well as all appurtenances. Measurement and payment to be made per each knox lock installed.

ST6 Includes the necessary equipment, labor, materials, and incidentals to Relocate Mailbox Foundation per the construction drawings and City of Midland standards and specifications, including all structure removal, foundation placement, and appurtenances. Measurement and payment to be made per each existing mailbox foundation removed and new mailbox foundation set.

P1 Includes the necessary equipment, labor, materials, and incidentals for Subgrade Preparation per the construction drawings and City of Midland standards and specifications, including all proof-rollling, sub-grade reworking, scarifying, compaction, and appurtenances. Measurement and payment to be made per square yard measured along the ground surface.

P2 Includes the necessary equipment, labor, materials, and incidentals for placement of Unclassified Embankment per the construction drawings and City of Midland standards and specifications, including all sprinkling, rolling, correction of soft spots, grading, sloping, compaction, and appurtenances. Measurement and payment to be made per each cubic yard placed.

P3 Includes the necessary equipment, labor, materials, and incidentals for placement of Jointed Concrete Pavement per the construction drawings and City of Midland standards and specifications, including all forming, reinforcement, placement, jointing, sealing, finishing, and appurtenances. Measurement and payment to be made per square yard of material placed measured along the ground surface.

P4 Includes the necessary equipment, labor, materials, and incidentals for the placement of Type "D" HMAC Asphalt Pavement Surface Course (PG 70-22, 110 LBS / SY at 1" thick) per the construction drawings and City of Midland standards and specifications, including all placement, compaction, and appurtenances. Measurement and payment to be made per square yard of material placed measured along the ground surface.

P5 Includes the necessary equipment, labor, materials, and incidentals for the placement of Type "C" HMAC Asphalt Pavement Surface Course (PG 64-22, 110 LBS / SY at 1" thick) per the construction drawings and City of Midland standards and specifications, including all placement, compaction, and appurtenances. Measurement and payment to be made per square yard of material placed measured along the ground surface.

P6 Includes the necessary equipment, labor, materials, and incidentals for the placement of Type "B" HMAC Asphalt Pavement Surface Course (PG 64-22, 110 LBS / SY at 1" thick) per the construction drawings and City of Midland standards and specifications, including all placement, compaction, and appurtenances. Measurement and payment to be made per square yard of material placed measured along the ground surface.

P7 Includes the necessary equipment, labor, materials, and incidentals for placement of Flexible Base compacted to 95% Density, ASTM D1557, per the construction drawings and City of Midland standards and specifications including all placement, compaction, and appurtenances. Measurement and payment to be made per square yard of material placed measured along the ground surface.

P8 Includes the necessary equipment, labor, materials, and incidentals for application of Bituminous Prime Coat (MC-30, 0.20 GAL / SY) per the construction drawings and City of Midland standards and specifications, including all appurtenances. Measurement and payment to be made per gallon of material applied at the designated rate.

P9 Includes the necessary equipment, labor, materials, and incidentals for application of Tack Coat (MC-30, 0.10 GAL / SY) per the construction drawings and City of Midland standards and specifications, including all appurtenances. Measurement and payment to be made per gallon of material applied at the designated rate.

P10 Includes the necessary equipment, labor, materials, and incidentals for placement of Stamped Concrete Median per the construction drawings and City of Midland standards and specifications including all forming, reinforcement, placement, jointing, sealing, finishing, and appurtenances. Measurement and payment to be made per square yard of material placed measured along the ground surface.

P11 Includes the necessary equipment, labor, materials, and incidentals for placement of Concrete Median per the construction drawings and City of Midland standards and specifications including all forming, reinforcement, placement, jointing, sealing, finishing, and appurtenances. Measurement and payment to be made per square yard of material placed measured along the ground surface.

P12 Includes the necessary equipment, labor, materials, and incidentals for placement of Concrete Fillet per the construction drawings and City of Midland standards and specifications including all forming, reinforcement, placement, jointing, sealing, finishing, and appurtenances. Curb section is formed and poured monolithically with fillet and is not a separate bid item. Measurement and payment to be made per square yard of material placed measured along the ground surface.

P13 Includes the necessary equipment, labor, materials, and incidentals for placement of Concrete Valley Gutter per the construction drawings and City of Midland standards and specifications including all forming, reinforcement, placement, jointing, sealing, finishing, and appurtenances. Measurement and payment to be made per square yard of material placed measured along the ground surface.

P14 Includes the necessary equipment, labor, materials, and incidentals for placement of Concrete Driveway Approach per the construction drawings and City of Midland standards and specifications including all forming, reinforcement, placement, jointing, sealing, finishing, and appurtenances. Pedestrian access ramps at the driveway approach are considered part of the approach and are not a separate bid item. Measurement and payment to be made per square yard of material placed measured along the ground surface.

P15 Includes the necessary equipment, labor, materials, and incidentals for placement of Concrete Curb & Gutter per the construction drawings and City of Midland standards and specifications including all forming, reinforcement, placement, jointing, finishing, and appurtenances. Measurement and payment to be made per linear foot of material placed measured along the back-of-curb.

P16 Includes the necessary equipment, labor, materials, and incidentals for placement of Concrete Pedestrian Access Ramp per the construction drawings and City of Midland standards and specifications, including all forming, reinforcement, placement, jointing, finishing, and appurtenances. Measurement and payment to be made per square yard of material placed measured along the ground surface.

P17 Includes the necessary equipment, labor, materials, and incidentals for Ring & Cover Adjustment per the construction drawings and City of Midland standards and specifications including all forming, reinforcement, placement, flowable fill, jointing, sealing, finishing, and appurtenances. This includes a minimum 1.0' wide concrete collar whose width is measured from the outer edge of the cover to the outer edge of the concrete ring. Measurement and payment to be made per each adjustment made.

T1 Includes the necessary equipment, labor, materials, and incidentals to Eliminate Existing Pavement Markings and Markers (Line Marking) per the construction drawings and City of Midland standards and specifications, including all appurtenances. Measurement and payment to be made per linear foot eliminated.

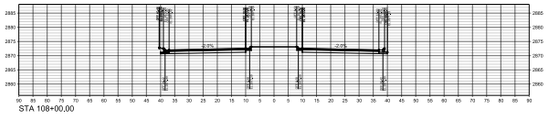
T2 Includes the necessary equipment, labor, materials, and incidentals for the placement of Retroreflectorized Pavement Markings per the construction drawings and City of Midland standards and specifications, including all appurtenances. Measurement and payment to be made per linear foot placed.

T3 Includes the necessary equipment, labor, materials, and incidentals for the placement of Thermoplastic Pavement Markings per the construction drawings and City of Midland standards and specifications, including all appurtenances. Measurement and payment to be made per linear foot placed.

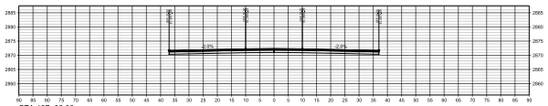
T4 Includes the necessary equipment, labor, materials, and incidentals for the placement of Prefabricated Pavement Markings per the construction drawings and City of Midland standards and specifications, including all appurtenances. Measurement and payment to be made per each marking placed.

T5 Includes the necessary equipment, labor, materials, and incidentals for In Road Sign Assembly per the construction drawings and City of Midland standards and specifications, including all appurtenances. Measurement and payment to be made per each sign assembled.

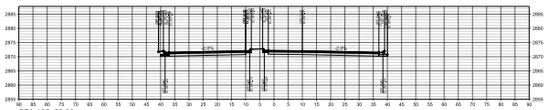
T6 Includes the necessary equipment, labor, materials, and incidentals to Remove Sign Assembly per the construction drawings and City of Midland standards and specifications, including all excavation, backfill, stabilization, foundations, bases, and appurtenances. Measurement and payment to be made per each existing sign assembly removed.



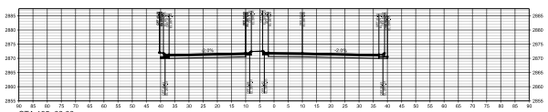
T7 Includes the necessary equipment, labor, materials, and incidentals for the placement of Retroreflective Raised Pavement Markers per the construction drawings and City of Midland standards and specifications, including all appurtenances. Measurement and payment to be made per each marker placed.



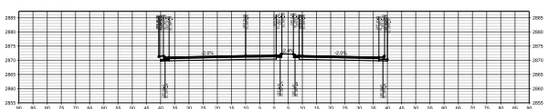
T8 Includes the necessary equipment, labor, materials, and incidentals for the placement and installation of Utility Duct Bank improvements per the construction drawings and City of Midland standards and specifications, including all appurtenances. Measurement and payment to be made per linear foot placed measured along the ground surface.



T9 Includes the necessary equipment, labor, materials, and incidentals for the placement and installation of Ground Box With Apron improvements per the construction drawings and City of Midland standards and specifications, including all appurtenances. Measurement and payment to be made per each ground box with apron placed.



T10 Includes the necessary equipment, labor, materials, and incidentals for the placement and installation of Delineator Assembly improvements per the construction drawings and City of Midland standards and specifications, including all appurtenances. Measurement and payment to be made per each delineator assembly placed.



T11 Includes the necessary equipment, labor, materials, and incidentals for the placement and installation of Temporary Workzone Pavement Markings improvements per the construction drawings and City of Midland standards and specifications, including all appurtenances. Measurement and payment to be made per lump sum.

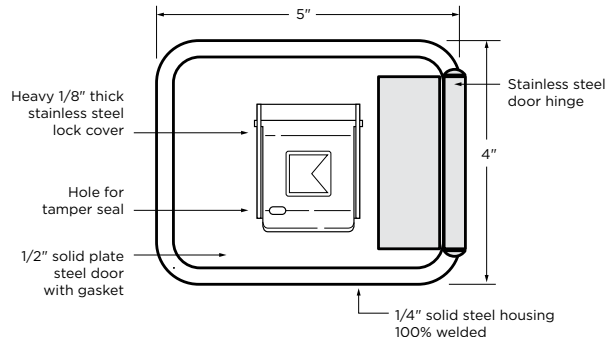
KNOXBOX® 3200

The KnoxBox 3200 is the number one high-security key lock box trusted by first responders and property owners. Store up to 10 keys to quickly gain rapid access to commercial properties.

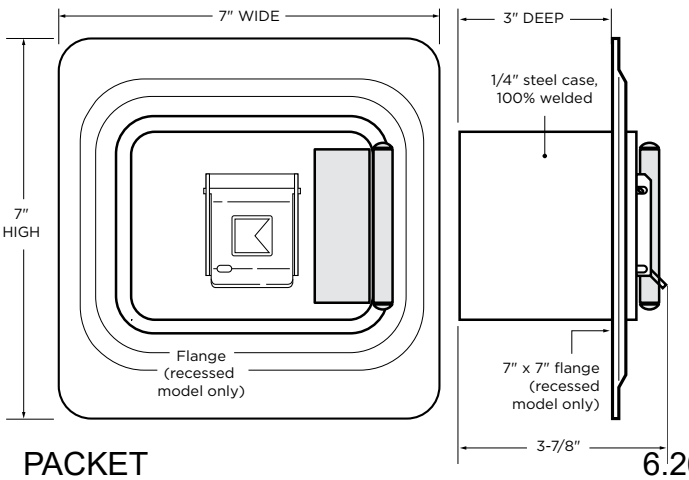
Available in 3 colors:

Black | Aluminum | Dark Bronze



WEIGHT:

Surface Mount - 8 lb
Recessed Mount - 9 lb



DIMENSIONS:

Surface Mount Body - 4"H x 5"W x 3-7/8"D
Recessed Mount Flange - 7"H x 7"W

SURFACE MOUNT - FRONT VIEW

RECESS MOUNT - FRONT VIEW **SIDE VIEW**

FEATURES

- Stores maximum 10 keys. Access cards and small entry items may also fit in interior compartment but will reduce max key quantity.
- Built Knox-Rugged and secure: UL 1037, UL 1610, UL 1332, UL 437
- Finished with Knox-Coat® to protect four times better than standard powder coat
- Weather-resistant door gasket
- Hinged door

BENEFITS

- Allows rapid property access
- Reduces property damage
- Prevents forced entry into buildings
- Minimizes first responder injury
- Compliant to National Fire Code (NFPA, IFC, IBC)

OPTIONS

- Knox Tamper Alert connects to building's alarm system for extra security
- Mount types: Recessed and Surface
- 3 color options: Black, Aluminum, Dark Bronze

ACCESSORIES

- Multi-Purpose Switch for use on electrical doors, gates and other electrical equipment
- Recess Mounting Kit for new concrete or masonry construction
- Public Safety Labels
- Tag-Out Tamper Seals
- Key Tags
- Key Rings

ORDERING SPECIFICATIONS

To insure procurement and delivery of the KnoxBox 3200, it is suggested that following specification paragraph is used:

KnoxBox surface/recessed mount with hinged door, with/without UL Listed Knox Tamper Alert. 1/4" plate steel housing, 1/2" thick steel door with interior gasket seal and stainless steel door hinge. Box and lock UL Listed. Lock has 1/8" thick stainless steel dust cover with tamper seal mounting capability.

Exterior Dimensions: Surface Mount Body - 4"H x 5"W x 3-7/8"D Recessed Mount Flange - 7"H x 7"W

Lock: UL Listed. Double-action rotating tumblers and hardened steel pins accessed by a biased cut key.

Finish: Knox-Coat proprietary finishing process

Color: Black, Dark Bronze or Aluminum

P/N: KnoxBox 3200 (mfr's cat. ID)

Mfr's Name: KNOX COMPANY

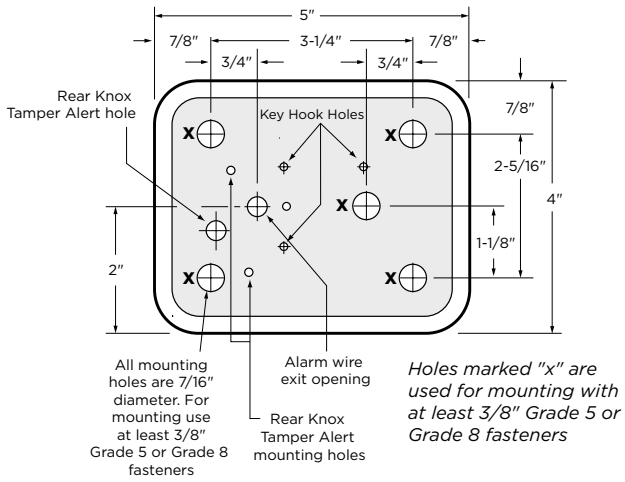
KNOXBOX® 3200

GENERAL MOUNTING INSTRUCTIONS

Suggested minimum mounting height, 6 feet above ground.

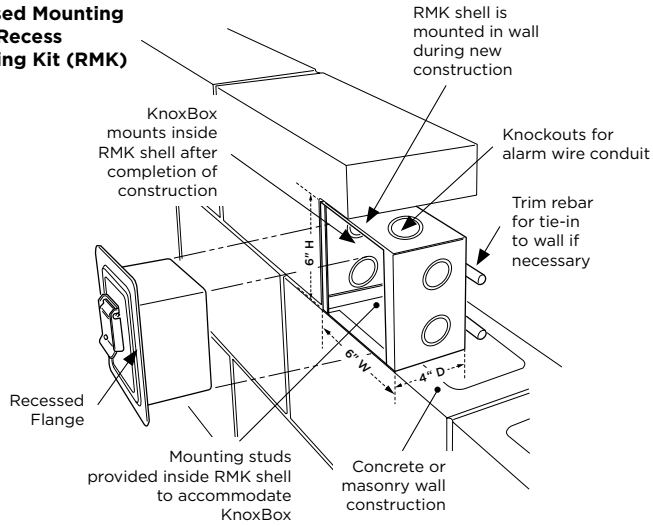


ATTENTION: KnoxBox is a very strong device that MUST be mounted properly to ensure maximum security and resist physical attack.

KnoxBox 3200 Hinged Door Surface Mount

KnoxBox 3200 Hinged Door Recess Mount

Inside View



RECESS MOUNTING KIT AND INSTALLATION INSTRUCTIONS

The Recess Mounting Kit (RMK) includes shell housing and mounting hardware, which may only be used for recessed models to cast-in-place within new concrete or masonry construction. The KnoxBox is mounted into the shell housing after construction is completed.

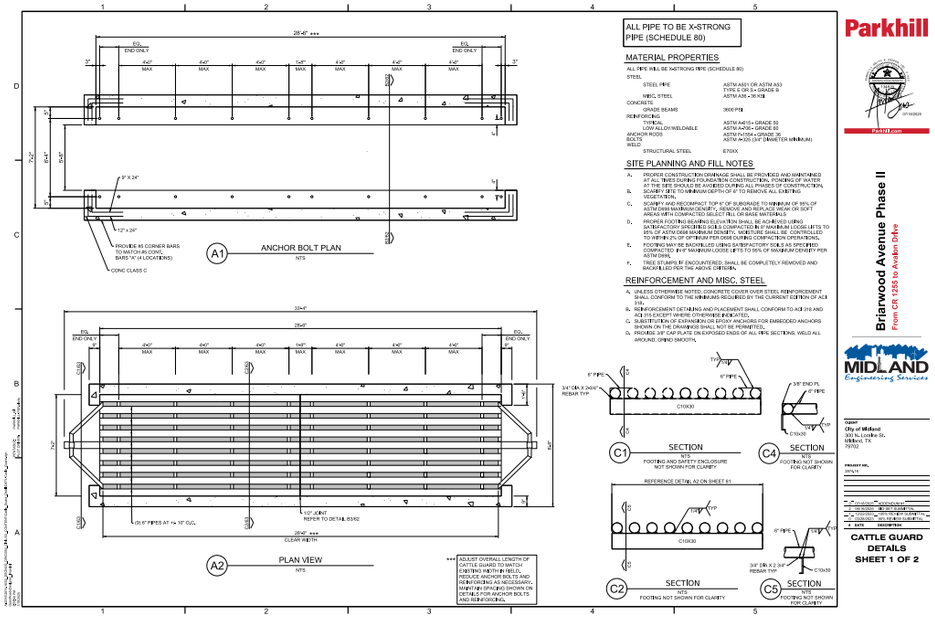
RECESS MOUNTING KIT DIMENSIONS

Rough-in Dimensions:
6-1/2"H x 6-1/2"W x 5"D

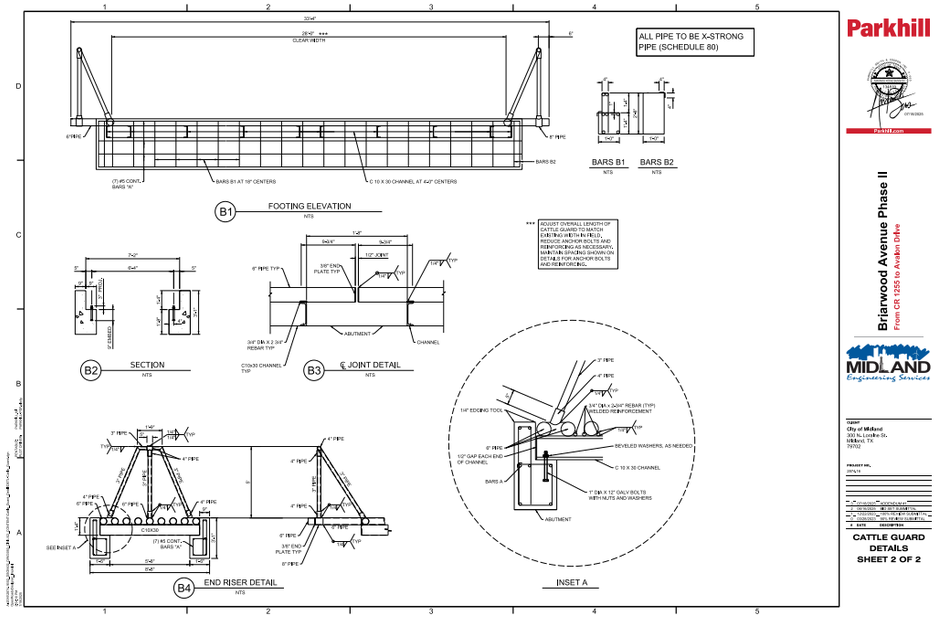
Recessed Mounting Using Recess Mounting Kit (RMK)

IMPORTANT:

Care should be taken to ensure the front of the Recess Mounting Kit (RMK) shell housing, including the cover plate and screw heads, is flush with the wall. The RMK must be plumbed to ensure vertical alignment of the box.



ABOUT THE KNOX COMPANY



Since 1975, the Knox Company has successfully developed innovative rapid access solutions for first responders with products that provide fast, safe, and secure entry into commercial, industrial, and residential properties, while minimizing damage and maximizing safety. Today, more than 15,000 fire, EMS and law enforcement departments/agencies depend on Knox products to gain access into over one million buildings/properties.

BRIARWOOD PAVING - PHASE II
Non-Mandatory Pre-Bid Meeting Agenda
Project No. (P21-06)
July 09, 2025

Discussion Items

1. Sign-In Sheet

2. Personnel Overview
   - Gabe McClelland – Director Engineering Services
   - Bobby Wojciechowski – Assistant Director Engineering Services
   - Josh Ferguson – Assistant City Engineer
   - Kirby Jones – Project Manager
   - Taha Sakrani – City Traffic Engineer
   - Clint Harmon – Construction Inspector - Roadway Inspector
   - Stephen Lamb – Franchise Utility Coordinator
   - Michael Williams – Stormwater Administrator
   - Alexis Torres – Administrative Assistant

3. Project Overview and Scope
   - Briarwood from Avalon to SH158; reconstruction to a 4-lane cross-section with medians and drainage updates. Alternate additional scope; signal at Avalon.
   - The location and details for the construction and related work are shown on a set of drawings named Briarwood Ave Phase II set dated 06/16/2025 and numbered from 001 (1) through 183 (187) inclusive, and a set of drawings named Avalon Drive & Briarwood Ave. Traffic Signal Project set dated 05/19/25 and numbered C100 (1) through C223 (32) inclusive. These drawings and plans, together with the specifications, form a part of the Contract. Where figures are shown on the drawings, they shall take precedence over scaled distances and dimensions.

4. Bid Process
   - Pre-Bid meeting attendance is non-mandatory to bid on this project.
   - ATTENTION: All questions submitted before or after the Non-Mandatory Pre-Bid Meeting must be submitted via Bonfire portal or to the following email address:

     purchasing@midlandtexas.gov

   - Addendum distributed by Bonfire notification (Friday) afternoon following the Pre-Bid Meeting.
     - The deadline to ask or send questions for the addendum is this Friday, July 11, 2025, at Noon.
     - Questions asked after the Noon deadline will be directed to the information already provided in the bid documents or included in the Addendum.

   - ATTENTION: All bidders who choose to submit bids digitally for this project must submit their bids through the City of Midland's online procurement portal. The City of Midland's online procurement portal can be accessed at:

- ATTENTION: Bidders are to submit bids either by mail or in person. If bidders choose to mail their bid packets in, then they are to mail the bid packet to one of the addresses listed below:

  USPS Mailing Address:
  City of Midland, Texas
  Attn: City Secretary's Office
  P.O. Box 1152
  Midland, TX 79702

  – OR –

  Physical Address for mail carriers other than USPS:
  City of Midland, Texas
  Attn: City Secretary's Office
  300 North Loraine St., Suite 330
  Midland, TX 79701

  If bid packets are delivered in person then bidders must drop the bid packets off at the first-floor front desk of City Hall before the bid opening deadline.

- **Bid Opening is Wednesday, July 16, 2025 at 2:00 PM** in the City Hall Council Chamber located on the 1st Floor of Midland's City Hall.
  - The Bid Opening will be open to the public.
  - No late bids will be accepted.
  - Bidders must be willing to sign the contract as is.
  - Bidders must complete the conflict of interest forms if applicable.
  - Bidders must fill out all bid items in the Proposal. If bid items are left blank then the bid will be considered non-responsive.
  - Bidders have sole responsibility for making sure they have and acknowledge all addendums provided. If all acknowledgement forms are not included with the bid packet submittal then the bid will be considered non-responsive.
  - Bidders must provide proof that they possess active licenses equal to or a higher class than a Water Operator D license and either a Wastewater D license or a Class 1 Collections license.

Not Required!

5. Notice to Proceed
   - Date of Notice to Proceed to be determined at the Pre-Construction Meeting.
   - Pre-Construction Meeting date will be set after the project bid is awarded.

6. Payment
   - Invoices should be submitted on or before the 1st day of each month and cover work completed up to the 25th day of the preceding month.
   - Invoice submittals are to be itemized and match the bid items listed in the bid packet Proposal.
   - Payment based on portion of work completed only. No payment for material delivery.
   - Payment will be made for material installed, not for material delivery, for all Proposal Bid Items except those specifically listed in the Bid Packet's Special Provisions section, sub-section 4. Payment.
   - 5% retainage until project completion, acceptance, and final payment.
   - Recommended that invoices state "Invoice Due Upon Receipt", or have a due date that is two (2) weeks after the date the invoice is submitted.

Check & final direction w/addendum. ?

7. Project Schedule
   - City Inspector must be notified of all work occurring and be able to perform inspections on any construction or installation that occurs.
   - Typically work times are Monday – Friday from 8:00 AM – 5:00 PM. No work earlier than 7:00 AM or later than 8:00 PM without City permission unless for emergency conditions.
   - Work is not to occur on Sundays or legal holidays unless required for emergency situations.

- Work is not to occur on Saturdays unless requested by Contractor in writing at least 48-hours in advance and approved by the City Engineer.

8. Project Specifics
   - Comply with all OSHA and other applicable safety requirements and regulations at all times.
   - Construction staking is solely the responsibility of the Contractor.
   - Construction testing is solely the responsibility of the Contractor.
   - Contractor is responsible for all Erosion Control for this project.
     - The winning contractor must submit all TCEQ documentation etc., large or small site notice for linear projects. Please read all requirements in the Construction General Permit regarding linear projects and proper documentation. This is to be submitted to the City of Midland at least 2 days before ground is disturbed for small sites or 7 days before ground is disturbed for large sites.
     - Contractor is required to place erosion control BMPs as needed and to regularly maintain any BMPs placed. Project site is to be kept reasonably clean, and any piles of spoils, backfill material, etc. are to include sand bag BMPs or similar temporary erosion protection emplacements at all times.
     - Contractor is required to remove all temporary BMPs placed at the end of the project. This is considered subsidiary to the overall project.
   - Contractor is responsible for all Traffic Control for this project.
     - Contractor is responsible for coordinating with the City.
     - Contractor is responsible for maintaining access to all adjacent properties during this project.
       - Contractor is responsible for notifying affected property owners at least two (2) business days in advance of any planned access interruptions.
       - Contractor is directed to use steel plates or other means to enable access to adjacent properties when work is not actively occurring at an otherwise blocked point of access so long as this does not conflict with the approved traffic control plan.
     - Contractor is responsible for coordinating with City Transportation to have any traffic control signs removed or relocated as needed by the City.
     - Contractor is to take particular care when working in the vicinity of the following sites, and to take every precaution to protect the public and secure the project site when working in or around these locations.
       - (Site description & physical location.) ?
   - Contractor is responsible for maintaining service to adjacent lots during this project.
     - Contractor mist notify affected properties at least two (2) business days prior to any planned service interruption.
     - Contractor is to take particular care when working in the vicinity of the following sites, to minimize service interruptions as much as possible, and whenever possible to coordinate planned service interruptions to minimize the impact to the sites listed.
       - MISD Bus Barn - 4400 N County Rd 1248, Midland, TX 79707
       - Fire Station #11 - 6600 Briarwood Ave, Midland, TX 79707
       - Any residential street, maintain local access
   - Material stored on the project site must be properly stored and protected from damage and weather.
   - There is a one (1) calendar year warranty period on this project. This includes all infrastructure installed.

9. Additional Information, Clarifications, and Corrections
   - Bidders are directed to bid the item quantities listed in the Bid Packet's Proposal.
   - Contractor is remined that this project is located in an urban environment. Structures, trees, and overhead lines are common, and contractor is to provide proper equipment to complete all work required for this project in an urban environment.

10. Any Additional Questions

- Can't get a responsible bid in the timeline asked for.
  [redacted]
  > Maybe start Sept. 1 -ish.
  > Will push back 1 week, have to hit August Council. (August 12 to award.)
  - still not enough time, but better. Hell of a project. A lot of parts to this. Pages are full of subsidiary elements in pages as we go through this.
  > Please provide questions & we'll get answers.
- Chart for work zone striping.
  > striping subsidiary
- Questions [redacted] submitted. Temp B has to be removed.
- Traffic control, cover striping or not. Work zone stripes on temp pavement, not permanent.
- Erosion control placed as needed, not each month.

Please direct all questions or comments following the Pre-Bid Meeting to the Bonfire portal with the City of Midland.

- Which Knox lock do you want. Have to key the bat to Fire Departments
- Excavations quantities seems hard to verify. • Will check.
- Flowable fill? • Pung Item 21 for rings & cover. Will clarify others.
- Rip-Rap seems like a huge quantity for 5".
- Seal coat mentioned, not listed in quantities. • Will check.
- Stockpile location? • Will follow-up & verify if available or not.
- Taking down a ton of fence, putting 200' back? > Yes. A lot not being put back. • 200' fence really just if you need extra fence to tie 4 cattle guards back in.
- Utilities out of way? No ROW issues? > Correct.
  > At some point TCP will blend w/TxDOT @ 158 when their project starts.
- A lot of stamped concrete. Pattern & color not stated, would help to know, big cost difference.
- Median curb called in phase 3, [redacted] final lift, if move to [redacted] would help.
  • Addendum.

Q/A and Clarification

During the Pre-Bid Meeting, the following questions were raised by one or more bidders. Below is a list of the questions along with the answers and clarifications.

Clarification: All information provided in Addendum 01 and Addendum 02 for this project remains in effect unless specifically addressed in this Addendum 03.

Clarification: The Bid Opening is being moved back to Friday, August 1, 2025, at 2:00 PM in the City Hall Council Chamber located on the 1st Floor of Midland's City Hall.

Clarification: The deadline for questions is being moved back to Friday, July 25, 2025, at Noon. All questions must be submitted either through the City of Midland's online procurement portal, or by email to the email address listed below, to be considered valid questions for this bid process.

purchasing@midlandtexas.gov

Questions that are not submitted through the City of Midland's online procurement portal or emailed to the email address listed above will not be considered valid and will not be addressed.

Clarification: The previous deadline for questions was July 16, 2025, at Noon per Addendum 01. Questions submitted after that deadline and before this Addendum 03 was issued are not considered valid, and will need to be re-submitted per the previously described process in this Addendum 03 to be considered valid questions for this bid process.

Clarification: A fourth addendum for this project will be issued Wednesday, July 30, 2025.

Clarification: All addendum acknowledgement forms must be included with the bid for the bid to be considered complete. Bidders have sole responsibility for making sure they have and acknowledge all addendums provided for this project bid.

ADDENDUM 04

Q/A and Clarification

During the Pre-Bid Meeting, the following questions were raised by one or more bidders. Below is a list of the questions along with the answers and clarifications.

Clarification: All information provided in Addendum 01, Addendum 02, and Addendum 03 for this project remains in effect unless specifically addressed in this Addendum 04.

Clarification: The Bid Opening is being moved back to Friday, August 15, 2025, at 2:00 PM in the City Hall Council Chamber located on the 1st Floor of Midland's City Hall.

Clarification: The deadline for questions is being moved back to Friday, August 8, 2025, at Noon. All questions must be submitted either through the City of Midland's online procurement portal, or by email to the email address listed below, to be considered valid questions for this bid process.

purchasing@midlandtexas.gov

Questions that are not submitted through the City of Midland's online procurement portal or emailed to the email address listed above will not be considered valid and will not be addressed.

Clarification: The second deadline for questions was July 25, 2025, at Noon per Addendum 03. Questions submitted after the second deadline and before this Addendum 04 was issued are not considered valid, and will need to be re-submitted per the previously described process in this Addendum 04 to be considered valid questions for this bid process.

Clarification: A fifth addendum for this project will be issued Monday, August 4, 2025.

Clarification: All addendum acknowledgement forms must be included with the bid for the bid to be considered complete. Bidders have sole responsibility for making sure they have and acknowledge all addendums provided for this project bid.

ADDENDUM 05

Q/A and Clarification

During the Pre-Bid Meeting, the following questions were raised by one or more bidders. Below is a list of the questions along with the answers and clarifications.

Clarification: All information provided in Addendum 01, Addendum 02, Addendum 03, and Addendum 04 for this project remains in effect unless specifically addressed in this Addendum 05.

Clarification: Addendum 05 was originally supposed to include additional information for bidders. However, to ensure that the new information provided is as correct and accurate as possible, the new information will instead be provided by Wednesday, August 6, 2025 as part of Addendum 06.

Clarification: The deadline for questions and the date and time of the bid opening remain as stated in Addendum 04.

Clarification: All addendum acknowledgement forms must be included with the bid for the bid to be considered complete. Bidders have sole responsibility for making sure they have and acknowledge all addendums provided for this project bid.

ADDENDUM 06

Briarwood Paving Phase II
Project Number PD21-06

Q/A and Clarification

During the Pre-Bid Meeting, the following questions were raised by one or more bidders. Below is a list of the questions along with the answers and clarifications.

Clarification: All information provided in Addendum 01, Addendum 02, Addendum 03, Addendum 04, and Addendum 05 for this project remains in effect unless specifically addressed in this Addendum 06.

Clarification: The deadline for questions and the date and time of the bid opening remain as stated in Addendum 04.

Clarification: All addendum acknowledgement forms must be included with the bid for the bid to be considered complete. Bidders have sole responsibility for making sure they have and acknowledge all addendums provided for this project bid.

Clarification: Private infrastructure conflicts have been discovered in the Briarwood Paving Phase II project area. The City of Midland is coordinating with the private utility owners to have these issues addressed, however the westernmost portion of the project site from the Trobaugh Boulevard intersection and west to the end of the proposed project limits has a number of conflicts still actively being worked on. For this reason, the City of Midland is dividing the project just west of the Trobaugh Boulevard intersection at Briarwood Avenue, and the portion of the project east of this point will be considered the new Base Bid portion of the project, and the portion west of this point will be considered the new Additive Alternative Bid 01. The traffic signal portion of the project that was originally designated Additive Alternate 01 is now designated Additive Alternative 02, but is otherwise unchanged.

Clarification: Bidders are to disregard all previous versions of design drawings, bid items, and pay notes previously provided for this project, and are instead to replace them with the new, revised versions provided with and described by this Addendum 06 when submitting a bid for this project.

Clarification: The base bid drawing set has been revised and labeled to distinguish between portions of the project design that remain past of the BASE BID, and portions of the project design that are now considered part of ADDITIVE ALTERNATE 01.

BASE BID – This will include all improvements from Station 119+67.24 to the east as indicated in the revised design drawing set provided, or basically everything along Briarwood Avenue from (and including) the Trobaugh Boulevard intersecting to the east limit of the project design.

ADDITIVE ALTERNATE 01 – This will include all improvements from Station 119+67.24 to the west as indicated in the revised design drawing set provided, or

basically along Briarwood Avenue from Trobaugh Boulevard to the west limit of the project design.

Clarification: The additive alternate drawing set addressing the traffic signal improvements portion of this project has been revised to include "ADDITIVE ALTERNATE 02 DRAWING SET" on the cover sheet. No other changes were made to this additive alternate.

Clarification: The Base Bid previously including all bid items for the proposed improvements along Briarwood Avenue for this project except for those related to the traffic signal improvements has now been split into a revised Base Bid and a new Additive Alternate 01 Bid. The Pay Notes related to the previous Base Bid have been revised to include separate Pay Notes for the new Base Bid and Additive Alternate Bid 01 as described in this Addendum 06.

Clarification: The Additive Alternate Bid including the bid items addressing the traffic signal improvements portion of this project has been renamed from 'Additive Alternate Bid' to 'Additive Alternate Bid 02'. No other changes were made to this additive alternate bid. The Pay Notes previously related to this additive alternate have been revised to reference the renamed Additive Alternate Bid 02.

Clarification: Some questions that have been asked are listed and addressed as part of this Addendum 06 below. All remaining questions that have already been asked but that are not addressed in this Addendum 06 will be addressed in the addendum issued after the deadline for new questions as stated in Addendum 04, along with all other questions asked between now and that same deadline.

Question: Bid item 3-8 (5" Concrete Riprap) is still showing 14,515 SY on the Excel spreadsheet. It should be 1,300 SY.

Answer: This bid item has been corrected and revised per the previously listed clarifications in this Addendum 06.

Question: Bit item 6-11 (Road Sign Assembly) on the Traffic Control Items should be EA and not SF. This should be changed on the Excel spreadsheet and the pdf sheet per the answer to question 35 on addendum 2.

Answer: This bid item has been corrected and revised per the previously listed clarifications in this Addendum 06.

Question: Question 35 on addendum 2 stated that bid item 6-11 Road Sign Assembly had the wrong unit of measure (shows SF but should be EA). The answer was that it should be EA. The unit has not been changed on either the Excel spread sheet or the Bid Item pdf file.

Answer: This bid item has been corrected and revised per the previously listed clarifications in this Addendum 06.

Question: The unit Pay Item D3 in the pay notes says it will be paid for by CY, but the unit of measure in the pay item schedule is in SY. Can you confirm if this quantity is in CY or SY?

Answer: The payment quantity is in square yards for this bid item. This bid item has been corrected and revised per the previously listed clarifications in this Addendum 06.

BRIARWOOD AVENUE
GENERAL NOTES:

The technical specifications adopted by the Texas Department of Transportation (TxDOT) November 1, 2014, and titled "Standard Specifications for Construction and Maintenance of Highways, Streets and Bridges" shall govern this project, except where superseded in the Plans and Contract Documents. This specification book may be purchased from the TxDOT or downloaded at:
http://www.txdot.gov/business/resources/txdot-specifications.html

For this project, any reference within the specification book to "Department," "Engineer," or "Owner" should be interpreted as the City of Midland Engineering staff, or their representatives.

General

All Bearings, Dimensions, and Topographic features shown in this Construction Drawing set are related the Texas State Plane Coordinate System, Texas Central Zone, North American Datum 1983. All elevations are related to North American Vertical Datum 1988.

Any issues, conflicts, or discrepancies encountered during construction that conflict with this Construction Drawing set shall be brought to the attention of the Engineer prior to making any design changes in the field.

Repair damage to the Right of Way to the satisfaction of the Owner. Restore all disturbed areas due to trenching or any construction activity to a condition equivalent to the original condition within 14 working days from the time work began in the area including all necessary seeding.

Coordinate street closures with the local fire, police, other emergency personnel, and transportation.

Maintain access to adjacent property at all times.

Notify, in writing, each residence and business 7 days prior to beginning construction of the phase/phases that are expected to affect their ingress and egress or any planned interruptions. This notice may be hand delivered or mailed.

OSHA requirements and all other applicable Federal, State, or City of Midland safety requirements shall be followed and complied with at all times.

Provide a lidded dumpster to be used by Contractor's personnel on the job site. This shall be considered subsidiary to the various bid items.

Dispose of all waste materials in compliance with local, state, and federal regulations.

Do not begin work before 7:00 A.M. or end work after 7:00 P.M. unless authorized by the Engineer and remove all equipment from the roadway prior to end of workday.

Perform any erosion control measures such as seeding or sodding before beginning the next phase, unless otherwise authorized by the Engineer.

All demolition dimensions are approximate based on the most reliable data available. Contractor shall field verify actual dimensions and notify Engineer of quantity increase or discrepancies.

Contractor shall notify Engineer of any conflicts or discrepancies before removal of any items not noted in Construction Drawings.

Hot Mix Basis of Estimate

ITEM	DESCRIPTION	*RATE (approx.)
3076	Dense-Graded HMA (TY C) (PG64-22)	345 LBS/SY
3076	Dense-Graded HMA (TY D) (PG70-22)	230 LBS/SY
508	HMAC for detour (TY B)	690 LBS/SY

*Actual rates will be determined by Engineer in Field

Surface Treatment Basis of Estimate

DESCRIPTION	PRIME	QCST
ASPH TYPE & GRADE	MC-30	CRS-1P OR CRS-2P (COOL) AC-20-5TR (WARM)
ASPH RATE (GAL/SY)	0.20	0.42
AGGR TYPE		PB
AGGR GRADE		4
AGGR RATE (CY/SY)		1/100

Utilities
Overhead and underground utility installations do exist within the project limits. Surface features, such as manholes and valve boxes, were identified in the topographic survey and may be used as an approximate location of where some utilities exist. Some utilities were potholed and are identified on the plans. These identified features should not be considered a thorough or exact marking of all existing utilities. The Contractor is responsible for following all location services protocol and for repairing any damages to utilities caused by the Contractor.

Contractor is to take all necessary precautions to protect all existing facilities that are encountered regardless of whether they appear in this Construction Drawing set.

All new or existing valve, manholes, and meter covers must be adjusted to finished grade regardless of whether the surface is paved or unpaved. Concrete collars shall be placed around all public infrastructure utility covers.

Item 100 – Preparing Right Of Way
Sprinkler systems shall be cut at the right-of-way line and restored to operating conditions using a licensed irrigator. Payment for this work shall be considered subsidiary.

Fence and gate removal not specifically identified on the Plans as a pay item shall be subsidiary to Preparing Right Of Way. Fence and gate materials shown to be removed shall be neatly stockpiled at a location designated by the landowner.

Item 105 – Removing Stabilized Treated and Untreated Base and Asphalt Pavement
Store salvaged material in stockpile(s), location(s) as directed by the Engineer.

All saw-cuts for pavement removal shall be cut in clean, straight lines.

Item 110 – Excavation
Broom the existing base or subgrade to remove any loose material dropped during excavation operations. This work is considered subsidiary to this item.

Item 160 - Topsoil
Salvage, windrow and stockpile topsoil from existing areas within the ROW. Maximum salvage depth is 6 inches, unless approved by the Engineer. Place a 6-inch layer of loosely compacted Topsoil in areas

Parkhill

GENERAL NOTES
SHEET 1 OF 5

003

designated on the plans. An adequate quantity of topsoil is available within the project limits. Payment for topsoil work is included in the embankment quantities and no separate payment will be made for this work.

If additional topsoil is determined to be required, provide material of equal quality to achieve a 6-inch minimum thickness throughout. The topsoil and its source will be approved by the Engineer.

Contractor may use stockpiled topsoil for areas where drainage dikes are called in Construction Drawings.

Item 164 – Seeding For Erosion Control
Provide seed according to Table 2 for the Odessa District, urban seed mix for sandy soils. Furnish seed tags from the seed supplier to the Engineer for verification of quantity and type. Submit an available substitution to the Engineer, for approval, if a grass variety is not available.

Notify the Engineer of scheduled seeding operations 24 hours prior to seeding applications. Do not begin seeding operations until the Engineer has approved seedbed preparations. Locate and flag all irrigation heads, valve covers, utility facility covers, etc. prior to commencing seed application operations.

Drill seed according to specifications. Use a pasture or rangeland type drill seed. Mulch is not required.

Do not disturb or drive on newly seeded areas. Repair any damage to the seeded areas to the satisfaction of the Engineer.

Revegetate all areas and surfaces disturbed by any construction activity outside of paved or other impervious areas.

Item 169 – Vegetative Watering
Water newly seeded grass areas evenly with a minimum of two-tenths (2/10) of an inch per day for 15 consecutive days or until 70% coverage has been achieved
Water from a tanked, spray-equipped vehicle capable of spraying water to all areas without driving of trailering the vehicle on said areas.

Vegetative Watering will not be paid for separately and will be considered subsidiary to Item 164.

Item 216 – Proof Rolling
Provide a 25-ton roller, or other equipment approved by the Engineer for proof rolling. Proof Roll all subgrade in the presence of the engineer, or as directed, prior to acceptance.

All subgrade and base courses shall be Proof Rolled in accordance with City of Midland Standards. No separate payment will be made for proof rolling.

Item 247 – Flexible Base
Use Flexible Base Ty A or B, Grade 4, with a minimum Plasticity Index of 6.

No salvaged base may be reused in the construction of new base but may be incorporated into the subgrade or embankment.

Item 302 – Aggregates for Surface Treatments
Use a Grade 4, Surface Aggregate Class B aggregate. Use an unmodified asphalt with a minimum performance grade of 64-16 (PG 64-16) or better for aggregate pre-coating. Precoat aggregate with 1.0 percent by weight of asphalt.

Use a liquid asphalt anti-stripping agent of a type and at a rate approved by the Engineer. The use of flux oil is not permitted.

Cure precoated aggregate a minimum of 72 hours before applying the aggregate to the roadway surface.

Item 310 – Prime Coat
Apply an MC-30 or AE-P prime coat to all finished treated base, new flexible base and salvage base due to receive asphaltic concrete pavement or surface treatments. Remove all loose and scabbed material from the surface prior to prime coat application.

Allow prime coat to penetrate and dry for a minimum of 72 hours before placing any asphaltic material on the primed surface, unless otherwise authorized by the Engineer.

Item 316 – Seal Coat
AC-20-5TR will be used during warm weather placement. CRS-1P or CRS-2P will be used for cool weather placement as directed by the Engineer.

Use medium pneumatic tire rollers, as directed by the Engineer. Do not use flat wheel rollers.

Item 341 – Dense-Graded Hot-Mix Asphalt
Binder:
Provide a binder with a Performance Grade of 64-22 (PG 64-22) for the Type C subsurface course.

Provide a binder with a Performance Grade of 70-22 (PG 70-22) for the Type D surface course.

Aggregate quality:
Provide coarse aggregate for all surface hotmix and overlays meeting a minimum Surface Aggregate Classification (SAC) of **B** as published in TxDOT's *AGGREGATE QUALITY MONITORING PROGRAM RATED SOURCE QUALITY CATALOG*.

Mixture design:
The target laboratory molded density for mix will be 96.5 percent.

Test method Tex-530-C (Boil Test) will not be required.

Placement:
Semi-trailer type vehicles are prohibited from dumping directly into the finishing machine for the finished surface unless the trailer is equipped with an auger slatted chain or another approved conveyor.

No RAP will be allowed.

No RAS will be allowed.

Mineral filler will not be allowed.

Lime will not be allowed as an anti-stripping agent.

Provide trackless asphalt for tack coat at a rate of 0.10-0.13 gal/sy. Adjustments to the rate may be made in the field at the direction of the engineer. Apply tack coat uniformly to all intermediate asphalt pavement surfaces and all joints, including cold joints with mats previously laid and joints adjacent to concrete pavements.

Item 400 – Excavation and Backfill for Structures
Structural Excavation is subsidiary to the structures being installed. Where flowable fill is chosen to be used as backfill material by the Contractor's and for the Contractor's convenience, no additional payment will be made.

Construct fill over structures to plan grade before hauling with heavy equipment over structures.

Compact backfill used for structures, other than flowable backfill, to a minimum density of 95 percent. Use a template to secure reasonably accurate Class C shaping of the foundation material outside of cement stabilized areas.

SHEET 2 OF 5

003a

Contact the utility company and properly secure the utility poles prior to excavating next to the utility poles. The work and material used to secure the utility poles are subsidiary to the pertinent items.
All trenching and backfill is subsidiary to the various culvert and headwall items.

Item 421 – Hydraulic Cement Concrete
All concrete shall be Class "C" (3600 psi) and maintain fiber reinforcement throughout, in addition to any steel reinforcement shown.

Use polypropylene fiber reinforcing at a minimum rate of 3 lbs/cy.

Furnish mix designs to the Engineer at least 48 hours prior to placing concrete. Provide an approved Private Laboratory Contractor to perform the needed concrete testing for mix design approval.

Fly ash will not be allowed in any mix design.

Engineer will provide quality assurance testing.

Provide air entrainment in all concrete except for concrete used in precast concrete members. Target an entrained air content of 4.0% for concrete pavement and 5.5% for all other concrete requiring air entrainment. Ensure the minimum entrained air content is at least 3.0% for all classes of concrete.

Place concrete pavement within 45 minutes of batching and use vibratory equipment to consolidate concrete. Do not use vibratory equipment to distribute concrete pavement. Segregated concrete is subject to rejection.

For this project, consider all concrete for culverts, culvert extensions, headwalls and wingwalls to be non-structural concrete.

All concrete pavement joints shall be sealed in compliances with City of Midland standards. This requirement does not apply to pedestrian access ramps, sidewalk, or curb joints.

Item 432 – Riprap
Provide 5-inch-thick concrete riprap, unless otherwise indicated in the plans.

In large areas of riprap, provide one-half (1/2)-inch thick expansion joint material at approximately 15-foot intervals, or as directed by the Engineer.

Use City of Midland approved expansion joint material and place between the proposed riprap and curb and gutter.

Reinforce all riprap on this project with No. 3 bars spaced 12 inches O.C.B.W. or No. 4 bars spaced at 18 inches O.C.B.W.

Broom-finish all riprap on this project unless otherwise directed.

In addition to reinforcing steel, polypropylene fiber is required at a rate of 3 lbs./cy. Polypropylene fiber may not be used in lieu of reinforcing steel.

Items 462 and 464 – Concrete Box Culvert and Reinforced Concrete Pipe
Join all concrete culverts with a cold-applied plastic joint gasket such as RAM-NEK or approved equal.

Maintain trench protection to protect Owner's representatives, inspectors, and Contractors during testing operations.

OSHA approved trench safety systems are required for all trenches 5.0' deep or greater.

All trenching and backfill is subsidiary to the various culvert and headwall items.

Item 466 – Headwalls and Wingwalls
Install reinforced concrete aprons on all headwalls and wingwalls, using reinforcing composed of #4 bars at 12-inch spacings, center-to-center, or as shown on the detail sheet.

Item 467 – Safety End Treatment
Provide shop drawings for pipe runners.

Item 479 – Adjusting Manholes and Inlets
Raise the manholes and water valves up to finished roadway elevation, matching the finish cross-slope.

Item 502 – Barricades, Signs and Traffic Handling
The work required for Item 502 will be paid for as a lump sum.

Prior to beginning construction, the Engineer shall approve the routing of traffic and sequence of work.

In addition to the Traffic Contro Plan (TCP) and the latest WZ standard plan sheets, install barricades and warning signs, as appropriate, to adequately warn motorists. Permanent signs may be installed when construction in an area is complete, anc they will not be in conflict with the traffic control plan for the remainder of the job.

This project has a regulatory work zone speed reduction within the project limits. The work zone speed limit is reduced from 60 mph to 35 mph. Placement of speed reduction zone signs shall comply with BC (3)-14. Speed resumption sign(s) is required atthe end of a speed reduction zone. Existing signs may remain in place durng the TCP period if they do not interfere with construction, and they do not conflict with the TCP plan.

Additional signs and barricades may be required, as directed by the Engineer, and shall be considered subsidiary to TCP.

Cover or remove any work zone signs when work or condition referenced is not occurring.

Do not place barricades, signs, or any other traffic control devices where they interfere with sight distance at driveways or side streets. Provide access to all driveways during all phases of construction, unless otherwise directed on the plans.

All locations used for storing construction equipment and materials of any type within the right of way shall be approved by the Engineer. Use of the Right-of-Way for these purposes will be restricted to those locations where driver sight distance to businesses and side street intersections is not obstructed, public safety is not risked and at other locations where an unsightly appearance, as determined by the Engineer, will not exist.

No work will be permitted to commence on the road before 7:00 A.M. and shall be arranged so that all machinery and/or equipment shall be away from the roadway near the Right-of-Way line after 7:00 P.M.

Remove any obstructions to existing drainage due to the Contractor's operations as required, at the Contractors expense.

Wash the channelizing devices and barricades following each rainfall or snowfall event and at times deemed necessary by the Engineer.

To ensure the safety and convenience of traffic, flaggers may be required when construction machinery is being operated along, across, or adjacent to lanes carrying traffic. If considered necessary by the Engineer, supplemental signs and barricades may be required.

Fill any holes left by barricade or sign supports and restore the area to its original condition.

Barricades, Signs and Traffic Handling is a plan quantity item. If time is suspended, no additiona compensation will be made.

No.	Description	Date

BRIARWOOD AVENUE
GENERAL NOTES
SHEET 3 OF 5

003b

Traffic switches will not be permitted on Fridays or any working day preceding a holiday unless authorized by the Engineer.

Construct temporary ramps to maintain access to driveways and city streets as directed by the Engineer. Temporary ramp construction is subsidiary to TCP, unless otherwise shown on the plans.

The Contractor shall bid on the traffic control plan shown in the plans. Any proposed alterations to the TCP (combining work areas / phasing / etc.) shall be submitted to the Engineer at least 10 days prior to anticipated changes.

Square tubing sign supports may be used for temporary construction signs. Aluminum and wood signs may be mounted if the vertical supports are embedded into the ground. Square tubing supports on skids which are typically held in place with sandbags can only support signs made of light weight fluted plastic.

Any trench or drop off over 2" will require a safety slope of at least 3:1 and can be constructed out of RAP, embankment or other material approved by the Engineer. The placement, maintenance, and removal are the responsibility of the Contractor and is subsidiary to the various items.

Item 506 – Temporary Erosion, Sedimentation, and Environmental Controls
All erosion control measures shown in plans and required by the Engineer, including installation and removal upon completion of construction activity, will not be paid for separately and will be included under Item 506 on a lump sum basis.

Install erosion control measures prior to beginning any construction activity on project site.

Contractor shall maintain erosion control measures at all times. Repairs to existing measures shall be made immediately upon discovery.

All erosion control measures shall be inspected immediately following any storm event. Implement additional erosion control measures during storm events as needed or directed by the Engineer.

Contractor is to maintain a reasonable clean project site at all times. Any sediment, debris, etc. outside project site area shall be removed promptly.
All stockpiles will be surrounded by silt fence or equivalent measures as approved by the Engineer to properly control sediment runoff.

Contractor shall provide a concrete washout device meeting City of Midland specifications for all concrete washout activities. Contractor may not use any other areas within the project site for concrete washout activities under any circumstance.

Contractor is required to mitigate any damages to adjacent property or to receiving waters caused by improperly installed or poorly maintained erosion control measures.

Item 508 – Constructing Detours
Any drainage pipe or SETs required for detours are subsidiary to this Item. The minimum pipe size is 18 inches.

Item 529 – Concrete Curb, Gutter and Combined Curb and Gutter
Place one-half (1/2)-inch of approved, pre-molded expansion joint material at 40-foot intervals and at the beginning and end of all radii. Place 3/25-inch grooved or sawed construction joints, as directed by the Engineer, spaced equally, with the spacing not to exceed ten feet and no less than two feet between joints.

All concrete fillets are to be placed monolithically with adjacent concrete curb.

Item 531 – Curb Ramps
The curb ramp locations shown in the plans have considered the geometric features of the intersection, traffic signals, and the pavement markings. When field conditions, such as lack of right of way width or obstructions require, the ramp may be relocated within the right of way with the approval of the Engineer. In any case, construct curb ramps in conformance with the Texas Accessibility Standards (TAS) and the Americans with Disabilities Act Accessibility Guicelines (ADAAG). All deficient ramps will be removed and replaced at the Contractor's expense.

Use polypropylene fiber reinforcing at a minimum rate of 3 lbs./cy in lieu of wire reinforcing.
Form tooled joints on each side of the fire-foot wide ramp section, and at each break in ramp slope or geometry, and at five-foot intervals as if it were sidewalk. Place asphalt expansion joint material between proposed ramps and existing concrete.

Place asphalt expansion joint material between proposed sidewalk and utility poles, guy wires, vent pipes, standpipes and as directed.

All curbs on curb ramps will not be paid for directly but are considered subsidiary to the various bid items.

Item 585 – Ride Quality for Pavement Surfaces
Use Surface Test Type A to evaluate ride quality of travel lanes in accordance with item 585, "Ride Quality for Pavement Surfaces".

Corrective action, when required, shall be diamond grinding, as approved and directed by the Engineer. No Bonus Pay Adjustments will be made for low IRI results.

This item will be considered subsidiary to the various items.

Item 618 – Conduit
Do not place boring pits closer than 2 feet from the edge of the pavement unless otherwise directed. Do not use water jetting. When boring is used for under pavement conduit installations, the maximum allowable over-cut is 1" in diameter. When conduits are bored, do not exceed 18 inches in the vertical and horizontal tolerances as measured from the intendd target point.

Do not use a pneumatically driven devce for punching holes beneath the pavement (commony known as a "missile").

Use a colored cleaner-primer on all PVC-to-PVC joints before application of PVC cement.

Seal all conduit ends with a permanently soft, non-toxic duct seal. Use a duct seal that does not adversely affect other plastic materials or corrode metals.

Furnish and install non-metallic pull ropes in conduit installed for future use and cap using standard weather-tight conduit caps, as approved.

The locations of conduit and ground boxes are diagrammatic only and may be shifted to accommodate field conditions as directed by the Engineer.

Item 620 – Electrical Conductors
Terminate all electrical conductors from the controller at the termination block in the traffic signal pole hand hole whether in use or not.

All wiring not covered by the plans anc specifications shall be in accordance with the National Electric Code (NEC).

When the specifications for electrical items require UL listed products, it will be construed to mean UL listed or CSA listed.

BRIARWOOD AVENUE
GENERAL NOTES
SHEET 4 OF 5

003c

Bond together any grounding conductors that share the same conduit, junction box, ground box, or structure, at every accessible point in accordance with the National Electrical Code (NEC).

Item 624 – Ground Boxes
Locations of ground boxes are approximate. Final locations will be as approved by Engineer. Provide an apron for ground boxes as shown on TxDOT Standard ED (4)-14.

Concrete removal required for installation of ground boxes will be subsidiary to Ground Boxes. Seal ground boxes with polyurethane foam that will not adversely affect other plastic materials or corrode metals (Froth-Pak 115 2.75 density 157833 or approved equal).

Item 644 – Small Roadside Sign Assemblies
All new sign supports for stop and yield signs will have a 12" red strip of Type C High Specific Intensity Reflective tape. Place the top of the tape 4' above the edge of the roadway. This work will not be paid for directly and will be subsidiary to the pertinent bid item.

For standard small sign details and dimensions, refer to the "Standard Highway Sign Designs for Texas (SHSD)"; a supplement to the Texas Manual on Uniform Traffic Control Devices (TMUTCD)".

Stake all sign locations, and receive approval from the Engineer, prior to sign placement.

Item 658 – Delineator and Object Marker Assemblies
Delineator and object marker assembly posts shall be composed of post-consumer recycled materials. Embedded stub shall be perforated square tubing.

Item 662 – Work Zone Pavement Markings
Materials used for non-removable work zone pavement markings will be paint and beads or other approved materials.

All removable work zone pavement markings placed on final surfaces shall consist of ceramic buttons and RPMs as shown on standard sheet BC (11). These shall be applied with a thermoplastic adhesive, unless otherwise directed by the Engineer. Buttons will be paid for by the linear foot of striping for which they represent.

Contractor is responsible for the removal of ceramic buttons, RPMs, and Adhesives as directed by the Engineer and before permanent striping is installed. Payment for this work will be paid for under Item 677.

Do not place guide markers on a finished surface unless they fall on a proposed lane line. Remove Stick-down markings prior to final marking. Remove tabs after the standard pavement markings have been placed.

The deviation rate in alignment shall not exceed one inch per 200 feet of roadway. The maximum deviation shall not exceed 2 inches, nor shall any deviation be abrupt. Striping not in conformance shall be removed and replaced at the Contractor's expense.

Item 666 – Reflectorized Pavement Markings
Type I markings shall meet the minimum retroreflectivity values defined by Article 4.4 Retroreflectivity Requirements.

Permanent pavement markings are to be thermoplastic in accordance with TxDOT Item 666 Type I specifications for long-line markings. Short-line and symbol markings will meet either TxDOT Item 666 Type I or Item 668 specifications.

Do not paint any pavement markings.

Item 677 – Eliminating Existing Pavement Markings and Markers
Submit eliminating plan for approval br the Engineer in accordance with Item 677.

Item 678 – Pavement Surface Preparation for Markings
Use dry sandblasting for pavement surface preparation for markings. This work will be considered subsidiary to the various items.

Item 734 – Litter Removal
Perform litter removal as necessary ard before mowing. This work will be considered subsidiary to the various items.

Item 738 – Cleaning and Sweeping
Clean and sweep existing pavements as necessary and as directed by the Engineer. This work will be considered subsidiary to the various items.

Item 6001 - Portable Changeable Message Sign
Provide solar powered changeable message boards for this project. Modify the message as directed by the Engineer.

PCMS shall be placed in operation a minimum of one (1) week prior to construction. Location(s) and duration for PCMS shall be as directed by the Engineer.

CONSTRUCTION SEQUENCE NARRATIVE

PHASE 1
1. INSTALL ADVANCED WARNING SIGNS. SEE ADVANCED WARNING LAYOUT AND BC SHEETS FOR DETAIL.
2. INSTALL EROSION CONTROL DEVICES.
3. SET BARRICADES AND TRAFFIC CONTROL DEVICES TO INSTALL TEMPORARY PAVEMENT. REFER TO TCP 2-1 FOR SHOULDER CLOSURE NOTES.
4. CONSTRUCT TEMPORARY PAVEMENT FROM STA 110+60 TO STA 138+70
5. RE-SET BARRICADES AND TRAFFIC CONTROL DEVICES TO PHASE 1 SET-UP. CONSTRUCT ALL UNDERGROUND UTILITIES AND DRAINAGE STRUCTURES TO HALF WIDTHS.
6. PERFORM PHASE 1 CONSTRUCTION OF ROADWAY
7. CATTLE GUARD RELOCATION AND FENCE MENDING. FROM STA+ 128+00 AND 129+00 TO STA 133+50

PHASE 2
1. INSTALL EROSION CONTROL DEVICES.
2. RE-SET BARRICADES AND TRAFFIC CONTROL DEVICES TO INSTALL TEMPORARY PAVEMENT. REFER TO TCP 2-1 FOR SHOULDER CLOSURE NOTES.
3. CONSTRUCT TEMPORARY PAVEMENT FROM STA 110+84 TO STA 114+38.56.
4. RE-SET BARRICADES AND TRAFFIC CONTROL DEVICES TO PHASE 2 SET-UP. CONSTRUCT ALL UNDERGROUND UTILITIES AND REMAINING DRAINAGE STRUCTURES.
5. PERFORM PHASE 2 CONSTRUCTION OF ROADWAY.

PHASE 3
1. RE-SET BARRICADES AND TRAFFIC CONTROL DEVICES TO PHASE 3 SET-UP.
2. DEMO EXISTING ROADWAY TO CONSTRUCT NEW MEDIAN FROM STA 194+90.07 TO STA 196+46.00
3. SAW-CUT AND DEMO SACRIFICIAL PAVEMENT CONSTRUCTED IN PHASE 1
4. PERFORM PHASE 3 MEDIAN CONSTRUCTION

PHASE 4
1. INSTALL 2" TYPE D HMAC PAVEMENT SURFACE OVER NEW CONSTRUCTION, STARTING WITH INSIDE LANES AND MEDIAN CROSSOVERS.
2. RE-SET BARRICADES AND TRAFFIC CONTROL DEVICES
3. INSTALL 2" TYPE D HMAC PAVEMENT SURFACE OUTSIDE LANES.
4. INSTALL ONE-COURSE SURFACE TREATMENT OVER TEMPORARY STRIPING FROM STA 194+90.07 TO STA 207+00.00.
5. MARK LANE LINES WITH TABS UNTIL APPROVAL FROM THE ENGINEER TO PLACE PERMANENT MARKINGS. PLACE PERMANENT MARKINGS USING MOBILE OPERATIONS. REFER TO TCP 3-3 FOR OPERATION NOTES.
6. REMOVE ALL TCP DEVICES AND PERFORM FINAL CLEANUP. REMOVE EROSION CONTROL DEVICES AFTER ENGINEER'S APPROVAL TO DO SO.

BARRICADE AND CONSTRUCTION (BC) STANDARD SHEETS GENERAL NOTES:

1. The Barricade and Construction Standard Sheets (BC sheets) are intended to show typical examples for placement of temporary traffic control devices, construction pavement markings, and typical work zone signs. The information contained in these sheets meet or exceed the requirements shown in the "Texas Manual on Uniform Traffic Control Devices" (TMUTCD).

2. The development and design of the Traffic Control Plan (TCP) is the responsibility of the Engineer.

3. The Contractor may propose changes to the TCP that are signed and sealed by a licensed professional engineer for approval. The Engineer may develop, sign and seal Contractor proposed changes.

4. The Contractor is responsible for installing and maintaining the traffic control devices as shown in the plans. The Contractor may not move or change the approximate location of any device without the approval of the Engineer.

5. Geometric design of lane shifts and detours should, when possible, meet the applicable design criteria contained in manuals such as the American Association of State Highway and Transportation Officials (AASHTO), "A Policy on Geometric Design of Highways and Streets," the TxDOT "Roadway Design Manual" or engineering judgment.

6. When projects abut, the Engineer(s) may omit the END ROAD WORK, TRAFFIC FINES DOUBLE, and other advance warning signs if the signing would be redundant and the work areas appear continuous to the motorists. If the adjacent project is completed first, the Contractor shall erect the necessary warning signs as shown on these sheets, the TCP sheets or as directed by the Engineer. The BEGIN ROAD WORK NEXT X MILES sign shall be revised to show appropriate work zone distance.

7. The Engineer may require duplicate warning signs on the median side of divided highways where median width will permit and traffic volumes justify the signing.

8. All signs shall be constructed in accordance with the details found in the "Standard Highway Sign Designs for Texas," latest edition. Sign details not shown in this manual shall be shown in the plans or the Engineer shall provide a detail to the Contractor before the sign is manufactured.

9. The temporary traffic control devices shown in the illustrations of the BC sheets are examples. As necessary, the Engineer will determine the most appropriate traffic control devices to be used.

10. Where highway construction or maintenance work is being undertaken, other than mobile operations as defined by the Texas Manual on Uniform Traffic Control Devices, CSJ limit signs are required. CSJ limit signs are shown on BC(2). The OBEY WARNING SIGNS STATE LAW sign, STAY ALERT TALK OR TEXT LATER and the WORK ZONE TRAFFIC FINES DOUBLE sign with plaque shall be erected in advance of the CSJ limits. The BEGIN ROAD WORK NEXT X MILES, CONTRACTOR and END ROAD WORK signs shall be erected at or near the CSJ limits. For mobile operations, CSJ limit signs are not required.

11. Traffic control devices should be in place only while work is actually in progress or a definite need exists.

12. The Engineer has the final decision on the location of all traffic control devices.

13. Inactive equipment and work vehicles, including workers' private vehicles must be parked away from travel lanes. They should be as close to the right-of-way line as possible, or located behind a barrier or guardrail, or as approved by the Engineer.

WORKER SAFETY NOTES:

1. Workers on foot who are exposed to traffic or to construction equipment within the right-of-way shall wear high-visibility safety apparel meeting the requirements of ISEA "American National Standard for High-Visibility Apparel," or equivalent revisions, and labeled as ANSI 107-2004 standard performance for Class 2 or 3 risk exposure. Class 3 garments should be considered for high traffic volume work areas or night time work.

2. Except in emergency situations, flagger stations shall be illuminated when flagging is used at night.

COMPLIANT WORKZONE TRAFFIC CONTROL DEVICES

1. Only pre-qualified products shall be used. The "Compliant Work Zone Traffic Control Devices List" (CWZTCD) describes pre-qualified products and their sources.

2. Work zone traffic control devices shall be compliant with the Manual for Assessing Safety Hardware (MASH).

SHEET 2 OF 12

TYPICAL APPLICATION OF WORK ZONE SPEED LIMIT SIGNS

Work zone speed limits shall be regulatory, established in accordance with the "Procedures for Establishing Speed Zones," and approved by the Texas Transportation Commission, or by City Ordinance when within incorporated City Limits.

Reduced speeds should only be posted in the vicinity of work activity and not throughout the entire project.
Regulatory work zone speed signs (R2-1) shall be removed or covered during periods when they are not needed.

GUIDANCE FOR USE:

LONG/INTERMEDIATE TERM WORK ZONE SPEED LIMITS

This type of work zone speed limit should be included on the design of the traffic controlplans when restricted geometrics with a lower design speed are present in the work zone and modification of the geometrics to a higher design speed is not feasible.

Long/intermediate Term Work Zone Speed Limit signs, when approved as described above, should be posted and visible to the motorist when work activity is present. Work activity may also be defined as a change in the roadway that requires a reduced speed for motorists to safely negotiate the work area, including:
- a) rough road or damaged pavement surface
- b) substantial alteration of roadway geometrics (diversions)
- c) construction detours
- d) grade
- e) width
- f) other conditions readily apparent to the driver

As long as any of these conditions exist, the work zone speed limit signs should remain in place.

SHORT TERM WORK ZONE SPEED LIMITS

This type of work zone speed limit may be included on the design of the traffic controlplans when workers or equipment are not behind concrete barrier, when work activity is within 10 feet of the traveled way or actually in the traveled way.

Short Term Work Zone Speed Limit signs should be posted and visible to the motorists only when work activity is present. When work activity is not present, signs shall be removed or covered.
(See Removing or Covering on BC(4)).

GENERAL NOTES

1. Regulatory work zone speed limits should be used only for sections of construction projects where speed controls of major importance.
2. Regulatory work zone speed limit signs shall be placed on supports at a 7 foot minimum mounting height.
3. Speed zone signs are illustrated for one direction of travel and are normally posted for each direction of travel.
4. Frequency of work zone speed limit signs should be:
   - 40 mph and greater — 0.2 to 2 miles
   - 35 mph and less — 0.2 to 1 mile
5. Regulatory speed limit signs shall have black legend and border on a white reflective background (See "Reflective Sheeting" on BC(4)).
6. Fabrication, erection and maintenance of the "ADVANCE SPEED LIMIT" (CW3-5) sign, "WORK ZONE" (G20-5aP) plaque and the "SPEED LIMIT" (R2-1) signs shall not be paid for directly, but shall be considered subsidiary to Item 502.
7. Turning signs from view, laying signs over or down will not be allowed, unless as otherwise noted under "REMOVING OR COVERING" on BC(4).
8. Techniques that may help reduce traffic speeds include but are not limited to:
   - A. Law enforcement.
   - B. Flagger stationed next to sign.
   - C. Portable changeable message sign (PCMS).
   - D. Low-power (drone)-radar transmitter.
   - E. Speed monitor trailers or signs.
9. Speeds shown on details above are for illustration only. Work Zone Speed Limits should only be posted as approved for each project.
10. For more specific guidance concerning the type of work, work zone conditions and factors impacting allowable regulatory construction speed zone reduction see TxDOT form #2014 in the TxDOT e-form system.

DATES CE(2)

TYPICAL MINIMUM CLEARANCES FOR LONG TERM AND INTERMEDIATE TERM SIGNS
ROAD WORK AHEAD
12' min.
6'-6"
7.0' min. 6.0' min.
Traveled way
Paved shoulder
6' or greater
2' minimum from curb
Curb
** 12' MAX
* When placing skid supports on unleveled ground, the leg post lengths must be adjusted so the sign appears straight and plumb. Objects shallNOT be placed under skids as a means of leveling.
** When plaques are placed on dual-leg supports, they should be attached to the upright nearest the travelway. Supplementaryplaques (advisory or distance) should not cover the surface of the parent sign.
ATTACHMENT FOR SIGN SUPPORTS
WORK ZONE TRAFFIC FINES DOUBLE WHEN WORKERS ARE PRESENT
Support shallnot protrude above sign
Support shallnot protrude above sign
Sign supports shall extend more than 1/2 way up the back of the sign substrate.
FRONT ELEVATION
Wood, metalor Fiber Reinforced Plastic
Splicing embedded perforated square metalshallg in order to extend post height allmay be allowed when the splice is made using four bolts,two above and two below the splice point.Splice must be located entirely behind the sign substrate,not near the base of the support.Splice insert lengths should be at least 5 times nominalpost size,centered on the splice and of at least the same gauge material.
OR
SIDE ELEVATION
Wood
Attachment to wooden supports willbe by bolts and nuts or screws.Use TxDOT's or manufacturer's recommended procedures for attaching sign substrates to other types of sign supports
Nails shallNOT be allowed. Each sign shallbe attached directly to the sign support. Multiple signs shallnot be joined or spliced by any means. Wood supports shallnot be extended or repaired by splicing or other means.
STOP/SLOW PADDLES
1.STOP/SLOW paddles are the primary method to controltraffic by flaggers.The STOP/SLOW paddle size should be 24" x 24".
2.STOP/SLOW paddles shallbe retroreflectorized when used at night.
3.STOP/SLOW paddles may be attached to a staff with a minimum length of 6' to the bottom of the sign.
4.Any Signs Incorporated into the STOP or SLOW paddle faces shallonly be as specifically described in Section 6E.03 Hand Signaling Devices in the TMUTD.
STOP

BACKGROUND | ORANGE | TYPE B, OR C, SHEETING
LEGEND & BORDER | WHITE | TYPE B OR C SHEETING
LEGEND & BORDER | BLACK | ACRYLIC NON-REFLECTIVE FILM
CONTRACTOR REQUIREMENTS FOR MAINTAINING PERMANENT SIGNS WITHIN THE PROJECT LIMITS
1. Permanent signs are used to give notice of traffic laws or regulations, call attention to conditions that are potentially hazardous to traffic operations, show route designations, destinations, directions, distances, services, points of interest,and other geographical,recreational,specific service GUIDE,or cultural activities. Drivers processing through a work zone need the same, if not better route guidance as normally installed on a roadway without construction.
2. When permanent regulatory or warning signs conflict with work zone conditions, remove or cover the permanent signs until the permanent sign message matches the roadway condition.For details for covering large guide signs see the TS-CD standard.
3. When existing permanent signs are moved and relocated due to construction purposes,they shallbe visible to motorists at all times.
4. If existing signs are to be relocated on their originalsupports, they shallbe installed on crashworthy bases as shown on the SMD Standard sheets. The signs shallmeet the required mounting heights shown on the BC Sheets or the SMD Standards. This work should be paid for under the appropriate pay item for relocating existing signs.
5. If permanent signs are to be removed and relocated using temporary supports, the Contractor shalluse crashworthy supports as shown on the BC standard sheets, MUTCD sheets, or the SMD standards. The signs shallmeet the required mounting heights shown in the BC or the SMD standard sheets during construction. This work should be paid for under the appropriate pay item for relocating existing signs.
6. Any sign or traffic controldevice that is struck or damaged by the Contractor's or other construction equipment shallbe replaced as soon as possible by the Contractor to ensure proper guidance for the motorists. This willbe subsidiary to Item 502.
GENERAL NOTES FOR WORK ZONE SIGNS
1. Contractor shallinstalland maintain signs in a straight and plumb condition and/or as directed by the Engineer.
2. Wooden sign posts shallbe painted white.
3. Barricades shallNOT be used as sign supports.
4. All signs shallbe installed in accordance with the plans or as directed by the Engineer. Signs shallbe used to regulate, warn, and guide the traveling public safely through the work zone.
5. The Contractor may furnish either the sign design shown in the plans or in the "Standard Highway Sign Designs for Texas" (SHSD). The Engineer/Inspector may require the Contractor to furnish their own sign layout that as shown in the TMUTCD but may have been omitted from the SHSD. Any sign design not specifically documented by written agreement between the Engineer and the Contractor's Responsible Person, Attorneys must be documented in writing before being implemented. This can include documenting the changes in the Inspector's TxDOT diary and having both the Inspector and Contractor Initialand date the agreed upon changes.
6. The Contractor shallfurnish sign supports listed in the "Compliant Work Zone Traffic ControlDevice List" (CWZTCD) for unattendable signs. Supports for temporary large mountable signs shallmeet the requirements detailed on the Temporary Large Mountable Signs (TLMS) standard sheets.The Contractor shallinstallthe sign supports in accordance with the manufacturer's recommendations. If there is a question regarding installation procedures,the Contractor shallprovide the Engineer a copy of the manufacturer's installation recommendations so that the Engineer can verify that the signs are being installed correctly.
7. It is the Contractor is responsible for installing signs on approved supports and replacing signs with damaged or cracked substrates and/or damaged or marred reflective sheeting as directed by the Engineer/Inspector.
8. Identification markings may be shown only on the back of the sign substrate. The maximum height of letters and/or company logos used for identification shallbe 1 inch.
9. The Contractor shallreplace damaged wood posts. New or damaged wood sign posts shallnot be spliced.
DURATION OF WORK (as defined by the "Texas Manualon Uniform Traffic ControlDevices" Part 6):
1. The types of sign supports,sign mounting heights,the size of signs,and the type of sign substrates can vary based on the type of work being performed. The Engineer is responsible for selecting the appropriate size sign for the type of work being performed. The Contractor is responsible for ensuring that the sign supports,mounting height and substrate meets manufacturer's recommendations in regard to crashworthiness and duration of work requirements.
a. Long-term stationary - work that occupies a location more than 3 days.
b. Intermediate-term stationary - work that occupies a location more than one daylight period up to 3 days,or nighttime work lasting more than one hour.
c. Short-term stationary - daytime work that occupies a location for more than 1 hour in a single daylight period.
d. Short duration - work that occupies a location up to 1 hour.
e. Mobile - work that moves continuously or intermittently (stopping for up to approximately 15 minutes)
SIGN MOUNTING HEIGHT:
1. The bottom of Long-termIntermediate-term signs shallbe at least 7 feet,but not more than 9 feet, above the paved surface,except as shown for Long-termIntermediate-term plaques mounted below other signs.
2. The bottom of Short-term/Short Duration signs shallbe a minimum of 1 foot above the pavement surface but no more than 2 feet above the ground.
3. Long-termIntermediate-term Signs may be used in lieu of Short-term/Short Duration signing.
4. Short-term/Short Duration signs shallbe removed during daylight and shallbe removed at the end of the workday or raised to appropriate Long-term/Intermediate sign height.
5. Regulatory signs shallbe mounted at least 7 feet,but not more than 9 feet,above the paved surface regardless of work duration.
SIZE OF SIGNS:
1. The Contractor shallfurnish the sign sizes shown on BC (1)unless otherwise shown in the plans or as directed by the Engineer.
SIGN SUBSTRATES
1. The Contractor shallensure the sign substrate is installed in accordance with the manufacturer's recommendations for the type of sign support that is being used.The CWZTCD lists each substrate that can be used on the different types and models of sign supports.
2. "Weak" type materials are NOT an approved sign substrate,regardless of the tightness of the wires.
3. All wooden individualsign panels fabricated from 2 or more pieces shallhave one or more plywood cleat,1/2" thick by 6" wide, fastened to the back of the sign and extending fully across the sign,The cleat shallbe attached to the back of the sign using wood screws that do not penetrate the face of the sign panel.The screws shallbe placed on both sides of the splice and spaced at 6" centers.The Engineer may approve other methods of splicing the sign face.
REFLECTIVE SHEETING:
1. All signs shallbe retroreflective and conspicuous at nightby means of sheeting meeting the color and retroreflectivity requirements of DMS-8300 Type B or Type C sheeting.The minimum sheeting requirements for various applications is shown on BC(1).
2. White sheeting meeting the requirements of DMS-8300 Type A shallbe used for signs with a white background.
3. Orange sheeting,meeting the requirements of DMS-8300 Type B or Type C, shallbe used for rigid signs with orange backgrounds.
SIGN LETTERS:
1. All sign letters and numbers shallbe clear,and open rounded type uppercase alphabet letters as approved by the FederalHighway Administration (FHWA) and as published in the "Standard Highway Sign Design for Texas" manual. Signs,letters and numbers shallbe of first class workmanship in accordance with Department Standards and Specifications.
REMOVING OR COVERING
1. When sign messages may be confusing or do not apply, the signs shallbe removed or completely covered.
2. Long-term stationary or intermediate stationary signs installed on square metalshallmay be turned away from traffic 90 degrees when the sign message is not applicable. This technique may not be used for signs installed in the median of divided highways or near any intersections where the sign may be seen from approaching traffic.
3. Signs installed on wooden skids shallnot be turned at 90 degree angles to the roadway. These signs should be removed or completely covered when not applicable.
4. When signs are covered, the materialused shallbe opaque, such as heavy mildew plastic,or other materials which willcover the entire sign face and maintain their opaque properties under automobile headlights at night, without damaging the sign sheeting.
5. Burlap shallNOT be used to cover signs.
6. Duct tape or other adhesive materialshallNOT be affixed to a sign face.
7. Signs and anchor holes shallbe removed and holes backfilled upon completion of work.
SIGN SUPPORT WEIGHTS
1. Where sign supports require the use of weights to keep from turning over,the use of sandbags with dry,cohesionless sand should be used.
2. The sandbags shallbe tied shut to keep the sand from spilling and to maintain a constant weight.
3. Rock,concrete,iron,steelor other solid objects shallnot be permitted for use as sign support weights.
4. Sandbags should weigh a minimum of 25 lbs and a maximum of 50 lbs.
5. Sandbags shallbe made of a tough,durable fabric such as burlap or canvas. Paper,Rubber bags or other fabrics shallNOT be used.
6. Rubber ballasts designed for channelizing devices should not be used for ballast on portable sign supports.Sign supports designed and manufactured with rubber bases may be used when shown on the SMD standards.
7. Sandbags shallbe placed on the skid and shallbe tied shut.Straps of the traffic controldevice and shallnot be suspended above ground level or hung with rope, wire, chains or other fasteners. Sandbags shallbe placed using the length of the skids to weigh down the sign support.
8. Sandbags shallnot be placed under the skid and shallnot be used to level sign supports placed on slopes.
FLAGS ON SIGNS
1. Flags may be used to draw attention to warning signs, when used, the flag shall be 16 inches square or larger and shallbe orange or fluorescent red-orange in color. Flags shallnot be allowed to cover any portion of the sign face.

WHEN NOT IN USE, REMOVE THE PCMS FROM THE RIGHT-OF-WAY OR PLACE THE PCMS BEHIND BARRIER OR GUARDRAIL WITH SIGN PANEL TURNED PARALLEL TO TRAFFIC

PORTABLE CHANGEABLE MESSAGE SIGNS

1. The Engineer/inspector shall approve all messages used on portable changeable message signs (PCMS).
2. Messages on PCMS should contain no more than 8 words (about four to eight characters per word), not including simple words such as "TO," "FOR," "AT," etc.
3. Messages should consist of a single phase, or two phases that alternate. Three-phase messages are not allowed. Each phase of the message should convey a single thought, and must be understood by itself.
4. Do not use "EXIT" to refer to an exit ramp on a freeway/ex... "EXIT CLOSED." Do not use the term "RAMP."
5. Always use the route or interstate designation (IH, US, SH, FM ... along with the number when referring to a roadway.
6. When in use, the bottom of a stationary PCMS message panel should be a minimum 7 feet above the roadway, where possible.
7. The message term "WEEKEND" should be used only if the work is to start on Saturday morning and end by Sunday evening at midnight. Otherwise, the days of the week should be specified. "FRI-SUN" is to begin on Friday evening and/or continue thru Monday morning.
8. The Engineer/inspector may select one of two options which are available for displaying a two-phase message on a PCMS. Each phase may be displayed for either four seconds each or for three seconds each.
9. Do not "flash" messages or words included in a message. The message should be steady burn or continuous while displayed.
10. Do not present redundant information on a two-phase message (i.e., keeping two lines of the message the same and changing the third line, such as "LANE CLOSED AHEAD" and "USE CAUTION").
11. Do not display the message "LANES SHIFT LEFT" or "LANES SHIFT RIGHT" on a PCMS. Drivers do not understand the message.
12. Do not display messages that scroll vertically or vertically across the face of the sign.
13. Do not display messages that scroll horizontally or vertically across the face of the sign.
14. The following table lists abbreviated words and two-word phrases that are acceptable for use on a PCMS. Both words in a phrase must be displayed together. Words or phrases not on this list should not be abbreviated, unless shown in the applicable MUTCD.
15. Characters displayed on a PCMS must be at least 18 inches for trailer mounted units. They should be visible from at least 1/2 US-mile and the text should be legible from at least 600 feet at night and 800 feet in daylight. Truck mounted units must have a character height of 10 inches and must be legible from at least 400 feet.
16. Care must be exercised to centered on the message board rather than left or right justified.
17. If desired, the PCMS should default to an illegible display that will not alarm motorists and will only be used to alert workers that the PCMS has malfunctioned. A pattern such as a series of horizontal solidus (/) bars is appropriate.

REDUCE SPEED XXX FT		DRIVE WITH CARE	NEXT TUE AUG XX
USE OTHER ROUTES			TONIGHT XX PM- XX AM
STAY IN LANE *			

** See Application Guidelines Note 6.

APPLICATION GUIDELINES

1. Only Tier 2 phases are to be used on a PCMS.
2. A Tier 2 phase can be selected from the "Road/Lane/Ramp Closure List" and the "Other Condition List".
3. A 2nd phase can be selected from the "Action to Take/Effect on Travel, Location, General Warning, or Advance Notice Phase Lists".
4. A Location phase is necessary only if a distance or location is involved in the first phase selected.
5. If two PCMS are used in sequence, they must be separated by a minimum of 1000 ft. Each PCMS phase limited to two phases, and should be understandable by themselves.
6. For advance notice, when the current date is within seven days of the actual work date, calendar days should be replaced with days of the week. Advance notification should typically be for no more than one week prior to the work.

WORDING ALTERNATIVES

1. The words RIGHT, LEFT and ALL can be interchanged as appropriate.
2. Abbreviations IH, US, SH, FM and LP can be interchanged as appropriate.
3. EAST, WEST, NORTH and SOUTH for abbreviations E, W, N and S can be interchanged as appropriate.
4. Highway names and numbers replaced as appropriate.
5. ROAD, HIGHWAY and FREEWAY can be interchanged as needed.
6. AM, PM may be used instead of distances if necessary.
7. MILE, MILES, FEET and FT can be interchanged as appropriate.
8. AT, BEFORE and PAST interchanged as needed.
9. Distances or AHEAD can be eliminated from the message if a location phase is used.

PCMS SIGNS WITHIN THE R.O.W. SHALL BE BEHIND GUARDRAIL OR CONCRETE BARRIER OR SHALL HAVE A MINIMUM OF FOUR (4) PLASTIC DRUMS PLACED PERPENDICULAR TO TRAFFIC ON THE UPSTREAM SIDE OF THE PCMS, WHEN EXPOSED TO ONE DIRECTION OF TRAFFIC, WHEN EXPOSED TO TWO WAY TRAFFIC, THE FOUR DRUMS SHOULD BE PLACED WITH ONE DRUM AT EACH OF THE FOUR CORNERS OF THE UNIT.

FULL MATRIX PCMS SIGNS

1. When FullMatrix PCMS signs are used, the character height and legibility/visibility requirements shall be maintained as listed in Note 15 under "PORTABLE CHANGEABLE MESSAGE SIGNS" above.
2. When symbol signs, such as the "Trigger Symbol" (D620-T) are represented graphically on the FullMatrix PCMS sign and, with the approval of the Engineer, it shall maintain the legibility/visibility requirement listed above.
3. When symbol signs are represented graphically on the FullMatrix PCMS, they shall only supplement the use of the static sign represented, and shall not substitute for the static sign.
4. A FullMatrix PCMS may be used to simulate a flashing arrow board provided it meets the visibility, flash rate and dimming requirements on BC(7), for the same size arrow.

DISCLAIMER:
The use of this standard is governed by the "Texas Engineering Practice Act". No warranty of any kind is made by the Texas Department of Transportation for any purpose whatsoever. The Texas Department of Transportation assumes no responsibility for the incorrect results or damages resulting from its use.

REVISIONS				
9-07 8-14	DIST	COUNTY		SHEET NO.
7-13 5-21				0415

1. Barrier Reflectors shall be yellow and conform to the color and
2. Color of Barrier Reflectors shall be as specified in the TMUTCD. The
CONCRETE TRAFFIC BARRIER (CTB)
3. Where traffic is on one side of the CTB, two (2) Barrier Reflectors
4. Where CTB separates two-way traffic, three barrier reflectors shall be
5. When CTB separates traffic traveling in the same direction, no barrier
6. Barrier Reflector units shall be yellow or white in color to match
7. Maximum spacing of Barrier Reflectors is forty (40) feet.
8. Maximum spacing of Barrier Reflector Double-reflective roadway marker tabs
9. Attachment of Barrier Reflectors to CTB shall be per manufacturer's
10. Missing or damaged Barrier Reflectors shall be replaced as directed
11. Single slope barriers shall be delineated as shown on the above detail.
Barrier Reflector on 10" tubular bracket
Barrier Reflectors
Max. spacing of barrier reflectors is 20 feet. Attach the delineators as per manufacturer's recommendations.
LOW PROFILE CONCRETE BARRIER (LPCB)
LOW PROFILE CONCRETE BARRIER (LPCB) USED IN WORK ZONES
LPCB is approved for use in work zone locations, where the posted speed is 45mph, or less. See Roadway Standard Sheet LPCB.
See D & OM (VIII)
Install a minimum of 3 Barrier Reflectors as per manufacturer's recommendations.
DELINEATION OF END TREATMENTS
END TREATMENTS FOR CTB'S USED IN WORK ZONES
End treatments used on CTB's in work zones shall meet the appropriate crashworthy standards as defined in the Manual for Assessing Safety Hardware (MASH), Refer to the CMJTCD List for approved end treatments and manufacturers.
BARRIER REFLECTORS FOR CONCRETE TRAFFIC BARRIER AND ATTENUATORS
Type C Warning Light or approved substitute mounted on a drum adjacent to the travelway.
Warning reflector may be round or square,that have a yellow retroflective surface area of at least 30 square inches
WARNING LIGHTS
1. Warning lights shall meet the requirements of the TMUTCD.
2. Warning lights shall NOT be installed on barricades.
3. Type A Low Intensity Flashing Warning Lights are commonly used with drums. They are intended to warn of or mark a potentially hazardous
4. Type C and Type D 360 degree Steady Burn Lights are intended to be used in a series for delineation to supplement other traffic control
5. The Engineer/Inspector or the plans shall specify the location and type of warning lights to be installed on the traffic control devices.
6. When required by the Engineer, the Contractor shall furnish a copy of the warning lights certification. The warning light manufacturer will certify the warning lights meet the requirements of the latest ITE Purchase Specifications for Flashing and Steady-Burn Warning Lights.
7. When used to delineate curves, Type C and Type D Steady Burn Lights should only be placed on the outside of the curve, not the inside.
8. The location of warning lights and warning reflectors on drums shall be as shown elsewhere in the plans.
WARNING LIGHTS MOUNTED ON PLASTIC DRUMS
1. Type A flashing warning lights are intended to warn drivers that they are approaching or are in a potentially hazardous area.
2. Type A random flashing warning lights are not intended for delineation and shall not be used in a series.
3. A series of sequential flashing warning lights placed on channelizing devices in turns or merging taper may be used for delineation, if used, the flash rate of adjacent lights shall be sufficiently different from the flash rate of the lights in the adjacent taper or of the merging taper to
order to identify the desired vehicle path. The rate of flashing for each light shall be 45 flashes per minute, plus or minus 11 flashes.
4. Type C and D steady-burn warning lights are intended to be used in a series to delineate the edge of the travelway on detours, on lane
5. Type A, Type C and Type D warning lights shall be installed at locations as detailed on other sheets in the plans.
6. Warning lights shall not be installed on a drum that has a sign, chevron or vertical panel.
7. The maximum spacing for warning lights on drums should be identical to the channelizing device spacing.
WARNING REFLECTORS MOUNTED ON PLASTIC DRUMS AS A SUBSTITUTE FOR TYPE C STEADY BURN WARNING LIGHTS
1. A warning reflector or approved substitute may be mounted on a plastic drum as a substitute for a Type C steady burn warning light at the discretion of the Contractor unless otherwise noted in the plans.
2. The warning reflector shall be yellow in color and shall be manufactured using a sign substrate approved for use with plastic drums listed on the CMJTCD.
3. The warning reflector shall have a minimum retroreflective surface area (one-sided) of 30 square inches.
4. Square reflectors shall be fully retroreflected, including the area where attached to the drum.
5. Square reflectors must have a minimum of 30 square inches of retroreflected sheeting. They do not have to be retroreflected where it attaches to the drum.
6. The side of the warning reflector facing approaching traffic shall have sheeting meeting the color and retroreflectivity requirements for DMS 8300-Type B or Type C.
7. When used near two-way traffic, both sides of the warning reflector shall be retroreflected.
8. The warning reflector should be mounted on the side of the handle nearest approaching traffic.
9. The maximum spacing for warning reflectors should be identical to the channelizing device spacing requirements.
Arrow Boards may be located behind channelizing devices in place for a shoulder taper or merging taper, otherwise they shall be delineated with four (4) channelizing devices placed perpendicular to traffic on the upstream side of traffic.
1. The Flashing Arrow Board should be used for offline closures on multi-lane roadways, or slow moving maintenance or construction activities on the travelanes.
2. Flashing Arrow Boards should not be used on two-lane, two-way roadways, detours, diversions or work on shoulders unless the "CAUTION" display (see detail below) is used.
3. The Engineer/Inspector shall choose all appropriate signs, barricades and/or other traffic control devices that should be used in conjunction with the Flashing Arrow Board.
4. The Flashing Arrow Board should be able to display the following symbols:
4 CORNER CAUTION
OR
ALTERNATING DIAMOND CAUTION
DOUBLE ARROW
RIGHT/LEFT ARROW Right arrow shown; left is similar
RIGHT/LEFT SEQUENTIAL CHEVRON Right chevron shown; left is similar
5. The "CAUTION" display consists of four corner lamps flashing simultaneously, or the Alternating Diamond Caution mode, as shown.
6. The straight line caution display is NOT ALLOWED.
7. The Flashing Arrow Board shall be capable of minimum 50 percent dimming from rated lamp voltage. The flashing rate of the lamps shall not be less than 25 nor more than 40 flashes per minute.
8. Minimum lamp "on time" shall be approximately 50 percent for the flashing arrow and equal intervals of 25 percent for each sequential phase of the flashing chevron.
9. The minimum size of the Arrow Board is 30" x 60".
10. The flashing arrow display is the TxDOT standard; however, the sequential chevron display may be used during daylight operations.
11. The Flashing Arrow Board shall be mounted on a vehicle, trailer or other suitable support.
12. A Flashing Arrow Board SHALL NOT BE USED to laterally shift traffic.
13. A Flashing Arrow Board may be used in a stationary mode, if provided it meets visibility, flash rate and dimming requirements on this sheet for the same size arrow.
14. Minimum mounting height of trailer mounted Arrow Boards should be 1 feet from roadway to bottom of panel.
REQUIREMENTS
TYPE | MINIMUM SIZE | MINIMUM NUMBER OF PANEL LAMPS | MINIMUM VISIBILITY DISTANCE
B | 30 x 60 | 13 | 3/4 mile
C | 48 x 96 | 15 | 1 mile
ATTENTION
Flashing Arrow Boards shall be equipped with automatic dimming devices.
WHEN NOT IN USE, REMOVE THE ARROW BOARD FROM THE RIGHT-OF-WAY OR PLACE IT BEHIND A BARRIER OR CONCRETE TRAFFIC BARRIER OR GUARDRAIL.
FLASHING ARROW BOARDS
TRUCK-MOUNTED ATTENUATORS
1. Truck mounted attenuators (TMA) used on TxDOT facilities must meet the requirements outlined in the Manual for Assessing Safety Hardware (MASH).
2. Refer to the CMJTCD for the requirements of Level 2 or Level 3 TMAs.
3. Refer to the CMJTCD for a list of approved TMAs.
4. TMAs shall be placed on freeways unless otherwise noted in the plans.
5. A TMA should be used anytime that it can be positioned 30 to 100 feet in advance of the area of crew exposure without adversely affecting the work performance.
6. The TMA should be positioned to protect the area from a work area is spread above the roadway and the work crew is an extended distance from the TMA.

DATES (REV.)

GENERAL NOTES

1. For long term stationary work zones on freeways, drums shall be used as the primary channelizing device.
2. For intermediate term stationary work zones on freeways, drums should be used as the primary channelizing device but may be replaced in tangent sections by vertical panels, or 42" two-piece cones. In tangent sections, one-piece cones may be used with the approval of the Engineer but only if personnel are present on the project at all times to maintain the cones in proper position and location.
3. For short term stationary work zones on freeways, drums are the preferred channelizing device but may be replaced in tapers, transitions and tangent sections by vertical panels, two-piece cones or one-piece cones as approved by the Engineer.
4. Drums and alternate items shall comply with the requirements of the current version of the "Texas Manual on Uniform Traffic Control Devices" (TMUTCD) and the "Compliant Work Zone Traffic Control Devices List" (CWZTCD).
5. Drums, bases, and related materials shall exhibit good workmanship and shall be free from objectionable marks or defects that would adversely affect their appearance or serviceability.
6. The Contractor shall have a maximum of 24 hours to replace any plastic drum that is damaged or unacceptable to the Engineer/Inspector. The replacement device must be an approved device.

GENERAL DESIGN REQUIREMENTS

Pre-qualified plastic drums shall meet the following requirements:

1. Plastic drums shall be a two-piece design; the "body" of the drum shall be the top portion and the "base" shall be the bottom.
2. The body and base shall latch together in such a manner that the body separates from the base when impacted by a vehicle traveling at a speed of 20 MPH or greater but prevents accidental separation due to normal handling and/or air turbulence created by passing vehicles.
3. Plastic drums shall be constructed of lightweight plastics, and shall not contain materials the Contractor considers non-recyclable or other place holders that will be removed prior to sign supports.
4. Drums shall present a profile that is a minimum of 18 inches in width at the 36 inch height when viewed from any direction. The height of drum unit body installed on base shall be a minimum of 36 inches and a maximum of 42 inches.
5. The top of the drum shall have a built-in handle for easy pickup and shall be designed to drain water and not collect debris. The handle shall have a minimum of two safety spaces 5/16 inch diameter holes to allow attachment of a warning light, warning reflector unit or approved compatible device.
6. The exterior of the drum body shall have a minimum of four alternating orange and white retroreflective circumferential stripes not less than 4 inches nor greater than 8 inches in width. Any non-reflectorized space between any two adjacent stripes shall not exceed 2 inches in width.
7. Bases shall have a maximum width of 36 inches, a maximum height of 4 inches, and a minimum of two footholds of sufficient size to allow base to be tied down while separating the drum body from the base.
8. Plastic drums shall be manufactured from virgin or recycled high-density polyethylene (HDPE) or other approved materials.
9. Drum body shall have a maximum unballasted weight of 11 lbs.
10. Drum and base shall be marked with manufacturer's name and model number.

RETROREFLECTIVE SHEETING

1. The stripes used on drums shall be constructed of sheeting meeting the color and retroreflectivity requirements of Departmental Materials Specification DMS-8300, "Sign Face Materials," Type A or Type B reflective sheeting shall be supplied unless otherwise specified in the plans.
2. The sheeting shall be suitable for use on and shall adhere to the drum surface for the life expectancy of the sheeting. The sheeting shall remain adhered in place and exhibit no delaminating, cracking, or loss of retroreflectivity other than that loss due to abrasion of the sheeting surface.

BALLAST

1. Unballasted bases shall be large enough to hold up to 50 lbs. of sand. The base, when filled with the ballast material, should weigh between 35 lbs minimum and 50 lbs maximum. The ballast may be sand in one to three sandbags separate from the base, sand in a sand-filled plastic base, or other ballasting devices as approved by the Engineer. Stacking of sandbags will be allowed, however height of sandbags above pavement surface may not exceed 12 inches.
2. Bases with built-in ballast shall weigh between 40 lbs. and 50 lbs. Built-in ballast can be constructed of an integral sound rubber base or other approved material.
3. Recycled truck tire sidewalls may be used for ballast on drums approved for this type of ballast on the CWZTCD list.
4. The ballast shall not be heavy objects, valet, or any material that would become hazardous to motorists, pedestrians, or workers when the drum is struck by a vehicle.
5. When used in regions susceptible to freezing, drums shall have drainage holes in the base to prevent water from collect and freeze becoming a hazard when struck by a vehicle.
6. Ballast shall not be placed on top of drums.
7. Adhesives may be used to secure base of drums to pavement.

DETECTABLE PEDESTRIAN BARRICADES

1. When existing pedestrian facilities are disrupted, closed, or relocated in a TTC zone, the temporary facilities shall be detectable and include accessibility features consistent with those existing prior to the disruption in accordance with Chapter 6 of NCHRP 672 for Pedestrian Control Requirements for Sidewalk Diversions, Sidewalk Detours and Crosswalk Closures.
2. Where pedestrians with visual disabilities normally use the closed sidewalk, a Detectable Pedestrian Barricade shall be placed at the entrance to each width of the closed sidewalk instead of a Type 3 Barricade.
3. Detectable pedestrian barricades similar to the one pictured above, longitudinal channelizing devices, some concrete barriers, and wood or chain link fencing with a continuous detectable edging can satisfactorily delineate a pedestrian path.
4. Tapes, ropes, or plastic chain strung between devices are not detectable, do not comply with the design standards in the "Americans with Disabilities Act Accessibility Guidelines (ADAAG)" and should not be used as a contractor pedestrian channelizer.
5. Warning lights shall not be attached to detectable pedestrian barricades.
6. Detectable pedestrian barricades should use 45° non-intersecting miter joints per BC(8)-21 provided that the rail has no splinters, burrs, or sharp edges.

16" x 24" Sign (Maximum Sign Dimension Chevron Can be Used on Crossing Traffic Lane Divider, Driveway sign D11b, Keep Right R4 series or other signs as approved by Engineer

12" x 24" Vertical Panel mount with diagonals sloping down towards travelway

Plywood, Aluminum or Metal sign substrates shall NOT be used on plastic drums

SIGNS, CHEVRONS, AND VERTICAL PANELS MOUNTED ON PLASTIC DRUMS

1. Signs used on plastic drums shall be manufactured using substrates listed on the CWZTCD.
2. Chevrons and other work zone signs with an orange background shall be manufactured with Type B or type C Orange, sheeting meeting the color and retroreflectivity requirements of DMS-8300, "Sign Face Materials," unless otherwise specified in the plans.
3. Vertical Panels shall be manufactured with orange and white sheeting meeting the requirements of DMS-8300 Type A or Type B. Diagonal stripes on Vertical Panels shall slope down toward the intended traveled lane.
4. Other sign messages (text or symbolic) may be used as approved by the Engineer. Sign dimensions shall not exceed 18 inches in width or 24 inches in height, except for the R8 series signs discussed in note 8 below.
5. Signs shall be installed using a 1/2 inch bolt (carriage) and nut, two washers, and one locking washer for each connection.
6. Mounting bolts and nuts shall be fully engaged and adequately torqued. Bolts should not extend more than 1/2 inch beyond nuts.
7. Chevrons may be placed on drums on the outside of curves, on merging tapers or on shifting tapers, when used in these locations, they may be placed on every drum or spaced not more than on every third drum. A minimum of three (3) should be used at each location called for in the plans.
8. R9-9, R9-10, R9-11 and R9-11b Sidewalk Closed signs which are 24 inches wide may be mounted on plastic drums, with approval of the Engineer.

SHEET 10 OF 12

WORK ZONE PAVEMENT MARKINGS

GENERAL

1. The Contractor shall be responsible for maintaining work zone and existing pavement markings, in accordance with the standard specifications and specifications, or attachments open to traffic within the CSJ limits unless otherwise stated in the plans.
2. Color, patterns and dimensions shall be in conformance with the "Texas Manual on Uniform Traffic Control Devices" (TMUTCD).
3. Additional supplemental pavement marking details may be found in the plans or specifications.
4. Pavement markings shall be installed in accordance with the TMUTCD and as shown on the plans.
5. When short term markings are required on the plans, short term markings shall conform with the TMUTCD, the plans and details as shown on the Standard Plan Sheet BC(STPM).
6. When standard pavement markings are not in place and the roadway is opened to traffic, DO NOT PASS signs shall be erected to mark the beginning of the sections where passing is prohibited and PASS with CARE signs at the beginning of sections where passing is permitted.
7. All work zone pavement markings shall be installed in accordance with Item 662, "Work Zone Pavement Markings."

RAISED PAVEMENT MARKERS

1. Raised pavement markers are to be placed according to the patterns on BC(1).
2. All raised pavement markers used for work zone markings shall meet the requirements of Item 672, "RAISED PAVEMENT MARKERS" and Departmental Material Specification DMS-4200 or DMS-4300.

PREFABRICATED PAVEMENT MARKINGS

1. Removable prefabricated pavement markings shall meet the requirements of DMS-8241.
2. Non-removable prefabricated pavement markings (thermo) shall meet the requirements of DMS-8240.

MAINTAINING WORK ZONE PAVEMENT MARKINGS

1. The Contractor will be responsible for maintaining work zone pavement markings within the work limits.
2. Work zone pavement markings shall be inspected in accordance with the frequency and reporting requirements of work zone traffic control device inspections as required by Form 1204.
3. The markings should provide a visible reference for a minimum distance of 300 feet during normal daylight hours and 100 feet when illuminated by automobile low-beam headlights at night, unless sight distance is restricted by roadway geometrics.
4. Markings failing to meet this criteria within the first 30 days after placement shall be replaced at the expense of the Contractor as per Specification Item 662.

REMOVAL OF PAVEMENT MARKINGS

1. Pavement markings that are no longer applicable, could create confusion or direct a motorist toward or into the closed portion of the roadway shall be removed or obliterated before the roadway is opened to traffic.
2. The above shall not apply to detours in place for less than three days, where flaggers and/or sufficient channelizing devices are used in lieu of markings to outline the detour route.
3. Pavement markings shall be removed to the fullest extent possible, so as not to leave a discernible marking. This shall be by any method approved by TxDOT Specification Item 677 for "Eliminating Existing Pavement Markings and Markers".
4. The removal of pavement markings may require resurfacing or seal coating portions of the roadway as described in Item 677.
5. Subject to the approval of the Engineer, any method that proves to be successful on a particular type pavement may be used.
6. Blast cleaning may be used but will not be required unless specifically shown in the plans.
7. Over-painting of the markings SHALL NOT BE permitted.
8. Removal of raised pavement markers shall be as directed by the Engineer.
9. Removal of existing pavement markings and markers within gore paid for directly in accordance with Item 677, "ELIMINATING EXISTING PAVEMENT MARKINGS AND MARKERS," unless otherwise stated in the plans.
10. Black-out marking tape may be used to cover conflicting existing markings for periods less than two weeks when approved by the Engineer.

Temporary Flexible-Reflective Roadway Marker Tabs

STAPLES OR NAILS SHALL NOT BE USED TO SECURE TEMPORARY FLEXIBLE-REFLECTIVE ROADWAY MARKER TABS TO THE PAVEMENT SURFACE

1. Temporary flexible-reflective roadway marker tabs used as guidemarks shall meet the requirements of DMS-8242.
2. Tabs detailed on this sheet are to be inspected and accepted by the Engineer or designated representative. Sampling and testing is not normally required, however at the option of the Engineer, either "A" or "B" below may be imposed to assure quality before placement on the roadway.
   A. Select five (5) or more tabs at random from each lot or shipment and submit to the Construction Division, Materials and Pavement Section to determine specification compliance.
   B. Select five (5) tabs and perform the following test. Affix five (5) tabs at 24 inch intervals on an asphaltic pavement in a straight line, using a medium size passenger vehicle or pickup, run over the markers with the front and rear tires at a speed of 25 to 40 miles per hour, four (4) times in each direction. No more than one (1) out of the five (5) reflective surfaces shall be lost or displaced as a result of this test.
3. Small design variances may be noted between tab manufacturers.
4. See Standard Sheet MTCP(PM) for tab placement on new pavements. See Standard Sheet TCP(T-1) for tab placement on seal coat work.

RAISED PAVEMENT MARKERS USED AS GUIDEMARKS

1. Raised pavement markers used as guidemarks shall be from the approved product list, and meet the requirements of DMS-4200.
2. All temporary construction raised pavement markers provided on a project shall be of the same manufacturer.
3. Adhesive for guidemarks shall be bituminous materials applied or butyl rubber pad for bituminous, or thermoplastic for concrete surfaces.

Guidemarks shall be designated as:
YELLOW - Two amber reflective surfaces with yellow body.
WHITE - Two silver reflective surface with white body.

DEPARTMENTAL MATERIAL SPECIFICATIONS

PAVEMENT MARKERS (REFLECTORIZED)	DMS-4200
TRAFFIC BUTTONS	DMS-4300
EPOXY AND ADHESIVES	DMS-6100
BITUMINOUS ADHESIVE FOR PAVEMENT MARKERS	DMS-6130
PERMANENT PREFABRICATED PAVEMENT MARKINGS	DMS-8240
TEMPORARY REMOVABLE, PREFABRICATED PAVEMENT MARKINGS	DMS-8241
TEMPORARY FLEXIBLE, REFLECTIVE ROADWAY MARKER TABS	DMS-8242

A list of prequalified reflective raised pavement markers, non-reflective traffic buttons, roadway marker tabs and other pavement markings can be found at the Materials Producer List web address shown on BC(1).

TABS ON CENTERLINES OF TWO-LANE TWO-WAY ROADS
For seal coat, micro-surface or similar operations
"DO NOT PASS" SIGN (R4-1) and NO-PASSING ZONES
A. Prior to the beginning of construction, all currently striped no-passing zones shall be signed with the DO NOT PASS (R4-1) signs and PASS with CARE (R4-2) signs placed at the beginning and end of each zone for each direction of travel except as otherwise provided herein. Signs marking these individual no-passing zones need not be covered prior to construction if the signs supplement the existing pavement markings.
B. At the discretion of the Engineer, in areas of numerous no-passing zones, several zones may be combined as a single zone. If passing is to be prohibited over one or more lengthy sections, a DO NOT PASS sign and a NEXT XX MILES (R20-1TP) plaque may be used at the beginning of such zones. The DO NOT PASS sign and the NEXT XX MILES plaque should be repeated every mile to the end of the no-passing zone. In areas where there is a considerable distance between passing zones, the end of the no-passing zone may be signed with a PASS WITH CARE sign and a NEXT XX MILES plaque.
C. Depending on traffic volumes and length of sections, it may be desirable to prohibit passing throughout the project to prevent damage to unstable soil and tights. The DO NOT PASS sign and NEXT XX MILES plaque should be used and repeated as often as necessary for this purpose. Where several existing zones are to be combined into one individual no-passing zone, the sign at the beginning of the zone should be removed until the surfacing operation has passed this location so as not to confuse the DO NOT PASS sign control with the existing pavement markings. Where several short no-passing zones are combined into one long zone of such combined zones, appropriate DO NOT PASS and PASS WITH CARE signs should be placed at the beginning and end of the no-passing zones where the surfacing operation has stopped for the day.
D. R4-1 and R4-2 are to remain in place until standard pavement markings are installed.
"NO CENTER LINE" SIGN (CW8-12)
A. Center line markings are yellow pavement markings that delineate the separation of travel lanes that have opposite directions of travel on a roadway. Divided highways do not typically have center line markings.
B. At the time construction activity obliterates the existing center line markings, low volume roads may not have an existing centerline, a NO CENTER LINE (CW8-12) sign should be erected at the beginning of the work area, at approximately 2 mile intervals within the work area, beyond major intersections and other locations deemed necessary by the Engineer.
C. The NO CENTER LINE signs are to remain in place until standard pavement markings are installed.
"LOOSE GRAVEL" SIGN (CW8-7)
A. When construction begins, a LOOSE GRAVEL (CW8-7) sign should be erected at each end of the work area and repeated at intervals of approximately 2 miles in rural areas and closer in urban areas.
B. The LOOSE GRAVEL signs are to remain in place until the condition no longer exists.
PAVEMENT MARKINGS
A. Temporary markings for surfacing projects shall be Temporary Flexible-retroactive Roadway Marker Tabs unless otherwise approved by the Engineer. Tabs are to be installed to provide true alignment for striping as soon as practicable as directed by the Engineer. Tabs will be placed at the spacing indicated. Tabs shall not be placed on the surface course more than two (2) days before the surfacing is applied. After the surfacing is rolled and swept, the cover over the retroactive strip shall be removed.
B. Tabs shall not be used to simulate edge lines.
C. Tab placement for overlay/inlay operations shall be as shown on the WZSTPM4 standard sheet.
COORDINATION OF SIGN LOCATIONS
A. The location of warning signs at the beginning and end of a work area are to be coordinated with other signing typically shown on the Barricade and Construction Standards for project limits to ensure adequate sign spacing.
B. Where possible the ROAD WORK AHEAD (CW20-1D), LOOSE GRAVEL (CW8-7), and NO CENTER LINE (CW8-12) signs should be placed in the sequence shown following the GREY WARNING SIGNS STATE LINE (R20-3T) and the TRAFFIC FINES DOUBLE (R20-5T) sign, and one "X" sign spacing prior to the CONTRACTOR (G20-6T) sign typically located at or near the limits of surfacing. LOOSE GRAVEL and NO CENTER LINE signs will then be repeated as described above.

GENERAL NOTES
1. The traffic control devices detailed on this sheet will be furnished and erected as directed by the Engineer on sections of roadway where tabs must be placed prior to the surfacing operation which will cover or obliterate the existing pavement markings.
2. The devices shown on this sheet are to be used to supplement those required by the BC Standards or others required elsewhere in the plans.
3. Signs shall be erected as detailed on the BC Standards. All signs shall conform to the Traffic Control Devices List (TCMTCD) or supports approved for Long-Term / Intermediate-Term Work Zone Sign Supports.
4. When surfacing operations take place on divided highways, freeways or expressways, the size of the required lateral construction warning signs shall be 48" x 48".
5. Signs on divided highways, freeways and expressways will be placed on both right and left sides of the roadway based on roadway conditions as directed by the Engineer.

TYPE 10

DIRECTIONAL RAMP WITHIN RADIUS

CURB RAMP NOTES:

1. ADJUST CURB RAMP LOCATION AND OR TYPE SO THAT NO OBSTRUCTION IS LOCATED WITHIN THE LANDING AREA.
2. ALL SLOPES ARE MAXIMUM ALLOWABLE. THE LEAST POSSIBLE SLOPE SHALL BE USED.
3. LANDINGS SHALL BE 5'X 5' MINIMUM WITH A MAXIMUM 2% SLOPE IN ANY DIRECTION. WHERE OBSTRUCTIONS EXIST, THERE SHALL BE A 3' MINIMUM CLEARANCE IN WIDTH AND LENGTH OF THE LANDING.
4. MANEUVERING SPACE AT THE BOTTOM OF CURB RAMPS SHALL BE A MINIMUM OF 4'X4' WHOLLY CONTAINED WITHIN THE CROSSWALK AND TO THE ENTIRE OUTSIDE OF THE PARALLEL VEHICULAR TRAVEL PATH.
5. MAXIMUM ALLOWABLE CROSS SLOPE ON SIDEWALK AND CURB RAMP SURFACES IS 2%.
6. CURB RAMPS WITH RETURNED CURBS MAY BE USED ONLY WHERE PEDESTRIANS WOULD NOT NORMALLY WALK ACROSS THE RAMP, EITHER BECAUSE THE ADJACENT SURFACE IS PLANTING OR OTHER NON-WALKING SURFACE OR BECAUSE THE SIDE APPROACH IS SUBSTANTIALLY OBSTRUCTED. OTHERWISE, PROVIDE FLARED SIDES.
7. ADDITIONAL INFORMATION ON CURB RAMP LOCATION, DESIGN, LIGHT REFLECTIVE VALUE AND TEXTURE MAY BE FOUND IN THE CURRENT EDITION OF THE TEXAS ACCESSIBILITY STANDARDS (TAS) AND 16 TAC 68.102.
8. AT INTERSECTIONS WHERE CROSSWALK MARKINGS ARE NOT REQUIRED, CURB RAMPS SHALL BE ALIGNED WITH THEORETICAL CROSSWALKS,OR AS DIRECTED BY THE ENGINEER.
9. PROVIDE A SMOOTH TRANSITION WHERE THE CURB RAMPS CONNECT TO THE STREET.
10. FLARE SLOPE SHALL NOT EXCEED 10% MEASURED ALONG CURB LINE.
11. ALL RAMPS AND LANDINGS WITH A CONCRETE SURFACE SHALL HAVE A COURSE BROOM FINISH OR OTHER ROUGH NON-SKID TYPE FINISH AS APPROVED BY THE ENGINEER.
12. PLACE 6"-0F CONCRETE IN RAMPS, LANDINGS, AND FLARES THAT ARE LOCATED AT THE RETURNS ADJACENT TO THE BACK OF CURB OF ARTERIAL STREETS AND COMMERCIAL SITES.

GENERAL NOTES:

1. CONCRETE TO BE CITY OF MIDLAND CLASS "A" WITH A MINIMUM28 DAY COMPRESSION STRENGTH OF 3000 PS. USE FIBER REINFORCED CONCRETE THROUGHOUT.
2. MATERIALS AND CONSTRUCTION METHODS TO CONFORM TO THE CITY OF MIDLAND STANDARDS AND SPECIFICATIONS UNLESS OTHERWISE DIRECTED BY ADA STANDARDS AND RESOURCES.

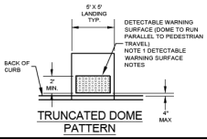
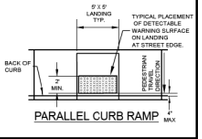
DETECTABLE WARNING SURFACE NOTES:



1. DETECTABLE WARNING SURFACE SUCH AS ARMOR-TILE ADA SOUND AMPLIFYING DETECTABLE/TACTILE WARNING SURFACE TILE OR EQUAL AND APPROVED BY THE ENGINEER AS MEETING ALL REQUIREMENTS OF ASTM C-936, C-33.
2. CURB RAMPS MUST CONTAIN A DETECTABLE WARNING SURFACE THAT CONSISTS OF RAISED TRUNCATED DOMES COMPLYING WITH SECTION 7.08 DETACHABLE WARNINGS OF THE TEXAS ACCESSIBILITY STANDARDS (TAS). THE SURFACE MUST CONTRAST VISUALLY WITH ADJOINING SURFACES, INCLUDING SIDE FLARES. FURNISH DARK BROWN OR DARK RED DETECTABLE WARNING SURFACE ADJACENT TO UNCOLORED CONCRETE,UNLESS SPECIFIED ELSEWHERE IN THE PLANS.
3. DETECTABLE WARNING SURFACES MUST BE SLIP RESISTANT AND NOT ALLOW WATER TO ACCUMULATE.
4. ALIGN TRUNCATED DOMES IN THE DIRECTION OF PEDES"RIAN TRAVEL WHEN ENTERING THE STREET.
5. SHADED AREAS INDICATE THE APPROXIMATE LOCATION FOR THE DETECTABLE WARNING SURFACE FOR EACH CURB RAMP TYPE.
6. DETECTABLE WARNING SURFACES SHALL BE A MINIMUM OF 24" IN DEPTH IN THE DIRECTION OF PEDESTRIAN TRAVEL.
7. DETECTABLE WARNING SURFACES SHALL BE LOCATED SO THAT THE EDGE NEAREST THE CURB LINE IS A MINIMUM OF 6" AND A MAXIMUM OF 15" FROM THE EXTENSION OF THE FACE OF CURB. DETECTABLE WARNING SURFACES MAY BE CURVED ALONG THE CORNER RADIUS.
8. SINGLE TILE PLATES COLONIAL RED COLOR.

GENERAL NOTES:



1. CONCRETE TO BE CITY OF MIDLAND CLASS "A" WITH A MINIMUM 28 DAY COMPRESSION STRENGTH OF 3000 PSI. USE FIBER REINFORCED CONCRETE THROUGHOUT.
2. MATERIALS AND CONSTRUCTION METHODS TO CONFORM TO THE CITY OF MIDLAND STANDARDS AND SPECIFICATIONS UNLESS OTHERWISE DIRECTED BY ADA STANDARDS AND RESOURCES.

(1) Round the wall heights shown to the nearest foot for bidding purposes.

(2) Concrete volume shown is for box culvert curb only. For curbs using the Box Culvert Rail Mounting Details (BCRM) standard sheet, the curb concrete is to be increased by a factor of 2.25. If Class S concrete is required for the top slab of the culvert, also provide Class S concrete for the curb. Curb concrete is considered part of the Box Culvert for payment.

(3) Concrete volume shown is total of wings, footings, culvert toewall (if any), anchor toewalls (if any) and wingwall toewalls. Riprap aprons, culverts, and curb quantities are not included.

(4) Regardless of the type of culvert shown on this sheet, the Contractor has the option of furnishing cast-in-place or precast culverts unless otherwise shown elsewhere on the plans. If the Contractor elects to furnish precast culverts of a different type than those shown on this sheet, it is the Contractor's responsibility to make the necessary adjustments to the dimensions and quantities shown.

NOTES:
Skew = 0° on SW-0, FW-0, SETB-CO, SETB-SW-0, and SETB-FW-0 standard sheets;
30° maximum for safety end treatment.

SL:1 = Horizontal : 1 Vertical
- Side slope at culvert for flared or straight wingwalls.
- Channel slope for parallel wingwalls.
- Slope must be 3:1 or flatter for safety end treatments.

T = Box culvert top slab thickness. Dimension can be found on the applicable box culvert standard sheet.

U = Box culvert wall thickness. Dimension can be found on the applicable box culvert standard sheet.

C = Curb height

See applicable wing or end treatment standard sheets for calculations of Hw, A, B, Lw, Ltw, Atw, and Total Wingwall Area.

Hw = Height of wingwall

A = Distance from face of curb to end of wingwall (not applicable to parallel or straight wingwalls)

B = Offset of end of wingwall (not applicable to parallel or straight wingwalls)

Lw = Length of longest wingwall.

Ltw = Length of culvert toewall (not applicable when using riprap apron)

Atw = Length of anchor toewall (applicable to safety end treatment only).
Total Wingwall Area = Wingwall area in sq. ft. for two wingwalls (one structure end) if Lt or Rt.
Area for four wingwalls (two structure ends) if Both.

GENERAL NOTES

1. PREPARE SOIL AND APPLY SEED MIXTURE AS SPECIFIED BEFORE INSTALLING PERMANENT TURF REINFORCEMENT MAT.
2. BEGIN AT TOP OF CHANNEL BY ANCHORING THE MAT IN A 12" DEEP X 6" WIDE DITCH WITH APPROXIMATELY 12" OF MAT EXTENDED BEYOND THE UP-SLOPE PORTION OF THE TRENCH. ANCHOR THE MAT WITH A ROW OF STAPLES APPROXIMATELY 12" APART IN THE BOTTOM OF THE TRENCH. BACKFILL AND COMPACT THE TRENCH AFTER STAPLING AND FOLD THE REMAINING 12" PORTION OF THE MAT BACK OVER COMPACTED SOIL AND SEED. SECURE THE MAT WITH A ROW OF STAPLES APPROXIMATELY 12" APART ACROSS THE WIDTH OF THE MAT.
3. ROLL CENTER MAT IN DIRECTION OF WATER FLOW IN BOTTOM CHANNEL. MAT WILL UNFOLD WITH APPROPRIATE SIDE AGAINST THE SOIL SURFACE. ALL MATS MUST BE SECURELY FASTENED TO SOIL SURFACE BY PLACING STAPLES IN APPROPRIATE LOCATIONS AS SHOWN IN THE CORRESPONDING TO THE APPROPRIATE STAPLE PATTERN.
4. PLACE CONSECUTIVE MATS END-OVER-END (SHINGLE STYLE) WITH A 4" - 6" OVERLAP. USE A DOUBLE ROW OF STAPLES STAGGERED 4" APART AND 4" ON CENTER TO SECURE MATS.
5. FULL LENGTH EDGE OF MATS AT TOP OF SIDE SLOPES MUST BE ANCHORED WITH A ROW OF STAPLES APPROXIMATELY 12" APART IN A 6" DEEP X 6" WIDE TRENCH. BACKFILL AND COMPACT TRENCH AFTER STAPLING.
6. ADJACENT MATS MUST BE OVERLAPPED APPROXIMATELY 2" - 5" AND STAPLED.
7. THE TERMINAL END OF THE MATS MUST BE ANCHORED WITH A ROW OF STAPLES APPROXIMATELY 12" APART IN A 6" DEEP BY 6" WIDE TRENCH. BACKFILL AND COMPACT TRENCH AFTER STAPLING.

Bridge Division Standard
134

0' Min to 5'-0" Max. Estimated curb heights are shown elsewhere in the plans. For structures with pedestrian rail on curbs taller than 1'-0", refer to the Extended Curb Details (ECD) standard sheet. For structures with T631 or T631LS bridge rail, refer to the Extended Curb Details (ECD) standard sheet. For structures with bridge rail other than T631 or T631LS, refer to the Rail Anchorage Curb (RAC) standard sheet for structures with bridge rail other than T631 or T631LS.

For vehicle safety, the following requirements must be met:
- For structures without bridge rail, construct curbs no more than 3" above finished grade.
- For structures with bridge rail, construct curbs flush with finished grade.

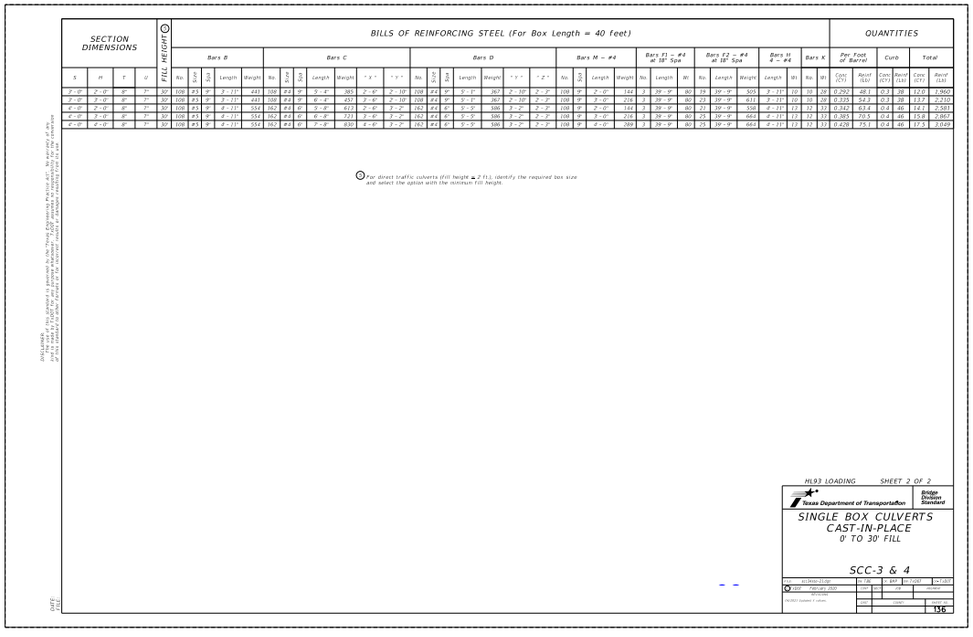
Reduce curb heights, if necessary, to meet the above requirements. No changes will be made in quantities and no additional compensation will be allowed for this work.

For curbs less than 2'-0" high, bill Bars K or reduce bar height as necessary to maintain cover. For curbs less than 3' high, Bars K may be omitted.

1'-0" typical. 2'-2" when the Rail Anchorage Curb (RAC) standard sheet is referred to elsewhere in the plans.

The Contractor may replace Bars B, C, D, E, F1, F2, H, Y, and/or Z with deformed welded wire reinforcement (WWR) meeting the requirements of ASTM A1064. The area of required reinforcement may be reduced by the ratio of 60 ksi / 70 ksi. Provide WWR with the longest wire running perpendicular to the direction of bar splices in the WWR of the same length required for the equivalent bar size, rounded up for wire sizes between conventional bar sizes. The lap length required for WWR is never less than the lap length required for uncoated #4 bars.

Example conversion: Replacing No. 6 Gr 60 at 6" Spacing with WWR.
Required WWR = (0.44 sq. in. per ft) x (60 ksi / 70 ksi) = 0.755 sq. in. per ft.
If D30.6 wire is used to meet the 0.755 sq. in. per ft. requirement in this example, the required spacing = (0.306 sq. in.) / (0.755 sq. in. per ft) x (12 in. per ft) = 4.86" Max spacing. Required lap length for the provided D30.6 wire is 7'-1" (the same minimum lap length required for uncoated #3 bars, as listed under MATERIAL NOTES).



CONSTRUCTION NOTES:
Do not use permanent forms.
Chamfer the bottom edge of the top slab 3" at the entrance.
Optionally, raise construction joints shown at the fillet line by a maximum of 6". If this option is taken, Bars H may be cut off or raised, Bars C and D may be reversed.

MATERIAL NOTES:
Provide Grade 60 reinforcing steel.
Provide galvanized reinforcing steel if required elsewhere in the plans.
Provide Class S concrete (f'c = 4,500 psi) for the top slab, bottom slab and curb, with the following exceptions: provide Class S concrete (f'c = 4,000 psi) for top slabs of:
- culverts with overlay,
- culverts with 2-lift-2 course surface treatment, or
- culverts with the top slab as the final riding surface.

Provide the following minimum bar laps:
- Uncoated bar, galvanized – #4 or #5 = 2'-0" Min
- Uncoated or galvanized – #6 = 2'-7" Min

GENERAL NOTES:
Design is according to AASHTO LRFD Bridge Design Specifications for the range of fill heights shown.
See the Single Box Culverts Cast-In-Place Miscellaneous Detail (SCC-MD) standard sheet for details pertaining to skewed ends, angle sections, and lengthening.

Cover dimensions are clear dimensions, unless noted otherwise.
Reinforcing bar dimensions shown are out-to-out of bar.

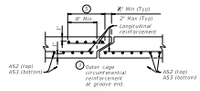
① For box length = 8'-0"

② AS1 thru AS4, AS7 and AS8 are minimum required areas of reinforcement per linear foot of box length. AS5 is minimum required area of reinforcement per linear foot of box width.



FILL HEIGHT 2 FT. AND GREATER

FILL HEIGHT LESS THAN 2 FT

② Length is equal to spacing of longitudinal reinforcing plus 2". (10" Min) (Typ)

SECTION A-A

(Widening top slab detail, KSK joint reinforcement.)

MATERIAL NOTES:

Provide 0.03 sq. in./ft. minimum longitudinal reinforcement at each face in slabs and walls. This minimum requirement may be met by the transverse wires when wire mesh reinforcement is used.

Provide Class H concrete (f'c = 5,000 psi).

GENERAL NOTES:

Designs shown conform to ASTM C1577. Refer to ASTM C1577 for information or details not shown.

See Box Culverts Precast Miscellaneous Details (SCP-MD) standard for wing, headwall and flared end details.

In lieu of furnishing the designs shown on this sheet, the contractor may furnish an alternate design that is equal to or exceeds the box design for the design fill height in the table. Submit shop plans for alternate designs in accordance with Item "Precast Concrete Structural Members (Fabrication)".

All pipe culverts
3 #5 Std (4.000" O.D.)
3# Std (3.500" O.D.)
4# Std (4.500" O.D.)
5# Std (5.563" O.D.)
1 For proper installation of the first cross pipe is critical for vehicle safety. Place the top of the first cross pipe no more than 6" above the flow line.
2 Provide cross pipes, except the first bottom pipe, of the size shown in the table. Provide a 3 (#2" standard pipe (4" O.D.) for the first bottom pipe.
3 Install the third cross pipe from the bottom of the culvert using the bolted connection. Install the remaining cross pipes that are the cross pipe so as to permit disassembly of the bolted connection to allow clevious access. At the Contractor's option, install all other cross pipes using the bolted connection details.
4 Match cross slope as shown elsewhere in the plans. Cross slope of 4:1 or flatter is required for vehicle safety.
5 Riprap placed beyond the limits shown will be paid for as concrete riprap in accordance with Item 432, "Riprap".
6 Quantities shown are for one end of one reinforced concrete pipe (RCP) culvert. For multiple pipe culverts or for corrugated metal pipe (CMP) culverts, quantities will need to be adjusted. Riprap quantities are for contractor's information only.
MATERIAL NOTES:
Synthetic fibers listed on the "Fibers for Concrete" Material Producer List (MPL) may be used in lieu of steel reinforcing in riprap concrete unless noted otherwise.
Use ASTM A307 bolts and nuts, Grade A or B, except ASTM A53 (Type E or S, Gr. B), ASTM A500 Gr. B), or API 5L/5LX. Provide ASTM A307 bolts and nuts.
Galvanize all steel components, except concrete reinforcing, after fabrication. Repair galvanizing damaged during transport or construction in accordance with the specifications.
GENERAL NOTES:
Cross pipes are designed for a traversing load of 10,000 pounds at yield as recommended by Research Report 280-2F, "Safety Treatment of Roadside Parallel-Drainage Structures". Treatment for other traversing loads may vary.
Safety end treatments (SET) shown herein are intended for use in those installations where out of control vehicles are likely to traverse the openings approximately perpendicular to the cross pipes.
Construct concrete riprap and all necessary inserts in accordance with the requirements of Item 432, "Riprap".
Payment for riprap and tiewalls is included in the Price Bid for each Safety End Treatment.

TYPICAL SECTION

Used for curbs over 1'-0" to 3'-0"

BARS V (#5) ⑥
Spaced at 12" Max

BARS L (#5) ⑦
Spaced at 12" Max

OPTIONAL BARS L (#5) ⑦ ⑪
Spaced at 12" Max

BARS U (#4) ⑥
Spaced at 12" Max

⑤ 'T' is equal to the culvert top slab thickness. For precast boxes with slabs less than 9" thick, see SCP-MD standard for additional details.

⑥ Adjust normal culvert slab bars as necessary to clear obstructions.

⑦ Place bars L as shown. T-lit hook as necessary to maintain cover.

⑧ Place normal culvert curb bars M(#4) as shown. Adjust as necessary to clear obstructions.

⑨ Additional bars M(#4) as required to maintain 12" Max spacing.

⑩ Replace normal culvert curb bars K with one bar U and two bars V as shown spaced at 12" Max. Adjust length of bars V as necessary to maintain clear cover.

⑪ Optional bars L are to be used only for precast box culverts with 3'-0" closure pour.

⑫ Quantities shown are for Contractor's information only. Quantities are per linear foot of curb length. The value in table can be interpolated for intermediate values of curb height, 'C'. Quantity includes bars K (when applicable).

TABLE OF ESTIMATED CURB QUANTITIES ⑫

Curb Height 'C'	Conc (CY/LF)	Reinf Steel (LB/LF)
1'-0"	0.037	10.4
1'-6"	0.056	14.5
2'-0"	0.074	19.0
2'-6"	0.093	18.0
3'-0"	0.111	19.0
3'-6"	0.130	21.1
4'-0"	0.148	22.4
4'-6"	0.167	24.6
5'-0"	0.185	25.9

CONSTRUCTION NOTES:
Adjust reinforcing steel as necessary to provide 1 ½" cover.
For vehicle safety, top of the curb must not project more than 3" above the finished grade.

MATERIAL NOTES:
Provide Grade 60 reinforcing steel.
Provide galvanized reinforcing steel if required elsewhere in the project.
Provide Class 'C' concrete (f'_c = 3,600 psi) minimum for curbs.
Provide bar laps, where required, as follows:
- Uncoated or galvanized – #4 = 2'-0" Min

GENERAL NOTES:
Designed according to AASHTO LRFD Bridge Design Specifications.
These extended curb details have sufficient strength to allow for future retrofit of Type T631 or T631S railing. Refer to the TxDOT standards for Type T631 and T631 and PR3 Type rails. These details are not suitable for the retrofitting of other rail types. For new construction using T631 or T631S railing, use the T631-CR standard.
This Curb is considered as part of the Box Culvert for payment.

Cover dimensions are clear dimensions, unless noted otherwise.
Reinforcing bar dimensions shown are out-to-out of bar.

Texas Department of Transportation | Bridge Division Standard

EDGE LINE AND LANE LINES
ONE-WAY ROADWAY
WITH OR WITHOUT SHOULDERS
TYPICAL TWO-LANE, TWO-WAY PAVEMENT
MARKINGS THROUGH INTERSECTIONS
GENERAL NOTES
1. Edge line striping shall be as shown in the plans or as directed by the Engineer. The edge line should not be placed less than 6 inches from the edge of pavement. This distance may vary due to pavement raveling or other conditions. Edge lines are not required in curb and gutter sections of roadways.
2. The traveled way includes only that portion of the roadway used for vehicular travel. It does not include the parking lanes, sidewalks, berms and shoulders. The traveled ways shall be measured from the center of edge line to the center of edge line of a two lane roadway.
MATERIAL SPECIFICATIONS
PAVEMENT MARKERS (REFLECTORIZED) DMS-4200
EPOXY ADHESIVES DMS-6100
BITUMINOUS ADHESIVE FOR PAVEMENT MARKERS DMS-6150
TRAFFIC PAINT DMS-8200
HOT APPLIED THERMOPLASTIC DMS-8220
PERMANENT PREFABRICATED PAVEMENT MARKINGS DMS-8240
All pavement marking materials shall meet the required Departmental Material Specifications as specified by the plans.

Based on Traveled Way and Pavement Widths
for Undivided Roadways
FOUR LANE DIVIDED ROADWAY CROSSOVERS
NOTES
1. Where divided highways are separated by median widths of 30 feet or more, median openings shall be signed as two separate intersections. Each median opening has two width measurements, with one measurement for each approach. The narrow median width will be the controlling width to determine if signs are required. Yield signs are the typical intersection control. Stop signs and stop bars are optional as determined by the Engineer.
2. Install median striping (double yellow centerlines and stop lines/yield lines) when a 50' or greater median centerline can be placed. Stop lines shall only be used with stop signs. Yield lines shall only be used with yield signs.
3. Length of turn bays, including taper, deceleration, and storage lengths shall be as shown on the plans or as directed by the Engineer.

LANE REDUCTION
NOTES
1. Lane reduction pavement markings are used where the number of through lanes is reduced because of narrowing of the roadway or because a lane is dropped to provide parking. If this would result in a through lane, or Texas Super 7 Passing Lanes, see TSOPM1 standard sheets.
2. On divided highways, an additional RIGHT LANE ENDS (W9-1R) sign may be installed on the median aligned with the W9-1R sign on the right side of the highway.
3. Lane reduction arrows are required for speeds of 45 mph or greater. An optional third lane reduction arrow may be added based on engineering judgement. If used, the optional third lane reduction arrow should be centered between the first and last lane reduction arrows.
4. For lane reductions on Freeways and Expressways, signing shall conform to the TxDOT Freeway Signing Handbook.
ADVANCED WARNING SIGN DISTANCE (D)
Posted Speed | D (ft) | L (ft)
30 MPH | 450 | L= WS/60
35 MPH | 565
40 MPH | 670
45 MPH | 775
50 MPH | 885 | L=WS
55 MPH | 990
60 MPH | 1,100
65 MPH | 1,200
70 MPH | 1,250
75 MPH | 1,350
GENERAL NOTES
1. Lane use word and arrow markings shallbe used where through lanes approaching an intersection become mandatory. Unless Lane use word and arrow markings are used, turn bays should be a minimum of substantial length. Lane use arrow markings or word and arrow markings may be used to other lanes and turn bays for emphasis. Details for words and arrows are as shown in the Standard Highway Sign Designs for Texas.
2. When lane-use words and arrow markings are used, two sets of arrows should be used if the length of the bay is greater than 180 feet. When a single lane use arrow word and arrow marking is used in a turn bay, it should be placed 20 feet from or near the upstream end of the full-width turn lane.
3. Use raised pavement marker Type I-C with undivided highways, non-medians and two-way left turn highways, non-medians and two-way left turn highways with raised medians and Type II-C-R with divided highways and raised median.
4. Length of turn bays, including taper, deceleration, and storage lengths shall be as shown on the plans or as shown in Table 3-23 in Chapter 3 of the Roadway Design Manual for additional information on turning lanes or storage lengths.

NOTE
1. Install per manufacturer's recommendations.
GENERAL NOTES
1. Where a restriction prevents consistent placement from the pavement edge, place the affected object markers in line with the innermost edge of the obstructions.
2. When Type 2 object markers are more than 8'-0" from the edge of the pavement, it may not be possible to maintain a height of approximately 4'-0", if this is the case, place the object marker as close to the recommended height as possible.
3. Install all object markers in accordance with the manufacturer's recommendation.
4. Diagonal stripes on Type 3 object markers shall slope down toward the intended travel lane.
5. Object marker substrates shall be 0.080" aluminum sign blank and conform to ASTM B-209 Alloy 6061-T6 or an approved alternative.

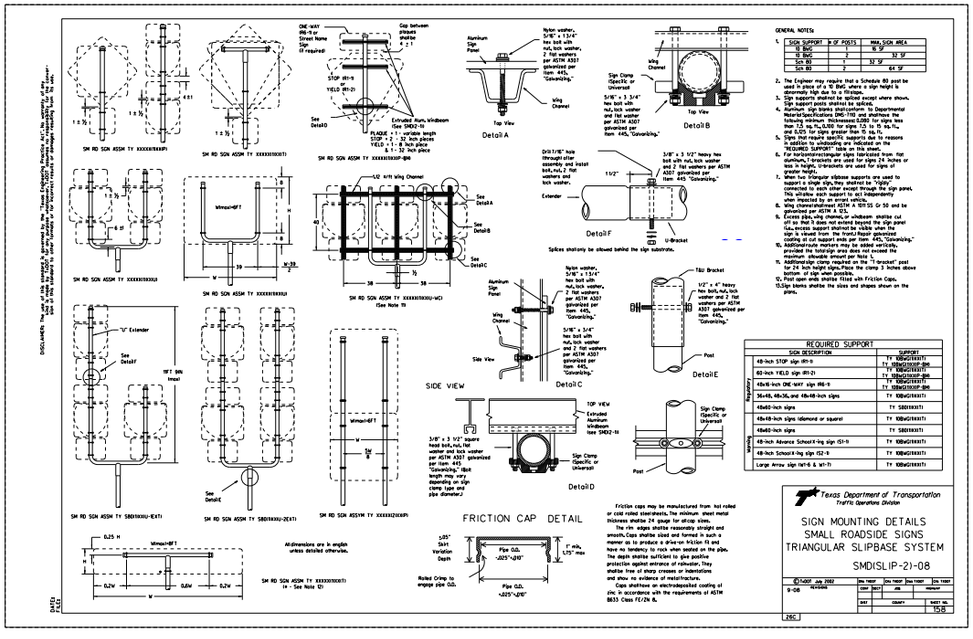
DESCRIPTION:
The use of this standard is governed by the "Texas Engineering Practice Act". Any modification of this standard, including deletions, or the addition of any other information, shall release the TxDOT of all responsibility for the use thereof. Seal not required unless this standard is altered.



FREEWAY DELINEATION FOR RAMPS AND ACCELERATION / DECELERATION LANES
Spacing of white delineators for acceleration or deceleration lanes should be 100 ft.
For ramp tangents: 100' max spacing
For ramp curves: use the delineator spacing table (Straight/Curve) in Table 1. Curves may not apply. Delineators should be on outside of curve.
DETAIL 4a
CROSSOVERS
Four Type 1-A (RPMs at 20' spacing
Double yellow delineator
Double yellow delineator
Type II-C-R (RPMs at 20' spacing

GENERAL NOTES
1. Signs to be furnished shallbe as detailed elsewhere in the plans and/or as shown on sign tabulation sheet. Standard sign designs and arrow dimensions can be found in the "Standard Highway Sign Designs for Texas" (SHSD).
2. Sign legend shalluse the FederalHighway Administration (FHwA) Standard Highway Alphabets (B, C, D, E, Emod or F).
3. Lateralspacing between letters and numerals shallconform with the SHSD, and any approved changes thereto. Lateralspacing of legend shallprovide a balanced appearance when spacing is not shown.
4. Black legend and borders shallbe applied by screening process or cut-out acrylic non-reflective black film to background sheeting, or combination thereof.
5. White legend and borders shallbe applied by screening process with transparent colored ink, transparent colored overlay film to white background sheeting or cut-out white sheeting to colored background sheeting, or combination thereof.
6. Colored legend shallbe applied by screening process with transparent colored ink, transparent colored overlay film or colored sheeting to background sheeting, or combination thereof.
7. Sign substrate shallbe any materialthat meets the DepartmentalMaterial Specification requirements of DMS-7110 or approved alternatives.
8. Mounting details for roadside mounted signs are shown in the "SMD series" Standard Plan Sheets.

GENERAL NOTES

1. If shown on the plans or directed by the Engineer, filter dams should be placed near the toe of slopes where erosion is anticipated, upstream and/or downstream of drainage structures, and in roadway ditches and channels to collect sediment.
2. Materials (aggregate, wire mesh, sandbags, etc.) shall be as indicated by the specification for "Rock Filter Dams for Erosion and Sedimentation Control".
3. The rock filter dam dimensions shall be as indicated on the SW3P plans.
4. Side slopes should be 2:1 or flatter. Dams within the safety zone shall have sideslopes of 6:1 or flatter.
5. Maintain a minimum of 1' between top of rock filter dam weir and top of embankment for filter dams at sediment traps.
6. Filter dams should be embedded a minimum of 4" into existing ground.
7. The sediment trap for ponding of sediment laden runoff shall be of the dimensions shown on the plans.
8. Rock filter dam types 2 & 3 shall be secured with 20 gauge galvanized wire mesh on the upstream side of the aggregate. The aggregate shall be placed on the mesh to the height & shape specified. The mesh shall be folded at the upstream side over the aggregate and tightly secured to itself on the downstream side using wire ties or hog rings. For in stream use, the mesh should be secured or staked to the stream bed prior to aggregate placement.
9. Sack Gabions should be staked down with ½" dia. rebar stakes, and have a double-twisted hexagonal-weave with a nominal mesh opening of 2 ½" x 3 ½".
10. Flow outlet should be onto a stabilized area (vegetation, rock, etc.).
11. The guidelines shown hereon are suggestions only and may be modified by the Engineer.

ROCK FILTER DAM USAGE GUIDELINES

Rock Filter Dams should be constructed downstream from disturbed areas to intercept sediment from overland runoff and/or concentrated flow. The dams should be sized to filter a maximum flow through rate of 60 GPM/FT² of cross sectional area. A 2 year storm frequency may be used to calculate the flow rate.

Type 1 (18" high with no wire mesh) (3" to 6" aggregate) Type 1 may be used at the toe of slopes, around inlets, in small ditches, and at drop or swale outlets. This type of dam is recommended to control erosion from a drainage area of 5 acres or less. Type 1 may not be used in concentrated high velocity flows (approximately 8 Ft/Sec or more) in which aggregate washout may occur. Sandbags may be used at the embedded foundation (4" deep min.) for better filtering efficiency at low flows if called for on the plans or directed by the Engineer.

Type 2 (18" high with wire mesh) (3" to 6" aggregate) Type 2 may be used in ditches and at dike or swale outlets.

Type 3 (36" high with wire mesh) (4" to 8" aggregate) Type 3 may be used in stream flow and should be secured to the stream bed.

Type 4 (Sack gabions) (3" to 6" aggregate) Type 4 May be used in ditches and smaller channels to form an erosion control dam.

Type 5: Provide rock filter dams as shown on plans.

DATE: FILE:

GENERAL NOTES (TYPE 1)

1. The length of the type 1 construction exit shallbe as indicated on the plans,but not less than 50'.
2. The coarse aggregate should be open graded with a size of 4" to 8".
3. The approach transitions should be no steeper than 6:1 and constructed as directed by the Engineer.
4. The construction exit foundation course shallbe flexible base, bituminous concrete,portland cement concrete or other materialas approved by the Engineer.
5. The construction exit shallbe graded to allow drainage to a sediment trapping device.
6. The guidelines shown hereon are suggestions only and may be modified by the Engineer.
7. Construct exits with a width of at least 14 ft. for one-way and 20 ft. for two-way traffic for the full width of the exit,or as directed by the engineer.

GENERAL NOTES (TYPE 2)

1. The length of the type 2 construction exit shallbe as indicated on the plans,but not less than 50'.
2. The treated timber planks shallbe attached to the railroad ties with 7/2 x 6" min.lag bolts. Other fasteners may be used as approved by the Engineer.
3. The treated timber planks shallbe #2 grade min., and should be free from large and loose knots.
4. The approach transitions shallbe no steeper than 6:1 and constructed as directed by the Engineer.
5. The construction exit foundation course shallbe flexible base, bituminous concrete,portland cement concrete or other material as approved by the Engineer.
6. The construction exit should be graded to allow drainage to a sediment trapping device.
7. The guidelines shown hereon are suggestions only and may be modified by the Engineer.
8. Construct exits with a width of at least 14 ft. for one-way and 20 ft. for two-way traffic for the full width of the exit, or as directed by the engineer.

GENERAL NOTES (TYPE 3)

1. The length of the type 3 construction exit shallbe as shown on the plans, or as directed by the Engineer.
2. The type 3 construction exit may be constructed from open graded crushed stone with a size of two to four inches spread a min. of 4" thick to the limits shown on the plans.
3. The treated timber planks shallbe #2 grade min., and should be free from large and loose knots.
4. The guidelines shown hereon are suggestions only and may be modified by the Engineer.

GENERAL NOTE

1. Soil used in dike construction shall be machine compacted.
2. Top width and height of dike may be modified with prior approval of the Engineer.
3. Side slopes within the safety clear zone of a roadway shall be 6:1 or flatter.
4. Grading shall be shown elsewhere in the plans or as directed by the Engineer.
5. The Engineer reserves the right to modify the dimensions shown for the dike dependent on runoff volume characteristics.
6. Dikes that are in place for more than 14 calendar days should be stabilized to prevent sediment runoff.
7. The guidelines shown hereon are suggestions only and may be modified by the Engineer.
8. Remove sediment and debris when accumulation affects the performance of the devices, after a rain and when directed by the engineer.

DIKE USAGE GUIDELINES

A Dike may be used to intercept runoff and divert it around unstabilized areas or to divert sediment laden runoff to an erosion control device (sediment basin or trap, rock filter dam, etc.).

The drainage area contributing runoff to a dike should not exceed 5 acres. The spacing of dikes should be as follows:

Slope of disturbed areas above dike	greater than 10:1	5 - 10:1	less than 5:1
Maximum distance between dikes	100'	200'	300'

Intercepted runoff flowing along a dike should outlet to a stabilized area (vegetation, rock, etc.).

GENERAL NOTE
1. Dimensions of swale may be modified with prior approval of the Engineer.
2. Side slopes within the safety clear zone of a roadway shall be 6:1 or flatter.
3. Grading shall be shown elsewhere on the plans or as directed by the Engineer.
4. The Engineer reserves the right to modify the dimensions shown for the swale dependent on runoff volume characteristics.
5. Swales that are in place for more than 14 calendar days should be stabilized through seeding or other measures to control sediment runoff.
6. The guidelines shown hereon are suggestions only and may be modified by the Engineer.
7. Remove sediment and debris when accumulation affects the performance of the devices, after a rain and when directed by the Engineer.
SWALE AND DIKE/SWALE USAGE GUIDELINES
A swale or dike/swale may be used to intercept runoff and divert it around unstabilized areas or to divert sediment laden runoff to an erosion control device (sediment basin or trap, rock filter dam, etc.).
The drainage area contributing runoff to a swale or dike/swale should not exceed 5 acres. The spacing of swales and dike/swales should be as follows:
Slope of disturbed area above dike: greater than 10:1 | 5 - 10:1 | less than 5:1
Maximum distance between dikes: 100' | 200' | 300'
Intercepted runoff flowing in a swale or dike/swale should outlet to a stabilized area (vegetation, rock, etc.).

REBAR STAKE DETAIL
SEDIMENT BASIN & TRAP USAGE GUIDELINES
An erosion controlling sediment trap may be used to filter sediment out of runoff draining from an unstabilized area.
Log Traps: The drainage area for a sediment trap should not exceed 5 acres. The trap capacity should be 1800 CF/Acre (0.5" over the drainage area).
Control logs should be placed in the following locations:
1. Within drainage ditches spaced as needed or min. 500' on center
2. Immediately preceding ditch inlets or drain inlets
3. Just before the drainage enters a water course
4. Just before the drainage leaves the right of way
5. Just before the drainage leaves the construction limits where drainage flows away from the projects.
The logs should be cleaned when the sediment has accumulated to a depth of 1/2 the log diameter.
Cleaning and removal of accumulated sediment deposits is incidental and will not be paid for separately.
GENERAL NOTES:
1. EROSION CONTROL LOGS SHALL BE INSTALLED IN ACCORDANCE WITH MANUFACTURER'S RECOMMENDATIONS, OR AS DIRECTED BY THE ENGINEER.
2. LENGTHS OF EROSION CONTROL LOGS SHALL BE IN ACCORDANCE WITH MANUFACTURER'S RECOMMENDATIONS AND AS REQUIRED FOR THE PURPOSE INTENDED.
3. UNLESS OTHERWISE DIRECTED, USE BIODEGRADABLE OR PHOTODEGRADABLE CONTAINMENT MESH ONLY WHERE LOG WILL REMAIN IN PLACE AS PART OF A VEGETATIVE SYSTEM. FOR TEMPORARY INSTALLATIONS, USE RECYCLABLE CONTAINMENT MESH.
4. FILL LOGS WITH SUFFICIENT FILTER MATERIAL TO ACHIEVE THE MINIMUM COMPACTED DIAMETER SPECIFIED IN THE PLANS WITHOUT EXCESSIVE DEFORMATION.
5. STAKES SHALL BE 2" X 2" WOOD OR #3 REBAR, 2'-4' LONG, EMBEDDED SUCH THAT 2" PROTRUDES ABOVE LOG, OR AS DIRECTED BY THE ENGINEER.
6. DO NOT PLACE STAKES THROUGH CONTAINMENT MESH.
7. COMPOST CRADLE MATERIAL IS INCIDENTAL & WILL NOT BE PAID FOR SEPARATELY.
8. SANDBAGS USED AS ANCHORS SHALL BE PLACED ON TOP OF LOGS & SHALL BE OF SUFFICIENT SIZE TO HOLD LOGS IN PLACE.
9. TURN THE ENDS OF EACH ROW OF LOGS UPSLOPE TO PREVENT RUNOFF FROM FLOWING AROUND THE LOG.
10. FOR HEAVY RUNOFF EVENTS, ADDITIONAL UPSTREAM STAKES MAY BE NECESSARY TO KEEP LOG FROM FOLDING IN ON ITSELF.

AVALON DR. & BRIARWOOD AVE. TRAFFIC SIGNAL
CITY OF MIDLAND, MIDLAND COUNTY, TEXAS

09/30/2025

C100 of 23

PROJECT OVERVIEW

All work and materials shall conform to the Texas Department of Transportation (TxDOT) "Standard Specifications for Construction and Maintenance of Highways, Streets, and Bridges", 2024 edition, unless otherwise indicated in these plans or directed by the Engineer. All items numbers referenced in the plans refer to TxDOT specifications.

The City of Midland (City) will furnish various items to the contractor as listed under item 680.

Contact the Traffic Signal Shop at 432-685-7508 prior to the start of any service work to schedule a city representative to attend a pre-construction meeting.

Underground utilities may be present within the right-of-way on the project. Contact Texas 811 a minimum of two business days prior to excavating.

The locations of all signal-related items, pavement markings, signing, etc., are diagrammatic only and may be shifted to accommodate field conditions under as directed by the Engineer.

ITEM 416: DRILLED SHAFT FOUNDATIONS

Locations of foundations shown on the plans are diagrammatic only and may be shifted to meet local conditions, subject to approval by the inspector. The Contractor shall stake all foundation locations and have them approved by the inspector before excavating. The Contractor shall ensure that all poles and luminaires are clear of overhead lines and existing ground utilities before excavating.

The Inspector, together with the Contractor, will calculate the vertical signal head clearance before placing any traffic signal pole foundation.

The Contractor shall notify the Inspector at least 48 hours prior to forming and placing concrete for any signal pole and controller foundation. The Inspector will determine the depth of the foundation based on the soil conditions encountered and provide adequate notice so arrive at the job site may result in removing and replacing the foundation at the Contractor's expense.

ITEM 449: ANCHOR BOLTS

A pipe joint waterproof shim is set electrically conducting protective threaded luminaire shall be used on the foundation anchor bolts for the traffic signal poles. (Cross-Hatch-Fit-It, 512 Osborne 515, Thomas & Betts Kopr-Shield, or equal).

ITEM 502: BARRICADES, SIGNS, AND TRAFFIC HANDLING

Use Temporary Traffic Control (TTC) for this project as detailed on the latest TxDOT Barricade and Construction (BC) standard plan sheets. Work Zone standard plan sheets 'WZ (BTS-1 and BTS-2)', and as provided for in Part VI of the latest edition of the "Texas Manual on Uniform Traffic Control Devices".

In addition to the TTC and WZ standard plan sheets, install barricades and warning signs, as appropriately, to adequately warn motorists.

Existing signs are to remain as long as they do not interfere with construction and do not conflict with the traffic control plan.

Permanent signs may be installed when construction in an area is complete and they will not be in conflict with the traffic control plan for the remainder of the job.

Cover or remove any work zone signs when the work or condition referenced is not occurring.

When traffic is inter-wired, arrange warning devices in accordance with examples provided in the latest edition of the "Texas Manual on Uniform Control Devices".

No work will be permitted to commence on the road before noon. Work shall be scheduled such that all machinery and/or equipment shall be away from the roadway and stored near the right-of-way line by noon. Any operations requiring lane closures shall not begin before 9:00 A.M. or continue past 4:00 P.M., unless otherwise approved by the City in advance.

Do not place barricades, signs, or any other traffic control devices where they interfere with sight distance at driveways or side streets. Provide access to all driveways during all phases of construction.

Locations used for storing construction equipment and materials of any type within the right-of-way shall be approved by the inspector. Use of the right-of-way for these purposes will be restricted to locations where driver sight distance to businesses and side-street intersections is not obstructed and so other business where an unsightly appearance will not result, as determined by the inspector.

Remove any obstructions to existing drainage due to the Contractor's operations, as required, at the Contractor's expense.

ITEM 551: SIDEWALKS

The curb ramp and pedestrian pushbutton locations shown in the plans have taken into account the geometric features of the intersections, TxDOT, and ADA/TAS accessibility requirements. If any changes occur during construction, the location of these features must be adjusted to ensure that meet ITAS/ADAAG requirements.

ITEM 618: CONDUIT

When conduit must be placed by trenching on paved areas, cut and restore pavement in accordance with Item 400 and as shown in the plans. Cut pavement using only approved saws. Cutting and restoring pavement will not be paid for directly but will be subsidiary to this item.

Ensure only a Buy High tensile strength polyester fiber pull rope is used for pulling conductors through the PVC conduit systems.

The locations of conduit and ground boxes are diagrammatic only and may be shifted to accommodate field conditions as directed.

ITEM 620: ELECTRICAL CONDUCTORS

Terminate all electrical conductors from the controller at the termination block in the traffic signal pole hand hole whether in use or not.

All wiring not covered by the plans and specifications shall be in accordance with the National Electric Code (NEC).

When the specifications for electrical items require UL listed products, it will be construed to mean UL listed or CSA listed.

Bond together any grounding conductors that share the same conduit, junction box, ground box, or structure, at every accessible point in accordance with the National Electrical Code (NEC).

ITEM 621: TRAY CABLE

All proposed tray cable and number of conductors required shall be as shown on the plans. No splices shall be allowed.

ITEM 624: GROUND BOXES

Locations of ground boxes are approximate. Final locations will be as approved by the Inspector. Provide an apron for ground boxes as shown on plan 8224(1)-14.

ITEM 628: ELECTRICAL SERVICES

Contact the Electric Utility Company (Oncor) to make all necessary arrangements to provide power for the electrical services shown on the plans in accordance with Item 628 and the Electrical Details, except that the City of Midland will make applications to the Electric Utility Company for service (See note below).

Before fabricating the electrical service, contact the City of Midland Traffic Signal Supervisor (phone 432-685-7508) to make application (billing arrangements) for service with Oncor.

Time-charge suspension due to the availability of power shall not be considered unless all arrangements for power have been submitted within fifteen (15) days after principal work has begun.

ITEM 656: FOUNDATIONS FOR TRAFFIC CONTROL DEVICES

The foundations for the traffic signal controller is subsidiary to Item 680.

Locations of foundations shown on the plans are diagrammatic only and may be shifted to meet local conditions, subject to approval by the Inspector. The Contractor shall stake all foundation locations and have them approved by the Inspector before excavating. The Contractor shall ensure that all luminaires and mast arms are clear of all overhead lines and underground utilities before excavating.

The Inspector, together with the Contractor, will calculate the vertical signal head clearance before placing any traffic signal pole foundation.

Install traffic signal controller foundation to accommodate cabinet pedestal base provided by City. Extend the slab at least 36 inches beyond the pedestal base on the front and back sides of the cabinet to provide an all-weather surface at each cabinet door.

ITEM 680: INSTALLATION OF HIGHWAY TRAFFIC SIGNALS

The Project shall consist of the installation of all equipment and materials necessary for a complete traffic signal system, as follows:

1. Provide submittal literature for all traffic signal equipment before installation. Equipment will not be accepted for delivery or any payment made until the equipment, material lists, and shop drawings have been approved by the Engineer. Approval by the Engineer does not relieve the Contractor of his responsibilities to meet the requirements of the specifications and plans. All submitted literature shall be approved and certified for all the furnished traffic signal equipment prior to its installation.

2. The City will furnish the following items to the Contractor for installation on this project:
   - *(1) City/Traffic detection system with VIVID cameras, cable, processor and mounting brackets.*
   - *(1) Clarion GPS system, including cable, processor, and mounting brackets*
   - *(1) 30 ft. mast arm pedestal pole*
   - *(1) Internally lighted street name (S30) sign*
   - *(1) R10-27k traffic sign*

   Contact the City of Midland Signal Shop at 432-685-7508 to coordinate a pick-up time for City-supplied items. Once the City has delivered the material shall be responsible for properly receiving and safeguarding all such items until project acceptance by the city.

   Contractor furnished and installed items shall include all signal and lighting poles and posts as shown in th plans, including anchor bolts, as per TxDOT specifications. The Contractor shall also furnish and install the following items as per the specifications and plans. Unless otherwise noted, all items are:
   - *(1) Traffic signal cabinet, NEMA TS2, 16 channel, dual door*
   - *(1) Traffic signal controller, Q-Free 816-1, NEMA TS2, Type 1*
   - *(1) Malfunction management unit, 16 channel*
   - *(1) Battery backup system, self-contained in backpack cabinet.*

   The City shall furnish and install a communication radio, network switch, and related accessories after the completion of construction and activation of the signal. The Contractor shall furnish and install the CAT 5 Ethernet cable for the radio as called for in the plans.

3. The locations shown on the plans for foundations, conduit and other items may be adjusted for better fit field conditions if needed due to conflicts with utilities, as approved by the Inspector.

4. Accomplish the erection of poles and luminaires located near any overhead electrical lines using established industry and utility safety practices. Consult with the appropriate utility company before beginning such work, as needed.

5. Provide vibration dampers for mast arms 28 feet long and longer. Use dampers "8Pv40" for arms up to 40 feet long, and "x5 adp" for longer mast arms. Install using Astro-Brac sign brackets, 3ginlbs aluminum channel, or equal, at a maximum of 5 feet from the end of the mast arms.

6. Wire the signal installation to operate in accordance with phase diagrams in these plans. Timing and phasing will be maintained City of Midland Traffic Operations after activation of the signal. A copy of all revisions to the original timing and phasing plans shall be delivered to City of Midland Traffic Operations, and a new copy shall be placed in the controller cabinet at the completion of the project.

7. The City of Midland Signal Shop will not assume responsibility for the maintenance of the traffic signals until the project is completed and accepted.

8. Project inspection: For electrical project inspection, contact the City of Midland Signal Shop at 432-685-7508 at least 48 hours in advance of needed inspection. At the time of the final electrical inspection, the City will create a punch list of discrepancies to be corrected before signal is put into flash mode.

9. Provide qualified technician on the project site to place the traffic signal in full operation.

10. Signal Turn-On: Place the traffic signal into operation only after all requested striping is completed and all conflicting striping is removed. Notify the City of Midland Signal Shop approximately 48 hours in advance of the signal turn-on. Signal technicians from the City must be present when the signals are placed in full operation. Unless otherwise directed, place the signal in full operation between 9:00 AM and 12:00 NOON on Tuesdays or Wednesdays only.

11. Test Period for Signals. The signals shall operate continuously for a minimum of thirty (30) calendar days in a satisfactory manner. Equipment failures during these 30 days will cause the test period to start over.

    During the thirty-day test period, the City of Midland Signal Shop will be the First Responders to all trouble calls. They will, in turn, contact the Contractor. The Contractor shall:

    - Provide qualified personnel to respond to all trouble calls and diagnose and repair any malfunctions to signal equipment supplied for the project.
    - Provide a local telephone number not subject to frequent changes and available to receive calls on a 24-hour basis.
    - Respond to trouble calls within two hours. Provide trouble-shoot times but not more than 2 hours maximum.
    - Make appropriate repairs within 24 hours.
    - Place a logbook in the controller cabinet and keep a record of each trouble call reported. Notify the Engineer of each trouble call.
    - The error log in the NMU shall not be cleared during the thirty-day test period without approval.

    If, during the test period, the City of Midland Signal Shop is called out to the intersection under the Contractor's control to restore the signals to normal operation, the City will replace the equipment with stock equipment until the original equipment is repaired and replaced.

C150 of 33

GENERAL NOTES FOR ALL ELECTRICAL WORK

1. The location of all conduits, junction boxes, ground boxes, and encroachment services is diagrammatic and may be shifted to accommodate field conditions.

2. Provide new and unused materials. Ensure that all materials and installations comply with the applicable portions of the National Electrical Code (NEC), TxDOT standards and specifications, National Electrical Manufacturers Association (NEMA), and are listed by Underwriter's Laboratories (UL) or a Nationally Recognized Testing Lab (NRTL). NRTLs such as Canadian Standard Association (CSA), Intertek Testing Services NA Ltd., or MET Laboratories, Inc. are acceptable. Devices that are only marked with a CE, International Electrotechnical Commission (IEC) listed devices will not be considered an acceptable equal to a NEMA listed device. Acceptable devices may have both a NEMA and IEC listing. Faulty fabrication or poor workmanship in any materials, equipment, or installation is justification for rejection. Replace or remanufacture rejected materials or equipment at no additional cost to the Department.

3. Miscellaneous nuts, bolts and hardware, except for high strength bolts, may be stainless steel when plans specify galvanized, provided the bolt size is 5/8 in. or less in diameter.

4. Provide the following test equipment as required by the Engineer to confirm compliance with the contract and the NEC: voltmeter, ammeter, megohm meter 1000 volt DC), ground-resistance tester, torque wrenches, and torque screwdrivers. Ensure all equipment has been properly calibrated by a qualified testing agency. Submit calibration certificates to the Engineer upon request. Operate test equipment during inspection as requested by the Engineer.

5. Install grounding as shown on the plans and in accordance with the NEC. Ensure all metallic conduits, metal poles, luminaires, and metal enclosures are bonded to the equipment grounding conductor. Ground all transformers, service equipment, and electrical enclosures. Ground rods, connectors, and bonding jumpers are subsidiary to the various bid items.

6. When required by the Engineer, notify the Department in writing of materials from the Materials Producers List (MPL) intended for use on each project. Prequalified materials are listed on the MPL under Item 610, "Roadway Illumination and Electrical Supplies." No substitutions will be allowed for materials on this list.

CONDUIT

A. MATERIALS

1. Provide conduit, junction boxes, fittings, and hardware as per TxDOT Departmental Material Specification DMS 11028 "Conduit" and Item 618 "Conduit" of TxDOT's Standard Specifications for Construction and Maintenance of Highways, Streets, and Bridges," latest edition. Provide only conduit that is listed by UL or a NRTL and is manufactured in the United States. Provide conduit types according to the descriptions code or as shown on the plans. Do not substitute other types of conduits for those shown. Provide liquidtight flexible metal conduit (LFMC) when flexible conduit is called for on galvanized sheet rigid metallic conduit (RMC) systems. Provide liquidtight flexible nonmetallic conduit (LFNC) when flexible conduit is called for on polyvinyl chloride (PVC) systems.

2. Provide galvanized steel RMC for all exposed conduits, unless otherwise shown on the plans. Properly bond all metal conduits.

3. Unless otherwise shown on the plans, provide junction boxes with a minimum size as shown in the following table, which applies to the greatest number of conductors entering the box through one conduit with no more than four conduits per box. When a mixture of conductor sizes is contained in a box, refer to Table 314.16(B) in the NEC. Except for structures not applicable to the table, size junction boxes in accordance with NEC.

AWG	3 CONDUCTORS	5 CONDUCTORS	7 CONDUCTORS
#14	10" x 10" x 4"	10" x 10" x 4"	16" x 16" x 4"
#12	8" x 8" x 4"	10" x 10" x 4"	12" x 12" x 4"
#10	8" x 8" x 4"	10" x 10" x 4"	10" x 10" x 4"
#8	8" x 8" x 4"	8" x 8" x 4"	10" x 10" x 4"
#6	8" x 8" x 4"	8" x 8" x 4"	8" x 8" x 4"

4. Junction boxes with an interior volume of less than 100 cu. in. and supported by entering roadways must have threaded entries or hubs identified for the intended purpose and supported by connection of two or more rigid metal conduits. Secure conduit within 3 ft. of the enclosure or within 18 in. of the enclosure if all conduit entries are on the same side. Mechanically secure all junction boxes with an internal volume greater than 100 cu. inches.

5. Provide hot dipped galvanized cast iron or sand cast aluminum outlet boxes for junction boxes containing only #6 AWG or 12 AWG conductors. Do not use die cast aluminum boxes. Size outlet boxes according to the NEC.

6. Do not use intermediate metal conduit (IMC) or electrical metallic tubing (EMT) unless specifically required by the plan sheets. When EMT is called for, provide junction boxes made from galvanized steel stamping, listed and approved for outdoor use, unless otherwise noted on the plans. Size all galvanized steel junction boxes according to the NEC. Use only galvanized steel RMC systems that meet the same requirements for junction boxes used with RMC systems.

7. Provide PVC junction boxes intended for outdoor use on PVC conduit systems, unless otherwise noted on the plans.

8. Provide PVC elbows in PVC conduit systems, unless otherwise shown on the plans. Use only a rigid, high tensile strength polyester fiber duct tape for pulling conductors through the PVC conduit system. When galvanized steel RMC elbows are specifically called for in the PVC conduit system, provide a transition from the PVC conduit to the RMC elbow by means of a grounding bushing on a rigid metal extension. Grounding of the rigid metal elbow is not required if the entire RMC elbow is encased in a minimum of 2 in. of concrete. PVC extensions are allowed on these concrete encased rigid metal elbows. RMC or PVC elbows are subsidiary to various bid items.

9. When required, provide high-density polyethylene (HDPE) conduit with factory ironclad internal conductors according to Item 620 "Duct Cable." At the Contractor's request and with approval by the Engineer, HDPE conduit may be substituted for PVC conduit installed by open cut. Place HDPE conduit 3/4 in. under Item 618. Ensure bored HDPE substitutes for PVC in schedule 40 one of the same size PVC called for in the plans. Ensure the substituted HDPE meets the requirements of Item 620, except that the conduit is supplied without factory-installed conductors. Make the transition of the HDPE conduit to PVC or RMC elbow when required at the bore pit. Provide conduit of the size and type shown on the plans for sweeps and risers between underground runs and above ground foundations. Provide PVC or galvanized steel RMC elbows as called for on all ground boxes and foundations.

10. Use heatshrink straps when supporting 2 in. and larger conduits. On electrician service poles, use factory sized stainless steel or hot dipped galvanized premade standoff straps one at bend on the service riser conduit.

B. CONSTRUCTION METHODS

1. Provide and install expansion joint conduit fittings on all structure-mounted conduits at the structure's expansion joints to allow for movement of the conduit. In addition, provide and install expansion joint fittings on all continuous runs of galvanized steel RMC conduit externally exposed on structures such as bridges at maximum intervals of 150 ft. When requested by the project Engineer, supply manufacturer's specification sheet for expansion joint fittings. Provide fittings that are adjustable to accommodate at least 4 in. of conduit movement at no additional cost to the Department. Provide the method of determining the amount of expansion to the Engineer upon request. Do not use LFNC or LFMC as a substitute for the required expansion conduit fittings.

2. Space all conduit supports at maximum intervals of 5 ft. Install conduit spacers when attaching metal conduit to surface of concrete structures. See "Conduit Mounting Options" on ED(2). Install conduit support within 3 ft. of all enclosures and conduit terminations.

3. Do not attach conduit supports directly to pre-stressed concrete beams except as shown specified in the plans or as approved by the Engineer.

4. Unless otherwise shown on the plans, jack or bore conduit placed beneath existing roadways, driveways, sidewalks, or other the base or surfacing operation has begun. Backfill and compact the bore pits before the conduit per Item 416 "Drilling, Boring, or Tunneling Pilot or Box" prior to installing conduit or duct cable to prevent bending of the connections.

5. When placing conduit in the sub-grade of new roadways, backfill all trenches with excavated material, compacted in accordance with Item 132 "Embankment." When placing conduit in the base of new roadways, backfill all trenches with cement-stabilized base as per requirements of Items 110 "Excavation", 400 "Excavation and Backfill for Structures", 401 "Flowable Backfill", 402 "Trench Excavation Protection", and 403 "Temporary Special Shoring."

6. Provide and place warning tape approximately 10 in. above all trenched conduit as per Item 618.

7. During construction, temporarily cap or plug open ends of all conduit and raceways immediately after installation to prevent entry of dirt, debris and animals. Temporary caps constructed of durable duct tape are allowed. Tightly fix the tape to the conduit opening. Clean out the conduit and prove it clear in accordance with Item 618 prior to installing any conductors.

8. Ensure conduit entry into the top of any enclosure is waterproof by installing conduit sealing hubs or using boxes with threaded bosses. This includes surface mounted battery switches, meter cans, service enclosures, auxiliary enclosures and junction boxes. Grounding bushings on other than sealing hubs are not required.

9. Fit the ends of all PVC conduit terminations with bushings or bell end fittings. Provide and install a grounding type bushing on all metal conduit terminations.

10. Install a bonding jumper from each grounding bushing to the nearest ground rod, grounding lug, or equipment grounding conductor. Ensure all bonding jumpers are the same size as the equipment grounding conductor. Bonding of conduit used as a coring under roadways for duct cable is not required. If the duct extends the full length through the coring.

11. At all electrical services, install a 6 AWG solid copper grounding electrode conductor.

12. Place conduits entering ground boxes so that the conduit openings are between 3 in. and 6 in. from the bottom of the box. See the ground box details on sheet ED(4).

13. Seal ends of all conduits with duct seal, expandable foam, or by other methods approved by the Engineer. Seal conduit immediately after completion of conductor installation and pull tests. Do not use duct tape as a permanent conduit sealant. Do not use silicone caulk as a conduit sealant.

14. File smooth the cut ends of all expanding spiral and conduit. Before installing, paint the field cuts and threads of galvanized RMC with a zinc-rich primer. Where the zinc coating is damaged, or more zinc content is desirable overspray, use zinc rich paint to touch up galvanized material as allowed under Item 445 "Galvanizing." Do not paint non-galvanized material with a zinc rich paint as an alternative for materials required to be galvanized.

ELECTRICAL CONDUCTORS

A. MATERIAL INFORMATION

1. Provide Type XHHW insulated conductors in accordance with Departmental Material Specification DMS-11040, "Conductors," and Item 620 "Electrical Conductors." Provide conductors as listed on the Material Producers List (MPL) on the Department web site under "Roadway Illumination and Electrical Supplies" Item 620. Color code insulated conductors with the following: Phase A black, Phase B red, Phase C blue, Neutral white insulation. Identify grounding conductors ground wires with green insulation or bare conductors. Identify ungrounded limit conductors with any color insulation except green, white, or gray. Keep color scheme consistent throughout the entire system. Identify conductors # American Wire Gauge (AWG) and smaller by continuous color insulation. Identify conductors larger than # AWG at each end and each pull box (unless in by colored tape. When identifying conductors with colored tape, mark at least 6 in. of the conductor's insulation with half laps of tape.

2. Provide a solid copper # AWG grounding electrode conductor to bond the electrical service equipment to the concrete encased grounding electrode or the ground rod at the service location. Connect the grounding electrode conductor to the ground rod with a UL listed connector in accordance with DMS-11040. Connect the grounding electrode conductor to the concrete encased grounding electrode as shown in the plans.

3. Where two or more circuits are present in one conduit or enclosure, permanently identify the conductors of each branch circuit by connecting a non-metallic tag around both circuit conductors at each accessible location. Provide tags with two arrows, large enough to indicate circuit number, letter, or other identification as shown in the plans. Print circuit identification on the tag with a permanent marker.

4. Use listed compression or screw type pressure connectors, terminal blocks, or split bolt connectors. Insulate splices with heavy wall heat shrink tubing or gel-filled insulating splice covers. Provide a minimum of 2 in. spot both sides of the splice. Where heat shrink tubing may not shrink sufficiently to provide a watertight seal around the individual conductors, prior to heating the tubing, increase the diameter of the conductor insulation using hot melt adhesive tape to provide a watertight seal between the heat shrink tubing and the conductor. Use hot melt adhesive tape to fill the gap and seal the ends of heat shrink tubing. Heat shrink tubing that appears to have been burned, or overheated, is considered defective and must be replaced.

5. Size and install gel-filled insulating splice covers according to manufacturer's specifications when used in place of heat shrink tubing.

6. Wire nuts with factory applied waterproof sealant may be used for # AWG or smaller conductors in above ground junction boxes, but not in pole bases or ground boxes. Install wire nuts in an upright position to prevent the accumulation of water.

7. Support conductors in illumination poles with a J-hook at the top of the pole.

8. When terminating conductors, remove the insulation and jacketing material without nicking the wire. Remove only enough insulation to fit completely into mated individual conductor crimps or recessed strands will be considered damaged.

9. Replace conductors and cables that are damaged beyond repair or that fail an insulation resistance test at no additional cost to the department.

10. Do not splice conductors with duct tape, electrician tape, or wire nuts. Use only approved splicing methods.

11. Install breakaway connectors on conductors 6/0 and under Item 620 whenever those conductors pass through a breakaway support device. Follow manufacturer's instructions for installation. Tighten bolts to the manufacturer's specified torque threaded connections. Proper terminations are critical to the safe operation of breakaway devices. Trim waterproofing boots on breakaway connectors to fit snugly around the conductor to ensure waterproof connection. Only one conductor may enter a single opening in a boot. Provide waterproof boots with the correct number of openings for the number of openings factory sealed. Use pressurfilled breakaway connectors as shown on the plans.

12. Provide and install a separate stranded equipment grounding conductor (EGC) in all conduits that contain circuit wiring of 50 volts or more. Unless shown elsewhere, size the EGC to be the same size as the largest current carrying conductor contained in the conduit. Ensure all EGCs are bonded to each electrical equipment location. For limited energy installations, provide a minimum size 8 AWG EGC. No EGC is paid for under Item 620.

C. TEMPORARY WIRING

1. Install temporary conductors and electrical equipment in accordance with the NEC article "Temporary Installations" and Department standard sheets.

2. Provide a ground fault circuit interrupter (GFCI) for power outlets for portable electrical equipment, power tools, ice machines, ice storage bins and refrigerators located outdoors on grade. GFCI may be any one of the following: molded cord and plug set, receptacle, or circuit breaker type.

3. Use listed wire nuts with factory applied sealant for temporary wiring where approved.

4. Enclose conductor splices within a listed enclosure or ground box, or ensure the splices are more than 18 in. above grade vertically and more than 3 ft. horizontally from any metal structure. Where installing temporary conductors in areas subject to vehicle traffic or mobile communication equipment, ensure the conductors are buried a minimum of 12 in. deep and are the lowest point. Ground messenger wires that support power conductors in conformance with the NEC.

5. Protect and when necessary repair any existing electrical conduits uncovered during the construction process in a timely manner and in conformance with the NEC.

GROUND RODS & GROUNDING ELECTRODES

A. MATERIAL INFORMATION

1. Provide and install a grounding electrode at electrical services. Provide ground rods according to DMS-11040 and the plans. Larger diameter or longer length rods may be called for in some specific locations, see the individual pole and foundation detail sheets. Provide additional rods, as called for in specific locations including electrical service, see individual plan sheets.

B. CONSTRUCTION METHODS

1. Function auxiliary ground rods for lightning protection and install in soil, concrete, or both, as called for in the plans. For ground rods installed in concrete, ensure the connection of the conductor to the ground rod is readily accessible for inspection or repairs. For ground rods installed in soil, ensure that the upper end is between 2 to 4 in. below finished grade.

2. Do not place ground rods in the same drilled hole as a timber pole.

3. Install ground rods so the imprinted part number is at the upper end of the rod.

4. Remove all non-conductive coatings such as concrete splatter from the rod at the clamp location.

5. Route all conductors as short and straight as possible for connection to lightning protection ground rods. When a bend is required, ensure a minimum radius bend of four inches for these conductors.

6. Unless otherwise called for in the plans, protect grounding electrode conductors with non-metallic conduit. When protecting grounding electrode conductors with metal conduit, provide and install a grounding type bushing and properly sized bonding jumper on each end of the metal conduit.

7. Written authorization is required before installing a ground rod in a horizontal trench for rocky soil or a solid rock bottom.

APRON FOR GROUND BOX

(1) Uniformly space ends of conduits within the ground box. Position ends of conduits so that ground box walls do not interfere with the installation of grounding bushings or bell end fittings.

(2) Maintain sufficient space between conduits to allow for proper installation of bushing.

(3) Place aggregate under the box, not in the box. Aggregate should not encroach on the interior volume of the box.

(4) Install a grounding bushing on the upper end of all RMC terminating in a ground box. Where the conduit enters the box and the elbow is less than 18 in. below the bottom of the ground box, install a PVC bushing or bell end fitting on the upper end of all PVC conduits terminating in a ground box.

GROUND BOX DIMENSIONS	
TYPE	OUTSIDE DIMENSIONS (INCHES) (Width x Length X Depth)
A	12 X 23 X 11
B	12 X 23 X 22
C	16 X 29 X 11
D	16 X 29 X 22
E	12 X 23 X 17

GROUND BOX COVER DIMENSIONS								
TYPE	DIMENSIONS (INCHES)							
	H	J	K	L	M	N	P	
A, B & E	23 ½	23	15 ⅜	13 ½	9 ⅜	5 ⅜	1 ⅜	2
C & D	30 ½	30 ¾	17 ½	17 ¼	13 ¼	6 ⅜	1 ⅜	2

GROUND BOX COVER

GROUND BOXES

A. MATERIALS

1. Provide polymer concrete ground boxes measuring 16x30x24 in. (HxLxD) or greater in accordance with Departmental Material Specification (DMS) 11070 "Ground Boxes" and Item 624 "Ground Boxes."

2. Provide Type A, B, C, D, and E ground boxes as shown in the plans, and as listed on the Material Producers List (MPL) on the Department web site under "Roadway Illumination and Electrical Supplies," Item 624.

3. Ensure ground box cover is correctly labeled in accordance with DMS 11070.

4. Provide larger ground boxes in accordance with Item 624 and as shown in the plans.

B. CONSTRUCTION METHODS

1. Remove all gravel and dirt from conduit. Cap all conduits prior to placing aggregate and setting ground box. Provide Grade 3 or 4 coarse aggregate as shown in Table 2 of Item 302 "Aggregates for Surface Treatments." Ensure aggregate bed is in place and at least 6 inches deep, prior to setting the ground box. Install ground box on top of aggregate.

2. Open ground box aprons in place. Reinforcing steel may be field bent. Ensure the depth of concrete for the apron extends from finished grade to the top of the aggregate bed under the box. Ground box aprons, including concrete and reinforcing steel, are subsidiary to ground boxes when called for by descriptive code.

3. Keep dirt holes in the box clear of dirt. Dirt covers down when not working in ground boxes.

4. Install all conduits and slip in a neat and workmanlike manner, uniformly space conduits so grounding bushings and bell end fittings can easily be installed.

5. Temporarily seal all conduits in the ground box until conductors are installed.

6. Permanently seal conduits immediately after the completion of conductor installation in the box. Seal conduits entering the box at both ends of all conduits with duct seal, expandable plug, or other method as approved. Do not use duct tape as a permanent conduit sealant. Do not use silicone caulk as a sealant.

7. When a ground rod is present in a ground box, bond all equipment grounding conductors together and to the ground rod with listed connectors.

8. When a type D or E ground box is stacked to meet volume requirements, it is allowable to cut an appropriately sized hole for conduit entry in the side wall at least 18 inches below grade.

9. If an existing ground box in the contract has a metal cover, bond the cover to the equipment grounding conductor with a 3 Ft. long stranded bonding jumper the same size as the grounding conductor. The bonding jumper is subsidiary to various bid items. Verify existing ground boxes with metal covers are shown on the plans, with notes fully describing the work required.

10. If other ground boxes with metal covers are within the project limits but are not part of the contract, the Engineer may direct the Contractor to bond the metal covers, identifying the specific boxes in writing. This work will be paid for separately.

11. Bond metal ground box covers to the grounding conductor with a new ground type lug.

ELECTRICAL SERVICES NOTES

1. Provide new materials, ensure installation and materials comply with the applicable provisions of the National Electrical Code (NEC) and National Electrical Manufacturers Association (NEMA) standards. Ensure material is Underwriters Laboratories (UL) listed.
2. Provide electrical services, including but not limited to, service entrance, meter, circuit breaker panels, and branch circuits breakers as shown on the Electrical Service Data chart in the plans. Faulty fabrication or poor workmanship in material, equipment, or installation will be rejected. Provide products of the manufacturers listed in the specifications and guarantees as a customary trade practice, furnish these to the State.
3. Provide all work, materials, services, and any incidentals needed to install a complete electrical service as specified in the plans.
4. Coordinate with the Engineer and the utility provider for metering and compliance with the utility company's service requirements. Any utility company fees, deposits, charges, and other charges, by many utility companies, to provide power to the location are paid for in accordance with Item 626. Get approval for the costs associated with these charges prior to engaging the utility company to do the work. Consult with the utility provider to determine costs and requirements, and coordinate the work as approved.
5. The enclosure manufacturer will provide Master Lock Type 2 with brass tumblers for "Off the Shelf" enclosures. Manufacturer will provide Corbin Russwin Type 2 to provide Master type KEYED Type 2 with brass tumblers for "Off the Shelf" enclosures. Master Lock #2195 keys and locks become property of the State. Unless otherwise approved, do not energize electrical service equipment until locks are installed.
6. Enclosures with screened disconnects must de-energize all equipment inside the enclosure do not need a dead front. In lit, protect focusing the terminations from incidental contact as required by the NEC.
7. When galvanized is specified for nuts, screws, bolts or miscellaneous hardware, stainless steel may be used.
8. Provide wiring and examition components rated for 75°C. Provide red, black, white, and green insulated conductors for circuit wiring sized #6 AWG and smaller #10 Wire Gauge (AWG). Identify size 6 AWG conductors by continuous color (green). Identify examition conductors sized 4 AWG and larger by continuous color (green) insulation or by green tape at each end and at each point of access. Design with hot taps of colored tape, when identifying conductors. Ensure each service entrance conductor exits through a separately gutted nonmetallic opening in the service enclosure. Ensure the length of the service conductors extending are to be 12 inches minimum, 18 inches maximum, or as required by utility.
9. All examition service conduit and conductors attached to the examition service including that part of the wires below ground are subsidiary to the examition. Conductors for underground service, including service conductors and connections after the wires, including service conduit and conductors for the utility pole riser when furnished by the Contractor, will be paid for separately.
10. Provide rigid metal conduit (RMC) for all conduits on service, except for the 3/4 inch PVC conduit containing the electrical service grounding electrode conductor. Ensure the grounding electrode conductor is the same size as the main conductor for branch circuit entry to enclosure is the same size as is not shown on the layout sheets for branch circuit conduit. Extend all rigid metal conduits from the top of the service enclosure to the bottom of the service enclosure. Where the conduit shown on the layout for that particular branch circuit. Install a grounding bushing on the RMC where it terminates in the service enclosure.
11. Use of liquidtight flexible metal conduit (LFMC) is allowed between the meter and service enclosure when they are mounted 90 to 180 degrees to each other. Size the LFMC the same size as service entrance conduit. LFMC must not exceed 3 feet in length. Torque LFMC within 1 foot of each end. LFMC less than 12 inches in length must be bonded with a bonding jumper. Ensure the LFMC contains a green insulated conductor with a grounding fitting. The LFMC must contain a grounded neutral conductor. Ensure any bend in LFMC never exceeds 180 degrees. A pull rope is not required in LFMC conductors. Ensure LFMC allows for flexibility of three conductor movement demonstrated to the satisfaction of the Engineer.
12. Ensure all mounting hardware and installation details of services conform to utility company specifications.
13. For all electrical service enclosures listed under Item 626 on the MPL, the UL 508 enclosure manufacturers will prepare and submit a schematic drawing unique to each service. Before shipment to the job site, place the applicable reinforced schematic drawings and the reinforced plan sheets showing the examition service data sheet used to build the enclosure in the enclosure's data packet. The training contractor will train the Engineer in the use of the schematic drawings and the reinforced branch circuits supplied by that service. The reinforced plan sheets are to be placed in the service enclosure's document packet. Reduce 11 in. x 17 in. plan sheets to 8 1/2 in. x 11 in. before reinforcing. Deliver these drawings before cooperation of the work to the Engineer, instead of placing in enclosure that has no door pockets.
14. When providing an "Off The Shelf" Type 0 or Type 7 service, provide reinforced plan sheets detailing equipment and branch circuits supplied by that service. Reduce 11 in. x 17 in. plan sheets to 8 1/2 in. x 11 in before reinforcing. Deliver these drawings before cooperation of the work to the Engineer, instead of placing in enclosure that has no door pockets.
15. Do not install conduit in the back wall of a service enclosure where it would penetrate the equipment mounting panel inside the enclosure. Provide grounding bushings for all conduits. Ensure the grounding bushings are bonded. Bonding grounding bushings are not required when the end of the metal conduit is fitted with a conduit sealing hub or threaded boss, such as a meter base hub.

SERVICE ASSEMBLY ENCLOSURE

1. Provide threaded hub for all conduit entries into the top of enclosure.
2. Type galvanized sheet (GS) enclosures may be used for Type C pedestals and for Type D and E services that do not use an enclosure mounted photocell or lighting contactor. Provide GS enclosures in accordance with DMS 11080, 11082, 11083, and 11084.
3. Provide stainless (SS) and aluminum sheet (SS) enclosures for Types A, C, and D in accordance with DMS 11080, 11081, 11082, 11083, and 11084. Do not paint stainless sheet.
4. Provide pedestal service (PS) enclosures in accordance with 32.81 and DMS 11080 and 11085. Do not provide GS pedestal services. If GS is shown in the PS descriptive code, provide an AL enclosure.

MAIN DISCONNECT & BRANCH CIRCUIT BREAKERS

1. Field drill flange-mounted remote operator handle if needed, to ensure handle is capable to turn the "On" and "Off" positions.
2. When the utility company provides a transformer larger than 50 kVA, verify that the available fault current is less than the circuit breaker's ampere interrupting capacity (AIC) rating and provide documentation from the electric utility provider to the Engineer.

PHOTOELECTRIC CONTROL

1. Provide photocell as listed on the MPL. Mount, adjust, or shield the photocell to ensure that it does not get night mode light for ambient proper operation. Mount photocell facing north when practical. Mount top of pole photocells as shown on Top Mounted Photocell Detail.

TRAFFIC SIGNAL NOTES
1. Do not pass luminaire conductors through the signal controller cabinet.
2. Include an equipment grounding conductor in all conduits throughout the electrical system. Bond all exposed metal parts to the grounding conductor.
3. Provide roadway luminaires, when required, in accordance with the material and construction sections of Item 610, "Roadway Illumination Assemblies," and the details for mounting of luminaires. Test luminaires for proper operation as a part of the associated traffic signal system test.
4. If internally illuminated street name signs are approved for use, ground the fixture to the pole with a 12 AWG green XHHW conductor.
5. Bond anchor bolts to rebar cage in two locations using #3 bars or 6 AWG stranded copper conductors. Use listed mechanical connectors rated for embedment in concrete. See TXDOT standard TS-FD for further details.
6. Drill and tap signal poles for ½ in. x 13 UNC rank ground fitting. Drill, tap and thread a hole in the pole for the ½ in. rank ground fitting. Route electrical service entrance conductor through properly sized holes through the bottom of the enclosure for the service grounding electrode conductor. Connect the electrical service grounding electrode conductor to the rank ground fitting. Ensure electrical service grounding electrode conductor is #6 AWG minimum. Use listed mechanical connectors for rank ground fitting. See Sheet A details for further information. Size service entrance conduit and branch circuit conduits as shown in the plans.
7. Mount electrical service enclosure and meter to signal pole with stainless steel bands using two-hole straps. Install a grounding bushing on all metal conduits not connected to conduit-sealing hub or threaded boss. Bond the grounding bushing to the ground bus with a bonding jumper. Seal all conduits entering enclosures with duct seal or expanding foam. Do not use silicone to seal conduit ends.
8. Ground all electrical service enclosures and metal cabinets in accordance with the NEC and local codes. Use a grounding electrode conductor sized in accordance with the NEC. Bond the grounding electrode conductor to the grounding bus in the service enclosure. Use a grounding electrode conductor clamp and connect to a grounding electrode. Use a minimum of one ground rod. Where multiple ground rods are used, space rods a minimum of 6 ft. apart and connect with a #6 AWG minimum bare copper conductor.
9. Leak all enclosures and bolt down all ground box covers before applying power to the signal installation.
10. Terminate conduits entering the top of enclosures with a conduit-sealing hub or threaded boss such as meter hub. Install a grounding bushing on all metal conduits not connected to conduit-sealing hub or threaded boss. Bond the grounding bushing to the ground bus with a bonding jumper. Seal all conduits entering enclosures with duct seal or expanding foam. Do not use silicone to seal conduit ends.
11. For all conduits, ensure the burial depth is a minimum of 18". Ensure the minimum burial depth for conduit placed under a roadway is 24".
White insulation or color code 'K' neutral conductor's insulation with white tape where conductor exits weatherhead.
Red insulation or color code 'L' (phase 1) or 'M' (phase 2) conductor's insulation with red tape where conductor exits the weatherhead. Conductor tails lengths, 12" min., 18" max.

PEDESTAL SERVICE NOTES
1. Manufacture pedestal electrical services in accordance with Departmental Material Specifications (DMS) 1080 "Electrical Services", 1085 "Electrical Services-Pedestal ITC" and then 620 "Electrical Services. "Provide pedestal electrical services listed on the Material Products List (MPL) on the Department's web site under "Electrical Services-Pedestal". Provide all items listed in the MPL. Provide hardware and installation details of services meet utility company specifications. Contact the local utility company for approval of pedestal details prior to manufacturing the pedestal and incorporate any changes required by the utility company prior to manufacturing the pedestals and cabinets.
2. When a meter socket is required, provide a socket with a minimum 100 amp rating that complies with local utility requirements.
3. Provide Class A or C concrete for pedestal service foundations in accordance with Item 420, "Concrete Substructures," except that concrete will not be paid for directly but is considered subsidiary to Item 620.
4. Provide #4 reinforcing steel for foundations in accordance with Item 440, "Reinforcement for Concrete."
5. Install (3) 1/2 in. x 13 in. minimum length concrete single expansion type anchors for mounting pedestal enclosure to foundation. Anchor location to match mounting holes in each corner of enclosure. Secure each of the four corners of the pedestal enclosure to foundation with 1/2 in. galvanized bolt, nut, and lock washer. Countersunk or unchrome steel machine thread bolts, a properly aligned washer and a flat washer.
6. Finish top of concrete foundation in a neat and workmanlike manner. If leveling washers are used, ensure no more than 1/2 in. gap at any corner. Do not exceed a maximum slope of 1/2 in. in the foundation within 12 in. of any anchor. When properly installed, ensure the top of the service enclosure is level from to back and side to side within 1/2 in. Repair cracking or movement of the service enclosure at no additional cost to the department.
7. Do not use liquidtight flexible metal conduit (LFMC) on pedestal type services.
8. Ensure all elbows in the foundation are sized as per utility provider's conduit requirements for underground conduit and headers. PVC connections may be restricted provided the ends of the rigid metal conduits are more than 2 in. below the top of the concrete foundation. Where connection conduits are metal, grounding bushings must be installed with a bonding jumper properly terminated.

ROADWAY ILLUMINATION ASSEMBLY NOTES

1. Details apply to roadway lighting installations bid or referenced under Item 618, "Roadway Illumination Assemblies." Provide, furnish, and install all other materials not shown on the plans which may be necessary for complete and proper construction. Where manufacturers provide warranties or guarantees as a customary trade practice, furnish to the State such warranties or guarantees.

2. The locations of poles and fixtures may be shifted by the Engineer to accommodate local conditions. Install or remove poles and luminaires located near overhead electrical lines using established industry and utility safety practices and in accordance with laws governing such work. Consult with the appropriate utility company prior to beginning such work.

3. Provide new and unused materials. Ensure that all materials and installations comply with the applicable articles of the National Electrical Code (NEC), TxDOT standards and specifications, National Electrical Manufacturers Association (NEMA),and are listed by Underwriters Laboratories (UL) or a Nationally Recognized Testing Lab (NRTL). NRTLs such as Canadian Standard Association, Intertek Testing Services NA Inc., or FM Approvals LLC can be considered equivalent to UL. Faulty fabrication or poor workmanship in any materials, equipment, or installation is justification for rejection.

4. Provide Roadway Illumination Light Fixtures as per TxDOT Departmental Material Specification (DMS) 11010, Item 610, and as shown on the Material Producers List (MPL) for Roadway Illumination and Electrical Supplies.

5. Fabricate steel roadway illumination poles in accordance with Roadway Illumination Poles (RIP) standards and Item 610. Poles fabricated according to RIP standards do not require shop drawing submittals.

   a. Alternate designs to RIP standards or the use of aluminum to fabricate poles will require the submission of shop drawings electronically. For instructions on submitting shop drawings electronically see "Guide to Electronic Shop Drawing Submittal" on the TxDOT web sites.

   b. Limitations on use of the RIP standards: The RIP standard details were developed for installations in locations where the 3-second gust basic maximum wind speed is 110 mph, and where the elevation of the base of the pole is less than 11 ft, not more than 25' above the elevation of the surrounding terrain, in accordance with the "AASHTO Standard Specifications for Structural Supports for Highway Signs, Luminaires and Traffic Signals," 6th Edition (2013) of the AASHTO Design Specifications. For poles to be installed in regions where the maximum basic wind speed exceeds 110 mph or to be mounted more than 25' above the surrounding terrain, provide poles meeting the following requirements:

      I. Submittals. Following the electronic shop drawing submittal process (see Guide to Electronic Shop Drawing Submittal on the TxDOT web sites), submit to the Engineer for approval fabrication drawings and calculations for the poles, sealed by a Texas licensed professional engineer (P.E.).

      II. Luminaire Structural Support Requirements. Provide light poles, arms, and anchor bolt assemblies with a 25 year design life to safely resist dead loads, live loads and the required basic wind speeds at the location of installation in accordance with the 6th edition (2013) of the AASHTO Design Specifications. For transformer base poles, provide transformer bases and connecting hardware in accordance with shop drawing submittals. Submit certification of the anchor bolt assembly fatigue design life calculations, and submit certification of the plastic segment load test and FMEA breakaway requirement test of the model of base being furnished with the shop drawings. Show breakaway base model number, manufacturer's name, and logo on shop drawings. Include on manufacturer's shop drawings the ASTM designations for all materials to be used.

6. For both transformer and shoe-base type illumination poles, provide and install double-pole breakaway fuse holders as specified by DMS-11040. Breakaway fuse holders are listed on the MPL for Roadway Illumination and Electrical Supplies under Items 610 & 620. Provide 10 each time delay fuses for breakaway connectors. Light pole, or fixture the light fixture for underpass luminaires. In each pole, connect luminaires to the breakaway connector with continuous stranded 12 AWG copper conductors as listed on the MPL. Bond all equipment grounding conductors together and to the ground lug in the transformer base or hand hole.

7. Tighten anchor bolts for shoe base, concrete traffic barrier base, and bridge mount roadway illumination poles, in accordance with Item 449.

8. Install T-Base with following procedure:

   a. Anchor Bolt Tightening.

      I. Coat the threads of the anchor bolts with electrically conductive lubricant.

      II. Place the T-base over the anchor bolts. Foundation must be level and flat. The maximum permissible gap under any one corner of the T-base is 1/8" before nuts are tightened.

      III. Coat the bearing surfaces of the nuts and washers with electrically conductive lubricant. Install (1) 1/2" hard down washer, (1) lock washer, and (1) nut on each anchor bolt. Turn the nuts onto the bolts so that each is hand-tight against the washer.

      IV. Using a torque wrench, tighten each nut to 150 ft-lb. Uniform contact is required between the foundation and the T-base in the corner regions of the T-base, and all corner gaps must be closed after applying torque. If a gap still exists after torquing to 150 ft-lbs, continue torquing each bolt incrementally until gap is closed or maximum allowable torque of 250 ft. pound is reached, whichever comes first. If 250 ft-lbs is not enough to close the gap the foundation must be leveled. Gaps along the straight sides of the T-bases and the foundation are permissible. Ensure that no high point of contact occurs between the straight sides of the T-base and the foundation.

      V. Check top of T-base for level. If not level then foundation must be leveled.

   b. Top Bolt Procedure

      I. Erect pole over T-base with crane. Coat bolts, nuts, washers, and lock washers with electrically conductive lubricant.

      II. Install bolts and 1/2" connecting washers from the inside of the T-base, thread up through the pole base. Install flat washers, lock washers and nuts snug tight according to Item 447, "Structural Bolting."

      III. Tighten each nut to 150 ft-lb, using a torque wrench.

   c. Level and Plumb

      I. Ensure pole is plumb and mast arm is perpendicular to the roadway according to plans to within 5 degrees.

9. Construct luminaire pole foundations in accordance with Item 416, "Drilled Shaft Foundations," and TxDOT standard sheet RID(3).

10. Provide and install underpass luminaires in accordance with Item 610, DMS-11010, and TxDOT standard sheet RID(3). Typical luminaire size for underpass luminaires is 150W HPS or 150W EQ LED.

11. Mount luminaires on arms level as shown by the luminaire level indicator.

12. Orient luminaires perpendicular to the roadway (mounted to be ↕↕ unless otherwise shown on the plans.

Wiring Diagram Notes:

1. Use 1/2 IN.-13 UNC threaded, copper or tin-plated copper, pole bonding connector, sized appropriately for conductors, bonded to T-base, or use ground lug in handhole as available.
2. Use pre-qualified two-pole breakaway connectors for all luminaire pole installations. For luminaires fed by a circuit with a neutral conductor, use double pole breakaway connectors with the neutral side unfused and marked white.
3. Split bolt or other connector.

TYPICAL WIRING DIAGRAM

LUMINAIRES SERVED AT 480V OR 240/480 VOLT SERVICE OR LUMINAIRES SERVED AT 240V FOR 120/240 VOLT SERVICE.

Decorative LED Lighting Notes:

1. LED Drivers in Remote Outdoor enclosures (for drivers that do not include an enclosure as part of a factory assembly):
   a. Provide NEMA 3R outdoor enclosure or as approved.
   b. Install enclosure at least 12" above ground or other horizontal surface. Mount vertically or on ceiling, and avoid direct sun where possible.
   c. Install drivers with at least 2 inches of space from enclosure walls.
   d. For multiple drivers in an enclosure, provide at least 4 inches side to side and 1 inch end to end from other drivers or electronics equipment
   e. For drivers mounted on back wall of enclosure, mount enclosure on 1 5/8" strut or other standoff to dissipate heat, or mount driver to side of the enclosure or to the metal cover.
   f. Provide remote drivers with a maximum of 100 watts
   g. Provide drivers with documentation of 100,000 hr lifetime or Tcase of 65C or higher.

Driver Spacing In Remote Enclosure

TABLE 1
ANCHOR BOLTS

POLE MOUNTING HEIGHT	BOLT CIRCLE: Shoe Base	BOLT CIRCLE: T-Base	ANCHOR BOLT SIZE
≤40 Ft.	13 3/4	14 1/4	1 1/4 x 36"
45-50 Ft.	15 3/4	17 1/4	1 1/4 x 36"

TABLE 2
RECOMMENDED FOUNDATION LENGTHS
(See note 1)

MOUNTING HEIGHT	TEXAS ZONE PENETROMETER & BLOWCOUNT: 10	15	40
≤30 Ft.	6'	6'	6'
>30 Ft. to 35 Ft.	8'	6'	6'
150 Ft. to 40 Ft.	8'	8'	6'
>40 Ft. to 50 Ft.	10'	8'	6'

TABLE 3
PAY QUANTITY OF RIPRAP PER FOUNDATION (Install only when shown on the plans)

Foundation Diameter	Riprap Diameter	Riprap (Conc. Cl. B)
30 In.	78 In.	6.35 CY

GENERAL NOTES:

1. "Recommended Foundation Lengths" table is for information purposes only. Foundation lengths shall be as shown on the plans, or as directed by the Engineer. Foundations will be paid for under Item 416, "Drilled Shaft Foundations," unless otherwise shown on the plans.
2. Erect roadway illumination assembly poles plumb and true. Form and level the top 6" of the foundation so the pole will be plumb. Use leveling nuts to plumb shoe base poles. Do not use shims or leveling nuts under transformer bases. Do not grout between baseplate and the foundation.
3. Ensure Class 2A and 2B fit for anchor bolts and nuts. Tap and chase nuts after galvanizing. Anchor bolt body with rolled threads need not be full length.
4. Use appropriate class of concrete as specified in Items 416 and 432. Concrete for riprap may be upgraded to Class C at no extra cost to the Department.
5. Place riprap around the foundation when called for elsewhere in the plans. Riprap will be paid for under Item 432.
6. Locate breakaway roadway illumination assemblies as shown in the placement table, unless otherwise dimensioned on the plans. Protect non-breakaway illumination assemblies from vehicular impact (i.e., 2.5 Ft. behind guard rail or mounted on traffic barrier), or located outside the clear zone, except that 2.5 Ft. from curb face is minimum desired for light poles on city streets, 45 mph or less. See Roadway Design Manual for further information.
7. Use 4 hold down and 4 connecting washers on transformer base poles as recommended by the manufacturer and supplied with base.
8. Install a minimum of 2 conduits in each foundation. See lighting layout sheets for locations of foundations with more than 2 conduits. Cap unused conduits in foundations on both ends.
9. Conduit location in foundations is critical for breakaway devices. Place conduits 2 In. apart on centerline as shown.
10. Bond anchor bolt to rebar cage with #6 bare stranded copper conductor. Use listed mechanical connectors noted for embedment in concrete. The bonded steel in the foundation creates a concrete encased grounding electrode which replaces the ground rod.
11. Grade earthwork around T-base foundations even with the finished grade as shown in Section A-A to ensure proper function of the breakaway device. Use riprap on T-base foundations that are located on sloped grades, and as shown on the plans for level grades.

TABLE 4
BREAKAWAY POLE PLACEMENT (See note 6)

ROADWAY FUNCTIONAL CLASSIFICATION	** POLE OFFSET GUIDANCE TO FACE OF TRANSFORMER BASE)
Freeway Mainlanes (roadway with full control of access)	15 Ft. minimum and typical* from curb edge
All curbed, 45 mph or less design speed	2.5 Ft. minimum (15 Ft. desirable) from curb face
All others	10 Ft. minimum (15 Ft. desirable) from curb edge

* or as close to ROW line as is practical

** provide 2/3 of the luminaire mounting height behind the pole for locating pole to prevent encroachment on the other travel lanes. See design guidelines.

Texas Department of Transportation — Traffic Operations Division Standard

GENERAL NOTES:

1. All work, materials and services not shown on the plans which may be necessary for complete and proper construction shall be performed, furnished and installed by the Contractor. Faulty fabrication or poor workmanship in any material, shall be corrected by the Contractor at his own expense. The Contractor shall assign to the Department any available warranties or guarantees as a customary trade practice, further to the Department such warranties or guarantees.

2. The location of poles and fixtures are diagrammatic only and may be shifted by the Engineer to accommodate local conditions. Install or remove poles and luminaires located near overhead electrical lines using established industry safe practices and in accordance with laws governing such work. Consult with the appropriate utility company prior to beginning such work.

3. Standard Steel Pole Designs. Steel poles fabricated in accordance with the details and dimensions shown herein, shall be considered standard designs. Submission of shop drawings and design calculations for standard designs is not required.

4. Optional Steel Pole Designs. Multi-sided steel poles may be allowed as optional designs, if steel poles are permitted or required, pending approval by the Department as outlined below.

   a. Shop Drawings. Optional designs require submission of shop drawings and design calculations bearing the seal and signature of a Professional Engineer registered in the State of Texas for approval by the Engineer. The Department may elect to pre-approve some shop drawings for optionally designed poles. Submission of shop drawings and design calculations is not required for structures fabricated in accordance with the details of shop drawings on the pre-approved list maintained by the TxDOT Traffic Operations Division. Any deviation from the pre-approved shop drawings will require submission of shop drawings of the complete structure for approval by the Engineer prior to fabrication.
   b. Structural Support Design for Luminaires. Lighting support structures shall be designed for a 25 year design life in accordance with the AASHTO Standard Specifications for Structural Supports for Highway Signs, Luminaires and Traffic Signals, 6th Edition, 2013 with Interim Revisions through 2015. Poles shall be designed for 110 mph 3-second gust wind speeds. The Gust Factor, G_f, and Wind Importance Factor, I_r, shall be applied as per the AASHTO Specifications assuming a 25-year design life. The design wind pressure for hurricane wind velocities greater than 100 mph shall not be less than the design wind pressure using 100 mph with the non-hurricane Wind Importance Factor, I_r, value. For hurricane wind velocities greater than 100 mph, the Wind Importance Factor, I_r, shall be used in the design calculations and shop drawing submittals. All transformer bases shall have been structurally tested to resist the theoretical plastic moment capacity of the pole. Certification of the plastic moment load test and the breakaway design shall be part of the shop drawings. Poles furnished shall be identified with the shop drawing number, assigned sheet and structure numbers, and the manufacturer's name or logo.
   c. Manufacturer's shop drawings shall include the ASTM designations for all materials to be used.
   d. Mast arm Arrangements. All poles and attachments shall be structurally designed to support two 12-foot mast arms and luminaires. Poles shall be supplied with mast arm combinations as shown in the plans. All poles shall be designed for a 90-pound luminaire having an effective projected area of 1.5 square feet.
   e. Anchor Bolt Assembly. Anchor bolt assemblies for optionally designed poles shall be the same as those shown herein.

5. Aluminum Pole Designs. Aluminum pole designs may be allowed, if aluminum poles are permitted or required, pending approval by the Department as outlined below.

   a. Meet all of the requirements stated above for optional steel pole designs and the following:
      1. Aluminum poles shall be designed in accordance with the latest AASHTO Specifications (see LRFD 01.2).
      2. Aluminum pole designs shall use the same anchor bolt assembly and be subject to the same geometric restraints and other requirements for steel poles specified herein.
      3. Aluminum poles shall be equipped with vibration mitigation devices, as approved by the engineer.
      4. Pole components shall be constructed using the following materials:
      Pole: ASTM B241 Alloy 6005-T5, 6061-T6 or ASTM B221 Alloy 6005-T5.
      Base Flanges: ASTM B26 Alloy 356.0-T6 or ASTM B108 Alloy 356.0-T6 if yield strength test required.
      Mast arm Fittings: ASTM B209 Alloy 6061-T6 or ASTM B221 Alloy 6005-T5.
      Mast Arms: ASTM B241 Alloy 6005-T5 or Alloy 6061-T6.
      Handhole Frame and Cover: ASTM B26 Alloy 356.0-T6, ASTM B26 Alloy 356.0-T6.
      Bolts: Stainless Steel 2(5) 300 series. Bolts threading into aluminum threads shall be treated with anti-seize compound, Never-Seez Compound, Permatex 133A or equal.

6. Special Designs. Poles with architectural treatments shall meet the requirements shown elsewhere in the plans.

7. Luminaire Mounting Height. Actual luminaire mounting height shall be the nominal mounting height given on RIP(2) for all pole-arm combinations except for poles with 4 ft. luminaire arms, which shall be 3'-0" lower than the nominal height, unless otherwise shown or directed.

EXPLANATION OF ROADWAY ILLUMINATION ASSEMBLY DESIGNATIONS

TYPE SA 50 T - X - 10 140W EQ LED

- SA: Pole and mast arm may be steel or Slip Fit.
- ST: Pole and mast arm must be steel.
- AL: Pole and mast arm must be aluminum.
- SPs: Special (overlap) steel or aluminum pole for mounting an CSB or SSB. See standard sheet CSB (#), or SSB (#).

Two numerical digits denote nominal mounting height in feet.

Mast letter denotes type of base, (S-Shoe Base, T-Transformer Base, or B-Bridge/Pier, Wall Mount)

Final number denotes length of mast arm in feet.

Use of second mast arm is indicated by second dashed number which denotes length in feet.

Luminaire rating in watts (i.e. 400W., Equivalent wattage LED Fixtures will include EQ in it. 400W EQ)

Last letters indicate light source (S - High Pressure Sodium, LED - LED Luminaire)

MATERIAL DATA

COMPONENT	ASTM DESIGNATION	MIN. YIELD (ksi)
Pole Shaft- (0.14"/Ft. Taper)	A572 Gr 50, A595 Gr A, A1011 Gr 50 or 55 CL 2 (3), or A1008 HSLAS Gr 50 CL 2	50
Base Plate and Handhole Frame	A572 Gr.50, or A36	36
T-Base Connecting Bolts	F3125 Gr A325	92
Anchor Bolts	F1554 Gr 55, A193-B7 or A321	55 105
Anchor Bolt Templates	A36	36
Heavy Hex (H.H.) Nuts	A194 Gr 2H,or A563 Gr DH	
Flat Washers	F436	

NOTES:
1. 2"-6" rise for 4 Ft. luminaire arms.
2. Before oxidized as shown on Concrete Traffic Barrier Base Baseplate details, Sheet 4 of 4.
3. A1011 SS Gr 50 may be used instead of A572 Gr 50 provided it meets the elongation requirements for HSLAS.

POLE ASSEMBLY FABRICATION TOLERANCES TABLE

DIMENSION	TOLERANCE
Shaft length	±1"
O.D. of outside piece at slip fitting pieces	+1/8", -1/16"
O.D. of inside piece at slip fitting pieces	+1/32", -1/8"
Shaft diameters other	+3/16"
Out of "round"	1/4"
Straightness of shaft	±1/4" in 10 Ft
Twist in multi-sided shaft	4° in 50 Ft
Perpendicular to baseplate	1/8" in 24"
Pole centered on baseplate	±1/4"
Location of attachments	±1/4"
Bolt hole spacing	±1/16"

GENERAL NOTES:

1. Designs conform to AASHTO Standard Specifications for Structural Supports for Highway Signs, Luminaires, and Traffic Signals, 6th Edition (2013) and Interim Revisions thereto, Design 3-Second Gust Wind Speed supporting 90 mph (3-Second Gust) Wind Speed supporting 90 mph (3-Second Gust), Adjust the wind speed to a 25 year recurrence interval. Design moments timed in ridrop assume base of pole is 25' above natural ground level.
2. Structures are designed to support two 12' luminaire mast arms and luminaires. Mast arms are designed to support a 6 square foot luminaire on an effective projected area of 1.5 square feet.
3. Fabrication shall be in accordance with the Specifications and with the details, dimensions, and weld procedures shown on the plans. The Fabricator shall submit working drawings of luminaire pole assemblies fabricated in accordance with the details, dimensions, and weld procedures shown on the plans. The Fabricator shall submit weld procedures which the Fabricator must obtain prior to fabrication. Materials, fabrication tolerances, and shipping practices shall meet the requirements of these sheets and the Specifications. In the absence of specified tolerances, the Fabricator shall follow the most rigorous generally obtainable in normal fabrication practice.
4. For mounting heights between values shown in the table, interpolate between diameter and thickness values for the larger height.
5. Unless otherwise noted, all steel parts shall be galvanized in accordance with Item 445, "Galvanizing."
6. Steel poles shall be fabricated in accordance with Item 441, "Steel Structures." Longitudinal base welds for pole shafts shall be complete penetration groove welds and shall be in accordance with AWS D1.1, Structural Welding Code-Steel.
7. Telescoping poles joined by slip-fit/expansion welds will not be permitted, unless otherwise shown on the plans. Poles may be fabricated in two sections and field-assembled by the lap-joint method. The two sections shall be telescoped a minimum of 1 1/2 times and a maximum of 1 1/2 times the shaft diameter at the lap joint.
8. Alternate material equal to or better than material specified may be substituted with the approval of the Engineer.
9. Lubricate and tighten anchor bolts, when erecting shoe base poles and concrete traffic barrier base poles, in accordance with Item 449, "Anchor Bolts."
10. All poles, except Transformer Base Poles, shall have hand holes and reinforcing as shown on the details. For shoe base poles, hand holes shall be placed 90 degrees to mast arm unless otherwise noted on the plans. For poles mounted on a bridge rail/retaining wall, the hand hole shall not be located 180 degrees from luminaire arm. For poles mounted on a concrete traffic barrier with two luminaire arms, all hand holes shall be on the same side of the barrier. For poles mounted on a bridge lighting bracket or a retaining wall, the hand hole shall be on the traffic side of the pole, at a height that will clear the barrier.
11. The finished pole shall have a smooth, uniform finish free of pits, blisters, or other defects. Scratches, chipped, and other damaged galvanized areas on poles and mast arms shall be repaired in accordance with Item 445, "Galvanizing."
12. Pole length is based on a 5'-6" luminaire arm rise. A ft. increase in arm rise will require a 1 ft. increase in pole length. Poles will have an actual mounting height 2'-0" less than the nominal mounting height. Increasing the pole length to meet the nominal mounting height is allowed, but unnecessary unless otherwise directed by the engineer.
13. Erect transformer base poles in accordance with sheet RIC(II).

NOTES:
④ Any of the materials listed for plates may be used where the drawings do not specify a particular ASTM designation.
⑤ ASTM must be suitable for forging and also meet the following requirements: Charpy V-notch value of 35 ksi, and elongation in 2 inches of 22 percent.
⑥ A572, A1008 HSLAS-F, and A1011 HSLAS-F materials may have higher yield strengths but shall not have less elongation than the grade indicated.
⑦ Dimensional limits are given to show acceptable variations in design. They are not intended to permit production of a particular piece, except those the same dimensions within specified tolerances.
⑧ Each pole simplex fitting shall be supplied complete with all bolts, nuts, and washers as specified. The bolts and lock washers shall be secured to the pole with the other hardware items called for in the plans.
⑨ Proposed deviations in arm simplex dimensions or materials must be submitted to the Department for approval.
⑩ A welded handhole frame is permissible. Maximum of two 121 CJP weld splices is allowed.

SECTION C-C

ILSN CLAMP-ON DETAIL 1

ILSN CLAMP-ON DETAIL 2

ILSN CLAMP-ON DETAIL 3

GENERAL NOTES:

Clamp-on details shall be used for ILSN support arm assemblies. A 1½" dia drainage hole shall be drilled in the bottom of the arm. The 1½" dia drainage hole shall be field drilled through the pole to provide wire access after arm is oriented. Deburr both holes.

Where duplicate parts occur on a detail, welds shown for one part shall apply to all similar parts on the details.

Pin bolts are required to prevent rotation of clamp-on arms under design wind forces.

NOTES:

Pin bolts shall be A325 with threads excluded from the shear plane. The 1¼" dia slip base shall have 1⅛" dia holes for a ⅞" dia galvanized anchor pin. Base clamp plate shall be furnished with a 1½" dia hole for wire access. The 1½" dia hole for each pin bolt shall be field drilled through the pole after arm orientations have been approved by the Engineer.

TRAFFIC SIGNAL CONTROLLER BASE:

1. Provide a traffic signal controller base (cabinet base) manufactured of polymer concrete material consisting of aggregate and resin binder. Provide a base that is monolithic in construction. The cabinet base must be reinforced on the inside of the cabinet base with fiberglass matting. Provide one of the following bases: Ameraspan Part # A60018492H, Susatte Model # PC30402TBS, or other as approved by TxDOT Traffic Safety Division.
2. The polymer concrete material must have a minimum compressive strength of 10,300 pounds per square inch (psi), minimum flexural strength of 3600 psi, and minimum shear strength of 3600 psi.
3. The polymer concrete cabinet base must conform to the dimensions shown and must accommodate a standard TxDOT basemount cabinet.
4. Supply the cabinet base with four 1/2"-13 UNC stainless steel inserts for attachment of the cabinet to the base. Inserts must withstand a minimum torque of 50 ft-lb and a minimum straight pull out strength of 750 lbs.
5. Provide the cabinet base with 4 cable risers mounted one on each side of the base 3" to 5" from the top edge of the base. Unless approved otherwise, cable risers must be 1-1/2 x 9¼in 3416inch steel channel with eight 1-slots spaced at 1-1/2 inches. The cable risers must easily accommodate the insertion of tie wraps to attach field wiring to the risers to serve as strain relief. Secure cable risers to the base using 1/2"-13 UNC stainless steel screws and inserts.
6. The cabinet base, when secured to the concrete slab with controller cabinet attached, must withstand a minimum wind load of 125 mph or a 300 lb force applied at 48" above the bottom of the base without causing the base or cabinet to come out of their anchored position or cause any permanent deformation. The manufacturer must provide a letter certifying this requirement, signed and sealed by a Texas licensed Professional Engineer. Provide the cabinet base with hardware for attachment to a concrete slab.
7. The traffic signal base must be permanently marked either by ingress or by permanent ink with the manufacturer's model number and date of mfgr.
8. Seal the base to the concrete with a silicone caulk bead and fastened to the slab per manufacturer's instructions.

CONCRETE SLAB:

9. Traffic signal controller pad must be a portland cement concrete slab poured in place, must conform to the dimensions shown, and must be level.
10. Grade earthwork such that it is flush with the concrete pad on all four sides, unless otherwise shown on the plans. Satisfactory to ITEM 680, four inch rip rap may be used in lieu of earthwork. Slopes shall gradually contour to match grade.
11. Bond a #6 AWG copper ground wire and an 8 ft ground rod bonded to the reinforcing mesh by a suitable UL listed clamp and terminated to the cabinet grounding bus for the purpose of providing a local ground for the electrical grounding conductor. The electrical grounding conductor specified in Item 680.3.4.4 is required and must be terminated to the cabinet ground bus.
12. Install a PVC sleeve to prevent the ground rod from direct embedment in the slab.
13. Provide welded wire mesh 6X6-W2.9 X W2.9 for reinforcement. Provide joints and splices in the mesh with a minimum 6-inch overlap. Center the mesh between top and bottom and provide a minimum 3 inch cover on the edges.
14. Provide Class B concrete minimum for the slab in accordance with Item 421. Construct the slab in accordance with Item 531.

CONDUITS:

15. Stub up and run 3-inch conduits through the slab for the various traffic signal poles and ground boxes as shown on the layouts. Install the number of conduits as shown in layouts plus two additional 3 inch conduits for future use. Terminate the conduits with a bushing between 2 and 4 inches above the slab.
16. Extend conduits for future use at least 18 inches from the edge of the slab, terminate underground with a coupling and plug or cap so that the pole can be removed without damaging the coupling. Stub mast arm poles to unused telephone conduit.
17. Stub up two separate conduits through the slab from the electrician and telephone services. Run the conduit for the electrician feed directly to the electrician service enclosure. Run the conduit for the telephone line directly to the telephone service, usually located on the same pole as the electrician service. Telephone must not under any circumstance share a conduit with any other function.
18. Terminate electric and telephone conduits above the slab with a coupling. After the base is installed, extend the conduits above the top of the base and secure to the base using a sheet aluminum strap or similar suitable substitute.

CONTROLLER CABINET:

19. Anchor the controller cabinet to the base using four stainless steel 1/2-13 NC bolts.
20. The silicone caulk bead specified in Item 680.3.8 must be RTV 133.

PAYMENT:

21. Bid TS-CF as subsidiary to Item 680.

GENERAL NOTES:
1. Backplates are optional for traffic signals and pedestrian hybrid beacons. When backplates are used, a 2-inch wide fluorescent yellow AASHTO Type B_V or C_{VL} retroreflective border conforming to Tx DOT DMS-8300 is required. Place on all approaches when used.
2. Signal head and backplate compatibility must be verified by the contractor prior to installation.
3. When using backplates on signal heads, venting is preferred to reduce cyclic vibration stress.
4. When a vented backplate is used, the retroreflective border must not be placed over the louvers.
5. This standard sheet applies to all signal heads with backplates, including but not limited to:
• Pole mounted
• Overhead mounted
• Span wire mounted
• Mast arm mounted
• Vertical signal heads
• Horizontal signal heads
• Clustered signal heads
• Pedestrian hybrid beacons

14	6" Concrete Driveway Approach	P14
15	Type A Concrete Curb & Gutter	P15
16	Type C Concrete Curb & Gutter	P15
17	Type I Concrete Curb & Gutter	P15
18	Concrete Pedestrian Access Ramp	P16
19	Manhole Ring & Cover Adjustment	P17
20	Water Valve Box Ring & Cover Adjustment	P17
21	6" Temporary Flexible Base (Type A, Grade 4)	P7

Traffic Items

1	Eliminate Existing Pavement Markings and Markers (Line Markings)	T1
2	Retroreflectorized Pavement Markings, TxDOT Item 666 (24" White, Solid)	T2
3	Retroreflectorized Pavement Markings, TxDOT Item 666 (8" White, Solid)	T2
4	Retroreflectorized Pavement Markings, TxDOT Item 666 (12" Yellow, Solid)	T2
5	Retroreflectorized Pavement Markings, TxDOT Item 666 (8" White, LNDP)	T2
6	Thermoplastic Pavement Markings, TxDOT Item 666 (6" White, Solid)	T3
7	Thermoplastic Pavement Markings, TxDOT Item 666 (6" White, Broken)	T3
8	Thermoplastic Pavement Markings, TxDOT Item 666 (6" Yellow, Solid)	T3
9	Prefabricated Pavement Markings (White, Arrow Symbol)	T4
10	Prefabricated Pavement Markings (White, Bike Lane Symbol)	T4
11	In Road Sign Assembly (SUP&AM [Type S80(1)SB(p)])	T5
12	Remove Sign Assembly	T6
13	Retroreflective Raised Pavement Marker (Type II-C-R)	T7
14	Utility Duct Bank	T8
15	Type C Ground Box (162911) With Apron	T9
16	Delineator Assembly (OM-2Y)(WC)GND(BI)	T10
17	Delineator Assembly (8' Permenant Type III Barricade)	T10
18	Temporary Workzone Pavement Markings	T11

PAY QUANTITY NOTES

M1 Includes the necessary equipment, labor, materials, and incidentals for all Mobilization to the job site complete and in place. Measurement and payment to be made per lump sum.

M2 Includes the necessary equipment, labor, materials, and incidentals for the installation of Pipe Casing per the construction drawings and City of Midland standards and specifications, including all spacers, grout, embedment, detector wire, tracer tape, and appurtenances. Measurement and payment to be per linear foot measured along the ground surface following the pipe centerline through all valves, fittings, structures, and appurtenances.

M3 Includes the necessary equipment, labor, materials, and incidentals for the installation of Pipe Conduit per the construction drawings and City of Midland standards and specifications, including all trenching, embedment, backfill, and appurtenances. Measurement and payment to be per linear foot measured along the ground surface following the pipe centerline through all boxes, fittings, structures, and appurtenances.

M4 Includes the necessary equipment, labor, materials, and incidentals to implement the Erosion Control Plan per the construction drawings and City of Midland standards and specifications. Measurement and payment to be made per lump sum.

M5 Includes the necessary equipment, labor, materials, and incidentals to implement the Traffic Control per the approved Traffic Control Plan. Any required traffic control devices are to meet the City of Midland Traffic Division Standards. Measurement and payment to be made per lump sum.

M6 Includes the necessary equipment, labor, materials, and incidentals to implement Job Site Safety and to provide a safe work environment for the project work area (including all personal protection equipment, trench safety, etc.) per the construction drawings and in compliance with all applicable Federal, State, and Local requirements or regulations including those of OSHA and the City of Midland. JOB SITE SAFETY IS THE RESPONSABILITY OF THE CONTRACTOR. Measurement and payment to be made per lump sum.

M7 Includes the necessary equipment, labor, materials, and incidentals for Seeded Erosion Control Mats per the construction drawings and City of Midland standards and specifications, including all removal, storage, and replacement of existing topsoil as well as all mats, seeding, staking, and appurtenances. Watering is addressed in a separate pay note. Measurement and payment to be made per square yard measured along the ground surface.

M8 Includes the necessary equipment, labor, materials, and incidentals for Seeding & Stabilization per the construction drawings and City of Midland standards and specifications, including all removal, storage, and replacement of existing topsoil as well as all seeding and appurtenances. Watering is addressed in a separate pay note. Measurement and payment to be made per square yard measured along the ground surface.

M9 Includes the necessary equipment, labor, materials, and incidentals for Spray Watering per the construction drawings and City of Midland standards and specifications, including all appurtenances. Measurement and payment to be made per lump sum.

D1 Includes the necessary equipment, labor, materials, and incidentals for Preparation of Right-of-Way per the construction drawings and City of Midland standards and specifications including removal and disposal of all obstructions from the right-of-way and easements where removal of such obstructions is not indicated in the consturction drawings, all scraping and preservation of top soil, and including all clearing, grubbing, and appurtenances. Measurement and payment to be made per acre measured along the ground surface.

D2 Includes the necessary equipment, labor, materials, and incidentals for Unclassified Excavation per the construction drawings and City of Midland standards and specifications including all existing sub-structure removal, unclassified excavation, material removal, and appurtenances. Measurment and payment to be per square yard measured along the ground surface.

D3 Includes the necessary equipment, labor, materials, and incidentals for Unclassified Excavation per the construction drawings and City of Midland standards and specifications including all existing sub-structure removal, unclassified excavation, material removal, and appurtenances. Measurment and payment to be per square yard of material removed.

D4 Includes the necessary equipment, labor, materials, and incidentals for Unclassified Excavation per the construction drawings and City of Midland standards and specifications including all existing pavement and sub-structure removal, unclassified excavation, material removal, and appurtenances. Measurment and payment to be per cubic yard of material removed.

D5 Includes the necessary equipment, labor, materials, and incidentals for the Removal & Disposal of Existing Unclassified Pavement per the construction drawings and City of Midland standards and specifications including all pavement removal, saw-cutting, and appurtenances. Depths given are approximate and pavement material is to be removed in its entirety. No additional compensation will be made for increased pavement depth removal. Measurement and payment to be made per square yard measured along the ground surface.

D6 Includes the necessary equipment, labor, materials, and incidentals for the Removal & Disposal of Existing Miscellaneous Concrete per the construction drawings and City of Midland standards and specifications, including all appurtenances. Measurement and payment to be made per square yard measured along the ground surface.

D7 Includes the necessary equipment, labor, materials, and incidentals to Remove & Dispose of Existing Fence And Gate per the construction drawings and City of Midland standards and specifications, including removal of all, columns, posts, foundations, anchors, gates, frames, and structures as well as all excavation, backfill, cutting, and appurtenances. Measurement and payment to be made per linear foot measures along the ground surface following the fence centerline through all structures and appurtenances.

SD1 Includes the necessary equipment, labor, materials, and incidentals for the installation of Reinforced Concrete Box Culvert per the construction drawings and City of Midland standards and specifications, including all embedment, detector wire, tracer tape, necessary testing, and appurtenances. Measurement and payment to be made per linear foot measured along the ground surface following the box culvert centerline through all structures and appurtenances.

SD2 Includes the necessary equipment, labor, materials, and incidentals for the installation of Storm Drains per the construction drawings and City of Midland standards and specifications, including all embedment, detector wire, tracer tape, necessary testing, and appurtenances. Measurement and payment to be made per linear foot measured along the ground surface following the pipe centerline through all structures and appurtenances.

SD3 Includes the necessary equipment, labor, materials, and incidentals for the installation of a Reinforced Concrete Headwall per the construction drawings and City of Midland standards and specifications, including all forms, reinforcment, placement, sealing, finishing, and appurtenances. Measurement and payment to be made per each concrete headwall installed.

SD4 Includes the necessary equipment, labor, materials, and incidentals for the installation of a Headwall Safety End Treatment per the construction drawings and City of Midland standards and specifications, including all forms, reinforcment, placement, sealing, finishing, and appurtenances. Measurement and payment to be made per each headwall safety end treatment installed.

SD5 Includes the necessary equipment, labor, materials, and incidentals for Open Trenching of Storm Drain per the construction drawings and City of Midland standards and specifications, including all unclassified excavation, backfill not including flowable fill backfill, providing trench safety and protection for workers to install pipe, structures, and appurtenances. Measurement and payment to be made per linear foot measured along the ground surface following the pipe centerline through all structures, fittings, and appurtenances.

SD6 Includes the necessary equipment, labor, materials, and incidentals for the installation of Concrete Rip-Rap per the consturction drawings and City of Midland standards and specifications, including all excavation, forms, reinforcement, placement, jointing, sealing, finishing, and appurtenances. Measurement and payment to be made per square yard measured along the ground surface.

ST1 Includes the necessary equipment, labor, materials, and incidentals to install a Fence per the construction drawings and City of Midland standards and specifications, including all columns, posts, foundations, anchors, and structures as well as all excavation, backfill, cutting, and appurtenances. Measurement and payment to be made per linear foot measured along the ground surface following the fence centerline through all structures and appurtenances.

ST2 Includes the necessary equipment, labor, materials, and incidentals to install a Fence Gate per the construction drawings and City of Midland standards and specifications, including all columns, posts, foundations, anchors, frames, attachments, and structures as well as all excavation, backfill, cutting, and appurtenances. Measurement and payment to be made per each gate installed.

ST3 Includes the necessary equipment, labor, materials, and incidentals to install an Electric Gate per the construction drawings and City of Midland standards and specifications, including all columns, posts, foundations, anchors, frames, attachments, and structures as well as all excavation, backfill, cutting, and appurtenances. Measurement and payment to be made per each gate installed.

ST4 Includes the necessary equipment, labor, materials, and incidentals to relocate a Cattle Guard per the construction drawings and City of Midland standards and specifications, including all beams, foundations, anchors, frames, attachments, and structures as well as all excavation, backfill, cutting, and appurtenances. Measurement and payment to be made per each cattle guard installed.

ST5 Includes the necessary equipment, labor, materials, and incidentals to install a Knox Lock per the construction drawings and City of Midland standards and specifications, including all posts, foundations, anchors, frames, safe or box, attachments, and structures as well as all appurtenances. Measurement and payment to be made per each knox lock installed.

ST6 Includes the necessary equipment, labor, materials, and incidentals to Relocate Mailbox Foundation per the construction drawings and City of Midland standards and specifications, including all structure removal, foundation placement, and appurtenances. Measurement and payment to be made per each existing mailbox foundation removed and new mailbox foundation set.

P1 Includes the necessary equipment, labor, materials, and incidentals for Subgrade Preparation per the construction drawings and City of Midland standards and specifications, including all proof-rollling, sub-grade reworking, scarifying, compaction, and appurtenances. Measurement and payment to be made per square yard measured along the ground surface.

P2 Includes the necessary equipment, labor, materials, and incidentals for placement of Unclassified Embankment per the construction drawings and City of Midland standards and specifications, including all sprinkling, rolling, correction of soft spots, grading, sloping, compaction, and appurtenances. Measurement and payment to be made per each cubic yard placed.

P3 Includes the necessary equipment, labor, materials, and incidentals for placement of Jointed Concrete Pavement per the construction drawings and City of Midland standards and specifications, including all forming, reinforcement, placement, jointing, sealing, finishing, and appurtenances. Measurement and payment to be made per square yard of material placed measured along the ground surface.

P4 Includes the necessary equipment, labor, materials, and incidentals for the placement of Type "D" HMAC Asphalt Pavement Surface Course (PG 70-22, 110 LBS / SY at 1" thick) per the construction drawings and City of Midland standards and specifications, including all placement, compaction, and appurtenances. Measurement and payment to be made per square yard of material placed measured along the ground surface.

P5 Includes the necessary equipment, labor, materials, and incidentals for the placement of Type "C" HMAC Asphalt Pavement Surface Course (PG 64-22, 110 LBS / SY at 1" thick) per the construction drawings and City of Midland standards and specifications, including all placement, compaction, and appurtenances. Measurement and payment to be made per square yard of material placed measured along the ground surface.

P6 Includes the necessary equipment, labor, materials, and incidentals for the placement of Type "B" HMAC Asphalt Pavement Surface Course (PG 64-22, 110 LBS / SY at 1" thick) per the construction drawings and City of Midland standards and specifications, including all placement, compaction, and appurtenances. Measurement and payment to be made per square yard of material placed measured along the ground surface.

P7 Includes the necessary equipment, labor, materials, and incidentals for placement of Flexible Base compacted to 95% Density, ASTM D1557, per the construction drawings and City of Midland standards and specifications including all placement, compaction, and appurtenances. Measurement and payment to be made per square yard of material placed measured along the ground surface.

P8 Includes the necessary equipment, labor, materials, and incidentals for application of Bituminous Prime Coat (MC-30, 0.20 GAL / SY) per the construction drawings and City of Midland standards and specifications, including all appurtenances. Measurement and payment to be made per gallon of material applied at the designated rate.

P9 Includes the necessary equipment, labor, materials, and incidentals for application of Tack Coat (MC-30, 0.10 GAL / SY) per the construction drawings and City of Midland standards and specifications, including all appurtenances. Measurement and payment to be made per gallon of material applied at the designated rate.

P10 Includes the necessary equipment, labor, materials, and incidentals for placement of Stamped Concrete Median per the construction drawings and City of Midland standards and specifications including all forming, reinforcement, placement, jointing, sealing, finishing, and appurtenances. Measurement and payment to be made per square yard of material placed measured along the ground surface.

P11 Includes the necessary equipment, labor, materials, and incidentals for placement of Concrete Median per the construction drawings and City of Midland standards and specifications including all forming, reinforcement, placement, jointing, sealing, finishing, and appurtenances. Measurement and payment to be made per square yard of material placed measured along the ground surface.

P12 Includes the necessary equipment, labor, materials, and incidentals for placement of Concrete Fillet per the construction drawings and City of Midland standards and specifications including all forming, reinforcement, placement, jointing, sealing, finishing, and appurtenances. Curb section is formed and poured monolithically with fillet and is not a separate bid item. Measurement and payment to be made per square yard of material placed measured along the ground surface.

P13 Includes the necessary equipment, labor, materials, and incidentals for placement of Concrete Valley Gutter per the construction drawings and City of Midland standards and specifications including all forming, reinforcement, placement, jointing, sealing, finishing, and appurtenances. Measurement and payment to be made per square yard of material placed measured along the ground surface.

P14 Includes the necessary equipment, labor, materials, and incidentals for placement of Concrete Driveway Approach per the construction drawings and City of Midland standards and specifications including all forming, reinforcement, placement, jointing, sealing, finishing, and appurtenances. Pedestrian access ramps at the driveway approach are considered part of the approach and are not a separate bid item. Measurement and payment to be made per square yard of material placed measured along the ground surface.

P15 Includes the necessary equipment, labor, materials, and incidentals for placement of Concrete Curb & Gutter per the construction drawings and City of Midland standards and specifications including all forming, reinforcement, placement, jointing, finishing, and appurtenances. Measurement and payment to be made per linear foot of material placed measured along the back-of-curb.

P16 Includes the necessary equipment, labor, materials, and incidentals for placement of Concrete Pedestrian Access Ramp per the construction drawings and City of Midland standards and specifications, including all forming, reinforcement, placement, jointing, finishing, and appurtenances. Measurement and payment to be made per square yard of material placed measured along the ground surface.

P17 Includes the necessary equipment, labor, materials, and incidentals for Ring & Cover Adjustment per the construction drawings and City of Midland standards and specifications including all forming, reinforcement, placement, flowable fill, jointing, sealing, finishing, and appurtenances. This includes a minimum 1.0' wide concrete collar whose width is measured from the outer edge of the cover to the outer edge of the concrete ring. Measurement and payment to be made per each adjustment made.

T1 Includes the necessary equipment, labor, materials, and incidentals to Eliminate Existing Pavement Markings and Markers (Line Marking) per the construction drawings and City of Midland standards and specifications, including all appurtenances. Measurement and payment to be made per linear foot eliminated.

T2 Includes the necessary equipment, labor, materials, and incidentals for the placement of Retroreflectorized Pavement Markings per the construction drawings and City of Midland standards and specifications, including all appurtenances. Measurement and payment to be made per linear foot placed.

T3 Includes the necessary equipment, labor, materials, and incidentals for the placement of Thermoplastic Pavement Markings per the construction drawings and City of Midland standards and specifications, including all appurtenances. Measurement and payment to be made per linear foot placed.

T4 Includes the necessary equipment, labor, materials, and incidentals for the placement of Prefabricated Pavement Markings per the construction drawings and City of Midland standards and specifications, including all appurtenances. Measurement and payment to be made per each marking placed.

T5 Includes the necessary equipment, labor, materials, and incidentals for In Road Sign Assembly per the construction drawings and City of Midland standards and specifications, including all appurtenances. Measurement and payment to be made per each sign assembled.

T6 Includes the necessary equipment, labor, materials, and incidentals to Remove Sign Assembly per the construction drawings and City of Midland standards and specifications, including all excavation, backfill, stabilization, foundations, bases, and appurtenances. Measurement and payment to be made per each existing sign assembly removed.

T7 Includes the necessary equipment, labor, materials, and incidentals for the placement of Retroreflective Raised Pavement Markers per the construction drawings and City of Midland standards and specifications, including all appurtenances. Measurement and payment to be made per each marker placed.

T8 Includes the necessary equipment, labor, materials, and incidentals for the placement and installation of Utility Duct Bank improvements per the construction drawings and City of Midland standards and specifications, including all appurtenances. Measurement and payment to be made per linear foot placed measured along the ground surface.

T9 Includes the necessary equipment, labor, materials, and incidentals for the placement and installation of Ground Box With Apron improvements per the construction drawings and City of Midland standards and specifications, including all appurtenances. Measurement and payment to be made per each ground box with apron placed.

T10 Includes the necessary equipment, labor, materials, and incidentals for the placement and installation of Delineator Assembly improvements per the construction drawings and City of Midland standards and specifications, including all appurtenances. Measurement and payment to be made per each delineator assembly placed.

T11 Includes the necessary equipment, labor, materials, and incidentals for the placement and installation of Temporary Workzone Pavement Markings improvements per the construction drawings and City of Midland standards and specifications, including all appurtenances. Measurement and payment to be made per lump sum.

BID ITEMS

(See Proposal sheet for additional information.)

Project Name: BRIARWOOD AVE PHASE II
Project Number: P21-06
ADDITIVE ALTERNATE BID 01

Miscellaneous Items						
Item No.	Description	Quantity	Unit	Pay Note	Unit Price	Total Amount
1)	Mobilization, furnished, installed, complete and in place.	1	LS	M1	$_____	$_____
2)	4" PVC Pipe Casing (Irrigation Sleeve, SDR 26 ASTM), furnished, installed, complete and in place.	0	LF	M2	$_____	$_____
3)	3" PVC Pipe Conduit (Schedule 40 Electric), furnished, installed, complete and in place.	0	LF	M3	$_____	$_____
4)	Erosion/Sediment Control, furnished, installed, complete and in place.	1	LS	M4	$_____	$_____
5)	Traffic Control, furnished, installed, complete and in place.	1	LS	M5	$_____	$_____
6)	Job Site Safety, furnished, installed, complete and in place.	1	LS	M6	$_____	$_____
7)	Seeded Erosion Control Mats, furnished, installed, complete and in place.	2077	SY	M7	$_____	$_____
8)	Seeding & Stabilization, furnished, installed, complete and in place.	2000	SY	M8	$_____	$_____
9)	Spray Watering, furnished, installed, complete and in place.	1	LS	M9	$_____	$_____
Total Miscellaneous Items 1 - 9		$_____				

Demolition Items						
Item No.	Description	Quantity	Unit	Pay Note	Unit Price	Total Amount
1)	Preparation of Right-of-Way, furnished, installed, complete and in place.	9	ACRE	D1	$_____	$_____
2)	Unclassified Roadway Excavation (Base Removal, Depth ≤ 14”), complete and in place.	7272	SY	D2	$_____	$_____
3)	Unclassified Roadway Excavation (Non Pavement & Base Removal), complete and in place.	7500	SY	D3	$_____	$_____
4)	Unclassified Basin & Channel Excavation, complete and in place.	0	CY	D4	$_____	$_____
5)	Removal & Dispose of Existing Unclassified Pavement, complete and in place.	7272	SY	D5	$_____	$_____
6)	Removal & Disposal of Existing Miscellaneous Concrete, complete and in place.	0	SY	D6	$_____	$_____
7)	Removal & Disposal of Existing Fence And Gate, complete and in place.	783	LF	D7	$_____	$_____
Total Demolition Items 1 - 7		$_____				

Storm Drain Items						
Item No.	Description	Quantity	Unit	Pay Note	Unit Price	Total Amount
1)	3'x2' Reinforced Concrete Box Culvert furnished, installed, complete and in place.	0	LF	SD1	$_____	$_____
2)	24" Reinforced Concrete Pipe (RCP), furnished, installed, complete and in place.	0	LF	SD2	$_____	$_____
3)	Reinforced Concrete Headwall (Wingwall, PW-1, HW=4', furnished, installed, complete and in place.	0	EA	SD3	$_____	$_____
4)	Reinforced Concrete Headwall (Wingwall, PW-1, HW=5'), furnished, installed, complete and in place.	0	EA	SD3	$_____	$_____
5)	Headwall Safety End Treatment (Type I), furnished, installed, complete and in place.	0	EA	SD4	$_____	$_____
6)	Headwall Safety End Treatment (Type 2), furnished, installed, complete and in place.	0	EA	SD4	$_____	$_____
7)	Open Trenching of Storm Drain, furnished, installed, complete and in place.	0	LF	SD5	$_____	$_____
8)	5" Concrete Rip-Rap, furnished, installed, complete and in place.	0	SY	SD6	$_____	$_____
Total Storm Drain Items 1 - 8		$_____				

Structural Items						
Item No.	Description	Quantity	Unit	Pay Note	Unit Price	Total Amount
1)	Barbed-Wire Fence, furnished, installed, complete and in place.	0	LF	ST1	$_____	$_____
2)	Swing Gate, furnished, installed, complete and in place.	0	EA	ST2	$_____	$_____
3)	Electric Gate, furnished, installed, complete and in place.	0	EA	ST3	$_____	$_____
4)	24' Cattle Guard Relocation, furnished, complete and in place.	0	EA	ST4	$_____	$_____
5)	Knox Lock, furnished, installed, complete and in place.	0	EA	ST5	$_____	$_____
6)	Relocate Mailbox Foundation, furnished, installed, complete and in place.	2	EA	ST6	$_____	$_____
Total Structural Items 1 - 6		$_____				

Paving Items						
Item No.	Description	Quantity	Unit	Pay Note	Unit Price	Total Amount
1)	Subgrade Preparation (Depth ≤ 6”), furnished, installed, complete and in place.	16076	SY	P1	$_____	$_____
2)	Unclassified Embankment (Density Controlled), furnished, installed, complete and in place.	500	CY	P2	$_____	$_____
3)	8” Jointed Concrete Pavement, furnished, installed, complete and in place.	0	SY	P3	$_____	$_____
4)	2” Type D HMAC Asphalt Pavement Surface Course (PG70-22, 110 LBS / SY @ 1” Thick), furnished, installed, complete and in place.	15540	SY	P4	$_____	$_____
5)	3” Type C HMAC Asphalt Pavement Surface Course (PG64-22, 110 LBS / SY @ 1” Thick), furnished, installed, complete and in place.	15540	SY	P5	$_____	$_____
6)	6” Temporary Type B HMAC Asphalt Pavement Surface Course (PG64-22, 110 LBS / SY @ 1” Thick), furnished, installed, complete and in place.	1759	SY	P6	$_____	$_____
7)	10” Flexible Base (Type A, Grade 4), furnished, installed, complete and in place.	15060	SY	P7	$_____	$_____
8)	Bituminous Prime Coat (MC-30, 0.20 Gal / SY), furnished, installed, complete and in place.	8886	GAL	P8	$_____	$_____
9)	Tack Coat (MC-30, 0.10 Gal / SY), furnished, installed, complete and in place.	1554	GAL	P9	$_____	$_____
10)	4” Stamped Concrete Median, furnished, installed, complete and in place.	1058	SY	P10	$_____	$_____
11)	4” Concrete Median, furnished, installed, complete and in place.	295	SY	P11	$_____	$_____
12)	8” Concrete Fillet, furnished, installed, complete and in place.	0	SY	P12	$_____	$_____
13)	8” Concrete Valley Gutter, furnished, installed, complete and in place.	0	SY	P13	$_____	$_____
14)	6” Concrete Driveway Approach, furnished, installed, complete and in place.	610	SY	P14	$_____	$_____
15)	Type A Concrete Curb & Gutter, furnished, installed, complete and in place.	3444	LF	P15	$_____	$_____
16)	Type C Concrete Curb & Gutter, furnished, installed, complete and in place.	1809	LF	P15	$_____	$_____
17)	Type I Concrete Curb & Gutter, furnished, installed, complete and in place.	0	LF	P15	$_____	$_____

18)	Concrete Pedestrian Access Ramp, furnished, installed, complete and in place.	0	SY	P16	$_____	$_____
19)	Manhole Ring & Cover Adjustment, furnished, installed, complete and in place.	4	EA	P17	$_____	$_____
20)	Water Valve Box Ring & Cover Adjustment, furnished, installed, complete and in place.	0	EA	P17	$_____	$_____
21)	6" Temporary Flexible Base (Type A, Grade 4), furnished, installed, complete and in place.	0	SY	P7	$_____	$_____
Total Paving Items 1 - 21		$_____				

Traffic Control Items						
Item No.	Description	Quantity	Unit	Pay Note	Unit Price	Total Amount
1)	Eliminate Existing Pavement Markings and Markers (Line Markings), furnished, installed, complete and in place.	2995	LF	T1	$_____	$_____
2)	Retroreflectorized Pavement Markings, TxDOT Item 666 (24" White, Solid), furnished, installed, complete and in place.	118	LF	T2	$_____	$_____
3)	Retroreflectorized Pavement Markings, TxDOT Item 666 (8" White, Solid), furnished, installed, complete and in place.	636	LF	T2	$_____	$_____
4)	Retroreflectorized Pavement Markings, TxDOT Item 666 (12" Yellow, Solid), furnished, installed, complete and in place.	46	LF	T2	$_____	$_____
5)	Retroreflectorized Pavement Markings, TxDOT Item 666 (8" White, LNDP), furnished, installed, complete and in place.	0	LF	T2	$_____	$_____
6)	Thermoplastic Pavement Markings, TxDOT Item 666 (6" White, Solid), furnished, installed, complete and in place.	3442	LF	T3	$_____	$_____
7)	Thermoplastic Pavement Markings, TxDOT Item 666 (6" White, Broken), furnished, installed, complete and in place.	807	LF	T3	$_____	$_____
8)	Thermoplastic Pavement Markings, TxDOT Item 666 (6" Yellow, Solid), furnished, installed, complete and in place.	1226	LF	T3	$_____	$_____
9)	Prefabricated Pavement Markings, TxDOT Item 666 (White, Arrow Symbol), furnished, installed, complete and in place.	6	EA	T4	$_____	$_____
10)	Prefabricated Pavement Markings, TxDOT Item 666 (White, Bike Lane Symbol), furnished, installed, complete and in place.	6	EA	T4	$_____	$_____
11)	In Road Sign Assembly (SUP&AM [Type S80(1)SB(p)]), furnished, installed, complete and in place.	6	SF	T5	$_____	$_____
12)	Remove Sign Assembly, furnished, installed, complete and in place.	0	EA	T6	$_____	$_____
13)	Retroreflective Raised Pavement Marker (Type II-C-R), furnished, installed, complete and in place.	103	EA	T7	$_____	$_____
14)	Utility Duct Bank, furnished, installed, complete and in place.	0	LF	T8	$_____	$_____
15)	Type C Ground Box (162911) With Apron, furnished, installed, complete and in place.	0	EA	T9	$_____	$_____
16)	Delineator Assembly (OM-2Y)(WC)GND(BI), furnished, installed, complete and in place.	0	EA	T10	$_____	$_____
17)	Delineator Assembly (8' Permenant Type III Barricade), furnished, installed, complete and in place.	0	EA	T10	$_____	$_____
18)	Temporary Workzone Pavement Markings, furnished, installed, complete and in place.	1	LS	T11	$_____	$_____

1	Preparation of Right-of-Way	D1
2	Unclassified Roadway Excavation (Base Removal, Depth ≤ 14")	D2
3	Unclassified Roadway Excavation (Non Pavement & Base Removal)	D3
4	Unclassified Excavation (Basin & Channel)	D4
5	Removal & Disposal of Existing Unclassified Pavement	D5
6	Removal & Disposal of Existing Miscellaneous Concrete	D6
7	Removal & Disposal of Existing Fence And Gate	D7
Storm Drain Items		
1	3'x2' Reinforced Concrete Box Culvert	SD1
2	24" Reinforced Concrete Pipe (RCP)	SD2
3	Reinforced Concrete Headwall (Wingwall, PW-1, HW=4')	SD3
4	Reinforced Concrete Headwall (Wingwall, PW-1, HW=5')	SD3
5	Headwall Safety End Treatment (Type I)	SD4
6	Headwall Safety End Treatment (Type II)	SD4
7	Open Trenching of Storm Drain	SD5
8	5" Concrete Rip-Rap	SD6
Structural Items		
1	Barbed-Wire Fence	ST1
2	Swing Gate	ST2
3	Electric Gate	ST3
4	24' Cattle Guard Relocation	ST4
5	Knox Lock	ST5
6	Relocate Mailbox Foundation	ST6

Paving Items

1	Subgrade Preparation (Depth ≤ 6")	P1
2	Unclassified Embankment (Density Controlled)	P2
3	8" Jointed Concrete Pavement	P3
4	2" Type D HMAC Asphalt Pavement Surface Course (PG70-22, 110 LBS / SY @ 1" Thick)	P4
5	3" Type C HMAC Asphalt Pavement Surface Course (PG64-22, 110 LBS / SY @ 1" Thick)	P5
6	6" Temporary Type B HMAC Asphalt Pavement Surface Course (PG64-22, 110 LBS / SY @ 1" Thick)	P6
7	10" Flexible Base (Type A, Grade 4)	P7
8	Bituminous Prime Coat (MC-30, 0.20 Gal / SY)	P8
9	Tack Coat (MC-30, 0.10 Gal / SY)	P9
10	4" Stamped Concrete Median	P10
11	4" Concrete Median	P11
12	8" Concrete Fillet	P12
13	8" Concrete Valley Gutter	P13
14	6" Concrete Driveway Approach	P14
15	Type A Concrete Curb & Gutter	P15
16	Type C Concrete Curb & Gutter	P15
17	Type I Concrete Curb & Gutter	P15
18	Concrete Pedestrian Access Ramp	P16
19	Manhole Ring & Cover Adjustment	P17
20	Water Valve Box Ring & Cover Adjustment	P17
21	6" Temporary Flexible Base (Type A, Grade 4)	P7

Traffic Items

1	Eliminate Existing Pavement Markings and Markers (Line Markings)	T1
2	Retroreflectorized Pavement Markings, TxDOT Item 666 (24" White, Solid)	T2
3	Retroreflectorized Pavement Markings, TxDOT Item 666 (8" White, Solid)	T2
4	Retroreflectorized Pavement Markings, TxDOT Item 666 (12" Yellow, Solid)	T2
5	Retroreflectorized Pavement Markings, TxDOT Item 666 (8" White, LNDP)	T2
6	Thermoplastic Pavement Markings, TxDOT Item 666 (6" White, Solid)	T3
7	Thermoplastic Pavement Markings, TxDOT Item 666 (6" White, Broken)	T3
8	Thermoplastic Pavement Markings, TxDOT Item 666 (6" Yellow, Solid)	T3
9	Prefabricated Pavement Markings (White, Arrow Symbol)	T4
10	Prefabricated Pavement Markings (White, Bike Lane Symbol)	T4
11	In Road Sign Assembly (SUP&AM [Type S80(1)SB(p)])	T5
12	Remove Sign Assembly	T6
13	Retroreflective Raised Pavement Marker (Type II-C-R)	T7
14	Utility Duct Bank	T8
15	Type C Ground Box (162911) With Apron	T9
16	Delineator Assembly (OM-2Y)(WC)GND(BI)	T10
17	Delineator Assembly (8' Permenant Type III Barricade)	T10
18	Temporary Workzone Pavement Markings	T11

PAY QUANTITY NOTES

M1 Includes the necessary equipment, labor, materials, and incidentals for all Mobilization to the job site complete and in place. Measurement and payment to be made per lump sum.

M2 Includes the necessary equipment, labor, materials, and incidentals for the installation of Pipe Casing per the construction drawings and City of Midland standards and specifications, including all spacers, grout, embedment, detector wire, tracer tape, and appurtenances. Measurement and payment to be per linear foot measured along the ground surface following the pipe centerline through all valves, fittings, structures, and appurtenances.

M3 Includes the necessary equipment, labor, materials, and incidentals for the installation of Pipe Conduit per the construction drawings and City of Midland standards and specifications, including all trenching, embedment, backfill, and appurtenances. Measurement and payment to be per linear foot measured along the ground surface following the pipe centerline through all boxes, fittings, structures, and appurtenances.

M4 Includes the necessary equipment, labor, materials, and incidentals to implement the Erosion Control Plan per the construction drawings and City of Midland standards and specifications. Measurement and payment to be made per lump sum.

M5 Includes the necessary equipment, labor, materials, and incidentals to implement the Traffic Control per the approved Traffic Control Plan. Any required traffic control devices are to meet the City of Midland Traffic Division Standards. Measurement and payment to be made per lump sum.

M6 Includes the necessary equipment, labor, materials, and incidentals to implement Job Site Safety and to provide a safe work environment for the project work area (including all personal protection equipment, trench safety, etc.) per the construction drawings and in compliance with all applicable Federal, State, and Local requirements or regulations including those of OSHA and the City of Midland. JOB SITE SAFETY IS THE RESPONSABILITY OF THE CONTRACTOR. Measurement and payment to be made per lump sum.

M7 Includes the necessary equipment, labor, materials, and incidentals for Seeded Erosion Control Mats per the construction drawings and City of Midland standards and specifications, including all removal, storage, and replacement of existing topsoil as well as all mats, seeding, staking, and appurtenances. Watering is addressed in a separate pay note. Measurement and payment to be made per square yard measured along the ground surface.

M8 Includes the necessary equipment, labor, materials, and incidentals for Seeding & Stabilization per the construction drawings and City of Midland standards and specifications, including all removal, storage, and replacement of existing topsoil as well as all seeding and appurtenances. Watering is addressed in a separate pay note. Measurement and payment to be made per square yard measured along the ground surface.

M9 Includes the necessary equipment, labor, materials, and incidentals for Spray Watering per the construction drawings and City of Midland standards and specifications, including all appurtenances. Measurement and payment to be made per lump sum.

D1 Includes the necessary equipment, labor, materials, and incidentals for Preparation of Right-of-Way per the construction drawings and City of Midland standards and specifications including removal and disposal of all obstructions from the right-of-way and easements where removal of such obstructions is not indicated in the consturction drawings, all scraping and preservation of top soil, and including all clearing, grubbing, and appurtenances. Measurement and payment to be made per acre measured along the ground surface.

D2 Includes the necessary equipment, labor, materials, and incidentals for Unclassified Excavation per the construction drawings and City of Midland standards and specifications including all existing sub-structure removal, unclassified excavation, material removal, and appurtenances. Measurment and payment to be per square yard measured along the ground surface.

D3 Includes the necessary equipment, labor, materials, and incidentals for Unclassified Excavation per the construction drawings and City of Midland standards and specifications including all existing sub-structure removal, unclassified excavation, material removal, and appurtenances. Measurment and payment to be per square yard of material removed.

D4 Includes the necessary equipment, labor, materials, and incidentals for Unclassified Excavation per the construction drawings and City of Midland standards and specifications including all existing pavement and sub-structure removal, unclassified excavation, material removal, and appurtenances. Measurment and payment to be per cubic yard of material removed.

D5 Includes the necessary equipment, labor, materials, and incidentals for the Removal & Disposal of Existing Unclassified Pavement per the construction drawings and City of Midland standards and specifications including all pavement removal, saw-cutting, and appurtenances. Depths given are approximate and pavement material is to be removed in its entirety. No additional compensation will be made for increased pavement depth removal. Measurement and payment to be made per square yard measured along the ground surface.

D6 Includes the necessary equipment, labor, materials, and incidentals for the Removal & Disposal of Existing Miscellaneous Concrete per the construction drawings and City of Midland standards and specifications, including all appurtenances. Measurement and payment to be made per square yard measured along the ground surface.

D7 Includes the necessary equipment, labor, materials, and incidentals to Remove & Dispose of Existing Fence And Gate per the construction drawings and City of Midland standards and specifications, including removal of all, columns, posts, foundations, anchors, gates, frames, and structures as well as all excavation, backfill, cutting, and appurtenances. Measurement and payment to be made per linear foot measures along the ground surface following the fence centerline through all structures and appurtenances.

SD1 Includes the necessary equipment, labor, materials, and incidentals for the installation of Reinforced Concrete Box Culvert per the construction drawings and City of Midland standards and specifications, including all embedment, detector wire, tracer tape, necessary testing, and appurtenances. Measurement and payment to be made per linear foot measured along the ground surface following the box culvert centerline through all structures and appurtenances.

SD2 Includes the necessary equipment, labor, materials, and incidentals for the installation of Storm Drains per the construction drawings and City of Midland standards and specifications, including all embedment, detector wire, tracer tape, necessary testing, and appurtenances. Measurement and payment to be made per linear foot measured along the ground surface following the pipe centerline through all structures and appurtenances.

SD3 Includes the necessary equipment, labor, materials, and incidentals for the installation of a Reinforced Concrete Headwall per the construction drawings and City of Midland standards and specifications, including all forms, reinforcment, placement, sealing, finishing, and appurtenances. Measurement and payment to be made per each concrete headwall installed.

SD4 Includes the necessary equipment, labor, materials, and incidentals for the installation of a Headwall Safety End Treatment per the construction drawings and City of Midland standards and specifications, including all forms, reinforcment, placement, sealing, finishing, and appurtenances. Measurement and payment to be made per each headwall safety end treatment installed.

SD5 Includes the necessary equipment, labor, materials, and incidentals for Open Trenching of Storm Drain per the construction drawings and City of Midland standards and specifications, including all unclassified excavation, backfill not including flowable fill backfill, providing trench safety and protection for workers to install pipe, structures, and appurtenances. Measurement and payment to be made per linear foot measured along the ground surface following the pipe centerline through all structures, fittings, and appurtenances.

SD6 Includes the necessary equipment, labor, materials, and incidentals for the installation of Concrete Rip-Rap per the consturction drawings and City of Midland standards and specifications, including all excavation, forms, reinforcement, placement, jointing, sealing, finishing, and appurtenances. Measurement and payment to be made per square yard measured along the ground surface.

ST1 Includes the necessary equipment, labor, materials, and incidentals to install a Fence per the construction drawings and City of Midland standards and specifications, including all columns, posts, foundations, anchors, and structures as well as all excavation, backfill, cutting, and appurtenances. Measurement and payment to be made per linear foot measured along the ground surface following the fence centerline through all structures and appurtenances.

ST2 Includes the necessary equipment, labor, materials, and incidentals to install a Fence Gate per the construction drawings and City of Midland standards and specifications, including all columns, posts, foundations, anchors, frames, attachments, and structures as well as all excavation, backfill, cutting, and appurtenances. Measurement and payment to be made per each gate installed.

ST3 Includes the necessary equipment, labor, materials, and incidentals to install an Electric Gate per the construction drawings and City of Midland standards and specifications, including all columns, posts, foundations, anchors, frames, attachments, and structures as well as all excavation, backfill, cutting, and appurtenances. Measurement and payment to be made per each gate installed.

ST4 Includes the necessary equipment, labor, materials, and incidentals to relocate a Cattle Guard per the construction drawings and City of Midland standards and specifications, including all beams, foundations, anchors, frames, attachments, and structures as well as all excavation, backfill, cutting, and appurtenances. Measurement and payment to be made per each cattle guard installed.

ST5 Includes the necessary equipment, labor, materials, and incidentals to install a Knox Lock per the construction drawings and City of Midland standards and specifications, including all posts, foundations, anchors, frames, safe or box, attachments, and structures as well as all appurtenances. Measurement and payment to be made per each knox lock installed.

ST6 Includes the necessary equipment, labor, materials, and incidentals to Relocate Mailbox Foundation per the construction drawings and City of Midland standards and specifications, including all structure removal, foundation placement, and appurtenances. Measurement and payment to be made per each existing mailbox foundation removed and new mailbox foundation set.

P1 Includes the necessary equipment, labor, materials, and incidentals for Subgrade Preparation per the construction drawings and City of Midland standards and specifications, including all proof-rollling, sub-grade reworking, scarifying, compaction, and appurtenances. Measurement and payment to be made per square yard measured along the ground surface.

P2 Includes the necessary equipment, labor, materials, and incidentals for placement of Unclassified Embankment per the construction drawings and City of Midland standards and specifications, including all sprinkling, rolling, correction of soft spots, grading, sloping, compaction, and appurtenances. Measurement and payment to be made per each cubic yard placed.

P3 Includes the necessary equipment, labor, materials, and incidentals for placement of Jointed Concrete Pavement per the construction drawings and City of Midland standards and specifications, including all forming, reinforcement, placement, jointing, sealing, finishing, and appurtenances. Measurement and payment to be made per square yard of material placed measured along the ground surface.

P4 Includes the necessary equipment, labor, materials, and incidentals for the placement of Type "D" HMAC Asphalt Pavement Surface Course (PG 70-22, 110 LBS / SY at 1" thick) per the construction drawings and City of Midland standards and specifications, including all placement, compaction, and appurtenances. Measurement and payment to be made per square yard of material placed measured along the ground surface.

P5 Includes the necessary equipment, labor, materials, and incidentals for the placement of Type "C" HMAC Asphalt Pavement Surface Course (PG 64-22, 110 LBS / SY at 1" thick) per the construction drawings and City of Midland standards and specifications, including all placement, compaction, and appurtenances. Measurement and payment to be made per square yard of material placed measured along the ground surface.

P6 Includes the necessary equipment, labor, materials, and incidentals for the placement of Type "B" HMAC Asphalt Pavement Surface Course (PG 64-22, 110 LBS / SY at 1" thick) per the construction drawings and City of Midland standards and specifications, including all placement, compaction, and appurtenances. Measurement and payment to be made per square yard of material placed measured along the ground surface.

P7 Includes the necessary equipment, labor, materials, and incidentals for placement of Flexible Base compacted to 95% Density, ASTM D1557, per the construction drawings and City of Midland standards and specifications including all placement, compaction, and appurtenances. Measurement and payment to be made per square yard of material placed measured along the ground surface.

P8 Includes the necessary equipment, labor, materials, and incidentals for application of Bituminous Prime Coat (MC-30, 0.20 GAL / SY) per the construction drawings and City of Midland standards and specifications, including all appurtenances. Measurement and payment to be made per gallon of material applied at the designated rate.

P9 Includes the necessary equipment, labor, materials, and incidentals for application of Tack Coat (MC-30, 0.10 GAL / SY) per the construction drawings and City of Midland standards and specifications, including all appurtenances. Measurement and payment to be made per gallon of material applied at the designated rate.

P10 Includes the necessary equipment, labor, materials, and incidentals for placement of Stamped Concrete Median per the construction drawings and City of Midland standards and specifications including all forming, reinforcement, placement, jointing, sealing, finishing, and appurtenances. Measurement and payment to be made per square yard of material placed measured along the ground surface.

P11 Includes the necessary equipment, labor, materials, and incidentals for placement of Concrete Median per the construction drawings and City of Midland standards and specifications including all forming, reinforcement, placement, jointing, sealing, finishing, and appurtenances. Measurement and payment to be made per square yard of material placed measured along the ground surface.

P12 Includes the necessary equipment, labor, materials, and incidentals for placement of Concrete Fillet per the construction drawings and City of Midland standards and specifications including all forming, reinforcement, placement, jointing, sealing, finishing, and appurtenances. Curb section is formed and poured monolithically with fillet and is not a separate bid item. Measurement and payment to be made per square yard of material placed measured along the ground surface.

P13 Includes the necessary equipment, labor, materials, and incidentals for placement of Concrete Valley Gutter per the construction drawings and City of Midland standards and specifications including all forming, reinforcement, placement, jointing, sealing, finishing, and appurtenances. Measurement and payment to be made per square yard of material placed measured along the ground surface.

P14 Includes the necessary equipment, labor, materials, and incidentals for placement of Concrete Driveway Approach per the construction drawings and City of Midland standards and specifications including all forming, reinforcement, placement, jointing, sealing, finishing, and appurtenances. Pedestrian access ramps at the driveway approach are considered part of the approach and are not a separate bid item. Measurement and payment to be made per square yard of material placed measured along the ground surface.

P15 Includes the necessary equipment, labor, materials, and incidentals for placement of Concrete Curb & Gutter per the construction drawings and City of Midland standards and specifications including all forming, reinforcement, placement, jointing, finishing, and appurtenances. Measurement and payment to be made per linear foot of material placed measured along the back-of-curb.

P16 Includes the necessary equipment, labor, materials, and incidentals for placement of Concrete Pedestrian Access Ramp per the construction drawings and City of Midland standards and specifications, including all forming, reinforcement, placement, jointing, finishing, and appurtenances. Measurement and payment to be made per square yard of material placed measured along the ground surface.

P17 Includes the necessary equipment, labor, materials, and incidentals for Ring & Cover Adjustment per the construction drawings and City of Midland standards and specifications including all forming, reinforcement, placement, flowable fill, jointing, sealing, finishing, and appurtenances. This includes a minimum 1.0' wide concrete collar whose width is measured from the outer edge of the cover to the outer edge of the concrete ring. Measurement and payment to be made per each adjustment made.

T1 Includes the necessary equipment, labor, materials, and incidentals to Eliminate Existing Pavement Markings and Markers (Line Marking) per the construction drawings and City of Midland standards and specifications, including all appurtenances. Measurement and payment to be made per linear foot eliminated.

T2 Includes the necessary equipment, labor, materials, and incidentals for the placement of Retroreflectorized Pavement Markings per the construction drawings and City of Midland standards and specifications, including all appurtenances. Measurement and payment to be made per linear foot placed.

T3 Includes the necessary equipment, labor, materials, and incidentals for the placement of Thermoplastic Pavement Markings per the construction drawings and City of Midland standards and specifications, including all appurtenances. Measurement and payment to be made per linear foot placed.

T4 Includes the necessary equipment, labor, materials, and incidentals for the placement of Prefabricated Pavement Markings per the construction drawings and City of Midland standards and specifications, including all appurtenances. Measurement and payment to be made per each marking placed.

T5 Includes the necessary equipment, labor, materials, and incidentals for In Road Sign Assembly per the construction drawings and City of Midland standards and specifications, including all appurtenances. Measurement and payment to be made per each sign assembled.

T6 Includes the necessary equipment, labor, materials, and incidentals to Remove Sign Assembly per the construction drawings and City of Midland standards and specifications, including all excavation, backfill, stabilization, foundations, bases, and appurtenances. Measurement and payment to be made per each existing sign assembly removed.

T7 Includes the necessary equipment, labor, materials, and incidentals for the placement of Retroreflective Raised Pavement Markers per the construction drawings and City of Midland standards and specifications, including all appurtenances. Measurement and payment to be made per each marker placed.

T8 Includes the necessary equipment, labor, materials, and incidentals for the placement and installation of Utility Duct Bank improvements per the construction drawings and City of Midland standards and specifications, including all appurtenances. Measurement and payment to be made per linear foot placed measured along the ground surface.

T9 Includes the necessary equipment, labor, materials, and incidentals for the placement and installation of Ground Box With Apron improvements per the construction drawings and City of Midland standards and specifications, including all appurtenances. Measurement and payment to be made per each ground box with apron placed.

T10 Includes the necessary equipment, labor, materials, and incidentals for the placement and installation of Delineator Assembly improvements per the construction drawings and City of Midland standards and specifications, including all appurtenances. Measurement and payment to be made per each delineator assembly placed.

T11 Includes the necessary equipment, labor, materials, and incidentals for the placement and installation of Temporary Workzone Pavement Markings improvements per the construction drawings and City of Midland standards and specifications, including all appurtenances. Measurement and payment to be made per lump sum.

BID ITEMS

(See Proposal sheet for additional information.)

Project Name: BRIARWOOD AVE PHASE II
Project Number: P21-06
ADDITIVE ALTERNATE BID 02

Traffic Control Items						
Item No.	Description	Quantity	Unit	Pay Note	Unit Price	Total Amount
1)	Intersection Signals & Electrical (Briarwood Drive & Avalon Drive), furnished, installed, complete and in place.	1	LS	T11	$_____	$_____
Total Traffic Control Items 1 - 1		$_____

ADDITIVE ALTERNATE BID 02

Bid Item		Pay Quantity Note
Traffic Items		
1	Intersection Signals & Electrical (Briarwood Drive & Avalon Drive)	T11

PAY QUANTITY NOTES

T11 Includes the necessary equipment, labor, materials, and incidentals for the placement and installation of all Intersection Signals & Electrical improvements per the construction drawings and City of Midland standards and specifications, including all lights, heads, fixtures, arms, poles, buttons, pedestals, foundations, wiring, cables, boxes, cabinets, and appurtenances. Measurement and payment to be made per lump sum for each street intersection where signal and electrical improvements are made.

ADDENDUM 07
Project Number PD21-06

TO ALL BIDDERS ON THE SUBJECT BID: Briarwood Paving Phase II

ADDENDUM 07

DATE: August 12, 2025

1. Q/A and Clarification
2. Revised Base Bid Drawing Set
3. Revised Additive Alternate 01 Drawing Set
4. Updated Additional Pavement Cross-Section Information
5. City of Midland Traffic Signal Material Specification
6. City of Midland Standard ILSN Layout
7. Revised Bid Item – Base Bid
8. Revised Bid Item – Additive Alternate Bid 01
9. Revised Pay Notes – Base Bid
10. Revised Pay Notes – Additive Alternate Bid 01

PLEASE RETURN THIS ADDENDUM WITH YOUR BID BY THE CLOSING DATE.

All other terms and conditions shall remain the same.

Briarwood Paving Phase II
Project Number PD21-06

Q/A and Clarification

During the Pre-Bid Meeting, the following questions were raised by one or more bidders. Below is a list of the questions along with the answers and clarifications.

Clarification: All information provided in Addendum 01, Addendum 02, Addendum 03, Addendum 04, Addendum 05, and Addendum 06 for this project remains in effect unless specifically addressed in this Addendum 07.

Clarification: The deadline for questions and the date and time of the bid opening remain as stated in Addendum 04.

Clarification: All addendum acknowledgement forms must be included with the bid for the bid to be considered complete. Bidders have sole responsibility for making sure they have and acknowledge all addendums provided for this project bid.

Clarification: Addendum 06 separated the Bid Items section of the Project Manual into three separate Bid Item sub-sections for a Base Bid, an Additive Alternate Bid 01, and an Additive Alternate Bid 02. This Addendum 07 is combining the previously provided Base Bid and Additive Alternate 01 Bid Items into a single Bid Item list for the Base Bid. The Additive Alternate 02 Bid Items section is being re-named Additive Alternate 01.

Base Bid Bid Items Revisions – Combined the quantities for all the bid line items between the previously separate versions of the Base Bid and Additive Alternate 01 Bid Items. Removed the Base Bid Miscellaneous Bid Item #2 line item for 4" PVC Pipe Casing for irrigation because no irrigation casing is to be installed with this project. Removed the Base Bid Structural Bid Item #3 line item for Electric Gate because the combined quantity was 0.

Additive Alternate 01 Bid Items Revisions – No revisions beyond the name change described.

Clarification: The Pay Notes sections of the Project Manual have been combined, revised, and renamed to reflect the revisions to the Bid Items sections previously described in this Addendum 07. Pay Notes M2 and ST3 were both removed from the Base Bid Pay Notes as a result of this.

Clarification: The design drawing set previously red-lined and included with Addendum 06 to distinguish between the Base Bid portion and the Additive Alternate Bid 01 portion has been revised and included with this Addendum 07 so that both portions are now combined into a single Base Bid design set.

Clarification: The design drawing set previously red-lined and included with Addendum 06 to be identified as the Additive Alternate Bid 02 design drawing set has been revised and

included with this Addendum 07 to now be identified as the Additive Alternate 01 design drawing set.

Clarification: The minimum rate of 3.0 LBS / CY called for in the design drawing sets for fiber reinforcement in concrete is incorrect. Instead, where fiber reinforcement is called for in the design drawing sets, the contractor is to use Polypropylene Fiber Reinforcing at a rate of 5.0 LBS / CY throughout for all concrete placed.

Where concrete is placed for ADA improvements such as sidewalk or ramps, the fiber reinforcement placed is to be micro-fiber reinforcement.

Where concrete is placed for non-ADA improvements such as pavement, medians, or flatwork, the fiber reinforcement placed is to be macro-fiber reinforcement.

Clarification: There will be no irrigation casing installed in this project. Bidders are to disregard irrigation casing shown in the design drawing sets, which is consistent with the answers previously provided in Addendum 02. The bid items and pay notes have been revised with this Addendum 07 to reflect this.

Note that pipe conduit for electrical lines is not impacted by this change and remains a part of this project scope as indicated in the design drawings.

Question: Here's the problems we found with the cross sections provided:

- Stations 103+00 to 115+00 do not show any existing elevations.
- The proposed typical sections in the plans show the base going under and one foot past the back of the curb at the outside curb and at the median curb. The cross sections do not show the base going past or under the median curb.
- Stations 148+00 to 150+00 show two different back slopes (2:1 and 6:1) which one should we use?
- Stations 163+00 to 167+00 (also station 162+00) show a proposed V bottom ditch but no proposed slope or grade information?

Answer: Revised cross-sections have been included with this Addendum 07. Base and sub-grade improvements are to be placed extending 1.0' beyond the back-of-curb as shown in the typical sections in the design drawing set. Side slopes, back slopes, ditch slopes, and median slopes are to be as shown in the typical sections in the design drawing set.

Question: Question 16 on addendum 2 states that if there are irrigation sleeves going to the stamped concrete median then they are not required. They are all going to the stamped concrete median. So why do we have this bid item?

Answer: This miscellaneous bid item has been removed from the Project Manual's revised Bid Items section for the Base Bid that is attached to this Addendum 07. The original answer provided in Addendum 2 remains correct.

Question: Sheet 76 - shows 2 EA 3" conduits that is assumed is item #3 on the base bid, but quantity of conduit appears to only account for 1 EA 3" conduit for bid item #3 and should be twice as much. Also, is this conduit intended to be ditched or bored?

Answer: The bid item quantity is correct as shown. The City anticipates that conduit would be placed by open trenching, however if the Contractor wants to place the conduit by boring instead at no additional cost to the City, then so long as the final installation meets the design requirements in the construction drawings and City of Midland standards, then the City would have no objection to the Contractor proceeding with the second construction method on this project.

Question: For the 4" PVC casing for item #2 on base bid, Ditched or bored also?
Answer: The previous bid item for 4" PVC Pipe Casing has been removed from the Project Manual's revised Bid Items section for the Base Bid that is attached to this Addendum 07.

Question: Looking at Google Maps for May of 2025, it appears that the power lines are not going to be very feasible to install ILSN or LUM height signal poles or the Lum pole in the island and maintain minimum OSHA clearances.
Answer: The City has sent the design drawings to Oncor to relocate the overhead lines to meet OSHA clearances, and Oncor should complete this by the end of September 2025. The City will furnish the signal pole, anchor bolds, and ILSN arms (9 ft). The City will also furnish the camera, radio, controller, and FYA signs. The Contractor will furnish and install NoTraffic detection and dual sided ILSN. The City's standard layout for ILSN is attached to this Addendum 07.

Question: For the add alternate traffic signal portion, Items should be added and/or clarified for quantities and intents for missing items that include, APS Control Unit, cameras and control equipment (install only), ILSN (install only).
Answer: The City has sent the design drawings to Oncor to relocate the overhead lines to meet OSHA clearances, and Oncor should complete this by the end of September 2025. The City will furnish the signal pole, anchor bolds, and ILSN arms (9 ft). The City will also furnish the camera, radio, controller, and FYA signs. The Contractor will furnish and install NoTraffic detection and dual sided ILSN. The City's standard layout for ILSN is attached to this Addendum 07.

Question: Please give information about the brand/size info on the City supplied ILSNs so the correct length arm can be quoted.
Answer: The City has sent the design drawings to Oncor to relocate the overhead lines to meet OSHA clearances, and Oncor should complete this by the end of September 2025. The City will furnish the signal pole, anchor bolds, and ILSN arms (9 ft). The City will also furnish the camera, radio, controller, and FYA signs. The Contractor will furnish and install NoTraffic detection and dual sided ILSN. The City's standard layout for ILSN is attached to this Addendum 07.

Question: If the add alternate for the traffic signal is awarded, will the work be done concurrently with the base bid or not? Wondering because we don't know if items such as traffic control, TMAs, message boards need to be included separately or included in the base bid. Please advise. If separately, items should be added for them as well for consistent bids.
Answer: Anything that the City of Midland awards for this project will be considered part of a single, unified overall project, and any bid submittals and construction activity

should plan to reflect this. So if Additive Alternate 01 for the traffic signal improvements is awarded, it will be considered part of the combined overall project and its overall construction activity, and not as a separate element.

BRIARWOOD AVENUE
SHEET INDEX

002

BRIARWOOD AVENUE
GENERAL NOTES:

The technical specifications adopted by the Texas Department of Transportation (TxDOT) November 1, 2014, and titled "Standard Specifications for Construction and Maintenance of Highways, Streets and Bridges" shall govern this project, except where superseded in the Plans and Contract Documents. This specification book may be purchased from the TxDOT or downloaded at:
http://www.txdot.gov/business/resources/txdot-specifications.html

For this project, any reference within the specification book to "Department," "Engineer," or "Owner" should be interpreted as the City of Midland Engineering staff, or their representatives.

General

All Bearings, Dimensions, and Topographic features shown in this Construction Drawing set are related the Texas State Plane Coordinate System, Texas Central Zone, North American Datum 1983. All elevations are related to North American Vertical Datum 1988.

Any issues, conflicts, or discrepancies encountered during construction that conflict with this Construction Drawing set shall be brought to the attention of the Engineer prior to making any design changes in the field.

Repair damage to the Right of Way to the satisfaction of the Owner. Restore all disturbed areas due to trenching or any construction activity to a condition equivalent to the original condition within 14 working days from the time work began in the area including all necessary seeding.

Coordinate street closures with the local fire, police, other emergency personnel, and transportation.

Maintain access to adjacent property at all times.

Notify, in writing, each residence and business 7 days prior to beginning construction of the phase/phases that are expected to affect their ingress and egress or any planned interruptions. This notice may be hand delivered or mailed.

OSHA requirements and all other applicable Federal, State, or City of Midland safety requirements shall be followed and complied with at all times.

Provide a lidded dumpster to be used by Contractor's personnel on the job site. This shall be considered subsidiary to the various bid items.

Dispose of all waste materials in compliance with local, state, and federal regulations.

Do not begin work before 7:00 A.M. or end work after 7:00 P.M. unless authorized by the Engineer and remove all equipment from the roadway prior to end of workday.

Perform any erosion control measures such as seeding or sodding before beginning the next phase, unless otherwise authorized by the Engineer.

All demolition dimensions are approximate based on the most reliable data available. Contractor shall field verify actual dimensions and notify Engineer of quantity increase or discrepancies.

Contractor shall notify Engineer of any conflicts or discrepancies before removal of any items not noted in Construction Drawings.

Hot Mix Basis of Estimate

ITEM	DESCRIPTION	*RATE (approx.)
3076	Dense-Graded HMA (TY C) (PG64-22)	345 LBS/SY
3076	Dense-Graded HMA (TY D) (PG70-22)	230 LBS/SY
508	HMAC for detour (TY B)	690 LBS/SY

*Actual rates will be determined by Engineer in Field

Surface Treatment Basis of Estimate

DESCRIPTION	PRIME	QCST
ASPH TYPE & GRADE	MC-30	CRS-1P OR CRS-2P (COOL) AC-20-5TR (WARM)
ASPH RATE (GAL/SY)	0.20	0.42
AGGR TYPE		PB
AGGR GRADE		4
AGGR RATE (CY/SY)		1/100

Utilities
Overhead and underground utility installations do exist within the project limits. Surface features, such as manholes and valve boxes, were identified in the topographic survey and may be used as an approximate location of where some utilities exist. Some utilities were potholed and are identified on the plans. These identified features should not be considered a thorough or exact marking of all existing utilities. The Contractor is responsible for following all location services protocol and for repairing any damages to utilities caused by the Contractor.

Contractor is to take all necessary precautions to protect all existing facilities that are encountered regardless of whether they appear in this Construction Drawing set.

All new or existing valve, manholes, anc meter covers must be adjusted to finished grade regardless of whether the surface is paved or unpaved. Concrete collars shall be placed around all public infrastructure utility covers.

Item 100 – Preparing Right Of Way
Sprinkler systems shall be cut at the right-of-way line and restored to operating conditions using a licensed irrigator. Payment for this work shall be considered subsidiary.

Fence and gate removal not specifically identified on the Plans as a pay item shall be subsidiary to Preparing Right Of Way. Fence and gate materials shown to be removed shall be neatly stockpiled at a location designated by the landowner.

Item 105 – Removing Stabilized Treated and Untreated Base and Asphalt Pavement
Store salvaged material in stockpile(s), location(s) as directed by the Engineer.

All saw-cuts for pavement removal shall be cut in clean, straight lines.

Item 110 – Excavation
Broom the existing base or subgrade to remove any loose material dropped during excavation operations. This work is considered subsidiary to this item.

Item 160 - Topsoil
Salvage, windrow and stockpile topsoil from existing areas within the ROW. Maximum salvage depth is 6 inches, unless approved by the Engineer. Place a 6-inch layer of loosely compacted Topsoil in areas

Parkhill

BRIARWOOD AVENUE
GENERAL NOTES
SHEET 1 OF 5

003

designated on the plans. An adequate quantity of topsoil is available within the project limits. Payment for topsoil work is included in the embankment quantities and no separate payment will be made for this work.

If additional topsoil is determined to be required, provide material of equal quality to achieve a 6-inch minimum thickness throughout. The topsoil and its source will be approved by the Engineer.

Contractor may use stockpiled topsoil for areas where drainage dikes are called in Construction Drawings.

Item 164 – Seeding For Erosion Control
Provide seed according to Table 2 for the Odessa District, urban seed mix for sandy soils. Furnish seed tags from the seed supplier to the Engineer for verification of quantity and type. Submit an available substitution to the Engineer, for approval, if a grass variety is not available.

Notify the Engineer of scheduled seeding operations 24 hours prior to seeding applications. Do not begin seeding operations until the Engineer has approved seedbed preparations. Locate and flag all irrigation heads, valve covers, utility facility covers, etc. prior to commencing seed application operations.

Drill seed according to specifications. Use a pasture or rangeland type drill seed. Mulch is not required.

Do not disturb or drive on newly seeded areas. Repair any damage to the seeded areas to the satisfaction of the Engineer.

Revegetate all areas and surfaces disturbed by any construction activity outside of paved or other impervious areas.

Item 169 – Vegetative Watering
Water newly seeded grass areas evenly with a minimum of two-tenths (2/10) of an inch per day for 15 consecutive days or until 70% coverage has been achieved
Water from a tanked, spray-equipped vehicle capable of spraying water to all areas without driving of trailering the vehicle on said areas.

Vegetative Watering will not be paid for separately and will be considered subsidiary to Item 164.

Item 216 – Proof Rolling
Provide a 25-ton roller, or other equipment approved by the Engineer for proof rolling. Proof Roll all subgrade in the presence of the engineer, or as directed, prior to acceptance.

All subgrade and base courses shall be Proof Rolled in accordance with City of Midland Standards. No separate payment will be made for proof rolling.

Item 247 – Flexible Base
Use Flexible Base Ty A or B, Grade 4, with a minimum Plasticity Index of 6.

No salvaged base may be reused in the construction of new base but may be incorporated into the subgrade or embankment.

Item 302 – Aggregates for Surface Treatments
Use a Grade 4, Surface Aggregate Class B aggregate. Use an unmodified asphalt with a minimum performance grade of 64-16 (PG 64-16) or better for aggregate pre-coating. Precoat aggregate with 1.0 percent by weight of asphalt.

Use a liquid asphalt anti-stripping agent of a type and at a rate approved by the Engineer. The use of flux oil is not permitted.

Cure precoated aggregate a minimum of 72 hours before applying the aggregate to the roadway surface.

Item 310 – Prime Coat
Apply an MC-30 or AE-P prime coat to all finished treated base, new flexible base and salvage base due to receive asphaltic concrete pavement or surface treatments. Remove all loose and scabbed material from the surface prior to prime coat application.

Allow prime coat to penetrate and dry for a minimum of 72 hours before placing any asphaltic material on the primed surface, unless otherwise authorized by the Engineer.

Item 316 – Seal Coat
AC-20-5TR will be used during warm weather placement. CRS-1P or CRS-2P will be used for cool weather placement as directed by the Engineer.

Use medium pneumatic tire rollers, as directed by the Engineer. Do not use flat wheel rollers.

Item 341 – Dense-Graded Hot-Mix Asphalt
Binder:
Provide a binder with a Performance Grade of 64-22 (PG 64-22) for the Type C subsurface course.

Provide a binder with a Performance Grade of 70-22 (PG 70-22) for the Type D surface course.

Aggregate quality:
Provide coarse aggregate for all surface hotmix and overlays meeting a minimum Surface Aggregate Classification (SAC) of **B** as published in TxDOT's *AGGREGATE QUALITY MONITORING PROGRAM (QMP) APPROVED SOURCE QUALITY CATALOG*.

Mixture design:
The target laboratory molded density for mix will be 96.5 percent.

Test method Tex-530-C (Boil Test) will not be required.

Placement:
Semi-trailer type vehicles are prohibited from dumping directly into the finishing machine for the finished surface unless the trailer is equipped with an auger slatted chain or another approved conveyor.

No RAP will be allowed.

No RAS will be allowed.

Mineral filler will not be allowed.

Lime will not be allowed as an anti-stripping agent.

Provide trackless asphalt for tack coat at a rate of 0.10-0.13 gal/sy. Adjustments to the rate may be made in the field at the direction of the engineer. Apply tack coat uniformly to all intermediate asphalt pavement surfaces and all joints, including cold joints with mats previously laid and joints adjacent to concrete pavements.

Item 400 – Excavation and Backfill for Structures
Structural Excavation is subsidiary to the structures being installed. Where flowable fill is chosen to be used as backfill material by the Contractor's and for the Contractor's convenience, no additional payment will be made.

Construct fill over structures to plan grade before hauling with heavy equipment over structures.

Compact backfill used for structures, other than flowable backfill, to a minimum density of 95 percent. Use a template to secure reasonably accurate Class C shaping of the foundation material outside of cement stabilized areas.

BRIARWOOD AVENUE
GENERAL NOTES
SHEET 2 OF 5

003a

Contact the utility company and properly secure the utility poles prior to excavating next to the utility poles. The work and material used to secure the utility poles are subsidiary to the pertinent items.
All trenching and backfill is subsidiary to the various culvert and headwall items.

Item 421 – Hydraulic Cement Concrete
All concrete shall be Class "C" (3600 psi) and maintain fiber reinforcement throughout, in addition to any steel reinforcement shown.

Use polypropylene fiber reinforcing at a minimum rate of 3 lbs/cy.

Furnish mix designs to the Engineer at least 48 hours prior to placing concrete. Provide an approved Private Laboratory Contractor to perform the needed concrete testing for mix design approval.

Fly ash will not be allowed in any mix design.

Engineer will provide quality assurance testing.

Provide air entrainment in all concrete except for concrete used in precast concrete members. Target an entrained air content of 4.0% for concrete pavement and 5.5% for all other concrete requiring air entrainment. Ensure the minimum entrained air content is at least 3.0% for all classes of concrete.

Place concrete pavement within 45 minutes of batching and use vibratory equipment to consolidate concrete. Do not use vibratory equipment to distribute concrete pavement. Segregated concrete is subject to rejection.

For this project, consider all concrete for culverts, culvert extensions, headwalls and wingwalls to be non-structural concrete.

All concrete pavement joints shall be sealed in compliances with City of Midland standards. This requirement does not apply to pedestrian access ramps, sidewalk, or curb joints.

Item 432 – Riprap
Provide 5-inch-thick concrete riprap, unless otherwise indicated in the plans.

In large areas of riprap, provide one-half (1/2)-inch thick expansion joint material at approximately 15-foot intervals, or as directed by the Engineer.

Use City of Midland approved expansion joint material and place between the proposed riprap and curb and gutter.

Reinforce all riprap on this project with No. 3 bars spaced 12 inches O.C.B.W. or No. 4 bars spaced at 18 inches O.C.B.W.

Broom-finish all riprap on this project unless otherwise directed.

In addition to reinforcing steel, polypropylene fiber is required at a rate of 3 lbs./cy. Polypropylene fiber may not be used in lieu of reinforcing steel.

Items 462 and 464 – Concrete Box Culvert and Reinforced Concrete Pipe
Join all concrete culverts with a cold-applied plastic joint gasket such as RAM-NEK or approved equal.

Maintain trench protection to protect Owner's representatives, inspectors, and Contractors during testing operations.

OSHA approved trench safety systems are required for all trenches 5.0' deep or greater.

All trenching and backfill is subsidiary to the various culvert and headwall items.

Item 466 – Headwalls and Wingwalls
Install reinforced concrete aprons on all headwalls and wingwalls, using reinforcing composed of #4 bars at 12-inch spacings, center-to-center, or as shown on the detail sheet.

Item 467 – Safety End Treatment
Provide shop drawings for pipe runners.

Item 479 – Adjusting Manholes and Inlets
Raise the manholes and water valves up to finished roadway elevation, matching the finish cross-slope.

Item 502 – Barricades, Signs and Traffic Handling
The work required for Item 502 will be paid for as a lump sum.

Prior to beginning construction, the Engineer shall approve the routing of traffic and sequence of work.

In addition to the Traffic Contro Plan (TCP) and the latest WZ standard plan sheets, install barricades and warning signs, as appropriate, to adequately warn motorists. Permanent signs may be installed when construction in an area is complete, anc they will not be in conflict with the traffic control plan for the remainder of the job.

This project has a regulatory work zone speed reduction within the project limits. The work zone speed limit is reduced from 60 mph to 35 mph. Placement of speed reduction zone signs shall comply with BC (3)-14. Speed resumption sign(s) is required atthe end of a speed reduction zone. Existing signs may remain in place durng the TCP period if they do not interfere with construction, and they do not conflict with the TCP plan.

Additional signs and barricades may be required, as directed by the Engineer, and shall be considered subsidiary to TCP.

Cover or remove any work zone signs when work or condition referenced is not occurring.

Do not place barricades, signs, or any other traffic control devices where they interfere with sight distance at driveways or side streets. Provide access to all driveways during all phases of construction, unless otherwise directed on the plans.

All locations used for storing construction equipment and materials of any type within the right of way shall be approved by the Engineer. Use of the Right-of-Way for these purposes will be restricted to those locations where driver sight distance to businesses and side street intersections is not obstructed, public safety is not risked and at other locations where an unsightly appearance, as determined by the Engineer, will not exist.

No work will be permitted to commence on the road before 7:00 A.M. and shall be arranged so that all machinery and/or equipment shall be away from the roadway near the Right-of-Way line after 7:00 P.M.

Remove any obstructions to existing drainage due to the Contractor's operations as required, at the Contractors expense.

Wash the channelizing devices and barricades following each rainfall or snowfall event and at times deemed necessary by the Engineer.

To ensure the safety and convenience of traffic, flaggers may be required when construction machinery is being operated along, across, or adjacent to lanes carrying traffic. If considered necessary by the Engineer, supplemental signs and barricades may be required.

Fill any holes left by barricade or sign supports and restore the area to its original condition.

Barricades, Signs and Traffic Handling is a plan quantity item. If time is suspended, no additiona compensation will be made.

No.	Description	Date

BRIARWOOD AVENUE
GENERAL NOTES
SHEET 3 OF 5

003b

Traffic switches will not be permitted on Fridays or any working day preceding a holiday unless authorized by the Engineer.

Construct temporary ramps to maintain access to driveways and city streets as directed by the Engineer. Temporary ramp construction is subsidiary to TCP, unless otherwise shown on the plans.

The Contractor shall bid on the traffic control plan shown in the plans. Any proposed alterations to the TCP (combining work areas / phasing / etc.) shall be submitted to the Engineer at least 10 days prior to anticipated changes.

Square tubing sign supports may be used for temporary construction signs. Aluminum and wood signs may be mounted if the vertical supports are embedded into the ground. Square tubing supports on skids which are typically held in place with sandbags can only support signs made of light weight fluted plastic.

Any trench or drop off over 2" will require a safety slope of at least 3:1 and can be constructed out of RAP, embankment or other material approved by the Engineer. The placement, maintenance, and removal are the responsibility of the Contractor and is subsidiary to the various items.

Item 506 – Temporary Erosion, Sedimentation, and Environmental Controls
All erosion control measures shown in plans and required by the Engineer, including installation and removal upon completion of construction activity, will not be paid for separately and will be included under Item 506 on a lump sum basis.

Install erosion control measures prior to beginning any construction activity on project site.

Contractor shall maintain erosion control measures at all times. Repairs to existing measures shall be made immediately upon discovery.

All erosion control measures shall be inspected immediately following any storm event. Implement additional erosion control measures during storm events as needed or directed by the Engineer.

Contractor is to maintain a reasonable clean project site at all times. Any sediment, debris, etc. outside project site area shall be removed promptly.
All stockpiles will be surrounded by silt fence or equivalent measures as approved by the Engineer to properly control sediment runoff.

Contractor shall provide a concrete washout device meeting City of Midland specifications for all concrete washout activities. Contractor may not use any other areas within the project site for concrete washout activities under any circumstance.

Contractor is required to mitigate any damages to adjacent property or to receiving waters caused by improperly installed or poorly maintained erosion control measures.

Item 508 – Constructing Detours
Any drainage pipe or SETs required for detours are subsidiary to this Item. The minimum pipe size is 18 inches.

Item 529 – Concrete Curb, Gutter and Combined Curb and Gutter
Place one-half (1/2)-inch of approved, pre-molded expansion joint material at 40-foot intervals and at the beginning and end of all radii. Place 3/25-inch grooved or sawed construction joints, as directed by the Engineer, spaced equally, with the spacing not to exceed ten feet and no less than two feet between joints.

All concrete fillets are to be placed monolithically with adjacent concrete curb.

Item 531 – Curb Ramps
The curb ramp locations shown in the plans have considered the geometric features of the intersection, traffic signals, and the pavement markings. When field conditions, such as lack of right of way width or obstructions require, the ramp may be relocated within the right of way with the approval of the Engineer. In any case, construct curb ramps in conformance with the Texas Accessibility Standards (TAS) and the Americans with Disabilities Act Accessibility Guicelines (ADAAG). All deficient ramps will be removed and replaced at the Contractor's expense.

Use polypropylene fiber reinforcing at a minimum rate of 3 lbs./cy in lieu of wire reinforcing.
Form tooled joints on each side of the fire-foot wide ramp section, and at each break in ramp slope or geometry, and at five-foot intervals as if it were sidewalk. Place asphalt expansion joint material between proposed ramps and existing concrete.

Place asphalt expansion joint material between proposed sidewalk and utility poles, guy wires, vent pipes, standpipes and as directed.

All curbs on curb ramps will not be paid for directly but are considered subsidiary to the various bid items.

Item 585 – Ride Quality for Pavement Surfaces
Use Surface Test Type A to evaluate ride quality of travel lanes in accordance with item 585, "Ride Quality for Pavement Surfaces".

Corrective action, when required, shall be diamond grinding, as approved and directed by the Engineer. No Bonus Pay Adjustments will be made for low IRI results.

This item will be considered subsidiary to the various items.

Item 618 – Conduit
Do not place boring pits closer than 2 feet from the edge of the pavement unless otherwise directed. Do not use water jetting. When boring is used for under pavement conduit installations, the maximum allowable over-cut is 1" in diameter. When conduits are bored, do not exceed 18 inches in the vertical and horizontal tolerances as measured from the intendd target point.

Do not use a pneumatically driven devce for punching holes beneath the pavement (commony known as a "missile").

Use a colored cleaner-primer on all PVC-to-PVC joints before application of PVC cement.

Seal all conduit ends with a permanently soft, non-toxic duct seal. Use a duct seal that does not adversely affect other plastic materials or corrode metals.

Furnish and install non-metallic pull ropes in conduit installed for future use and cap using standard weather-tight conduit caps, as approved.

The locations of conduit and ground boxes are diagrammatic only and may be shifted to accommodate field conditions as directed by the Engineer.

Item 620 – Electrical Conductors
Terminate all electrical conductors from the controller at the termination block in the traffic signal pole hand hole whether in use or not.

All wiring not covered by the plans anc specifications shall be in accordance with the National Electric Code (NEC).

When the specifications for electrical items require UL listed products, it will be construed to mean UL listed or CSA listed.

BRIARWOOD AVENUE
GENERAL NOTES
SHEET 4 OF 5

003c

Bond together any grounding conductors that share the same conduit, junction box, ground box, or structure, at every accessible point in accordance with the National Electrical Code (NEC).

Item 624 – Ground Boxes
Locations of ground boxes are approximate. Final locations will be as approved by Engineer. Provide an apron for ground boxes as shown on TxDOT Standard ED (4)-14.

Concrete removal required for installation of ground boxes will be subsidiary to Ground Boxes. Seal ground boxes with polyurethane foam that will not adversely affect other plastic materials or corrode metals (Froth-Pak 115 2.75 density 157833 or approved equal).

Item 644 – Small Roadside Sign Assemblies
All new sign supports for stop and yield signs will have a 12" red strip of Type C High Specific Intensity Reflective tape. Place the top of the tape 4' above the edge of the roadway. This work will not be paid for directly and will be subsidiary to the pertinent bid item.

For standard small sign details and dimensions, refer to the "Standard Highway Sign Designs for Texas (SHSD)"; a supplement to the Texas Manual on Uniform Traffic Control Devices (TMUTCD)".

Stake all sign locations, and receive approval from the Engineer, prior to sign placement.

Item 658 – Delineator and Object Marker Assemblies
Delineator and object marker assembly posts shall be composed of post-consumer recycled materials. Embedded stub shall be perforated square tubing.

Item 662 – Work Zone Pavement Markings
Materials used for non-removable work zone pavement markings will be paint and beads or other approved materials.

All removable work zone pavement markings placed on final surfaces shall consist of ceramic buttons and RPMs as shown on standard sheet BC (11). These shall be applied with a thermoplastic adhesive, unless otherwise directed by the Engineer. Buttons will be paid for by the linear foot of striping for which they represent.

Contractor is responsible for the removal of ceramic buttons, RPMs, and Adhesives as directed by the Engineer and before permanent striping is installed. Payment for this work will be paid for under Item 677.

Do not place guide markers on a finished surface unless they fall on a proposed lane line. Remove Stick-down markings prior to final marking. Remove tabs after the standard pavement markings have been placed.

The deviation rate in alignment shall not exceed one inch per 200 feet of roadway. The maximum deviation shall not exceed 2 inches, nor shall any deviation be abrupt. Striping not in conformance shall be removed and replaced at the Contractor's expense.

Item 666 – Reflectorized Pavement Markings
Type I markings shall meet the minimum retroreflectivity values defined by Article 4.4 Retroreflectivity Requirements.

Permanent pavement markings are to be thermoplastic in accordance with TxDOT Item 666 Type I specifications for long-line markings. Short-line and symbol markings will meet either TxDOT Item 666 Type I or Item 668 specifications.

Do not paint any pavement markings.

Item 677 – Eliminating Existing Pavement Markings and Markers
Submit eliminating plan for approval br the Engineer in accordance with Item 677.

Item 678 – Pavement Surface Preparation for Markings
Use dry sandblasting for pavement surface preparation for markings. This work will be considered subsidiary to the various items.

Item 734 – Litter Removal
Perform litter removal as necessary ard before mowing. This work will be considered subsidiary to the various items.

Item 738 – Cleaning and Sweeping
Clean and sweep existing pavements as necessary and as directed by the Engineer. This work will be considered subsidiary to the various items.

Item 6001 - Portable Changeable Message Sign
Provide solar powered changeable message boards for this project. Modify the message as directed by the Engineer.

PCMS shall be placed in operation a minimum of one (1) week prior to construction. Location(s) and duration for PCMS shall be as directed by the Engineer.

CONSTRUCTION SEQUENCE NARRATIVE

PHASE 1
1. INSTALL ADVANCED WARNING SIGNS. SEE ADVANCED WARNING LAYOUT AND BC SHEETS FOR DETAIL.
2. INSTALL EROSION CONTROL DEVICES.
3. SET BARRICADES AND TRAFFIC CONTROL DEVICES TO INSTALL TEMPORARY PAVEMENT. REFER TO TCP 2-1 FOR SHOULDER CLOSURE NOTES.
4. CONSTRUCT TEMPORARY PAVEMENT FROM STA 110+60 TO STA 138+70
5. RE-SET BARRICADES AND TRAFFIC CONTROL DEVICES TO PHASE 1 SET-UP. CONSTRUCT ALL UNDERGROUND UTILITIES AND DRAINAGE STRUCTURES TO HALF WIDTHS.
6. PERFORM PHASE 1 CONSTRUCTION OF ROADWAY.
7. CATTLE GUARD RELOCATION AND FENCE MENDING. FROM STA+ 128+00 AND 129+00 TO STA 133+50

PHASE 2
1. INSTALL EROSION CONTROL DEVICES.
2. RE-SET BARRICADES AND TRAFFIC CONTROL DEVICES TO INSTALL TEMPORARY PAVEMENT. REFER TO TCP 2-1 FOR SHOULDER CLOSURE NOTES.
3. CONSTRUCT TEMPORARY PAVEMENT FROM STA 110+84 TO STA 114+38.56.
4. RE-SET BARRICADES AND TRAFFIC CONTROL DEVICES TO PHASE 2 SET-UP. CONSTRUCT ALL UNDERGROUND UTILITIES AND REMAINING DRAINAGE STRUCTURES.
5. PERFORM PHASE 2 CONSTRUCTION OF ROADWAY.

PHASE 3
1. RE-SET BARRICADES AND TRAFFIC CONTROL DEVICES TO PHASE 3 SET-UP.
2. DEMO EXISTING ROADWAY TO CONSTRUCT NEW MEDIAN FROM STA 194+90.07 TO STA 196+46.00
3. SAW-CUT AND DEMO SACRIFICIAL PAVEMENT CONSTRUCTED IN PHASE 1
4. PERFORM PHASE 3 MEDIAN CONSTRUCTION

PHASE 4
1. INSTALL 2" TYPE D HMAC PAVEMENT SURFACE OVER NEW CONSTRUCTION, STARTING WITH INSIDE LANES AND MEDIAN CROSSOVERS.
2. RE-SET BARRICADES AND TRAFFIC CONTROL DEVICES
3. INSTALL 2" TYPE D HMAC PAVEMENT SURFACE OUTSIDE LANES.
4. INSTALL ONE-COURSE SURFACE TREATMENT OVER TEMPORARY STRIPING FROM STA 194+90.07 TO STA 207+00.00.
5. MARK LANE LINES WITH TABS UNTIL APPROVAL FROM THE ENGINEER TO PLACE PERMANENT MARKINGS. PLACE PERMANENT MARKINGS USING MOBILE OPERATIONS. REFER TO TCP 3-3 FOR OPERATION NOTES.
6. REMOVE ALL TCP DEVICES AND PERFORM FINAL CLEANUP. REMOVE EROSION CONTROL DEVICES AFTER ENGINEER'S APPROVAL TO DO SO.

BARRICADE AND CONSTRUCTION (BC) STANDARD SHEETS GENERAL NOTES:

1. The Barricade and Construction Standard Sheets (BC sheets) are intended to show typical examples for placement of temporary traffic control devices, construction pavement markings, and typical work zone signs. The information contained in these sheets meet or exceed the requirements shown in the "Texas Manual on Uniform Traffic Control Devices" (TMUTCD).

2. The development and design of the Traffic Control Plan (TCP) is the responsibility of the Engineer.

3. The Contractor may propose changes to the TCP that are signed and sealed by a licensed professional engineer for approval. The Engineer may develop, sign and seal Contractor proposed changes.

4. The Contractor is responsible for installing and maintaining the traffic control devices as shown in the plans. The Contractor may not move or change the approximate location of any device without the approval of the Engineer.

5. Geometric design of lane shifts and detours should, when possible, meet the applicable design criteria contained in manuals such as the American Association of State Highway and Transportation Officials (AASHTO), "A Policy on Geometric Design of Highways and Streets," the TxDOT "Roadway Design Manual" or engineering judgment.

6. When projects abut, the Engineer(s) may omit the END ROAD WORK, TRAFFIC FINES DOUBLE, and other advance warning signs if the signing would be redundant and the work areas appear continuous to the motorists. If the adjacent project is completed first, the Contractor shall erect the necessary warning signs as shown on these sheets, the TCP sheets or as directed by the Engineer. The BEGIN ROAD WORK NEXT X MILES sign shall be revised to show appropriate work zone distance.

7. The Engineer may require duplicate warning signs on the median side of divided highways where median width will permit and traffic volumes justify the signing.

8. All signs shall be constructed in accordance with the details found in the "Standard Highway Sign Designs for Texas," latest edition. Sign details not shown in this manual shall be shown in the plans or the Engineer shall provide a detail to the Contractor before the sign is manufactured.

9. The temporary traffic control devices shown in the illustrations of the BC sheets are examples. As necessary, the Engineer will determine the most appropriate traffic control devices to be used.

10. Where highway construction or maintenance work is being undertaken, other than mobile operations as defined by the Texas Manual on Uniform Traffic Control Devices, CSJ limit signs are required. CSJ limit signs are shown on BC(2). The OBEY WARNING SIGNS STATE LAW sign, STAY ALERT TALK OR TEXT LATER and the WORK ZONE TRAFFIC FINES DOUBLE sign with plaque shall be erected in advance of the CSJ limits. The BEGIN ROAD WORK NEXT X MILES, CONTRACTOR and END ROAD WORK signs shall be erected at or near the CSJ limits. For mobile operations, CSJ limit signs are not required.

11. Traffic control devices should be in place only while work is actually in progress or a definite need exists.

12. The Engineer has the final decision on the location of all traffic control devices.

13. Inactive equipment and work vehicles, including workers' private vehicles must be parked away from travel lanes. They should be as close to the right-of-way line as possible, or located behind a barrier or guardrail, or as approved by the Engineer.

WORKER SAFETY NOTES:

1. Workers on foot who are exposed to traffic or to construction equipment within the right-of-way shall wear high-visibility safety apparel meeting the requirements of ISEA "American National Standard for High-Visibility Apparel," or equivalent revisions, and labeled as ANSI 107-2004 standard performance for Class 2 or 3 risk exposure. Class 3 garments should be considered for high traffic volume work areas or night time work.

2. Except in emergency situations, flagger stations shall be illuminated when flagging is used at night.

COMPLIANT WORKZONE TRAFFIC CONTROL DEVICES

1. Only pre-qualified products shall be used. The "Compliant Work Zone Traffic Control Devices List" (CWZTCD) describes pre-qualified products and their sources.

2. Work zone traffic control devices shall be compliant with the Manual for Assessing Safety Hardware (MASH).

SHEET 2 OF 12

TYPICAL APPLICATION OF WORK ZONE SPEED LIMIT SIGNS

Work zone speed limits shall be regulatory, established in accordance with the "Procedures for Establishing Speed Zones," and approved by the Texas Transportation Commission, or by City Ordinance when within incorporated City Limits.

Reduced speeds should only be posted in the vicinity of work activity and not throughout the entire project.
Regulatory work zone speed signs (R2-1) shall be removed or covered during periods when they are not needed.

GUIDANCE FOR USE:

LONG/INTERMEDIATE TERM WORK ZONE SPEED LIMITS

This type of work zone speed limit should be included on the design of the traffic controlplans when restricted geometrics with a lower design speed are present in the work zone and modification of the geometrics to a higher design speed is not feasible.

Long/intermediate Term Work Zone Speed Limit signs, when approved as described above, should be posted and visible to the motorist when work activity is present. Work activity may also be defined as a change in the roadway that requires a reduced speed for motorists to safely negotiate the work area, including:
- a) rough road or damaged pavement surface
- b) substantial alteration of roadway geometrics (diversions)
- c) construction detours
- d) grade
- e) width
- f) other conditions readily apparent to the driver

As long as any of these conditions exist, the work zone speed limit signs should remain in place.

SHORT TERM WORK ZONE SPEED LIMITS

This type of work zone speed limit may be included on the design of the traffic controlplans when workers or equipment are not behind concrete barrier, when work activity is within 10 feet of the traveled way or actually in the traveled way.

Short Term Work Zone Speed Limit signs should be posted and visible to the motorists only when work activity is present. When work activity is not present, signs shall be removed or covered.
(See Removing or Covering on BC(4)).

GENERAL NOTES

1. Regulatory work zone speed limits should be used only for sections of construction projects where speed controls of major importance.
2. Regulatory work zone speed limit signs shall be placed on supports at a 7 foot minimum mounting height.
3. Speed zone signs are illustrated for one direction of travel and are normally posted for each direction of travel.
4. Frequency of work zone speed limit signs should be:
   - 40 mph and greater — 0.2 to 2 miles
   - 35 mph and less — 0.2 to 1 mile
5. Regulatory speed limit signs shall have black legend and border on a white reflective background (See "Reflective Sheeting" on BC(4)).
6. Fabrication, erection and maintenance of the "ADVANCE SPEED LIMIT" (CW3-5) sign, "WORK ZONE" (G20-5aP) plaque and the "SPEED LIMIT" (R2-1) signs shall not be paid for directly, but shall be considered subsidiary to Item 502.
7. Turning signs from view, laying signs over or down will not be allowed, unless as otherwise noted under "REMOVING OR COVERING" on BC(4).
8. Techniques that may help reduce traffic speeds include but are not limited to:
   - A. Law enforcement.
   - B. Flagger stationed next to sign.
   - C. Portable changeable message sign (PCMS).
   - D. Low-power (transi-radar transmitter.
   - E. Speed monitor trailers or signs.
9. Speeds shown on details above are for illustration only. Work Zone Speed Limits should only be posted as approved for each project.
10. For more specific guidance concerning the type of work, work zone conditions and factors impacting allowable regulatory construction speed zone reduction see TxDOT form #2014 in the TxDOT e-form system.

TYPICAL MINIMUM CLEARANCES FOR LONG TERM AND INTERMEDIATE TERM SIGNS
ROAD WORK AHEAD
Traveled lane
Paved shoulder
Curb
ATTACHMENT FOR SIGN SUPPORTS
WORK ZONE
TRAFFIC FINES DOUBLE
ROAD WORK AHEAD
Support shaftnot protrude above sign
Sign supports shall extend more than 1/2 way up the back of the sign substrate.
FRONT ELEVATION
Wood, metalor Fiber Reinforced Plastic
Splicing embedded perforated square metalshallg in order to extend post height allfurly be allowed when the splice is made using four bolts,two above and two below the splice point.Splice must be located entirely behind the sign substrate,not near the base of the support.Splice insert lengths should be at least 5 times nominalpost size,centered on the splice and of at least the same gauge material.
Attachment to wooden supports willbe by bolts and nuts or screws.Use TxDOT's or manufacturer's recommended procedures for attaching sign substrates to other types of sign supports
OR
SIDE ELEVATION
Wood
Nails shallNOT be allowed. Each sign shallbe attached directly to the sign support. Multiple signs shallnot be joined or spliced by any means. Wood supports shallnot be extended or repaired by splicing or other means.
STOP/SLOW PADDLES
1.STOP/SLOW paddles are the primary method to controltraffic by Flaggers.The STOP/SLOW paddle size should be 24" x 24".
2.STOP/SLOW paddles shallbe retroreflectorized when used at night.
3.STOP/SLOW paddles may be attached to a staff with a minimum length of 6'to the bottom of the sign.
4.Any Signs Incorporated into the STOP or SLOW paddle faces shallonly be as specifically described in Section 6E.03 Hand Signaling Devices in the TMUTCD.

LEGEND & BORDER | WHITE | TYPE B OR C SHEETING
LEGEND & BORDER | BLACK | ACRYLIC NON-REFLECTIVE FILM
CONTRACTOR REQUIREMENTS FOR MAINTAINING PERMANENT SIGNS WITHIN THE PROJECT LIMITS
1. Permanent signs are used to give notice of traffic laws or regulations, call attention to conditions that are potentially hazardous to traffic operations, show route designations, destinations, directions, distances, services, points of interest,and other geographical,recreational,specific service 0,000,or cultural information. Drivers processing through a work zone need the same, if not better route guidance as normally installed on a roadway without construction.
2. When permanent regulatory or warning signs conflict with work zone conditions, remove or cover the permanent signs until the permanent sign message matches the roadway condition.For details for covering large guide signs see the TS-CD standard.
3. When existing permanent signs are moved and relocated due to construction purposes,they shallbe visible to motorists at alltimes.
4. If existing signs are to be relocated on their originalsupports, they shallbe installed on crashworthy bases as shown on the SMD Standard sheets. The signs shallmeet the required mounting heights shown on the BC Sheets or the SMD Standards. This work should be paid for under the appropriate pay item for relocating existing signs.
5. If permanent signs are to be removed and relocated using temporary supports, the Contractor shalluse crashworthy supports as shown on the BC standard sheets, MPS standard sheets, or the SMD standard sheets.The signs shallmeet the mounting heights shown in the BC or the SMD standard sheets during construction. This work should be paid for under the appropriate pay item for relocating existing signs.
6. Any sign or traffic controldevice that is struck or damaged by the Contractor's or other construction equipment shallbe replaced as soon as possible by the Contractor to ensure proper guidance for the motorists. This utilize subsidiary to Item 502.
GENERAL NOTES FOR WORK ZONE SIGNS
1. Contractor shallinstalland maintain signs in a straight and plumb condition and/or as directed by the Engineer.
2. Wooden sign posts shallbe painted white.
3. Barricades shallNOT be used as sign supports.
4. All signs shallbe installed in accordance with the plans or as directed by the Engineer. Signs shallbe used to regulate, warn, and guide the traveling public safely through the work zone.
5. The Contractor may furnish either the sign design shown in the plans or in the "Standard Highway Sign Designs for Texas" (SHSD). The Engineer/Inspector may require the Contractor to furnish their own sign layout that as shown in the TMUTCD but may have been omitted from the SHSD. Any sign design not specifically documented by written agreement between the Engineer and the Contractor's Responsible Person, Attorneys must be documented in writing before being implemented. This can include documenting the changes in the Inspector's TxDOT diary and having both the Inspector and Contractor Initialand date the agreed upon changes.
6. The Contractor shallfurnish sign supports listed in the "Compliant Work Zone Traffic Controldevice List" (CWZTCD)for unsatisfactory signs. Supports for temporary large mountable signs shallmeet the requirements detailed on the Temporary Large Mountable Signs (TLMS) standard sheets.The Contractor shallinstallthe sign supports in accordance with the manufacturer's recommendations. If there is a question regarding installation procedures,the Contractor shallprovide the Engineer a copy of the manufacturer's installation recommendations so that the Engineer can verify that the signs are being installed correctly.
7. It is the Contractor is responsible for installing signs on approved supports and replacing signs with damaged or cracked substrates and/or damaged or marred reflective sheeting as directed by the Engineer/Inspector.
8. Identification markings may be shown only on the back of the sign substrate. The maximum height of letters and/or company logos used for identification shallbe 1 inch.
9. The Contractor shallreplace damaged wood posts. New or damaged wood sign posts shallnot be spliced.
DURATION OF WORK (as defined by the "Texas Manualon Uniform Traffic ControlDevices" Part 6)
1. The types of sign supports,sign mounting heights,the size of signs,and the type of sign substrates can vary based on the type of work being performed. The Engineer is responsible for selecting the appropriate size sign for the type of work being performed. The Contractor is responsible for ensuring that the sign supports,mounting height and substrate meets manufacturer's recommendations in regard to crashworthiness and duration of work requirements.
a. Long-term stationary - work that occupies a location more than 3 days.
b. Intermediate-term stationary - work that occupies a location more than one daylight period up to 3 days,or nighttime work lasting more than one hour.
c. Short-term stationary - daytime work that occupies a location for more than 1 hour in a single daylight period.
d. Short duration - work that occupies a location up to 1 hour.
e. Mobile - work that moves continuously or intermittently (stopping for up to approximately 15 minutes)
SIGN MOUNTING HEIGHT
1. The bottom of Long-termIntermediate-term signs shallbe at least 7 feet,but not more than 9 feet, above the paved surface,except as shown for Long-termIntermediate mounted below other signs.
2. The bottom of Short-term/Short Duration signs shallbe a minimum of 1 foot above the pavement surface but no more than 2 feet above the shoulder.
3. Long-termIntermediate-term Signs may be used in lieu of Short-term/Short Duration signing.
4. Short-term/Short Duration signs shallbe removed during daylight and shallbe removed at the end of the workday or raised to appropriate Long-term/Intermediate sign height.
5. Regulatory signs shallbe mounted at least 7 feet,but not more than 9 feet,above the paved surface regardless of work duration.
SIZE OF SIGNS
1. The Contractor shallfurnish the sign sizes shown on BC (1)unless otherwise shown in the plans or as directed by the Engineer.
SIGN SUBSTRATES
1. The Contractor shallensure the sign substrate is installed in accordance with the manufacturer's recommendations for the type of sign support that is being used.The CWZTCD lists each substrate that can be used on the different types and models of sign supports.
2. "Weak" type materials are NOT an approved sign substrate,regardless of the tightness of the wires.
3. All wooden individualsign panels fabricated from 2 or more pieces shallhave one or more plywood cleat,1/2" thick by 6" wide, fastened to the back of the sign and extending fully across the sign,The cleat shallbe attached to the back of the sign using wood screws that do not penetrate the face of the sign panel.The screws shallbe placed on both sides of the splice and spaced at 6" centers.The Engineer may approve other methods of splicing the sign face.
REFLECTIVE SHEETING
1. All signs shallbe retroreflective and conspicuous at nightby meansof sheeting meeting the color and retroreflectivity requirements of DMS-8300 Type B or Type C sheeting.The minimum sheeting requirements for various applications is shown on BC(1).
2. White sheeting meeting the requirements of DMS-8300 Type A shallbe used for signs with a white background.
3. Orange sheeting meeting the requirements of DMS-8300 Type B or Type C shallbe used for rigid signs with orange backgrounds.
SIGN LETTERS
1. All sign letters and numbers shallbe clear,and open rounded type uppercase alphabet letters as approved by the FederalHighway Administration (FHWA) and as published in the "Standard Highway Sign Design for Texas" manual. Signs,letters and numbers shallbe of first class workmanship in accordance with Department Standards and Specifications.
REMOVING OR COVERING
1. When sign messages may be confusing or do not apply, the signs shallbe removed or completely covered.
2. Long-term stationary or intermediate stationary signs installed on square metalshallmay be turned away from traffic 90 degrees when the sign message is not applicable. This technique may not be used for signs installed in the median of divided highways or near any intersections where the sign may be seen from approaching traffic.
3. Signs installed on wooden skids shallnot be turned at 90 degree angles to the roadway. These signs should be removed or completely covered when not applicable.
4. When signs are covered, the materialused shallbe opaque, such as heavy mildew plastic,or other materials which willcover the entire sign face and maintain their opaque properties under automobile headlights at night, without damaging the sign sheeting.
5. Burlap shallNOT be used to cover signs.
6. Duct tape or other adhesive materialshallNOT be affixed to a sign face.
7. Signs and anchor skids shallbe removed and holes backfilled upon completion of work.
SIGN SUPPORT WEIGHTS
1. Where sign supports require the use of weights to keep from turning over,the use of sandbags with dry,cohesionless sand should be used.
2. The Contractor shallprotect the sand from spilling and to maintain a constant weight.
3. Rock,concrete,iron,steelor other solid objects shallnot be permitted for use as sign support weights.
4. Sandbags should weigh a minimum of 25 lbs and a maximum of 50 lbs.
5. Sandbags shallbe placed on the skid and shallnot be used to level sign supports.Rubber bands or other bags shallNOT be used.
6. Rubber ballasts designed for channelizing devices should not be used for ballast on portable sign supports.Sign supports designed and manufactured with rubber bases may be used when shown on the SMD standards.
7. Sandbags shallbe placed under the skid and shallnot be used to level the traffic controldevice and shallnot be suspended above ground level or hung with rope, wire, chains or other fasteners. Sandbags shallbe placed using the length of the skids to weigh down the sign support.
8. Sandbags shallnot be placed under the skid and shallnot be used to level sign supports placed on slopes.
FLAGS ON SIGNS
1. Flags may be used to draw attention to warning signs, when used, the flag shall be 18 inches square or larger and shallbe orange or fluorescent red-orange in color. Flags shallnot be allowed to cover any portion of the sign face.

WHEN NOT IN USE, REMOVE THE PCMS FROM THE RIGHT-OF-WAY OR PLACE THE PCMS BEHIND BARRIER OR GUARDRAIL WITH SIGN PANEL TURNED PARALLEL TO TRAFFIC

PORTABLE CHANGEABLE MESSAGE SIGNS

1. The Engineer/inspector shall approve all messages used on portable changeable message signs (PCMS).
2. Messages on PCMS should contain no more than 8 words (about four to eight characters per word), not including simple words such as "TO," "FOR," "AT," etc.
3. Messages should consist of a single phase, or two phases that alternate. Three-phase messages are not allowed. Each phase of the message should convey a single thought, and must be understood by itself.
4. Do not use "EXIT" to refer to an exit ramp on a freeway/ex...
   "EXIT CLOSED." Do not use the term "RAMP."
5. Always use the route or interstate designation (IH, US, SH, FM ... along with the number when referring to a roadway.
6. When in use, the bottom of a stationary PCMS message panel should be a minimum 7 feet above the roadway, where possible.
7. The message term "WEEKEND" should be used only if the work is to start on Saturday morning and end by Sunday evening at midnight. Otherwise, the days of the week should be specified. Work is to begin on Friday evening and/or continue into Monday morning.
8. The Engineer/inspector may select one of two options which are available for displaying a two-phase message on a PCMS. Each phase may be displayed for either two seconds each or for three seconds each.
9. Do not "flash" messages or words included in a message. The message should be steady burn or continuous while displayed.
10. Do not present redundant information on a two-phase message, i.e., keeping two lines of the message the same and changing the third line, such as "RIGHT LANE CLOSED" and "USE CAUTION."
11. Do not display the message "LANES SHIFT LEFT" or "LANES SHIFT RIGHT" on a PCMS. Drivers do not understand the message.
12. Do not display messages that scroll vertically or vertically across the face of the sign.
13. Do not display messages that scroll horizontally or vertically across the face of the sign.
14. The following table lists abbreviated words and two-word phrases that are acceptable for use on a PCMS. Both words in a phrase must be displayed together. Words or phrases not on this list should not be abbreviated, unless shown in the MUTCD.
15. Proportional characters should be at least 18 inches for trailer mounted units. They should be visible from at least 1/2 US-mile and the text should be legible from at least 600 feet at night and 800 feet in daylight. Truck mounted units must have a character height of 10 inches and must be legible from at least 400 feet.
16. Care should be exercised to centered on the message board rather than left or right justified.
17. If desired, the PCMS should default to an illegible display that will not alarm motorists and will only be used to alert workers that the PCMS has malfunctioned. A pattern such as a series of horizontal solid bars is appropriate.

** See Application Guidelines Note 6.

APPLICATION GUIDELINES

1. Only Tier 2 phases are to be used on a PCMS.
2. A 1st phase can be selected from the "Road/Lane/Ramp Closure List" and the "Other Condition List".
3. A 2nd phase can be selected from the "Action to Take/Effect on Travel, Location, General Warning, or Advance Notice Phase Lists".
4. A Location phase is necessary only if a distance or location is needed for the first phase selected.
5. If two PCMS are used in sequence, they must be separated by a minimum of 1000 ft. Each PCMS shall be limited to two phases, and should be understandable by themselves.
6. For advance notice, when the current date is within seven days of the actual work date, calendar days should be replaced with days of the week. Advance notification should typically be for no more than one week prior to the work.

WORDING ALTERNATIVES

1. The words RIGHT, LEFT and ALL can be interchanged as appropriate.
2. Abbreviations IH, US, SH, FM and LP can be interchanged as appropriate.
3. EAST, WEST, NORTH and SOUTH for abbreviations E, W, N and S can be interchanged as appropriate.
4. Highway names and numbers replaced as appropriate.
5. ROAD, HIGHWAY and FREEWAY can be interchanged as needed.
6. AM, PM may be used instead of distances if necessary.
7. MILE, MILES, FEET and FT can be interchanged as appropriate.
8. AT, BEFORE and PAST interchanged as needed.
9. Distances or AHEAD can be eliminated from the message if a location phase is used.

PCMS SIGNS WITHIN THE R.O.W. SHALL BE BEHIND GUARDRAIL OR CONCRETE BARRIER OR SHALL HAVE A MINIMUM OF FOUR (4) PLASTIC DRUMS PLACED PERPENDICULAR TO TRAFFIC ON THE UPSTREAM SIDE OF THE PCMS, WHEN EXPOSED TO ONE DIRECTION OF TRAFFIC, WHEN EXPOSED TO TWO WAY TRAFFIC, THE FOUR DRUMS SHOULD BE PLACED WITH ONE DRUM AT EACH OF THE FOUR CORNERS OF THE UNIT.

FULL MATRIX PCMS SIGNS

1. When Full Matrix PCMS signs are used, the character height and legibility/visibility requirements shall be maintained as listed in Note 15 under "PORTABLE CHANGEABLE MESSAGE SIGNS" above.
2. When symbol signs, such as the "Flagger Symbol" (CW20-7) are represented graphically on the Full Matrix PCMS sign and, with the approval of the Engineer, it shall maintain the legibility/visibility requirement listed above.
3. When symbol signs are represented graphically on the Full Matrix PCMS, they shall only supplement the use of the static sign represented, and shall not substitute for the static sign.
4. A full matrix PCMS may be used to simulate a flashing arrow board provided it meets the visibility, flash rate and dimming requirements on BC(7), for the same size arrow.

DATES / FILE:

1. Barrier Reflectors shallbe yellow, and conform to the color and
retroreflectivity requirements of ASTM D 4956-04, Type IV.
Reflectors can be found at the Materials Producer List web address
shown on BDM.
2. Color of Barrier Reflectors shallbe as specified in the TMUTCD. The
cost of the reflectors shallbe considered subsidiary to Item 542.
Barrier Reflectors
CONCRETE TRAFFIC BARRIER (CTB)
3. Where traffic is on one side of the CTB, two (2) Barrier Reflectors
shallbe mounted in approximately the midsection of each section of CTB.
An alternate mounting location is uniformly spaced at one end of each
CTB. This alternate location allows for attachment of a barrier gregate without
drilling holes in the concrete barrier. The reflectors shallbe on the side of
the CTB shallbe located directly below the reflector mounted on top of
the barrier, as shown in the detailsbove.
4. Where CTB separates two-way traffic, three barrier reflectors shallbe
mounted on each section of CTB. The reflector unit on top shallhave
two yellow reflective faces 90 deviationshalle the reflectors on each
side of the barrier shallhave one yellow reflective face, as shown in
the detailsbove.
5. When CTB separates traffic traveling in the same direction, no barrier
reflectors shallbe required on top of the CTB.
6. Barrier Reflector units shallbe yellow or white in color to match
the edgeline being supplemented.
7. Maximum spacing of Barrier Reflectors is forty (40) feet.
8. Maximum spacing of Barrier Reflector Shallbe reflective roadway marker lobs
shallNOT be used as CTB delineators.
9. Attachment of Barrier Reflectors to CTB shallbe per manufacturer's
recommendations.
10. Missing or damaged Barrier Reflectors shallbe replaced as directed
by the Engineer.
11. Single slope barriers shallbe delineated as shown on the above detail.
Barrier Reflector on
10" tubplastic bracket
4"
Max. spacing of barrier
reflectors is 20 feet.
Attach the delineators as per
manufacturer's recommendations.
LOW PROFILE CONCRETE BARRIER (LPCB)
LOW PROFILE CONCRETE
BARRIER (LPCB) USED
IN WORK ZONES
LPCB is approved for use in work
zone locations, where the posted
speed is 45mph, or less. See
Roadway Standard Sheet LPCB.
See D & OM (VIII)
Install a minimum of
3 Barrier Reflectors
as per manufacturer's
recommendations.
DELINEATION OF END TREATMENTS
END TREATMENTS FOR
CTB'S USED
IN WORK ZONES
End treatments used on CTB's in work zones
shallmeet the appropriate crashworthy
standards as defined in the Manual for
Assessing Safety Hardware (MASH), Refer
to the CMJTCD List for approved end
treatments and manufacturers.
BARRIER REFLECTORS FOR CONCRETE TRAFFIC BARRIER AND ATTENUATORS
Type C Warning Light or
approved substitute mounted on a
drum adjacent to the travelway.
Warning reflector may be round
or square,but have a yellow
reflective surface area of at least
30 square inches
WARNING LIGHTS
1. Warning lights shallmeet the requirements of the TMUTCD.
2. Warning lights shallNOT be installed on barricades.
3. Type A (low intensity) flashing warning Lights are commonly used with drums. They are intended to warn of or mark a potentially hazardous
area. Type A warning lights shallbe installed on the channelizing devices and/or other sheets of the plans by the designation "A". The Type A warning Lights shall
only be used with units manufactured with Type B or C flashing meeting the requirements of Departmental Material Specification DMS-8300.
4. Type C and Type D 360 degree Steady Burn Lights are intended to be used in a series for delineation to supplement other traffic control
devices. Their use shallbe as indicated on this sheet and/or other sheets of the plans by the designation "SB".
5. The Engineer/Inspector or the plans shallspecify the location and type of warning lights to be installed on the traffic controldevices.
6. When required by the Engineer, the Contractor shallfurnish a copy of the warning lights certification. The warning light manufacturer will
certify the warning lights meet the requirements of the latest ITE Purchase Specifications for Flashing and Steady-Burn Warning Lights.
7. When used to delineate curves, Type C and Type D Steady Burn Lights should only be placed on the outside of the curve, not the inside.
8. The location of warning lights and warning reflectors on drums shallbe as shown elsewhere in the plans.
WARNING LIGHTS MOUNTED ON PLASTIC DRUMS
1. Type A flashing warning lights are intended to warn drivers that they are approaching or are in a potentially hazardous area.
2. Type A random flashing warning lights are not intended for delineation and shallnot be used in a series.
3. A series of sequential flashing warning lights placed on channelizing devices to form a merging taper may be used for delineation, if used,
the sequential flashing warning lights shallbe installed on the downstream end of the taper. The rate of flashing of the merging taper is
slower than the rate of flashing for other warning lights in order to identify the desired vehicle path. The rate of flashing for each light shallbe 65 flashes per minute, plus or minus 10 flashes.
4. Type C and D steady-burn warning lights are intended to be used in a series to delineate the edge of the travelway on detours, on lane
closures, on lane closures, and on other similar conditions.
5. Type A, Type C and Type D warning lights shallbe installed at locations as detailed on other sheets in the plans.
6. Warning lights shallnot be installed on a drum that has a sign, chevron or verticalpanel.
7. The maximum spacing for warning lights on drums should be identicalto the channelizing device spacing.
WARNING REFLECTORS MOUNTED ON PLASTIC DRUMS AS A SUBSTITUTE FOR TYPE C STEADY BURN WARNING LIGHTS
1. A warning reflector or approved substitute may be mounted on a plastic drum as a substitute for a Type C steady burn warning light at the
discretion of the Contractor unless otherwise noted in the plans.
2. The warning reflector shallbe yellow in color and shallbe manufactured using a sign substrate approved for use with plastic drums listed
on the CMJTCD.
3. The warning reflector shallhave a minimum retroreflective surface area tone-sided of 30 square inches.
4. Square reflectors shallbe fully retroreflected, including the area where attached to the drum.
5. Square reflectors must have a minimum of 30 square inches of retroreflected sheeting. They do not have to be retroreflected where it
attaches to the drum.
6. The side of the warning reflector facing approaching traffic shallhave sheeting meeting the color and retroreflectivity requirements for
DMS 8300-Type B or Type C.
7. When used near two-way traffic, both sides of the warning reflector shallbe retroreflected.
8. The warning reflector should be mounted on the side of the tranile nearest approaching traffic.
9. The maximum spacing for warning reflectors should be identicalto the channelizing device spacing requirements.
Arrow Boards may be located behind channelizing devices in place for a shoulder
taper or merging taper, otherwise they shallbe delineated with four (4) channelizing
devices placed perpendicular to traffic on the upstream side of traffic.
1. The Flashing Arrow Board should be used for oflane closures on multi-lane roadways, or slow
moving maintenance or construction activities on the travelanes.
2. Flashing Arrow Boards should not be used on two-lane, two-way roadways, detours, diversions
or work on shoulders unless the "CAUTION" display (see detailsbelow) is used.
3. The Engineer/Inspector shallcheck all appropriate signs, barricades and/or other traffic
controldevices that should be used in conjunction with the Flashing Arrow Board.
4. The Flashing Arrow Board should be able to display the following symbols:
4 CORNER CAUTION
OR
ALTERNATING DIAMOND CAUTION
DOUBLE ARROW
RIGHT/LEFT
Right arrow shown;
left is similar
RIGHT/LEFT
SEQUENTIAL CHEVRON
Right chevron shown;
left is similar
5. The "CAUTION" display consists of four corner lamps flashing simultaneously, or the Alternating
Diamond Caution mode, as shown.
6. The straight line caution display is NOT ALLOWED.
7. The Flashing Arrow Board shallbe capable of minimum 50 percent dimming from rated lamp voltage.
The flashing rate of the lamps shallnot be less than 25 nor more than 40 flashes per minute.
8. Minimum lamp "on time" shallbe approximately 50 percent for the flashing arrow and equal
intervals of 25 percent for each sequentialphase of the flashing chevron.
9. The minimum number of lamps shallbe 15.
10. The flashing arrow display is the TxDOT standard;however, the sequentialchevron
display may be used during daylight operations.
11. The Flashing Arrow Board shallbe mounted on a vehicle, trailer or other suitable support.
12. A Flashing Arrow Board SHALL NOT BE USED to laterally shift traffic.
13. A Flashing Arrow Board may be used in a stationary mode, if it provides it meets visibility,
flash rate and dimming requirements on this sheet for the same size arrow.
14. Minimum mounting height of trailer mounted Arrow Boards should be 7 feet from roadway
to bottom of panel.
REQUIREMENTS
TYPE | MINIMUM SIZE | MINIMUM NUMBER OF PANEL LAMPS | MINIMUM VISIBILITY DISTANCE
B | 30 x 60 | 15 | 3/4 mile
C | 48 x 96 | 15 | 1 mile
ATTENTION
Flashing Arrow Boards
shallbe equipped with
automatic dimming devices.
WHEN NOT IN USE, REMOVE
THE ARROW BOARD FROM THE
RIGHT-OF-WAY OR PLACE IT
BEHIND A BARRIER OR CONCRETE
TRAFFIC BARRIER OR GUARDRAIL.
FLASHING ARROW BOARDS
TRUCK-MOUNTED ATTENUATORS
1. Truck mounted attenuators (TMA) used on TxDOT facilities
must meet the requirements outlined in the Manual for
Assessing Safety Hardware (MASH).
2. Refer to the CMJTCD for the requirements of Level 2 or
Level 3 TMAs.
3. Refer to the CMJTCD for a list of approved TMAs.
4. TMAs should be used on freeways unless otherwise noted
in the plans.
5. A TMA should be used anytime that it can be positioned
30 to 100 feet in advance of the area of crew exposure
without adversely affecting the work performance.
6. A TMA should be positioned to protect the work from a work
area is spread above the roadway and the work crew is an
extended distance from the TMA.

DATES REVISED
5-10 5-21
DISCLAIMER:
The use of this standard is governed by the "Texas Engineering Practice Act". No warranty of any kind is made by the Texas Department of Transportation for any purpose whatsoever. The Texas Department of Transportation assumes no responsibility for the use of this standard in other applications or any modifications made to this standard.

GENERAL NOTES

1. For long term stationary work zones on freeways, drums shall be used as the primary channelizing device.
2. For intermediate term stationary work zones on freeways, drums should be used as the primary channelizing device but may be replaced in tangent sections by vertical panels, or 42" two-piece cones. In tangent sections, one-piece cones may be used with the approval of the Engineer but only if personnel are present on the project at all times to maintain the cones in proper position and location.
3. For short term stationary work zones on freeways, drums are the preferred channelizing device but may be replaced in tapers, transitions and tangent sections by vertical panels, two-piece cones or one-piece cones as approved by the Engineer.
4. Drums and alternate items shall comply with the requirements of the current version of the "Texas Manual on Uniform Traffic Control Devices" (TMUTCD) and the "Compliant Work Zone Traffic Control Devices List" (CWZTCD).
5. Drums, bases, and related materials shall exhibit good workmanship and shall be free from objectionable marks or defects that would adversely affect their appearance or serviceability.
6. The Contractor shall have a maximum of 24 hours to replace any plastic drum that is damaged or unacceptable to the Engineer/Inspector. The replacement device must be an approved device.

GENERAL DESIGN REQUIREMENTS

Pre-qualified plastic drums shall meet the following requirements:

1. Plastic drums shall be a two-piece design; the "body" of the drum shall be the top portion and the "base" shall be the bottom.
2. The body and base shall latch together in such a manner that the body separates from the base when impacted by a vehicle traveling at a speed of 20 MPH or greater but prevents accidental separation due to normal handling and/or air turbulence created by passing vehicles.
3. Plastic drums shall be constructed of lightweight plastics, and ballasted with sand materials. The Contractor shall not use recycled tires or other place holders in the base material that will not provide adequate supports.
4. Drums shall present a profile that is a minimum of 18 inches in width at the 36 inch height when viewed from any direction. The height of drum unit body installed on base shall be a minimum of 36 inches and a maximum of 42 inches.
5. The top of the drum shall have a built-in handle for easy pickup and shall be designed to drain water and not collect debris. The handle shall have a minimum of two safety spaces 5/16 inch diameter holes to allow attachment of a warning light, warning reflector unit or approved connection device.
6. The exterior of the drum body shall have a minimum of four alternating orange and white retroreflective circumferential stripes not less than 4 inches nor greater than 8 inches in width. Any non-reflectorized space between any two adjacent stripes shall not exceed 2 inches in width.
7. Bases shall have a maximum width of 36 inches, a maximum height of 4 inches, and a minimum of two footholds of sufficient size to allow base to be tied down with rope separating the drum body from the base.
8. Plastic drums shall be manufactured from virgin or recycled high-density polyethylene (HDPE) or other approved materials.
9. Drum body shall have a maximum unballasted weight of 9 lbs.
10. Drum and base shall be marked with manufacturer's name and model number.

RETROREFLECTIVE SHEETING

1. The stripes used on drums shall be constructed of sheeting meeting the color and retroreflectivity requirements of Departmental Materials Specification DMS-8300, "Sign Face Materials," Type A or Type B reflective sheeting shall be supplied unless otherwise specified in the plans.
2. The sheeting shall be suitable for use on and shall adhere to the drum surface for the life expectancy of the sheeting. The sheeting shall remain adhered in place and exhibit no delaminating, cracking, or loss of retroreflectivity other than that loss due to abrasion of the sheeting surface.

BALLAST

1. Unballasted bases shall be large enough to hold up to 50 lbs. of sand. The base, when filled with the ballast material, should weigh between 35 lbs minimum and 50 lbs maximum. The ballast may be sand in one to three sandbags separate from the base, sand in a sand-filled plastic base, or other ballasting devices as approved by the Engineer. Stacking of sandbags will be allowed, however height of sandbags above pavement surface may not exceed 12 inches.
2. Bases with built-in ballast shall weigh between 40 lbs. and 50 lbs. Built-in ballast can be constructed of an integral sound rubber base or other approved material.
3. Recycled truck tire sidewalls may be used for ballast on drums approved for this type of ballast on the CWZTCD list.
4. The ballast shall not be heavy objects, valuables, or any materials that would become hazardous to motorists, pedestrians, or workers when the drum is struck by a vehicle.
5. When used in regions susceptible to freezing, drums shall have drainage holes in the base to prevent water from being trapped and freeze becoming a hazard when struck by a vehicle.
6. Ballast shall not be placed on top of drums.
7. Adhesives may be used to secure base of drums to pavement.

DETECTABLE PEDESTRIAN BARRICADES

1. When existing pedestrian facilities are disrupted, closed, or relocated in a TTC zone, the temporary facilities shall be detectable and include accessibility features consistent with those existing prior to disruption in accordance with Chapter 6 of NCHRP 672 for Pedestrian Control Requirements for Sidewalk Diversions, Sidewalk Detours and Crosswalk Closures.
2. Where pedestrians with visual disabilities normally use the closed sidewalk, a Detectable Pedestrian Barricade shall be placed across the entire width of the closed sidewalk instead of a Type 3 Barricade.
3. Detectable pedestrian barricades similar to the one pictured above, longitudinal channelizing devices, some concrete barriers, and wood or chain link fencing with a continuous detectable edging can satisfactorily delineate a pedestrian path.
4. Tapes, ropes, or plastic chain strung between devices are not detectable, do not comply with the design standards in the "Americans with Disabilities Act Accessibility Guidelines (ADAAG)", and should not be used as a contractor pedestrian channelizer.
5. Warning lights shall not be attached to detectable pedestrian barricades.
6. Detectable pedestrian barricades should use 6" nominal barricade rails. See BC(9) for standard details. Rails shall not have rails with a smooth continuous noticeable for hand trailing with no splinters, burrs, or sharp edges.

Plywood, Aluminum or Metal sign substrates shall NOT be used on plastic drums

SIGNS, CHEVRONS, AND VERTICAL PANELS MOUNTED ON PLASTIC DRUMS

1. Signs used on plastic drums shall be manufactured using substrates listed on the CWZTCD.
2. Chevrons and other work zone signs with an orange background shall be manufactured with Type B or type C Orange, sheeting meeting the color and retroreflectivity requirements of DMS-8300, "Sign Face Materials," unless otherwise specified in the plans.
3. Vertical Panels shall be manufactured with orange and white sheeting meeting the requirements of DMS-8300 Type A or Type B. Diagonal stripes on Vertical Panels shall slope down toward the intended traveled lane.
4. Other sign messages (text or symbolic) may be used as approved by the Engineer. Sign dimensions shall not exceed 18 inches in width or 24 inches in height, except for the R8 series signs discussed in note 8 below.
5. Signs shall be installed using a 1/2 inch bolt (nominal) and nut, two washers, and one locking washer for each connection.
6. Mounting bolts and nuts shall be fully engaged and adequately torqued. Bolts should not extend more than 1/2 inch beyond nuts.
7. Chevrons may be placed on drums on the outside of curves, on merging tapers or on shifting tapers, when used in these locations, they may be placed on every drum or spaced not more than on every third drum. A minimum of three (3) should be used at each location called for in the plans.
8. R9-9, R9-10, R9-11 and R9-11b Sidewalk Closed signs which are 24 inches wide may be mounted on plastic drums, with approval of the Engineer.

WORK ZONE PAVEMENT MARKINGS

GENERAL

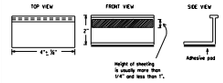
1. The Contractor shall be responsible for maintaining work zone and existing pavement markings, in accordance with the standard specifications and specifications, or attachments open to traffic within the CSJ limits unless otherwise stated in the plans.
2. Color, patterns and dimensions shall be in conformance with the "Texas Manual on Uniform Traffic Control Devices" (TMUTCD).
3. Additional supplemental pavement marking details may be found in the plans or specifications.
4. Pavement markings shall be installed in accordance with the TMUTCD and as shown on the plans.
5. When short term markings are required on the plans, short term markings shall conform with the TMUTCD, the plans and details as shown on the Standard Plan Sheet BC(STPM).
6. When standard pavement markings are not in place and the roadway is opened to traffic, DO NOT PASS signs shall be erected to mark the beginning of the sections where passing is prohibited and PASS with CARE signs at the beginning of sections where passing is permitted.
7. All work zone pavement markings shall be installed in accordance with Item 662, "Work Zone Pavement Markings."

RAISED PAVEMENT MARKERS

1. Raised pavement markers are to be placed according to the patterns on BC(1).
2. All raised pavement markers used for work zone markings shall meet the requirements of Item 672, "RAISED PAVEMENT MARKERS" and Departmental Material Specification DMS-4200 or DMS-4300.

PREFABRICATED PAVEMENT MARKINGS

1. Removable prefabricated pavement markings shall meet the requirements of DMS-8241.
2. Non-removable prefabricated pavement markings (thermo) shall meet the requirements of DMS-8240.



MAINTAINING WORK ZONE PAVEMENT MARKINGS

1. The Contractor will be responsible for maintaining work zone pavement markings within the work limits.
2. Work zone pavement markings shall be inspected in accordance with the frequency and reporting requirements of work zone traffic control device inspections as required by Form 1204.
3. The markings should provide a visible reference for a minimum distance of 300 feet during normal daylight hours and 100 feet when illuminated by automobile low-beam headlights at night, unless sight distance is restricted by roadway geometrics.
4. Markings failing to meet this criteria within the first 30 days after placement shall be replaced at the expense of the Contractor as per Specification Item 662.

REMOVAL OF PAVEMENT MARKINGS

1. Pavement markings that are no longer applicable, could create confusion or direct a motorist toward or into the closed portion of the roadway shall be removed or obliterated before the roadway is opened to traffic.
2. The above shall not apply to detours in place for less than three days, where flaggers and/or sufficient channelizing devices are used in lieu of markings to outline the detour route.
3. Pavement markings shall be removed to the fullest extent possible, so as not to leave a discernible marking. This shall be by any method approved by TxDOT Specification Item 677 for "Eliminating Existing Pavement Markings and Markers".
4. The removal of pavement markings may require resurfacing or seal coating portions of the roadway as described in Item 677.
5. Subject to the approval of the Engineer, any method that proves to be successful on a particular type pavement may be used.
6. Blast cleaning may be used but will not be required unless specifically shown in the plans.
7. Over-painting of the markings SHALL NOT BE permitted.
8. Removal of raised pavement markers shall be as directed by the Engineer.
9. Removal of existing pavement markings and markers within gore paid for directly in accordance with Item 677, "ELIMINATING EXISTING PAVEMENT MARKINGS AND MARKERS," unless otherwise stated in the plans.
10. Black-out marking tape may be used to cover conflicting existing markings for periods less than two weeks when approved by the Engineer.

Temporary Flexible-Reflective Roadway Marker Tabs

STAPLES OR NAILS SHALL NOT BE USED TO SECURE TEMPORARY FLEXIBLE-REFLECTIVE ROADWAY MARKER TABS TO THE PAVEMENT SURFACE

1. Temporary flexible-reflective roadway marker tabs used as guidemarks shall meet the requirements of DMS-8242.
2. Tabs detailed on this sheet are to be inspected and accepted by the Engineer or designated representative. Sampling and testing is not normally required, however at the option of the Engineer, either "A" or "B" below may be imposed to assure quality before placement on the roadway.
   A. Select five (5) or more tabs at random from each lot or shipment and submit to the Construction Division, Materials and Pavement Section to determine specification compliance.
   B. Select five (5) tabs and perform the following test. Affix five (5) tabs at 24 inch intervals on an asphaltic pavement in a straight line, using a medium size passenger vehicle or pickup, run over the markers with the front and rear tires at a speed of 25 to 40 miles per hour, four (4) times in each direction. No more than one (1) out of the five (5) reflective surfaces shall be lost or displaced as a result of this test.
3. Small design variances may be noted between tab manufacturers.
4. See Standard Sheet MTXSTPM for tab placement on new pavements. See Standard Sheet TCP(7-1) for tab placement on seal coat work.

RAISED PAVEMENT MARKERS USED AS GUIDEMARKS

1. Raised pavement markers used as guidemarks shall be from the approved product list, and meet the requirements of DMS-4200.
2. All temporary construction raised pavement markers provided on a project shall be of the same manufacturer.
3. Adhesive for guidemarks shall be bituminous materials applied or butyl rubber pad for bituminous, or thermoplastic for concrete surfaces.

Guidemarks shall be designated as:
YELLOW - two amber reflective surfaces with yellow body.
WHITE - two silver reflective surface with white body.

For seal coat, micro-surface or similar operations
"DO NOT PASS" SIGN (R4-1) and NO-PASSING ZONES
A. Prior to the beginning of construction, all currently striped no-passing zones shall be signed with the DO NOT PASS (R4-1) signs and PASS with CARE (R4-2) signs placed at the beginning and end of each zone for each direction of travel except as otherwise provided herein. Signs marking these individual no-passing zones need not be covered prior to construction if the signs supplement the existing pavement markings.
B. At the discretion of the Engineer, in areas of numerous no-passing zones, several zones may be combined as a single zone. If passing is to be prohibited over one or more lengthy sections, a DO NOT PASS sign and a NEXT XX MILES (R20-1TP) plaque may be used at the beginning of such zones. The DO NOT PASS sign and the NEXT XX MILES plaque should be repeated every mile to the end of the no-passing zone. In areas where there is a considerable distance between passing zones, the end of the no-passing zone may be signed with a PASS WITH CARE sign and a NEXT XX MILES plaque.
C. Depending on traffic volumes and length of sections, it may be desirable to prohibit passing throughout the project to prevent damage to unstable soil and tights. The DO NOT PASS sign and NEXT XX MILES plaque should be used and repeated as often as necessary for this purpose. Where several existing zones are to be combined into one individual no-passing zone, the sign at the beginning of the zone should be removed until the surfacing operation has passed this location so as not to confuse the DO NOT PASS sign control with the existing pavement markings. Where it is impractical to combine the DO NOT PASS signs for the length of such combined zones, appropriate DO NOT PASS and PASS WITH CARE signs should be placed at the beginning and end of the no-passing zones where the surfacing operation has stopped for the day.
D. R4-1 and R4-2 are to remain in place until standard pavement markings are installed.
"NO CENTER LINE" SIGN (CW8-12)
A. Center line markings are yellow pavement markings that delineate the separation of travel lanes that have opposite directions of travel on a roadway. Divided highways do not typically have center line markings.
B. At the time construction activity obliterates the existing center line markings, low volume roads may not have an existing centerline, a NO CENTER LINE (CW8-12) sign should be erected at the beginning of the work area, at approximately 2 mile intervals within the work area, beyond major intersections and other locations deemed necessary by the Engineer.
C. The NO CENTER LINE signs are to remain in place until standard pavement markings are installed.
"LOOSE GRAVEL" SIGN (CW8-7)
A. When construction begins, a LOOSE GRAVEL (CW8-7) sign should be erected at each end of the work area and repeated at intervals of approximately 2 miles in rural areas and closer in urban areas.
B. The LOOSE GRAVEL signs are to remain in place until the condition no longer exists.
PAVEMENT MARKINGS
A. Temporary markings for surfacing projects shall be Temporary Flexible-retroactive Roadway Marker Tabs unless otherwise approved by the Engineer. Tabs are to be installed to provide true alignment for striping as shown or as directed by the Engineer. Tabs will be placed at the spacing indicated. Tabs should not be placed more than 14 days before the surfacing is applied. After the surfacing is rolled and swept, the cover over the retroactive strip shall be removed.
B. Tabs shall not be used to simulate edge lines.
C. Tab placement for overlay/inlay operations shall be as shown on the WZSTPM standard sheet.
COORDINATION OF SIGN LOCATIONS
A. The location of warning signs at the beginning and end of a work area are to be coordinated with other signing typically shown on the Barricade and Construction Standards for project limits to ensure adequate sign spacing.
B. Where possible the ROAD WORK AHEAD (CW20-1D), LOOSE GRAVEL (CW8-7), and NO CENTER LINE (CW8-12) signs should be placed in the sequence shown following the GREY WARNING SIGNS STATE LINE (R20-3T) and the TRAFFIC FINES DOUBLE (R20-5T) sign, and one "X" sign spacing prior to the CONTRACTOR (G20-6T) sign typically located at or near the limits of surfacing. LOOSE GRAVEL and NO CENTER LINE signs will then be repeated as described above.

GENERAL NOTES
1. The traffic control devices detailed on this sheet will be furnished and erected as directed by the Engineer on sections of roadway where tabs must be placed prior to the surfacing operation which will cover or obliterate the existing pavement markings.
2. The devices shown on this sheet are to be used to supplement those required by the BC Standards or others required elsewhere in the plans.
3. Signs shall be erected as detailed on the BC Standards. Portable supports meeting the Traffic Control Devices List (TCAT12D) or supports approved for Long-Term / Intermediate-Term Work Zone Sign Supports.
4. When surfacing operations take place on divided highways, freeways or expressways, the size of the required lane closed construction warning signs shall be 60" x 48".
5. Signs on divided highways, freeways and expressways will be placed on both right and left sides of the roadway based on roadway conditions as directed by the Engineer.

TYPE 10

DIRECTIONAL RAMP WITHIN RADIUS

CURB RAMP NOTES:

1. ADJUST CURB RAMP LOCATION AND OR TYPE SO THAT NO OBSTRUCTION IS LOCATED WITHIN THE LANDING AREA.
2. ALL SLOPES ARE MAXIMUM ALLOWABLE. THE LEAST POSSIBLE SLOPE SHALL BE USED.
3. LANDINGS SHALL BE 5'X 5' MINIMUM WITH A MAXIMUM 2% SLOPE IN ANY DIRECTION. WHERE OBSTRUCTIONS EXIST, THERE SHALL BE A 3' MINIMUM CLEARANCE IN WIDTH AND LENGTH OF THE LANDING.
4. MANEUVERING SPACE AT THE BOTTOM OF CURB RAMPS SHALL BE A MINIMUM OF 4'X4' WHOLLY CONTAINED WITHIN THE CROSSWALK AND TO THE ENTIRE OUTSIDE OF THE PARALLEL VEHICULAR TRAVEL PATH.
5. MAXIMUM ALLOWABLE CROSS SLOPE ON SIDEWALK AND CURB RAMP SURFACES IS 2%.
6. CURB RAMPS WITH RETURNED CURBS MAY BE USED ONLY WHERE PEDESTRIANS WOULD NOT NORMALLY WALK ACROSS THE RAMP, EITHER BECAUSE THE ADJACENT SURFACE IS PLANTING OR OTHER NON-WALKING SURFACE OR BECAUSE THE SIDE APPROACH IS SUBSTANTIALLY OBSTRUCTED. OTHERWISE, PROVIDE FLARED SIDES.
7. ADDITIONAL INFORMATION ON CURB RAMP LOCATION, DESIGN, LIGHT REFLECTIVE VALUE AND TEXTURE MAY BE FOUND IN THE CURRENT EDITION OF THE TEXAS ACCESSIBILITY STANDARDS (TAS) AND 16 TAC 68.102.
8. AT INTERSECTIONS WHERE CROSSWALK MARKINGS ARE NOT REQUIRED, CURB RAMPS SHALL BE ALIGNED WITH THEORETICAL CROSSWALKS,OR AS DIRECTED BY THE ENGINEER.
9. PROVIDE A SMOOTH TRANSITION WHERE THE CURB RAMPS CONNECT TO THE STREET.
10. FLARE SLOPE SHALL NOT EXCEED 10% MEASURED ALONG CURB LINE.
11. ALL RAMPS AND LANDINGS WITH A CONCRETE SURFACE SHALL HAVE A COURSE BROOM FINISH OR OTHER ROUGH NON-SKID TYPE FINISH AS APPROVED BY THE ENGINEER.
12. PLACE 6"-0F CONCRETE IN RAMPS, LANDINGS, AND FLARES THAT ARE LOCATED AT THE RETURNS ADJACENT TO THE BACK OF CURB OF ARTERIAL STREETS AND COMMERCIAL SITES.

GENERAL NOTES:

1. CONCRETE TO BE CITY OF MIDLAND CLASS "A" WITH A MINIMUM28 DAY COMPRESSION STRENGTH OF 3000 PS. USE FIBER REINFORCED CONCRETE THROUGHOUT.
2. MATERIALS AND CONSTRUCTION METHODS TO CONFORM TO THE CITY OF MIDLAND STANDARDS AND SPECIFICATIONS UNLESS OTHERWISE DIRECTED BY ADA STANDARDS AND RESOURCES.

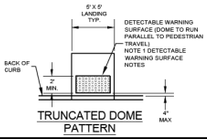
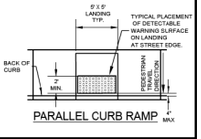
DETECTABLE WARNING SURFACE NOTES:



1. DETECTABLE WARNING SURFACE SUCH AS ARMOR-TILE ADA SOUND AMPLIFYING DETECTABLE/TACTILE WARNING SURFACE TILE OR EQUAL AND APPROVED BY THE ENGINEER AS MEETING ALL REQUIREMENTS OF ASTM C-936, C-33.
2. CURB RAMPS MUST CONTAIN A DETECTABLE WARNING SURFACE THAT CONSISTS OF RAISED TRUNCATED DOMES COMPLYING WITH SECTION 7.08 DETACHABLE WARNINGS OF THE TEXAS ACCESSIBILITY STANDARDS (TAS). THE SURFACE MUST CONTRAST VISUALLY WITH ADJOINING SURFACES, INCLUDING SIDE FLARES. FURNISH DARK BROWN OR DARK RED DETECTABLE WARNING SURFACE ADJACENT TO UNCOLORED CONCRETE,UNLESS SPECIFIED ELSEWHERE IN THE PLANS.
3. DETECTABLE WARNING SURFACES MUST BE SLIP RESISTANT AND NOT ALLOW WATER TO ACCUMULATE.
4. ALIGN TRUNCATED DOMES IN THE DIRECTION OF PEDES"RIAN TRAVEL WHEN ENTERING THE STREET.
5. SHADED AREAS INDICATE THE APPROXIMATE LOCATION FOR THE DETECTABLE WARNING SURFACE FOR EACH CURB RAMP TYPE.
6. DETECTABLE WARNING SURFACES SHALL BE A MINIMUM OF 24" IN DEPTH IN THE DIRECTION OF PEDESTRIAN TRAVEL.
7. DETECTABLE WARNING SURFACES SHALL BE LOCATED SO THAT THE EDGE NEAREST THE CURB LINE IS A MINIMUM OF 6" AND A MAXIMUM OF 15" FROM THE EXTENSION OF THE FACE OF CURB. DETECTABLE WARNING SURFACES MAY BE CURVED ALONG THE CORNER RADIUS.
8. SINGLE TILE PLATES COLONIAL RED COLOR.

GENERAL NOTES:



1. CONCRETE TO BE CITY OF MIDLAND CLASS "A" WITH A MINIMUM 28 DAY COMPRESSION STRENGTH OF 3000 PSI. USE FIBER REINFORCED CONCRETE THROUGHOUT.
2. MATERIALS AND CONSTRUCTION METHODS TO CONFORM TO THE CITY OF MIDLAND STANDARDS AND SPECIFICATIONS UNLESS OTHERWISE DIRECTED BY ADA STANDARDS AND RESOURCES.

RUNOFF FLOW DIRECTION
WIRE MESH BACKING SUPPORT 6 G A - W 1.4 X W1.4
6" MIN.
TRENCH (BACKFILLED AND COMPACTED)
8" MIN.
FABRIC TOE-IN
NOTES:
1. THIS DETAIL IS TO BE USED FOR SHEET FLOW CONDITIONS ONLY. DO NOT USE SILT FENCE FOR POINT FLOW OR CONCENTRATED FLOW CONDITIONS.
2. INSTALL STEEL OR WOOD POSTS, WHICH SUPPORT THE SILT FENCE, WITH A SLIGHT ANGLE TOWARD THE ANTICIPATED RUNOFF SOURCE. POSTS MUST BE EMBEDDED A MINIMUM OF ONE (1) FOOT.
3. TRENCH THE TOE OF THE SILT FENCE IN WITH A SPADE OR MECHANICAL TRENCHER, SO THAT THE DOWNSLOPE FACE OF THE TRENCH IS FLAT AND PERPENDICULAR TO THE LINE OF FLOW. WHERE THE FENCE CANNOT BE TRENCHED IN (E.G.PAVEMENT), WEIGHT DOWN FABRIC FLAP WITH WASHED GRAVEL ON UPHILL SIDE TO PREVENT FLOW UNDER FENCE.
4. THE TRENCH MUST BE A MINIMUM OF SIX (6) INCHES DEEP AND SIX (6) INCHES WIDE TO ALLOW FOR THE SILT FENCE FABRIC TO BE LAID IN THE GROUND AND BACKFILLED WITH COMPACTED MATERIA...
5. SECURELY FASTEN SILT FENCE TO EACH STEEL SUPPORT POST OR TO WOVEN WIRE, WHICH IN TURN IS TO BE ATTACHED TO THE STEEL OR WOOD FENCE POST. INCLUDE A 04 (6) INCH DOUBLE OVERLAP, SECURELY FASTENED, WHERE ENDS OF FABRIC MEET.
6. REMOVE SILT FENCE WHEN THE SITE IS COMPLETELY STABILIZED SO AS NOT TO BLOCK OR IMPEDE STORM FLOW OR DRAINAGE.
7. REMOVE ACCUMULATED SILT WHEN IT REACHES A DEPTH OF SIX (6) INCHES. DISPOSE OF THE SILT ONSITE IN AN APPROVED LOCATION AND IN SUCH A MANNER AS TO NOT CONTRIBUTE TO ADDITIONAL SILTATION.
8. MATERIALS AND CONSTRUCTION METHODS TO CONFORM TO CITY OF MIDLAND STANDARDS AND SPECIFICATIONS.
9. CONSTRUCT AS SHOWN UNLESS OTHERWISE APPROVED IN WRITING BY THE CITY ENGINEER.

① Round the wall heights shown to the nearest foot for bidding purposes.

② Concrete volume shown is for box culvert curb only. For curbs using the Box Culvert Rail Mounting Details (BCRM) standard sheet, the volume shown must be increased by a factor of 2.25. If Class S concrete is required for the top slab of the culvert, also provide Class S concrete for the curb. Curb concrete is considered part of the Box Culvert for payment.

③ Concrete volume shown is total of wings, footings, culvert toewall (if any), anchor toewalls (if any) and wingwall toewalls. Riprap aprons, culverts, and curb quantities are not included.

④ Regardless of the type of culvert shown on this sheet, the Contractor has the option of furnishing cast-in-place or precast culverts unless otherwise shown elsewhere on the plans. If the Contractor elects to furnish precast culverts of a different type than those shown on this sheet, it is the Contractor's responsibility to make the necessary adjustments to the dimensions and quantities shown.

NOTES:
Skew = 0° on SW-0, FW-0, SETB-CO, SETB-SW-0, and SETB-FW-0 standard sheets;
30° maximum for safety end treatment.

SL:1 = Horizontal : 1 Vertical
- Side slope at culvert for flared or straight wingwalls.
- Channel slope for parallel wingwalls.
- Slope must be 3:1 or flatter for safety end treatments.

T = Box culvert top slab thickness. Dimension can be found on the applicable box culvert standard sheet.

U = Box culvert wall thickness. Dimension can be found on the applicable box culvert standard sheet.

C = Curb height

See applicable wing or end treatment standard sheets for calculations of Hw, A, B, Lw, Ltw, Atw, and Total Wingwall Area.

Hw = Height of wingwall

A = Distance from face of curb to end of wingwall (not applicable to parallel or straight wingwalls)

B = Offset of end of wingwall (not applicable to parallel or straight wingwalls)

Lw = Length of longest wingwall.

Ltw = Length of culvert toewall (not applicable when using riprap apron)

Atw = Length of anchor toewall (applicable to safety end treatment only)
Total Wingwall Area = Wingwall area in sq. ft. for two wingwalls (one structure end) if Lt or Rt.
Area for four wingwalls (two structure ends) if Both.

PRELIMINARY
This draft has not been submitted to the Texas Engineering Practice Act. Do not use for construction purposes.

DATE PLOTTED

GENERAL NOTES

1. PREPARE SOIL AND APPLY SEED MIXTURE AS SPECIFIED BEFORE INSTALLING PERMANENT TURF REINFORCEMENT MAT.
2. BEGIN AT TOP OF CHANNEL BY ANCHORING THE MAT IN A 12" DEEP X 6" WIDE DITCH WITH APPROXIMATELY 12" OF MAT EXTENDED BEYOND THE UP-SLOPE PORTION OF THE TRENCH. ANCHOR THE MAT WITH A ROW OF STAPLES APPROXIMATELY 12" APART IN THE BOTTOM OF THE TRENCH. BACKFILL AND COMPACT THE TRENCH AFTER STAPLING AND FOLD THE REMAINING 12" PORTION OF THE MAT BACK OVER COMPACTED SOIL AND SEED. SECURE THE MAT WITH A ROW OF STAPLES APPROXIMATELY 12" APART ACROSS THE WIDTH OF THE MAT.
3. ROLL CENTER MAT IN DIRECTION OF WATER FLOW IN BOTTOM CHANNEL. MAT WILL UNFOLD WITH APPROPRIATE SIDE AGAINST THE SOIL SURFACE. ALL MATS MUST BE SECURELY FASTENED TO SOIL SURFACE BY PLACING STAPLES IN APPROPRIATE LOCATIONS AS SHOWN AND CORRESPONDING TO THE APPROPRIATE STAPLE PATTERN.
4. PLACE CONSECUTIVE MATS END-OVER-END (SHINGLE STYLE) WITH A 4" - 6" OVERLAP. USE A DOUBLE ROW OF STAPLES STAGGERED 4" APART AND 4" ON CENTER TO SECURE MATS.
5. FILL LENGTH EDGE OF MATS AT TOP OF SIDE SLOPES MUST BE ANCHORED WITH A ROW OF STAPLES APPROXIMATELY 12" APART IN A 6" DEEP X 6" WIDE TRENCH. BACKFILL AND COMPACT TRENCH AFTER STAPLING.
6. ADJACENT MATS MUST BE OVERLAPPED APPROXIMATELY 2" - 5" AND STAPLED.
7. THE TERMINAL END OF THE MATS MUST BE ANCHORED WITH A ROW OF STAPLES APPROXIMATELY 12" APART IN A 6" DEEP BY 6" WIDE TRENCH. BACKFILL AND COMPACT TRENCH AFTER STAPLING.

TYPICAL SECTION
PLAN OF REINF STEEL
SECTION THRU CURB
BARS C
BARS D
BARS K (#4)
(Spa. = 1'-0" Max)
(Length = 4'-2")
CONSTRUCTION NOTES:
Do not use permanent forms.
Chamfer the bottom edge of the top slab 3" at the entrance.
Optionally, raise construction joints shown at the flow line by a maximum of 6". If this option is taken, Bars H may be cut off or raised, Bars C and D may be reversed.
MATERIAL NOTES:
Provide Grade 60 reinforcing steel.
Provide galvanized reinforcing steel if required elsewhere in the plans.
Provide Class S concrete (f'c = 4,500 psi) for top slab, bottom slab and curb, with the following exceptions: provide Class S concrete (f'c = 4,000 psi) for top slabs of:
• culverts with overlay,
• culverts with 2-lift-2 course surface treatment, or
• culverts with the top slab as the final riding surface.
Provide the following minimum cover for rebar:
• Uncoated or galvanized – #4 or #5 Bar – 1" Min
• Uncoated or galvanized – #6 – 2-1" Min
GENERAL NOTES:
Design is according to AASHTO LRFD Bridge Design Specifications for the range of Fill heights shown.
See the Single Box Culverts Cast-In-Place Miscellaneous Detail (SCC-MD) standard sheet for details pertaining to skewed ends, angle sections, and lengthening.
Cover dimensions are clear dimensions, unless noted otherwise.
Reinforcing bar dimensions shown are out-to-out of bar.

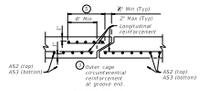
[1] For box length = 8'-0"

[2] AS1 thru AS4, AS7 and AS8 are minimum required areas of reinforcement per linear foot of box length. AS5 is minimum required area of reinforcement per linear foot of box width.



FILL HEIGHT 2 FT. AND GREATER

FILL HEIGHT LESS THAN 2 FT

[4] Length is equal to spacing of longitudinal reinforcing plus 2". (10" Min) (Typ)

SECTION A-A

(Showing top slab detail, inlet joint reinforcement.)

MATERIAL NOTES:

Provide 0.03 sq. in./ft. minimum longitudinal reinforcement at each face in slabs and walls. This minimum requirement may be met by the transverse wires when wire mesh reinforcement is used.

Provide Class H concrete (f'c = 5,000 psi).

GENERAL NOTES:

Designs shown conform to ASTM C1577. Refer to ASTM C1577 for information or details not shown.

See Box Culverts Precast Miscellaneous Details (SCP-MD) standard for wing, headwall, and flared end details.

In lieu of furnishing the designs shown on this sheet, the contractor may furnish an alternate design that is equal to or exceeds the box design for the design fill height in the table. Submit shop plans for alternate designs in accordance with Item "Precast Concrete Structural Members (Fabrication)".

4" Std (4.000" O.D.)
5" Std (5.563" O.D.)
1 For proper installation of the first cross pipe is critical for vehicle safety. Place the top of the first cross pipe no more than 6" above the flow line.
2 Provide cross pipes, except the first bottom pipe, of the size shown in the table. Provide a 3 (#2" standard pipe (4" O.D.) for the first bottom pipe.
3 Install the third cross pipe from the bottom of the culvert using a 12" long bolt with nut and washer through the bolt hole in the cross pipe so as to permit disassembly of the bolted connection to allow clearout access. At the Contractor's option, install all other cross pipes using the bolted connection details.
4 Match cross slope as shown elsewhere in the plans. Cross slope of 4:1 or flatter is required for vehicle safety.
5 Riprap placed beyond the limits shown will be paid for as concrete riprap in accordance with Item 432, "Riprap".
6 Quantities shown are for one end of one reinforced concrete pipe (RCP) culvert. For multiple pipe culverts or for corrugated metal pipe (CMP) culverts, quantities will need to be adjusted. Riprap quantities are for contractor's information only.
MATERIAL NOTES:
Synthetic fibers listed on the "Fibers for Concrete" Material Producer List (MPL) may be used in lieu of steel reinforcing in riprap concrete unless noted otherwise.
Furnish anchor bolts and nuts conforming to ASTM A53 (Type E or S, Gr. B), ASTM A500 Gr. B), or API 5L/5Z. Provide ASTM A307 bolts and nuts.
Galvanize all steel components, except concrete reinforcing, after fabrication. Repair galvanizing damaged during transport or construction in accordance with the specifications.
GENERAL NOTES:
Cross pipes are designed for a traversing load of 10,000 pounds at yield as recommended by Research Report 280-2F, "Safety Treatment of Roadside Parallel-Drainage Structures". Treatments that meet the Test Level 3 (TL-3) "Safety and Performance Standard for Highway Appurtenances" (SPS) shown herein are intended for use in those installations where out of control vehicles are likely to traverse the openings approximately perpendicular to the cross pipes.
Construct concrete riprap and all necessary inserts in accordance with the requirements of Item 432, "Riprap".
Payment for riprap and toewall is included in the Price Bid for each Safety End Treatment.

TYPICAL SECTION

Used for curbs over 1'-0" to 5'-0"

BARS V (#5) ⓒ
Spaced at 12" Max

BARS L (#5) ⓕ
Spaced at 12" Max

OPTIONAL BARS L (#5) ⓐ ⓔ
Spaced at 12" Max

BARS U (#4) ⓒ
Spaced at 12" Max

ⓐ "T" is equal to the culvert top slab thickness. For precast boxes with slabs less than 9" thick, see SCP-MD standard for additional details.

ⓑ Adjust normal culvert slab bars as necessary to clear obstructions.

ⓒ Place bars L as shown. T-lit hook as necessary to maintain cover.

ⓓ Place normal culvert curb bars M(#4) as shown. Adjust as necessary to clear obstructions.

ⓔ Additional bars M(#4) as required to maintain 12" Max spacing.

ⓕ Replace normal culvert curb bars K with one bar U and two bars V as shown spaced at 12" Max. Adjust length of bars V as necessary to maintain clear cover.

ⓖ Optional bars L are to be used only for precast box culverts with 3'-0" closure pour.

ⓗ Quantities shown are for Contractor's information only. Quantities are per linear foot of curb length. The value in table can be interpolated for intermediate values of curb height, "C". Quantity includes bars K (when applicable).

TABLE OF ESTIMATED CURB QUANTITIES ⓗ

Curb Height "C"	Conc (CY/LF)	Reinf Steel (LB/LF)
1'-0"	0.037	10.4
1'-6"	0.056	14.5
2'-0"	0.074	19.0
2'-6"	0.093	18.0
3'-0"	0.111	19.0
3'-6"	0.130	21.1
4'-0"	0.148	22.4
4'-6"	0.167	24.6
5'-0"	0.185	25.9

CONSTRUCTION NOTES:
Adjust reinforcing steel as necessary to provide 1 ½" cover.
For vehicle safety, top of the curb must not project more than 3" above the finished grade.

MATERIAL NOTES:
Provide Grade 60 reinforcing steel.
Provide galvanized reinforcing steel if required elsewhere in the culvert.
Provide Class "C" concrete (f'_c = 3,600 psi) minimum for curbs.
Provide bar laps, where required, as follows:
- Uncoated or galvanized – #4 = 2'-0" Min

GENERAL NOTES:
Designed according to AASHTO LRFD Bridge Design Specifications.
These extended curb details have sufficient strength to allow for future retrofit of Type T631 or T631S railing. Anchorage for Type T631 railing is provided by dowel #R3 Type CRS. These details are not suitable for the retrofitting of other rail types. For new construction using T631 or T631S railing, use the T631-CPI standard.
This Curb is considered as part of the Box Culvert for payment.

Cover dimensions are clear dimensions, unless noted otherwise.
Reinforcing bar dimensions shown are out-to-out of bar.

EDGE LINE AND LANE LINES
ONE-WAY ROADWAY
WITH OR WITHOUT SHOULDERS
TYPICAL TWO-LANE, TWO-WAY PAVEMENT
MARKINGS THROUGH INTERSECTIONS
GENERAL NOTES
1. Edge line striping shall be as shown in the plans or as directed by the Engineer. The edge line should not be placed less than 6 inches from the edge of pavement. This distance may vary due to pavement raveling or other conditions. Edge lines are not required in curb and gutter sections of roadways.
2. The traveled way includes only that portion of the roadway used for vehicular travel. It does not include the parking lanes, sidewalks, berms and shoulders. The traveled ways shall be measured from the center of edge line to the center of edge line of a two lane roadway.
MATERIAL SPECIFICATIONS

DETAIL "B"
YIELD LINES
GUIDE FOR PLACEMENT OF STOP LINES,
EDGE LINE & CENTERLINE
Based on Traveled Way and Pavement Widths
for Undivided Roadways
FOUR LANE DIVIDED ROADWAY CROSSOVERS
NOTES
1. Where divided highways are separated by median widths of 30 feet or more, median openings shall be signed as two separate intersections. Each median opening has two width measurements, with one measurement for each approach. The narrow median width will be the controlling width to determine if signs are required. Yield signs are the typical intersection control. Stop signs and stop bars are optional as determined by the Engineer.
2. Install median striping (double yellow centerlines and stop lines/yield lines) when a 50' or greater median centerline can be placed. Stop lines shall only be used with stop signs. Yield lines shall only be used with yield signs.
3. Length of turn bays, including taper, deceleration, and storage lengths shall be as shown on the plans or as directed by the Engineer.

LANE REDUCTION
NOTES
1. Lane reduction pavement markings are used where the number of through lanes is reduced because of narrowing of the roadway or because a lane is dropped. Lane reduction marking is not to be used for a through lane, or Texas Super 7 Passing Lanes, see TSOPM1 standard sheets.
2. On divided highways, an additional RIGHT LANE ENDS (W9-1R) sign may be placed on the median aligned with the W9-1R sign on the right side of the highway.
3. Lane reduction arrows are required for speeds of 45 mph or greater. An optional third lane reduction arrow may be added based on engineering judgement. If used, the optional third lane reduction arrow should be centered between the first and last lane reduction arrows.
4. For lane reductions on Freeways and Expressways, signing shall conform to the TxDOT Freeway Signing Handbook.
ADVANCED WARNING SIGN DISTANCE (D)
Posted Speed | D (ft) | L (ft)
30 MPH | 450 | L= WS/60
35 MPH | 565
40 MPH | 670
45 MPH | 775
50 MPH | 885 | L=WS
55 MPH | 990
60 MPH | 1,100
65 MPH | 1,200
70 MPH | 1,250
75 MPH | 1,350
GENERAL NOTES
1. Lane use word and arrow markings shallbe used where through lanes approaching an intersection become mandatory. Where lane use word and arrow markings are used, they shall be placed at a point of substantial length. Lane use arrow markings or word and arrow markings may be used to other lanes and turn bays for emphasis. Details for words and arrows are as shown in the Standard Highway Sign Designs for Texas.
2. When lane-use words and arrow markings are used, two sets of arrows should be used if the length of the bay is greater than 180 feet. When a single lane use arrow word and arrow marking is used in a turn bay, it should be placed 20 feet from or near the upstream end of the full-width turn lane.
3. Use raised pavement marker Type I-C with undivided highways, non-median and two-way left turn highways, and median applications. Use Type II-C-R with divided highways and raised median.
4. Length of turn bays, including taper, deceleration, and storage lengths shall be as shown on the plans or as shown in Chapter 3 of the Roadway Design Manual. See Chapter 3 of the Roadway Design Manual for additional information on turning lanes or storage lengths.

Ground line
Travel Lane
Pavement surface
Pavement surface
Ground line
See General Notes 1, 2, and 3
GENERAL NOTES
1. Where a restriction prevents consistent placement from the pavement edge, place the affected object markers in line with the innermost edge of the obstruction.
2. When Type 2 object markers are more than 8'-0" from the edge of the pavement, it may not be possible to maintain a height of approximately 4'-0". If this is the case, place the object marker as close to the recommended height as possible.
3. Install all object markers in accordance with the manufacturer's recommendation.
4. Diagonal stripes on Type 3 object markers shall slope down toward the intended travel lane.
5. Object marker substrates shall be 0.080" aluminum sign blank and conform to ASTM B-209 Alloy 6061-T6 or an approved alternative.

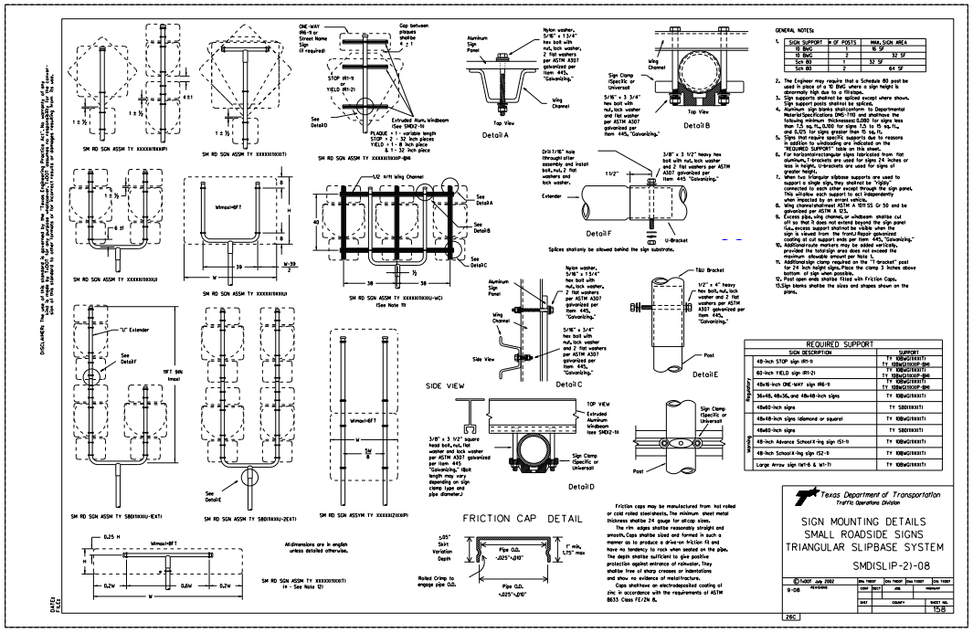
DESCRIPTION:
The use of this standard is governed by the "Texas Engineering Practice Act". No liability of any kind is assumed by the Texas Department of Transportation for the use of these standards, or the use of any derivation of these standards, on any project not sponsored by the Texas Department of Transportation.



FREEWAY DELINEATION FOR RAMPS AND ACCELERATION / DECELERATION LANES
Spacing of white delineators for acceleration or deceleration lanes should be 100 ft.
For ramp tangents: 100' max spacing
For ramp curves: use the delineator spacing table (Straight/Inner Curve) that may not apply. Delineators should be on outside of curve.
DETAIL 4a
CROSSOVERS
Four Type I-A (RPMs at 20' spacing
Double yellow delineator
Double yellow delineator
Type II-C-R (RPMs at 20' spacing
Varies
DETAIL 4b
FOR CULVERTS WITHOUT METAL BEAM GUARD FENCE (MBGF)
Bi-Directional OMA2 to be placed if safety end treatment is less than 15 ft from travel lane.
OMA2 to be placed if culvert headwall is greater than 20 ft in length and is less than 15 ft from travel lane or within the clear zone
OMA2 to be placed if culvert headwall is less than 15 ft from travel lane or within the clear zone
DETAIL 4c
NOTES
1. This detail applies for all existing culverts without MBGF, for application of OMs. New bridge-class culverts require safety end treatments, MBGF, or bridge railing. See the TxDOT Bridge Railing Manual.
2. For culverts with MBGF, see Sheet 5.
TYPICAL APPLICATION OF DEAD END BARRICADE

GENERAL NOTES

1. Signs to be furnished shallbe as detailed elsewhere in the plans and/or as shown on sign tabulation sheet. Standard sign designs and arrow dimensions can be found in the "Standard Highway Sign Designs for Texas" (SHSD).
2. Sign legend shalluse the FederalHighway Administration (FHwA) Standard Highway Alphabets (B, C, D, E, Emod or F).
3. Lateral spacing between letters and numerals shall conform with the SHSD, and any approved changes thereto. Lateral spacing of legend shallprovide a balanced appearance when spacing is not shown.
4. Black legend and borders shallbe applied by screening process or cut-out acrylic non-reflective black film to background sheeting, or combination thereof.
5. White legend and borders shallbe applied by screening process with transparent colored ink, transparent colored overlay film to white background sheeting or cut-out white sheeting to colored background sheeting, or combination thereof.
6. Colored legend shallbe applied by screening process with transparent colored ink, transparent colored overlay film or colored sheeting to background sheeting, or combination thereof.
7. Sign substrate shallbe any materialthat meets the DepartmentalMaterial Specification requirements of DMS-7110 or approved alternatives.
8. Mounting details for roadside mounted signs are shown in the "SMD series" Standard Plan Sheets.

FILTER DAM AT CHANNEL SECTIONS
WFD OR WFD OR WFD
GENERAL NOTES
1. If shown on the plans or directed by the Engineer, filter dams should be placed near the toe of slopes where erosion is anticipated, upstream and/or downstream of drainage structures, and in roadway ditches and channels to collect sediment.
2. Materials (aggregate, wire mesh, sandbags, etc.) shall be as indicated by the specification for "Rock Filter Dams for Erosion and Sedimentation Control".
3. The rock filter dam dimensions shall be as indicated on the SW3P plans.
4. Side slopes should be 2:1 or flatter. Dams within the safety zone shall have sideslopes of 6:1 or flatter.
5. Maintain a minimum of 1' between top of rock filter dam weir and top of embankment for filter dams at sediment traps.
6. Filter dams should be embedded a minimum of 4" into existing ground.
7. The sediment trap for ponding of sediment laden runoff shall be of the dimensions shown on the plans.
8. Rock filter dam types 2 & 3 shall be secured with 20 gauge galvanized wire mesh on the upstream face of the aggregate. The aggregate shall be placed on the mesh to the height & shape specified. The mesh shall be folded at the upstream side over the aggregate and tightly secured to itself on the downstream side using wire ties or hog rings. For in stream use, the mesh should be secured or staked to the stream bed prior to aggregate placement.
9. Sack Gabions should be staked down with ⅜" dia. rebar stakes, and have a double-twisted hexagonal-weave with a nominal mesh opening of 2 ⅞" x 3 ¼".
10. Flow outlet should be onto a stabilized area (vegetation, rock, etc.).
11. The guidelines shown hereon are suggestions only and may be modified by the Engineer.
ROCK FILTER DAM USAGE GUIDELINES
Rock Filter Dams should be constructed downstream from disturbed areas to intercept sediment from overland runoff and/or concentrated flow. The dams should be sized to filter a maximum flow through rate of 60 GPM/FT² of cross sectional area. A 2 year storm frequency may be used to calculate the flow rate.
Type 1 (18" high with no wire mesh) (3" to 6" aggregate) Type 1 may be used at the toe of slopes, around inlets, in small ditches, and in dry or swale outlets. This type of dam is recommended to control erosion from a drainage area of 5 acres or less. Type 1 may not be used in concentrated high velocity flows (approximately 8 Ft/Sec or more) in which aggregate wash out may occur. Sandbags may be used at the embedded foundation (4" deep min.) for better filtering efficiency at low flows if called for on the plans or directed by the Engineer.
Type 2 (18" high with wire mesh) (3" to 6" aggregate) Type 2 may be used in ditches and at dike or swale outlets.
Type 3 (36" high with wire mesh) (4" to 8" aggregate) Type 3 may be used in stream flow and should be secured to the stream bed.
Type 4 (Sack gabions) (3" to 6" aggregate) Type 4 May be used in ditches and smaller channels to form an erosion control dam.
Type 5: Provide rock filter dams as shown on plans.

CONSTRUCTION EXIT (TYPE 3)
SHORT TERM
GENERAL NOTES (TYPE 1)
1. The length of the type 1 construction exit shallbe as indicated on the plans,but not less than 50'.
2. The coarse aggregate should be open graded with a size of 4" to 8".
3. The approach transitions should be no steeper than 6:1 and constructed as directed by the Engineer.
4. The construction exit foundation course shallbe flexible base, bituminous concrete,portland cement concrete or other materialas approved by the Engineer.
5. The construction exit shallbe graded to allow drainage to a sediment trapping device.
6. The guidelines shown hereon are suggestions only and may be modified by the Engineer.
7. Construct exits with a width of at least 14 ft. for one-way and 20 ft. for two-way traffic for the full width of the exit,or as directed by the engineer.
GENERAL NOTES (TYPE 2)
1. The length of the type 2 construction exit shallbe as indicated on the plans,but not less than 50'.
2. The treated timber planks shallbe attached to the railroad ties with 7/2 x 6" min.lag bolts. Other fasteners may be used as approved by the Engineer.
3. The treated timber planks shallbe #2 grade min., and should be free from large and loose knots.
4. The approach transitions shallbe no steeper than 6:1 and constructed as directed by the Engineer.
5. The construction exit foundation course shallbe flexible base, bituminous concrete,portland cement concrete or other material as approved by the Engineer.
6. The construction exit should be graded to allow drainage to a sediment trapping device.
7. The guidelines shown hereon are suggestions only and may be modified by the Engineer.
8. Construct exits with a width of at least 14 ft. for one-way and 20 ft. for two-way traffic for the full width of the exit, or as directed by the engineer.
GENERAL NOTES (TYPE 3)
1. The length of the type 3 construction exit shallbe as shown on the plans, or as directed by the Engineer.
2. The type 3 construction exit may be constructed from open graded crushed stone with a size of two to four inches spread a min. of 4" thick to the limits shown on the plans.
3. The treated timber planks shallbe #2 grade min., and should be free from large and loose knots.
4. The guidelines shown hereon are suggestions only and may be modified by the Engineer.

1
Height from upslope toe 18 in, Minimum
Existing or graded ground
GENERAL NOTE
1. Soil used in dike construction shall be machine compacted.
2. Top width and height of dike may be modified with prior approval of the Engineer.
3. Side slopes within the safety clear zone of a roadway shall be 6:1 or flatter.
4. Grading shall be shown elsewhere in the plans or as directed by the Engineer.
5. The Engineer reserves the right to modify the dimensions shown for the dike dependent on runoff volume characteristics.
6. Dikes that are in place for more than 14 calendar days should be stabilized to prevent sediment runoff.
7. The guidelines shown hereon are suggestions only and may be modified by the Engineer.
8. Remove sediment and debris when accumulation affects the performance of the devices, after a rain and when directed by the engineer.
DIKE USAGE GUIDELINES
A Dike may be used to intercept runoff and divert it around unstabilized areas or to divert sediment laden runoff to an erosion control device (sediment basin or trap, rock filter dam, etc.).
The drainage area contributing runoff to a dike should not exceed 5 acres. The spacing of dikes should be as follows:
Slope of disturbed areas above dike: greater than 10:1 | 5 - 10:1 | less than 5:1
Maximum distance between dikes: 100' | 200' | 300'
Intercepted runoff flowing along a dike should outlet to a stabilized area (vegetation, rock, etc.).

TYPICAL SWALE CONFIGURATION
GENERAL NOTE
1. Dimensions of swale may be modified with prior approval of the Engineer.
2. Side slopes within the safety clear zone of a roadway shall be 6:1 or flatter.
3. Grading shall be shown elsewhere on the plans or as directed by the Engineer.
4. The Engineer reserves the right to modify the dimensions shown for the swale dependent on runoff volume characteristics.
5. Swales that are in place for more than 14 calendar days should be stabilized through seeding or other measures to control sediment runoff.
6. The guidelines shown hereon are suggestions only and may be modified by the Engineer.
7. Remove sediment and debris when accumulation affects the performance of the devices, after a rain and when directed by the Engineer.
SWALE AND DIKE/SWALE USAGE GUIDELINES
A swale or dike/swale may be used to intercept runoff and divert it around unstabilized areas or to divert sediment laden runoff to an erosion control device (sediment basin or trap, rock filter dam, etc.).
The drainage area contributing runoff to a swale or dike/swale should not exceed 5 acres. The spacing of swales and dike/swales should be as follows:
Slope of disturbed area above dike: greater than 10:1 | 5 - 10:1 | less than 5:1
Maximum distance between dikes: 100' | 200' | 300'
Intercepted runoff flowing in a swale or dike/swale should outlet to a stabilized area (vegetation, rock, etc.).

MINIMUM COMPACTED DIAMETER
DIAMETER MEASUREMENTS OF EROSION CONTROL LOGS SPECIFIED IN PLANS
GENERAL NOTES:
1. EROSION CONTROL LOGS SHALL BE INSTALLED IN ACCORDANCE WITH MANUFACTURER'S RECOMMENDATIONS, OR AS DIRECTED BY THE ENGINEER.
2. LENGTHS OF EROSION CONTROL LOGS SHALL BE IN ACCORDANCE WITH MANUFACTURER'S RECOMMENDATIONS AND AS REQUIRED FOR THE PURPOSE INTENDED.
3. UNLESS OTHERWISE DIRECTED, USE BIODEGRADABLE OR PHOTODEGRADABLE CONTAINMENT MESH ONLY WHERE LOG WILL REMAIN IN PLACE AS PART OF A VEGETATIVE SYSTEM. FOR TEMPORARY INSTALLATIONS, USE RECYCLABLE CONTAINMENT MESH.
4. FILL LOGS WITH SUFFICIENT FILTER MATERIAL TO ACHIEVE THE MINIMUM COMPACTED DIAMETER SPECIFIED IN THE PLANS WITHOUT EXCESSIVE DEFORMATION.
5. STAKES SHALL BE 2" X 2" WOOD OR #3 REBAR, 2'-4' LONG, EMBEDDED SUCH THAT 2" PROTRUDES ABOVE LOG, OR AS DIRECTED BY THE ENGINEER.
6. DO NOT PLACE STAKES THROUGH CONTAINMENT MESH.
7. COMPOST CRADLE MATERIAL IS INCIDENTAL & WILL NOT BE PAID FOR SEPARATELY.
8. SANDBAGS USED AS ANCHORS SHALL BE PLACED ON TOP OF LOGS & SHALL BE OF SUFFICIENT SIZE TO HOLD LOGS IN PLACE.
9. TURN THE ENDS OF EACH ROW OF LOGS UPSLOPE TO PREVENT RUNOFF FROM FLOWING AROUND THE LOG.
10. FOR HEAVY RUNOFF EVENTS, ADDITIONAL UPSTREAM STAKES MAY BE NECESSARY TO KEEP LOG FROM FOLDING IN ON ITSELF.

CL-GI EROSION CONTROL LOG AT CURB & GRATE INLET
SEDIMENT BASIN & TRAP USAGE GUIDELINES
An erosion controlling sediment trap may be used to filter sediment out of runoff draining from an unstabilized area.
Log Traps: The drainage area for a sediment trap should not exceed 5 acres. The trap capacity should be 1800 CF/Acre (0.5" over the drainage area).
Control logs should be placed in the following locations:
1. Within drainage ditches spaced as needed or min. 500' on center
2. Immediately preceding ditch inlets or drain inlets
3. Just before the drainage enters a water course
4. Just before the drainage leaves the right of way
5. Just before the drainage leaves the construction limits where drainage flows away from the projects.
The logs should be cleaned when the sediment has accumulated to a depth of 1/2 the log diameter.
Cleaning and removal of accumulated sediment deposits is incidental and will not be paid for separately.

COVER SHEET
AVALON DR. & BRIARWOOD AVE. TRAFFIC SIGNAL
CITY OF MIDLAND, MIDLAND COUNTY, TEXAS

09/30/2025

C100

PROJECT OVERVIEW

All work and materials shall conform to the Texas Department of Transportation (TxDOT) "Standard Specifications for Construction and Maintenance of Highways, Streets, and Bridges", 2024 edition, unless otherwise indicated in these plans or directed by the Engineer. All items numbers referenced in the plans refer to TxDOT specifications.

The City of Midland (City) will furnish various items to the contractor as listed under item 6RB.

Contact the Traffic Signal Shop at 432-685-7508 prior to the start of any service work to schedule a city representative to attend a pre-construction meeting.

Underground utilities may be present within the right-of-way on the project. Contact Texas 811 a minimum of two business days prior to excavating.

The locations of all signal-related items, pavement markings, signing, etc., are diagrammatic only and may be shifted to accommodate field conditions under as directed by the Engineer.

ITEM 416: DRILLED SHAFT FOUNDATIONS

Locations of foundations shown on the plans are diagrammatic only and may be shifted to meet local conditions, subject to approval by the inspector. The Contractor shall stake all foundation locations and have them approved by the inspector before excavating. The Contractor shall ensure that all poles and luminaires are clear of overhead lines and underground utilities before excavating.

The Inspector, together with the Contractor, will calculate the vertical signal head clearance before placing any traffic signal pole foundation.

The Contractor shall notify the Inspector at least 48 hours prior to forming and placing concrete for any signal pole and controller foundation. The Inspector will determine the depth of drilled shaft foundations based on the Contractor's test embedment and provide adequate notice so arrive at the job site may result in removing and replacing the foundation at the Contractor's expense.

ITEM 449: ANCHOR BOLTS

A pipe joint waterproof shim is set electrically conducting protective thread lubricant shall be used on the foundation anchor bolts for the traffic signal poles. (Crown Hardy R.S.L. (512) Kolorbe 315, Thomas & Betts Kopr-Shield, or equal).

ITEM 502: BARRICADES, SIGNS, AND TRAFFIC HANDLING

Use Temporary Traffic Control (TTC) for this project as detailed on the latest TxDOT Barricade and Construction (BC) standard plan sheets. Work Zone standard plan sheets 'WZ (BTS-1 and BTS-2)', and as provided for in Part VI of the latest edition of the "Texas Manual on Uniform Traffic Control Devices".

In addition to the TTC and WZ standard plan sheets, install barricades and warning signs, as appropriately, to adequately warn motorists.

Existing signs are to remain as long as they do not interfere with construction and do not conflict with the traffic control plan.

Permanent signs may be installed when construction in an area is complete and they will not be in conflict with the traffic control plan for the remainder of the job.

Cover or remove any work zone signs when the work or condition referenced is not occurring.

When traffic is interrupted, arrange warning devices in accordance with examples provided in the latest edition of the "Texas Manual on Uniform Control Devices".

No work will be permitted to commence on the road before noon. Work shall be scheduled such that all machinery and/or equipment shall be away from the roadway and stored near the right-of-way line by noon. Any operations requiring lane closures shall not begin before 9:00 A.M. or continue past 4:00 P.M., unless otherwise approved by the City in advance.

Do not place barricades, signs, or any other traffic control devices where they interfere with sight distance at driveways or side streets. Provide access to all driveways during all phases of construction.

Locations used for storing construction equipment and materials of any type within the right-of-way shall be approved by the inspector. Use of the right-of-way for these purposes will be restricted to locations where driver sight distance to businesses and side-street intersections is not obstructed and so other business where an unsightly appearance will not result, as determined by the inspector.

Remove any obstructions to existing drainage due to the Contractor's operations, as required, at the Contractor's expense.

ITEM 551: SIDEWALKS

The curb ramp and pedestrian pushbutton locations shown in the plans have taken into account the geometric features of the intersections, TxDOT standards, and pedestrian crossing markings. If any changes occur during construction, the location of these features must be adjusted to ensure that meets TDLR/ADAAG requirements.

ITEM 618: CONDUIT

When conduit must be placed by trenching on paved areas, cut and restore pavement in accordance with Item 400 and as shown in the plans. Cut pavement using only approved saws. Cutting and restoring pavement will not be paid for directly but will be subsidiary to this item.

Ensure only a Buy high tensile strength polyester fiber pull rope is used for pulling conductors through the PVC conduit systems.

The locations of conduit and ground boxes are diagrammatic only and may be shifted to accommodate field conditions as directed.

ITEM 620: ELECTRICAL CONDUCTORS

Terminate all electrical conductors from the controller at the termination block in the traffic signal pole hand hole whether in use or not.

All wiring not covered by the plans and specifications shall be in accordance with the National Electric Code (NEC).

When the specifications for electrical items require UL listed products, it will be construed to mean UL listed or CSA listed.

Bond together any grounding conductors that share the same conduit, junction box, ground box, or structure, at every accessible point in accordance with the National Electrical Code (NEC).

ITEM 621: TRAY CABLE

All proposed tray cable and number of conductors required shall be as shown on the plans. No splices shall be allowed.

ITEM 624: GROUND BOXES

Locations of ground boxes are approximate. Final locations will be as approved by the Inspector. Provide an apron for ground boxes as shown on plan 624(4)-14.

ITEM 628: ELECTRICAL SERVICES

Contact the Electric Utility Company (Oncor) to make all necessary arrangements to provide power for the electrical services shown on the plans in accordance with Item 628 and the Electrical Details, except that the City of Midland will make applications to the Electric Utility Company for service (See note below).

Before fabricating the electrical service, contact the City of Midland Traffic Signal Supervisor (phone 432-685-7508) to make application (billing arrangements) for service with Oncor.

Time-charge suspension due to the availability of a power shall not be considered unless all arrangements for power have been submitted within fifteen (15) days after principal work has begun.

ITEM 656: FOUNDATIONS FOR TRAFFIC CONTROL DEVICES

The foundations for the traffic signal controller is subsidiary to Item 6RB.

Locations of foundations shown on the plans are diagrammatic only and may be shifted to meet local conditions, subject to approval by the Inspector. The Contractor shall stake all foundation locations and have them approved by the Inspector before excavating. The Contractor shall ensure that all luminaires and mast arms are clear of all overhead lines and underground utilities before excavating.

The Inspector, together with the Contractor, will calculate the vertical signal head clearance before placing any traffic signal pole foundation.

Install traffic signal controller foundation to accommodate cabinet pedestal base provided by City. Extend the slab at least 36 inches beyond the pedestal base on the front and back sides of the cabinet to provide an all-weather surface at each cabinet door.

ITEM 680: INSTALLATION OF HIGHWAY TRAFFIC SIGNALS

The Project shall consist of the installation of all equipment and materials necessary for a complete traffic signal system, as follows:

1. Provide submittal literature for all traffic signal equipment before installation. Equipment will not be accepted for delivery or any payment made until the equipment, material lists, and shop drawings have been approved by the Engineer. Approval by the Engineer does not relieve the Contractor of his responsibilities to meet the requirements of the specifications and plans. All submitted literature shall be approved and one-half (½) of the furnished traffic signal equipment prior to its installation.

2. The City will furnish the following items to the Contractor for installation on this project:
   - *(1) City/Traffic detection system with VIVID cameras, cable, processor and mounting brackets.*
   - *(1) Clarecon GPS system, including cable, processor, and mounting brackets*
   - *(1) 336 S6 cabinet with associated racks*
   - *(4) Internally lighted street name (S)(W) sign*
   - *(1) R10-27k traffic sign*

   Contact the City of Midland Signal Shop at 432-685-7508 to coordinate a pick-up time for City-supplied items. Once the City has delivered the material, the Contractor shall be responsible for properly receiving and safeguarding all such items until project completion by the city.

   Contractor furnished and installed items shall include all signal and lighting poles and posts as shown in th plans, including anchor bolts, as per TxDOT specifications. The Contractor shall also furnish and install the following items as per the specifications and plans. Provide the following items:
   - *(1) Traffic signal cabinet, NEMA TS2, 16 channel, dual door*
   - *(1) Traffic signal controller, Q-Free 816-1, NEMA TS2, Type 1*
   - *(1) Malfunction management unit, 16 channel*
   - *(1) Battery backup system, self-contained in backpack cabinet.*

   The City shall furnish and install a communication radio, network switch, and related accessories after the completion of construction and activation of the signal. The Contractor shall furnish and install the CAT 5 Ethernet cable for the radio as called for in the plans.

3. The locations shown on the plans for foundations, conduit and other items may be adjusted for better fit field conditions if needed due to conflicts with utilities, as approved by the Inspector.

4. Accomplish the erection of poles and luminaires located over any overhead electrical lines using established industry and utility safety practices. Consult with the appropriate utility company before beginning such work, as needed.

5. Provide vibration dampers for mast arms 28 feet long and longer. Use dampers "(Fuller" for arms up to 40 feet long, and (4") adp" for longer mast arms. Install using Astro-Brac sign brackets, 3/4dia aluminum channel, or equal, at a maximum of 12 feet from the end of the mast arms.

6. Wire the signal installation to operate in accordance with phase diagrams in these plans. Timing and phasing will be maintained City of Midland Traffic Operations after activation of the signal. A copy of all revisions to the original timing and phasing plans shall be delivered to City of Midland Traffic Operations, and a new copy shall be placed in the controller cabinet at the completion of the project.

7. The City of Midland Signal Shop will not assume responsibility for the maintenance of the traffic signals until the project is completed and accepted.

8. Project inspection: For electrical project inspection, contact the City of Midland Signal Shop at 432-685-7508 at least 48 hours in advance of needed inspection. At the time of the final electrical inspection, the City will create a punch list of discrepancies to be corrected before signal is put into flash mode.

9. Provide qualified technician on the project site to place the traffic signal in full operation.

10. Signal Turn-On: Place the traffic signal into operation only after all required striping is complete and all conflicting signing is removed. Notify the City of Midland Signal Shop approximately 48 hours in advance of the signal turn-on. Signal technicians from the City must be present when the signals are placed in full operation. Unless otherwise directed, place the signal in full operation between 9:00 AM and 12:00 NOON on Tuesdays or Wednesdays only.

11. Two Period Set Signals. The signals shall operate continuously for a minimum of thirty (30) calendar days in a satisfactory manner. Equipment failures during these 30 days will cause the test period to start over.

    During the thirty-day test period, the City of Midland Signal Shop will be the First Responders to all trouble calls. They will, in turn, contact the Contractor. The Contractor shall:

    - Provide qualified personnel to respond to all trouble calls and diagnose and repair any malfunctions to signal equipment supplied for the project.
    - Provide a local telephone number not subject to frequent changes and available to receive calls on a 24-hour basis.
    - Respond to trouble calls within two hours. Provide trouble-shoot times but not more than 2 hours maximum.
    - Make appropriate repairs within 24 hours.
    - Place a logbook in the controller cabinet and keep a record of each trouble call reported. Notify the Engineer of each trouble call.
    - The error-log in the MMU shall not be cleared during the thirty-day test period without approval.

    If the Contractor fails to respond to trouble calls as specified, or if the equipment cannot be maintained in order to return the signals to normal operation, the City will replace the equipment with like-kind equipment until the original equipment is repaired and replaced.

ITEM 682: VEHICLE AND PEDESTRIAN SIGNAL HEADS

Provide all signal heads from the same manufacturer.

Provide all LED traffic signal lamp units with corresponding signal head components.

Vehicle signal heads shall have yellow aluminum housings with black aluminum vented back plates with a 1-4" visible yellow retro reflective border.

Pedestrian signal heads shall have yellow aluminum housing with LED "Walking Person" and "Hand" icon pedestrian signal modules with countdown feature.

Signal heads mounted on poles and mast arms shall be level and plumb and oriented as directed.

Vehicle signal heads shall be mounted using Astro-Brac mounting brackets or approved equal.

Cover all signal faces until placed in operation.

ITEM 684: TRAFFIC SIGNAL CABLES

Include service cable length in each run to provide adequate slack, at each ground box, foundation and signal head. Provide no excess 10 feet for each cable terminated in the controller cabinet. As per Section 684(1), "Cables used for inside signal heads and controllers or coils in ground boxes, on pole bases, and on span wires will not be paid for directly, but will be subsidiary to pertinent items."

Identify each cable as shown on the plans (cable 1, etc.) with plastic pre-numbered identification tags, tape or marking labels at each signal head, ground box, terminal block, pole base and controller.

All cables shall be continuous without splices from terminal point to terminal point unless otherwise directed or approved by the inspector.

All proposed signal cables and number of conductors required shall be as shown on the plans unless otherwise approved by the inspector. All proposed signal cables shall be #14 AWG stranded copper unless otherwise indicated.

Terminate all electrical conductors from the controller at the termination block in the signal pole hand hole whether in use or not.

ITEM 688: PEDESTRIAN AND VEHICLE DETECTORS

Provide Accessible Pedestrian Signal (APS) pedestrian detector units in accordance with TxDOT Departmental Materials Specification (DMS-11.02).

GENERAL NOTES FOR ALL ELECTRICAL WORK

1. The location of all conduits, junction boxes, ground boxes, and encroachment services is diagrammatic and may be shifted to accommodate field conditions.
2. Provide new and unused materials. Ensure that all materials and installations comply with the applicable portions of the National Electrical Code (NEC), TxDOT standards and specifications, National Electrical Manufacturers Association (NEMA), and are listed by Underwriters Laboratories (UL) or a Nationally Recognized Testing Lab (NRTL). NRTLs such as Canadian Standard Association (CSA), Intertek Testing Services NA Ltd., or MET Laboratories, Inc. are acceptable. Devices that are manufactured to comply with International Electrotechnical Commission (IEC) listed devices will not be considered an acceptable equal to a NEMA listed device. Acceptable devices may have both a NEMA and IEC listing. Faulty fabrication or poor workmanship in any materials, equipment, or installation is justification for rejection. Replace or remove all rejected materials or equipment at no additional cost to the Department.
3. Miscellaneous nuts, bolts and hardware, except for high strength bolts, may be stainless steel when plans specify galvanized, provided the bolt size is 5/8 in. or less in diameter.
4. Provide the following test equipment as required by the Engineer to confirm compliance with the contract and the NEC: voltmeter, ammeter, megohm meter 1000 volt DC), ground-resistance tester, torque wrenches, and torque screwdrivers. Ensure all equipment has been properly calibrated by a NIST traceable calibration service within the past 12 months when upon request. Operate test equipment during inspection as requested by the Engineer.
5. Install grounding as shown on the plans and in accordance with the NEC. Ensure all metallic conduits, metal poles, luminaires, and metal enclosures are bonded to the equipment grounding conductor. Ground all transformers, service equipment, and electrical enclosures. Ground rods, connectors, and bonding jumpers are subsidiary to the various bid items.
6. When required by the Engineer, notify the Department in writing of materials from the Materials Producers List (MPL) intended for use on each project. Prequalified materials are listed on the MPL under Item 610, "Roadway Illumination and Electrical Supplies." No substitutions will be allowed for materials on this list.

CONDUIT

A. MATERIALS

1. Provide conduit, junction boxes, fittings, and hardware as per TxDOT Departmental Material Specification DMS 11028 "Conduit" and Item 618 "Conduit" of TxDOT's Standard Specifications for Construction and Maintenance of Highways, Streets, and Bridges," latest edition. Provide PVC conduit that is Type EPC-40 for all bid items, unless otherwise noted on the plans. Provide conduit types according to the description code or as shown on the plans. Do not substitute other types of conduits for those shown. Provide liquidtight flexible metal conduit (LFMC) when flexible conduit is called for on galvanized sheet rigid metallic conduit (RMC) systems. Provide liquidtight flexible nonmetallic conduit (LFNC) when flexible conduit is called for on polyvinyl chloride (PVC) systems.
2. Provide galvanized sheet RMC for all exposed conduits, unless otherwise shown on the plans. Properly bond all metal conduits.
3. Unless otherwise shown on the plans, provide junction boxes with a minimum size as shown in the following table, which applies to the greatest number of conductors entering the box through one conduit with no more than four conduits per box. When a mixture of conductor sizes is contained in a box, refer to the largest conductor in the box. For situations not applicable to the table, size junction boxes in accordance with NEC.

AWG	3 CONDUCTORS	5 CONDUCTORS	7 CONDUCTORS
#6	10" x 10" x 4"	12" x 12" x 4"	14" x 14" x 4"
#4	8" x 8" x 4"	10" x 10" x 4"	12" x 12" x 4"
#4	8" x 8" x 4"	10" x 10" x 4"	10" x 10" x 4"
#6	6" x 6" x 4"	8" x 8" x 4"	10" x 10" x 4"
#8	6" x 6" x 4"	6" x 6" x 4"	8" x 8" x 4"

4. Junction boxes with an interior volume of less than 100 cu. in. and supported by entering raceways must have threaded entries or hubs identified for the intended purpose and supported by connection of two or more rigid metal conduits. Secure conduit within 3 ft. of the enclosure or within 18 in. of the enclosure if all conduit entries are on the same side. Mechanically secure all junction boxes with an internal volume greater than 100 cu. inches.
5. Provide hot dipped galvanized cast iron or sand cast aluminum outlet boxes for junction boxes containing only #6 AWG or 12 AWG conductors. Do not use die cast aluminum boxes. Size outlet boxes according to the NEC.
6. Do not use intermediate metal conduit (IMC) or electrical metallic tubing (EMT) unless specifically required by the plan sheets. When EMT is called for, provide junction boxes made from galvanized steel sheeting, listed and approved for outdoor use, unless otherwise noted on the plans. Size all galvanized steel junction boxes according to the NEC. Do not use aluminum junction boxes. Provide systems that meet the same requirements for junction boxes used with RMC systems.
7. Provide PVC junction boxes intended for outdoor use on PVC conduit systems, unless otherwise noted on the plans.
8. Provide PVC elbows in PVC conduit systems, unless otherwise shown on the plans. Use only a rigid, high tensile strength polyester fiber duct tape for pulling conductors through the PVC conduit system. When galvanized sheet RMC elbows are specifically called for in the PVC conduit system, provide a transition from the PVC conduit to the RMC elbow by means of a grounding bushing on a rigid metal extension. Grounding of the rigid metal elbow is not required if the entire RMC elbow is encased in a minimum of 2 in. of concrete. PVC extensions are allowed on these concrete encased rigid metal elbows. RMC or PVC elbows are subsidiary to various bid items.
9. When required, provide high-density polyethylene (HDPE) conduit with factory installed internal conductors according to Item 620 "Duct Cable." At the Contractor's request and with approval by the Engineer, the Department will allow substitution of HDPE conduit for PVC or RMC conduit 3/4 conduit and under, Item 618. Ensure bored HDPE substitutes for PVC in schedule #2 and of the same size PVC called for in the plans. Ensure the substituted HDPE meets the requirements of Item 620, except that the conduit is supplied without factory-installed conductors. Make the transition of the HDPE conduit to PVC or RMC elbow when required at the bore pit. Provide conduit of the size and type called for in the plans for the portion of conduit installed above ground or in foundations. Provide PVC or galvanized steel RMC elbows as called for on all ground boxes and foundations.
10. Use heatshrink straps when supporting 2 in. and larger conduits. On electrician service poles, securely bind stainless steel or hot dipped galvanized premade standoff straps one at bend on the service riser conduit.

B. CONSTRUCTION METHODS

1. Provide and install expansion joint conduit fittings on all structure-mounted conduits or the structure's expansion joints to allow for movement of the conduit. In addition, provide and install expansion joint fittings on all continuous runs of galvanized sheet RMC conduit externally exposed on structures such as bridges at maximum intervals of 150 ft. When requested by the project Engineer, supply manufacturer's specification sheet for expansion joint fittings. Provide the method of determining the amount of expansion to the Engineer upon request. Do not use LFMC or LFNC as a substitute for the required expansion conduit fittings.
2. Space all conduit supports at maximum intervals of 5 ft. Install conduit spacers when attaching metal conduit to surface of concrete structures. See "Conduit Mounting Options" on ED(2). Install conduit support within 3 ft. of all enclosures and conduit terminations.
3. Do not attach conduit supports directly to pre-stressed concrete beams except as shown specified in the plans or as approved by the Engineer.
4. Unless otherwise shown on the plans, jack or bore conduit placed beneath existing roadways, driveways, sidewalks, or other the base or surfacing operation has begun. Backfill and compact the bore pits before the conduit per Item 416 "Drilling, Boring, or Tunneling Pilot or Box" prior to installing conduit or duct cable to prevent bending of the connections.
5. When placing conduit in the sub-grade of new roadways, backfill all trenches with excavated material, compacted in accordance with Item 132 "Embankment." When placing conduit in the base of new roadways, backfill all trenches with cement-stabilized base as per requirements of Items 110 "Excavation", 400 "Excavation and Backfill for Structures", 401 "Flowable Backfill", 402 "Trench Excavation Protection", and 403 "Temporary Special Shoring."
6. Provide and place warning tape approximately 10 in. above all trenched conduit as per Item 618.
7. During construction, temporarily cap or plug open ends of all conduit and raceways immediately after installation to prevent entry of dirt, debris and animals. Temporary caps constructed of durable duct tape are allowed. Tightly fix the tape to the conduit opening. Clean out the conduit and prove it clear in accordance with Item 618 prior to installing any conductors.
8. Ensure conduit entry into the top of any enclosure is waterproof by installing conduit sealing hubs or using boxes with threaded bosses. This includes surface mounted battery switches, meter cans, service enclosures, auxiliary enclosures and junction boxes. Grounding bushings on either type sealing hubs are not required.
9. Fit the ends of all PVC conduit terminations with bushings or bell end fittings. Provide and install a grounding type bushing on all metal conduit terminations.
10. Install a bonding jumper from each grounding bushing to the nearest ground rod, grounding lug, or equipment grounding conductor. Ensure all bonding jumpers are the same size as the equipment grounding conductor. Bonding of conduit used as a coring under roadways for duct cable is not required. If the duct extends the full length through the coring.
11. At all electrical services, install a 6 AWG solid copper grounding electrode conductor.
12. Place conduits entering ground boxes so that the conduit openings are between 3 in. and 6 in. from the bottom of the box. See the ground box details on sheet ED(4).
13. Seal ends of all conduits with duct seal, expandable foam, or by other methods approved by the Engineer. Seal conduit immediately after completion of conductor installation and pull tests. Do not use duct tape as a permanent conduit sealant. Do not use silicone caulk as a conduit sealant.
14. File smooth the cut ends of all reaming burrs and conduit. Before installing, paint the field cut ends of galvanized RMC conduit with a rich zinc paint. Use paint containing not less than 94 percent zinc content to galvanize overspray. Use zinc rich paint to touch up galvanized material as allowed under Item 445 "Galvanizing." Do not paint non-galvanized material with a zinc rich paint as an alternative for materials required to be galvanized.

ELECTRICAL CONDUCTORS

A. MATERIAL INFORMATION

1. Provide Type XHHW insulated conductors in accordance with Departmental Material Specification (DMS)11043 "Conductors" and Item 620 "Electrical Conductors." Provide conductors as listed on the Material Producers List (MPL) on the Department web site under "Roadway Illumination and Electrical Supplies" Item 620. Color code insulated conductors as follows: Phase conductors shall be black, red, or blue with matching or white insulation. Identify grounding conductors ground wires with green insulation or bare conductors. Identify ungrounded (hot) conductors with any color insulation except green, white, or gray. Keep color scheme consistent throughout the entire system. Identify conductors # American Wire Gauge (AWG) and smaller by continuous color insulation. Identify conductors larger than # AWG by color insulation, colored tape (taken or by colored tape. When identifying conductors with colored tape, mark at least 6 in. of the conductor's insulation with half laps of tape.

2. Provide a solid copper # AWG grounding electrode conductor to bond the electrical service equipment to the concrete encased grounding electrode or the ground rod at the service location. Connect the grounding electrode conductor to the ground rod with a UL listed connector in accordance with DMS-11045. Connect the grounding electrode conductor to the concrete encased grounding electrode as shown in the plans.

3. Where two or more circuits are present in one conduit or enclosure, permanently identify the conductors of each branch circuit by connecting a non-metallic tag around both circuit conductors at each accessible location. Provide tags with two arrows, large enough to indicate circuit number, letter, or other identification as shown in the plans. Print circuit identification on the tag with a permanent marker.

4. Use listed compression or screw type pressure connectors, terminal blocks, or split bolt connectors. Insulate splices with heavy wall heat shrink tubing or adhesive tape to fill the gap and seal the ends of heat shrink tubing. Provide UL listed gel-filled insulating splice covers. Splicing materials, insulating materials, breakaway disconnects, splice covers, and fuse holders are subsidiary to various bid items.

B. CONSTRUCTION METHODS

1. Use only a flat, high tensile strength polyester fiber pull tape for pulling conductors through the conduit system. After installing conductors in conduit, perform conductor pull test. If a conductor cannot be freely pulled, make any needed alterations or repairs at no additional cost to the department. Perform insulation resistance tests in accordance with Item 620. Coordinate with the Engineer to witness the tests.

2. Leave 2 ft. minimum, 3 ft. maximum length for each conductor up to the splice in pull boxes and 3 ft. minimum, 5 ft. maximum length for each conductor in ground boxes when pulled through with no splice. Leave 1 ft. minimum, 1.5 ft. maximum length of conductor at enclosures, weatherheads and pole bases.

3. Make splices only in junction boxes, ground boxes, pole bases, or electrical service enclosures. Use only compression or screw type pressure connectors, terminal blocks, or split bolt connectors. Insulate splices with heavy wall heat shrink tubing or gel-filled insulating splice covers to provide a watertight seal. Use heat shrink tubing with a minimum 3:1 shrinkage at 2 in. past both sides of the splice. Where heat shrink tubing may not shrink sufficiently to provide a watertight seal around the individual conductors, prior to heating the tubing, increase the diameter of the conductor insulation using hot melt adhesive tape to provide a watertight seal between the heat shrink tubing and the conductor. Use hot melt adhesive tape to fill the gap and seal the ends of heat shrink tubing. Heat shrink tubing that appears to have been burned, or overheated, is considered defective and must be replaced.

4. Size and install gel-filled insulating splice covers according to manufacturer's specifications when used in place of heat shrink tubing.

5. Wire nuts with factory applied waterproof sealant may be used for # AWG or smaller conductors in above ground junction boxes, but not in pole bases or ground boxes. Install wire nuts in an upright position to prevent the accumulation of water.

6. Support conductors in illumination poles with a J-hook at the top of the pole.

7. When terminating conductors, remove the insulation and jacketing material without nicking, cutting, or damaging the strands. Conductors with nicked, cut, or damaged individual conductor strands or removed strands will be considered damaged.

8. Replace conductors and cables that are damaged beyond repair or that fail an insulation resistance test at no additional cost to the department.

9. Do not reuse damaged conductors with duct tape, electrician tape, or wire nuts. Use only approved splicing methods.

10. Do not terminate more than one conductor under a single connector, unless the connector is rated for multiple conductors. Do not exceed the pressure connector's listing for maximum number and size of conductors allowed.

11. Install breakaway connectors on conductors #4 and smaller whenever those conductors pass through a breakaway support device. Follow manufacturer's instructions for installation. Use a calibrated torque wrench to achieve proper torque threaded connections. Proper terminations are critical to the safe operation of breakaway devices. Trim waterproofing boots on breakaway connectors to fit snugly around the conductor to ensure waterproof connection. Only one conductor may enter a single opening in a boot. Provide waterproof boots with the correct number of openings to match the openings factory sealed. Use prequalified breakaway connectors as shown on the QPL.

12. Provide and install a separate stranded equipment grounding conductor (EGC) in all conduits that contain circuit wiring of 50 volts or more. Unless shown elsewhere, size the EGC to be the same size as the largest current carrying conductor contained in the conduit. Ensure all EGC's are continuous and terminated at each accessible location. For metallic conduit installations, provide a minimum size 8 AWG EGC. The EGC is paid for under Item 620.

C. TEMPORARY WIRING

1. Install temporary conductors and electrical equipment in accordance with the NEC article "Temporary Installations" and Department standard sheets.

2. Provide a ground fault circuit interrupter (GFCI) for power outlets for portable electrical equipment, power tools, ice machines, ice storage bins and refrigerators located outdoors on grade. GFCI may be any one of the following: molded cord and plug set, receptacle, or circuit breaker type.

3. Use listed wire nuts with factory applied sealant for temporary wiring where approved.

4. Enclose conductor splices within a listed enclosure or ground box, or ensure the splices are more than 18 ft. above grade vertically and more than 5 ft. horizontally from any metal structure. Where installing temporary conductors in areas subject to vehicle traffic or mobile communication equipment, ensure the conductors are buried a minimum of 12 in. deep or installed at the next lower point. Ground messenger wires that support power conductors in conformance with the NEC.

5. Protect and when necessary repair any existing electrical conduits uncovered during the construction process in a timely manner and in conformance with the NEC.

GROUND RODS & GROUNDING ELECTRODES

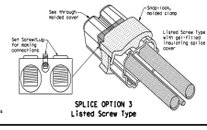
A. MATERIAL INFORMATION

1. Provide and install a grounding electrode at electrical services. Provide ground rods according to DMS-11045 and the plans. Larger diameter or longer length rods may be called for in some specific locations, see the individual pole data sheets. Provide additional grounding electrodes as called for in specific locations including electrical service, see individual pole sheets.

B. CONSTRUCTION METHODS

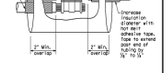
1. Function auxiliary ground rods for lightning protection and install in soil, concrete, or both, as called for in the plans. For ground rods installed in concrete, ensure the connection of the conductor to the ground rod is readily accessible for inspection or repairs. For ground rods installed in soil, ensure that the upper end is between 2 to 4 in. below finished grade.

2. Do not place ground rods in the same drilled hole as a timber pole.



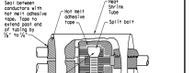
3. Install ground rods so the imprinted part number is at the upper end of the rod.

4. Remove all non-conductive coatings such as concrete splatter from the rod at the clamp location.



5. Route all conductors as short and straight as possible for connection to lightning protection ground rods. When a bend is required, ensure a minimum radius bend of four inches for these conductors.

6. Unless otherwise called for in the plans, protect grounding electrode conductors with non-metallic conduit. When protecting grounding electrode conductors with metal conduit, provide and install a grounding type bushing and properly sized bonding jumper on each end of the metal conduit.



7. Written authorization is required before installing a ground rod in a horizontal trench for rocky soil or a solid rock bottom.

No. 3 Reinforcing steel
10" (typ)
Cross A Concrete Apron when required
Ground Box
Grounding bushing on RMC. Bell end fitting for PVC (4)
Conduit or duct cable
Conduit (4)
apron-full Depth of box
6" aggregate Fill (2)
PLAN VIEW
SECTION A - A
APRON FOR GROUND BOX
(1) Uniformly space ends of conduits within the ground box. Position ends of conduits so that ground box walls do not interfere with the installation of grounding bushings or bell end fittings.
(2) Maintain sufficient space between conduits to allow for proper installation of bushing.
(3) Place aggregate under the box, not in the box. Aggregate should not encroach on the interior volume of the box.
(4) Install a grounding bushing on the upper end of all RMC terminating in a ground box. Where the conduit stub-up from the ground the elbow is less than 18 in. below the bottom of the ground box, install a PVC bushing or bell end fitting on the upper end of all PVC conduits terminating in a ground box.
GROUND BOXES
A. MATERIALS
1. Provide polymer concrete ground boxes measuring 16x30x24 in. (HxLxD) or greater in accordance with Departmental Material Specification (DMS) 11070 "Ground Boxes" and Item 624 "Ground Boxes."
2. Provide Type A, B, C, D, and E ground boxes as shown in the plans, and as listed on the Material Producers List (MPL) on the Department web site under "Roadway Illumination and Electrical Supplies," Item 624.
3. Ensure ground box cover is correctly labeled in accordance with DMS 11070.
4. Provide larger ground boxes in accordance with Item 624 and as shown in the plans.
B. CONSTRUCTION METHODS
1. Remove all gravel and dirt from conduit. Cap all conduits prior to placing aggregate and setting ground box. Provide Grade 5 or 6 coarse aggregate as shown in Table 2 of Item 302 "Aggregates for Surface Treatments." Ensure aggregate bed is in place and at least 6 inches deep, prior to setting the ground box. Install ground box on top of aggregate.
2. Open ground box aprons in place. Reinforcing steel may be field bent. Ensure the depth of concrete for the apron extends from finished grade to the top of the aggregate bed under the box. Ground box aprons, including concrete and reinforcing steel, are subsidiary to ground boxes when called for by descriptive code.
3. Keep dirt holes in the box clear of dirt. Bolt covers down when not working in ground boxes.
4. Install all conduits and slip in a neat and workmanlike manner, uniformly space conduits so grounding bushings and bell end fittings can easily be installed.
5. Temporarily seal all conduits in the ground box until conductors are installed.
6. Permanently seal conduits immediately after the completion of conductor installation with duct seal, expanding foam, or other method as approved. Do not use duct tape as a permanent conduit sealant. Do not use silicone caulk as a sealant.
7. When a ground rod is present in a ground box, bond all equipment grounding conductors together and to the ground rod with listed connectors.
8. When a type D or E ground box is stacked to meet volume requirements, it is allowable to cut an appropriately sized hole for conduit entry in the side wall at least 18 inches below grade.
9. If an existing ground box in the contract has a metal cover, bond the cover to the equipment grounding conductor with a 3 Ft. long stranded bonding jumper the same size as the grounding conductor. The bonding jumper is subsidiary to various bid items. Verify existing ground boxes with metal covers are shown on the plans, with notes fully describing the work required.
10. If other ground boxes with metal covers are within the project limits but are not part of the contract, the Engineer may direct the Contractor to bond the metal covers, identifying the specific boxes in writing. This work will be paid for separately.
11. Bond metal ground box covers to the grounding conductor with a new ground type lug.
GROUND BOX DIMENSIONS
TYPE | OUTSIDE DIMENSIONS (INCHES) (Width x Length X Depth)
A | 12 X 23 X 11
B | 12 X 23 X 22

ELECTRICAL SERVICES NOTES

1. Provide new materials. Ensure installation and materials comply with the applicable provisions of the National Electrical Code (NEC) and National Electrical Manufacturers Association (NEMA) standards. Ensure material is Underwriters Laboratories (UL) listed. Provide electrical service equipment, including meter socket enclosures, service disconnects, circuit breaker panels, and branch circuits breakers as shown on the Electrical Service Data chart in the plans. Faulty fabrication or poor workmanship in material, equipment, or installation will be sufficient reason for rejection. Provide materials that are warrantied and guaranteed as a customary trade practice, furnish these to the State.

2. Provide electrical services in accordance with Electrical Details standard sheets, Departmental Material Specification (DMS) 11080 "Electrical Services, TMG 11081 "Electrical Services-Type A," DMS 11082 "Electrical Services-Type C," DMS 11083 "Electrical Services-Type D," DMS 11084 "Electrical Services-Type T," DMS 11085 "Electrical Services-Pedestal IP31," and then 626 "Electrical Services" of the Texas Department of Transportation Standard Specifications. Refer to the "Materials" on the Materials Producers List (MPL) on the Department web site under "Roadway Illumination and Electrical Supplies," then 626. Provide other service types as specified on the plans.

3. Provide all work, materials, services, and any incidentals needed to install a complete electrical service as specified in the plans.

4. Coordinate with the Engineer and the utility provider for metering and compliance with the utility company's service drop requirements. Provide and install any transformer, and other services, as may the utility company, to provide power to the location are paid for in accordance with Item 626. Get approval for the costs associated with these charges prior to engaging the utility company to do the work. Consult with the utility provider to determine costs and requirements, and coordinate the work as approved.

5. The enclosure manufacturer will provide Master Lock Type 2 with brass tumblers for "Off the Shelf" enclosures. Master Lock will provide Type 2 with brass tumblers to provide Master Lock #2700 Type 2 with brass tumblers for "Off the shelf" enclosures. Master Lock #2191 keys and locks become property of the State. Provide keys to the Engineer, do not energize electrical service equipment until locks are installed.

6. Enclosures with exterior disconnects must de-energize all equipment inside the enclosure do not need a dead front. In lie, protect exposing the terminations from incidental contact as required by the NEC.

7. When galvanized is specified for nuts, screws, bolts or miscellaneous hardware, stainless steel may be used.

8. Provide wiring and electrical components rated for 75°C. Provide red, black, white, and green insulated copper conductors, sized as shown in the plans, No. 6 AWG wire Gauge (AWG). Identify size 6 AWG conductors by continuous color (green). Identify electrical conductors sized 4 AWG and larger by continuous color (black, white, or red) along the entire length of the conductor. Provide each design with hot tape of colored tape, when identifying conductors. Ensure each service entrance conductor exits through a separately pulled nonmetallic opening in the service disconnect. Ensure the wire bending space at terminations is to be 12 inches minimum, 18 inches maximum, or as required by utility.

9. All electrical service conduit and conductors attached to the electrical service including that on or the wires below ground are subsidiary to the electrical service. The Contractor is responsible for all electrical service conductors, connecting the wires, including service conduit and conductors for the utility pole riser when furnished by the Contractor, will be paid for separately.

10. Provide rigid metal conduit (RMC) for all conduits on service, except for the 3/4 inch PVC conduit containing the electrical service grounding electrode conductor. Ensure the minimum conduit size for service entrance and branch conduit for branch circuit entry to enclosure is the size as is not shown on the layout sheets for branch circuit conduit. Extend all rigid metal conduits to the bottom of the service enclosure. Increase the size of the conductors and the conduit shown on the layout for that particular branch circuits. Install a grounding bushing on the RMC where it terminates in the service enclosure.

11. Use of liquidtight flexible metal conduit (LFMC) is to road between the meter and service enclosure when they are mounted 90 to 180 degrees to each other. Size the LFMC the same size as service entrance conduit. LFMC must not exceed 3 feet in length. Torque LFMC within 1 foot of each end. LFMC less than 12 inches in length must be bonded with bonding jumper. Ensure LFMC is terminated with a fitting. The LFMC must contain a grounded neutral conductor. Ensure any bend in LFMC never exceeds 180 degrees. A pull rest 24 inches in length is required between bends. Ensure the flexibleness of three conductor movement demonstrated to the satisfaction of the Engineer.

12. Ensure all mounting hardware and installation details of services conform to utility company specifications.

13. For all electrical service enclosures listed under Item 626 on the MPL, the UL 508 enclosure manufacturers will prepare and submit a schematic drawing unique to each service. Before shipment to the job site, place the applicable reinforced schematic drawings and the customized plan sheets showing the electrical service data chart used to build the enclosure in the enclosure's data packet. The installing contractor is to install the schematic drawing on the inside door of the enclosure to identify branch circuits supplied by that service. The reinforced plan sheets are to be placed in the service enclosure's document packet. Reduce 11 in. x 17 in. plan sheets to 8 1/2 in. x 11 in. before inserting. Deliver these drawings to the Engineer. Instead of providing 11 in. x 17 in. plan sheets, the installing contractor is to redline plan sheets before delivering.

14. When providing an "Off The Shelf" Type D or Type T service, provide reinforced plan sheets detailing equipment and branch circuits supplied by that service. Reduce 11 in. x 17 in. plan sheets to 8 1/2 in. x 11 in before inserting. Deliver these drawings before completion of the work to the Engineer, instead of placing in enclosure that has no door pockets.

15. Do not install conduit in the back wall of a service enclosure where it would penetrate the equipment mounting panel inside the enclosure. Provide grounding bushings for all conduits. Ensure grounding bushings are bonded. Ensure bonding grounding bushings are not required when the end of the metal conduit is fitted with a conduit sealing hub or threaded boss, such as a meter base hub.

SERVICE ASSEMBLY ENCLOSURE

1. Provide threaded hub for all conduit entries into the top of enclosure.

2. Type galvanized sheet (GS) enclosures may be used for Type C pedestals and for Type D and T services that do not use an enclosure mounted photocell or lighting contactor. Provide GS enclosures in accordance with DMS 11080, 11082, 11083, and 11084.

3. Provide stainless (SS) and aluminum sheet (SS) enclosures for Types A, C, and D in accordance with DMS 11080, 11081, 11082, 11083, and 11084. Do not paint stainless sheet.

4. Provide pedestal service (PS) enclosures in accordance with 626(6) and DMS 11080 and 11085. Do not provide GS pedestal services. If GS is shown in the PS descriptive code, provide an AL enclosure.

MAIN DISCONNECT & BRANCH CIRCUIT BREAKERS

1. Field drill flange-mounted remote operator handle if needed, to ensure handle is capable to turn the "On" and "Off" positions.

2. When the utility company provides a transformer larger than 50 kVA, verify that the available fault current is less than the circuit breaker's ampere interrupting capacity (AIC) rating and provide documentation from the electric utility provider to the Engineer.

PHOTOELECTRIC CONTROL

1. Provide photocell as listed on the MPL. Mount, adjust, or shield the photocell to ensure that it does not light more than an ambient proper operation. Mount photocell facing north when practical. Mount top of pole photocells as shown on Top Mounted Photocell Detail.

TRAFFIC SIGNAL NOTES
1. Do not pass luminaire conductors through the signal controller cabinet.
2. Include an equipment grounding conductor in all conduits throughout the electrical system. Bond all exposed metal parts to the grounding conductor.
3. Provide roadway luminaires, when required, in accordance with the material and construction sections of Item 610, "Roadway Illumination Assemblies," and the details for mounting of luminaires. Test illuminated roadway luminaires for proper operation as a part of the associated traffic signal system test.
4. If internally illuminated street name signs are approved for use, ground the fixture to the pole with a 12 AWG green XHHW conductor.
5. Bond anchor bolts to rebar cage in two locations using #3 bars or 6 AWG stranded copper conductors. Use listed mechanical connectors rigged for embedment in concrete. See TXDOT standard TS-FD for further details.
6. Drill and tap signal poles for ½ in. X 13 UNC tank ground fitting. Drill, tap and thread a hole in the pole for the tank ground fitting. Route electrical service entrance/grounding cable through a sized hole through the bottom of the enclosure for the service grounding electrode conductor. Connect the electrical service grounding electrode conductor to the tank ground fitting. Ensure electrical service grounding electrode conductor is sized per the NEC and connected to the pole using the tank ground fitting. See Sheet 6 details for further information. Size service entrance conduit and branch circuit conduit as shown in the plans.
7. Mount electrical service enclosure and meter to signal pole with stainless steel bands using two-hole straps. Install grounding bushing on all conduits to bands using two-hole brackets. Install brackets near top and bottom of each enclosure. Install properly sized stainless steel washers on each bolt in the enclosure. Bond or drill and tap properly sized stand-off straps to signal pole for grounding conduit.
8. Conduct pull tests and insulation resistance tests on all illumination and power conductors as required in Item 620 "Electrical Conductors" and Ed(1). To prevent electrical damage, do not conduct insulation resistance tests on traffic signal cables after termination.
9. Lock all enclosures and bolt down all ground box covers before applying power to the signal installation.
10. Terminate conduits entering the top of enclosures with a conduit-sealing hub or threaded boss such as meter hub. Install a grounding bushing on all metal conduits not connected to conduit-sealing hub or threaded boss. Bond the grounding bushing to the ground bus with a bonding jumper. Seal all conduits entering enclosures with duct seal or expanding foam. Do not use silicone to seal conduit ends.
11. For all conduits, ensure the burial depth is a minimum of 18". Ensure the minimum burial depth for conduit placed under a roadway is 24".
White insulation or color code 'K' for neutral conductor & insulation with white tape where conductor exits weatherhead.
Red insulation or color code 'K' (ORGN OF LINE 2 conductor & insulation with red tape where conductor exits the weatherhead. Conductor tape lengths, 12"-inch., typ.

PEDESTAL SERVICE NOTES
1. Manufacture pedestal electrical services in accordance with Departmental Material Specifications (DMS) 1080 "Electrical Services", 1085 "Electrical Services-Pedestal ITC" and Item 620 "Electrical Services." Provide pedestal electrical services listed on the Material Producers List (MPL) or the Department's web site under Electrical Services-Pedestal ITC. Ensure that all MPL listed items, including hardware and installation details of services meet utility company specifications. Contact the local utility company for approval of pedestal details prior to manufacturing the pedestal and incorporate any changes required by the utility company prior to manufacturing the pedestal and enclosure.
2. When a meter socket is required, provide a socket with a minimum 100 amp rating that complies with local utility requirements.
3. Provide Class A or C concrete for pedestal service foundations in accordance with Item 420, "Concrete Substructures," except that concrete will not be paid for directly but is considered subsidiary to Item 620.
4. Provide #4 reinforcing steel for foundations in accordance with Item 440, "Reinforcement for Concrete."
5. Install (3) 1/2 in. X 13 in. minimum length concrete single expansion type anchors for mounting pedestal enclosure to foundation. Anchor location to match mounting holes in each corner of enclosure. Secure each of the four corners of the pedestal enclosure to foundation with 1/2 in. diameter by 12 in. long galvanized or stainless steel machine thread bolts, a washer & allen cadmium and a flat washer.
6. Finish top of concrete foundation in a neat and workmanlike manner. If leveling washers are used, ensure no more than 1/2 in. gap at any corner. Do not exceed a maximum slope of 1/8 in. in the foundation within 12 in. of the anchor bolts, ensuring that the top of the service enclosure is never more than a slope one side within 1/2 in. Repair cracking or movement of the service enclosure at no additional cost to the department.
7. Do not use rigid/right flexible metal conduit (LFMC) on pedestal type services.
8. Ensure all stubs in the foundation are sized as per utility provider's conduit requirements for underground conduit and headers. PVC connections may be restricted provided the ends of the rigid metal conduits are more than 2 in. below the top of the concrete foundation. Where expansion conduits are metal, grounding bushings must be installed with a bonding jumper properly terminated.

ROADWAY ILLUMINATION ASSEMBLY NOTES

1. Details apply to roadway lighting installations bid or referenced under Item 618, "Roadway Illumination Assemblies." Provide, furnish, and install all other materials not shown on the plans which may be necessary for complete and proper construction. Where manufacturers provide warranties or guarantees as a customary trade practice, furnish to the State such warranties or guarantees.

2. The locations of poles and fixtures may be shifted by the Engineer to accommodate local conditions. Install or remove poles and luminaires located near overhead electrical lines using established industry and utility safety practices and in accordance with laws governing such work. Consult with the appropriate utility company prior to beginning such work.

3. Provide new and unused materials. Ensure that all materials and installations comply with the applicable articles of the National Electrical Code (NEC), TxDOT standards and specifications, National Electrical Manufacturers Association (NEMA),and are listed by Underwriters Laboratories (UL) or a Nationally Recognized Testing Lab (NRTL). NRTLs such as Canadian Standard Association, Intertek Testing Services NA Inc., or FM Approvals LLC can be considered equivalent to UL. Faulty fabrication or poor workmanship in any materials, equipment, or installation is justification for rejection.

4. Provide Roadway Illumination Light Fixtures as per TxDOT Departmental Material Specification (DMS) 11010, Item 610, and as shown on the Material Producers List (MPL) for Roadway Illumination and Electrical Supplies.

5. Fabricate steel roadway illumination poles in accordance with Roadway Illumination Poles (RIP) standards and Item 610. Poles fabricated according to RIP standards do not require shop drawing submittals.

   a. Alternate designs to RIP standards or the use of aluminum to fabricate poles will require the submission of shop drawings electronically. For instructions on submitting shop drawings electronically see "Guide to Electronic Shop Drawing Submittal" on the TxDOT web sites.

   b. Limitations on use of the RIP standards: The RIP standard details were developed for installations in locations where the 3-second gust basic maximum wind speed is 110 mph, and where the elevation of the base of the pole is less than 11 ft, not more than 25' above the elevation of the surrounding terrain, in accordance with the "AASHTO Standard Specifications for Structural Supports for Highway Signs, Luminaires and Traffic Signals," 6th Edition (2013) or the AASHTO Design Specifications. For poles to be installed in regions where the maximum basic wind speed exceeds 110 mph or to be mounted more than 25' above the surrounding terrain, provide poles meeting the following requirements:

      I. Submittals, following the electronic shop drawing submittal process (see Guide to Electronic Shop Drawing Submittal on the TxDOT web sites), submit to the Engineer for approval fabrication drawings and calculations for the poles, sealed by a Texas licensed professional engineer (P.E.).

      II. Luminaire Structural Support Requirements. Provide slip joints, arms, and anchor bolt assemblies with a 25 year design life to safely resist dead loads, ice loads and the required basic wind speeds at the location of installation in accordance with the 6th edition (2013) of the AASHTO Design Specifications. For transformer base poles, provide transformer bases and connecting hardware in accordance with shop drawing submittals. Submit certification of the anchor bolt assembly fatigue life in accordance with the AASHTO Design Specifications. Submit certification of the plastic support load test and FHWA breakaway requirement test of the model of base being furnished with the shop drawings. Show breakaway base model number, manufacturer's name, and logo on shop drawings. Include on manufacturer's shop drawings the ASTM designations for all materials to be used.

6. For both transformer and shoe-base type illumination poles, provide and install double-pole breakaway fuse holders as specified by DMS-11040. Breakaway fuse holders are listed on the MPL for Roadway Illumination and Electrical Supplies under Items 610 & 620. Provide 10 each time delay fuses for breakaway connectors. Slip joints, or fixture the light fixture for underpass luminaires. In each pole, connect luminaires to the breakaway connector with continuous stranded 12 AWG copper conductors as listed on the MPL. Bond all equipment grounding conductors together and to the ground lug in the transformer base or hand hole.

7. Tighten anchor bolts for shoe base, concrete traffic barrier base, and bridge mount roadway illumination poles, in accordance with Item 449.

8. Install T-Base with following procedure:

   a. Anchor Bolt Tightening.

      I. Coat the threads of the anchor bolts with electrically conductive lubricant.

      II. Place the T-base over the anchor bolts. Foundation must be level and flat. The maximum permissible gap under any one corner of the T-base is 1/8" before nuts are tightened.

      III. Coat the bearing surfaces of the nuts and washers with electrically conductive lubricant. Install (1) 1/2" hard down washer, (1) lock washer, and (1) nut on each anchor bolt. Turn the nuts onto the bolts so that each is hand-tight against the washer.

      IV. Using a torque wrench, tighten each nut to 150 ft-lb. Uniform contact is required between the foundation and the T-base in the corner regions of the T-base, and all corner gaps must be closed after applying torque. If a gap still exists after torquing to 150 ft-lbs, continue torquing each bolt incrementally until gap is closed or maximum allowable torque of 250 ft. pound is reached, whichever comes first. If 250 ft-lbs is not enough to close the gap the foundation must be leveled. Gaps along the straight sides of the T-bases and the foundation are permissible. Ensure that no high point of contact occurs between the straight sides of the T-base and the foundation.

      V. Check top of T-base for level. If not level then foundation must be leveled.

   b. Top Bolt Procedure

      I. Erect pole over T-base with crane. Coat bolts, nuts, washers, and lock washers with electrically conductive lubricant.

      II. Install bolts and 1/2" connecting washers from the inside of the T-base, thread up through the pole base. Install flat washers, lock washers and nuts snug tight according to Item 447, "Structural Bolting."

      III. Tighten each nut to 150 ft-lb, using a torque wrench.

   c. Level and Plumb

      I. Ensure pole is plumb and mast arm is perpendicular to the roadway according to plans to within 5 degrees.

9. Construct luminaire pole foundations in accordance with Item 416, "Drilled Shaft Foundations," and TxDOT standard sheet RID(3).

10. Provide and install underpass luminaires in accordance with Item 610, DMS-11010, and TxDOT standard sheet RID(3). Typical luminaire size for underpass luminaires is 150W HPS or 150W EQ LED.

11. Mount luminaires on arms level as shown by the luminaire level indicator.

12. Orient luminaires perpendicular to the roadway (mounted to be ↕↕ unless otherwise shown on the plans.

Wiring Diagram Notes:

1. Use 1/2 IN.-13 UNC threaded, copper or tin-plated copper, pole bonding connector, sized appropriately for conductors, bonded to T-base, or use ground lug in handhole as available.
2. Use pre-qualified two-pole breakaway connectors for all luminaire pole installations. For luminaires fed by a circuit with a neutral conductor, use double pole breakaway connectors with the neutral side unfused and marked white.
3. Split bolt or other connector.

L1,L2 = Hot Conductors
G = Grounding Conductor

TYPICAL WIRING DIAGRAM

LUMINAIRES SERVED AT 480V OR 240/480 VOLT SERVICE OR LUMINAIRES SERVED AT 240V FOR 120/240 VOLT SERVICE.

Decorative LED Lighting Notes:

1. LED Drivers in Remote Outdoor enclosures (for drivers that do not include an enclosure as part of a factory assembly):
   a. Provide NEMA 3R outdoor enclosure or as approved.
   b. Install enclosure at least 12" above ground or other horizontal surface. Mount vertically or on ceiling, and avoid direct sun where possible.
   c. Install drivers with at least 2 inches of space from enclosure walls.
   d. For multiple drivers in an enclosure, provide at least 4 inches side to side and 1 inch end to end from other drivers or electronics equipment
   e. For drivers mounted on back wall of enclosure, mount enclosure on 1 5/8" strut or other standoff to dissipate heat, or mount driver to side of the enclosure or to the metal cover.
   f. Provide remote drivers with a maximum of 100 watts
   g. Provide drivers with documentation of 100,000 hr lifetime or Tcase of 65C or higher.

Driver Spacing in Remote Enclosure

GENERAL NOTES:

1. All work, materials and services not shown on the plans which may be necessary for complete and proper construction shall be performed, furnished and installed by the Contractor. Faulty fabrication or poor workmanship in any material, shall be replaced by the Contractor at his own expense. Contractor shall furnish all manufacturer's warranties or guarantees as a customary trade practice, furnish to the Department such warranties or guarantees.

2. The location of poles and fixtures are diagrammatic only and may be shifted by the Engineer to accommodate local conditions. Install or remove poles and luminaires located near overhead electrical lines using established industry safe practices and in accordance with laws governing such work. Consult with the appropriate utility company prior to beginning such work.

3. Standard Steel Pole Designs. Steel poles fabricated in accordance with the details and dimensions shown herein, shall be considered standard designs. Submission of shop drawings and design calculations for standard designs is not required.

4. Optional Steel Pole Designs. Multi-sided steel poles may be allowed as optional designs, if steel poles are permitted or required, pending approval by the Department as outlined below.

   a. Shop Drawings. Optional designs require submission of shop drawings and design calculations bearing the seal and signature of a Professional Engineer registered in the State of Texas for approval by the Engineer. The Department may elect to pre-approve some shop drawings for optionally designed poles. Submission of shop drawings and design calculations is not required for structures fabricated in accordance with the details of shop drawings on the pre-approved list maintained by the TxDOT Traffic Operations Division. Any deviation from the pre-approved shop drawings will require submission of shop drawings of the complete structure for approval by the Engineer before fabrication.
   b. Structural Support Design for Luminaires. Lighting support structures shall be designed for a 25 year design life in accordance with the AASHTO Standard Specifications for Structural Supports for Highway Signs, Luminaires and Traffic Signals, 6th Edition, 2013 and Interim Specifications. Poles and mast arms shall be designed for 110 mph 3-second gust wind speeds. The Gust Factor, G_f, and Wind Importance Factor, I_r, shall be applied as per the AASHTO Specifications assuming a 25-year design life. The design wind pressure for hurricane wind velocities greater than 100 mph shall not be less than the design wind pressure using 100 mph with the non-hurricane Wind Importance Factor, I_r, value. For hurricane wind velocities greater than 100 mph, the Wind Importance Factor, I_r, shall be applied in the design calculations and shop drawing submittals. All transformer bases shall have been structurally tested to resist the theoretical plastic moment capacity of the pole. Certification of the plastic moment load test and the breakaway design shall be submitted for approval. Base coupling furnished shall be compatible with the shop drawings. Design shall meet the requirements of the AASHTO Standard Specifications.
   c. Manufacturer's shop drawing shall include the ASTM designations for all materials to be used.
   d. Mast arm Arrangements. All poles and attachments shall be structurally designed to support two 12-foot mast arms and luminaires. Poles shall be supplied with mast arm combinations as shown in the plans. All mast arms shall be designed for a 60-pound luminaire having an effective projected area of 1.5 square feet.
   e. Anchor Bolt Assembly. Anchor bolt assemblies for optionally designed poles shall be the same as those shown herein.

5. Aluminum Pole Designs. Aluminum pole designs may be allowed, if aluminum poles are permitted or required, pending approval by the Department as outlined below.

   a. Meet all of the requirements stated above for optional steel pole designs and the following:
      1. Aluminum pole designs shall be designed in accordance with AASHTO LTS-6 (latest) and AWS D1.2.
      2. Aluminum pole designs shall use the same anchor bolt assembly and be subject to the same geometric restraints and other requirements for steel poles specified herein.
      3. Aluminum poles shall be equipped with vibration mitigation devices, as approved by the engineer.
      4. Pole components shall be constructed using the following materials:
      Pole: ASTM B241 Alloy 6005-T5, 6061-T6 or ASTM B221 Alloy 6005-T5.
      Base Flanges: ASTM B26 Alloy 356.0-T6 or ASTM B108 Alloy 356.0-T6 if yield strength test required.
      Mast arm Fittings: ASTM B209 Alloy 6061-T6 or ASTM B221 Alloy 6005-T5.
      Mast Arms: ASTM B241 Alloy 6005-T5 or Alloy 6061-T6.
      Handhole Frame and Cover: ASTM B26 Alloy 356.0-T6, ASTM B26 Alloy 356.0-T6.
      Bolts: Stainless Steel 316 300 series. Bolts threading into aluminum threads shall be treated with anti-seize compound, Never-Seez Compound, Permatex 133A or equal.

6. Special Designs. Poles with architectural treatments shall meet the requirements shown elsewhere in the plans.

7. Luminaire Mounting Height. Actual luminaire mounting height shall be the nominal mounting height given on RIP(2) for all pole-arm combinations except for poles with 4 ft. luminaire arms, which shall be 3'-0" lower than the nominal height, unless otherwise shown or directed.

EXPLANATION OF ROADWAY ILLUMINATION ASSEMBLY DESIGNATIONS

TYPE SA 50 T - X - 10 140W EDI LED

- SA: Pole and mast arm may be steel or aluminum.
- ST: Pole and mast arm must be steel.
- AL: Pole and mast arm must be aluminum.
- SPs: Special (overlap) steel or aluminum pole for mounting an CSB or SSB. See standard sheet CSB (4)-, or SSB (4)-.
- Two numerical digits denote nominal mounting height in feet.
- Next letter denotes type of base, (S-Shoe Base, T-Transformer Base, or B-Bridge/Pier, Wall Mount)
- Final number denotes length of mast arm in feet.
- Use of second mast arm is indicated by second dashed number which denotes length in feet.
- Luminaire rating in watts (i.e. 400W., Equivalent wattage LED Fixtures will include ED (i.e. 400W ED)
- Last letters indicate light source (S - High Pressure Sodium, LED - LED Luminaire)

40.00	10.50	4.48	45.00	0.1345	25.1	30.5

GENERAL NOTES:

1. Designs conform to AASHTO Standard Specifications for Structural Supports for Highway Signs, Luminaires, and Traffic Signals, 6th Edition (2013) and Interim Revisions thereto. Design 3-Second Gust Wind Speed supporting the luminaire and signal arm is 90 mph. Design wind speed for 1.33 gust factor, adjusted for wind speed to a 25 year recurrence interval. Design moments timed in ridrop assume base of pole is 25' above natural ground level.
2. Structures are designed to support two 12' luminaire mast arms and luminaires. Mast arms are designed to support a 6 square foot sign panel on an effective projected area of 1.4 square feet.
3. Fabrication shall be in accordance with the Specifications and with the details, dimensions, and weld procedures shown on the plans. The Fabricator shall submit working drawings of luminaire pole assemblies fabricated in accordance with the details, dimensions, and weld procedures shown on the plans. Working drawings shall include welding procedures which the Fabricator must obtain prior to fabrication. Materials, fabrication tolerances, and shipping practices shall meet the requirements of these sheets and the Specifications. In the absence of specified tolerances, the Fabricator shall follow the most rigorous tolerances generally obtainable in normal fabrication practice.
4. For mounting heights between values shown in the table, interpolate between diameter and thickness values for the larger height.
5. Unless otherwise noted, all steel parts shall be galvanized in accordance with Item 445, "Galvanizing."
6. Steel poles shall be fabricated in accordance with Item 441, "Steel Structures." Longitudinal seam welds for pole shafts shall be complete joint penetration (CJP) groove welds and shall be in accordance with AWS D1.1, Structural Welding Code-Steel.
7. Telescoping poles joined by slip-fit connection welds will not be permitted, unless otherwise shown on the plans. Poles may be fabricated in two sections and field-assembled by the Installation Contractor. The two sections shall be telescoped a minimum of 1.5 times, but not more than 1-1/2 times the shaft diameter at the top joint.
8. Alternate material equal to or better than material specified may be substituted with the approval of the Engineer.
9. Lubricate and tighten anchor bolts, when erecting shoe base poles and concrete traffic barrier base poles, in accordance with Item 449, "Anchor Bolts."
10. All poles, except Transformer Base Poles, shall have hand holes and reinforcing. For luminaire poles with slip-fitter shoe base poles, hand holes shall be placed 90 degrees to mast arm unless otherwise noted on the plans. For poles mounted on a concrete traffic barrier with two luminaire arms, hand holes shall be placed 180 degrees from luminaire arms. For poles mounted on a concrete traffic barrier with two luminaire arms, all hand holes shall be on the same side of the barrier. For poles mounted on a bridge lighting bracket or retaining wall, all hand holes shall be placed on the traffic side of the pole, at a height that will clear the barrier.
11. The finished pole shall have a smooth, uniform finish free of pits, blisters, or other defects. Scratches, chipped, and other damaged galvanized areas on poles and mast arms shall be repaired in accordance with Item 445, "Galvanizing."
12. Pole length is based on a 5'-6" luminaire arm-rise. A 7'-6" luminaire arm-rise may be used. Poles for 7'-6" luminaire arms will have an actual mounting height 2'-0" less than the nominal mounting height, increasing the pole length to meet the nominal mounting height is attained, but unnecessary unless otherwise directed by the engineer.
13. Erect transformer base poles in accordance with sheet RIC(11).

MATERIAL DATA

COMPONENT	ASTM DESIGNATION	MIN. YIELD (ksi)
Pole Shaft- (0.14"/Ft. Taper)	A572 Gr 50, A595 Gr A, A1011 Gr 50 or 55 CL 2 (3), or A1008 HSLAS Gr 50 CL 2	50
Base Plate and Handhole Frame	A572 Gr.50, or A36	36
T-Base Connecting Bolts	F3125 Gr A325	92
Anchor Bolts	F1554 Gr 55, A193-B7 or A321	55 105
Anchor Bolt Templates	A36	36
Heavy Hex (H.H.) Nuts	A194 Gr 2H,or A563 Gr DH	
Flat Washers	F436	

NOTES:

(1) 5'-6" rise for 4 Ft. luminaire arms.

(2) Before oscillized as shown on Concrete Traffic Barrier Base Baseplate details, Sheet 4 of 4.

(3) A1011 SS Gr 50 may be used instead of A572 Gr 50 provided it also meets the elongation requirements for HSLAS.

POLE ASSEMBLY FABRICATION TOLERANCES TABLE

DIMENSION	TOLERANCE
Shaft length	±1"
O.D. of outside piece at slip fitting pieces	+1/8", -1/16"
O.D. of inside piece at slip fitting pieces	+1/32", -1/8"
Shaft diameter other	+3/16"
Out of "round"	1/4"
Straightness of shaft	±1/4" in 10 Ft
Twist in multi-sided shaft	4° in 10 Ft
Perpendicular to baseplate	1/8" in 24"
Pole centered on baseplate	±1/4"
Location of attachments	±1/4"
Bolt hole spacing	±1/16"

SHIPPING PARTS LIST

Ship each pole with the following attached: enlarged hand hole, pole cap, fixed-one connection bolts and washers and any additional hardware listed in the table.

Nominal Arm Length	30' Poles With Luminaire Above Hardware (plus) One for 14' SLSA attached) small hand hole, clamp-on Stiffner		24' Poles With SLSA Above Hardware (plus) One small hand hole		19' Poles With No Luminaire and No SLSA See note above	
Ft	Designation	Quantity	Designation	Quantity	Designation	Quantity
20	20L-80		20S-80		20-60	
24	24L-80		24S-80		24-60	
28	28L-80		28S-80		28-60	
32	32L-80	– 1 –	32S-80	– 1 –	32-60	
36	36L-80		36S-80		36-60	
40	40L-80		40S-80		40-60	
44	44L-80		44S-80		44-60	
48	48L-80		48S-80	– 1 –	48-60	

Traffic Signal Arms (1 per Pole): Ship each arm with the listed equipment attached

Nominal Arm Length	Type I Arm (1 Signal) 1 GSB connector		Type II Arm (2 Signals) 1 Bracket Assembly and 2 GSB Connectors		Type III Arm (3 Signals) 2 Bracket Assemblies and 3 GSB Connectors	
Ft	Designation	Quantity	Designation	Quantity	Designation	Quantity
20	20S-80					
24	24S-80		24SS-60			
28	28S-80		28SS-60			
32			32SS-60	– 2 –	32SS-60	
36			36SS-60		36SS-60	
40					40SS-60	
44					44SS-60	
48					48SS-60	– 1 –

Luminaire Arms (1 per 30' pole)

Nominal Arm Length	Quantity
8' Arm	– 1 –

SLSA Arms (Max. 2 per pole) Ship with clamps, bolts and washers

Nominal Arm Length	Quantity
5' Arm	
8' Arm	– 3 –

Anchor Bolt Assemblies (1 per pole)

Anchor Bolt Diameter	Anchor Bolt Length	Quantity	Each anchor bolt assembly consists of the following: Top and Bottom hexagonal, 4 anchor bolts, 8 nuts, 8 washers, 1 template for anchor bolts (Type 2) per Standard Sheet "TS-FD"
1 1/2"	3'-4"	– 2 –	
1 3/4"	3'-10"	– 1 –	Templates may be removed for shipment.

ILSN CLAMP-ON DETAIL 2
ILSN CLAMP-ON DETAIL 3
GENERAL NOTES:
Clamp-on detail shall be used for ILSN support arm assemblies. A 1 1/2" min diameter hole shall be drilled in the pole for wiring. The 1 1/2" diameter hole shall have a field drilled through the pole to provide wire access after arm is oriented. Deburr both holes.
Where duplicate parts occur on a detail, welds shown for one part shall apply to all similar parts on the details.
Pin bolts are required to prevent rotation of clamp-on arms under design wind forces.
NOTES:
Pin bolts shall be A325 with threads excluded from the shear plane. The 490 bolt and nut shall have 3/4" dia holes for a 3/4" dia galvanized cotter pin. Base clamp plate shall be furnished with 1 1/2" dia hole for wiring access. The 1 1/2" dia hole for each pin bolt shall be field drilled through the pole after arm orientations have been approved by the Engineer.

TRAFFIC SIGNAL CONTROLLER BASE:

1. Provide a traffic signal control box (cabinet base) manufactured of polymer concrete material consisting of aggregates, resins, and reinforcing fibers. Provide a cabinet base that is one piece. The cabinet base must be reinforced on the inside of the cabinet base with fiberglass matting. Provide one of the following bases: Ameridan Part # A60018482H, Suddle Model # PC30482TBS, or other as approved by TxDOT Traffic Safety Division.
2. The polymer concrete material must have a minimum compressive strength of 10,300 pounds per square inch (psi), minimum flexural strength of 3600 psi, and minimum shear strength of 3600 psi.
3. The polymer concrete cabinet base must conform to the dimensions shown and must accommodate a standard TxDOT basement cabinet.
4. Supply the cabinet base with four 1¼"-13 UNC stainless steel inserts for attachment of the cabinet to the base. Inserts must withstand a minimum torque of 50 ft-lb and a minimum straight pull out strength of 750 lbs.
5. Provide the cabinet base with 4 cable risers mounted one on each side of the base 3" to 5" from the top edge of the base, unless approved otherwise. Cable risers must be 1-1/2 x 9¼in 3¼in inch steel channel with eight 1-slots spaced at 1-1/2 inches. The cable risers must easily accommodate the insertion of tie wraps to attach field wiring to the risers to serve as strain relief. Secure cable risers to the base using 1¼"-13 UNC stainless steel screws and inserts.
6. The cabinet base, when secured to the concrete slab with controller cabinet attached, must withstand a minimum wind load of 125 mph or a 300 lb force applied at 48" above the bottom of the base without causing the base or cabinet to come out of their anchored position or cause any permanent deformation. The manufacturer must provide a letter certifying this requirement, signed and sealed by a Texas licensed Professional Engineer. Provide the cabinet base with hardware for attachment to a concrete slab.
7. The traffic signal base must be permanently marked either by ingress or by permanent ink with the manufacturer's model number and date of mfgr.
8. Seal the base to the concrete with a silicone caulk bead and fastened to the slab per manufacturer's instructions.

CONCRETE SLAB:

9. Traffic signal controller pad must be a portland cement concrete slab poured in place, must conform to the dimensions shown, and must be level.
10. Grade earthwork such that it is flush with the concrete pad on all four sides, unless otherwise shown on the plans. Satisfactory to ITEM 680, four inch rip rap may be used in lieu of earthwork. Slopes shall gradually contour to match grade.
11. Bond a #6 AWG copper ground wire and an 8 ft ground rod bonded to the reinforcing mesh by a suitable UL listed clamp and terminated to the cabinet grounding bus for the purpose of providing a local ground for the electrician grounding conductor. The electrician grounding conductor specified in Item 680-2.6.4 is required and must be terminated to the cabinet ground bus.
12. Install a PVC sleeve to prevent the ground rod from direct embedment in the slab.
13. Provide welded wire mesh 6X6-W2.9 X W2.9 for reinforcement. Provide joints and splices in the mesh with a minimum 6-inch overlap. Center the mesh between top and bottom and provide a minimum 3 inch cover on the edges.
14. Provide Class B concrete minimum for the slab in accordance with Item 421. Construct the slab in accordance with Item 531.

CONDUITS:

15. Stub up and run 3-inch conduits through the slab for the various traffic signal poses and ground boxes as shown on the layouts. Install the number of conduits as shown in layouts plus two additional 2 inch conduits for future use. Terminate the conduits with a bushing between 2 and 4 inches above the slab.
16. Extend conduits for future use at least 18 inches from the edge of the slab, terminate underground with a coupling and plug or cap so that the end can be reused without damaging the coupling. Tape duct plug apply to unused telephone conduit.
17. Stub up two separate conduits through the slab from the electrician and telephone services. Run the conduit for the electrician feed directly to the electrician service enclosure. Run the conduit for the telephone line directly to the telephone service, usually located on the same pole as the electrician service. Telephone must not under any circumstance share a conduit with any other function.
18. Terminate electric and telephone conduits above the slab with a coupling. After the base is installed, extend the conduits above the top of the base and secure to the base using a sheet stainless strap or similar suitable substitute.

CONTROLLER CABINET:

19. Anchor the controller cabinet to the base using four stainless steel 1/2-13 NC bolts.
20. The silicone caulk bead specified in Item 680.3.8 must be RTV 133.

PAYMENT:

21. Bid TS-CF as subsidiary to Item 680.

Texas Department of Transportation — Traffic Safety Division Standard

GENERAL NOTES:
1. Backplates are optional for traffic signals and pedestrian hybrid beacons. When backplates are used, a 2-inch wide fluorescent yellow AASHTO Type B_F or C_{FO} retroreflective border conforming to TxDOT DMS-8300 is required. Place on all approaches when used.
2. Signal head and backplate compatibility must be verified by the contractor prior to installation.
3. When using backplates on signal heads, venting is preferred to reduce cyclic vibration stress.
4. When a vented backplate is used, the retroreflective border must not be placed over the louvers.
5. This standard sheet applies to all signal heads with backplates, including but not limited to:
• Pole mounted
• Overhead mounted
• Span wire mounted
• Mast arm mounted
• Vertical signal heads
• Horizontal signal heads
• Clustered signal heads
• Pedestrian hybrid beacons

City of Midland Traffic Signal Material Specification

1. **Cabinet**
    - Type: 16-Channel Henke Double Door Cabinet
2. **Controller**
    - Model: Q-Free XN-2 ATC Controller
3. **Conflict Monitor**
    - Model: EDI 16-Channel LEIP Smart Monitor
4. **Battery Backup System**
    - Manufacturer: Alpha
    - Battery Type: 240XTV Batteries
5. **Detection**
    - Type: No Traffic Detection
6. **Signal Heads**
    - Material: Polycarbonate
    - Backplates: Yellow reflective backplates
7. **Push Buttons**
    - Type: 2-wire
8. **Street Name Signs & Luminaires**
    - Requirement: All signal installations shall include Internally Illuminated Street Name Signs (ILSN) and luminaires unless an overhead conflict exists.
9. **ILSN Arm & Mounting**
    - Arm Length: 9 feet
    - ILSN Specifications:
        - Must include the City of Midland logo
        - Double-sided and mounted on the pole unless an overhead conflict exists

- If an overhead conflict exists, the ILSN shall be one-sided and mounted on the arm

10. **Ground Box**

- A ground box shall be installed between the electric service and the cabinet.

PAY QUANTITY NOTES

M1 Includes the necessary equipment, labor, materials, and incidentals for all Mobilization to the job site complete and in place. Measurement and payment to be made per lump sum.

M2

Pay Note Removed

M3 Includes the necessary equipment, labor, materials, and incidentals for the installation of Pipe Conduit per the construction drawings and City of Midland standards and specifications, including all trenching, embedment, backfill, and appurtenances. Measurement and payment to be per linear foot measured along the ground surface following the pipe centerline through all boxes, fittings, structures, and appurtenances.

M4 Includes the necessary equipment, labor, materials, and incidentals to implement the Erosion Control Plan per the construction drawings and City of Midland standards and specifications. Measurement and payment to be made per lump sum.

M5 Includes the necessary equipment, labor, materials, and incidentals to implement the Traffic Control per the approved Traffic Control Plan. Any required traffic control devices are to meet the City of Midland Traffic Division Standards. Measurement and payment to be made per lump sum.

M6 Includes the necessary equipment, labor, materials, and incidentals to implement Job Site Safety and to provide a safe work environment for the project work area (including all personal protection equipment, trench safety, etc.) per the construction drawings and in compliance with all applicable Federal, State, and Local requirements or regulations including those of OSHA and the City of Midland. JOB SITE SAFETY IS THE RESPONSABILITY OF THE CONTRACTOR. Measurement and payment to be made per lump sum.

M7 Includes the necessary equipment, labor, materials, and incidentals for Seeded Erosion Control Mats per the construction drawings and City of Midland standards and specifications, including all removal, storage, and replacement of existing topsoil as well as all mats, seeding, staking, and appurtenances. Watering is addressed in a separate pay note. Measurement and payment to be made per square yard measured along the ground surface.

M8 Includes the necessary equipment, labor, materials, and incidentals for Seeding & Stabilization per the construction drawings and City of Midland standards and specifications, including all removal, storage, and replacement of existing topsoil as well as all seeding and appurtenances. Watering is addressed in a separate pay note. Measurement and payment to be made per square yard measured along the ground surface.

M9 Includes the necessary equipment, labor, materials, and incidentals for Spray Watering per the construction drawings and City of Midland standards and specifications, including all appurtenances. Measurement and payment to be made per lump sum.

D1 Includes the necessary equipment, labor, materials, and incidentals for Preparation of Right-of-Way per the construction drawings and City of Midland standards and specifications including removal and disposal of all obstructions from the right-of-way and easements where removal of such obstructions is not indicated in the consturction drawings, all scraping and preservation of top soil, and including all clearing, grubbing, and appurtenances. Measurement and payment to be made per acre measured along the ground surface.

D2 Includes the necessary equipment, labor, materials, and incidentals for Unclassified Excavation per the construction drawings and City of Midland standards and specifications including all existing sub-structure removal, unclassified excavation, material removal, and appurtenances. Measurment and payment to be per square yard measured along the ground surface.

D3 Includes the necessary equipment, labor, materials, and incidentals for Unclassified Excavation per the construction drawings and City of Midland standards and specifications including all existing sub-structure removal, unclassified excavation, material removal, and appurtenances. Measurment and payment to be per square yard of material removed.

D4 Includes the necessary equipment, labor, materials, and incidentals for Unclassified Excavation per the construction drawings and City of Midland standards and specifications including all existing pavement and sub-structure removal, unclassified excavation, material removal, and appurtenances. Measurment and payment to be per cubic yard of material removed.

D5 Includes the necessary equipment, labor, materials, and incidentals for the Removal & Disposal of Existing Unclassified Pavement per the construction drawings and City of Midland standards and specifications including all pavement removal, saw-cutting, and appurtenances. Depths given are approximate and pavement material is to be removed in its entirety. No additional compensation will be made for increased pavement depth removal. Measurement and payment to be made per square yard measured along the ground surface.

D6 Includes the necessary equipment, labor, materials, and incidentals for the Removal & Disposal of Existing Miscellaneous Concrete per the construction drawings and City of Midland standards and specifications, including all appurtenances. Measurement and payment to be made per square yard measured along the ground surface.

D7 Includes the necessary equipment, labor, materials, and incidentals to Remove & Dispose of Existing Fence And Gate per the construction drawings and City of Midland standards and specifications, including removal of all, columns, posts, foundations, anchors, gates, frames, and structures as well as all excavation, backfill, cutting, and appurtenances. Measurement and payment to be made per linear foot measures along the ground surface following the fence centerline through all structures and appurtenances.

SD1 Includes the necessary equipment, labor, materials, and incidentals for the installation of Reinforced Concrete Box Culvert per the construction drawings and City of Midland standards and specifications, including all embedment, detector wire, tracer tape, necessary testing, and appurtenances. Measurement and payment to be made per linear foot measured along the ground surface following the box culvert centerline through all structures and appurtenances.

SD2 Includes the necessary equipment, labor, materials, and incidentals for the installation of Storm Drains per the construction drawings and City of Midland standards and specifications, including all embedment, detector wire, tracer tape, necessary testing, and appurtenances. Measurement and payment to be made per linear foot measured along the ground surface following the pipe centerline through all structures and appurtenances.

SD3 Includes the necessary equipment, labor, materials, and incidentals for the installation of a Reinforced Concrete Headwall per the construction drawings and City of Midland standards and specifications, including all forms, reinforcment, placement, sealing, finishing, and appurtenances. Measurement and payment to be made per each concrete headwall installed.

SD4 Includes the necessary equipment, labor, materials, and incidentals for the installation of a Headwall Safety End Treatment per the construction drawings and City of Midland standards and specifications, including all forms, reinforcment, placement, sealing, finishing, and appurtenances. Measurement and payment to be made per each headwall safety end treatment installed.

SD5 Includes the necessary equipment, labor, materials, and incidentals for Open Trenching of Storm Drain per the construction drawings and City of Midland standards and specifications, including all unclassified excavation, backfill not including flowable fill backfill, providing trench safety and protection for workers to install pipe, structures, and appurtenances. Measurement and payment to be made per linear foot measured along the ground surface following the pipe centerline through all structures, fittings, and appurtenances.

SD6 Includes the necessary equipment, labor, materials, and incidentals for the installation of Concrete Rip-Rap per the consturction drawings and City of Midland standards and specifications, including all excavation, forms, reinforcement, placement, jointing, sealing, finishing, and appurtenances. Measurement and payment to be made per square yard measured along the ground surface.

ST1 Includes the necessary equipment, labor, materials, and incidentals to install a Fence per the construction drawings and City of Midland standards and specifications, including all columns, posts, foundations, anchors, and structures as well as all excavation, backfill, cutting, and appurtenances. Measurement and payment to be made per linear foot measured along the ground surface following the fence centerline through all structures and appurtenances.

ST2 Includes the necessary equipment, labor, materials, and incidentals to install a Fence Gate per the construction drawings and City of Midland standards and specifications, including all columns, posts, foundations, anchors, frames, attachments, and structures as well as all excavation, backfill, cutting, and appurtenances. Measurement and payment to be made per each gate installed.

ST3

Pay Note Removed

ST4 Includes the necessary equipment, labor, materials, and incidentals to relocate a Cattle Guard per the construction drawings and City of Midland standards and specifications, including all beams, foundations, anchors, frames, attachments, and structures as well as all excavation, backfill, cutting, and appurtenances. Measurement and payment to be made per each cattle guard installed.

ST5 Includes the necessary equipment, labor, materials, and incidentals to install a Knox Lock per the construction drawings and City of Midland standards and specifications, including all posts, foundations, anchors, frames, safe or box, attachments, and structures as well as all appurtenances. Measurement and payment to be made per each knox lock installed.

ST6 Includes the necessary equipment, labor, materials, and incidentals to Relocate Mailbox Foundation per the construction drawings and City of Midland standards and specifications, including all structure removal, foundation placement, and appurtenances. Measurement and payment to be made per each existing mailbox foundation removed and new mailbox foundation set.

P1 Includes the necessary equipment, labor, materials, and incidentals for Subgrade Preparation per the construction drawings and City of Midland standards and specifications, including all proof-rollling, sub-grade reworking, scarifying, compaction, and appurtenances. Measurement and payment to be made per square yard measured along the ground surface.

P2 Includes the necessary equipment, labor, materials, and incidentals for placement of Unclassified Embankment per the construction drawings and City of Midland standards and specifications, including all sprinkling, rolling, correction of soft spots, grading, sloping, compaction, and appurtenances. Measurement and payment to be made per each cubic yard placed.

P3 Includes the necessary equipment, labor, materials, and incidentals for placement of Jointed Concrete Pavement per the construction drawings and City of Midland standards and specifications, including all forming, reinforcement, placement, jointing, sealing, finishing, and appurtenances. Measurement and payment to be made per square yard of material placed measured along the ground surface.

P4 Includes the necessary equipment, labor, materials, and incidentals for the placement of Type "D" HMAC Asphalt Pavement Surface Course (PG 70-22, 110 LBS / SY at 1" thick) per the construction drawings and City of Midland standards and specifications, including all placement, compaction, and appurtenances. Measurement and payment to be made per square yard of material placed measured along the ground surface.

P5 Includes the necessary equipment, labor, materials, and incidentals for the placement of Type "C" HMAC Asphalt Pavement Surface Course (PG 64-22, 110 LBS / SY at 1" thick) per the construction drawings and City of Midland standards and specifications, including all placement, compaction, and appurtenances. Measurement and payment to be made per square yard of material placed measured along the ground surface.

P6 Includes the necessary equipment, labor, materials, and incidentals for the placement of Type "B" HMAC Asphalt Pavement Surface Course (PG 64-22, 110 LBS / SY at 1" thick) per the construction drawings and City of Midland standards and specifications, including all placement, compaction, and appurtenances. Measurement and payment to be made per square yard of material placed measured along the ground surface.

P7 Includes the necessary equipment, labor, materials, and incidentals for placement of Flexible Base compacted to 95% Density, ASTM D1557, per the construction drawings and City of Midland standards and specifications including all placement, compaction, and appurtenances. Measurement and payment to be made per square yard of material placed measured along the ground surface.

P8 Includes the necessary equipment, labor, materials, and incidentals for application of Bituminous Prime Coat (MC-30, 0.20 GAL / SY) per the construction drawings and City of Midland standards and specifications, including all appurtenances. Measurement and payment to be made per gallon of material applied at the designated rate.

P9 Includes the necessary equipment, labor, materials, and incidentals for application of Tack Coat (MC-30, 0.10 GAL / SY) per the construction drawings and City of Midland standards and specifications, including all appurtenances. Measurement and payment to be made per gallon of material applied at the designated rate.

P10 Includes the necessary equipment, labor, materials, and incidentals for placement of Stamped Concrete Median per the construction drawings and City of Midland standards and specifications including all forming, reinforcement, placement, jointing, sealing, finishing, and appurtenances. Measurement and payment to be made per square yard of material placed measured along the ground surface.

P11 Includes the necessary equipment, labor, materials, and incidentals for placement of Concrete Median per the construction drawings and City of Midland standards and specifications including all forming, reinforcement, placement, jointing, sealing, finishing, and appurtenances. Measurement and payment to be made per square yard of material placed measured along the ground surface.

P12 Includes the necessary equipment, labor, materials, and incidentals for placement of Concrete Fillet per the construction drawings and City of Midland standards and specifications including all forming, reinforcement, placement, jointing, sealing, finishing, and appurtenances. Curb section is formed and poured monolithically with fillet and is not a separate bid item. Measurement and payment to be made per square yard of material placed measured along the ground surface.

P13 Includes the necessary equipment, labor, materials, and incidentals for placement of Concrete Valley Gutter per the construction drawings and City of Midland standards and specifications including all forming, reinforcement, placement, jointing, sealing, finishing, and appurtenances. Measurement and payment to be made per square yard of material placed measured along the ground surface.

P14 Includes the necessary equipment, labor, materials, and incidentals for placement of Concrete Driveway Approach per the construction drawings and City of Midland standards and specifications including all forming, reinforcement, placement, jointing, sealing, finishing, and appurtenances. Pedestrian access ramps at the driveway approach are considered part of the approach and are not a separate bid item. Measurement and payment to be made per square yard of material placed measured along the ground surface.

P15 Includes the necessary equipment, labor, materials, and incidentals for placement of Concrete Curb & Gutter per the construction drawings and City of Midland standards and specifications including all forming, reinforcement, placement, jointing, finishing, and appurtenances. Measurement and payment to be made per linear foot of material placed measured along the back-of-curb.

P16 Includes the necessary equipment, labor, materials, and incidentals for placement of Concrete Pedestrian Access Ramp per the construction drawings and City of Midland standards and specifications, including all forming, reinforcement, placement, jointing, finishing, and appurtenances. Measurement and payment to be made per square yard of material placed measured along the ground surface.

P17 Includes the necessary equipment, labor, materials, and incidentals for Ring & Cover Adjustment per the construction drawings and City of Midland standards and specifications including all forming, reinforcement, placement, flowable fill, jointing, sealing, finishing, and appurtenances. This includes a minimum 1.0' wide concrete collar whose width is measured from the outer edge of the cover to the outer edge of the concrete ring. Measurement and payment to be made per each adjustment made.

T1 Includes the necessary equipment, labor, materials, and incidentals to Eliminate Existing Pavement Markings and Markers (Line Marking) per the construction drawings and City of Midland standards and specifications, including all appurtenances. Measurement and payment to be made per linear foot eliminated.

T2 Includes the necessary equipment, labor, materials, and incidentals for the placement of Retroreflectorized Pavement Markings per the construction drawings and City of Midland standards and specifications, including all appurtenances. Measurement and payment to be made per linear foot placed.

T3 Includes the necessary equipment, labor, materials, and incidentals for the placement of Thermoplastic Pavement Markings per the construction drawings and City of Midland standards and specifications, including all appurtenances. Measurement and payment to be made per linear foot placed.

T4 Includes the necessary equipment, labor, materials, and incidentals for the placement of Prefabricated Pavement Markings per the construction drawings and City of Midland standards and specifications, including all appurtenances. Measurement and payment to be made per each marking placed.

T5 Includes the necessary equipment, labor, materials, and incidentals for In Road Sign Assembly per the construction drawings and City of Midland standards and specifications, including all appurtenances. Measurement and payment to be made per each sign assembled.

T6 Includes the necessary equipment, labor, materials, and incidentals to Remove Sign Assembly per the construction drawings and City of Midland standards and specifications, including all excavation, backfill, stabilization, foundations, bases, and appurtenances. Measurement and payment to be made per each existing sign assembly removed.

T7 Includes the necessary equipment, labor, materials, and incidentals for the placement of Retroreflective Raised Pavement Markers per the construction drawings and City of Midland standards and specifications, including all appurtenances. Measurement and payment to be made per each marker placed.

T8 Includes the necessary equipment, labor, materials, and incidentals for the placement and installation of Utility Duct Bank improvements per the construction drawings and City of Midland standards and specifications, including all appurtenances. Measurement and payment to be made per linear foot placed measured along the ground surface.

T9 Includes the necessary equipment, labor, materials, and incidentals for the placement and installation of Ground Box With Apron improvements per the construction drawings and City of Midland standards and specifications, including all appurtenances. Measurement and payment to be made per each ground box with apron placed.

T10 Includes the necessary equipment, labor, materials, and incidentals for the placement and installation of Delineator Assembly improvements per the construction drawings and City of Midland standards and specifications, including all appurtenances. Measurement and payment to be made per each delineator assembly placed.

T11 Includes the necessary equipment, labor, materials, and incidentals for the placement and installation of Temporary Workzone Pavement Markings improvements per the construction drawings and City of Midland standards and specifications, including all appurtenances. Measurement and payment to be made per lump sum.

SHEET INDEX

002

BRIARWOOD AVENUE
GENERAL NOTES:

The technical specifications adopted by the Texas Department of Transportation (TxDOT) November 1, 2014, and titled "Standard Specifications for Construction and Maintenance of Highways, Streets and Bridges" shall govern this project, except where superseded in the Plans and Contract Documents. This specification book may be purchased from the TxDOT or downloaded at:
http://www.txdot.gov/business/resources/txdot-specifications.html

For this project, any reference within the specification book to "Department," "Engineer," or "Owner" should be interpreted as the City of Midland Engineering staff, or their representatives.

General

All Bearings, Dimensions, and Topographic features shown in this Construction Drawing set are related the Texas State Plane Coordinate System, Texas Central Zone, North American Datum 1983. All elevations are related to North American Vertical Datum 1988.

Any issues, conflicts, or discrepancies encountered during construction that conflict with this Construction Drawing set shall be brought to the attention of the Engineer prior to making any design changes in the field.

Repair damage to the Right of Way to the satisfaction of the Owner. Restore all disturbed areas due to trenching or any construction activity to a condition equivalent to the original condition within 14 working days from the time work began in the area including all necessary seeding.

Coordinate street closures with the local fire, police, other emergency personnel, and transportation.

Maintain access to adjacent property at all times.

Notify, in writing, each residence and business 7 days prior to beginning construction of the phase/phases that are expected to affect their ingress and egress or any planned interruptions. This notice may be hand delivered or mailed.

OSHA requirements and all other applicable Federal, State, or City of Midland safety requirements shall be followed and complied with at all times.

Provide a lidded dumpster to be used by Contractor's personnel on the job site. This shall be considered subsidiary to the various bid items.

Dispose of all waste materials in compliance with local, state, and federal regulations.

Do not begin work before 7:00 A.M. or end work after 7:00 P.M. unless authorized by the Engineer and remove all equipment from the roadway prior to end of workday.

Perform any erosion control measures such as seeding or sodding before beginning the next phase, unless otherwise authorized by the Engineer.

All demolition dimensions are approximate based on the most reliable data available. Contractor shall field verify actual dimensions and notify Engineer of quantity increase or discrepancies.

Contractor shall notify Engineer of any conflicts or discrepancies before removal of any items not noted in Construction Drawings.

Hot Mix Basis of Estimate

ITEM	DESCRIPTION	*RATE (approx.)
3076	Dense-Graded HMA (TY C) (PG64-22)	345 LBS/SY
3076	Dense-Graded HMA (TY D) (PG70-22)	230 LBS/SY
508	HMAC for detour (TY B)	690 LBS/SY

*Actual rates will be determined by Engineer in Field

Surface Treatment Basis of Estimate

DESCRIPTION	PRIME	QCST
ASPH TYPE & GRADE	MC-30	CRS-1P OR CRS-2P (COOL) AC-20-5TR (WARM)
ASPH RATE (GAL/SY)	0.20	0.42
AGGR TYPE		PB
AGGR GRADE		4
AGGR RATE (CY/SY)		1/100

Utilities
Overhead and underground utility installations do exist within the project limits. Surface features, such as manholes and valve boxes, were identified in the topographic survey and may be used as an approximate location of where some utilities exist. Some utilities were potholed and are identified on the plans. These identified features should not be considered a thorough or exact marking of all existing utilities. The Contractor is responsible for following all location services protocol and for repairing any damages to utilities caused by the Contractor.

Contractor is to take all necessary precautions to protect all existing facilities that are encountered regardless of whether they appear in this Construction Drawing set.

All new or existing valve, manholes, and meter covers must be adjusted to finished grade regardless of whether the surface is paved or unpaved. Concrete collars shall be placed around all public infrastructure utility covers.

Item 100 – Preparing Right Of Way
Sprinkler systems shall be cut at the right-of-way line and restored to operating conditions using a licensed irrigator. Payment for this work shall be considered subsidiary.

Fence and gate removal not specifically identified on the Plans as a pay item shall be subsidiary to Preparing Right Of Way. Fence and gate materials shown to be removed shall be neatly stockpiled at a location designated by the landowner.

Item 105 – Removing Stabilized Treated and Untreated Base and Asphalt Pavement
Store salvaged material in stockpile(s), location(s) as directed by the Engineer.

All saw-cuts for pavement removal shall be cut in clean, straight lines.

Item 110 – Excavation
Broom the existing base or subgrade to remove any loose material dropped during excavation operations. This work is considered subsidiary to this item.

Item 160 - Topsoil
Salvage, windrow and stockpile topsoil from existing areas within the ROW. Maximum salvage depth is 6 inches, unless approved by the Engineer. Place a 6-inch layer of loosely compacted Topsoil in areas

BRIARWOOD AVENUE
GENERAL NOTES
SHEET 1 OF 5

003

designated on the plans. An adequate quantity of topsoil is available within the project limits. Payment for topsoil work is included in the embankment quantities and no separate payment will be made for this work.

If additional topsoil is determined to be required, provide material of equal quality to achieve a 6-inch minimum thickness throughout. The topsoil and its source will be approved by the Engineer.

Contractor may use stockpiled topsoil for areas where drainage dikes are called in Construction Drawings.

Item 164 – Seeding For Erosion Control
Provide seed according to Table 2 for the Odessa District, urban seed mix for sandy soils. Furnish seed tags from the seed supplier to the Engineer for verification of quantity and type. Submit an available substitution to the Engineer, for approval, if a grass variety is not available.

Notify the Engineer of scheduled seeding operations 24 hours prior to seeding applications. Do not begin seeding operations until the Engineer has approved seedbed preparations. Locate and flag all irrigation heads, valve covers, utility facility covers, etc. prior to commencing seed application operations.

Drill seed according to specifications. Use a pasture or rangeland type drill seed. Mulch is not required.

Do not disturb or drive on newly seeded areas. Repair any damage to the seeded areas to the satisfaction of the Engineer.

Revegetate all areas and surfaces disturbed by any construction activity outside of paved or other impervious areas.

Item 169 – Vegetative Watering
Water newly seeded grass areas evenly with a minimum of two-tenths (2/10) of an inch per day for 15 consecutive days or until 70% coverage has been achieved
Water from a tanked, spray-equipped vehicle capable of spraying water to all areas without driving of trailering the vehicle on said areas.

Vegetative Watering will not be paid for separately and will be considered subsidiary to Item 164.

Item 216 – Proof Rolling
Provide a 25-ton roller, or other equipment approved by the Engineer for proof rolling. Proof Roll all subgrade in the presence of the engineer, or as directed, prior to acceptance.

All subgrade and base courses shall be Proof Rolled in accordance with City of Midland Standards. No separate payment will be made for proof rolling.

Item 247 – Flexible Base
Use Flexible Base Ty A or B, Grade 4, with a minimum Plasticity Index of 6.

No salvaged base may be reused in the construction of new base but may be incorporated into the subgrade or embankment.

Item 302 – Aggregates for Surface Treatments
Use a Grade 4, Surface Aggregate Class B aggregate. Use an unmodified asphalt with a minimum performance grade of 64-16 (PG 64-16) or better for aggregate pre-coating. Precoat aggregate with 1.0 percent by weight of asphalt.

Use a liquid asphalt anti-stripping agent of a type and at a rate approved by the Engineer. The use of flux oil is not permitted.

Cure precoated aggregate a minimum of 72 hours before applying the aggregate to the roadway surface.

Item 310 – Prime Coat
Apply an MC-30 or AE-P prime coat to all finished treated base, new flexible base and salvage base due to receive asphaltic concrete pavement or surface treatments. Remove all loose and scabbed material from the surface prior to prime coat application.

Allow prime coat to penetrate and dry for a minimum of 72 hours before placing any asphaltic material on the primed surface, unless otherwise authorized by the Engineer.

Item 316 – Seal Coat
AC-20-5TR will be used during warm weather placement. CRS-1P or CRS-2P will be used for cool weather placement as directed by the Engineer.

Use medium pneumatic tire rollers, as directed by the Engineer. Do not use flat wheel rollers.

Item 341 – Dense-Graded Hot-Mix Asphalt
Binder:
Provide a binder with a Performance Grade of 64-22 (PG 64-22) for the Type C subsurface course.

Provide a binder with a Performance Grade of 70-22 (PG 70-22) for the Type D surface course.

Aggregate quality:
Provide coarse aggregate for all surface hotmix and overlays meeting a minimum Surface Aggregate Classification (SAC) of **B** as published in TxDOT's *AGGREGATE QUALITY MONITORING PROGRAM (QMP) RATED SOURCE QUALITY CATALOG*.

Mixture design:
The target laboratory molded density for mix will be 96.5 percent.

Test method Tex-530-C (Boil Test) will not be required.

Placement:
Semi-trailer type vehicles are prohibited from dumping directly into the finishing machine for the finished surface unless the trailer is equipped with an auger slatted chain or another approved conveyor.

No RAP will be allowed.

No RAS will be allowed.

Mineral filler will not be allowed.

Lime will not be allowed as an anti-stripping agent.

Provide trackless asphalt for tack coat at a rate of 0.10-0.13 gal/sy. Adjustments to the rate may be made in the field at the direction of the engineer. Apply tack coat uniformly to all intermediate asphalt pavement surfaces and all joints, including cold joints with mats previously laid and joints adjacent to concrete pavements.

Item 400 – Excavation and Backfill for Structures
Structural Excavation is subsidiary to the structures being installed. Where flowable fill is chosen to be used as backfill material by the Contractor's and for the Contractor's convenience, no additional payment will be made.

Construct fill over structures to plan grade before hauling with heavy equipment over structures.

Compact backfill used for structures, other than flowable backfill, to a minimum density of 95 percent. Use a template to secure reasonably accurate Class C shaping of the foundation material outside of cement stabilized areas.

BRIARWOOD AVENUE
GENERAL NOTES
SHEET 2 OF 5

003a

Contact the utility company and properly secure the utility poles prior to excavating next to the utility poles. The work and material used to secure the utility poles are subsidiary to the pertinent items. All trenching and backfill is subsidiary to the various culvert and headwall items.

Item 421 – Hydraulic Cement Concrete
All concrete shall be Class "C" (3600 psi) and maintain fiber reinforcement throughout, in addition to any steel reinforcement shown.

Use polypropylene fiber reinforcing at a minimum rate of 3 lbs/cy.

Furnish mix designs to the Engineer at least 48 hours prior to placing concrete. Provide an approved Private Laboratory Contractor to perform the needed concrete testing for mix design approval.

Fly ash will not be allowed in any mix design.

Engineer will provide quality assurance testing.

Provide air entrainment in all concrete except for concrete used in precast concrete members. Target an entrained air content of 4.0% for concrete pavement and 5.5% for all other concrete requiring air entrainment. Ensure the minimum entrained air content is at least 3.0% for all classes of concrete.

Place concrete pavement within 45 minutes of batching and use vibratory equipment to consolidate concrete. Do not use vibratory equipment to distribute concrete pavement. Segregated concrete is subject to rejection.

For this project, consider all concrete for culverts, culvert extensions, headwalls and wingwalls to be non-structural concrete.

All concrete pavement joints shall be sealed in compliances with City of Midland standards. This requirement does not apply to pedestrian access ramps, sidewalk, or curb joints.

Item 432 – Riprap
Provide 5-inch-thick concrete riprap, unless otherwise indicated in the plans.

In large areas of riprap, provide one-half (1/2)-inch thick expansion joint material at approximately 15-foot intervals, or as directed by the Engineer.

Use City of Midland approved expansion joint material and place between the proposed riprap and curb and gutter.

Reinforce all riprap on this project with No. 3 bars spaced 12 inches O.C.B.W. or No. 4 bars spaced at 18 inches O.C.B.W.

Broom-finish all riprap on this project unless otherwise directed.

In addition to reinforcing steel, polypropylene fiber is required at a rate of 3 lbs./cy. Polypropylene fiber may not be used in lieu of reinforcing steel.

Items 462 and 464 – Concrete Box Culvert and Reinforced Concrete Pipe
Join all concrete culverts with a cold-applied plastic joint gasket such as RAM-NEK or approved equal.

Maintain trench protection to protect Owner's representatives, inspectors, and Contractors during testing operations.

OSHA approved trench safety systems are required for all trenches 5.0' deep or greater.

All trenching and backfill is subsidiary to the various culvert and headwall items.

Item 466 – Headwalls and Wingwalls
Install reinforced concrete aprons on all headwalls and wingwalls, using reinforcing composed of #4 bars at 12-inch spacings, center-to-center, or as shown on the detail sheet.

Item 467 – Safety End Treatment
Provide shop drawings for pipe runners.

Item 479 – Adjusting Manholes and Inlets
Raise the manholes and water valves up to finished roadway elevation, matching the finish cross-slope.

Item 502 – Barricades, Signs and Traffic Handling
The work required for Item 502 will be paid for as a lump sum.

Prior to beginning construction, the Engineer shall approve the routing of traffic and sequence of work.

In addition to the Traffic Contro Plan (TCP) and the latest WZ standard plan sheets, install barricades and warning signs, as appropriate, to adequately warn motorists. Permanent signs may be installed when construction in an area is complete, anc they will not be in conflict with the traffic control plan for the remainder of the job.

This project has a regulatory work zone speed reduction within the project limits. The work zone speed limit is reduced from 60 mph to 35 mph. Placement of speed reduction zone signs shall comply with BC (3)-14. Speed resumption sign(s) is required atthe end of a speed reduction zone. Existing signs may remain in place durng the TCP period if they do not interfere with construction, and they do not conflict with the TCP plan.

Additional signs and barricades may be required, as directed by the Engineer, and shall be considered subsidiary to TCP.

Cover or remove any work zone signs when work or condition referenced is not occurring.

Do not place barricades, signs, or any other traffic control devices where they interfere with sight distance at driveways or side streets. Provide access to all driveways during all phases of construction, unless otherwise directed on the plans.

All locations used for storing construction equipment and materials of any type within the right of way shall be approved by the Engineer. Use of the Right-of-Way for these purposes will be restricted to those locations where driver sight distance to businesses and side street intersections is not obstructed, public safety is not risked and at other locations where an unsightly appearance, as determined by the Engineer, will not exist.

No work will be permitted to commence on the road before 7:00 A.M. and shall be arranged so that all machinery and/or equipment shall be away from the roadway near the Right-of-Way line after 7:00 P.M.

Remove any obstructions to existing drainage due to the Contractor's operations as required, at the Contractors expense.

Wash the channelizing devices and barricades following each rainfall or snowfall event and at times deemed necessary by the Engineer.

To ensure the safety and convenience of traffic, flaggers may be required when construction machinery is being operated along, across, or adjacent to lanes carrying traffic. If considered necessary by the Engineer, supplemental signs and barricades may be required.

Fill any holes left by barricade or sign supports and restore the area to its original condition.

Barricades, Signs and Traffic Handling is a plan quantity item. If time is suspended, no additiona compensation will be made.

No.	Description	Date

BRIARWOOD AVENUE
GENERAL NOTES
SHEET 3 OF 5

003b

Traffic switches will not be permitted on Fridays or any working day preceding a holiday unless authorized by the Engineer.

Construct temporary ramps to maintain access to driveways and city streets as directed by the Engineer. Temporary ramp construction is subsidiary to TCP, unless otherwise shown on the plans.

The Contractor shall bid on the traffic control plan shown in the plans. Any proposed alterations to the TCP (combining work areas / phasing / etc.) shall be submitted to the Engineer at least 10 days prior to anticipated changes.

Square tubing sign supports may be used for temporary construction signs. Aluminum and wood signs may be mounted if the vertical supports are embedded into the ground. Square tubing supports on skids which are typically held in place with sandbags can only support signs made of light weight fluted plastic.

Any trench or drop off over 2" will require a safety slope of at least 3:1 and can be constructed out of RAP, embankment or other material approved by the Engineer. The placement, maintenance, and removal are the responsibility of the Contractor and is subsidiary to the various items.

Item 506 – Temporary Erosion, Sedimentation, and Environmental Controls
All erosion control measures shown in plans and required by the Engineer, including installation and removal upon completion of construction activity, will not be paid for separately and will be included under Item 506 on a lump sum basis.

Install erosion control measures prior to beginning any construction activity on project site.

Contractor shall maintain erosion control measures at all times. Repairs to existing measures shall be made immediately upon discovery.

All erosion control measures shall be inspected immediately following any storm event. Implement additional erosion control measures during storm events as needed or directed by the Engineer.

Contractor is to maintain a reasonable clean project site at all times. Any sediment, debris, etc. outside project site area shall be removed promptly.
All stockpiles will be surrounded by silt fence or equivalent measures as approved by the Engineer to properly control sediment runoff.

Contractor shall provide a concrete washout device meeting City of Midland specifications for all concrete washout activities. Contractor may not use any other areas within the project site for concrete washout activities under any circumstance.

Contractor is required to mitigate any damages to adjacent property or to receiving waters caused by improperly installed or poorly maintained erosion control measures.

Item 508 – Constructing Detours
Any drainage pipe or SETs required for detours are subsidiary to this Item. The minimum pipe size is 18 inches.

Item 529 – Concrete Curb, Gutter and Combined Curb and Gutter
Place one-half (1/2)-inch of approved, pre-molded expansion joint material at 40-foot intervals and at the beginning and end of all radii. Place 3/25-inch grooved or sawed construction joints, as directed by the Engineer, spaced equally, with the spacing not to exceed ten feet and no less than two feet between joints.

All concrete fillets are to be placed monolithically with adjacent concrete curb.

Item 531 – Curb Ramps
The curb ramp locations shown in the plans have considered the geometric features of the intersection, traffic signals, and the pavement markings. When field conditions, such as lack of right of way width or obstructions require, the ramp may be relocated within the right of way with the approval of the Engineer. In any case, construct curb ramps in conformance with the Texas Accessibility Standards (TAS) and the Americans with Disabilities Act Accessibility Guicelines (ADAAG). All deficient ramps will be removed and replaced at the Contractor's expense.

Use polypropylene fiber reinforcing at a minimum rate of 3 lbs./cy in lieu of wire reinforcing.
Form tooled joints on each side of the fire-foot wide ramp section, and at each break in ramp slope or geometry, and at five-foot intervals as if it were sidewalk. Place asphalt expansion joint material between proposed ramps and existing concrete.

Place asphalt expansion joint material between proposed sidewalk and utility poles, guy wires, vent pipes, standpipes and as directed.

All curbs on curb ramps will not be paid for directly but are considered subsidiary to the various bid items.

Item 585 – Ride Quality for Pavement Surfaces
Use Surface Test Type A to evaluate ride quality of travel lanes in accordance with item 585, "Ride Quality for Pavement Surfaces".

Corrective action, when required, shall be diamond grinding, as approved and directed by the Engineer. No Bonus Pay Adjustments will be made for low IRI results.

This item will be considered subsidiary to the various items.

Item 618 – Conduit
Do not place boring pits closer than 2 feet from the edge of the pavement unless otherwise directed. Do not use water jetting. When boring is used for under pavement conduit installations, the maximum allowable over-cut is 1" in diameter. When conduits are bored, do not exceed 18 inches in the vertical and horizontal tolerances as measured from the intendd target point.

Do not use a pneumatically driven devce for punching holes beneath the pavement (commony known as a "missile").

Use a colored cleaner-primer on all PVC-to-PVC joints before application of PVC cement.

Seal all conduit ends with a permanently soft, non-toxic duct seal. Use a duct seal that does not adversely affect other plastic materials or corrode metals.

Furnish and install non-metallic pull ropes in conduit installed for future use and cap using standard weather-tight conduit caps, as approved.

The locations of conduit and ground boxes are diagrammatic only and may be shifted to accommodate field conditions as directed by the Engineer.

Item 620 – Electrical Conductors
Terminate all electrical conductors from the controller at the termination block in the traffic signal pole hand hole whether in use or not.

All wiring not covered by the plans anc specifications shall be in accordance with the National Electric Code (NEC).

When the specifications for electrical items require UL listed products, it will be construed to mean UL listed or CSA listed.

BRIARWOOD AVENUE
GENERAL NOTES
SHEET 4 OF 5

003c

Bond together any grounding conductors that share the same conduit, junction box, ground box, or structure, at every accessible point in accordance with the National Electrical Code (NEC).

Item 624 – Ground Boxes
Locations of ground boxes are approximate. Final locations will be as approved by Engineer. Provide an apron for ground boxes as shown on TxDOT Standard ED (4)-14.

Concrete removal required for installation of ground boxes will be subsidiary to Ground Boxes. Seal ground boxes with polyurethane foam that will not adversely affect other plastic materials or corrode metals (Froth-Pak 115 2.75 density 157833 or approved equal).

Item 644 – Small Roadside Sign Assemblies
All new sign supports for stop and yield signs will have a 12" red strip of Type C High Specific Intensity Reflective tape. Place the top of the tape 4' above the edge of the roadway. This work will not be paid for directly and will be subsidiary to the pertinent bid item.

For standard small sign details and dimensions, refer to the "Standard Highway Sign Designs for Texas (SHSD)"; a supplement to the Texas Manual on Uniform Traffic Control Devices (TMUTCD)".

Stake all sign locations, and receive approval from the Engineer, prior to sign placement.

Item 658 – Delineator and Object Marker Assemblies
Delineator and object marker assembly posts shall be composed of post-consumer recycled materials. Embedded stub shall be perforated square tubing.

Item 662 – Work Zone Pavement Markings
Materials used for non-removable work zone pavement markings will be paint and beads or other approved materials.

All removable work zone pavement markings placed on final surfaces shall consist of ceramic buttons and RPMs as shown on standard sheet BC (11). These shall be applied with a thermoplastic adhesive, unless otherwise directed by the Engineer. Buttons will be paid for by the linear foot of striping for which they represent.

Contractor is responsible for the removal of ceramic buttons, RPMs, and Adhesives as directed by the Engineer and before permanent striping is installed. Payment for this work will be paid for under Item 677.

Do not place guide markers on a finished surface unless they fall on a proposed lane line. Remove Stick-down markings prior to final marking. Remove tabs after the standard pavement markings have been placed.

The deviation rate in alignment shall not exceed one inch per 200 feet of roadway. The maximum deviation shall not exceed 2 inches, nor shall any deviation be abrupt. Striping not in conformance shall be removed and replaced at the Contractor's expense.

Item 666 – Reflectorized Pavement Markings
Type I markings shall meet the minimum retroreflectivity values defined by Article 4.4 Retroreflectivity Requirements.

Permanent pavement markings are to be thermoplastic in accordance with TxDOT Item 666 Type I specifications for long-line markings. Short-line and symbol markings will meet either TxDOT Item 666 Type I or Item 668 specifications.

Do not paint any pavement markings.

Item 677 – Eliminating Existing Pavement Markings and Markers
Submit eliminating plan for approval br the Engineer in accordance with Item 677.

Item 678 – Pavement Surface Preparation for Markings
Use dry sandblasting for pavement surface preparation for markings. This work will be considered subsidiary to the various items.

Item 734 – Litter Removal
Perform litter removal as necessary and before mowing. This work will be considered subsidiary to the various items.

Item 738 – Cleaning and Sweeping
Clean and sweep existing pavements as necessary and as directed by the Engineer. This work will be considered subsidiary to the various items.

Item 6001 - Portable Changeable Message Sign
Provide solar powered changeable message boards for this project. Modify the message as directed by the Engineer.

PCMS shall be placed in operation a minimum of one (1) week prior to construction. Location(s) and duration for PCMS shall be as directed by the Engineer.

BARRICADE AND CONSTRUCTION (BC) STANDARD SHEETS GENERAL NOTES:

1. The Barricade and Construction Standard Sheets (BC sheets) are intended to show typical examples for placement of temporary traffic control devices, construction pavement markings, and typical work zone signs. The information contained in these sheets meet or exceed the requirements shown in the "Texas Manual on Uniform Traffic Control Devices" (TMUTCD).

2. The development and design of the Traffic Control Plan (TCP) is the responsibility of the Engineer.

3. The Contractor may propose changes to the TCP that are signed and sealed by a licensed professional engineer for approval. The Engineer may develop, sign and seal Contractor proposed changes.

4. The Contractor is responsible for installing and maintaining the traffic control devices as shown in the plans. The Contractor may not move or change the approximate location of any device without the approval of the Engineer.

5. Geometric design of lane shifts and detours should, when possible, meet the applicable design criteria contained in manuals such as the American Association of State Highway and Transportation Officials (AASHTO), "A Policy on Geometric Design of Highways and Streets," the TxDOT "Roadway Design Manual" or engineering judgment.

6. When projects abut, the Engineer(s) may omit the END ROAD WORK, TRAFFIC FINES DOUBLE, and other advance warning signs if the signing would be redundant and the work areas appear continuous to the motorists. If the adjacent project is completed first, the Contractor shall erect the necessary warning signs as shown on these sheets, the TCP sheets or as directed by the Engineer. The BEGIN ROAD WORK NEXT X MILES sign shall be revised to show appropriate work zone distance.

7. The Engineer may require duplicate warning signs on the median side of divided highways where median width will permit and traffic volumes justify the signing.

8. All signs shall be constructed in accordance with the details found in the "Standard Highway Sign Designs for Texas," latest edition. Sign details not shown in this manual shall be shown in the plans or the Engineer shall provide a detail to the Contractor before the sign is manufactured.

9. The temporary traffic control devices shown in the illustrations of the BC sheets are examples. As necessary, the Engineer will determine the most appropriate traffic control devices to be used.

10. Where highway construction or maintenance work is being undertaken, other than mobile operations as defined by the Texas Manual on Uniform Traffic Control Devices, CSJ limit signs are required. CSJ limit signs are shown on BC(2). The OBEY WARNING SIGNS STATE LAW sign, STAY ALERT TALK OR TEXT LATER and the WORK ZONE TRAFFIC FINES DOUBLE sign with plaque shall be erected in advance of the CSJ limits. The BEGIN ROAD WORK NEXT X MILES, CONTRACTOR and END ROAD WORK signs shall be erected at or near the CSJ limits. For mobile operations, CSJ limit signs are not required.

11. Traffic control devices should be in place only while work is actually in progress or a definite need exists.

12. The Engineer has the final decision on the location of all traffic control devices.

13. Inactive equipment and work vehicles, including workers' private vehicles must be parked away from travel lanes. They should be as close to the right-of-way line as possible, or located behind a barrier or guardrail, or as approved by the Engineer.

WORKER SAFETY NOTES:

1. Workers on foot who are exposed to traffic or to construction equipment within the right-of-way shall wear high-visibility safety apparel meeting the requirements of ISEA "American National Standard for High-Visibility Apparel," or equivalent revisions, and labeled as ANSI 107-2004 standard performance for Class 2 or 3 risk exposure. Class 3 garments should be considered for high traffic volume work areas or night time work.

2. Except in emergency situations, flagger stations shall be illuminated when flagging is used at night.

COMPLIANT WORKZONE TRAFFIC CONTROL DEVICES

1. Only pre-qualified products shall be used. The "Compliant Work Zone Traffic Control Devices List" (CWZTCD) describes pre-qualified products and their sources.

2. Work zone traffic control devices shall be compliant with the Manual for Assessing Safety Hardware (MASH).

SHEET 2 OF 12
BARRICADE AND CONSTRUCTION PROJECT LIMIT
BC(2)-21

TYPICAL APPLICATION OF WORK ZONE SPEED LIMIT SIGNS

Work zone speed limits shall be regulatory, established in accordance with the "Procedures for Establishing Speed Zones," and approved by the Texas Transportation Commission, or by City Ordinance when within incorporated City Limits.

Reduced speeds should only be posted in the vicinity of work activity and not throughout the entire project.
Regulatory work zone speed signs (R2-1) shall be removed or covered during periods when they are not needed.

GUIDANCE FOR USE:

LONG/INTERMEDIATE TERM WORK ZONE SPEED LIMITS

This type of work zone speed limit should be included on the design of the traffic controlplans when restricted geometrics with a lower design speed are present in the work zone and modification of the geometrics to a higher design speed is not feasible.

Long/intermediate Term Work Zone Speed Limit signs, when approved as described above, should be posted and visible to the motorist when work activity is present. Work activity may also be defined as a change in the roadway that requires a reduced speed for motorists to safely negotiate the work area, including:

a) rough road or damaged pavement surface
b) substantial alteration of roadway geometrics (diversions)
c) construction detours
d) grade
e) width
f) other conditions readily apparent to the driver

As long as any of these conditions exist, the work zone speed limit signs should remain in place.

SHORT TERM WORK ZONE SPEED LIMITS

This type of work zone speed limit may be included on the design of the traffic controlplans when workers or equipment are not behind concrete barrier, when work activity is within 10 feet of the traveled way or actually in the traveled way.

Short Term Work Zone Speed Limit signs should be posted and visible to the motorists only when work activity is present. When work activity is not present, signs shall be removed or covered.
(See Removing or Covering on BC(4)).

GENERAL NOTES

1. Regulatory work zone speed limits should be used only for sections of construction projects where speed controls of major importance.
2. Regulatory work zone speed limit signs shall be placed on supports at a 7 foot minimum mounting height.
3. Speed zone signs are illustrated for one direction of travel and are normally posted for each direction of travel.
4. Frequency of work zone speed limit signs should be:
   40 mph and greater — 0.2 to 2 miles
   35 mph and less — 0.2 to 1 mile
5. Regulatory speed limit signs shall have black legend and border on a white reflective background (See "Reflective Sheeting" on BC(4)).
6. Fabrication, erection and maintenance of the "ADVANCE SPEED LIMIT" (CW3-5) sign, "WORK ZONE" (G20-5aP) plaque and the "SPEED LIMIT" (R2-1) signs shall not be paid for directly, but shall be considered subsidiary to Item 502.
7. Turning signs from view, laying signs over or down will not be allowed, unless as otherwise noted under "REMOVING OR COVERING" on BC(4).
8. Techniques that may help reduce traffic speeds include but are not limited to:
   A. Law enforcement.
   B. Flagger stationed next to sign.
   C. Portable changeable message sign (PCMS).
   D. Low-power (transi-radar transmitter.
   E. Speed monitor trailers or signs.
9. Speeds shown on details above are for illustration only. Work Zone Speed Limits should only be posted as approved for each project.
10. For more specific guidance concerning the type of work, work zone conditions and factors impacting allowable regulatory construction speed zone reduction see TxDOT form #2014 in the TxDOT e-form system.

Texas Department of Transportation assumes no responsibility for the accuracy or any use of or reliance upon this standard by any party.

DATES CE(2)

TYPICAL MINIMUM CLEARANCES FOR LONG TERM AND INTERMEDIATE TERM SIGNS
ROAD WORK AHEAD
12' min.
Traveled way
6'-6"
7.0' min.
6.0' min.
Paved shoulder
6' min.
6' or greater
2' minimum from curb
Curb
** 12 MAX
* When placing skid supports on unleveled ground, the leg post lengths must be adjusted so the sign appears straight and plumb. Objects shall NOT be placed under skids as a means of leveling.
** When plaques are placed on dual-leg supports, they should be attached to the upright nearest the traveled way. Supplementary plaques (advisory or distance) should not cover the surface of the parent sign.
ATTACHMENT FOR SIGN SUPPORTS
WORK ZONE TRAFFIC FINES DOUBLE WHEN WORKERS ARE PRESENT
Support shall not protrude above sign
Support shall not protrude above sign
Sign supports shall extend more than 1/2 way up the back of the sign substrate.
FRONT ELEVATION
Wood, metal or Fiber Reinforced Plastic
Splicing embedded perforated square metal tubing in order to extend post height will only be allowed when the splice is made using four bolts, two above and two below the splice point. Splice must be located entirely behind the sign substrate, not near the base of the support. Splice insert lengths should be at least 5 times nominal post size, centered on the splice and of at least the same gauge material.
OR
SIDE ELEVATION
Wood
Attachment to wooden supports will be by bolts and nuts or screws. Use TxDOT's or manufacturer's recommended procedures for attaching sign substrates to other types of sign supports
Nails shall NOT be allowed. Each sign shall be attached directly to the sign support. Multiple signs shall not be joined or spliced by any means. Wood supports shall not be extended or repaired by splicing or other means.
STOP/SLOW PADDLES
1. STOP/SLOW paddles are the primary method to control traffic by flaggers. The STOP/SLOW paddle size should be 24" x 24".
2. STOP/SLOW paddles shall be retroreflectorized when used at night.
3. STOP/SLOW paddles may be attached to a staff with a minimum length of 6' to the bottom of the sign.
4. Any signs incorporated into the STOP or SLOW paddle faces shall only be as specifically described in Section 6E.03 Hand Signaling Devices in the TMUTCD.

LEGEND & BORDER | BLACK | ACRYLIC NON-REFLECTIVE FILM
CONTRACTOR REQUIREMENTS FOR MAINTAINING PERMANENT SIGNS WITHIN THE PROJECT LIMITS
1. Permanent signs are used to give notice of traffic laws or regulations, call attention to conditions that are potentially hazardous to traffic operations, show route designations, destinations, directions, distances, services, points of interest, or other geographical, recreational, specific service (LOGO), or cultural information. Drivers proceeding through a work zone need the same, if not better route guidance as normally installed on a roadway without construction.
2. When permanent regulatory or warning signs conflict with work zone conditions, remove or cover the permanent signs until the permanent sign message matches the roadway condition. For details for covering large guide signs see the TS-CD standard.
3. When existing permanent signs are moved and relocated due to construction purposes, they shall be visible to motorists at all times.
4. If existing signs are to be relocated on their original supports, they shall be installed on crashworthy bases as shown on the SMD Standard sheets. The signs shall meet the required mounting heights shown on the BC Sheets or the SMD Standards. This work should be paid for under the appropriate pay item for relocating existing signs.
5. If permanent signs are to be removed and relocated using temporary supports, the Contractor shall use crashworthy supports as shown on the BC standard sheets, the SMD standard sheets, or the SMD standard sheets for permanent signs. The mounting height shall meet BC or the SMD standard sheets during construction. This work should be paid for under the appropriate pay item for relocating existing signs.
6. Any sign or traffic control device that is struck or damaged by the Contractor or by other construction equipment shall be replaced as soon as possible by the Contractor to ensure proper guidance for the motorists. This will be subsidiary to Item 502.
GENERAL NOTES FOR WORK ZONE SIGNS
1. Contractor shall install and maintain signs in a straight and plumb condition and/or as directed by the Engineer.
2. Wooden sign posts shall be painted white.
3. Barricades shall NOT be used as sign supports.
4. All signs shall be installed in accordance with the plans or as directed by the Engineer. Signs shall be used to regulate, warn, and guide the traveling public safely through the work zone.
5. The Contractor may further alter the sign design shown in the plans or in the "Standard Highway Sign Designs for Texas" (SHSD). The Engineer/Inspector may require the Contractor to furnish their own sign layout that as shown in the TMUTCD but may have been omitted from the plans. Any changes shall be documented by written agreement between the Engineer and the Contractor's Responsible Person. All changes must be documented in writing before being implemented. This can include documenting the changes in the Inspector's TxDOT diary and having both the Inspector and Contractor Initialed date the agreed upon changes.
6. The Contractor shall furnish sign supports listed in the "Compliant Work Zone Traffic Control Device List" (CWZTCD) for unattachable signs. Supports for temporary large mountable signs shall meet the requirements detailed on the Temporary Large Mountable Signs (TLMS) standard sheets. The Contractor shall install the sign supports in accordance with the manufacturer's recommendations. If there is a question regarding installation procedures, the Contractor shall provide the Engineer a copy of the manufacturer's installation recommendations so that the Engineer can verify that the supports are being installed correctly.
7. It is the Contractor's responsibility to maintain signs and replacing signs with damaged or cracked substrates and/or damaged or marred reflective sheeting as directed by the Engineer/Inspector.
8. Identification markings may be shown only on the back of the sign substrate. The maximum height of letters and/or company logos used for identification shall be 1 inch.
9. The Contractor shall replace damaged wood posts. New or damaged wood sign posts shall not be spliced.
DURATION OF WORK (as defined by the "Texas Manual on Uniform Traffic Control Devices" Part 6):
1. The types of sign supports, sign mounting heights, the size of signs, and the type of sign substrates can vary based on the type of work being performed. The Engineer is responsible for selecting the appropriate size sign for the type of work being performed. The Contractor is responsible for furnishing signs, sign supports, sign mounting height and substrate meets manufacturer's recommendations in regard to crashworthiness and duration of work requirements.
a. Long-term stationary - work that occupies a location more than 3 days.
b. Intermediate-term stationary - work that occupies a location more than one daylight period up to 3 days, or nighttime work lasting more than one hour.
c. Short-term stationary - daytime work that occupies a location for more than 1 hour in a single daylight period.
d. Short, duration - work that occupies a location up to 1 hour.
e. Mobile - work that moves continuously or intermittently (stopping for up to approximately 15 minutes.)
SIGN MOUNTING HEIGHT:
1. The bottom of Long-term/Intermediate-term signs shall be at least 7 feet, but not more than 9 feet, above the paved surface, except as shown for Long-term/plaques mounted below other signs.
2. The bottom of Short-term/Short Duration signs shall be a minimum of 1 foot above the pavement surface but no more than 2 feet above the ground.
3. Long-term/Intermediate-term signs may be used in lieu of Short-term/Short Duration signing.
4. Short-term/Short Duration signs shall be removed during daylight and shall be removed at the end of the workday or raised to appropriate Long-term/Intermediate sign height.
5. Regulatory signs shall be mounted at least 7 feet, but not more than 9 feet, above the paved surface regardless of work duration.
SIZE OF SIGNS:
1. The Contractor shall furnish the sign sizes shown on BC (1) unless otherwise shown in the plans or as directed by the Engineer.
SIGN SUBSTRATES
1. The Contractor shall ensure the sign substrate is installed in accordance with the manufacturer's recommendations for the type of sign support that is being used. The CWZTCD lists each substrate that can be used on the different types and models of sign supports.
2. "Weak" type materials are NOT an approved sign substrate, regardless of the tightness of the wires.
3. All wooden individual sign panels fabricated from 2 or more pieces shall have one or more plywood cleat, 1/2" thick by 6" wide, fastened to the back of the sign and extending fully across the sign. The cleat shall be attached to the back of the sign using wood screws that do not penetrate the face of the sign panel. The screws shall be placed on both sides of the splice and spaced at 6" centers. The Engineer may approve other methods of splicing the sign face.
REFLECTIVE SHEETING:
1. All signs shall be retroreflective and unilluminated. All sheeting shall have the color and retroreflectivity requirements of DMS-8300 for the sheeting type specified. The minimum sheeting requirements for various applications is shown on BC(1).
2. White sheeting meeting the requirements of DMS-8300 Type A shall be used for signs with a white background.
3. Orange sheeting meeting the requirements of DMS-8300 Type B or Type A_L shall be used for rigid signs with orange backgrounds.
SIGN LETTERS:
1. All sign letters and numbers shall be clear, and open rounded type uppercase alphabet letters as approved by the Federal Highway Administration (FHWA) and as published in the "Standard Highway Sign Design for Texas" manual. Signs, letters and numbers shall be of first class workmanship in accordance with Department Standards and Specifications.
REMOVING OR COVERING
1. When sign messages may be confusing or do not apply, the signs shall be removed or completely covered.
2. Long-term stationary or intermediate stationary signs installed on square metal tubing may be turned away from traffic 90 degrees when the sign message is not applicable. This technique may not be used for signs installed in the median of divided highways or near any intersections where the sign may be seen from approaching traffic.
3. Signs installed on wooden skids shall not be turned at 90 degree angles to the roadway. These signs should be removed or completely covered when not in use.
4. When signs are covered, the material used shall be opaque, such as heavy mildew plastic, or other materials which will cover the entire sign face and maintain their opaque properties under automobile headlights at night, without damaging the sign sheeting.
5. Burlap shall NOT be used to cover signs.
6. Duct tape or other adhesive material shall NOT be affixed to a sign face.
7. Signs and anchor slabs shall be removed and holes backfilled upon completion of work.
SIGN SUPPORT WEIGHTS
1. Where sign supports require the use of weights to keep from turning over, the use of sandbags with dry, cohesionless sand should be used.
2. The sandbags shall be tied shut to keep the sand from spilling and to maintain a constant weight.
3. Rock, concrete, iron, steel or other solid objects shall not be permitted for use as sign support weights.
4. Sandbags should weigh a minimum of 35 lbs and a maximum of 50 lbs.
5. Sandbags shall be made of a durable material such as Burlap or Geotextile Fabric. Rubber mats or other types shall NOT be used.
6. Rubber ballasts designed for channelizing devices should not be used for ballast on portable sign supports. Sign supports designed and manufactured with rubber bases may be used when shown on the SMD standards.
7. Sandbags shall be placed on the ground at the base of the supports of the traffic control device and shall not be suspended above ground level or hung with rope, wire, chains or other fasteners. Sandbags shall be placed along the length of the skids to weigh down the sign support.
8. Sandbags shall not be placed under the skid and shall not be used to level sign supports placed on slopes.
FLAGS ON SIGNS
1. Flags may be used to draw attention to warning signs, when used, the flag shall be 16 inches square or larger and shall be orange or fluorescent red-orange in color. Flags shall not be allowed to cover any portion of the sign face.

WHEN NOT IN USE, REMOVE THE PCMS FROM THE RIGHT-OF-WAY OR PLACE THE PCMS BEHIND BARRIER OR GUARDRAIL WITH SIGN PANEL TURNED PARALLEL TO TRAFFIC

PORTABLE CHANGEABLE MESSAGE SIGNS

1. The Engineer/inspector shall approve all messages used on portable changeable message signs (PCMS).
2. Messages on PCMS should contain no more than 8 words (about four to eight characters per word), not including simple words such as "TO," "FOR," "AT," etc.
3. Messages should consist of a single phase, or two phases that alternate. Three-phase messages are not allowed. Each phase of the message should convey a single thought, and must be understood by itself.
4. Do not use "EXIT" to refer to an exit ramp on a freeway i.e., "EXIT CLOSED." Do not use the term "RAMP."
5. Always use the route or interstate designation (IH, US, SH, FM along with the number when referring to a roadway.
6. When in use, the bottom of a stationary PCMS message panel should be a minimum 7 feet above the roadway, where possible.
7. The message term "WEEKEND" should be used only if the work is to start on Saturday morning and end by Sunday evening at midnight. Otherwise, the days of the week should be specified, i.e., "FRI 9-5" is to begin on Friday evening and/or continue into Monday morning.
8. The Engineer/inspector may select one of two options which are available for displaying a two-phase message on a PCMS. Each phase may be displayed for either four seconds each or for three seconds each.
9. Do not "flash" messages or words included in a message. The message should be steady burn or continuous while displayed.
10. Do not present redundant information on a two-phase message i.e., keeping two lines of the message the same and changing the third line, such as "RIGHT LANE CLOSED AHEAD."
11. Do not display the message "LANES SHIFT LEFT" or "LANES SHIFT RIGHT" on a PCMS. Drivers do not understand the message.
12. Do not display messages that scroll vertically or vertically across the face of the sign.
13. Do not display messages that scroll horizontally or vertically across the face of the sign.
14. The following table lists abbreviated words and two-word phrases that are acceptable for use on a PCMS. Both words in a phrase must be displayed together. Words or phrases not on this list should not be abbreviated, unless shown in the MUTCD.
15. Proportional characters should be at least 18 inches for trailer mounted units. They should be visible from at least 1/2 US-mile and the text should be legible from at least 600 feet at night and 800 feet in daylight. Trailer mounted units must have a character height of 12 inches and must be legible from at least 400 feet.
16. Each line of text should be centered on the message board rather than left or right justified.
17. If desired, the PCMS should default to an illegible display that will not alarm motorists and will only be used to alert workers that the PCMS has malfunctioned. A pattern such as a series of horizontal solid bars is appropriate.

** See Application Guidelines Note 6.

APPLICATION GUIDELINES

1. Only Tier 2 phases are to be used on a PCMS.
2. A Tier 2 phase can be selected from the "Road/Lane/Ramp Closure List" and the "Other Condition List".
3. A 2nd phase can be selected from the "Action to Take/Effect on Travel, Location, General Warning, or Advance Notice Phase Lists".
4. A Location phase is necessary only if a distance or location is needed for the first phase selected.
5. If two PCMS are used in sequence, they must be separated by a minimum of 1000 ft. Each PCMS phase limited to two phases, and should be understandable by themselves.
6. For advance notice, when the current date is within seven days of the actual work date, calendar days should be replaced with days of the week. Advance notification should typically be for no more than one week prior to the work.

WORDING ALTERNATIVES

1. The words RIGHT, LEFT and ALL can be interchanged as appropriate.
2. Abbreviations IN, US, SH, FM and LP can be interchanged as appropriate.
3. EAST, WEST, NORTH and SOUTH for abbreviations E, W, N and S can be interchanged as appropriate.
4. Highway names and numbers replaced as appropriate.
5. ROAD, HIGHWAY and FREEWAY can be interchanged as needed.
6. AM and PM may be used instead of distances if necessary.
7. MILE and MILES can be interchanged as appropriate.
8. AT, BEFORE and PAST interchanged as needed.
9. Distances or AHEAD can be eliminated from the message if a location phase is used.

PCMS SIGNS WITHIN THE R.O.W. SHALL BE BEHIND GUARDRAIL OR CONCRETE BARRIER OR SHALL HAVE A MINIMUM OF FOUR (4) PLASTIC DRUMS PLACED PERPENDICULAR TO TRAFFIC ON THE UPSTREAM SIDE OF THE PCMS, WHEN EXPOSED TO ONE DIRECTION OF TRAFFIC, WHEN EXPOSED TO TWO WAY TRAFFIC, THE FOUR DRUMS SHOULD BE PLACED WITH ONE DRUM AT EACH OF THE FOUR CORNERS OF THE UNIT.

FULL MATRIX PCMS SIGNS

1. When FullMatrix PCMS signs are used, the character height and legibility/visibility requirements shall be maintained as listed in Note 15 under "PORTABLE CHANGEABLE MESSAGE SIGNS" above.
2. When symbol signs, such as the "Trigger Symbol" (D4-2) (T) are represented graphically on the FullMatrix PCMS sign and, with the approval of the Engineer, it shall maintain the legibility/visibility requirement listed above.
3. When symbol signs are represented graphically on the FullMatrix PCMS, they shall only supplement the use of the static sign represented, and shall not substitute for the static sign.
4. A FullMatrix PCMS may be used to simulate a flashing arrow board provided it meets the visibility, flash rate and dimming requirements on BC(7), for the same size arrow.

Install a minimum of
3 Barrier Reflectors
as per manufacturer's
recommendations.
DELINEATION OF END TREATMENTS
END TREATMENTS FOR
CTB'S USED
IN WORK ZONES
End treatments used on CTB's in work zones
shallmeet the appropriate crashworthy
standards as defined in the Manual for
Assessing Safety Hardware (MASH), Refer
to the CMTCD List for approved end
treatments and manufacturers.
BARRIER REFLECTORS FOR CONCRETE TRAFFIC BARRIER AND ATTENUATORS
Type C Warning Light or
approved substitute mounted on a
drum adjacent to the traveluay.
Warning reflector may be round
or square,that have a yellow
reflective surface area of at least
30 square inches
WARNING LIGHTS
1. Warning lights shallmeet the requirements of the TMUTCD.
2. Warning lights shallNOT be installed on barricades.
3. Type A Low Intensity Flashing Warning Lights are commonly used with drums. They are intended to warn of or mark a potentially hazardous
4. Type C and Type D 360 degree Steady Burn Lights are intended to be used in a series for delineation to supplement other traffic control
5. The Engineer/Inspector or the plans shallspecify the location and type of warning lights to be installed on the traffic control devices.
6. When required by the Engineer, the Contractor shallfurnish a copy of the warning lights certification. The warning light manufacturer will
7. When used to delineate curves, Type C and Type D Steady Burn Lights should only be placed on the outside of the curve, not the inside.
8. The location of warning lights and warning reflectors on drums shallbe as shown elsewhere in the plans.
WARNING LIGHTS MOUNTED ON PLASTIC DRUMS
1. Type A flashing warning lights are intended to warn drivers that they are approaching or are in a potentially hazardous area.
2. Type A random flashing warning lights are not intended for delineation and shallnot be used in a series.
3. A series of sequential flashing warning lights placed on channelizing devices in turns or merging taper may be used for delineation, if used,
4. Type C and D steady-burn warning lights are intended to be used in a series to delineate the edge of the travelane on detours, on lane
5. Type A, Type C and Type D warning lights shallbe installed at locations as detailed on other sheets in the plans.
6. Warning lights shallnot be installed on a drum that has a sign, chevron or reflectorized.
7. The maximum spacing for warning lights on drums should be identical to the channelizing device spacing.
WARNING REFLECTORS MOUNTED ON PLASTIC DRUMS AS A SUBSTITUTE FOR TYPE C STEADY BURN WARNING LIGHTS
1. A warning reflector or approved substitute may be mounted on a plastic drum as a substitute for a Type C steady burn warning light at the
2. The warning reflector shallbe yellow in color and shallbe manufactured using a sign substrate approved for use with plastic drums listed
3. The warning reflector shallhave a minimum retroreflective surface area tone-sided of 30 square inches.
4. Only the reflective portion shallbe fully retroreflected, including the area where attached to the drum.
5. Square reflectors must have a minimum of 30 square inches of retroflectorized sheeting. They do not have to be retroflectorized where it
6. The side of the warning reflector facing approaching traffic shallhave sheeting meeting the color and retroreflectivity requirements for
7. When used near two-way traffic, both sides of the warning reflector shallbe retroflectorized.
8. The warning reflector should be mounted on the side of the handle nearest approaching traffic.
9. The maximum spacing for warning reflectors should be identicalto the channelizing device spacing requirements.
Arrow Boards may be located behind channelizing devices in place for a shoulder
taper or merging taper, otherwise they shallbe delineated with four (4) channelizing
devices placed perpendicular to traffic on the upstream side of traffic.
1. The Flashing Arrow Board should be used for offlane closures on multi-lane roadways, or slow
moving maintenance or construction activities on the travelanes.
2. Flashing Arrow Boards should not be used on two-lane, two-way roadways, detours, diversions
or work on shoulders unless the "CAUTION" display (see detailsheet) is used.
3. The Engineer/Inspector shallchoose all appropriate signs, barricades and/or other traffic
controldevices that should be used in conjunction with the Flashing Arrow Board.
4. The Flashing Arrow Board should be able to display the following symbolic
4 CORNER CAUTION
OR
ALTERNATING DIAMOND CAUTION
DOUBLE ARROW
RIGHT/LEFT
Right arrow shown;
left is similar
RIGHT/LEFT
SEQUENTIAL CHEVRON
Right chevron shown;
left is similar
5. The "CAUTION" display consists of four corner lamps flashing simultaneously, or the Alternating
Diamond Caution mode, as shown.
6. The straight line caution display is NOT ALLOWED.
7. The Flashing Arrow Board shallbe capable of minimum 50 percent dimming from rated lamp voltage.
The flashing rate of the lamps shallnot be less than 25 nor more than 40 flashes per minute.
8. Minimum lamp "on time" shallbe approximately 50 percent for the flashing arrow and equal
intervals of 25 percent for each sequentialphase of the flashing chevron.
9. The minimum number of lamps shall be 15.
10. The flashing arrow display is the TxDOT standard;however, the sequentialchevron
display may be used during daylight operations.
11. The Flashing Arrow Board shallbe mounted on a vehicle, trailer or other suitable support.
12. A Flashing Arrow Board SHALL NOT BE USED to laterally shift traffic.
13. A Flashing Arrow Board may be used for other than its intended purpose provided it meets visibility,
flash rate and dimming requirements on this sheet for the same size arrow.
14. Minimum mounting height of trailer mounted Arrow Boards should be 1 feet from roadway
to bottom of panel.
REQUIREMENTS
TYPE | MINIMUM SIZE | MINIMUM NUMBER OF PANEL LAMPS | MINIMUM VISIBILITY DISTANCE
B | 30 x 60 | 15 | 3/4 mile
C | 48 x 96 | 15 | 1 mile
ATTENTION
Flashing Arrow Boards
shallbe equipped with
automatic dimming devices.
WHEN NOT IN USE, REMOVE
THE ARROW BOARD FROM THE
RIGHT-OF-WAY OR PLACE IT
BEHIND THE FACE OF CONCRETE
TRAFFIC BARRIER OR GUARDRAIL.
FLASHING ARROW BOARDS
TRUCK-MOUNTED ATTENUATORS
1. Truck mounted attenuators (TMA) used on TxDOT facilities
must meet the requirements outlined in the Manual for
Assessing Safety Hardware (MASH).
2. Refer to the CMTCD for the requirements of Level 2 or
Level 3 TMAs.
3. Refer to the CMTCD for a list of approved TMAs.
4. TMAs shallbe placed on freeways unless otherwise noted
in the plans.
5. A TMA should be used anytime that it can be positioned
30 to 100 feet in advance of the area of crew exposure
without adversely affecting the work performance.
6. A TMA should be positioned to protect the area from a work
area is spread above the roadway and the work crew is an
extended distance from the TMA.

DISCLAIMER:
The use of this standard is governed by the "Texas Engineering Practice Act". No warranty of any kind is made by TxDOT for any purpose whatsoever. TxDOT assumes no responsibility for the accuracy or any use of this standard in other than its intended application.

GENERAL NOTES

1. For long term stationary work zones on freeways, drums shall be used as the primary channelizing device.
2. For intermediate term stationary work zones on freeways, drums should be used as the primary channelizing device but may be replaced in tangent sections by vertical panels, or 42" two-piece cones. In tangent sections, one-piece cones may be used with the approval of the Engineer but only if personnel are present on the project at all times to maintain the cones in proper position and location.
3. For short term stationary work zones on freeways, drums are the preferred channelizing device but may be replaced in tapers, transitions and tangent sections by vertical panels, two-piece cones or one-piece cones as approved by the Engineer.
4. Drums and alternate items shall comply with the requirements of the current version of the "Texas Manual on Uniform Traffic Control Devices" (TMUTCD) and the "Compliant Work Zone Traffic Control Devices List" (CWZTCD).
5. Drums, bases, and related materials shall exhibit good workmanship and shall be free from objectionable marks or defects that would adversely affect their appearance or serviceability.
6. The Contractor shall have a maximum of 24 hours to replace any plastic drum that is damaged or unacceptable to the Engineer/Inspector. The replacement device must be an approved device.

GENERAL DESIGN REQUIREMENTS

Pre-qualified plastic drums shall meet the following requirements:

1. Plastic drums shall be a two-piece design; the "body" of the drum shall be the top portion and the "base" shall be the bottom.
2. The body and base shall latch together in such a manner that the body separates from the base when impacted by a vehicle traveling at a speed of 20 MPH or greater but prevents accidental separation due to normal handling and/or air turbulence created by passing vehicles.
3. Plastic drums shall be constructed of lightweight flexible, long chain polymeric materials. The Contractor shall not use rigid plastics or other place holders that could become hazardous if struck by vehicles.
4. Drums shall present a profile that is a minimum of 18 inches in width at the 36 inch height when viewed from any direction. The height of drum unit body installed on base shall be a minimum of 36 inches and a maximum of 42 inches.
5. The top of the drum shall have a built-in handle for easy pickup and shall be designed to drain water and not collect debris. The handle shall have a minimum of two safety spaces 5/16 inch diameter holes to allow attachment of a warning light, warning reflector unit or approved compatible device.
6. The exterior of the drum body shall have a minimum of four alternating orange and white retroreflective circumferential stripes not less than 4 inches nor greater than 8 inches in width. Any non-reflectorized space between any two adjacent stripes shall not exceed 2 inches in width.
7. Bases shall have a maximum width of 36 inches, a maximum height of 4 inches, and a minimum of two footholds of sufficient size to allow base to be tied down when separating the drum body from the base.
8. The drum body shall be constructed of virgin polyethylene, high-density polyethylene (HDPE) or other approved materials.
9. Drum body shall have a maximum unballasted weight of 9 lbs.
10. Drum and base shall be marked with manufacturer's name and model number.

RETROREFLECTIVE SHEETING

1. The stripes used on drums shall be constructed of sheeting meeting the color and retroreflectivity requirements of Departmental Materials Specification DMS-8300, "Sign Face Materials," Type A or Type B reflective sheeting shall be supplied unless otherwise specified in the plans.
2. The sheeting shall be suitable for use on and shall adhere to the drum surface for the life expectancy of the drum. The sheeting shall remain adhered in place and exhibit no delaminating, cracking, or loss of retroreflectivity other than that loss due to abrasion of the sheeting surface.

BALLAST

1. Unballasted bases shall be large enough to hold up to 50 lbs. of sand. The base, when filled with the ballast material, should weigh between 35 lbs minimum and 50 lbs maximum. The ballast may be sand in one to three sandbags separate from the base, sand in a sand-filled plastic base, or other ballasting devices as approved by the Engineer. Stacking of sandbags will be allowed, however height of sandbags above pavement surface may not exceed 12 inches.
2. Bases with built-in ballast shall weigh between 40 lbs. and 50 lbs. Built-in ballast can be constructed of an integral crumb rubber base or other approved material.
3. Recycled truck tire sidewalls may be used for ballast on drums approved for this type of ballast on the CWZTCD list.
4. The ballast shall not be heavy objects, water, or any material that would become hazardous to motorists, pedestrians, or workers when the drum is struck by a vehicle.
5. When used in regions susceptible to freezing, drums shall have drainage holes in the base to prevent water from collecting and freeze becoming a hazard when struck by a vehicle.
6. Ballast shall not be placed on top of drums.
7. Adhesives may be used to secure base of drums to pavement.

DETECTABLE PEDESTRIAN BARRICADES

1. When existing pedestrian facilities are disrupted, closed, or relocated in a TTC zone, the temporary facilities shall be detectable and include accessibility features consistent with those existing prior to disruption in accordance with Chapter 6 of NCHRP 672 for Pedestrian Control Requirements for Sidewalk Diversions, Sidewalk Detours and Crosswalk Closures.
2. Where pedestrians with visual disabilities normally use the closed sidewalk, a Detectable Pedestrian Barricade shall be placed across the entire width of the closed sidewalk instead of a Type 3 Barricade.
3. Detectable pedestrian barricades similar to the one pictured above, longitudinal channelizing devices, some concrete barriers, and wood or chain link fencing with a continuous detectable edging can satisfactorily delineate a pedestrian path.
4. Tapes, ropes, or plastic chain strung between devices are not detectable, do not comply with the design standards in the "Americans with Disabilities Act Accessibility Guidelines (ADAAG)" and should not be used as a contractor pedestrian channelizer.
5. Warning lights shall not be attached to detectable pedestrian barricades.
6. Detectable pedestrian barricades should use 45° perpendicular cuts for the top and bottom rails and should not have rails with a smooth continuous rail suitable for hand trailing with no splinters, burrs, or sharp edges.

Plywood, Aluminum or Metal sign substrates shall NOT be used on plastic drums

SIGNS, CHEVRONS, AND VERTICAL PANELS MOUNTED ON PLASTIC DRUMS

1. Signs used on plastic drums shall be manufactured using substrates listed on the CWZTCD.
2. Chevrons and other work zone signs with an orange background shall be manufactured with Type B or type C Orange, sheeting meeting the color and retroreflectivity requirements of DMS-8300, "Sign Face Materials," unless otherwise specified in the plans.
3. Vertical Panels shall be manufactured with orange and white sheeting meeting the requirements of DMS-8300 Type A or Type B. Diagonal stripes on Vertical Panels shall slope down toward the intended traveled lane.
4. Other sign messages (text or symbolic) may be used as approved by the Engineer. Sign dimensions shall not exceed 18 inches in width or 24 inches in height, except for the R8 series signs discussed in note 8 below.
5. Signs shall be installed using a 1/2 inch bolt (carriage) and nut, two washers, and one locking washer for each connection.
6. Mounting bolts and nuts shall be fully engaged and adequately torqued. Bolts should not extend more than 1/2 inch beyond nuts.
7. Chevrons may be placed on drums on the outside of curves, on merging tapers or on shifting tapers, when used in these locations, they may be placed on every drum or spaced not more than on every third drum. A minimum of three (3) should be used at each location called for in the plans.
8. R9-9, R9-10, R9-11 and R9-11a Sidewalk Closed signs which are 24 inches wide may be mounted on plastic drums, with approval of the Engineer.

SHEET 10 OF 12

WORK ZONE PAVEMENT MARKINGS

GENERAL

1. The Contractor shall be responsible for maintaining work zone and existing pavement markings, in accordance with the standard specifications and special provisions, on all roadways open to traffic within the CSJ limits unless otherwise stated in the plans.
2. Color, patterns and dimensions shall be in conformance with the "Texas Manual on Uniform Traffic Control Devices" (TMUTCD).
3. Additional supplemental pavement marking details may be found in the plans or specifications.
4. Pavement markings shall be installed in accordance with the TMUTCD and as shown on the plans.
5. When short term markings are required on the plans, short term markings shall conform with the TMUTCD, the plans and details as shown on the Standard Plan Sheet WZSTPM.
6. When standard pavement markings are not in place and the roadway is opened to traffic, DO NOT PASS signs shall be erected to mark the beginning of the sections where passing is prohibited and PASS with CARE signs at the beginning of sections where passing is permitted.
7. All work zone pavement markings shall be installed in accordance with Item 662, "Work Zone Pavement Markings."

RAISED PAVEMENT MARKERS

1. Raised pavement markers are to be placed according to the patterns on BC(11).
2. All raised pavement markers used for work zone markings shall meet the requirements of Item 672, "RAISED PAVEMENT MARKERS" and Departmental Material Specification DMS-4200 or DMS-4300.

PREFABRICATED PAVEMENT MARKINGS

1. Removable prefabricated pavement markings shall meet the requirements of DMS-8241.
2. Non-removable prefabricated pavement markings (thermo) shall meet the requirements of DMS-8240.

MAINTAINING WORK ZONE PAVEMENT MARKINGS

1. The Contractor will be responsible for maintaining work zone pavement markings within the work limits.
2. Work zone pavement markings shall be inspected in accordance with the frequency and reporting requirements of work zone traffic control device inspections as required by Form 1204.
3. The markings should provide a visible reference for a minimum distance of 300 feet during normal daylight hours and 100 feet when illuminated by automobile low-beam headlights at night, unless sight distance is restricted by roadway geometrics.
4. Markings failing to meet this criteria within the first 30 days after placement shall be replaced at the expense of the Contractor as per Specification Item 662.

REMOVAL OF PAVEMENT MARKINGS

1. Pavement markings that are no longer applicable, could create confusion or direct a motorist toward or into the closed portion of the roadway shall be removed or obliterated before the roadway is opened to traffic.
2. The above shall not apply to detours in place for less than three days, where flaggers and/or sufficient channelizing devices are used in lieu of markings to outline the detour route.
3. Pavement markings shall be removed to the fullest extent possible, so as not to leave a discernible marking. This shall be by any method approved by TxDOT Specification Item 677 for "Eliminating Existing Pavement Markings and Markers".
4. The removal of pavement markings may require resurfacing or seal coating portions of the roadway as described in Item 677.
5. Subject to the approval of the Engineer, any method that proves to be successful on a particular type pavement may be used.
6. Blast cleaning may be used but will not be required unless specifically shown in the plans.
7. Over-painting of the markings SHALL NOT BE permitted.
8. Removal of raised pavement markers shall be as directed by the Engineer.
9. Removal of existing pavement markings and markers within gore and for directly in accordance with Item 677, "ELIMINATING EXISTING PAVEMENT MARKINGS AND MARKERS," unless otherwise stated in the plans.
10. Black-out marking tape may be used to cover conflicting existing markings for periods less than two weeks when approved by the Engineer.

Temporary Flexible-Reflective Roadway Marker Tabs

STAPLES OR NAILS SHALL NOT BE USED TO SECURE TEMPORARY FLEXIBLE-REFLECTIVE ROADWAY MARKER TABS TO THE PAVEMENT SURFACE

1. Temporary flexible-reflective roadway marker tabs used as guidemarks shall meet the requirements of DMS-8242.
2. Tabs detailed on this sheet are to be inspected and accepted by the Engineer or designated representative. Sampling and testing is not normally required, however at the option of the Engineer, either "A" or "B" below may be imposed to assure quality before placement on the roadway.
   A. Select five (5) or more tabs at random from each lot or shipment and submit to the Construction Division, Materials and Pavement Section to determine specification compliance.
   B. Select five (5) tabs and perform the following test. Affix five (5) tabs at 24 inch intervals on an asphaltic pavement in a straight line, using a medium size passenger vehicle or pickup, run over the markers with the front and rear tires at a speed of 25 to 40 miles per hour, four (4) times in each direction. No more than one (1) out of the five (5) reflective surfaces shall be lost or displaced as a result of this test.
3. Small design variances may be noted between tab manufacturers.
4. See Standard Sheet WZSTPM for tab placement on new pavements. See Standard Sheet TCP(7-1) for tab placement on seal coat work.

RAISED PAVEMENT MARKERS USED AS GUIDEMARKS

1. Raised pavement markers used as guidemarks shall be from the approved product list, and meet the requirements of DMS-4255.
2. All temporary construction raised pavement markers provided on a project shall be of the same manufacturer.
3. Adhesive for guidemarks shall be bituminous materials applied or butyl rubber pad for bituminous, or thermoplastic for concrete surfaces.

Guidemarks shall be designated as:
YELLOW - Two amber reflective surfaces with yellow body.
WHITE - Two silver reflective surface with white body.

DEPARTMENTAL MATERIAL SPECIFICATIONS

PAVEMENT MARKERS (REFLECTORIZED)	DMS-4200
TRAFFIC BUTTONS	DMS-4300
EPOXY AND ADHESIVES	DMS-6100
BITUMINOUS ADHESIVE FOR PAVEMENT MARKERS	DMS-6130
PERMANENT PREFABRICATED PAVEMENT MARKINGS	DMS-8240
TEMPORARY REMOVABLE, PREFABRICATED PAVEMENT MARKINGS	DMS-8241
TEMPORARY FLEXIBLE, REFLECTIVE ROADWAY MARKER TABS	DMS-8242

A list of prequalified reflective raised pavement markers, non-reflective traffic buttons, roadway marker tabs and other pavement markings can be found at the Material Producer List web address shown on BC(1).

TABS ON CENTERLINES OF TWO-LANE TWO-WAY ROADS
For seal coat, micro-surface or similar operations
"DO NOT PASS" SIGN (R4-1) and NO-PASSING ZONES
A. Prior to the beginning of construction, all currently striped no-passing zones shall be signed with the DO NOT PASS (R4-1) signs and PASS WITH CARE (R4-2) signs placed at the beginning and end of each zone for each direction of travel except as otherwise provided herein. Signs marking these individual no-passing zones need not be covered prior to construction if the signs supplement the existing pavement markings.
B. At the discretion of the Engineer, in areas of numerous no-passing zones, several zones may be combined as a single zone. If passing is to be prohibited over one or more lengthy sections, a DO NOT PASS sign and a NEXT XX MILES (R20-1TP) plaque may be used at the beginning of such zones. The DO NOT PASS sign and the NEXT XX MILES plaque should be repeated every mile to the end of the no-passing zone. In areas where there is a considerable distance between passing zones, the end of the no-passing zone may be signed with a PASS WITH CARE sign and a NEXT XX MILES plaque.
C. Depending on traffic volumes and length of sections, it may be desirable to prohibit passing throughout the project to prevent damage to unstable soil and tabs. The DO NOT PASS sign and NEXT XX MILES plaque should be used and repeated as often as necessary for this purpose. Where several existing zones are to be combined into one individual no-passing zone, the sign at the beginning of the zone should be covered until the surfacing operation has passed this location so as not to confuse the DO NOT PASS sign control with the existing pavement markings. Where several short non-passing zones are combined into a single long zone of such combined zones, appropriate DO NOT PASS and PASS WITH CARE signs should be placed at the beginning and end of the no-passing zones where the surfacing operation has stopped for the day.
D. R4-1 and R4-2 are to remain in place until standard pavement markings are installed.
"NO CENTER LINE" SIGN (CWB-12)
A. Center line markings are yellow pavement markings that delineate the separation of travel lanes that have opposite directions of travel on a roadway. Divided highways do not typically have center line markings.
B. At the time construction activity obliterates the existing center line markings, low volume roads may not have an existing centerline, a NO CENTER LINE (CWB-12) sign should be erected at the beginning of the work area, at approximately 2 mile intervals within the work area, beyond major intersections and other locations deemed necessary by the Engineer.
C. The NO CENTER LINE signs are to remain in place until standard pavement markings are installed.
"LOOSE GRAVEL" SIGN (CWB-7)
A. When construction begins, a LOOSE GRAVEL (CWB-7) sign should be erected at each end of the work area and repeated at intervals of approximately 2 miles in rural areas and closer in urban areas.
B. The LOOSE GRAVEL signs are to remain in place until the condition no longer exists.
PAVEMENT MARKINGS
A. Temporary markings for surfacing projects shall be Temporary Flexible-retroactive Roadway Marker Tabs unless otherwise approved by the Engineer. Tabs are to be installed to provide true alignment for striping as shown or as directed by the Engineer. Tabs will be placed at the spacing indicated. Tabs should not be placed more than 120 days before the surfacing is applied. After the surfacing is rolled and swept, the cover over the retroactive strip shall be removed.
B. Tabs shall not be used to simulate edge lines.
C. Tab placement for overlay/inlay operations shall be as shown on the WZSTPM4 standard sheet.
COORDINATION OF SIGN LOCATIONS
A. The location of warning signs at the beginning and end of a work area are to be coordinated with other signing typically shown on the Barricade and Construction Standards for project limits to ensure adequate sign spacing.
B. Where possible the ROAD WORK AHEAD (CW20-1D), LOOSE GRAVEL (CWB-7), and NO CENTER LINE (CWB-12) signs should be placed in the sequence shown following the GREY WARNING SIGNS STATE LINE (R20-3T) and the TRAFFIC FINES DOUBLE (R20-5T) sign, and one "X" sign spacing prior to the CONTRACTOR (G20-6T) sign typically located at or near the limits of surfacing. LOOSE GRAVEL and NO CENTER LINE signs will then be repeated as described above.

GENERAL NOTES
1. The traffic control devices detailed on this sheet will be furnished and erected as directed by the Engineer on sections of roadway where tabs must be placed prior to the surfacing operation which will cover or obliterate the existing pavement markings.
2. The devices shown on this sheet are to be used to supplement those required by the BC Standards or others required elsewhere in the plans.
3. Signs shall be erected as detailed on the BC Standards. Portable supplements to some Traffic Control Devices (i.e. ICW27CD) on supports approved for Long-Term / Intermediate-Term Work Zone Sign Supports.
4. When surfacing operations take place on divided highways, freeways or expressways, the size of the required lane closed construction warning signs shall be 36" x 48".
5. Signs on divided highways, freeways and expressways will be placed on both right and left sides of the roadway based on roadway conditions as directed by the Engineer.

CURB RAMP NOTES:

1. ADJUST CURB RAMP LOCATION AND OR TYPE SO THAT NO OBSTRUCTION IS LOCATED WITHIN THE LANDING AREA.
2. ALL SLOPES ARE MAXIMUM ALLOWABLE. THE LEAST POSSIBLE SLOPE THAT MEETS THE REQUIREMENTS SHALL BE USED.
3. LANDINGS SHALL BE 5'X 5' MINIMUM WITH A MAXIMUM 2% SLOPE IN ANY DIRECTION. WHERE OBSTRUCTIONS EXIST, THERE SHALL BE A 3' MINIMUM CLEARANCE IN WIDTH AND LENGTH OF THE LANDING.
4. MANEUVERING SPACE AT THE BOTTOM OF CURB RAMPS SHALL BE A MINIMUM OF 4'X4' WHOLLY CONTAINED WITHIN THE CROSSWALK AND TO THE ENTIRE OUTSIDE OF THE PARALLEL VEHICULAR TRAVEL PATH.
5. MAXIMUM ALLOWABLE CROSS SLOPE ON SIDEWALK AND CURB RAMP SURFACES IS 2%.
6. CURB RAMPS WITH RETURNED CURBS MAY BE USED ONLY WHERE PEDESTRIANS WOULD NOT NORMALLY WALK ACROSS THE RAMP, EITHER BECAUSE THE ADJACENT SURFACE IS PLANTING OR OTHER NON-WALKING SURFACE OR BECAUSE THE SIDE APPROACH IS SUBSTANTIALLY OBSTRUCTED. OTHERWISE, PROVIDE FLARED SIDES.
7. ADDITIONAL INFORMATION ON CURB RAMP LOCATION, DESIGN, LIGHT RIFLECTIVE VALUE AND TEXTURE MAY BE FOUND IN THE CURRENT EDITION OF THE TEXAS ACCESSIBILITY STANDARDS (TAS) AND 16 TAC 68.102.
8. AT INTERSECTIONS WHERE CROSSWALK MARKINGS ARE NOT REQUIRED, CURB RAMPS SHALL BE ALIGNED WITH THEORETICAL CROSSWALKS,OR AS DIRECTED BY THE ENGINEER.
9. PROVIDE A SMOOTH TRANSITION WHERE THE CURB RAMPS CONNECT TO THE STREET.
10. FLARE SLOPE SHALL NOT EXCEED 10% MEASURED ALONG CURB LINE.
11. ALL RAMPS AND LANDINGS WITH A CONCRETE SURFACE SHALL HAVE A COURSE BROOM FINISH OR OTHER ROUGH NON-SKID TYPE FINISH AS APPROVED BY THE ENGINEER.
12. PLACE 6"OF CONCRETE IN RAMPS, LANDINGS, AND FLARES THAT ARE LOCATED AT THE RETURNS ADJACENT TO THE BACK OF CURB OF ARTERIAL STREETS AND COMMERCIAL SITES.

GENERAL NOTES:

1. CONCRETE TO BE CITY OF MIDLAND CLASS "A" WITH A MINIMUM28 DAY COMPRESSION STRENGTH OF 3000 PS. USE FIBER REINFORCED CONCRETE THROUGHOUT.
2. MATERIALS AND CONSTRUCTION METHODS TO CONFORM TO THE CITY OF MIDLAND STANDARDS AND SPECIFICATIONS UNLESS OTHERWISE DIRECTED BY ADA STANDARDS AND RESOURCES.

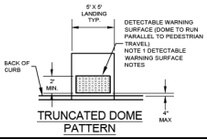
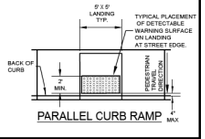
DETECTABLE WARNING SURFACE NOTES:



1. DETECTABLE WARNING SURFACE SUCH AS ARMOR-TILE ADA SOUND AMPLIFYING DETECTABLE/TACTILE WARNING SURFACE TILE OR EQUAL AND APPROVED BY THE ENGINEER AS MEETING ALL REQUIREMENTS OF ASTM C-936, C-33.
2. CURB RAMPS MUST CONTAIN A DETECTABLE WARNING SURFACE THAT CONSISTS OF RAISED TRUNCATED DOMES COMPLYING WITH SECTION 7.08 DETACHABLE WARNINGS OF THE TEXAS ACCESSIBILITY STANDARDS (TAS). THE SURFACE MUST CONTRAST VISUALLY WITH ADJOINING SURFACES, INCLUDING SIDE FLARES. FURNISH DARK BROWN OR DARK RED DETECTABLE WARNING SURFACE ADJACENT TO UNCOLORED CONCRETE,UNLESS SPECIFIED ELSEWHERE IN THE PLANS.
3. DETECTABLE WARNING SURFACES MUST BE SLIP RESISTANT AND NOT ALLOW WATER TO ACCUMULATE.
4. ALIGN TRUNCATED DOMES IN THE DIRECTION OF PEDES"RIAN TRAVEL WHEN ENTERING THE STREET.
5. SHADED AREAS INDICATE THE APPROXIMATE LOCATION FOR THE DETECTABLE WARNING SURFACE FOR EACH CURB RAMP TYPE.
6. DETECTABLE WARNING SURFACES SHALL BE A MINIMUM OF 24" IN DEPTH IN THE DIRECTION OF PEDESTRIAN TRAVEL.
7. DETECTABLE WARNING SURFACES SHALL BE LOCATED SO THAT THE EDGE NEAREST THE CURB LINE IS A MINIMUM OF 6" AND A MAXIMUM OF 15" FROM THE EXTENSION OF THE FACE OF CURB. DETECTABLE WARNING SURFACES MAY BE CURVED ALONG THE CORNER RADIUS.
8. SINGLE TILE PLATES COLONIAL RED COLOR.

GENERAL NOTES:



1. CONCRETE TO BE CITY OF MIDLAND CLASS "A" WITH A MINIMUM 28 DAY COMPRESSION STRENGTH OF 3000 PSI. USE FIBER REINFORCED CONCRETE THROUGHOUT.
2. MATERIALS AND CONSTRUCTION METHODS TO CONFORM TO THE CITY OF MIDLAND STANDARDS AND SPECIFICATIONS UNLESS OTHERWISE DIRECTED BY ADA STANDARDS AND RESOURCES.

NOTES:
Skew = 0° on SW-0, FW-0, SETB-CO, SETB-SW-0, and SETB-FW-0 standard sheets;
30° minimum for safety end treatment.

SL:1 = Horizontal : 1 Vertical
- Side slope at culvert for flared or straight wingwalls.
- Channel slope for parallel wingwalls.
- Slope must be 3:1 or flatter for safety end treatments.

T = Box culvert top slab thickness. Dimension can be found on the applicable box culvert standard sheet.

U = Box culvert wall thickness. Dimension can be found on the applicable box culvert standard sheet.

C = Curb height

See applicable wing or end treatment standard sheets for calculations of Hw, A, B, Lw, Ltw, Ahw, and Total Wingwall Area.

Hw = Height of wingwall

A = Distance from face of curb to end of wingwall (not applicable to parallel or straight wingwalls)

B = Offset of end of wingwall (not applicable to parallel or straight wingwalls)

Lw = Length of longest wingwall.

Ltw = Length of culvert toewall (not applicable when using riprap apron)

Ahw = Length of anchor toewall (applicable to safety end treatment only)
Total Wingwall Area = Wingwall area in sq. ft. for two wingwalls (one structure end) if Lt or Rt.
Area for four wingwalls (two structure ends) if Both.

(1) Round the wall heights shown to the nearest foot for bidding purposes.

(2) Concrete volume shown is for box culvert curb only. For curbs using the Box Culvert Rail Mounting Details (BCRM) standard sheet, the volume shown in the table is increased by a factor of 2.25. If Class S concrete is required for the top slab of the culvert, also provide Class S concrete for the curb. Curb concrete is considered part of the Box Culvert for payment.

(3) Concrete volume shown is total of wings, footings, culvert toewall (if any), anchor toewalls (if any) and wingwall toewalls. Riprap aprons, culverts, and curb quantities are not included.

(4) Regardless of the type of culvert shown on this sheet, the Contractor has the option of furnishing cast-in-place or precast culverts unless otherwise shown elsewhere on the plans. If the Contractor elects to furnish precast culverts of a different type than those shown on this sheet, it is the Contractor's responsibility to make the necessary adjustments to the dimensions and quantities shown.

PRELIMINARY
This draft has not been submitted to the Texas Engineering Practice Act. Do not use for construction purposes.
Texas Department of Transportation is not responsible for any use of this preliminary draft.

DATE:
FILE:

GENERAL NOTES

1. PREPARE SOIL AND APPLY SEED MIXTURE AS SPECIFIED BEFORE INSTALLING PERMANENT TURF REINFORCEMENT MAT.
2. BEGIN AT TOP OF CHANNEL BY ANCHORING THE MAT IN A 12" DEEP X 6" WIDE DITCH WITH APPROXIMATELY 12" OF MAT EXTENDED BEYOND THE UP-SLOPE PORTION OF THE TRENCH. ANCHOR THE MAT WITH A ROW OF STAPLES APPROXIMATELY 12" APART IN THE BOTTOM OF THE TRENCH. BACKFILL AND COMPACT THE TRENCH AFTER STAPLING AND FOLD THE REMAINING 12" PORTION OF THE MAT BACK OVER COMPACTED SOIL AND SEED. SECURE THE MAT WITH A ROW OF STAPLES APPROXIMATELY 12" APART ACROSS THE WIDTH OF THE MAT.
3. ROLL CENTER MAT IN DIRECTION OF WATER FLOW IN BOTTOM CHANNEL. MAT WILL UNFOLD WITH APPROPRIATE SIDE AGAINST THE SOIL SURFACE. ALL MATS MUST BE SECURELY FASTENED TO SOIL SURFACE BY PLACING STAPLES IN APPROPRIATE LOCATIONS AS SHOWN AND CORRESPONDING TO THE APPROPRIATE STAPLE PATTERN.
4. PLACE CONSECUTIVE MATS END-OVER-END (SHINGLE STYLE) WITH A 4" - 6" OVERLAP. USE A DOUBLE ROW OF STAPLES STAGGERED 4" APART AND 4" ON CENTER TO SECURE MATS.
5. FULL LENGTH EDGE OF MATS AT TOP OF SIDE SLOPES MUST BE ANCHORED WITH A ROW OF STAPLES APPROXIMATELY 12" APART IN A 6" DEEP X 6" WIDE TRENCH. BACKFILL AND COMPACT TRENCH AFTER STAPLING.
6. ADJACENT MATS MUST BE OVERLAPPED APPROXIMATELY 2" - 5" AND STAPLED.
7. THE TERMINAL END OF THE MATS MUST BE ANCHORED WITH A ROW OF STAPLES APPROXIMATELY 12" APART IN A 6" DEEP BY 6" WIDE TRENCH. BACKFILL AND COMPACT TRENCH AFTER STAPLING.

Texas Department of Transportation
Bridge Division Standard
134

0' Min to 5'-0" Max. Estimated curb heights are shown elsewhere in the plans. For structures with pedestrian rail on curbs taller than 3'-0", refer to the Extended Curb Details (ECD) standard sheet. For structures with T631 or T631LS bridge rail, refer to the Extended Curb Details (ECD) standard sheet. For structures with bridge rail other than T631 or T631LS, refer to the Rail Anchorage Curb (RAC) standard sheet for structures with bridge rail other than T631 or T631LS.

For vehicle safety, the following requirements must be met:
- For structures without bridge rail, construct curbs no more than 3" above finished grade.
- For structures with bridge rail, construct curbs flush with finished grade.

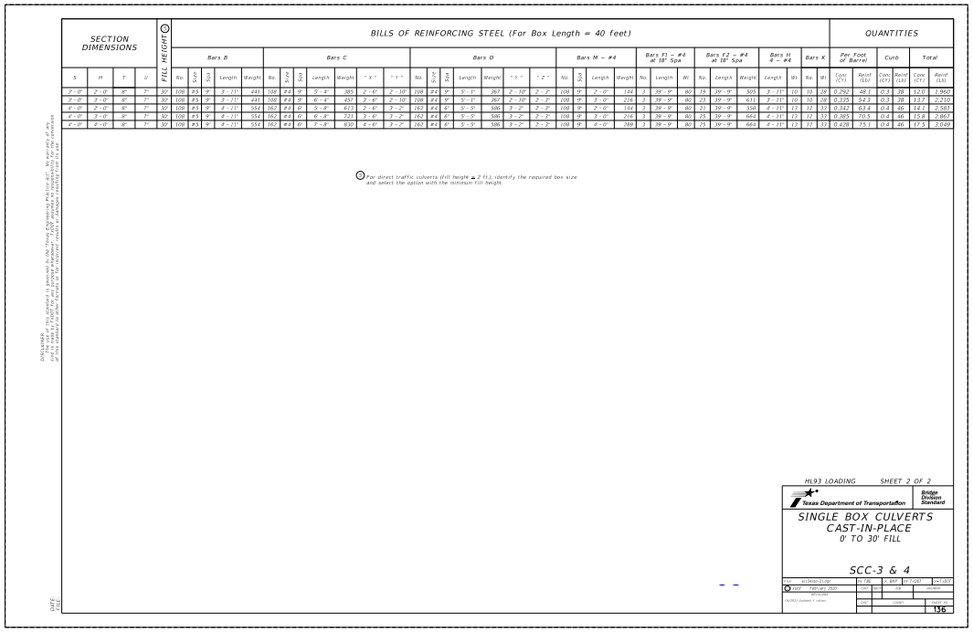
Reduce curb heights, if necessary, to meet the above requirements. No changes will be made in quantities and no additional compensation will be allowed for this work.

For curbs less than 2'-0" high, bilt Bars K or reduce bar height as necessary to maintain cover. For curbs less than 3' high, Bars K may be omitted.

1'-0" typical. 2'-2" when the Rail Anchorage Curb (RAC) standard sheet is referred to elsewhere in the plans.

The Contractor may replace Bars B, C, D, E, F1, F2, H, Y, and/or Z with deformed welded wire reinforcement (WWR) meeting the requirements of ASTM A1064. The area of required reinforcement may be reduced by the ratio of 60 ksi / 70 ksi. Provide WWR with the longest wires in the direction of the principal bar. Splices in the WWR of the same length required for the equivalent bar size, rounded up for wire sizes between conventional bar sizes. The lap length required for WWR is never less than the lap length required for uncoated #4 bars.

Example conversion: Replacing No. 6 Gr 60 at 6" Spacing with WWR.
Required WWR = (0.44 sq. in. per ft) x (60 ksi / 70 ksi) = 0.755 sq. in. per ft.
If D30.6 wire is used to meet the 0.755 sq. in. per ft. requirement in this example, the required spacing = (0.306 sq. in.) / (0.755 sq. in. per ft) x (12 in. per ft) = 4.86" Max spacing. Required lap length for the provided D306 wire is 7'-1" (the same minimum lap length required for uncoated #3 bars, as listed under MATERIAL NOTES).



CONSTRUCTION NOTES:
Do not use permanent forms.
Chamfer the bottom edge of the top slab 3" at the entrance.
Optionally, raise construction joints shown at the fillet line by a maximum of 6". If this option is taken, Bars H may be cut off or raised, Bars C and D may be reversed.

MATERIAL NOTES:
Provide Grade 60 reinforcing steel.
Provide galvanized reinforcing steel if required elsewhere in the plans.
Provide Class S concrete (f'c = 4,500 psi) for the top slab, wingwalls and apron and curb, with the following exceptions: provide Class S concrete (f'c = 4,000 psi) for top slabs of:
- culverts with overlay,
- culverts with 2-lift-2 course surface treatment, or
- culverts with the top slab as the final riding surface.

Provide the following minimum bar coating:
- Uncoated or galvanized – #4 and #5 Min
- Uncoated or galvanized – #6 – 2-1" Min

GENERAL NOTES:
Design is according to AASHTO LRFD Bridge Design Specifications for the range of fill heights shown.
See the Single Box Culverts Cast-In-Place Miscellaneous Detail (SCC-MD) standard sheet for details pertaining to skewed ends, angle sections, and lengthening.

Cover dimensions are clear dimensions, unless noted otherwise.
Reinforcing bar dimensions shown are out-to-out of bar.

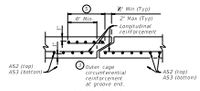
① For box length = 8'-0"

② AS1 thru AS4, AS7 and AS8 are minimum required areas of reinforcement per linear foot of box length. AS5 is minimum required area of reinforcement per linear foot of box width.



FILL HEIGHT 2 FT. AND GREATER

FILL HEIGHT LESS THAN 2 FT.

② Length is equal to spacing of longitudinal reinforcing plus 2". (10" Min) (Typ)

SECTION A-A

(Widening top slab detail, KEY joint reinforcement.)

MATERIAL NOTES:

Provide 0.03 sq. in./ft. minimum longitudinal reinforcement at each face in slabs and walls. This minimum requirement may be met by the transverse wires when wire mesh reinforcement is used.

Provide Class H concrete (f'c = 5,000 psi).

GENERAL NOTES:

Designs shown conform to ASTM C1577. Refer to ASTM C1577 for information or details not shown.

See Box Culverts Precast Miscellaneous Details (SCP-MD) standard for wing, headwall, and flared end details.

In lieu of furnishing the designs shown on this sheet, the contractor may furnish an alternate design that is equal to or exceeds the box design for the design fill height in the table. Submit shop plans for alternate designs in accordance with Item "Precast Concrete Structural Members (Fabrication)".

FOR USE IN OUTSIDE CULVERT BAY
FOR USE IN INSIDE CULVERT BAY
OPTION A2
OPTION A1
CROSS PIPE AND CONNECTIONS DETAILS
Cross pipe is the same size as the pipe runner. Cross pipe stub out is the same size as the anchor pipe.
Note that actual slope of safety pipe runner may vary slightly from side slope.
Take care to ensure that riprap concrete does not flow into the cross pipe so as to permit disassembly of the bolted connection to allow cleanout access.
After installation, inspect the 1¼" hole to ensure that the lap of the safety pipe runner with the bottom anchor pipe is adequate.
At fabricator's option, a heat bent to a smooth 5' radius or a manufactured elbow (of the same material as the runner) may be substituted for the mitered and welded joint in the bottom anchor pipe.

3" Std (3.500" O.D.)
4" Std (4.000" O.D.)
5" Std (5.563" O.D.)
1 The proper installation of the first cross pipe is critical for vehicle safety. Place the top of the first cross pipe no more than 6" above the flow line.
2 Provide cross pipes, except the first bottom pipe, of the size shown in the table. Provide a 3 (#2" standard pipe (4" O.D.) for the first bottom pipe.
3 Install the third cross pipe from the bottom of the culvert using a 3'-0" length of pipe. Cut the pipe in half and use only one side of the cross pipe so as to permit disassembly of the bolted connection to allow clearance access. At the Contractor's option, install all other cross pipes using the bolted connection details.
4 Match cross slope as shown elsewhere in the plans. Cross slope of 4:1 or flatter is required for vehicle safety.
5 Riprap placed beyond the limits shown will be paid for as concrete riprap in accordance with Item 432, "Riprap".
6 Quantities shown are for one end of one reinforced concrete pipe (RCP) culvert. For multiple pipe culverts or for corrugated metal pipe (CMP) culverts, quantities will need to be adjusted. Riprap quantities are for contractor's information only.
MATERIAL NOTES:
Synthetic fibers listed on the "Fibers for Concrete" Material Producer List (MPL) may be used in lieu of steel reinforcing in riprap concrete unless noted otherwise.
Use bolts, nuts, and washers conforming to ASTM A 307 or ASTM A 453 (Type 3 or 5, Gr B), ASTM A 563 (Gr B), or AFI 5L52.
Provide ASTM A307 bolts and nuts.
Galvanize all steel components, except concrete reinforcing, after fabrication. Repair galvanizing damaged during transport or construction in accordance with the specifications.
GENERAL NOTES:
Cross pipes are designed for a traversing load of 10,000 pounds at yield as recommended by Research Report 280-2F, "Safety Treatment of Roadside Parallel-Drainage Structures". Treatments that meet the Test Level 3 (TL-3) "Safety and Performance Standard for Highway Features" (1989) safety requirements (SPF) shown herein are intended for use in those installations where out of control vehicles are likely to traverse the openings approximately perpendicular to the cross pipes.
Construct concrete riprap and all necessary inserts in accordance with the requirements of Item 432, "Riprap".
Payment for riprap and tiewalls is included in the Price Bid for each Safety End Treatment.

BARS L (#5) ⑦
Spaced at 12" Max

OPTIONAL BARS L (#5) ⑧ ⑨
Spaced at 12" Max

BARS U (#4) ⑩
Spaced at 12" Max

① 'T' is equal to the culvert top slab thickness. For precast boxes with slabs less than 9" thick, see SCP-MD standard for additional details.

② Adjust normal culvert slab bars as necessary to clear obstructions.

③ Place bars L as shown. T-16 hook as necessary to maintain cover.

④ Place normal culvert curb bars M(#4) as shown. Adjust as necessary to clear obstructions.

⑤ Additional bars M(#4) as required to maintain 12" Max spacing.

⑥ Replace normal culvert curb bars K with one bar U and two bars V as shown spaced at 12" Max. Adjust length of bars V as necessary to maintain clear cover.

⑦ Optional bars L are to be used only for precast box culverts with 3'-0" closure pour.

⑧ Quantities shown are for Contractor's information only. Quantities are per linear foot of curb length. The value in table can be interpolated for intermediate values of curb height, 'C'. Quantity includes bars K (when applicable).

TABLE OF ESTIMATED CURB QUANTITIES ⑧

Curb Height 'C'	Conc (CY/LF)	Reinf Steel (LB/LF)
1'-0"	0.037	10.4
1'-6"	0.056	14.5
2'-0"	0.074	19.0
2'-6"	0.093	18.0
3'-0"	0.111	19.0
3'-6"	0.130	21.1
4'-0"	0.148	22.4
4'-6"	0.167	24.6
5'-0"	0.185	25.9

CONSTRUCTION NOTES:
Adjust reinforcing steel as necessary to provide 1 ½" cover.
For vehicle safety, top of the curb must not project more than 3" above the finished grade.

MATERIAL NOTES:
Provide Grade 60 reinforcing steel.
Provide galvanized reinforcing steel if required elsewhere in the project.
Provide Class 'C' concrete (f'_c = 3,600 psi) minimum for curbs.
Provide bar laps, where required, as follows:
- Uncoated or galvanized – #4 = 2'-0" Min

GENERAL NOTES:
Designed according to AASHTO LRFD Bridge Design Specifications.
These extended curb details have sufficient strength to allow for future retrofit of Type T631 or TX3115 railing. Type T631 railing is shown in the Bridge Railing and RR3 Type rails. These details are not suitable for the retrofitting of other rail types. For new construction using T631 or TX3115 railing, use the TXDOT-CR standard.
This Curb is considered as part of the Box Culvert for payment.

Cover dimensions are clear dimensions, unless noted otherwise.
Reinforcing bar dimensions shown are out-to-out of bar.

EDGE LINE AND LANE LINES
ONE-WAY ROADWAY
WITH OR WITHOUT SHOULDERS
TYPICAL TWO-LANE, TWO-WAY PAVEMENT
MARKINGS THROUGH INTERSECTIONS
GENERAL NOTES
1. Edge line striping shall be as shown in the plans or as directed by the Engineer. The edge line should not be placed less than 6 inches from the edge of pavement. This distance may vary due to pavement raveling or other conditions. Edge lines are not required in curb and gutter sections of roadways.
2. The traveled way includes only that portion of the roadway used for vehicular travel. It does not include the parking lanes, sidewalks, berms and shoulders. The traveled ways shall be measured from the center of edge line to the center of edge line of a two lane roadway.
MATERIAL SPECIFICATIONS
PAVEMENT MARKERS (REFLECTORIZED) DMS-4200
EPOXY ADHESIVES DMS-6100
BITUMINOUS ADHESIVE FOR PAVEMENT MARKERS DMS-6150
TRAFFIC PAINT DMS-8200
HOT APPLIED THERMOPLASTIC DMS-8220
PERMANENT PREFABRICATED PAVEMENT MARKINGS DMS-8240
All pavement marking materials shall meet the required Departmental Material Specifications as specified by the plans.

DETAIL "B"
YIELD LINES
GUIDE FOR PLACEMENT OF STOP LINES,
EDGE LINE & CENTERLINE
Based on Traveled Way and Pavement Widths
for Undivided Roadways
FOUR LANE DIVIDED ROADWAY CROSSOVERS
NOTES
1. Where divided highways are separated by median widths of 30 feet or more, median openings shall be signed as two separate intersections. Each median opening has two width measurements, with one measurement for each approach. The narrow median width will be the controlling width to determine if signs are required. Yield signs are the typical intersection control. Stop signs and stop bars are optional as determined by the Engineer.
2. Install median striping (double yellow centerlines and stop lines/yield lines) when a 50' or greater median centerline can be placed. Stop lines shall only be used with stop signs. Yield lines shall only be used with yield signs.
3. Length of turn bays, including taper, deceleration, and storage lengths shall be as shown on the plans or as directed by the Engineer.

LANE REDUCTION
NOTES
1. Lane reduction pavement markings are used where the number of through lanes is reduced because of narrowing of the roadway or because a lane is dropped to provide parking. If this would result in a through lane, or Texas Super 7 Passing Lanes, see TSOPM1 standard sheets.
2. On divided highways, an additional RIGHT LANE ENDS (W9-1R) sign may be placed on the median aligned with the W9-1R sign on the right side of the highway.
3. Lane reduction arrows are required for speeds of 45 mph or greater. An optional third lane reduction arrow may be added based on engineering judgement. If used, the optional third lane reduction arrow should be centered between the first and last lane reduction arrows.
4. For lane reductions on Freeways and Expressways, signing shall conform to the TxDOT Freeway Signing Handbook.
ADVANCED WARNING SIGN DISTANCE (D)
Posted Speed | D (ft) | L (ft)
30 MPH | 450 | L= WS/60
35 MPH | 565
40 MPH | 670
45 MPH | 775
50 MPH | 885 | L=WS
55 MPH | 990
60 MPH | 1,100
65 MPH | 1,200
70 MPH | 1,250
75 MPH | 1,350
GENERAL NOTES
1. Lane use word and arrow markings shallbe used where through lanes approaching an intersection become mandatory. Unless lane use words are used, lane use arrows shall be placed on the beginning of substantial length. Lane use arrow markings or word and arrow markings may be used to other lanes and turn bays for emphasis. Details for words and arrows are as shown in the Standard Highway Sign Designs for Texas.
2. When lane-use words and arrow markings are used, two sets of arrows should be used if the length of the bay is greater than 180 feet. When a single lane use arrow word and arrow marking is used in a turn bay, it should be placed 20 feet from or near the upstream end of the full-width turn lane.
3. Use raised pavement marker Type I-C with undivided highways, non-medians and two-way left turn highways, non-medians and two-way left turn highways with raised medians. Use Type II-C-R with divided highways and raised median.
4. Length of turn bays, including taper, deceleration, and storage lengths shall be as shown on the plans or as shown in Table 3-23 and Table 3-24 of the Roadway Design Manual for additional information on turning lanes or storage lengths.

TYPE 2 OBJECT MARKERS TYPICAL INSTALLATION
Ground line
Travel Lane
Pavement surface
Accordingly
2'-0" to 8'-0" in front of object being marked
See General Notes 1, 2, and 3
GENERAL NOTES
1. Where a restriction prevents consistent placement from the pavement edge, place the affected object markers in line with the innermost edge of the obstruction.
2. When Type 2 object markers are more than 8'-0" from the edge of the pavement, it may not be possible to maintain a height of approximately 4'-0". If this is the case, place the object marker as close to the recommended height as possible.
3. Install all object markers in accordance with the manufacturer's recommendation.
4. Diagonal stripes on Type 3 object markers shall slope down toward the intended travel lane.
5. Object marker substrates shall be 0.080" aluminum sign blank and conform to ASTM B-209 Alloy 6061-T6 or an approved alternative.

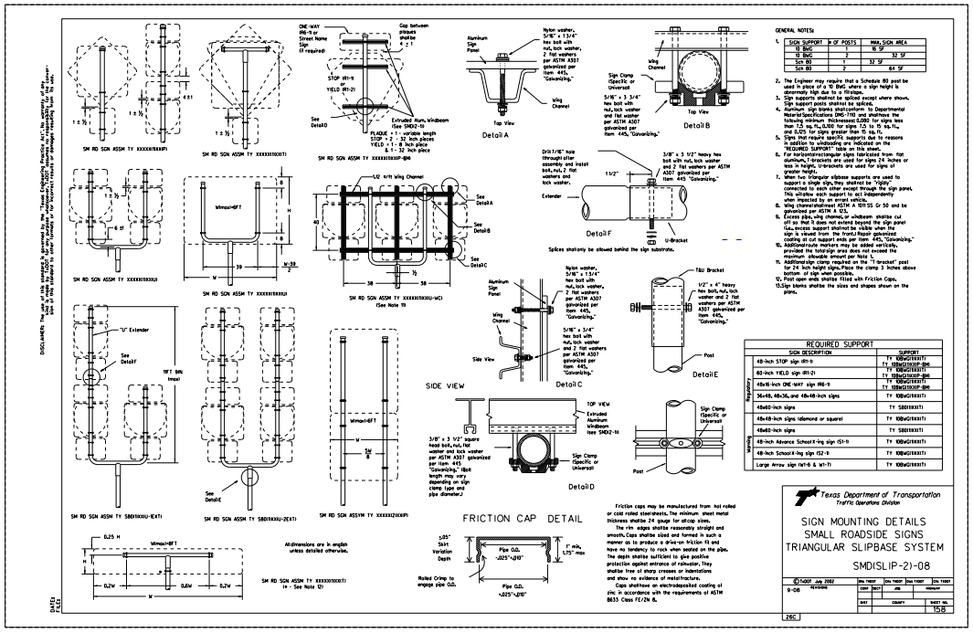
DESCRIPTION:
The use of this standard is governed by the "Texas Engineering Practice Act". No liability of any kind is assumed by the Texas Department of Transportation for the use of these standards, or the results of their application on designs not prepared by employees of the Texas Department of Transportation, or for any modifications made to these standards without the written approval of an authorized employee of the Texas Department of Transportation.



FREEWAY DELINEATION FOR RAMPS AND ACCELERATION / DECELERATION LANES
Spacing of white delineators for acceleration or deceleration lanes should be 100 ft.
For ramp tangents: 100' max spacing
For ramp curves: use the delineator spacing table (Straight/Curve) in Fig 3-1. Curve may not apply. Delineators should be on outside of curve.
DETAIL 4a
CROSSOVERS
Four Type 1A RPMs at 20' spacing
Double yellow delineator
Double yellow delineator
Type II-C-R RPMs at 20' spacing

DETAIL 4b
FOR CULVERTS WITHOUT METAL BEAM GUARD FENCE (MBGF)
Bi-Directional OMA2 to be placed if safety end treatment is less than 15 ft from travel lane.
OMA2 to be placed if culvert headwall is greater than 20 ft in length and is less than 15 ft from travel lane or within the clear zone
OMA2 to be placed if culvert headwall is less than 15 ft from travel lane or within the clear zone
DETAIL 4c
NOTES
1. This detail applies for all existing culverts without MBGF, for application of OMs. New bridge-class culverts require safety end treatments, MBGF, or bridge railing. See the TxDOT Bridge Railing Manual.
2. For culverts with MBGF, see Sheet 5.

GENERAL NOTES
1. Signs to be furnished shallbe as detailed elsewhere in the plans and/or as shown on sign tabulation sheet. Standard sign designs and arrow dimensions can be found in the "Standard Highway Sign Designs for Texas" (SHSD).
2. Sign legend shalluse the FederalHighway Administration (FHwA) Standard Highway Alphabets (B,C,D,E,Emod or F).
3. Lateralspacing between letters and numerals shallconform with the SHSD, and any approved changes thereto. Lateralspacing of legend shallprovide a balanced appearance when spacing is not shown.
4. Black legend and borders shallbe applied by screening process or cut-out acrylic non-reflective black film to background sheeting, or combination thereof.
5. White legend and borders shallbe applied by screening process with transparent colored ink, transparent colored overlay film to white background sheeting or cut-out white sheeting to colored background sheeting,or combination thereof.
6. Colored legend shallbe applied by screening process with transparent colored ink, transparent colored overlay film or colored sheeting to background sheeting, or combination thereof.
7. Sign substrate shallbe any materialthat meets the DepartmentalMaterial Specification requirements of DMS-7110 or approved alternatives.
8. Mounting details for roadside mounted signs are shown in the "SMD series" Standard Plan Sheets.

ROCK FILTER DAM USAGE GUIDELINES
Rock Filter Dams should be constructed downstream from disturbed areas to intercept sediment from overland runoff and/or concentrated flow. The dams should be sized to filter a maximum flow through rate of 60 GPM/FT² of cross sectional area. A 2 year storm frequency may be used to calculate the flow rate.
Type 1 (18" high with no wire mesh) (3" to 6" aggregate) Type 1 may be used at the toe of slopes, around inlets, in small ditches, and at skirt of swale outlets. This type of dam is recommended to control erosion from a drainage area of 5 acres or less. Type 1 may not be used in concentrated high velocity flows (approximately 8 Ft/Sec or more) in which aggregate wash out may occur. Sandbags may be used at the embedded foundation (4" deep min.) for better filtering efficiency at low flows if called for on the plans or directed by the Engineer.
Type 2 (18" high with wire mesh) (3" to 6" aggregate) Type 2 may be used in ditches and at dike or swale outlets.
Type 3 (36" high with wire mesh) (4" to 8" aggregate) Type 3 may be used in stream flow and should be secured to the stream bed.
Type 4 (Sack gabions) (3" to 6" aggregate) Type 4 May be used in ditches and smaller channels to form an erosion control dam.
Type 5: Provide rock filter dams as shown on plans.
GENERAL NOTES
1. If shown on the plans or directed by the Engineer, filter dams should be placed near the toe of slopes where erosion is anticipated, upstream and/or downstream of drainage structures, and in roadway ditches and channels to collect sediment.
2. Materials (aggregate, wire mesh, sandbags, etc.) shall be as indicated by the specification for "Rock Filter Dams for Erosion and Sedimentation Control".
3. The rock filter dam dimensions shall be as indicated on the SW3P plans.
4. Side slopes should be 2:1 or flatter. Dams within the safety zone shall have sideslopes of 6:1 or flatter.
5. Maintain a minimum of 1' between top of rock filter dam weir and top of embankment for filter dams at sediment traps.
6. Filter dams should be embedded a minimum of 4" into existing ground.
7. The sediment trap for ponding of sediment laden runoff shall be of the dimensions shown on the plans.
8. Rock filter dam types 2 & 3 shall be secured with 20 gauge galvanized wire mesh on the upstream face of the aggregate. The aggregate shall be placed on the mesh to the height & shape specified. The mesh shall be folded at the upstream side over the aggregate and tightly secured to itself on the downstream side using wire ties or hog rings. For in stream use, the mesh should be secured or staked to the stream bed prior to aggregate placement.
9. Sack Gabions should be staked down with ½" dia. rebar stakes, and have a double-twisted hexagonal weave with a nominal mesh opening of 2 ½" x 3 ½".
10. Flow outlet should be onto a stabilized area (vegetation, rock, etc.).
11. The guidelines shown hereon are suggestions only and may be modified by the Engineer.

GENERAL NOTES (TYPE 1)

1. The length of the type 1 construction exit shallbe as indicated on the plans,but not less than 50'.
2. The coarse aggregate should be open graded with a size of 4" to 8".
3. The approach transitions should be no steeper than 6:1 and constructed as directed by the Engineer.
4. The construction exit foundation course shallbe flexible base, bituminous concrete,portland cement concrete or other materialas approved by the Engineer.
5. The construction exit shallbe graded to allow drainage to a sediment trapping device.
6. The guidelines shown hereon are suggestions only and may be modified by the Engineer.
7. Construct exits with a width of at least 14 ft. for one-way and 20 ft. for two-way traffic for the full width of the exit,or as directed by the engineer.

GENERAL NOTES (TYPE 2)

1. The length of the type 2 construction exit shallbe as indicated on the plans,but not less than 50'.
2. The treated timber planks shallbe attached to the railroad ties with 7/2 x 6" min.lag bolts. Other fasteners may be used as approved by the Engineer.
3. The treated timber planks shallbe #2 grade min., and should be free from large and loose knots.
4. The approach transitions shallbe no steeper than 6:1 and constructed as directed by the Engineer.
5. The construction exit foundation course shallbe flexible base, bituminous concrete,portland cement concrete or other material as approved by the Engineer.
6. The construction exit should be graded to allow drainage to a sediment trapping device.
7. The guidelines shown hereon are suggestions only and may be modified by the Engineer.
8. Construct exits with a width of at least 14 ft. for one-way and 20 ft. for two-way traffic for the full width of the exit, or as directed by the engineer.

GENERAL NOTES (TYPE 3)

1. The length of the type 3 construction exit shallbe as shown on the plans, or as directed by the Engineer.
2. The type 3 construction exit may be constructed from open graded crushed stone with a size of two to four inches spread a min. of 4" thick to the limits shown on the plans.
3. The treated timber planks shallbe #2 grade min., and should be free from large and loose knots.
4. The guidelines shown hereon are suggestions only and may be modified by the Engineer.

EMBANKMENT SECTION - DIVERSION DIKE
DIKE USAGE GUIDELINES
A Dike may be used to intercept runoff and divert it around unstabilized areas or to divert sediment laden runoff to an erosion control device (sediment basin or trap, rock filter dam, etc.).
The drainage area contributing runoff to a dike should not exceed 5 acres. The spacing of dikes should be as follows:
Slope of disturbed areas above dike: greater than 10% | 5 - 10% | less than 5%
Maximum distance between dikes: 100' | 200' | 300'
Intercepted runoff flowing along a dike should outlet to a stabilized area (vegetation, rock, etc.).

REBAR STAKE DETAIL
SEDIMENT BASIN & TRAP USAGE GUIDELINES
An erosion controlog sediment trap may be used to filter sediment out of runoff draining from an unstabilized area.
Log Traps: The drainage area for a sediment trap should not exceed 5 acres. The trap capacity should be 1800 CF/Acre (0.5" over the drainage area).
Contrologs should be placed in the following locations:
1. Within drainage ditches spaced as needed or min. 500' on center
2. Immediately preceding ditch inlets or drain inlets
3. Just before the drainage enters a water course
4. Just before the drainage leaves the right of way
5. Just before the drainage leaves the construction limits where drainage flows away from the projects.
The logs should be cleaned when the sediment has accumulated to a depth of 1/2 the log diameter.
Cleaning and removal of accumulated sediment deposits is incidental and will not be paid for separately.
GENERAL NOTES:
1. EROSION CONTROL LOGS SHALL BE INSTALLED IN ACCORDANCE WITH MANUFACTURER'S RECOMMENDATIONS, OR AS DIRECTED BY THE ENGINEER.
2. LENGTHS OF EROSION CONTROL LOGS SHALL BE IN ACCORDANCE WITH MANUFACTURER'S RECOMMENDATIONS AND AS REQUIRED FOR THE PURPOSE INTENDED.
3. UNLESS OTHERWISE DIRECTED, USE BIODEGRADABLE OR PHOTODEGRADABLE CONTAINMENT MESH ONLY WHERE LOG WILL REMAIN IN PLACE AS PART OF A VEGETATIVE SYSTEM. FOR TEMPORARY INSTALLATIONS, USE RECYCLABLE CONTAINMENT MESH.
4. FILL LOGS WITH SUFFICIENT FILTER MATERIAL TO ACHIEVE THE MINIMUM COMPACTED DIAMETER SPECIFIED IN THE PLANS WITHOUT EXCESSIVE DEFORMATION.
5. STAKES SHALL BE 2" X 2" WOOD OR #3 REBAR, 2'-4' LONG, EMBEDDED SUCH THAT 2" PROTRUDES ABOVE LOG, OR AS DIRECTED BY THE ENGINEER.
6. DO NOT PLACE STAKES THROUGH CONTAINMENT MESH.
7. COMPOST CRADLE MATERIAL IS INCIDENTAL & WILL NOT BE PAID FOR SEPARATELY.
8. SANDBAGS USED AS ANCHORS SHALL BE PLACED ON TOP OF LOGS & SHALL BE OF SUFFICIENT SIZE TO HOLD LOGS IN PLACE.
9. TURN THE ENDS OF EACH ROW OF LOGS UPSLOPE TO PREVENT RUNOFF FROM FLOWING AROUND THE LOG.
10. FOR HEAVY RUNOFF EVENTS, ADDITIONAL UPSTREAM STAKES MAY BE NECESSARY TO KEEP LOG FROM FOLDING IN ON ITSELF.

COVER SHEET
AVALON DR. & BRIARWOOD AVE. TRAFFIC SIGNAL
CITY OF MIDLAND, MIDLAND COUNTY, TEXAS

05/30/2025

C100

PROJECT OVERVIEW

All work and materials shall conform to the Texas Department of Transportation (TxDOT) "Standard Specifications for Construction and Maintenance of Highways, Streets, and Bridges", 2024 edition, unless otherwise indicated in these plans or directed by the Engineer. All items numbers referenced in the plans refer to TxDOT specifications.

The City of Midland (City) will furnish various items to the contractor as listed under item 6.80.

Contact the Traffic Signal Shop at 432-685-7508 prior to the start of any service work to schedule a city representative to attend a pre-construction meeting.

Underground utilities may be present within the right-of-way on the project. Contact Texas 811 a minimum of two business days prior to excavating.

The locations of all signal-related items, pavement markings, signing, etc., are diagrammatic only and may be shifted to accommodate field conditions under as directed by the Engineer.

ITEM 416: DRILLED SHAFT FOUNDATIONS

Locations of foundations shown on the plans are diagrammatic only and may be shifted to meet local conditions, subject to approval by the inspector. The Contractor shall stake all foundation locations and have them approved by the inspector before excavating. The Contractor shall ensure that all poles and luminaires are clear of overhead lines and underground utilities before excavating.

The Inspector, together with the Contractor, will calculate the vertical signal head clearance before placing any traffic signal pole foundation.

The Contractor shall notify the Inspector at least 48 hours prior to forming and placing concrete for any signal pole and controller foundation. The Inspector will determine the depth of the foundation based on the soil conditions encountered and provide adequate notice so arrive at the job site may result in removing and replacing the foundation at the Contractor's expense.

ITEM 449: ANCHOR BOLTS

A pipe joint waterproof shim is set electrically conducting protective threaded luminaire shall be used on the foundation anchor bolts for the traffic signal poles. (Cross-Hatch-Fit-It, 512 Osborne 515, Thomas & Betts Kopr-Shield, or equal).

ITEM 502: BARRICADES, SIGNS, AND TRAFFIC HANDLING

Use Temporary Traffic Control (TTC) for this project as detailed on the latest TxDOT Barricade and Construction (BC) standard plan sheets. Work Zone standard plan sheets 'WZ (BTS-1 and BTS-2)', and as provided for in Part VI of the latest edition of the "Texas Manual on Uniform Traffic Control Devices".

In addition to the TTC and WZ standard plan sheets, install barricades and warning signs, as appropriately, to adequately warn motorists.

Existing signs are to remain as long as they do not interfere with construction and do not conflict with the traffic control plan.

Permanent signs may be installed when construction in an area is complete and they will not be in conflict with the traffic control plan for the remainder of the job.

Cover or remove any work zone signs when the work or condition referenced is not occurring.

When traffic is inter-timed, arrange warning devices in accordance with examples provided in the latest edition of the "Texas Manual on Uniform Control Devices".

No work will be permitted to commence on the road before noon. Work shall be scheduled such that all machinery and/or equipment shall be away from the roadway and stored near the right-of-way line by noon. Any operations requiring lane closures shall not begin before 9:00 A.M. or continue past 4:00 P.M., unless otherwise approved by the City in advance.

Do not place barricades, signs, or any other traffic control devices where they interfere with sight distance at driveways or side streets. Provide access to all driveways during all phases of construction.

Locations used for storing construction equipment and materials of any type within the right-of-way shall be approved by the inspector. Use of the right-of-way for these purposes will be restricted in locations where driver sight distance to businesses and side-street intersections is not obstructed and in other locations where an unsightly appearance will not result, as determined by the inspector.

Remove any obstructions to existing drainage due to the Contractor's operations, as required, at the Contractor's expense.

ITEM 551: SIDEWALKS

The curb ramp and pedestrian pushbutton locations shown in the plans have taken into account the geometric features of the intersections, TxDOT standards, and pedestrian crossing markings. If any changes occur during construction, the location of these features must be adjusted to ensure that meets TDLR/ADAAG requirements.

ITEM 618: CONDUIT

When conduit must be placed by trenching on paved areas, cut and restore pavement in accordance with Item 400 and as shown in the plans. Cut pavement using only approved saws. Cutting and restoring pavement will not be paid for directly but will be subsidiary to this item.

Ensure only a Buy high tensile strength polyester fiber pull rope is used for pulling conductors through the PVC conduit systems.

The locations of conduit and ground boxes are diagrammatic only and may be shifted to accommodate field conditions as directed.

ITEM 620: ELECTRICAL CONDUCTORS

Terminate all electrical conductors from the controller at the termination block in the traffic signal pole hand hole whether in use or not.

All wiring not covered by the plans and specifications shall be in accordance with the National Electric Code (NEC).

When the specifications for electrical items require UL listed products, it will be construed to mean UL listed or CSA listed.

Bond together any grounding conductors that share the same conduit, junction box, ground box, or structure, at every accessible point in accordance with the National Electrical Code (NEC).

ITEM 621: TRAY CABLE

All proposed tray cable and number of conductors required shall be as shown on the plans. No splices shall be allowed.

ITEM 624: GROUND BOXES

Locations of ground boxes are approximate. Final locations will be as approved by the Inspector. Provide an apron for ground boxes as shown on plan 8224-14.

ITEM 628: ELECTRICAL SERVICES

Contact the Electric Utility Company (Oncor) to make all necessary arrangements to provide power for the electrical services shown on the plans in accordance with Item 628 and the Electrical Details, except that the City of Midland will make applications to the Electric Utility Company for service (See note below).

Before fabricating the electrical service, contact the City of Midland Traffic Signal Supervisor (phone 432-685-7508) to make application (billing arrangements) for service with Oncor.

Time-charge suspension due to the availability of a power shall not be considered unless all arrangements for power have been submitted within fifteen (15) days after principal work has begun.

ITEM 656: FOUNDATIONS FOR TRAFFIC CONTROL DEVICES

The foundations for the traffic signal controller is subsidiary to Item 680.

Locations of foundations shown on the plans are diagrammatic only and may be shifted to meet local conditions, subject to approval by the Inspector. The Contractor shall stake all foundation locations and have them approved by the Inspector before excavating. The Contractor shall ensure that all luminaires and mast arms are clear of all overhead lines and underground utilities before excavating.

The Inspector, together with the Contractor, will calculate the vertical signal head clearance before placing any traffic signal pole foundation.

Install traffic signal controller foundation to accommodate cabinet pedestal base provided by City. Extend the slab at least 36 inches beyond the pedestal base on the front and back sides of the cabinet to provide an all-weather surface at each cabinet door.

ITEM 680: INSTALLATION OF HIGHWAY TRAFFIC SIGNALS

The Project shall consist of the installation of all equipment and materials necessary for a complete traffic signal system, as follows:

1. Provide submittal literature for all traffic signal equipment before installation. Equipment will not be accepted for delivery or any payment made until the equipment, material lists, and shop drawings have been approved by the Engineer. Approval by the Engineer does not relieve the Contractor of his responsibilities to meet the requirements of the specifications and plans. All submitted literature shall be approved and not verified for all the furnished traffic signal equipment prior to its installation.

2. The City will furnish the following items to the Contractor for installation on this project:
   - *(1) EagleEye detection system with VIVID cameras, cable, processor and mounting brackets.
   - *(1) Clarion GPS system, including cable, processor, and mounting brackets
   - *(1) 332S-CT cabinet with controller
   - *(2) Internally lighted street name (S)(W) sign
   - *(1) R10-27k traffic sign

   Contact the City of Midland Signal Shop at 432-685-7508 to coordinate a pick-up time for City-supplied items. Once the items are delivered, the Contractor shall be responsible for properly receiving and safeguarding all such items until project completion by the city.

   Contractor furnished and installed items shall include all signal and lighting poles and posts as shown in th plans, including anchor bolts, as per TxDOT specifications. The Contractor shall also furnish and install the following items as per the specifications and plans. Provide all items listed below:
   - (1) Traffic signal cabinet, NEMA TS2, 16-channel, dual door
   - (1) Traffic signal controller, Q-Free 814-1, NEMA TS2, Type 1
   - (1) Malfunction management unit, 16 channel
   - (1) Battery backup system, self-contained in backpack cabinet

   The City shall furnish and install a communication radio, network switch, and related accessories after the completion of construction and activation of the signal. The Contractor shall furnish and install the CAT 5 Ethernet cable for the radio as called for in the plans.

3. The locations shown on the plans for foundations, conduit and other items may be adjusted for better fit field conditions if needed due to conflicts with utilities, as approved by the Inspector.

4. Accomplish the erection of poles and luminaires located over any overhead electrical lines using established industry and utility safety practices. Consult with the appropriate utility company before beginning work, as needed.

5. Provide vibration dampers for mast arms 28 feet long and longer. Use dampers "8"x48" for arms up to 40 feet long, and "x5 sub" for longer mast arms. Install using Astro-Brac sign brackets, 3ghtly aluminum channel, or equal, at a maximum of 5 feet from the end of the mast arms.

6. Wire the signal installation to operate in accordance with phase diagrams in these plans. Timing and phasing will be maintained City of Midland Traffic Operations after activation of the signal. A copy of all revisions to the original timing and phasing plans shall be delivered to City of Midland Traffic Operations, and a new copy shall be placed in the controller cabinet at the completion of the project.

7. The City of Midland Signal Shop will not assume responsibility for the maintenance of the traffic signals until the project is completed and accepted.

8. Project inspection: For electrical project inspection, contact the City of Midland Signal Shop at 432-685-7508 at least 48 hours in advance of needed inspection. At the time of the final electrical inspection, the City will create a punch list of discrepancies to be corrected before signal is put into flash mode.

9. Provide qualified technician on the project site to place the traffic signal in full operation.

10. Signal Turn-On: Place the traffic signal into operation only after all requested striping is completed and all conflicting striping is removed. Notify the City of Midland Signal Shop approximately 48 hours in advance of the signal turn-on. Signal technicians from the City must be present when the signals are placed in full operation. Unless otherwise directed, place the signal in full operation between 9:00 AM and 12:00 NOON on Tuesday or Wednesday only.

11. Two Period Set Signals. The signals shall operate continuously for a minimum of thirty (30) calendar days in a satisfactory manner. Equipment failures during these 30 days will cause the test period to start over.

    During the thirty-day test period, the City of Midland Signal Shop will be the First Responders to all trouble calls. They will, in turn, contact the Contractor. The Contractor shall:

    - * Provide qualified personnel to respond to all trouble calls and diagnose and repair any malfunctions to signal equipment supplied for the project.
    - * Provide a local telephone number not subject to frequent changes and available to receive calls on a 24-hour basis.
    - * Respond to trouble calls within two hours. Provide trouble-shoot times but not more than 2 hours maximum.
    - * Make appropriate repairs within 24 hours.
    - * Place a logbook in the controller cabinet and keep a record of each trouble call reported. Notify the Engineer of each trouble call.
    - * Extend or log in the 30PD₁ shall not be cleared during this thirty-day test period without approval.

    If the signal equipment fails to perform satisfactorily during the test period, or fails to operate in order to return the signals to normal operation, the City will replace the equipment with new or like equipment and the original equipment is repaired and replaced.

ITEM 685: VEHICLE AND PEDESTRIAN SIGNAL HEADS

Provide all signal heads from the same manufacturer.

Provide all LED traffic signal lamp units with corresponding signal head components.

Vehicle signal heads shall have yellow aluminum housings with black aluminum vented back plates with a 1-4" visible yellow retro reflective border.

Pedestrian signal heads shall have yellow aluminum housing with LED "Walking Person" and "Hand" icon pedestrian signal modules with countdown feature.

Signal heads mounted on poles and mast arms shall be level and plumb and oriented as directed.

Vehicle signal heads shall be mounted using Astro-Brac mounting brackets or approved equal.

Cover all signal faces until placed in operation.

ITEM 684: TRAFFIC SIGNAL CABLES

Include service cable length in each run to provide adequate slack, at each ground box, foundation and signal head. Provide no excess 12 feet for each cable terminated in the controller cabinet. As per Section 684.5.1, "Cables used for inside signal heads and cord sets or cords in ground boxes, on pole bases, and on span wires will not be paid for directly, but will be subsidiary to pertinent items."

Identify each cable as shown on the plans (cable 1, etc.) with plastic pre-numbered identification tags, tape or marking labels at each signal head, ground box, terminal block, pole base and controller.

All cables shall be continuous without splices from terminal point to terminal point unless otherwise directed or approved by the inspector.

All proposed signal cables and number of conductors required shall be as shown on the plans unless otherwise approved by the inspector. All proposed signal cables shall be #14 AWG stranded copper unless otherwise indicated.

Terminate all electrical conductors from the controller at the termination block in the signal pole hand hole whether in use or not.

ITEM 688: PEDESTRIAN AND VEHICLE DETECTORS

Provide Accessible Pedestrian Signal (APS) pedestrian detector units in accordance with TxDOT Departmental Materials Specification (DMS) 11-02.
