DRAFT

16. 126-2023 – MOTION APPROVING AN ECONOMIC DEVELOPMENT AGREEMENT BETWEEN THE MIDLAND DEVELOPMENT CORPORATION AND KLJ ENGINEERING, LLC **(DISTRICT: ALL) (CITY MANAGER)**

ITEM PULLED NO ACTION TAKEN

17. 127-2023 – MOTION AUTHORIZING THE CITY MANAGER TO NEGOTIATE AND EXECUTE AN AGREEMENT WITH SPECIAL OLYMPICS TEXAS, INC., TO HOST FALL CLASSIC EVENTS IN THE CITY OF MIDLAND BEGINNING IN OCTOBER 2024; PROVIDED, HOWEVER, THAT SAID AGREEMENT SHALL NOT BECOME EFFECTIVE UNTIL APPROVED BY THE CITY COUNCIL **(DISTRICT: ALL) (COMMUNITY SERVICES)**

Communtiy Services Director Cristina Burns gave a brief overview of the item noting they would like funds for the next five years. Midlands' portion would be $250,000.00 per year.

Abagail Davis, VisitMidland, gave a brief overview of the item noting they have run some economic impact numbers which came out to about 1.8 million in overall economic impact.

Reagan Hinojos, 201 N. Loop 250, spoke in favor of this item and the positive impact the Special Olympics has on individuals and the community.

John Norman moved to approve Motion No. 127-2023; seconded by Dan Corrales.

The motion passed by the following vote:
AYE: Stretcher Burkes, Corrales, Poole, Blong, Dufford, Ladd, Norman
NAY: None
ABSTAIN: None
ABSENT: None

20. 129-2023 – MOTION APPROVING WITH STAFF'S RECOMMENDED CONDITIONS A PROPOSED PRELIMINARY PLAT OF YMCA ADDITION, SECTION 1, BEING A PLAT OF A 25.195-ACRE TRACT OF LAND OUT OF SECTIONS 23 AND 24, BLOCK 40, T-1-S, T&P RR CO. SURVEY, CITY AND COUNTY OF MIDLAND, TEXAS (GENERALLY LOCATED ON THE SOUTHEAST CORNER OF THE INTERSECTION OF GOLDEN GATE DRIVE AND MOCKINGBIRD LANE) **(DISTRICT 4) (DEVELOPMENT SERVICES)**

Council Member Corrales made comments regarding infrastructure and making smart decisions when it comes to planning for growth in the City of Midland.

Assistant City Manager Jose Ortiz gave a brief overview of the item noting the changes that are coming and where these changes currently are with regard to the planning of the road maintenance work.

City Manager Tommy Gonzalez reported on how the strategic plan will assist with a comprehensive plan, five-year Capital Improvement Plan (CIP).

Brad Swindig, 4900 Kingsboro, Director of COM, spoke in favor of the YMCA and the work

DRAFT

they do.

Mindy Hamm, 5801 Longhorn Lane, spoke in favor of this item and provided examples why.

Barbara Wood, 5500 Golden Gate Drive, has no problem with the YMCA but does have a problem with the current roadways in the area.

Andy Torres, 6413 W. Conchos Lane, reported he is not anti YMCA and spoke on what the YMCA did for him. However, he does not feel this is the right neighborhood for the new YMCA.

Stephen Brumley, 7100 West County Road 44, reported he is not against the YMCA but is against the location because of the noise and traffic it will bring.

Kylie Roman, 6606 Patriot Parkway, spoke in favor of the YMCA coming to this location due to the number of children that have to commute so far to get to the other facility.

Audrey Burkholder, 6406 Mockingbird Lane, spoke in opposition of this item due to traffic safety issues.

Allison King, 1212 Humble, spoke in favor of the YMCA to provide quality childcare for working moms.

Mason Burkholder, 6406 Mockingbird Lane, spoke in opposition of this item due to the traffic and wanting a safe environment for he and his little sister.

Dorota Anderson, 2608 Hughes St., spoke in favor of the YMCA coming to this location.

Jordan Fietz, 6507 Montero Lane, spoke in opposition of the YMCA coming to this location.

David Duree, 86 Shiloh, spoke in favor of this item.

Kathy Hobart, 6501 Montero Lane, spoke in opposition of this item for this location.

Gabriel Zertuche, 4322 Thomason Drive, spoke in favor of the YMCA in this location.

Kevin Hunstable, 1404 Bedford, spoke in opposition of this item due to lack of communication.

Mark Pace, 3 Deerfield Dr., spoke in favor of the YMCA in this location.

Elizabeth Harris-Jurado, 6022 Spahn St., is an employee of the YMCA and spoke in favor of this item.

Christine Bearden, 800 N. Big Spring, spoke in favor of the YMCA and its' afterschool program.

John Burkholder, 6406 Mockingbird Lane, spoke in opposition of this item due to safety

DRAFT

concerns.

Devon Copeland, 4415 Northcrest Drive and Aquatics Director for the YMCA, spoke in favor of the item noting the need for water safety training.

Abby Borrego, 2513 Wyatt Way, works at the YMCA and spoke in favor of the item.

Amanda Torres, 6413 Los Conchos Lane, spoke against the location but not against the YMCA as a whole. Ms. Torres is concerned about traffic safety.

Brittany Roberts, 3907 Crestline Ave., spoke in favor of the YMCA. Ms. Roberts is also an employee of the YMCA.

Marissa Nally, 2817 Haynes Drive, spoke in favor of the YMCA and all it has done for herself and her children.

Nolan Bradshaw, 6515 Gladiola, provided several reasons he is speaking in opposition of the YMCA coming to this location.

Clint Williamson, 1410 Country Club Dr., spoke in favor of the YMCA coming to expand the Midland community.

Jessica Lindemood, 5213 Quicksand Dr., spoke in favor of the YMCA and the fact that they offer scholarships and other beneficial services.

Dean Snidow, 1204 Telluride Dr., current Chairman of the Board of Directors for the YMCA. Mr. Snidow spoke in favor of the YMCA and what the new location will bring to Midland.

Juan Coronado, 2301 Homeland Court, spoke in favor of the YMCA and all it does.

Edwin Jackson, 444 W. Pine, works for the YMCA and spoke in favor of it and all of the services it provides.

Cade Grigsby, 1311 Lawson Ave., spoke in favor of the YMCA coming to this location.

Zach Nygaard, 1805 Tennessee Ave., spoke in favor of the YMCA. Mr. Nygaard spoke on less drive time for the children and less downtown traffic.

Mireya Mendez, 2408 Cimmaron Ave., is currently the teen director of the YMCA and spoke in favor of the YMCA.

Maddi Meier, 1805 Tennessee, is the sports director at the YMCA and spoke in favor of the YMCA to expand in the North side of town.

Renee Page, future resident of Midland, spoke in favor of the YMCA coming to Midland.

Jodi Bradshaw, 6515 Gladiola, spoke in opposition of this item and reported on several issues such as pipelines running under the land.

DRAFT

Lisa Jebson, 4415 Fairbanks Drive, spoke in favor of the YMCA coming to this location. Lisa is also an employee of the YMCA.

Amy Evans, 4506 Lenox, spoke in favor of the YMCA and all the YMCA has done for her.

Danny Ratliff, 6418 Chaps Lane, spoke in opposition of the YMCA from an engineering & common sense standpoint.

Bryan Williams, 417 E. Dormard, childcare coordinator at the YMCA, spoke in favor of the YMCA.

Beth Ryan, 1920 Centerview Lane, spoke in favor of the YMCA.

Assistant City Manager Jose Oritz reported there are conditions of the preliminary plat that need to be addressed prior to the final plat such as Mockingbird, Avalon and Goldengate. These streets need to be brought up to standards before the final plat can be approved.

Community Services Director Cristina Burns reported that childcare requires the use of an SUD.

Assistant City Manager Tina Jauz reported childcare over two hours per day may need to advance to the next step of an SUD.

Council Member Stretcher Burkes would like to have a discussion with the YMCA board as infrastructure can not chase development.

Jack Ladd moved to approve Motion No. 129-2023; seconded by Scott Dufford.

The motion passed by the following vote:
AYE: Poole, Blong, Dufford, Ladd, Norman
NAY: Stretcher Burkes, Corrales

DRAFT

25. 10447 – AN ORDINANCE AMENDING THE ZONING DISTRICT MAP OF THE CITY OF MIDLAND TO REZONE LOTS 2 AND 3, LLANO ESTACADO ADDITION, CITY AND COUNTY OF MIDLAND, TEXAS, FROM CE, COUNTRY ESTATE DISTRICT TO RR, REGIONAL RETAIL DISTRICT (GENERALLY LOCATED ON THE NORTH SIDE OF BRIARWOOD AVENUE, APPROXIMATELY 340 FEET WEST OF AVALON DRIVE); CONTAINING A CUMULATIVE CLAUSE; CONTAINING A SAVINGS AND SEVERABILITY CLAUSE; PROVIDING FOR A MAXIMUM PENALTY OR FINE OF TWO THOUSAND DOLLARS ($2,000.00); AND ORDERING PUBLICATION **(DISTRICT 3) (DEVELOPMENT SERVICES)** (FIRST READING HELD ON OCTOBER 10, 2023 )

Deputy City Secretary Jan Hamilton read the caption of Ordinance No. 10447.

Armando Arana, 6407 Aster Ave., spoke again against a Dollar Store coming to this location. Mr. Arana spoke at a previous Council Meeting.

The last time this item came to Council it didn't need a supermajority vote. Now, they have 54% of objections so it needs a supermajority.

Jack Ladd moved to approve the second and final reading of Ordinance No. 10447; seconded by Robin Poole.

The motion failed due to not having a supermajority by the following vote:
AYE: Poole, Dufford, Ladd, Norman
NAY: Stretcher Burkes, Corrales, Blong
ABSTAIN: None
ABSENT: None

**THIS ITEM FAILED DUE TO NOT HAVING A SUPERMAJORITY VOTE.**

## PUBLIC HEARINGS

The City Council will hold public hearings on the following items:

26. 10448 – AN ORDINANCE OF THE CITY COUNCIL OF THE CITY OF MIDLAND, TEXAS, PURSUANT TO CHAPTER 311 OF THE TEXAS TAX CODE, CREATING TAX INCREMENT FINANCING REINVESTMENT ZONE NUMBER TWO, CITY OF MIDLAND, TEXAS **(DISTRICT: 2 & 3) (COMMUNITY SERVICES)**

Deputy City Secretary Jan Hamilton read the caption of Ordinance No. 10448.

Natalie Moore, TIRZ Consultant with David Pettit Economic Development LLC., provided a brief history of the Midland Downtown Tax Increment Reinvestment Zone (TIRZ) and is proposing TIRZ number two. Ms. Moore reviewed the creation process which Chapter 311 outlines. Ms. Moore reported on Development Projects, Projected Tax Revenue and Projected Annual Tax Revenue. Ms. Moore also proposed project cost for public utilities, parking and transit improvements, street and intersection improvements, pedestrian enhancements, open space, parks and recreation, economic development grants and administrative cost.

DRAFT

Ms. Moore reported the proposed next steps will be the creation of an ordinance. There will also need to be a TIRZ Board consisting of 7 members appointed by the City Council which may include the Mayor and members of Council.

City Manager Tommy Gonzalez reported there have been discussions with the Hospital District, Midland County, Midland College and a meeting has been set up with MISD.

Ms. Moore also reported what it would look like if other taxing entities joined the TIRZ and future revenues.

City Manager Tommy Gonzalez reported this is also in conjunction with the Overlay District.

Council Member Ladd clarified that the City may have a second TIRZ if necessary to improve other areas. Council Member Ladd also thanked staff for the work they have done to report on this information.

Mayor Blong opened the public hearing at 2:32 p.m. There being no one present wishing to speak, the public hearing was immediately closed.

Jack Ladd moved to approve the first of two readings of Ordinance No. 10448; seconded by John Norman.

The motion passed by the following vote:
AYE: Stretcher Burkes, Corrales, Poole, Blong, Dufford, Ladd, Norman
NAY: None
ABSTAIN: None
ABSENT: None

27. 10449 – AN ORDINANCE VACATING AND ABANDONING A 0.138-ACRE PORTION OF ALLEY RIGHT-OF-WAY, LOCATED WITHIN BLOCK 127, SOUTHERN ADDITION, CITY AND COUNTY OF MIDLAND, TEXAS (GENERALLY LOCATED SOUTH OF EAST KENTUCKY AVENUE, APPROXIMATELY 100 FEET WEST OF SOUTH LAMESA ROAD); ADOPTING THE APPRAISAL BY THE ASSISTANT CITY MANAGER OF $12,000.00; RETAINING A NONEXCLUSIVE UTILITY EASEMENT; AND ORDERING RECORDATION BY THE CITY SECRETARY **(DISTRICT 2) (DEVELOPMENT SERVICES)**

Deputy City Secretary Jan Hamilton read the caption of Ordinance No. 10449.

Mayor Blong opened the public hearing at 2:33 p.m. There being no one present wishing to speak, the public hearing was immediately closed.

John Norman moved to approve the first of two readings of Ordinance No. 10449; seconded by Jack Ladd.

The motion passed by the following vote:
AYE: Stretcher Burkes, Corrales, Poole, Blong, Dufford, Ladd, Norman
NAY: None

DRAFT

ABSTAIN: None
ABSENT: None

28. 10450 – AN ORDINANCE GRANTING A SPECIAL EXCEPTION FOR LOTS 1 THROUGH 6 AND A 0.138-ACRE TRACT OF LAND, BLOCK 127, SOUTHERN ADDITION, CITY AND COUNTY OF MIDLAND, TEXAS (GENERALLY LOCATED AT THE SOUTHWEST CORNER OF THE INTERSECTION OF SOUTH LAMESA ROAD AND EAST KENTUCKY AVENUE), BY PERMITTING A METAL SCREENING FENCE IN LIEU OF A MASONRY SCREENING WALL; CONTAINING A CUMULATIVE CLAUSE; CONTAINING A SAVINGS AND SEVERABILITY CLAUSE; PROVIDING FOR A MAXIMUM PENALTY OR FINE OF TWO THOUSAND DOLLARS ($2,000.00); ORDERING RECORDATION BY THE CITY SECRETARY IN THE DEED RECORDS OF MIDLAND COUNTY, TEXAS; AND ORDERING PUBLICATION **(DISTRICT 2) (DEVELOPMENT SERVICES)**

Deputy City Secretary Jan Hamilton read the caption of Ordinance No. 10450.

Community Services Director Cristina Burns gave a brief overview of the item noting it is related to item 27 that was just approved. The applicant would like a special exception to the required masonry fence so they don't have to build another fence. They have worked with the neighbors on this.

Mayor Blong opened the public hearing at 2:36 p.m. There being no one present wishing to speak, the public hearing was immediately closed.

John Norman moved to approve the first of two readings of Ordinance No. 10450; seconded by Scott Dufford.

The motion passed by the following vote:
AYE: Stretcher Burkes, Corrales, Poole, Blong, Dufford, Ladd, Norman
NAY: None
ABSTAIN: None
ABSENT: None

29. 10451 – AN ORDINANCE GRANTING A SPECIAL EXCEPTION FOR LOT 2, BLOCK 3, MELODY ACRES, SECTION 4, CITY AND COUNTY OF MIDLAND, TEXAS (GENERALLY LOCATED ON THE NORTH SIDE OF TANFORAN AVENUE, APPROXIMATELY 200 FEET EAST OF ORIOLE DRIVE), BY PERMITTING A REDUCED MINIMUM LOT AREA; CONTAINING A CUMULATIVE CLAUSE; CONTAINING A SAVINGS AND SEVERABILITY CLAUSE; PROVIDING FOR A MAXIMUM PENALTY OR FINE OF TWO THOUSAND DOLLARS ($2,000.00); ORDERING RECORDATION BY THE CITY SECRETARY IN THE DEED RECORDS OF MIDLAND COUNTY, TEXAS; AND ORDERING PUBLICATION **(DISTRICT 4) (DEVELOPMENT SERVICES)** (DEFERRED FROM SEPTEMBER 26, 2023)

Deputy City Secretary Jan Hamilton read the caption of Ordinance No. 10451.

Community Services Director Cristina Burns gave a brief overview of the item noting this request is to change lot size. They would like to replat one lot into two in an AE District which requires a minimum of two acres. Staff has received several letters of rejection and is

DRAFT

recommending denial.

Mayor Blong opened the public hearing at 1:04 p.m.

Don Neil, 4414 Tanforan, spoke in opposition of this item.

Shane Hoffman, 4709 Woodbar Court, owner of the property in question, spoke with several neighbors who didn't have a problem with what he would like to do with his property.

There being no one else wishing to speak, the public hearing was closed at 1:11 p.m.

Robin Poole moved to approve the first of two readings of Ordinance No. 10451.; seconded by Dan Corrales.

The motion passed by the following vote:
AYE: Stretcher Burkes, Corrales, Poole, Blong, Dufford, Norman
NAY: None
ABSTAIN: Ladd
ABSENT: None

**THIS ITEM PASSED BY A SUPERMAJORITY WHICH WAS NEEDED.**

30. 10452 – AN ORDINANCE VACATING AND ABANDONING A 0.42-ACRE PORTION OF NORTH N STREET RIGHT-OF WAY AND A 0.13-ACRE PORTION OF ALLEY RIGHT-OF-WAY, EACH LOCATED ADJACENT TO OR WITHIN BLOCK 11, HIGHLAND PARK ADDITION, CITY AND COUNTY OF MIDLAND, TEXAS (GENERALLY LOCATED NORTH OF THE INTERSECTION OF NORTH N STREET AND WEST ILLINOIS AVENUE); ADOPTING THE APPRAISAL BY THE ASSISTANT CITY MANAGER OF $75,592.00; RETAINING A NONEXCLUSIVE UTILITY EASEMENT; AND ORDERING RECORDATION BY THE CITY SECRETARY **(DISTRICT 3) (DEVELOPMENT SERVICES)**

Deputy City Secretary Jan Hamilton read the caption of Ordinance No. 10452.

Mayor Blong opened the public hearing at 2:37 p.m. There being no one present wishing to speak, the public hearing was immediately closed.

Scott Dufford moved to approve the first of two readings of Ordinance No. 10452; seconded by Dan Corrales.

The motion passed by the following vote:

| **Council Members absent:** | None |
| **Staff members present:** | City Manager Tommy Gonzalez, City Attorney John Ohnemiller, Deputy City Manager Morris Williams Jr., Assistant City Manager Tina Jauz, Assistant City Manager Jose Ortiz |

The meeting was called to order at 9:20 a.m.

**SPECIAL SESSION**

1. The City Council will meet with City Staff in a workshop to discuss and consider City governance, management, operations, policies, protocols, strategic planning, and priorities. The City Council may discuss issues related to streets, roads, and water and sewer infrastructure; water supply and resources; parks and recreation; community services; public health and safety; land use and development; economic development; personnel; airports; technology; solid waste management; real property acquisition and disposition; and oil and gas development and regulation. The City Council may develop and prioritize actions and goals in connection with the foregoing matters.

   Mayor Blong opened the meeting with a statement on “what is politics”.

   Dr. Mac McGuire, CEO, Quality Texas, and Philip Huntley, Chief Transformation Officer for the City of Midland both introduced themselves.

   Dr. McGuire, City Manager Tommy Gonzalez and Mr. Huntley made up the Presentation team.

   City Manager Tommy Gonzalez reported on succession planning & implementation, animal services restructuring, water billing restructuring & action plan, focus groups for customer service, reestablishing the TIRZ, and the one-stop-shop.

   Council Member Corrales would like to revisit the 5 year plan at least yearly.

DRAFT

Dr. McGuire discussed the Value of Strategic Planning and High-performance workforce training such as Balridge Organizational Leadership Examiner Training, Baldridge Leadership Development Seminar and TMAC Lean Six Sigma.

Phillip Huntley reported on best practices in several areas that would provide improvements in the overall function of the organization.

Council moved to approve the City of Midland Strategic Plan for 2024 through 2029 in it's entirety which is listed below:

**Core Values:**
• **Commitment**: Duty to the public good.
• **Engagement**: Foster partnerships and collaboration.
• **Excellence**: Practice continuous improvement.
• **Innovation**: Embrace creativity and cutting-edge solutions.
• **Integrity**: Operate with transparency and accountability.
• **Inclusivity**: Ensure all voices are heard and valued.

**Key Focus Areas:**
**Communication**
**Customer Service**
**Economic Development**
**Fiscal Responsibility & Accountability**
**High-Performing City Team**
**Legislation**
**Quality of Place**
**Technology Improvements**

**Strategic Priorities:**
**1. Strong Economy with More Quality Jobs**
Goals:
• **Increase the Midland Sales Tax Base**: Develop strategies to expand the tax base by attracting businesses and supporting local commerce.
• **Enhance visitor revenue opportunities**: Boost tourism through marketing and infrastructure improvements.
• **Continue Downtown and West Midland Redevelopment**: Promote revitalization efforts for a vibrant downtown.
• **Nurture Development Districts**: Establish key action plans honed to enhance Development Districts.
• **Grow the core business of air transportation**: Develop and transform the Midland airport system.
• **Diversify Midland's Economy**: Support initiatives that diversify the local economy and enhance resilience.
• **Expand opportunities and programming for general and small business**: Foster the growth, retention, and expansion of local small businesses as well as business in general.

DRAFT

• **Improve Speed to Market for citizens, builders, developers, and contractors**: Reduce wait times for permit review/approval and inspection process of permitted work.
• **Establish our community as a premier destination for retail and entertainment**: Offer unique and compelling experiences that draw visitors, ultimately driving economic growth and community vibrancy, while increasing tourism and business development.

**2. Set the Standard for a Safe and Secure City**
Goals:
• **Be the safest city in West Texas**: Enhance public safety programs.
• **Improve pedestrian and motorist safety**: Invest in traffic management and infrastructure.
• **Implement effective code enforcement strategies**: Address nuisances to improve overall health and safety.
• **Revitalize neighborhoods**: Utilize best practices to support the redevelopment of neighborhoods.
• **Enhance animal services**: Ensure the welfare of pets and wildlife in the city.
• **Grow and retain public safety resources**: Expand law enforcement presence and fire reduction & prevention programs while reducing attrition.

**3. Quality of Life and Place**
Goals:
• **Enhance Community Engagement**: Champion innovative recreational, educational, and cultural programs that enrich residents' lives in partnership with the business community.
• **Foster relationships with foundations and outside businesses**: Collaborate to create world-class facilities and amenities.
• **Create an attractive and inclusive living environment**: Develop and enhance live, work, and play opportunities for our citizens.
• **Establish beautification programs**: Implement initiatives to make the community clean and bright.
• **Nurture and promote a healthy community**: Increase healthy community living and education opportunities for citizens of all ages.
• **Build the best parks system in our region**: Offer diverse, accessible, and enjoyable green spaces, tournament ready ball fields, safe playgrounds, and unique recreational opportunities that enhance the quality of life/quality of place for our community.

**4. Transparent & Consistent Communication**
Goals:
• **Set a climate of respect, collaboration, and team spirit**: Cultivate a culture of openness and respect.
• **Enhance communication efficiency and effectiveness**: Leverage and expand the use of technology to facilitate the exchange of information.
• **Enhance internal communication and employee engagement**: Strengthen information flow and collaboration among city staff.
• **Advance two-way communication of key messages**: Engage effectively with external stakeholders; foster community engagement.

DRAFT

• **Strengthen messaging opportunities through various media outlets**: Communicate the city's achievements and initiatives.

**5. Provide Sound Governance & Fiscal Management**
Goals:
• **Recruit and retain a skilled and diverse workforce**: Invest in talent and diversity; grow our local pipeline of skilled employees.
• **Enhance Citizen Experience**: Improve employee working conditions to better serve citizens.
• **Hone Public Servant Proficiency**: Cultivate a culture of professional growth, skilled mastery, and information exchange.
• **Implement cutting-edge practices**: Harness automation and Artificial Intelligence technology for efficient resource utilization.
• **Promote a well-balanced customer service philosophy**: Consistently deliver excellent service to residents.
• **Deliver services timely and efficiently**: Prioritize continuous improvement.
• **Ensure continued financial stability and accountability**: Maintain financial transparency.
• **Deliver effective and efficient processes**: Maximize value in procurement.
• **Ensure reliability and safety**: Maintain existing assets and develop new city asset opportunities, including parks and other facilities with a standard of excellence.
• **Create a work environment that supports bleeding-edge practices**: Encourage bleeding-edge practice that then cultivates an environment where employees can learn from their experiences and improve processes; thus, becoming a learning organization.

**6. Strengthen and Sustain our Infrastructure**
Goals:
• **Provide reliable and sustainable utilities**: Guarantee water supply and distribution systems security and longevity.
• **Enhance infrastructure for economic growth**: Improve competitiveness through infrastructure investments that includes collaboration with neighboring jurisdictions and exemplary peer agencies.
• **Streamline and consolidate City Facilities**: Create synergy for improved services.
• **Standardize infrastructure processes across the city**: Ensure consistency, timeliness, and accountability in infrastructure development.
• **Implement a funding stream for infrastructure**: Establish reliable funding for continual improvements.
• **Strategize for and monitor City Growth**: Develop proactive responses to growth rather than reactive.
• **Develop and Implement Comprehensive Road Planning and Maintenance Initiatives**: Ensure safe and maintained roads for existing and new developing areas and main thoroughfares.

**Conclusion**: The City of Midland's strategic plan is a roadmap for creating a prosperous and vibrant community. Together, we will achieve these goals and continue building a city that we are proud to call home.

DRAFT

**Vision Statement**:
The City of Midland will be the premier and safest city in West Texas by providing world-class municipal services through operational excellence and a culture of innovation.

**Mission Statement**:
Deliver exceptional services and promote a high quality of life and place for ALL our citizens.

**Guiding Principles: I-FORCE**
- **Integrity**
- **Financial Stewardship**
- **Outstanding Service**
- **Respect**
- **Collaboration**
- **Excellence**

**Slogan and Logo:**
**Feel (Crossed-Out)> "Be The Energy"**

DRAFT

# City Council Meeting

**Item Number:** 5

**Meeting Date:** November 14, 2023

**To:** City Council / City Manager

**From:** Christy Weakland, Director

**Subject:** RESOLUTION CASTING THE CITY OF MIDLAND'S VOTES FOR DIRECTORS OF THE MIDLAND CENTRAL APPRAISAL DISTRICT FOR ROBERT MCNAUGHTON; AND DIRECTING THE CITY MANAGER OR THE CITY MANAGER'S DESIGNEE TO FILE THE APPROPRIATE DOCUMENTS (DISTRICT: NONE) (FINANCE)

---

**Purpose:**

This is to determine how the City of Midland would like to cast their votes for the MCAD Board of Directors.

**Recommended City Council Action:**

Approve

**Fiscal Impact:**

None.

**Discussion:**

Elections for MCAD Board of Directors occurs biannually on odd numbered years. Midland City Council appointed Robert McNaughton as their nominee for the Board of Directors for 2024-2025. The City of Midland has been provided 524 out of 5,000 votes, based on the tax levy dollars managed by MCAD. The Council must review the ballot and determine how to distribute the votes among the five candidates.

RE: Election of Board of Directors for Midland Central Appraisal District

Dear Mayor Blong:

Enclosed please find an Official Ballot and a (sample) Resolution for the election of the Board of Director members for the Midland Central Appraisal District.

Each voting unit must cast its vote by written Resolution and submit it to the Chief Appraiser before December 15, 2023. The unit may cast its votes among any number of candidates. A voting unit must cast its votes for a person nominated and named on the ballot. There is no provision for write-in candidates. The five individuals with the most votes will be elected to the Board of Directors.

If you have any questions, please do not hesitate to contact me. Thank you.

Respectfully,

Jerry Bundick, RPA,RTA
Chief Appraiser

cc: Mr. Tommy Gonzalez, City Manager
Ms. Christy Weakland, Director of Finance

# City Council Meeting

**Item Number:** 6

**Meeting Date:** November 14, 2023

**To:** City Council / City Manager

**From:** Erika Martinez, Manager, Purchasing

**Subject:** RESOLUTION AUTHORIZING THE PURCHASE OF A TWO YEAR RENEWAL OF MAINTENANCE FOR THE EXISTING FIREWALL DEVICES AND ANTIVIRUS SOFTWARE THROUGH THE TEXAS DEPARTMENT OF INFORMATION RESOURCES FROM CDW GOVERNMENT LLC AT A TOTAL COST OF $248,803.28 (DISTRICT: NONE) (GENERAL SERVICES)

---

**Purpose:**

Resolution approving the purchasing of two (2) year renewal of the Security Automation Platform License and Maintenance for the Information Technology Systems Department from CDW Government LLC, through the Texas Department of Information Resources (DIR) contract DIR-TSO-4315at a total cost of $248,803.28.

**Recommended City Council Action:**

Approve

**Fiscal Impact:**

Funding is available in the Technology Fund 2024 operating budget.

**Discussion:**

Staff recommends purchasing of two (2) year renewal of the Security Automation Platform License and Maintenance for the Information Technology Systems Department from CDW Government LLC, through the Texas Department of Information Resources (DIR) contract DIR-TSO-4315. We are members of this cooperative and Subchapter F, Section 271.102 of the Local Government Code provides that a local government may participate in a cooperative purchasing program and that purchasing goods or services under Subchapter F satisfies any state law requiring the local government to seek competitive bids for those purchases. Please see the attached memo from Jennifer Frescaz, Chief Information Officer, for additional information.

Therefore, please consider a resolution approving the purchase of two (2) year renewal of the Security Automation Platform License and Maintenance for the Information Technology Systems Department from CDW Government LLC of Vernon Hills, Illinois through the Texas Department of Information Resources (DIR) at a total cost of $248,803.28.

Morris Williams Jr.

City Manager's Office

# City Council Agenda Item

**DATE:** **October 30, 2023**

**TO:** Erika Munoz, Purchasing Manager

**FROM:** Jennifer Frescaz, Chief Information Officer

**SUBJECT:** Consider a resolution to approve the purchase of a two-year renewal of the Security Automation Platform License and Maintenance for $248,803.28 from CDW-Government LLC via DIR-TSO-4315.

---

**Purpose:**
Consider a resolution to approve the purchase of a two-year renewal of the Security Automation Platform License and Maintenance for $248,803.28 from CDW-Government LLC via DIR-TSO-4315.

**Discussion:**
We are requesting approval for the renewal of our existing Security Automation Platform License and Maintenance for the next two years. This platform plays a vital role in our cybersecurity operations and has consistently proven its value. It automate complex security tasks, resulting in a significant reduction in monthly tickets, enhanced incident response efficiency, and cost-effectiveness.

The user-friendly interface of the automation platform ensures that our cybersecurity team can respond swiftly to security incidents, contributing to safeguarding the operational continuity of the City of Midland. Its continued use is critical for our ongoing commitment to maintaining a secure environment.

The cost of the license and maintenance renewal is budgeted in the Technology Fund. The total cost of the two-year renewal is $248,803.28.

**RESOLUTION NO. _____**

**RESOLUTION AUTHORIZING THE PURCHASE OF A TWO YEAR RENEWAL OF MAINTENANCE FOR THE EXISTING FIREWALL DEVICES AND ANTIVIRUS SOFTWARE THROUGH THE TEXAS DEPARTMENT OF INFORMATION RESOURCES FROM CDW GOVERNMENT LLC AT A TOTAL COST OF $248,803.28**

**WHEREAS**, the Texas Department of Information Resources ("DIR") is a cooperative program in which the City participates on purchases; and

**WHEREAS**, CDW Government LLC has agreed to provide a two year renewal of maintenance for the existing firewall devices and antivirus software through the DIR at a total cost of $248,803.28; and

**WHEREAS**, the City Council finds the price proposed for the purchase of a two year renewal of maintenance for the existing firewall devices and antivirus software through the DIR to be fair and reasonable; and

**WHEREAS**, the City Council finds it to be in the public interest to authorize the purchase of a two year renewal of maintenance for the existing firewall devices and antivirus software through the DIR from CDW Government LLC;

**NOW, THEREFORE, BE IT RESOLVED BY THE CITY COUNCIL OF THE CITY OF MIDLAND, TEXAS:**

**SECTION ONE.** That the City Manager is hereby authorized and directed to purchase of a two year renewal of maintenance for the existing firewall devices and antivirus software through the DIR from CDW Government LLC at a total cost of $248,803.28.

**SECTION TWO.** That funding shall be available in the Technology Fund 2024 operating budget.

**SECTION THREE.** That the City Comptroller is hereby authorized and directed to pay CDW Government LLC upon receipt of proper invoices approved by the City Manager.

On motion of Council member _____, seconded by Council member _____, the above and foregoing resolution was adopted by the City Council of the

City of Midland at a regular meeting on the _____ day of _____, A.D., 2023, by the following vote:

Monthly payment based on 36 month lease. Other terms and options are available. Contact your Account Manager for details. Payment quoted is subject to change.

Why finance?

• Lower Upfront Costs. Get the products you need without impacting cash flow. Preserve your working capital and existing credit line.

• Flexible Payment Terms. 100% financing with no money down, payment deferrals and payment schedules that match your company's business cycles.

• Predictable, Low Monthly Payments. Pay over time. Lease payments are fixed and can be tailored to your budget levels or revenue streams.

• Technology Refresh. Keep current technology with minimal financial impact or risk. Add-on or upgrade during the lease term and choose to return or purchase the equipment at end of lease.

• Bundle Costs. You can combine hardware, software, and services into a single transaction and pay for your software licenses over time! We know your challenges and understand the need for flexibility.

General Terms and Conditions:

This quote is not legally binding and is for discussion purposes only. The rates are estimate only and are based on a collection of industry data from numerous sources. All rates and financial quotes are subject to final review, approval, and documentation by our leasing partners. Payments above exclude all applicable taxes. Financing is subject to credit approval and review of final equipment and services configuration. Fair Market Value leases are structured with the assumption that the equipment has a residual value at the end of the lease term.

# City Council Meeting

**Item Number:** 7

**Meeting Date:** November 14, 2023

**To:** City Council / City Manager

**From:** Erika Martinez, Manager, Purchasing

**Subject:** RESOLUTION AUTHORIZING PURCHASE OF A KOMATSU EXCAVATOR AND ASSOCIATED ATTACHMENTS FROM KIRBY-SMITH MACHINERY, INC., THROUGH BUYBOARD FOR A TOTAL COST OF $396,151.30 (DISTRICT: NONE) (GENERAL SERVICES)

---

**Purpose:**

Resolution for the purchase of one (1) Komatsu Excavator from Kirby Smith Machinery through Buyboard contract 687-22 for a total cost of $396,151.30 for the Transportation Division for the Garage Division.

**Recommended City Council Action:**

Approve

**Fiscal Impact:**

Funding is available in the General Fund 2024 operating budget.

**Discussion:**

Staff is recommending the purchase of one (1) Komatsu Excavator from Kirby Smith Machinery through Buyboard contract 687-22. We are members of this cooperative and Subchapter F, Section 271.102 of the Local Government Code provides that a local government may participate in a cooperative purchasing program and that purchasing goods or services under Subchapter F satisfies any state law requiring the local government to seek competitive bids for those purchases. This will be an addition to the fleet. Please see attached memo from Manuel Salinas, Garage Superintendent, for additional information.

Therefore, please consider a resolution approving the purchase of one (1) Komatsu Excavator from Kirby Smith Machinery of Oklahoma City, OK through Buyboard contract 687-22 for a total

cost of $396,151.30 .

Morris Williams Jr.

# City Council Meeting

**Item Number:** 8

**Meeting Date:** November 14, 2023

**To:** City Council / City Manager

**From:** Erika Martinez, Manager, Purchasing

**Subject:** RESOLUTION AUTHORIZING THE PURCHASE OF A POWER PAVER, POWER CURBER, AND ASSOCIATED EQUIPMENT FROM CORNWELL CAPITAL II DBA POWER CURBERS COMPANIES LLC THROUGH THE EQUALIS GROUP PURCHASING PROGRAM FOR A TOTAL COST OF $990,650.00 (DISTRICT: NONE) (GENERAL SERVICES)

---

**Purpose:**

Resolution for the purchase of one (1) power paver and one (1) power curber from Cornwell Capital II LLC dba Power Curbers Companies LLC through Equalis Group contract #R101103A for a total cost of $990,650.00 for the Transportation Division for the Garage Division.

**Recommended City Council Action:**

Approve

**Fiscal Impact:**

Funding is available in the General Fund 2024 operating budget.

**Discussion:**

Staff is recommending the purchase of one (1) power paver and one (1) power curber from Cornwell Capital II LLC dba Power Curbers Companies LLC through Equalis Group contract #R101103A. We are members of this cooperative and Subchapter F, Section 271.102 of the Local Government Code provides that a local government may participate in a cooperative purchasing program and that purchasing goods or services under Subchapter F satisfies any state law requiring the local government to seek competitive bids for those purchases. This will be an addition to the fleet. Please see attached memo from Manuel Salinas, Garage Superintendent, for additional information.

Therefore, please consider a resolution approving the purchase of one (1) power paver and one (1) power curber from Cornwell Capital II LLC dba Power Curbers Companies LLC through Equalis Group contract #R101103A for a total cost of $990,650.00.

Morris Williams Jr.

City Manager's Office

# Fleet Services Division

**INTEROFFICE MEMORANDUM**

**TO: Regina Stephenson**

**FROM: Manuel Eloy Salinas**

**SUBJECT: Equalis Group: PaveConnect Contract #R101103A**

**DATE: 10/12/2023**

**Fleet Services is requesting the purchase of the following equipment which will be new additions for the Transportation Department.**

**(1) one 2023 Power Pavers SF-2700 Concrete Paver, budgeted amount for FY2024 is $706,640. The purchasing amount offered is $642,400.**

**(1) one 2023 Power Curbers 5700-D Curb & Gutter Paver, budgeted amount for FY2024 is $383,100. The purchasing amount being offered is $348,250.**

**Budgeted amount for FY2024 for these 2 items is $1,089,740, the purchasing amount offered is $990,650 through Equalis Group: PaveConnect Contract #R101103A.**

**Sincerely,**

**Manuel Eloy Salinas**

**City of Midland Superintendent**

**RESOLUTION NO. _____**

**RESOLUTION AUTHORIZING THE PURCHASE OF A POWER PAVER, POWER CURBER, AND ASSOCIATED EQUIPMENT FROM CORNWELL CAPITAL II DBA POWER CURBERS COMPANIES LLC THROUGH THE EQUALIS GROUP PURCHASING PROGRAM FOR A TOTAL COST OF $990,650.00**

**WHEREAS**, the Equalis Group Purchasing Program is a cooperative purchasing agency with which the City participates with on purchases through a cooperative purchasing program in accordance with TEX. LOC. GOV'T CODE § 271.102; and

**WHEREAS**, Cornwell Capital II LLC dba Power Curbers Companies LLC submitted a total cost to the City of $990,650.00 for the purchase of a power paver, power curber, and associated equipment through the Equalis Group Purchasing Program as shown on the quote attached hereto as Exhibit A, which is incorporated herein for all purposes; and

**WHEREAS**, the City Council finds the price proposed for the purchase of a power paver, power curber, and associated equipment to be fair and reasonable; and

**WHEREAS**, the City Council finds it to be in the public interest to authorize the purchase of a power paver, power curber, and associated equipment from Cornwell Capital II LLC dba Power Curbers Companies LLC through the Equalis Group Purchasing Program;

**NOW, THEREFORE, BE IT RESOLVED BY THE CITY COUNCIL OF THE CITY OF MIDLAND, TEXAS:**

**SECTION ONE**. That the City Manager is hereby authorized and directed to purchase of a power paver, power curber, and associated equipment from Cornwell Capital II LLC dba Power Curbers Companies LLC through the Equalis Group Purchasing Program for a total cost of $990,650.00.

**SECTION TWO**. That the City Comptroller is hereby authorized and directed to pay Cornwell Capital II LLC dba Power Curbers Companies LLC $990,650.00 for a power paver, power curber, and associated equipment from funds available in the General Fund 2024 operating budget upon receipt of proper invoices or statements approved by the City

Manager.

On motion of Council member _____, seconded by Council member _____, the above and foregoing resolution was adopted by the City Council of the City of Midland at a regular meeting on the _____ day of _____, A.D., 2023, by the following vote:

Midland SF-2700 10.9.23

Exhibit A

# 2023 SF-2700

**Base width of 12'**

(optional extensions to 32 ' listed below)

Cummins QSB6.7 water cooled turbo charged diesel engine,Tier 4F, 220 HP @ 2200 RPM,
12 volt electrical system.
Two 12 foot long Berco tracks, 12 inch wide steel pads, torque hub drive
Containment track noses 60" long, foldable.
Sixteen ( 16 ) hydraulic vibrator circuits with individual variable controls.
Twelve ( 12 ) hydraulic angled vibrators, 2.25" diameter with hydraulic lift, and baffled vibrator bar.
Split reversible hard surfaced auger system, individual controlled, 16" diameter.
Double tamper bar system staggered, with speed control, depth adjustable, eccentric cams.
Hydraulic controlled crownable finished pan system, .375" thick x 46" with adjustable edge overbuild.
Hydraulic controlled strike-off system crownable, .375" thick with adjustable height spreader beam.
Side forms 32" high, for 0"– 16" paving depth. Side form connected to the tracks for variable depth
paving on the go.
Rear mounted 18" wide walkway, sectionalized, with burlap drag hooks.
Four ( 4 ) hydraulic grade cylinders with 24" lift.
Proportional electronic sensor controlled grade, 4 sensors, for dual string-line, single string-line with cross slope
ensors, lock to grade or 3-D stringless with purchase of third party system and kit listed below.
Proportional electronic sensor controlled steering, 1 sensor, left or right side capability.
Synchronized start/stop switch for all paving functions.
Safety horn for operator
Emergency stop switches
Pressure washer system, 4 gpm @ 2000 psi, 50 ft hose with dual spray wand tip.
Two 110 gal plastic water tanks.
Hydraulic replacement filters.
Control console with umbrella.
Hydraulic sid from lift 4" lift
Pan Crown Lineal Indicator
Start-up Training for 3 days (Monday & Friday for travel include all expenses.)
Auto Reverse steering sensor one sensor
**WARRANTY:** 12 months. (2 years or 2000 hours on Cummins engine)

**STANDARD MACHINE** **422,500**

**OPTIONAL EQUIPMENT:** **30,400**

Urethane pads in lieu of steel pads both tracks ( 12' track )
Hydraulic Sideform Nose Lift.
1 set of 2 32" tall Loading Ramps

**OPTIONAL INDIVIDUAL EXTENSION KITS:** **70,500**

Spreader Beam Extension Kit required for widths over 18 feet
6 inch left side paving extension
6 inch right side paving extension
12 inch left side paving kit extension.
12 inch right side paving kit extension.
24 inch left side paving kit extension.
24 inch right side paving kit extension.
48 inch left side paving extension
48 inch right side paving extension
32 ft Extension kit consisting of 4ft left and right extensions through the machine, plus additional spreader components and hoses required for widths over 27ft.
(Does not include additional vibrators.)

**VIBRATORS:** **25,800**

12 Additional Hydraulic Vibrator, angled, 2500# rotor, 20ft hoses. ( @ 1966)
2 additional Vibrator Control Manifold, 4 controls with fittings.

**BAR INSERTERS** **21,900**

Hydraulic Side Bar Inserter for LH and RH (Includes LH & RH Trail Forms)
Center Bar Inserter for 30" to 36" (76.20-91.44 cm) bars, with activating wheel, bar basket and safety rail.

**FINISHING** **54,600**

Final Finisher
Water Misting System 12ft to 27ft (Requires pressure washer pump.)
Work bridge 12ft. - 32ft. Swivel Wheels Non Powered

**MOLDS** **4,000**

2 Curb Mold, LH and RH, must fit into 12 inch wide x 8 inch high dimensions.
Note: Consult factory for different curb dimensions.

**STRINGLINE** **2,700**

String line package 5000 ft (1.52 km) of string,200 stakes, 200 rods, and 200 line rod holder brackets.
2 String line tensioning winch.

**Midland SF-2700 23.2.23** **Initials** _____

**GPS/3D PACKAGE** 5,000

GPS/3-D Controls compatibility kit which includes reciever masts, power conditioner and wiring to connect 3-D control system.

**GPS or 3D control systems are priced seperately from the slipform machine. Consult the manufacturing company of the GPS/3D system for pricing

**The SF 1700 is validated on Top Con, Leica and Trimble Systems**

**SPARE PARTS KIT** 5,000

1 additional vibrator complete + Spare parts kit SP-27001-LE

## 2023 POWER CURBERS 5700-D

**STANDARD EQUIPMENT**

- SlipSmart electronic over hydraulic control for grade, forward and reverse steering, and slope. For automatic stringline control. Features auto slope, cruise control, and 3D readiness.
- Power Curbers ConnectSmart telematics system, for remote "visibility" of your machine.
- Synchronized on/off control for vibrators and crawlers.
- 42" carbide tooth fine trimmer, 21" diameter with spreader auger. 16" vertical hydraulic adjustment; 80" lateral hydraulic adjustment.
- Three Berco crawler tracks with 12" wide steel crawler pads; planetary gear reduction.
- 36" lift cylinders on elevation adjustment posts, with "all up" control.
- Hydraulic auger conveyor with torque hub drive; cast flighting; 12' long.
- 6 hydraulic vibrator circuits with electronic proportional controls and master scaling.
- 2 hydraulic vibrators with hangers.
- Right rear post has 22" of hydraulic side shift.
- 132-gallon stainless steel water tank with 2000 PSI high-pressure washer and adjustable spray nozzle.
- Hydraulically adjustable offset mold mount with 16" vertical hydraulic adjustment and 24" horizontal adjustment.
- One curb and gutter mold up to 32" wide.
- One Universal hopper.
- Safety horn for operator and chute man.
- LED light kit, backup alarm, and five emergency stop switches.
- Bimini Top
- Fuel reservoir: 66 gallons.
- Hydraulic tank capacity: 50 gallons.
- Operating weight: 24,700 pounds.
- Cummins QSB4.5-130C Tier 4F diesel engine, turbo CAC, 130 hp at 2400 rpm (97kW).
- **Warranty** – Machine = 1 year or 1000 hours. Engine = 2 years or 2000 hours by Cummins.

**OPTIONAL EQUIPMENT** (included in price on page 1)

- 3D/GPS package - to pour without stringline with a machine control system from Topcon, Leica, or Trimble (sold separately). Includes All-crawler steering, in lieu of standard front steering & 3D/GPS Controls. Compatibility kit which includes receiver masts, power conditioner, and wiring to connect 3D control system.
- Quick connect mold mounting, in lieu of standard mold mount
- Hydraulic lock for mold offset
- Hydraulic front grade sensor control - operator controlled
- D-Rings for alternative chain-down pattern (see manual for recommended chaining)
- Urethane crawler pads, in lieu of standard steel grouser pads (set of 3)
- 2 Sensor ski and skate combo on grade arm assembly, + 2 sensor jack extensions.
- Stringline kit with 5000' of string and 200 stakes, rods, and clamps + radius kit SL-208
- Additional Vibrator w/hanger – 2 additional sensors – extra curly cord – Hopper casket.
- Start-up Training for 3 days (Monday & Friday for travel include all expenses.)

**To:** City Council / City Manager

**From:** Erika Martinez, Manager, Purchasing

**Subject:** RESOLUTION APPROVING THE PURCHASE OF ONE (1) JOHN DEERE 6110M CAB TRACTOR, ONE (1) JOHN DEERE 1585 TERRAIN CUT COMMERCIAL FRONT MOWER, AND ONE (1) JOHN DEERE 72-INCH 7-IRON PRO COMMERCIAL SIDE MOWER FROM DEERE & COMPANY THROUGH SOURCEWELL FOR A TOTAL COST OF $209,887.38 (DISTRICT: NONE) (GENERAL SERVICES)

---

**Purpose:**

Resolution for the purchase of one (1) Cab Tractor with Heavy Duty Cutter, one (1) Terrain Cut, and one (1) 7-Iron Pro Deck from Deere & Company through Sourcewell contract 110719-JDC for a total cost of $209,887.38 for the Airport Airpark Division for the Garage Division.

**Recommended City Council Action:**

Approve

**Fiscal Impact:**

Funding is available in the Airport Fund 2024 operating budget.

**Discussion:**

Staff is recommending the purchase of one (1) Cab Tractor with Heavy Duty Cutter, one (1) Terrain Cut, and one (1) 7-Iron Pro Deck from Deere & Company through Sourcewell contract 110719-JDC. We are members of this cooperative and Subchapter F, Section 271.102 of the Local Government Code provides that a local government may participate in a cooperative purchasing program and that purchasing goods or services under Subchapter F satisfies any state law requiring the local government to seek competitive bids for those purchases. This will be an addition to the fleet. Please see attached memo from Manuel Salinas, Garage Superintendent and Justine Ruff, Director of Airports, for additional information.

Therefore, please consider a resolution approving the purchase of one (1) Cab Tractor with Heavy Duty Cutter, one (1) Terrain Cut, and one (1) 7-Iron Pro Deck from Deere & Company of Cary, NC through Sourcewell contract 110719-JDC for a total cost of $209,887.38.

Morris Williams Jr.

City Manager's Office

# Fleet Services Division

**INTEROFFICE MEMORANDUM**

**TO: Regina Stephenson**

**FROM: Manuel Salinas**

**SUBJECT: Sourcewell Ag Tractors 110719-JDC (PG 1P CG 70)**

**(1) one John Deere 1585 TerrainCut, budgeted amount for FY2024 is $49,452. The purchasing amount offered is $45,410.68.**

**(1) one John Deere 72in 7-Iron Pro Deck, budgeted amount for FY2024 is $4,935. The purchasing amount offered is $5,021.83.**

**Budgeted amount for FY2024 for these 3 items is $194,586, the purchasing amount offered is $209,887.38 through Sourcewell Contract Ag Tractors 110719-JDC (PG 1P CG 70)**

**Sincerely,**

**Manuel Eloy Salinas**

**City of Midland Garage Superintendent**

**RESOLUTION NO. _____**

**RESOLUTION APPROVING THE PURCHASE OF ONE (1) JOHN DEERE 6110M CAB TRACTOR, ONE (1) JOHN DEERE 1585 TERRAIN CUT COMMERCIAL FRONT MOWER, AND ONE (1) JOHN DEERE 72-INCH 7-IRON PRO COMMERCIAL SIDE MOWER FROM DEERE & COMPANY THROUGH SOURCEWELL FOR A TOTAL COST OF $209,887.38**

**WHEREAS**, the Sourcewell is a cooperative purchasing agency with which the City participates with on purchases through a cooperative purchasing program in accordance with TEX. LOC. GOV'T CODE § 271.102; and

**WHEREAS**, Deere & Company has submitted a total proposed cost to the City of $209,887.38 for the purchase of one (1) John Deere 6100M Cab Tractor, one (1) John Deere 1585 TerrainCut Commercial Front Mower, and one (1) John Deere 72-inch 7-Iron Pro Commercial Side Mower through Sourcewell, as shown on the quote attached hereto as Exhibit A and incorporated herein for all purposes; and

**WHEREAS**, the City Council finds the price proposed by Deere & Company for said tractor and mowers to be fair and reasonable; and

**WHEREAS**, the City Council finds it to be in the public interest to purchase said tractor and mowers from Deere & Company through Sourcewell;

**NOW, THEREFORE, BE IT RESOLVED BY THE CITY COUNCIL OF THE CITY OF MIDLAND, TEXAS:**

**SECTION ONE.** That the City Manager is hereby authorized and directed to purchase one (1) John Deere 6100M Cab Tractor, one (1) John Deere 1585 TerrainCut Commercial Front Mower, and one (1) John Deere 72-inch 7-Iron Pro Commercial Side Mower from Deere & Company through Sourcewell for a total cost of $209,887.38.

**SECTION TWO.** That the City Comptroller is hereby authorized and directed to pay Deere & Company for said tractor and mowers from funds available in the Airport Fund 2024 operating budget upon receipt of proper invoices or statements approved by the City Manager.

On motion of Council member _____, seconded by Council member _____, the above and foregoing resolution was adopted by the City Council of the City of Midland at a regular meeting on the _____ day of _____, A.D., 2023, by the following vote:

**DATE:** October 03, 2023

**TO:** Justine Ruff, Director of Airports

**FROM:** Michael Carrillo, Accounting Manager

**SUBJECT:** Price Increase of the new Cab Tractor

---

We collected bids to purchase a Cab Tractor needed for the Airport's fleet of equipment during the 2023-24 fiscal year. The original bid submitted for the Cab Tractor, along with a deck (cutter attached) was $140,199.00. After checking the paperwork, we realized the bid offered for the deck portion of the Cab Tractor was for the wrong model needed. The amount of work the Airport does requires a heavier duty attachment than the deck initially proposed.

The price for the Cab Tractor and the deck we need is $159,454.87. This increase is due to bids submitted on a lesser model than the Airport requires, and also considering inflation and the natural price increase from the time of the first bid and the second.

The model of the cutter attachment on our most recent quote, SCHULTE XH1500, is a heavy-duty model and will be more sufficient in our area.

# City Council Meeting

**Item Number:** 10

**Meeting Date:** November 14, 2023

**To:** City Council / City Manager

**From:** Erika Martinez, Manager, Purchasing

**Subject:** RESOLUTION APPROVING THE PURCHASE AND UPFITTING OF THIRTY (30) CHEVROLET TAHOES AND TWO (2) CHEVROLET SILVERADO 1500 PICKUP TRUCKS FROM CALDWELL COUNTRY CHEVEROLET, LLC, THROUGH BUYBOARD AT A TOTAL COST OF $2,641,694.00 (DISTRICT: NONE) (GENERAL SERVICES)

---

**Purpose:**

Resolution for the purchase of thirty (30) Police Tahoes with upfitting and two (2) Pickups with upfitting from Caldwell Country Chevrolet, LLC through Buyboard contract 601-19 for a total cost of $2,641,694.00 for the Police Department for the Garage Division.

**Recommended City Council Action:**

Approve

**Fiscal Impact:**

Funding is available in the Garage Fund 2024 operating budget.

**Discussion:**

Staff is recommending the purchase of thirty (30) Police Tahoes with upfitting and two (2) Pickups with upfitting from Caldwell Country Chevrolet, LLC through Buyboard contract 601-19. We are members of this cooperative and Subchapter F, Section 271.102 of the Local Government Code provides that a local government may participate in a cooperative purchasing program and that purchasing goods or services under Subchapter F satisfies any state law requiring the local government to seek competitive bids for those purchases. This will be a replacement to the fleet. Please see attached memo from Manuel Salinas, Garage Superintendent, for additional information.

Therefore, please consider a resolution approving the purchase of thirty (30) Police Tahoes with upfitting and two (2) Pickups with upfitting from Caldwell Country Chevrolet, LLC of Caldwell, Texas through Buyboard contract 601-19 for a total cost of $2,641,694.00.

Morris Williams Jr.

City Manager's Office

# Fleet Services Division

**INTEROFFICE MEMORANDUM**

**TO: Regina Stephenson**

**FROM: Manuel Eloy Salinas**

**SUBJECT: Buy Board Contract #601-19 for 30 Police Tahoe's and 2 Pick Ups**

**DATE: 10/24/2023**

**Fleet Services is requesting the purchase of thirty (30) Police Tahoe's and two (2) Police Pick Ups. These thirty- two (32) units will be replacements for units that have gone beyond their useful service life. Budgeted amount for FY2024 for thirty (30) Police Package Tahoe's and two (2) Police Package Pick Ups is $2,592,000. The purchasing amount of $2,641,694 is being offered through Buy Board Contract #601-19 for thirty (30) Police Package Tahoe's, and two (2) Police Package Pick Ups from Caldwell Country.**

**Sincerely,**

**Manuel Eloy Salinas**

**City of Midland Superintendent**

**RESOLUTION NO. _____**

**RESOLUTION APPROVING THE PURCHASE AND UPFITTING OF THIRTY (30) CHEVROLET TAHOES AND TWO (2) CHEVROLET SILVERADO 1500 PICKUP TRUCKS FROM CALDWELL COUNTRY CHEVEROLET, LLC, THROUGH BUYBOARD AT A TOTAL COST OF $2,641,694.00**

**WHEREAS**, Buyboard is a cooperative purchasing agency with which the City participates with on purchases through a cooperative purchasing program in accordance with TEX. LOC. GOV'T CODE § 271.102; and

**WHEREAS**, Caldwell Country Chevrolet, LLC, has submitted a total proposed cost to the City of $2,641,694.00 for the purchase and upfitting of thirty (30) Chevrolet Tahoes and two (2) Chevrolet Silverado 1500 pickup trucks through Buyboard, as shown on the quotes attached hereto as Exhibit A and incorporated herein for all purposes; and

**WHEREAS**, the Council finds the price proposed by Caldwell Country Chevrolet, LLC, through Buyboard for the purchase and upfitting of said vehicles to be fair and reasonable; and

**WHEREAS**, the City Council finds it to be in the public interest to provide for the purchase and upfitting of said vehicles from Caldwell Country Chevrolet, LLC, through Buyboard;

**NOW, THEREFORE, BE IT RESOLVED BY THE CITY COUNCIL OF THE CITY OF MIDLAND, TEXAS:**

**SECTION ONE.** That the City Manager is hereby authorized and directed to provide for the purchase and upfitting of thirty (30) Chevrolet Tahoes and two (2) Chevrolet Silverado 1500 pickup trucks from Caldwell Country Chevrolet, LLC, through Buyboard at a total cost of $2,641,694.00.

**SECTION TWO.** That the City Comptroller is hereby authorized and directed to pay $2,641,694.00 to Caldwell Country Chevrolet, LLC, for the purchase and upfitting of said vehicles from funds available in the Garage Fund 2024 operating budget upon receipt of

proper invoices or statements approved by the City Manager.

On motion of Council member _____, seconded by Council member _____, the above and foregoing resolution was adopted by the City Council of the City of Midland at a regular meeting on the _____ day of _____, A.D., 2023, by the following vote:

# City Council Meeting

**Item Number:** 11

**Meeting Date:** November 14, 2023

**To:** City Council / City Manager

**From:** Erika Martinez, Manager, Purchasing

**Subject:** RESOLUTION RESCINDING RESOLUTION 2023-115; REJECTING THE SOLE PROPOSAL RECEIVED; AND AUTHORIZING THE CITY MANAGER TO ADVERTISE A REQUEST FOR COMPETITIVE SEALED PROPOSALS FOR THE NORTH CITIZEN COLLECTION STATION PROJECT AND THE WEST CITIZEN COLLECTION STATION PROJECT (DISTRICT: ALL) (GENERAL SERVICES)

---

**Purpose:**

Resolution to rescind Resolution 2023-115; reject the sole proposal received and authorizing the City Manager or the City Manager's designee to: (i) reissue a request for proposals for the North Citizen Collection Station Project and the West Citizen Collection Station Project.

**Recommended City Council Action:**

Approve

**Fiscal Impact:**

No funding is required.

**Discussion:**

The City Manager and/or City Manager's designee authorized the issuance of a request for proposals for the North Citizen Collection Station Project and the West Citizen Collection Station Project for the Solid Waste Department. The proposal request was sent to one hundred sixty (160) vendors. We received a sole bid from Onyx General Contractors, LLC. Staff recommends rejecting the sole proposal received for North Citizen Collection Station Project and the West Citizen Collection Station Project. Please see the attached memo from Jeffery Ahrlett, Solid Waste Director, for more information.

Therefore, please consider a resolution to rescind Resolution 2023-115; reject the sole proposal received and authorizing the City Manager or the City Manager's designee to: (i) reissue a request for proposals for the North Citizen Collection Station Project and the West Citizen Collection Station Project for the Solid Waste Department.

Morris William Jr.

City Manager's Office

**RESOLUTION NO.** 2023-115

**RESOLUTION AWARDING A CONTRACT FOR THE NORTH CITIZEN COLLECTION STATION PROJECT AND THE WEST CITIZEN COLLECTION STATION PROJECT TO ONYX GENERAL CONTRACTORS, LLC, FOR A COST OF $6,422,091.20; AND TRANSFERRING AND APPROPRIATING FUNDS**

**WHEREAS,** Motion 079-2023 approved plans and specifications and authorized the advertisement for competitive sealed proposals for the North Citizen Collection Station Project and the West Citizen Collection Station Project; and

**WHEREAS,** proposals were opened on August 16, 2023, with the sole proposal being submitted by Onyx General Contractors, LLC, as shown on the tabulation attached hereto as Exhibit "A" and incorporated herein for all purposes; and

**WHEREAS,** the City Council finds the amount proposed by Onyx General Contractors, LLC, to be fair and reasonable; and

**WHEREAS,** the City Council finds it to be in the public interest to award a contract to Onyx General Contractors, LLC, for the North Citizen Collection Station Project and the West Citizen Collection Station Project;

**NOW, THEREFORE, BE IT RESOLVED BY THE CITY COUNCIL OF THE CITY OF MIDLAND, TEXAS:**

**SECTION ONE.** That the City Manager and City Secretary are hereby authorized and directed to execute and attest, respectively, on behalf of the City of Midland, a contract with Onyx General Contractors, LLC, for the North Citizen Collection Station Project and the West Citizen Collection Station Project for a cost of $6,422,091.20. Said contract to be kept on file in the office of the City Secretary, referenced by the date and number of this Resolution.

**SECTION TWO.** That $1,000,000.00 shall be appropriated from the General Fund unappropriated fund balance and transferred to a project in the Sanitation Construction Fund. $5,422,091.20 shall be appropriated from the Solid Waste Fund unappropriated fund balance

and will be transferred and appropriated to a project for said purposes.

**SECTION THREE.** That the City Comptroller is hereby authorized and directed to pay Onyx General Contractors, LLC, pursuant to the terms of said contract upon receipt of proper invoices or statements approved by the City Manager.

On motion of Council member Ladd, seconded by Council member Poole, the above and foregoing resolution was adopted by the City Council of the City of Midland at a regular meeting on the 12th day of September, A.D., 2023, by the following vote:

Council members voting "AYE": Stretcher Burkes, Corrales, Poole, Blong, Dufford, Ladd, Norman

Council members voting "NAY": None

Lori Merritt Blong, Mayor

ATTEST:

Marcia Bentley-German, City Secretary

RECOMMENDED AND APPROVED:

Tommy Gonzalez, City Manager

APPROVED AS TO CONTENT
AND COMPLETENESS:

Regina Stephenson, General Services Director

APPROVED ONLY AS TO FORM:

John Ohlemiller, City Attorney

2023-115

# City Council Meeting

**Item Number:** 7

**Meeting Date:** September 12, 2023

**To:** City Council / City Manager

**From:** Erika Martinez, Manager, Purchasing

**Subject:** RESOLUTION AWARDING A CONTRACT FOR THE NORTH CITIZEN COLLECTION STATION PROJECT AND THE WEST CITIZEN COLLECTION STATION PROJECT TO ONYX GENERAL CONTRACTORS, LLC, FOR A COST OF $6,422,091.20; AND TRANSFERRING AND APPROPRIATING FUNDS (DISTRICT: ALL) (GENERAL SERVICES)

---

**Purpose:**

Resolution awarding a contract for the North Citizen Collection Station Project and the West Citizen Collection Station Project for the Solid Waste Department to Onyx General Contractors, LLC. of Midland, Texas for a cost of $6,422,091.20.

**Recommended City Council Action:**

Approve

**Fiscal Impact:**

$1,000,000 will be appropriated from General Fund Unappropriated Fund Balance and Transferred to a project in the Sanitation Construction Fund. This was funding received from a surface use agreement in 2022 and was deposited into the General Fund but meant to be used toward the Collection Station. $5,422,091.20 will be appropriated from the Solid Waste Fund unappropriated fund balance and will be transferred and appropriated to a project.

**Discussion:**

Motion 079-2023 approved the specifications and authorized advertisement for bids for the North Citizen Collection Station Project and West Citizen Collection Station Project for the Solid Waste Department. The bid was sent to one hundred sixty (160) vendors. We received a sole bid from Onyx General Contractors, LLC. Staff recommends the acceptance of the sole bid received from Onyx General Contractors, LLC for the construction of the North Citizen Collection Station

Project and West Citizen Collection Stations. Please see the attached memo from Jeffery Ahrlett, Solid Waste Director, for more information.

Therefore, please consider a resolution awarding a contract for the the North Citizen Collection Station Project and the West Citizen Collection Station Project for the Solid Waste Department to Onyx General Contractors, LLC. of Midland, Texas for a cost of $6,422,091.20.

Tina Daugherty
City Manager's Office

MIDLAND
Solid Waste

***INTEROFFICE MEMORANDUM***

**TO:** **Erika Martinez, Purchasing Manager**

**FROM:** **Jeffery Ahrlett, Director of Solid Waste**

**SUBJECT:** **Awarding a contract for the Citizen Collection Station North and Citizen Collection Station West Construction.**

**DATE:** **September 12, 2023**

Requesting a resolution awarding a contract for the Citizen Collection Station North and Citizen Collection Station West projects. Award a contract to bidder Onyx General Contractors, LLC. Of Midland, Texas for a cost of $6,422,091.20.

Onyx has proven experience in the construction of Citizen Collection Station facilities. The Solid Waste Department has worked with Onyx General Contractors in the past as they have built the current Citizen Collection station, as well as the City of Midland Landfill facility which includes a citizen collection station.

Due to the continued growth throughout the City of Midland, Solid Waste believes it is necessary to construct two Citizen Collection Stations to better serve our residents. The North Citizen Collection Station will be located on North 349 near the new water tower. The West Citizen Collection Station will be located on business 20 near Big Sky Drive in.

Solid Waste is seeking council approval to accept the bid of $6,422,091.20 from Onyx General Contractors, LLC. for the Citizen Collection Station North and Citizen Collection Station West construction project.

Re: 6119.21 City of Midland West and North Citizens' Collection Stations
Recommendation for Award

Dear Ms. Martinez:

We reviewed the one Proposal for the noted Project received August 16, 2023, and determined that it was submitted in accordance with guidelines established by the Proposal Documents and those procedures adopted by the City of Midland. While compiling the detailed proposal tabulation, it was found that there were mathematical errors in the totals.

We recommend the Construction Contract for the City of Midland West and North Citizens' Collection Station project be awarded to Onyx General Contractors, LLC per the unit price multiplied by quantity per the proposal tabulation. **Contract amounts for the West Site of $3,026,672.80 and for the North Site of $3,395,418.40, combined total of $ 6,422,091.20.**

For anything further, please contact me at 469.200.7373 if you have questions or wish to discuss this matter further.

Sincerely,

PARKHILL

# DOCUMENT 00 11 20 - REQUEST FOR PROPOSALS

1.1 OWNER

City of Midland
300 North Loraine Street
Midland, Texas 79701

1.2 PROJECT

West and North Citizens' Collection Stations

1.3 ENGINEER/ENGINEER

Parkhill
1700 W. Wall, Suite 100
Midland, Texas 79701
432.697.1447
Attn: R. Ashley Coco, AIA

1.4 DESCRIPTION

A. You are invited to submit a stipulated sum proposal on the attached forms for General Construction Work including mechanical, plumbing, electrical, Work and for furnishing of all labor, materials, services and equipment necessary for and incidental to the Work as called for on the Drawings and in the Project Manual. The construction is expected to commence by October 02, 2023.
B. Proposers may submit a proposal for the Work either individually or combined as indicated on the Proposal Form.
C. A contract may be awarded based on the proposal offering the best value to the Owner for the Project.

1.5 BASIS OF PROPOSALS

A. Owner will be utilizing the competitive sealed proposal procurement method as authorized by Texas Government Code, Title 10, Subtitle F., Chapter 2269, Subchapter D. The selection criteria used to evaluate each proposer's proposal is stipulated below in paragraph "D. Selection Criteria and Points."
B. The construction cost budget for this Project is approximately $6,000,000.00.
C. Proposals shall be made on a stipulated sum basis on the attached Proposal Forms.
D. Selection Criteria and Points.
   1. (0-40 points) Construction Price - Base Proposal.
   2. (0-20 points) Construction Time.
   3. (0-10 points) Resume of Project manager.
   4. (0-10 points) Resume of job superintendent.
   5. (0-10 points) Past and current experience on Projects of similar scope, size, complexity, and location. Include the following information: Owner, Project Name, Date Completed, Project Duration, Proposal Cost, Final Cost, Project Manager and Job Superintendent. If a current employee constructed the Project while working for a different employer clearly delineate that relationship.

6. (0-10 points) List of all litigation, claims, or lawsuits made against your company, an Owner or Engineer in which you were the contractor, including any Projects that your company failed to fulfill the terms of the contract with an Owner in the last five years. Provide status of each.
7. Letter of Intent to issue Performance and Payment Bonds from proposer's bonding company listing availability of current bonding capacity and amount of Work currently under bond.
8. Ranking and selection of the proposers will be based on the scoring and evaluation of the listed selection criteria determined to provide the best value to the Owner.

E. Additional Requirements
1. For the Project Manager and Job Superintendent, provide the following for each:
   a. Daily responsibilities for the Project.
   b. Formal education level.
   c. History of Work experience.
   d. Personal references including name, position, owner, current telephone number and email address.
2. In addition to requirements of the proposal documents, Owner may require additional information to establish responsibility of Proposer. Owner may further require identification of proposed subcontractors, suppliers and/or other persons and/or organizations proposed for portions of the Work and substantial data to determine their qualifications and experience. If requested, Proposer must submit all data to the Owner. Owner may also consider and use as part of the evaluation the operating costs, maintenance requirements, performance data and guarantees of major items of material and equipment proposed for incorporation in the Work when such data is required to be submitted in the proposal documents or prior to the award of the contract.
3. Owner may conduct such investigations as Owner deems necessary to assist in the evaluation of any proposal and to establish the responsibility, qualifications, and financial ability of Proposer, proposed subcontractors, suppliers and other persons and organizations to perform and furnish the Work in accordance with the proposal documents to Owner's satisfaction within the prescribed time.

## 1.6 SUBMISSION OF PROPOSALS

A. Address to: City of Midland
Attn: City Secretary's Office
300 North Loraine Street
Midland, TX 79701
or Mail to:

B. Location: City of Midland
Attn: City Secretary's Office
P.O. Box 1152
Midland, TX 79702

C. Date: August 9, 2023

D. Time: 2:00 p.m., local time.

E. Proposals received after the submission time on the due date will not be accepted and will be returned unopened to Proposer.

1.7 PROPOSAL DOCUMENTS

A. Proposal Documents may be examined at the Engineer's office and at the following plan rooms:
   1. Dodge Data & Analytics
      806.794.2722
      Kim.mccallon@construction.com
   2. AGC Plan Room
      4500 W Illinois, Suite 201
      Midland, Texas 79703
      432.520.2220
      midland@wtagc.org
   3. Odessa Plan Room
      2706 Henderson
      Odessa, Texas 79764
      432.337.0912
      Odessaplanroom@gmail.com
   4. AGC-Abilene
      3125 S. 27th
      Abilene, Texas 79605
      325.676.7447
      wtagc@sbcglobal.net

B. Proposers may secure copies of Proposal Documents as follows:
   1. By contacting Pam Gonzales at pgonzales@parkhill.com. Additional information can be found at https://parkhill.com/projects-for-bid.
   2. Download documents (.PDF file extension format) from Parkhill's Info Exchange web site after registering as a plan holder with issuing Parkhill office. There is no cost or deposit required for this option.

C. Only Proposers who obtain Proposal Documents through Parkhill will be registered as a document holder (plan holder) and will therefore automatically receive addenda if/when issued.

1.8 ADDENDA

A. Addenda will be issued to document holders by City of Midland.

1.9 PRE-PROPOSAL CONFERENCE

A. A pre-proposal conference will be held on Tuesday, July 25, 2023 at the Project site at 2:30 p.m. local time. Attendance by Proposers is not mandatory.

1.10 PROPOSAL SECURITY

A. Proposal security in the sum of 5 percent of the total proposal amount and in the form of a cashier's check, certified check, or Surety Proposal Bond, shall accompany all proposals as stipulated in the Instructions to Proposers.

1.11 OPENING OF PROPOSALS

A. Proposals will be publicly opened in the City Council Chambers immediately after closing of proposal time to identify the names of the proposer and their respective proposed contract

amount. Other contents of the proposals will be afforded security sufficient to preclude disclosure of contents prior to award or rejection action.

B. After opening the Proposals, the Owner will evaluate and rank each Proposal with respect to the published selection criteria described in section titled BASIS OF PROPOSALS. After opening and ranking, an award may be made on the basis of the initially submitted Proposal, without discussion, clarification or modification, or the Owner may discuss with the selected proposer, offers for cost adjustment and other elements of the Proposal. Other than the data read at the Proposal opening, the Owner shall not disclose any information derived from the Proposals submitted by competing firms in conducting such discussions.

C. If the Owner determines that it is unable to reach a satisfactory agreement with the first ranked proposer, the Owner will terminate discussions with that proposer. The Owner will then proceed with negotiations with each successive proposer as they appear in the order of ranking until an agreement is reached, or until the Owner has rejected all Proposals. After termination of discussions with any proposer, Owner will not resume discussions with that proposer.

D. The Owner reserves the right to accept or reject any or all alternates or to accept any combination of alternates considered advantageous to the Owner.

E. The award or rejection action regarding this Proposal is at the sole discretion of the Owner and the Owner makes no warranty regarding this Proposal that a contract will be awarded to any proposer.

F. The Owner agrees that if the Contract is awarded, it will be awarded to the proposer offering the best value to the Owner. The Owner is not bound to accept the lowest priced Proposal if that Proposal is judged not to be the best value for the Owner, as determined by the Owner.

1.12 FORMALITIES

A. The City of Midland reserves the right to waive irregularities and to reject all proposals.

1.13 APPLICABLE GOVERNING LAWS AND REGULATIONS

A. In accordance with the Instruction to Proposers, all proposers shall comply with State Labor Laws concerning wage rates Texas Family Code concerning affidavit of eligibility to submit proposals non-discrimination in employment and employment of historically underutilized businesses.

END OF SECTION

## DOCUMENT 00 21 16 - INSTRUCTIONS TO PROPOSERS

ARTICLE 1 – DEFINITIONS

1.1 Proposal Documents include the Proposal Requirements and the proposed Contract Documents. The Proposal Requirements consist of the Request for Proposals, Instructions to Proposers, the proposal form, and other sample proposal and contract forms. The proposed Contract Documents consist of the form of Agreement between the Owner and Contractor, Conditions of the Contract (General, Supplementary and other Conditions), Drawings, Specifications and all Addenda issued prior to execution of the Contract.

1.2 Definitions set forth in the General Conditions of the Contract for Construction, or in other Contract Documents are applicable to the Proposal Documents.

1.3 Addenda are written, or graphic instruments issued by the Engineer prior to the execution of the Contract which modify or interpret the Proposal Documents by additions, deletions, clarifications or corrections.

1.4 A Proposal is a complete and properly signed proposal to do the Work for the sums stipulated therein, submitted in accordance with the Proposal Documents.

1.5 The Base Proposal is the sum stated in the Proposal for which the Proposer offers to perform the Work described in the Proposal Documents as the base, to which Work may be added or from which Work may be deleted for sums stated in Alternate Proposals.

1.6 An Alternate Proposal (or Alternate) is an amount stated in the Proposal to be added to or deducted from the amount of the Base Proposal if the corresponding change in the Work, as described in the Proposal Documents, is accepted.

1.8 A Proposer is a person or entity who submits a Proposal.

1.9 A Sub-proposer is a person or entity who submits a proposal to a Proposer for materials, equipment or labor for a portion of the Work.

ARTICLE 2 - PROPOSER'S REPRESENTATIONS

2.1 The Proposer, by making a Proposal, represents that:

2.1.1 The Proposer has read and understands the Proposal Documents and the Proposal is made in accordance therewith.

2.1.2 The Proposer has read and understands the Proposal Documents or contract documents, to the extent that such documentation relates to the Work for which the Proposal is submitted.

2.1.3 The Proposer has visited the site, become familiar with local conditions under which the Work is to be performed and has correlated the Proposer's personal observations with the requirements of the proposed Contract Documents.

2.1.4 The Proposal is based upon the materials, equipment and systems required by the Proposal Documents without exception.

2.1.5 By submitting proposal, each proposer agrees to waive any claim it has or may have against the Owner, the Engineer, the Engineer and their respective employees and offices, arising out of or in connection with the administration, evaluation, or recommendation of any proposal; waiver of any

requirements under the Proposal Documents; or the Contract Documents; acceptance or rejection of any proposals; and award of the Contract.

ARTICLE 3 - PROPOSAL DOCUMENTS

3.1 COPIES

3.1.1 Proposal may obtain complete sets of the Proposal Documents from Parkhill as stated in Request for Proposals.

3.1.5 Proposal Documents will be issued directly to Subproposers or others unless specifically offered in Request for Proposals.

3.1.6 Proposers shall use complete sets of Proposal Documents in preparing Proposals; neither the Owner nor Engineer assumes responsibility for errors or misinterpretations resulting from the use of incomplete sets of Proposal Documents.

3.1.7 In making copies of the Proposal Documents available on the above terms, the Owner and the Engineer do so only for the purpose of obtaining Proposals on the Work and do not confer a license or grant permission for any other use of the Proposal Documents.

3.2 INTERPRETATION OR CORRECTION OF PROPOSAL DOCUMENTS

3.2.1 The Proposer shall carefully study and compare the Proposal Documents with each other, and with other work being proposal concurrently or presently under construction to the extent that it relates to the Work for which the Proposal is submitted, shall examine the site and local conditions, and shall at once report to the Engineer errors, inconsistencies or ambiguities discovered.

3.2.2 Proposers and Sub-proposers requiring clarification or interpretation of the Proposal Documents shall make a written request which shall reach the Engineer at least seven days prior to the date for receipt of Proposals.

3.2.3 Interpretations, corrections and changes of the Proposal Documents will be made by Addendum. Interpretations, corrections and changes of the Proposal Documents made in another manner will not be binding, and Proposers shall not rely upon them.

3.3 SUBSTITUTIONS

3.3.1 The materials, products and equipment described in the Proposal Documents establish a standard of required function, dimension, appearance and quality to be met by any proposed substitution.

3.3.2 No substitution will be considered prior to receipt of Proposals unless written request for approval has been received by the Engineer at least 7 days prior to the date for receipt of Proposals. Such requests shall include the name of the material or equipment for which it is to be substituted and a complete description of the proposed substitution including Drawings, performance and test data, and other information necessary for an evaluation. An item by item (line by line) comparison of each item listed in the specification shall be compiled and submitted comparing specified material/product with proposed substitution. A statement setting forth changes in other material, equipment or other portions of the Work including changes in the work of other contracts that incorporation of the proposed substitution would require shall be included. The burden of proof of the merit of the proposed substitution is upon the proposer. Engineer's approval is for manufacturer only, and not specific material, system or equipment. Approved manufacturer's material, system or equipment is subject to additional and final review after award of contract and submitted for Engineer's approval during Construction Administration submittal/shop drawing review process. The Engineer's decision of approval or disapproval of a proposed substitution shall be final.

3.3.3 If the Engineer approves a proposed substitution prior to receipt of Proposals, such approval will be set forth in an Addendum. Proposers shall not rely upon approvals made in any other manner.

3.4 ADDENDA

3.4.1 Addenda will be issued via City of Midland.

3.4.2 Copies of Addenda will be made available for inspection wherever Proposal Documents are on file for that purpose.

3.4.3 No Addenda will be issued later than 2 days prior to the date for receipt of Proposals except an Addendum withdrawing the request for Proposals or one which includes postponement of the date for receipt of Proposals.

3.4.4 Only Proposers who obtain Proposal Documents through Parkhill will be registered as a document holder (plan holder) and will therefore automatically receive addenda if/when issued.

3.4.5 Each Proposer shall ascertain, prior to submitting a Proposal, that the Proposer has received all Addenda issued, and the Proposer shall acknowledge their receipt in the Proposal.

ARTICLE 4 - PROPOSAL PROCEDURES

4.1 FORM AND STYLE OF PROPOSALS

4.1.1 Proposals shall be submitted on forms identical to the form included with the Proposal Documents.

4.1.2 All blanks on the proposal form shall be filled in by typewriter or manually, in ink.

4.1.3 Where so indicated by the makeup of the proposal form, sums shall be expressed in both words and figures, and in case of discrepancy between the two, the amount written in words shall govern.

4.1.4 Interlineations, alterations and erasures must be initialed by the signer of the Proposal.

4.1.5 All requested Alternates shall be proposed. If no change in cost to the Base Proposal is required, mark "No Change."

4.1.5 Where two or more Proposals for designated portions of the Work have been requested, the Proposer may, without forfeiture of the proposal security, state the Proposer's refusal to accept award of less than the combination of Proposals stipulated by the Proposer. The Proposer shall make no additional stipulations on the proposal form nor qualify the Proposal in any other manner.

4.1.6 Each copy of the Proposal shall include the legal name of the Proposer and a statement that the Proposer is a sole proprietor, partnership, corporation or other legal entity. Each copy shall be signed by the person or persons legally authorized to bind the Proposer to a contract. A Proposal by a corporation shall further give the state of incorporation and have the corporate seal affixed. A Proposal submitted by an agent shall have a current power of attorney attached certifying the agent's authority to bind the Proposer.

4.1.8 All costs associated with the preparation, submission and delivery of Proposal is the sole responsibility of the Proposer.

4.2 PROPOSAL SECURITY

4.2.1 Each Proposal shall be accompanied by a proposal security as stipulated in the Request for Proposals, in the form and amount required, pledging that the Proposer will enter into a Contract with the Owner on the terms stated in the Proposal and will furnish bonds covering the faithful performance of the Contract and payment of all obligations arising thereunder. Should the Proposer refuse to enter into such Contract or fail to furnish such bonds, the amount of the proposal security shall be forfeited to the Owner as liquidated damages, not as a penalty. The amount of the proposal security shall not be forfeited to the Owner in the event the Owner fails to comply with Subparagraph 6.2.1.

4.2.2 The surety bond shall be written on AIA Document A310, Proposal Bond, or a similar standard form of the Surety, and the attorney-in-fact who executes the bond on behalf of the Surety, shall affix to the bond a certified and current copy of the power of attorney.

4.2.3 The Owner will have the right to retain the proposal security of Proposers to whom an award is being considered until either (a) the Contract has been executed and bonds have been furnished, or (b) the specified time has elapsed so that Proposals may be withdrawn, or (c) all Proposals have been rejected.

4.3 SUBMISSION OF PROPOSALS

4.3.1 All copies of the Proposal, the proposal security and other documents required to be submitted with the Proposal shall be enclosed in a sealed opaque envelope. The envelope shall be addressed as indicated in the Request for Proposals and shall be identified with the Project name, the Proposer's name, and address and, if applicable, the designated portion of the Work for which the Proposal is submitted. If the Proposal is sent by mail, the sealed envelope shall be enclosed in a separate mailing envelope with the notation "SEALED PROPOSAL ENCLOSED" on the face thereof.

4.3.2 Proposals shall be deposited at the designated location prior to the time and date for receipt of Proposals. Proposals received after the time and date for receipt of Proposals will be returned unopened.

4.3.3 The Proposer shall assume full responsibility for timely delivery at the location designated for receipt of Proposals.

4.3.4 Oral, telephonic or telegraphic Proposals are invalid and will not receive consideration.

4.3.5 The Proposer shall be responsible for all costs associated with preparing the Proposal Document response. The Owner and Engineer shall not incur any costs associated with the production and printing of the Proposal Document and post proposal information.

4.3.6 The Proposer shall prepare 6hard copies and 1 copy in pdf. on a USB flash drive of his proposal information which will be sealed in an opaque envelope.

4.4 MODIFICATION OR WITHDRAWAL OF PROPOSAL

4.4.1 A Proposal may not be modified, withdrawn, or canceled by the Proposer during the stipulated time period following the time and date designated for the receipt of Proposals, and each Proposer so agrees in submitting a Proposal.

4.4.2 Prior to the time and date designated for receipt of Proposals, a Proposal submitted may be modified or withdrawn by notice to the party receiving Proposals at the place designated for receipt of Proposals. Such notice shall be in writing over the signature of the Proposer or by telegram; if by telegram, written confirmation over the signature of the Proposer shall be mailed and postmarked on or before the date and time set for receipt of Proposals. A change shall be so worded as not to reveal the amount of the original Proposal.

4.4.3 Withdrawn Proposals may be resubmitted up to the date and time designated for the receipt of Proposals provided that they are then fully in conformance with these Instructions to Proposers.

ARTICLE 5 - CONSIDERATION OF PROPOSALS

5.1 OPENING OF PROPOSALS

5.1.1 As stated in the Request for Proposals, the properly identified Proposals, received on time, will be opened publicly and will be read aloud. An abstract of the same information may, at the discretion of the Owner, be made available to the Proposers within a reasonable time.

5.2 REJECTION OF PROPOSALS

5.2.1 The Owner shall have the right to reject any, or all Proposals, reject a Proposal not accompanied by a required proposal security, or by other data required by the Proposal Documents, or reject a Proposal which is in any way incomplete or irregular.

5.3 ACCEPTANCE OF PROPOSAL (AWARD)

5.3.1 It is the intent of the Owner to award a Contract to the lowest responsible Proposer provided the Proposal has been submitted in accordance with the requirements of the Proposal Documents and does not exceed the funds available. The Owner shall have the right to waive informalities or irregularities in a Proposal received and to accept the Proposal which, in the Owner's judgment, is in the Owner's own best interests. The issuance of this request for proposals does not obligate the Owner to enter into a contract.

5.3.2 The Owner shall have the right to accept Alternates in any order or combination, unless otherwise specifically provided in the Proposal Documents, and to determine the low Proposer on the basis of the sum of the Base Proposal and Alternates accepted.

5.3.3 Each proposer agrees to waive any claim it has or may have against the Owner, the Engineer, and their respective employees, arising out of or in connection with the administration, evaluation, or recommendation of any proposal.

ARTICLE 6 - POST-PROPOSAL INFORMATION

6.1 CONTRACTOR'S QUALIFICATION STATEMENT

6.1.1 Proposers to whom award of a Contract is under consideration shall submit to the Engineer, upon request, a properly executed AIA Document A305-2020, Contractor's Qualification Statement, Exhibit A, Exhibit B (except for paragraph B.1) and Exhibit C (except for paragraph C.2). Exhibits D and E are not required.

6.2 OWNER'S FINANCIAL CAPABILITY

6.2.1 The Owner shall, at the request of the Proposer to whom an award of a Contract is under consideration and no later than seven days prior to the expiration of the time for withdrawal of Proposals, furnish to the Proposer reasonable evidence that financial arrangements have been made to fulfill the Owner's obligations under the Contract. Unless such reasonable evidence is furnished, the Proposer will not be required to execute the Agreement between the Owner and Contractor.

6.3 SUBMITTALS

6.3.1 The Proposer shall, as soon as practicable, after notification of selection for the award of a Contract, furnish to the Owner through the Engineer in writing:

6.3.1.1 a designation of the Work to be performed with the Proposer's own forces:

6.3.1.2 names of the manufacturers, products and the suppliers of principal items or systems of materials and equipment proposed for the Work; and

6.3.1.3 names of subcontractors, persons, or entities (including those who are to furnish materials or equipment fabricated to a special design) proposed for the principal portions of the Work.

6.3.2 The Proposer will be required to establish, to the satisfaction of the Engineer and Owner, the reliability and responsibility of the persons or entities proposed to furnish and perform the Work described in the Proposal Documents.

6.3.3 Prior to the award of the Contract, the Engineer will notify the Proposer in writing if either the Owner or Engineer, after due investigation, has reasonable objection to a person or entity proposed by the Proposer. If the Owner or Engineer has reasonable objection to a proposed person or entity, the Proposer may, at the Proposer's option, (1) withdraw the Proposal, or (2) submit an acceptable substitute person or entity, with an adjustment in the Base Proposal or Alternate Proposal to cover the difference in cost occasioned by such substitution. The Owner may, accept the adjusted proposal price or disqualify, the Proposer. In the event of either withdrawal or disqualification, proposal security will not be forfeited.

6.3.4 Persons and entities proposed by the Proposer and to whom the Owner and Engineer have made no reasonable objection must be used on the Work for which they were proposed and shall not be changed except with the written consent of the Owner and Engineer.

ARTICLE 7 - PERFORMANCE BOND AND PAYMENT BOND

7.1 BOND REQUIREMENTS

7.1.1 The Proposer shall furnish bonds covering the faithful performance of the Contract and payment of all obligations arising thereunder.

7.1.2 The cost shall be included in the Proposal.

7.2 TIME OF DELIVERY AND FORM OF BONDS

7.2.1 The Proposer shall deliver the required bonds to the Owner prior to the execution of the Contract.

7.2.2 The bonds shall be written on AIA Document A312, Performance Bond and Payment Bond or the Bonding Company's standard bond forms. Both bonds shall be written in the amount of the Contract Sum.

7.2.3 The bonds shall be dated on or after the date of the Contract.

7.2.4 The Proposer shall require the attorney-in-fact who executes the required bonds on behalf of the surety, to affix thereto a certified and current copy of the power of attorney.

ARTICLE 8 - INSURANCE

8.1 INSURANCE REQUIREMENTS

8.1.1 The Proposer shall furnish insurance in the types and amount of coverage required, and shall be secured from sources as defined in the Owner/Contractor Agreement.

8.1.2 The cost shall be included in the Proposal.

8.2 TIME OF DELIVERY AND FORM OF INSURANCE

8.2.1 The Proposer shall deliver the required certificates of insurance coverage to the Owner upon its execution of the Contract.

8.2.2 The insurance certificate shall be written on a form acceptable to the Owner. Insurance shall be written in the amount required by the Contract.

8.2.3 The insurance certificates shall be dated on or before the date of the Contract.

ARTICLE 9 - FORM OF AGREEMENT BETWEEN OWNER AND CONTRACTOR

9.1 FORM TO BE USED

9.1.1 The Agreement for the Work will be written on Owner provided document.

ARTICLE 10 - APPLICABLE GOVERNING LAWS AND REGULATIONS

10.1 WAGE RATES

10.1.1 All Contractors must comply with State Labor Laws as required by current amended provisions of Section 2 of Article 5159a, Texas Civil Statutes. Contractor is required to pay not less than the specified minimum wage rates of the various applicable classes of labor.

10.1.2 The Contractor shall forfeit as a penalty to the State, sixty dollars ($60.00) for each laborer, workman or mechanic employed for each calendar day or portion thereof, if such laborer, workman or mechanic is paid less than the said stipulated rates for any work done under said contract, by Contractor or by their subcontractor.

10.4 NON-DISCRIMINATION

10.4.2 During the proposal and performance of this Contract, the Contractor agrees as follows:

10.4.2.1 The Contractor shall not discriminate against any employee or applicant for employment because of race, color, religion, sex, age, or national origin. The Contractor shall take affirmative action to ensure that applicants are employed, and that employees are treated during employment without regard to their race, color, sex, religion, age, or national origin. Such action shall include, but not be limited to, the following: Employment, upgrading, demotion, or transfer; recruitment or recruitment advertising; layoff or termination; rates of pay or other forms of compensation; and selection for training, including apprenticeship. The Contractor agrees to post in conspicuous places, available to employees or applicants for employment, notices to be provided setting forth the provisions of this non-discrimination article.

10.5 HISTORICALLY UNDERUTILIZED BUSINESS

10.5.2 The Contractor shall include a "Historically Underutilized Business Policy Statement" in all subcontracts pertaining to the Work as follows:

City of Midland is committed to make efforts to assist Historically Underutilized Businesses (HUBs) to receive at least thirty percent (30%) of the total value of all contract awards issued by the state. Therefore, HUBs qualified to do so are encouraged to propose; and all business that propose are encouraged to give particular attention in preparing their proposals to include HUBs as subcontractors and material suppliers at any tier for a total value of at least 30% of the amount of their proposal. **Each proposer is required to state in its proposal (HUB Proposal Supplement) the percentage of the proposal amount represented by women owned HUBs, the percentage represented by minority-owned HUBs, and the combined total of each.**

HUB Subcontracting Program Reporting Policy, Responsibilities at the time of award:

The State of Texas operates under the basic principles of free and vigorous competition. In accordance with House Bill 2626, 73rd Legislature, all state agencies are to give a good faith effort to award at least thirty percent (30%) of the total value of all contracts to certified HUBs. Achievement of the goal may be reached by the state contracting directly with HUB vendors or by the state's general contractors establishing contracts with HUB vendors as subcontractors, suppliers or material providers.

All contractors are required to prepare the reporting forms within the designated time period stated on each form to assist City of Midland's efforts to document HUB vendor usage. Contractors that have demonstrated past HUB participation are still expected to provide documentation at the prescribed times.

General Services Commission (GSC) will assist contractors in identifying HUB businesses, call 512.463.3612. If contractors have difficulty in obtaining HUB vendors or meeting the goal targeted, contractor will be required to provide City of Midland with information under the good faith effort criteria listed below:

Delivery of a written notice to all HUB Subcontractors or Suppliers identified on the GSC HUB Certification Directory, contractor group listings, State Agency listings, other government agencies listings, and to any local HUB who requested information on the job. The notice will contain (1) adequate information about the plans, specifications, and requirements of the Contract and Subcontract work, and (2) a contact person within the Contractor's office to answer questions.

Provide documentation on the type of solicitations made for HUB participation, include records, and submit evidence of correspondence and responses from HUBs. In accordance with normal industry practices, divide contract into small, economically feasible segments which could be performed by HUBs, include dollar amount offered to HUB.

Evidence of the steps taken to assist in financing, bonding, and technical assistance services for HUBs where HUBs are otherwise qualified and information as to the Contractors bonding requirements, the procedure for obtaining any needed bond, and the telephone number of one or more acceptable surety companies contacted. Provide an explanation for rejection to any HUB whose proposal is rejected, unless another HUB is accepted for the same work, as follows: (1) where price competitiveness is not the reason, a written rejection notice will include the reason for rejection, and (2) where price competitiveness is the reason, a meeting will be held, if requested, with the price-rejected HUB to discuss the rejection.

10.5.3 City of Midland will review and evaluate the above documentation on the basis of demonstrated "good faith effort." Additional positive efforts or technical assistance may be provided and/or suggested by GSC. GSC will assist contractors in affirmative action plans to achieve the state's HUB contracting goal, call .512.463.3612.

10.5.4 An Historically Underutilized Business is defined by stature as (a) a corporation formed for profit in which at least 51 percent of the equity is owned by one or more women or Black, Hispanic, Asian Pacific, or Indian Americans, (b) a sole proprietorship 100 percent owned, operated, and controlled by such person(s), (c) a partnership in which such person(s) own at least 51 percent of its assets and interest and have proportionate control of partnership affairs, (d) a joint venture of HUBs, or (e) a supplier contract between an HUB and a prime contractor under which the HUB manufactures, distributes, or warehouses and ships the supplies.

10.5.5 **The proposer shall indicate in the appropriate space on the HUB Proposal Supplement whether or not the proposer meets the definition of an Historically Underutilized Business.**

10.5.6 **The proposer shall also indicate in the appropriate space on the HUB Proposal Supplement whether or not the proposer meets the following definition of a small business:**

A Small Business is a corporation, partnership, sole proprietorship or other legal entity formed for the purpose of making a profit which is independently owned and operated and has either fewer than 100 employees or less than $1,000,000 in gross annual receipts during the past calendar or fiscal year.

# DOCUMENT 00 26 00 - PROCUREMENT SUBSTITUTION PROCEDURES

## 1.1 DEFINITIONS

A. Procurement Substitution Requests: Requests for changes in products, materials, equipment, and methods of construction from those indicated in the Procurement and Contracting Documents, submitted prior to receipt of Proposals.

B. Substitution Requests: Requests for changes in products, materials, equipment, and methods of construction from those indicated in the Contract Documents, submitted following Contract award. See Section 01 25 00 "Substitution Procedures" for conditions under which substitution requests will be considered following Contract award.

## 1.2 QUALITY ASSURANCE

A. Compatibility of Substitutions: Investigate and document compatibility of proposed substitution with related products and materials. Engage a qualified testing agency to perform compatibility tests recommended by manufacturers.

## 1.3 PROCUREMENT SUBSTITUTIONS

A. Procurement Substitutions, General: By submitting a Proposal, the Proposer represents that its Proposal is based on materials and equipment described in the Procurement and Contracting Documents, including Addenda. Proposers are encouraged to request approval of qualifying substitute materials and equipment when the Specifications Sections list materials and equipment by product or manufacturer name.

B. Procurement Substitution Requests will be received and considered by Owner when the following conditions are satisfied, as determined by Architect; otherwise requests will be returned without action:
   1. Extensive revisions to the Contract Documents are not required.
   2. Proposed changes are in keeping with the general intent of the Contract Documents, including the level of quality of the Work represented by the requirements therein.
   3. The request is fully documented and properly submitted.

## 1.4 SUBMITTALS

A. Procurement Substitution Request: Submit to Architect. Procurement Substitution Request must be made in writing in compliance with the following requirements:
   1. Requests for substitution of materials and equipment will be considered if received no later than 7 days prior to date of Proposal opening.
   2. Submittal Format: Submit 3 copies or 1 PDF copy of each written Procurement Substitution Request, using CSI Substitution Request Form 1.5C. All copies must be legible.
   3. Provide product data in a side-by-side, line-by-line review. Substitution Request Form 1.5C received without product data will be returned unanswered. Additionally, provide appropriate drawings, samples, tests, and reports as necessary to support and clarify product data. Attach all as backup data to CSI Substitution Request Form 1.5C.

B. Architect's Action:
   1. Architect may request additional information or documentation necessary for evaluation of the Procurement Substitution Request. Architect will notify all Proposers of acceptance of the proposed substitute by means of an Addendum to the Procurement and Contracting Documents.

C. Architect's approval of a substitute during the Proposal process does not relieve Contractor of the responsibility to submit required Shop Drawings and to comply with all other requirements of the Contract Documents.

# SECTION 00 31 00 – AVAILABLE PROJECT INFORMATION

## PART 1 - GENERAL

1.1 SUMMARY

A. Related Sections:
1. Division 01 Specification Sections apply to Work of this Section.

1.2 INFORMATION

A. Property Survey:
1. A survey of the property was authorized by the Owner, and the survey was made by:

Parkhill
1700 W Wall Street
Midland, TX 79701
(432) 697-1447

2. Site layout, Drawings and boundary traverse and closure information included in the Drawings.
3. Property survey and Site improvement layout is available for Contractor's information.

1.3 RESPONSIBILITY

A. Proposers are expected to examine the Site survey information then determine for themselves the validity of the information contained there-in as it relates to this Project.
B. Engineer and Owner do not guarantee continuity of conditions indicated at boring locations and assume no responsibility for variations of subsoil quality or conditions.
C. Engineer and Owner assume no responsibility for variations of Site survey information.

## PART 2 - PRODUCTS (Not Used)

## PART 3 - EXECUTION (Not Used)

END OF SECTION

# SECTION 00 31 32 - GEOTECHNICAL DATA

## PART 1 - GENERAL

1.1 SUMMARY

A. Related Requirements:
1. Division 01 Specification Sections apply to Work of this Section.

1.2 INFORMATION

A. Geotechnical Data:
1. An investigation of subsurface soil conditions at the construction site was authorized by Owner, and investigations at the West CCS Site were made by:

Beyond Engineering and Testing
011-B South County Road 1260
Midland, TX 79706
432.561.5780

Investigations at the North CCS Site were made by:

Terracon
10400 State Hwy 191
Miland, TX 79707
432.684.9600

2. The two reports, in their entirety, are bound at the end of this Section.

1.3 GEOTECHNICAL DATA

A. This Document with its referenced attachments is part of the Procurement and Contracting Requirements for Project. They provide Owner's information for Proposers' convenience and are intended to supplement rather than serve in lieu of [Proposers' own investigations. This Document and its attachments are not part of the Contract Documents.

B. Because subsurface conditions indicated by the soil borings are a sampling in relation to the entire construction area, and for other reasons, the Owner, Architect, Engineer, the Architect's or Engineer's consultants, and the firm reporting the subsurface conditions do not warranty the conditions below the depths of the borings or that the strata logged from the borings are necessarily typical of the entire site. Any party using the information described in the soil borings and geotechnical report shall accept full responsibility for its use.
1. The opinions expressed in this report are those of a geotechnical engineer and represent interpretations of subsoil conditions, tests, and results of analyses conducted by a geotechnical engineer. Owner is not responsible for interpretations or conclusions drawn from the data.
2. Any party using information described in the geotechnical report shall make additional test borings and conduct other exploratory operations that they may require to determine the character of subsurface materials that may be encountered.

3. Proposers are expected to examine the geotechnical data reports and then determine for themselves the validity of the information contained there-in as it relates to this Project.

Dear Mr. Ahrlett:

Beyond Engineering and Testing, LLC (BEYOND) is pleased to present our geotechnical engineering study for the proposed Citizen's Collection Center project in Midland, Texas. City of Midland (Client) commissioned this geotechnical engineering study to explore and evaluate the subsurface conditions at the site, develop geotechnical design parameters, and provide related construction recommendations for the project. Our geotechnical report describes our field exploration and laboratory testing program, our engineering interpretation pertinent to the project, as well as earthwork guidelines for the project.

We appreciate the opportunity to serve you. We look forward to working with you on construction materials testing services during construction phase. Note that BEYOND is already under contract with Client for this project. As such, a simple change order is needed to approve testing services during construction phase. Please call us if you have any questions concerning this report or any of our other services.

Respectfully submitted,
**Beyond Engineering and Testing, LLC**

Appasaheb "Amar" Kadam
Project Manager, E.I.T.

## 1.0 INTRODUCTION

Beyond Engineering and Testing, LLC (BEYOND) is pleased to present our subsurface exploration and geotechnical engineering evaluation for the proposed Citizen's Collection Station project. The proposed project site will be situated near 6400 West Highway 80 in Midland, Texas at GPS coordinates (31.955276, -102.159771). The approximate project location is shown on Figure 1, Project Site Location Map, within Appendix A.

The purpose of this geotechnical investigation and report is to:

- Explore subsurface conditions;
- Conduct field and laboratory testing to characterize the engineering properties of subsurface materials;
- Provide geotechnical engineering parameters for the design and construction of foundation systems;
- Provide pavement recommendations, and;
- Provide earthwork requirements.

The recommendations contained in this report are based upon field and laboratory test results, engineering analyses, experience with similar subsurface conditions, and our project understanding.

## 2.0 PROPOSED CONSTRUCTION

BEYOND understands the proposed project will comprise of Citizen's Collection Station facility which consists of 40 feet by 60 feet metal building, concrete pavement, a built-up ramp and retaining walls for roll-off drops.

## 3.0 FIELD EXPLORATION

BEYOND prepared and executed a field exploration program for the proposed project on November 19, 2021. The approximate boring locations are shown on Figure 2, Borehole Locations Map, within Appendix A of this report. A summary of approximate geographic latitude and longitude coordinates and depth of each boring drilled as part of the subsurface exploration program is presented in Table 3.0.1.

*Table 3.0.1 – Summary of Boring Locations and Depths*

| Boring No. | Latitude (degrees) | Longitude (degrees) | Total Boring Depth (feet) |
|---|---|---|---|
| B-1 | 31.955617 | -102.157978 | 19 |
| B-2 | 31.955419 | -102.158930 | 19 |
| B-3 | 31.955276 | -102.159771 | 19 |

Notes: Latitude and longitude coordinates provided in Table 3.0.1 were obtained from a hand-held GPS device with accuracy of approximate 15 to 20 feet.

BEYOND utilized air rotary drilling method to advance the boreholes. We collected samples using Standard Penetration Testing (SPT) split spoon samplers. We collected all samples from the samplers in the field, performed visual soil classification, labeled the samples as to location and depth, and bagged soil samples to minimize moisture changes. We conducted the SPT tests in general accordance with ASTM D1586: Standard Test Method for Standard Penetration Test (SPT) and Split-Barrel Sampling of Soils. SPT test results are shown on the attached Boring Logs under the "Field Data" column and are preceded by the letter "N". SPT testing was performed using automatic hammer.

BEYOND prepared field logs for each boring drilled. The field logs contain visual classifications of the materials encountered during drilling as well as interpolation of the subsurface conditions between samples. We also observed for groundwater level in the borehole while advancing the boreholes. These observations are discussed in subsequent sections of this report.

The project engineer reviewed the field logs, samples, and laboratory data to make appropriate modifications to the field logs. BEYOND classified soils in general accordance with the Unified Soil Classification System (USCS). The soil classification symbols on the boring logs are described in the *Boring Log Key* included in Appendix A. The final logs of boring include modifications based on our laboratory test results and observations performed on the soil samples collected in the field. The final logs of boring describe the materials encountered, strata thickness, the various depths at which the samples were obtained, as well as field test results.

## 4.0 SUBSURFACE CONDITIONS

### 4.1 Regional Geology

As per the geologic Atlas of Texas, Pecos sheet, the geology at the project site and in the vicinity consists of the following.

**Quaternary Period Units**

- **Playa Deposits** (Qp): Shallow, closed, depressions that have filled mainly with clay and silt, along with minor amounts of sand.
- **Windblown Cover Sand** (Qcs/Qbd): Eolian deposits comprised of fine- to medium-grained sand-sized quartz grains, silty in nature, with calcareous and caliche deposits being common. Windblown sediments can reach 10 feet in thickness.

Site vicinity geologic map is shown on Figure 3 within Appendix A of this report.

### 4.2 Subsurface Stratigraphy

As indicated on our logs of borings drilled as part of this study, native soils were encountered beneath approximately 2 inches of topsoil and extended to the bottom of the boring. The native soils generally encountered are as follows:

- Loose to very dense sand with varying amounts of clay, silt and gravel.

Bedrock was not encountered in any of the borings completed as part of this study.

The above descriptions are general and depth ranges are approximate because boundaries between different strata are seldom clear and abrupt in the field. In addition, the lines separating major strata types on the logs of borings do not necessarily represent distinct lines of demarcation of the various strata. Detailed logs of borings for locations drilled as part of this study, which present the stratum descriptions, types of sampling used, laboratory test data, and additional field data, are presented in Appendix A. The Boring Log Key, defining the terms and descriptive symbols used on each log of boring, is also presented in Appendix A.

### 4.3 Groundwater Conditions

BEYOND did not encountered groundwater during drilling operations.

Based on the Texas Water Development Board (TWDB) Groundwater Database of water wells within a 0.25-mile radius from the project site locations, groundwater levels at adjacent water wells were recorded at depths of 39 to 42 feet below ground surface. These measurements are from submitted driller's well reports from 2014.

It is imperative to note that the short-term groundwater level observations performed as part of this study are not an accurate evaluation of groundwater levels at the project site and should not be interpreted as a comprehensive groundwater study. The observations made during this investigation may also not represent conditions at the time of construction and it should be understood the presence of groundwater may have an effect on certain construction activities and long-term performance of foundations and pavements. Groundwater levels are highly dependent on climatic and hydrologic conditions before and after construction, and site development including irrigation demands, drainage and other factors. If a detailed groundwater study is desired, a groundwater hydrologist should be retained to perform these services.

## 5.0 LABORATORY TESTS

BEYOND performed various laboratory tests to determine the soil's physical properties. These tests allow us to classify soils and to assess soil performance under the project design conditions. Laboratory tests are presented in each respective *Log of Boring* and in the *Summary of Laboratory Tests* in Appendix A. The project geotechnical engineer assigned appropriate laboratory tests on selected soil samples. BEYOND performed the following laboratory methods for soil analyses:

- Standard Practice for Classification of Soils for Engineering Purposes (Unified Soil Classification System): ASTM D2487;
- Standard Test Methods for Laboratory Determination of Water (Moisture) Content of Soil and Rock by Mass: ASTM D2216;
- Standard Test Methods for Liquid Limit, Plastic Limit, and Plasticity Index of Soils: ASTM D4318;
- Standard Test Methods for Amount of Material in Soils Finer than No. 200 (75-µm) Sieve: ASTM D1140;
- Sulfate and Chlorides Content: EPA 300/300.1;

## 5.1 Geotechnical Laboratory Test Results

Moisture content tests were performed, in accordance with ASTM D2216, on selected soil samples. The test results are provided on Logs of Boring in Appendix A of the report as well as on the Summary of Laboratory Results in Appendix A of this report.

Percent finer than No. 200 (75-µm) sieve tests were performed, in accordance with ASTM D1140, on selected soil samples. The test results are provided on Logs of Boring in Appendix A of the report as well as on the Summary of Laboratory Results in Appendix A of this report.

Laboratory test results indicate that the native clay soils have liquid limit (LL) values range from non-plastic to 39% and plastic limit (PL) value ranging from non-plastic to 23%, with Plasticity Index (PI) values ranging from about non plastic to 23%. Based on FHWA-NHI-10-016 for the method of identifying potentially expansive soils as shown in Table 5.1.1, the soils at this proposed project site possess low swell potential.

***Table 5.1.1 – Method of Identifying Potentially Expansive Soils (from FHWA-NHI-10-016)***

| Liquid Limit (%) | Plasticity Index | Potential Swell (%) | Potential Swell Classification |
|---|---|---|---|
| < 50 | < 25 | < 0.5 | Low |
| 50 to 60 | 25 to 35 | 0.5 to 1.5 | Marginal |
| > 60 | > 35 | > 1.5 | High |

The Potential Vertical Rise (PVR) is the potential ability of a soil material to swell, at a given density, moisture and loading condition, when exposed to capillary or surface water. We estimate the PVR value for lightly loaded slabs-on-grade or shallow footings to be less than 1-inch, using the TxDOT method Tex-124-E.

A summary of laboratory testing results is presented in Appendix A of this report.

### 5.2 Soil Corrosiveness

BEYOND obtained the services of Xenco Laboratories to perform analytical tests to determine the content of soluble sulfate and chloride in the soils at or near foundation bearing depths. The results of soluble sulfate and chloride content are summarized in Table 5.2.1.

***Table 5.2.1 – Results of Soluble Sulfate and Chloride Content***

| Boring No. | Depth of Sample (feet) | Soluble Chlorides (mg/kg) | Soluble Sulfate (mg/kg) |
|---|---|---|---|
| B-1 | 0 | <4.95 | <4.95 |

These test results indicate non-corrosive chloride content and negligible sulfate contents. The Xenco test results are included within Appendix A.

## 6.0 FOUNDATION DESIGN AND GEOTECHNICAL RECOMMENDATIONS

BEYOND understands the proposed Citizen's Collection Station facility consists of a 40 foot by 60 foot metal building, concrete and asphalt pavement, a built-up ramp and retaining walls for roll-off drops.

Based on the site geotechnical conditions, shallow foundations may be used to support the proposed buildings. Earthwork requirements for the proposed buildings are provided under Section 7.

We recommend that BEYOND's geotechnical engineer or our qualified representative be retained to observe shallow foundation excavations in this area to assess the need for any over-excavation and re-compaction and/or replacement.

### 6.1 Shallow Foundations

We recommend that the spread footings at the site should have a minimum embedment of 2 feet below final site grade for confinement, and the strip footings should have a minimum embedment of 1.5 feet below final site grade. The footings should bear on soils placed in accordance with Section 7 of this report. We recommend a minimum width of 12 inches for strip footings and a minimum of 24 inches for spread footings.

For our engineering analyses, we utilized the strength parameters provided in Table 6.1.1. Site grading plans for the proposed project site were not available during preparation of this report. BEYOND assumes final grade of the drop area will be approximately 1 to 6 feet higher than existing site grade.

***Table 6.1.1 – Engineering Properties of Subsurface Materials for Shallow Foundation***

| Angle of Internal Friction, $\phi$' (degree) | Total Unit Weight, $\gamma$ (pcf) | Ultimate Coefficient of Friction, $\mu$ |
|---|---|---|
| 30 | 110 | 0.35 |

Table 6.1.2 provides the values for net allowable bearing pressures against general shear failure based on a factor of safety of 3 for continuous and footings that bear on soils placed in accordance with Section 7 of this report. We estimate total footing settlement should not exceed 1-inch based on the allowable bearing pressures provided in Table 6.1.2.

***Table 6.1.2 – Allowable Bearing Pressures for Shallow Foundations***

| Footing Type | Footing Width (feet) | Footing Depth (feet) | Allowable Bearing Pressure (psf) |
|---|---|---|---|
| Continuous Footing | 1.0 | 1.5 | 1,250 |
| Continuous Footing | 1.5 | 1.5 | 1,500 |
| Spread Footing | 2.0 | 2.0 | 2,500 |
| Spread Footing | 2.0 | 3.0 | 3,500 |

Proper drainage must be maintained during construction and throughout the life of the structures to provide for improved shallow foundation performance. Other design and construction recommendations as outlined in the ACI design manual should be followed.

## 6.2 Floating Floor Slab for Building

A floating slab-on-grade is structurally independent of the spread footings. This option is also viable for the proposed building. The slab-on-grade can be supported on properly prepared subgrade in accordance with Section 7.1 of this report. A properly prepared subgrade should provide a modulus of subgrade reaction, $K_1$, of about 90 psi/inch, where $K_1$ corresponds to modulus of subgrade reaction corresponds to a 1-ft x 1-ft plate.

For square footing on cohesionless soil subgrade, the subgrade modulus value may be modified for various foundation widths based upon the following equation:

$$K_s = K_1\left[\frac{B+1}{2B}\right]^2$$

Where:

$K_s$ = adjusted modulus of subgrade reaction based on actual footing width;
$K_1$ = modulus of subgrade reaction corresponds to a 1-ft x 1-ft plate;
B = footing width (in feet)

We recommend an optional crushed stone layer of four (4) inches in thickness immediately below the floor slab. The crushed stone should meet TxDOT Item 247, Grade 3. The crushed stone will provide increased support, assist in reducing differential floor settlements, and provide uniform friction across the bottom of the slab. Most importantly, the crushed stone allows truck traffic during construction without rutting. The design team may choose to avoid the crushed stone layer. With this option, we recommend using a pump to place concrete. Using a pump avoids truck traffic on the finished subgrade.

Based on our experience of similar projects, we provide the following guidelines for concrete floor slab design and construction. The concrete specifications should require a low water/cement ratio and the concrete should be placed with a relatively dry slump. Control joints should be constructed while the concrete is relatively green, before it shrinks. Spacing for control joints should be 15 to 20 feet to control shrinkage cracks.

In order to improve aesthetics by reducing shrinkage cracks and irregular surface textures, BEYOND also recommends the following: the ready-mix concrete should arrive at the target slump and the contractor should not be allowed to add water to the mixture. Water sprayed onto the slab during 'bull floating' must be minimal; otherwise, alligator cracking of the surface may develop. If vapor barriers are used, the designer should also consider adding a thin sand cushion on top of the vapor barrier. This bedding sand allows the concrete to cure evenly from top to bottom. Other design and construction recommendations as outlined in the ACI design manual should be followed.

### 6.3 Lateral Earth Pressures

Following are recommended equivalent fluid pressures for below-grade walls using native soils or imported materials as backfill. When backfilling adjacent to retaining walls, the contractor should be careful not to over-compact soils adjacent to the wall, thus inducing additional lateral stresses on the retaining walls. Proper drainage should be provided away from the walls during all phases of construction and post-construction grading. Below grade basement walls are considered as non-yielding walls due to restrained at the top to prevent sufficient movement to develop active condition. The at-rest lateral pressures are the appropriate earth pressures to use for design of basement walls. Active earth pressure may be for walls that exhibit a certain degree of horizontal movement, such as cantilevered retaining walls.

Positive drainage should be provided to prevent the buildup of hydrostatic water pressure on the walls. To prevent hydrostatic build-up, retaining walls should incorporate a wall drain for collection and removal of surface water behind the walls. A clean, granular, fee-draining materials with no more than 5% passing the No. 200 sieve is the preferred backfill for wall drains. Acceptable backfill would be crushed material with a gradation of in general conformance with ASTM C33, No. 57 or 67 aggregate. The high permeability of such material, combined with adequate drainage, such as weepholes at the bottom of the wall, prevents hydrostatic build-up. If no positive drainage is provided, hydrostatic water pressure should be considered in the design of the walls.

Backfill materials for the retaining wall should be placed and compacted to a minimum compaction of 95% of the maximum dry density as determined by ASTM D698 and moisture conditioned within +/- 2% of optimum moisture content. The loose thickness of each layer before compacting shall not exceed 8 inches. Close to retaining walls, smaller compactors should use to prevent excessive lateral pressures against the retaining walls from stress caused by heavy compactors.

*Table 6.3.1 – Equivalent Fluid Pressures for Lateral Earth Pressures*

| Soil Type | Lateral Earth Pressure Condition | Lateral Earth Pressure Coefficient | Equivalent Fluid Pressure (psf/ft) |
|---|---|---|---|
| Native or Imported Cohesionless Soils $\phi$'=31, $\gamma_t$=115 pcf | At-Rest Condition | $k_o$=0.48 | 56 |
| | Active Condition | $k_a$=0.32 | 37 |
| | Passive Condition | $k_p$=3.12 | 360 |

The values apply only to cases where the ground surface is level. BEYOND should be contacted to provide suitable values for cases where the ground surface is sloped. These earth pressure values do not include safety factors or hydrostatic pressure. Surcharge loads should also be considered.

### 6.4 Seismic Parameters

The following seismic parameters are based on the 2015 International Building Code (IBC) and a Site Class D for this project site. The Mapped Spectral Response Acceleration for the 1 second ($S_1$) and short periods ($S_S$) were computed using the U.S. Seismic Design Maps web-based application program developed by the Applied Technology Council (ATC). Table 6.4.1 summarizes recommended seismic parameters to be used in the design:

*Table 6.4.1 Recommended Seismic Parameters*

| Parameter | Calculated Value |
|---|---|
| $S_S$ – Mapped Spectral Response Acceleration at Short Period (0.2-Second) | 0.124 g |
| $S_1$ – Mapped Spectral Response Acceleration at 1-Second Period | 0.033 g |
| $F_a$ (Site Coefficient) – Site Class D | 1.6 |
| $F_v$ (Site Coefficient) – Site Class D | 2.4 |

Note: Seismic Parameters were obtained from https://hazards.atcouncil.org/#/

## 7.0 FOUNDATION CONSTRUCTION CRITERIA

In this section, we provide various specifications and construction recommendations to allow earthwork to meet the intent of the geotechnical parameters provided in Section 6. We recommend that BEYOND be retained to provide verification testing services during construction. This allows us to verify that construction of foundation items are in compliance with our recommendations.

### 7.1 Site Preparation

Prior to construction, the contractor should establish proper and positive drainage to maintain a relatively dry condition at the proposed construction site. This will be important if any work is attempted during prolonged rainfall periods. Water ponding in construction areas should be avoided.

Winter weather conditions can also impact the construction process. Newly placed fill should not be placed on frozen subgrade and frozen material should not be used for fill.

Site preparation should begin by removing surface debris, vegetation, organic topsoil, loose soil and major root systems, if any. Compact resulting subgrade and verify stability using a proof-roll test. Conduct a proof-roll tests using a loaded dump truck or loaded double-axle water truck with a minimum weight of 20 tons. Passing proof-roll tests must show less than ½-inch deflection and no area pumping. Any soft spots or areas that exhibit pumping should be excavated and re-compacted to a minimum compaction of 98% of the maximum dry density as determined by ASTM D698 and moisture conditioned within +/- 2% of optimum moisture content.

The base of each foundation excavation should be observed by the geotechnical engineer or a qualified representative prior to foundation installation.

### 7.2 Select Fill Below Foundation and Floor Slab

Select non-expansive fill material placed within foundation and floor slab areas should meet one of the following soil classifications: SC-SM, SM, SC, CL, GC or GW-GC. In addition, select fill shall possess a plasticity index, PI of less than 18 and shall not possess particle sizes greater than 3-inches. Native soils within the upper 5 feet below existing site grade may be used as select fill. Additional testing should be performed during construction to verify the suitability of native soils as select fill.

Select fill below the foundation should be placed in loose lifts not exceeding 8-inches and should be compacted to a minimum compaction of 98% of the maximum dry density as determined by ASTM D698 and moisture conditioned within +/- 2% of optimum moisture content for cohesive soils or moisture conditioned within +/- 3% of optimum moisture content for cohesionless soils. Compacted backfill density should be verified by nuclear density tests, with at least one test per 2,500 square feet for each lift under buildings and one test per 5,000 square feet in other areas.

### 7.3 Shallow Foundation Construction

The following construction criteria and general guidance should be observed during shallow foundation construction:

1. Remove loose soils from footing excavations. Do not allow loose, excavated soils from the footings to be spread out within the building pad. These loose soils will cause differential settlements.

2. Excavations for footings should be accomplished with a smooth-mouthed bucket. If a toothed bucket is used, excavation with this bucket should be terminated a few inches above final grade and the excavation completed with a smooth-mouthed bucket or by manual labor. Debris or loose material in the bottom of the excavation should be re-compacted or removed prior to placing concrete. This is especially important along footing excavations.

3. The foundation excavation should be sloped sufficiently to create internal sumps for runoff collection and removal. Foundation excavations subject to rainfall and possible deterioration from accumulated water should be protected using a protective "mud-slab" (concrete). If surface runoff water or groundwater seepage accumulates at the bottom of the foundation excavation, it should be collected and removed and not allowed to adversely affect the quality of the bearing surface.

4. The foundation excavations should be checked for size and cleaned of loose material and debris prior to the placement of reinforcing steel. Precautions should be taken during the placement of reinforcement and concrete to prevent the loose excavated material from falling into the excavation.

5. Prior to the placement of concrete, any water must be removed from the foundation excavation.

6. Prompt placement of concrete in the excavation as it is completed, cleaned, and observed is strongly recommended.

### 7.4 Open Excavations

Temporary construction slopes and/or permanent embankment slopes should be protected from surface runoff water. Site grading should be designed to allow drainage at planned areas where erosion protection is provided, instead of allowing surface water to flow down unprotected slopes. Surcharge loads, either static or dynamic, should not be applied to an excavation slope. Construction equipment should be prevented from traveling along or near the top of the excavation slope. Monitoring of temporary slopes, trenches, and dewatering during construction should be undertaken by the contractor to detect early warnings of movement within slopes, structures, pavements, etc.

In all cases of excavations in soils, sloped excavations and trench shields are required for excavations greater than four feet in depth. The contractor's "Competent Person" (as defined by OSHA) must inspect each trench to determine the type of bench or slope that is actually required. With all excavations, only a "competent person" shall determine whether sloped, benched, or trench shields can be used. OSHA and applicable state and local standards should be observed and followed. Site safety is the responsibility of the contractor.

### 7.5 Drainage

Proper drainage should be provided away from the foundation elements during all phases of construction and post-construction grading. Proper drainage is essential to the long-term stability of the structure. Ponding of water near the foundation elements from improper drainage should not be permitted. Downspouts should use splash blocks that divert water away from the foundation. Planters near buildings should be lined and should not allow saturation of soils near the foundation.

## 8.0 PAVEMENTS

The proposed pavement sections presented here are calculated based solely on engineering structural parameters. Construction cost is not included in this analysis. Daily traffic volume or 18-kips Equivalent Single-Axle Loads (ESALs) for the proposed pavement was not available during preparation of this report. We anticipate traffic will mainly consist of passenger cars, pick-up trucks and haul trucks to transport the trash receptacles. We understand the facility will utilize the pavement sections outlined in Table 8.1.1. Based on the proposed pavement sections and assumptions below we have calculated the estimated ESAL's that the pavement can support over a design life of 20 years.

### 8.1 Design Recommendations for Pavements

BEYOND calculated pavement section options in accordance with the *AASHTO Guide for Design of Pavement Structures 1993*. For pavement analysis we assumed the following parameters:

- Design life: 20 years;
- Reliability: 85% (Flexible) or 90% (Rigid);
- Overall Standard Deviation: 0.45 (Flexible) or 0.35 (Rigid);
- Initial Serviceability: 4.2 (Flexible) or 4.5 (Rigid);
- Terminal Serviceability: 2.0 (Flexible) or 2.5 (Rigid);
- Assumed CBR-value: 6.0
- Design Resilient Modulus (psi): 8,000
- Asphaltic Concrete: Layer structural coefficient of 0.44, and a drainage coefficient of 1.0; and
- Untreated Base Course: Layer structural coefficient of 0.14, and a drainage coefficient of 1.0.
- Concrete compressive strength: 3,500 psi

Table 8.1.1 presents our pavement sections based on our assumed design parameters.

***Table 8.1.1 Recommended Pavement Section***

| Option | Estimated ESAL's | Concrete Thickness (inches) | HMAC Thickness (inches) | Untreated Aggregate Base Course Thickness (inches) |
|---|---|---|---|---|
| Light Duty Asphalt | 25,000 | -- | 2.0 | 6.0 |
| Heavy Duty Asphalt | 275,000 | -- | 3.0 | 9.0 |
| Concrete Pavement | 900,000 | 8.0 | -- | 6.0 |

The concrete pavement should be designed by the Civil Engineer to have proper reinforcement. As a general guideline, a minimum of #3 reinforcing bars at 18 inches on-center-each-way (OCEW) is recommended for the proposed concrete pavement.

### 8.2 Material Specifications

The pavement should be specified, constructed, and tested to meet the following requirements:

1. *Natural Subgrade* – Remove all vegetation and construction debris. Scarify the resulting subgrade to at least 12 inches, moisture condition and compact to a minimum of 98% of the maximum density per ASTM D698 and moisture conditioned within +/- 2% of optimum moisture content for cohesive soils or moisture conditioned within +/- 3% of optimum moisture content for cohesionless soils. The compacted surface shall be proof-rolled using a loaded tandem-axle dump truck or water truck of 25 tons or heavier. Passing proof-roll tests must show less than 1-inch deflection and no area pumping. Soft spots or areas exhibiting pumping should be excavated and re-compacted. Use select fill placed in accordance with Section 7.3 to reach final target site grade.
2. *Crushed Limestone Base Material (Flexible Base)* - Crushed rock as per Texas Department of Transportation, Standard Specifications for Construction and Maintenance of Highways, Streets and Bridges (2014), Item 247, **Grade 2** or better. The material should be compacted to a minimum of **95%** of the maximum density as per **ASTM D1557**.
3. *Portland Cement Concrete* - BEYOND recommends using a TxDOT **Class P** concrete mix design, or similar.
4. *HMAC* – **Type B** Hot Mix Asphaltic Concrete surface course. This material should meet TxDOT Item 340 specifications.
5. *Prime Coat* – Texas Department of Transportation Item 310.

## 9.0 LIMITATIONS

Recommendations contained in this report are based on our field observations and subsurface explorations, limited laboratory tests, and our present knowledge of the proposed construction. It is possible that soil conditions will vary between or beyond the points explored. If soil conditions are encountered that differ from those described herein, we should be notified immediately. If the scope of the proposed design or construction changes from that described in this report, our data should also be reviewed.

We prepared this report in substantial compliance with the generally accepted geotechnical engineering practice, as it exists in the area at the time of our study. No warranty is expressed or implied. The recommendations provided in this report are based on the assumption that BEYOND will conduct an adequate program of tests and observations during the construction phase in order to evaluate compliance with our recommendations.

This report may be used only by the client, their design team, and only for the purposes stated, within three years from its issuance. Land use, site conditions (both on site and off site) or other factors may change over time, and additional work may be required with the passage of time. Any party other than the client who wishes to use this Report shall notify BEYOND of such intended use. Based on the intended use of the report, BEYOND may require that additional work

be performed and that an updated report be issued. Non-compliance with any of these requirements by the client or anyone else will release BEYOND from any liability resulting from the use of this report by any unauthorized party.

This is a geotechnical engineering report and is not intended to provide information about possible contaminated soils or the locations of any abandoned underground storage tanks. The owner should consult with an environmental specialist to determine whether this site is suitable from an environmental perspective.

Other standards or documents referenced in any given standard cited in this report, or otherwise relied upon by the authors of this report, are only mentioned in the given standard; they are not incorporated into it or "included by reference," as that latter term is used relative to contracts or other matters of law.

## DEGREE OF WEATHERING

1) Unweathered: No evidence of any chemical or mechanical alteration.
2) Slightly weathered: Slight discoloration on surface, slight alteration along discontinuities, less that 10% of the rock volume altered.
3) Moderately weathered: Discoloring evident, surface pitted and altered with alteration penetrating well below rock surfaces, weathering "halos" evident, 10 to 50% of the rock volume altered.
4) Highly weathered: Entire mass discolored, alteration pervading nearly all of the rock with some pockets of slightly weathered rock noticeable, some minerals leached away.
5) Decomposed: Rock reduced to a soil with relicit rock texture, generally molded and crumbled by hand.

## SOIL STRUCTURE

Calcareous..... Containing calcium carbonate
Slickensided..... The presence of planes of weakness having a slick and glossy appearance
Interbedded..... Alternating layers of varying material

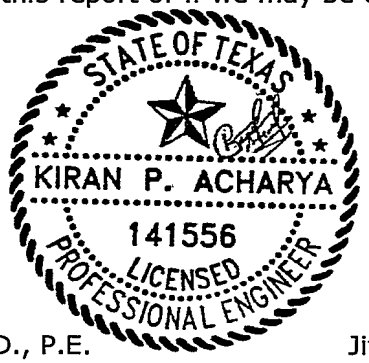
Terracon Project No. A4235100



Dear Mr. Coco:

We have completed Geotechnical Engineering services for the above referenced project in general accordance with Terracon Email Quote dated May 25, 2023, and a Consulting Services Agreement between Parkhill and Terracon dated May 31, 2023. This report presents the findings of the subsurface exploration and provides geotechnical recommendations concerning earthwork and the design as well as construction of foundations, and pavements for the proposed project.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning this report or if we may be of further service, please contact us.

Sincerely,

**Terracon**

# Report Summary

| Topic [1] | Overview Statement [2] |
|---|---|
| **Project Description** | This project is to construct a small single-story pre-engineered metal building and a paved "Citizens Collection Station (CCS)" area for city of Midland Solid Waste department. |
| **Geotechnical Characterization** | Clayey gravel with sand was encountered within the upper about 2 feet of existing grades, underlain by very dense, cemented, calcareous materials, locally called "caliches". We expect on-site subsurface materials have low potential for shrink/swell with fluctuations in moisture content. The on-site subsurface materials can generally be used as structural fill provided that the caliche materials are crushed into sizes less than 4 inches in maximum dimensions, and they meet structural fill requirements. Groundwater was not encountered during our field exploration. |
| **Earthwork** | Heavy duty equipment will generally be suitable for earthwork, and utility trench excavations on the project site. Controlled blasting could be required for utility trench excavations in confined areas. |
| **Shallow Foundations** | Shallow foundations such as spread and/or continuous strip footings can generally be used to support the building. Net allowable bearing pressure of 3,000 pounds per square foot (psf) be used for design of shallow foundations. |
| **Pavements** | <u>Asphalt Pavement:</u><br>1.5" asphalt concrete over 8" of aggregate base course for Class I<br>2" asphalt concrete over 8" of aggregate base course for Class II<br>2.5" asphalt concrete over 10" of aggregate base course for Class III<br><u>Concrete Pavement:</u><br>5" PCC over 4" aggregate base for Category A<br>6" PCC over 4" aggregate base for Category D<br>7" PCC over 4" aggregate base for Category E |
| **General Comments** | This section contains important information about the limitations of this geotechnical engineering report. |

1. If the reader is reviewing this report as a pdf, the topics above can be used to access the appropriate section of the report by simply clicking on the topic itself.
2. This summary is for convenience only. It should be used in conjunction with the entire report for design purposes.

# Introduction

This report presents the results of our subsurface exploration and Geotechnical Engineering services performed for the Midland North CCS to be located about 2.5 Miles N-NW of Intersection of US Highway 349 and Occidental Parkway in Midland County, TX. The purpose of these services was to provide information and geotechnical engineering recommendations relative to:

- Subsurface soil conditions
- Groundwater conditions
- Seismic site classification per IBC
- Site preparation and earthwork
- Foundation design and construction
- Pavement design and construction

The geotechnical engineering scope of services for this project included the advancement of soil-test borings, laboratory testing, engineering analysis, and preparation of this report.

Drawings showing the site and boring locations are shown on the **Site Location** and **Exploration Plan**, respectively. The results of laboratory testing performed on soil samples obtained from the site during our field exploration are included on the boring logs in the **Exploration Results** section.

# Project Description

Our initial understanding of the project was provided in our proposal and was discussed during project planning. A period of collaboration has transpired since the project was initiated, and our final understanding of the project conditions is as follows:

| Item | Description |
|---|---|
| **Information Provided** | A project site location and a construction layout were received from Mr. R. Ashley Coco of Parkhill via an email on May 25, 2023. |
| **Proposed Structures** | This project includes construction of a small pre-engineered metal building on the southern end, and a paved area for trash collection at the northern portion of the site. The paved area will be a CCS for city of Midland Solid Waste department. |

| Item | Description |
|---|---|
| **Foundation Types** | We expect the building will be supported on shallow foundations, such as spread and/or continuous strip footings. |
| **Finished Floor Elevation** | Finished floor elevation is assumed to be within 2 feet of existing grades. |
| **Maximum Loads (Assumed)** | ▪ Column loads: 50 kips<br>▪ Wall loads: 1.5 kips per linear foot (klf)<br>▪ Slab loads: 125 psf |
| **Pavements (Assumed)** | We understand that CCS area will be paved. We assume that the traffic classification for design of asphalt pavement will consist of:<br>▪ Class I: Parking stalls for autos and pickup trucks [Equivalent Single Axle Loads (ESALs) = 7,000]<br>▪ Class II: Traffic consisting of home delivery trucks, trash pickup (ESALs = 27,000)<br>▪ Class III: Delivery lanes with up to ten 3-axle trucks per day (ESALs = 107,000)<br>The anticipated ACI traffic categories and daily truck traffic for design of concrete pavement are assumed to consist of:<br>▪ Category A: Car and auto parking areas and access lanes, 10 trucks per day<br>▪ Category D: Heavy-duty trucks, 1 truck per day<br>▪ Category E: Fire or trash truck lanes, 1 truck per day<br>The pavement design period is 20 years. |

Terracon should be notified if any of the above information is inconsistent with the planned construction, especially the grading limits and structural loads, as modifications to our recommendations may be necessary.

# Site Conditions

The following description of site conditions is derived from our site visit in association with the field exploration and our review of publicly available geologic and topographic maps.

| Item | Description |
|---|---|
| **Parcel Information** | Midland North CCS site is located about 2.5 Miles N-NW of Intersection of US Highway 349 and Occidental Parkway in Midland County, TX. The coordinates of approximate center of the site are 32.1038°N, 102.0955°W. See **Site Location** |
| **Existing Improvements** | None |
| **Current Ground Cover** | Exposed soils, grasses, and mesquites |
| **Existing Topography** | Relatively flat |

We also collected photographs at the time of our field exploration program. Representative photos are provided in our **Photography Log**.

# Geotechnical Characterization

We have developed a general characterization of the subsurface conditions based upon our review of the subsurface exploration, laboratory data, geologic setting, and our understanding of the project. This characterization, termed GeoModel, forms the basis of our geotechnical calculations and evaluation of the site. Conditions observed at each exploration point are indicated on the individual log. The individual log can be found in the **Exploration Results** and the GeoModel can be found in the **Figures** attachment of this report.

As part of our analyses, we identified the following model layers within the subsurface profile. For a more detailed view of the model layer depths at the boring location, please refer to the GeoModel.

| Model Layer | Layer Name | General Description |
|---|---|---|
| 1 | Sand and Gravel | Clayey gravel with sand; very dense |
| 2 | Caliche | Silty clayey sand with gravel; very dense |

Excavation difficulties are generally anticipated within Model Layer 2.

Caliche is a calcium-carbonate-cemented material. Caliche has many resemblances to rock. It is difficult to excavate caliche materials.

The borings were advanced in the dry using air rotary drilling technique that allows short-term groundwater observation to be made while drilling. Groundwater seepage was not

encountered or observed in either of the borings within the maximum drilling depths of about 24 feet bgs at the time of our field exploration. Groundwater is not expected to affect shallow foundation construction at this site.

Groundwater conditions may be different at the time of construction. Groundwater conditions may change because of seasonal variations in rainfall, runoff, and other conditions not apparent at the time of drilling. The possibility of groundwater level fluctuations should be considered when developing the design and construction plans for the project. Long-term groundwater monitoring was outside the scope of services for this project.

# Seismic Site Class

The seismic design requirements for buildings and other structures are based on Seismic Design Category. Site Classification is required to determine the Seismic Design Category for a structure. The Site Classification is based on the upper 100 feet of the site profile defined by a weighted average value of either shear wave velocity, standard penetration resistance, or undrained shear strength in accordance with Section 20.4 of ASCE 7 and the International Building Code (IBC). Based on the soil/rock properties observed at the site and as described on the exploration log and results, our professional opinion is for that a **Seismic Site Classification of C** be considered for the project. Subsurface exploration at this site was extended to a maximum depth of about 24 feet bgs. The site properties below the boring depth to 100 feet were estimated based on our experience and knowledge of geologic conditions of the general area. Additional deeper boring or geophysical testing may be performed to confirm the conditions below the current boring depth.

# Geotechnical Overview

The area to the west of the project site is previously developed. Although no deleterious materials, such as construction debris, or organics were encountered during our field exploration or observed in the collected samples, we caution that potential existing fill that contains deleterious materials could exist on the project site in areas away from our borings. If deleterious materials are detected during construction, Terracon should be notified immediately to provide consultation. In general, deleterious materials can be replaced with structural fill.

The site appears suitable for the proposed development based upon geotechnical conditions encountered in the test borings, provided that the recommendations provided in this report are implemented in the design and construction phases of this project.

We expect on-site subsurface materials have low potential for shrink/swell with fluctuations in moisture content. Moisture-induced potential vertical movements are estimated to be less than 1 inch. The on-site soils are generally suitable for use as structural fill. Based on the conditions encountered and estimated load-settlement relationships, the proposed building can be supported on shallow spread/continuous strip footings.

According to the 2021 International Structures Code (Section 1613.3.2), IBC seismic site classification for this site is determined to be C. The recommendations contained in this report are based upon the results of field and laboratory testing (presented in the **Exploration Results**), engineering analyses, and our current understanding of the proposed project. The **General Comments** section provides an understanding of the report limitations.

# Earthwork

Earthwork will include clearing and grubbing, excavations, and fill placement. The following sections provide recommendations for use in the preparation of specifications for the work. Recommendations include critical quality criteria as necessary to render the site in the state considered in our geotechnical engineering evaluation for foundations.

## Site Preparation

Prior to placing fill, striping of existing topsoil, vegetations, and root mats should be performed in the proposed development area. The soil materials which contain less than 5 percent organics can be reused as structural fill provided the material is moisture conditioned and properly compacted.

## Subgrade Preparation

We suggest after site preparation operation is conducted; the entire site should be proofrolled. The proofrolling should be conducted with an adequately loaded vehicle such as a fully-loaded tandem-axle dump truck. The proofrolling should be performed under the observation of the Geotechnical Engineer or representative. Areas excessively deflecting under the proofrolling should be delineated and subsequently addressed by the Geotechnical Engineer. Excessively wet or dry material should either be removed, or moisture conditioned and recompacted as per **Fill Placement and Compaction Requirements** section.

All exposed areas which will receive fill, once properly cleared and benched where necessary, should be scarified to a minimum depth of 10 inches, and compacted per the

compaction requirements in this report. Compacted structural fill soils should then be placed to the proposed design grade and the moisture content and compaction of subgrade soils should be maintained until foundation or pavement construction.

## Excavation

Based on the conditions encountered, we believe heavy-duty equipment, such as a hoe ram, a heavy dozer equipped with a ripper, a rock saw or jack hammer or with rock trenching equipment, will generally be required for earthwork and utility-trench excavations. Controlled blasting (trench excavations) could be required for utility trench excavations in confined areas. The bottom of excavations should be thoroughly cleaned of loose soils and disturbed materials prior to backfill placement and/or construction.

The descriptions provided below are a guide to conditions generally encountered in the region of the project site. Required excavation techniques will vary based on weathering of the materials to be excavated, the fracturing, jointing and overall stratigraphy of the feature. Actual field conditions usually display a gradual weathering progression with poorly defined and uneven boundaries between layers of different materials. We recommend that the following definitions for rock in earthwork excavation be included in bid documents:

| Excavation Type | Definition |
|---|---|
| Mass Excavation | Any material occupying an original volume of more than 1 cubic yard which cannot be excavated with a single-toothed ripper drawn by a crawler tractor having a minimum draw bar pull rating of not less than 80,000 pounds usable pull (Caterpillar D-8 or larger). |
| Trench Excavation | Any material occupying an original volume of more than 1/2 cubic yard which cannot be excavated with a backhoe having a bucket curling rate of not less than 40,000 pounds, using a rock bucket and rock teeth (a John Deere 790 or larger). |

## Fill Material Types

Fill required to achieve design grade should be classified as structural fill and general fill. Structural fill is material used below, or within 10 feet of structures, pavements, or constructed slopes. General fill is material used to achieve grade outside of these areas.

**Reuse of On-Site Soil:** Excavated on-site soil may be re-used as fill. Material property requirements for on-site soil for use as general fill and structural fill are noted in the table below:

| Property | General Fill | Structural Fill |
|---|---|---|
| Composition | Free of deleterious material | Free of deleterious material |
| Maximum particle size | 6 inches | 4 inches |
| Fines content | Not limited | 10% to 50% Passing No. 200 sieve |
| Plasticity | Not limited | Maximum liquid limit of 35 and maximum plasticity index of 15 |
| GeoModel Layer Expected to be Suitable[1,2] | 1,2 | 1,2 |

1. Based on subsurface exploration. Actual material suitability should be determined in the field at time of construction.
2. Caliche materials should be crushed into sizes less than 4 inches in maximum dimensions and should meet structural fill requirements before they can be used as structural fill.

**Imported Fill Materials:** Imported fill materials should meet the following material property requirements. Regardless of its source, compacted fill should consist of approved materials that are free of organic matter and debris. Frozen material should not be used, and fill should not be placed on a frozen subgrade.

| Soil Type [1] | USCS Classification | Acceptable Parameters (for Structural Fill) |
|---|---|---|
| Low Plasticity Cohesive | CL, CL-ML | Liquid Limit less than 35<br>Plasticity index less than 15<br>25% to 50% retained on No. 200 sieve |
| Granular | GW, GP, GM, GC, SW, SP, SM, SC | 10% to 50% passing No. 200 sieve |

1. Structural and general fill should consist of approved materials free of organic matter and debris. A sample of each material type should be submitted to the Geotechnical Engineer for evaluation prior to use on this site.

## Fill Placement and Compaction Requirements

Structural and general fill should meet the following compaction requirements.

| Item | Structural Fill | General Fill |
|---|---|---|
| **Maximum Lift Thickness** | 8 inches or less in loose thickness when heavy, self-propelled compaction equipment is used<br>4 inches in loose thickness when hand-guided equipment (i.e., jumping jack or plate compactor) is used | Same as structural fill |
| **Minimum Compaction Requirements** [1,2] | At least 95% of the material's maximum dry density in all fill areas. | Same as structural fill |
| **Water Content Range** [1] | -2% to +2% of optimum moisture content | As required to achieve min. compaction requirements |

1. Maximum density and optimum water content as determined by the standard Proctor test (ASTM D 698).
2. If the granular material is a coarse sand or gravel, or of a uniform size, or has a low fines content, compaction comparison to relative density may be more appropriate. In this case, granular materials should be compacted to at least 70% relative density (ASTM D 4253 and D 4254).

## Utility Trench Backfill

Any soft or unsuitable materials encountered at the bottom of utility trench excavations should be removed and replaced with structural fill or bedding material in accordance with public works specifications for the utility be supported. This recommendation is particularly applicable to utility work requiring grade control and/or in areas where subsequent grade raising could cause settlement in the subgrade supporting the utility. Trench excavation should not be conducted below a downward 1:1 projection from existing foundations without engineering review of shoring requirements and geotechnical observation during construction.

Trench backfills should be mechanically placed and compacted as discussed earlier in this report. Compaction of initial lifts should be accomplished with hand-operated tampers or other lightweight compactors. Where trenches are placed beneath slabs or footings, the backfill should satisfy the gradation and plasticity index requirements of engineered fill discussed in this report. Flooding or jetting for placement and compaction of backfill is not recommended.

## Grading and Drainage

Positive drainage should be provided during construction and maintained throughout the life of the development. Infiltration of water into utility trenches or foundation excavations should be prevented during construction. Water retained next to the foundation areas can result in soil movements greater than those discussed in this report. Greater movements can result in unacceptable differential foundation movements. The roof should have gutters/drains with downspouts that discharge onto splash blocks at a distance of at least 10 feet from the building.

In areas where sidewalks or paving do not immediately adjoin structures, we recommend that protective slopes be provided with a minimum grade of approximately 5 percent for at least 10 feet from foundation areas. After foundations construction, final grades should be verified to document effective drainage has been achieved. Grades around the structures should also be periodically inspected and adjusted as necessary as part of the structures' maintenance program. Where paving or flatwork abuts the structure, a maintenance program should be established to effectively seal and maintain joints and prevent surface water infiltration.

## Earthwork Construction Considerations

Shallow excavations for the proposed structures are anticipated to be accomplished with heavy duty construction equipment. Upon completion of earthwork, care should be taken to maintain the subgrade water content prior to construction foundations. Construction traffic over the completed subgrades should be avoided. The site should also be graded to prevent ponding of surface water on the prepared subgrades or in excavations. Water collecting over or adjacent to construction areas should be removed. If the subgrade freezes, desiccates, saturates, or is disturbed, the affected material should be removed, or the materials should be scarified, moisture conditioned, and recompacted prior to foundation construction.

As a minimum, excavations should be performed in accordance with OSHA 29 CFR, Part 1926, Subpart P, "Excavations" and its appendices, and in accordance with any applicable local and/or state regulations.

Construction site safety is the sole responsibility of the contractor who controls the means, methods, and sequencing of construction operations. Under no circumstances shall the information provided herein be interpreted to mean Terracon is assuming responsibility for construction site safety or the contractor's activities; such responsibility shall neither be implied nor inferred.

Excavations or other activities resulting in ground disturbance have the potential to affect adjoining properties and structures. Our scope of services does not include review of available final grading information or consider potential temporary grading performed

by the contractor for potential effects such as ground movement beyond the project limits. A preconstruction/precondition survey should be conducted to document nearby property/infrastructure prior to any site development activity. Excavation or ground disturbance activities adjacent or near property lines should be monitored or instrumented for potential ground movements that could negatively affect adjoining property and/or structures.

### Construction Observation and Testing

The earthwork efforts should be monitored under the direction of the Geotechnical Engineer or representative. Monitoring should include documentation of adequate removal of vegetation and topsoil, proof-rolling and mitigation of areas delineated by the proof-roll to require mitigation.

Each lift of compacted fill should be tested, evaluated, and reworked as necessary until approved by the Geotechnical Engineer prior to placement of additional lifts. Each lift of fill should be tested for density and water content at a frequency of at least one test for every 2,500 square feet of compacted fill in the proposed structure areas, and at least one test for every 5,000 square feet of compacted fill in the proposed pavement construction area. One density and water content test should be conducted for every 50 linear feet of compacted utility trench backfill.

In areas of foundation excavations, the bearing subgrade should be evaluated under the direction of the Geotechnical Engineer or representative. In the event that unanticipated conditions are encountered, the Geotechnical Engineer should prescribe mitigation options.

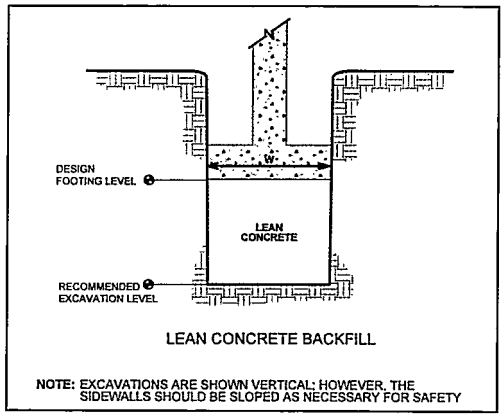
In addition to the documentation of the essential parameters necessary for construction, the continuation of the Geotechnical Engineer into the construction phase of the project provides the continuity to maintain the Geotechnical Engineer's evaluation of subsurface conditions, including assessing variations and associated design changes.

## Shallow Foundations

If the site has been prepared in accordance with the requirements noted in **Earthwork**, the following design parameters are applicable for shallow foundations.

Terracon

## Design Parameters – Compressive Loads

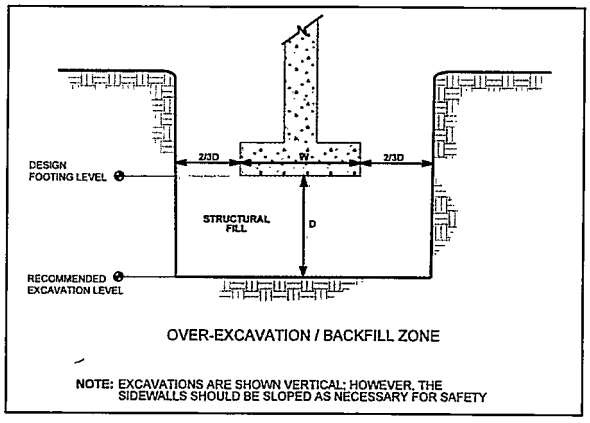


| Item | Description |
|---|---|
| **Maximum Net Allowable Bearing Pressure** [1, 2] | 3,000 psf (footings) |
| **Required Bearing Stratum** [3] | GeoModel Layer 1 or 2 or properly compacted structural fill extending to undisturbed native soils) |
| **Minimum Foundation Dimensions** | 30 inches for spread footings<br>18 inches for continuous strip footings |
| **Ultimate Passive Resistance**[4] | 360 pcf |
| **Sliding Resistance** [5] | 0.35 |
| **Minimum Embedment below Finished Grade** [6] | 24 inches |
| **Estimated Total Settlement from Structural Loads** [2] | Less than 1 inch |
| **Estimated Differential Settlement** [2, 7] | Less than 1/2 inch |

1. The maximum net allowable bearing pressure is the pressure in excess of the minimum surrounding overburden pressure at the footing base elevation. Values assume that exterior grades are no steeper than 20% within 10 feet of structure.
2. Values provided are for the maximum loads noted in **Project Description**. Additional geotechnical consultation will be necessary if higher loads are anticipated.
3. Unsuitable or soft soils should be over-excavated and replaced per the recommendations presented in **Earthwork**.
4. Use of passive earth pressures require the sides of the excavation for the spread footing foundation to be nearly vertical and the concrete placed neat against these vertical faces or that the footing forms be removed, and compacted structural fill be placed against the vertical footing face. Assumes no hydrostatic pressure.
5. Can be used to compute sliding resistance where foundations are placed on suitable soil/materials. Frictional resistance for granular materials is dependent on the bearing pressure which may vary due to load combinations. For fine-grained materials, lateral resistance using cohesion should not exceed ½ the dead load.
6. Embedment necessary to minimize the effects of frost and/or seasonal water content variations. For sloping ground, maintain depth below the lowest adjacent exterior grade within 5 horizontal feet of the structure.
7. Differential settlements are noted for equivalent-loaded foundations and bearing elevation as measured over a span of 50 feet.

## Foundation Construction Considerations

As noted in **Earthwork**, the footing excavations should be evaluated under the observation of the Geotechnical Engineer. The base of all foundation excavations should be free of water and loose soil, prior to placing concrete. Concrete should be placed soon after excavating to reduce bearing soil disturbance. Care should be taken to prevent wetting or drying of the bearing materials during construction. Excessively wet or dry material or any loose/disturbed material in the bottom of the footing excavations should be removed/reconditioned before foundation concrete is placed.



If unsuitable bearing soils are observed at the base of the planned footing excavation, the excavation should be extended deeper to suitable soils, and the footings could bear directly on these soils at the lower level or on lean concrete backfill placed in the excavations. The lean concrete replacement zone is illustrated on the sketch below.

LEAN CONCRETE BACKFILL

NOTE: EXCAVATIONS ARE SHOWN VERTICAL; HOWEVER, THE SIDEWALLS SHOULD BE SLOPED AS NECESSARY FOR SAFETY

Alternatively, over-excavation for structural fill placement below footings should be conducted as shown below. The over-excavation should be backfilled up to the footing base elevation, with suitable fill placed, as recommended in the **Earthwork** section.

OVER-EXCAVATION / BACKFILL ZONE

NOTE: EXCAVATIONS ARE SHOWN VERTICAL; HOWEVER, THE SIDEWALLS SHOULD BE SLOPED AS NECESSARY FOR SAFETY

# Floor Slabs

## Floor Slab Design Parameters

Design parameters for floor slabs assume the requirements for **Earthwork** have been followed. Specific attention should be given to positive drainage away from the structure and positive drainage of the aggregate base beneath the floor slab.

| Item | Description |
|---|---|
| **Floor Slab Support**[1] | At least 12 inches of properly compacted native soils or properly compacted caliche materials (sizes less than 4 inches in maximum dimensions and meet structural fill requirement) or properly compacted structural fill as needed to achieve finished pad elevation. |
| **Estimated Modulus of Subgrade Reaction**[2] | 125 psi/inch for point loading conditions |

1. Floor slabs should be structurally independent of building footings or walls to reduce the possibility of floor slab cracking caused by differential movements between the slab and foundation.
2. Modulus of subgrade reaction is an estimated value based upon our experience with the subgrade condition, the requirements noted in **Earthwork**, and the floor slab support as noted in this table. It is provided for point loads. For large area loads the modulus of subgrade reaction would be lower.

A conventional slab-on-grade system can be used on the project site; no structural slab is necessary because on-site soils are not expansive soils. The use of a vapor retarder should be considered beneath concrete slabs on grade covered with wood, tile, carpet, or other moisture sensitive or impervious coverings, when the project includes humidity-controlled areas, or when the slab will support equipment sensitive to moisture. When conditions warrant the use of a vapor retarder, the slab designer should refer to ACI 302 and/or ACI 360 for procedures and cautions regarding the use and placement of a vapor retarder.

Saw-cut contraction joints should be placed in the slab to help control the location and extent of cracking. For additional recommendations, refer to the ACI Design Manual. Joints or cracks should be sealed with a waterproof, non-extruding compressible compound specifically recommended for heavy duty concrete pavement and wet environments.

Where floor slabs are tied to perimeter walls or turn-down slabs to meet structural or other construction objectives, our experience indicates differential movement between the walls and slabs will likely be observed in adjacent slab expansion joints or floor slab cracks beyond the length of the structural dowels. The Structural Engineer should account for potential differential settlement through use of sufficient control joints, appropriate reinforcing, or other means.

### Floor Slab Construction Considerations

Finished subgrade, within and for at least 5 feet beyond the floor slab, should be protected from traffic, rutting, or other disturbance and maintained in a relatively moist condition until floor slabs are constructed. If the subgrade should become damaged or desiccated prior to construction of floor slabs, the affected material should be removed, and structural fill should be added to replace the resulting excavation. Final conditioning of the finished subgrade should be performed immediately prior to placement of the floor slab support course.

The Geotechnical Engineer or representative should approve the condition of the floor slab subgrades immediately prior to placement of the floor slab support course, reinforcing steel, and concrete. Attention should be paid to high traffic areas that were rutted and disturbed earlier, and to areas where backfilled trenches are located.

## Pavements

### Pavement – Subgrade Preparation

The natural subgrade should be uniformly compacted to the criteria in section **Fill Placement and Compaction Requirements** of this report. It should then be protected and maintained in a moist condition until the pavement is placed. Pavement subgrades should be graded to prevent ponding and infiltration of excessive moisture on or adjacent to the pavement subgrade surface.

Site grading is generally accomplished early in the construction phase. However, as construction proceeds, the subgrade may be disturbed due to utility excavations, construction traffic, desiccation, or rainfall. Thus, the pavement subgrade may not be suitable for pavement construction and corrective action will be required. The subgrade should be carefully evaluated at the time of pavement construction for signs of disturbance or excessive rutting. If disturbance has occurred, pavement subgrade areas should be reworked, moisture conditioned, and properly compacted to the recommendations provided in this report immediately prior to paving.

## General Pavement Comments

Pavement designs are provided for the traffic conditions and pavement life conditions as noted in **Project Description** and in the following sections of this report. A critical aspect of pavement performance is site preparation. Pavement designs noted in this section must be applied to the site which has been prepared as recommended in the **Earthwork** section.

## Pavement Design Parameters

A California Bearing Ratio (CBR) of 4 was used for the subgrade for the asphaltic concrete (AC) pavement designs. A modulus of subgrade reaction of 125 pci was used for the portland cement concrete (PCC) pavement designs. The value was empirically derived based upon our experience with the similar subgrade soils and our expectation of the quality of the subgrade as prescribed by the **Site Preparation** conditions as outlined in **Earthwork**. A modulus of rupture of 550 psi was used in design for the concrete (based on correlations with a minimum 28-day compressive strength of 4,000 psi).

## Pavement Section Thicknesses

The following table provides our opinion of minimum thickness for Asphaltic Concrete (AC) sections:

**Asphaltic Concrete Design**

| Layer | Thickness (inches) | | |
|---|---|---|---|
| | Traffic Class I [1] | Traffic Class II [1] | Traffic Class III [1] |
| AC [2,3] | 1.5 | 2 | 2.5 |
| Aggregate Base | 8 | 8 | 10 |

1. See **Project Description** for more specifics regarding traffic assumptions.
2. All materials should meet the Texas Department of Transportation (TXDOT) Standard Specifications for Highway Construction.
   - Asphaltic Surface – Plant mixed, hot laid Type C or D Surface, meeting the master specifications requirements of 2014 TXDOT Standard Specifications Item SS 3224 (2011) and specific criteria for the job mix formula.
   - Asphaltic Base - Crushed limestone base meeting all of the requirements of 2014 TxDOT Item 247, Type A, Grade 1-2.
3. A minimum 1.5-inch surface course should be used on AC pavements.

The following table provides our estimated minimum thickness of Portland Cement Concrete (PCC) pavements.

**Portland Cement Concrete Design**

| Layer | Thickness (inches) | | |
|---|---|---|---|
| | Traffic Category A [1] | Traffic Category D [1] | Traffic Category E [1] |
| PCC [2] | 5 | 6 | 7 |
| Aggregate Base | 4 | 4 | 4 |

1. See **Project Description** for more specifics regarding traffic classifications.
2. All materials should meet the Texas Department of Transportation (TXDOT) Standard Specifications for Highway Construction.

Areas for parking of heavy vehicles, concentrated turn areas, and start/stop maneuvers could require thicker pavement sections. Edge restraints (i.e., concrete curbs or aggregate shoulders) should be planned along curves and areas of maneuvering vehicles.

Although not required for structural support, a minimum 4-inch-thick base course layer is recommended to help reduce potential for slab curl, shrinkage cracking, and subgrade pumping through joints. Proper joint spacing will also be required to prevent excessive slab curling and shrinkage cracking. Joints should be sealed to prevent entry of foreign material and doweled where necessary for load transfer. PCC pavement details for joint spacing, joint reinforcement, and joint sealing should be prepared in accordance with ACI 330 and ACI 325.

Where practical, we recommend early-entry cutting of crack-control joints in PCC pavements. Cutting of the concrete in its "green" state typically reduces the potential for micro-cracking of the pavements prior to the crack control joints being formed, compared to cutting the joints after the concrete has fully set. Micro-cracking of pavements may lead to crack formation in locations other than the sawed joints, and/or reduction of fatigue life of the pavement.

Openings in pavements, such as decorative landscaped areas, are sources for water infiltration into surrounding pavement systems. Water can collect in the islands and migrate into the surrounding subgrade soils thereby degrading support of the pavement. Islands with raised concrete curbs, irrigated foliage, and low permeability near-surface soils are particular areas of concern. The civil design for the pavements with these conditions should include features to restrict or collect and discharge excess water from the islands. Examples of features are edge drains connected to the stormwater collection system, longitudinal subdrains, or other suitable outlets and impermeable barriers

preventing lateral migration of water such as a cutoff wall installed to a depth below the pavement structure.

## Pavement Drainage

Pavements should be sloped to provide rapid drainage of surface water. Water allowed to pond on or adjacent to the pavements could saturate the subgrade and contribute to premature pavement deterioration. In addition, the pavement subgrade should be graded to provide positive drainage within the granular base section. Appropriate sub-drainage or connection to a suitable daylight outlet should be provided to remove water from the granular subbase.

## Pavement Maintenance

The pavement sections represent minimum recommended thicknesses and, as such, periodic upkeep should be anticipated. Preventive maintenance should be planned and provided for through an on-going pavement management program. Maintenance activities are intended to slow the rate of pavement deterioration and to preserve the pavement investment. Pavement care consists of both localized (e.g., crack, and joint sealing and patching) and global maintenance (e.g., surface sealing). Additional engineering consultation is recommended to determine the type and extent of a cost-effective program. Even with periodic maintenance, some movements and related cracking may still occur, and repairs may be required.

Pavement performance is affected by its surroundings. In addition to providing preventive maintenance, the civil engineer should consider the following recommendations in the design and layout of pavements:

- Final grade adjacent to paved areas should slope down from the edges at a minimum 2%.
- Subgrade and pavement surfaces should have a minimum 2% slope to promote proper surface drainage.
- Install pavement drainage systems surrounding areas anticipated for frequent wetting.
- Install joint sealant and seal cracks immediately.
- Seal all landscaped areas in or adjacent to pavements to reduce moisture migration to subgrade soils.
- Place compacted, low permeability backfill against the exterior side of curb and gutter.
- Place curb, gutter and/or sidewalk directly on clay subgrade soils rather than on unbound granular base course materials.

# General Comments

Our analysis and opinions are based upon our understanding of the project, the geotechnical conditions in the area, and the data obtained from our site exploration. Variations will occur between exploration point locations or due to the modifying effects of construction or weather. The nature and extent of such variations may not become evident until during or after construction. Terracon should be retained as the Geotechnical Engineer, where noted in this report, to provide observation and testing services during pertinent construction phases. If variations appear, we can provide further evaluation and supplemental recommendations. If variations are noted in the absence of our observation and testing services on-site, we should be immediately notified so that we can provide evaluation and supplemental recommendations.

Our Scope of Services does not include either specifically or by implication any environmental or biological (e.g., mold, fungi, bacteria) assessment of the site or identification or prevention of pollutants, hazardous materials, or conditions. If the owner is concerned about the potential for such contamination or pollution, other studies should be undertaken.

Our services and any correspondence are intended for the sole benefit and exclusive use of our client for specific application to the project discussed and are accomplished in accordance with generally accepted geotechnical engineering practices with no third-party beneficiaries intended. Any third-party access to services or correspondence is solely for information purposes to support the services provided by Terracon to our client. Reliance upon the services and any work product is limited to our client and is not intended for third parties. Any use or reliance of the provided information by third parties is done solely at their own risk. No warranties, either express or implied, are intended or made.

Site characteristics as provided are for design purposes and not to estimate excavation cost. Any use of our report in that regard is done at the sole risk of the excavating cost estimator as there may be variations on the site that are not apparent in the data that could significantly affect excavation cost. Any parties charged with estimating excavation costs should seek their own site characterization for specific purposes to obtain the specific level of detail necessary for costing. Site safety and cost estimating including excavation support and dewatering requirements/design are the responsibility of others.

Construction and site development have the potential to affect adjacent properties. Such impacts can include damages due to vibration, modification of groundwater/surface water flow during construction, foundation movement due to undermining or subsidence from excavation, as well as noise or air quality concerns. Evaluation of these items on nearby properties are commonly associated with contractor means and methods and are not addressed in this report. The owner and contractor should consider a preconstruction/precondition survey of surrounding development. If changes in the

nature, design, or location of the project are planned, our conclusions and recommendations shall not be considered valid unless we review the changes and either verify or modify our conclusions in writing.

# Exploration and Testing Procedures

## Field Exploration

| Number of Borings | Boring Depth (feet) [1, 2] | Location |
|---|---|---|
| B-1 | 24 | Building Footprint Area |
| B-2 | 24 | Citizens Collection Station (CCS) Area |

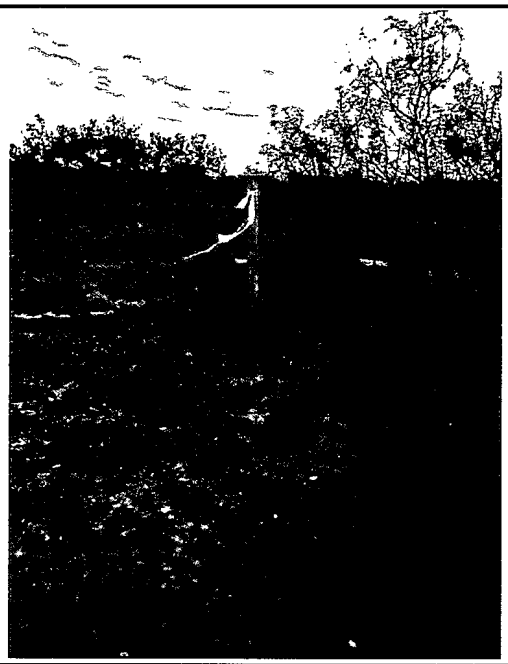
1. Below ground surface
2. Borings were terminated at depths of about 1 foot shorter than the planned depths due to very dense caliche materials.

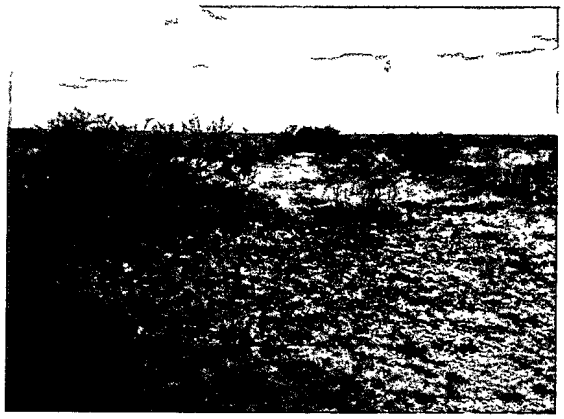
**Boring Layout and Elevations:** Terracon personnel provided the boring layout. Elevations were estimated at the boring locations using Google Earth Pro. We used handheld GPS equipment to locate borings with an estimated horizontal accuracy of +/- 20 feet. If more precise elevation and boring coordinates are desired, we recommend the borings be surveyed.

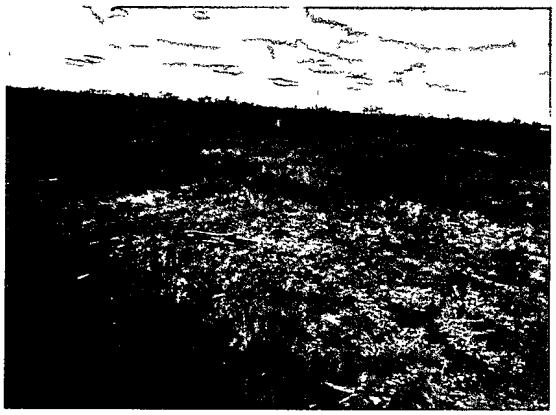
**Subsurface Exploration Procedures:** We advanced the borings with a truck-mounted rotary drill rig using air rotary drilling method. Five samples were obtained in the upper 10 feet of each boring and at intervals of 5 feet thereafter. In the split-barrel sampling procedure, a standard 2-inch outer diameter split-barrel sampling spoon was driven into the ground by a 140-pound automatic hammer falling a distance of 30 inches. The number of blows required to advance the sampling spoon the last 12 inches of a normal 18-inch penetration is recorded as the Standard Penetration Test (SPT) resistance value. The SPT resistance values, also referred to as N-values, are indicated on the boring logs at the test depths. For safety purposes, all borings were backfilled with auger cuttings after their completion.

We also observed the boreholes while drilling and at the completion of drilling for the presence of groundwater. Groundwater was not observed at these times in the boreholes.

The sampling depths, penetration distances, and other sampling information was recorded on the field boring logs. The samples were placed in appropriate containers and taken to our soil laboratory for testing and classification by a Geotechnical Engineer. Our exploration team prepared field boring logs as part of the drilling operations. These field logs included visual classifications of the materials observed during drilling and our interpretation of the subsurface conditions between samples. Final boring logs were prepared from the field logs. The final boring logs represent the Geotechnical Engineer's interpretation of the field logs and include modifications based on observations and tests of the samples in our laboratory.







## Laboratory Testing

The project engineer reviewed the field data and assigned laboratory tests. The laboratory testing program included the following types of tests:

- Moisture Content
- Dry Unit Weight
- Atterberg Limits

The laboratory testing program often included examination of soil samples by an engineer. Based on the results of our field and laboratory programs, we described and classified the soil samples in accordance with the Unified Soil Classification System.

## Descriptive Soil Classification

Soil classification as noted on the soil boring logs is based Unified Soil Classification System. Where sufficient laboratory data exist to classify the soils consistent with ASTM D2487 "Classification of Soils for Engineering Purposes" this procedure is used. ASTM D2488 "Description and Identification of Soils (Visual-Manual Procedure)" is also used to classify the soils, particularly where insufficient laboratory data exist to classify the soils in accordance with ASTM D2487. In addition to USCS classification, coarse grained soils are classified on the basis of their in-place relative density, and fine-grained soils are classified on the basis of their consistency. See "Strength Terms" table below for details. The ASTM standards noted above are for reference to methodology in general. In some cases, variations to methods are applied as a result of local practice or professional judgment.

## Location And Elevation Notes

Exploration point locations as shown on the Exploration Plan and as noted on the soil boring logs in the form of Latitude and Longitude are approximate. See Exploration and Testing Procedures in the report for the methods used to locate the exploration points for this project. Surface elevation data annotated with +/- indicates that no actual topographical survey was conducted to confirm the surface elevation. Instead, the surface elevation was approximately determined from topographic maps of the area.

## Strength Terms

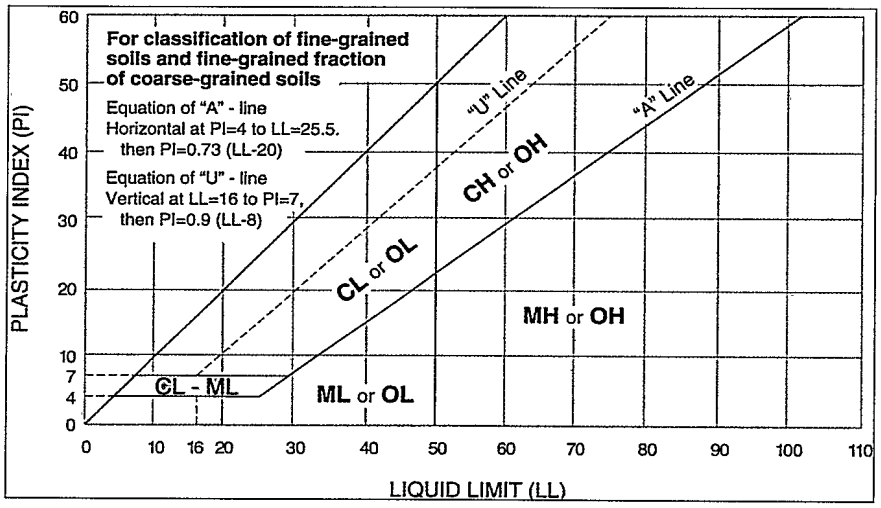
**Relative Density of Coarse-Grained Soils**
(More than 50% retained on No. 200 sieve.)
Density determined by Standard Penetration Resistance

| Relative Density | Standard Penetration or N-Value (Blows/Ft.) |
|---|---|
| Very Loose | 0 - 3 |
| Loose | 4 - 9 |
| Medium Dense | 10 - 29 |
| Dense | 30 - 50 |
| Very Dense | > 50 |

**Consistency of Fine-Grained Soils**
(50% or more passing the No. 200 sieve.)
Consistency determined by laboratory shear strength testing, field visual-manual procedures or standard penetration resistance

| Consistency | Unconfined Compressive Strength Qu (tsf) | Standard Penetration or N-Value (Blows/Ft.) |
|---|---|---|
| Very Soft | less than 0.25 | 0 - 1 |
| Soft | 0.25 to 0.50 | 2 - 4 |
| Medium Stiff | 0.50 to 1.00 | 4 - 8 |
| Stiff | 1.00 to 2.00 | 8 - 15 |
| Very Stiff | 2.00 to 4.00 | 15 - 30 |
| Hard | > 4.00 | > 30 |

## Relevance of Exploration and Laboratory Test Results



Exploration/field results and/or laboratory test data contained within this document are intended for application to the project as described in this document. Use of such exploration/field results and/or laboratory test data should not be used independently of this document.

| | | | Fines classify as CL or CH | SC | Clayey sand [G, H, I] |
| **Fine-Grained Soils:** 50% or more passes the No. 200 sieve | **Silts and Clays:** Liquid limit less than 50 | **Inorganic:** | PI > 7 and plots above "A" line [J] | CL | Lean clay [K, L, M] |
| | | | PI < 4 or plots below "A" line [J] | ML | Silt [K, L, M] |
| | | **Organic:** | $\frac{LL\ oven\ dried}{LL\ not\ dried} < 0.75$ | OL | Organic clay [K, L, M, N] / Organic silt [K, L, M, O] |
| | **Silts and Clays:** Liquid limit 50 or more | **Inorganic:** | PI plots on or above "A" line | CH | Fat clay [K, L, M] |
| | | | PI plots below "A" line | MH | Elastic silt [K, L, M] |
| | | **Organic:** | $\frac{LL\ oven\ dried}{LL\ not\ dried} < 0.75$ | OH | Organic clay [K, L, M, P] / Organic silt [K, L, M, Q] |
| **Highly organic soils:** | Primarily organic matter, dark in color, and organic odor | | | PT | Peat |

[A] Based on the material passing the 3-inch (75-mm) sieve.
[B] If field sample contained cobbles or boulders, or both, add "with cobbles or boulders, or both" to group name.
[C] Gravels with 5 to 12% fines require dual symbols: GW-GM well-graded gravel with silt, GW-GC well-graded gravel with clay, GP-GM poorly graded gravel with silt, GP-GC poorly graded gravel with clay.
[D] Sands with 5 to 12% fines require dual symbols: SW-SM well-graded sand with silt, SW-SC well-graded sand with clay, SP-SM poorly graded sand with silt, SP-SC poorly graded sand with clay.
[E] $Cu = D_{60}/D_{10}$ $Cc = \frac{(D_{30})^2}{D_{10} \times D_{60}}$
[F] If soil contains ≥ 15% sand, add "with sand" to group name.
[G] If fines classify as CL-ML, use dual symbol GC-GM, or SC-SM.
[H] If fines are organic, add "with organic fines" to group name.
[I] If soil contains ≥ 15% gravel, add "with gravel" to group name.
[J] If Atterberg limits plot in shaded area, soil is a CL-ML, silty clay.
[K] If soil contains 15 to 29% plus No. 200, add "with sand" or "with gravel," whichever is predominant.
[L] If soil contains ≥ 30% plus No. 200 predominantly sand, add "sandy" to group name.
[M] If soil contains ≥ 30% plus No. 200, predominantly gravel, add "gravelly" to group name.
[N] PI ≥ 4 and plots on or above "A" line.
[O] PI < 4 or plots below "A" line.
[P] PI plots on or above "A" line.
[Q] PI plots below "A" line.

Attention of all Prospective Proposers/Plan Holders is directed to the following modifications to the referenced Drawings and Project Manual. This Addendum becomes a part of the Contract Documents and modifies the original Contract Documents dated July 14, 2023 as noted below:

This Addendum consists of 3 page(s), the Section 01 22 00 Measurement and Payment, the attached drawing(s) no(s). C-101, C-106, C-112, and E-501.

I. CHANGES TO PRIOR ADDENDA:

1. NONE

II. CHANGES TO PROJECT MANUAL:

1. SECTION 01 22 00 – MEASUREMENT AND PAYMENT
   a. ADD this Section in its entirety.

III. CHANGES TO DRAWINGS:

1. SHEET C-101 – WEST CCS SITE LAYOUT PLAN
   a. ADD this Sheet in its entirety.

2. SHEET C-106 – NORTH CCS SITE LAYOUT PLAN
   a. ADD this Sheet in its entirety.

3. SHEET C-112 – NORTH CCS LANDSCAPE PLAN
   a. ADD this Sheet in its entirety.

4. SHEET E-501 – ELECTRICAL RISER DIAGRAM AND DETAILS
   a. ADD this Sheet in its entirety.

IV. QUESTIONS AND CLARIFICATIONS:

Concrete

1. 20 mil poly is specified and called for in the plans. It is a special order item that would require us to purchase 12 roll pallet + freight (currently about 300); when we are only needing 4 rolls. Would the engineer entertain 15 mil poly because of local supply and cost? Added cost is more than $3,200

   RESPONSE: Substitution of 15 mil barrier is not acceptable for this project.

2. S-502; C1 shows 4" PVC, C-101 & C-106 note 15 call for 6" x 2" drainage cut outs per Detail B4/S-502; but there is no detail. What does the owner/architect/engineer want to do?

   RESPONSE: Refer to revised sheet C-101 and C-106 for drainage cut out.

3. Is there any details for the light pole bases?

   RESPONSE: Refer to revised Sheet E-501 as part of this addendum.

Septic Tanks

4. What is the amount of water discharge (gallons per day) of the RO system identified on Plumbing Plan, P-111, Note 1?

   RESPONSE: The RO system is expected to discharge 1 gallon of water per day.

Landscaping

5. Plant Schedule on North CCS Landscape Plan C-112 lists 9 Chinese Pistache, however plan shows 17 trees. Please clarify the quantity.

   RESPONSE: Refer to C-112 as part of this addendum.

6. There's no detail or section for the border going around the areas where the trees and ¾" Rock Mulch will be contained. Plan C-112. Please confirm if steel lawn edging is acceptable or what to consider to contain the Rock Mulch.

   RESPONSE: Refer to C-112 as part of this addendum.

Cold-Formed Metal Framing

7. In the loading bay area, there's no detail showing any framing to connect the treated plywood to the perimeter walls. Please confirm if we need to figure 3-5/8 framing behind it or what to consider.

   RESPONSE: Attached the 3/4" plywood to 14 ga x2x2 base angle attached with 1"X-U Hilti pins at 24" center at the slab aligned with the girts above. Secure the plywood sheet to the 14 ga x2x2 clip angle attached with 1"X-U Hilti pins at 24" center, the 5-foot girt, and the 7-foot girt.

Electrical

8. Can you provide the information on the trash Compactor & Guard shack. Need the Voltage & amperage for the trach compactor and location. We need to know where the Guard shack will be located and what electrical & data is required if any and location.

   RESPONSE: Refer to revised Section 01 22 00 Measurement and Payment.

Attention of all Prospective Proposers/Plan Holders is directed to the following modifications to the referenced Drawings and Project Manual. This Addendum becomes a part of the Contract Documents and modifies the original Contract Documents dated July 14, 2023 as noted below:

This Addendum consists of 4 page(s), the attached drawing(s) no(s). C-112, and Pre-Proposal Agenda.

I. CHANGES TO PRIOR ADDENDA:

1. NONE

II. CHANGES TO PROJECT MANUAL:

1. NONE

III. CHANGES TO DRAWINGS:

1. SHEET C-112 – NORTH CCS LANDSCAPE PLAN
   a. ADDED this Sheet in its entirety.

IV. QUESTIONS AND CLARIFICATIONS:

North Citizens' Collection Station Project- questions:

1. What modifications to the entrance road?

   RESPONSE: Connection to HWY 349.

2. Where is the electrical?

   RESPONSE: Working with Oncor to determine. Take utilities out of building 5 feet for tie in.

3. Water source?

   RESPONSE: City water.

4. Septic source

   RESPONSE: Septic systems are included in the construction drawings.

5. Inspections? ETJ permits are they required? Who is paying for them?

   RESPONSE: Confirm with City of Midland Permitting office.

6. Storm pond dirt okay to use?

   RESPONSE Onsite soil maybe used for structural fill. Processing.

West Citizens' Collection Station Project- questions:

7. Where is the electrical?

   RESPONSE: On site.

8. Water source?

   RESPONSE: Water well by current white building.

9. Septic source

   RESPONSE: Septic systems are included in the construction drawings.

10. City based approved material okay for this project? Road base items?

    RESPONSE: Road base items are detailed on Sheet C-501.

11. Storm pond dirt okay to use?

    RESPONSE: Refer to Geotech Reports include in Project Manual in reference to the suitability of onsite material for use as fill material.

12. Transportation material currently house on site, where will that go? Moved to?

    RESPONSE: Material may be stockpiled onsite during construction. Excess material not determined to be waste may be stockpiled onsite.

13. What is the function of the building?

    RESPONSE: Operation/Oversight of the entire facility.

General questions:

14. Completion dates?

    RESPONSE: Looking at 9 months to one (1) year. Both sites need to be completed simultaneously.

15. Will chemicals be brought in?

    RESPONSE: No, City is not permitted for chemicals.

16. Mezzanine in the plans?

    RESPONSE: Yes, mezzanine is for storage.

17. County requiring permits?

    RESPONSE: Confirm with Midland County Public Works.

18. Item 38 of the North Site BID Form corresponds to Landscaping and Irrigation, however no plans are included.

    RESPONSE: Sheet C-112, included with this addendum, displays the landscaping plan.

19. Curbs are shown within the Plans but there's no bid item for them. Please clarify.

    RESPONSE: Curb construction work is performed under Proposal item 7 and Proposal item 26 for the respective site.

20. Onsite material will not meet specs, is there going to be a line item added for imported materials? If we need to consider to screen the onsite materials, is there going to be a line item added for screening?

    RESPONSE: Refer to Geotech reports included in Project Manual in reference to the suitability of onsite material for use as fill material.

21. Is there any GEO TECH Report available for these locations? ; If not, are rock clauses to be excluded?

    RESPONSE: Geotech reports were included for both sites in Project Manual.

22. Project Manual (pages 2-7) shows a Note specifying not to use the manual for regulatory approval, construction, bidding, or permit purposes. Please confirm if there will be a revision of the specifications or how to proceed.

    RESPONSE: Sealed Project Manual was previously issued for construction use and obtaining AHJ permits as needed.

23. Please confirm the location of new utilities. (Water & electrical), or should we consider 5' stub-outs from the buildings.

    RESPONSE: Yes, extend utilities outside buildings 5 feet for connections.

24. Please confirm if the electrical subcontractor will be responsible for removing the overhead lines and poles marked with Note 5 or Power Company will be taking care of them. Plan C-001.

    RESPONSE: Contractor will be responsible for removing the overhead lines and poles marked with Note 5.

25. Is there a Door Hardware Schedule available? Not included within the Plans or the Project Manual.

    RESPONSE: Please refer to sealed Project Manual previously released.

26. There are (2) corner guards but no size. Please inform the wing size and the height.

    RESPONSE: Provide "CO-8" stainless steel corner guards from Construction Specialties or equal. Leg size is 3-1/2 inches, height is 48 inches installed above specified base utilizing adhesive installation, following manufacturer's written installation instructions.

27. Please confirm if exposed structure ceiling or structural steel called to paint on this project.

    RESPONSE: Workbay and Mezzanine have no ceiling and are exposed to structure. Exposed steel to be painted as specified in 09 91 23, color to be selected by Architect/Engineer from manufacturer's full range. Metals to be painted with basis of design product (or equal):
    - Semi-Gloss Finish High Performance:
      - 1ST Coat: S-W Pro Industrial Pro-Cryl Universal Primer, B66-1310 Series (5.0 mils wet, 2.0 mils dry).
      - 2ND Coat: S-W Pro Industrial Acrylic Semi-Gloss, B66-650 Series.
      - 3RD Coat: S-W Pro Industrial Acrylic Semi-Gloss, B66-650 Series (2.0-4.0 mils dry per coat).

# IMPORTANT NOTICE

## Conflict Of Interest Reporting Requirements

Compliance with LOCAL GOVERNMENT CODE TITLE 5. MATTERS AFFECTING PUBLIC OFFICERS AND EMPLOYEES SUBTITLE C. MATTERS AFFECTING PUBLIC OFFICERS AND EMPLOYEES OF MORE THAN ONE TYPE OF LOCAL GOVERNMENT CHAPTER 176. DISCLOSURE OF CERTAIN RELATIONSHIPS WITH LOCAL GOVERNMENT OFFICERS; PROVIDING PUBLIC ACCESS TO CERTAIN INFORMATION.

**Form CIQ:** This questionnaire reflects changes made to the law by H.B. 23, 84th Leg., Regular Session. This questionnaire shall be filed in accordance with Chapter 176, Local Government Code, by a vendor who has a business relationship as defined by Section 176.001(1-a) with a local governmental entity and the vendor meets requirements under Section 176.006(a). By law this questionnaire must be filed with the records administrator of the local governmental entity not later than the 7th business day after the date the vendor becomes aware of facts that require the statement to be filed. See Section 176.006(a-1), Local Government Code. A vendor commits an offense if the vendor knowingly violates Section 176.006, Local Government Code. An offense under this section is a misdemeanor.

Bidders are responsible for filing Conflict of Interest form "CIQ" in accordance with the above referenced statute. Failure to do so is a class C Misdemeanor. Contracts or Purchase Orders awarded to a vendor that has violated this law is subject to termination at such time that the violation is discovered with no recourse to the City of Midland. The bidder will be subsequently removed from the bidders list for a minimum of one year.

When there is no known conflict of interest as defined by the statute, it is not necessary to file/submit the Form CIQ. The form must be submitted if a conflict is subsequently discovered.

By submitting a response to this request, vendor represents that it complies with the requirements of Chapter 176 of the Texas Local Government Code.

For a current list of the local government officers go to: http://www.midlandtexas.gov/

Upon completion of the form, sign and submit with bid or mail to:

City of Midland
Attn: City Secretary
PO Box 1152
Midland, Texas 79702

**For vendor doing business with local governmental entity**

**This questionnaire reflects changes made to the law by H.B. 23, 84th Leg., Regular Session.**

This questionnaire is being filed in accordance with Chapter 176, Local Government Code, by a vendor who has a business relationship as defined by Section 176.001(1-a) with a local governmental entity and the vendor meets requirements under Section 176.006(a).

By law this questionnaire must be filed with the records administrator of the local governmental entity not later than the 7th business day after the date the vendor becomes aware of facts that require the statement to be filed. *See* Section 176.006(a-1), Local Government Code.

A vendor commits an offense if the vendor knowingly violates Section 176.006, Local Government Code. An offense under this section is a misdemeanor.

**OFFICE USE ONLY**

Date Received

**1** **Name of vendor who has a business relationship with local governmental entity.**

**2** ☐ **Check this box if you are filing an update to a previously filed questionnaire.** (The law requires that you file an updated completed questionnaire with the appropriate filing authority not later than the 7th business day after the date on which you became aware that the originally filed questionnaire was incomplete or inaccurate.)

**3** **Name of local government officer about whom the information is being disclosed.**

_____

Name of Officer

**4** **Describe each employment or other business relationship with the local government officer, or a family member of the officer, as described by Section 176.003(a)(2)(A). Also describe any family relationship with the local government officer. Complete subparts A and B for each employment or business relationship described. Attach additional pages to this Form CIQ as necessary.**

A. Is the local government officer or a family member of the officer receiving or likely to receive taxable income, other than investment income, from the vendor?

☐ Yes ☐ No

B. Is the vendor receiving or likely to receive taxable income, other than investment income, from or at the direction of the local government officer or a family member of the officer AND the taxable income is not received from the local governmental entity?

☐ Yes ☐ No

**5** **Describe each employment or business relationship that the vendor named in Section 1 maintains with a corporation or other business entity with respect to which the local government officer serves as an officer or director, or holds an ownership interest of one percent or more.**

**6** ☐ Check this box if the vendor has given the local government officer or a family member of the officer one or more gifts as described in Section 176.003(a)(2)(B), excluding gifts described in Section 176.003(a-1).

## CONFLICT OF INTEREST QUESTIONNAIRE
## For vendor doing business with local governmental entity

A complete copy of Chapter 176 of the Local Government Code may be found at http://www.statutes.legis.state.tx.us/Docs/LG/htm/LG.176.htm. For easy reference, below are some of the sections cited on this form.

**Local Government Code § 176.001(1-a):** "Business relationship" means a connection between two or more parties based on commercial activity of one of the parties. The term does not include a connection based on:

(A) a transaction that is subject to rate or fee regulation by a federal, state, or local governmental entity or an agency of a federal, state, or local governmental entity;

(B) a transaction conducted at a price and subject to terms available to the public; or

(C) a purchase or lease of goods or services from a person that is chartered by a state or federal agency and that is subject to regular examination by, and reporting to, that agency.

**Local Government Code § 176.003(a)(2)(A) and (B):**

(a) A local government officer shall file a conflicts disclosure statement with respect to a vendor if:

***

(2) the vendor:

(A) has an employment or other business relationship with the local government officer or a family member of the officer that results in the officer or family member receiving taxable income, other than investment income, that exceeds $2,500 during the 12-month period preceding the date that the officer becomes aware that

(i) a contract between the local governmental entity and vendor has been executed; or

(ii) the local governmental entity is considering entering into a contract with the vendor;

(B) has given to the local government officer or a family member of the officer one or more gifts that have an aggregate value of more than $100 in the 12-month period preceding the date the officer becomes awarethat:

(i) a contract between the local governmental entity and vendor has been executed; or

(ii) the local governmental entity is considering entering into a contract with thevendor.

**Local Government Code § 176.006(a) and (a-1)**

(a) A vendor shall file a completed conflict of interest questionnaire if the vendor has a business relationship with a local governmental entity and:

(1) has an employment or other business relationship with a local government officer of that local governmental entity, or a family member of the officer, described by Section 176.003(a)(2)(A);

(2) has given a local government officer of that local governmental entity, or a family member of the officer, one or more gifts with the aggregate value specified by Section 176.003(a)(2)(B), excluding any gift described by Section 176.003(a-1); or

(3) has a family relationship with a local government officer of that local governmental entity.

(a-1) The completed conflict of interest questionnaire must be filed with the appropriate records administrator not later than the seventh business day after the later of:

(1) the date that the vendor:

(A) begins discussions or negotiations to enter into a contract with the local governmental entity; or

(B) submits to the local governmental entity an application, response to a request for proposals or bids, correspondence, or another writing related to a potential contract with the local governmental entity;or

(2) the date the vendor becomes aware:

(A) of an employment or other business relationship with a local government officer, or a family member of the officer, described by Subsection (a);

(B) that the vendor has given one or more gifts described by Subsection (a); or

(C) of a family relationship with a local government officer.

OF

## Consideration of Location of Bidder's Principal Place of Business
## For Bids of $50,000 up to $100,000 for Services and $500,000 for Commodities
## Affidavit of Eligibility

Pursuant to Texas Local Government Code 271.9051, in purchasing real property, personal property that is not affixed to real property, or services, if the City receives one or more bids from a bidder whose principal place of business is in the City of Midland and whose bid is within five percent (5%) of the lowest bid price received by the City from a bidder who is not a resident of the City of Midland, the City may enter into a contract with:

(1) the lowest bidder; or

(2) the bidder whose principal place of business is in the City of Midland if the City Council determines, in writing, that the local bidder offers the City the best combination of contract price and additional economic development opportunities for the City of Midland created by the contract award, including the employment of residents of the City of Midland and increased tax revenues to the City of Midland.

In order to receive consideration, bidders must submit this affidavit to:

Erika Martinez
Purchasing Manager
City of Midland
300 N. Loraine St.,
PO BOX 1152
Midland, TX 79702-1152

*Complete all areas below. Incomplete affidavits may be rejected.*

Local Business Name: ONYX GENERAL CONTRACTORS, LLC

Local Address (must be within the City limits): 1010 S. FM 1788 Midland, Texas 79706

1. Is the above address the principal place of business for the business named above? ☒ Yes ☐ No
2. How many residents of the City of Midland are employed at the above business location? 60+
3. Year your business was established in the City of Midland: 2000
4. If you collect sales tax for ANY class of customer, provide the following Reseller information:

   Reseller Permit Number: _____

   Company Name and Address (as it appears on permit):
   ONYX GENERAL CONTRACTORS, LLC
   PO Box 60547
   Midland, Texas 79711
5. Does your business have more than one office in the State of Texas? ☐ Yes ☒ No
   If Yes, identify the office location considered as the point-of sale for the purpose of sales tax calculation:

   _____

   _____
6. Was the local business required to pay business and/or real property tax for the most recent tax year?

   ☒ Yes ☐ No

   If Yes, did the local business pay any of this tax to the City of Midland? ☒ Yes ☐ No

Under penalty of perjury, the undersigned states that the foregoing statements are true and correct. It is further acknowledged that any person, firm, corporation or entity intentionally submitting false information to the City in an attempt to qualify for eligibility shall be prohibited from bidding on City of Midland products and services for a period of one (1) year.

Authorized Signature: _____ Date: 08/16/2023

## EDUCATION

Texas Tech University, Lubbock, Texas — Dec. 2014

- Master of Science in Civil Engineering
- Structural Specialization

Angelo State University, San Angelo, Texas — May 2012

- Bachelor of Science – Applied Physics
- Minor - Mathematics

## PROFESSIONAL ENGINEER

- Licensed professional engineer in the State of Texas

## WORK EXPERIENCE

Onyx Contractors – Project Manager/Engineer (Midland, TX) — June 2018 - Present

- Manage projects from start to finish including but not limited to: subcontracts, change orders, submittals, RFI's, etc
- Conversion of accepted proposals into properly completed jobs, according to specifications, within budget, and on time.
- Assist with cost estimating and quantity take-off

HMT Engineering & Surveying – E.I.T (New Braunfels, TX) — August 2017 – May 2018

- Land development engineering: residential subdivisions & commercial developments
- Detention/retention pond design, water quality design, drainage channel design, culvert design, drainage studies, municipal water/sewer design plans and cost estimating, road/paving design plans and cost estimating, bid documents and specifications

West Texas Engineering – E.I.T. (Lubbock, TX) — October 2014 – July 2017

- Land development engineering: commercial, multi-family residential
- Site plans, grading plans, site utility design, detention/retention pond design, municipal water/sewer plans and cost estimating, paving plans and cost estimating, drainage studies, traffic reports and control plans, storm water pollution prevention, FEMA floodplain determination, site investigation reports, permitting, construction inspection reports

Green Sand and Gravel (San Angelo, TX) — Sept. 2011 – Aug. 2014

- Educating customers on what aggregate types work best for various projects
- Job scheduling and cost estimating
- Volume calculations (e.g. house pads, roads, fill material)

## SKILLS

- Experience with programs such as AutoCAD Civil 3D, HEC-RAS, Planswift, and Microsoft Office
- Sufficient mathematical skills (e.g. Calculus, Differential Equations, Linear Algebra)
- Knowledge of engineering theories, principles, and specifications
- Project management – construction scheduling, good communication skills, estimating
- Knowledge of construction practices

# GILBERT PRIEGO

702 Devonian Dr

Midland, TX 79703

432-694-5065

## EXPERIENCE

**January 2014 – Present** **Civil Superintendent** **Onyx Contractors**

- Manage and coordinate subcontractors and employees

Jobs completed include, but are not limited to the following:

- City of Midland Landfill Pit 4, Phase 1B
- City of Midland Medians for Quiet Zone
- City of Midland Cart Paths – Hogan Park
- City of Midland Landfill Pit 2
- City of Midland Citizens collection Center – Fast Track Project
- Construction of Ward Street Bridge
- New facility for CasedHole Solutions
- Warren Cat of Odessa New Engine shop

**1997-2008** **Laredo Paving Inc., Big Spring, TX**

Managed and gave oversight to a crew of 20 employees, dealing effectively with individuals from various cultures and ethnic backgrounds.

Designed, developed, implemented and organized safety and orientated meetings for the last 11 years in the areas of company policies, procedures, techniques, equipment and supplies related to construction and safety operation.

Supervised operational effectiveness by structuring clean and safe environments that met with OSHA and MSHA standards.

Gave instruction on how to keep work areas, yards and storage facilities within the highest safety specifications for the good of all employees and departments.

Coordinated weekly, quarterly and annual sectional meetings and gatherings for the evaluation, programming, scheduling and conflict resolution of any safety task that included and was not limited to substance abuse and risk management.

Taking action in any situation that required discipline or correction that was required for keeping employees and company safe.

Continually instructed employees on the procedures for handling and resolving all work practices, to insure that everything was done according to company specifications.

Gave direct input to the development, construction, execution, and cost effectiveness of company projects with a focus on completion of jobs that had no safety deficiencies or accidents.

Taking into consideration proactive factors such as budget, timing and personal to complete all jobs within a timely matter.

## EDUCATION

Bowie High School, El Paso, Texas

Class of 1985

Received instruction and new regulation updates from safey conferences in different cities of the United States, such as the following:

# SECTION 00 52 00 – AGREEMENT FORM

## PART 1 - GENERAL

1.1 APPLICABLE DOCUMENT

A. The Agreement for the Work will be written on the Owner provided form that follows Section 00 80 10 "Owner Documents."

## PART 2 - PRODUCTS (Not Used)

## PART 3 - EXECUTION (Not Used

END OF SECTION

**DOCUMENT 00 54 10 - WEATHER TABLE**
**(MIDLAND, TX)**

The number of calendar days indicated on the Proposal Form is the contract time allowed to complete Project from Notice to Proceed to Substantial Completion, taking into account the normal weather occurrence as shown in the Table below. Weather occurrences exceeding those listed in the table will be taken into consideration when evaluating a request for extension in contract time.

| MONTH | MEAN NUMBER DAYS PRECIPITATION (0.01" OR MORE) | NORMAL PRECIPITATION (WATER EQUIVALENT) (INCHES) | MEAN NUMBER DAYS SNOWFALL (INCLUDING ICE PELLETS/SLEET) (1.0" OR MORE) | AVERAGE NUMBER OF DAYS THAT MIN. TEMP IS < 40 |
|---|---|---|---|---|
| JANUARY | 2.8 | 1.28 | 0 | 25.6 |
| FEBRUARY | 2.6 | 1.02 | 0.2 | 16.8 |
| MARCH | 4 | 1.95 | 0 | 4.8 |
| APRIL | 3 | 1.42 | 0 | 2 |
| MAY | 4.6 | 2.00 | 0 | 0 |
| JUNE | 5.2 | 2.01 | 0 | 0 |
| JULY | 4 | 1.47 | 0 | 0 |
| AUGUST | 5.6 | 2.06 | 0 | 0 |
| SEPTEMBER | 6.6 | 2.38 | 0 | 0 |
| OCTOBER | 3.8 | 1.58 | 0 | 3.4 |
| NOVEMBER | 2 | 0.89 | 0 | 8.6 |
| DECEMBER | 3.6 | 1.16 | 0 | 19.8 |
| ANNUALLY | 42.5 | 15.68 | 1.9 | 107.4 |

This table is based on information from NOAA and measured at the Midland International Airport, Midland, Texas.

Means, normal, and averages are based on records covering a period of 5 years from 2016-2020.

## SECTION 00 80 10 – OWNER DOCUMENTS

### PART 1 - GENERAL

1.1 APPLICABLE DOCUMENT

A. Owner provided documents are as indicated below and that follows this Section.

1. Notice to Bidders.
2. Bid Bond.
3. Contract.
4. Exhibit C- Bonding Requirements.
5. Performance Bond.
6. Payment Bond.
7. Exhibit D- Building Wage Rate.
8. Exhibit D- Heavy & Highway Wage Rate.
9. Conflict of Interest Reporting Requirements.
10. Conflict of Interest Questionnaire.
11. Affidavit of Eligibility.
12. General Conditions of Bidding.
13. Standard Purchase Terms and Conditions.

### PART 2 - PRODUCTS (Not Used)

### PART 3 - EXECUTION (Not Used)

END OF SECTION

## NOTICE TO BIDDERS

IF THIS PURCHASE REQUIRES A CONTRACT, THE ATTACHED **CONTRACT AND INSURANCE REQUIREMENTS ARE NON-NEGOTIABLE**. MODIFICATIONS BY BIDDER/COMPANY OF ANY MATERIAL TERM(S) TO THE CONTRACT DOCUMENTS WILL BE DEEMED A NON-RESPONSIVE BID. NON-RESPONSIVE BIDS WILL BE REJECTED. BIDDER/COMPANY MUST BE WILLING TO SIGN THE CONTRACT AS IS AND WITHOUT MODIFICATIONS, PROVIDE PROPERLY EXECUTED BONDS (IF APPLICABLE) AND PROVIDE INSURANCE SPECIFICALLY AS REQUIRED WITHIN THE CONTRACT DOCUMENTS **WITHIN 21 DAYS** OF THE DATE OF THE TRANSMITTAL LETTER.

IF THE SELECTED BIDDER/COMPANY CANNOT MEET THE ABOVE REQUIREMENTS, THEN **THE CITY RESERVES THE RIGHT TO AWARD THIS PURCHASE TO ANOTHER BIDDER**.

**IMPORTANT NOTICE** – IF THE CONTRACT DOCUMENTS REQUIRE WORKER'S COMPENSATION INSURANCE, BIDDER/COMPANY MUST CARRY WORKER'S COMPENSATION INSURANCE TO BE ELIGIBLE FOR THIS CONTRACT. IF YOU CANNOT PROVIDE WORKER'S COMPENSATION INSURANCE AS REQUIRED BY STATE OF TEXAS STATUTE, WE RESPECTFULLY REQUEST THAT YOU "NO BID" THIS WORK.

**COMPLIANCE:** Company agrees that it shall comply with Texas Government Code Section 2252.908, *et seq.*, as amended. Company agrees that it shall comply with Texas Local Government Code Section 176.006, *et seq.*, as amended. For further instructions on how to comply with Texas Government Code Section 2252.908 and Texas Local Government Code Section 176.006,

please go to https://www.ethics.state.tx.us/whatsnew/elf_info_form1295.htm and https://www.ethics.state.tx.us/filinginfo/conflict_forms.htm.

ANY VENDOR WHO FAILS TO COMPLY WITH THE TERMS OF THE AWARD **MAY BE DECLARED AN IRRESPONSIBLE VENDOR**. BIDS SUBMITTED BY SAID VENDOR SHALL NOT BE CONSIDERED AGAIN FOR A MINIMUM PERIOD OF SIX MONTHS AS DETERMINED BY THE CITY MANAGER.

# GENERAL POWER OF ATTORNEY

Know all men by these presents: That the FCCI Insurance Company, a Corporation organized and existing under the laws of the State of Florida (the "Corporation") does make, constitute and appoint:

Garland Martin; Robbie Martin; Josh Andrajack; Tina McLelland; Haevyn Knobloch

Each, its true and lawful Attorney-In-Fact, to make, execute, seal and deliver, for and on its behalf as surety, and as its act and deed in all bonds and undertakings provided that no bond or undertaking or contract of suretyship executed under this authority shall exceed the sum of (not to exceed $20,000,000.00): $20,000,000.00

This Power of Attorney is made and executed by authority of a Resolution adopted by the Board of Directors. That resolution also authorized any further action by the officers of the Company necessary to effect such transaction.

The signatures below and the seal of the Corporation may be affixed by facsimile, and any such facsimile signatures or facsimile seal shall be binding upon the Corporation when so affixed and in the future with regard to any bond, undertaking or contract of surety to which it is attached.

In witness whereof, the FCCI Insurance Company has caused these presents to be signed by its duly authorized officers and its corporate Seal to be hereunto affixed, this 23rd day of July, 2020.

# THE CITY OF MIDLAND
## CONTRACT
## Contract No. 23004412

THIS CONTRACT, effective the 13th day of September, 2023, by and between the City of Midland, hereinafter referred to as "CITY", and Onyx General Contractors, LLC, hereinafter referred to as "COMPANY", is made for the following considerations:

1. **Cost:** Total Proposal: $ 6,422,091.20 DOLLARS

2. **Scope of Work:** COMPANY shall perform all work described for a new sound system at Momentum Bank Ballpark. Said work being more particularly described in the following documents, which are attached hereto and incorporated herein for all purposes.

EXHIBIT A..... Specifications, Proposal or Cost Summary
EXHIBIT B.....Intentionally Omitted
EXHIBIT C..... Bonding instructions for Public Works Contract of $50,000 and more
EXHIBIT D..... Wage Scale

3. **City:** The words "CITY's Representative" or "representative" shall mean Jeffery Ahrlett or the designee under whose supervision these contract documents, including the plans and specifications, were prepared, or who may inspect work performed under this Contract; or such other representative, supervisor, or inspector as may be authorized by CITY to act in any particular capacity under this Contract.

4. **City's Representative:** CITY's Representative may make periodic visits to the site to observe the progress and quality of the executed work and to determine, in general, if the work is proceeding in accordance with the contract documents. CITY's representative will not be required to make exhaustive or continuous on-site inspections to check the quality or quantity of the work, nor will such representative be responsible for the construction means, methods, techniques, sequences or procedures, or the safety precautions incident thereto. CITY's representative will not be responsible for COMPANY's failure to perform the work in accordance with the contract.

5. **Company:** Unless otherwise stipulated, COMPANY shall provide and pay for all materials, supplies, machinery, equipment, tools, superintendence, labor, insurance, and all water, light, power, fuel,

transportation and all other facilities necessary for the execution and completion of the work covered by the contract documents. Unless otherwise specified, all materials shall be new, and both workmanship and materials shall be of a good quality. COMPANY shall, if required, furnish satisfactory evidence as to the kind and quality of materials.

5.1. COMPANY shall, at its expense, obtain all permits and licenses necessary for the performance of this contract and pay all fees and taxes required by law, and comply with all laws, ordinances, rules and regulations governing COMPANY's performance of the contract, including all environmental laws and regulations, whether state or federal.

5.2. All work shall be done and all materials furnished in strict conformity with the contract and specifications.

6. **Minor Work Not Mentioned:** All minor detail of the work not specifically mentioned in the Specifications but obviously necessary for the proper completion of the work, such as the proper connection of new work to old, shall be considered as incidental to and a part of the work for which the prices are named in the contract. COMPANY will not be entitled to any additional compensation therefor unless specifically stated otherwise. Otherwise the term "extra work" as used in this contract shall mean and include all work that may be required by CITY to be done by COMPANY to accomplish any alteration or addition to the work as shown on the Specifications.

6.1. COMPANY shall perform all extra work under the direction of CITY's Representative when presented with a written work order signed by CITY's Representative, subject, however, to the right of the COMPANY to require written confirmation of such extra work order by CITY. Payment for extra work shall be as agreed in the work order.

7. **Safety:** COMPANY shall at all times exercise reasonable precaution for the safety of employees and others on or near the work and shall comply with all applicable provisions of federal, state and municipal laws. All machinery and equipment and other physical hazards shall be guarded in accordance with federal, state or municipal laws or regulations.

8. **INDEMNITY: COMPANY SHALL INDEMNIFY AND HOLD HARMLESS AND DEFEND CITY AND ALL OF CITY'S OFFICERS, AGENTS AND EMPLOYEES FROM ALL SUITS, ACTIONS, CLAIMS, DAMAGES, PERSONAL INJURIES, ACCIDENTAL DEATH, LOSSES, PROPERTY DAMAGE AND EXPENSES OF ANY CHARACTER WHATSOEVER, INCLUDING ATTORNEY'S FEES, BROUGHT FOR OR ON ACCOUNT OF ANY INJURIES OR DAMAGES RECEIVED OR SUSTAINED BY ANY PERSON OR PERSONS OR**

**PROPERTY, ON ACCOUNT OF ANY NEGLIGENT ACT OF COMPANY, THEIR AGENTS OR EMPLOYEES, OR ANY SUBCONTRACTOR, IN THE EXECUTION, SUPERVISION AND OPERATIONS GROWING OUT OF OR IN ANY WAY CONNECTED WITH THE PERFORMANCE OF THIS CONTRACT, AND COMPANY WILL BE REQUIRED TO PAY ANY JUDGMENT WITH COSTS WHICH MAY BE OBTAINED AGAINST CITY OR ANY OF ITS OFFICERS, AGENTS OR EMPLOYEES, INCLUDING ATTORNEY'S FEES. THE OBLIGATIONS CONTAINED IN THIS SECTION 8 SHALL SURVIVE THE TERMINATION OF THIS CONTRACT.**

8.1. **COMPANY SHALL INDEMNIFY AND HOLD HARMLESS AND DEFEND CITY AND ALL OF CITY'S OFFICERS, AGENTS AND EMPLOYEES FROM ALL SUITS, ACTIONS, CLAIMS, DAMAGES, PERSONAL INJURIES, ACCIDENTAL DEATH, PROPERTY DAMAGE, LOSSES, AND EXPENSES OF ANY CHARACTER WHATSOEVER INCLUDING ATTORNEY'S FEES, BROUGHT FOR OR ON ACCOUNT OF ANY INJURIES OR DAMAGES RECEIVED OR SUSTAINED BY ANY PERSON OR PERSONS OR PROPERTY, ON ACCOUNT OF ANY NEGLIGENT ACT OF CITY, CITY'S OFFICERS, AGENTS AND EMPLOYEES, WHETHER SUCH NEGLIGENT ACT WAS THE SOLE PROXIMATE CAUSE OF THE INJURY OR DAMAGE OR A PROXIMATE CAUSE JOINTLY AND CONCURRENTLY WITH COMPANY OR COMPANY'S EMPLOYEES, AGENTS OR SUBCONTRACTORS NEGLIGENCE IN THE EXECUTION, SUPERVISION AND OPERATIONS GROWING OUT OF OR IN ANY WAY CONNECTED WITH THE PERFORMANCE OF THIS CONTRACT, AND COMPANY WILL BE REQUIRED TO PAY ANY JUDGMENT WITH COSTS WHICH MAY BE OBTAINED AGAINST CITY OR ANY OF ITS OFFICERS, AGENTS OR EMPLOYEES, INCLUDING ATTORNEY'S FEES. THE OBLIGATIONS CONTAINED IN THIS SECTION 8.1 SHALL SURVIVE THE TERMINATION OF THIS CONTRACT.**

8.2. **COMPANY AGREES THAT IT WILL INDEMNIFY AND SAVE CITY HARMLESS FROM ALL CLAIMS GROWING OUT OF ANY DEMANDS OF SUBCONTRACTORS, LABORERS, WORKMEN, MECHANICS, MATERIALMEN, AND FURNISHERS OF MACHINERY AND PARTS THEREOF, EQUIPMENT, POWER TOOLS AND ALL SUPPLIES, INCURRED IN THE FURTHERANCE OF THE PERFORMANCE OF THIS CONTRACT. WHEN CITY SO DESIRES, COMPANY SHALL FURNISH SATISFACTORY EVIDENCE THAT ALL OBLIGATIONS OF THE NATURE HEREINABOVE DESIGNATED HAVE BEEN PAID, DISCHARGED OR WAIVED. COMPANY, ITS SURETIES AND INSURANCE CARRIERS SHALL DEFEND, INDEMNIFY AND SAVE HARMLESS CITY AND**

**ALL OF ITS OFFICERS, AGENTS AND EMPLOYEES FROM ALL SUITS, ACTIONS, OR CLAIMS OF ANY CHARACTER WHATSOEVER, BROUGHT FOR OR ON ACCOUNT OF ANY INJURIES OR DAMAGES RECEIVED OR SUSTAINED BY ANY PERSON OR PERSONS OR PROPERTY, ARISING FROM ANY ACT OF COMPANY OR ANY SUBCONTRACTOR, THEIR AGENTS OR EMPLOYEES, IN THE EXECUTION AND SUPERVISION OF THIS CONTRACT, AND WILL BE REQUIRED TO PAY ANY JUDGMENT WITH COSTS WHICH MAY BE OBTAINED AGAINST CITY OR ANY OF ITS OFFICERS, AGENTS, OR EMPLOYEES INCLUDING ATTORNEY'S FEES. THE OBLIGATIONS CONTAINED IN THIS SECTION 8.2 SHALL SURVIVE THE TERMINATION OF THIS CONTRACT.**

9. **Start of Work:** COMPANY shall commence work no later than ten (10) days after receipt of the execution of this document or other written release to proceed and shall complete such work no later than 365 calendar days after release to proceed.

10. **Clean Up:** COMPANY shall promptly remove from CITY's premises all materials condemned by CITY's Representative on account of failure to conform to the contract, whether actually incorporated in the work or not, and COMPANY shall at its own expense promptly replace such condemned materials with other materials conforming to the requirements of the contract. COMPANY shall also bear the expense of restoring all work of other contractors damaged by any such removal or replacement. If COMPANY does not remove and replace any such condemned materials within a reasonable time after a written notice by CITY, CITY may remove and replace such at COMPANY's expense.

11. **Warranty:** Neither the final payment nor any provision in this contract shall relieve COMPANY of responsibility for faulty materials or workmanship, and he shall remedy any defects due thereto and pay for any damage to other work resulting therefrom, which shall appear within a period of one (1) year from the date of substantial completion. CITY shall give notice of observed defects with reasonable promptness.

12. **Remedy:** CITY may, on account of subsequently discovered evidence, withhold whole or part of any payment to such extent as may be necessary to protect itself from loss on account of:

12.1. Defective work not remedied; or

12.2. Claims filed or reasonable evidence indicating possible filing of claims; or

12.3. Failure of COMPANY to make payments promptly to subcontractors or for material or labor which CITY may pay as an agent for the COMPANY; or

12.4. Damages to another contractor or subcontractor.

When the above grounds to withhold payment are removed, or COMPANY provides a surety bond satisfactory to CITY, which will protect CITY in the amount withheld, payment may be released.

13. **Funding Out:** In the event no funds or insufficient funds are appropriated and budgeted or are otherwise unavailable in any fiscal period for contract payments due under the contract, then this contract shall terminate on the last day of the fiscal period for which full appropriations were made, without penalty or expense to CITY of any kind whatsoever.

14. **Wage Scale:** COMPANY agrees to pay all workmen in his employ no less than the generally prevailing wage rate for employees of similar category in the Permian Basin Area, as is depicted in the wage rate scale attached hereto as EXHIBIT D, and incorporated herein by reference for all legal purposes.

14.1. If applicable, the Davis-Bacon Act, 29 CFR 5.5, and any related acts or regulations are hereby incorporated by reference and made a part of this Contract, and all terms and requirements under said laws, by such incorporation, are made terms and requirements of this Contract, to which the parties to this Contract have agreed to be bound.

15. **Prompt Pay Act:** CITY and COMPANY agree that Texas Government Code, Chapter 2251, Payment for Goods and Services (the "Prompt Pay Act") does not waive governmental immunity.

16. **Payment; Retainage:** After all work is completed by COMPANY, including all Change Orders altering the original scope and amount of the contract are completed, and the CITY has inspected and approved that the work is completed and in compliance with the contract and all subsequent Change Orders, the CITY may thereafter issue payment to COMPANY in the amount of the contract and all Change Orders. The CITY shall be the final judge of when the work is completed by COMPANY. The CITY, in its sole discretion, shall determine if the work under the contract and under any Change Orders has been done to the CITY's requirements.

16.1. The CITY may make periodic payments to COMPANY; provided, however, such periodic payments may only be made pursuant to this section, and only after all work and all Change Orders are completed by COMPANY and approved by the CITY. The approval shall be in the CITY's sole discretion. Requests for progress payments may be made to the extent of the materials and labor completed at the end of each month. Upon approval by the CITY or the CITY's representative, the request and invoice shall be forwarded for payment less 5% retainage. The total of these payments shall not exceed 95% of the total contract amount.

17. **Late Completion; Liquidated Damages:** It is hereby understood and mutually agreed, by and between COMPANY and the CITY, that the date of beginning and the time for completion as specified in the contract of the work to be done hereunder are ESSENTIAL CONDITIONS of this contract; and it is further mutually understood and agreed that the work embraced in this contract shall be commenced on a date to be specified in the "Notice to Proceed." COMPANY agrees that said work shall be prosecuted regularly, diligently, and uninterruptedly at such rate of progress as will insure full completion thereof within the time specified. It is expressly understood and agreed, by and between COMPANY and the CITY, that the time for the completion of the work described herein is a reasonable time for the completion of the same, taking into consideration the average climatic range and usual industrial conditions prevailing in this locality.

17.1. In the event COMPANY shall neglect, fail or refuse to complete the work within the time herein specified, or any proper extension thereof granted by the CITY, then COMPANY and COMPANY's surety, if any, shall be liable for and does hereby agree, as a part consideration for the awarding of this contract, to pay to the CITY $500.00, not as a penalty but as liquidated damages for such breach of contract as hereinafter set forth, for each and every day that COMPANY shall be in default after the time stipulated in the contract for completing the work. Further, the CITY shall have the right to cancel this contract for such delay. In the event the CITY cancels this contract pursuant to the terms of this section, the CITY shall pay to COMPANY only those monies deemed appropriate by the CITY, in its sole discretion, to compensate COMPANY for any work actually performed, less any liquidated damages COMPANY owes the CITY.

17.2. The said amount is fixed and agreed upon by and between COMPANY and the CITY because of the impracticability and extreme difficulty of fixing and ascertaining the actual damages the CITY would in such event sustain, and said amount is agreed to be the amount of damages which the CITY would sustain and said amount shall be retained from time to time by the CITY from current periodical estimates.

17.3. It is further agreed that time is of the essence of each and every portion of this contract and of the specifications wherein a definite and certain length of time is fixed for the performance of any act whatsoever; and where under the contract an additional time is allowed for the completion of any work, the new time limit fixed by such extension shall be of the essence of this contract. Provided, that COMPANY shall not be charged with liquidated damages or any excess cost when the CITY determines, in its sole discretion, that COMPANY is without fault and COMPANY's reasons for the time extension are acceptable to the CITY. Provided, further, that COMPANY shall not be charged with liquidated damages or excess cost when the delay in completion of the work is due

a. To any preference, priority or allocation order duly issued by the Government;

b. To unforeseeable cause beyond the control and without the fault or negligence of COMPANY, including, but not restricted to, acts of God, or of the public enemy, acts of the CITY, acts of another contractor in the performance of a contract with the CITY, fires, floods, epidemics, quarantine restrictions, strikes, freight embargoes, and severe weather; and

c. To any delays of subcontractors or suppliers occasioned by any of the causes specified in subsections (a) and (b) of this article.

17.4. Provided, further, that COMPANY shall, within ten (10) days from the beginning of such delay, unless the CITY shall, in its sole discretion grant a further period of time prior to the date of final settlement of the contract, notify the CITY, in writing, of the causes of the delay, who shall ascertain the facts and extent of the delay and notify COMPANY within a reasonable time of its decision in the matter.

17.5. **COMPANY AGREES THAT THE PAYMENT OF SUCH LIQUIDATED DAMAGES MAY BE RECOVERED BY THE CITY FROM RETAINAGE HELD BY THE CITY. NOTWITHSTANDING ANY OTHER PROVISION HEREOF, COMPANY HEREBY RELEASES, ACQUITS, RELINQUISHES AND FOREVER DISCHARGES CITY, CITY'S EMPLOYEES AND OFFICERS FROM ANY AND ALL DEMANDS, CLAIMS, DAMAGES, OR CAUSES OF ACTION OF ANY KIND WHATSOEVER ARISING FROM THE CITY WITHHOLDING PAYMENT FROM COMPANY AS LIQUIDATED DAMAGES FOR COMPANY'S FAILURE TO COMPLETE THE WORK WITHIN THE TIME SPECIFIED HEREIN, INCLUDING BUT NOT LIMITED TO BREACH OF CONTRACT, QUANTUM MERUIT, CLAIMS UNDER THE DUE PROCESS AND TAKINGS CLAUSES OF THE TEXAS AND UNITED STATES CONSTITUTIONS, TORT CLAIMS, OR CITY'S NEGLIGENCE.**

17.6. **COMPANY SHALL RECEIVE NO FINANCIAL COMPENSATION FOR DELAY OR HINDRANCE TO THE WORK. IN NO EVENT SHALL THE CITY BE LIABLE TO COMPANY OR ANY SUBCONTRACTOR OR SUPPLIER, ANY OTHER PERSON OR ANY SURETY FOR OR ANY EMPLOYEE OR AGENT OF ANY OF THEM, FOR ANY DAMAGES ARISING OUT OF OR ASSOCIATED WITH ANY DELAY OR HINDRANCE TO THE WORK, REGARDLESS OF THE SOURCE OF THE DELAY OR HINDRANCE, INCLUDING EVENTS OF FORCE MAJEURE, AND EVEN IF SUCH DELAY OR HINDRANCE RESULTS FROM, ARISES OUT OF OR IS DUE, IN WHOLE OR IN PART, TO THE NEGLIGENCE OF THE CITY. COMPANY'S SOLE REMEDY IN ANY SUCH CASE SHALL BE AN EXTENSION OF TIME.**

18. **No Third-Party Beneficiary:** CITY's approval of this contract does not create a third-party

beneficiary. There is no third-party beneficiary to this contract. No person or entity who is not a party to this contract shall have any third-party beneficiary or other rights hereunder.

**19. WAIVER OF ATTORNEY FEES: BY EXECUTING THIS CONTRACT, COMPANY AGREES TO WAIVE AND DOES HEREBY KNOWINGLY, CONCLUSIVELY, VOLUNTARILY AND INTENTIONALLY WAIVE ANY CLAIM IT HAS OR MAY HAVE IN THE FUTURE AGAINST CITY REGARDING THE AWARD OR ATTORNEY'S FEES, WHICH ARE IN ANY WAY RELATED TO THIS CONTRACT, OR THE CONSTRUCTION, INTERPRETATION OR BREACH OF THIS CONTRACT. COMPANY SPECIFICALLY AGREES THAT IF COMPANY BRINGS OR COMMENCES ANY LEGAL ACTION OR PROCEEDING RELATED TO THIS CONTRACT, THE CONSTRUCTION, INTERPRETATION, VALIDITY OR BREACH OF THIS CONTRACT, INCLUDING, BUT NOT LIMITED TO, ANY ACTION PURSUANT TO THE PROVISIONS OF THE TEXAS UNIFORM DECLARATORY JUDGMENTS ACT (TEXAS CIVIL PRACTICE AND REMEDIES CODE SECTION 37.001, ET SEQ., AS AMENDED), OR CHAPTER 271 OF THE TEXAS LOCAL GOVERNMENT CODE, COMPANY AGREES TO ABANDON, WAIVE AND RELINQUISH ANY AND ALL RIGHTS TO THE RECOVERY OF ATTORNEY'S FEES TO WHICH COMPANY MIGHT OTHERWISE BE ENTITLED.**

**COMPANY AGREES THAT THIS IS THE VOLUNTARY AND INTENTIONAL RELINQUISHMENT AND ABANDONMENT OF A PRESENTLY-EXISTING KNOWN RIGHT. COMPANY ACKNOWLEDGES THAT IT UNDERSTANDS ALL TERMS AND CONDITIONS OF THIS CONTRACT. COMPANY FURTHER ACKNOWLEDGES AND AGREES THAT THERE WAS AND IS NO DISPARITY OF BARGAINING POWER BETWEEN CITY AND COMPANY. THIS SECTION SHALL NOT BE CONSTRUED OR INTERPRETED AS A WAIVER OR GOVERNMENTAL IMMUNITY AND SHALL SURVIVE THE TERMINATION OF THIS CONTRACT.**

**COMPANY IS RELYING ON ITS OWN JUDGMENT. COMPANY HAD THE OPPORTUNITY TO DISCUSS THIS CONTRACT WITH COMPETENT LEGAL COUNSEL PRIOR TO ITS EXECUTION. THE OBLIGATIONS CONTAINED IN THIS SECTION 18 SHALL SURVIVE THE TERMINATION OF THIS CONTRACT.**

20. **Governmental Immunity:** By executing this contract CITY is not waiving its right of governmental immunity. CITY is retaining its immunity from suit. CITY is not granting consent to be sued by legislative resolution or action.

**THERE IS NO WAIVER OF GOVERNMENTAL IMMUNITY.**

21. **Insurance:**

COMPANY shall at all times during the term of this Contract maintain and keep in full force and effect insurance in the following types and minimum amounts with companies authorized to do business in the State of Texas:

| | |
|---|---|
| Commercial General Liability (including Contractual liability): | |
| -Personal Injury: | $1,000,000.00 per person |
| | $1,000,000.00 per occurrence |
| -Property Damage: | $500,000.00 per occurrence |
| Business Automobile Liability: | $250,000.00 combined single limit - |
| | Personal Injury and Property Damage |
| Workers' Compensation: | Statutory limits |
| Employers' Liability: | $500,000.00 per accident or occurrence |

The Commercial General Liability shall be on a per project aggregate, including completed operations, and shall be on a claims-occurred basis. This insurance shall name CITY as an additional insured and waive subrogation in favor of CITY.

The Business Automobile Liability insurance provided by COMPANY shall cover any auto for bodily injury and property damage, including owned vehicles, hired and non-city vehicles, and employee non-ownership, and the amount of such policy shall be a minimum of $250,000.00 covering any vehicle used for the execution of the work that is the subject of this Contract. This insurance shall name CITY as an additional insured and waive subrogation in favor of CITY.

The Workers' Compensation coverage provided by COMPANY shall inure to the benefit of employees injured during the course and scope of their employment by COMPANY pursuant to this Contract. The Workers' Compensation shall waive all rights of subrogation in favor of CITY.

All insurance required pursuant to this Contract shall provide for a waiver of subrogation in favor of CITY. All insurance required pursuant to this Contract, except for Workers' Compensation Insurance, shall name CITY as an additional insured on a claims occurred basis. CITY shall be provided the notice by COMPANY's insurance provider not later than thirty (30) days prior to any reduction or termination of such coverage.

COMPANY shall contractually require all contractors, subcontractors, and sub-subcontractors that work on any portion of the work that is the subject of this Contract to obtain insurance coverage that meets or exceeds the policy requirements and minimum amounts specified herein. All contractors, subcontractors, and sub-subcontractors shall obtain insurance policies that provide blanket waivers of

subrogation in favor of the City of Midland and policies that name the City of Midland as an additional insured on a claims occurred basis (except workers' compensation).

The parties agree that, prior to the execution of the Contract, COMPANY shall provide one or more certificates of insurance specifically stating that these requirements have been met and subject to the approval of CITY. CITY shall not be required to provide any insurance whatsoever pursuant to this Contract.

COMPANY certifies that the certificate of insurance provided as required herein complies with the requirements of Chapter 1811 of the Texas Insurance Code. COMPANY shall not use an unapproved certificate of insurance or insert inappropriate language on a certificate. Compliance with state law is the sole responsibility of COMPANY.

22. **Assignment**: COMPANY shall not, either directly or indirectly, assign all or any part of this Contract or any interest, right or privilege herein, without the prior written consent of CITY. The issue on whether or not to grant consent to an assignment is in the sole discretion of CITY.

23. **RELEASE: NOTWITHSTANDING ANY OTHER PROVISION CONTAINED HEREIN, COMPANY HEREBY RELEASES, ACQUITS, RELINQUISHES AND FOREVER DISCHARGES CITY AND CITY'S COUNCIL MEMBERS, EMPLOYEES, AND OFFICERS FROM ANY AND ALL DEMANDS, CLAIMS, DAMAGES OR CAUSES OF ACTION OF ANY KIND WHATSOEVER THAT COMPANY HAS OR MIGHT HAVE IN THE FUTURE, INCLUDING, BUT NOT LIMITED TO, BREACH OF CONTRACT, QUANTUM MERUIT, CLAIMS UNDER THE DUE PROCESS AND TAKINGS CLAUSES OF THE TEXAS AND UNITED STATES CONSTITUTIONS, TORT CLAIMS, OR CITY'S NEGLIGENCE. THE OBLIGATIONS CONTAINED IN THIS SECTION SHALL SURVIVE THE TERMINATION OF THIS CONTRACT.**

24. **Governing Law and Venue:** This contract shall be governed by the laws of the State of Texas. All performance and payment made pursuant to this contract shall be deemed to have occurred in Midland County, Texas. The obligations and undertakings of each of the parties to this Agreement shall be deemed to have occurred in Midland County, Texas. Exclusive venue for any claims, suits or any other action arising from or connected in any way to this contract or the performance of this contract shall be in Midland County, Texas.

25. **Independent Contractor:** COMPANY shall perform all work and services described herein as an independent contractor and not as an officer, agent, servant, or employee of CITY. COMPANY shall have exclusive control of, and the exclusive right to control the details of the services and work to be

performed hereunder, and all persons performing the same. COMPANY shall be solely responsible for the acts and omissions of its officers, agents, employees, contractors and subcontractors and the doctrine of respondeat superior shall not apply as between CITY and COMPANY, its officers, agents, employees, contractors and subcontractors. Nothing in this Contract shall be construed as creating a partnership or joint enterprise between CITY and COMPANY. No person performing any of the work and services described hereunder by COMPANY shall be considered an officer, agent, servant or employee of CITY. Further, it is specifically understood and agreed that nothing in this contract is intended or construed as creating a "Community of Pecuniary Interest" or an "Equal Right of Control" which would give rise to vicarious liability.

COMPANY shall be an independent contractor under this Contract and shall assume all of the rights, obligations and liabilities, applicable to it as such independent contractor hereunder. CITY does not have the power to direct the order in which the work is done. CITY shall not have the right to control the means, methods or details of COMPANY's work. COMPANY shall assume exclusive responsibility for the work. COMPANY is entirely free to do the work in its own way.

26. **Notice of Alleged Breach; Statutory Prerequisites:** As a condition precedent to filing suit for alleged damages incurred by an alleged breach of an express or implied provision of this Contract, COMPANY or its legal representative, shall give the City Manager, or any other reasonable official of CITY, notice in writing (consisting of one (1) original and seven (7) copies of notice attached to a copy of this Contract) of such damages, duly verified, within one hundred twenty (120) days after the same has been sustained. The discovery rule does not apply to the giving of this notice. The notice shall include when, where and how the damages occurred, the apparent extent thereof, the amount of damages sustained, the amount for which COMPANY shall settle, the physical and mailing addresses of COMPANY at the time and date the claim was presented and the physical and mailing addresses of COMPANY for the six (6) months immediately preceding the occurrence of such damages, and the names and addresses of the witnesses upon whom COMPANY relies to establish its claim; and a failure to provide such written notification within the time and manner provided herein shall exonerate, excuse and except CITY from any liability whatsoever. CITY is under no obligation to provide notice to COMPANY that COMPANY's notice is insufficient. CITY reserves the right to request additional information regarding the claim. Said additional information shall be supplied within thirty (30) days after receipt of notice.

The statutory prerequisites outlined herein constitute jurisdictional requirements pursuant to Section 271.154 of the Texas Local Government Code and Section 311.034 of the Texas Government Code. Notwithstanding any other provision to the contrary, COMPANY's failure to comply with the

requirements of this Section shall perpetually bar COMPANY's claim for damages under Chapter 271 of the Texas Local Government Code, and Section 311.034 of the Texas Government Code, regardless if CITY has actual or constructive notice or knowledge of said claim or alleged damages. COMPANY agrees that the requirements of this entire Contract are reasonable. The provisions and obligations of this Section shall survive the termination of this Contract.

27. **Consideration:** The terms of this Contract are supported by good and valuable consideration, the receipt and sufficiency of which is hereby acknowledged by the parties named herein.

28. **Termination At Will:** CITY may terminate this Contract at will for no or any reason upon giving at least one hundred eighty (180) days written notice to COMPANY. The parties to this Contract understand and agree that it is in CITY's sole discretion to cancel the Contract during the term of the Contract without penalty to CITY. COMPANY has no expectation and has received no guarantees that this Contract will not be terminated before the end of the Contract term. The parties have bargained for the flexibility of terminating this Contract upon tender of the requisite notice at any time during the term of the Contract. All work and services under the Contract shall be suspended upon termination of the Contract becoming effective.

29. **Compliance:** COMPANY agrees that it shall comply with Texas Government Code Section 2252.908, *et seq.*, as amended. COMPANY agrees that it shall comply with Texas Local Government Code Section 176.006, *et seq.*, as amended.

30. To the extent that Sections 2271.002 and 2274.002 of the Texas Government Code (collectively, the "Anti-Boycott Statutes") apply to this Contract, Company hereby verifies:

- that Company does not boycott Israel and will not boycott Israel during the term of this Contract;
- that Company does not boycott energy companies and will not boycott energy companies during the term of this Contract; and
- that Company does not have a practice, policy, guidance, or directive that discriminates against a firearm entity or firearm trade association and will not discriminate during the term of this Contract against a firearm entity or firearm trade association.

To the extent that the Anti-Boycott Statutes do not apply to this Contract, such verification is not required, and Company shall be deemed to have not made such verification.

31. **Records Retention and Production of Information.** To the extent that this Contract constitutes a contract described by Section 552.371 of the Texas Government Code, COMPANY shall: (i) preserve all contracting information related to this Contract as provided by the records retention requirements

applicable to CITY for the duration of this Contract; (ii) promptly provide to CITY any contracting information related to the Contract that is in the custody or possession of COMPANY on request of CITY; and (iii) on completion of the Contract, either: (a) provide at no cost to CITY all contracting information related to the Contract that is in the custody or possession of COMPANY; or (b) preserve the contracting information related to the Contract as provided by the records retention requirements applicable to CITY.

32. **Public Information.** To the extent that this Contract is a contract described by Section 552.371 of the Texas Government Code, COMPANY agrees as follows in accordance with Section 552.372(b) of the Texas Government Code: The requirements of Subchapter J, Chapter 552, Government Code, may apply to this Contract, and COMPANY agrees that the contract can be terminated if COMPANY knowingly or intentionally fails to comply with a requirement of that subchapter.

33. **Conflict of Terms.** If a conflict of terms or language exists between: (i) any of the provisions of this Contract and (ii) any of the provisions contained in any exhibit(s) attached to this Contract, precedence shall be given to the provisions of this Contract. For the avoidance of any doubt, the provisions contained in this Contract shall supersede any and all conflicting provisions contained in any exhibit(s) attached hereto. Furthermore, the parties acknowledge and agree that any provision contained in an exhibit(s) attached to this Contract that imposes an additional express or implied obligation on CITY is hereby made void and of no force or effect. CITY's sole and exclusive obligations under this Contract are contained in the provisions of this Contract that precede the signature page(s), which evidences the parties' execution.

34. Company agrees that all iron or steel products produced through a manufacturing process and used in the project that is the subject of this Contract shall be produced in the United States in accordance with Government Code § 2252.202, et seq., as amended.

EXECUTED IN DUPLICATE the day and year first above mentioned.

COUNTY OF _____ §

BEFORE ME, the undersigned authority, on this ____ day of _____, 20____ personally appeared, _____, an officer of Onyx General Contractors, LLC, known to me to be the person and official whose name is subscribed to the forgoing instrument, and acknowledged to me that he executed the same as the act and deed of said corporation, for the purposes and consideration therein expressed, and in the capacity therein stated.

GIVEN UNDER MY HAND AND SEAL OF OFFICE this the ____day of _____, 20____.

_____
Notary Public, State of

# EXHIBIT C

## *Bonding Requirements*

The successful bidder shall be required to furnish a Performance & Payment Bond* for bids in excess of $50,000.00, in an amount equal to one hundred percent (100%) of the total contract price, such bond to be executed in five (5) original counterparts by a Corporate Surety authorized to do business in the State of Texas and acceptable to the City of Midland. All bonds must be executed on forms contained in these contract documents. The form of agreement which the successful bidder, as contractor, will be required to execute is also included herewith. The form of agreement and the form of the bonds should be carefully examined by the bidder.

A certified check, cashier's check, bank money order, or irrevocable letter of credit issued by a bank satisfactory to the City, or a bidder's bond on the form provided, in the amount of five percent (5%) of the largest possible lump sum bid submitted, payable without recourse to the City, must accompany the bidder's proposal, as a guaranty that the bidder will enter a contract and execute the required payment bond and guaranty in the forms provided within fifteen (15) days after notice of award of contract to him. Bids or proposals without the required bid guaranty will not be considered. All bid sureties and payment bonds shall name the City of Midland as Obligee.

*A cash security such as a cashier's check or irrevocable letter of credit issued by a bank satisfactory to the City for 100 % of the contract amount may be supplied in lieu of the Performance and Payment Bonds. The check will be returned un-cashed upon satisfactory completion of the work and evidence of payment of all obligations due for the contract.

# PERFORMANCE BOND

THE STATE OF TEXAS §

COUNTY OF MIDLAND §

SURETY NO _____

KNOW ALL MEN BY THESE PRESENTS, THAT_____(Hereinafter called the Principal[s]), as Principal(s), and_____(Hereinafter called the Surety), as Surety, are held and firmly bound unto the City of Midland, Texas a home rule municipal corporation of Midland County, Texas, (hereinafter called the Obligee), in the amount of _____ DOLLARS ($_____) for the payment whereof the said Principal and surety bind themselves, and their heirs, administrators, executors, successors and assigns, jointly and severally, firmly by these presents.

WHEREAS, the Principal has entered into a certain written contract with the Obligee, dated the _____day of_____, 20___, for the furnishing of materials and equipment to perform all labor and work necessary for the construction of _____, specifically including in the scope of this work and bond, the additional maintenance guaranty provisions set forth in the contract conditions, which contract is hereby referred to and made a part hereof as fully and to the same extent as if copies at length herein, as well as the Principal's primary obligation to perform according to plans and specifications.

NOW, THEREFORE, THE CONDITION OF THIS OBLIGATION IS SUCH, that if the said Principal shall faithfully perform the work in accordance with the plans, specifications, instructions to bidder, general and special conditions and other contract documents, including any addendum thereto, then this obligation shall be void; otherwise to remain in full force and effect.

PROVIDED further that if any legal action be filed upon this Bond venue shall lie in Midland County, State of Texas.

Surety, for value received, stipulates and agrees that no change, extension of time, alteration or addition to the terms of the contract, or to the work performed thereunder, or the plans, specifications or drawings accompanying the same, or any assignment of the contract as may be provided for in the instructions to bidders, shall in anywise affect its obligation on this Bond, and it does waive notice of any such change, extension of time, alteration or addition to the terms of the contract, assignment thereof, or the work to be performed thereunder.

IN WITNESS WHEREOF, the said Principal and surety do sign and seal this instrument, this _____ day of_____, 20___.

**EXHIBIT D – BUILDING WAGE RATES rev 01-01-21**

General Decision Number: TX20210261 01/01/2021

Superseded General Decision Number: TX20200261

State: Texas

Construction Type: Building

County: Midland County in Texas.

BUILDING CONSTRUCTION PROJECTS (does not include single family homes or apartments up to and including 4 stories).

Note: Under Executive Order (EO) 13658, an hourly minimum wage of $10.95 for calendar year 2021 applies to all contracts subject to the Davis-Bacon Act for which the contract is awarded (and any solicitation was issued) on or after January 1, 2015. If this contract is covered by the EO, the contractor must pay all workers in any classification listed on this wage determination at least $10.95 per hour (or the applicable wage rate listed on this wage determination, if it is higher) for all hours spent performing on the contract in calendar year 2021. If this contract is covered by the EO and a classification considered necessary for performance of work on the contract does not appear on this wage determination, the contractor must pay workers in that classification at least the wage rate determined through the conformance process set forth in 29 CFR 5.5(a)(1)(ii) (or the EO minimum wage rate, if it is higher than the conformed wage rate). The EO minimum wage rate will be adjusted annually. Please note that this EO applies to the above-mentioned types of contracts entered into by the federal government that are subject to the Davis-Bacon Act itself, but it does not apply to contracts subject only to the Davis-Bacon Related Acts, including those set forth at 29 CFR 5.1(a)(2)-(60). Additional information on contractor requirements and worker protections under the EO is available at www.dol.gov/whd/govcontracts.

==========

Note: Executive Order (EO) 13706, Establishing Paid Sick Leave for Federal Contractors applies to all contracts subject to the Davis-Bacon Act for which the contract is awarded (and any solicitation was issued) on or after January 1, 2017. If this contract is covered by the EO, the contractor must provide employees with 1 hour of paid sick leave for every 30 hours they work, up to 56 hours of paid sick leave each year. Employees must be permitted to use paid sick leave for their own illness, injury or other health-related needs, including preventive care; to assist a family member (or person who is like family to the employee) who is ill, injured, or has other health-related needs, including preventive care; or for reasons resulting from, or to assist a family member (or person who is like family to the employee) who is a victim of, domestic violence, sexual assault, or stalking. Additional information on contractor requirements and worker protections under the EO is available at www.dol.gov/whd/govcontracts. Unlisted classifications needed for work not included within the scope of the classifications listed may be added after award only as provided in the labor standards contract clauses

(29CFR 5.5 (a) (1) (ii)).

WELDERS - Receive rate prescribed for craft performing operation to which welding is incidental.

Note: Executive Order (EO) 13706, Establishing Paid Sick Leave for Federal Contractors applies to all contracts subject to the Davis-Bacon Act for which the contract is awarded (and any solicitation was issued) on or after January 1, 2017. If this contract is covered by the EO, the contractor must provide employees with 1 hour of paid sick leave for every 30 hours they work, up to 56 hours of paid sick leave each year. Employees must be permitted to use paid sick leave for their own illness, injury or other health-related needs, including preventive care; to assist a family member (or person who is like family to the employee) who is ill, injured, or has other health-related needs, including preventive care; or for reasons resulting from, or to assist a family member (or person who is like family to the employee) who is a victim of, domestic violence, sexual assault, or stalking. Additional information on contractor requirements and worker protections under the EO is available at www.dol.gov/whd/govcontracts. Unlisted classifications needed for work not included within the scope of the classifications listed may be added after award only as provided in the labor standards contract clauses

(29CFR 5.5 (a) (1) (ii)).

---

The body of each wage determination lists the classification and wage rates that have been found to be prevailing for the cited type(s) of construction in the area covered by the wage determination. The classifications are listed in alphabetical order of ""identifiers"" that indicate whether the particular rate is a union rate (current union negotiated rate for local), a survey rate (weighted average rate) or a union average rate (weighted union average rate).

Union Rate Identifiers

A four letter classification abbreviation identifier enclosed in dotted lines beginning with characters other than ""SU"" or ""UAVG"" denotes that the union classification and rate were prevailing for that classification in the survey. Example: PLUM0198-005 07/01/2014. PLUM is an abbreviation identifier of the union which prevailed in the survey for this classification, which in this example would be Plumbers. 0198 indicates the local union number or district council number where applicable, i.e., Plumbers Local 0198. The next number, 005 in the example, is an internal number used in processing the wage determination. 07/01/2014 is the effective date of the most current negotiated rate, which in this example is July 1, 2014.

Union prevailing wage rates are updated to reflect all rate changes in the collective bargaining agreement (CBA) governing this classification and rate.

Survey Rate Identifiers

Classifications listed under the ""SU"" identifier indicate that no one rate prevailed for this classification in the survey and the published rate is derived by computing a weighted average rate based on all the rates reported in the survey for that classification. As this weighted average rate

includes all rates reported in the survey, it may include both union and non-union rates. Example: SULA2012-007 5/13/2014. SU indicates the rates are survey rates based on a weighted average calculation of rates and are not majority rates. LA indicates the State of Louisiana. 2012 is the year of survey on which these classifications and rates are based. The next number, 007 in the example, is an internal number used in producing the wage determination. 5/13/2014 indicates the survey completion date for the classifications and rates under that identifier.

Survey wage rates are not updated and remain in effect until a new survey is conducted.

Union Average Rate Identifiers

Classification(s) listed under the UAVG identifier indicate that no single majority rate prevailed for those classifications; however, 100% of the data reported for the classifications was union data. EXAMPLE: UAVG-OH-0010 08/29/2014. UAVG indicates that the rate is a weighted union average rate. OH indicates the state. The next number, 0010 in the example, is an internal number used in producing the wage determination. 08/29/2014 indicates the survey completion date for the classifications and rates under that identifier.

A UAVG rate will be updated once a year, usually in January of each year, to reflect a weighted average of the current negotiated/CBA rate of the union locals from which the rate is based.

---

WAGE DETERMINATION APPEALS PROCESS

1.) Has there been an initial decision in the matter? This can be:

* an existing published wage determination
* a survey underlying a wage determination
* a Wage and Hour Division letter setting forth a position on a wage determination matter
* a conformance (additional classification and rate) ruling

On survey related matters, initial contact, including requests for summaries of surveys, should be with the Wage and Hour Regional Office for the area in which the survey was conducted because those Regional Offices have responsibility for the Davis-Bacon survey program. If the response from this initial contact is not satisfactory, then the process described in 2.) and 3.) should be followed.

With regard to any other matter not yet ripe for the formal process described here, initial contact should be with the Branch of Construction Wage Determinations. Write to:

Branch of Construction Wage Determinations
Wage and Hour Division
U.S. Department of Labor
200 Constitution Avenue, N.W.
Washington, DC 20210

2.) If the answer to the question in 1.) is yes, then an interested party (those affected by the action) can request review and reconsideration from the Wage and Hour Administrator (See 29 CFR Part 1.8 and 29 CFR Part 7). Write to:

Wage and Hour Administrator
U.S. Department of Labor
200 Constitution Avenue, N.W.
Washington, DC 20210

The request should be accompanied by a full statement of the interested party's position and by any information (wage payment data, project description, area practice material, etc.) that the requestor considers relevant to the issue.

3.) If the decision of the Administrator is not favorable, an interested party may appeal directly to the Administrative Review Board (formerly the Wage Appeals Board). Write to:

Administrative Review Board
U.S. Department of Labor
200 Constitution Avenue, N.W.
Washington, DC 20210

4.) All decisions by the Administrative Review Board are final.

---

END OF GENERAL DECISION

# IMPORTANT NOTICE

## Conflict Of Interest Reporting Requirements

Compliance with LOCAL GOVERNMENT CODE TITLE 5. MATTERS AFFECTING PUBLIC OFFICERS AND EMPLOYEES SUBTITLE C. MATTERS AFFECTING PUBLIC OFFICERS AND EMPLOYEES OF MORE THAN ONE TYPE OF LOCAL GOVERNMENT CHAPTER 176. DISCLOSURE OF CERTAIN RELATIONSHIPS WITH LOCAL GOVERNMENT OFFICERS; PROVIDING PUBLIC ACCESS TO CERTAIN INFORMATION.

**Form CIQ:** This questionnaire reflects changes made to the law by H.B. 23, 84th Leg., Regular Session. This questionnaire shall be filed in accordance with Chapter 176, Local Government Code, by a vendor who has a business relationship as defined by Section 176.001(1-a) with a local governmental entity and the vendor meets requirements under Section 176.006(a). By law this questionnaire must be filed with the records administrator of the local governmental entity not later than the 7th business day after the date the vendor becomes aware of facts that require the statement to be filed. See Section 176.006(a-1), Local Government Code. A vendor commits an offense if the vendor knowingly violates Section 176.006, Local Government Code. An offense under this section is a misdemeanor.

Bidders are responsible for filing Conflict of Interest form "CIQ" in accordance with the above referenced statute. Failure to do so is a class C Misdemeanor. Contracts or Purchase Orders awarded to a vendor that has violated this law is subject to termination at such time that the violation is discovered with no recourse to the City of Midland. The bidder will be subsequently removed from the bidders list for a minimum of one year.

When there is no known conflict of interest as defined by the statute, it is not necessary to file/submit the Form CIQ. The form must be submitted if a conflict is subsequently discovered.

By submitting a response to this request, vendor represents that it complies with the requirements of Chapter 176 of the Texas Local Government Code.

For a current list of the local government officers go to: http://www.midlandtexas.gov/

Upon completion of the form, sign and submit with bid or mail to:

City of Midland
Attn: City Secretary
PO Box 1152
Midland, Texas 79702

# CONFLICT OF INTEREST QUESTIONNAIRE

**FORM CIQ**

**For vendor doing business with local governmental entity**

**This questionnaire reflects changes made to the law by H.B. 23, 84th Leg., Regular Session.**

This questionnaire is being filed in accordance with Chapter 176, Local Government Code, by a vendor who has a business relationship as defined by Section 176.001(1-a) with a local governmental entity and the vendor meets requirements under Section 176.006(a).

By law this questionnaire must be filed with the records administrator of the local governmental entity not later than the 7th business day after the date the vendor becomes aware of facts that require the statement to be filed. *See* Section 176.006(a-1), Local Government Code.

A vendor commits an offense if the vendor knowingly violates Section 176.006, Local Government Code. An offense under this section is a misdemeanor.

| OFFICE USE ONLY |
| --- |
| Date Received |

1 **Name of vendor who has a business relationship with local governmental entity.**

2 ☐ **Check this box if you are filing an update to a previously filed questionnaire.** (The law requires that you file an updated completed questionnaire with the appropriate filing authority not later than the 7th business day after the date on which you became aware that the originally filed questionnaire was incomplete or inaccurate.)

3 **Name of local government officer about whom the information is being disclosed.**

_____

Name of Officer

4 **Describe each employment or other business relationship with the local government officer, or a family member of the officer, as described by Section 176.003(a)(2)(A). Also describe any family relationship with the local government officer. Complete subparts A and B for each employment or business relationship described. Attach additional pages to this Form CIQ as necessary.**

A. Is the local government officer or a family member of the officer receiving or likely to receive taxable income, other than investment income, from the vendor?

☐ Yes ☐ No

B. Is the vendor receiving or likely to receive taxable income, other than investment income, from or at the direction of the local government officer or a family member of the officer AND the taxable income is not received from the local governmental entity?

☐ Yes ☐ No

5 **Describe each employment or business relationship that the vendor named in Section 1 maintains with a corporation or other business entity with respect to which the local government officer serves as an officer or director, or holds an ownership interest of one percent or more.**

6 ☐ Check this box if the vendor has given the local government officer or a family member of the officer one or more gifts as described in Section 176.003(a)(2)(B), excluding gifts described in Section 176.003(a-1).

## CONFLICT OF INTEREST QUESTIONNAIRE
## For vendor doing business with local governmental entity

A complete copy of Chapter 176 of the Local Government Code may be found at http://www.statutes.legis.state.tx.us/Docs/LG/htm/LG.176.htm. For easy reference, below are some of the sections cited on this form.

**Local Government Code § 176.001(1-a):** "Business relationship" means a connection between two or more parties based on commercial activity of one of the parties. The term does not include a connection based on:

(A) a transaction that is subject to rate or fee regulation by a federal, state, or local governmental entity or an agency of a federal, state, or local governmental entity;

(B) a transaction conducted at a price and subject to terms available to the public; or

(C) a purchase or lease of goods or services from a person that is chartered by a state or federal agency and that is subject to regular examination by, and reporting to, that agency.

**Local Government Code § 176.003(a)(2)(A) and (B):**

(a) A local government officer shall file a conflicts disclosure statement with respect to a vendor if:

***

(2) the vendor:

(A) has an employment or other business relationship with the local government officer or a family member of the officer that results in the officer or family member receiving taxable income, other than investment income, that exceeds $2,500 during the 12-month period preceding the date that the officer becomes aware that

(i) a contract between the local governmental entity and vendor has been executed; or

(ii) the local governmental entity is considering entering into a contract with the vendor;

(B) has given to the local government officer or a family member of the officer one or more gifts that have an aggregate value of more than $100 in the 12-month period preceding the date the officer becomes aware that:

(i) a contract between the local governmental entity and vendor has been executed; or

(ii) the local governmental entity is considering entering into a contract with the vendor.

**Local Government Code § 176.006(a) and (a-1)**

(a) A vendor shall file a completed conflict of interest questionnaire if the vendor has a business relationship with a local governmental entity and:

(1) has an employment or other business relationship with a local government officer of that local governmental entity, or a family member of the officer, described by Section 176.003(a)(2)(A);

(2) has given a local government officer of that local governmental entity, or a family member of the officer, one or more gifts with the aggregate value specified by Section 176.003(a)(2)(B), excluding any gift described by Section 176.003(a-1); or

(3) has a family relationship with a local government officer of that local governmental entity.

(a-1) The completed conflict of interest questionnaire must be filed with the appropriate records administrator not later than the seventh business day after the later of:

(1) the date that the vendor:

(A) begins discussions or negotiations to enter into a contract with the local governmental entity; or

(B) submits to the local governmental entity an application, response to a request for proposals or bids, correspondence, or another writing related to a potential contract with the local governmental entity; or

(2) the date the vendor becomes aware:

(A) of an employment or other business relationship with a local government officer, or a family member of the officer, described by Subsection (a);

(B) that the vendor has given one or more gifts described by Subsection (a); or

(C) of a family relationship with a local government officer.

CITY OF MIDLAND

# Consideration of Location of Bidder's Principal Place of Business
## For Bids of $50,000 up to $100,000 for Services and $500,000 for Commodities
## Affidavit of Eligibility

Pursuant to Texas Local Government Code 271.9051, in purchasing real property, personal property that is not affixed to real property, or services, if the City receives one or more bids from a bidder whose principal place of business is in the City of Midland and whose bid is within five percent (5%) of the lowest bid price received by the City from a bidder who is not a resident of the City of Midland, the City may enter into a contract with:

(1) the lowest bidder; or

(2) the bidder whose principal place of business is in the City of Midland if the City Council determines, in writing, that the local bidder offers the City the best combination of contract price and additional economic development opportunities for the City of Midland created by the contract award, including the employment of residents of the City of Midland and increased tax revenues to the City of Midland.

In order to receive consideration, bidders must submit this affidavit to:

Erika Martinez
Purchasing Manager
City of Midland
300 N. Loraine St.,
PO BOX 1152
Midland, TX 79702-1152

*Complete all areas below. Incomplete affidavits may be rejected.*

Local Business Name: _____

Local Address (must be within the City limits): _____

1. Is the above address the principal place of business for the business named above? ☐ Yes ☐ No
2. How many residents of the City of Midland are employed at the above business location? _____
3. Year your business was established in the City of Midland: _____
4. If you collect sales tax for ANY class of customer, provide the following Reseller information:

   Reseller Permit Number: _____

   Company Name and Address (as it appears on permit):

   _____

   _____

   _____
5. Does your business have more than one office in the State of Texas? ☐ Yes ☐ No
   If Yes, identify the office location considered as the point-of sale for the purpose of sales tax calculation:

   _____

   _____
6. Was the local business required to pay business and/or real property tax for the most recent tax year?

   ☐ Yes ☐ No

   If Yes, did the local business pay any of this tax to the City of Midland? ☐ Yes ☐ No

Under penalty of perjury, the undersigned states that the foregoing statements are true and correct. It is further acknowledged that any person, firm, corporation or entity intentionally submitting false information to the City in an attempt to qualify for eligibility shall be prohibited from bidding on City of Midland products and services for a period of one (1) year.

Authorized Signature: _____ Date: _____

Printed Name and Title: _____

IMPORTANT: READ CAREFULLY BEFORE MAKING BID
GENERAL CONDITIONS OF BIDDING

1. All bids are to be submitted as specified in the procurement document(s).

2. Each Bidder is requested to provide: Descriptive literature clearly marked to show each item on this bid. Any catalog or manufacturer's reference in this proposal is descriptive, but not restrictive, and is used only to indicate type and quality. If, however, the bidder proposes similar but not identical terms, he must furnish all particulars. If no mention is made of any exceptions, it is assumed that he is bidding on the article specified and not on an approved equal and he will be required to deliver exact article specified.

3. Prices should be itemized. (Indicate unit price and extend to show total price.) In case of discrepancy between the unit price and the extension, the unit price shall govern.

4. Unit price for each item offered shall include all discounts; e.g., trade, seasonal, etc. with net 30 days payment terms. Discounts shall not be shown as such but shall be incorporated in the base bid price. Any bid showing discounts will be considered an alternate bid. The City of Midland will not be responsible for any goods delivered without a purchase order number.

5. If the Contract is awarded, it will be awarded to either the lowest responsible bidder, or to the bidder who provides goods or services at the best value for the City of Midland. In determining the best value for the City of Midland, the City of Midland may consider the criteria enumerated in Section 252.043 of the Texas Local Government Code. The City of Midland reserves the right to award by item or by total bid, or to reject any or all bids or parts of bids. Further, the City of Midland reserves all rights granted by Section 271.027 of the Texas Local Government Code. The City of Midland reserves the right to award the bid to the lowest responsible bidder.

6. Time of proposed delivery shall be stated in number of calendar days.

7. NOTE: The City of Midland, Texas is exempt from all Federal, State and City tax. Please do not include these taxes in your bid price or invoice. Taxable items must be so designated, and the City will supply vendor with a Tax Exemption Certificate, properly executed.

8. All items are to be delivered, unloaded and stacked at the location indicated on the Bid Request and Purchase Order.

9. All items are to be delivered F.O.B. to the City of Midland, Texas with freight prepaid and included in the bid.

10. Detailed specifications rule over General specifications (headings, etc.)

11. The City of Midland reserves the right to remove a company from the bid list for (1) continued failure to respond to request for bids, (2) failure to deliver merchandise within promised time, or (3) delivery of substandard merchandise.

12. No officer or employee of the City shall have a financial interest, direct or indirect, in any contract with the City, or be financially interested, directly or indirectly, in the sale to the City of any lands, materials, supplies or services except as allowed under chapter 176 of the Local Government Code. Form CIQ shall be submitted and placed on file with the City of Midland.

13. The City shall determine the most advantageous bid for the City and accept the proposal of the responsible party submitting the lowest and/or most advantageous bid or reject any and all bids.

14. The City of Midland, Texas may consider as informal any bid not prepared and submitted in accordance with the provisions hereof, and may waive, in its sole discretion, any informalities.

STANDARD PURCHASE TERMS AND CONDITIONS
PURCHASING DIVISION, CITY OF MIDLAND, TEXAS

"Seller", as used herein, has the same meaning as "Company". "Buyer", as used herein, has the same meaning as "City".

Seller and Buyer agree as follows:

1. SELLER TO PACKAGE GOODS - Seller will package goods in accordance with good commercial practice. Each shipping container shall be clearly and permanently marked as follows; (a) Seller's name and address, (b) Consignee's name, and address, and purchase order number, (c) Container number and total number of containers, e.g. box 1 of 4 boxes, and (d) the number of the container bearing the packing slip. Seller shall bear cost of packaging unless otherwise provided. Goods shall be suitably packed to secure lowest transportation costs and to conform with requirements of common carriers and any applicable specifications. Buyer's count or weight shall be final and conclusive on shipments not accompanied by packing lists.

2. SHIPMENT UNDER RESERVATION PROHIBITED - Seller is not authorized to ship the goods under reservation and no tender of a bill of lading will serve as a tender of goods.

3. TITLE & RISK OF LOSS - The title and risk of loss of the goods shall not pass to Buyer until Buyer actually receives and takes possession of the goods at the point or points of delivery in Midland, Texas.

4. NO REPLACEMENT OF DEFECTIVE TENDER - Every tender or delivery of goods must fully comply with all provisions of this contract as to time of delivery, quality and the like. If a tender is made which does not fully conform, this shall constitute a breach and Seller shall not have the right to substitute a conforming tender, provided, where the time for performance has yet expired, the Seller may reasonably notify Buyer of his intention to cure and may then make a conforming tender within the contract time but not afterward.

5. PLACE OF DELIVERY - The place of delivery shall be that set forth in the block of the purchase order entitled "deliver to".

6. INVOICES - Seller shall submit separate ORIGINAL invoices, on each purchase order. Invoices shall indicate the purchase order number. All invoices must be mailed to City of Midland, Accounts Payable, P.O. Box 1152, Midland, TX 79702-1152. Payment will be made within 30 days from the date the invoice and properly executed receiving documents are received by City of Midland, Accounts Payable at the above address. Invoices sent to any other address will delay payment.

7. GRATUITIES - The buyer may, by written notice to the seller, cancel this contract without liability to Seller, if it is determined by Buyer that gratuities, in the form of entertainment, gifts, or otherwise, were offered or given by the seller, or any agent or representative of the Seller, to any officer or employee of the City of Midland with a view toward securing a contract or securing favorable treatment with respect to performing of such a contract. In the event this contract is cancelled by Buyer pursuant to this provision, Buyer shall be entitled, in addition to any other rights and remedies, to recover or withhold the amount of the cost incurred by Seller in providing such gratuities.

8. WARRANTY - PRICE -

a. The price to be paid by the Buyer shall be that contained in Seller's bid which Seller warrants to be no higher than Seller's current prices on order by others for products of the kind and specifications covered by this agreement for similar quantities under similar or like conditions and methods of purchase. In the event Seller breaches this warranty, the prices of the items shall be reduced to the Seller's current prices on order by others, or in the alternative, Buyer may cancel this contract without liability to Seller for breach or Seller's actual expense.

b. The Seller warrants that no person or selling agency has been employed or retained to solicit or secure this contract upon an agreement or understanding for commission, percentage, brokerage, or contingent fee excepting bona fide employees or bona fide established commercial or selling agencies maintained by the Seller for the purpose of securing business. For breach or violation of this warranty the Buyer shall have the right or rights to cancel this contract without liability and to deduct from the contract price, or otherwise recover the full amount of such commission, percentage, brokerage or contingent fee.

9. WARRANTY - PRODUCT - Seller shall not limit or exclude any implied warranties and any attempt to do so shall render this contract voidable at the option of the Buyer. Seller warrants that the goods furnished will conform to the specification, drawings, and description listed in the bid invitation, and to the sample(s) furnished by Seller, if any. In the event of a conflict between the specifications, drawings and descriptions, the specifications shall govern.

10. SAFETY WARRANTY - Seller warrants that the product sold to Buyer shall conform to the standards promulgated by the U.S. Department of Labor under the Occupational Safety and Health Act of 1970. In the event the product does not conform to OSHA standards, Buyer may return the product for correction or replacement at the Seller's expense. In the event Seller fails to make the appropriate correction within a reasonable time, correction made by buyer will be at Seller's expense.

11. RIGHT OF INSPECTION - Buyer shall have the right to inspect the goods at delivery before accepting them.

12. CANCELLATION - Buyer shall have the right to cancel for default all or any part of the undelivered portion of this order if Seller breached any of the terms hereof including warranties of Seller if the Seller becomes insolvent or commits acts of bankruptcy. Such right of cancellation is in addition to and not in lieu of any other remedies which Buyer may have in law or equity.

13. TERMINATION - The performance of work under this order may be terminated in whole, or in part by the Buyer in accordance with this provision. Termination of work hereunder shall be effected by the delivery to Seller of a "Notice of Termination" specifying the extent to which performance of work under the order is terminated and the date upon which such termination becomes effective. Such right of termination is in addition to and not in lieu of the rights of Buyer set forth in Clause 13, herein.

14. FORCE MAJEURE - Neither party shall be held responsible for losses, resulting if the fulfillment of any terms or provisions of this contract is delayed or prevented by any cause not within the control of the party whose performance is interfered with, and which by the exercise of reasonable diligence said party is unable to prevent.

15. ASSIGNMENT - DELEGATION - No right or interest in this contract shall be assigned or delegation of any obligation made by Seller without the written permission of the Buyer. Any attempted assignment or delegation by the Seller shall be wholly void and totally ineffective for all purposes unless made in conformity with this paragraph.

16. MODIFICATIONS - This contract can be modified or rescinded only by a writing signed by both of the parties or their duly authorized agents.

17. INTERPRETATION - PAROL EVIDENCE - This writing, plus any specifications for bids and performance provided by Buyer in its advertisement for bids, is intended by the parties as a final expression of this agreement. No course of prior dealings between the parties and no usage of the trade shall be relevant to supplement or explain any term used in this agreement. Acceptance or acquiescence in a course of performance rendered under this agreement shall not be relevant to determine the meaning of this agreement even though the accepting or acquiescing party has knowledge of the performance and opportunity for objection. Whenever a term defined by the Uniform Commercial Code is used in this agreement, the definition contained in the Code is to control.

18. ADVERTISING - Seller shall not advertise or publish without Buyer's prior consent the fact that Buyer has entered into the contract, except to the extent necessary to comply with proper requests for information from an authorized representative of the federal, state or local government.

19. RIGHT TO ASSURANCE - Whenever one party to the contract in good faith has reason to question the other party's intent to perform he may demand that the other party give written assurance of this intent to perform. In the event that a demand is made and no assurance is given within five (5) days, the demanding party may treat this failure as an anticipatory repudiation of the contract.

20. PROTECTION AGAINST ROYALTIES OR PATENT INFRINGEMENT - The Seller shall pay all royalties and license fees, and shall provide for the use of any design, device, material or process covered by letters patent or copyright by suitable legal agreement with Patentee or Owner thereof. The Seller shall defend all suits or claims for infringement of any patent or copyrights and shall indemnify and save the Buyer harmless from any loss on account thereof, except that Buyer shall defend all such suits and claims and shall be responsible for all such loss when a particular design, device, material or process is allowed to the Seller, the Seller shall indemnify and save Buyer harmless from any loss on account thereof. If the material or process specified or required by Buyer is an infringement, the Seller shall be responsible for such loss unless he promptly gives written notice to the buyer of such infringement.

21. TIME - It is hereby expressly agreed and understood that time is of the essence for the performance of this contract, and any failure by contract to meet the time specifications of this agreement will cause Seller to be in default of this agreement.

22. TAX - The City of Midland is exempt from all Federal, State and City tax. Please do not include these taxes in your bid price or invoice. Taxable items must be so designated, and the City will supply vendor with a Tax Exemption Certificate, properly executed.

23. **INSURANCE –**

**The following provisions apply unless the agreement is for the supply of goods only:**

Seller shall at all times during the term of this agreement maintain and keep in full force and effect insurance in the following types and minimum amounts with companies authorized to do business in the State of Texas:

| | |
|---|---|
| Commercial General Liability (including Contractual liability): | |
| -Personal Injury: | $1,000,000.00 per person |
| | $1,000,000.00 per occurrence |
| -Property Damage: | $500,000.00 per occurrence |
| Business Automobile Liability: | $250,000.00 combined single limit- |
| | Personal Injury and Property Damage |
| Worker's Compensation: | Statutory limits |
| Employers' Liability: | $500,000.00 per accident or occurrence |

The Commercial General Liability shall be on a per project or policy aggregate, including completed operations, and shall be on an occurrence basis.

The Workers' Compensation coverage provided by Seller shall inure to the benefit of employees injured during the course and scope of their employment by Seller pursuant to this agreement.

The Business Automobile Liability insurance provided by Seller shall cover any auto for bodily injury and property damage, including owned vehicles, hired and non-owner vehicles, and employee non-ownership, and the amount of such policy shall be a minimum of $250,000.00 covering any vehicle used for the execution of the work that is the subject of this agreement.

All insurance required pursuant to this agreement, except for Worker's Compensation Insurance, shall name the Buyer as an additional insured on a claims occurred basis. All insurance required pursuant to this agreement, including Worker's Compensation Insurance, shall provide for a waiver of subrogation as to the Buyer.

The parties agree that, prior to the execution of the agreement, Seller shall provide one or more certificates of insurance showing that the requirements of this article have been met, and specifically containing, without limitations, the following endorsement:

***"The City of Midland is included as an additional insured, on a claims occurred basis, on all policies except for Worker's Compensation. The Seller and Insurer hereby waive all rights of subrogation with respect to claims against the City of Midland, its agents, employees and officers, on all policies of insurance."***
Buyer shall be provided the notice by Seller's insurance provider not later than thirty (30) days prior to any reduction or termination of such coverage. Buyer shall not be required to provide any insurance whatsoever pursuant to this agreement.

Seller shall contractually require all contractors, subcontractors, and sub-subcontractors that work on any portion of the work that is the subject of this agreement to obtain insurance coverage that meets or exceeds the policy requirements and minimum amounts specified herein. All contractors, subcontractors, and sub-subcontractors shall obtain insurance policies that provide blanket waivers of subrogation in favor of the City of Midland and policies that name the City of Midland as an additional insured on a claims occurred basis (except workers compensation).

24. ASSIGNMENT - Seller shall not, either directly or indirectly, assign all or any part of this agreement or any interest, right or privilege herein, without the prior written consent of the Buyer. The issue on whether or not to grant consent to an assignment is in the sole discretion of the Buyer.

25. **RELEASE - NOTWITHSTANDING ANY OTHER PROVISIONS, SELLER HEREBY RELEASES, ACQUITS, RELINQUISHES AND FOREVER DISCHARGES BUYER, BUYER'S EMPLOYEES AND OFFICERS, FROM ANY AND ALL DEMANDS, CLAIMS, DAMAGES, OR CAUSES OF ACTION OF ANY KIND WHATSOEVER WHICH SELLER HAS OR MIGHT HAVE IN THE FUTURE, INCLUDING BUT NOT LIMITED TO BREACH OF CONTRACT, QUANTUM MERUIT, CLAIMS UNDER THE DUE PROCESS AND TAKINGS CLAUSES OF THE TEXAS AND UNITED STATES CONSTITUTIONS, TORT CLAIMS, OR BUYER'S NEGLIGENCE.**

26. GOVERNING LAW AND VENUE - This agreement shall be governed by the laws of the State of Texas. All performance and payment made pursuant to this agreement shall be deemed to have occurred in Midland County, Texas. Exclusive venue for any claims, suits or any other action arising from or connected in any way to this agreement or the performance of this agreement shall be in Midland County, Texas. The obligations and undertakings of each of the parties to this agreement shall be deemed to have occurred in Midland County, Texas.

27. INDEPENDENT CONTRACTOR - It is expressly understood and agreed that Seller shall perform all work and services described herein as an independent contractor and not as an officer, agent, servant or employee of the Buyer; that Seller shall have exclusive control of and the exclusive right to control the details of the services and work performed hereunder, and all persons performing the same; and shall be solely responsible for the acts and omissions of its officers, agents, employees, contractors and subcontractors; that the doctrine of respondeat superior shall not apply as between Buyer and Seller, its officers, agents, employees, contractors and subcontractors; and that nothing herein shall be construed as creating a partnership or joint enterprise between Buyer and Seller. No person performing any of the work and services described hereunder by Seller shall be considered an officer, agent, servant or employee of the Buyer. Further, it is specifically understood and agreed that nothing in this agreement is intended or shall be construed as creating a "Community of Pecuniary Interest" or "An Equal Right of Control" which would give rise to vicarious liability. Seller shall be an independent contractor under this agreement and shall assume all of the rights, obligations and liabilities, applicable to it as such independent contractor hereunder. The Buyer does not have the power to direct the order in which the work is done. The Buyer shall not have the right to control the means, methods or details of the Seller's work. Seller shall assume exclusive responsibility for the work. Seller is entirely free to do the work in its own way.

28. NOTICE OF ALLEGED BREACH; STATUTORY PREREQUISITES - As a condition precedent to filing suit for alleged damages incurred by an alleged breach of an express or implied provision of this agreement, Seller or his legal representative, shall give the City Manager, or any other reasonable official of the Buyer, notice in writing (consisting of one original and seven copies of notice attached to a copy of this agreement) of such damages, duly verified, within one-hundred-twenty (120) days after the same has been sustained. The discovery rule does not apply to the giving of this notice. The notice shall include when, where and how the damages occurred, the apparent extent thereof, the amount of damages sustained, the amount for which the Seller will settle, the physical and mailing addresses of Seller at the time and date the claim was presented and the physical and mailing addresses of Seller for the six months immediately preceding the occurrence of such damages, and the names and addresses of the witnesses upon whom the Seller relies to establish its claim; and a failure to so notify the City Manager within the time and manner provided herein shall exonerate, excuse and except the Buyer from any liability whatsoever. The Buyer is under no obligation to provide notice to Seller that Seller's notice is insufficient. Buyer reserves the right to request reasonable additional information regarding the claim. Said additional information shall be supplied within thirty (30) days after receipt of notice.

The statutory prerequisites outlined herein constitute jurisdictional requirements pursuant to Section 271.154 of the Texas Local Government Code and Section 311.034 of the Texas Government Code. Notwithstanding any other provision, Seller's failure to comply with the requirements herein shall perpetually bar Seller's claim for damages under Chapter 271 of the Texas Local Government Code, and Section 311.034 of the Texas Government Code, regardless if Buyer has actual or constructive notice or knowledge of said claim or alleged damages. Seller agrees that the requirements of this entire agreement are reasonable.

29. **INDEMNITY (NOT APPLICABLE TO PURCHASE AGREEMENTS) - SELLER WILL INDEMNIFY AND HOLD HARMLESS AND DEFEND BUYER AND ALL OF BUYER'S OFFICERS, AGENTS AND EMPLOYEES FROM ALL SUITS, ACTIONS, CLAIMS, DAMAGES, PERSONAL INJURIES, LOSSES, PROPERTY DAMAGE AND EXPENSES OF ANY CHARACTER WHATSOEVER, INCLUDING REASONABLE ATTORNEY'S FEES,**

**BROUGHT FOR OR ON ACCOUNT OF ANY INJURIES OR DAMAGES RECEIVED OR SUSTAINED BY ANY PERSON OR PERSONS OR PROPERTY, ON ACCOUNT OF ANY NEGLIGENT ACT OF SELLER,** its agents or employees, or any subcontractor, arising out of, or resulting from, Seller's use of, or activities on, the agreement premises, and Seller will be required to pay any judgment with costs which may be obtained against Buyer or any of its officers, agents or employees, including reasonable attorney's fees.

**SELLER SHALL INDEMNIFY AND HOLD HARMLESS AND DEFEND BUYER AND ALL OF BUYER'S OFFICERS, AGENTS AND EMPLOYEES FROM ALL SUITS, ACTIONS, CLAIMS, DAMAGES, ACCIDENTAL DEATH, PERSONAL INJURIES, PROPERTY DAMAGE, LOSSES, AND EXPENSE OF ANY CHARACTER WHATSOEVER INCLUDING REASONABLE ATTORNEY'S FEES, BROUGHT FOR OR ON ACCOUNT OF ANY INJURIES OR DAMAGES RECEIVED OR SUSTAINED BY ANY PERSON OR PERSONS OR PROPERTY, ON ACCOUNT OF ANY NEGLIGENT ACT OF BUYER, BUYER'S OFFICERS, AGENTS AND EMPLOYEES, WHETHER SUCH NEGLIGENT ACT WAS THE SOLE PROXIMATE CAUSE OF THE INJURY OR DAMAGE OR A PROXIMATE CAUSE JOINTLY AND CONCURRENTLY WITH SELLER OR SELLER'S EMPLOYEES, AGENTS OR SUBCONTRACTORS NEGLIGENCE, IN THE EXECUTION, SUPERVISION AND OPERATIONS GROWING OUT OF OR IN ANY WAY CONNECTED WITH THE PERFORMANCE OF THIS AGREEMENT AND SELLER WILL BE REQUIRED TO PAY ANY JUDGMENT WITH COSTS WHICH MAY BE OBTAINED AGAINST BUYER OR ANY OF BUYER'S OFFICERS, AGENTS OR EMPLOYEES, INCLUDING ATTORNEY'S FEES.**

30. SOVEREIGN IMMUNITY - By executing this agreement the Buyer is not waiving its right of sovereign immunity. The Buyer is retaining its immunity from suit. The Buyer is not granting consent to be sued by legislative resolution or action. **THERE IS NO WAIVER OF SOVEREIGN IMMUNITY.**

31. THIRD PARTY BENEFICIARY - The Buyer's approval of this agreement does not create a third party beneficiary. There is no third party beneficiary to this agreement. No person or entity who is not a party to this agreement shall have any third party beneficiary or other rights hereunder.

32. **ATTORNEY FEES - BY EXECUTING THIS AGREEMENT, SELLER AGREES TO WAIVE AND DOES HEREBY KNOWINGLY, CONCLUSIVELY, VOLUNTARILY AND INTENTIONALLY WAIVE ANY CLAIM IT HAS OR MAY HAVE IN THE FUTURE AGAINST THE BUYER, REGARDING THE AWARD OF ATTORNEY'S FEES, WHICH ARE IN ANY WAY RELATED TO THE AGREEMENT, OR THE CONSTRUCTION, INTERPRETATION OR BREACH OF THE AGREEMENT. THE SELLER SPECIFICALLY AGREES THAT IF THE SELLER BRINGS OR COMMENCES ANY LEGAL ACTION OR PROCEEDING RELATED TO THIS AGREEMENT, THE CONSTRUCTION, INTERPRETATION, VALIDITY OR BREACH OF THIS AGREEMENT, INCLUDING BUT NOT LIMITED TO ANY ACTION PURSUANT TO THE PROVISIONS OF THE TEXAS UNIFORM DECLARATORY JUDGMENTS ACT (TEXAS CIVIL PRACTICE AND REMEDIES CODE SECTION 37.001, ET. SEQ., AS AMENDED), OR CHAPTER 271 OF THE TEXAS LOCAL GOVERNMENT CODE, THE SELLER AGREES TO ABANDON, WAIVE AND RELINQUISH ANY AND ALL RIGHTS TO THE RECOVERY OF ATTORNEY'S FEES TO WHICH SELLER MIGHT OTHERWISE BE ENTITLED.**

**SELLER AGREES THAT THIS IS THE VOLUNTARY AND INTENTIONAL RELINQUISHMENT AND ABANDONMENT OF A PRESENTLY EXISTING KNOWN RIGHT. SELLER ACKNOWLEDGES THAT IT UNDERSTANDS ALL TERMS AND CONDITIONS OF THE AGREEMENT. THE SELLER FURTHER ACKNOWLEDGES AND AGREES THAT THERE WAS AND IS NO DISPARITY OF BARGAINING POWER BETWEEN THE BUYER AND THE SELLER. THIS SECTION SHALL NOT BE CONSTRUED OR INTERPRETED AS A WAIVER OF SOVEREIGN IMMUNITY.**

**THE SELLER AND BUYER ARE RELYING ON THEIR OWN JUDGMENT. EACH PARTY HAD THE OPPORTUNITY TO DISCUSS THIS AGREEMENT WITH LEGAL COUNSEL PRIOR TO ITS EXECUTION.**

33. CONSIDERATION - The terms of this agreement are supported by good and valuable consideration, the receipt and sufficiency of which is hereby acknowledged by the parties named herein.

34. CERTIFICATION - In accordance with the Texas Local Government Code, the City of Midland Department of Facilities and Fleet Management does hereby certify that the City of Midland is in compliance with Sections 252, 271 and all applicable sections of the Texas Local Government Code and other state law as it applies to procurement and contracting issues.

35. FEDERAL WAGE REQUIREMENTS - If applicable, the Davis-Bacon Act, 29 CFR 5.5, and any related acts or regulations are hereby incorporated by reference and made a part of this agreement and all terms and requirements under said laws, by such incorporation, are made terms and requirements of this agreement, to which the parties to this agreement have agreed to be bound.

36. COMPLIANCE WITH FEDERAL, STATE AND LOCAL LAWS - Seller shall at all times during the term of this agreement comply with applicable federal, state, and local laws regarding Seller's activities pursuant to this agreement, including but not limited to all applicable sections of the Municipal Code of Midland, Texas, as may be amended, said sections being hereby incorporated by reference and made a part of this agreement for all legal purposes. Failure to abide by any such law mentioned herein constitutes grounds for the immediate termination of this agreement.

# SECTION 01 10 00 - SUMMARY

## PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Work covered by Contract Documents.
   2. Contractor's use of site and premises.
   3. Permits.

B. Related Requirements:
   1. Other Division 01 Specification Sections apply to Work of this Section.

1.2 WORK COVERED BY CONTRACT DOCUMENTS

A. Identification: West and North Citizens' Collection Stations.
B. Location: Midland, Texas.
C. Owner: City of Midland.
D. Work consists of construction of two citizen collection station facilities. Facility construction includes HMAC and concrete roadways, cast-in-place retaining wall, concrete paved parking lot, electrical services, light poles, and building construction. Building construction includes erection of prefabricated metal building, HVAC, plumbing, electrical, and interior finish.

1.3 CONTRACTOR'S USE OF SITE AND PREMISES

A. Limits on Use of Site:
   1. Owner occupancy.
   2. Work by others.
B. Construction Operations: Limited to areas noted on Drawings.
C. Time Restrictions for Performing Work:
   1. 7:00 a.m. to 7:00 p.m. Monday through Friday.
D. Utility Outages and Shutdowns:
   1. Coordinate and schedule utility outages/shutdown.
   2. Allowed only as preiously agreed upon.
   3. Schedule at least 1 week before outage/shutdown.
   4. Submit early request of outage/shutdown to Engineer itemizing dates, times, and durations.

1.4 PERMITS

A. Furnish all necessary permits for construction of Work including:
   1. Building permit.
   2. Stormwater permit.

**PART 2 - PRODUCTS (Not Used)**

**PART 3 - EXECUTION (Not Used)**

END OF SECTION

# SECTION 01 20 00 - PRICE AND PAYMENT PROCEDURES

## PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Inspection and testing allowances.
   2. Schedule of Values.
   3. Application for Payment.
   4. Change Procedures.
   5. Measurement and payment - unit prices.
   6. Alternates.

B. Related Requirements:
   1. Other Division 01 Specification Sections apply to Work of this Section.

1.2 UNIT PRICES

A. Authority: Measurement methods delineated in Section 01 22 00 "Measurement and Payment."

B. Take measurements and compute quantities. Engineer to verify.

C. Unit Quantities: Quantities and measurements indicated in Bid Form are for Contract purposes only and should be verified by Proposer. Quantities and measurements supplied or placed in Work determine payment. When actual Work requires more or fewer quantities than those indicated, provide required quantities at contracted unit prices.

D. Payment Includes:
   1. Full compensation for required labor, products, tools, equipment, plant, transportation, services, and incidentals;
   2. Erection, application, or installation of Work item; and
   3. Overhead and profit.

E. Final payment for Work governed by unit prices will be made based on actual measurements and quantities accepted by Engineer multiplied by unit price for Work incorporated in or made necessary by Work.

## PART 2 - PRODUCTS (Not Used)

## PART 3 - EXECUTION (Not Used)

END OF SECTION

# SECTION 01 22 00 – MEASUREMENT AND PAYMENT

## PART 1 - GENERAL

### 1.1 SUMMARY

A. Section Includes:
   1. Procedures for measurement and payment.
   2. Mobilization demobilization.
   3. Unit price items.
   4. Lump sum items.
   5. Proposal Form-specific payment items.

B. Related Requirements:
   1. Section 00 42 00 "Proposal Form."
   2. Other Division 01 Specification Sections apply to Work of the Section.

### 1.2 PROCEDURES FOR MEASUREMENT AND PAYMENT

A. Unit price Proposal on each item as stated in Section 00 42 00 "Proposal Form" includes furnishing all labor, superintendence, machinery, equipment, and materials except as otherwise specified, necessary, or incidental to complete various item of Work per Drawings and Specifications.

B. Cost of Work or materials shown on Drawings, or called for in Specifications, and on which no separate payment is made included in Proposal prices on various pay items.

C. Payment not made for any items not complete, including all associated incidental Work.

### 1.3 UNIT PRICE ITEMS

A. Unit price items, not otherwise included herein, paid at a unit price per unit.

B. Payment will include all Work and material for installing unit price item as specified.

C. Measurement made in units shown on Section 00 42 00 "Proposal Form."

### 1.4 LUMP SUM ITEMS

A. Lump sum items include all Work and materials for installing lump sum item as specified.

B. Payment based on percentage complete basis as agreed by Engineer and Contractor.

C. Payment includes all Work and material for installing lump sum Proposal item as specified.

### 1.5 PROPOSAL FORM-SPECIFIC PAYMENT ITEMS

A. Proposal Item 1: Mobilization (5 percent Maximum):
   1. Measurement: Lump Sum Basis.
   2. Payment: Made for mobilizing and demobilizing all equipment, tools, insurance, bonds, and all other job-related items to and from the job site. Price will be on a lump sum basis and shall include all equipment, labor, materials, superintendence, and all incidentals necessary to become fully mobilized at the start of the Project and demobilized when Work is complete. Mobilization related expenses include Contractor's cost for the following: obtaining and setting up construction office

facilities, obtaining and paying for electric power required for construction, providing and maintaining dust control over the Project working area, temporary fencing, and all other incidentals required for Contractor to complete mobilization. This Proposal item shall not exceed 5 percent of the Contract price.

B. Proposal Item 2: Erosion Control:
   1. Measurement: Lump Sum Basis.
   2. Payment: Made for all costs associated with providing all labor, equipment, materials, and supervision necessary to implement an approved traffic control plan. Payment shall also include all costs associated with grading and constructing any necessary temporary bypass roads needed to keep the flow of traffic moving during construction operations.

C. Proposal Item 3: Excavation:
   1. Measurement: Per Cubic Yard Basis.
   2. Payment: Made for providing all labor, equipment, materials, supplies, etc., necessary to excavate the road and drainage ponds to the elevations and grades shown on the Plans. Subgrade preparation to receive concrete structures is incidental to this Proposal item. No payment for Work outside limits indicated on Drawings.

D. Proposal Item 4: Embankment (Fill):
   1. Measurement: Per Cubic Yard Basis.
   2. Payment: Made for providing all labor, equipment, materials, supplies, etc., necessary to fill the areas shown to construct the access road and drainage channels as shown. Subgrade preparation to receive concrete structures is incidental to this Proposal item. No payment for Work outside limits indicated on Drawings.

E. Proposal Item 5: Furnish and Install 3-Inch-Thick Type "B" HMAC, 9-Inch Base Course, 12-Inch Subgrade:
   1. Measurement: Per Square Yard Basis.
   2. Payment: Made for providing and installing 3-inch HMAC Type B pavement, 9-inch base course and preparation of 12 inches of subgrade. Pavement shall include all costs associated with providing all labor, equipment, materials, and supervision necessary to install the pavement sections to the grades shown on the Plans in accordance with Specifications. No payment for Work outside limits indicated on Drawings.

F. Proposal Item 6: Furnish and Install 8-Inch-Thick Concrete Pavement and Reinforcement, 6-Inch Base Course, 12-Inch Subgrade:
   1. Measurement: Per Square Yard Basis.
   2. Payment: Made for providing and installing 8-inch concrete pavement and reinforcement, 6-inch base course and preparation of 12 inches of subgrade. Pavement shall include all costs associated with providing all labor, equipment, materials, and supervision necessary to install the pavement sections to the grades shown on the Plans in accordance with the Specifications. 6-inch ramps, transformer pad, condensing unit pad, bollards, and wheel stops are incidental to this Proposal item. No payment for Work outside limits indicated on Drawings.

G. Proposal Item 7: Concrete Drainage Gutter:
   1. Measurement: Per Linear Foot.
   2. Payment: Made for the concrete drainage gutters as detailed on the plans. Pavement shall include all costs associated with providing all labor, equipment, materials, and supervision necessary to install the pavement sections to the grades shown on the Plans in accordance with the Specifications.

H. Proposal Item 8: Concrete Retaining Wall and Steel Rails:
   1. Measurement: Per Linear Foot Basis.
   2. Payment: Made for providing and installing the concrete retaining wall. Payment shall include all costs associated with providing all labor, equipment, materials, supervision, excavation, fine grading, curing, welding, painted steel posts and rails, steel embed plates, steel C-channels, control joints, backfill, and all other appurtenances necessary to install the retaining wall as shown on the Plans and in accordance with Specifications.

I. Proposal Item 9: Entrance Gate:
   1. Measurement: Per Linear Foot Basis.
   2. Payment: Made for providing and installing the Wrought Iron/Steel Gate at the Entrance. Payment shall include all costs associated with providing all labor, equipment, materials, and supervision necessary to install the shown on the Drawings and in accordance with Specifications.

J. Proposal Item 10: Exit Gate:
   1. Measurement: Per Linear Foot Basis.
   2. Payment: Made for providing and installing a wrought iron/steel swing gate at exit. Payment shall include all costs associated with providing all labor, equipment, materials, and supervision necessary to install as shown on Drawings and in accordance with Specification.

K. Proposal Item 11: Six-Foot Chain Link Fence:
   1. Measurement: Per Linear Foot Basis.
   2. Payment: Made for providing and installing the chain link fence with e-strand barb wire and screening along property boundary on a linear foot basis. Payment shall include all costs associated with providing all labor, equipment, materials, and supervision necessary to install the shown on the Drawings and in accordance with Specifications. Sliding gates are incidental to this Proposal item.

L. Proposal Item 12: Pavement Markings and Striping:
   1. Measurement: Per Each Basis.
   2. Payment: Made for providing and installing pavement marking symbols. Payment shall include all costs associated with providing all labor, equipment, materials, and supervision necessary to install the pavement markings as shown on the Plans and in accordance with Specifications.

M. Proposal Item 13: Schedule 80 Waterline.
   1. Measurement: Per Linear Foot Basis.
   2. Payment: Made for providing and installing the Schedule 80 pipe as shown on Plans. Payment shall include all costs associated with providing all labor, equipment, materials, and supervision necessary to install as shown on the Drawings and in accordance with Specifications. No payment for Work outside limits indicated on Drawings.

N. Proposal Item 14: SDR 35 Sewer Line.
   1. Measurement: Per Linear Foot Basis.
   2. Payment: Made for providing and installing the SDR 35 pipe as shown on Plans. Payment shall include all costs associated with providing all labor, equipment, materials, and supervision necessary to install as shown on the Drawings and in accordance with the Specification. No payment for Work outside limits indicated on Drawings.

O. Proposal Item 15: Traffic Signage:
   1. Measurement: Per Each Basis.
   2. Payment: Made for the installation of traffic signage. Payment shall include all costs associated with providing all labor, equipment, materials, and supervision necessary to install traffic signage. Such payment shall be compensation for the complete performance of the work in accordance with the Drawings and provisions of these Specifications.

P. Proposal Item 16: 40-Foot by 60-Foot Metal Building:
   1. Measurement: Lump Sum Basis.
   2. Payment: Made for costs associated with providing all labor, equipment, materials, and supervision necessary to anchor the structure on site on a lump sum basis. Payment shall include all costs associated with providing all labor, equipment, and supervision necessary.

Q. Proposal Item 17: Electrical Site Work:
   1. Measurement: Lump Sum Basis.
   2. Payment: Made for the electrical site improvements. Electrical Work includes grounding system, service pole, weather head, riser, meter can, main disconnect, fusible/non-fusible disconnects, electrical racks, distributions panels, dry-type transformers, in-ground pull boxes, conduits, trenching and backfill, wires/cables, area light fixtures with poles and foundations, interior and exterior light fixtures, receptacles, light switches, data connection points, all building preparations for camera locations, installation of Owner-provided compactor and guard shack, installation of any other electrical items indicated on Contract Drawings, and all associated terminations. Payment includes full compensation for complete performance of the Work in accordance with the Drawings and provisions of these Specifications.

R. Proposal Item 18: Septic Tank:
   1. Measurement: Lump Sum Basis.
   2. Payment made for all costs associated with providing the system design, and all labor, equipment, materials, and supervision necessary to install septic tank, absorptive field, and all necessary piping, fittings, clean outs, and valves.

S. Proposal Item 19: Water Well:
   1. Measurement: Lump Sum Basis.
   2. Payment made for all costs associated with providing all required materials to generate water from the existing well at the facility and connect to waterline installed as part of Proposal Item 13.

T. Proposal Item 20: Mobilization (5 percent maximum):
   1. Measurement: Lump Sum Basis.
   2. Payment: Made for mobilizing and de-mobilizing, tools, insurance, bonds, and all other job-related items to and from the Job Site. Price will be on a lump sum Basis and shall include all equipment, labor, materials, superintendence, and all incidentals necessary to become fully mobilized at the start of Project, and demobilized when Work is complete. Mobilization related expenses includes Contractor's cost for the following: obtaining and setting up construction office facilities, obtain and paying for the electrical power required for construction, providing and maintaining dust control over the Project working area, temporary fencing, and all other incidentals required for Contractor to complete mobilization. This Proposal item shall not exceed 5 percent of the Contract price.

U. Proposal Item 21: Erosion Control:
   1. Measurement: Lump Sum Basis.
   2. Made for all costs associated with providing all labor, equipment, materials, and supervision necessary to implement an approved traffic control Plan. Payment shall also include all costs associated with grading and constructing any necessary temporary bypass roads needed to keep the flow of traffic moving during construction operations.

V. Proposal Item 22: Excavation:
   1. Measurement: Per Cubic Yard Basis.
   2. Payment: Made for providing all labor, equipment, materials, supplies etc., necessary to excavate the road and drainage ponds to the elevations and grades shown on Plans. Subgrade preparation to receive concrete structures is incidental to the Proposal item. No payment for Work outside limits indicated on Drawings.

W. Proposal Item 23: Embankment (Fill):
   1. Measurement: Per Cubic Yard Basis.
   2. Payment: Made for providing all labor, equipment, materials, supplies, etc., necessary to fill the areas shown to construct the access road and drainage channels as shown. Subgrade preparation to receive concrete structures is incidental to this Proposal item. No payment for Work outside limits indicted on Drawings.

X. Proposal Item 24: Furnish and Install 3-Inch-Thick Type "B" HMAC, 9-Inch Base Course, 12-Inch Subgrade:
   1. Measurement: Per Square Yard Basis.
   2. Payment: Made for providing and installing 3-inch HMAC pavement, 9-inch base course and preparation of 12 inches of subgrade. Pavement shall include all costs associated with providing all labor, equipment, materials, and supervision necessary to install the pavement Sections to the grades shown on Plans in accordance with Specifications. No payment for Work outside limits indicated on Drawings.

Y. Proposal Item 25: Furnish and Install 8-Inch-Thick Concrete Pavement and Reinforcement, 6-Inch Base Course, 12-Inch Subgrade:
   1. Measurement: Per Square Yard Basis.
   2. Payment: Made for providing and installing 8-inch concrete pavement and reinforcement, 6-inch base course, and preparation of 12 inches of subgrade. Pavement shall include all costs associated with providing all labor, equipment, materials, and supervision necessary to install the pavement Sections to the grade shown on the Plans in accordance with the Specifications. 6-inch ramps, transformer pad, condensing unit pad, bollards, and wheel stops are incidental to this Proposal item. No payment for Work outside limits indicated on Drawings.

Z. Proposal Item 26: Concrete Drainage Gutter:
   1. Measurement: Per Linear Foot Basis.
   2. Payment: Made for the concrete drainage gutters as detailed on Plans. Pavement shall include all costs associated with providing all labor, equipment, materials, and supervision necessary to install the pavement sections to the grades shown on Plans in accordance with the Specifications.

AA. Proposal Item 27: Concrete Retaining Wall and Steel Rails:
   1. Measurement: Per Linear Foot Basis.
   2. Payment: Made for providing and installing the concrete retaining wall. Payment shall include all costs associated with providing all labor, equipment, materials, supervision, excavation, fine grading, curing, welding, painted steel posts and rails, steel embed plates, steel C-channels, control joints, backfill, and all other appurtenances necessary to install the retaining wall as shown on Plans and in accordance with Specification.

BB. Proposal Item 28: Entrance Gate:
1. Measurement: Per Linear Foot Basis.
2. Payment: Made for providing and installing the wrought-iron/steel gate at entrance. Payment shall include all costs associated with providing all labor, equipment, materials, and supervision necessary to install as shown on Drawings and in accordance with Specifications.

CC. Proposal Item 29: Exit Gate:
1. Measurement: Per Linear Foot Basis.
2. Payment: Made for providing and installing the wrought iron/steel swing gate at exit. Payment shall include all costs associated with providing all labor, equipment, materials, and supervision necessary to install as shown on Drawings and in accordance with Specifications.

DD. Proposal Item 30: Six-Foot Chain Link Fence:
1. Measurement: Per Linear Foot Basis.
2. Payment: Made for providing and installing the chain link fence with e-strand barb wire and screening along property boundary on a linear foot basis. Payment shall include all costs associated with providing all labor, equipment, materials, and supervision necessary to install as shown on Drawings and in accordance with Specifications. Sliding gates are incidental to this Proposal item.

EE. Proposal Item 31: Pavement Markings and Striping:
1. Measurement: Per Each Basis.
2. Payment: Made for providing and installing pavement marking symbols. Payment shall include all costs associated with providing all labor, equipment, materials, and supervision necessary to install the pavement markings as shown on Plans and in accordance with Specifications.

FF. Proposal Item 32: Schedule 80 Waterline:
1. Measurement: Per Linear Foot Basis.
2. Payment: Made for providing and installing Schedule 80 pipe as shown on Plans. Payment shall include all costs associated with providing all labor, equipment, materials, and supervision necessary to install as shown on Drawings and in accordance with Specifications. No payment for Work outside limits indicted on Drawings.

GG. Proposal Item 33: SDR 35 Sewer Line:
1. Measurement: Per Linear Foot Basis.
2. Payment: Made for providing and installing the SDR 35 pipe as shown on Plans. Payment shall include all costs associated with providing all labor, equipment, materials, and supervision necessary to install as shown on Drawings and in accordance with Specifications. No payment for Work outside limits indicated on Drawings.

HH. Proposal Item 34: Traffic Signage:
1. Measurement: Per Each Basis.
2. Payment: Made for installation of traffic signage. Payment shall include all costs associated with providing all labor, equipment, materials, and supervision necessary to install traffic signage. Such payment shall be compensation for the complete performance of Work in accordance with Drawings and provision of these Specifications.

II. Proposal Item 35: 40-Foot by 60-Foot Metal Building:
   1. Measurement: Lump Sum Basis.
   2. Payment: Made for installation of metal building. Payment shall include all costs associated with providing all labor, equipment, and supervision necessary to install metal building. Such payment shall be compensation for the complete performance of Work in accordance with Drawings and provision of these Specifications.

JJ. Proposal Item 36: Electrical Site Work:
   1. Measurement: Lump Sum Basis.
   2. Payment: Made for electrical site improvements. Electrical Work includes grounding system, service pole, weather head, riser, meter can, main disconnect, fusible/non-fusible disconnects, electrical racks, distribution panels, dry-type transformers, in-ground pull boxes, conduits, trenching and backfill, wires/cables area light fixtures with poles and foundations, interior and exterior light fixtures, receptacles, light switches, data connection points, all building preparation for camera locations, installation of Owner-provided compactor and guard shack, installation of any other electrical items indicated on Contract Drawings, and all associated terminations. Payment includes full compensation for complete performance of Wok in accordance with Drawings and provisions of these Specifications.

KK. Proposal Item 37: Septic Tank:
   1. Measurement: Lump Sum Basis.
   2. Payment made for all costs associated with providing the system design, and all labor, equipment, materials, and supervision necessary to install septic tank, absorptive field, and all necessary piping, fittings, clean outs, and valves.

LL. Proposal Item 38: Landscape and Irrigation:
   1. Measurement: Lump Sum Basis:
   2. Made for installing landscaping and irrigation as shown on Plans. Payment shall include all costs associated with providing all labor, equipment, and supervision necessary.

MM. Proposal Item 39: Entrance Road:
   1. Measurement: Per Square Yard Basis.
   2. Made for providing and installing pavement material to install the entrance road. Pavement shall include all costs associated with providing all labor, equipment, materials, and supervision necessary to install the pavement sections to the grades shown on Plans in accordance with the Specifications. No payment for Work outside limits indicated on Drawings.

**PART 3 - EXECUTION (Not Used)**

END OF SECTION

# SECTION 01 30 00 - ADMINISTRATIVE REQUIREMENTS

## PART 1 - GENERAL

### 1.1 SUMMARY

A. Section Includes:
   1. Project Information Management.
   2. Coordination.
   3. Preconstruction meeting.
   4. Electronic drawing file (digital data) request.
   5. Request for information.
   6. Progress meetings.
   7. Preinstallation meetings.

B. Related Requirements:
   1. Other Division 01 Specification Sections apply to Work of this Section.

### 1.2 PROJECT INFORMATION MANAGEMENT

A. Project Website:
   1. Use Newforma Info Exchange at https://projects.team-psc.com/UserWeb/Login to send and receive Project information.
   2. Contact Engineer to set up user name and password information.
   3. If Project is not listed when logged in, contact Engineer to add Project to your account.

B. Project information includes, but is not limited to:
   1. Product Submittals.
   2. Requests for Information (RFI).
   3. Applications for Payment.
   4. Schedules.
   5. Construction Change Requests (CCRs).
   6. Closeout Documents.
   7. Construction Document Files.

### 1.3 COORDINATION

A. Coordinate scheduling, submittals, and Work to assure efficient and orderly sequence of installation of construction elements.

B. Verify utility requirements and characteristics of operating equipment are compatible with building utilities. Coordinate work of various Sections having interdependent responsibilities for installing, connecting to, and placing such equipment in service.

C. Coordinate space requirements and installation of mechanical and electrical work indicated diagrammatically on Drawings. Follow routing as closely as practicable. Utilize spaces efficiently to maximize accessibility for other installations, maintenance, and repairs.

D. In finished building areas, except as otherwise indicated, conceal pipes, ducts, and wiring within construction. Coordinate locations of fixtures and outlets with finish elements as applicable.

E. Coordinate completion and clean-up of Work of separate Sections in preparation for Substantial Completion.

F. After Owner occupancy of premises, coordinate access to site with Owner for correction of defective Work and Work not in accordance with Contract Documents to minimize disruption of Owner's activities.

1.4 PRECONSTRUCTION MEETING

A. Engineer will schedule a meeting after Notice to Proceed.

B. Attendance Required:
   1. Owner.
   2. Engineer.
   3. Contractor.
   4. Major subcontractors.

C. Agenda:
   1. Distribute Contract Documents.
   2. Submit lists of subcontractors and products, Schedule of Values, submittal schedule, and progress schedule.
   3. Designate personnel representing each party in Contract and Engineer.
   4. Procedures and processing field decisions, submittals, substitutions, Applications for Payments, proposal request, Change Orders, Request for Information (RFI), and Contract closeout procedures.
   5. Review Notice to Proceed and Substantial/Final Completion Dates.
   6. Workmen's identification and background checks.
   7. Stormwater Pollution and Prevention Plan (SWPPP) if necessary.
   8. Scheduling:
      a. Use of premises by Owner and Contractor.
      b. Owner's requirements.
      c. Construction facilities and controls provided by Owner.
      d. Temporary utilities provided by Owner.
      e. Security and housekeeping procedures.
      f. Construction progress meetings.
      g. Procedures for testing.
      h. Procedures for maintaining record documents.
      i. Requirements for start-up of equipment.
      j. Inspection and acceptance of equipment put into service during construction.
   9. Scheduling activities of Construction Material Testing lab.

D. Engineer shall record minutes and distribute copies to participants.

1.5 ELECTRONIC DRAWING FILE (DIGITAL DATA) REQUEST

A. During Procurement Phase:
   1. Bidders and Proposers may purchase a Digital Data file. Digital Data file will be provided in software release currently used by Engineer. File will be provided via Engineer's Project website.
   2. AutoCAD Drawing files (.dwg) are available for purchase from Engineer upon request. Cost of files are indicated below plus applicable tax.
      a. 1 – 3 Sheets: $100.00 per sheet.
      b. 4 – 6 Sheets: $400.00 flat fee.
      c. 7 – 9 Sheets: $500.00 flat fee.

3. Revit® BIM Model files (.rvt) are available for purchase from Engineer upon request. Cost of model files are $150.00 for each model plus applicable tax. All details, detail annotation, and reference are omitted and not part of the Model file.
4. Prior to delivery of file(s), purchaser shall sign a Digital Data Licensing Agreement. Payment for Digital Data file(s) shall occur upon delivery of file to purchaser.
5. Digital Data file(s) shall be used only for preparing Bids and Proposals required by this Project not used in any other form in whole or in part.

B. Upon Award of Contract:

1. At pre-construction meeting, Contractor shall bring the executed Digital Data Licensing Agreement (AIA C106-2013) at the end of this Section for release of electronic files. Upon Contractor submitting the executed Agreement to Engineer, Engineer will provide Contractor one electronic copy of the Revit® BIM Model file(s), AutoCAD (.dwg file(s), when Revit® BIM Model file is not available, and Portable Document Format (.pdf) file(s) at no charge within five working days. Note that CAD files associated with the Work can be accessed and exported from the Revit® BIM Model provided to Contractor through Revit® software; therefore, Engineer will not provide individual CAD files. Files and Formats to be as followed:
   a. Civil Overall master file in AutoCAD format.
      1) Overall Site Plan with utility and grading information.
      2) All details, detail annotation, and references are omitted and not part of the AutoCAD file.
   b. Landscape: Overall master file in AutoCAD format.
      1) Overall Site Plan with grading, flatwork, irrigation, and planting plans.
      2) All details, detail annotation, and references are omitted and not part of the AutoCAD file.
   c. Structural: Revit® BIM Model and associated working plans views.
      1) Overall Site Plan with utility and grading information.
      2) All details, detail annotation, and reference are omitted and not part of the AutoCAD file.
   d. Architectural/Interior: Revit® BIM Model and associated working plan views.
      1) Plan views contain overall and enlarged section plan view set-up of floor plans, floor patterns, reflected ceilings, and roof plans only. All plan views contain grids, dimensions, room names, and general annotation.
      2) Reflected Ceiling Plans contain ceilings grids and types only. Lighting and mechanical are provided as part of the MEP Model.
      3) Roof Plans contain grids and general annotation only. Mechanical is provided as part of the MEP Model.
      4) Interior and exterior elevations and schedules.
      5) Finish plans and finish schedules.
      6) All details, details annotation, and references are omitted and not part of the model life.
   e. Mechanical, Electrical, and Plumbing: Revit® BIM Model and associated working plan views.
      1) Plan views contain overall and enlarged plan section view set-up of mechanical, electrical lighting, electrical power, and plumbing plans only.
      2) All details, detail annotation, and references are omitted and not part of the model file.

f. Other Disciplines: Revit® BIM Model and associated working plan views.
   1) Plan views contain overall and enlarged plan section view set-up showing all device locations and general annotation.
   2) All details, detail annotation and references are omitted and not part of the model file
   3) The Revit All details, detail annotation, and references are omitted and not part of the model file.

2. Revit® BIM Model file provided to Contractor is NOT FOR CONSTRUCTION PURPOSES, but convenience only. This BIM Model will consist of the original model utilized for base bid. It is Contractor responsibility to coordinate all accepted alternated, addenda, RFI, Proposal Request, and any other changes realized during procurement and construction phases. Engineer will not provide up-to-date Contract Documents or update BIM Models to Contractor unless otherwise stated within the Owner/Engineer Agreement.

3. Conformed Construction Documents: If required by Owner/Engineer Agreement, they will be provided in PDF. Conformed Construction Documents are Drawings and Specifications modified to include any Addenda issued before execution of the Contract.
   a. To the extent Conformed Construction Documents are provided to Contractor, the following provisions shall apply:
      1) Conformed Construction Documents, and related information contained therein, are provided for Contractor's convenience only and does not relieve Contractor from Contract Document requirements. Specifically, to the extent that any discrepancy or conflict exist between Issue for Bid documents, including any Addenda issued prior to execution of Contact or Modifications issued after execution of Contact on the one hand, and Conformed Construction Documents on the other; Issue for Bid documents Addenda, and Modifications shall control unless otherwise specified in writing by Engineer.
      2) Contractor shall not use such Drawings, documents, or other data, in whole or in part, for any purpose or project other than this Project, in preparation of Shop Drawings and other submittals.
      3) Contractor acknowledges that such Drawings, documents, or other data obtained prior to use by them for any purpose.
      4) Any Conformed Construction Documents, including any Drawings Specifications, documents, or other data related thereto, are provided "as is" without representation or warranty by Engineer, either expressed or implied.
      5) Contractor acknowledges that Conformed Construction Documents provide by Engineer are as courtesy to Contractor at their specific request, and accordingly, CONTRACTOR HEREBY AGREES TO RELEASE, HOLD HARMLESS, DEFEND, AND INDEMNIFY ENGINEER AND OWNER FROM ANY AND ALL CLAIMS, DEMANDS, OR CAUSES OF ACTION, WHICH CONTRACTOR OR ANY THIRD PARTY MAY HAVE BY REASON OF ANY INJURY OR DAMAGE SUSTAINED BY CONTRACTOR OR THIRD PARTY ARISING OUT OF OR IN ANY WAY RELATED TO THE USE OF SUCH CONFORMED CONSTRUCTION DOCUMENTS.

1.6 REQUEST FOR INFORMATION (RFI)

A. RFI requests from subcontractors or material suppliers will not be considered.
B. Information indicated on RFI shall be complete before submission. If Engineer determines request can be answered with information provided, Engineer will assign RFI tracking number. If Engineer determines request is not an RFI, request will be returned to Contractor electronically and deleted from Engineer's electronic tracking software without assigning an RFI tracking number. A transmittal document returning denied RFI request will be provided with a response indicating action to be taken by Contractor.
C. RFIs may contain more than 1 item when items are related. Otherwise, only 1 item shall be addressed on each RFI request.
D. Allow 7 days for Engineer's response to each RFI.
E. Response to RFI will be issued to Contractor and Owner per Section 01 33 00 "Submittal Procedures."
F. Responses from Engineer are not changes unless issued with a change per Section 01 20 00 "Price and Payment Procedures."

1.7 PROGRESS MEETINGS

A. Schedule and administer monthly meetings throughout Work progress at minimum.
B. Engineer will arrange meetings, prepare agenda with copies for participants, preside at meetings.
C. Attendance Required:
   1. Owner.
   2. Job superintendent.
   3. Major subcontractors.
   4. Suppliers.
   5. Engineer.
   6. As appropriate to agenda topics for each meeting.
D. Agenda:
   1. Review minutes of previous meetings.
   2. Review Work progress.
   3. Field observations, problems, and decisions.
   4. Identify problems which impede planned progress.
   5. Review submittal schedule and status of submittals.
   6. Review off-site fabrication and delivery schedules.
   7. Maintenance of progress schedule.
   8. Corrective measures to regain projected schedules.
   9. Planned progress during succeeding Work period.
   10. Coordinate projected progress.
   11. Maintenance of quality and work standards.
   12. Effect of proposed changes on progress schedule and coordination.
   13. Testing.
   14. Other business relating to Work.
E. Record minutes and distribute copies within 5 days to Engineer, participants, and those affected by decisions made.

1.8 PREINSTALLATION MEETING

A. When required in individual Specifications, convene a preinstallation meeting at site before installing Work.
B. Require attendance of parties directly affecting, or affected by, Work.
C. Notify Engineer 14 days in advance of meeting date.
D. Prepare agenda and preside at meeting.
   1. Review conditions of installation, preparation, and installation procedures.
   2. Review coordination with related work.
E. Record minutes and distribute copies within 5 days after meeting to participants and copy Engineer.

END OF SECTION

# AIA® Document C106™ – 2013

## *Digital Data Licensing Agreement*

**AGREEMENT** made as of the day of in the year
*(In words, indicate day, month and year.)*

**BETWEEN** the Party transmitting Digital Data ("Transmitting Party"):
*(Name, address and contact information, including electronic addresses)*

Parkhill.

and the Party receiving the Digital Data ("Receiving Party"):
*(Name, address and contact information, including electronic addresses)*

for the following Project:
*(Name and location or address)*

**ADDITIONS AND DELETIONS:**
The author of this document has added information needed for its completion. The author may also have revised the text of the original AIA standard form. An *Additions and Deletions Report* that notes added information as well as revisions to the standard form text is available from the author and should be reviewed. A vertical line in the left margin of this document indicates where the author has added necessary information and where the author has added to or deleted from the original AIA text.

This document has important legal consequences. Consultation with an attorney is encouraged with respect to its completion or modification.

The Transmitting Party and Receiving Party agree as follows.

**TABLE OF ARTICLES**

1 GENERAL PROVISIONS

2 TRANSMISSION OF DIGITAL DATA

3 LICENSE CONDITIONS

4 LICENSING FEE OR OTHER COMPENSATION

5 DIGITAL DATA

**ARTICLE 1 GENERAL PROVISIONS**

**§ 1.1** The purpose of this Agreement is to grant a license from the Transmitting Party to the Receiving Party for the Receiving Party's use of Digital Data on the Project, and to set forth the license terms.

**§ 1.2** This Agreement is the entire and integrated agreement between the parties. Except as specifically set forth herein, this Agreement does not create any other contractual relationship between the parties.

**AIA Document C106™ – 2013.** Copyright © 2007 and 2013 by The American Institute of Architects. All rights reserved. User Notes: (862876232)

§ 1.3 For purposes of this Agreement, the term Digital Data is defined to include only those items identified in Article 5 below.

§ 1.3.1 Confidential Digital Data is defined as Digital Data containing confidential or business proprietary information that the Transmitting Party designates and clearly marks as "confidential."

## ARTICLE 2 TRANSMISSION OF DIGITAL DATA

§ 2.1 The Transmitting Party grants to the Receiving Party a nonexclusive limited license to use the Digital Data identified in Article 5 solely and exclusively to perform services for, or construction of, the Project in accordance with the terms and conditions set forth in this Agreement.

§ 2.2 The transmission of Digital Data constitutes a warranty by the Transmitting Party to the Receiving Party that the Transmitting Party is the copyright owner of the Digital Data, or otherwise has permission to transmit the Digital Data to the Receiving Party for its use on the Project in accordance with the terms and conditions of this Agreement.

§ 2.3 If the Transmitting Party transmits Confidential Digital Data, the transmission of such Confidential Digital Data constitutes a warranty to the Receiving Party that the Transmitting Party is authorized to transmit the Confidential Digital Data. If the Receiving Party receives Confidential Digital Data, the Receiving Party shall keep the Confidential Digital Data strictly confidential and shall not disclose it to any other person or entity except as set forth in Section 2.3.1.

§ 2.3.1 The Receiving Party may disclose the Confidential Digital Data as required by law or court order, including a subpoena or other form of compulsory legal process issued by a court or governmental entity. The Receiving Party may also disclose the Confidential Digital Data to its employees, consultants or contractors in order to perform services or work solely and exclusively for the Project, provided those employees, consultants and contractors are subject to the restrictions on the disclosure and use of Confidential Digital Data as set forth in this Agreement.

§ 2.4 The Transmitting Party retains its rights in the Digital Data. By transmitting the Digital Data, the Transmitting Party does not grant to the Receiving Party an assignment of those rights; nor does the Transmitting Party convey to the Receiving Party any right in the software used to generate the Digital Data.

§ 2.5 To the fullest extent permitted by law, the Receiving Party shall indemnify and defend the Transmitting Party from and against all claims arising from or related to the Receiving Party's modification to, or unlicensed use of, the Digital Data.

## ARTICLE 3 LICENSE CONDITIONS

The parties agree to the following conditions on the limited license granted in Section 2.1:
*(State below rights or restrictions applicable to the Receiving Party's use of the Digital Data, requirements for data format, transmission method or other conditions on data to be transmitted.)*

This Digital Data is part of the Transmitting Party's Instruments of Service and shall not be used by Receiving Party or anyone else receiving this data through or from the Receiving Party for any purpose other than as a convenience in the preparation of bid submittals, shop drawings, coordination drawings, construction phase submittals, and field layout and staking required by the Owner for the exclusive use of the referenced Project. Any use or reuse by the Receiving Party or by others will be at the Receiving Party's sole risk and without liability or legal exposure to Transmitting Party. The Receiving Party agrees to make no claim and hereby waive, to the fullest extent permitted by law, any claim or cause of action of any nature against Transmitting Party, its officers, directors, employees, or subconsultants that may arise out of or in connection with Receiving Party's use of this Digital Data.
Receiving party or any third party, to the fullest extent permitted by law, shall indemnify and hold harmless the Transmitting Party against all damages, liabilities or costs, including reasonable attorney's fees and defense costs arising out of or resulting from Receiving Party or any third parties use of this Digital Data.

No representation as to the compatibility of this Digital Data with Receiving Party's hardware or software is provided.

This Digital Data is not a Construction Document. Differences may exist between this Digital Data and corresponding two-dimensional hard-copy Construction Document. The Transmitting Party makes no representation regarding the

User Notes:

accuracy or completeness of the Digital Data the Receiving Party receives. In the event that a conflict arises between the signed/sealed two-dimensional hard-copy Construction Document prepared by Transmitting Party and the Digital Data, the signed/sealed two-dimensional hard-copy Construction Document shall govern. The Receiving Party is responsible for determining if any conflict exists. By the Receiving Party's use of this Digital Data, Receiving Party is not relieved of their duty to fully comply with the Contract Documents, including, and without limitation, the need to check, confirm and coordinate all dimensions and details, field measurements, verify field conditions and coordination of work with that of other contractors for the Project.

Because information presented in the Digital Data can be modified, unintentionally or otherwise, the Transmitting Party reserves the right to remove all indicia of ownership and/or involvement from each Digital Data.

Under no circumstances shall delivery of this Digital Data for use by the Receiving Party be deemed a sale of document ownership by Transmitting Party, and no warranties, either express or implied, of merchantability or fitness for any particular purpose is made. In no event shall the Transmitting Party be liable for any loss of profit or any consequential damages as a result of the Receiving Party's use or reuse of this Digital Data.

The Digital Data file does not necessarily contain all the information that is required to produce finished Construction Documents. Because of this, there may be data within the Digital Data that is missing, incomplete or even contradictory to the information provided in the final two dimensional Construction Documents.

Professional judgment will need to be used by the Receiving Party, along with reasonable expectations and interpretations in order to use the Digital Data for its intended purpose. Should the Transmitting Party provide revised and updated copies of the Digital Data to the Receiving Party throughout the Project, all terms and conditions of this agreement will be applicable and unchanged for all subsequent transmissions of the Digital Data.

## ARTICLE 4 LICENSING FEE OR OTHER COMPENSATION

The Receiving Party agrees to pay the Transmitting Party the following fee for the Receiving Party's use of the Digital Data:
*(State the fee, in dollars, or other method by which the Receiving Party will compensate the Transmitting Party for the Receiving Party's use of the Digital Data.)*

DURING PROCUREMENT PHASE

**.dwg Files**
1-3 Sheets $125.00 per sheet plus applicable tax
4-6 Sheets $500.00 flat fee plus applicable tax
7-9 Sheets $700 flat fee plus applicable tax

**.rvt Files**
Revit Models are $300.00 per model plus applicable tax

UPON AWARD OF CONTRACT:
No service fee will be required for delivery of the electronic file(s).

## ARTICLE 5 DIGITAL DATA

The Parties agree that the following items constitute the Digital Data subject to the license granted in Section 2.1:
*(Identify below, in detail, the information created or stored in digital form the parties intend to be subject to this Agreement.)*

[Revit Models (.rvt files)]
[AutoCAD (.dwg files)]
[Portable Document Format (.pdf)]

# SECTION 01 32 16 - CONSTRUCTION PROGRESS SCHEDULE

## PART 1 - GENERAL

### 1.1 SUMMARY

A. Section Includes:
   1. Submittals.
   2. Bar Gantt chart schedules.
   3. Review and evaluation.
   4. Updating schedules.
   5. Distribution.

B. Related Sections:
   1. Other Division 01 Specification Sections apply to Work of this Section.

### 1.2 SUBMITTALS

A. Post as electronic file to Project website.

B. Submit initial progress schedule for Engineer review within 15 days after established Notice to Proceed date.

C. Schedule Updates:
   1. Submit with each Application for Payment.
   2. Projected and actual percent of completion.
   3. Completion progress by listed activity and subactivity to within 5 working days prior to submittal.
   4. Changes in Work scope and activities modified since submittal.
   5. Delays in submittals or resubmittals, deliveries, or Work.
   6. Revised projections of progress and completion.

D. Narrative Progress Report:
   1. Submit with each Application for Payment.
   2. Summary of Work completed during past period between reports.
   3. Work planned during next period.
   4. Explanation of differences between summary of Work completed and Work planned in previously-submitted report.
   5. Current and anticipated delaying factors and estimated impact on other activities and completion milestones.
   6. Corrective action taken or proposed.

### 1.3 BAR GANTT CHART SCHEDULES

A. Format Bar Gantt chart Schedule to include at least:
   1. Identification and listing, in chronological order, activities reasonably required to complete Work including:
      a. Subcontract Work.
      b. Major equipment design, fabrication, factory testing, and delivery dates including required lead times.
      c. Move-in and other preliminary activities.

d. Equipment and equipment system test and startup activities.
e. Project closeout and cleanup.
f. Work sequences, constraints, and milestones.

2. Listings identified by Specification Section number.
3. Identification of:
   a. Horizontal time frame by year, month, and week.
   b. Duration, early start, and completion for each activity and subactivity.
   c. Critical activities and Project float.
   d. Sub-schedules to further define critical portions of Work.

1.4 REVIEW AND EVALUATION

A. Participate in joint review and evaluation of schedules with Engineer at each Progress Meeting or Application for Payment submittals.
B. Evaluate Project status to determine Work behind and ahead of schedule.
C. After review, revise schedules incorporating results of review and resubmit within 10 days.

1.5 UPDATING SCHEDULES

A. Maintain schedules to record actual start and finish dates of completed activities.
B. Indicate progress of each activity to date of revision with projected completion date of each activity. Update schedules to depict current status of Work.
C. Identify activities modified since previous submittal, major changes in Work, and other identifiable changes.
D. Upon approval of Change Order, include change in next schedule submittal.
E. Indicate changes required to maintain Date of Substantial Completion.
F. Prepare narrative report to define problem areas, anticipated delays, and impact on schedule. Report corrective action taken or proposed and effect.

1.6 DISTRIBUTION

A. Following joint review, distribute copies to subcontractors, suppliers, Engineer, Owner, and other concerned parties.
B. Instruct recipients to promptly report, in writing, problems anticipated by projections shown in schedules.

**PART 2 - PRODUCTS (Not Used)**

**PART 3 - EXECUTION (Not Used)**

END OF SECTION

# SECTION 01 33 00 - SUBMITTAL PROCEDURES

## PART 1 - GENERAL

### 1.1 SUMMARY

A. Section Includes:
   1. Submittal procedures.
   2. Resubmittal requirements.
   3. Proposed products list.
   4. Requirements for complete shop drawings.
   5. Product data.
   6. Samples.
   7. Test reports.
   8. Certificates.
   9. Manufacturer instructions.
   10. Manufacturer field reports.

B. Related Requirements:
   1. Other Division 01 Specification Sections apply to Work of this Section.

### 1.2 SUBMITTAL PROCEDURES

A. Submit to Engineer for review to check for conformance with information given and design concept expressed in Contract Documents.

B. Produce copies and distribute in accordance with this Article.

C. Use Project website to submit record documents as described in Section 01 70 00 "Execution and Closeout Requirements."

D. Transmit each submittal separately with Contractor's standard transmittal letter including Contractor name, address, and phone number. Each Submittal shall contain only one Specification Section.

E. Sequentially number transmittal forms using Section number or Contractor's sequential numbering system.

F. Identify Project, Contractor, subcontractor, or supplier, pertinent Drawing sheet and detail number(s), and Specification Section number appropriate to Submittal.

G. Apply Contractor's stamp, signed or initialed certifying review, verification of products required, field dimensions, adjacent construction Work, and coordination of information, is per requirements of Work and Contract Documents.

H. Schedule Submittals to expedite Project and deliver to Engineer. Coordinate submission of related items.

I. For each Submittal for review, allow 10 working days excluding delivery time to and from Contractor.

J. Identify variations from Contract Documents and product or system limitations detrimental to successful performance of completed Work. Information, comments, field verifications, responses, or other notations marked on Submittals by Contractor shall be in blue or green colors only.

K. Distribute copies of reviewed Submittals to concerned parties. Instruct parties to promptly report any inability to comply with provisions.

L. Unrequested Submittals will not be recognized or processed.

M. Format:
   1. Submit all Submittals digitally using PDF file extension. Each Submittal shall be a single PDF file including transmittal letter. Multiple files for same Submittal will not be accepted.
   2. Submittals in any other format, including ZIP files, will be rejected.
   3. Hard copies, not accepted.
   4. To ensure each page is legible, PDF pages of Drawings shall be same size/scale as hard copy. Where applicable, provide scale symbols to indicate scale. Illegible submittals will be rejected.
   5. Upload Submittals to Project website.

N. Submittal procedures described herein apply to construction progress schedule, products list, Shop Drawings, product data, samples (actual samples and digital files of same), design data, test reports, certificates, manufacturer's instructions and field reports, erection Drawings, RFIs, and other Submittals submitted to Engineer.

1.3 RESUBMITTAL REQUIREMENTS

A. Revise Submittals as required and resubmit to meet requirements specified and noted on submittal reviews.
B. Mark as *Resubmittal.*
C. Reuse original transmittal number and supplement with sequential alphabetical or numeric suffix for each Resubmittal.

1.4 PROPOSED PRODUCTS LIST

A. Within 15 days after date of Notice to Proceed, submit complete list of major products proposed for use, with name of manufacturer, trade name, and model number of each product.
B. For products specified only by reference standards, give manufacturer, trade name, model or catalog designation, and reference standards.

1.5 REQUIREMENTS FOR COMPLETE SHOP DRAWINGS

A. Printable Image Size: Minimum 8.5 by 11 inches, maximum 30 by 42 inches.
B. Draw details to a noted scale.
C. Draw site plans to same scale indicated on Contract Drawings.
D. Engineer-issued Construction Documents (electronic or paper format) cannot be used in any shape, form, or fashion in creating and developing Shop Drawings, except electronic files containing floor, site plans, or layout plans purchased from Engineer may be used as backgrounds for Contractor, subcontractors, sub-subcontractors, and material suppliers in Shop Drawing process.

1.6 PRODUCT DATA

A. Mark each copy to identify applicable products, models, options, and other data. Supplement manufacturers' standard data to provide information unique to Project.
B. Include recommendations for application and use, and reference to compliance with specified standards of trade associations and testing agencies.
C. After review, distribute per Article 1.2 "Submittal Procedures," and provide copies for Record Documents described in Section 01 70 00 "Execution and Closeout Requirements."

1.7 SAMPLES

A. Submit samples to illustrate functional and aesthetic characteristics of product with integral parts and attachment devices. Accompany physical sample with color digital image (photo or scanned PDF) of sample. Coordinate sample Submittals for interfacing work.
B. Unless otherwise specified, submit samples of finishes from manufacturer's full range of standard colors, textures, and patterns, for Engineer selection.
C. Where variations in color, pattern, or texture are inherent in material or product, submit multiple samples to indicate approximate range or variations.
D. Include full Project information and identification of manufacturer, model number, type, style and color on each sample.
E. Submit number of samples specified in individual Specifications, one retained by Engineer.
F. Reviewed samples which may remain as part of Work indicated in individual Specifications.
G. Do not use Samples for testing unless specifically stated in individual Specifications.

1.8 TEST REPORTS

A. Submit for Engineer's knowledge as Contract Administrator or Owner.
B. Submit test reports for information to assess conformance with information given and design concept expressed in Contract Documents.

1.9 CERTIFICATES

A. When specified in individual Specifications, submit certification by manufacturer, installation/application subcontractor, or Contractor, to Engineer.
B. Indicate material or product conforms to/exceeds specified requirements. Submit supporting reference data, affidavits, and certifications as appropriate.
C. Certificates may be recent or previous test results on material or product, but must be acceptable to Engineer.

1.10 MANUFACTURER'S INSTRUCTIONS

A. When specified in individual Specifications, submit manufacturer-printed instructions for delivery, storage, assembly, installation, startup, adjusting, and finishing.
B. Identify conflicts between manufacturers' instructions and Contract Documents.
C. Indicate special procedures, conditions requiring special attention and special environmental criteria required for application or installation.

1.11 MANUFACTURER'S FIELD REPORTS

A. Submit reports for Engineer's benefit as contract administrator or for Owner.
B. Submit report within 30 days of observation to Engineer for information.
C. Submit for information to assess conformance with information given and design concept expressed in Contract Documents.

**PART 2 - PRODUCTS (Not Used)**

**PART 3 - EXECUTION (Not Used)**

END OF SECTION

# SECTION 01 40 00 - QUALITY REQUIREMENTS

## PART 1 - GENERAL

### 1.1 SUMMARY

A. Section Includes:
   1. Quality control.
   2. Tolerances.
   3. References.
   4. Mockup requirements.
   5. Testing and inspection services.
   6. Manufacturer's field services.

B. Related Sections:
   1. Other Division 01 Specification Sections apply to Work of this Section.

### 1.2 QUALITY CONTROL

A. Monitor quality control over suppliers, manufacturers, products, services, Site conditions, and workmanship, to produce Work of specified quality.

B. Comply with manufacturer's instructions. If manufacturer's instructions conflict with Contract Documents, request clarification from Engineer before proceeding.

C. Perform Work using persons qualified to produce required and specified quality.

D. Products, materials, and equipment may be subject to inspection by Engineer at place of manufacture or fabrication. Such inspections shall not relieve Contractor of complying with requirements of Contract Documents.

E. Supervise performance of Work to ensure Work, whether completed or in progress, will not be subjected to harmful, dangerous, damaging, or otherwise deleterious exposure during construction.

### 1.3 TOLERANCES

A. Monitor fabrication and installation tolerance control of products to produce acceptable Work. Do not permit tolerances to accumulate.

B. Comply with manufacturer's recommended tolerances and tolerance requirements in reference standards. When tolerances conflict with Contract Documents, request clarification from Engineer before proceeding.

C. Adjust products to appropriate dimensions; position before securing products in place.

### 1.4 REFERENCES

A. For products or workmanship specified by association, trade, or other consensus standards, comply with requirements of standard except when more rigid requirements are specified or required by applicable codes.

B. Conform to reference standard by date of issue current as of date of Contract Documents except where specific date is established by code.

C. Obtain copies of standards and maintain onsite when required by product Specifications.

D. When requirements of indicated reference standards conflict with Contract Documents, request clarification from Engineer before proceeding.
E. Neither contractual relationships, duties, or responsibilities of parties in Contract, nor those of Engineer shall be altered from Contract Documents by mention or inference in reference documents.

1.5 TESTING AND INSPECTION SERVICES

A. Owner will employ and pay for specified services of an independent firm to perform testing and inspection.
B. Independent firm will perform tests, inspections, and other services specified in individual Specifications and as required by Engineer.
C. Testing, inspections, and source quality control may occur on or off Project Site. Perform off-site testing as required by Engineer.
D. Submit reports to Engineer, indicating observations and results of tests and compliance or noncompliance with Contract Documents.
E. Cooperate with independent firm. Furnish samples of materials, design mix, equipment, tools, storage, safe access, and assistance by incidental labor, as requested.
   1. Notify Engineer and independent firm 24 hours before expected time for operations requiring services.
   2. Pay for additional samples and tests required for Contractor use.
F. Employment of testing agency or laboratory shall not relieve Contractor of obligation to perform Work per requirements of Contract Documents.
G. Retesting or Re-inspection Required Because of Nonconformance with Specified or Indicated Requirements: Payment for retesting or re-inspection will be charged to Contractor by deducting testing charges from Contract Sum/Price.
H. Independent Firm Responsibilities:
   1. Test samples of mixes submitted by Contractor.
   2. Provide qualified personnel at Site. Cooperate with Engineer and Contractor in performance of services.
   3. Perform indicated sampling and testing of products per specified standards.
   4. Ascertain compliance of materials and mixes with Contract Document requirements.
   5. Promptly notify Engineer and Contractor of observed irregularities or nonconformance of Work or products.
   6. Perform additional tests required by Engineer.
   7. Attend preconstruction and progress meetings.
I. Independent Firm Reports. After each test, promptly submit report to Engineer and Contractor and provide interpretation of test results. Include:
   1. Date issued.
   2. Project title and number.
   3. Name of inspector.
   4. Date and time of sampling or inspection.
   5. Identification of product and Specifications.
   6. Location in Project.
   7. Type of inspection or test.
   8. Date of test.
   9. Results of tests.
   10. Conformance with Contract Documents.

1.6 MANUFACTURER'S FIELD SERVICES

A. When specified in individual Specifications, require material or product suppliers or manufacturers to provide qualified staff personnel to observe site conditions, conditions of surfaces and installation, quality of workmanship, equipment startup, testing, adjusting, and balancing equipment, commissioning, and other as applicable, and initiate instructions when necessary.

B. Submit qualifications of observer to Engineer 30 days before required observations. Observer is subject to Engineer approval.

C. Report observations and Site decisions or instructions given to applicators or installers that are supplemental or contrary to manufacturer's written instructions.

D. Refer to Section 01 33 00 "Submittal Procedures," Article 1.11 - Manufacturer's Field Reports.

**PART 2 - PRODUCTS (Not Used)**

**PART 3 - EXECUTION (Not Used)**

END OF SECTION

# SECTION 01 43 26 - TESTING LABORATORY SERVICES

## PART 1 - GENERAL

### 1.1 SUMMARY

A. Section Includes:
   1. Selection and payment.
   2. Contractor submittals.
   3. Laboratory responsibilities.
   4. Laboratory reports.
   5. Limits on testing laboratory authority.
   6. Contractor responsibilities.
   7. Schedule of inspections and tests.

B. Related Sections:
   1. Other Division 01 Specification Sections apply to Work of this Section.

### 1.2 REFERENCES

A. ASTM C1077 - Standard Practice for Agencies Testing Concrete and Concrete Aggregates for Use in Construction and Criteria for Testing Agency Evaluation.

B. ASTM D3666 - Standard Specification for Minimum Requirements for Agencies Testing and Inspecting Road and Paving Materials.

C. ASTM D3740 - Standard Practice for Minimum Requirements for Agencies Engaged in Testing/Inspection of Soil and Rock as Used in Engineering Design and Construction.

D. ASTM E329 - Standard Specification for Minimum Requirements for Agencies Engaged in Construction Inspection, Testing, or Special Inspection.

E. ISO/IEC 17025.

### 1.3 SELECTION AND PAYMENT

A. Contractor shall employ and pay for services of an independent testing laboratory to perform specified inspection and testing.

B. Employment of testing laboratory shall in no way relieve Contractor of obligation to perform work per Contract Document requirements.

### 1.4 QUALITY ASSURANCE

A. Comply with requirements of ASTM C1077, D3666, D3740, E329, and ISO/IEC 17025.

B. Laboratory: Authorized to operate in State of Texas.

C. Laboratory Staff: Maintain a full-time, on-staff, registered Engineer to review services.

### 1.5 CONTRACTOR SUBMITTALS

A. Before starting Work, submit testing laboratory name, address, and phone number, as well as names of full-time registered Engineer and responsible officer.

B. Submit copy of laboratory facility inspection report made by Materials Reference Laboratory of National Bureau of Standards during most recent inspection, with remedy memorandum of deficiencies, reported by inspection.

C. Submit Testing Laboratory firm's reports to the distribution list the Engineer provided at preconstruction conference, indicating observations and results of tests and indicating compliance or non-compliance with Contract Documents.
D. Testing and employment of testing agency or laboratory does not relieve Contractor from performing Work to Contract requirements.
E. Retest/reinspect required because of non-conformance to specified requirements using same testing agency or laboratory. Payment for retesting is Contractor responsibility.

1.6 LABORATORY RESPONSIBILITIES

A. Test samples of mixes submitted by Contractor.
B. Provide qualified personnel onsite. Cooperate with Engineer and Contractor in service performance.
C. Perform specified inspection, sampling, and testing of Products per specified standards.
D. Ascertain compliance of materials and mixes with Contract Document requirements.
E. Promptly notify Engineer and Contractor of observed irregularities or non-conformance of Work or Products.
F. Perform additional inspections and tests required by Engineer.
G. Attend pre-construction conferences.

1.7 LABORATORY REPORTS

A. After each inspection and test, promptly distribute reports to distribution list provided by Engineer at preconstruction conference.
B. Include:
   1. Date issued.
   2. Project title and number.
   3. Name of inspector.
   4. Date and time of sampling or inspection.
   5. Identification of product and Specification Section.
   6. Location in Project.
   7. Type of inspection or test.
   8. Date of test.
   9. Results of tests.
   10. Conformance with Contract Documents.
C. When requested by Engineer, provide interpretation of test results.

1.8 LIMITS ON TESTING LABORATORY AUTHORITY

A. Laboratory may not release, revoke, alter, or enlarge Contract Document requirements.
B. Laboratory may not approve or accept any portion of Work.
C. Laboratory may not assume any duties of Contractor.
D. Laboratory has no authority to stop the Work.

1.9 CONTRACTOR RESPONSIBILITIES

A. Deliver to laboratory at designated location, adequate samples of materials proposed to use which require testing along with proposed mix designs.
B. Cooperate with laboratory personnel and provide access to Work and manufacturer facilities.

C. Provide incidental labor and facilities to provide access to Work to test, obtain, and handle samples at site or source of products to test, facilitate tests and inspections, storage, and curing test samples.
D. Notify Engineer and laboratory 24 hours before expected time for operations requiring inspection and testing services.
E. Pay costs of testing laboratory services from Allowance specified in Section 01 20 00 "Price and Payment Procedures" on Engineer approval of invoices.
F. Employ services of a separate qualified testing laboratory, arrange with laboratory, and pay for additional samples and tests required by Contractor beyond specified requirements.

1.10 SCHEDULE OF INSPECTIONS AND TESTS

A. As indicated in individual Specifications.

**PART 2 - PRODUCTS (Not Used)**

**PART 3 - EXECUTION (Not Used)**

END OF SECTION

# SECTION 01 50 00 - TEMPORARY FACILITIES AND CONTROLS

## PART 1 - GENERAL

### 1.1 SUMMARY

A. Section Includes:
   1. Temporary Utilities:
      a. Electricity.
      b. Lighting.
      c. Heating.
      d. Cooling.
      e. Ventilation.
      f. Communication services.
      g. Water.
      h. Sanitary.
   2. Construction Facilities:
      a. Field offices and sheds.
      b. Employee residential occupancy.
      c. Vehicular access.
      d. Parking.
      e. Progress cleaning.
      f. Project identification.
      g. Traffic regulation.
   3. Temporary Controls:
      a. Barriers.
      b. Fencing.
      c. Enclosures.
      d. Security.
      e. Water control.
      f. Dust control.
      g. Erosion and sediment control.
      h. Noise control.
      i. Pest and rodent control.
      j. Pollution control.
      k. Protect Work.
   4. Remove utilities, facilities, and controls.

B. Related Requirements:
   1. Other Divisions 01 Specification Sections apply to Work of this Section.

### 1.2 ELECTRICITY

A. Provide and pay for required power service from existing electrical utility source.

### 1.3 LIGHTING

A. Do not utilize permanent building lighting during construction. Provide and maintain 1-watt-per-square-foot lighting to exterior staging and storage areas after dark for security purposes.

B. Provide and maintain 0.25-watt-per-square-foot HID lighting to interior work areas after dark for security purposes.
C. Provide branch wiring from power source to distribution boxes with lighting conductors, pigtails, and lamps, as required.
D. Maintain lighting and provide routine repairs.

1.4 VENTILATION

A. Ventilate enclosed areas to assist cure of materials, dissipate humidity, and prevent accumulation of dust, fumes, vapors, or gases.
B. Provide temporary fan units required to maintain clean air for construction operations.

1.5 COMMUNICATION SERVICES

A. At minimum, provide cell phone service for onsite superintendent and home office phone service.

1.6 WATER

A. Provide, maintain, and pay for suitable quality water service required for construction operations. Extend branch piping with outlets located so water is available by hoses with threaded connections.

1.7 SANITARY

A. Provide and maintain required facilities and enclosures.
B. Do not use existing facilities.

1.8 FIELD OFFICES AND SHEDS

A. Office
   1. Construction
      a. Portable/mobile building(s) or buildings constructed with floors raised above ground, securely fixed to foundations with steps and landings at entrance doors.
      b. Structurally-sound, secure, weathertight enclosure to maintain environmental conditions specified.
      c. Maintain during progress of Work.
      d. Temperature Transmission Resistance of Floors, Walls, and Ceilings: Compatible with occupancy and storage requirements.
      e. Exterior Materials: Weather resistant.
      f. Interior Materials in Offices: Sheet-type materials for walls and ceilings, prefinished or painted, resilient floors and bases.
   2. Lighting: Exterior lighting at entrance doors.
   3. Fire Extinguishers: Provide appropriate-type fire extinguisher at each building.
   4. Provide separate workstation, similarly equipped and furnished, for Engineer use.
   5. Office Heating, Cooling, and Ventilating: Automatic equipment to maintain comfort conditions.
B. Storage Areas and Sheds
   1. Size storage per Specifications allowing for access and orderly provision for product maintenance and inspection.

2. Fire Extinguishers: Appropriate-type fire extinguisher at each storage area.
3. Interior Materials in Storage Sheds: As required to provide specified environmental conditions for storage of products.
4. Heating and Ventilation: As required to maintain products per Contract Documents.
5. Lighting: As required for maintenance and inspection of products.

C. Prepare: Fill/grade sites for temporary structures sloped for drainage away from buildings.
D. Install office spaces ready for occupancy 15 days after date fixed in Notice to Proceed.
E. Maintenance and Cleaning
1. Weekly janitorial services for offices, periodic cleaning and maintenance for office and storage areas.
2. Maintain approach walks free of mud, water, and snow.
F. Removal: At Work completion remove buildings, foundations, utility services, and debris. Restore areas to original conditions.

1.9 EMPLOYEE RESIDENTIAL OCCUPANCY

A. Not allowed on Owner property.

1.10 VEHICULAR ACCESS

A. Construct temporary all-weather access roads from public thoroughfares to serve construction area, width and load-bearing capacity to accommodate unimpeded traffic for construction purposes.
B. Construct temporary bridges and culverts to span low areas and allow unimpeded drainage.
C. Extend and relocate vehicular access as Work progress requires, providing necessary detours for unimpeded traffic flow.
D. Location as indicated on Drawings.
E. Provide unimpeded access for emergency vehicles. Maintain 20-foot-wide driveways with turning space between and around combustible materials.
F. Provide and maintain access to fire hydrants and control valves free of obstructions.
G. Provide means of removing mud from vehicle wheels before entering public streets.
H. Do not use existing onsite roads for construction traffic.
I. Verify with local Authorities Having Jurisdiction regarding temporary fire lanes and related access.

1.11 PARKING

A. Construct temporary gravel-surfaced parking areas to accommodate construction personnel.
B. Locate as approved by Engineer.
C. When Site space is not adequate, provide additional off-site parking.

D. Use of existing on-site streets and driveways for construction traffic is not permitted.
E. Using designated areas of existing parking facilities by construction personnel is not permitted.
F. Do not allow heavy or tracked vehicles or construction equipment in parking areas.
G. Do not allow vehicle parking on existing pavement.
H. Designate one parking space for Engineer.
I. Permanent Pavements And Parking Facilities
1. Before Substantial Completion, bases for permanent roads and parking areas may be used for construction traffic.

2. Avoid traffic loading beyond paving design capacity. Tracked vehicles not allowed.
3. Use of permanent parking structures not permitted.

J. Maintenance
1. Maintain traffic and parking areas in sound condition free of excavated material, construction equipment, products, mud, snow, and ice.
2. Maintain existing and permanent paved areas used for construction. Promptly repair breaks, potholes, low areas, standing water, and other deficiencies, to maintain paving and drainage in original, or specified, condition.

K. Removal, Repair
1. Remove temporary materials and construction at Substantial Completion.
2. Remove underground work and compacted materials to 2-foot depth. Fill and grade site as specified.
3. Repair existing facilities damaged by use, to original condition.

L. Mud from Site Vehicles: Provide way to remove mud from wheels before entering streets.

## 1.12 PROGRESS CLEANING

A. Maintain areas free of waste materials, debris, and rubbish. Maintain a clean and orderly site.

B. Remove debris and rubbish from pipe chases, plenums, attics, crawl spaces, and other closed or remote spaces, before enclosing space.

C. Sweep and vacuum interior areas clean before surface finishing and continue cleaning to eliminate dust.

D. Remove waste materials, debris, and rubbish from site and dispose off-site as required to maintain clean site.

## 1.13 PROJECT IDENTIFICATION

A. Project Identification Sign
1. Size: Provide one 8 feet wide by 4 feet high.
2. Materials: 3/4-inch-thick exterior-grade plywood and solid-wood frame.
3. Background Paint: Exterior quality, two coats; sign background of olor as selected.
4. Lettering: Exterior paint of quality adequate to withstand weathering, fading, and chipping for construction duration, contrasting colors as selected with exhibit lettering by professional sign painter.
5. Lettering: Precut vinyl self-adhesive products, white.
6. Design: Design indicated in Drawings.
7. Content:
   a. Project title, as indicated on Contract Documents.
   b. Owner's name and logo.
   c. Names and titles of Engineer and consultants.
   d. Name of Prime Contractor.
   e. Name of major subcontractors.
8. Lettering: Series C of Standard Alphabet for Traffic Control Devices *Manual on Uniform Traffic Control Devices for Streets and Highways*, Federal Highway Administration.

B. Project Informational Signs
1. If required by other documents or Specifications, provide weather-protected signs for site-safety procedures, wage rates, and stormwater pollution prevention plan (SWPPP).
2. Erect sign on or adjacent to field office, if required.

C. Design sign and structure to withstand 90-mile-per-hour wind velocity.
D. Installation
   1. Install Project identification sign within 15 days after date fixed by Notice to Proceed.
   2. Erect at designated location.
   3. Erect supports and framing on secure foundation, rigidly braced and framed to resist wind loadings.
   4. Install sign surface plumb and level with butt joints. Anchor securely.
   5. Paint exposed surfaces of sign supports and framing.
E. No other signs allowed without Owner permission except those required by law.
F. Maintain clean signs and supports. Repair deterioration and damage.
G. Remove signs, framing, supports, and foundations at completion of Project and restore area.

1.14 TRAFFIC REGULATION

A. Contractor Responsibilities
   1. Provide Traffic Control Plan (TCP) as necessary for phased construction.
   2. TCP must be signed and sealed by a professional engineer licensed in [Texas].
   3. Designate a responsible individual for TCP replacement and maintenance.
B. Signs, Signals, And Devices
   1. Post- and Wall-Mounted Traffic Control and Informational Signs: As approved by authority having jurisdiction, Texas Manual on Uniform Traffic Control Devices (TMUTCD), and/or TxDOT Standards shown in Plans.
   2. Traffic Control Signals: As approved by local jurisdictions.
   3. Traffic Cones and Drums: As approved by authority having jurisdiction.
   4. Flares and Lights: As approved by authority having jurisdiction.
   5. Flagperson Equipment: As required by authority having jurisdiction.
C. Flagpersons: Provide trained and equipped flagpersons to regulate traffic when construction operations or traffic encroach on public traffic lanes.
D. Flares and Lights: Use during hours of low visibility to delineate traffic lanes and guide traffic.

E. Haul Routes
   1. Consult with authority having jurisdiction, establish public thoroughfares to use for haul routes and site access.
   2. Drawings indicate haul routes designated by authorities having jurisdiction for use of construction traffic.
   3. Confine construction traffic to designated haul routes.
   4. Provide traffic control at critical areas of haul routes to regulate traffic and minimize interference with public traffic.
F. Traffic Signs And Signals
   1. Provide signs at approaches to Site and on-site, crossroads, detours, parking areas, and elsewhere as needed to direct construction and affected public traffic.
   2. Provide, operate, and maintain automatic traffic control signals to direct and maintain orderly flow of traffic in areas under Contractor's control and areas affected by Contractor operations.
   3. Relocate as Work progresses to maintain effective traffic control.
G. Removal
   1. Remove equipment and devices when no longer required.
   2. Repair damage caused by installation.

3. Remove post settings to 2-foot depth.

1.15 BARRIERS

A. Provide barriers to prevent unauthorized entry to construction areas as well as protect existing facilities and adjacent properties from damage from construction operations. Allow for Owner's use of Site.
B. Provide barricades and covered walkways required by authorities having jurisdiction for:
   1. Public rights-of-way.
   2. Public access to existing building.
C. Replace damaged items condition to original condition and protect items designated to remain:
   1. Trees.
   2. Shrubbery.
   3. Lawns.
D. Protect Site improvements including but not limited to pavements, walkways, and drainage structures from damage. Replace damaged site improvements to original condition.
E. Protect non-owned vehicular traffic and stored materials from damage.

1.16 FENCING

A. Construction: Commercial-grade chain-link fence.
B. Provide 6-foot-high fence around construction site equipped with vehicular and pedestrian gates with locks.

1.17 ENCLOSURES

A. Provide temporary insulated weathertight closure of exterior openings to accommodate acceptable working conditions and protection for products, allow temporary heating, cooling, ventilation, and maintenance of required ambient temperatures identified in individual Specifications, and prevent entry of unauthorized persons. Provide access doors with self-closing hardware and locks.

1.18 SECURITY

A. Security Program
   1. Protect Work andexisting premises from theft, vandalism, and unauthorized entry.
   2. Initiate program at Project mobilization.
   3. Maintain program throughout construction period until Owner occupancy.
B. Entry Control
   1. Restrict entrance of persons and vehicles into Project Site.
   2. Allow entrance only to authorized persons with proper identification.
   3. Maintain log of workers and visitors and make available to Owner on request.

1.19 WATER CONTROL

A. Grade site to drain.
B. Maintain excavations free of water.
C. Provide, operate, and maintain pumping equipment.
D. Protect Site from puddling and running water. Provide water barriers required to protect site from soil erosion.

E. Provide water barriers required to protect existing buildings from puddling, ponding, or other water accumulation that may damage foundations or other subsurface construction.

1.20 DUST CONTROL

A. Execute Work to minimize raising dust from construction operations.
B. Provide positive means to prevent airborne dust from dispersing into atmosphere.

1.21 EROSION AND SEDIMENT CONTROL

A. Plan and execute construction to control surface drainage from cuts, fills, borrow, and waste disposal areas. Prevent erosion and sedimentation.
B. Minimize surface area of bare soil exposed at one time.
C. Provide temporary measures including berms, dikes, drains, and other devices to prevent water flow resulting in erosion.
D. Construct fill and waste areas by selective placement to avoid erosive surface silts or clays.
E. Periodically inspect earthwork to detect evidence of erosion and sedimentation. Promptly apply corrective measures.
F. Comply with site Section 01 57 23 "Temporary Stormwater Pollution Control."

1.22 NOISE CONTROL

A. Provide methods, means, and facilities to minimize disruption of Owner operations and activities due to noise produced by construction operations.
B. Conduct activities to produce noise that may interfere with Owner operations and activities only when agreed to by Owner.

1.23 PEST AND RODENT CONTROL

A. Provide methods, means, and facilities to prevent the following from damaging Work:
   1. Pests.
   2. Insects.
   3. Rodents.

1.24 POLLUTION CONTROL

A. Provide methods, means, and facilities to prevent contamination of soil, water, and atmosphere from discharge of noxious, toxic substances, and pollutants produced by construction operations.
B. Comply with pollution and environmental control requirements of authorities having jurisdiction.

1.25 PROTECT WORK

A. Protect installed Work and provide special protection where specified in Specifications.
B. Provide temporary and removable protection for installed Products. Control activity in immediate work area to minimize damage.
C. Provide protective coverings at openings in walls, roof, and soffits.
D. Protect finished walkways, drives, and other surfaces from traffic, dirt, wear, damage, or movement of heavy objects, by protecting with durable sheet materials.

E. Prohibit traffic or storage upon waterproofed or roofed surfaces. If traffic/activity necessary, obtain recommendations for protection from waterproofing or roofing material manufacturer.
F. Prohibit traffic from landscaped areas.

1.26 REMOVE UTILITIES, FACILITIES, AND CONTROLS

A. Remove temporary above-grade utilities, equipment, facilities, and materials as soon as permanent facilities can be utilized.
B. Remove risers for underground utilities to minimum 2-foot depth and cap.
C. Remove buried equipment, facilities, and materials completely to minimum 2-foot depth and cap.
D. Backfill excavations as specified in other sections and grade site as indicated.
E. Clean and repair damage caused by installation or temporary Work.
F. Restore existing facilities used during construction to original condition. Restore permanent facilities used during construction to specified condition.
G. Remove when no longer needed:
   1. Office.
   2. Storage sheds.

**PART 2 - PRODUCTS (Not Used)**

**PART 3 - EXECUTION (Not Used)**

END OF SECTION

# SECTION 01 57 23 - TEMPORARY STORMWATER POLLUTION CONTROL

## PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Contractor responsibilities.
   2. Submittals.
   3. Erosion and sediment controls.

B. Related Requirements:
   1. Local jurisdiction requirements.
   2. Division 01 Specification Sections apply to Work of this Section.

1.2 CONTRACTOR RESPONSIBILITIES

A. Contractor is solely responsible for meeting all TCEQ and EPA requirements for stormwater pollution prevention:
   1. Develop a Stormwater Pollution Prevention Plan (SWPPP) if not provided;
   2. File Notice of Intent (NOI) and include Owner as an "Operator;"
   3. Install and maintain all erosion control measures and best management practices (BMPs);
   4. Perform inspections and prepare reports; and
   5. File Notice of Termination (NOT).

1.3 SUBMITTALS

A. Submit to Engineer, SWPPP, Submittal Procedures, and all other related documentation conforming to Section 01 33 00 "Submittal Procedures."

1.4 EROSION AND SEDIMENT CONTROLS

A. Implement structural measures to divert flows from exposed soils, temporarily store flows, or otherwise limit run-off and discharge of pollutants from exposed areas of site. Timely implement structural practices as specified in SWPPP during construction to minimize erosion and sediment run-off.

B. Stabilized Ingress/Egress:
   1. Provide stabilized access to/from construction site as soon as practical per SWPPP.
   2. Ensure any soil tracked off-site is cleaned from existing roads, alleys, and any adjacent properties as soon as possible. Check for any pollutants (mud, silt, sand, cement, construction materials, etc.) tracked or washed off-site and perform necessary clean-up measures at the end of each work day.

C. Silt Fences/Diversion Berms: Provide as a temporary structural practice to minimize erosion and sediment runoff, as necessary. Properly install silt fences and/or diversion berms to effectively retain sediment immediately after completing each phase of Work where erosion would occur as sheet and rill erosion (clearing and grubbing, excavation, embankment, grading, etc.).

D. Sand/Gravel Bags: Provide as a temporary structural practice to minimize erosion and sediment runoff. Properly place bags to effectively retain sediment immediately after completing each phase of Work (clearing and grubbing, excavation, embankment, grading, etc.) in each independent runoff area (after clearing and grubbing between ridge and drain, place bags as Work progresses, remove/replace/relocate bags as needed for Work to progress in drainage area). Replace sand/gravel bags no longer in good condition, as needed.

E. Site Stabilization:
   1. Minimize surface area of base soil material at one time.
   2. Implement necessary stabilization measures including:
      a. Temporary/permanent seeding/sodding;
      b. Mulching;
      c. Geotextiles;
      d. Vegetative buffer strips;
      e. Paving;
      f. Rock riprap; and/or
      g. Rock-filled gabions.
      h. Inlet protection.
   3. Implement stabilization measures per SWPPP.

**PART 2 - PRODUCTS (Not Used)**

**PART 3 - EXECUTION (Not Used)**

END OF SECTION

PACKET 7.232 September 12, 2023
PACKET 11.234 November 14, 2023

# SECTION 01 60 00 - PRODUCT REQUIREMENTS

## PART 1 - GENERAL

### 1.1 SUMMARY

A. Section Includes:
   1. Products.
   2. Product delivery requirements.
   3. Product storage and handling requirements.

B. Related Sections:
   1. Other Division 01 Specification Sections apply to Work of this Section.

### 1.2 PRODUCTS

A. At minimum, comply with specified requirements and reference standards.

B. Specified products define standard of quality, type, function, dimension, appearance, and performance required.

C. Furnish products of qualified manufacturers suitable for intended use. Furnish products of each type by single manufacturer unless specified otherwise. Confirm manufacturer production capacity can provide sufficient product, on time, to meet Project requirements.

### 1.3 PRODUCT DELIVERY REQUIREMENTS

A. Transport and handle products per manufacturer instructions.

B. Promptly inspect shipments to ensure products comply with requirements, quantities are correct, and products are undamaged.

C. Provide equipment and personnel to handle products. Prevent soiling, disfigurement, or damage.

D. Owner will not assist in offloading or accepting product deliveries.

### 1.4 PRODUCT STORAGE AND HANDLING REQUIREMENTS

A. Store and protect products per manufacturer instructions.

B. Store products with seals and labels intact and legible.

C. Store sensitive products in weathertight, climate-controlled enclosures in an environment suitable to product.

D. For exterior storage of fabricated products, place products on sloped supports above ground.

E. Cover products subject to deterioration with impervious sheet covering. Provide ventilation to prevent condensation and degradation of products.

F. Store loose granular materials on solid flat surfaces in well-drained area. Prevent mixing with foreign matter.

G. Provide equipment and personnel to store products. Prevent soiling, disfigurement, or damage.

H. Arrange product storage to permit access for inspection. Periodically inspect to verify products are undamaged and maintained in acceptable condition.

**PART 2 - PRODUCTS (Not Used)**

**PART 3 - EXECUTION (Not Used)**

END OF SECTION

# SECTION 01 70 00 - EXECUTION AND CLOSEOUT REQUIREMENTS

## PART 1 - GENERAL

### 1.1 SUMMARY

A. Section Includes:
   1. Surveying.
   2. Closeout procedures.
   3. Starting systems.
   4. Demonstration and instructions.
   5. Testing, adjusting, and balancing.
   6. Project record documents.
   7. Operation and maintenance data.
   8. Manual for materials and finishes.
   9. Manual for equipment and systems.
   10. Spare parts and maintenance products.
   11. Product warranties and product bonds.
   12. Examination.
   13. Preparation.
   14. Execution.
   15. Protecting installed construction.
   16. Final cleaning.

B. Related Sections:
   1. Other Division 01 Specification Sections apply to Work of this Section.

### 1.2 SURVEYING

A. Employ land surveyor registered in State of Texas and acceptable to Engineer.

B. Locate and protect survey control and reference points. Promptly notify Engineer of discrepancies discovered.

C. Control datum for survey is indicated on Drawings.

D. Verify setbacks, easements, and rights of way. Confirm Drawing dimensions and elevations.

E. Provide field engineering services. Establish elevations, lines, and levels using recognized engineering survey practices.

F. Submit copy of Site Drawing signed by land surveyor certifying elevations and locations of Work are per Contract Documents.

G. Maintain complete and accurate log of control and survey Work as Work progresses.

H. Protect survey control points before starting Site Work. Preserve permanent reference points during construction.

I. Promptly report to Engineer loss or destruction of reference point or relocation required because of changes in grades or other reasons.

J. Replace dislocated survey control points based on original survey control. Make no changes without prior written notice to Engineer.

1.3 CLOSEOUT PROCEDURES

A. Prerequisites to Substantial Completion. Complete following items before requesting Certification of Substantial Completion either for entire Work or portions of Work:
   1. Submit maintenance manuals, Project Record Documents, and other similar final record data per this Section.
   2. Complete facility startup, testing, adjusting, balancing systems and equipment, demonstrations, and instructions to Owner's operating and maintenance personnel as specified per this Section.
   3. Conduct inspection to establish basis for request that Work is substantially complete. Create comprehensive list (initial punch list) indicating items to complete or correct, value of incomplete or nonconforming Work, reason for incompletion, and date of anticipated completion for each item. Include copy of list with request for Certificate of Substantial Completion.
   4. Obtain and submit releases enabling Owner's full, unrestricted use of Project and access to services and utilities. Include certificate of occupancy, operating certificates, and similar releases from authorities having jurisdiction and utility companies.
   5. Deliver tools, spare parts, extra stocks of material, and similar physical items to Owner.
   6. Change locks and transmit keys directly to Owner. Advise Owner's personnel of change-over in security provisions.
   7. Discontinue or change over and remove temporary facilities and services from Project Site along with construction tools, mockups, and similar elements.
   8. Perform final cleaning per this Section.

B. Substantial Completion Inspection:
   1. When Contractor considers Work substantially complete, submit to Engineer and Owner:
      a. Written certificate that Work, or designated portion, is substantially complete.
      b. List of items to complete or correct (initial punch list).
   2. Within 7 days after receipt of request for Substantial Completion, Engineer and Owner will inspect to determine if Work or designated portion is substantially complete.
   3. If Engineer and Owner determine Work is NOT substantially complete:
      a. Engineer and Owner will promptly notify Contractor, in writing, stating reasons for opinion.
      b. Contractor shall remedy deficiencies in Work and send second written request for Substantial Completion to Engineer and Owner.
      c. Engineer and Owner will reinspect Work.
      d. Repeat until Work passes inspection.
   4. When Engineer and Owner finds Work is substantially complete, they will:
      a. Prepare Certificate of Substantial Completion on EJCDC C-625, Certificate of Substantial Completion, accompanied by Contractor's list of items to complete or correct as verified and amended by Engineer and Owner (final punch list).
      b. Submit Certificate to Owner and Contractor for written acceptance of responsibilities assigned in Certificate.
   5. After Work is substantially complete:
      a. Allow Owner occupancy of Project under provisions stated in Certificate of Substantial Completion.

b. Complete Work listed for completion or correction within time stipulated.

C. Prerequisites for Final Completion. Complete following items before requesting final acceptance and final payment:
   1. When Contractor considers Work complete, submit written certification that:
      a. Contract Documents were reviewed.
      b. Work was examined for compliance with Contract Documents.
      c. Work was completed per Contract Documents.
      d. Work is complete and ready for final inspection.
   2. Submit:
      a. Final punch list indicating all items are complete or correct.
      b. Final payment request with final releases and supporting documentation not previously submitted and accepted. Include certificates of insurance for products and completed operations, where required.
      c. Specified warranties, workmanship/maintenance bonds, maintenance agreements, and other similar documents.
      d. Accounting statement for final changes to Contract Sum.
      e. Contractor's Affidavit of Payment of Debts and Claims on Contractor form.
      f. Contractor Affidavit of Release of Liens on Contractor form.
      g. Consent of Surety to Final Payment on Contractor form.
   3. Perform final cleaning for Contractor-soiled areas per this Section.

D. Final Completion Inspection:
   1. Within 7 days after receipt of request for final inspection, Engineer and Owner will inspect to determine if Work or designated portion is complete.
   2. If Engineer and Owner consider Work incomplete or defective:
      a. Engineer and Owner will promptly notify Contractor, in writing, listing incomplete or defective Work.
      b. Contractor shall remedy stated deficiencies and send second written request to Engineer and Owner that Work is complete.
      c. Engineer and Owner will reinspect Work.
      d. Redo and Inspect Deficient Work: Repeated until Work passes inspection.
      e. Engineer and Owner inspection.

## 1.4 STARTING SYSTEMS

A. Coordinate schedule for startup of various equipment and systems.

B. Notify Engineer 7 days before startup of each item.

C. Verify each piece of equipment or system was checked for proper lubrication, drive rotation, belt tension, control sequence, and conditions which may cause damage.

D. Verify tests, meter readings, and electrical characteristics agree with those required by equipment or system manufacturer.

E. Verify wiring and support components for equipment are complete and tested.

F. Execute startup under supervision of manufacturer representative or Contractor personnel per manufacturer's instructions.

G. When specified in individual Specifications, require manufacturer to provide authorized representative who will be present at Site to inspect, check, and approve equipment or system installation before startup and supervise placing equipment or system in operation.

H. Submit a written report per Section 01 33 00 "Submittal Procedures," that equipment or system has properly installed and functioning correctly.

1.5 DEMONSTRATION AND INSTRUCTIONS

A. Demonstrate operation and maintenance (O&M) of products to Owner personnel 2 weeks before date of Substantial Completion.
B. Demonstrate Project equipment by manufacturer's representative who is knowledgeable about Project.
C. Use O&M manuals as basis for instruction. Review contents of manual with Owner personnel in detail to explain all aspects of operation and maintenance.
D. Demonstrate startup, operation, control, adjustment, troubleshooting, servicing, maintenance, and shutdown of each item of equipment at agreed time, at equipment location.
E. Prepare and insert additional data in O&M manuals when need for additional data is apparent during instruction.
F. Required instruction time for each item of equipment and system is specified in individual Specifications.

1.6 TESTING, ADJUSTING, AND BALANCING

A. Owner will appoint and employ services of independent firm to perform testing, adjusting, and balancing. Contractor shall pay for services from cash allowance specified in Section 01 20 00 "Price and Payment Procedures."
B. Reports will be submitted by independent firm to Engineer indicating observations and results of tests and indicating compliance or noncompliance with requirements of Contract Documents.

1.7 PROJECT RECORD DOCUMENTS

A. Maintain on-site one set of these record documents and record actual revisions to Work:
   1. Drawings.
   2. Specifications.
   3. Addenda.
   4. Change Orders and other modifications to Contract.
   5. Reviewed Shop Drawings, product data, and Samples.
   6. Manufacturer's instruction for assembly, installation, and adjusting.
B. Ensure entries are complete and accurate enabling future reference by Owner.
C. Store record documents separate from documents used for construction.
D. Record information concurrent with construction progress not less than weekly.
E. Specifications: Legibly mark and record, at each product Section, description of actual products installed including:
   1. Manufacturer name, product model, and number.
   2. Product substitutions or alternates used.
   3. Changes made by Addenda and modifications.
F. Record Drawings. Legibly mark each item to record actual construction.
   1. Include Contract modifications such as Addenda, supplementary instructions, change directives, field orders, minor changes in Work, and change orders.
   2. Include locations of concealed elements of Work.
   3. Identify depth of buried utility lines and provide dimensions showing distances from permanent facility components parallel to utilities.
   4. Dimension ends, corners, and junctions of buried utilities to permanent facility components using triangulation.

5. Identify and locate existing buried or concealed items encountered during Project.
6. Measured depths of foundations in relation to finish floor datum.
7. Measured horizontal and vertical locations of underground utilities and appurtenances referenced to permanent surface improvements.
8. Measured locations of internal utilities and appurtenances concealed in construction, referenced to visible and accessible features of Work.
9. Field changes of dimension and detail.
10. Details not on original Drawings.

G. Submit marked-up paper copy documents to Engineer with claim for final Application for Payment.

H. Submit PDF electronic files of marked-up documents to Engineer with claim for final Application for Payment.

## 1.8 OPERATION AND MAINTENANCE DATA

A. Submit in PDF composite electronic indexed file.

B. Submit data bound in 8-1/2- by 11-inch text pages, 3 D-side-ring binders with durable plastic covers.

C. Prepare binder cover with printed *Operation and Maintenance Instructions*, title of Project, and subject matter of binder when multiple binders required.

D. Internally subdivide binder contents with permanent page dividers, logically organized as described, with tab titling clearly printed under reinforced laminated plastic tabs.

E. Drawings: Provide with reinforced punched binder tab. Bind in with text. Fold larger Drawings to size of text pages.

F. Contents: Prepare Table of Contents (TOC) for each volume, with each product or system description identified, typed on white paper, in three parts as:

1. Part 1: Directory, listing names, addresses, and phone numbers of Engineer, Contractor, subcontractors, and major equipment suppliers.
2. Part 2: O&M instructions, arranged by system and subdivided by Specification Section. For each category, identify names, addresses, and phone numbers of subcontractors and suppliers. Include:
   a. Significant design criteria.
   b. List of equipment.
   c. Parts list for each component.
   d. Operating instructions.
   e. Maintenance instructions for equipment and systems.
   f. Maintenance instructions for finishes including recommended cleaning methods and materials, and special precautions identifying detrimental agents.
   g. Safety precautions to take when operating and maintaining or working near equipment.
3. Part 3: Project documents and certificates, including:
   a. Shop Drawings and product data.
   b. Certificates.
   c. Originals of warranties.

## 1.9 MANUAL FOR MATERIALS AND FINISHES

A. Submit two copies of preliminary draft or proposed formats and outlines of contents before start of Work. Engineer will review draft and return one copy with comments.

B. For equipment or component parts of equipment put into service during construction and operated by Owner, submit documents within 10 days after acceptance.

C. Submit one copy of completed volumes 15 days before final inspection. Draft copy reviewed and returned after final inspection, with Engineer comments. Revise content of document sets as required before final submission.
D. Submit two sets of revised final volumes within 10 days after final inspection.
E. Submit in PDF composite electronic indexed file of final manual within 10 days after final inspection.
F. Building Products, Applied Materials, and Finishes: Include product data with catalog number, size, composition, and color and texture designations. Include information for reordering custom-manufactured products.
G. Instructions for Care and Maintenance: Include manufacturer recommendations for cleaning agents and methods, precautions against detrimental agents and methods, and recommended schedule for cleaning and maintenance.
H. Moisture Protection and Weather-Exposed Products: Include product data listing applicable reference standards, chemical composition, and details of installation. Include recommendations for inspections, maintenance, and repair.
I. Additional requirements as specified in individual product Specifications.
J. Include listing in TOC for design data with tabbed fly sheet and space for insertion of data.

1.10 MANUAL FOR EQUIPMENT AND SYSTEMS

A. Submit two copies of preliminary draft or proposed formats and outlines of contents before Work. Engineer will review draft and return one copy with comments.
B. For equipment or component parts of equipment put into service during construction and operated by Owner, submit documents within 10 days after acceptance.
C. Submit one copy of completed volumes 15 days before final inspection. Draft copy will be reviewed and returned after final inspection with Engineer comments. Revise content of document sets as required before final submission.
D. Submit two sets of revised final volumes within 10 days after final inspection.
E. Submit in PDF composite electronic indexed file of final manual within 10 days after final inspection.
F. Each System and Item of Equipment: Include description of unit/system and component parts. Identify function, normal operating characteristics, and limiting conditions. Include performance curves with engineering data and tests, complete nomenclature, and model number of replaceable parts.
G. Panelboard Circuit Directories: Provide electrical service characteristics, controls, and communications by label machine.
H. Include color-coded wiring diagrams as installed.
I. Operating Procedures: Include startup, break-in, and routine normal operating instructions and sequences. Include regulation, control, stopping, shutdown, and emergency instructions. Include summer, winter, and special operating instructions.
J. Maintenance Requirements: Include routine procedures and guide for preventative maintenance and troubleshooting; disassembly, repair, and reassembly instructions; and alignment, adjusting, balancing, and checking instructions.
K. Include servicing and lubrication schedule and list of lubricants required.
L. Include manufacturer-printed operation and maintenance instructions.
M. Include sequence of operation by controls manufacturer.
N. Include original manufacturer parts list, illustrations, assembly drawings, and diagrams required for maintenance.
O. Include control diagrams by controls manufacturer as installed.
P. Include Contractor coordination Drawings with color-coded piping diagrams as installed.

Q. Include charts of valve tag numbers, with location and function of each valve, keyed to flow and control diagrams.
R. Include list of original manufacturer's spare parts, current prices, and recommended quantities maintained in storage.
S. Include test and balancing reports per Section 01 40 00 "Quality Requirements."
T. Additional requirements as specified in individual product Specifications.
U. Include listing in TOC for design data with tabbed dividers and space for insertion of data.

1.11 SPARE PARTS AND MAINTENANCE PRODUCTS

A. Furnish spare parts, maintenance, and extra products in quantities specified in individual Specifications.
B. Deliver to place in location as directed by Owner. Obtain receipt before final payment.

1.12 PRODUCT WARRANTIES AND PRODUCT BONDS

A. Obtain warranties and bonds executed by responsible subcontractors, suppliers, and manufacturers within 10 days after completion of applicable item of Work.
B. Execute and assemble transferable warranty documents and bonds from subcontractors, suppliers, and manufacturers.
C. Verify documents are in proper form, contain full information, and are notarized.
D. Co-execute submittals when required.
E. Include TOC and assemble in three D-side-ring binders with durable plastic cover.
F. Submit before final Application for Payment.
G. Time of Submittals:
   1. For equipment or component parts of equipment put into service during construction with Owner permission, submit documents within 10 days after acceptance.
   2. Make other submittals within 10 days after date of Substantial Completion before final Application for Payment.
   3. For items of Work for which acceptance is delayed beyond Substantial Completion, submit within 10 days after acceptance listing date of acceptance as beginning of warranty or bond period.

**PART 2 - PRODUCTS (Not Used)**

**PART 3 - EXECUTION**

3.1 EXAMINATION

A. Verify existing Site conditions and substrate surfaces are acceptable for subsequent Work.
B. Beginning new Work means acceptance of existing conditions.
C. Verify existing substrate can structurally support or attach new Work applied.
D. Examine and verify specific conditions described in individual Specifications.
E. Verify utility services are available with correct characteristics and in correct locations.

3.2 PREPARATION

A. Clean substrate surfaces before applying next material or substance per manufacturer instructions.

B. Seal cracks or openings of substrate before applying next material or substance.
C. Apply manufacturer-required or -recommended substrate primer, sealer, or conditioner before applying new material or substance in contact or bond.

3.3 EXECUTION

A. Comply with manufacturer installation instructions performing each step in sequence. Maintain one set of manufacturer installation instructions at Project Site during installation and until completion of construction.
B. When manufacturer installation instructions conflict with Contract Documents, request clarification from Engineer before proceeding.
C. Verify field measurements are as indicated on approved Shop Drawings or as instructed by manufacturer.
D. Secure products in place with positive anchorage devices designed and sized to withstand stresses, vibration, physical distortion, or disfigurement.
    1. Secure Work true-to-line and level and within specified tolerances, or if not specified, industry-recognized tolerances.
    2. Physically separate products in place, provide electrical insulation, or provide protective coatings to prevent galvanic action or corrosion between dissimilar metals.
    3. Exposed Joints: Provide uniform joint width and arrange to obtain best visual effect. Refer questionable visual-effect choices to Engineer for final decision.
E. Allow for expansion of materials and building movement.
F. Climatic Conditions and Project Status: Install each unit of Work under conditions to ensure best possible results in coordination with entire Project.
    1. Isolate each unit of Work from incompatible Work necessary to prevent deterioration.
    2. Coordinate enclosure of Work with required inspections and tests to minimize necessity of uncovering Work for those purposes.
G. Mounting Heights: Where not indicated, mount individual units of Work at industry-recognized standard mounting heights for particular application indicated.
    1. Refer questionable mounting heights choices to Engineer for final decision.
    2. Elements Identified as Accessible to Handicapped: Comply with applicable codes and regulations.
H. Adjust operating products and equipment to ensure smooth and unhindered operation.
I. Clean and perform maintenance on installed Work as frequently as necessary through remainder of construction. Lubricate operable components recommended by manufacturer.

3.4 PROTECTING INSTALLED CONSTRUCTION

A. Protect installed Work and provide special protection where specified.
B. Provide temporary and removable protection for installed products. Control activity in immediate Work area to prevent damage.
C. Provide protective coverings at walls, projections, jambs, sills, and soffits of openings.
D. Use durable sheet materials to protect finished floors, stairs, and other surfaces from traffic, dirt, wear, damage, or movement of heavy objects.

E. Prohibit traffic or storage upon waterproofed or roofed surfaces. When traffic or activity necessary, obtain recommendations for protection from waterproofing or roofing material manufacturer.
F. Prohibit traffic from landscaped areas.

## 3.5 FINAL CLEANING

A. Execute final cleaning before final Project assessment. Employ experienced personnel or professional cleaning firm.
B. Clean interior and exterior glass and surfaces exposed to view. Remove temporary labels, stains, and foreign substances. Polish transparent and glossy surfaces and vacuum carpeted and soft surfaces.
C. Clean equipment and fixtures to sanitary condition with appropriate cleaning materials.
D. Clean filters of operating equipment.
E. Clean debris from roofs, gutters, downspouts, and drainage systems.
F. Clean site. Sweep paved areas and rake landscaped surfaces clean.
G. Remove waste and surplus materials, rubbish, and construction facilities from site.

END OF SECTION

PACKET 7.243 September 12, 2023
PACKET 11.245 November 14, 2023

# SECTION 03 10 00 - CONCRETE FORMING AND ACCESSORIES

## PART 1 - GENERAL

### 1.1 SUMMARY

A. Section Includes:
   1. Form-facing material for cast-in-place concrete.
   2. Shoring, bracing, and anchoring.

B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.
   2. Section 32 13 13 "Concrete Paving" for formwork related to concrete pavement and walks.

### 1.2 DEFINITIONS

A. Form-Facing Material: Temporary structure or mold for the support of concrete while the concrete is setting and gaining sufficient strength to be self-supporting.

B. Formwork: The total system of support of freshly placed concrete including the mold or sheathing that contacts the concrete as well as supporting members, hardware, and necessary bracing.

### 1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.
   1. Review the following:
      a. Special inspection and testing and inspecting agency procedures for field quality control.
      b. Construction, movement, contraction, and isolation joints
      c. Forms and form-removal limitations.
      d. Anchor rod and anchorage device installation tolerances.

### 1.4 ACTION SUBMITTALS

A. Product Data: For each of the following:
   1. Exposed surface form-facing material.
   2. Concealed surface form-facing material.
   3. Form ties.
   4. Form-release agent.

### 1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For testing and inspection agency.

B. Field quality-control reports.

C. Minutes of preinstallation conference.

## PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Concrete Formwork: Design, engineer, erect, shore, brace, and maintain formwork, shores, and reshores in accordance with ACI 301 to support vertical, lateral, static, and dynamic loads, and construction loads that might be applied, until structure can support such loads so that resulting concrete conforms to the required shapes, lines, and dimensions.
   1. Design wood panel forms in accordance with APA's "Concrete Forming Design/Construction Guide."
   2. Design formwork to limit deflection of form-facing material to 1/240 of center-to-center spacing of supports.

2.2 FORM-FACING MATERIALS

A. As-Cast Surface Form-Facing Material:
   1. Provide continuous, true, and smooth concrete surfaces.
   2. Furnish in largest practicable sizes to minimize number of joints.
   3. Acceptable Materials: As required to comply with Surface Finish designations specified in Section 03 30 00 "Cast-In-Place Concrete" and as follows:
      a. Plywood, metal, or other approved panel materials.
      b. Exterior-grade plywood panels, suitable for concrete forms, complying with DOC PS 1 and as follows:
         1) APA Structural 1 Plyform, B-B or better; mill oiled and edge sealed.

B. Concealed Surface Form-Facing Material: Lumber, plywood, metal, plastic, or another approved material.
   1. Provide lumber dressed on at least 2 edges and 1 side for tight fit.

2.3 RELATED MATERIALS

A. Chamfer Strips: Wood, metal, PVC, or rubber strips, 3/4-inch by 3/4-inch, minimum.

B. Form-Release Agent: Commercially formulated form-release agent that does not bond with, stain, or adversely affect concrete surfaces and does not impair subsequent treatments of concrete surfaces.
   1. Formulate form-release agent with rust inhibitor for steel form-facing materials.
   2. Form release agent for form liners shall be acceptable to form liner manufacturer.

C. Form Ties: Factory-fabricated, removable or snap-off, glass-fiber-reinforced plastic, or metal form ties designed to resist lateral pressure of fresh concrete on forms and to prevent spalling of concrete on removal.
   1. Furnish ties that, when removed, leave holes no larger than 1 inch in diameter in concrete surface.

## PART 3 - EXECUTION

3.1 INSTALLATION OF FORMWORK

A. Comply with ACI 301.

B. Construct formwork so concrete members and structures are of size, shape, alignment, elevation, and position indicated within tolerance limits of ACI 117, and to comply with the Surface Finish designations specified in Section 03 30 00 "Cast-In-Place Concrete" for as-cast finishes.

C. Limit concrete surface irregularities as follows:
   1. Surface Finish-2.0: ACI 117 Class B, 1/4-inch.

D. Construct forms tight enough to prevent loss of concrete mortar.
   1. Minimize joints.
   2. Exposed Concrete: Symmetrically align joints in forms.

E. Construct removable forms for easy removal without hammering or prying against concrete surfaces.
   1. Provide crush or wrecking plates where stripping may damage cast-concrete surfaces.
   2. Provide top forms for inclined surfaces steeper than 1.5 horizontal to 1 vertical.
   3. Install keyways, reglets, recesses, and other accessories for easy removal.

F. Do not use rust-stained, steel, form-facing material.

G. Set edge forms, bulkheads, and intermediate screed strips for slabs to achieve required elevations and slopes in finished concrete surfaces.
   1. Provide and secure units to support screed strips
   2. Use strike-off templates or compacting-type screeds.

H. Provide temporary openings for cleanouts and inspection ports where interior area of formwork is inaccessible.
   1. Close openings with panels tightly fitted to forms and securely braced to prevent loss of concrete mortar.
   2. Locate temporary openings in forms at inconspicuous locations.

I. Chamfer exterior corners and edges of permanently exposed concrete.

J. At construction joints, overlap forms onto previously placed concrete not less than 12 inches.

K. Form openings, chases, offsets, sinkages, keyways, reglets, blocking, screeds, and bulkheads required in the Work.
   1. Determine sizes and locations from trades providing such items.
   2. Obtain written approval of Engineer prior to forming openings not indicated on Drawings.

L. Construction and Movement Joints:
   1. Construct joints true to line with faces perpendicular to surface plane of concrete.
   2. Install so strength and appearance of concrete are not impaired at locations indicated or as approved by Architect.
   3. Place joints perpendicular to main reinforcement.
   4. Locate joints for beams, slabs, joists, and girders in the middle third of spans.
      a. Offset joints in girders a minimum distance of twice the beam width from a beam-girder intersection.
   5. Locate horizontal joints in walls and columns at underside of floors, slabs, beams, and girders and at the top of footings or floor slabs.
   6. Space vertical joints in walls as indicated on Drawings.
      a. Locate joints beside piers integral with walls, near corners, and in concealed locations where possible.

M. Provide temporary ports or openings in formwork where required to facilitate cleaning and inspection.
   1. Locate ports and openings in bottom of vertical forms, in inconspicuous location, to allow flushing water to drain.
   2. Close temporary ports and openings with tight-fitting panels, flush with inside face of form, and neatly fitted so joints will not be apparent in exposed concrete surfaces.

N. Clean forms and adjacent surfaces to receive concrete. Remove chips, wood, sawdust, dirt, and other debris just before placing concrete.

O. Retighten forms and bracing before placing concrete, as required, to prevent mortar leaks and maintain proper alignment.

P. Coat contact surfaces of forms with form-release agent, according to manufacturer's written instructions, before placing reinforcement.

## 3.2 INSTALLATION OF EMBEDDED ITEMS

A. Place and secure anchorage devices and other embedded items required for adjoining Work that is attached to or supported by cast-in-place concrete.
   1. Use setting Drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
   2. Install anchor rods, accurately located, to elevations required and complying with tolerances in Section 7.5 of AISC 303.
   3. Clean embedded items immediately prior to concrete placement.

## 3.3 REMOVING AND REUSING FORMS

A. Formwork for sides of beams, walls, columns, and similar parts of the Work that does not support weight of concrete may be removed after cumulatively curing at not less than 50 degrees F for 24 hours after placing concrete. Concrete has to be hard enough to not be damaged by form-removal operations, and curing and protection operations need to be maintained.

B. Clean and repair surfaces of forms to be reused in the Work.
   1. Split, frayed, delaminated, or otherwise damaged form-facing material are unacceptable for exposed surfaces.
   2. Apply new form-release agent.

C. When forms are reused, clean surfaces, remove fins and laitance, and tighten to close joints.
   1. Align and secure joints to avoid offsets.
   2. Do not use patched forms for exposed concrete surfaces unless approved by Architect.

## 3.4 FIELD QUALITY CONTROL

A. Special Inspections: Owner will engage a special inspector and qualified testing and inspecting agenc to perform field tests and inspections and prepare test reports.

B. Inspections:
   1. Inspect formwork for shape, location, and dimensions of the concrete member being formed.

END OF SECTION

# SECTION 03 20 00 - CONCRETE REINFORCING

## PART 1 - GENERAL

### 1.1 SUMMARY

A. Section Includes:
   1. Steel reinforcement bars.
B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.

### 1.2 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.
   1. Review the following:
      a. Special inspection and testing and inspecting agency procedures for field quality control.
      b. Construction contraction and isolation joints.
      c. Steel-reinforcement installation.

### 1.3 ACTION SUBMITTALS

A. Product Data: For the following:
   1. Each type of steel reinforcement.
   2. Bar supports.
   3. Mechanical splice couplers.
B. Sustainable Design Submittals.
C. Shop Drawings: Comply with ACI SP-066:
   1. Include placing Drawings that detail fabrication, bending, and placement.
   2. Include bar sizes, lengths, materials, grades, bar schedules, stirrup spacing, bent bar diagrams, bar arrangement, location of splices, lengths of lap splices, details of mechanical splice couplers, tie spacing, and supports for concrete reinforcement.
D. Construction Joint Layout: Indicate proposed construction joints required to build the structure.
   1. Location of construction joints is subject to approval of the Architect.

### 1.4 INFORMATIONAL SUBMITTALS

A. Qualification Statements: For testing and inspection agency.
B. Material Test Reports: For the following from a qualified testing agency:
   1. Steel Reinforcement:
      a. For reinforcement to be welded, mill test analysis for chemical composition and carbon equivalent of the steel in accordance with ASTM A706/A706M.
   2. Mechanical splice couplers.
C. Field quality-control reports.
D. Minutes of preinstallation conference.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Steel Reinforcement: Deliver, store, and handle steel reinforcement to prevent bending and damage.
   1. Store reinforcement to avoid contact with earth.

**PART 2 - PRODUCTS**

2.1 STEEL REINFORCEMENT

A. Reinforcing Bars: ASTM A615, Grade 60, deformed.

2.2 REINFORCEMENT ACCESSORIES

A. Joint Dowel Plate: PNA-Diamond Dowel system.
B. Bar Supports: Bolsters, chairs, spacers, and other devices for spacing, supporting, and fastening reinforcing bars and welded-wire reinforcement in place.
   1. Manufacture bar supports from steel wire or plastic in accordance with CRSI's "Manual of Standard Practice."
      a. For concrete surfaces exposed to view, where legs of wire bar supports contact forms, use CRSI Class 1 plastic-protected steel wire, all-plastic bar supports, or CRSI Class 2 stainless steel bar supports.
C. Mechanical Splice Couplers: ACI 318 Type 2, same material of reinforcing bar being spliced; standard bar lock.
D. Steel Tie Wire: ASTM A1064, annealed steel, not less than 0.0508-inch in diameter.
   1. Finish: Plain, ASTM A884, Class A, Type 1.

2.3 FABRICATING REINFORCEMENT

A. Fabricate steel reinforcement according to CRSI's "Manual of Standard Practice."

**PART 3 - EXECUTION**

3.1 PREPARATION

A. Protection of In-Place Conditions:
   1. Do not cut or puncture vapor retarder.
   2. Repair damage and reseal vapor retarder before placing concrete.
B. Clean reinforcement of loose rust and mill scale, earth, ice, and other foreign materials that reduce bond to concrete.

3.2 INSTALLATION OF STEEL REINFORCEMENT

A. Comply with CRSI's "Manual of Standard Practice" for placing and supporting reinforcement.
B. Accurately position, support, and secure reinforcement against displacement.
   1. Locate and support reinforcement with bar supports to maintain minimum concrete cover.
   2. Do not tack weld crossing reinforcing bars.

C. Preserve clearance between bars of not less than 1 inch, not less than one bar diameter, or not less than 1-1/3-times size of large aggregate, whichever is greater.
D. Provide concrete coverage in accordance with ACI 318.
E. Set wire ties with ends directed into concrete not toward exposed concrete surfaces.
F. Splices: Lap splices as indicated on Drawings.
   1. Bars indicated to be continuous and all vertical bars shall be lapped not less than 36 bar diameters at splices or 24 inches, whichever is greater.
   2. Stagger splices in accordance with ACI 318.
   3. Mechanical Splice Couplers: Install in accordance with manufacturer's instructions.

3.3 JOINTS

A. Construction Joints: Install so strength and appearance of concrete are not impaired at locations indicated or as approved by Architect.
   1. Place joints perpendicular to main reinforcement.
   2. Do not continue reinforcement across construction joints unless otherwise indicated.
B. Doweled Joints: Install dowel plates and support assemblies at joints where indicated. Lubricate or asphalt coat one-half of plates length to prevent concrete bonding to one side of joint.

3.4 INSTALLATION TOLERANCES

A. Comply with ACI 117.

3.5 FIELD QUALITY CONTROL

A. Special Inspections: Owner will engage a special inspector and qualified testing and inspecting agency to perform field tests and inspections and prepare test reports.
B. Inspections:
   1. Steel-reinforcement placement.
   2. Steel-reinforcement mechanical splice couplers.

END OF SECTION

# SECTION 03 30 00 - CAST-IN-PLACE CONCRETE

## PART 1 - GENERAL

### 1.1 SUMMARY

A. Section Includes:
   1. Cast-in-place concrete, including concrete materials, mixture design, placement procedures, and finishes.

B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.
   2. Section 03 10 00 "Concrete Forming and Accessories" for form-facing materials.
   3. Section 03 20 00 "Concrete Reinforcing" for steel reinforcing bars.
   4. Section 31 20 00 "Earth Moving" for drainage fill under slabs-on-ground.
   5. Section 32 13 13 "Concrete Paving" for concrete pavement and walks.

### 1.2 DEFINITIONS

A. Cementitious Materials: Portland cement alone or in combination with one or more of the following: blended hydraulic cement, fly ash; materials subject to compliance with requirements.

B. Water/Cement Ratio (w/cm): The ratio by weight of water to cementitious materials.

### 1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.
   1. Require representatives of each entity directly concerned with cast-in-place concrete to attend including the following:
      a. Contractor's superintendent.
      b. Independent testing agency responsible for concrete design mixtures.
      c. Ready-mix concrete manufacturer.
      d. Concrete Subcontractor.
   2. Review the following:
      a. Special inspection and testing and inspecting agency procedures for field quality control.
      b. Construction joints, control joints, isolation joints, and joint-filler strips.
      c. Semirigid joint fillers.
      d. Vapor-retarder installation.
      e. Anchor rod and anchorage device installation tolerances.
      f. Cold and hot weather concreting procedures.
      g. Concrete finishes and finishing.
      h. Curing procedures.
      i. Forms and form-removal limitations.
      j. Methods for achieving specified floor and slab flatness and levelness.
      k. Floor and slab flatness and levelness measurements.
      l. Concrete repair procedures.
      m. Concrete protection.

1.4 ACTION SUBMITTALS

A. Product Data: For each of the following.
   1. Portland cement.
   2. Fly ash.
   3. Blended hydraulic cement.
   4. Aggregates.
   5. Admixtures:
      a. Include limitations of use including restrictions on cementitious materials, supplementary cementitious materials, air entrainment, aggregates, temperature at time of concrete placement, relative humidity at time of concrete placement, curing conditions, and use of other admixtures.
   6. Vapor retarders.
   7. Curing materials.
      a. Include documentation from color pigment manufacturer, indicating that proposed methods of curing are recommended by color pigment manufacturer.
   8. Joint fillers.
   9. Repair materials.

B. Sustainable Design Submittals:

C. Design Mixtures: For each concrete mixture, include the following:
   1. Mixture identification.
   2. Minimum 28-day compressive strength.
   3. Durability exposure class.
   4. Maximum w/cm.
   5. Slump limit.
   6. Air content.
   7. Nominal maximum aggregate size.
   8. Indicate amounts of mixing water to be withheld for later addition at Project site if permitted.
   9. Intended placement method.
   10. Submit alternate design mixtures when characteristics of materials, Project conditions, weather, test results, or other circumstances warrant adjustments.

D. Shop Drawings:
   1. Construction Joint Layout: Indicate proposed construction joints required to construct the structure.
      a. Location of construction joints is subject to approval of the Engineer.

E. Concrete Schedule: For each location of each Class of concrete indicated in "Concrete Mixtures" Article including the following:
   1. Concrete Class designation.
   2. Location within Project.
   3. Exposure Class designation.
   4. Formed Surface Finish designation and final finish.
   5. Final finish for floors.
   6. Curing process.

## 1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For the following:
   1. Installer: Include copies of applicable ACI certificates.
   2. Ready-mixed concrete manufacturer.
   3. Testing agency: Include copies of applicable ACI certificates.

B. Material Certificates: For each of the following signed by manufacturers:
   1. Cementitious materials.
   2. Admixtures.
   3. Curing compounds.
   4. Bonding agents.
   5. Adhesives.
   6. Vapor retarders.
   7. Semirigid joint filler.
   8. Joint-filler strips.
   9. Repair materials.

C. Material Test Reports: For the following from a qualified testing agency:
   1. Portland cement.
   2. Fly ash.
   3. Blended hydraulic cement.
   4. Aggregates.
   5. Admixtures.

D. Floor surface flatness and levelness measurements report indicating compliance with specified tolerances.

E. Research Reports:
   1. For concrete admixtures in accordance with ICC's Acceptance Criteria AC198.

F. Preconstruction Test Reports: For each mix design.

G. Field quality-control reports.

H. Minutes of preinstallation conference.

## 1.6 QUALITY ASSURANCE

A. Installer Qualifications: A qualified installer who employs Project personnel qualified as an ACI-certified Flatwork Technician and Finisher and a supervisor who is a certified ACI Flatwork Concrete Finisher/Technician or an ACI Concrete Flatwork Technician.
   1. Post-Installed Concrete Anchors Installers: ACI-certified Adhesive Anchor Installer.

B. Ready-Mixed Concrete Manufacturer Qualifications: A firm experienced in manufacturing ready-mixed concrete products and that complies with ASTM C94 requirements for production facilities and equipment.
   1. Manufacturer certified in accordance with NRMCA's "Certification of Ready Mixed Concrete Production Facilities."

## 1.7 PRECONSTRUCTION TESTING

A. Preconstruction Testing Service: Engage a qualified testing agency to perform preconstruction testing on each concrete mixture.
   1. Include the following information in each test report:
      a. Admixture dosage rates.
      b. Slump.
      c. Air content.

d. Seven-day compressive strength.
e. 28-day compressive strength.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Comply with ASTM C94 and ACI 301.

1.9 FIELD CONDITIONS

A. Cold-Weather Placement: Comply with ACI 301 and ACI 306.1 and as follows.
1. Protect concrete Work from physical damage or reduced strength that could be caused by frost, freezing actions, or low temperatures.
2. When average high and low temperature is expected to fall below 40 degrees F for 3 successive days, maintain delivered concrete mixture temperature within the temperature range required by ACI 301.
3. Do not use frozen materials or materials containing ice or snow.
4. Do not place concrete in contact with surfaces less than 35 degrees F, other than reinforcing steel.
5. Do not use calcium chloride, salt, or other materials containing antifreeze agents or chemical accelerators unless otherwise specified and approved in mixture designs.

B. Hot-Weather Placement: Comply with ACI 301 and ACI 305.1, and as follows:
1. Maintain concrete temperature at time of discharge to not exceed 95 degrees F.
2. Fog-spray forms, steel reinforcement, and subgrade just before placing concrete. Keep subgrade uniformly moist without standing water, soft spots, or dry areas.

**PART 2 - PRODUCTS**

2.1 CONCRETE, GENERAL

A. ACI Publications: Comply with ACI 301 unless modified by requirements in the Contract Documents.

2.2 CONCRETE MATERIALS

A. Cementitious Materials:
1. Portland Cement: ASTM C150, gray.
2. Fly Ash: ASTM C618, Class F.
3. Blended Hydraulic Cement: ASTM C595, Type IS, portland blast-furnace slag Type IL, portland-limestone cement.

B. Normal-Weight Aggregates: ASTM C33, Class 3S coarse aggregate or better, graded. Provide aggregates from a single source.
1. Alkali-Silica Reaction: Comply with one of the following:
a. Expansion Result of Aggregate: Not more than 0.04-percent at one-year when tested in accordance with ASTM C1293.
b. Expansion Results of Aggregate and Cementitious Materials in Combination: Not more than 0.10-percent at an age of 16 days when tested in accordance with ASTM C1567.

c. Alkali Content in Concrete: Not more than pounds per cubic yardfour for moderately reactive aggregate or pounds per cubic yardthree for highly reactive aggregate, when tested in accordance with ASTM C1293 and categorized in accordance with ASTM C1778, based on alkali content being calculated in accordance with ACI 301.

2. Maximum Coarse-Aggregate Size: One-and-three-fourth inch nominal.
3. Fine Aggregate: Free of materials with deleterious reactivity to alkali in cement.

C. Chemical Admixtures: Certified by manufacturer to be compatible with other admixtures that do not contribute water-soluble chloride ions exceeding those permitted in hardened concrete. Do not use calcium chloride or admixtures containing calcium chloride.
1. Water-Reducing Admixture: ASTM C494, Type A.
2. High-Range, Water-Reducing Admixture: ASTM C494, Type F.

## 2.3 VAPOR RETARDERS

A. Sheet Vapor Retarder, Class A: ASTM E1745, Class A, except with maximum water-vapor permeance of not less than 20-mils--thick. Include manufacturer's recommended adhesive or pressure-sensitive tape.

## 2.4 CURING MATERIALS

A. Evaporation Retarder: Waterborne, monomolecular film forming, manufactured for application to fresh concrete.
B. Absorptive Cover: AASHTO M 182, Class 2, burlap cloth made from jute or kenaf, weighing approximately 9 ouncees per square yard when dry.
C. Moisture-Retaining Cover: ASTM C171, polyethylene film burlap-polyethylene sheet.
1. Color:
a. Ambient Temperature Below 50 degrees F: Black.
b. Ambient Temperature between 50 degrees F and 85 degrees F: Any color.
c. Ambient Temperature Above 85 degrees F: White.
D. Water: Potable or complying with ASTM C1602.
E. Clear, Solvent-Borne, Membrane-Forming, Curing and Sealing Compound: ASTM C1315, Type 1, Class A.

## 2.5 RELATED MATERIALS

A. Expansion- and Isolation-Joint-Filler Strips: ASTM D1751, asphalt-saturated cellulosic fiber.
B. Semirigid Joint Filler: Two-component, semirigid, 100 percent solids, epoxy resin with a Type A shore durometer hardness of 80 in accordance with ASTM D2240.
C. Bonding Agent: ASTM C1059, Type II, nonredispersible, acrylic emulsion or styrene butadiene.
D. Epoxy Bonding Adhesive: ASTM C881, two-component epoxy resin, capable of humid curing and bonding to damp surfaces, of class suitable for application temperature and of grade and class to suit requirements, and as follows:
1. Types IV and V, load bearing, for bonding hardened or freshly mixed concrete to hardened concrete.

## 2.6 CONCRETE MIXTURES, GENERAL

A. Prepare design mixtures for each type and strength of concrete, proportioned on the basis of laboratory trial mixture or field test data, or both, in accordance with ACI 301.
   1. Use a qualified testing agency for preparing and reporting proposed mixture designs, based on laboratory trial mixtures.

B. Cementitious Materials: Limit percentage, by weight, of cementitious materials other than portland cement in concrete as follows:
   1. Fly Ash: 25 percent by mass.

C. Admixtures: Use admixtures in accordance with manufacturer's written instructions.
   1. Use water-reducing, high-range water-reducing, or plasticizing admixture in concrete, as required, for placement and workability.
   2. Use water-reducing admixture in pumped concreteand concrete with a w/cm below 0.50.

## 2.7 CONCRETE MIXTURES

A. Class A: Normal-weight concrete used for footings, grade beams, and tie beams.
   1. Exposure Class: ACI 318 F2.
   2. Minimum Compressive Strength: 4,000 psi at 28 days.
   3. Maximum w/cm: .50.
   4. Slump Limit: 4 inches, plus or minus 1 inch.

B. Class B: Normal-weight concrete used for foundation walls.
   1. Exposure Class: ACI 318.
   2. Minimum Compressive Strength: 4,000 psi at 28 days.
   3. Maximum w/cm: 0.50.
   4. Slump Limit: 6 inches, plus or minus 1 inch for concrete with verified slump of 3 inches plus or minus 1 inch before adding high-range water-reducing admixture or plasticizing admixture at Project Site.

C. Class C: Normal-weight concrete used for interior slabs-on-ground.
   1. Exposure Class: ACI 318 F0.
   2. Minimum Compressive Strength: 4,000 psi at 28 days.
   3. Maximum w/cm: 0.45.
   4. Minimum Cementitious Materials Content: Based on the requirements of ACI 301 for floors and relatee to nominal maximu aggregate sizes.
   5. Slump Limit: 6 inches, plus or minus 1 inch for concrete with verified slump of 3 inches plus or minus 1 inch before adding high-range water-reducing admixture or plasticizing admixture at Project site.
   6. Air Content:
      a. Do not use an air-entraining admixture or allow total air content to exceed 3 percent for concrete used in trowel-finished floors.

## 2.8 CONCRETE MIXING

A. Ready-Mixed Concrete: Measure, batch, mix, and deliver concrete in accordance with ASTM C94 and ASTM C1116, and furnish batch ticket information.

## PART 3 - EXECUTION

### 3.1 EXAMINATION

A. Verification of Conditions:
   1. Before placing concrete, verify that installation of concrete forms, accessories, and reinforcement, and embedded items is complete and that required inspections have been performed.
   2. Do not proceed until unsatisfactory conditions have been corrected.

### 3.2 PREPARATION

A. Provide reasonable auxiliary services to accommodate field testing and inspections, acceptable to testing agency, including the following:
   1. Daily access to the Work.
   2. Incidental labor and facilities necessary to facilitate tests and inspections.
   3. Secure space for storage, initial curing, and field curing of test samples, including source of water and continuous electrical power at Project site during site curing period for test samples.
   4. Security and protection for test samples and for testing and inspection equipment at Project site.

### 3.3 INSTALLATION OF EMBEDDED ITEMS

A. Place and secure anchorage devices and other embedded items required for adjoining Work that is attached to or supported by cast-in-place concrete.
   1. Use setting Drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
   2. Install anchor rods, accurately located, to elevations required and complying with tolerances in Section 7.5 of ANSI/AISC 303.

### 3.4 INSTALLATION OF VAPOR RETARDER

A. Sheet Vapor Retarders: Place, protect, and repair sheet vapor retarder in accordance with ASTM E1643 and manufacturer's written instructions.
   1. Install vapor retarder with longest dimension parallel with direction of concrete pour.
   2. Face laps away from exposed direction of concrete pour.
   3. Lap vapor retarder Down footings and grade beams not less than 6 inches, sealing vapor retarder to concrete.
   4. Lap joints 6 inches and seal with manufacturer's recommended tape.
   5. Terminate vapor retarder at the top of floor slabs and grade beams sealing entire perimeter to floor slabs, grade beams, or foundation walls.
   6. Seal penetrations in accordance with vapor retarder manufacturer's instructions.
   7. Protect vapor retarder during placement of reinforcement and concrete.
      a. Repair damaged areas by patching with vapor retarder material, overlapping damages area by 6 inches on all sides, and sealing to vapor retarder.

## 3.5 JOINTS

A. Construct joints true to line, with faces perpendicular to surface plane of concrete.

B. Construction Joints: Coordinate with floor slab pattern and concrete placement sequence.

1. Install so strength and appearance of concrete are not impaired, at locations indicated on Drawings or as approved by Engineer.
2. Place joints perpendicular to main reinforcement.
   a. Cut reinforcement across construction joints unless otherwise indicated.
3. Locate joints for beams, slabs, joists, and girders at third points of spans. Offset joints in girders a minimum distance of twice the beam width from a beam-girder intersection.
4. Locate horizontal joints in walls and columns at underside of floors, slabs, beams, and girders and at the top of footings or floor slabs.
5. Space vertical joints in walls as indicated on Drawings. Unless otherwise indicated on Drawings, locate vertical joints beside piers integral with walls, near corners, and in concealed locations where possible.
6. Use a bonding agent at locations where fresh concrete is placed against hardened or partially hardened concrete surfaces.

C. Control Joints in Slabs-on-Ground: Form weakened-plane control joints, sectioning concrete into areas as indicated. Construct control joints for a depth equal to at least one-fourth of concrete thickness as follows:

1. Sawed Joints: Form control joints with "early entry" proccess equipped with shatterproof abrasive or diamond-rimmed blades. Cut 1/8-inch-wide joints into concrete when cutting action does not tear, abrade, or otherwise damage surface and before concrete develops random cracks.

D. Isolation Joints in Slabs-on-Ground: After removing formwork, install joint-filler strips at slab junctions with vertical surfaces, such as column pedestals, foundation walls, grade beams, and other locations, as indicated.

1. Extend joint-filler strips full width and depth of joint, terminating flush with finished concrete surface unless otherwise indicated on Drawings.
2. Terminate full-width joint-filler strips not less than 1/2-inch or more than 1-inch below finished concrete surface, where joint sealants are indicated.
3. Install joint-filler strips in lengths as long as practicable. Where more than one length is required, lace or clip sections together.

E. Doweled Joints:

1. Install dowel plates and support assemblies at joints where indicated on Drawings.
2. Lubricate or asphalt coat one-half of dowel plates length to prevent concrete bonding to one side of joint.

F. Dowel Plates: Install dowel plates at joints where indicated on Drawings.

## 3.6 CONCRETE PLACEMENT

A. Before placing concrete, verify that installation of formwork, reinforcement, embedded items, and vapor retarder is complete and that required inspections are completed.

1. Immediately prior to concrete placement, inspect vapor retarder for damage and deficient installation, and repair defective areas.
2. Provide continuous inspection of vapor retarder during concrete placement and make necessary repairs to damaged areas as Work progresses.

B. Notify Engineer and testing and inspection agencies 24 hours prior to commencement of concrete placement.

C. Do not add water to concrete during delivery, at Project site, but not to exceed the amount indicated on the concrete delivery ticket.
   1. Do not add water to concrete after adding high-range water-reducing admixtures to mixture.

D. Before test sampling and placing concrete, water may be added at Project site, subject to limitations of ACI 301, but not to exceed the amount indicated on the concrete delivery ticket.
   1. Do not add water to concrete after adding high-range water-reducing admixtures to mixture.

E. Deposit concrete continuously in one layer or in horizontal layers of such thickness that no new concrete is placed on concrete that has hardened enough to cause seams or planes of weakness.
   1. If a section cannot be placed continuously, provide construction joints as indicated.
   2. Deposit concrete to avoid segregation.
   3. Deposit concrete in horizontal layers of depth not to exceed formwork design pressures and in a manner to avoid inclined construction joints.
   4. Consolidate placed concrete with mechanical vibrating equipment in accordance with ACI 301.
      a. Do not use vibrators to transport concrete inside forms.
      b. Insert and withdraw vibrators vertically at uniformly spaced locations to rapidly penetrate placed layer and at least 6 inches into preceding layer.
      c. Do not insert vibrators into lower layers of concrete that have begun to lose plasticity.
      d. At each insertion, limit duration of vibration to time necessary to consolidate concrete, and complete embedment of reinforcement and other embedded items without causing mixture constituents to segregate.

F. Deposit and consolidate concrete for floors and slabs in a continuous operation, within limits of construction joints, until placement of a panel or section is complete.
   1. Do not place concrete floors and slabs in a checkerboard sequence.
   2. Consolidate concrete during placement operations, so concrete is thoroughly worked around reinforcement and other embedded items and into corners.
   3. Maintain reinforcement in position on chairs during concrete placement.
   4. Screed slab surfaces with a straightedge and strike off to correct elevations.
   5. Level concrete, cut high areas, and fill low areas.
   6. Slope surfaces uniformly to drains where required.
   7. Begin initial floating using bull floats or darbies to form a uniform and open-textured surface plane, before excess bleedwater appears on the surface.
   8. Do not further disturb slab surfaces before starting finishing operations.

## 3.7 FINISHING FORMED SURFACES

A. As-Cast Surface Finishes:
   1. ACI 301 Surface Finish SF-2.0: As-cast concrete texture imparted by form-facing material, arranged in an orderly and symmetrical manner with a minimum of seams.
      a. Patch voids larger than 3/4-inch wide or 1/2-inch deep.
      b. Remove projections larger than 1/4-inch.
      c. Patch tie holes.
      d. Surface Tolerance: ACI 117 Class B.
      e. Locations: Apply to concrete surfaces exposed to public view.

B. Related Unformed Surfaces:

1. At tops of walls, horizontal offsets, and similar unformed surfaces adjacent to formed surfaces, strike off smooth and finish with a color and texture matching adjacent formed surfaces.
2. Continue final surface treatment of formed surfaces uniformly across adjacent unformed surfaces unless otherwise indicated.

## 3.8 FINISHING FLOORS AND SLABS

A. Comply with ACI 302.1R recommendations for screeding, restraightening, and finishing operations for concrete surfaces. Do not wet concrete surfaces.

B. Float Finish:
1. When bleedwater sheen has disappeared and concrete surface has stiffened sufficiently to permit operation of specific float apparatus, consolidate concrete surface with power-driven floats or by hand floating if area is small or inaccessible to power-driven floats.
2. Repeat float passes and restraightening until surface is left with a uniform, smooth, granular texture and complies with ACI 117 tolerances for conventional concrete.
3. Apply float finish to surfaces to receive trowel finish.

C. Trowel Finish:
1. After applying float finish, apply first troweling and consolidate concrete by hand or power-driven trowel.
2. Continue troweling passes and restraighten until surface is free of trowel marks and uniform in texture and appearance.
3. Grind smooth any surface defects that would telegraph through applied coatings or floor coverings.
4. Do not add water to concrete surface.
5. Do not apply hard-troweled finish to concrete, which has a total air content greater than 3 percent.
6. Apply a trowel finish to surfaces exposed to view or to be covered with resilient flooring, carpet, ceramic tile.
7. Finish surfaces to the following tolerances, in accordance with ASTM E1155, for a randomly trafficked floor surface:
   a. Slabs on Ground:
      1) Finish and measure surface so gap at any point between concrete surface and an unleveled, freestanding, 10-feet long straightedge resting on two high spots and placed anywhere on the surface does not exceed 1/4-inch and also no more than 1/16-inch in 2 feet.

D. Broom Finish: Apply a broom finish to exterior concrete platforms, steps, ramps, and locations indicated on Drawings.
1. Immediately after float finishing, slightly roughen trafficked surface by brooming with fiber-bristle broom perpendicular to main traffic route.
2. Coordinate required final finish with Engineer before application.

## 3.9 INSTALLATION OF MISCELLANEOUS CONCRETE ITEMS

A. Filling In:
1. Fill in holes and openings left in concrete structures after Work of other trades is in place unless otherwise indicated.
2. Mix, place, and cure concrete, as specified, to blend with in-place construction.
3. Provide other miscellaneous concrete filling indicated or required to complete the Work.

B. Curbs: Provide monolithic finish to interior curbs by stripping forms while concrete is still green and by steel-troweling surfaces to a hard, dense finish with corners, intersections, and terminations slightly rounded.

C. Equipment Bases and Foundations:
   1. Coordinate sizes and locations of concrete bases with actual equipment provided.
   2. Construct concrete bases 6 inches high unless otherwise indicated on Drawings, and extend base not less than 6 inches in each direction beyond the maximum dimensions of supported equipment unless otherwise indicated on Drawings, or unless required for seismic anchor support.
   3. Minimum Compressive Strength: 4,000 psi 3,000 psi at 28 days.
   4. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch centers around the full perimeter of concrete base.
   5. For supported equipment, install epoxy-coated anchor bolts that extend through concrete base and anchor into structural concrete substrate.
   6. Prior to pouring concrete, place and secure anchorage devices.
      a. Use setting Drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
      b. Cast anchor-bolt insert into bases.
      c. Install anchor bolts to elevations required for proper attachment to supported equipment.

## 3.10 CONCRETE CURING

A. Protect freshly placed concrete from premature drying and excessive cold or hot temperatures.
   1. Comply with ACI 301 and ACI 306.1 for cold weather protection during curing.
   2. Comply with ACI 301 and ACI 305.1 for hot-weather protection during curing.

B. Curing Unformed Surfaces: Comply with ACI 308.1 as follows:
   1. Begin curing immediately after finishing concrete.
   2. Interior Concrete Floors:
      a. Floors to Receive Floor Coverings Specified in Other Sections: Contractor has option of the following:
         1) Absorptive Cover: As soon as concrete has sufficient set to permit application without marring concrete surface, install prewetted absorptive cover over entire area of floor.
            a) Lap edges and ends of absorptive cover not less than 12 inches.
            b) Maintain absorptive cover water saturated, and in place, for duration of curing period, but not less than 7 days.
         2) Moisture-Retaining-Cover Curing: Cover concrete surfaces with moisture-retaining cover for curing concrete, placed in widest practicable width, with sides and ends lapped at least 12 inches, and sealed by waterproof tape or adhesive.
            a) Immediately repair any holes or tears during curing period, using cover material and waterproof tape.
            b) Cure for not less than 7 days.
      b. Floors to Receive Curing Compound after moist cure:
         1) Apply uniformly in continuous operation by power spray or roller in accordance with manufacturer's written instructions.
         2) Recoat areas subjected to heavy rainfall within three hours after initial application.

3) Maintain continuity of coating, and repair damage during curing period.
4) Removal: After curing period has elapsed, remove curing compound without damaging concrete surfaces by method recommended by curing compound manufacturer unless manufacturer certifies curing compound does not interfere with bonding of floor covering used on Project.

3.11 TOLERANCES

A. Conform to ACI 117.

3.12 JOINT FILLING

A. Prepare, clean, and install joint filler in accordance with manufacturer's written instructions.
   1. Defer joint filling until concrete has aged at least one month.
   2. Do not fill joints until construction traffic has permanently ceased.
B. Remove dirt, debris, saw cuttings, curing compounds, and sealers from joints; leave contact faces of joints clean and dry.
C. Install semirigid joint filler full depth in saw-cut joints and at least 2 inches deep in formed joints.
D. Overfill joint, and trim joint filler flush with top of joint after hardening.

3.13 CONCRETE SURFACE REPAIRS

A. Defective Concrete:
   1. Repair and patch defective areas when approved by Engineer.
   2. Remove and replace concrete that cannot be repaired and patched to Engineer's approval.
B. Patching Mortar: Mix dry-pack patching mortar, consisting of one part portland cement to two and one-half parts fine aggregate passing a No. 16 sieve, using only enough water for handling and placing.
C. Repairing Formed Surfaces: Surface defects include color and texture irregularities, cracks, spalls, air bubbles, honeycombs, rock pockets, fins and other projections on the surface, and stains and other discolorations that cannot be removed by cleaning.
   1. Immediately after form removal, cut out honeycombs, rock pockets, and voids more than 1/2-inch in any dimension to solid concrete.
      a. Limit cut depth to 3/4-inch.
      b. Make edges of cuts perpendicular to concrete surface.
      c. Clean, dampen with water, and brush-coat holes and voids with bonding agent.
      d. Fill and compact with patching mortar before bonding agent has dried.
      e. Fill form-tie voids with patching mortar or cone plugs secured in place with bonding agent.
   2. Repair defects on surfaces exposed to view by blending white portland cement and standard portland cement, so that, when dry, patching mortar matches surrounding color.
      a. Patch a test area at inconspicuous locations to verify mixture and color match before proceeding with patching.

b. Compact mortar in place and strike off slightly higher than surrounding surface.

3. Repair defects on concealed formed surfaces that will affect concrete's durability and structural performance as determined by Engineer.

D. Repairing Unformed Surfaces:

1. Test unformed surfaces, such as floors and slabs, for finish, and verify surface tolerances specified for each surface.
   a. Correct low and high areas.
   b. Test surfaces sloped to drain for trueness of slope and smoothness; use a sloped template.
2. Repair finished surfaces containing surface defects, including spalls, popouts, honeycombs, rock pockets, crazing, and cracks in excess of 0.01-inch wide or that penetrate to reinforcement or completely through unreinforced sections regardless of width, and other objectionable conditions.
3. After concrete has cured at least 14 days, correct high areas by grinding.
4. Correct localized low areas during, or immediately after, completing surface-finishing operations by cutting out low areas and replacing with patching mortar.
   a. Finish repaired areas to blend into adjacent concrete.
5. Repair defective areas, except random cracks and single holes 1-inch or less in diameter, by cutting out and replacing with fresh concrete.
   a. Remove defective areas with clean, square cuts, and expose steel reinforcement with at least a 3/4-inch clearance all around.
   b. Dampen concrete surfaces in contact with patching concrete and apply bonding agent.
   c. Mix patching concrete of same materials and mixture as original concrete, except without coarse aggregate.
   d. Place, compact, and finish to blend with adjacent finished concrete.
   e. Cure in same manner as adjacent concrete.
6. Repair random cracks and single holes 1-inch or less in diameter with patching mortar.
   a. Groove top of cracks and cut out holes to sound concrete, and clean off dust, dirt, and loose particles.
   b. Dampen cleaned concrete surfaces and apply bonding agent.
   c. Place patching mortar before bonding agent has dried.
   d. Compact patching mortar and finish to match adjacent concrete.
   e. Keep patched area continuously moist for at least 72 hours.

E. Perform structural repairs of concrete, subject to Engineer's approval, using epoxy adhesive and patching mortar.

F. Repair materials and installation not specified above may be used, subject to Engineer's approval.

## 3.14 FIELD QUALITY CONTROL

A. Special Inspections: Owner will engage a special inspector to perform field tests and inspections and prepare testing and inspection reports.

B. Testing Agency: Owner will engage a qualified testing and inspecting agency to perform tests and inspections and to submit reports.

1. Testing agency shall be responsible for providing curing container for composite samples on Site and verifying that field-cured composite samples are cured in accordance with ASTM C31.

2. Testing agency shall immediately report to Engineer, Contractor, and concrete manufacturer any failure of Work to comply with Contract Documents.
3. Testing agency shall report results of tests and inspections, in writing, to Owner, Engineer, Contractor, and concrete manufacturer within 48 hours of inspections and tests.
    a. Test reports shall include reporting requirements of ASTM C31, ASTM C39, and ACI 301, including the following as applicable to each test and inspection:
        1) Project name.
        2) Name of testing agency.
        3) Names and certification numbers of field and laboratory technicians performing inspections and testing.
        4) Name of concrete manufacturer.
        5) Date and time of inspection, sampling, and field testing.
        6) Date and time of concrete placement.
        7) Location in Work of concrete represented by samples.
        8) Date and time sample was obtained.
        9) Truck and batch ticket numbers.
        10) Design compressive strength at 28 days.
        11) Concrete mixture designation, proportions, and materials.
        12) Field test results.
        13) Information on storage and curing of samples before testing, including curing method and maximum and minimum temperatures during initial curing period.
        14) Type of fracture and compressive break strengths at 7 days and 28 days.

C. Batch Tickets: For each load delivered, submit three copies of batch delivery ticket to testing agency, indicating quantity, mix identification, admixtures, design strength, aggregate size, design air content, design slump at time of batching, and amount of water that can be added at Project site.

D. Inspections:
1. Headed bolts and studs.
2. Verification of use of required design mixture.
3. Concrete placement, including conveying and depositing.
4. Curing procedures and maintenance of curing temperature.
5. Batch Plant Inspections: On a random basis, as determined by Engineer.

E. Concrete Tests: Testing of composite samples of fresh concrete obtained in accordance with ASTM C 172 shall be performed in accordance with the following requirements:
1. Testing Frequency: Obtain one composite sample for each day's pour of each concrete mixture exceeding 5 cubic yards, but less than 25 cubic yards, plus one set for each additional 50 cubic yards or fraction thereof.
    a. When frequency of testing provides fewer than five compressive-strength tests for each concrete mixture, testing shall be conducted from at least five randomly selected batches or from each batch if fewer than five are used.
2. Slump: ASTM C143:
    a. One test at point of placement for each composite sample, but not less than one test for each day's pour of each concrete mixture.
    b. Perform additional tests when concrete consistency appears to change.
3. Concrete Temperature: ASTM C1064/C1064M:
    a. One test hourly when air temperature is 40 degrees F and below or 80 degrees F and above, and one test for each composite sample.

4. Compression Test Specimens: ASTM C31/C31M:
   a. Cast and laboratory cure two sets of four 6-inch by 12-inch or 4-inch by 8-inch cylinder specimens for each composite sample.
5. Compressive-Strength Tests: ASTM C39.
   a. Test one set of two laboratory-cured specimens at 7 days and one set of two specimens at 28 days.
   b. A compressive-strength test shall be the average compressive strength from a set of two specimens obtained from same composite sample and tested at age indicated.
6. Strength of each concrete mixture will be satisfactory if every average of any three consecutive compressive-strength tests equals or exceeds specified compressive strength, and no compressive-strength test value falls below specified compressive strength by more than 500 psi if specified compressive strength is 5,000 psi, or no compressive strength test value is less than 10 percent of specified compressive strength if specified compressive strength is greater than 5,000 psi.
7. Nondestructive Testing: Impact hammer, sonoscope, or other nondestructive device may be permitted by Engineer but will not be used as sole basis for approval or rejection of concrete.
8. Additional Tests:
   a. Testing and inspecting agency shall make additional tests of concrete when test results indicate that slump, air entrainment, compressive strengths, or other requirements have not been met, as directed byEngineer.
   b. Testing and inspecting agency may conduct tests to determine adequacy of concrete by cored cylinders complying with ASTM C42 or by other methods as directed by Engineer.
      1) Acceptance criteria for concrete strength shall be in accordance with ACI 301 section 1.6.6.3.
9. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional Work with specified requirements.
10. Correct deficiencies in the Work that test reports and inspections indicate do not comply with the Contract Documents.

F. Measure floor and slab flatness and levelness in accordance with ASTM E1155 within 24 hours of completion of floor finishing and promptly report test results to Engineer.

## 3.15 PROTECTION

A. Protect concrete surfaces as follows:
1. Protect from petroleum stains.
2. Diaper hydraulic equipment used over concrete surfaces.
3. Prohibit vehicles from interior concrete slabs.
4. Prohibit use of pipe-cutting machinery over concrete surfaces.
5. Prohibit placement of steel items on concrete surfaces.
6. Prohibit use of acids or acidic detergents over concrete surfaces.

END OF SECTION

# SECTION 05 40 00 - COLD-FORMED METAL FRAMING

## PART 1 - GENERAL

### 1.1 SUMMARY

A. Section Includes:
   1. Load-bearing fwall framing.
   2. Formed joist framing.

B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.
   2. Section 05 50 00 "Metal Fabrications" for miscellaneous steel shapes, masonry shelf angles, and connections used with cold-formed metal framing.
   3. Section 09 22 16 "Non-Structural Metal Framing."

### 1.2 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference Project site.

### 1.3 ACTION SUBMITTALS

A. Product Data: For the following:
   1. Cold-formed steel framing materials.
   2. Load-bearing wall framing.
   3. Verical deflection clips.
   4. Double deflection track.
   5. Floor joist framing.
   6. Post-installed anchors.
   7. Power-actuated anchors.
   8. Sill sealer gasket.

B. Shop Drawings:
   1. Indicate layout, spacings, sizes, thicknesses, and type of cold-formedsteel framing; fabrication; and and fastening and anchorage details, includingmechanical fasteners,.
   2. Indicate reinforcing channels, opening framing, supplemental framing, strapping, bracing, bridges, splices, accessories, connection details, and attachment to adjoining work..

C. Delegated Design Submittals: For cold-formed steel framing.

### 1.4 INFORMATIONAL SUBMITTALS

A. Qualification Data: For testing agency.

B. Welding certificates.

C. Product Certificates: For each type of code-compliance certification for studs and tracks.

D. Product Test Reports: For each listed product, for tests performed by manufacturer and witnessed by a qualified testing agency.
   1. Steel sheet.
   2. Expansion anchors.

E. Power-actuated anchors.

1. Mechanical fasteners.
2. Vertical deflection clips.
3. Miscellaneous structural clips and accessories.

F. Research Reports:
1. For nonstandard cold-formed steel framing post-installed anchors and power-actuated fasteners from ICC-ES.
2. For sill sealer gasket/termite barrier, showing compliance with ICC-ES AC380.

1.5 QUALITY ASSURANCE

A. Testing Agency Qualifications: Qualified according to ASTM E329 for testing indicated.
B. Product Tests: Mill certificates or data from a qualified independent testing agency indicating steel sheet complies with requirements, including base-metal thickness, yield strength, tensile strength, total elongation, chemical requirements, and metallic-coating thickness.
C. Code-Compliance Certification of Studs and Tracks: Provide documentation that framing members are certified according to the product-certification program of the Certified Steel Stud Association or the Steel Stud Manufacturers Association.
D. Welding Qualifications: Qualify procedures and personnel according to the following:
1. AWS D1.1, "Structural Welding Code - Steel."
2. AWS D1.3, "Structural Welding Code- Sheet Steel."

1.6 DELIVERY, STORAGE, AND HANDLING

A. Protect and store cold-formed steel framing from corrosion, moisture staining, deformation, and other damage during delivery, storage, and handling as required in AISI S202,

**PART 2 - PRODUCTS**

2.1 PERFORMANCE REQUIREMENTS

A. Delegated Design: Engage a qualified Professional Engineer, as defined in Section 01 40 00 "Quality Requirements," to design cold-formed steel framing.
B. Structural Performance: Provide cold-fomed steel framing capable of withstanding design loads within limits and under conditions indicated.
1. Design Loads: As indicated on Drawings.
2. Deflection Limits: Design framing systems to withstand design loads without deflections greater than the following:
a. Exterior Load-Bearing Wall Framing: Horizontal deflection of 1/360 of the wall height.
b. Interior Load-Bearing Wall Framing: Horizontal defletion of 1/360 of the wall height under a horizontal load of 5 pound force per square feet.
c. Floor Joist Framing: Vertical deflection of 1/480 for live loads and 1/240 for total loads of the span.
3. Design framing sysems to provide for movement of framing members loccated outside the insulated building envelope without damage or over-stressing, sheathing failure, connection failure, undue strain on fasteners and anchors, or other detrimental effects when subject to a maximum ambient temperature change of 120 degrees F.

4. Cold-Formed Steel Framing Standards: Unless more stringent requirements are indicated, framing complies with AISI S100 and ASTM C955.

## 2.2 COLD-FORMED STEEL FRAMING MATERIALS

A. Framing Members, General: Comply with ASTM C955 for conditions indicated.
B. Steel Sheet: ASTM A1003, Structural Grade, Type H, metallic coated, of grade and coating designation as follows:
   1. Grade: As required by structural performance.
   2. Coating: G60.
C. Sheet Sheet for Vertical Deflection Clips: ATM A653, structural steel, zinc coated, of grade and coating as follows:
   1. Grade: As required by structural performance.
   2. Coating: G60.

## 2.3 LOAD-BEARING WALL FRAMING

A. Steel Studs: Manufacturer's standard C-shaped steel studs, off web depths indicated, punched, with stiffened flanges, and as follows:
   1. Minimum Base-Metal Thickness: 0.0538-inch.
   2. Flange Width: 1-5/8 inches.
B. Steel Track: Manufacturer's standard U-shaped steel tracck, of web depths indicated, unpunched, with straight flanges, and as follows:
   1. Minimum Base-Metal Thickness: Matching steel studs.
   2. Flange Width: 1-1/4 inches.
C. Steel Box or Back-to-Back Headers: Manufacturer's standard C-shapes used to form header beams, of web depths indicated, unpunched, with stiffened flanges, and as follows:
   1. Minimum Base-Metal Thickness: 0.0538-inch.
   2. Flange Width: 1-5/8 inches.
D. Single Deflection Track: Manufacturer's single, deep-leg, U-shaped steel track; unpunched, with unstiffened flanges, of web depth to contain studs while allowing free vertical movement, with flanges designed to support horizontal loads and transfer them to the primary structure, and as follows.
   1. Minimum Base-Metal Thickness: 0.0538-inch.
   2. Flange Width: 1 inch plus the design gap.
E. Double Deflection Tracks: Manufacturer's double, deep leg, U-shaped steel tracks, consisting of nested inner and outer track, unpunced, with unstiffened flanges.
   1. Out Track: Of web depth to allow free vertical movement of inner track, with flanges designedto support horizonal loads and transfer them to the primary structure, and as follows:
      a. Minimum Base-Metal Thickness: 0.0538-inch.
      b. Flange Width: 1 inch.
   2. Inner Track: Of web depth indicated and as follows:
      a. Minimum Base-Metal Thickness: 0.0538-inch.
      b. Flange Width: Dimension equal to sum of outer deflection track flange width plus 1 inch.

## 2.4 INTERIOR NON-LOAD-BEARING WALL FRAMING

A. Steel Studes: manufacturer's standard C-shaped steel studs, of web depths indicated, punchh, with stiffened flanges, and as follows:
   1. Minimum Base-Metal Thickness: 0,0538-inch.
   2. Flange Width: 1-5/8 inches.

B. Steel Track: Manufacturer's standard U-shaped steel track, of web depths indicated, unpunched, with unstiffened flanges, and as follows:
   1. Minimum Base-Metal Thickness: Matching steel studs.
   2. Flange Width: 1-1/4 inches.

C. Single Deflection Track: Manufacturer's single, deep-leg, U-shaped steel track, unpunched, with unstiffened flanges, of web depth to contain studs while allowing free vertical movement, with flanges designed to support horizontal loads and transfer them to primary structure, and as follows:
   1. Minimum Base-Metal Thickness: 0.0538-inch.
   2. Flange Width: 1 inch plus the design gap.

D. Double Deflection Track: Manufacturer's double, deep-leg, U-shaped steel tracks, consisting of nesed inner and outher tracks; unpunchhhed, with unstiffened flanges.
   1. Out Track: Of web depth to allow free vertical movement of inner track, with flanges designedto support horizonal loads and transfer them to the primary structure, and as follows:
      a. Minimum Base-Metal Thickness: 0.0538-inch.
      b. Flange Width: 1 inch plus the design gap.
   2. Inner Track: Of web depth indicated and as follows:
      a. Minimum Base-Metal Thickness: 0.0538-inch.
      b. Flange Width: Dimension equal to sum of outer deflection track flange width plus 1 inch.

## 2.5 FLOOR JOIST FRAMING

A. Steel Joists: Manufacturer's standard C-shaped steel joists, of web depth indicated, unpunched, wih stiffened flanges, and as follows:
   1. Minimum Base-Metal Thickness: 0.0677-inch.
   2. Flange Width: 2 inches minimum

B. Steel Joist Track: Manufacturer's standard U-shaped steel joist track, of web depths indicated, unpunches, wth unstiffened flanges, and as follows:
      a. Maching Matching steel joists.
      b. Flange Width: As required.

## 2.6 FRAMING ACCESSORIES

A. Fabricate steel-framing accessories from ASTM A1003, Structural Grade, Type H, metallic-coated steel sheet, of same grade, and coating designation used for framing members.

B. Provide accessories of manufacturer's standard thickness and configuration, unless otherwise indicated, as follows:
   1. Supplementary framing.
   2. Bracing, bridging, and solid blocking.
   3. Web stiffeners.
   4. Anchor clips.

5. End clips.
6. Foundaton clips
7. Gusset plates.
8. Stud kickers and knee braces.
9. Joist hangers and end closures.
10. Hole-reinforcing plates.
11. Backer plates.

## 2.7 ANCHORS, CLIPS, AND FASTENERS

A. Steel Shapes and Clip: ASTM A36, zinc coated by hot-dip process according to ASTM A123.

B. Anchor Bolts: ASTM F1554, Grade 36, threaded carbon-steel hex-headed bolts, carbon-steel nuts, and flat, hardened-steel washers: zinc coated by hot-dip proccess according to ASTM 153, Class C.

C. Post-Installed Anchors: Fastener systems with bolts of same basic metal as fastened metal, if visible, unless otherwise indicted; with working capacity greater than or equal to the design load, according to an evaluation report acceptable to authorities having jurisdiction, based on ICC-ES AC01, ICC-ES AC193, ICC-ES AC58, OR ICC-ES AC308 as appropriate for the substrate.
   1. Uses: Securing cold-formed steel framing to structure.
   2. Type: Adhesive anchor.
   3. Material for Interior Locations: Carbon-steel components zinc plated to comply with ASTM B633 OR ASTM F1941, Class Fe/Zn 5, unless otherwise indicated.

D. Power-Actuated Anchors: Fastener systems with working capacity greater than or equal to the design load, according to an evaluation report acceptable to authorities having jurisdiction, based on ICC-ES AC70.

E. Mechanical Fasteners: ASTM C1513, corrosion-resistant-coated, self-drilling, self-tapping, steel drill screwes.
   1. Head Type: Low-profile head beneath sheathing, manufacturer's standard elsewhere.

F. Welding Electrodes: Comply with AWS standards.

## 2.8 MISCELLANEOUS MATERIALS

A. Galvanizing Repair Paint; ATM A780, MIL-P-21035B, OR SSPC-Paint 20.

B. Nonmetallic, Nonshrink Grout: Factory-packaged, nonmetallic, noncorrosive, nonstaining grout, complying with ASTM C1107, and with a fluid consisteny and 30-minute working time.

C. Shims: Load-bearing, high-density, multimonomer, nonleaching plastic; or cold-formed steel of same grade and metallic coating as framing members supported by shims.

D. Sill Sealer Gasket/Termite Barrier: Minimum 68-mil nominal thickness, self-adhering sheet consisting of 64 mils of rubberized asphalt laminated on one side to a 4-mil-thick, polyethylene-film reinforcement, and with release liner on adhesive side.
   1. Physical Properites:
      a. Peel Adhesion: 17.0 pounds per inch of width when tested in accordance with ASTM D412.
      b. Low-Temperature Flexibility: Pass at minus 25 degrees F when tested in accordance with ASTM D146.
      c. Water Vapor Permeance: 0.05 permeance maximum when tested in accordance with ASTM E96, Method B.

PACKET 7.270 September 12, 2023
PACKET 11.272 November 14, 2023

d. Resistance to Termite Penetration: Comply with ICC-ES AC380.

2.9 FABRICATION

A. Fabricate cold-formed steel framing and accessories plumb, square, and true to line, and with connections securely fastened, according to referenced AISI's specifications and standards, manufacturer's written instructions, and requirements in this Section,
   1. Fabricate framing assemblies using jigs or templates.
   2. Cut framing members by sawing or shearing; do not torch out.
   3. Fasten cold-formed steel framing members by welding, screw fastening, clinch fastening, pneumatic pin fastening, or riveting as standard with fabricator. Wire tying of framing members is not permitted.
      a. Comply with AW D1.3 requirements and procedures for welding, appearance and qualty of welds, and methods used in correcting welding work.
      b. Locate mechanical fasteners and install according to Shop Drawings, with screws penetrating jointed members by no fewer than three exposed screw threads.
   4. Fasten other materials to cold-formed steel framing by welding, bolting, pneumatic pin fastening, or screw fastening according to Shop Drawings.

B. Reinforce, stiffen, and brace framing assemblies to withstand handling, delivery, and erection stresses. Lift fabricated assemblies by means that prevent damage or permanent distortion.

C. Tolerances: Fabricte assemblies level ,plumb, and true to line at a maximum allowable variation of 1/8-inch in 10 feet and as follows:
   1. Spacing: Space individual framing members no more than plus or minus 1/8-inch from plan location. Cumulative errors are not to exceed minimum fastening requiremens of sheathing or other finishing materials.
   2. Squareness: Fabricate each cold-formed steel framing assembly to a maximum out-of-square tolerance of 1/8-inch.

**PART 3 - EXECUTION**

3.1 EXAMINATION

A. Examine substrates, areas, conditions and butting structural framing for compliance with requirements for installation tolerances and other conditions affecting performance of Work.

B. Proceed with installation onlty after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Install load-bearing shims or grout between the underside of load-bearing wall bottom track and the top of foundation wall or slab at locations with a gap larger than 1/4-inch to ensure a uniform bearing surface on supporting concrete or masonry construction.

B. Install sill sealer gasket/termite barrier in accordance with manufacturer's written instructions at the underside of wall bottom track or rim track and at the top of foundation wall or slab at stud or joist locations.

## 3.3 INSTALLATION, GENERAL

A. Cold-formed steel framing may be shop or field fabricated for installation or it may be field assembled.

B. Install cold-formed steel framing according to AISI200, AISI S202, and manufacturer's written instructions unless more stringent requirements are indicated.

C. Install shop- or field-fabricted, cold-formed framing and securely anchor to supporting structure.
   1. Screw bolt, or weld wall panels at horizontal and vertical junctures to produce flush, even, true-to-line joints with maximum variation in plane and true position between fabricated panels not exceeding 1/16-inch.

D. Install cold-fired steel framing and accessories plumb, square, and true-to-line, and with connections securely fastened.
   1. Cut framing members by sawing or shearing; do not torch cut.
   2. Fasten, cold-formed steel framing members by welding, screw fastening, clinch fastening, or riveting. Wire tying of framing members is not permitted.
      a. Comply with AWS D1.3 requirements and procedures for welding, appearance and quality of welds, and methods used in correcting welding Work.
      b. Locate mechanical fastener, install according to Shop Drawings, and comply with requirements for spacing, edge distances, and screw penetration.

E. Install temporary bracing and supports to secure framing and support loads equal to those for which structure was designed. Maintain braces and supports in place, undisturbed, until entire integrated supporting structure has been completed and permanent connections to framing are secured.

F. Install insulation specified in Section 07 21 00 "Thermal Insulation," in framing-assembly members, such as headers, sills, boxed joists, and multiple studs at openings, that are inaccessible on completion of framing work

G. Fasten hole-reinforcing plate over web penetrations that exceed size of manufacturer's approved or standard punched openings.

## 3.4 INSTALLATION OF LOAD-BEARING WALL FRAMING

A. Install continuous top and bottom tracks sized to match studs. Align tracks accurately and securely anchor at corners and ends and at spacings as follows:
   1. Anchor Spacing: As shown on Shop Drawings.

B. Squarely seat studs against top and bottom tracks with gap not exceeding 1/8-inch between the end of wall-framing member and the web of track.
   1. Fasten both flanges of studs to top and bottom tracks.
   2. Space studs as follows:
      a. Stud Spacing: 16 inches.

C. Set studs plumb, except as needed for diagonal bracing or required for nonplumb walls or warped surfaces and similar configurations.

D. Align studs vertically where floor framing interrupts wall-framing continuity. Where studs cannot be aligned, continuously reinforce track to transfer loads.

E. Align floor and roof framing over studs according to AISI S200, Section C1. Where framing cannot be aligned, continuously reinforce track to transfer loads.

F. Anchor studs abutting structural columns or walls, including masonry walls, to supporting structure.

PACKET 7.272 September 12, 2023
PACKET 11.274 November 14, 2023

G. Install headers over wall openings wider than stud spacing. Locate headers above openings. Fabricate headers of compound shapes indicated or required to transfer load to supporting studs, complete with clip-angle connectors, web stiffeners, or gusset plates.
   1. Frame wall openings with not less than a double stud at each jamb of frame. Fasten jamb members together to uniformly distribute loads.
   2. Install tracks and jack studs above and below wall openings. Anchor tracks to jamb studs with clip angles or by welding, and space jack studs same as full-height wall studs.

H. Install supplementary framing, blocking, and bracing in stud framing indicted to support fixtures, equipment, services, casework, heavy trim, furnishings, and similar work requiring attachment to framing.
   1. If type of supplementary support is not indicated comply with stud manufacturer's written recommendations and industry standards in each case considering weight or load resulting from item supported.

I. Install horizontal bridging in stud system, spaced vertically 48 inches. Fasten at each stud intersection.
   1. Channel Bridging: Cold-rolled steel channel, welded or mechanically fastened to webs of punched studs with a minimum of two screws into each flange of the clip angle for framing members up to 6 inches deep.
   2. Strap Bridging: Combination of flat, taut, steel sheet straps of width and thickness indicated and stud-track solid blocking of width and thickness to match studs. Fasten flat straps to stud flanges and secure solid blocking to stud webs or flanges.
   3. Bar Bridging: Proprietary bridging bars installed according to manufacturer's written instructions.

J. Install miscellaneous framing and connections, including supplementary framing, web stiffeners, clip angles, continuous angles, anchors, and fasteners to provide a complete and stable wall-framing system.

## 3.5 INSTALLATION OF EXTERIOR NON-LOAD BEARING WALL FRAMING

A. Install continuous tracks sized to match studs. Align tracks accurately and securely anchor to supporting structure.

B. Fasten both flanges of studs to top and bottom tracks unless otherwise indicated. Space studs as follows:
   1. Stud Spacing: 16 inches.

C. Set studs plumb except as needed for diagonal bracing or required for non-plumb walls or warped surfaces and similar requirements.

D. Isolate non-load-bearing steel framing from building structure to prevent transfer to vertical loads while providing lateral support.
   1. Install single deep-leg deflection tracks and anchor to building structure.
   2. Install double deep-leg deflection tracks and anchor out track to building structure.

E. Install horizontal bridging in wall studs, spaced vertically in rows indicated on Shop Drawings but no more than 48 inches apart. Fasten at each stud intersection.
   1. Channel Bridging: Cold-rolled steel channel, welded or mechanically fastened, to webs of punched studs.
   2. Strap Bridging: Combination of flat, taut, steel sheet straps of width and thickness indicated and stud-track solid blocking of width and thickness to match studs. Fasten flat straps to stud flanges and secure solid blocking to stud webs or flanges.
   3. Bar Bridging: Proprietary bridging bars installed according to manufacturer's written instructions.

F. Top Bridging for Single Deflection Track: Install row of horizontal bridging within 12 inches of single deflection track. Install a combination of bridging and stud or stud-track solid blocking of width and thickness matching studs, secured to stud webs or flanges.
   1. Install solid bocking at 96-inch centers.
G. Install miscellaneous framing and connections, including stud kickers, web stiffeners, clip angles, continuous angles, anchors, and fasteners to provide a complete and stable wall-framing system.

## 3.6 INSTALLATION OF INTERIOR NON-LOAD BEARING WALL FRAMING

A. Install continuous tracks sized to match studs. Align tracks accurately and securely anchor to supporting structure.
B. Fasten both flanges of studs to top and bottom tracks unless otherwise indicated. Space studs as follows:
   1. Stud Spacing: 16 inches.
C. Set studs plumb, except as needed for diagonal bracing or required for non-plumb walls or warped surfaces and similar requirements.
D. Isolate non-load bearing steel framing from building structure to prevent transfer of vertical loads while providing lateral support.
   1. Install single deep-leg deflection tracks and anchor to building structure.
   2. Install double deep-leg deflection tracks and anchor outer track to buiding structure.
E. Install horizontal bridging in wall studs, spaced vertically in rows indicaed on Shop Drawings but not more than 48 inches apart. Fasten at each stud intersection.
   1. Channel Bridging: Cold-rolled steel channel, welded or mechanically fastened, to webs of punched studs.
   2. Strap Bridging: Combination of flat, taut, steel sheet straps of width and thickness indicated and stud-track solid blocking of width and thickness to match studs. Fasten flat straps to stud flanges and secure solid blocking to stud webs or flanges.
   3. Bar Bridging: Proprietary bridging bars installed according to manufacturer's written instructions.
F. Top Bridging for Single Deflection Track: Install row of horizontal bridging within 12 inches of single deflection track. Install a combination of bridging and stud or stud-track solid blocking of width and thickness matching studs, secured to stud webs or flanges.
   1. Install solid blocking at 96-inch centers.
G. Install miscellaneous framing and connections, including stud kickers, web stiffeners, clip angles, continuous angles, anchors, and fasteners to provide a complete and stable wall-framing system.

## 3.7 INSTALLATION OF JOIST FRAMING

A. Install continuous tracks sized to match studs. Align tracks accurately and securely anchor to supporting structure.
B. Fasten both flanges of studs to top and bottom tracks unless otherwise indicated. Space studs as follows:
   1. Stud Spacing: 16 inches.
C. Set studs plumb except as needed for diagonal bracing or required for non-plumb walls or warped surfaces and similar requirements.
D. Isolate non-load-bearing steel framing from building structure to prevent transfer to vertical loads while providing lateral support.
   1. Install single deep-leg deflection tracks and anchor to building structure.

2. Install double deep-leg deflection tracks and anchor out track to building structure.

E. Install horizontal bridging in wall studs, spaced vertically in rows indicated on Shop Drawings but no more than 48 inches apart. Fasten at each stud intersection.
   1. Channel Bridging: Cold-rolled steel channel, welded or mechanically fastened, to webs of punched studs.
   2. Strap Bridging: Combination of flat, taut, steel sheet straps of width and thickness indicated and stud-track solid blocking of width and thickness to match studs. Fasten flat straps to stud flanges and secure solid blocking to stud webs or flanges.
   3. Bar Bridging: Proprietary bridging bars installed according to manufacturer's written instructions.

F. Top Bridging for Single Deflection Track: Install row of horizontal bridging within 12 inches of single deflection track. Install a combination of bridging and stud or stud-track solid blocking of width and thickness matching studs, secured to stud webs or flanges.
   1. Install solid bocking at 96-inch centers.

G. Install miscellaneous framing and connections, including stud kickers, web stiffeners, clip angles, continuous angles, anchors, and fasteners to provide a complete and stable wall-framing system.

## 3.8 INSTALLATION OF INTERIOR NON-LOAD BEARING WALL FRAMING

A. Install perimeter joist track sized to match joists. Align and securely anchor or fasten track to supporting structure at corners, ends, and spacing indicated on Shop Drawings.

B. Install joists bearing on supporting frame, level, straight, and plumb; adjust to final position, brace, and reinforce. Fasten joists to both flanges of joist track.
   1. Install joists over supporting frame with a minimm end bearing of 1-1/2 inches.
   2. reinforce ends and bearing oints of joists with web stiffeners, end clips, joist hangers, steel clip angles, or steel-stud sections.

C. Space joists not more than 2 inches from abutting walls and as follows:
   1. Joist Spacing: 24 inches.

D. Frame openings with built-up joist headers, consisting of jost and joist track or anothr combinaton of connected joists if indicated.

E. Install joist reinforcement at interior supports with single, short length of joist secction located directly over interior support, with lapped joists of equal length to joist reinforcement.
   1. Install web stiffeners to transfer axial loads of walls above.

F. Install bridging intervals indicaed on Shop Drawings.. Fasten at each joist intersection as follows:
   1. Joist-Track Bridging: Joist-track solid bocking of width and thickness indicated, secured to joist webs.
   2. Combination Bridging: Combination of flat, taut, steel sheet straps of width and thickness indicated and joist-track solid blocking of width and thickness indicated. Fasten flat straps to bottom flange and secure solid blocking to joist webs.

G. Secure joists to load-bearing interior walls to prevent lateral movement of bottom flange.

H. Install miscellaneous joist framing and connections, including web stiffeners, closure pieces, clip angles, continuous angles, hold-down angles, anchors, and fasteners to provide a complete and stable joist-framing assembly.

3.9 INSTALLATION TOLERANCES

A. Install cold-formed steel framing level plumb and true-to-line to a maximum allowable tolerance variation of 1/8-inch in 10 feet and as follows:
   1. Space individual framing members no more than plus or minus 1/8-inch from plan location. Cumulative errors are not to exceed minimum fastening requirements of sheathing or other finishing materials.

3.10 REPAIR

A. Galvanizing Repairs: Prepare and repair damaged galvanized coatings on fabricated and installed cold-formed steel framing with galvanized repair paint according to ASTM A780 and manufacturer's written instructions.

3.11 FIELD QUALITY CONTROL

A. Testing: Owner will engage a qualified independent testing and inspecting agency to perform field tests and inspectons and prpare test reports.
B. Field and shop welds will be subject to testing and inspecting.
C. Testing ageny will report test results promptly and in writing to Contractor and Architect.
D. Cold-formed steel framing will be considered defective if it does not pass tests and inspections.
E. Additional testing and inspecting, at Contractor's expense, will be performed tto determine compliance of replaced or additional work with specified requirements.

3.12 PROTECTION

A. Provide final protection and maintain conditions, in a manner acceptale to manufacturer and Installer, that ensure that cold-formed steel framing is without damage or deterioration at time of Substantial Completion.

END OF SECTION

## SECTION 06 16 13 – INSULATING SHEATHING (ZIP SYSTEM R SHEATHING)

### PART 1 - GENERAL

1.1 SUMMARY

A. Section includes insulating wall sheathing with integral water-resistive barrier and air barrier.
B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.

1.2 REFERENCES

A. American Society of Mechanical Engineers (ASME): www.asme.org.

8. ICC-ES ESR-1539 - Power Driven Staples and Nails for Use in Engineered and Non-Engineered Connections.
9. ICC-ES NER-272 - Power Driven Staples and Nails for Use in All Types of Building Construction.

F. Sustainable Forestry Initiative (SFI): www.sfiprogram.org/
1. SFI 2010 - 2014 Standard.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of sheathing product specified.

1.4 INFORMATIONAL SUBMITTALS

A. Evaluation Reports: From ICC-ES, for wood sheathing and seam tape.
B. Product Certifications: From manufacturer, indicating that sheathing products comply with ICC-ES AC269 and ICC-ES AC310.

1.5 QUALITY ASSURANCE

A. Manufacturer Qualifications: Provide wood products from manufacturer certified by SFI, FSC, or comparable sustainable forestry program acceptable to Engineer.
B. Provide wall sheathing products meeting requirements for water-resistive barrier in accordance with ICC-ES AC310.
C. Provide wall sheathing products meeting requirements of ICC-ES AC269.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Comply with manufacturer's written instructions for protection of sheathing products from weather prior to installation.

1.7 WARRANTY

A. Special Manufacturer's Warranty: Manufacturer's standard form in which sheathing manufacturer agrees to repair or replace sheathing products that demonstrate deterioration or failure under normal use due to manufacturing defects within warranty period specified, when installed according to manufacturer's instructions.
1. Warranty Period for Sheathing Products: Thirty years following date of Substantial Completion.
2. Warranty Conditions: Special warranties exclude deterioration or failure due to structural movement resulting in stresses on sheathing products exceeding manufacturer's written specifications, or due to air or moisture infiltration resulting from cladding failure or mechanical damage.

## PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Basis-of-Design Product: Provide sheathing products manufactured by Huber Engineered Woods LLC, Charlotte NC; Phone: 800.933.9220; Website: www.zipsystem.com.

2.2 PERFORMANCE REQUIREMENTS

A. Air-Barrier Assembly Air Leakage: Less than 0.04 cubic feet per minute per square foot at 1.57 pound force per square foot, per ASTM E2375.
B. Water-Vapor Permeance, Facer: Minimum 12 perms, ASTM E96.
C. Weather Exposure: Manufacturer warranty applies for maximum allowable exposure period of 180 days.

2.3 MATERIALS

A. Oriented Strand Board: DOC PS 2, made with binder containing no added urea formaldehyde.
B. Rigid Foam Plastic Insulating Board: Rigid polyisocyanurate foam core complying with ASTM C1289 Type II, Class 2, and ICC-ES AC12, with coated glass fiber facers on both sides, with the following characteristics:
   1. Nominal Density: Two pounds per cubic foot.
   2. Compressive Strength, ASTM D1621: Not less than 20 psi.
   3. Vapor Permeance, ASTM E96: Less than 1.0 perm.
   4. Edge Configuration: Square finished.

2.4 COMPOSITE INSULATING WALL SHEATHING

A. Composite Insulating Wall Sheathing: Oriented-strand-board Exposure one sheathing 7/16-inch thick, with factory-laminated water-resistive barrier exterior facer, and with rigid foam plastic insulating board laminated to interior face.
   1. Basis-of-Design Product: Provide Huber Engineered Woods LLC; ZIP System R Sheathing.
   2. Span Rating and Performance Category of Sheathing Layer: Not less than 24/16; 7/16 Performance Category.
   3. Thickness: One inch.
   4. Thermal Resistivity (R Value): 6.6 degrees F by h by square foot/BTU by inches at 75 degrees F.
   5. Edge Profile: Square edge.
   6. Exterior Facer: Medium-density, phenolic-impregnated polymer-modified sheet material meeting requirements for ASTM D779 Grade D weather-resistive barrier in accordance with ICC AC38 and AC310, with fastener spacing symbols on exterior facer for 16-inch and 24-inch on center spacing, with the following characteristics
      a. Water Resistance of Coatings, ASTM D2247: Pass 14 day exposure test.
      b. Moisture Vapor Transmission, ASTM E96: Not less than 12 perms.
      c. Water Penetration, ASTM E331: Pass at 2.86 pound force per square foot.
      d. Wind Driven Rain, TAS-100: Pass.
      e. Accelerated Weathering, ASTM G154: Pass.

PACKET 7.279 September 12, 2023
PACKET 11.281 November 14, 2023

2.5 FASTENERS

A. Fasteners, General: Size and type complying with manufacturer's written instructions for Project conditions and requirements of authorities having jurisdiction.
   1. Corrosion Resistance: Hot-dip zinc coating, ASTM A153.
B. Nails, Brads, and Staples: ICC AC116 and ICC AC201.

C. Power-Driven Fasteners: ICC-ES-1539 or NER-272.
D. Wood Screws: ASME B18.6.1.

2.6 SHEATHING JOINT-AND-PENETRATION TREATMENT MATERIAL

A. Self-Adhering Seam and Flashing Tape: Pressure-sensitive, self-adhering, cold-applied, seam tape consisting of polyolefin film with acrylic adhesive, meeting ICC AC148.
   1. Basis-of-Design Product: Provide Huber Engineered Woods; ZIP System Tape.
   2. Thickness: 0.012-inch

**PART 3 - EXECUTION**

3.1 EXAMINATION

A. Examine framing spacing and alignment to determine if Work is ready to receive sheathing. Proceed with sheathing Work once conditions meet requirements.

3.2 SHEATHING INSTALLATION

A. Install sheathing panels in accordance with manufacturer's written instructions, requirements of applicable Evaluation Reports, and requirements of authorities having jurisdiction.
B. Air and Moisture Barrier: Coordinate sheathing installation with flashing and joint sealant installation and with adjacent building air and moisture barrier components to provide complete, continuous air- and moisture- barrier.
C. Do not bridge expansion joints; allow joint spacing equal to spacing of structural supports.
D. Install panels with laminated facer to exterior. Stagger end joints of adjacent panel runs.
   1. ICC-ES ESR-1539 OR ICC-NES NER-272 for power-drive fasteners.
   2. IBC: Table 2304.9.1 Fastening Schedule.
E. Apply seam tape at all panel seams, penetrations, and facer defects or cracks to form continuous weathertight surface. Apply tape according to manufacturer's written instructions and requirements of ICC-ES applicable to tape application.

END OF SECTION

# SECTION 06 41 16 - PLASTIC-LAMINATE-CLAD ARCHITECTURAL CABINETS

## PART 1 - GENERAL

### 1.1 SUMMARY

A. Section Includes:
   1. Plastic-laminate-clad architectural cabinets.

B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.
   2. Section 08 71 00 "Door Hardware."
   3. Section 08 80 00 "Glazing."

### 1.2 COORDINATION

A. Hardware Coordination: Distribute copies of approved hardware schedule specified in Section 08 71 00 "Door Hardware" to manufacturer of architectural cabinets; coordinate Shop Drawings and fabrication with hardware requirements.

### 1.3 ACTION SUBMITTALS

A. Shop Drawings:
   1. Include Plans, elevations, Sections, and attachment details.
   2. Show locations and sizes of furring, blocking, and hanging strips if used, including concealed blocking and reinforcement specified in other Sections.
   3. Show locations and sizes of cutouts and holes for items installed in plastic-laminate architectural cabinets.

B. Samples for Verification: For the following:
   1. Plastic Laminates: In largest size available by manufacturer for each type, color, pattern, and surface finish required.

### 1.4 DELIVERY, STORAGE, AND HANDLING

A. Do not deliver cabinets until painting and similar finish operations that might damage architectural cabinets have been completed in installation areas. Store cabinets in installation areas or in areas where environmental conditions comply with requirements specified in "Field Conditions" Article.

1.5 FIELD CONDITIONS

A. Environmental Limitations: Do not deliver or install cabinets until building is enclosed, wet-work is complete, and HVAC system is operating and maintaining temperature between 60 and 90 degrees F and relative humidity between 25 and 55 percent during the remainder of the construction period.

B. Field Measurements: Where cabinets are indicated to fit to other construction, verify dimensions of other construction by field measurements before fabrication, and indicate measurements on Shop Drawings. Coordinate fabrication schedule with construction progress to avoid delaying the Work.

1. Locate concealed framing, blocking, and reinforcements that support cabinets by field measurements before being enclosed/concealed by construction, and indicate measurements on Shop Drawings.

## PART 2 - PRODUCTS

2.1 PLASTIC-LAMINATE-CLAD ARCHITECTURAL CABINETS

A. Quality Standard: Unless otherwise indicated, comply with the Engineerural Woodwork Standards for grades of cabinets indicated for construction, finishes, installation, and other requirements.

2.2 CABINET HARDWARE AND ACCESSORIES

A. General: Provide cabinet hardware and accessory materials associated with architectural cabinets except for items specified in Section 08 71 00 "Door Hardware."

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   a. Accuride International.
   b. Blum, Julius & Co., Inc.
   c. CompX International, Inc.
   d. Grass America Inc.
   e. Hettich America L.P.
   f. Knape & Vogt Manufacturing Company.

B. Frameless Concealed Hinges (European Type): ANSI/BHMA A156.9, B01602, 100 degrees of opening, self-closing.

C. Back-Mounted Pulls: ANSI/BHMA A156.9, B02011.

D. Wire Pulls: Back mounted, solid metal, 5 inches long, 2-1/2 inches deep, and 5/16-inch in diameter.

E. Adjustable Shelf Standards and Supports: ANSI/BHMA A156.9, B04071; with shelf rests, B04081.

F. Shelf Rests: ANSI/BHMA A156.9, B04013; plastic two-pin plastic with shelf hold-down clip.

G. Drawer Slides: ANSI/BHMA A156.9.
   1. Grade 1 and Grade 2: Side mounted and extending under bottom edge of drawer.
      a. Type: Partial extension.
      b. Material: Zinc-plated steel with polymer rollers.
   2. For drawers more than 6 inches high or more than 24 inches wide, provide Grade 1HD-200.

H. Door and Drawer Silencers: ANSI/BHMA A156.16, L03011.

I. Exposed Hardware Finishes: For exposed hardware, provide finish that complies with ANSI/BHMA A156.18 for ANSI/BHMA finish number indicated.
   1. Matte Black: US19; ANSI/BHMA 622 for brass or bronze base.

J. For concealed hardware, provide manufacturer's standard finish that complies with product class requirements in ANSI/BHMA A156.9.

2.3 FABRICATION

A. Fabricate architectural cabinets to dimensions, profiles, and details indicated.

B. Complete fabrication, including assembly and hardware application, to maximum extent possible before shipment to Project Site. Disassemble components only as necessary for shipment and installation. Where necessary for fitting at Site, provide ample allowance for scribing, trimming, and fitting.
   1. Notify Engineer 7 days in advance of the dates and times architectural cabinet fabrication will be complete.
   2. Trial fit assemblies at manufacturer's shop that cannot be shipped completely assembled. Install dowels, screws, bolted connectors, and other fastening devices that can be removed after trial fitting. Verify that various parts fit as intended and check measurements of assemblies against field measurements before disassembling for shipment.

C. Shop-cut openings to maximum extent possible to receive hardware, appliances, electrical work, and similar items. Locate openings accurately and use templates or roughing-in diagrams to produce accurately sized and shaped openings. Sand edges of cutouts to remove splinters and burrs.

D. Install glass to comply with applicable requirements in Section 08 80 00 "Glazing" and in GANA's "Glazing Manual."
   1. For glass in frames, secure glass with removable stops.
   2. For exposed glass edges, polish and grind smooth.

**PART 3 - EXECUTION**

3.1 PREPARATION

A. Before installation, condition cabinets to humidity conditions in installation areas for not less than 72 hours.

3.2 INSTALLATION

A. Assemble cabinets and complete fabrication at Project Site to extent that it was not completed in the shop.

B. Anchor cabinets to anchors or blocking built in or directly attached to substrates. Secure with wafer-head cabinet installation screws.

PACKET 7.283 September 12, 2023
PACKET 11.285 November 14, 2023

C. Install cabinets level, plumb, and true in line to a tolerance of 1/8-inch in 96 inches using concealed shims.
   1. Scribe and cut cabinets to fit adjoining Work, refinish cut surfaces, and repair damaged finish at cuts.
   2. Install cabinets without distortion so doors and drawers fit openings and are accurately aligned. Adjust hardware to center doors and drawers in openings and to provide unencumbered operation. Complete installation of hardware and accessory items as indicated.

## 3.3 ADJUSTING AND CLEANING

A. Repair damaged and defective cabinets, where possible, to eliminate functional and visual defects. Where not possible to repair, replace architectural cabinets. Adjust joinery for uniform appearance.
B. Clean, lubricate, and adjust hardware.
C. Clean cabinets on exposed and semi-exposed surfaces.

END OF SECTION

PACKET 7.284 September 12, 2023
PACKET 11.286 November 14, 2023

# SECTION 06 64 00 - PLASTIC PANELING

## PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Plastic sheet paneling.
B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.

1.2 PROJECT CONDITIONS

A. Environmental Limitations: Do not deliver or install plastic paneling until spaces are enclosed and weathertight and temporary HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.

## PART 2 - PRODUCTS

2.1 SOURCE LIMITATIONS

A. Obtain plastic paneling and trim accessories from single manufacturer.

2.2 PLASTIC SHEET PANELING

A. Glass-Fiber-Reinforced Plastic Paneling: Gelcoat-finished, glass-fiber-reinforced plastic panels complying with ASTM D5319.
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Crane Composites, Inc.
      b. Glasteel.
      c. Marlite.
      d. Nudo Products, Inc.
B. Plastic Sheet Paneling Type-A (FRP1): Basis of Design product is Standard FRP manufactured by Marlite, Inc., Arlington, Texas.
   1. Surface-Burning Characteristics: As follows when tested by a qualified testing agency in accordance with ASTM E84. Identify products with appropriate markings of applicable testing agency.
      a. Flame-Spread Index: 200 or less.
      b. Smoke-Developed Index: 450 or less.
   2. Nominal Thickness: Not less than 0.09-inch.
   3. Surface Finish: Molded pebble texture.
   4. Color: Medium Gray P 430N.

C. Plastic Sheet Paneling Type-B (FRP2): Basis of Design product is Symetrix SmartSeam FRP Panels manufactured by Marlite, Inc., Arlington, Texas.
   1. Surface-Burning Characteristics: As follows when tested by a qualified testing agency in accordance with ASTM E84. Identify products with appropriate markings of applicable testing agency.
      a. Flame-Spread Index: 200 or less.
      b. Smoke-Developed Index: 450 or less.
   2. Nominal Thickness: Not less than 0.09-inch.
   3. Surface Configuration: Subway Vertical 3 inch by 6 inch tile configuration.
   4. Surface Finish: Satin.
   5. Color: Black with White Grout Lines, SS105-G63.

2.3 ACCESSORIES

A. Trim Accessories: Manufacturer's standard one-piece vinyl extrusions designed to retain and cover edges of panels. Provide division bars, inside corners, and caps as needed to conceal edges.
   1. Color: Match panels.
B. Adhesive: As recommended by plastic paneling manufacturer.
C. Sealant: Mildew-resistant, single-component, neutral-curing silicone sealant recommended by plastic paneling manufacturer.
   1. Sealant shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers." The building concentration of formaldehyde shall not exceed half of the indoor recommended exposure limit, or 33 micrograms per cubic meter, and that of acetaldehyde shall not exceed 9 micrograms per cubic meter.

**PART 3 - EXECUTION**

3.1 EXAMINATION

A. Examine substrates and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Remove wallpaper, vinyl wall covering, loose or soluble paint, and other materials that might interfere with adhesive bond.
B. Prepare substrate by sanding high spots and filling low spots as needed to provide flat, even surface for panel installation.
C. Clean substrates of substances that could impair adhesive bond including oil, grease, dirt, and dust.
D. Condition panels by unpacking and placing in installation space before installation according to manufacturer's written recommendations.

E. Lay out paneling before installing. Locate panel joints to provide equal panels at ends of walls not less than half the width of full panels.
   1. Mark plumb lines on substrate at panel joint locations for accurate installation.
   2. Locate trim accessories or panel joints to allow clearance at panel edges according to manufacturer's written instructions.

3.3 INSTALLATION

A. Install plastic paneling according to manufacturer's written instructions.
B. Install panels in a full spread of adhesive.
C. Install trim accessories with adhesive. Do not fasten through panels.
D. Fill grooves in trim accessories with sealant before installing panels, and bed inside corner trim in a bead of sealant.
E. Maintain uniform space between panels and wall fixtures. Fill space with sealant.
F. Remove excess sealant and smears as paneling is installed. Clean with solvent recommended by sealant manufacturer and then wipe with clean dry cloths until no residue remains.

END OF SECTION

# SECTION 07 21 00 - THERMAL INSULATION

## PART 1 - GENERAL

### 1.1 SUMMARY

A. Section Includes:
   1. Glass-fiber blanket insulation.

B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.
   2. Section 06 16 13 "Insulating Sheathing" for foam-plastic board sheathing installed directly over wood or steel framing.
   3. Section 09 29 00 "Gypsum Board" for sound attenuation blanket used as acoustic insulation.
   4. Section 13 34 19 "Metal Building Systems" for glass-fiber blanket insulation installed within metal building system.

### 1.2 ACTION SUBMITTALS

A. Product Data: For the following:
   1. Glass-fiber blanket insulation.

### 1.3 INFORMATIONAL SUBMITTALS

A. Installer's Certification: Listing type, manufacturer, and R-value of insulation installed in each element of the building thermal envelope.
   1. Sign, date, and post the certification in a conspicuous location on Project Site.

B. Product Test Reports: For each product, for tests performed by a qualified testing agency.

C. Research Reports: For foam-plastic insulation, from ICC-ES.

### 1.4 DELIVERY, STORAGE, AND HANDLING

A. Protect insulation materials from physical damage and from deterioration due to moisture, soiling, and other sources. Store inside and in a dry location. Comply with manufacturer's written instructions for handling, storing, and protecting during installation.

## PART 2 - PRODUCTS

### 2.1 GLASS-FIBER BLANKET INSULATION

A. Glass-Fiber Blanket Insulation, Polypropylene-Scrim-Kraft Faced: ASTM C665, Type II (nonreflective faced), Class A (faced surface with a flame-spread index of 25 or less); Category 1 (membrane is a vapor barrier).
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. CertainTeed Corporation.
      b. CertainTeed Insulation.
      c. Johns Manville; a Berkshire Hathaway company.
      d. Knauf Insulation.

e. Owens Corning.

2. Labeling: Provide identification of mark indicating R-value of each piece of insulation 12 inches and wider in width.

2.2 ACCESSORIES

A. Insulation for Miscellaneous Voids:

1. Glass-Fiber Insulation: ASTM C764, Type II, loose fill; with maximum flame-spread and smoke-developed indexes of five, per ASTM E84.

**PART 3 - EXECUTION**

3.1 PREPARATION

A. Clean substrates of substances that are harmful to insulation, including removing projections capable of puncturing insulation or vapor retarders, or that interfere with insulation attachment.

3.2 INSTALLATION, GENERAL

A. Comply with insulation manufacturer's written instructions applicable to products and applications.

B. Install insulation that is undamaged, dry, and unsoiled and that has not been left exposed to ice, rain, or snow at any time.

C. Install insulation with manufacturer's R-value label exposed after insulation is installed.

D. Extend insulation to envelop entire area to be insulated. Fit tightly around obstructions and fill voids with insulation. Remove projections that interfere with placement.

E. Provide sizes to fit applications and selected from manufacturer's standard thicknesses, widths, and lengths. Apply single layer of insulation units unless multiple layers are otherwise shown or required to make up total thickness or to achieve R-value.

3.3 INSTALLATION OF INSULATION IN FRAMED CONSTRUCTION

A. Blanket Insulation: Install in cavities formed by framing members according to the following requirements:

1. Use insulation widths and lengths that fill the cavities formed by framing members. If more than one length is required to fill the cavities, provide lengths that will produce a snug fit between ends.

2. Place insulation in cavities formed by framing members to produce a friction fit between edges of insulation and adjoining framing members.

3. Maintain 3-inch clearance of insulation around recessed lighting fixtures not rated for or protected from contact with insulation.

4. For metal-framed wall cavities where cavity heights exceed 96 inches, support unfaced blankets mechanically and support faced blankets by taping flanges of insulation to flanges of metal studs.

5. Vapor-Retarder-Faced Blankets: Tape joints and ruptures in vapor-retarder facings, and seal each continuous area of insulation to ensure airtight installation.

a. Exterior Walls: Set units with facing placed toward exterior of construction.

b. Interior Walls: Set units with facing placed toward areas of high humidity.

B. Miscellaneous Voids: Install insulation in miscellaneous voids and cavity spaces where required to prevent gaps in insulation using the following materials:
   1. Glass-Fiber Insulation: Compact to approximately 40 percent of normal maximum volume equaling a density of approximately 2.5 pounds per cubic feet.

3.4 PROTECTION

A. Protect installed insulation from damage due to harmful weather exposures, physical abuse, and other causes.
B. Provide temporary coverings or enclosures where insulation is subject to abuse and cannot be concealed and protected by permanent construction immediately after installation.

END OF SECTION

# SECTION 07 62 00 - SHEET METAL FLASHING AND TRIM

## PART 1 - GENERAL

### 1.1 SUMMARY

A. Section Includes:
   1. Formed wall sheet metal fabrications.

B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.
   2. Section 13 34 19 "Metal Building Systems" for sheet metal flashing and trim integral with metal wall panels.

### 1.2 COORDINATION

A. Coordinate sheet metal flashing and trim layout and seams with sizes and locations of penetrations to be flashed, and joints and seams in adjacent materials.

B. Coordinate sheet metal flashing and trim installation with adjoining roofing and wall materials, joints, and seams to provide leakproof, secure, and noncorrosive installation.

### 1.3 ACTION SUBMITTALS

A. Product Data: For each of the following:
   1. Underlayment materials.
   2. Elastomeric sealant.
   3. Butyl sealant.

### 1.4 CLOSEOUT SUBMITTALS

A. Special warranty.

### 1.5 DELIVERY, STORAGE, AND HANDLING

A. Do not store sheet metal flashing and trim materials in contact with other materials that might cause staining, denting, or other surface damage.
   1. Store sheet metal flashing and trim materials away from uncured concrete and masonry.
   2. Protect stored sheet metal flashing and trim from contact with water.

B. Protect strippable protective covering on sheet metal flashing and trim from exposure to sunlight and high humidity, except to extent necessary for period of sheet metal flashing and trim installation.

## PART 2 - PRODUCTS

### 2.1 PERFORMANCE REQUIREMENTS

A. Sheet metal flashing and trim assemblies, including cleats, anchors, and fasteners, shall withstand wind loads, structural movement, thermally induced movement, and exposure to weather without failure due to defective manufacture, fabrication, installation, or other defects in construction. Completed sheet metal flashing and trim shall not rattle, leak, or loosen, and shall remain watertight.

B. Sheet Metal Standard for Flashing and Trim: Comply with SMACNA's "Engineerural Sheet Metal Manual" requirements for dimensions and profiles shown unless more stringent requirements are indicated.

C. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes to prevent buckling, opening of joints, overstressing of components, failure of joint sealants, failure of connections, and other detrimental effects. Base calculations on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.

### 2.2 SHEET METALS

A. Protect mechanical and other finishes on exposed surfaces from damage by applying strippable, temporary protective film before shipping.

B. Stainless Steel Sheet: ASTM A240, Type 316, dead soft, fully annealed; with smooth, flat surface.

### 2.3 MISCELLANEOUS MATERIALS

A. Provide materials and types of fasteners, protective coatings, sealants, and other miscellaneous items as required for complete sheet metal flashing and trim installation and as recommended by manufacturer of primary sheet metal unless otherwise indicated.

B. Fasteners: Wood screws, annular threaded nails, self-tapping screws, self-locking rivets and bolts, and other suitable fasteners designed to withstand design loads and recommended by manufacturer of primary sheet metal.
   1. Fasteners for Stainless Steel Sheet: Series 300 stainless steel.

C. Bituminous Coating: Cold-applied asphalt emulsion in accordance with ASTM D1187.

### 2.4 WALL SHEET METAL FABRICATIONS

A. Through-Wall Flashing: Fabricate continuous flashings in minimum 96-inch-long, but not exceeding 12-foot-long, sections, under copings, and at shelf angles. Fabricate discontinuous lintel, sill, and similar flashings to extend 6 inches beyond each side of wall openings; and form with 2-inch-high, end dams. Fabricate from the following materials:
   1. Stainless Steel: 0.0156-inch thick.

B. Opening Flashings in Frame Construction: Fabricate head, sill, jamb, and similar flashings to extend beyond wall openings. Form head and sill flashing with 2-inch-high, end dams. Fabricate from the following materials:
   1. Stainless Steel: 0.0156-inch thick.

C. Wall Expansion-Joint Cover: Fabricate from the following materials:
   1. Stainless Steel: 0.0188-inch thick.

## PART 3 - EXECUTION

### 3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with installer present, for compliance with requirements for installation tolerances, substrate, and other conditions affecting performance of the Work.
   1. Verify compliance with requirements for installation tolerances of substrates.
   2. Verify that substrate is sound, dry, smooth, clean, sloped for drainage, and securely anchored.
   3. Verify that air- or water-resistant barriers have been installed over sheathing or backing substrate to prevent air infiltration or water penetration.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

### 3.2 INSTALLATION, GENERAL

A. Install sheet metal flashing and trim to comply with details indicated and recommendations of cited sheet metal standard that apply to installation characteristics required unless otherwise indicated on Drawings.
   1. Install fasteners, protective coatings, separators, sealants, and other miscellaneous items as required to complete sheet metal flashing and trim system.
   2. Install sheet metal flashing and trim true to line, levels, and slopes. Provide uniform, neat seams with minimum exposure of sealant.
   3. Anchor sheet metal flashing and trim and other components of the Work securely in place with provisions for thermal and structural movement.
   4. Install sheet metal flashing and trim to fit substrates and to result in watertight performance.
   5. Space individual cleats not more than 12 inches apart. Attach each cleat with at least two fasteners. Bend tabs over fasteners.
   6. Install exposed sheet metal flashing and trim with limited oil-canning, and free of buckling and tool marks.
   7. Do not field cut sheet metal flashing and trim by torch.

B. Metal Protection: Where dissimilar metals contact each other or where metal contacts pressure-treated wood or other corrosive substrates, protect against galvanic action or corrosion by painting contact surfaces with bituminous coating or by other permanent separation as recommended by sheet metal manufacturer or cited sheet metal standard.
   1. Coat concealed side of stainless steel sheet metal flashing and trim with bituminous coating where flashing and trim contact wood, ferrous metal, or cementitious construction.
   2. Underlayment: Where installing sheet metal flashing and trim directly on cementitious or wood substrates, install underlayment and cover with slip sheet.

C. Expansion Provisions: Provide for thermal expansion of exposed flashing and trim.
   1. Space movement joints at maximum of 10 feet with no joints within 24 inches of corner or intersection.
   2. Use lapped expansion joints only where indicated on Drawings.

D. Fasteners: Use fastener sizes that penetrate substrate not less than recommended by fastener manufacturer to achieve maximum pull-out resistance.

E. Conceal fasteners and expansion provisions where possible in exposed Work and locate to minimize possibility of leakage. Cover and seal fasteners and anchors as required for a tight installation.
F. Seal joints as required for watertight construction.
   1. Use sealant-filled joints unless otherwise indicated.

## 3.3 INSTALLATION OF WALL FLASHINGS

A. Install sheet metal wall flashing to intercept and exclude penetrating moisture in accordance with cited sheet metal standard unless otherwise indicated. Coordinate installation of wall flashing with installation of wall-opening components such as windows, doors, and louvers.
B. Opening Flashings in Frame Construction: Install continuous head, sill, jamb, and similar flashings to extend beyond wall openings.

## 3.4 CLEANING

A. Clean exposed metal surfaces of substances that interfere with uniform oxidation and weathering.
B. Clean off excess sealants.

## 3.5 PROTECTION

A. Remove temporary protective coverings and strippable films as sheet metal flashing and trim are installed unless otherwise indicated in manufacturer's written installation instructions.
B. On completion of sheet metal flashing and trim installation, remove unused materials and clean finished surfaces as recommended in writing by sheet metal flashing and trim manufacturer.
C. Maintain sheet metal flashing and trim in clean condition during construction.
D. Replace sheet metal flashing and trim that have been damaged or that have deteriorated beyond successful repair by finish touchup or similar minor repair procedures, as determined by Engineer.

END OF SECTION

# SECTION 08 11 13 - HOLLOW METAL DOORS AND FRAMES

## PART 1 - GENERAL

### 1.1 SUMMARY

A. Section includes hollow-metal Work.
B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.
   2. Section 08 71 00 "Door Hardware" for door hardware for hollow-metal doors.

### 1.2 DEFINITIONS

A. Minimum Thickness: Minimum thickness of base metal without coatings according to NAAMM-HMMA 803 or SDI A250.8.

### 1.3 COORDINATION

A. Coordinate anchorage installation for hollow-metal frames. Furnish setting Drawings, templates, and directions for installing anchorages including sleeves, concrete inserts, anchor bolts, and items with integral anchors. Deliver such items to Project Site in time for installation.

### 1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.
   1. Include construction details, material descriptions, core descriptions, and finishes.
B. Shop Drawings: Include the following:
   1. Elevations of each door type.
   2. Details of doors including vertical- and horizontal-edge details and metal thicknesses.
   3. Frame details for each frame type including dimensioned profiles and metal thicknesses.
   4. Locations of reinforcement and preparations for hardware.
   5. Details of each different wall opening condition.
   6. Details of anchorages, joints, field splices, and connections.
   7. Details of accessories.
   8. Details of moldings, removable stops, and glazing.
   9. Details of conduit and preparations for power, signal, and control systems.
C. Schedule: Provide a schedule of hollow-metal Work prepared by or under the supervision of supplier, using same reference numbers for details and openings as those on Drawings. Coordinate with final Door Hardware Schedule.

### 1.5 DELIVERY, STORAGE, AND HANDLING

A. Deliver hollow-metal Work palletized, packaged, or crated to provide protection during transit and Project Site storage. Do not use non-vented plastic.
   1. Provide additional protection to prevent damage to factory-finished units.

B. Store hollow-metal work vertically under cover at Project Site with head up. Place on minimum 4-inch-high wood blocking. Provide minimum 1/4-inch space between each stacked door to permit air circulation.

## PART 2 - PRODUCTS

### 2.1 MANUFACTURERS

A. Source Limitations: Obtain hollow-metal Work from single source from single manufacturer.

### 2.2 INTERIOR DOORS AND FRAMES

A. Construct interior doors and frames to comply with the standards indicated for materials, fabrication, hardware locations, hardware reinforcement, tolerances, and clearances and as specified.

B. Heavy-Duty Doors and Frames: SDI A250.8, Level 2 at locations indicated in the Door and Frame Schedule.
   1. Physical Performance: Level B according to SDI A250.4.
   2. Doors:
      a. Type: As indicated in the Door and Frame Schedule.
      b. Thickness: One-and-three-fourth inches.
      c. Core: Manufacturer's standard kraft-paper honeycomb, polystyrene, polyurethane, polyisocyanurate, mineral-board, or vertical steel-stiffener core at manufacturer's discretion.
   3. Frames:
      a. Construction: Face welded.
   4. Exposed Finish: Prime.

### 2.3 EXTERIOR HOLLOW-METAL DOORS AND FRAMES

A. Construct exterior doors and frames to comply with the standards indicated for materials, fabrication, hardware locations, hardware reinforcement, tolerances, and clearances and as specified.

B. Extra-Heavy-Duty Doors and Frames: SDI A250.8, Level 3.
   1. Physical Performance: Level A according to SDI A250.4.
   2. Doors:
      a. Type: As indicated in the Door and Frame Schedule.
      b. Thickness: One-and-three-fourth inches.
      c. Face: Metallic-coated steel sheet, minimum thickness of 0.053-inch, with minimum A40 coating.
   3. Frames:
      a. Construction: Face welded.
   4. Exposed Finish: Prime.

### 2.4 BORROWED LITES

A. Hollow-metal frames of uncoated steel sheet, minimum thickness of 0.053-inch.

B. Construction: Face welded.

## 2.5 FRAME ANCHORS

A. Jamb Anchors:
   1. Masonry Type: Adjustable strap-and-stirrup or T-shaped anchors to suit frame size, not less than 0.042-inch thick, with corrugated or perforated straps not less than 2 inches wide by 10 inches long; or wire anchors not less than 0.177-inch thick.
   2. Stud-Wall Type: Designed to engage stud, welded to back of frames; not less than 0.042-inch thick.

B. Floor Anchors: Formed from same material as frames, minimum thickness of 0.042-inch, and as follows:
   1. Monolithic Concrete Slabs: Clip-type anchors, with two holes to receive fasteners.

## 2.6 MATERIALS

A. Hot-Rolled Steel Sheet: ASTM A1011, Commercial Steel (CS), Type B; free of scale, pitting, or surface defects; pickled and oiled.

B. Frame Anchors: ASTM A879, Commercial Steel (CS), 04Z coating designation; mill phosphatized.

C. Inserts, Bolts, and Fasteners: Hot-dip galvanized according to ASTM A153.

D. Grout: ASTM C476, except with a maximum slump of 4 inches, as measured according to ASTM C143.

E. Mineral-Fiber Insulation: ASTM C665, Type I (blankets without membrane facing); consisting of fibers manufactured from slag or rock wool; with maximum flame-spread and smoke-developed indexes of 25 and 50, respectively; passing ASTM E136 for combustion characteristics.

F. Glazing: Comply with requirements in Section 08 80 00 "Glazing."

G. Bituminous Coating: Cold-applied asphalt mastic, compounded for 15 mil dry film thickness per coat. Provide inert-type noncorrosive compound free of asbestos fibers, sulfur components, and other deleterious impurities.

## 2.7 FABRICATION

A. Fabricate hollow-metal work to be rigid and free of defects, warp, or buckle. Accurately form metal to required sizes and profiles, with minimum radius for metal thickness. Where practical, fit and assemble units in manufacturer's plant. To ensure proper assembly at Project Site, clearly identify Work that cannot be permanently factory assembled before shipment.

B. Hollow-Metal Doors:
   1. Steel-Stiffened Door Cores: Provide minimum thickness 0.026-inch, steel vertical stiffeners of same material as face sheets extending full-door height, with vertical webs spaced not more than 6 inches apart. Spot weld to face sheets no more than 5 inches on center. Fill spaces between stiffeners with glass- or mineral-fiber insulation.
   2. Vertical Edges for Single-Acting Doors: Provide beveled or square edges at manufacturer's discretion.
   3. Bottom Edge Closures: Close bottom edges of doors with end closures or channels of same material as face sheets.
   4. Exterior Doors: Provide weep-hole openings in bottoms of exterior doors to permit moisture to escape. Seal joints in top edges of doors against water penetration.

PACKET 7.297 September 12, 2023
PACKET 11.299 November 14, 2023

C. Hollow-Metal Frames: Where frames are fabricated in sections due to shipping or handling limitations, provide alignment plates or angles at each joint, fabricated of same thickness metal as frames.
   1. Frames: Provide closed tubular members with no visible face seams or joints, fabricated from same material as door frame. Fasten members at crossings and to jambs by butt welding.
   2. Provide countersunk, flat- or oval-head exposed screws and bolts for exposed fasteners unless otherwise indicated.
   3. Grout Guards: Weld guards to frame at back of hardware mortises in frames to be grouted.
   4. Floor Anchors: Weld anchors to bottoms of jambs with at least four spot welds per anchor; however, for slip-on drywall frames, provide anchor clips or countersunk holes at bottoms of jambs.
   5. Jamb Anchors: Provide number and spacing of anchors as follows:
      a. Stud-Wall Type: Locate anchors not more than 18 inches from top and bottom of frame. Space anchors not more than 32 inches on center and as follows:
         1) Three anchors per jamb up to 60 inches high.
         2) Four anchors per jamb from 60 to 90 inches high.
         3) Five anchors per jamb from 90 to 96 inches high.
         4) Five anchors per jamb plus one additional anchor per jamb for each 24 inches or fraction thereof above 96 inches high.
      b. Postinstalled Expansion Type: Locate anchors not more than 6 inches from top and bottom of frame. Space anchors not more than 26 inches on center.
   6. Head Anchors: Two anchors per head for frames more than 42 inches wide and mounted in metal-stud partitions.
   7. Door Silencers: Drill stops to receive door silencers where specified in Section 08 71 00 "Door Hardware." Keep holes clear during construction.

D. Fabricate concealed stiffeners and edge channels from either cold- or hot-rolled steel sheet.

E. Hardware Preparation: Factory prepare hollow-metal work to receive templated mortised hardware; include cutouts, reinforcement, mortising, drilling, and tapping according to SDI A250.6, the Door Hardware Schedule, and templates.
   1. Reinforce doors and frames to receive non-templated, mortised, and surface-mounted door hardware.
   2. Comply with applicable requirements in SDI A250.6 and BHMA A156.115 for preparation of hollow-metal work for hardware.

## 2.8 STEEL FINISHES

A. Prime Finish: Clean, pretreat, and apply manufacturer's standard primer.
   1. Shop Primer: Manufacturer's standard, fast-curing, lead- and chromate-free primer complying with SDI A250.10; recommended by primer manufacturer for substrate; compatible with substrate and field-applied coatings despite prolonged exposure.

## PART 3 - EXECUTION

### 3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
B. Examine roughing-in for embedded and built-in anchors to verify actual locations before frame installation.
C. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.
D. Proceed with installation only after unsatisfactory conditions have been corrected.

### 3.2 PREPARATION

A. Drill and tap doors and frames to receive non-templated, mortised, and surface-mounted door hardware.

### 3.3 INSTALLATION

A. General: Install hollow-metal work plumb, rigid, properly aligned, and securely fastened in place. Comply with Drawings and manufacturer's written instructions.
B. Hollow-Metal Frames: Install hollow-metal frames for doors, transoms, sidelites, borrowed lites, and other openings, of size and profile indicated. Comply with SDI A250.11 or NAAMM-HMMA 840 as required by standards specified.
    1. Set frames accurately in position; plumbed, aligned, and braced securely until permanent anchors are set. After wall construction is complete, remove temporary braces, leaving surfaces smooth and undamaged.
        a. Where frames are fabricated in sections because of shipping or handling limitations, field splice at approved locations by welding face joint continuously; grind, fill, dress, and make splice smooth, flush, and invisible on exposed faces.
        b. Install frames with removable stops located on secure side of opening.
        c. Install door silencers in frames before grouting.
        d. Remove temporary braces necessary for installation only after frames have been properly set and secured.
        e. Check plumb, square, and twist of frames as walls are constructed. Shim as necessary to comply with installation tolerances.
        f. Field apply bituminous coating to backs of frames that will be filled with grout containing antifreezing agents.
    2. Floor Anchors: Provide floor anchors for each jamb and mullion that extends to floor, and secure with postinstalled expansion anchors.
    3. Metal-Stud Partitions: Solidly pack mineral-fiber insulation inside frames.
    4. In-Place Concrete or Masonry Construction: Secure frames in place with postinstalled expansion anchors. Countersink anchors, and fill and make smooth, flush, and invisible on exposed faces.

PACKET 7.299 September 12, 2023
PACKET 11.301 November 14, 2023

5. Installation Tolerances: Adjust hollow-metal door frames for squareness, alignment, twist, and plumb to the following tolerances:
   a. Squareness: Plus or minus 1/16-inch, measured at door rabbet on a line 90 degrees from jamb perpendicular to frame head.
   b. Alignment: Plus or minus 1/16-inch, measured at jambs on a horizontal line parallel to plane of wall.
   c. Twist: Plus or minus 1/16-inch, measured at opposite face corners of jambs on parallel lines, and perpendicular to plane of wall.
   d. Plumbness: Plus or minus 1/16-inch, measured at jambs at floor.

C. Hollow-Metal Doors: Fit hollow-metal doors accurately in frames, within clearances specified below. Shim as necessary.
   1. Non-Fire-Rated Steel Doors:
      a. Between Door and Frame Jambs and Head: One-eighth-inch plus or minus 1/32-inch.
      b. Between Edges of Pairs of Doors: One-eighth-inch to 1/4-inch plus or minus 1/32-inch.
      c. At Bottom of Door: Three-fourth-inch plus or minus 1/32-inch.
      d. Between Door Face and Stop: One-sixteenth-inch to 1/8-inch plus or minus 1/32-inch.

## 3.4 ADJUSTING AND CLEANING

A. Final Adjustments: Check and readjust operating hardware items immediately before final inspection. Leave Work in complete and proper operating condition. Remove and replace defective Work, including hollow-metal Work that is warped, bowed, or otherwise unacceptable.

B. Remove grout and other bonding material from hollow-metal Work immediately after installation.

C. Prime-Coat Touchup: Immediately after erection, sand smooth rusted or damaged areas of prime coat and apply touchup of compatible air-drying, rust-inhibitive primer.

D. Metallic-Coated Surface Touchup: Clean abraded areas and repair with galvanizing repair paint according to manufacturer's written instructions.

E. Touchup Painting: Cleaning and touchup painting of abraded areas of paint are specified in painting Sections.

END OF SECTION

# SECTION 08 33 23 - OVERHEAD COILING DOORS

## PART 1 - GENERAL

### 1.1 SUMMARY

A. Section Includes:
   1. Insulated service doors.
B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.

### 1.2 ACTION SUBMITTALS

A. Product Data: For each type and size of overhead coiling door and accessory.
   1. Include construction details, material descriptions, dimensions of individual components, profiles for slats, and finishes.
B. Shop Drawings: For each installation and for special components not dimensioned or detailed in manufacturer's product data.
   1. Include points of attachment and their corresponding static and dynamic loads imposed on structure.
   2. Show locations of controls, locking devices, detectors or replaceable fusible links, and other accessories.
   3. Include diagrams for power, signal, and control wiring.

### 1.3 CLOSEOUT SUBMITTALS

A. Maintenance data.

### 1.4 QUALITY ASSURANCE

A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer for both installation and maintenance of units required for this Project.

### 1.5 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of doors that fail in materials or workmanship within specified warranty period.
   1. Warranty Period: Two years from date of Substantial Completion.

## PART 2 - PRODUCTS

### 2.1 DOOR ASSEMBLY

A. Door: Overhead coiling door formed with curtain of interlocking metal slats.
   1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
      a. Overhead Door Corporation.

b. Raynor Garage Doors.
c. Windsor Door.

B. Operation Cycles: Door components and operators capable of operating for not less than 20,000.
C. Door Curtain Material: Galvanized steel.
D. Door Curtain Slats: Curved profile slats of center-to-center height.
E. Hood: Galvanized steel.
F. Locking Devices: Equip door with slide bolt for padlock and chain lock keeper.
G. Electric Door Operator:
1. Usage Classification: Medium duty, up to 12 cycles per hour and up to 50 cycles per day.
2. Safety: Listed according to UL 325 by a qualified testing agency for commercial or industrial use.
3. Motor Exposure: Interior.
4. Motor Electrical Characteristics:
a. Horsepower: One-half horse power.
b. Voltage: 115V AC, single phase, 60 Hz.
5. Emergency Manual Operation: Crank type.
6. Control Station(s): Interior mounted.
H. Door Finish:
1. Baked-Enamel or Powder-Coated Finish: Color as selected by Engineer from manufacturer's full range.
2. Interior Curtain-Slat Facing: Match finish of exterior curtain-slat face.

## 2.2 MATERIALS, GENERAL

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

## 2.3 HOODS

A. General: Form sheet metal hood to entirely enclose coiled curtain and operating mechanism at opening head. Contour to fit end brackets to which hood is attached. Roll and reinforce top and bottom edges for stiffness. Form closed ends for surface-mounted hoods and fascia for any portion of between-jamb mounting that projects beyond wall face. Equip hood with intermediate support brackets as required to prevent sagging.
1. Include automatic drop baffle on fire-rated doors to guard against passage of smoke or flame.
2. Exterior-Mounted Doors: Fabricate hood to act as weather protection and with a perimeter sealant-joint-bead profile for applying joint sealant.

## 2.4 LOCKING DEVICES

A. Slide Bolt: Fabricate with side-locking bolts to engage through slots in tracks for locking by padlock, located on both left and right jamb sides, operable from coil side.
B. Safety Interlock Switch: Equip power-operated doors with safety interlock switch to disengage power supply when door is locked.

2.5 MANUAL DOOR OPERATORS

A. General: Equip door with manual door operator by door manufacturer.
B. Crank Operator: Consisting of crank and crank gearbox, steel crank drive shaft, and gear-reduction unit, of type indicated. Size gears to require not more than force to turn crank. Fabricate gearbox to be oiltight and to completely enclose operating mechanism. Provide manufacturer's standard crank-locking device.

2.6 ELECTRIC DOOR OPERATORS

A. General: Electric door operator assembly of size and capacity recommended and provided by door manufacturer for door and operation-cycles requirement specified, with electric motor and factory-prewired motor controls, starter, gear-reduction unit, solenoid-operated brake, clutch, control stations, control devices, integral gearing for locking door, and accessories required for proper operation.
   1. Comply with NFPA 70.
   2. Control equipment complying with NEMA ICS 1, NEMA ICS 2, and NEMA ICS 6, with NFPA 70 Class 2 control circuit, maximum 24V AV or DC.
B. Motors: Reversible-type motor with controller (disconnect switch) for motor exposure indicated for each door assembly.
C. Control Station: Three-button control station in fixed location with momentary-contact push-button controls labeled "Open" and "Stop" and sustained- or constant-pressure push-button control labeled "Close."
D. Emergency Manual Operation: Equip each electrically powered door with capability for emergency manual operation. Design manual mechanism so required force for door operation does not exceed 30 pound force.
E. Emergency Operation Disconnect Device: Equip operator with hand-operated disconnect mechanism for automatically engaging manual operator and releasing brake for emergency manual operation while disconnecting motor without affecting timing of limit switch. Mount mechanism so it is accessible from floor level. Include interlock device to automatically prevent motor from operating when emergency operator is engaged.

**PART 3 - EXECUTION**

3.1 INSTALLATION, GENERAL

A. Install overhead coiling doors and operating equipment complete with necessary hardware, anchors, inserts, hangers, and equipment supports; according to manufacturer's written instructions and as specified.
B. Power-Operated Doors: Install automatic garage doors openers according to UL 325.

END OF SECTION

# SECTION 08 41 13 - ALUMINUM-FRAMED ENTRANCES AND STOREFRONTS

## PART 1 - GENERAL

### 1.1 SUMMARY

A. Section Includes:
   1. Aluminum-framed storefront systems.
   2. Aluminum-framed entrance door systems.

B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.

### 1.2 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project Site.

### 1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.
   1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.

B. Shop Drawings: For aluminum-framed entrances and storefronts. Include plans, elevations, Sections, full-size details, and attachments to other Work.
   1. Include details of provisions for assembly expansion and contraction and for draining moisture occurring within the assembly to the exterior.
   2. Include full-size isometric details of each type of vertical-to-horizontal intersection of aluminum-framed entrances and storefronts, showing the following:
      a. Joinery, including concealed welds.
      b. Anchorage.
      c. Expansion provisions.
      d. Glazing.
      e. Flashing and drainage.
   3. Show connection to and continuity with adjacent thermal, weather, air, and vapor barriers.
   4. Include point-to-point wiring diagrams showing the following:
      a. Power requirements for each electrically operated door hardware.
      b. Location and types of switches, signal device, conduit sizes, and number and size of wires.

C. Samples for Verification: For each type of exposed finish required, in manufacturer's standard sizes.

### 1.4 INFORMATIONAL SUBMITTALS

A. Certificates:
   1. Energy Performance Certificates: For aluminum-framed entrances and storefronts, accessories, and components, from manufacturer.
      a. Basis for Certification: NFRC-certified energy performance values for each aluminum-framed entrance and storefront.

PACKET 7.304 September 12, 2023
PACKET 11.306 November 14, 2023

1.5 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For aluminum-framed entrances and storefronts.

1.6 QUALITY ASSURANCE

A. Qualifications:
   1. Installers: An entity that employs installers and supervisors who are trained and approved by manufacturer and that employs a qualified glazing Contractor for this Project who is certified under the North American Contractor Certification Program (NACC) for Architectural Glass & Metal (AG&M) contractors and that employs glazing technicians certified under the Architectural Glass and Metal Technician (AGMT) certification program.
   2. Delegated Design Engineer: A professional Engineer who is legally qualified to practice in state where Project is located and who is experienced in providing engineering services of the type indicated.
   3. Laboratory Mockup Testing Agency: Qualified in accordance with ASTM E699 for testing indicated.
   4. Testing Agency: Qualified in accordance with ASTM E699 for testing indicated and accredited by IAS or ILAC Mutual Recognition Arrangement as complying with ISO/IEC 17025 and acceptable to Owner and Engineer.
   5. Egress Door Inspector: Inspector for field quality-control inspections of egress door assemblies shall comply with qualifications set forth in NFPA 101, Section 7.2.1.15.4 and the following:
      a. DHI's Fire and Egress Door Assembly Inspector (FDAI) certification.

1.7 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of aluminum-framed entrances and storefronts that do not comply with requirements or that fail in materials or workmanship within specified warranty period.
   1. Failures include, but are not limited to, the following:
      a. Structural failures including, but not limited to, excessive deflection.
      b. Noise or vibration created by wind and thermal and structural movements.
      c. Deterioration of metals, metal finishes, and other materials beyond normal weathering.
      d. Water penetration through fixed glazing and framing areas.
      e. Failure of operating components.
   2. Warranty Period: Two years from date of Substantial Completion.

B. Special Finish Warranty, Anodized Finishes: Standard form in which manufacturer agrees to repair finishes or replace aluminum that shows evidence of deterioration of anodized finishes within specified warranty period.
   1. Deterioration includes, but is not limited to, the following:
      a. Color fading more than 5 Delta E units when tested in accordance with ASTM D 2244.
      b. Chalking in excess of a No. 8 rating when tested in accordance with ASTM D 4214.
      c. Cracking, peeling, or chipping.
   2. Warranty Period: Two years from date of Substantial Completion.

PACKET 7.305 September 12, 2023
PACKET 11.307 November 14, 2023

## PART 2 - PRODUCTS

### 2.1 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Commercial Architectural Products, Inc.
   2. EFCO Corporation.
   3. Kawneer North America, an Arconic company.
   4. Oldcastle BuildingEnvelope (OBE); CRH Americas.
   5. Trulite Glass & Aluminum Solutions, LLC.
   6. Tubelite Inc.
   7. U.S. Aluminum; a brand of C.R. Laurence.

B. Source Limitations: Obtain all components of aluminum-framed entrance and storefront system, including framing and accessories, from single manufacturer.

### 2.2 PERFORMANCE REQUIREMENTS

A. General Performance: Comply with performance requirements specified, as determined by testing of aluminum-framed entrances and storefronts representing those indicated for this Project without failure due to defective manufacture, fabrication, installation, or other defects in construction.
   1. Aluminum-framed entrances and storefronts shall withstand movements of supporting structure including, but not limited to, twist, column shortening, long-term creep, and deflection from uniformly distributed and concentrated live loads.
   2. Failure also includes the following:
      a. Thermal stresses transferring to building structure.
      b. Glass breakage.
      c. Noise or vibration created by wind and thermal and structural movements.
      d. Loosening or weakening of fasteners, attachments, and other components.
      e. Failure of operating units.

B. Structural Loads:
   1. Wind Loads: As indicated on Drawings.
   2. Other Design Loads: As indicated on Drawings.

C. Deflection of Framing Members Supporting Glass: At design wind load, as follows:
   1. Deflection Normal to Wall Plane: Limited to 1/175 of clear span for spans of up to 13 feet 6 inches and to 1/240 of clear span plus 1/4-inch for spans greater than 13 feet 6 inches.
   2. Deflection Parallel to Glazing Plane: Limited to amount not exceeding that which reduces glazing bite to less than 75 percent of design dimension and that which reduces edge clearance between framing members and glazing or other fixed components to less than 1/8-inch.

D. Structural: Test in accordance with ASTM E330/E330M as follows:
   1. When tested at positive and negative wind-load design pressures, storefront assemblies, including entrance doors, do not evidence deflection exceeding specified limits.

PACKET 7.306 September 12, 2023
PACKET 11.308 November 14, 2023

2. When tested at 150 percent of positive and negative wind-load design pressures, storefront assemblies, including entrance doors and anchorage, do not evidence material failures, structural distress, or permanent deformation of main framing members exceeding 0.2 percent of span.
3. Test Durations: As required by design wind velocity, but not less than 10 seconds.

E. Water Penetration under Static Pressure: Test in accordance with ASTM E331 as follows:
1. No evidence of water penetration through fixed glazing and framing areas, including entrance doors, when tested in accordance with a minimum static-air-pressure differential of 20 percent of positive wind-load design pressure, but not less than 10 pound force per square foot.
2. Maximum Water Leakage: In accordance with AAMA 501.1. Water leakage does not include water controlled by flashing and gutters, or water that is drained to exterior.

F. Energy Performance: Certified and labeled by manufacturer for energy performance as follows:
1. Thermal Transmittance (U-factor):
   a. Fixed Glazing and Framing Areas: U-factor for the system of not more than 0.45 Btu per square foot by h by degrees F as determined in accordance with NFRC 100.
   b. Entrance Doors: U-factor of not more than 0.77 Btu per square foot by h by degrees F as determined in accordance with NFRC 100.
2. Solar Heat-Gain Coefficient (SHGC):
   a. Fixed Glazing and Framing Areas: SHGC for the system of not more than 0.35 as determined in accordance with NFRC 200.
   b. Entrance Doors: SHGC of not more than 0.25 as determined in accordance with NFRC 200.
3. Air Leakage:
   a. Fixed Glazing and Framing Areas: Air leakage for the system of not more than 0.06-cubic foot per minute per square foot at a static-air-pressure differential of 1.57 pounds of force per square foot hen tested in accordance with ASTM E283.
   b. Entrance Doors: Air leakage of not more than 1.0 cubic foot per minute per square foot at a static-air-pressure differential of 1.57 pounds of force per square foot.
4. Condensation Resistance Factor (CRF):
   a. Fixed Glazing and Framing Areas: CRF for the system of not less than 55 as determined in accordance with AAMA 1503.
   b. Entrance Doors: CRF of not less than 63 as determined in accordance with AAMA 1503.

G. Thermal Movements: Allow for thermal movements resulting from ambient and surface temperature changes.
1. Temperature Change: 120 degrees F, ambient; 180 degrees F, material surfaces.
2. Thermal Cycling: No buckling; stress on glass; sealant failure; excess stress on framing, anchors, and fasteners; or reduction of performance when tested in accordance with AAMA 501.5.
   a. High Exterior Ambient-Air Temperature: That which produces an exterior metal-surface temperature of 180 degrees F.
   b. Low Exterior Ambient-Air Temperature: Zero degrees F.
   c. Interior Ambient-Air Temperature: 75 degrees F.

## 2.3 STOREFRONT SYSTEMS

A. Framing Members: Manufacturer's extruded- or formed-aluminum framing members of thickness required and reinforced as required to support imposed loads.
   1. Exterior Framing Construction: Thermally broken.
   2. Fabrication Method: Field-fabricated stick system.
   3. Aluminum: Alloy and temper recommended by manufacturer for type of use and finish indicated.
   4. Steel Reinforcement: As required by manufacturer.

B. Backer Plates: Manufacturer's standard, continuous backer plates for framing members, if not integral, where framing abuts adjacent construction.

C. Brackets and Reinforcements: Manufacturer's standard high-strength aluminum with nonstaining, nonferrous shims for aligning system components.

## 2.4 ENTRANCE DOOR SYSTEMS

A. Entrance Doors: Manufacturer's standard glazed entrance doors for manual-swing or automatic operation.
   1. Door Construction: One-and-three-fourths-inch overall thickness, with minimum 0.125-inch-thick, extruded-aluminum tubular rail and stile members. Mechanically fasten corners with reinforcing brackets that are deeply penetrated and fillet welded or that incorporate concealed tie rods.
   2. Door Design: Wide stile; 5-inch nominal width.
   3. Glazing Stops and Gaskets: Beveled, snap-on, extruded-aluminum stops and preformed gaskets.
      a. Provide nonremovable glazing stops on outside of door.
   4. Finish: Match adjacent storefront framing finish.

## 2.5 ENTRANCE DOOR HARDWARE

A. General:
   1. Door Hardware: Hardware not specified in this Section is specified in Section 08 71 00 "Door Hardware."
   2. Cylinders: As specified in Section 08 71 00 "Door Hardware."
   3. References to BHMA Standards: Provide products complying with these standards and requirements for description, quality, and function.

B. Hardware sets for aluminum doors located in Section 08 71 00.10 "Door Hardware Schedule."
   1. Weather Stripping: Manufacturer's standard replaceable components.
   2. Weather Sweeps: Manufacturer's standard exterior-door bottom sweep with concealed fasteners on mounting strip.
   3. Thresholds: BHMA A156.21 raised thresholds beveled with a slope of not more than 1:2, with maximum height of 1/2-inch.

## 2.6 GLAZING

A. Glazing: Comply with Section 08 80 00 "Glazing."Glazing."

B. Glazing Gaskets: Manufacturer's standard sealed-corner pressure-glazing system of black, resilient elastomeric glazing gaskets, setting blocks, and shims or spacers.

C. Glazing Sealants: As recommended by manufacturer.

PACKET 7.308 September 12, 2023
PACKET 11.310 November 14, 2023

D. Structural Glazing Sealants: ASTM C1184 chemically curing silicone formulation that is compatible with system components with which it comes in contact; specifically formulated and tested for use as structural sealant and approved by structural-sealant manufacturer for use in storefront system indicated.
   1. Color: Black.
   2. Weatherseal Sealants: ASTM C920 for Type S; Grade NS; Class 25; Uses NT, G, A, and O; chemically curing silicone formulation that is compatible with structural sealant and other system components with which it comes in contact; recommended by structural-sealant, weatherseal-sealant, and structural-sealant-glazed storefront manufacturers for this use.
      a. Color: Match structural sealant.

2.7 MATERIALS

A. Sheet and Plate: ASTM B209.
B. Extruded Bars, Rods, Profiles, and Tubes: ASTM B221.
C. Structural Profiles: ASTM B308/B308M.

2.8 ACCESSORIES

A. Fasteners and Accessories: Manufacturer's standard corrosion-resistant, nonstaining, nonbleeding fasteners and accessories compatible with adjacent materials.
   1. Use self-locking devices where fasteners are subject to loosening or turning out from thermal and structural movements, wind loads, or vibration.
   2. Reinforce members as required to receive fastener threads.
   3. Use exposed fasteners with countersunk Phillips screw heads, finished to match framing system.
B. Concealed Flashing: Manufacturer's standard corrosion-resistant, nonstaining, nonbleeding flashing compatible with adjacent materials.
C. Bituminous Paint: Cold-applied asphalt-mastic paint containing no asbestos, formulated for 30-mil thickness per coat.
D. Rigid PVC filler.

2.9 FABRICATION

A. Form or extrude aluminum shapes before finishing.
B. Fabricate components that, when assembled, have the following characteristics:
   1. Profiles that are sharp, straight, and free of defects or deformations.
   2. Accurately fitted joints with ends coped or mitered.
   3. Physical and thermal isolation of glazing from framing members.
   4. Accommodations for thermal and mechanical movements of glazing and framing to maintain required glazing edge clearances.
   5. Provisions for field replacement of glazing from exterior.
   6. Fasteners, anchors, and connection devices that are concealed from view to greatest extent possible.
C. Mechanically Glazed Framing Members: Fabricate for flush glazing without projecting stops.
D. Storefront Framing: Fabricate components for assembly using screw-spline system.

E. Entrance Door Frames: Reinforce as required to support loads imposed by door operation and for installing entrance door hardware.
   1. At interior and exterior doors, provide compression weather stripping at fixed stops.
F. Entrance Doors: Reinforce doors as required for installing entrance door hardware.
   1. At pairs of exterior doors, provide sliding-type weather stripping retained in adjustable strip and mortised into door edge.
   2. At exterior doors, provide weather sweeps applied to door bottoms.
G. Entrance Door Hardware Installation: Factory install entrance door hardware to the greatest extent possible. Cut, drill, and tap for factory-installed entrance door hardware before applying finishes.
H. After fabrication, clearly mark components to identify their locations in Project in accordance with Shop Drawings.

2.10 ALUMINUM FINISHES

A. Color Anodic Finish: AAMA 611, AA-M12C22A42/A44, Class I, 0.018-millimeter or thicker.
   1. Color: black.

## PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION, GENERAL

A. Comply with manufacturer's written instructions.
B. Do not install damaged components.
C. Fit joints to produce hairline joints free of burrs and distortion.
D. Rigidly secure nonmovement joints.
E. Install anchors with separators and isolators to prevent metal corrosion and electrolytic deterioration and to prevent impeding movement of moving joints.
F. Seal perimeter and other joints watertight unless otherwise indicated.
G. Metal Protection:
   1. Where aluminum is in contact with dissimilar metals, protect against galvanic action by painting contact surfaces with materials recommended by manufacturer for this purpose or by installing nonconductive spacers.
   2. Where aluminum is in contact with concrete or masonry, protect against corrosion by painting contact surfaces with bituminous paint.
H. Set continuous sill members and flashing in full sealant bed, as specified in Section 07 92 00 "Joint Sealants," to produce weathertight installation.
I. Install joint filler behind sealant as recommended by sealant manufacturer.
J. Install components plumb and true in alignment with established lines and grades.

PACKET 7.310 September 12, 2023
PACKET 11.312 November 14, 2023

3.3 INSTALLATION OF GLAZING

A. Install glazing as specified in Section 08 80 00 "Glazing."

3.4 INSTALLATION OF STRUCTURAL GLAZING

A. Prepare surfaces that will contact structural sealant in accordance with sealant manufacturer's written instructions, to ensure compatibility and adhesion. Preparation includes, but is not limited to, cleaning and priming surfaces.
B. Set glazing into framing in accordance with sealant manufacturer and framing manufacturer's written instructions and standard practice. Use a spacer or backer as recommended by manufacturer.
C. Set glazing with proper orientation so that coatings face exterior or interior as specified.
D. Hold glazing in place using temporary retainers of type and spacing recommended by manufacturer until structural sealant joint has cured.
E. Apply structural sealant to completely fill cavity in accordance with sealant manufacturer and framing manufacturer's written instructions and in compliance with local codes.
F. Apply structural sealant at temperatures indicated by sealant manufacturer for type of sealant.
G. Allow structural sealant to cure in accordance with manufacturer's written instructions.
H. Clean and protect glass as indicated in Section 08 80 00 "Glazing."

3.5 INSTALLATION OF WEATHERSEAL SEALANT

A. After structural sealant has completely cured, remove temporary retainers and insert backer rod between lites of glass as recommended by sealant manufacturer.
B. Install weatherseal sealant to completely fill cavity, in accordance with sealant manufacturer's written instructions, to produce weatherproof joints.

3.6 INSTALLATION OF ALUMINUM-FRAMED ENTRANCE DOORS

A. Install entrance doors to produce smooth operation and tight fit at contact points.
   1. Exterior Doors: Install to produce weathertight enclosure and tight fit at weather stripping.
   2. Field-Installed Entrance Door Hardware: Install surface-mounted entrance door hardware in accordance with entrance door hardware manufacturers' written instructions using concealed fasteners to greatest extent possible.

3.7 ERECTION TOLERANCES

A. Install aluminum-framed entrances and storefronts to comply with the following maximum tolerances:
   1. Plumb: 1/8-inch in 10 feet; 1/4 inch in 40 feet.
   2. Level: 1/8-inch in 20 feet; 1/4-inch in 40 feet.
   3. Alignment:
      a. Where surfaces abut in line or are separated by reveal or protruding element up to 1/2-inch wide, limit offset from true alignment to 1/1- inch.
      b. Where surfaces are separated by reveal or protruding element from 1/2-inch to 1 inch wide, limit offset from true alignment to 1/8-inch.

PACKET 7.311 September 12, 2023
PACKET 11.313 November 14, 2023

c. Where surfaces are separated by reveal or protruding element of 1 inch wide or more, limit offset from true alignment to 1/4-inch.

4. Location: Limit variation from plane to 1/8-inch in 12 feet; 1/2-inch over total length.

END OF SECTION

PACKET 7.312 September 12, 2023
PACKET 11.314 November 14, 2023

# SECTION 08 71 00 - DOOR HARDWARE

## PART 1 - GENERAL

### 1.1 SUMMARY

A. This Section includes commercial door hardware for the following:
   1. Swinging doors.
   2. Other doors to the extent indicated.

B. Door hardware includes, but is not necessarily limited to, the following:
   1. Mechanical door hardware.
   2. Electromechanical door hardware.
   3. Cylinders specified for doors in other sections.

C. Related Requirements:
   1. Section 08 11 13 "Hollow Metal Doors and Frames."
   2. Section 08 41 13 "Aluminum-Framed Entrances and Storefronts."

D. Codes and References: Comply with the version year adopted by the Authority Having Jurisdiction.
   1. ANSI A117.1 - Accessible and Usable Buildings and Facilities.
   2. ICC/IBC - International Building Code.
   3. NFPA 70 - National Electrical Code.
   4. NFPA 80 - Fire Doors and Windows.
   5. NFPA 101 - Life Safety Code.
   6. NFPA 105 - Installation of Smoke Door Assemblies.
   7. State Building Codes, Local Amendments.

E. Standards: All hardware specified herein shall comply with the following industry standards as applicable. Any undated reference to a standard shall be interpreted as referring to the latest edition of that standard:
   1. ANSI/BHMA Certified Product Standards - A156 Series.
   2. UL10C - Positive Pressure Fire Tests of Door Assemblies.
   3. ANSI/UL 294 - Access Control System Units.

### 1.2 SUBMITTALS

A. Product Data: Manufacturer's product data sheets including installation details, material descriptions, dimensions of individual components and profiles, operational descriptions, and finishes.

B. Door Hardware Schedule: Prepared by or under the supervision of supplier, detailing fabrication, and assembly of door hardware, as well as procedures and diagrams. Coordinate the final Door Hardware Schedule with doors, frames, and related work to ensure proper size, thickness, hand, function, and finish of door hardware.
   1. Format: Comply with scheduling sequence and vertical format in DHI's "Sequence and Format for the Hardware Schedule."
   2. Organization: Organize the Door Hardware Schedule into Door Hardware Sets indicating complete designations of every item required for each door or opening. Organize door hardware sets in same order as in the Door Hardware Sets at the end of Part 3. Submittals that do not follow the same format and order as the Door Hardware Sets will be rejected and subject to resubmission.

3. Content: Include the following information:
   a. Type, style, function, size, label, hand, and finish of each door hardware item.
   b. Manufacturer of each item.
   c. Fastenings and other pertinent information.
   d. Location of Door Hardware Set, cross-referenced to Drawings, both on floor plans and in Door and Frame Schedule.
   e. Explanation of abbreviations, symbols, and codes contained in Schedule.
   f. Mounting locations for door hardware.
   g. Door and frame sizes and materials.
   h. Warranty information for each product.
4. Submittal Sequence: Submit the final Door Hardware Schedule at earliest possible date, particularly where approval of the Door Hardware Schedule must precede fabrication of other Work that is critical in the Project construction schedule. Include Product Data, Samples, Shop Drawings of other work affected by door hardware, and other information essential to the coordinated review of the Door Hardware Schedule.

C. Shop Drawings: Details of electrified access control hardware indicating the following:
1. Wiring Diagrams: Upon receipt of approved schedules, submit detailed system wiring diagrams for power, signaling, monitoring, communication, and control of the access control system electrified hardware. Differentiate between manufacturer-installed and field-installed wiring. Include the following:
   a. Elevation diagram of each unique access controlled opening showing location and interconnection of major system components with respect to their placement in the respective door openings.
   b. Complete (risers, point-to-point) access control system block wiring diagrams.
   c. Wiring instructions for each electronic component scheduled herein.
2. Electrical Coordination: Coordinate with related Sections the voltages and wiring details required at electrically controlled and operated hardware openings.

D. Keying Schedule: After a keying meeting with the Owner has taken place prepare a separate keying schedule detailing final instructions. Submit the keying schedule in electronic format. Include keying system explanation, door numbers, key set symbols, hardware set numbers and special instructions. Owner must approve submitted keying schedule prior to the ordering of permanent cylinders/cores.

E. Informational Submittals:
1. Product Test Reports: Indicating compliance with cycle testing requirements, based on evaluation of comprehensive tests performed by manufacturer and witnessed by a qualified independent testing agency.

F. Operating and Maintenance Manuals: Provide manufacturers operating and maintenance manuals for each item comprising the complete door hardware installation in quantity as required in Section 01 70 00 "Execution and Closeout Requirements."

## 1.3 QUALITY ASSURANCE

A. Manufacturers Qualifications: Engage qualified manufacturers with a minimum 5 years of documented experience in producing hardware and equipment similar to that indicated for this Project and that have a proven record of successful in-service performance.

B. Certified Products: Where specified, products must maintain a current listing in the Builders Hardware Manufacturers Association (BHMA) Certified Products Directory (CPD).

C. Installer Qualifications: A minimum 3 years' documented experience installing both standard and electrified door hardware similar in material, design, and extent to that indicated for this Project and whose work has resulted in construction with a record of successful in-service performance.

D. Door Hardware Supplier Qualifications: Experienced commercial door hardware distributors with a minimum 5 years' documented experience supplying both mechanical and electromechanical hardware installations comparable in material, design, and extent to that indicated for this Project. Supplier recognized as a factory direct distributor by the manufacturers of the primary materials with a warehousing facility in Project's vicinity. Supplier to have on staff a certified Architectural Hardware Consultant (AHC) available during the course of the Work to consult with Contractor, Engineer, and Owner concerning both standard and electromechanical door hardware and keying.

E. Source Limitations: Obtain each type and variety of door hardware specified in this Section from a single source unless otherwise indicated.
   1. Electrified modifications or enhancements made to a source manufacturer's product line by a secondary or third-party source will not be accepted.
   2. Provide electromechanical door hardware from the same manufacturer as mechanical door hardware, unless otherwise indicated.

F. Each unit to bear third-party permanent label indicating compliance with the referenced testing standards.

G. Keying Conference: Conduct conference to comply with requirements in Division 01 Section "Project Meetings." Keying conference to incorporate the following criteria into the final keying schedule document:
   1. Function of building, purpose of each area and degree of security required.
   2. Plans for existing and future key system expansion.
   3. Requirements for key control storage and software.
   4. Installation of permanent keys, cylinder cores and software.
   5. Address and requirements for delivery of keys.

H. Pre-Submittal Conference: Conduct coordination conference in compliance with requirements in Division 01 Section "Project Meetings" with attendance by representatives of Supplier(s), Installer(s), and Contractor(s) to review proper methods and the procedures for receiving, handling, and installing door hardware.
   1. Prior to installation of door hardware, conduct a Project specific training meeting to instruct the installing contractors' personnel on the proper installation and adjustment of their respective products. Product training to be attended by installers of door hardware (including electromechanical hardware) for aluminum, hollow metal and wood doors. Training will include the use of installation manuals, hardware schedules, templates, and physical product samples as required.
   2. Inspect and discuss electrical roughing-in, power supply connections, and other preparatory work performed by other trades.
   3. Review sequence of operation narratives for each unique access controlled opening.
   4. Review and finalize construction schedule and verify availability of materials.
   5. Review the required inspecting, testing, commissioning, and demonstration procedures

I. At completion of installation, provide written documentation that components were applied according to manufacturer's instructions and recommendations and according to approved schedule.

1.4 DELIVERY, STORAGE, AND HANDLING

A. Inventory door hardware on receipt and provide secure lock-up and shelving for door hardware delivered to Project site. Do not store electronic access control hardware, software or accessories at Project site without prior authorization.

B. Tag each item or package separately with identification related to the final Door Hardware Schedule, and include basic installation instructions with each item or package.

C. Deliver, as applicable, permanent keys, cylinders, cores, access control credentials, software and related accessories directly to Owner via registered mail or overnight package service. Instructions for delivery to the Owner shall be established at the "Keying Conference."

1.5 COORDINATION

A. Templates: Obtain and distribute to the parties involved templates for doors, frames, and other Work specified to be factory prepared for installing standard and electrified hardware. Check Shop Drawings of other Work to confirm that adequate provisions are made for locating and installing hardware to comply with indicated requirements.

B. Door Hardware and Electrical Connections: Coordinate the layout and installation of scheduled electrified door hardware and related access control equipment with required connections to source power junction boxes, low voltage power supplies, detection and monitoring hardware, and fire and detection alarm systems.

C. Door and Frame Preparation: Doors and corresponding frames are to be prepared, reinforced and pre-wired (if applicable) to receive the installation of the specified electrified, monitoring, signaling and access control system hardware without additional in-field modifications.

1.6 WARRANTY

A. General Warranty: Reference Division 01, General Requirements. Special warranties specified in this Article shall not deprive Owner of other rights Owner may have under other provisions of the Contract Documents and shall be in addition to, and run concurrent with, other warranties made by Contractor under requirements of the Contract Documents.

B. Warranty Period: Written warranty, executed by manufacturer(s), agreeing to repair or replace components of standard and electrified door hardware that fails in materials or workmanship within specified warranty period after final acceptance by the Owner. Failures include, but are not limited to, the following:

1. Structural failures including excessive deflection, cracking, or breakage.
2. Faulty operation of the hardware.
3. Deterioration of metals, metal finishes, and other materials beyond normal weathering.
4. Electrical component defects and failures within the systems operation.

C. Warranty Period: Unless otherwise indicated, warranty shall be one year from date of Substantial Completion.

**PART 2 - PRODUCTS**

2.1 SCHEDULED DOOR HARDWARE

A. General: Provide door hardware for each door to comply with requirements in Door Hardware Sets and each referenced Section that products are to be supplied under.

B. Designations: Requirements for quantity, item, size, finish or color, grade, function, and other distinctive qualities of each type of door hardware are indicated in the Door Hardware Sets at the end of Part 3. Products are identified by using door hardware designations, as follows:

1. Named Manufacturer's Products: Product designation and manufacturer are listed for each door hardware type required for the purpose of establishing requirements. Manufacturers' names are abbreviated in the Door Hardware Schedule.

C. Please note that ASSA ABLOY is transitioning the Yale Commercial brand to Arrow. This affects only the brand name; the products and product numbers will remain unchanged. The brand transition is expected to be complete in or about May of 2024, and products shipping after that time will be branded Arrow.

D. Substitutions: Requests for substitution and product approval for inclusive mechanical and electromechanical door hardware in compliance with the Specifications must be submitted in writing and in accordance with the procedures and time frames outlined in Division 01, General Requirements. Approval of requests is at the discretion of the Engineer, Owner, and their designated consultants.

2.2 HANGING DEVICES

A. Hinges: ANSI/BHMA A156.1 butt hinges with number of hinge knuckles and other options as specified in the Door Hardware Sets.

1. Quantity: Provide the following hinge quantity:
   a. Two Hinges: For doors with heights up to 60 inches.
   b. Three Hinges: For doors with heights 61 to 90 inches.
   c. Four Hinges: For doors with heights 91 to 120 inches.
   d. For doors with heights more than 120 inches, provide 4 hinges, plus 1 hinge for every 30 inches of door height greater than 120 inches.
2. Hinge Size: Provide the following, unless otherwise indicated, with hinge widths sized for door thickness and clearances required:
   a. Widths up to 3 Feet: Four-and-one-half-inch standard or heavy weight as specified.
   b. Sizes from 3 Feet 1 Inch to 4 Feet: Five-foot standard or heavy weight as specified.
3. Hinge Weight and Base Material: Unless otherwise indicated, provide the following:
   a. Exterior Doors: Heavy weight, non-ferrous, ball bearing or oil impregnated bearing hinges unless Hardware Sets indicate standard weight.
   b. Interior Doors: Standard weight, steel, ball bearing or oil impregnated bearing hinges unless Hardware Sets indicate heavy weight.
4. Hinge Options: Comply with the following:
   a. Non-Removable Pins: With the exception of electric through wire hinges, provide set screw in hinge barrel that, when tightened into a groove in hinge pin, prevents removal of pin while door is closed; for the all out-swinging lockable doors.

5. Manufacturers:
   a. McKinney (MK) - TA/T4A Series, 5 knuckle.

B. Continuous Geared Hinges: ANSI/BHMA A156.26 Grade 1-600 continuous geared hinge. with minimum 0.120-inch-thick extruded 6063-T6 aluminum alloy hinge leaves and a minimum overall width of 4 inches. Hinges are non-handed, reversible, and fabricated to template screw locations. Factory trim hinges to suit door height and prepare for electrical cut-outs.
   1. Manufacturers:
      a. Pemko (PE).

## 2.3 DOOR OPERATING TRIM

A. Door Push Plates and Pulls: ANSI/BHMA A156.6 door pushes and pull units of type and design specified in the Hardware Sets. Coordinate and provide proper width and height as required where conflicting hardware dictates.
   1. Push/Pull Plates: Minimum .050-inch-thick, size as indicated in Hardware Sets, with beveled edges, secured with exposed screws unless otherwise indicated.
   2. Door Pull and Push Bar Design: Size, shape, and material as indicated in the hardware sets. Minimum clearance of 2-1/2 inches from face of door unless otherwise indicated.
   3. Offset Pull Design: Size, shape, and material as indicated in the Hardware Sets. Minimum clearance of 2-1/2 inches from face of door and offset of 90 degrees unless otherwise indicated.
   4. Pulls, where applicable, shall be provided with a 10-inch clearance from the finished floor on the push side to accommodate wheelchair accessibility.
   5. Fasteners: Provide manufacturer's designated fastener type as indicated in Hardware Sets.
   6. Manufacturers:
      a. Rockwood (RO).

## 2.4 CYLINDERS AND KEYING

A. General: Cylinder manufacturer to have minimum 10 years' experience designing secured master key systems and have on record a published security keying system policy.
   1. Manufacturers:
      a. Sargent Manufacturing (SA).
      b. Match Existing, Field Verify.

B. Cylinder Types: Original manufacturer cylinders able to supply the following cylinder formats and types:
   1. Threaded mortise cylinders with rings and cams to suit hardware application.
   2. Rim cylinders with back plate, flat-type vertical or horizontal tailpiece, and raised trim ring.
   3. Bored or cylindrical lock cylinders with tailpieces as required to suit locks.
   4. Tubular deadlocks and other auxiliary locks.
   5. Mortise and rim cylinder collars to be solid and recessed to allow the cylinder face to be flush and be free spinning with matching finishes.
   6. Keyway: Match Facility Standard.

C. Small Format Interchangeable Cores: Provide small format interchangeable cores (SFIC) as specified, core insert, removable by use of a special key; usable with other manufacturers' cylinders.

D. Keying System: Each type of lock and cylinders to be factory keyed.
   1. Supplier shall conduct a "Keying Conference" to define and document keying system instructions and requirements.
   2. Furnish factory cut, nickel-silver large bow permanently inscribed with a visual key control number as directed by Owner.
   3. New System: Key locks to a new key system as directed by the Owner.

E. Key Quantity: Provide the following minimum number of keys:
   1. Change Keys per Cylinder: Two.
   2. Master Keys (per Master Key Level/Group): Five.
   3. Construction Keys (where required): Ten.
   4. Construction Control Keys (where required): Two.
   5. Permanent Control Keys (where required): Two.

F. Construction Keying: Provide temporary keyed construction cores.

G. Key Registration List (Bitting List):
   1. Provide keying transcript list to Owner's representative in the proper format for importing into key control software.
   2. Provide transcript list in writing or electronic file as directed by the Owner.

## 2.5 KEY CONTROL

A. Key Control Cabinet: Provide a key control system including envelopes, labels, and tags with self-locking key clips, receipt forms, 3-way visible card index, temporary markers, permanent markers, and standard metal cabinet. Key control cabinet shall have expansion capacity of 150 percent of the number of locks required for the Project.
   1. Manufacturers:
      a. Lund Equipment (LU).
         a. MMF Industries (MM).
         b. Telkee (TK).

## 2.6 MECHANICAL LOCKS AND LATCHING DEVICES

A. Mortise Locksets, Grade 1 (Heavy Duty): ANSI/BHMA A156.13, Series 1000, Operational Grade 1 Certified Products Directory (CPD) listed. Locksets are to be manufactured with a corrosion resistant steel case and be field-reversible for handing without disassembly of the lock body.
   1. Heavy duty mortise locks shall have a ten-year warranty.
   2. Where specified, provide status indicators with highly reflective color and wording for "locked/unlocked" or "vacant/occupied" with custom wording options if required. Indicator to be located above the cylinder with the inside thumb-turn not blocking the visibility of the indicator status. Indicator window size to be a minimum of 2.1 inches by 0.6-inch with a curved design allowing a 180-degree viewing angle with protective covering to prevent tampering.
   3. Manufacturers:
      a. Sargent Manufacturing (SA) - 8200 Series.

## 2.7 LOCK AND LATCH STRIKES

A. Strikes: Provide manufacturer's standard strike with strike box for each latch or lock bolt, with curved lip extended to protect frame, finished to match door hardware set, unless otherwise indicated, and as follows:
   1. Flat-Lip Strikes: For locks with three-piece antifriction latchbolts, as recommended by manufacturer.
   2. Extra-Long-Lip Strikes: For locks used on frames with applied wood casing trim.
   3. Aluminum-Frame Strike Box: Provide manufacturer's special strike box fabricated for aluminum framing.
   4. Double-lipped strikes: For locks at double acting doors. Furnish with retractable stop for rescue hardware applications.

B. Standards: Comply with the following:
   1. Strikes for Mortise Locks and Latches: BHMA A156.13.
   2. Strikes for Bored Locks and Latches: BHMA A156.2.
   3. Strikes for Auxiliary Deadlocks: BHMA A156.36.
   4. Dustproof Strikes: BHMA A156.16.

## 2.8 DOOR CLOSERS

A. All door closers specified herein shall meet or exceed the following criteria:
   1. General: Door closers to be from one manufacturer, matching in design and style, with the same type door preparations and templates regardless of application or spring size. Closers to be non-handed with full sized covers.
   2. Standards: Closers to comply with UL-10C for Positive Pressure Fire Test and be U.L. listed for use of fire rated doors.
   3. Size of Units: Comply with manufacturer's written recommendations for sizing of door closers depending on size of door, exposure to weather, and anticipated frequency of use. Where closers are indicated for doors required to be accessible to the Americans with Disabilities Act, provide units complying with ANSI ICC/A117.1.
   4. Closer Arms: Provide heavy duty, forged steel closer arms unless otherwise indicated in Hardware Sets.
   5. Closers shall not be installed on exterior or corridor side of doors; where possible install closers on door for optimum aesthetics.
   6. Closer Accessories: Provide door closer accessories including custom templates, special mounting brackets, spacers and drop plates as required for proper installation. Provide through-bolt and security type fasteners as specified in the Hardware Sets.

B. Door Closers, Surface Mounted (Large Body Cast Iron): ANSI/BHMA A156.4, Grade 1 Certified Products Directory (CPD) listed surface mounted, heavy duty door closers with complete spring power adjustment, sizes 1 thru 6; and fully operational adjustable according to door size, frequency of use, and opening force. Closers to be rack and pinion type, one piece cast iron body construction, with adjustable backcheck and separate non-critical valves for closing sweep and latch speed control.
   1. Large body cast iron surface mounted door closers shall have a 30-year warranty.
   2. Manufacturers:
      a. Sargent Manufacturing (SA) - 281 Series.

C. Door Closers, Surface Mounted (Heavy Duty): ANSI/BHMA A156.4, Grade 1 Certified Products Directory (CPD) listed surface mounted, heavy duty door closers with complete spring power adjustment, sizes 1 thru 6; and fully operational adjustable according to door

size, frequency of use, and opening force. Closers to be rack and pinion type, one piece cast iron or aluminum alloy body construction, with adjustable backcheck and separate non-critical valves for closing sweep and latch speed control. Provide non-handed units standard.

1. Heavy duty surface mounted door closers shall have a 30-year warranty.
2. Manufacturers:
   a. Sargent Manufacturing (SA) - 351 Series.

2.9 ENGINEERURAL TRIM

A. Door Protective Trim
   1. General: Door protective trim units to be of type and design as specified below or in the Hardware Sets.
   2. Size: Fabricate protection plates (kick, armor, or mop) not more than 2 inches less than door width (LDW) on stop side of single doors and 1-inch LDW on stop side of pairs of doors, and not more than 1 inch less than door width on pull side. Coordinate and provide proper width and height as required where conflicting hardware dictates. Height to be as specified in the Hardware Sets.
   3. Where plates are applied to fire rated doors with the top of the plate more than 16 inches above the bottom of the door, provide plates complying with NFPA 80. Consult manufacturer's catalog and template book for specific requirements for size and applications.
   4. Protection Plates: ANSI/BHMA A156.6 protection plates (kick, armor, or mop), fabricated from the following:
      a. Stainless Steel: 300 grade, .050-inch thick.
   5. Options and fasteners: Provide manufacturer's designated fastener type as specified in the Hardware Sets. Provide countersunk screw holes.
   6. Manufacturers:
      a. Rockwood (RO).

2.10 DOOR STOPS AND HOLDERS

A. General: Door stops and holders to be of type and design as specified below or in the Hardware Sets.

B. Door Stops and Bumpers: ANSI/BHMA A156.16, Grade 1 door stops and wall bumpers. Provide wall bumpers, either convex or concave types with anchorage as indicated, unless floor or other types of door stops are specified in Hardware Sets. Do not mount floor stops where they will impede traffic. Where floor or wall bumpers are not appropriate, provide overhead type stops and holders.
   1. Manufacturers:
      a. Rockwood (RO).

C. Overhead Door Stops and Holders: ANSI/BHMA A156.8, Grade 1 Certified Products Directory (CPD) listed overhead stops and holders to be surface or concealed types as indicated in Hardware Sets. Track, slide, arm, and jamb bracket to be constructed of extruded bronze and shock absorber spring of heavy tempered steel. Provide non-handed design with mounting brackets as required for proper operation and function.
   1. Manufacturers:
      a. Norton Rixson (RF).
      b. Sargent Manufacturing (SA).,

2.11 ENGINEERURAL SEALS

A. General: Thresholds, weatherstripping, and gasket seals to be of type and design as specified below or in the Hardware Sets. Provide continuous weatherstrip gasketing on exterior doors and provide smoke, light, or sound gasketing on interior doors where indicated. At exterior applications provide non-corrosive fasteners and elsewhere where indicated.

B. Smoke Labeled Gasketing: Assemblies complying with NFPA 105 that are listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, for smoke control ratings indicated, based on testing according to UL 1784.
   1. Provide smoke labeled perimeter gasketing at all smoke labeled openings.

C. Fire Labeled Gasketing: Assemblies complying with NFPA 80 that are listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, for fire ratings indicated, based on testing according to UL-10C.
   1. Provide intumescent seals as indicated to meet UL10C Standard for Positive Pressure Fire Tests of Door Assemblies, and NPFA 252, Standard Methods of Fire Tests of Door Assemblies.

D. Sound-Rated Gasketing: Assemblies that are listed and labeled by a testing and inspecting agency, for sound ratings indicated.

E. Replaceable Seal Strips: Provide only those units where resilient or flexible seal strips are easily replaceable and readily available from stocks maintained by manufacturer.

F. Manufacturers:
   1. Pemko (PE).

2.12 FABRICATION

A. Fasteners: Provide door hardware manufactured to comply with published templates generally prepared for machine, wood, and sheet metal screws. Provide screws according to manufacturers recognized installation standards for application intended.

2.13 FINISHES

A. Standard: Designations used in the Hardware Sets and elsewhere indicate hardware finishes complying with ANSI/BHMA A156.18, including coordination with traditional U.S. finishes indicated by certain manufacturers for their products.

B. Provide quality of finish, including thickness of plating or coating (if any), composition, hardness, and other qualities complying with manufacturer's standards, but in no case less than specified by referenced standards for the applicable units of hardware.

C. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

**PART 3 - EXECUTION**

3.1 EXAMINATION

A. Examine scheduled openings, with Installer present, for compliance with requirements for installation tolerances, labeled fire door assembly construction, wall and floor construction, and other conditions affecting performance.
B. Notify Engineer of any discrepancies or conflicts between the Door Schedule, door types, Drawings, and scheduled hardware. Proceed only after such discrepancies or conflicts have been resolved in writing.

3.2 PREPARATION

A. Hollow Metal Doors and Frames: Comply with ANSI/DHI A115 series.
B. Wood Doors: Comply with ANSI/DHI A115-W series.

3.3 INSTALLATION

A. Install each item of mechanical and electromechanical hardware and access control equipment to comply with manufacturer's written instructions and according to specifications.
   1. Installers are to be trained and certified by the manufacturer on the proper installation and adjustment of fire, life safety, and security products including: hanging devices; locking devices; closing devices; and seals.
B. Mounting Heights: Mount door hardware units at heights indicated in following applicable publications, unless specifically indicated or required to comply with governing regulations:
   1. Standard Steel Doors and Frames: DHI's "Recommended Locations for Engineerural Hardware for Standard Steel Doors and Frames."
   2. DHI TDH-007-20: Installation Guide for Doors and Hardware.
   3. Where indicated to comply with accessibility requirements, comply with ANSI A117.1 "Accessibility Guidelines for Buildings and Facilities."
   4. Provide blocking in drywall partitions where wall stops or other wall mounted hardware is located.
C. Retrofitting: Install door hardware to comply with manufacturer's published templates and written instructions. Where cutting and fitting are required to install door hardware onto or into surfaces that are later to be painted or finished in another way, coordinate removal, storage, and reinstallation of surface protective trim units with finishing work specified in Division 09 Sections. Do not install surface-mounted items until finishes have been completed on substrates involved.
D. Thresholds: Set thresholds for exterior and acoustical doors in full bed of sealant.
E. Storage: Provide a secure lock up for hardware delivered to the Project but not yet installed. Control the handling and installation of hardware items so that the completion of the work will not be delayed by hardware losses before and after installation.

3.4 FIELD QUALITY CONTROL

A. Field Inspection (Punch Report): Reference Section 01 70 00 "Execution and Closeout Requirements." Produce Project punch report for each installed door opening indicating compliance with approved submittals and verification hardware is properly installed, operating, and adjusted. Include list of items to be completed and corrected, indicating the reasons or deficiencies causing the Work to be incomplete or rejected.
   1. Organization of List: Include separate Door Opening and Deficiencies and Corrective Action Lists organized by Mark, Opening Remarks and Comments, and related Opening Images and Video Recordings.

3.5 ADJUSTING

A. Initial Adjustment: Adjust and check each operating item of door hardware and each door to ensure proper operation or function of every unit. Replace units that cannot be adjusted to operate as intended. Adjust door control devices to compensate for final operation of heating and ventilating equipment and to comply with referenced accessibility requirements.

3.6 CLEANING AND PROTECTION

A. Protect all hardware stored on construction site in a covered and dry place. Protect exposed hardware installed on doors during the construction phase. Install any and all hardware at the latest possible time frame.
B. Clean adjacent surfaces soiled by door hardware installation.
C. Clean operating items as necessary to restore proper finish. Provide final protection and maintain conditions that ensure door hardware is without damage or deterioration at time of Owner occupancy.

3.7 DEMONSTRATION

A. Instruct Owner's maintenance personnel to adjust, operate, and maintain mechanical and electromechanical door hardware.

3.8 DOOR HARDWARE SETS

A. The Hardware Sets represent the design intent and direction of the Owner and Engineer. They are a guideline only and should not be considered a detailed hardware schedule. Discrepancies, conflicting hardware and missing items should be brought to the attention of the Engineer with corrections made prior to the Bidding process. Omitted items not included in a Hardware Set should be scheduled with the appropriate additional hardware required for proper application and functionality.
   1. Quantities listed are for each pair of doors, or for each single door.
   2. The supplier is responsible for handing and sizing all products.
   3. Where multiple options for a piece of hardware are given in a single line item, the supplier shall provide the appropriate application for the opening.

B. Manufacturer's Abbreviations:
   1. MK - McKinney
   2. PE - Pemko
   3. AD - Adams Rite
   4. SA - SARGENT
   5. RO - Rockwood
   6. RF - Rixson

## Hardware Sets

### Set: 1.0

Doors: 108

| | | | | |
|---|---|---|---|---|
| 1 | Continuous Hinge | BSPFM__SLF-HD1 | | PE |
| 1 | Access Control Cyl Lock (By Div 28) | 72 IN100-10G77-BIPS LL | BSP | SA |
| 1 | SFIC Cylinder | as required | BSP | SA |
| 1 | Door Closer w Stop | 281 CPS | BSP | SA |
| 1 | Drop Plate & Mounting Hardware | as required | BSP | SA |
| 1 | Threshold | 2005BSPT x Width | | PE |
| 1 | Perimeter Seal | by door / frame mfg | | |
| 1 | Sweep | 315BSPN x Width | | PE |
| 1 | Antenna (By Div 28) | EXT-10-ANT | | SA |
| 1 | Hub (By Div 28) | AH (coordinate hardware version w Owner) | | SA |

Notes: Door is normally closed, latched, and secured. Valid credential for ingress, free egress at all times. Coordinate with security and electrical.

Access control locking device to be furnished by Authorized Channel Partner (ACP) and installed by Certified Integrator (CI).

**Set: 2.0**

Doors: 112

| | | | | |
|---|---|---|---|---|
| 1 | Continuous Hinge | BSPFM__SLF-HD1 | | PE |
| 1 | Mortise Deadlock | MS1850S x 4066 01 | 335 | AD |

END OF SECTION

# SECTION 08 80 00 - GLAZING

## PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Glass products.
   2. Insulating glass.
   3. Glazing tapes.
   4. Miscellaneous glazing materials.

B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.

1.2 DEFINITIONS

A. Glass Manufacturers: Firms that produce primary glass, fabricated glass, or both, as defined in referenced glazing publications.

B. Glass Thicknesses: Indicated by thickness designations in millimeters in accordance with ASTM C1036.

C. IBC: International Building Code.

D. Interspace: Space between lites of an insulating-glass unit.

1.3 COORDINATION

A. Coordinate glazing channel dimensions to provide necessary bite on glass, minimum edge and face clearances, and adequate sealant thicknesses with reasonable tolerances to achieve proper safety margins for glazing retention under each design load case, load case combination, and service condition.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Glass Samples: For each type of glass product other than clear monolithic vision glass; 12 inches square.

C. Glazing Schedule: List glass types and thicknesses for each size opening and location. Use same designations indicated on Drawings.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Protect glazing materials in accordance with manufacturer's written instructions. Prevent damage to glass and glazing materials from condensation, temperature changes, direct exposure to sun, or other causes.

B. Comply with insulating-glass manufacturer's written instructions for venting and sealing units to avoid hermetic seal ruptures due to altitude change.

1.6 FIELD CONDITIONS

A. Environmental Limitations: Do not proceed with glazing when ambient and substrate temperature conditions are outside limits permitted by glazing material manufacturers and when glazing channel substrates are wet from rain, frost, condensation, or other causes.
   1. Do not install glazing sealants when ambient and substrate temperature conditions are outside limits permitted by sealant manufacturer or are below 40 degrees F.

**PART 2 - PRODUCTS**

2.1 MANUFACTURERS

A. General Glass Manufactures: Unless specified otherwise and subject to compliance with requirements, provide products by the following:
   1. AGC Glass Company North America, Inc.
   2. Guardian Glass; SunGuard.
   3. Pilkington North America.
   4. Viracon, Inc.
   5. Vitro Architectural Glass.

2.2 PERFORMANCE REQUIREMENTS

A. General: Installed glazing systems shall withstand normal thermal movement and wind and impact loads (where applicable) without failure, including loss or glass breakage attributable to defective manufacture, fabrication, or installation; failure of sealants or gaskets to remain watertight and airtight; deterioration of glazing materials; or other defects in construction.

B. Structural Performance: Glazing shall withstand the following design loads within limits and under conditions indicated determined in accordance with the IBC and ASTM E1300:
   1. Design Wind Pressures: As indicated on Drawings.
      a. Wind Design Data: As indicated on Drawings.
   2. Thermal Loads: Design glazing to resist thermal stress breakage induced by differential temperature conditions and limited air circulation within individual glass lites and insulated glazing units.

C. Safety Glazing: Where safety glazing is indicated or required by IBC or other code, provide glazing that complies with 16 CFR 1201, Category II.

D. Thermal and Optical Performance Properties: Provide glass with performance properties specified, as indicated in manufacturer's published test data, based on procedures indicated below:
   1. For insulating-glass units, properties are based on units of thickness indicated for overall unit and for each lite.
   2. U-Factors: Center-of-glazing values, in accordance with NFRC 100 and based on most current non-beta version of LBL's WINDOW computer program, expressed as Btu per square feet by hour by degrees F.

## 2.3 GLASS PRODUCTS, GENERAL

A. Glazing Publications: Comply with published recommendations of glass product manufacturers and organizations below unless more stringent requirements are indicated. See these publications for glazing terms not otherwise defined in this Section or in referenced standards.
   1. NGA Publications: "Glazing Manual."
   2. AAMA Publications: AAMA GDSG-1, "Glass Design for Sloped Glazing," and AAMA TIR A7, "Sloped Glazing Guidelines."
   3. IGMA Publication for Sloped Glazing: IGMA TB-3001, "Guidelines for Sloped Glazing."
   4. IGMA Publication for Insulating Glass: SIGMA TM-3000, "North American Glazing Guidelines for Sealed Insulating Glass Units for Commercial and Residential Use."

B. Safety Glazing Labeling: Where safety glazing is indicated, permanently mark glazing with certification label of the SGCC or another certification agency acceptable to authorities having jurisdiction or manufacturer. Label shall indicate manufacturer's name, type of glass, thickness, and safety glazing standard with which glass complies.

C. Thickness: Where glass thickness is indicated, it is a minimum. Provide glass that complies with performance requirements and is not less than thickness indicated.
   1. Thickness of Tinted Glass: Provide same thickness for each tint color indicated throughout Project.

D. Strength: Where annealed float glass is indicated, provide annealed float glass, heat-strengthened float glass, or fully tempered float glass as needed to comply with "Performance Requirements" Article. Where heat-strengthened float glass is indicated, provide heat-strengthened float glass or fully tempered float glass as needed to comply with "Performance Requirements" Article. Where fully tempered float glass is indicated, provide fully tempered float glass.

## 2.4 GLASS PRODUCTS

A. Reflective- and Low-E-Coated Vision Glass: ASTM C1376.
   1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
      a. Cardinal Glass Industries.
      b. Guardian Glass; SunGuard.
      c. Saint-Gobain Glass Exprover NA.
      d. Vitro Architectural Glass.

## 2.5 INSULATING GLASS

A. Insulating-Glass Units: Factory-assembled units consisting of sealed lites of glass separated by a dehydrated interspace, qualified in accordance with ASTM E2190.
   1. Sealing System: Dual seal, with manufacturer's standard primary and secondary sealants.
   2. Desiccant: Molecular sieve, silica gel, or a blend of both.

2.6 GLAZING TAPES

A. Back-Bedding Mastic Glazing Tapes: Preformed, butyl-based, 100 percent solids elastomeric tape; nonstaining and nonmigrating in contact with nonporous surfaces; with or without spacer rod as recommended in writing by tape and glass manufacturers for application indicated; and complying with ASTM C1281 and AAMA 800 for products indicated below:
   1. AAMA 806.3 tape, for glazing applications in which tape is subject to continuous pressure.
   2. AAMA 807.3 tape, for glazing applications in which tape is not subject to continuous pressure.

2.7 MISCELLANEOUS GLAZING MATERIALS

A. General: Provide products of material, size, and shape complying with referenced glazing standard, recommended in writing by manufacturers of glass and other glazing materials for application indicated, and with a proven record of compatibility with surfaces contacted in installation.
B. Cleaners, Primers, and Sealers: Types recommended by sealant or gasket manufacturer.
C. Setting Blocks:
   1. Type recommended in writing by sealant or glass manufacturer.
D. Spacers:
   1. Type recommended in writing by sealant or glass manufacturer.
E. Edge Blocks:
   1. Type recommended in writing by sealant or glass manufacturer.

2.8 FABRICATION OF GLAZING UNITS

A. Fabricate glazing units in sizes required to fit openings indicated for Project, with edge and face clearances, edge and surface conditions, and bite complying with written instructions of product manufacturer and referenced glazing publications, to comply with system performance requirements.
   1. Allow for thermal movements from ambient and surface temperature changes acting on glass framing members and glazing components.
      a. Temperature Change: 120 degrees F, ambient; 180 degrees F, material surfaces.

**PART 3 - EXECUTION**

3.1 EXAMINATION

A. Examine framing, glazing channels, and stops, with Installer present, for compliance with the following:
   1. Manufacturing and installation tolerances, including those for size, squareness, and offsets at corners.
   2. Presence and functioning of weep systems.
   3. Minimum required face and edge clearances.
   4. Effective sealing between joints of glass-framing members.
B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Clean glazing channels and other framing members receiving glass immediately before glazing. Remove coatings not firmly bonded to substrates.
B. Examine glazing units to locate exterior and interior surfaces. Label or mark units as needed so that exterior and interior surfaces are readily identifiable. Do not use materials that leave visible marks in the completed Work.

3.3 GLAZING, GENERAL

A. Comply with combined written instructions of manufacturers of glass, sealants, gaskets, and other glazing materials, unless more stringent requirements are indicated, including those in referenced glazing publications.
B. Protect glass edges from damage during handling and installation. Remove damaged glass from Project Site and legally dispose off Project Site. Damaged glass includes glass with edge damage or other imperfections that, when installed, could weaken glass, impair performance, or impair appearance.
C. Apply primers to joint surfaces where required for adhesion of sealants, as determined by preconstruction testing.
D. Install setting blocks in sill rabbets, sized and located to comply with referenced glazing publications, unless otherwise required by glass manufacturer. Set blocks in thin course of compatible sealant suitable for heel bead.
E. Do not exceed edge pressures stipulated by glass manufacturers for installing glass lites.
F. Provide spacers for glass lites where length plus width is larger than 50 inches.
    1. Locate spacers directly opposite each other on both inside and outside faces of glass. Install correct size and spacing to preserve required face clearances, unless gaskets and glazing tapes are used that have demonstrated ability to maintain required face clearances and to comply with system performance requirements.
    2. Provide 1/8-inch-minimum bite of spacers on glass and use thickness equal to sealant width. With glazing tape, use thickness slightly less than final compressed thickness of tape.
G. Provide edge blocking where indicated or needed to prevent glass lites from moving sideways in glazing channel, as recommended in writing by glass manufacturer and in accordance with requirements in referenced glazing publications.
H. Set glass lites in each series with uniform pattern, draw, bow, and similar characteristics.
I. Set glass lites with proper orientation so that coatings face exterior or interior as specified.

3.4 TAPE GLAZING

A. Position tapes on fixed stops so that, when compressed by glass, their exposed edges are flush with or protrude slightly above sightline of stops.
B. Install tapes continuously but not necessarily in one continuous length. Do not stretch tapes to make them fit opening.
C. Cover vertical framing joints by applying tapes to heads and sills first, then to jambs. Cover horizontal framing joints by applying tapes to jambs, then to heads and sills.
D. Place joints in tapes at corners of opening with adjoining lengths butted together, not lapped. Seal joints in tapes with compatible sealant approved by tape manufacturer.
E. Do not remove release paper from tape until right before each glazing unit is installed.
F. Apply heel bead of elastomeric sealant.

G. Center glass lites in openings on setting blocks, and press firmly against tape by inserting dense compression gaskets formed and installed to lock in place against faces of removable stops. Start gasket applications at corners and work toward centers of openings.
H. Apply cap bead of elastomeric sealant over exposed edge of tape.

## 3.5 CLEANING AND PROTECTION

A. Immediately after installation, remove non-permanent labels and clean surfaces.
B. Protect glass from contact with contaminating substances resulting from construction operations. Examine glass surfaces adjacent to or below exterior concrete and other masonry surfaces at frequent intervals during construction, but not less than once a month, for buildup of dirt, scum, alkaline deposits, or stains.
   1. If, despite such protection, contaminating substances do contact with glass, remove substances immediately as recommended in writing by glass manufacturer. Remove and replace glass that cannot be cleaned without damage to coatings.
C. Remove and replace glass that is damaged during construction period.
D. Wash glass on both exposed surfaces not more than 4 days before date scheduled for inspections that establish date of Substantial Completion. Wash glass as recommended in writing by glass manufacturer.
   1. Safety glazing required.

## 3.6 INSULATING GLASS SCHEDULE

A. Low-E-Coated, Tinted Insulating Glass Type G12:
   1. Overall Unit Thickness: 1 inch.
   2. Minimum Thickness of Each Glass Lite: 6 millimeters.
   3. Outdoor Lite: Tinted float glass.
   4. Tint Color: Gray.
   5. Interspace Content: Air.
   6. Indoor Lite: Clear float glass.
   7. Low-E Coating: Sputtered on second surface.
   8. Summer Daytime U-Factor: 0.22 maximum.
   9. SGHC: .25 maximum.

END OF SECTION

# SECTION 09 22 16 - NON-STRUCTURAL METAL FRAMING

## PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Non-load-bearing steel framing systems for interior partitions.
   2. Suspension systems for interior ceilings and soffits.
B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

1.3 INFORMATIONAL SUBMITTALS

A. Product Certificates: For each type of code-compliance certification for studs and tracks.

1.4 QUALITY ASSURANCE

A. Code-Compliance Certification of Studs and Tracks: Provide documentation that framing members are certified according to the product-certification program of the Certified Steel Stud Association, the Steel Framing Industry Association, the Steel Stud Manufacturers Association, or the Supreme Steel Framing System Association.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Notify manufacturer of damaged materials received prior to installation.
B. Deliver materials in manufacturer's original, unopened, undamaged containers with identification labels intact.
C. Protect cold-formed metal framing from corrosion, deformation, and other damage during delivery, storage, and handling as required by AISI S202, "Code of Standard Practice for Cold-Formed Steel Structural Framing."

## PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Horizontal Deflection: For composite and non-composite wall assemblies, limited to following ratios of the wall height based on horizontal loading of 5 pounds of force per square foot.
   1. Plaster: 1/360.
   2. Gypsum Board and Other Finishes: 1/240.
B. Design Loads: As indicated on architectural Drawings or 5 pounds of force per square foot minimum as required by the IBC.

2.2 FRAMING SYSTEMS

A. Framing Members, General: Comply with AISI S220 for conditions indicated.
   1. Steel Sheet Components: Comply with AISI S220 requirements for metal unless otherwise indicated
   2. Protective Coating: Comply with AISI S220; ASTM A653, G40; or coating with equivalent corrosion resistance. Galvannealed products are unacceptable.
      a. Coating demonstrates equivalent corrosion resistance with an evaluation report acceptable to authorities having jurisdiction.

B. Studs and Track: AISI S220.
   1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
      a. CEMCO; California Expanded Metal Products Co.
      b. ClarkDietrich.
      c. Jaimes Industries.
   2. Minimum Base-Steel Thickness: As required by performance requirements for horizontal deflection.
   3. Depth: As indicated on Drawings.

2.3 SUSPENSION SYSTEMS

A. Tie Wire: ASTM A641, Class 1 zinc coating, soft temper, 0.062-inch-diameter wire, or double strand of 0.048-inch-diameter wire.

B. Wire Hangers: ASTM A641, Class 1 zinc coating, soft temper, 0.16-inch in diameter.

2.4 AUXILIARY MATERIALS

A. General: Provide auxiliary materials that comply with referenced installation standards.
   1. Fasteners for Steel Framing: Of type, material, size, corrosion resistance, holding power, and other properties required to fasten steel members to substrates.

**PART 3 - EXECUTION**

3.1 EXAMINATION

A. Examine areas and substrates, with Installer present, and including welded hollow-metal frames, cast-in anchors, and structural framing, for compliance with requirements and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Suspended Assemblies: Coordinate installation of suspension systems with installation of overhead structure to ensure that inserts and other provisions for anchorages to building structure have been installed to receive hangers at spacing required to support the Work and that hangers will develop their full strength.
   1. Furnish concrete inserts and other devices indicated to other trades for installation in advance of time needed for coordination and construction.

## 3.3 INSTALLATION, GENERAL

A. Installation Standard: ASTM C754.
   1. Gypsum Board Assemblies: Also comply with requirements in ASTM C840 that apply to framing installation.
B. Install framing and accessories plumb, square, and true to line, with connections securely fastened.
C. Install supplementary framing, and blocking to support fixtures, equipment services, heavy trim, grab bars, toilet accessories, furnishings, or similar construction.
D. Install bracing at terminations in assemblies.
E. Do not bridge building control and expansion joints with non-load-bearing steel framing members. Frame both sides of joints independently.

## 3.4 INSTALLING FRAMED ASSEMBLIES

A. Install framing system components according to spacings indicated, but not greater than spacings required by referenced installation standards for assembly types.
B. Where studs are installed directly against exterior masonry walls or dissimilar metals at exterior walls, install isolation strip between studs and exterior wall.
C. Install studs so flanges within framing system point in same direction.
D. Install tracks at floors and overhead supports. Extend framing full height to structural supports or substrates above suspended ceilings except where partitions are indicated to terminate at suspended ceilings. Continue framing around ducts that penetrate partitions above ceiling.
   1. Door Openings: Screw vertical studs at jambs to jamb anchor clips on door frames; install track section (for cripple studs) at head and secure to jamb studs.
      a. Install two studs at each jamb unless otherwise indicated.
      b. Install cripple studs at head adjacent to each jamb stud, with a minimum 1/2-inch clearance from jamb stud to allow for installation of control joint in finished assembly.
      c. Extend jamb studs through suspended ceilings and attach to underside of overhead structure.
   2. Other Framed Openings: Frame openings other than door openings the same as required for door openings unless otherwise indicated. Install framing below sills of openings to match framing required above door heads.
E. Direct Furring:
   1. Screw to wood framing.
   2. Attach to concrete or masonry with stub nails, screws designed for masonry attachment, or powder-driven fasteners spaced 24 inches on center.
F. Installation Tolerance: Install each framing member so fastening surfaces vary not more than 1/8-inch from the plane formed by faces of adjacent framing.

## 3.5 INSTALLING CEILING SUSPENSION SYSTEMS

A. Install suspension system components according to spacings indicated, but not greater than spacings required by referenced installation standards for assembly types.
   1. Hangers: 48 inches on center.
B. Isolate suspension systems from building structure where they abut or are penetrated by building structure to prevent transfer of loading imposed by structural movement.

C. Suspend hangers from building structure as follows:
   1. Install hangers plumb and free from contact with insulation or other objects within ceiling plenum that are not part of supporting structural or suspension system.
      a. Splay hangers only where required to miss obstructions and offset resulting horizontal forces by bracing, countersplaying, or other equally effective means.
   2. Where width of ducts and other construction within ceiling plenum produces hanger spacings that interfere with locations of hangers required to support standard suspension system members, install supplemental suspension members and hangers in the form of trapezes or equivalent devices.
      a. Size supplemental suspension members and hangers to support ceiling loads within performance limits established by referenced installation standards.
   3. Wire Hangers: Secure by looping and wire tying, either directly to structures or to inserts, eye screws, or other devices and fasteners that are secure and appropriate for substrate, and in a manner that will not cause hangers to deteriorate or otherwise fail.
   4. Do not attach hangers to steel roof deck.
   5. Do not attach hangers to permanent metal forms. Furnish cast-in-place hanger inserts that extend through forms.
   6. Do not attach hangers to rolled-in hanger tabs of composite steel floor deck.
   7. Do not connect or suspend steel framing from ducts, pipes, or conduit.

D. Installation Tolerances: Install suspension systems that are level to within 1/8-inch in 12 feet measured lengthwise on each member that will receive finishes and transversely between parallel members that will receive finishes.

END OF SECTION

# SECTION 09 29 00 - GYPSUM BOARD

## PART 1 - GENERAL

### 1.1 SUMMARY

A. Section Includes:
   1. Interior gypsum board.

B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.
   2. Section 09 22 16 "Non-Structural Metal Framing" for non-structural steel framing and suspension systems that support gypsum board panels.

### 1.2 ACTION SUBMITTALS

A. Product Data: For the following:
   1. Gypsum wallboard.
   2. Gypsum board, Type X.
   3. Interior trim.
   4. Joint treatment materials.
   5. Laminating adhesive.

### 1.3 DELIVERY, STORAGE AND HANDLING

A. Store materials inside under cover and keep them dry and protected against weather, condensation, direct sunlight, construction traffic, and other potential causes of damage. Stack panels flat and supported on risers on a flat platform to prevent sagging.

### 1.4 FIELD CONDITIONS

A. Environmental Limitations: Comply with ASTM C840 requirements or gypsum board manufacturer's written instructions, whichever are more stringent.

B. Do not install paper-faced gypsum panels until installation areas are enclosed and conditioned.

C. Do not install panels that are wet, moisture damaged, and mold damaged.
   1. Indications that panels are wet or moisture damaged include, but are not limited to, discoloration, sagging, or irregular shape.
   2. Indications that panels are mold damaged include, but are not limited to, fuzzy or splotchy surface contamination and discoloration.

## PART 2 - PRODUCTS

### 2.1 GYPSUM BOARD, GENERAL

A. Manufacturers: Unless noted otherwise and subject to compliance with requirements, provide products by the following:
   1. Georgia-Pacific Gypsum LLC.
   2. National Gypsum Company.
   3. USG Corporation.

B. Size: Provide maximum lengths and widths available that will minimize joints in each area and that correspond with support system indicated.

2.2 INTERIOR GYPSUM BOARD

A. Gypsum Wallboard: ASTM C1396.
   1. Thickness: Five-eighths-inch.
   2. Long Edges: Tapered.
B. Gypsum Board, Type X: ASTM C1396.
   1. Thickness: Five-eighths-inch.
   2. Long Edges: Tapered.

2.3 TRIM ACCESSORIES

A. Interior Trim: ASTM C1047.
   1. Material: Galvanized or aluminum-coated steel sheet, rolled zinc, plastic, or paper-faced galvanized-steel sheet.
   2. Shapes:
      a. Cornerbead.
      b. U-Bead: J-shaped; exposed short flange does not receive joint compound.
      c. Expansion (control) joint.
      d. Base-of-Wall Moisture Barrier Trim: Galvanized-steel sheet, 2 inches high to extruded PVC, 1/2-inch high.
         1) Manufacturers: Subject to compliance with requirements, provide products by the following:
            a) VersaDry, LLC.
            b) Waterguard.

2.4 .JOINT TREATMENT MATERIALS

A. General: Comply with ASTM C475.
B. Joint Tape:
   1. Interior Gypsum Board: Paper.

C. Joint Compound for Interior Gypsum Board: For each coat, use formulation that is compatible with other compounds applied on previous or for successive coats.
   1. Prefilling: At open joints, rounded or beveled panel edges, and damaged surface areas, use setting-type taping compound.
   2. Embedding and First Coat: For embedding tape and first coat on joints, fasteners, and trim flanges, use setting-type taping compound.
      a. Use setting-type compound for installing paper-faced metal trim accessories.
   3. Fill Coat: For second coat, use setting-type, sandable topping compound.
   4. Finish Coat: For third coat, use drying-type, all-purpose compound.

2.5 AUXILIARY MATERIALS

A. Provide auxiliary materials that comply with referenced installation standards and manufacturer's written instructions.
B. Steel Drill Screws: ASTM C1002 unless otherwise indicated.
   1. Use screws complying with ASTM C954 for fastening panels to steel members from 0.033- to 0.112-inch thick.

C. Thermal Insulation: As specified in Section 07 21 00 "Thermal Insulation."

## PART 3 - EXECUTION

### 3.1 EXAMINATION

A. Examine areas and substrates including welded hollow-metal frames and support framing, with Installer present, for compliance with requirements and other conditions affecting performance of the Work.
B. Examine panels before installation. Reject panels that are wet, moisture damaged, and mold damaged.
C. Proceed with installation only after unsatisfactory conditions have been corrected.

### 3.2 INSTALLATION AND FINISHING OF PANELS, GENERAL

A. Comply with ASTM C840.
B. Install panels with face side out. Butt panels together for a light contact at edges and ends with not more than 1/16-inch of open space between panels. Do not force into place.
C. Locate edge and end joints over supports, except in ceiling applications where intermediate supports or gypsum board back-blocking is provided behind end joints. Do not place tapered edges against cut edges or ends. Stagger vertical joints on opposite sides of partitions. Do not make joints other than control joints at corners of framed openings.
D. Form control and expansion joints with space between edges of adjoining gypsum panels.
E. Cover both faces of support framing with gypsum panels in concealed spaces (above ceilings, etc.,) except in chases braced internally.
   1. Unless concealed application is indicated or required for sound, fire, air, or smoke ratings, coverage may be accomplished with scraps of not less than 8 square feet in area.
   2. Fit gypsum panels around ducts, pipes, and conduits.
   3. Where partitions intersect structural members projecting below underside of floor/roof slabs and decks, cut gypsum panels to fit profile formed by structural members; allow 1/4- to 3/8-inch-wide joints to install sealant.

F. Isolate perimeter of gypsum board applied to non-load-bearing partitions at structural abutments. Provide 1/4- to 1/2-inch-wide spaces at these locations and trim edges with edge trim where edges of panels are exposed. Seal joints between edges and abutting structural surfaces with acoustical sealant.
G. Attachment to Steel Framing: Attach panels so leading edge or end of each panel is attached to open (unsupported) edges of stud flanges first.

### 3.3 INSTALLATION OF INTERIOR GYPSUM BOARD

A. Install interior gypsum board in the following locations:
   1. Wallboard Type: As indicated on Drawings.
B. Single-Layer Application:
   1. On partitions/walls, apply gypsum panels horizontally (perpendicular to framing) unless otherwise indicated or required by fire-resistance-rated assembly, and minimize end joints.
      a. Stagger abutting end joints not less than one framing member in alternate courses of panels.

2. On Z-shaped furring members, apply gypsum panels vertically (parallel to framing) with no end joints. Locate edge joints over furring members.
3. Fastening Methods: Apply gypsum panels to supports with steel drill screws.

C. Multilayer Application:
1. On partitions/walls, apply gypsum board indicated for base layers and face layers vertically (parallel to framing) with joints of base layers located over stud or furring member and face-layer joints offset at least one stud or furring member with base-layer joints unless otherwise indicated or required by fire-resistance-rated assembly. Stagger joints on opposite sides of partitions.
2. On Z-shaped furring members, apply base layer vertically (parallel to framing) and face layer either vertically (parallel to framing) or horizontally (perpendicular to framing) with vertical joints offset at least one furring member. Locate edge joints of base layer over furring members.
3. Fastening Methods: Fasten base layers and face layers separately to supports with screws.

## 3.4 INSTALLATION OF TRIM ACCESSORIES

A. General: For trim with back flanges intended for fasteners, attach to framing with same fasteners used for panels. Otherwise, attach trim according to manufacturer's written instructions.
B. Control Joints: Install control joints according to ASTM C840 and in specific locations approved by Engineer for visual effect.
C. Interior Trim: Install in the following locations:
1. Cornerbead: Use at outside corners unless otherwise indicated.
2. U-Bead: Use at exposed panel edges.
3. Base-of-Wall Moisture Barrier Trim: Install per manufacture's instructions. At restroom walls and walls within 4 feet of plumbing, provide PVC base-of-wall moisture barrier trim with sealant between trim and floor.

## 3.5 FINISHING GYPSUM BOARD

A. General: Treat gypsum board joints, interior angles, edge trim, control joints, penetrations, fastener heads, surface defects, and elsewhere as required to prepare gypsum board surfaces for decoration. Promptly remove residual joint compound from adjacent surfaces.
B. Prefill open joints and damaged surface areas.
C. Apply joint tape over gypsum board joints, except for trim products specifically indicated as not intended to receive tape.
D. Gypsum Board Finish Levels: Finish panels to levels indicated below and according to ASTM C840:
1. Level 4: At panel surfaces that will be exposed to view unless otherwise indicated.
a. Primer and its application to surfaces are specified in Section 09 91 23 "Interior Painting."

## 3.6 PROTECTION

A. Protect adjacent surfaces from drywall compound and promptly remove from floors and other non-drywall surfaces. Repair surfaces stained, marred, or otherwise damaged during drywall application.
B. Protect installed products from damage from weather, condensation, direct sunlight, construction, and other causes during remainder of the construction period.

PACKET 7.342 September 12, 2023
PACKET 11.344 November 14, 2023

C. Remove and replace panels that are wet, moisture damaged, and mold damaged.
   1. Indications that panels are wet or moisture damaged include, but are not limited to, discoloration, sagging, or irregular shape.
   2. Indications that panels are mold damaged include, but are not limited to, fuzzy or splotchy surface contamination and discoloration.

END OF SECTION

# SECTION 09 51 13 - ACOUSTICAL PANEL CEILINGS

## PART 1 - GENERAL

### 1.1 SUMMARY

A. Section includes acoustical panels and exposed suspension systems for interior ceilings.
B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.
C. Products furnished, but not installed under this Section, include anchors, clips, and other ceiling attachment devices to be cast in concrete.

### 1.2 INFORMATIONAL SUBMITTALS

A. Field quality-control reports.

### 1.3 DELIVERY, STORAGE, AND HANDLING

A. Deliver acoustical panels, suspension-system components, and accessories to Project Site and store them in a fully enclosed, conditioned space where they will be protected against damage from moisture, humidity, temperature extremes, direct sunlight, surface contamination, and other causes.
B. Before installing acoustical panels, permit them to reach room temperature and a stabilized moisture content.

### 1.4 FIELD CONDITIONS

A. Environmental Limitations: Do not install acoustical panel ceilings until spaces are enclosed and weathertight, wet-work in spaces is complete and dry, work above ceilings is complete, and ambient temperature and humidity conditions are maintained at the levels indicated for Project when occupied for its intended use.
   1. Pressurized Plenums: Operate ventilation system for not less than 48 hours before beginning acoustical panel ceiling installation.

## PART 2 - PRODUCTS

### 2.1 ACOUSTICAL PANELS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   1. Armstrong World Industries, Inc.
   2. CertainTeed Corporation.
   3. United States Gypsum Company.
B. Basis of Design product is Dune manufactured by Armstrong World Industries, Inc.
   1. Size: 24 inches by 24 inches by 5/8-inch, item number 1772.
   2. Edge/Joint Detail: Square.
   3. Material: Mineral Fiber.
   4. Color: White.

2.2 METAL SUSPENSION SYSTEM

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   1. Armstrong World Industries, Inc.
   2. CertainTeed Corporation.
   3. United States Gypsum Company.

B. Basis of Design product is Prelude XL 15/16-inch Exposed Tee System manufactured by Armstrong World Industries, Inc.
   1. Material: Hot-dipped Galvanized Steel.
   2. Color: White.

2.3 ACCESSORIES

A. Wire Hangers, Braces, and Ties: Provide wires as follows:
   1. Zinc-Coated, Carbon-Steel Wire: ASTM A641, Class 1 zinc coating, soft temper.

B. Hanger Rods: Mild steel, zinc coated or protected with rust-inhibitive paint.

C. Angle Hangers: Angles with legs not less than 7/8-inch wide; formed with 0.04-inch-thick, galvanized-steel sheet complying with ASTM A653, G90 coating designation; with bolted connections and 5/16-inch-diameter bolts.

**PART 3 - EXECUTION**

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, including structural framing to which acoustical panel ceilings attach or abut, with Installer present, for compliance with requirements specified in this and other Sections that affect ceiling installation and anchorage and with requirements for installation tolerances and other conditions affecting performance of acoustical panel ceilings.

B. Examine acoustical panels before installation. Reject acoustical panels that are wet, moisture damaged, or mold damaged.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Measure each ceiling area and establish layout of acoustical panels to balance border widths at opposite edges of each ceiling. Avoid using less-than-half-width panels at borders unless otherwise indicated, and comply with layout shown on reflected ceiling plans.

B. Layout openings for penetrations centered on the penetrating items.

## 3.3 INSTALLATION

A. Install acoustical panel ceilings according to ASTM C636 and manufacturer's written instructions.

B. Suspend ceiling hangers from building's structural members and as follows:
   1. Install hangers plumb and free from contact with insulation or other objects within ceiling plenum that are not part of supporting structure or of ceiling suspension system.
   2. Splay hangers only where required to miss obstructions; offset resulting horizontal forces by bracing, countersplaying, or other equally effective means.
   3. Where width of ducts and other construction within ceiling plenum produces hanger spacings that interfere with location of hangers at spacings required to support standard suspension-system members, install supplemental suspension members and hangers in form of trapezes or equivalent devices.
   4. Secure wire hangers to ceiling-suspension members and to supports above with a minimum of three tight turns. Connect hangers directly to structure or to inserts, eye screws, or other devices that are secure and appropriate for substrate and that will not deteriorate or otherwise fail due to age, corrosion, or elevated temperatures.
   5. Secure flat, angle, channel, and rod hangers to structure, including intermediate framing members, by attaching to inserts, eye screws, or other devices that are secure and appropriate for both the structure to which hangers are attached and the type of hanger involved. Install hangers in a manner that will not cause them to deteriorate or fail due to age, corrosion, or elevated temperatures.
   6. Do not support ceilings directly from permanent metal forms or floor deck. Fasten hangers to cast-in-place hanger inserts, postinstalled mechanical or adhesive anchors, or power-actuated fasteners that extend through forms into concrete.
   7. When steel framing does not permit installation of hanger wires at spacing required, install carrying channels or other supplemental support for attachment of hanger wires.
   8. Do not attach hangers to steel deck tabs.
   9. Do not attach hangers to steel roof deck. Attach hangers to structural members.
   10. Space hangers not more than 48 inches on center along each member supported directly from hangers unless otherwise indicated; provide hangers not more than 8 inches from ends of each member.
   11. Size supplemental suspension members and hangers to support ceiling loads within performance limits established by referenced standards.

C. Secure bracing wires to ceiling suspension members and to supports with a minimum of four tight turns. Suspend bracing from building's structural members as required for hangers, without attaching to permanent metal forms, steel deck, or steel deck tabs. Fasten bracing wires into concrete with cast-in-place or postinstalled anchors.

D. Install edge moldings and trim of type indicated at perimeter of acoustical ceiling area and where necessary to conceal edges of acoustical panels.
   1. Apply acoustical sealant in a continuous ribbon concealed on back of vertical legs of moldings before they are installed.
   2. Screw attach moldings to substrate at intervals not more than 16 inches on center and not more than 3 inches from ends. Miter corners accurately and connect securely.
   3. Do not use exposed fasteners, including pop rivets, on moldings and trim.

E. Install suspension-system runners so they are square and securely interlocked with one another. Remove and replace dented, bent, or kinked members.

F. Install acoustical panels with undamaged edges and fit accurately into suspension-system runners and edge moldings. Scribe and cut panels at borders and penetrations to provide precise fit.
   1. Arrange directionally patterned acoustical panels as follows:
      a. As indicated on reflected ceiling plans.
      b. Install panels with pattern running in one direction parallel to long axis of space.
      c. Install panels in a basket-weave pattern.
   2. For square-edged panels, install panels with edges fully hidden from view by flanges of suspension-system runners and moldings.
   3. For reveal-edged panels on suspension-system runners, install panels with bottom of reveal in firm contact with top surface of runner flanges.
   4. For reveal-edged panels on suspension-system members with box-shaped flanges, install panels with reveal surfaces in firm contact with suspension-system surfaces and panel faces flush with bottom face of runners.
   5. Paint cut edges of panel remaining exposed after installation; match color of exposed panel surfaces using coating recommended in writing for this purpose by acoustical panel manufacturer.
   6. Install hold-down clips in areas indicated; space according to panel manufacturer's written instructions unless otherwise indicated.
   7. Install clean-room gasket system in areas indicated, sealing each panel and fixture as recommended by panel manufacturer's written instructions.
   8. Protect lighting fixtures and air ducts according to requirements indicated for fire-resistance-rated assembly.

## 3.4 ERECTION TOLERANCES

A. Suspended Ceilings: Install main and cross runners level to a tolerance of 1/8-inch in 12 feet, non-cumulative.
B. Moldings and Trim: Install moldings and trim to substrate and level with ceiling suspension system to a tolerance of 1/8-inch in 12 feet, non-cumulative.

## 3.5 CLEANING

A. Clean exposed surfaces of acoustical panel ceilings, including trim, edge moldings, and suspension-system members. Comply with manufacturer's written instructions for cleaning and touchup of minor finish damage.
B. Remove and replace ceiling components that cannot be successfully cleaned and repaired to permanently eliminate evidence of damage.

END OF SECTION

# SECTION 09 91 23 - INTERIOR PAINTING

## PART 1 - GENERAL

### 1.1 SUMMARY

A. Section Includes:
   1. Surface preparation and the application of paint systems on:
      a. Concrete.
      b. Steel.
      c. Galvanized metal.
      d. Aluminum (not anodized or otherwise coated).
      e. Gypsum board.
      f. Plywood.

B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.
   2. Section 09 91 13 "Exterior Painting" for surface preparation and the application of paint systems on exterior substrates.

### 1.2 DEFINITIONS

A. Gloss Level 1: Not more than 5 units at 60 degrees and 10 units at 85 degrees, according to ASTM D523, a matte flat finish.

B. Gloss Level 2: Not more than 10 units at 60 degrees and 10 to 35 units at 85 degrees, according to ASTM D523, a high-side sheen flat, velvet-like finish.

C. Gloss Level 3: 10 to 25 units at 60 degrees and 10 to 35 units at 85 degrees, according to ASTM D523, an eggshell finish.

D. Gloss Level 4: 20 to 35 units at 60 degrees and not less than 35 units at 85 degrees, according to ASTM D523, a satin-like finish.

E. Gloss Level 5: 35 to 70 units at 60 degrees, according to ASTM D 523, a semi-gloss finish.

F. Gloss Level 6: 70 to 85 units at 60 degrees, according to ASTM D523, a gloss finish.

### 1.3 ACTION SUBMITTALS

A. Product Data: For each type of product. Include preparation requirements and application instructions.

B. Product List: For each product indicated, include the following:
   1. Cross-reference to paint system and locations of application areas. Use same designations indicated on Drawings and in schedules.
   2. VOC content.

### 1.4 DELIVERY, STORAGE, AND HANDLING

A. Delivery and Handling: Deliver products to Project Site in an undamaged condition in manufacturer's original sealed containers, complete with labels and instructions for handling, storing, unpacking, protecting, and installing. Packaging shall bear the manufacturer's label with the following information:
   1. Product name and type (description).
   2. Batch date.

3. Color number.
4. VOC content.
5. Environmental handling requirements.
6. Surface preparation requirements.
7. Application instructions.

B. Store materials not in use in tightly covered containers in well-ventilated areas with ambient temperatures continuously maintained at not less than 45 degrees F.
1. Maintain containers in clean condition, free of foreign materials and residue.
2. Remove rags and waste from storage areas daily.

1.5 FIELD CONDITIONS

A. Apply paints only when temperature of surfaces to be painted and ambient air temperatures are between 50 and 95 degrees F.
B. Do not apply paints when relative humidity exceeds 85 percent; at temperatures less than 5 degrees F above the dew point; or to damp or wet surfaces.
C. Lead Paint: It is not expected that lead paint will be encountered in the Work.
1. If suspected lead paint is encountered, do not disturb; immediately notify Engineer and Owner.

**PART 2 - PRODUCTS**

2.1 MANUFACTURERS

A. Basis-of-Design Product: Subject to compliance with requirements, provide Sherwin-Williams Company products indicated or comparable product from one of the following:
1. Benjamin Moore & Co.
2. Kwal, Division of Sherwin-Williams.
3. PPG Engineerural Finishes, Inc.
4. Kelly Moore.
5. Dunn Edwards.

B. Source Limitations: Obtain paint materials from single source from single listed manufacturer.
1. Manufacturer's designations listed on a separate color schedule are for color reference only and do not indicate prior approval.

2.2 PAINT, GENERAL

A. Standards: Provide products that comply with manufacturer's premium first quality standards indicated and like VOC limits.
B. Material Compatibility:
1. Provide materials for use within each paint system that are compatible with one another and substrates indicated, under conditions of service and application as demonstrated by manufacturer, based on testing and field experience.
2. For each coat in a paint system, provide products recommended in writing by manufacturers of topcoat for use in paint system and on substrate indicated.

C. Colors: As selected by Engineer from manufacturer's full range.

## PART 3 - EXECUTION

### 3.1 EXAMINATION

A. Examine substrates and conditions, with Applicator present, for compliance with requirements for maximum moisture content and other conditions affecting performance of the Work. Verify suitability of substrates, including surface conditions and compatibility with existing finishes and primers. Where acceptability of substrate conditions is in question, apply samples and perform in-situ testing to verify compatibility, adhesion, and film integrity of new paint application.
   1. Report, in writing, conditions that may affect application, appearance, or performance of paint.

B. Substrate Conditions:
   1. Maximum Moisture Content of Substrates: When measured with an electronic moisture meter as follows:
      a. Concrete: Twelve percent.
      b. Masonry (Clay and CMU): Twelve percent.
      c. Wood: Fifteen percent.
      d. Gypsum Board: Twelve percent.
      e. Plaster: Twelve percent.
   2. Gypsum Board Substrates: Verify that finishing compound is sanded smooth.
   3. Plaster Substrates: Verify that plaster is fully cured.
   4. Spray-Textured Ceiling Substrates: Verify that surfaces are dry.

C. Proceed with coating application only after unsatisfactory conditions have been corrected; application of coating indicates acceptance of surfaces and conditions.

### 3.2 PREPARATION

A. Comply with manufacturer's written instructions and recommendations in "MPI Manual" applicable to substrates indicated.

B. Remove hardware, covers, plates, and similar items already in place that are removable and are not to be painted. If removal is impractical or impossible because of size or weight of item, provide surface-applied protection before surface preparation and painting.
   1. After completing painting operations, use workers skilled in the trades involved to reinstall items that were removed. Remove surface-applied protection if any.

C. Clean substrates of substances that could impair bond of paints, including dust, dirt, oil, grease, and incompatible paints and encapsulants.
   1. Remove incompatible primers and re-prime substrate with compatible primers or apply tie coat as required to produce paint systems indicated.

D. Steel Substrates: Remove rust, loose mill scale, and shop primer, if any. Clean using methods recommended in writing by paint manufacturer but not less than the following:
   1. SSPC-SP 2, "Hand Tool Cleaning."
   2. SSPC-SP 3, "Power Tool Cleaning."
   3. SSPC-SP 7/NACE No. 4, "Brush-off Blast Cleaning."
   4. SSPC-SP 11, "Power Tool Cleaning to Bare Metal."

E. Shop-Primed Steel Substrates: Clean field welds, bolted connections, and abraded areas of shop paint, and paint exposed areas with the same material as used for shop priming to comply with SSPC-PA 1 for touching up shop-primed surfaces.

F. Galvanized-Metal Substrates: Remove grease and oil residue from galvanized sheet metal fabricated from coil stock by mechanical methods to produce clean, lightly etched surfaces that promote adhesion of subsequently applied paints.

G. Aluminum Substrates: Remove loose surface oxidation.

3.3 APPLICATION

A. Apply paints according to manufacturer's written instructions and to recommendations in "MPI Manual."
   1. Use applicators and techniques suited for paint and substrate indicated.
   2. Paint surfaces behind movable equipment and furniture same as similar exposed surfaces. Before final installation, paint surfaces behind permanently fixed equipment or furniture with prime coat only.
   3. Paint front and backsides of access panels, removable or hinged covers, and similar hinged items to match exposed surfaces.
   4. Do not paint over labels of independent testing agencies or equipment name, identification, performance rating, or nomenclature plates.
   5. Primers specified in painting schedules may be omitted on items that are factory primed or factory finished if acceptable to topcoat manufacturers.

B. Tint each undercoat a lighter shade to facilitate identification of each coat if multiple coats of same material are to be applied. Tint undercoats to match color of topcoat, but provide sufficient difference in shade of undercoats to distinguish each separate coat.

C. If undercoats or other conditions show through topcoat, apply additional coats until cured film has a uniform paint finish, color, and appearance.

D. Apply paints to produce surface films without cloudiness, spotting, holidays, laps, brush marks, roller tracking, runs, sags, ropiness, or other surface imperfections. Cut in sharp lines and color breaks.

E. Painting Fire Suppression, Plumbing, HVAC, Electrical, Communication, and Electronic Safety and Security Work:
   1. Paint the following Work where exposed in equipment rooms:
      a. Equipment, including panelboards.
      b. Uninsulated metal piping.
      c. Uninsulated plastic piping.
      d. Pipe hangers and supports.
      e. Metal conduit.
      f. Plastic conduit.
      g. Tanks that do not have factory-applied final finishes.
   2. Paint the following Work where exposed in occupied spaces:
      a. Equipment, including panel boards.
      b. Uninsulated metal piping.
      c. Uninsulated plastic piping.
      d. Pipe hangers and supports.
      e. Metal conduit.
      f. Plastic conduit.
      g. Other items as directed by Engineer.
   3. Paint portions of internal surfaces of metal ducts, without liner, behind air inlets and outlets that are visible from occupied spaces.

## 3.4 FIELD QUALITY CONTROL

A. Dry Film Thickness Testing: Owner may engage the services of a qualified testing and inspecting agency to inspect and test paint for dry film thickness.
   1. Contractor shall touch up and restore painted surfaces damaged by testing.
   2. If test results show that dry film thickness of applied paint does not comply with paint manufacturer's written recommendations, Contractor shall pay for testing and apply additional coats as needed to provide dry film thickness that complies with paint manufacturer's written recommendations.

## 3.5 CLEANING AND PROTECTION

A. At end of each workday, remove rubbish, empty cans, rags, and other discarded materials from Project Site.
B. After completing paint application, clean spattered surfaces. Remove spattered paints by washing, scraping, or other methods. Do not scratch or damage adjacent finished surfaces.
C. Protect Work of other trades against damage from paint application. Correct damage to Work of other trades by cleaning, repairing, replacing, and refinishing, as approved by Engineer, and leave in an undamaged condition.
D. At completion of construction activities of other trades, touch up and restore damaged or defaced painted surfaces.

## 3.6 INTERIOR PAINTING SCHEDULE

A. Concrete: Walls and Ceilings, Poured Concrete, Precast Concrete, Unglazed Brick, Cement Board, Tilt-Up, Cast-in-Place including Plaster Walls and Ceilings.
   1. Latex Systems:
      a. Eg-Shel / Satin Finish:
         1) First Coat: S-W Loxon Concrete and Masonry Primer Sealer, LX02W50 (8 mils wet, 3.2 mils dry).
         2) Second Coat: S-W ProMar 200 Zero VOC Latex Eg-Shel B20-2600 Series.
         3) Third Coat; S-W ProMar 200 Zero VOC Latex Eg-Shel B20-2600 Series (4 mils wet, 1.7 mils dry per coat).

B. Wood: Walls, Ceilings, Doors, and Trim.
   1. Latex Systems:
      a. Eg-Shel / Satin Finish:
         1) First Coat: S-W Premium Wall and Wood Primer, B28W8111 (4 mils wet, 1.8 mils dry).
         2) Second Coat: S-W ProClassic Waterborne Acrylic Satin, B20 Series.
         3) Third Coat: S-W ProClassic Waterborne Acrylic Satin, B20 Series (4 mils wet, 1.2 mils dry per coat).

C. Drywall: Walls, Ceilings, Gypsum Board, and similar items.
   1. Latex Systems:
      a. Eg-Shel / Satin Finish:
         1) First Coat: S-W ProMar 200 Zero VOC Interior Latex Primer, B28W2600 (4 mils wet, 1.5 mils dry).
         2) Second Coat: S-W ProMar 200 Zero VOC Latex Eg-Shel, B20-2600 Series.

3) Third: Coat: S-W ProMar 200 Zero VOC Latex Eg-Shel, B20-2600 Series (4 mils wet, 1.7 mils dry per coat).

END OF SECTION

# SECTION 10 28 13 - TOILET ACCESSORIES

## PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Public-use washroom accessories.
   2. Custodial accessories.
B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.

1.2 COORDINATION

A. Coordinate accessory locations with other work to prevent interference with clearances required for access by people with disabilities, and for proper installation, adjustment, operation, cleaning, and servicing of accessories.
B. Deliver inserts and anchoring devices set into concrete or masonry as required to prevent delaying the Work.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.
   1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.
   2. Include anchoring and mounting requirements, including requirements for cutouts in other work and substrate preparation.
   3. Include electrical characteristics.

## PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
B. Structural Performance: Design accessories and fasteners to comply with the following requirements:
   1. Grab Bars: Installed units are able to resist 250 pounds of force concentrated load applied in any direction and at any point.

2.2 PUBLIC-USE WASHROOM ACCESSORIES

A. Source Limitations: Obtain public-use washroom accessories from single source from single manufacturer.

B. Toilet Tissue (Roll) Dispenser (TTD-1):
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
a. American Specialties, Inc.
b. Bobrick Washroom Equipment, Inc.
c. Bradley Corporation.
2. Description: Double-roll dispenser.
3. Mounting: Surface mounted.
4. Operation: Noncontrol delivery with standard spindle.
5. Capacity: Designed for 4-1/2- or 5-inch-diameter tissue rolls.
6. Material and Finish: Stainless steel, ASTM A480 No. 4 finish (satin).
7. Basis of Design: Bradley model 5263.

C. Paper Towel (Folded) Dispenser/12 Gallon Waste (PTDWR):
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
a. American Specialties, Inc.
b. Bobrick Washroom Equipment, Inc.
c. Bradley Corporation.
2. Mounting: Surface mounted.
3. Minimum Capacity: 600 C-fold or 800 multifold towels.
4. Material and Finish: Stainless steel, ASTM A480 No. 4 finish (satin).
5. Lockset: Tumbler type.
6. Refill Indicator: None.
7. Basis of Design: Bradley model 234-11.

D. Soap Dispenser (SD):
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
a. American Specialties, Inc.
b. Bobrick Washroom Equipment, Inc.
c. Bradley Corporation.
2. Mounting: Surface mounted.
3. Description: Designed for manual operation and dispensing soap in liquid form.
4. Mounting: Vertically oriented, surface mounted.
5. Lockset: Tumbler type.
6. Refill Indicator: Window type.
7. Basis of Design: Bradley model 6562.

E. Grab Bar:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
a. American Specialties, Inc.
b. Bobrick Washroom Equipment, Inc.
c. Bradley Corporation.
2. Mounting: Flanges with concealed fasteners.
3. Material: Stainless steel, 0.05-inch-thick.
a. Finish: Smooth, ASTM A480 No. 4 finish (satin) on ends and slip-resistant texture in grip area.

4. Outside Diameter: One-and-one-fourth inches.
5. Configuration and Length: As indicated on Drawings.
6. Basis of Design product: Bradley model 832.

F. Mirror Unit (M1):
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. American Specialties, Inc.
   b. Bobrick Washroom Equipment, Inc.
   c. Bradley Corporation.
2. Frame: Stainless steel channel.
   a. Corners: Manufacturer's standard.
3. Mounting: Surface mounted.
4. Size: 18 inches by 36 inches.
5. Basis of Design product: Bradley model 780-1836.

G. Hook:
1. Description: Double-prong unit.
2. Mounting: Concealed.
3. Material and Finish: Stainless steel, ASTM A480 No. 4 finish (satin).
4. Basis of Design product: Bradley model 9124.

## 2.3 CUSTODIAL ACCESSORIES

A. Custodial Utility Shelf:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. American Specialties, Inc.
   b. Bobrick Washroom Equipment, Inc.
   c. Bradley Corporation.
2. Description: With exposed edges turned down not less than 1/2-inch and supported by two triangular brackets welded to shelf underside.
3. Size: 30 inches long by 8 inches deep.
4. Material and Finish: Not less than nominal 0.05-inch-thick stainless steel, ASTM A480 No. 4 finish (satin).
5. Basis of Design product: Bradley model 9983.

B. Custodial Mop and Broom Holder:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. American Specialties, Inc.
   b. Bobrick Washroom Equipment, Inc.
   c. Bradley Corporation.
2. Description: Unit with holders,.
3. Mop/Broom Holders: Three, spring-loaded, rubber hat, cam type.
4. Material and Finish: Stainless steel, ASTM A480 No. 4 finish (satin).
5. Basis of Design product: Bradley 9953.

C. Custodial Paper Towel (Folded) Dispenser:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. American Specialties, Inc.
   b. Bobrick Washroom Equipment, Inc.
   c. Bradley Corporation.
2. Mounting: Surface mounted.

3. Minimum Capacity: 400 C-fold or 525 multifold towels.
4. Material and Finish: Stainless steel, ASTM A480 No. 4 finish (satin).
5. Lockset: Tumbler type.
6. Refill Indicator: Pierced slots at sides or front.
7. Basis of Design product: Bradley model 250-15.

2.4 MATERIALS

A. Steel Sheet: ASTM A1008, Designation CS (cold rolled, commercial steel), 0.036-inch-minimum nominal thickness.
B. Galvanized-Steel Sheet: ASTM A653, with G60 hot-dip zinc coating.
C. Galvanized-Steel Mounting Devices: ASTM A153, hot-dip galvanized after fabrication.
D. Fasteners: Screws, bolts, and other devices of same material as accessory unit, unless otherwise recommended by manufacturer or specified in this Section, and tamper and theft resistant where exposed, and of stainless or galvanized steel where concealed.
E. Mirrors: ASTM C1503, Mirror Glazing Quality, clear-glass mirrors, nominal 6.0 millmeters thick.

2.5 FABRICATION

A. General: Fabricate units with tight seams and joints, and exposed edges rolled. Hang doors and access panels with full-length, continuous hinges. Equip units for concealed anchorage and with corrosion-resistant backing plates.
B. Keys: Provide universal keys for internal access to accessories for servicing and resupplying. Provide minimum of twoInsert number keys to Owner's representative.

**PART 3 - EXECUTION**

3.1 INSTALLATION

A. Install accessories according to manufacturer's written instructions, using fasteners appropriate to substrate indicated and recommended by unit manufacturer. Install units level, plumb, and firmly anchored in locations and at heights indicated.
   1. Remove temporary labels and protective coatings.
B. Grab Bars: Install to comply with specified structural-performance requirements.
C. Shower Seats: Install to comply with specified structural-performance requirements.

3.2 ADJUSTING AND CLEANING

A. Adjust accessories for unencumbered, smooth operation. Replace damaged or defective items.
B. Clean and polish exposed surfaces according to manufacturer's written instructions.

END OF SECTION

# SECTION 10 44 16 - FIRE EXTINGUISHERS

## PART 1 - GENERAL

1.1 SUMMARY

A. Section includes portable, hand-carried fire extinguishers and mounting brackets for fire extinguishers.
B. Related Requirements:
   1. Divisions 01 Specification Sections apply to Work of this Section.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product. Include rating and classification, material descriptions, dimensions of individual components and profiles, and finishes for fire extinguisher and mounting brackets.

1.3 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For fire extinguishers to include in maintenance manuals.

## PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. NFPA Compliance: Fabricate and label fire extinguishers to comply with NFPA 10, "Portable Fire Extinguishers."
B. Fire Extinguishers: Listed and labeled for type, rating, and classification by an independent testing agency acceptable to authorities having jurisdiction.

2.2 PORTABLE, HAND-CARRIED FIRE EXTINGUISHERS

A. Fire Extinguishers: Type, size, and capacity for each mounting bracket (FEB) indicated.
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. JL Industries, Inc.; a division of the Activar Construction Products Group.
      b. Larsens Manufacturing Company.
      c. Potter Roemer LLC.
   2. Handles and Levers: Manufacturer's standard.
   3. Instruction Labels: Include pictorial marking system complying with NFPA 10, Appendix B.
B. Multipurpose Dry-Chemical Type in Steel Container: UL-rated 4-A:60-B:C, 10-pound nominal capacity with monoammonium phosphate-based dry chemical in enameled-steel container.

2.3 MOUNTING BRACKETS (FEB)

A. Mounting Brackets: Manufacturer's standard steel, designed to secure fire extinguisher to wall or structure, of sizes required for types and capacities of fire extinguishers indicated, with red baked-enamel finish.
   1. Manufacturers: Subject to compliance with requirements provide products from the Fire Extinguisher manufacturer or one of the following:
      a. JL Industries, Inc: a division of Activar Construction Products Group.
      b. Larsens Manufacturing Company.
      c. Potter Roemer LLC.
   2. Identification: Letter complying with authorities have jurisdiction for letter style, size, spacing, and location. Locate as indicated by Architect/Engineer.
      a. Identify bracket-mounted fire extinguishers with the words "FIRE EXTINGUISHER" in red letter decals applied to mounting surface.

**PART 3 - EXECUTION**

3.1 EXAMINATION

A. Examine fire extinguishers for proper charging and tagging.
   1. Remove and replace damaged, defective, or undercharged fire extinguishers.
B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. General: Install fire extinguishers in locations indicated and in compliance with requirements of authorities having jurisdiction.
B. Mounting Brackets: Fasten mounting brackets to surfaces, square and plumb, at locations indicated.

END OF SECTION

# SECTION 11 40 00 - FOODSERVICE EQUIPMENT

## PART 1 - GENERAL

### 1.1 SUMMARY

A. Owner-Furnished Equipment: Where indicated, Owner will furnish equipment for installation by Contractor.
B. Related Requirements:
   1. Division 01 Specification Sections, apply to this Section.

### 1.2 COORDINATION

A. Coordinate foodservice equipment layout and installation with other Work, including layout and installation of lighting fixtures, HVAC equipment, and fire-suppression system components.
B. Coordinate locations and requirements of utility service connections.

## PART 2 - PRODUCTS (Not Used)

## PART 3 - EXECUTION

### 3.1 INSTALLATION

A. Install foodservice equipment level and plumb, according to manufacturer's written instructions.
   1. Connect equipment to utilities.
   2. Provide cutouts in equipment, neatly formed, where required to run service lines through equipment to make final connections.
B. Complete equipment assembly where field assembly is required.
C. Install equipment with access and maintenance clearances that comply with manufacturer's written installation instructions and with requirements of authorities having jurisdiction.
D. Install cabinets and similar equipment on bases in a bed of sealant.
E. Install closure-trim strips and similar items requiring fasteners in a bed of sealant.
F. Install joint sealant in joints between equipment and abutting surfaces with continuous joint backing unless otherwise indicated. Produce airtight, watertight, vermin-proof, sanitary joints.

### 3.2 CLEANING AND PROTECTING

A. After completing installation of equipment, repair damaged finishes.
B. Clean and adjust equipment as required to produce ready-for-use condition.
C. Protect equipment from damage during remainder of the construction period.

END OF SECTION

# SECTION 13 34 19 - METAL BUILDING SYSTEMS

## PART 1 - GENERAL

### 1.1 SUMMARY

A. Section Includes:
   1. Structural-steel framing.
   2. Metal roof panels.
   3. Metal wall panels.
   4. Thermal insulation.
   5. Accessories.

B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.

### 1.2 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project Site.

### 1.3 ACTION SUBMITTALS

A. Product Data: For each type of metal building system component, including insulation systems.

B. Shop Drawings: Indicate components by others. Include full building plan, elevations, Sections, details, and attachments to other Work, and insulation systems.

C. Delegated Design Submittals: For metal building systems.
   1. Include analysis data indicating compliance with performance requirements and design data signed and sealed by the qualified professional engineer responsible for their preparation.

### 1.4 WARRANTY

A. Special Warranty on Metal Panel Finishes: Manufacturer agrees to repair finish or replace metal panels that show evidence of deterioration of factory-applied finishes within specified warranty period.
   1. Finish Warranty Period: Twenty years from date of Substantial Completion.

B. Special Weathertightness Warranty for Standing-Seam Metal Roof Panels: Manufacturer agrees to repair or replace standing-seam metal roof panel assemblies that leak or otherwise fail to remain weathertight within specified warranty period.
   1. Warranty Period: Twenty years from date of Substantial Completion.

C. Insulation: Manufacturer agrees to repair or replace system where evidence of degradation or performance is seen within the warranty period.
   1. Warranty Period: Ten years from date of Substantial Completion.

## PART 2 - PRODUCTS

### 2.1 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   1. ACI Building Systems, Inc.
   2. Nucor Corporation, Nucor Buildings Group.
   3. Standard Structures, Inc. (SSI).

### 2.2 PERFORMANCE REQUIREMENTS

A. Delegated Design: Engage a qualified professional engineer, as defined in Section 01 40 00 "Quality Requirements," to design metal building system.

B. Structural Performance: Metal building systems to withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated according to procedures in MBMA's "Metal Building Systems Manual."
   1. Design Loads: As indicated on Drawings.
   2. Deflection and Drift Limits:
      a. Design metal building system assemblies to withstand serviceability design loads without exceeding deflections and drift limits recommended in AISC Steel Design Guide No. 3 "Serviceability Design Considerations for Steel Buildings."

C. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes by preventing buckling, opening of joints, overstressing of components, failure of joint sealants, failure of connections, and other detrimental effects. Base calculations on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.
   1. Temperature Change: 120 degrees F, ambient; 180 degrees F, material surfaces.

D. Structural Performance for Metal Roof and Wall Panels: Provide metal panel systems capable of withstanding the effects of the following loads, based on testing according to ASTM E1592:
   1. Wind Loads: As indicated on Drawings.

E. Air Infiltration for Metal Roof Panels: Air leakage of not more than 0.06 cubic feet per minute per square feet when tested according to ASTM E1680 or ASTM E283 at the following test-pressure difference:
   1. Test-Pressure Difference: 1.57 pound force per square feet.

F. Air Infiltration for Metal Wall Panels: Air leakage of not more than 0.06 cubic feet per minutes per square feet when tested according to ASTM E283 at the following test-pressure difference:
   1. Test-Pressure Difference: 1.57 pounds of force per square feet.

G. Water Penetration for Metal Roof Panels: No water penetration when tested according to ASTM E1646 or ASTM E331 at the following test-pressure difference:
   1. Test-Pressure Difference: 2.86 pounds of force per square feet.

H. Water Penetration for Metal Wall Panels: No water penetration when tested according to ASTM E331 at the following test-pressure difference:
   1. Test-Pressure Difference: 2.86 pounds of force per square feet.

I. Thermal Performance for Opaque Elements: Provide the following maximum U-factors and minimum R-values when tested according to ASTM C1363 or ASTM C518:
   1. Roof:
      a. R-Value: Minimum R-19+R-11 LS.
   2. Walls:
      a. R-Value: Minimum R-13+R6.5ci.

2.3 METAL ROOF PANELS

A. Basis of Design product is Zee-Lock Panel manufactured by Berridge Manufacturing Co., San Antonio, Texas. Standing Seam Concealed Fastener, Metal Roof Panels: Formed with smooth panel between standing mechanically seamed side lap; designed to be installed by lapping side edges of adjacent panels and mechanically seaming panels to supports with extruded vinyl weatherseal on all continuous ribs.
   1. Material: Zinc-coated (galvanized) or aluminum-zinc alloy-coated steel sheet, nominal uncoated steel thickness. Prepainted by the coil-coating process to comply with ASTM A755.
      a. Exterior Finish: Kynar 500/Hynar 5000.
      b. Color: Cityscape.
   2. Panel Coverage: Sixteen inches.
   3. Panel Height: Two inches.

2.4 METAL WALL PANELS

A. Metal Wall Panel Type-A: Basis of Design product is "M" Panel manufactured by Berridge Manufacturing Co., San Antonio, Texas. Exposed-Fastener, Tapered-Rib, Metal Wall Panels: Formed with raised, trapezoidal major ribs; designed to be installed vertically by lapping side edges of adjacent panels and mechanically attaching panels to supports using exposed fasteners in side laps.
   1. Material: Zinc-coated (galvanized) or aluminum-zinc alloy-coated steel sheet, nominal uncoated steel thickness. Prepainted by the coil-coating process to comply with ASTM A755.
      a. Exterior Finish: Kynar 500/Hynar 5000.
      b. Color: Cityscape.
   2. Major-Rib Spacing: Six inches on center
   3. Panel Coverage: 36 inches.
   4. Panel Height: 0.75 inches.
   5. Panel Thickness: 22 gauge.

B. Metal Wall Panel Type-B: Basis of Design product is Thin-Line panel manufactured by Berridge Manufacturing Co., San Antonio, Texas. Concealed-Fastener Metal Wall Panels: Formed with smooth finish; designed to be installed vertically by lapping side edges of adjacent panels to supports or solid sheathing using concealed fasteners inside side laps.
   1. Material: Zinc-coated (galvanized) or aluminum-zinc alloy-coated steel sheet, nominal uncoated steel thickness. Prepainted by the coil-coating process to comply with ASTM A755.
      a. Exterior Finish: Kynar 500/Hynar 5000.
      b. Color: Charcoal Gray.
   2. Panel Coverage: Three and five-eighths inches.
   3. Panel Height: Three-eighths inch.

4. Panel Thickness: 24 gauge.

## 2.5 THERMAL INSULATION

A. Roof Liner Systems: Basis of Design product is the Simple Saver insulation system (with OSHA compliant through fall protection) manufactured by Thermal Design with an installed total roof insulation R-value as listed above and an average installed thickness of 12 inches. Roof system shall be a multi-layer system. A thermal break shall be applied where there is no existing thermal break between metal panel and metal structure.

B. Wall Liner System: Basis of Design product is the Simple Saver insulation system manufactured by Thermal Design with an installed total R-value as listed above and an installed thickness of 8 inches, completely filling cavity between girts. A thermal break shall be applied where there is no existing thermal break between metal panel and metal structure.

## 2.6 ACCESSORIES

A. General: Provide accessories as standard with metal building system manufacturer and as specified. Fabricate and finish accessories at the factory to greatest extent possible, by manufacturer's standard procedures and processes. Comply with indicated profiles and with dimensional and structural requirements.
   1. Form exposed sheet metal accessories that are without excessive oil-canning, buckling, and tool marks and that are true to line and levels indicated, with exposed edges folded back to form hems.

B. Roof Panel Accessories: Provide components required for a complete metal roof panel assembly including copings, fasciae, corner units, ridge closures, clips, sealants, gaskets, fillers, closure strips, and similar items. Match material and finish of metal roof panels unless otherwise indicated.

C. Wall Panel Accessories: Provide components required for a complete metal wall panel assembly including copings, fasciae, mullions, sills, corner units, clips, sealants, gaskets, fillers, closure strips, and similar items. Match material and finish of metal wall panels unless otherwise indicated.

D. Flashing and Trim: Zinc-coated (galvanized) or aluminum-zinc alloy-coated steel sheet, 0.018-inch nominal uncoated steel thickness, prepainted with coil coating; finished to match adjacent metal panels.

E. Gutters: Zinc-coated (galvanized) or aluminum-zinc alloy-coated steel sheet, 0.018-inch nominal uncoated steel thickness, prepainted with coil coating; finished to match roof fascia and rake trim. Match profile of gable trim, complete with end pieces, outlet tubes, and other special pieces as required. Fabricate in minimum 96-inch-long sections, sized according to SMACNA's "Architectural Sheet Metal Manual."
   1. Gutter Supports: Fabricated from same material and finish as gutters.
   2. Strainers: Bronze, copper, or aluminum wire ball type at outlets.

F. Downspouts: Zinc-coated (galvanized) or aluminum-zinc alloy-coated steel sheet, 0.018-inch nominal uncoated steel thickness, prepainted with coil coating; finished to match metal wall panels. Fabricate in minimum 10-foot-long sections, complete with formed elbows and offsets.
   1. Mounting Straps: Fabricated from same material and finish as gutters.

G. Simple Saver Insulation Systems accessories:

1. UVMAX Steel Strap, 100 KSI minimum yield high tensile strength steel, galvanized, primed and painted the specified color on the exposed side with clear coat primer on the concealed side.
   a. Size: 0.02-inch by 1inch by continuous length.
   b. Color: White
   c. Fasteners: #12 by 3/4-inch plated self-drilling screws with sealing washers painted to match the specified color for fastening to light gauge steel (up to 12 GA purlins) or #12 by 1-1/4-inch plated self-drilling screws with sealing washers, painted to match the specified color for heavier gauge steel (up to 3/8-inch purlins or bar joists). Always install two fasteners in the end of each strap for safety and to withstand installation stress, and one fastener at all other designated fastening points.
2. Syseal Fabric shall be woven reinforced high-density polyethylene yarns coated on both sides with a continuous polyethylene film. Fabric shall comply with ASTM E84 and be Class A compliant with a flame spread index of 25 or less. This material shall be manufactured in large custom pieces by extrusion welding from roll goods. Pieces shall be fabricated to substantially fit the large defined building areas with minimum practical sealing to be done on job site. Fabric shall be folded to allow for rapid pull-out on the strap support system and certified for fall protection by the manufacturer.
   a. Color: Syseal FP (White), roof and walls.
3. Sealant: Simple Saver System G524 High Tack Sealant.
4. Insulation: Fiberglass blanket or batt insulation meeting ASTM C991 Type 1, ASTM E136, and ASTM E84.
5. Fast-R Insulation Hangers: Preformed, rigid insulation hangers for supporting insulation between wall girts or roof purlins where roof pitch is 4:12 or greater. Coiled hangers are not allowed.
6. Thermal Break: 3/16 inch by 3 inch Quik-Stop Trash Free foam tape, closed cell polyethylene foam with pre-applied adhesive film and peel-off backing

## 2.7 FABRICATION

A. General: Design components and field connections required for erection to permit easy assembly.
   1. Mark each piece and part of the assembly to correspond with previously prepared erection drawings, diagrams, and instruction manuals.
   2. Fabricate structural framing to produce clean, smooth cuts and bends. Punch holes of proper size, shape, and location. Members to be free of cracks, tears, and ruptures.

B. Tolerances: Comply with MBMA's "Metal Building Systems Manual" for fabrication and erection tolerances.

C. Primary Framing: Shop fabricate framing components to indicated size and section, with baseplates, bearing plates, stiffeners, and other items required for erection welded into place. Cut, form, punch, drill, and weld framing for bolted field assembly.

D. Secondary Framing: Shop fabricate framing components to indicated size and section by roll forming or break forming, with baseplates, bearing plates, stiffeners, and other plates required for erection welded into place. Cut, form, punch, drill, and weld secondary framing for bolted field connections to primary framing.

E. Metal Panels: Fabricate and finish metal panels at the factory to greatest extent possible by manufacturer's standard procedures and processes as necessary to fulfill indicated performance requirements. Comply with indicated profiles and with dimensional and structural requirements.
   1. Provide panel profile including major ribs and intermediate stiffening ribs, if any, for full length of metal panel.

2.8. SOURCE QUALITY CONTROL

A. Special Inspection: Owner will engage a qualified special inspector to perform source quality control inspections and to submit reports.
   1. Accredited Manufacturers: Special inspections will not be required if fabrication is performed by an IAS AC472-accredited manufacturer approved by authorities having jurisdiction to perform such Work without special inspection.
B. Product will be considered defective if it does not pass tests and inspections.
C. Prepare test and inspection reports.

**PART 3 - EXECUTION**

3.1 METAL PANEL INSTALLATION, GENERAL

A. General: Anchor metal panels and other components of the Work securely in place, with provisions for thermal and structural movement.
   1. Field cut metal panels as required for doors, windows, and other openings. Cut openings as small as possible, neatly to size required, and without damage to adjacent metal panel finishes.
      a. Field cutting of metal panels by torch is not permitted unless approved in writing by manufacturer.
   2. Install metal panels perpendicular to structural supports unless otherwise indicated.
   3. Flash and seal metal panels with weather closures at perimeter of openings and similar elements. Fasten with self-tapping screws.
   4. Locate and space fastenings in uniform vertical and horizontal alignment.
   5. Locate metal panel splices over structural supports with end laps in alignment.
   6. Lap metal flashing over metal panels to allow moisture to run over and off the material.
B. Lap-Seam Metal Panels: Install screw fasteners using power tools with controlled torque adjusted to compress EPDM washers tightly without damage to washers, screw threads, or metal panels. Install screws in predrilled holes.
   1. Arrange and nest side-lap joints so prevailing winds blow over, not into, lapped joints. Lap ribbed or fluted sheets one full rib corrugation. Apply metal panels and associated items for neat and weathertight enclosure. Avoid "panel creep" or application not true to line.
C. Metal Protection: Where dissimilar metals contact each other or corrosive substrates, protect against galvanic action by painting contact surfaces with corrosion-resistant coating, by applying rubberized-asphalt underlayment to each contact surface, or by other permanent separation as recommended by metal roof panel manufacturer.

D. Joint Sealers: Install gaskets, joint fillers, and sealants where indicated and where required for weatherproof performance of metal panel assemblies. Provide types of gaskets, fillers, and sealants indicated; or, if not indicated, provide types recommended by metal panel manufacturer.
   1. Seal metal panel end laps with double beads of tape or sealant the full width of panel. Seal side joints where recommended by metal panel manufacturer.
   2. Prepare joints and apply sealants to comply with requirements in Section 07 92 00 "Joint Sealants."

## 3.2 METAL ROOF PANEL INSTALLATION

A. General: Provide metal roof panels of full length from eave to ridge unless otherwise indicated or restricted by shipping limitations.
   1. Install ridge caps as metal roof panel Work proceeds.
   2. Flash and seal metal roof panels with weather closures at eaves and rakes. Fasten with self-tapping screws.

B. Standing-Seam Metal Roof Panels: Secure metal roof panels to supports with seamer recommended by manufacturer.
   1. Provide continuous vinyl weatherseal under heads of standing seams on weather side of metal roof panels.
   2. Provide sealant tape at protruding equipment, vents, and accessories.
   3. Apply a continuous ribbon of sealant tape to weather-side surface of fastenings on end laps and on side laps of nesting-type metal panels, on side laps of ribbed or fluted metal panels, and elsewhere as needed to make metal panels weatherproof to driving rains.

C. Metal Fascia Panels: Align bottom of metal panels and fasten with blind rivets, bolts, or self-drilling or self-tapping screws. Flash and seal metal panels with weather closures where fasciae meet soffits, along lower panel edges, and at perimeter of all openings.

## 3.3 METAL WALL PANEL INSTALLATION

A. General: Install metal wall panels in orientation, sizes, and locations indicated on Drawings. Install panels perpendicular to girts, extending full height of building, unless otherwise indicated. Anchor metal wall panels and other components of the Work securely in place, with provisions for thermal and structural movement.
   1. Unless otherwise indicated, begin metal panel installation at corners with center of rib lined up with line of framing.
   2. Shim or otherwise plumb substrates receiving metal wall panels.
   3. When two rows of metal panels are required, lap panels 4 inches minimum.
   4. When building height requires two rows of metal panels at gable ends, align lap of gable panels over metal wall panels at eave height.
   5. Rigidly fasten base end of metal wall panels and allow eave end free movement for thermal expansion and contraction. Predrill panels.
   6. Flash and seal metal wall panels with weather closures at eaves and rakes and at perimeter of all openings. Fasten with self-tapping screws.
   7. Install screw fasteners in predrilled holes.
   8. Install flashing and trim as metal wall panel work proceeds.
   9. Apply elastomeric sealant continuously between metal base channel (sill angle) and concrete, and elsewhere as indicated on Drawings; if not indicated, as necessary for waterproofing.

10. Align bottom of metal wall panels and fasten with blind rivets, bolts, or self-drilling or self-tapping screws.
11. Provide weatherproof escutcheons for pipe and conduit penetrating exterior walls.

B. Metal Wall Panels: Install metal wall panels on exterior side of girts. Attach metal wall panels to supports with fasteners as recommended by manufacturer.

## 3.4 THERMAL INSULATION INSTALLATION

A. General: Install insulation concurrently with metal panel installation, in thickness indicated to cover entire surface, according to manufacturer's written instructions.
1. Set vapor-retarder-faced units with vapor retarder toward warm side of construction unless otherwise indicated. Do not obstruct ventilation spaces except for firestopping.
2. Tape joints and ruptures in vapor retarder, and seal each continuous area of insulation to the surrounding construction to ensure airtight installation.
3. Install factory-laminated, vapor-retarder-faced blankets straight and true in one-piece lengths, with both sets of facing tabs sealed, to provide a complete vapor retarder.
4. Install blankets straight and true in one-piece lengths. Install vapor retarder over insulation, with both sets of facing tabs sealed, to provide a complete vapor retarder.

B. Blanket Roof Insulation: Comply with the following installation method:
1. Install insulation per manufacturer's written instructions.
2. Over-Framing Installation: Extend insulation and vapor retarder over and perpendicular to top flange of secondary framing. Hold in place by metal roof panels fastened to secondary framing.
3. Between-Purlin Installation: Extend insulation and vapor retarder between purlins. Carry vapor-retarder-facing tabs up and over purlin, overlapping adjoining facing of next insulation course and maintaining continuity of retarder. Hold in place with bands and crossbands below insulation.
4. Retainer Strips: Install retainer strips at each longitudinal insulation joint, straight and taut, nesting with secondary framing to hold insulation in place.

C. Blanket Wall Insulation: Fit insulation vertically between girts, impaled on insulation hangers. Fluff insulation to the specified thickness, insuring there are no gaps or voids. Apply vapor retarder over and perpendicular to top flange of secondary framing. Hold in place by metal wall panels fastened to secondary framing.
1. Retainer Strips: Install retainer strips at each longitudinal insulation joint, straight and taut, nesting with secondary framing to hold insulation in place.
2. Seal wall fabric to the roof fabric and to the base angle, or base cee channel as well as the column flanges.
3. Additional straps are installed along the base angle and each column to retain system permanently in place.

## 3.5 ACCESSORY INSTALLATION

A. General: Install accessories with positive anchorage to building and weathertight mounting, and provide for thermal expansion. Coordinate installation with flashings and other components.
1. Install components required for a complete metal roof panel assembly, including trim, copings, ridge closures, seam covers, flashings, sealants, gaskets, fillers, closure strips, and similar items.

2. Install components for a complete metal wall panel assembly, including trim, copings, corners, seam covers, flashings, sealants, gaskets, fillers, closure strips, and similar items.
3. Where dissimilar metals contact each other or corrosive substrates, protect against galvanic action by painting contact surfaces with corrosion-resistant coating, by applying rubberized-asphalt underlayment to each contact surface, or by other permanent separation as recommended by manufacturer.

B. Flashing and Trim: Comply with performance requirements, manufacturer's written installation instructions, and SMACNA's "Architectural Sheet Metal Manual." Provide concealed fasteners where possible and set units true to line and level. Install work with laps, joints, and seams that will be permanently watertight and weather resistant.
1. Install exposed flashing and trim that is without excessive oil-canning, buckling, and tool marks and that is true to line and levels indicated with exposed edges folded back to form hems. Install sheet metal flashing and trim to fit substrates and to result in waterproof and weather-resistant performance.
2. Expansion Provisions: Provide for thermal expansion of exposed flashing and trim. Space movement joints at a maximum of 10 feet with no joints allowed within 24 inches of corner or intersection. Where lapped or bayonet-type expansion provisions cannot be used or would not be sufficiently weather resistant and waterproof, form expansion joints of intermeshing hooked flanges, not less than 1 inch deep, filled with mastic sealant (concealed within joints).

C. Gutters: Join sections with riveted-and-soldered or lapped-and-sealed joints. Attach gutters to eave with gutter hangers spaced as required for gutter size, but not more than 36 inches on center using manufacturer's standard fasteners. Provide end closures and seal watertight with sealant. Provide for thermal expansion.

D. Downspouts: Join sections with 1-1/2-inch telescoping joints. Provide fasteners designed to hold downspouts securely 1 inch away from walls; locate fasteners at top and bottom and at approximately 60 inches on center in between.
1. Provide elbows at base of downspouts to direct water away from building.
2. Tie downspouts to underground drainage system indicated.

## 3.6 FIELD QUALITY CONTROL

A. Special Inspections: Owner will engage a qualified special inspector to perform field quality control special inspections and to submit reports.
B. Product will be considered defective if it does not pass tests and inspections.
C. Prepare test and inspection reports.

END OF SECTION

# SECTION 22 05 29 - HANGERS AND SUPPORTS FOR PLUMBING PIPING AND EQUIPMENT

## PART 1 - GENERAL

### 1.1 SUMMARY

A. Section Includes:
   1. Pipe hangers and supports.
   2. Hanger rods.
   3. Equipment curbs.
   4. Formed steel channel.
   5. Equipment bases and supports.

B. Related Sections:
   1. Division 01 Specification Sections apply to Work of this Section.

### 1.2 REFERENCES

A. American Society of Mechanical Engineers:
   1. ASME B31.1 - Power Piping.
   2. ASME B31.5 - Refrigeration Piping.
   3. ASME B31.9 - Building Services Piping.

B. ASTM International:
   1. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.
   2. ASTM E119 - Standard Test Methods for Fire Tests of Building Construction and Materials.
   3. ASTM E814 - Standard Test Method for Fire Tests of Through Penetration Fire Stops.
   4. ASTM F708 - Standard Practice for Design and Installation of Rigid Pipe Hangers.

C. American Welding Society:
   1. AWS D1.1 - Structural Welding Code - Steel.

D. FM Global:
   1. FM - Approval Guide, A Guide to Equipment, Materials & Services Approved By Factory Mutual Research For Property Conservation.

E. Manufacturers Standardization Society of the Valve and Fittings Industry:
   1. MSS SP 58 - Pipe Hangers and Supports - Materials, Design and Manufacturer.
   2. MSS SP 69 - Pipe Hangers and Supports - Selection and Application.
   3. MSS SP 89 - Pipe Hangers and Supports - Fabrication and Installation Practices.

### 1.3 SUBMITTALS

A. Division 01 and Section 23 05 00 "General Mechanical Requirements."

B. Shop Drawings: Indicate system layout with location including critical dimensions, sizes, and pipe hanger and support locations and detail of trapeze hangers.

C. Product Data:
   1. Hangers and Supports: Submit manufacturers catalog data including load capacity.

D. Design Data: Indicate load carrying capacity of trapeze, multiple pipe, and riser support hangers.

E. Manufacturer's Installation Instructions:
   1. Hangers and Supports: Submit special procedures and assembly of components.
F. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

1.4 QUALITY ASSURANCE

A. Perform Work in accordance with AWS D1.1 for welding hanger and support attachments to building structure.
B. Perform Work in accordance with State and local standards.

1.5 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing Products specified in this Section with minimum 3 years' experience.
B. Installer: Company specializing in performing Work of this Section with minimum 3 years' experience.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Accept materials on site in original factory packaging, labeled with manufacturer's identification.
B. Protect from weather and construction traffic, dirt, water, chemical, and damage, by storing in original packaging.

1.7 FIELD MEASUREMENTS

A. Verify field measurements prior to fabrication.

1.8 WARRANTY

A. Section 23 05 00 "General Mechanical Requirements."

**PART 2 - PRODUCTS**

2.1 PIPE HANGERS AND SUPPORTS

A. Plumbing Piping - DWV:
   1. Conform to ASME B31.9, ASTM F708, MSS SP58, MSS SP69, or MSS SP89.
   2. Hangers for Pipe Sizes 1/2- to 1-1/2 inch: Malleable iron or Carbon steel, adjustable swivel, split ring.
   3. Hangers for Pipe Sizes 2 inches and Larger: Carbon steel, adjustable, clevis.
   4. Multiple or Trapeze Hangers: Steel channels with welded spacers and hanger rods.
   5. Wall Support for Pipe Sizes 3 inches and Smaller: Cast iron hook.
   6. Wall Support for Pipe Sizes 4 inches and Larger: Welded steel bracket and wrought steel clamp.
   7. Vertical Support: Steel riser clamp.
   8. Floor Support: Cast iron adjustable pipe saddle, lock nut, nipple, floor flange, and concrete pier or steel support.
   9. Copper Pipe Support: Copper-plated, carbon-steel adjustable, ring.

B. Plumbing Piping - Water:
   1. Conform to ASME B31.9, ASTM F708, MSS SP58, MSS SP69, or MSS SP89.
   2. Hangers for Pipe Sizes 1/2- to 1-1/2 inch: Malleable iron or Carbon steel, adjustable swivel, split ring.
   3. Hangers for Cold Pipe Sizes 2 inches and Larger: Carbon steel, adjustable, clevis.
   4. Hangers for Hot Pipe Sizes 2 to 4 inches: Carbon steel, adjustable, clevis.
   5. Multiple or Trapeze Hangers: Steel channels with welded spacers and hanger rods.
   6. Wall Support for Pipe Sizes 3 inches and Smaller: Cast iron hook.
   7. Wall Support for Pipe Sizes 4 inches and Larger: Welded steel bracket and wrought steel clamp.
   8. Vertical Support: Steel riser clamp.
   9. Floor Support for Cold Pipe: Cast iron adjustable pipe saddle, lock nut, nipple, floor flange, and concrete pier or steel support.
   10. Floor Support for Hot Pipe Sizes 4 inches and Smaller: Cast iron adjustable pipe saddle, lock nut, nipple, floor flange, and concrete pier or steel support.
   11. Copper Pipe Support: Copper-plated, Carbon-steel ring.

2.2 ACCESSORIES

A. Hanger Rods: Mild steel threaded both ends, threaded on one end, or continuous threaded.

2.3 EQUIPMENT CURBS

A. Fabrication: Unless otherwise noted, shall be welded 18 gauge galvanized steel shell and base, mitered 3-inch cant, variable step to match roof insulation, 1-1/2-inch thick insulation, factory installed wood nailer. Provide tapered curbs to match roof slope.

2.4 FORMED STEEL CHANNEL

A. Manufacturers:
   1. B-line, an Eaton business.
   2. Unistrut; Part of Atkore International.
   3. Substitutions: See Section 23 05 00 "General Mechanical Requirements."
B. Product Description: Galvanized 12 gauge thick steel. With holes 1-1/2 inches on center.

**PART 3 - EXECUTION**

3.1 EXAMINATION

A. Verify the existing conditions before starting work.
B. Verify openings are ready to receive sleeves.
C. Verify openings are ready to receive firestopping.

3.2 PREPARATION

A. Obtain permission from Engineer before using powder-actuated anchors.
B. Do not drill or cut structural members without obtaining permission from Engineer.

## 3.3 INSTALLATION - PIPE HANGERS AND SUPPORTS

A. Install in accordance with ASME B31.1, ASME B31.5, ASME 31.9, ASTM F708,MSS SP 58, MSS SP 69, or MSS SP 89.
B. Support horizontal piping as scheduled.
C. Install hangers with minimum 1/2-inch space between finished covering and adjacent work.
D. Place hangers within 12 inches of each horizontal elbow.
E. Use hangers with 1-1/2-inch minimum vertical adjustment.
F. Support horizontal cast iron pipe adjacent to each hub, with 5 feet maximum spacing between hangers.
G. Support vertical piping at every floor. Support vertical cast iron pipe at each floor at hub.
H. Where piping is installed in parallel and at same elevation, provide multiple pipe or trapeze hangers.
I. Support riser piping independently of connected horizontal piping.
J. Provide copper plated hangers and supports for copper piping.
K. Design hangers for pipe movement without disengagement of supported pipe.
L. Prime coat exposed steel hangers and supports. Refer to Section 09 90 00 "Painting and Coating. Hangers and supports located in crawl spaces, pipe shafts, and suspended ceiling spaces are not considered exposed.
M. Provide clearance in hangers and from structure and other equipment for installation of insulation. Refer to Section 23 07 05 "HVAC and Plumbing Insulation."

## 3.4 INSTALLATION - EQUIPMENT BASES AND SUPPORTS

A. Provide housekeeping pads of concrete, minimum 4 inches thick and extending 6 inches beyond supported equipment. Refer to Section 03 30 00 "Cast-In-Place Concrete."
B. Using templates furnished with equipment, install anchor bolts, and accessories for mounting and anchoring equipment.
C. Construct supports of steel members, formed steel channel, or steel pipe and fittings. Brace and fasten with flanges bolted to structure.
D. Provide rigid anchors for pipes after vibration isolation components are installed.

## 3.5 INSTALLATION - FLASHING

A. Provide flexible flashing and metal counterflashing where piping penetrates weather or waterproofed walls, floors, and roofs.
B. Flash vent and soil pipes projecting 3 inches minimum above finished roof surface with lead worked 1-inch minimum into hub, 8 inches minimum clear on sides with 24- by 24-inch sheet size. For pipes through outside walls, turn flanges back into wall and caulk, metal counter-flash, and seal.
C. Flash floor drains in floors with topping over finished areas with lead, 10 inches clear on sides with minimum 36- by 36-inch sheet size. Fasten flashing to drain clamp device.
D. Seal floor drains watertight to adjacent materials.
E. Adjust storm collars tight to pipe with bolts; caulk around top edge. Use storm collars above roof jacks. Screw vertical flange section to face of curb.

## 3.6 FIELD QUALITY CONTROL

A. Inspect installed firestopping for compliance with specifications and submitted schedule.

3.7 CLEANING

A. Clean adjacent surfaces of firestopping materials.

3.8 PROTECTION OF FINISHED WORK

A. Protect adjacent surfaces from damage by material installation.

3.9 SCHEDULES

A. Pipe Hanger Spacing:

| Pipe Size (inches) | Max. Hanger Spacing (feet) | Hanger Rod Diameter (inches) |
|---|---|---|
| 1/2 | 6 | 3/8 |
| 3/4 | 6 | 3/8 |
| 1 | 6 | 3/8 |
| 1 1/4 | 6 | 3/8 |
| 1 1/2 | 10 | 3/8 |
| 2 | 10 | 3/8 |
| 2 1/2 | 10 | 1/2 |
| 3 | 10 | 1/2 |
| 4 | 10 | 5/8 |
| 6 | 10 | 3/4 |
| 8 | 10 | 3/4 |
| PVC (all sizes) | 4 | 3/8 |
| C.I. Bell and Spigot (or No-Hub) and at Joints | 5 | 5/8 |

PACKET 11.376 November 14, 2023

# SECTION 22 11 00 - FACILITY WATER DISTRIBUTION

## PART 1 - GENERAL

### 1.1 SUMMARY

A. Section Includes:
1. Domestic water piping, within 5 feet of building.
2. Domestic water piping, above grade.
3. Unions and flanges.
4. Valves.
5. Pressure gauges.
6. Pressure gage taps.
7. Thermometers.
8. Relief valves.
9. Strainers.
10. Water hammer arrestors.
11. Mixing valves.
12. Diaphragm-type compression tanks.

B. Related Sections:
1. Division 01 Specification Sections apply to Work of this Section.
2. Section 03 30 00 "Cast-In-Place Concrete:" Execution requirements for placement of concrete house keeping pads specified by this section.
3. Section 22 05 29 "Hangers and Supports" for Plumbing Piping and Equipment: Product requirements for pipe hangers and supports for placement by this section.
4. Section 23 07 05 "HVAC and Plumbing Insulation." Product and execution requirements for pipe insulation.
5. Division 26 Specification Sections for execution requirements for electric connections to equipment specified by this Section.

1. UL 393 - Indicating Pressure Gauges for Fire-Protection Service.
2. UL 404 - Gauges, Indicating Pressure, for Compressed Gas Service.

## 1.3 SUBMITTALS

A. Division 01 and Section 01 33 00 "Submittal Procedures."

B. Product Data:
1. Piping: Submit data on pipe materials, fittings, and accessories. Submit manufacturer's catalog information.
2. Valves: Submit manufacturers catalog information with valve data and ratings for each service.
3. Domestic Water Specialties: Submit manufacturers catalog information, component sizes, rough-in requirements, service sizes, and finishes.

4. Pumps: Submit pump type, capacity, certified pump curves showing pump performance characteristics with pump and system operating point plotted. Include NPSH curve when applicable. Include electrical characteristics and connection requirements.

C. Manufacturer's Installation Instructions: Submit installation instructions for pumps, valves and accessories.

1.4 CLOSEOUT SUBMITTALS

A. Project Record Documents: Record actual locations of valves and equipment.
B. Operation and Maintenance Data: Submit spare parts list, exploded assembly views and recommended maintenance intervals.

1.5 QUALITY ASSURANCE

A. For drinking water service, provide valves complying with NSF 61.
B. Perform Work in accordance with State and local standards.

1.6 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum 3 years' experience.
B. Installer: Company specializing in performing Work of this section with minimum 3 years' experience.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Accept valves and equipment on site in shipping containers with labeling in place. Inspect for damage.
B. Provide temporary protective coating on cast iron and steel valves.
C. Provide temporary end caps and closures on piping and fittings. Maintain in place until installation.
D. Protect piping systems from entry of foreign materials by temporary covers, completing sections of the Work, and isolating parts of completed system.

1.8 FIELD MEASUREMENTS

A. Verify field measurements prior to fabrication.

1.9 WARRANTY

A. Section 23 05 00 "General Mechanical Requirements."

1.10 EXTRA MATERIALS

A. Furnish two packing kits for each size valve, two loose keys for outside hose bibs and hose end vacuum breakers for hose bibs, and two pump seals for each pump model.

## PART 2 - PRODUCTS

2.1 DOMESTIC WATER PIPING, BURIED WITHIN 5 FEET OF BUILDING

A. Copper Tubing: ASTM B88, Type K, annealed.
   1. Fittings: ASME B16.18, cast copper, or ASME B16.22, wrought copper.
   2. Joints: Compression connection or Brazed, AWS A5.8 BCuP silver/phosphorus/copper alloy with melting range 1,190 to 1,480 degrees F.

2.2 DOMESTIC WATER PIPING, ABOVE GRADE

A. Copper Tubing: ASTM B88, Type L, hard drawn.
   1. Fittings: ASME B16.18, cast copper alloy or ASME B16.22, wrought copper and bronze.
   2. Joints: ASTM B32, Alloy Grade Sb5 tin-antimony, or Alloy Grade Sn95 tin-silver, lead free solder
   3. Copper Press Fittings:
      a. Manufacturers:
         1) Viega.
         2) Ridge Tool Company.
      b. Press Fittings: Copper and copper alloy press fittings shall conform to material requirements of ASME B 16.18 or ASME B 16.22 and performance criteria of IAPMO PS117. Sealing elements for press fittings shall be EPDM. Sealing elements shall be factory installed. Press ends shall have SC (Smart Connect™) feature design (leakage path). In ProPress 1/2- to 4-inch dimensions the Smart Connect Feature assures leakage of fluids and/or gases from inside the system past the sealing element of an upressed connection. The function of this feature is to provide the installer quick and easy identification of connections which have not been pressed prior to putting the system into operation.

2.3 UNIONS AND FLANGES

A. Unions for Pipe 2 Inches and Smaller:
   1. Copper Piping: Class 150, bronze unions with soldered.
   2. Dielectric Connections: Union with galvanized or plated steel threaded end, copper solder end, water impervious isolation barrier.

B. Flanges for Pipe 2-1/2 Inches and Larger:
   1. Copper Piping: Class 150, slip-on bronze flanges.
   2. Gaskets: 1/16-inch thick preformed neoprene gaskets.

2.4 BALL VALVES

A. Manufacturers:
1. Apollo Flow Controls; Conbraco Industries, Inc.
2. Milwaukee Valve Company.
3. NIBCO INC.
4. Watts.
5. Substitutions: Division 01 and Section 23 05 00 "General Mechanical Requirements," substituted products.

B. Two Inches and Smaller: MSS SP 110, 600 psi WOG, bronze, three piece body, chrome plated bronze ball, full port, teflon seats, blow-out proof stem, solder or threaded ends with union, and lever handle.

2.5 CHECK VALVES

A. Horizontal Swing Check Valves:
1. Manufacturers:
a. Milwaukee Valve Company.
b. NIBCO INC.
c. Apollo Flow Controls.
d. Substitutionss: Division 01 and Section 23 05 00 "General Mechanical Requirements," substituted products.

B. Spring Loaded Check Valves:
1. Manufacturers:
a. NIBCO INC.
b. Milwaukee Valve Colpany.
c. Subsitution: Division 01 and Sect 23 05 00 "General Mechanical Requirements," substituted products.
2. Two Inches and Smaller: MSS SP 80, Class 250, bronze body, in-line spring lift check, silent closing, Buna-N disc, integral seat, solder or threaded ends.
3. Two and One-Half Inches and Larger: MSS SP 71, Class 125, wafer or globe style, cast iron body, bronze seat, center guided bronze disc, stainless steel spring and screws, flanged ends.

2.6 PRESSURE GAGES

A. Manufacturers:
1. Trerice.
2. Weiss.
3. Substitutions: Division 01 and Section 23 05 00 "General Mechanical Requirements" for substituted products.

B. Gage: ASME B40.1, UL 404 with bourdon tube, rotary brass movement, brass socket, front calibration adjustment, black scale on white background.
1. Case: Cast aluminum.
2. Bourdon Tube: Phosphor bronze.
3. Dial Size: 4-1/2-inch diameter.
4. Mid-Scale Accuracy: 1 percent.
5. Scale: Psi.

2.7 PRESSURE GAUGE TAPS

A. Manufacturers:
1. Trerice.
2. Weiss.
3. Substitutions: Division 01 and Section 23 05 00 "General Mechanical Requirements." substituted products.

B. Ball Valve: Brass, 1/4-inch NPT for 250 psi.

2.8 STEM TYPE THERMOMETERS

A. Manufacturers:
1. Trerice.
2. Weiss.
3. Substitutions: Division 01 and Section 23 05 00 "General Mechanical Requirements." substituted products.

B. Thermometer: ASTM E1, red appearing mercury, lens front tube, cast aluminum case with enamel finish.
1. Size: 9 inch scale.
2. Window: Clear Lexan.
3. Stem: Brass, 3/4-inch NPT, 3-1/2 inches long.
4. Accuracy: 2 percent.
5. Calibration: Degrees F.

2.9 RELIEF VALVES

A. Pressure Relief:
1. Bronze body, Teflon seat, steel stem and springs, automatic, direct pressure actuated at maximum 60 psi, UL listed for fuel oil, capacities ASME certified and labeled.

B. Temperature and Pressure Relief:
1. ANSI Z21.22 certified, bronze body, teflon seat, stainless steel stem and springs, automatic, direct pressure actuated, temperature relief maximum 210 degrees F, capacity ASME certified and labeled.

2.10 STRAINERS

A. Manufacturers:
1. Watts.
2. Zurn Industries, LLC.
3. Substitutions: Division 01 and Section 23 05 00 "General Mechanical Requirements." substituted products.

B. Two inches and Smaller: Threaded brass body for 175 psi CWP, Y pattern with 1/32-inch stainless steel perforated screen.

C. One and One-Half Inches to 4 Inches: Class 125, flanged iron body, Y pattern with 1/16-inch stainless steel perforated screen.

D. Five Inches and Larger: Class 125, flanged iron body, basket pattern with 1/8-nch stainless steel perforated screen.

2.11 WATER HAMMER ARRESTORS

A. ASSE 1010; stainless steel construction, piston type sized in accordance with PDI WH-201.
B. Pre-charged suitable for operation in temperature range 34 to 250 degrees F and maximum 150 psi working pressure.

2.12 THERMOSTATIC MIXING VALVES

A. Valve: Chrome plated cast brass body, stainless steel or copper alloy bellows, integral temperature adjustment. Conform to ASSE 1070 to temper water to maximum 110 degrees F.

2.13 DIAPHRAGM-TYPE COMPRESSION TANKS

A. Manufacturers:
   1. Amtrol.
   2. Elbi.
   3. Substitutions: Division 01 and Section 23 05 00 "General Mechanical Requirements." substituted products.
B. Construction: Welded steel, tested and stamped in accordance with ASME Section VIII; supplied with National Board Form U-1, rated for working pressure of 125 psig, with flexible diaphragm sealed into tank, and steel legs or saddles.
C. Accessories: Pressure gage and air-charging fitting.

**PART 3 - EXECUTION**

3.1 EXAMINATION

A. Verify excavations are to required grade, dry, and not over-excavated.

3.2 PREPARATION

A. Ream pipe and tube ends. Remove burrs.
B. Remove scale and dirt, on inside and outside, before assembly.

3.3 INSTALLATION - THERMOMETERS AND GAGES

A. Install one pressure gage for each pump, locate taps before strainers and on suction and discharge of pump; pipe to gage.
B. Install gage taps in piping.
C. Install pressure gauges with pulsation dampers. Provide ball valve to isolate each gage.
D. Install thermometers in piping systems in sockets in short couplings. Enlarge pipes smaller than 2-1/2 inches for installation of thermometer sockets. Allow clearance from insulation.
E. Provide instruments with scale ranges selected according to service with largest appropriate scale.

F. Install gauges and thermometers in locations where they are easily read from normal operating level. Install vertical to 45 degrees off vertical.
G. Adjust gauges and thermometers to final angle, clean windows and lenses, and calibrate to zero.

3.4 INSTALLATION - BURIED PIPING SYSTEMS

A. Verify connection size, location, and invert are as indicated on Drawings.
B. Establish elevations of buried piping with not less than 2 feet of cover.
C. Establish minimum separation of water from sanitary sewer piping piping in accordance with local code.

D. Remove scale and dirt on inside of piping before assembly.
E. Excavate pipe trench in accordance with Section 23 05 00 "General Mechanical Requirements."
F. Route pipe in straight line.
G. Install pipe to allow for expansion and contraction without stressing pipe or joints.
H. Install shutoff valves at locations indicated on Drawings in accordance with this Section.
I. Metallic Pipe: Install plastic ribbon tape continuous over top of pipe. 12 inches above pipeline; coordinate with Section 23 05 00 "General Mechanical Requirements.
J. Non-Metallic Pipe: Install trace wire continuous over top of pipe. Buried 12 inches above pipeine; coordinate with Section 23 05 00 "General Mechanical Requirements."
K. Pipe Cover and Backfilling:
    1. Backfill trench in accordance with Section 23 05 00 "General Mechanical Requirements."
    2. Maintain optimum moisture content of fill material to attain required compaction density.
    3. After hydrostatic test, evenly backfill entire trench in accordance with Section 23 05 00 "General Mechanical Requirements."
    4. Evenly and continuously backfill remaining trench depth in uniform layers with backfill material.
    5. Do not use wheeled or tracked vehicles for tamping.

3.5 INSTALLATION - ABOVE GROUND PIPING

A. Install non-conducting dielectric connections wherever jointing dissimilar metals.
B. Route piping in orderly manner and maintain gradient. Route parallel and perpendicular to walls.
C. Install piping to maintain headroom without interfering with use of space or taking more space than necessary.
D. Group piping whenever practical at common elevations.
E. Slope piping and arrange systems to drain at low points.
F. Install piping to allow for expansion and contraction without stressing pipe, joints, or connected equipment.
G. Provide clearance in hangers and from structure and other equipment for installation of insulation and access to valves and fittings. Refer to Section 22 05 29 "Hangers and Supports."
H. Provide access where valves and fittings are not accessible.

I. Where pipe support members are welded to structural building framing, scrape, brush clean, and apply one coat of zinc rich primer to welding.
J. Provide support for utility meters in accordance with requirements of utility companies.
K. Prepare exposed, unfinished pipe, fittings, supports, and accessories ready for finish painting. Refer to Division 09.
L. Install domestic water piping in accordance with ASME B31.9.
M. Sleeve pipes passing through partitions, walls and floors.
N. Install unions downstream of valves and at equipment or apparatus connections.
O. Install valves with stems upright or horizontal, not inverted.
P. Install brass male adapters each side of valves in copper piped system. Solder adapters to pipe.
Q. Install ball or butterfly valves for shut-off and to isolate equipment, part of systems, or vertical risers.
R. Install ball or butterfly valves for throttling, bypass, or manual flow control services.

S. Provide lug end butterfly valves adjacent to equipment when functioning to isolate equipment.
T. Provide spring loaded check valves on discharge of water pumps.
U. Install potable water protection devices on plumbing lines where contamination of domestic water may occur; on boiler feed water lines, janitor rooms, fire sprinkler systems, premise isolation, irrigation systems, flush valves, interior and exterior hose bibs.
V. Pipe relief from valves, back-flow preventers and drains to nearest floor drain.
W. Test backflow preventers in accordance with ASSE.
X. Install water hammer arrestors complete with accessible isolation valve on hot and cold water supply piping as shown on Drawings.
Y. Press Connections: Copper press fittings shall be made in accordance with the manufacturer's installation instructions. The tubing shall be fully inserted into the fitting and the tubing marked at the shoulder of the fitting. The fitting alignment shall be checked against the mark on the tubing to assure the tubing is fully engaged (inserted) in the fitting. The joint shall be pressed using the tool approved by the manufacturer.

## 3.6 FIELD QUALITY CONTROL

A. Test domestic water piping system in accordance with applicable code.

3.7 CLEANING

A. Prior to starting work, verify system is complete, flushed and clean.
B. Verify pH of water to be treated is between 7.4 and 7.6 by adding alkali (caustic soda or soda ash) or acid (hydrochloric).
C. Inject disinfectant, free chlorine in liquid, powder and tablet or gas form, throughout system to obtain residual from 50 to 80 milligrams per liter.
D. Bleed water from outlets to obtain distribution and test for disinfectant residual at minimum 15 percent of outlets.
E. Maintain disinfectant in system for 24 hours.
F. When final disinfectant residual tests less than 25 milligrams per liter, repeat treatment.
G. Flush disinfectant from system until residual concentration is equal to incoming water or 1.0 milligrams per liter.
H. Take samples no sooner than 24 hours after flushing, from 10 percent of outlets and from water entry, and analyze in accordance with AWWA C651.

END OF SECTION

# SECTION 22 13 00 - FACILITY SANITARY SEWERAGE

## PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Sanitary sewer piping buried beyond 5 feet of building.
   2. Sanitary sewer piping above grade.

B. Related Sections:
   1. Division 01 Specification Sections apply to Work of this Section.

1.2 REFERENCES

A. American Society of Mechanical Engineers:
   1. ASME A112.14.1 - Backwater Valves.
   2. ASME A112.14.3 - Grease Interceptors.

   5. MSS SP 80 - Bronze Gate, Globe, Angle and Check Valves.
   6. MSS SP 89 - Pipe Hangers and Supports - Fabrication and Installation Practices.
   7. MSS SP 110 - Ball Valves Threaded, Socket-Welding, Solder Joint, Grooved and Flared Ends.

E. Plumbing and Drainage Institute:
   1. PDI G101 - Standard - Testing and Rating Procedure for Grease Interceptors.

1.3 SUBMITTALS

A. Division 01 and Section 23 05 00 "General Mechanical Requirements."
B. Product Data:
   1. Piping: Submit data on pipe materials, fittings, and accessories. Submit manufacturers catalog information.
   2. Sanitary Drainage Specialties: Submit manufacturers catalog information, component sizes, rough-in requirements, service sizes, and finishes.
C. Manufacturer's Installation Instructions: Submit installation instructions for material and equipment.
D. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

1.4 CLOSEOUT SUBMITTALS

A. Project Record Documents: Record actual locations of equipment and clean-outs.

1.5 QUALITY ASSURANCE

A. Perform Work in accordance with State and local standards.

1.6 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this Section with minimum 3 years' experience.
B. Installer: Company specializing in performing Work of this Section with minimum 3 years' experience .

1.7 DELIVERY, STORAGE, AND HANDLING

A. Protect piping systems from entry of foreign materials by temporary covers, completing sections of the Work, and isolating parts of completed system.

1.8 ENVIRONMENTAL REQUIREMENTS

A. Do not install underground piping when bedding is wet or frozen.

1.9 FIELD MEASUREMENTS

A. Verify field measurements prior to fabrication.

1.10 WARRANTY

A. Section 23 05 00 "General Mechanical Requirements" for product warranties.

## PART 2 - PRODUCTS

2.1 SANITARY SEWER PIPING, BURIED BEYOND 5 FEET OF BUILDING

A. Cast Iron Soil Pipe: ASTM A74, service weight, bell and spigot ends.
   1. Fittings: Cast iron, ASTM A74.
   2. Joints: Hub-and-spigot, CISPI HSN compression type with ASTM C564, neoprene gaskets or lead and oakum.

B. PVC Pipe: ASTM D2729, polyvinyl chloride (PVC) material, bell and spigot solvent sealed ends.
   1. Fittings: PVC, ASTM D2729.
   2. Joints: ASTM D2855, solvent weld with ASTM D2564 solvent cement.

C. PVC Pipe: ASTM D3034, Type PSM, polyvinyl chloride (PVC) material, bell, and spigot style rubber ring sealed gasket joint.
   1. Fittings: PVC, ASTM D3034.
   2. Joints: ASTM F477, elastomeric gaskets.

D. PVC Pipe: ASTM D1785, Schedule 40, polyvinyl chloride (PVC) material, bell and spigot style solvent sealed joint ends.
   1. Fittings: ASTM D2466, Schedule 40, PVC .
   2. Joints: ASTM D2855, solvent weld with ASTM D2564 Solvent cement.

E. Plastic Pipe: ASTM D2665, polyvinyl chloride (PVC) material.
   1. Fittings: PVC, ASTM D2665.
   2. Joints: ASTM D2855, solvent weld with ASTM D2564 solvent cement.

2.2 SANITARY SEWER PIPING, ABOVE GRADE

A. Cast Iron Pipe: ASTM A74, service weight.
   1. Fittings: Cast iron, ASTM A74.
   2. Joints: ASTM C564, rubber gasket joint devices or lead and oakum.

B. Cast Iron Pipe: CISPI 301, hub-less.
   1. Fittings: Cast iron, CISPI 301.
   2. Joints: CISPI 310, neoprene gaskets and stainless steel clamp-and-shield assemblies.

C. Copper Tube: ASTM B306, DWV ASTM B88 ASTM B251 Type L.
   1. Fittings: ASME B16.23, cast bronze, or ASME B16.29, wrought copper.
   2. Joints: Solder, lead free, ASTM B32,95-5 tin-antimony, or tin and silver, with melting range 430 to 535 degrees F.

D. PVC Pipe: ASTM D2729, polyvinyl chloride (PVC) material.
   1. Fittings: ASTM D2729, PVC.
   2. Joints: ASTM D2855, solvent weld with ASTM D2564 solvent cement.

E. PVC Pipe: ASTM D2665, polyvinyl chloride (PVC) material.
   1. Fittings: ASTM D2665, PVC.
   2. Joints: ASTM D2855, solvent weld with ASTM D2564 solvent cement.

F. PVC Pipe: ASTM D1785 Schedule 40 , polyvinyl chloride (PVC) material.
   1. Fittings: ASTM D2466, Schedule 40, PVC .
   2. Joints: ASTM D2855, solvent weld with ASTM D2564 Solvent cement.

## PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify excavations are to required grade, dry, and not over-excavated.

3.2 PREPARATION

A. Ream pipe and tube ends. Remove burrs.
B. Remove scale and dirt, on inside and outside, before assembly.
C. Prepare piping connections to equipment with flanges or unions.
D. Keep open ends of pipe free from scale and dirt. Protect open ends with temporary plugs or caps.

3.3 INSTALLATION - HANGERS AND SUPPORTS

A. Pipe Hangers and Supports:
   1. Install in accordance with Section 22 05 29 "Hangers and Supports."

3.4 INSTALLATION - BURIED PIPING SYSTEMS

A. Verify connection to existing piping system size, location, and invert are as indicated on Drawings.
B. Establish elevations of buried piping with not less than 2 feet of cover.
C. Establish minimum separation of sanitary sewer from other services piping in accordance with local code.
D. Remove scale and dirt on inside of piping before assembly.
E. Excavate pipe trench in accordance with Section 23 05 00 "General Mechanical Requirements."
F. Install pipe to elevation as indicated on Drawings.
G. Route pipe in straight line.
H. Metallic Piping: Install plastic ribbon tape continuous over top of pipe. above pipe. Refer to Section 23 05 53 "Identification for HVAC and Plumbing Piping and Equipment.
I. Non-Metalic Piping: Install trace wire continuous over top of pipe. Refer to Section Section 23 05 00 "General Mechanical Requirements."
J. Pipe Cover and Backfilling:
   1. Backfill trench in accordance with Section 23 05 00 "General Mechanical Requirements."

3.5 INSTALLATION - ABOVE GROUND PIPING

A. Establish invert elevations, slopes for drainage as required by local code. Maintain gradients.
B. Extend cleanouts to finished floor or wall surface. Lubricate threaded cleanout plugs with mixture of graphite and linseed oil. Provide clearances at cleanout for snaking drainage system.
C. Encase exterior cleanouts in concrete flush with grade.
D. Install floor cleanouts at elevation to accommodate finished floor.
E. Provide non-conducting dielectric connections wherever jointing dissimilar metals.

F. Route piping in orderly manner and maintain gradient. Route parallel and perpendicular to walls.
G. Install piping to maintain headroom. Do not spread piping, conserve space.
H. Group piping whenever practical at common elevations.
I. Install piping to allow for expansion and contraction without stressing pipe, joints, or connected equipment.
J. Provide clearance in hangers and from structure and other equipment for installation of insulation.
K. Provide access where valves and fittings are not accessible.
L. Install piping penetrating roofed areas to maintain integrity of roof assembly.
M. Where pipe support members are welded to structural building framing, scrape, brush clean, and apply one coat of zinc rich primer to welding.
N. Prepare exposed, unfinished pipe, fittings, supports, and accessories ready for finish painting. Refer to Division 09 Finishes.
O. Install bell and spigot pipe with bell end upstream.
P. Sleeve pipes passing through partitions, walls and floors.
Q. Install firestopping at fire rated construction perimeters and openings containing penetrating sleeves and piping. Refer to Division 07.
R. Support cast iron drainage piping at every joint.

## 3.6 FIELD QUALITY CONTROL

A. Test sanitary waste and vent piping system in accordance with applicable code.

END OF SECTION

# SECTION 22 33 00 - ELECTRIC DOMESTIC WATER HEATERS

## PART 1 - GENERAL

### 1.1 SUMMARY

A. Section Includes:
   1. Electric water heaters.
B. Related Sections:
   1. Division 01 Specification Section apply to Work of this Section.
   2. Section 03 30 00 "Cast-in-Place Concrete:" Execution requirements for concrete housekeeping pads specified by this Section.
   3. Section: 22 11 00 "Facility Water Distribution:" Supply connections to domestic water heaters.
   4. Section 26 05 91 "Equipment Wiring Systems:" Electric connection specified by this Section.

### 1.2 REFERENCES

A. American Society of Heating, Refrigerating and Air-Conditioning Engineers:
   1. ASHRAE 90.1 - Energy Standard for Buildings Except Low-Rise Residential Buildings.
B. American Society of Mechanical Engineers:
   1. ASME PTC 25 - Pressure Relief Devices.
   2. ASME Section VIII - Boiler and Pressure Vessel Code - Pressure Vessels.

### 1.3 SUBMITTALS

A. Division 01 and Section 01 33 00 "Submittal Procedures."
B. Product Data: Submit dimensioned Drawings of water heaters indicating components and connections to other equipment and piping. Submit electrical characteristics and connection locations.
C. Manufacturer's Installation Instructions: Submit mounting and support requirements.

### 1.4 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: Submit replacement part numbers and availability.

### 1.5 QUALITY ASSURANCE

A. Water Heater Performance Requirements: Equipment efficiency not less than prescribed by ASHRAE 90.1.
B. Perform Work according to State and local standards.

### 1.6 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this Section with minimum 3 years' experience.
B. Installer: Company specializing in performing Work of this Section with minimum 3 years' documented experience.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Accept water heaters on Site in original labeled cartons. Inspect for damage.
B. Protect tanks with temporary inlet and outlet caps. Maintain caps in place until installation.

1.8 FIELD MEASUREMENTS

A. Verify field measurements prior to fabrication.

1.9 WARRANTY

A. Refer to Division 01 and Section 23 05 00 "General Mechanical Requirements."
B. Furnish 3 year manufacturer warranty for domestic water heaters.

**PART 2 - PRODUCTS**

2.1 ELECTRIC WATER HEATERS

A. Manufacturers:
   1. A. O. Smith Corporation.
   2. State Industries.
   3. Keltech.
   4. Substitutions: Section 23 05 00 "General Mechanical Requirements."
B. Type: Automatic, electric, vertical storage.
C. Tank: Glass lined welded steel, thermally insulated with minimum 1-inch-thick glass fiber; encased in corrosion-resistant steel jacket with baked-on enamel finish.
D. Controls: Automatic water thermostat with temperature range from 120 to 170 degrees F, flanged or screw-in nichrome elements, enclosed controls and electrical junction box.
E. Accessories: Brass water connections and dip tube, drain valve, magnesium anode, and ASME temperature and pressure relief valve.

**PART 3 - EXECUTION**

3.1 INSTALLATION

A. Maintain manufacturer's recommended clearances around and over water heaters.
B. Install water heater on concrete housekeeping pad, minimum 3-1/2 inches high and 6 inches larger than water heater base on each side.
C. Connect domestic hot and cold water piping to supply and return water heater connections.

D. Install the following piping accessories.
   1. On Supply:
      a. Shutoff valve.
   2. On Return:
      a. Thermometer well and thermometer.
      b. Shutoff valve.
E. Install discharge piping from relief valves and drain valves to nearest floor drain.
F. Install water heater trim and accessories furnished loose for field mounting.

G. Install electrical devices furnished loose for field mounting.
H. Install control wiring between water heater control panel and field mounted control devices.
I. Install Work according to State and local standards.

END OF SECTION

PACKET 7.393 September 12, 2023
PACKET 11.395 November 14, 2023

# SECTION 22 40 00 - PLUMBING FIXTURES

## PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Water closets.
   2. Lavatories.
   3. Drains.
B. Related Sections:
   1. Division 01 Specification Sections apply to Work of this Section.

1.2 SUBMITTALS

A. Division 01 and Section 23 05 00 "General Mechanical Requirements."
B. Product Data: Submit catalog illustrations of fixtures, sizes, rough-in dimensions, utility sizes, trim, and finishes.
C. Manufacturer's Installation Instructions: Submit installation methods and procedures.
D. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

1.3 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: Submit fixture, trim, exploded view, and replacement parts lists.

1.4 QUALITY ASSURANCE

A. Perform Work according to State and local standards.
B. Provide products requiring electrical connections listed and classified by Underwirters Laboratory Inc., as suitable for purpose specified and indicated.

1.5 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this Section with minimum 3 years' experience.
B. Installer: Company specializing in performing Work of this Section with minimum 3 years' experience.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Accept fixtures on-site in factory packaging. Inspect for damage.
B. Protect installed fixtures from damage by securing areas and by leaving factory packaging in place to protect fixtures and prevent use.

## PART 2 - PRODUCTS

2.1 FIXTURES

A. Refer to Drawings Plumbing Fixture Schedule for fixture make, model numbers, and type.

## PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify walls and floor finishes are prepared and ready for installation of fixtures.
B. Verify electric power is available and of correct characteristics.
C. Confirm millwork is constructed with adequate provision for installation of counter top lavatories and sinks.

3.2 PREPARATION

A. Rough-in fixture piping connections according to minimum sizes indicated in fixture rough-in schedule for particular fixtures.

3.3 INSTALLATION

A. Install Work according to State and local standards.
B. Install each fixture with trap, easily removable for servicing and cleaning.
C. Provide chrome-plated rigid or flexible supplies to fixtures with stops, reducers, and escutcheons.
D. Install components level and plumb.
E. Install and secure fixtures in place with wall supports or carriers and bolts.
F. Seal fixtures to wall and floor surfaces with sealant as specified in Division 07, color to match fixture.

3.4 INTERFACE WITH OTHER PRODUCTS

A. Review millwork Shop Drawings. Confirm location and size of fixtures and openings before rough in and installation.

3.5 ADJUSTING

A. Adjust stops or valves for intended water flow rate to fixtures without splashing, noise, or overflow.

3.6 CLEANING

A. Clean plumbing fixtures and equipment.

END OF SECTION

# SECTION 23 05 00 - GENERAL MECHANICAL REQUIREMENTS

## PART 1 - GENERAL

### 1.1 SUMMARY

A. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.

### 1.2 DESCRIPTION

A. Work covered by this Division shall consist of furnishing all labor, equipment, supplies, and materials and in performing all operations necessary for the installation of complete and operating mechanical systems as required by these Specifications and/or shown on the Drawings, subject to the terms and conditions of the Contract. The Work shall also include the completion of such mechanical and electrical details not mentioned or shown which are necessary for the successful operation of all systems described on the Drawings or required by these Specifications; this includes the furnishing all materials for the filling the systems to make them operable, including water, refrigerant, oil, and grease. Prove satisfactory operation of all equipment and controls to Engineer on request.

B. Work Not Included: Certain labor, material, and equipment may be furnished and/or installed under other Divisions of these Specifications. This Contractor shall coordinate with other trades and arrange his Work to make the part fit together. The following items are to be accomplished under other Divisions of these Specifications:
   1. Temporary Heat: Refer to paragraph in this Section.
   2. Temporary Water and Toilet: Refer to General Conditions.
   3. Roof Curbs: Refer to paragraph in this Section.
   4. Electrical Equipment and Wiring: Refer to paragraph in this Section.
   5. Concrete: Refer to paragraph in this Section.

C. Equipment Furnished by Owner: Rough-in services pipes to locations as required by Engineerural and Mechanical Drawings and equipment Shop Drawings. Provide service valves on all pipes except waste and vent pipes. Final connection to equipment will be made by this Contractor.

### 1.3 BIDDING

A. All mechanical equipment shall be new unless specified otherwise in the Specifications or on the Drawings.

B. All Bids must be based only on the equipment and materials as scheduled on the Drawings and as specified or on equivalent equipment and materials. Any Contractor who assumes equivalence of products and who bases his Proposal on that assumption does so at his own risk.

C. A listing of approved alternative manufacturers does not mean that all products of a particular alternative manufacturer are acceptable alternative to the scheduled items. All fixtures and devices must still be submitted according to the prescribed procedures. In addition, some items that have an important visual affect, e.g., electric water coolers, may be required to receive Owner's or Engineer's approval also.

1.4 EXISTING UTILITIES

A. The Drawings indicate the locations, type, and sizes of various utilities within the Site where known. These utilities are indicated as accurately as possible. If Contractor encounters any utilities during construction which are not shown on the Drawings, they shall ask for written instructions from Engineer. Any relocation or remodeling required will then be directed by a change order. This Contractor shall assume all responsibility for protection of all utilities, shown or not, and for repair required by this construction.

B. Contractor shall verify location, size, elevation, pressure, and any other pertinent data of the existing utilities. Additional costs incurred due to failure to verify such data and to coordinate associated Work with respective utility providers shall not be Owner's responsibility but shall be borne by Contractor.

C. All costs associated with providing utilities including, but not limited to, connection fees, boring under roads, etc., shall be included in Contractor's proposal price, whether such costs are incurred by Contractor or charged by the utility company.

D. Submission of a proposal by Contractor shall be considered an acknowledgment by Contractor of his compliance with this Section.

1.5 CODES, PERMITS, AND FEES

A. Contractor shall comply with all local, State, and national codes and shall pay for all applicable costs, fees, permits, licenses, and inspections for this Division.

1.6 TEMPORARY HEAT

A. Temporary heat will be furnished by General Contractor. Use of the permanent heating system will not be allowed without written authorization from Engineer and Owner. In case the permanent heating system is used for temporary heat, General Contractor shall pay all the costs until acceptance by Owner. Warranty of equipment shall not start until acceptance by Owner.

1.7 DRAWINGS

A. Contract Drawings are diagrammatic only and are not intended to be scaled for dimensions. All dimensions shall be taken from Engineerural Drawings, certified equipment Drawings, and from the structure itself before fabricating and Work. All space requirements and equipment locations shall be verified, coordinated with other trades, as it is the various Contractors' responsibility to install the systems complete in the space provided without extra charges to Owner.

B. It is intended that anything, whether labor and materials, which is usually furnished as part of any equipment specified and which is necessary for operation shall be furnished as part of the Contract without additional cost, whether or not shown or described.

C. All piping in finished areas of the building shall be concealed except where otherwise noted on the Drawings.

D. All equipment shall be installed in accordance with manufacturer's recommendations, unless approval is given in writing by Engineer for deviation.

1.8 REQUIREMENTS OF REGULATORY AGENCIES

A. The mechanical Work shall be performed in strict accordance with the local and State codes, ordinances, and regulations governing the particular Work involved. Furnish, without extra charge, any additional material and labor when and where required to comply with these Rules and Regulations, though the Work is not mentioned in the Specifications or shown on the Drawings. When the Specifications or Drawings call for or describe materials or construction of a better quality or larger sizes than required by the above mentioned Rules and Regulations, the provisions of these Specifications and accompanying Drawings shall take precedence.

1.9 QUALIFICATIONS

A. All mechanics shall be capable journeymen, skilled in the Work assigned to them with licensing required by the inspecting authority. All welders must have been certified within the past 3 years to perform the Work which they are doing.

1.10 WARRANTY

A. All materials and equipment shall be new unless otherwise specified.
B. Guarantee all workmanship, material and equipment and replace any found defective without cost to Owner, for 1 year after final acceptance, as defined in General Conditions.
C. Each warranty for longer than 1 year as described above (that comes with equipment used on the job) shall be passed into Owner in the Operation and Maintenance Manual, along with the dates of start and end of warranty.
D. Refer to General Conditions for additional information regarding specific warranty requirements.

1.11 PROJECT RECORD DOCUMENTS

A. Before final payment, provide Engineer with one clean set of Drawings and Specifications corrected up-to-date as job progress. These documents shall reflect the As-Built conditions. Refer to General Conditions for additional information.

1.12 SUBMITTALS

A. The intent of this Section is to give general submittal information; refer to specific submittal information in the subsequent Mechanical Sections.
B. Sale of Electronic CADD Files:
   1. Refer to Engineerural Specification Section 01 33 00 "Submittal Procedures" OR call the Parkhill, office issuing this Project and request the pricing for electronic files.
C. Within 30 days after award of the Contract, and before orders are placed, Contractor shall submit specific information on list of equipment and principal materials specified. Contractor shall indicate and/or provide names of manufacturers, catalog and model numbers, cut sheets, and such other supplementary information as necessary for evaluation. Submittal shall be electronic using pdf file extension.

D. Requirements for Each Submittal:
   1. Bear a dated stamp or specific written indication that Contractor has reviewed and approved all submittal prior to submission to Engineer.
   2. Have all information deleted by Contractor that pertains to the means and methods of construction or to fabrication by Contractor that pertains to the means and methods of construction or to fabrication, assembly, installation, or erection (approval by Engineer shall not extend to these areas unless specifically noted by Engineer).
   3. Be clearly and SPECIFICALLY marked as to which specific piece of equipment is being submitted, bye use of a permanent marker, stamp, etc., so as to distinguish it from other pieces of equipment that may occur on the same page.
   4. Be clearly marked as to which available options are being submitted that are associated with a piece of equipment.
   5. Be complete with respect to quantities, dimensions, specific performance, materials, and similar data to enable the Engineer to review the proposed equipment.

E. Omission by Contractor of any of the above requirements or submittals will subject submittal to automatic rejection without review.

F. Any submittals received by Engineer that were not requested shall be returned without review of any kind.

G. Installation Instructions: For certain products or systems as identified in subsequent Specifications Sections or on the Drawings, Contractor shall be required to provide copies of manufacturer's installation instructions with the submittal. When required as such, the installation instructions are considered part of the submittal and their omission may result in automatic rejection of the submittal. Where more than one identical device is scheduled, only one set of installation instructions needs to be submitted; e.g., if seven 5-ton split systems air conditions are scheduled, only one 5-ton unit installation instruction needs to be submitted. Similarly, if one set of installation instructions is identified by the manufacturer and on the instructions to be applicable to more than 1 type or size of devices, e.g., if one set of air conditioner instructions is good for 3-, 4-, 5-ton units, then only one instruction set is required for these devices.

## 1.13 SUBSTITUTED PRODUCTS

A. Material or equipment specified by manufacturer's name is being used as a basis of standard, unless otherwise noted. Engineer will be the sole judge on the equivalence of substituted equipment and materials.

B. It shall be Contractor's responsibility to verify that submitted substitute equipment will fit in space available. Contractor's submittal for acceptance of the substitute shall include a written statement of whether or not such acceptance would require any subsequent or associated changes to the Drawings or Specifications. Any such changes shall be described in writing, briefly but complete.

C. Contractor shall be responsible for the costs of any such modifications due to substitution of materials or equipment for that which was specified or scheduled. The cost shall be complete; that is, it shall include the cost effect of any and all other trades.

D. Engineer may request detailed Shop Drawing or plan layouts of mechanical rooms or systems of the substituted equipment.

1.14 SAFETY

A. General: Contractor shall be responsible for initiating, maintaining, and supervising all safety precautions and programs in connection with the Work, and Contractor shall comply with all laws governing safety, specifically the "Occupational Safety and Health Standards" and the "Safety and Health Regulations for Construction," state and federal.

B. According to OSHA, a hazardous chemical is any chemical which is a physical hazard or a health hazard. This may include items such as paints, solvents, adhesives, sealants, cleaners, etc. If a Contractor produces, uses, or stores hazardous chemicals at the workplace, then Contractor shall develop, implement, and maintain a hazard communication program in compliance with the latest OSHA requirements. In Projects with multiple tenants in which the building is partially occupied during all or part of the Project, Contractor shall inform the Building Manager or Owner, according to OSHA guidelines, of any hazardous chemicals being produced, stored, or used in the building so that other tenants may be notified. Contractor shall employ required methods of training, information, handling, ventilation, labeling, storing, disposal, and removal of hazardous chemicals.

1.15 LABELING

A. Each device for which an independent testing authority has established a standard shall have affixed a label indicating its compliance and listing. Refer to General Conditions for list of such independent testing authorities.

1.16 SITE VISIT REPORTS

A. During the course of the job, Engineer will make Site visits to observe Work in progress and will subsequently prepare a written Site visit report, which will be sent to Contractor and to whomever else Engineer desires. Contractor shall prepare a written and typed response within 7 calendar days of his receiving the Site visit report. General Contractor shall include in his response the following information.
   1. Date of Site visit by Engineer.
   2. Date of receipt of the Site visit report.
   3. Name and title of the preparer of the response.
   4. An item number referenced to the Site report.
   5. A brief three- or four-word description of the item.
   6. Contractor or Subcontractor affected.
   7. The proposed course of action.
   8. An expected time of completion of the action.

1.17 CUTTING AND PATCHING

A. No joists, beams, girders, columns, slabs, or other structural elements shall be cut, drilled, or altered in any way by Contractor without first obtaining written permission and instructions from Engineer.

B. Where it is necessary to cut through any non-structural elements of walls, floors, or ceilings to permit the installation of any Work under this Contract, or to repair any defects that may appear up to the expiration of the guarantee, such cutting shall be done by Contractor with as little damage as reasonably possible to the element being cut or to adjacent elements.

C. After the necessary Work has been completed, the damage shall be repaired by the respective Contractor, who shall pay all costs of such cutting, repairs, and patching. All patching or sealing of cuts, penetrations, etc., including final appearance of same, shall be done to the approval of Engineer.

## PART 2 - PRODUCTS

2.1 MATERIALS

A. All materials shall be new and of specified quality, unless specifically noted otherwise. Materials shall be free from defects. Where manufacturer names are mentioned in the Specifications or on the Drawings, it has been done in order to establish a standard of quality and construction.

B. Contractor will be responsible for transportation of his material to and from the job Site and will be responsible for the storage and protection of his materials and Work until the final acceptance of the job. At the end of each day of Work, each Contractor is responsible for covering or protecting his Work and/or materials that may be susceptible to damage even if such damage is the result of unforeseen causes, e.g., an overnight thunderstorm. Failure to do so will be sufficient cause for rejection of any item in question, and any such item shall be replaced by Contractor at no cost to Owner.

C. Contractor shall verify that all pieces of equipment will fit through available openings in the building and that all equipment can be installed without modification of building structure.

2.2 EQUIPMENT SCHEDULE

A. All equipment major items are specified in the equipment schedules on the Drawings and shall be new and furnished complete with all accessories normally supplied with the catalog item listed and all other accessories necessary for a complete and satisfactory installation.

B. Equipment items so noted will require start-up by factory trained personnel. Equipment items so noted will require factory approved service personnel who shall provide all service, including all parts and all labor, as requested by Owner, during the full period of equipment warranty.

2.3 EQUIPMENT RATINGS

A. Equipment capacities as scheduled on the Drawings are at Project Site altitude. Capacities of submitted equipment must be corrected for Project Site altitude unless otherwise noted.

2.4 WORKMANSHIP

A. The workmanship shall, in all respects, be of the highest grade, and all construction shall be done according to the best practices of the trade. Piping, ducting and conduit shall be concealed unless otherwise noted, and installed square to the building lines. Any Work not meeting this requirement shall be replaced or rebuilt without extra expense to Owner.

## 2.5 V-BELT DRIVES

A. V-belt drives shall be of fabric and rubber construction of approved manufacture. Multiple belts shall be matched and all belts shall be adjusted to drive the apparatus properly and to prevent slippage and undue wear in starting motor nameplate rating.

## 2.6 BELTGUARDS

A. Contractor shall provide for each V-belt drive a painted steel belt guard, which shall be constructed around an angle iron frame, securely bolted to the floor or apparatus. The guard shall completely enclose drives and pulleys and be constructed to comply with all safety requirements. Hinged access doors not less than 6- by 6-inch shall be provided for access to motors and fan shaft for test purposes.

## 2.7 ELECTRICAL WIRING AND CONTROL EQUIPMENT

A. All disconnects, motor starters, relays, wiring, etc. shall comply with all requirements of Section 26 05 00 "Basic Electrical Methods" of the electrical Specifications.

B. Mechanical Contractor must refer to the electrical control equipment and wiring shown on the Electrical Drawings. Any changes or additions required by specified or substituted equipment furnished shall be the complete responsibility of Contractor furnishing the equipment.

C. All electrical equipment characteristics (voltage, etc.) must be VERIFIED by Mechanical Contractor prior to ordering. It is imperative that voltage and phase characteristics are checked with the Electrical Drawings.

D. All motors shall be built in accordance with the current applicable IEEE, ASA, and NEMA standards. All general-purpose motors shall be open drip-proof machines for installation indoors and/or in protected locations. Totally enclosed fan cooled (TEFC) motors shall be used in all areas of exposure to weather or other environmental contamination. Motors shall be rated explosion-proof when located in hazardous atmospheres. Type II weather-protected motors may be used in lieu of TEFC motors on roof fan units and similar equipment. Motors mounted in direct sun shall be provided with a shield to for direct radiation from the sun when the sun is 45 degrees F or greater above the horizon.

E. Unless indicated otherwise, motors shall be NEMA design B with a service factor of 1.15 with 40 degrees C rise and total temperature rise of 65 degrees C ambient and when powered from the system voltage feeding the motor. TEFC motors shall have a service factor of 1.00 with total temperature rise of 65 degrees C in the above conditions. Single-phase motors shall be NEMA Type N split-phase induction motors with built-in thermal protectors. Single-phase motors connected on loads requiring high starting torque shall be capacitor-start induction motors.

F. All motors shall be all copper wound, high power factor, high efficiency motors. Electric motors shall be an energy efficient type as defined in the latest edition of NEMA document number MG1. Motor efficiency shall be made available to Engineer as required.

G. If there is not a separate "Controls Contractor" for this Project, Mechanical Contractor is responsible for providing and installing all control wiring. Wiring and conduit is to be provided and installed as directed under Division 26 Specifications.

## 2.8 EQUIPMENT AND PIPING SUPPORTS

A. All supporting systems for piping, equipment, and materials supported by the building structure shall be submitted to the Engineer for approval prior to purchase and installation.

B. Roof Supports:

1. Manufacturer's installation recommendations vary depending on roof types, but Contractor is responsible for verifying the roof type and adhering strictly to the appropriate set of manufacturer's installation instructions.

## 2.9 ROOF PENETRATIONS

A. Piping:

1. Penetration shall be accomplished with factory-made assemblies designed specifically for the purpose. The use of pitch pans or pitch pockets is not allowed. Contractor shall provide a factory-made penetration assembly as follows:

a. For pipes, conduits, etc., up to 3 inches in diameter that can or are intended to be turned to horizontal after passing through the roof (e.g., small electrical conduit, gas piping, refrigerant lines, water pipes, etc.) the device shall consist of a curb assembly with a welded 18 gauge galvanized steel shell and base, 1-1/2 inches thick 3 pounds per cubic foot rigid insulation, 0.50-inch aluminum or 20 gauge galvanized cap with minimum 3-inch over hang and 1-inch rigid insulation, and 2- x 6-inch wood nailer. Product shall be Custom Curb Model CPC, ThyCurb Model RP-2 with TC-1, 2, or 3 curb, or approved equivalent.

B. Ductwork with Equipment:

1. Each pierce of roof mounted equipment such as exhaust or supply fans, relief or intake hoods, packaged rooftop air conditioners, air handlers, etc., shall be provide and installed with an insulated roof curb designed to mate with the equipment and provide a weatherproof enclosure. In the event that a presinsulated curb is not available, an uninsulated curb is acceptable if Contractor provides and installs field insulation per manufacturer's instructions. Contractor shall provide the roof curb(s) to Roofing Contractor for installation.

C. General:

1. All roof flashing assemblies and roof curbs shall be closely coordinated with other Work through Roofing Contractor to ensure that the flashing, canting, insulation type and location, etc., is correct and appropriate for the particular roof construction type.
2. Each roof curb shall be selected and provided so that the top of the curb shall be level after installation. Provide tapered curb as required to match roof slope. The curb shall provide a minimum clearance of 10 inches between the top of the finished roof surface and the top of the wood nailer, continuous around the curb perimeter.
3. Each roof penetration location shown on the Drawings is approximate. Refer to the Engineerural and Structural Drawings for the structural openings. Refer to "Cutting and Patching" paragraph in this Section of this Specification for more information.
4. Provide each roof curb with other options as scheduled on the Drawings.

2.10 ACCESSIBILITY

A. Access Panels:
   1. Access panels shall be provided wherever necessary for possible future replacement, adjustment, or maintenance of operating devices such as machinery, valves, dampers, switches, relays, etc., or to other critical non-operating devices such as pull boxes, inspection parts, gauges, etc. Such access panels shall be provided and install by Contractor, whether or not shown on the Drawings, and shall be brought to the attention of Engineer for approval of type, color, etc. Where access is provided in rated members, the access panels shall be of a type that maintains the integrity of the member penetrated.

B. Access to Equipment:
   1. All pipes, tubing, conduit, etc., including but not limited to draining piping of any type, electrical conduit, wiring not in conduit, and pneumatic control tubing shall be installed in such a way so as not to prevent and/or not to make necessary difficult the removal, operation, use, or maintenance of equipment, access panels or doors, pathways (especially in attics or crawlspaces), observation ports, measurement, balancing devices, or junction boxes.
   2. If access for these purposes is prevented or made unreasonably difficult in the opinion of Engineer, then Contractor shall make modifications or repairs at no cost to anyone except Contractor. Such modifications or repairs shall be considered neither complete nor adequate until Engineer is satisfied that access for the above purpose is achieved.

2.11 PROTECTION OF PENETRATION

A. All penetrations of fire or smoke barriers shall be sealed, sleeves (if any), insulation (if any), and vibration isolation (if any) that maintain the fire or smoke resistance of the barrier in accordance with the latest edition of NFPA 101 Life Safety Code.
B. Contractor shall verify locations and type of all partitions penetrations from the Drawings. Sealing material and methods shall be per UL recommendations.

2.12 BEDDING COURSE

A. Bedding Course: Naturally or artificially graded mixture of natural or crushed gravel, crushed stone, and natural or crushed sand; ASTM D2940; except with 100 percent passing a 1-inch sieve and not more than 8 percent passing a No. 200 sieve.

**PART 3 - EXECUTION**

3.1 STORAGE

A. Provide for proper storage of all materials and equipment and assume responsibility for losses due to any cause. All storage shall be within the contract limits of the building Site or in a bonded warehouse. All equipment and materials must be covered and stored out of the elements; any item, which has become rusted, will not be permitted to be used.

B. Each Contractor shall provide temporary storage facilities suitable for equipment stored at the Job Site. Storage facilities shall be rainproof and lockable as required. Materials or equipment stored on Site but not in a lockable rainproof storage facility shall be stored above ground or above slab. Contractor shall take necessary precautions to prevent entry of and/or damage from dirt, trash, water, or vermin. Equipment not properly stored and protected shall be, at the discretion of Engineer, replaces at no cost to Owner. Roofs are not acceptable storage areas unless specifically allowed in writing by Engineer.

3.2 INSTALLATION AND ARRANGEMENT

A. Install all Work to permit removal (without damage to other parts) of coils, heat exchanger bundles, boiler tubes, fan shafts and wheels, filters, belt guards, sheaves and drives, and all other parts which might require periodic replacement or maintenance. Arrange pipes, ducts, and equipment to permit ready access to valves, traps, starters, motors, control components, and to clear opens of doors and of access panels.

B. Offsets, transitions, and changes in direction in pipes and ducts shall be made as required to maintain proper head room and pitch of sloping pipes whether or not indicated on the Drawings. Furnish and install all traps, air vents, sanitary vents, etc., as required to affect these offsets, transitions, and changes in direction.

C. Duct transitions and offsets required to connect ductwork to equipment shall be made as required whether or not indicated on the Drawings.

3.3 PROTECTION OF WORK AND PROPERTY

A. Where there are existing facilities, be responsible for protection thereof, whether or not such facility is to be removed or relocated or remain as installed. Moving or removing any facility must be done so as not to cause interruption to the Work or Owner's Operation.

B. All pipe and duct openings shall be closed with caps or plugs during installation. All fixtures shall be covered and protected against injury. At final completion, all Work shall be cleaned and delivered in an unblemished condition or refinished and repainted at the discretion of Engineer.

3.4 CONCEALED AND EXPOSED WORK

A. "Concealed" is intended to mean within such spaces as pipe chases, pipe trenches, above plaster ceilings, in walls and buried pipe is inaccessible when building is completed. "Exposed" is intended to be within equipment rooms, unfinished spaces, above "pushup" ceilings, accessible pipe tunnels, etc., where pipe is accessible.

3.5 CONCRETE

A. Mechanical Contractor shall coordinate all requirements for concrete. All concrete shall be furnished under the Engineer Divisions of these Specifications.

3.6 FIELD MEASUREMENTS

A. Contractor shall verify the dimensions and conditions governing Work at the Project Site. He shall examine adjoining Work on which his Work is dependent, for perfect efficiency, and shall report any Work which must be corrected.

PACKET 7.406 September 12, 2023
PACKET 11.408 November 14, 2023

3.7 LUBRICATION

A. Contractor shall provide all oil and grease for the operating of all equipment until acceptance. Contractor shall be held responsible for all damage to bearings while the equipment is being operated by him up to the date of acceptance of the equipment. Contractor shall protect all bearings and shafts during installation and shall thoroughly grease the steel shafts to prevent corrosion.

3.8 MANUFACTURER'S DIRECTION

A. Contractor shall install all equipment in strict accordance with all directions and recommendations furnished by the manufacturer. Where such directions conflict with the Plans and Specifications, Contractor shall report such conflicts to Engineer, who shall make changes deemed necessary and desirable.

3.9 FLUSHING, CLEANING, AND STERILIZING

A. Before final connections are made in the piping systems, all piping shall be blown out with air and then completely washed out with cleaning compounds. The systems shall be flushed for complete removal of all foreign materials. Furnish all temporary connections, valves, etc., required for this purpose.
B. After flushing, sterilize the domestic water systems with an approved chlorinating agent to provide a dosage on not less than 50 ppm. After minimum contact period of 8 hours, the system shall be flushed with clean water until the residual chlorine is no greater than the city water.

3.10 TESTS

A. Test all, storm, vent, and waste lines with either a 5 psi air test or a standing water test of 12 feet of head pressure. Test shall be held for a minimum of 2 hours, or as required by local code.
B. Test all new domestic cold, hot, and recirculating hot water service lines at 50 psig above operating pressure, without exceedidng the pressure rating of the piping materials. Test shall be held for a minimum of 2 hours, or as required by local code.
C. Test all new gas lines at 1-1/2 times the proposed maximum working pressure, but not less than 5 psig. Test to be held for a minimum of 2 hours, or as required by local code.
D. Repair leaks and defects with new materials and retest piping or portion thereof until satisfactory results are obtained.
E. All tests shall be witnessed and approved by Engineer and the local authority having jurisdiction before covering or insulating. The satisfactory operation of blowers, pumps and other equipment with moving parts shall be demonstrated to Engineer. Equipment without movable parts shall have pressure or other tests performed by Contractor to demonstrate satisfactory operation.
F. Furnish all instruments, pumps, blowers, and equipment required for the testing.
G. Provide written copies of these test reports for inclusion on the Operations and Maintenance Manuals and submit one copy to Engineer.

PACKET 7.407 September 12, 2023
PACKET 11.409 November 14, 2023

3.11 PAINTING

A. Surfaces of all equipment and material not provided with a factory finish coat shall be thoroughly cleaned, primed (if not factory primed) and finish coated with a high quality alkyd industrial enamel of a color chosen by Owner.

3.12 SPECIAL OPENINGS

A. Contractor shall attempt to schedule delivery of all large equipment requiring special openings for installation prior to enclosing of area. Where this is not possible written notice of required openings which must be provided shall be listed by size and location and submitted to General Contractor prior to enclosing of areas involved. Work required to construct openings and the associated cost of enclosing them shall be done at no additional cost to Owner.

3.13 PLACING IN OPERATION

A. All ducts, pipes, equipment, controls, etc., shall be cleaned of plaster and other foreign debris
B. Before final acceptance, all strainers shall be thoroughly cleaned or replaced, all bearings shall be oiled or greased and all drains shall be cleaned out and primed. All permanent filters shall be cleaned; throwaway type filters shall be replaced with new filters.
C. The systems shall be placed in operation.
D. Contractor shall verify that all controls are set to meet operating conditions specified.
   1. Example: Boiler operating control set at 180 degrees F. Limit control set at 200 degrees F.
E. Contractor shall verify that all pieces of equipment are operable and that all sequence of controls are being met.
F. Contractor to adjust seating through the first year as required by Engineer.

3.14 BALANCING, TESTING, AND ADJUSTING THE MECHANICAL SYSTEMS

A. Contractor shall include in their proposal the cost of testing, adjusting, and balancing (TAB). Mechanical Contractor shall provide a TAB report that shows the corrected airflow or coordinate with TAB Contractor to balance the system and correct deficiences noted by the TAB Contractor during TAB testing.

3.15 OPERATION AND MAINTENANCE INSTRUCTIONS

A. Contractor shall prepare and provide electronic copies of operating and maintenance manuals. Contractor shall deliver the electronic sets to Engineer for approval. Each manual shall be in a ring binder and shall be indexed with dividers for each Section. Delivery of required documents is a condition of final acceptance.
B. Each manual shall contain, but not limited to, the following general sections:
   1. Certificates of acceptance from the inspecting authorities.
   2. Waiver of all liens.
   3. Warranties with starting dates and end dates for each pieces of equipment and/or for each system (warranties shall begin on date of substantial completion and acceptance by Owner).

4. Names, telephone, and fax numbers and addresses of all subcontractors, vendors, manufacturer's representatives, and warranties providers.
5. Certification letters from each Contractor that each system furnished and installed by that Contractor and/or subcontractors is started-up, balanced, adjusted, and checked for proper operation in accordance with the intent of the Contract Documents.
6. Spare parts lists for each piece of equipment.
7. Lubrication charts showing type of lubrication and application methods and frequencies.
8. Filter cleaning or replacement schedule (on Contractor's letterhead stationary).
9. Preventative maintenance schedule for checking all items such as belt drives, safety controls, oil and refrigerant charges, and seasonal changer over recommendations. Cleaning of all strainers, traps, coils, tower pans, tubes, sprays, etc. (on Contractor's letterhead stationary).
10. Normal operating instructions including a sequence of operations (on Contractor's letterhead stationary).
11. Instructions as to procedures to be followed for emergency situations, such as alarms or safety items being tripped (on Contractor's letterhead stationary).
12. Instruction on who to call for service during guarantee period (on Contractor's letterhead stationary).
13. Copies of As-Built Drawings on reproducible vellum as produced by a Xerox or photographic process.
14. Copies of all approved Shop Drawing Submittals including nameplate date, design parameters, name, telephone and fax numbers, address of vendor, manufacturer's representative and warrantee provider.

C. Approval will not be given for final payment until the tests, balancing, and operating instruction portions have been completed.

## 3.16 INSTRUCTIONS TO OWNER

A. Contractor shall instruct Owner's operating personnel in the operations and maintenance of all mechanical systems and equipment. There shall be a minimum of 2 hours of training. Contractor shall furnish any special servicing tools required for maintenance.

B. Contractor shall conduct a demonstration of the installation upon completion and final acceptance of the Work. There shall be a minimum 2-hour demonstration. Prior to this, all Work shall have been completed, tested, balanced, and placed in operation. Qualified personnel must be present at the demonstration to operate all the systems and prove the performance of the equipment. The schedule for this demonstration shall be coordinated with Engineer.

## 3.17 EXCAVATION FOR PIPE AND CONDUIT

A. Excavate trenches to indicated gradients, lines, depths, and elevations.

B. Excavate trenches to uniform widths to provide a working clearance on each side of pipe or conduit. Excavate trench walls vertically from trench bottom to 12 inches higher than top of pipe or conduit, unless otherwise indicated.

C. Trench Bottoms: Excavate and shape trench bottoms to provide uniform bearing and support of pipes and conduit. Shape subgrade to provide continuous support for bells, joints, and barrels of pipes and for joints, fittings, and bodies of conduits. Remove projecting stones and sharp objects along trench subgrade. Level bottom of all trenches and cover all PVC pipe with processed chat.

1. For pipes and conduit less than 6 inches in nominal diameter and flat-bottomed, multiple-duct conduit units, hand excavate trench bottoms and support pipe and conduit on an undisturbed subgrade.
2. For pipes and conduit 6 inches or larger in nominal diameter, shape bottom of trench to support bottom 90 degrees of pipe circumference. Fill depressions with tamped sand backfill.
3. Excavate trenches 4 inches deeper than elevation required in rock or other unyielding bearing material to allow for bedding course.

D. Place backfill and fill materials in layers not more than 8 inches in loose depth for material compacted by heavy compaction equipment, and not more than 4 inches in loose depth for material compacted by hand-operated tampers.

E. All piping and conduit trenches across pavement shall be backfilled with two-sack concrete to within 12 inches of finished grade.

F. Compact soil to not less than the following percentages of maximum dry unit weight according to ASTM D698:
1. Under structures, building slabs, steps, and pavements, scarify and recompact top 12 inches of existing subgrade and each layer of backfill or fill material at 95 percent.
2. Under walkways, scarify and recompact top 6 inches below subgrade and compact each layer of backfill or fill material at 92 percent.
3. Under lawn or unpaved areas, scarify and recompact top 6 inches below subgrade and compact each layer of backfill or fill material at 85 percent.

G. Install detectable warning tape above conduits and pipe, 12 inches below finished grade, except 6 inches below subgrade under pavements and slabs.

H. Protection:
1. Protecting Graded Areas: Protect newly graded areas from traffic, freezing, and erosion. Keep free of trash and debris.
2. Repair and reestablish grades to specified tolerances where completed or partially completed surfaces become eroded, rutted, settled, or where they lose compaction due to subsequent construction operations or weather conditions.
   a. Scarify or remove and replace soil material to depth as directed by Engineer; reshape and recompact.
3. Where settling occurs before Project correction period elapses, remove finished surfacing, backfill with additional soil material, compact, and reconstruct surfacing.
   a. Restore appearance, quality, and condition of finished surfacing to match adjacent Work, and eliminate evidence of restoration to the greatest extent possible.

I. Disposal of Surplus and Waste Materials:
1. Disposal: Remove surplus satisfactory soil and waste material, including unsatisfactory soil, trash, and debris, and legally dispose of it off Owner's property unless otherwise directed by Owner.
2. Repair: Any damage to shrubs, grass or structures shall be repaired to previous condition by Contractor at no additional expense to Owner.

J. Bracing and Sheeting: Open cut trenches shall be sheeted and braced as required by OSHA and the requirements of the State of Texas as necessary for the safety of workers or the protection of property.

END OF SECTION

PACKET 7.410 September 12, 2023
PACKET 11.412 November 14, 2023

# SECTION 23 05 00.20 - BASIC MECHANICAL MATERIALS AND METHODS

## PART 1 - GENERAL

### 1.1 SUMMARY

A. Section Includes:
   1. The following basic mechanical materials and methods to complement other Division 23 Sections.
      a. Piping materials and installation instructions common to most piping systems.
      b. Concrete equipment base construction requirements.
      c. Equipment nameplate data requirements.
      d. Labeling and identifying mechanical systems and equipment is specified in Section 23 05 53 "Identification for HVAC and Plumbing Piping and Equipment."
      e. Nonshrink grout for equipment installations.
      f. Field-fabricated metal and wood equipment supports.
      g. Installation requirements common to equipment specification Sections.
      h. Cutting and patching.
      i. Touch-up painting and finishing.
   2. Pipe and pipe fitting materials are specified in piping system Sections.

B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.

### 1.2 DEFINITIONS

A. Pipe, pipe fittings, and piping include tube, tube fittings, and tubing.

B. Finished Spaces: Spaces other than mechanical and electrical equipment rooms, furred spaces, pipe and duct shafts, unheated spaces immediately below the roof, spaces above ceilings, unexcavated spaces, crawl spaces, and tunnels.

C. Exposed Interior Installations: Exposed to view indoors. Examples include finished occupied spaces and mechanical equipment rooms.

D. Exposed Exterior Installations: Exposed to view outdoors, or subject to outdoor ambient temperatures and weather conditions. Examples include rooftop locations.

E. Concealed Interior Installations: Concealed from view and protected from physical contact by building occupants. Examples include above ceilings and in duct shafts.

F. Concealed Exterior Installations: Concealed from view and protected from weather conditions and physical contact by building occupants, but subject to outdoor ambient temperatures. Examples include installations within unheated shelters.

### 1.3 SUBMITTALS

A. General: Submit the following according to the Conditions of the Contract and Division 01 and Section 23 05 00 "General Mechanical Requirements."

B. Product data for following piping specialties:
   1. Mechanical sleeve seals.
   2. Dielectric Fittings.
   3. Access Doors.

1.4 QUALITY ASSURANCE

A. Qualify welding processes and operators for piping according to ASME "Boiler and Pressure Vessel Code," Section IX, "Welding and Brazing Qualifications."
   1. Comply with provisions of ASME B31 Series "Code for Pressure Piping."
   2. Certify that each welder has passed AWS qualification tests for the welding processes involved and that certification is current.

B. ASME A13.1 for lettering size, length of color field, colors, and viewing angles of identification devices.

C. Equipment Selection: Equipment of greater or larger power, dimensions, capacities, and ratings may be furnished provided such proposed equipment is approved in writing and connecting mechanical and electrical services, circuit breakers, conduit, motors, bases, and equipment spaces are increased. No additional costs will be approved for these increases, if larger equipment is approved. If minimum energy ratings or efficiencies of the equipment are specified, the equipment must meet the design requirements and commissioning requirements.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Deliver pipes and tubes with factory-applied end-caps. Maintain end-caps through shipping, storage, and handling to prevent pipe-end damage and prevent entrance of dirt, debris, and moisture.

B. Protect stored pipes and tubes from moisture and dirt. Elevate above grade. When stored inside, do not exceed structural capacity of the floor.

C. Protect flanges, fittings, and piping specialties from moisture and dirt.

D. Protect stored plastic pipes from direct sunlight. Support to prevent sagging and bending.

1.6 SEQUENCING AND SCHEDULING

A. Coordinate mechanical equipment installation with other building components.

B. Arrange for chases, slots, and openings in building structure during progress of construction to allow for mechanical installations.

C. Coordinate the installation of required supporting devices and set sleeves in poured-in-place concrete and other structural components as they are constructed.

D. Sequence, coordinate, and integrate installations of mechanical materials and equipment for efficient flow of the Work. Coordinate installation of large equipment requiring positioning prior to closing in the building.

E. Coordinate connection of electrical services.

F. Coordinate connection of mechanical systems with exterior underground and overhead utilities and services. Comply with requirements of governing regulations, franchised service companies, and controlling agencies.

G. Coordinate requirements for access panels and doors where mechanical items requiring access are concealed behind finished surfaces.

H. Coordinate installation of identifying devices after completing covering and painting where devices are applied to surfaces. Install identifying devices prior to installing acoustical ceilings and similar concealment.

## PART 2 - PRODUCTS

2.1 PIPE AND PIPE FITTINGS

A. Refer to individual piping system specification Sections for pipe and fitting materials and joining methods.
B. Pipe Threads: ASME B1.20.1 for factory-threaded pipe and pipe fittings.

2.2 JOINING MATERIALS

A. Refer to individual piping system Specification Sections in Division 23 for special joining materials not listed below.
B. Pipe Flange Gasket Materials: Suitable for the chemical and thermal conditions of the piping system contents.
   1. ASME B16.21, nonmetallic, flat, asbestos-free, 1/8-inch maximum thickness, except where thickness or specific material is indicated.
      a. Full-Face Type: For flat-face, Class 125 cast-iron and cast-bronze flanges.
      b. Narrow-Face Type: For raised-face, Class 250 cast iron and steel flanges.
   2. ASME B16.20 for grooved, ring-joint, steel flanges.
   3. AWWA C110, rubber, flat face, 1/8-inch-thick, except where other thickness is indicated; and full-face or ring type, except where type is indicated.
C. Flange Bolts and Nuts: ASME B18.2.1, carbon steel, except where other material is indicated.
D. Plastic Pipe Flange Gasket, Bolts, and Nuts: Type and material recommended by piping system manufacturer, except where other type or material is indicated.
E. Solder Filler Metal: ASTM B32.
   1. Alloy Sn95 or Alloy Sn94: Tin (approximately 95 percent) and silver (approximately 5 percent), having 0.10 percent lead content.
F. Brazing Filler Metals: AWS A5.8.
   1. BCuP Series: Copper-phosphorus alloys.
   2. BAg1: Silver alloy.
G. Welding Filler Metals: Comply with AWS D10.12 for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.
H. Solvent Cements: Manufacturer's standard solvents complying with the following:
   1. Acrylonitrile-Butadiene-Styrene (ABS): ASTM D2235.
   2. Chlorinated Poly (Vinyl Chloride) (CPVC): ASTM F493.
   3. Poly (Vinyl Chloride) (PVC): ASTM D2564.
   4. PVC to ABS Transition: Made to requirements of ASTM D3138, color other than orange.
I. Plastic Pipe Seals: ASTM F477, elastomeric gasket.
J. Flanged, Ductile-Iron Pipe Gasket, Bolts, and Nuts: AWWA C110, rubber gasket, carbon steel bolts and nuts.
K. Couplings: Iron body sleeve assembly, fabricated to match outside diameters of plain-end pressure pipes.
   1. Sleeve: ASTM A126, Class B, gray iron.
   2. Followers: ASTM A47, Grade 32510 or ASTM A536 ductile iron.
   3. Gaskets: Rubber.
   4. Bolts and Nuts: AWWA C111.
   5. Finish: Enamel paint.

2.3 PIPING SPECIALTIES

A. Escutcheons: Manufactured wall, ceiling, and floor plates; deep-pattern type where required to conceal protruding fittings and sleeves.
   1. Inside Diameter: Closely fit around pipe, tube, and insulation.
   2. Outside Diameter: Completely cover opening.
   3. Cast Brass: One-piece, with setscrew.
      a. Finish: Rough brass.
      b. Finish: Polished chrome plate.
   4. Cast Brass: Split casting, with concealed hinge and setscrew.
      a. Finish: Rough brass.
      b. Finish: Polished chrome plate.
   5. Stamped Steel: One-piece, with setscrew and chrome-plated finish.
   6. Stamped Steel: One-piece, with spring clips and chrome-plated finish.
   7. Stamped Steel: Split plate, with concealed hinge, setscrew, and chrome-plated finish.
   8. Stamped Steel: Split plate, with concealed hinge, spring clips, and chrome-plated finish.
   9. Stamped Steel: Split plate, with exposed-rivet hinge, setscrew, and chrome-plated finish.
   10. Stamped Steel: Split plate, with exposed-rivet hinge, spring clips, and chrome-plated finish.
   11. Cast-Iron Floor Plate: One-piece casting.

B. Dielectric Fittings: Assembly or fitting having insulating material isolating joined dissimilar metals to prevent galvanic action and stop corrosion.
   1. Description: Combination of copper alloy and ferrous; threaded, solder, plain, and weld neck end types and matching piping system materials.
   2. Insulating Material: Suitable for system fluid, pressure, and temperature.
   3. Dielectric Unions: Factory-fabricated, union assembly for 250-psig minimum working pressure at a 180 degrees F temperature.
   4. Dielectric Flanges: Factory-fabricated, companion-flange assembly for 150- or 300-psig minimum pressure to suit system pressures.
   5. Dielectric-Flange Insulation Kits: Field-assembled, companion-flange assembly, full-face or ring type. Components include neoprene or phenolic gasket, phenolic or polyethylene bolt sleeves, phenolic washers, and steel backing washers.
      a. Provide separate companion flanges and steel bolts and nuts for 150- or 300-psig minimum working pressure to suit system pressures.
   6. Dielectric Couplings: Galvanized-steel coupling, having inert and noncorrosive, thermoplastic lining, with threaded ends and 300-psig minimum working pressure at 225 degrees F temperature.
   7. Dielectric Nipples: Electroplated steel nipple, having inert and noncorrosive thermoplastic lining, with combination of plain, threaded, or grooved end types and 300-psig working pressure at 225 degrees F temperature.

C. Mechanical Sleeve Seals: Modular, watertight mechanical type. Components include interlocking synthetic rubber links shaped to continuously fill annular space between pipe and sleeve. Connecting bolts and pressure plates cause rubber-sealing elements to expand when tightened.

D. Sleeves: The following materials are for wall, floor, slab, and roof penetrations:
   1. Steel Sheet Metal: 24-gauge or heavier galvanized sheet metal, round tube closed with welded longitudinal joint.
   2. Steel Pipe: ASTM A53, Type E, Grade A, Schedule 40, galvanized, plain ends.
   3. Cast-Iron: Cast or fabricated wall pipe equivalent to ductile-iron pressure pipe, having plain ends and integral water stop, except where other features are specified.
   4. Wall Penetration Systems: Wall sleeve assembly, consisting of housing, gaskets, and pipe sleeve, with 1 mechanical-joint end conforming to AWWA C110 and one plain pipe-sleeve end.
      a. Penetrating Pipe Deflection: 5 percent without leakage.
      b. Housing: Ductile-iron casting having waterstop and anchor ring, with ductile-iron gland, steel studs and nuts, and rubber gasket conforming to AWWA C111, of housing and gasket size as required to fit penetrating pipe.
      c. Pipe Sleeve: AWWA C151, ductile-iron pipe.
      d. Housing-to-Sleeve Gasket: Rubber or neoprene push-on type of manufacturer's design.
   5. Cast-Iron Sleeve Fittings: Commercially made sleeve having an integral clamping flange, with clamping ring, bolts, and nuts for membrane flashing.
      a. Underdeck Clamp: Clamping ring with setscrews.

2.4 GROUT

A. Nonshrink, Nonmetallic Grout: ASTM C1107, Grade B.
   1. Characteristics: Post-hardening, volume-adjusting, dry, hydraulic-cement grout, nonstaining, noncorrosive, nongaseous, and recommended for interior and exterior applications.
   2. Design Mix: 5,000-psi, 28-day compressive strength.
   3. Packaging: Premixed and factory-packaged.

2.5 ACCESS DOORS

A. Flush mounted steel access doors with 16 gauge frame and 14 gauge panel. Prime coat finish. Concealed spring hinges, screwdriver cam-lock. Doors in fire rated surfaces shall be UL listed and labeled. Doors to be Milcor or approved equivalent.

## PART 3 - EXECUTION

3.1 PIPING SYSTEMS - COMMON REQUIREMENTS

A. General: Install piping as described below, except where system Sections specify otherwise. Individual piping system Specification Sections in Divisions 23 specify piping installation requirements unique to the piping system.
B. General Locations and Arrangements: Drawings (plans, schematics, and diagrams) indicate general location and arrangement of piping systems. Indicated locations and arrangements were used to size pipe and calculate friction loss, expansion, pump sizing, and other design considerations. Install piping as indicated, except where deviations to layout are approved on Coordination Drawings.
C. Install piping at indicated slope.

D. Install components having pressure rating equal to or greater than system operating pressure.
E. Install piping in concealed interior and exterior locations, except in equipment rooms and service areas.
F. Install piping free of sags and bends.
G. Install exposed interior and exterior piping at right angles or parallel to building walls. Diagonal runs are prohibited, except where indicated.
H. Install piping tight to slabs, beams, joists, columns, walls, and other building elements. Allow sufficient space above removable ceiling panels to allow for ceiling panel removal.
I. Install piping to allow application of insulation plus 1-inch clearance around insulation.
J. Locate groups of pipes parallel to each other, spaced to permit valve servicing.
K. Install fittings for changes in direction and branch connections.
L. Install couplings according to manufacturer's printed instructions.
M. Install pipe escutcheons for pipe penetrations of concrete and masonry walls, wall board partitions, and suspended ceilings according to the following:
    1. Chrome-Plated Piping: Cast-brass, one-piece, with setscrew, and polished chrome-plated finish. Use split-casting escutcheons, where required, for existing piping.
    2. Uninsulated Piping Wall Escutcheons: Cast-brass or stamped-steel, with setscrew.
    3. Uninsulated Piping Floor Plates in Utility Areas: Cast-iron floor plates.
    4. Insulated Piping: Cast-brass or stamped-steel, with concealed hinge, spring clips, and chrome-plated finish.
    5. Piping in Utility Areas: Cast-brass or stamped-steel, with setscrew or spring clips.
N. Sleeves are required for core drilled holes.
O. Install sleeves for pipes passing through concrete and masonry walls, concrete floor and roof slabs, and where indicated.
P. Install sleeves for pipes passing through concrete and masonry walls, gypsum-board partitions, concrete floor and roof slabs, and where indicated.
    1. Cut sleeves to length for mounting flush with both surfaces.
        a. Exception: Extend sleeves installed in floors of mechanical equipment areas or other wet areas 4 inches above finished floor level. Extend cast-iron sleeve fittings below floor slab as required to secure clamping ring where specified.
    2. Build sleeves into new walls and slabs as Work progresses.
    3. Install large enough sleeves to provide 1/4-inch annular clear space between sleeve and pipe or pipe insulation. Use the following sleeve materials:
        a. Steel Pipe Sleeves: For pipes smaller than 6 inches.
        b. Steel Sheet-Metal Sleeves: For pipes 6 inches and larger that penetrate gypsum board partitions.
        c. Cast-Iron Sleeve Fittings: For floors having membrane waterproofing. Secure flashing between clamping flanges. Install section of cast-iron soil pipe to extend sleeve to 4 inches above finished floor level. Flashing is specified in Division 07.
            1) Seal space outside of sleeve fittings with nonshrink, nonmetallic grout.
    4. Except for below-grade wall penetrations, seal annular space between sleeve and pipe or pipe insulation, using elastomeric joint sealants specified in Division 07.

Q. Above Grade, Exterior Wall, and Pipe Penetrations: Seal penetrations using sleeves and mechanical sleeve seals. Size sleeve for 1-inch annular clear space between pipe and sleeve for installation of mechanical seals.
   1. Install steel pipe for sleeves smaller than 6 inches.
   2. Install cast-iron wall pipes for sleeves 6 inches and larger.
   3. Assemble and install mechanical seals according to manufacturer's printed instructions.

R. Below Grade, Exterior Wall, and Pipe Penetrations: Install cast-iron wall pipes for sleeves. Seal pipe penetrations using mechanical sleeve seals. Size sleeve for 1-inch annular clear space between pipe and sleeve for installation of mechanical seals.
   1. Below Grade, Exterior Wall, and Pipe Penetrations: Install ductile-iron wall penetration system sleeves according to manufacturer's printed installation instructions.

S. Fire Barrier Penetrations: Maintain indicated fire rating of walls, partitions, ceilings, and floors at pipe penetrations. Seal pipe penetrations with firestopping sealant material. Firestopping materials are specified in Division 07.

T. Verify final equipment locations for roughing in.

U. Refer to equipment specifications in other Sections for roughing-in requirements.

V. Piping Joint Construction: Join pipe and fittings as follows and as specifically required in individual piping system Sections.
   1. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.
   2. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.
   3. Soldered Joints: Construct joints according to AWS "Soldering Manual," in "The Soldering of Pipe and Tube" chapter.
   4. Brazed Joints: Construct joints according to AWS "Brazing Manual" in the "Pipe and Tube" chapter.
   5. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full inside diameter. Join pipe fittings and valves as follows:
      a. Note the internal length of threads in fittings or valve ends, and proximity of internal seat or wall, to determine how far pipe should be threaded into joint.
      b. Apply appropriate tape or thread compound to external pipe threads (except where dry seal threading is specified).
      c. Align threads at point of assembly.
      d. Tighten joint with wrench. Apply wrench to valve end into which pipe is being threaded.
      e. Damaged Threads: Do not use pipe or pipe fittings having threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.
   6. Welded Joints: Construct joints according to AWS D10.12 "Recommended Practices and Procedures for Welding Low Carbon Steel Pipe" using qualified processes and welding operators according to the "Quality Assurance" Article.
   7. Flanged Joints: Align flange surfaces parallel. Select appropriate gasket material, size, type, and thickness for service application. Install gasket concentrically positioned. Assemble joints by sequencing bolt tightening to make initial contact of flanges and gaskets as flat and parallel as possible. Use suitable lubricants on bolt threads. Tighten bolts gradually and uniformly using torque wrench.

8. Plastic Pipe and Fitting Solvent-Cement Joints: Clean and dry joining surfaces by wiping with clean cloth or paper towels. Join pipe and fittings according to the following standards:
   a. Comply with ASTM F402 for safe handling of solvent-cement and primers.
   b. Acrylonitrile-Butadiene-Styrene (ABS): ASTM D2235 and ASTM D2661.
   c. Chlorinated Poly (Vinyl Chloride) (CPVC): ASTM D2846 and ASTM F493.
   d. Poly (Vinyl Chloride) (PVC) Pressure Application: ASTM D2672.
   e. Poly (Vinyl Chloride) (PVC) Non-Pressure Application: ASTM D2855.
   f. PVC to ABS (Non-Pressure) Transition: Procedure and solvent cement described in ASTM D3138.
9. Plastic Pipe and Fitting Heat-Fusion Joints: Prepare pipe and fittings and join with heat-fusion equipment according to manufacturer's printed instructions.
   a. Plain-End Pipe and Fittings: Butt joining.
   b. Plain-End Pipe and Socket-Type Fittings: Socket joining.

W. Piping Connections: Except as otherwise indicated, make piping connections as specified below.
1. Install unions in piping 2 inches and smaller adjacent to each valve and at final connection to each piece of equipment having a 2-inch or smaller threaded pipe connection.
2. Install flanges in piping 2-1/2 inches and larger adjacent to flanged valves and at final connection to each piece of equipment having flanged pipe connection.
3. Dry Piping Systems (Gas): Install dielectric unions and flanges to connect piping materials of dissimilar metals.
4. Wet Piping Systems (Water): Install dielectric coupling and nipple fittings to connect piping materials of dissimilar metals.

## 3.2 EQUIPMENT INSTALLATION - COMMON REQUIREMENTS

A. Install equipment to provide the maximum possible headroom where mounting heights are not indicated.
B. Install equipment according to approved submittal data. Portions of the Work are shown only in diagrammatic form. Refer conflicts to Engineer.
C. Install equipment level and plumb, parallel and perpendicular to other building systems and components in exposed interior spaces, except where otherwise indicated.
D. Install mechanical equipment to facilitate servicing, maintenance, and repair or replacement of equipment components. Connect equipment for ease of disconnecting, with minimum of interference with other installations. Extend grease fittings to an accessible location.
E. Install equipment giving right-of-way to piping systems installed at a required slope.

## 3.3 ACCESS DOORS

A. Furnish an access door for each pipe chase for each floor. This includes both toilet plumbing chases and pipe riser chases. Access doors assembly to be size 16 by 16 inches. Access doors are not shown on floor plans. Access door locations shall be field verified.
B. Also, furnish access doors in all non-removable ceiling and in partitions and walls where necessary access to plumbing cleanouts, shock absorbers, fire dampers, manual dampers, valves and other mechanical devices requiring access. Size these as required for access with minimum size of 12 by 12 inches.

C. Any access doors furnished for installation in fire rated surfaces or assembly shall carry an approved fire rating for that use.
D. Any access doors furnished for installation in glued on acoustical surfaces or assembly shall have recessed door to allow installation of tiles.
E. Provide all access doors to General Contractor for them to construct into the building.

3.4 PAINTING AND FINISHING

A. Refer to Division 09 for field painting requirements.
B. Damage and Touch-Up: Repair marred and damaged factory-painted finishes with materials and procedures to match original factory finish.

3.5 CONCRETE BASES

A. Construct concrete equipment bases of dimensions indicated, but not less than 4 inches larger than supported unit in both directions. Follow supported equipment manufacturer's setting templates for anchor bolt and tie locations. Use 3,000-psi, 28-day compressive strength concrete and reinforcement use fibrillated or monofilament polypropylene fibers engineered and designed for use in concrete, complying with ASTM C 1116, Type III, 1/2- to 1-1/2 inches long. Uniformly disperse in concrete mix at manufacturer's recommended rate, but not less than 1.5 pound per cubic yard.

3.6 ERECTION OF METAL SUPPORTS AND ANCHORAGE

A. Cut, fit, and place miscellaneous metal supports accurately in location, alignment, and elevation to support and anchor mechanical materials and equipment.
B. Field Welding: Comply with AWS D1.1 "Structural Welding Code - Steel."

3.7 ERECTION OF WOOD SUPPORTS AND ANCHORAGE

A. Cut, fit, and place wood grounds, nailers, blocking, and anchorage to support and anchor mechanical materials and equipment.
B. Select fastener sizes that will not penetrate members where oppoSite side will be exposed to view or will receive finish materials. Make tight connections between members. Install fasteners without splitting wood members.
C. Attach to substrates as required to support applied loads.

3.8 CUTTING AND PATCHING

A. Cut, channel, chase, and drill floors, walls, partitions, ceilings, and other surfaces necessary for mechanical installations. Perform cutting by skilled mechanics of the trades involved.
B. Repair cut surfaces to match adjacent surfaces.

3.9 GROUTING

A. Install nonmetallic, nonshrink grout for mechanical equipment base bearing surfaces, pump and other equipment base plates, and anchors. Mix grout according to manufacturer's printed instructions.
B. Clean surfaces that will come into contact with grout.

C. Provide forms for placement of grout, as required.
D. Avoid air entrapment when placing grout.
E. Place grout to completely fill equipment bases.
F. Place grout on concrete bases to provide a smooth bearing surface for equipment.
G. Place grout around anchors.
H. Cure placed grout according to manufacturer's printed instructions.

3.10 DEMOLITION

A. Disconnect, demolish, and remove Work specified under Divisions 23 and as indicated.
B. Where pipe, duct Work, insulation, or equipment to remain is damaged or disturbed, remove damaged portions and install new products of equal capacity and quality.
C. Accessible Work: Remove indicated exposed pipe and duct Work in its entirety.
D. Abandoned Work: Cut and remove buried pipe abandoned in place, 2 inches beyond the face of adjacent construction. Cap and patch surface to match existing finish.
E. Removal: Remove indicated equipment from the Project Site.
F. Temporary Disconnection: Remove, store, clean, reinstall, reconnect, and make operational equipment indicated for relocation.

END OF SECTION

# SECTION 23 05 53 - IDENTIFICATION FOR HVAC PIPING AND EQUIPMENT

## PART 1 - GENERAL

### 1.1 SUMMARY

A. Section Includes:
   1. Nameplates.
   2. Tags.
   3. Stencils.
   4. Pipe markers.

B. Related Sections:
   1. Division 01 Specification Sections apply to Work of this Section.

### 1.2 REFERENCES

A. American Society of Mechanical Engineers:
   1. ASME A13.1 - Scheme for the Identification of Piping Systems.

### 1.3 SUBMITTALS

A. Division 01 and Section 23 05 00 "General Mechanical Requirements."
B. Product Data: Submit manufacturers catalog literature for each product required.
C. Manufacturer's Installation Instructions: Indicate installation instructions, special procedures, and installation.
D. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

### 1.4 CLOSEOUT SUBMITTALS

A. Project Record Documents: Record actual locations of tagged valves; include valve tag numbers.

### 1.5 QUALITY ASSURANCE

A. Conform to ASME A13.1 for color scheme for identification of piping systems and accessories.

### 1.6 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this Section with minimum 3 years' experience.
B. Installer: Company specializing in performing Work of this Section with minimum 3 years' experience.

### 1.7 FIELD MEASUREMENTS

A. Verify field measurements prior to fabrication.

## PART 2 - PRODUCTS

2.1 NAMEPLATES

A. Nameplates
   1. Manufacturers:
      a. Seton Identification Products.
      b. Substitutions: Section 23 05 00 "Generald Mechanical Requirements.

B. Product Description: Laminated three-layer plastic with engraved black etters on light contrasting background color.

2.2 TAGS

A. Metal Tags
   1. Manufacturers:
      a. Brass with stamped letters; tag size minimum 1-1/2 inches diameter with finished edges.

B. Tag Chart: Typewritten letter size list of applied tags and location in anodized aluminum frame.

2.3 STENCILS

A. Stencils: With clean cut symbols and letters of following size:
   1. Up to 2 inches Outside Diameter of Insulation or Pipe: 1/2-inch high letters.
   2. Two and one half to 6 inches Outside Diameter of Insulation or Pipe: 1-inch high letters.
   3. Over 6 inches Outside Diameter of Insulation or Pipe: 1-3/4 inches high letters.
   4. Equipment: 1-3/4 inches high letters.

B. Stencil Paint: As specified in Section 09 90 00, semi-gloss enamel, colors and lettering size conforming to ASME A13.1.

2.4 PIPE MARKERS

A. Color and Lettering: Conform to ASME A13.1.

B. Plastic Pipe Markers:
   1. Factory fabricated, flexible, semi-rigid plastic, preformed to fit around pipe or pipe covering. Larger sizes may have maximum sheet size with spring fastener.

C. Plastic Tape Pipe Markers:
   1. Flexible, vinyl film tape with pressure sensitive adhesive backing and printed markings.

D. Plastic Underground Pipe Markers:
   1. Bright colored continuously printed plastic ribbon tape, minimum 6 inches wide by 4 mil thick, manufactured for direct burial service. Markers used on nonmetallic pipe shall contain tracer wire.

## PART 3 - EXECUTION

3.1 PREPARATION

A. Degrease and clean surfaces to receive adhesive for identification materials.
B. Prepare surfaces in accordance with Division 09 for stencil painting.

3.2 INSTALLATION

A. Apply stencil painting in accordance with Division 09.
B. Install identifying devices after completion of coverings and painting.
C. Install plastic nameplates with corrosive-resistant mechanical fasteners, or adhesive.
D. Install tags using corrosion resistant chain. Number tags consecutively by location.
E. Install underground plastic pipe markers 8 to 10 inches below finished grade, directly above buried pipe.
F. Identify air handling units, pumps, heat transfer equipment, tanks, and water treatment devices with plastic nameplates. Identify in-line pumps and other small devices with tags.
G. Identify control panels and major control components outside panels with plastic nameplates.
H. Identify valves in main and branch piping with tags.
I. Identify air terminal units and radiator valves with numbered tags.
J. Tag automatic controls, instruments, and relays. Key to control schematic.
K. Identify piping, concealed or exposed, with plastic pipe markers, plastic tape pipe markers,or stenciled painting. Use tags on piping 3/4-inch diameter and smaller. Identify service, flow direction, and pressure. Install in clear view and align with axis of piping. Locate identification not to exceed 20 feet on straight runs including risers and drops, adjacent to each valve and tee, at each side of penetration of structure or enclosure, and at each obstruction.

PACKET 7.423 September 12, 2023
PACKET 11.425 November 14, 2023

# SECTION 23 07 05 - HVAC AND PLUMBING INSULATION

## PART 1 - GENERAL

### 1.1 SUMMARY

A. Section Includes:
   1. Ductwork insulation.
   2. Duct liner.
   3. Insulation jackets.
   4. Piping system insulation.
   5. Insulation accessories including vapor retarders, jackets, and accessories.

B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.

### 1.2 REFERENCES

A. ASTM International:
   1. ASTM A167 - Standard Specification for Stainless and Heat-Resisting Chromium-Nickel Steel Plate, Sheet, and Strip.
   2. ASTM B209 - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate.
   3. ASTM C177 - Standard Test Method for Steady-State Heat Flux Measurements and Thermal Transmission Properties by Means of the Guarded-Hot-Plate Apparatus.
   4. ASTM C195 - Standard Specification for Mineral Fiber Thermal Insulating Cement.
   5. ASTM C449 - Standard Specification for Mineral Fiber Hydraulic-Setting Thermal Insulating and Finishing Cement.
   6. ASTM C518 - Standard Test Method for Steady-State Heat Flux Measurements and Thermal Transmission Properties by Means of the Heat Flow Meter Apparatus.
   7. ASTM C533 - Standard Specification for Calcium Silicate Block and Pipe Thermal Insulation.
   8. ASTM C534 - Standard Specification for Preformed Flexible Elastomeric Cellular Thermal Insulation in Sheet and Tubular Form.
   9. ASTM C547 - Standard Specification for Mineral Fiber Pipe Insulation.
   10. ASTM C552 - Standard Specification for Cellular Glass Thermal Insulation.
   11. ASTM C553 - Standard Specification for Mineral Fiber Blanket Thermal Insulation for Commercial and Industrial Applications.
   12. ASTM C591 - Standard Specification for Unfaced Preformed Rigid Cellular Polyisocyanurate Thermal Insulation.
   13. ASTM C592 - Standard Specification for Mineral Fiber Blanket Insulation and Blanket-Type Pipe Insulation (Metal-Mesh Covered) (Industrial Type).
   14. ASTM C610 - Standard Specification for Molded Expanded Perlite Block and Pipe Thermal Insulation.
   15. ASTM C612 - Standard Specification for Mineral Fiber Block and Board Thermal Insulation.
   16. ASTM C795 - Standard Specification for Thermal Insulation for Use in Contact with Austenitic Stainless Steel.

17. ASTM C921 - Standard Practice for Determining the Properties of Jacketing Materials for Thermal Insulation.
18. ASTM C1071 - Standard Specification for Thermal and Acoustical Insulation (Glass Fiber, Duct Lining Material).
19. ASTM C1126 - Standard Specification for Faced or Unfaced Rigid Cellular Phenolic Thermal Insulation.
20. ASTM C1136 - Standard Specification for Flexible, Low Permeance Vapor Retarders for Thermal Insulation.
21. ASTM C1290 - Standard Specification for Flexible Fibrous Glass Blanket Insulation Used to Externally Insulate HVAC Ducts.
22. ASTM D1784 - Standard Specification for Rigid Poly (Vinyl Chloride) (PVC) Compounds and Chlorinated Poly (Vinyl Chloride) (CPVC) Compounds.
23. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.
24. ASTM E96 - Standard Test Methods for Water Vapor Transmission of Materials.
25. ASTM E162 - Standard Test Method for Surface Flammability of Materials Using a Radiant Heat Energy Source.
26. ASTM G21 - Standard Practice for Determining Resistance of Synthetic Polymeric Materials to Fungi.

B. Sheet Metal and Air Conditioning Contractors:
   1. SMACNA - HVAC Duct Construction Standard - Metal and Flexible.

## 1.3 SUBMITTALS

A. Refer to Division 01 and Section 23 05 00 "General Mechanical Requirements" for submittals.
B. Product Data: Submit product description, thermal characteristics and list of materials and thickness for each service, and location.
C. Manufacturer's Installation Instructions: Submit manufacturers published literature indicating proper installation procedures.
D. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

## 1.4 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this Section with minimum 3 years' experience.
B. Applicator: Company specializing in performing Work of this Section with minimum 3 years' experience approved by manufacturer.

## 1.5 DELIVERY, STORAGE, AND HANDLING

A. Accept materials on Site in original factory packaging, labeled with manufacturer's identification, including product density and thickness.
B. Protect insulation from weather and construction traffic, dirt, water, chemical, and mechanical damage, by storing in original wrapping.

## 1.6 ENVIRONMENTAL REQUIREMENTS

A. Install insulation only when ambient temperature and humidity conditions are within range recommended by manufacturer.
B. Maintain temperature during and after installation for minimum period of 24 hours.

1.7 FIELD MEASUREMENTS

A. Verify field measurements prior to fabrication.

1.8 WARRANTY

A. Refer to Section 23 05 00 "General Mechanical Requirements" for product warranties.

**PART 2 - PRODUCTS**

2.1 MAN MADE MINERAL FIBER

A. Manufacturers:
   1. Johns Manville.
   2. Knauf.
   3. Owens Corning.
   4. Substitutions: Refer to Section 23 05 00 "General Mechanical Requirements" for substitutions.
B. Insulation: ASTM C547 Mineral Fiber Pipe Insulation, Type I, 850 degrees F.
C. Vapor Retarder Jacket:
   1. ASTM C921, White Kraft paper with glass fiber yarn, bonded to aluminized film.
   2. Moisture Vapor Transmission: ASTM E96; 0.02 perm-inches.
D. Tie Wire: 0.048-inch stainless steel with twisted ends on maximum 12-inch centers.
E. Vapor Retarder Lap Adhesive: Compatible with insulation.
F. Insulating Cement/Mastic: ASTM C195; hydraulic setting on mineral wool.
G. Glass Fiber Fabric:
   1. Cloth: Untreated; 9 ounces per square yard weight.
   2. Blanket: 1.0 pound per cubic feet density.
   3. Weave: 10 by 10.
H. Indoor Vapor Retarder Finish:
   1. Cloth: Untreated; 9 ounces per square yard weight.
   2. Vinyl emulsion type acrylic, compatible with insulation, white color.
I. Insulating Cement: ASTM C449.

2.2 MINERAL FIBER, FLEXIBLE

A. Manufacturers:
   1. Johns Manville.
   2. Knauf.
   3. Owens Corning.
   4. Substitutions: Refer to Section 23 05 00 "General Mechanical Requirements" for substitutions.
B. Insulation: ASTM C553 Mineral Fiber Blanket Thermal Insulation for Commercial and Industrial Applications, Type II.
   1. Density: 0.75 PCF.
C. Vapor Retarder Jacket:
   1. Kraft paper with glass fiber yarn and bonded to aluminized film.
   2. Moisture vapor transmission: ASTM E96; 0.02 perm.
   3. Secure with pressure sensitive tape.

D. Vapor Retarder Tape: Kraft paper reinforced with glass fiber yarn and bonded to aluminized film, with pressure sensitive rubber-based adhesive.
E. Tie Wire: Annealed steel, 16 gauge.

2.3 ELASTOMERIC CELLULAR FOAM

A. Manufacturers:
1. Armaflex.
2. Substitutions: Refer to Section 23 05 00 "General Mechanical Requirements" for substitutions.
B. Preformed Flexible Elastomeric Cellular Thermal Insulation in Sheet and Tubular form: ASTM C534; Type I, Tubular form.
C. Elastomeric Foam Adhesive: Air dried, contact adhesive, compatible with insulation.

2.4 PIPE INSULATION AND EQUIPMENT JACKETS

A. PVC Plastic Pipe Jacket:
1. Manufacturers:
a. Johns Manville.
b. Knauf.
c. Owens Corning.
d. Substitutions: Refer to Section 23 05 00 "General Mechanical Requirements" for substitutions.
2. Product Description: ASTM D1784, one-piece molded type fitting covers and sheet material, off-white color.
3. Thickness: 15 mil.
4. Connections: Brush-on welding adhesive.
B. PVC Plastic Equipment Jacket:
1. Manufacturers:
a. Johns Manville.
b. Knauf.
c. Owens Corning.
d. Substitutions: Refer to Section 23 05 00 "General Mechanical Requirements" for substitutions.
2. Product Description: Sheet material, off-white color.
3. Minimum Service Temperature: Minus 40 degrees F.
4. Maximum Service Temperature: 150 degrees F.
5. Moisture Vapor Transmission: ASTM E96; 0.002 perm-inches.
6. Thickness: 15 mil.
7. Connections: Brush-on welding adhesive.
C. Covering Adhesive Mastic: Compatible with insulation.
D. Aluminum Pipe Jacket:
1. ASTM B209.
2. Thickness: 0.020-inch thick
3. Finish: Stucco embossed.
4. Jointing: Longitudinal slip joints and 2-inch laps.
5. Fittings: 0.016-inch thick die shaped fitting covers with factory attached protection liner.
6. Metal Jacket Bands: 3/8-inch wide; 0.015-inch thick aluminum.

## PART 3 - EXECUTION

### 3.1 EXAMINATION

A. Verify piping, equipment and ductwork has been tested before applying insulation materials.
B. Verify surfaces are clean and dry, with foreign material removed.

### 3.2 INSTALLATION

A. Exposed Piping: Locate insulation and cover seams in least visible locations. Provide PVC jacketing.
B. Insulated pipes conveying fluids below ambient temperature: Insulate entire system including fittings, valves, unions, flanges, strainers, flexible connections, pump bodies, and expansion joints.
C. Man made mineral fiber insulated pipes conveying fluids below ambient temperature:
   1. Furnish factory-applied or field-applied vapor retarder jackets. Secure factory-applied jackets with pressure sensitive adhesive self-sealing longitudinal laps and butt strips. Secure field-applied jackets with outward clinch expanding staples and seal staple penetrations with vapor retarder mastic.
   2. Insulate fittings, joints, and valves with molded insulation of like material and thickness as adjacent pipe. Finish with glass cloth and vapor retarder adhesive or PVC fitting covers.
D. For hot piping conveying fluids over 140 degrees F, insulate flanges and unions at equipment.
E. Man made mineral fiber insulated pipes conveying fluids above ambient temperature:
   1. Furnish factory-applied or field-applied standard jackets. Secure with outward clinch expanding staples or pressure sensitive adhesive system on standard factory-applied jacket and butt strips or both.
   2. Insulate fittings, joints, and valves with insulation of like material and thickness as adjoining pipe. Finish with glass cloth and adhesive or PVC fitting covers.
F. Inserts and Shields:
   1. Application: Piping or Equipment 1-1/2 inches diameter or larger.
   2. Shields: Galvanized steel between pipe hangers or pipe hanger rolls and inserts.
   3. Insert location: Between support shield and piping and under finish jacket.
   4. Insert configuration: Minimum 6 inches long, of thickness and contour matching adjoining insulation; may be factory fabricated.
   5. Insert material: Compression resistant insulating material suitable for planned temperature range and service.
G. Continue insulation through penetrations of building assemblies or portions of assemblies having fire resistance rating of 1 hour or less. Provide intumescent firestopping when continuing insulation through assembly. Finish at supports, protrusions, and interruptions. Refer to Division 07 for penetrations of assemblies with fire resistance rating greater than 1 hour.
H. Factory Insulated Equipment: Do not insulate.
I. Exposed Equipment: Locate insulation and cover seams in least visible locations.
J. Apply insulation close to equipment by grooving, scoring, and beveling insulation. Fasten insulation to equipment with studs, pins, clips, adhesive, wires, or bands.

K. Fill joints, cracks, seams, and depressions with bedding compound to form smooth surface. On cold equipment, use vapor retarder cement.

L. Insulated Equipment Containing Fluids Below Ambient Temperature: Insulate entire system.

M. Mineral fiber insulated equipment containing fluids below ambient temperature: Provide vapor retarder jackets, factory-applied or field-applied. Finish with glass-cloth and vapor barrier adhesive.

N. For hot equipment containing fluids over 140 degrees F, insulate flanges and unions with removable sections and jackets.

O. Mineral Fiber Insulated Equipment Containing Fluids Above Ambient Temperature: Provide standard jackets, with or without vapor retarder, factory-applied or field-applied. Finish with glass cloth and adhesive.

P. Finish insulation at supports, protrusions, and interruptions.

Q. Nameplates and ASME Stamps: Bevel and seal insulation around; do not insulate over.

R. Equipment Requiring Access for Maintenance, Repair, or Cleaning: Install insulation for easy removal and replacement without damage.

S. Insulated ductwork conveying air below ambient temperature:
   1. Provide insulation with vapor retarder jackets.
   2. Finish with tape and vapor retarder jacket.
   3. Continue insulation through walls, sleeves, hangers, and other duct penetrations.
   4. Insulate entire system including fittings, joints, flanges, fire dampers, flexible connections, and expansion joints.

T. Insulated ductwork conveying air above ambient temperature:
   1. Provide with or without standard vapor retarder jacket.
   2. Insulate fittings and joints. Where service access is required, bevel and seal ends of insulation.

U. External Duct Insulation Application:
   1. Secure insulation with vapor retarder with wires and seal jacket joints with vapor retarder adhesive or tape to match jacket.
   2. Secure insulation without vapor retarder with staples, tape, or wires.
   3. Install without sag on underside of ductwork. Use adhesive or mechanical fasteners where necessary to prevent sagging. Lift ductwork off trapeze hangers and insert spacers.
   4. Seal vapor retarder penetrations by mechanical fasteners with vapor retarder adhesive.
   5. Stop and point insulation around access doors and damper operators to allow operation without disturbing wrapping.

V. For hot equipment containing fluids over 140 degrees F, insulate flanges and unions with removable sections and jackets.

W. Exterior Applications: Provide vapor retarder jacket. Insulate fittings, joints, and valves with insulation of like material and thickness as adjoining pipe, and finish with glass mesh reinforced vapor retarder cement. Cover with aluminum jacket with seams located at 3 or 9 o' clock position on side of horizontal piping with overlap facing down to shed water.

3.3 SCHEDULES

A. Plumbing Systems:
   1. Domestic Hot Water Supply:
      a. Man-made Mineral Fiber Insulation:
         1) Pipe Size Range: 1.5-inch or less.
            a) Thickness: 1 inch.
         2) Pipe Size Range: Greater than 1.5 inches.
            a) Thickness: 2 inches.
         3) Runout Piping 4 feet or less:
            a) Pipe Size Range: 1 inch or less.
            b) Thickness: 1/2-inch.
   2. Domestic Cold Water:
      a. Man-made Mineral Fiber Insulation:
         1) Pipe Size Range: All sizes.
            a) Thickness: 1/2-inch.

B. Cooling Systems:
   1. Interior Condensate Drains and Refrigerant Suction Piping:
      a. Elastomeric Cellular Foam:
         1) Pipe Size Range: All sizes.
            a) Thickness: 3/4-inch.

C. Supply Ducts:
   1. Mineral Fiber, Flexible:
      a. Thickness: As required to meet R-6.

D. Return Ducts:
   1. Mineral Fiber, Flexible (return ducts without liner):
      a. Thickness: As required to meet R-6.

END OF SECTION

# SECTION 23 23 00 - REFRIGERANT PIPING

## PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
1. Refrigerant piping.
2. Unions, flanges, and couplings.
3. Valves.
4. Refrigerant strainers.

B. Related Sections:
1. Division 01 Specification Sections apply to Work of this Section.

1.2 REFERENCES

A. Air-Conditioning and Refrigeration Institute:
1. ARI 495 - Refrigerant Liquid Receivers.
2. ARI 710 - Liquid-Line Driers.
3. ARI 730 - Flow-Capacity Rating and Application of Suction-Line Filters and Filter Dryers.
4. ARI 750 - Thermostatic Refrigerant Expansion Valves.
5. ARI 760 - Solenoid Valves for Use with Volatile Refrigerants.

B. American Society of Heating, Refrigerating and Air-Conditioning Engineers:
1. ASHRAE 15 - Safety Code for Mechanical Refrigeration.

C. American Society of Mechanical Engineers:
1. ASME B16.22 - Wrought Copper and Copper Alloy Solder Joint Pressure Fittings.
2. ASME B16.26 - Cast Copper Alloy Fittings for Flared Copper Tubes.
3. ASME B31.5 - Refrigeration Piping.
4. ASME Section VIII - Boiler and Pressure Vessel Code - Pressure Vessels.

D. ASTM International:
1. ASTM A53 - Standard Specification for Pipe, Steel, Black and Hot-Dipped, Zinc-Coated, Welded and Seamless.
2. ASTM A234 - Standard Specification for Piping Fittings of Wrought Carbon Steel and Alloy Steel for Moderate and High Temperature Service.
3. ASTM B88 - Standard Specification for Seamless Copper Water Tube.
4. ASTM B280 - Standard Specification for Seamless Copper Tube for Air Conditioning and Refrigeration Field Service.
5. ASTM F708 - Standard Practice for Design and Installation of Rigid Pipe Hangers.
6. ASTM B749 - Standard Specification for Lead and Lead Alloy Strip, Sheet, and Plate Products.

E. American Welding Society:
1. AWS A5.8 - Specification for Filler Metals for Brazing and Braze Welding.
2. AWS D1.1 - Structural Welding Code - Steel.

F. Manufacturers Standardization Society of the Valve and Fittings Industry:
   1. MSS SP 58 - Pipe Hangers and Supports - Materials, Design and Manufacturer.
   2. MSS SP 69 - Pipe Hangers and Supports - Selection and Application.
   3. MSS SP 89 - Pipe Hangers and Supports - Fabrication and Installation Practices.

G. Underwriters Laboratories Inc.:
   1. UL 429 - Electrically Operated Valves.

1.3 SYSTEM DESCRIPTION

A. Where more than one piping system material is specified, provide compatible system components and joints. Use non-conducting dielectric connections when joining dissimilar metals in systems.

B. Provide flanges, unions, or couplings at locations requiring servicing. Use unions, flanges, or couplings downstream of valves and at equipment connections. Do not use direct welded or threaded connections to valves or equipment.

C. Provide pipe hangers and supports in accordance with ASME B31.5, ASTM F708, MSS SP 58, MSS SP 69, and MSS SP 89.

1.4 SUBMITTALS

A. Division 01 and Section 23 05 00 "Submittal Procedures."

B. Product Data:
   1. Piping: Submit data on pipe materials, fittings, and accessories.
   2. Valves: Submit manufacturer's catalog information with valve data and ratings for each service.

1.5 QUALITY ASSURANCE

A. Perform Work in accordance with ASME B31.5 code for installation of refrigerant piping systems.

B. Perform Work in accordance with AWS D1.1 for welding hanger and support attachments to building structure.

C. Perform Work in accordance with State and local standards.

1.6 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum 3 years' documented experience.

B. Fabricator or Installer: Company specializing in performing Work of this section with minimum 3 years' experience.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Dehydrate and charge refrigeration components including piping and receivers, seal prior to shipment. Maintain seal until connected into system.

B. Accept valves on site in shipping containers with labeling in place. Inspect for damage.

C. Provide temporary end caps and closures on piping and fittings. Maintain in place until installation.

D. Protect piping systems from entry of foreign materials by temporary covers, completing sections of the Work, and isolating parts of completed system.

1.8 ENVIRONMENTAL REQUIREMENTS

A. Do not install underground piping when bedding is wet or frozen.

1.9 FIELD MEASUREMENTS

A. Verify field measurements prior to fabrication.

1.10 WARRANTY

A. Division 01 and Section 23 05 00 "General Mechanical Requirements."

## PART 2 - PRODUCTS

2.1 REFRIGERANT PIPING

A. Copper Tubing: ASTM B280, drawn.
   1. Fittings: ASME B16.22 wrought copper.
   2. Joints: Braze, AWS A5.8 BCuP silver/phosphorus/copper alloy with melting range 1,190 to ,480 degrees F.

2.2 UNIONS, FLANGES, AND COUPLINGS

A. Two inches and Smaller:
   1. Copper Pipe: Bronze, soldered joints.
B. Dielectric Connections: Union with galvanized or plated steel threaded end, copper solder end, water impervious isolation barrier.

2.3 VALVES

A. Ball Valves:
   1. Two piece bolted forged brass body with teflon ball seals and copper tube extensions, brass bonnet and seal cap, chrome plated ball, stem with neoprene ring stem seals, soldered ends.
   2. Maximum working pressure: 500 psig.
   3. Maximum working temperature: 325 degrees F.
B. Service Valves:
   1. Forged brass body with copper stubs, brass caps, removable valve core, integral ball check valve, flared or solder ends.
   2. Maximum working pressure: 500 psig.
C. Refrigerant Check Valves:
   1. Straight Through Type:
      a. Spring, neoprene seat.
      b. Maximum working pressure: 500 psig.
      c. Maximum working temperature: 250 degrees F.

2.4 REFRIGERANT STRAINERS

A. Straight Line or Angle Line Type:
   1. Brass or steel shell, steel cap and flange, and replaceable cartridge, with screen of stainless steel wire or monel reinforced with brass.
   2. Maximum working pressure: 430 psig.

## PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify excavations are to required grade, dry, and not over-excavated.

3.2 PREPARATION

A. Ream pipe and tube ends. Remove burrs.
B. Remove scale and dirt on inside and outside before assembly.
C. Prepare piping connections to equipment with flanges or unions.
D. Keep open ends of pipe free from scale and dirt. Protect open ends with temporary plugs or caps.

3.3 INSTALLATION - INSERTS

A. Provide inserts for placement in concrete forms.
B. Provide inserts for suspending hangers from reinforced concrete slabs and sides of reinforced concrete beams.
C. Provide hooked rod to concrete reinforcement section for inserts carrying pipe 4 inches and larger.
D. Where concrete slabs form finished ceiling, locate inserts flush with slab surface.
E. Where inserts are omitted, drill through concrete slab from below and provide through-bolt with recessed square steel plate and nut recessed into and grouted flush with slab.

3.4 INSTALLATION - PIPE HANGERS AND SUPPORTS

A. Refer to Section 22 05 09 "Hangers and Supports."

3.5 INSTALLATION - ABOVE GROUND PIPING SYSTEMS

A. Route piping parallel to building structure and maintain gradient.
B. Install piping to conserve building space, and not interfere with use of space.
C. Group piping whenever practical at common elevations.
D. Sleeve pipe passing through partitions, walls and floors. Refer to Section 23 05 00 "General Mechanical Requirements."
E. Install piping to allow for expansion and contraction without stressing pipe, joints, or connected equipment.
F. Provide access where valves and fittings are not exposed.
G. Arrange refrigerant piping to return oil to compressor. Provide traps and loops in piping, and provide double risers as required. Slope horizontal piping 0.40 percent in direction of flow.
H. Flood refrigerant piping system with nitrogen when brazing.

I. Where pipe support members are welded to structural building framing, scrape, brush clean, and apply one coat of zinc rich primer to welds.
J. Install valves with stems upright or horizontal, not inverted.
K. Insulate piping ; refer to Section 23 07 05 "HVAC and Plumbing Installation."
L. Fully charge completed system with refrigerant after testing.
M. Follow ASHRAE 15 procedures for charging and purging of systems and for disposal of refrigerant.
N. Install refrigerant piping in accordance with ASME B31.5.

3.6 FIELD QUALITY CONTROL

A. Test refrigeration system in accordance with ASME B31.5.
B. Pressure test refrigeration system with dry nitrogen to 200 psig.
C. Repair leaks.
D. Retest until no leaks are detected.

3.7 SCHEDULES

A. Copper Tube Hanger Spacing:
1. Pipe Size 1/2-Inch:
a. Maximum Hanger Spacing: 5 feet.
b. Hanger Rod Diameter: 3/8-inch.
2. Pipe Size 3/4-Inch:
a. Maximum Hanger Spacing: 5 feet.
b. Hanger Rod Diameter: 3/8-inch.
3. Pipe Size 1 Inch:
a. Maximum Hanger Spacing: 6 feet.
b. Hanger Rod Diameter: 3/8-inch.
4. Pipe Size 1-1/4 Inches:
a. Maximum Hanger Spacing: 7 feet.
b. Hanger Rod Diameter: 3/8-inch
5. Pipe Size 1-1/2 Inches:
a. Maximum Hanger Spacing: 8 feet.
b. Hanger Rod Diameter: 3/8-inch.
6. Pipe Size 2 Inches:
a. Maximum Hanger Spacing: 8 feet.
b. Hanger Rod Diameter: 3/8-inch.
7. Pipe Size 2-1/2 Inches:
a. Maximum Hanger Spacing: 9 feet.
b. Hanger Rod Diameter: 1/2-inch.
8. Pipe Size 3 Inches:
a. Maximum Hanger Spacing: 10 feet.
b. Hanger Rod Diameter: 1/2-inch.
9. Pipe Size 4 Inches:
a. Maximum Hanger Spacing: 10 feet.
b. Hanger Rod Diameter: 1/2-inch.

END OF SECTION

## SECTION 23 31 00 - HVAC DUCTS AND CASINGS

### PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Duct materials.
   2. Ductwork fabrication.

B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.

1.2 REFERENCE STANDARDS

A. ASTM International:
   1. ASTM A36 - Standard Specification for Carbon Structural Steel.
   2. ASTM A90 - Standard Test Method for Weight Mass of Coating on Iron and Steel Articles with Zinc or Zinc-Alloy Coatings.
   3. ASTM A167 - Stainless and Heat-Resisting Chromium-Nickel Steel Plate, Sheet, and Strip.
   4. ASTM A568 - Standard Specification for Steel, Sheet, Carbon, Structural, and High-Strength, Low-Alloy, Hot-Rolled and Cold-Rolled, General Requirements for.
   5. ASTM A653 - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.
   6. ASTM A1008 - Standard Specification for Steel, Sheet, Cold-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy with Improved Formability, Solution Hardened, and Bake Hardenable.
   7. ASTM A1011 - Standard Specification for Steel, Sheet and Strip, Hot-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy with Improved Formability, and Ultra-High Strength.
   8. ASTM B209 - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate.
   9. ASTM C14 - Standard Specification for Nonreinforced Concrete Sewer, Storm Drain, and Culvert Pipe.
   10. ASTM C443 - Standard Specification for Joints for Concrete Pipe and Manholes, Using Rubber Gaskets.
   11. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.

B. National Fire Protection Association:
   1. NFPA 90A - Standard for the Installation of Air-Conditioning and Ventilating Systems.
   2. NFPA 90B - Standard for the Installation of Warm Air Heating and Air-Conditioning Systems.

C. Sheet Metal and Air Conditioning Contractors' National Association:
   1. SMACNA 016 - HVAC Air Duct Leakage Test Manual.
   2. SMACNA 1966 - HVAC Duct Construction Standards - Metal and Flexible.

D. Underwriters Laboratories Inc.:
   1. UL 181 - Factory-Made Air Ducts and Air Connectors.

1.3 PERFORMANCE REQUIREMENTS

A. Variation of duct configuration or sizes other than those of equivalent or lower loss coefficient is not permitted except by written permission. Size round ducts installed in place of rectangular ducts in accordance with ASHRAE table of equivalent rectangular and round ducts.

1.4 SUBMITTALS

A. Division 01 and Section 23 05 00 "General Mechnical Requirements."
B. Product Data: Submit manufacturer information for duct materials and, duct connectors.

C. Test Reports: Indicate pressure tests performed, including date, section tested, test pressure, and leakage rate according to SMACNA 016.
D. Manufacturer Installation Instructions:
   1. Submit special procedures for glass-fiber ducts.

1.5 CLOSEOUT SUBMITTALS

A. Project Record Documents:
   1. Record actual locations of ducts and duct fittings.
   2. Record changes in fitting location and type.
   3. Show additional fittings used.

1.6 QUALITY ASSURANCE

A. Perform Work according to SMACNA 1966.
B. Construct ductwork to NFPA 90A standards.

1.7 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this Section with minimum 3 years' experience.
B. Installer: Company specializing in performing Work of this Section with minimum 3 years' experience .

1.8 ENVIRONMENTAL REQUIREMENTS

A. Do not install duct sealant when temperatures are less than those recommended by sealant manufacturers.
B. Maintain temperatures during and after installation of duct sealant.

1.9 FIELD MEASUREMENTS

A. Verify field measurements prior to fabrications.

1.10 WARRANTY

A. Section 23 05 00 "General Mechanical Requirements" for product warranties.

## PART 2 - PRODUCTS

2.1 DUCTS MATERIALS

A. Galvanized-Steel Ducts:
   1. Material: ASTM A653 galvanized-steel sheet.
   2. Quality: Lock forming.
   3. Finish: G90 zinc coating according to ASTM A90.

B. Fasteners: Rivets, bolts, or sheet metal screws.

2.2 FABRICATION

A. Rectangular Ducts:
   1. According to SMACNA 1966 and as indicated on Drawings.
   2. Provide duct material, gages, reinforcing, and sealing for indicated operating pressures.

B. Round Ducts:
   1. According to SMACNA 1966 and as indicated on Drawings.
   2. Seams: Longitudinal.
   3. Provide duct material, gages, reinforcing, and sealing for indicated operating pressures.

C. Tees, Bends, and Elbows:
   1. Minimum Radius:
      a. One and one half times centerline duct width.
      b. If not possible or if rectangular elbows are used, provide airfoil turning vanes.

D. Divergence:
   1. Increase duct sizes gradually, not exceeding 15 degrees of divergence wherever possible.
   2. Upstream of Equipment: Maximum 30 degrees.
   3. Downstream of Equipment: Maximum 45 degrees.

E. Takeoffs:
   1. Provide standard 45-degree lateral wye takeoffs.
   2. If not possible due to space limitations, provide 90-degree conical tee connections.

F. Sealing:
   1. Seal joints between duct sections and duct seams with welds, gaskets, mastic adhesives, mastic plus embedded fabric systems, or tape.
   2. Sealants, Mastics, and Tapes: Comply with UL 181A and provide products bearing appropriate UL 181A markings.
   3. Do not provide sealing products not bearing UL approval marking.

## PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify sizes of equipment connections before fabricating transitions.

3.2 INSTALLATION

A. Install and seal ducts according to SMACNA 1966.
B. During construction, install temporary closure of metal or taped polyethylene on open ductwork to prevent construction dust from entering ductwork system.
C. Hanger and Supports:
   1. Fabricate and support ducts according to SMACNA 1966.
   2. Threaded Rods: Provide double nuts and lock washers.

3.3 INTERFACE WITH OTHER PRODUCTS

A. Install openings in ductwork where required to accommodate thermometers and controllers. Install Pitot tube openings for testing of systems. Install Pitot tube complete with metal can with spring device or screw to prevent air leakage. Where openings are provided in insulated ductwork, install insulation material inside metal ring.

3.4 SCHEDULES

A. Ductwork Material Schedule:

| AIR SYSTEM | MATERIAL |
|---|---|
| General Exhaust<br>Supply Air<br>Return Air | Steel |

B. Ductwork Pressure Class Schedule:

| AIR SYSTEM | MATERIAL |
|---|---|
| General Exhaust<br>Supply Air<br>Return Air | 1-inch wg regardless of velocity |

END OF SECTION

# SECTION 23 33 00 - AIR DUCT ACCESSORIES

## PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Back-draft dampers.
   2. Duct access doors.
   3. Volume control dampers.
   4. Flexible duct connections.
   5. Duct test holes.

B. Related Sections:
   1. Division 01 Specification Section apply to Work of this Section.

1.2 REFERENCES

A. Air Movement and Control Association International, Inc.:
   1. AMCA 500 - Test Methods for Louvers, Dampers, and Shutters.

B. ASTM International:
   1. ASTM E1 - Standard Specification for ASTM Thermometers.

C. National Fire Protection Association:
   1. NFPA 90A - Standard for the Installation of Air Conditioning and Ventilating Systems.
   2. NFPA 92A - Recommended Practice for Smoke-Control Systems.

D. Sheet Metal and Air Conditioning Contractors:
   1. SMACNA - HVAC Duct Construction Standard - Metal and Flexible.

E. Underwriters Laboratories Inc.:
   1. UL 555 - Standard for Safety for Fire Dampers.
   2. UL 555C - Standard for Safety for Ceiling Dampers.
   3. UL 555S - Standard for Safety for Smoke Dampers.

1.3 SUBMITTALS

A. Division 01 and Section 23 05 00 "General Mechanical Requirements."

B. Product Data: Submit data for shop fabricated assemblies and hardware used.

C. Product Data: Submit for the following. Include where applicable electrical characteristics and connection requirements.
   1. Fire dampers including locations and ratings.
   2. Smoke dampers including locations and ratings.
   3. Backdraft dampers.
   4. Flexible duct connections.
   5. Volume control dampers.
   6. Duct access doors.
   7. Duct test holes.

D. Product Data: For fire dampers, smoke dampers, or combination fire and smoke dampers submit the following:
   1. Include UL ratings, dynamic ratings, leakage, pressure drop and maximum pressure data.
   2. Indicate materials, construction, dimensions, and installation details.
E. Manufacturer's Installation Instructions: Submit for Fire and Combination Smoke and Fire Dampers.

1.4 CLOSEOUT SUBMITTALS

A. Project Record Documents: Record actual locations of access doors and test holes.
B. Operation and Maintenance Data: Submit for Combination Smoke and Fire Dampers.

1.5 QUALITY ASSURANCE

A. Dampers tested, rated and labeled in accordance with the latest UL requirements.
B. Damper pressure drop ratings based on tests and procedures performed in accordance with AMCA 500.
C. Perform Work in accordance with State and local standards.

1.6 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum 3 years experience.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Protect dampers from damage to operating linkages and blades.
B. Delivery: Deliver materials to site in manufacturer's original, unopened containers and packaging, with labels clearly indicating manufacturer and material.
C. Storage: Store materials in a dry area indoor, protected from damage.
D. Handling: Handle and lift dampers in accordance with manufacturer's instructions. Protect materials and finishes during handling and installation to prevent damage.

1.8 FIELD MEASUREMENTS

A. Verify field measurements prior to fabrication.

1.9 COORDINATION

A. Coordinate Work where appropriate with building control Work.

1.10 WARRANTY

A. Section 23 05 00 "General Mechanical Requirements" for product warranties.

## PART 2 - PRODUCTS

2.1 BACK-DRAFT DAMPERS

A. Product Description: Multi-Blade, back-draft dampers: Parallel-action, gravity-balanced, Galvanized 16 gauge thick steel, or extruded aluminum. Blades, maximum 6-inch width, center pivoted, with felt or flexible vinyl sealed edges. Blades linked together in rattle-free manner with 90-degree stop, steel ball bearings, and plated steel pivot pin. Furnish dampers with adjustment device to permit setting for varying differential static pressure.

2.2 DUCT ACCESS DOORS

A. Fabricate in accordance with SMACNA HVAC Duct Construction Standards - Metal and Flexible, and as indicated on Drawings.
B. Fabrication: Rigid and close fitting of galvanized steel with sealing gaskets and quick fastening locking devices. For insulated ductwork, furnish minimum 1-inch thick insulation with sheet metal cover.
   1. Less than 12 inches square, secure with sash locks.
   2. Up to 18 inches Square: Furnish two hinges and two sash locks.
   3. Up to 24 x 48 inches: Three hinges and two compression latches.
   4. Larger Sizes: Furnish additional hinge.
   5. Access panels with sheet metal screw fasteners are not acceptable.

2.3 VOLUME CONTROL DAMPERS

A. Fabricate in accordance with SMACNA HVAC Duct Construction Standards - Metal and Flexible, and as indicated on Drawings.
B. Multi-Blade Damper: Fabricate of opposed blade pattern with maximum blade sizes 8- by 72-inch. Assemble center and edge crimped blades in prime coated or galvanized frame channel with suitable hardware.
C. End Bearings: Except in round ductwork 12 inches and smaller, furnish end bearings. On multiple blade dampers, furnish oil-impregnated nylon or sintered bronze bearings. Furnish closed end bearings on ducts having pressure classification over 2 inches wg.
D. Quadrants:
   1. Furnish locking, indicating quadrant regulators on single and multi-blade dampers.
   2. On insulated ducts mount quadrant regulators on standoff mounting brackets, bases, or adapters.
   3. Where rod lengths exceed 30 inches furnish regulator at both ends.

2.4 FLEXIBLE DUCT CONNECTIONS

A. Fabricate in accordance with SMACNA HVAC Duct Construction Standards - Metal and Flexible.
B. Connector: Fabric crimped into metal edging strip.
   1. Fabric: UL listed fire-retardant neoprene coated woven glass fiber fabric conforming to NFPA 90A, minimum density 30 ounces per square yard.
   2. Net Fabric Width: Approximately 6 inches wide.
   3. Metal: 3-inch wide, 24 gauge galvanized steel.

2.5 DUCT TEST HOLES

A. Permanent Test Holes: Factory fabricated, air tight flanged fittings with screw cap. Furnish extended neck fittings to clear insulation.

**PART 3 - EXECUTION**

3.1 EXAMINATION

A. Verify rated walls are ready for fire damper installation.
B. Verify ducts and equipment installation are ready for accessories.
C. Check location of air outlets and inlets and make necessary adjustments in position to conform to architectural features, symmetry, and lighting arrangement.

3.2 INSTALLATION.

A. Install in accordance with NFPA 90A, and follow SMACNA HVAC Duct Construction Standards - Metal and Flexible. Refer to Section 23 31 00 "HVAC Ducts and Casings" for duct construction and pressure class.
B. Install Work in accordance with State and local standards.
C. Install back-draft dampers on exhaust fans or exhaust ducts nearest to outside and where indicated on Drawings.
D. Access Doors: Install access doors at the following locations and as indicated on Drawings:
   1. Before and after each duct mounted filter.
   2. Before and after each duct mounted coil.
   3. Before and after each duct mounted fan.
   4. Before and after each automatic control damper.
   5. Before and after each fire damper, smoke dampe,r or combination fire and smoke damper.
   6. Downstream of each VAV box.
   7. Install at locations for cleaning kitchen exhaust ductwork in accordance with NFPA 96.
E. Access Door Sizes: Install minimum 8- by 8-inch size for hand access, 18- by 18-inch size for shoulder access, and as indicated on Drawings. Review locations prior to fabrication.
   1. Mark access doors for fire and smoke dampers on outside surface, with minimum 1/2-inch high letters reading: FIRE/SMOKE DAMPER, SMOKE DAMPER, OR FIRE DAMPER.
F. Install temporary duct test holes and required for testing and balancing purposes. Cut or drill in ducts. Cap with neat patches, neoprene plugs, threaded plugs, or threaded or twist-on metal caps.
G. Install permanent duct test holes and required for testing and balancing purposes.

H. Install fire dampers, combination fire and smoke dampers,and smoke dampers at locations as indicated on Drawings. Install with required perimeter mounting angles, sleeves, breakaway duct connections, corrosion resistant springs, bearings, bushings and hinges.
   1. Install smoke dampers and combination smoke and fire dampers in accordance with NFPA 92A.
   2. Install dampers square and free from racking with blades running horizontally.
   3. Do not compress or stretch damper frame into duct or opening.
   4. Handle damper using sleeve or frame. Do not lift damper using blades, actuator, or jack shaft.
   5. Install bracing for multiple section assemblies to support assembly weight and to hold against system pressure. Install bracing as needed.

3.3 DEMONSTRATION

A. Demonstrate re-setting of fire dampers to Owner's representative.

END OF SECTION

# SECTION 23 34 00 - HVAC FANS

## PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Sidewalk propeller fans.
   2. Centrifugal square inline fans.
B. Related Sections:
   1. Division 01 Specification Sections apply to Work of this Section.

1.2 REFERENCES

A. American Bearing Manufacturers Association:
   1. ABMA 9 - Load Ratings and Fatigue Life for Ball Bearings.
   2. ABMA 11 - Load Ratings and Fatigue Life for Roller Bearings.
B. Air Movement and Control Association International, Inc.:
   1. AMCA 99 - Standards Handbook.
   2. AMCA 204 - Balance Quality and Vibration Levels for Fans.
   3. AMCA 210 - Laboratory Methods of Testing Fans for Aerodynamic Performance Rating.
   4. AMCA 300 - Reverberant Room Method for Sound Testing of Fans.
   5. AMCA 301 - Methods for Calculating Fan Sound Ratings from Laboratory Test Data.
C. American Refrigeration Institute:
   1. ARI 1060 - Air-to-Air Energy Recovery Ventilation Equipment Certification Equipment Program.
D. National Electrical Manufacturers Association:
   1. NEMA MG 1 - Motors and Generators.
   2. NEMA 250 - Enclosures for Electrical Equipment (1000 Volts Maximum).
E. Underwriters Laboratories Inc.:
   1. UL 705 - Power Ventilators.

1.3 SUBMITTALS

A. Section 23 05 00 " General Mechanical Requirements."
B. Product Data: Submit data on each type of fan and include accessories, fan curves with specified operating point plotted, power, RPM, sound power levels for both fan inlet and outlet at rated capacity, electrical characteristics and connection requirements.
C. Manufacturer's Installation Instructions: Submit fan manufacturer instructions.
D. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

1.4 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: Submit instructions for lubrication, motor and drive replacement, spare parts list, and wiring diagrams.

1.5 QUALITY ASSURANCE

A. Performance Ratings: Conform to AMCA 210 and bear AMCA Certified Rating Seal.
B. Sound Ratings: AMCA 301, tested to AMCA 300 ,and bear AMCA Certified Sound Rating Seal.
C. UL Compliance: UL listed and labeled, designed, manufactured, and tested in accordance with UL 705.
D. Balance Quality: Conform to AMCA 204.
E. Perform Work in accordance with State and local standards.

1.6 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum 3 years' experience.
B. Installer: Company specializing in performing Work of this section with minimum 3 years' experience.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Protect motors, shafts, and bearings from weather and construction dust.

1.8 FIELD MEASUREMENTS

A. Verify field measurements prior to fabrication.

1.9 WARRANTY

A. Section 23 05 00 "General Mechanical Requirements" for product warranties.

1.10 EXTRA MATERIALS

A. Furnish two sets of belts for each fan.

**PART 2 - PRODUCTS**

2.1 SIDEWALL PROPELLER FANS

A. Manufacturers:
1. Greenheck Corporation..
2. Loren Cook Company.
3. Substitutions: Section 23 05 00 "General Mechanical Requirements."
B. General Description:
1. Fan arrangement shall be exhaust.
2. Sidewall mounted applications.
3. Each fan shall bear a permanently affixed manufacturer's engraved metal nameplate containing the model number and individual serial number.

C. Wheel:
   1. Propeller constructed of cast aluminum tapered airfoil blades and cast aluminum hubs.
   2. Securely attached to motor shaft with a standard square key, set screw, and tapered bushing.
   3. Statically and dynamically balanced in accordance with AMCA Standard 204-05.
   4. The propeller and fan inlet will be meatched and shall have precise running tolerances for maximum performance and operating efficiency.

D. Motors:
   1. Electronically Commutated Motor:
      a. Motor Enclosure: Open drip proof.
      b. Motor to be a DC electronic commutation type motor (ECM) specially designed for fan application.
      c. Motors are permanently lubricated, heavy duty ball bearing type to match with the fanload and pre-wired to the specific voltage and phase.
      d. Internal motor circuitry to convert AC power supplied to the fan to DC power to operate the motor.
      e. Motor shall be speed controllable down to 20 percent of full speed (80 percent turndown). Speed shall be controlled by either apotentiometer dial mounted at the motor or by a 0-10 VDC signal.
      f. Motor shall be a minimum of 85 percent efficient at all speeds.

E. Drive Frame:
   1. Frames and panels shall be bolted construction.
   2. Drive fram assemblies and fan panels shall be galvanized steel or inted steel.
   3. Drive frame shall have formed channels and fan panels shall have pre-punched mounting holes, formed flanges, and a deep formed one-piece inlet venturi.

F. Options/Accessories:
   1. Damprs:
      a. Type: WD-320, Gravity.
      b. Prevents outside air from entering back into the building when fan is off.
      c. Balanced for minimal resistance to flow.
      d. Galvanized frames with pre-puched mounting holes.
   2. Discharge Diffusers:
      a. Constructed of heavy gauge galvanized steel frame and blades.
      b. Shall have pre-punch moutning flanges.
      c. Designed to mount to the interior end of the wall housing when used in supply configuration.
   3. Wall Housing:
      a. Fan panel will be mounted vertically drecting the air horizontally out of the building. Wall housing will be mounted in a manner that will not have any housing protruding outside the building. Motor and drives will be accessible from the interior of the building.
      b. Construct3ed of galvanized steel with heavy gauge mounting flanges and pre-punches mounting holds.
      c. Housing shall include OSHA approved motor guard.
      d. Reduces installation time and provides maximum installation flexibility.

4. Weather Hood:
   a. Shall shield wall opening and dampers from rain and snow.
   b. Material Type: Galvanized.
   c. Turndown Angle: 45 degrees.
   d. 1/2- by 1/2-inch weld wire birdscreen.

## 2.2 CENTRIFUGAL SQUARE INLINE FANS

A. Manufacturers:
   1. Greenheck Fan Corporation.
   2. Loren Cook Company.
   3. Substitutions: Refer to Section 23 05 00 "General Mechanical Requirements."

B. General Description:
   1. Base fan performance at standard conditions (density 0.075 pounds per cubed feet).
   2. Normal operating temperature up to 130 degrees F.
   3. Applications include intake, exhaust, return, or makeup air systems.
   4. Each fan shall bear a permanently affixed manufacturer's engraved mmetal nameplate containing the model number and individual serial number.

C. Fan Wheel:
   1. Backward inclined centrifugal type.
   2. Aluminum construction.
   3. Statically and dynamically balanced in accordance to AMCA Standard 204-05.
   4. The wheel cone and fan inlet will be matched and shall have precise running tolerances for maximum performance and operating efficiency.
   5. Single thickness blades are securely riveted or welded to a heavy gauge back plate and wheel cone.

D. Electronically Commutated Motor:
   1. Motor Enclosure: Open drip proof..
   2. Motor to be a DC Electronic Commutation Type Motor (ECM) specifically designed for fan applications. AC induction type motors are not acceptable. Examples of unacceptable motors are Shaded Pole, Permanent Split Capacitor (PSC), Split Phase, Capacitor Start, and 3-phase induction type motors.
   3. Motors are permanently lubricated, heavy duty ball bearing type to match with fan load and pre-wired to the specific voltage and phase.
   4. Internal motor circuitry to convert AC power supplied to the fan to DC power to operate the motor.
   5. Motor shall be speed controllable down to 20 percent of full speed (80 percent turndown). Speed shall be controlled by either a potentiometer dial mounted at the motor or by a 1-10 VDC signal.
   6. Motor shall be a minimum of 85 percent efficient at all speeds.

E. Housing/Cabinet Construction:
   1. Square design constructed of heavy gauge galvanized steel and shall include square duct mounting collars.
   2. Housing and bearing supports shall be constructed of heavy gauge bolted and welded steel construction to prevent vibration and to rigidly support the shaft and bearing assembly.
   3. Galvanized construction material

F. Housing Supports and Drive Frame:
   1. Housing supports are constructed of structural steel with formed flanges.
   2. Drive frame is welded steel which supports the motor.

G. Disconnect Switches:
   1. NEMA Rated: NEMA 1: Indoor application no water. Factory standard.
   2. Positive electrical shut-off.
   3. Wired from fan motor to junction box.

H. Duct Collars:
   1. Square design to provide a large discharge area.
   2. Inlet and discharge collars provide easy duct conection.

I. Access Panel: Two-sided access panels, permit easy access to all internal components.

## PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify roof curbs are installed and dimensions are as instructed by manufacturer.

3.2 INSTALLATION

A. Secure roof fans with cadmium plated steel lag screws to roof curb.
B. Install backdraft dampers on inlet to roof exhaust fans.
C. Install safety screen where inlet or outlet is exposed.
D. Provide sheaves required for final air balance.

3.3 DEMONSTRATION

A. Demonstrate fan operation and maintenance procedures.

3.4 PROTECTION OF FINISHED WORK

A. Do not operate fans for until ductwork is clean, filters in place, bearings lubricated, and fan has been test run under observation.

END OF SECTION

# SECTION 23 37 00 - AIR OUTLETS AND INLETS

## PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Diffusers.
   2. Registers
   3. Grilles.
   4. Louvers.

B. Related Sections:
   1. Division 01 Specification Sections apply to Work of this Section.

1.2 REFERENCES

A. Air Movement and Control Association International, Inc.:
   1. AMCA 500 - Test Methods for Louvers, Dampers, and Shutters.

B. American Society of Heating, Refrigerating and Air-Conditioning Engineers:
   1. ASHRAE 70 - Method of Testing for Rating the Performance of Air Outlets and Inlets.

C. Sheet Metal and Air Conditioning Contractors:
   1. SMACNA - HVAC Duct Construction Standard - Metal and Flexible.

1.3 SUBMITTALS

A. Division 01 and Section 23 05 00 "General Mechanical Requirements" for Submittal Procedures.

B. Product Data: Submit sizes, finish, and type of mounting. Submit schedule of outlets and inlets showing type, size, location, application, and noise level.

C. Test Reports: Rating of air outlet and inlet performance.

D. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

1.4 CLOSEOUT SUBMITTALS

A. Section 01 70 00 - Execution and Closeout Requirements: Closeout procedures.

B. Project Record Documents: Record actual locations of air outlets and inlets.

1.5 QUALITY ASSURANCE

A. Test and rate diffuser, register, and grille performance in accordance with ASHRAE 70.

B. Test and rate louver performance in accordance with AMCA 500.

1.6 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum 3 years' documented experience.

1.7 WARRANTY

A. Section 01 70 00 "Execution and Closeout Requirements" for product warranties and product bonds.

## PART 2 - PRODUCTS

2.1 DIFFUSERS, GRILLES, AND REGISTERS

A. Manufacturers:
1. Nailor.
2. Titus.
3. Price.
4. Substitutions: Section 23 05 00 "General Mechanical Requirements."

2.2 LOUVERS

A. Manufacturers:
1. Cesco Products.
2. Greenheck Fan Corporation.
3. Pottorff.
4. Ruskin Company.
5. Substitutions: Section 23 05 00 "General Mechanical Requirements."

## PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify inlet and outlet locations.
B. Verify ceiling or wall systems are ready for installation.

3.2 INSTALLATION

A. Install diffusers to ductwork with airtight connection.
B. Install balancing dampers on duct take-off to diffusers, grilles, and registers, whether or not dampers are furnished as part of diffuser, grille, and register assembly.
C. Paint visible portion of ductwork behind air outlets and inlets matte black.
D. Do not locate air registers, diffusers or grilles in floors of toilet or bathing rooms.

3.3 INTERFACE WITH OTHER PRODUCTS

A. Check location of outlets and inlets and make necessary adjustments in position to conform to architectural features, symmetry, and lighting arrangement.

3.4 SCHEDULES

A. Refer to Drawings for all schedules.

END OF SECTION

# SECTION 23 81 26.20 - SPLIT-SYSTEM HEAT PUMPS

## PART 1 - GENERAL

### 1.1 SUMMARY

A. Section Includes:
   1. Air handling unit.
   2. Condensing unit.

B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.
   2. Section 23 05 00 "General Maintenance Requirements."
   3. Division 26 Electrical.

### 1.2 REFERENCES

A. Air-Conditioning and Refrigeration Institute:
   1. ARI 210/240 - Unitary Air-Conditioning and Air-Source Heat Pump Equipment.
   2. ARI 270 - Sound Rating of Outdoor Unitary Equipment.
   3. ARI 340/360 - Commercial and Industrial Unitary Air-Conditioning and Heat Pump Equipment.

B. American Society of Heating, Refrigerating and Air-Conditioning Engineers:
   1. ASHRAE 52.1 - Gravimetric and Dust-Spot Procedures for Testing Air-Cleaning Devices Used in General Ventilation for Removing Particulate Matter.

C. National Fire Protection Association:
   1. NFPA 90A - Standard for the Installation of Air Conditioning and Ventilating Systems.

### 1.3 SUBMITTALS

A. Refer to Division 01 and Section 23 05 00 “General Mechanical Requirements” for submittals.

B. Product Data: Submit data indicating:
   1. Cooling and heating capacities.
   2. Dimensions.
   3. Weights.
   4. Rough-in connections and connection requirements.
   5. Duct connections.
   6. Electrical requirements with electrical characteristics and connection requirements.
   7. Controls.
   8. Accessories.

C. Manufacturer's Installation Instructions: Submit assembly, support details, connection requirements, and include start-up instructions.

D. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

1.4 CLOSEOUT SUBMITTALS

A. Project Record Documents: Record actual locations of controls installed remotely from units.
B. Operation and Maintenance Data: Submit manufacturer's descriptive literature, operating instructions, installation instructions, and maintenance and repair data.

1.5 QUALITY ASSURANCE

A. Cooling Capacity: Rate in accordance with ARI 210/240.
B. Sound Rating: Measure in accordance with ARI 270.
C. Insulation and adhesives: Meet requirements of NFPA 90A.

1.6 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this Section with minimum 3 years' experience.
B. Installer: Company specializing in performing Work of this Section with minimum 3 years' experience.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Accept units and components on site in factory protective containers, with factory shipping skids and lifting lugs. Inspect for damage.
B. Protect units from weather and construction traffic by storing in dry, roofed location.

1.8 WARRANTY

A. Furnish 5 year manufacturer's warranty for compressors.

**PART 2 - PRODUCTS**

2.1 MINI SPLIT SYSTEM AIR CONDITIONING UNITS

A. Manufacturers:
   1. Carrier Corp.
   2. Daikin.
   3. Mitsubishi Electric.
   4. L.G.
   5. Samsung.
   6. Substitutions: Refer to Section 23 05 00 "General Mechanical Requirements."
B. Wall-Mounted Indoor Unit:
   1. Indoor unit shall be factory assembled, wired, and run tested. Contained within the unit shall be all factory wiring, piping, control circuit board and fan motor. The unit shall have a self-diagnostic function, 3-minute time delay mechanism, an auto restart function, an emergency operation function, and a test run switch. Indoor unit and refrigerant pipes will be charged with dry air instead of refrigerant, before shipment from factory.

2. Unit Cabinet:
   a. Casing shall have a white finish.
   b. Multi-directional drain and refrigerant piping offering four directions for refrigerant piping and two directions for draining shall be standard.
   c. There shall be a separate back plate which secures the unit firmly to the wall.
3. Fan:
   a. Evaporator fan shall be an assembly with a line-flow fan directly driven by a single motor.
   b. Fan shall be statically and dynamically balanced and run on a motor with permanently lubricated bearings.
   c. A manual adjustable guide vane shall be provided with ability to change the airflow from side to side (left to right).
   d. A motorized air sweep flow louver shall provide an automatic change in airflow by directing the air up and down to provide for uniform air distribution.
   e. Indoor fan shall consist of three speeds: high, medium, and low.
4. Filter: Return air shall be filtered by means of an easily removable washable filter.
5. Coil:
   a. Evaporator coil shall be of nonferrous construction with smooth plate fins on copper tubing.
   b. Tubing shall have inner grooves for high efficiency heat exchange.
   c. All tube joints shall be brazed with phos copper or silver alloy.
   d. Coils shall be pressure tested at the factory.
   e. A condensate pan and drain shall be provided under the coil.
6. Electrical:
   a. Unit shall be powered from the outdoor unit.
   b. Indoor unit shall not have any supplemental electrical heat elements.
7. Control: Provide 7-day electronic programmable WIFI thermostat.
   a. This unit shall have a wireless controller to perform input functions necessary to operate the system.
   b. Controller shall consist of a power on/off switch, model selector, temperature setting, time control, fan speed select, and auto vane selector.
   c. Temperature changes shall be by 2 degrees F increments with a range of 59 to 89 degrees F.
   d. Microprocessor located in the indoor unit shall have the capability of sensing return air temperature and indoor coil temperature, receiving and processing commands from the wireless controller, providing emergency operation, and controlling the outdoor unit.
   e. System shall be capable of automatic restart when power is restored after power interruption.
   f. Control system shall control the continued operation of the air sweep louvers, as well as provide on/off and system/mode function switching.

C. Outdoor Unit:
1. Outdoor unit is designed specifically for use with the indoor units. The unit must have a powder coating finish. Outdoor unit shall be completely factory assembled, piped, and wired. Each unit must be run tested at the factory.
2. Unit Cabinet: casing shall be fabricated of galvanized steel, bonderized, and finished with a powder coating baked enamel. Provide with manufacturer's hail guard.
3. Fan:
   a. Unit shall be furnished with a direct drive propeller-type fan.
   b. Motor shall have inherent protection by permanently lubricated bearings.

c. Fan motor shall be mounted for quiet operation.
d. Fan shall be provided with a raised guard to prevent contact with moving parts.
e. Outdoor unit shall have a horizontal discharge airflow.

4. Coil:
   a. Condenser coil shall be nonferrous construction with lanced or corrugated plate fins on copper tubing.
   b. Coil shall be protected with an integral metal guard.
   c. Refrigerant flow from the condenser shall be controlled by means of a metering orifice.
   d. Provide with either a factory installed or field installed hail screen.
5. Compressor:
   a. Compressor shall be a high-performance rotary.
   b. Outdoor unit shall have an accumulator.
   c. Compressor will be equipped with an in internal thermal overload.
   d. Outdoor unit must have the ability to operate with a maximum height difference of 25 feet and have refrigerant tubing length of 49 feet between indoor and outdoor units with the need for line size changes, traps, or additional oil.
   e. Compressor shall be mounted to avoid the transmission of vibration.
6. Electrical:
   a. Unit electrical power shall be as scheduled.
   b. Outdoor unit shall be controlled by the microprocessor located in the indoor unit.

2.2 ELECTRICAL CHARACTERISTICS AND COMPONENTS

A. Electrical Characteristics: In accordance with Division 26 Electrical.

**PART 3 - EXECUTION**

3.1 EXAMINATION

A. Verify piping rough-in is at correct location.
B. Verify electrical rough-in is at correct location.

3.2 INSTALLATION

A. Install refrigerant piping from unit to remote condensing unit. Install refrigerant specialties furnished with unit.
B. Pipe condensate from drain pan to condensate drainage system. Refer to Drawings.
C. Install accessories furnished loose for field mounting.
D. Install electrical devices furnished loose for field mounting.
E. Install control wiring between unit control panel and field mounted control devices.

3.3 CLEANING

A. After construction is completed, clean exposed surfaces of units.
B. Vacuum clean coils and inside of unit cabinet.
C. Touch-up marred or scratched surfaces of factory finished cabinets using finish materials furnished by manufacturer.

3.4 DEMONSTRATION

A. Demonstrate unit operation and maintenance.
B. Furnish services of manufacturer's technical representative for 2 hours to instruct Owner's personnel in operation and maintenance of units. Schedule training with Owner, provide at least 7 days notice of training date.

3.5 PROTECTION OF FINISHED WORK

A. Protect finished surfaces of cabinets with protective covers during remainder of construction.

END OF SECTION

# SECTION 23 82 39 - UNIT HEATERS

## PART 1 - GENERAL

1.1 SUMMARY

A. Section includes suspended heaters with electric-resistance heating coils.
B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.

1.2 REFERENCES

A. American Society of Heating, Refrigerating and Air-Conditioning Engineers:
   1. ASHRAE 90.1 – Energy Standard for Buildings Except Low-Rise Residential Buildings.
   2. ASHRAE 33: Method of Testing Forced Circulation Air Cooling and Heating Coils.
B. National Fire Protection Association:
   1. NFPA 70: National Electrical Code.
   2. NFPA 90A: Standard for the Installation of Air Conditioning and Ventilating Systems.
   3. NFPA 90B: Standard for the Installation of Warm Air Heating and Air Conditioning Systems.
C. UL LLC:
   1. UL 823: Standard for Electric Heaters for Use in Hazardous (Classified) Locations.
   2. UL 1995: Heating and Cooling Equipment.
   3. UL 2021: Fixed and Location-Dedicated Electric Room Heaters.

1.3 SUBMITTALS

A. Division 01 and Section 23 05 00 "General Mechanical Requirements" for submittals.
B. Product Data: Submit manufacturer's literature and data indicating rated capacities, weights, accessories, electrical nameplate data, and wiring diagrams.
C. Manufacturer's Installation Instructions: Submit/indicate rigging and assembly.
D. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

1.4 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: Submit manufacturer's descriptive literature, operating instructions, maintenance and repair data, and parts listing.

1.5 QUALITY ASSURANCE

A. Perform Work in accordance with State and local standards.

1.6 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this Section with minimum 3 years' experience.
B. Installer: Company specializing in performing Work of this Section with minimum 3 years' experience.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Accept heaters and controls on site in factory packaging. Inspect for damage.

1.8 FIELD MEASURMENTS

A. Verify field measurements prior to fabrication.

**PART 2 - PRODUCTS**

2.1 ELECTRIC RESISTANCE CEILING HEATERS

A. Manufacturers:
   1. Reznor.
   2. Markel.
   3. Substitutions: Refer to Section 23 05 00 "General Mechanical Requirements" for substitutions.
B. Self-contained, packaged, factory assembled, prewired unit consisting of cabinet, supply fan, heater exchanger, controls and accessories:
   1. Discharge Louvers: Flat ribbon wire, stamped-steel, or extruded aluminum grille.
   2. Control Voltage: 24 Volt, 60 Hertz.
   3. Location: Suspended mount.
   4. Heat ON indicator light.
C. Cabinet: Galvanized steel, corrosion resistant baked enamel finish, easily removed and secured access panels, insulated or double panel construction, constructed to fit into a ceiling.
D. Supply Fan: Propeller type with direct drive.
E. Heat Exchanger: Nickel-chromium-wire heating element enclosed in metallic sheath mechanically bonded into fins, or stainless steel tubular elements with aluminum fins, with automatic, integrated high-temperature cutout and overheat reset sensor. Element supports shall eliminate thermal expansion noise.
F. Controls:
   1. Thermostat integral to heater.
G. Motor Type: Permanently lubricated, totally enclosed, thermally protected, continuous duty.

## PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas to receive unit heaters for compliance with requirements for installation tolerances and other conditions affecting performance.

3.2 INSTALLATION

A. Install units in accordance with NFPA 90B and NFPA 70.
B. Provide hangers and supports for suspended units. Refer Section 23 05 29 "Hangers and Supports for HVAC Piping and Equipment."
C. Provide operating controls.
D. Provide connection to electrical power systems. Refer to Division 26.

END OF SECTION

# SECTION 26 05 00 - BASIC ELECTRICAL METHODS

## PART 1 - GENERAL

### 1.1 SUMMARY

A. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.

### 1.2 REQUIREMENTS OF REGULATORY AGENCIES AND STANDARDS

A. Regulatory Agencies: Installation, materials, equipment and Workmanship shall conform to the applicable provisions of the following:
B. National Electrical Code (NEC).
C. National Electrical Safety Code (NESC).
D. Terms and conditions of the electrical utility and other authorities having lawful jurisdiction pertaining to the Work required.
E. All temperature control wiring and associated conduit and boxes, shall be provided under other Sections of the Specifications. All power and control wiring, not identified under Divisions 22 and 23, shall be provided under Division 26.
F. The Work covered by Division 26 of the Specifications includes the furnishing of all materials, labor, transportation, tools, permits, and fees for the complete installation of all electrical Work required in the Contract Drawings.
G. In the event that additional or special construction is required, Contractor is responsible for providing all material and equipment which are usually furnished with such construction in order to complete the installation, whether indicated or not.
H. Contractor shall familiarize himself with the existing conditions of the Site and advise Engineer of any discrepancy or conflict prior to bidding.
I. Contractor shall be responsible for all permits, fees, and licenses required for the Project. All cost of such permits or fees shall be included in the bid.
J. All equipment and material shall be installed in accordance with applicable manufacturer's recommendations and standards.
K. Install sleeves, sealant pans, and roof penetrations as required for the installation of the electrical Work. All such Work is subject to the approval of Engineer.
L. Contractor shall be responsible for coordinating with the utility service provider to verify all locations, routing, equipment and labor that will be furnished as a part of this Contract.
M. Any fees or charges associated with delivering permanent power for the Project shall be included in Contractor's bid.

### 1.3 SUBMITTALS

A. The intent of this Section is to give general submittal information; refer to specific submittal information in the subsequent Mechanical Sections.

PACKET 7.460 September 12, 2023
PACKET 11.462 November 14, 2023

B. Within 10 days after award of the Contract, and before orders are placed, Contractor shall submit specific information on list of equipment and principal materials specified. Contractor shall indicate and/or provide names of manufacturers, catalog and model numbers, cut sheets, and such other supplementary information as necessary for evaluation. Minimum of six copies, or as directed by Engineer, of each shall be submitted and shall include all items mentioned by model number and/or manufacturer's name in the Specifications or in schedules on the Drawings.

C. Requirements for Each Submittal:
   1. Bear a dated stamp or specific written indication that Contractor has reviewed and approved all submittal prior to submission to Engineer.
   2. Have all information deleted by Contractor that pertains to the means and methods of construction or to fabrication, assembly, installation, or erection (approval by Engineer shall not extend to these areas unless specifically noted by Engineer).
   3. Be clearly and SPECIFICALLY marked as to which specific piece of equipment is being submitted, by use of a permanent marker, stamp, etc., so as to distinguish it from other pieces of equipment that may occur on the same page.
   4. Be clearly marked as to which available options are being submitted that are associated with a piece of equipment.
   5. Be complete with respect to quantities, dimensions, specific performance, materials, and similar data to enable Engineer to review the proposed equipment.

D. Omission by Contractor of any of the above requirements or submittals will subject submittal to automatic rejection without review.

E. Any submittals received by Engineer that were not requested shall be returned without review of any kind.

## PART 2 - PRODUCTS

### 2.1 EQUIPMENT REQUIREMENTS

A. The electrical requirements for equipment specified or indicated on the Drawings are based on information available at the time of design. If equipment furnished for installation has electrical requirements other than indicated on the Electrical Drawings, Contractor shall make any required changes to wire and conduit size, controls, overcurrent protection, and installation as required to accommodate the equipment supplied, without additional charge to Owner. The complete responsibility and costs for such adjustments shall be assigned to the respective Section of this Specification under which the equipment is furnished.

### 2.2 MATERIALS

A. All similar materials and equipment shall be the product of the same manufacturer unless specified otherwise.

B. Materials and equipment shall be the standard products of manufacturers regularly engaged in the production of such material and shall be the manufacturer's current and standard design.

C. Altitude: Equipment affected by altitude shall perform satisfactorily for the function intended at the altitude of the Project Site.

D. Detectable Warning Tape: Acid and alkali-resistant polyethylene film warning tape manufactured for marking and identifying underground utilities, minimum 6-inch-wide and 4 mils thick, continuously inscribed with a description of utility, with metallic core encased in a protective jacket for corrosion protection, detectable by metal detector when tape is buried up to 30 inch deep; colored as follows:
   1. Red: Electric.
   2. Yellow: Gas, oil, steam, and dangerous materials.
   3. Orange: Telephone and other communications.
   4. Blue: Water systems.
   5. Green: Sewer systems.

E. Backfill Material:
   1. Material 4 inches below and 12 inches above pipes and conduit shall be natural or manufactured sand complying to ASTM C33.
   2. Material more than 12 inches above pipes and conduits shall be sand indicated above or native fill free of rock or gravel larger than 3/8-inches in any dimension, debris, waste, frozen materials, vegetation, and other deleterious matter.

## PART 3 - EXECUTION

3.1 GENERAL

A. Fabrication, erection, and installation of the complete electrical system shall be done in accordance with accepted good practice by qualified personnel experienced in such Work and shall proceed in an orderly manner so as not to impede the progress of the Project. Electrical Contractor shall check all areas and surfaces where electrical equipment material is to be installed, removed, or relocated and report any unsatisfactory conditions before starting Work. Commencement of Work signifies this Contractor's acceptance of existing conditions. In the acceptance or rejection of the finished installation, no allowance will be made for lack of skill on the part of Workers. Surfaces requiring coatings will be completed prior to installation of any electrical Work on these surfaces.

B. The Electrical Drawings are diagrammatic. The installation requirements shall be carefully coordinated with structural, architectural, and mechanical conditions and shall be adjusted to avoid conflict.

C. All Work shall be concealed in walls, ceilings, and chases unless specifically noted to be exposed or otherwise approved.

D. The locations of electrical equipment are approximate and are not intended to convey the exact details and mounting of location of outlets, equipment, and other items. Exact locations are to be field determined by actual measurements.

E. The location height and projection of fixtures illuminating signs or special features shall be approved by Engineer prior to installation.

F. Contractor shall coordinate the location of all exterior fixtures with architectural Drawings and Specifications.

G. Consult architectural Drawings to determine wall finishes and locations of wall-mounted equipment, countertop splashes, and similar items to avoid conflict with electrical equipment. At locations where surface or pendant mounted light fixtures are noted, provide for all necessary framing channels, pendants, chains, canopies, and other hardware as required for a complete and operable system.

H. Protect subgrades and foundation soils against freezing temperatures or frost. Provide protective insulating materials as necessary.

I. Excavation for Pipe and Conduit:
   1. Excavate trenches to indicated gradients, lines, depths, and elevations.
   2. Excavate trenches to uniform widths to provide a Working clearance on each side of pipe or conduit. Excavate trench walls vertically from trench bottom to 12 inches higher than top of pipe or conduit, unless otherwise indicated.
   3. Trench Bottoms: Excavate and shape trench bottoms to provide uniform bearing and support of pipes and conduit. Shape subgrade to provide continuous support for bells, joints, and barrels of pipes and for joints, fittings, and bodies of conduits. Remove projecting stones and sharp objects along trench subgrade.
      a. For pipes and conduit less than 6 inches in nominal diameter and flat-bottomed, multiple-duct conduit units, hand excavate trench bottoms and support pipe and conduit on an undisturbed subgrade.
      b. For pipes and conduit 6 inches or larger in nominal diameter, shape bottom of trench to support bottom 90 degrees of pipe circumference. Fill depressions with tamped sand backfill.
      c. Excavate trenches 4 inches deeper than elevation required in rock or other unyielding bearing material to allow for bedding course.
   4. Place backfill and fill materials in layers not more than 8 inches in loose depth for material compacted by heavy compaction equipment, and not more than 4 inches in loose depth for material compacted by hand-operated tampers.
   5. Compact soil to not less than the following percentages of maximum dry unit weight according to ASTM D698:
      a. Under structures, building slabs, steps, and pavements, scarify and recompact top 12 inches of existing subgrade and each layer of backfill or fill material at 95 percent.
      b. Under walkways, scarify and recompact top 6 inches below subgrade and compact each layer of backfill or fill material at 92 percent.
      c. Under lawn or unpaved areas, scarify and recompact top 6 inches below subgrade and compact each layer of backfill or fill material at 85 percent.
   6. Install detectable warning tape above conduits and pipe, 12 inches below finished grade, except 6 inches below subgrade under pavements and slabs.
   7. Protection:
      a. Protecting Graded Areas: Protect newly graded areas from traffic, freezing, and erosion. Keep free of trash and debris.
      b. Repair and reestablish grades to specified tolerances where completed or partially completed surfaces become eroded, rutted, settled, or where they lose compaction due to subsequent construction operations or weather conditions.
         1) Scarify or remove and replace soil material to depth as directed by Engineer; reshape and recompact.
      c. Where settling occurs before Project correction period elapses, remove finished surfacing, backfill with additional soil material, compact, and reconstruct surfacing.
         1) Restore appearance, quality, and condition of finished surfacing to match adjacent Work, and eliminate evidence of restoration to the greatest extent possible.

8. Disposal of Surplus and Waste Materials:
   a. Disposal: Remove surplus satisfactory soil and waste material, including unsatisfactory soil, trash, and debris, and legally dispose of it off Owner's property unless otherwise directed by Owner.
   b. Repair: Any damage to shrubs, grass or structures shall be repaired to previous condition by Contractor at no additional expense to Owner.

J. It shall be the responsibility of Division 26 Contractor to provide for all disconnecting and motor control devices for all equipment. Contractor shall coordinate to determine voltage, phase, and configurations. Any changes necessary to coordinate these items between Divisions 22, 23, and 26 shall be considered part of this Contract.

K. Division 26 Contractor shall be responsible for providing for all power requirements associated with the mechanical systems including power, control devices, smoke dampers, etc. Refer to Division 22 and 23 Drawings for locations and requirements. Connect all smoke dampers to the fire alarm control panel.

## 3.2 PERFORMANCE TESTS

A. Thoroughly test all control circuits, fixtures, services, and all circuits for proper operating condition and freedom from grounds and short circuits before acceptance is requested. All equipment, appliances, and devices shall be operated under load conditions.

B. After the interior wiring system installation is complete conduct operating tests for approval. When requested, test all the wire, cable, devices, and equipment after installation, to assure that all material continues to possess all the original characteristics as required by governing codes and standards listed in these Specifications.

C. After motor operation has been verified make voltage readings at all panelboards and starters. Based on these readings, make final adjustments of primary taps on all transformers in the building as directed, or coordinate with the utility proper building voltage.

D. Perform such other tests as required by other Sections of these Specifications or as requested to prove acceptability.

E. Furnish all instruments and labor for testing.

F. All material installed shall be listed, inspected, and approved by a nationally accepted testing laboratory such as UL and/or ETL. All material shall bear the UL or ETL label where available.

## 3.3 SUBMITTAL AND APPROVAL OF MATERIALS

A. All requirements for submittals shall comply with the applicable provisions included in the individual Specification Sections.

B. Unless identified as a sole source item, the listing of product manufacturers, catalog numbers, etc., on Drawings is intended to establish a standard of quality of the product. It is the responsibility of Contractor to review all items he intends to submit. If equipment other than that indicated on Drawings is proposed by Contractor, the information will be reviewed at the time of the submission of the submittal.

END OF SECTION

# SECTION 26 05 13 - BUILDING WIRE AND CABLE

## PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Building wire and cable.
   2. Wiring connectors and connections.
B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.
   2. Section 01 40 00 "Quality Requirements" for requirements for references and standards.
   3. Section 26 05 53 "Electrical Identification."

1.2 REFERENCES

A. NECA Standard of Installation (National Electrical Contractors Association).
B. NETA ATS - Acceptance Testing Specifications for Electrical Power Distribution Equipment and Systems (International Electrical Testing Association).
C. NFPA 70 - National Electrical Code.

1.3 SUBMITTALS FOR REVIEW

A. Refer to Section 01 33 00 "Submittal Procedures" for procedures for Submittals.
B. Product Data: Provide for each cable assembly type.

1.4 SUBMITTALS FOR INFORMATION

A. Refer to Section 01 33 00 "Submittal Procedures" for procedures for Submittals.
B. Test Reports: Indicate procedures and values obtained.
C. Manufacturer's Installation Instructions: Indicate application conditions and limitations of use stipulated by product testing agency specified under Regulatory Requirements.

1.5 SUBMITTALS AT PROJECT CLOSEOUT

A. Refer to Section 01 70 00 "Execution and Closeout Requirements" for procedures for submittals.
B. Project Record Documents: Record actual locations of components and circuits.

1.6 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this Section with minimum 3 years' documented experience.

1.7 REGULATORY REQUIREMENTS

A. Conform to NFPA 70.
B. Furnish products listed and classified by UL as suitable for the purpose specified and indicated.

1.8 FIELD SAMPLES

A. Provide under provisions of Section 01 40 00 "Quality Requirements."

1.9 PROJECT CONDITIONS

A. Refer to Section 01 30 00 "Administrative Requirements."
B. Verify that field measurements are as indicated.
C. Conductor sizes are based on copper.
D. Wire and cable routing indicated is approximate unless dimensioned.

1.10 COORDINATION

A. Coordinate Work under provisions of Section 01 30 00 "Administrative Requirements."
B. Where wire and cable destination is indicated and routing is not shown, determine exact routing and lengths required.

**PART 2 - PRODUCTS**

2.1 BUILDING WIRE

A. Manufacturers:
   1. American Cable.
   2. Houston Wire and Cable.
   3. Southwire.
   4. Substitutions: Refer to Section 01 60 00 "Product Requirements."
B. Description: Single conductor insulated wire.
C. Conductor: Copper.
D. Insulation Voltage Rating: 600 volts.
E. Insulation: NFPA 70, Type indicated herein.
F. MC Cable: Shall not be utilized on this Project.

2.2 WIRING CONNECTORS

A. Split Bolt Connectors:
   1. Buchanan.
   2. Burndy.
   3. Ilsco.
   4. Substitutions: Refer to Section 01 60 00 "Product Requirements."

B. Solderless Pressure Connectors:
   1. Buchanan.
   2. Burndy.
   3. Ilsco.
   4. Substitutions: Refer to Section 01 60 00 "Product Requirements."
C. Spring Wire Connectors:
   1. Ideal.
   2. Substitutions: Refer to Section 01 60 00 "Product Requirements."
D. Compression Connectors:
   1. Buchanan.
   2. Burndy.
   3. Ilsco.
   4. Substitutions: Refer to Section 01 60 00 "Product Requirements."

## PART 3 - EXECUTION

### 3.1 EXAMINATION

A. Refer to Section 01 30 00 "Administrative Requirements" for verification of existing conditions before starting Work.
B. Verify that interior of building has been protected from weather.
C. Verify that mechanical Work likely to damage wire and cable has been completed.
D. Verify that raceway installation is complete and supported.

### 3.2 PREPARATION

A. Completely and thoroughly swab raceway before installing wire.

### 3.3 WIRING METHODS

A. Concealed Dry Interior Locations: Use only building wire, Type THHN/THWN insulation, in raceway.
B. Exposed Dry Interior Locations: Use only building wire, Type THHN/THWN insulation, in raceway.
C. Above Accessible Ceilings: Use only building wire, Type THHN/THWN insulation, in raceway.
D. Wet or Damp Interior Locations: Use only building wire, Type THHN/THWN insulation, in raceway.
E. Exterior Locations: Use only building wire, Type THHN/THWN insulation, in raceway.
F. Use wiring methods indicated.

### 3.4 INSTALLATION

A. Refer to Section 01 40 00 "Quality Requirements" for manufacturer's instructions.
B. Route wire and cable as required to meet Project Conditions.
C. Install cable in accordance with the NECA "Standard of Installation."
D. Use solid conductor for feeders and branch circuits 10 AWG and smaller.

E. Use stranded conductors for control circuits.
F. Use conductor not smaller than 12 AWG for power and lighting circuits with the exception of premanufactured fixture whips, listed for such use and not exceeding 6 feet in length.
G. Use conductor not smaller than 14 AWG for control circuits.
H. Use 10 AWG conductors for 20 ampere, 120 volt branch circuits longer than 100 feet and as indicated on the Drawings.
I. Install all conductors in conduit.
J. Pull all conductors into raceway at same time.
K. Use suitable wire pulling lubricant for building wire 4 AWG and larger.
L. Protect exposed cable from damage.
M. All cables shall be neatly supported.
N. Use suitable cable fittings and connectors.
O. Neatly train and lace wiring inside boxes, equipment, and panelboards.
P. Clean conductor surfaces before installing lugs and connectors.
Q. Make splices, taps, and terminations to carry full ampacity of conductors with no perceptible temperature rise.
R. Use split bolt connectors for copper conductor splices and taps, 6 AWG and larger. Tape uninsulated conductors and connector with electrical tape to 150 percent of insulation rating of conductor.
S. Use solderless pressure connectors with insulating covers for copper conductor splices and taps, 8 AWG and smaller.
T. Use insulated spring wire connectors with plastic caps for copper conductor splices and taps, 10 AWG and smaller.
U. Identify and color code wire and cable under provisions of Section 26 05 53 "Electrical Identification." Identify each conductor with its circuit number or other designation indicated.
V. The number of conductors in each conduit run shall be limited to the requirements as indicated on the Drawings and indicated in Article 310 of the National Electrical Code.

## 3.5 FIELD QUALITY CONTROL

A. Refer to Section 01 40 00 "Quality Requirements" for field inspection, testing, and adjusting.
B. Inspect and test in accordance with NETA ATS, except Section 4.
C. Perform inspections and tests listed in NETA ATS, Section 7.3.1.

END OF SECTION

# SECTION 26 05 19 - EQUIPMENT WIRING SYSTEMS

## PART 1 - GENERAL

1.1 SUMMARY

A. Section includes basic electrical connections to equipment specified under other Sections.
B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.
   2. Section 26 05 00 "Basic Electrical Methods."

1.2 REFERENCES

A. NEMA WD 1 - General Purpose Wiring Devices.
B. NEMA WD 6 - Wiring Device Configurations.
C. ANSI/NFPA 70 - National Electrical Code.

1.3 SUBMITTALS

A. Submit under provisions of Section 01 33 00 "Submittal Procedures."
B. Product Data: Provide wiring device manufacturer's catalog information showing dimensions, configurations, and construction.
C. Manufacturer's Instructions: Indicate application conditions and limitations of use stipulated by product testing agency specified under Regulatory Requirements. Include instructions for storage, handling, protection, examination, preparation, installation, and starting of product.

1.4 REGULATORY REQUIREMENTS

A. Conform to requirements of ANSI/NFPA 70.
B. Furnish products listed and classified by UL as suitable for purpose specified and shown.

1.5 COORDINATION

A. Coordinate Work under provisions of Section 01 30 00 "Submittal Procedures."
B. Obtain and review Shop Drawings, product data, and manufacturer's instructions for equipment furnished under other Sections.
C. Determine connection locations and requirements.
D. Sequence rough-in of electrical connections to coordinate with installation schedule for equipment.
E. Sequence electrical connections to coordinate with startup schedule for equipment.

## PART 2 - PRODUCTS

2.1 CORDS AND CAPS

A. Attachment Plug Construction: Conform to NEMA WD 1.
B. Configuration: NEMA WD 6; match receptacle configuration at outlet provided for equipment.

C. Cord Construction: ANSI/NFPA 70, multiconductor flexible cord with identified equipment grounding conductor, suitable for use in damp locations.
D. Size: Suitable for connected load of equipment, length of cord, and rating of branch circuit overcurrent protection.
E. Division 26 Contractor shall be responsible for providing matching cord/receptacle for all equipment not furnished with such equipment.

## PART 3 - EXECUTION

### 3.1 EXAMINATION

A. Verify conditions under provisions of Section 01 30 00 "Submittal Procedures."
B. Verify that equipment is ready for electrical connection, wiring, and energization.

### 3.2 ELECTRICAL CONNECTIONS

A. Make electrical connections in accordance with equipment manufacturer's instructions.
B. Make conduit connections to equipment using flexible conduit. Use liquidtight flexible conduit with watertight connectors in damp or wet locations.
C. Make wiring connections using wire and cable with insulation suitable for temperatures encountered in heat producing equipment.
D. Provide receptacle outlet where connection with attachment plug is indicated. Provide cord and cap where field-supplied attachment plug is indicated.
E. Provide suitable strain-relief clamps and fittings for cord connections at outlet boxes and equipment connection boxes.
F. Install disconnect switches, controllers, control stations, and control devices as indicated.
G. Modify equipment control wiring with terminal block jumpers as indicated.
H. Provide interconnecting conduit and wiring between devices and equipment where indicated.
I. Check and modify phase connections as required for proper motor rotation.
J. Provide power to equipment only after equipment supplier verifies acceptance to receive and approves.
K. Contractor shall coordinate with all equipment to verify exact power and control wiring as required to properly serve equipment.

END OF SECTION

# SECTION 26 05 26 - GROUNDING AND BONDING

## PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Rod electrodes.
   2. Mechanical connectors.
   3. Exothermic connections.
   4. Wire.

B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.
   2. Section 01 40 00 "Quality Requirements" for requirements for references and standards.

1.2 REFERENCES

A. NETA ATS - Acceptance Testing Specifications for Electrical Power Distribution Equipment and Systems (International Electrical Testing Association).
B. NFPA 70 - National Electrical Code.

1.3 GROUNDING SYSTEM DESCRIPTION

A. Metal underground water pipe.
B. Metal frame of the building.
C. Rod electrodes.

1.4 PERFORMANCE REQUIREMENTS

A. Grounding System Maximum Resistance: 10 ohms.

1.5 SUBMITTALS FOR REVIEW

A. Refer to Section 01 33 00 "Submittal Procedures."
B. Product Data: Provide for grounding electrodes and connections.

1.6 SUBMITTALS FOR CLOSEOUT

A. Refer to Section 01 70 00 "Execution and Closeout Requirements" for procedures for Submittals.
B. Project Record Documents: Record actual locations of components and grounding electrodes.
C. Certificate of Compliance: Indicate approval of installation by authority having jurisdiction.

1.7 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this Section with minimum 3 years' documented experience, and with service facilities within 100 miles of Project.

1.8 REGULATORY REQUIREMENTS

A. Conform to requirements of NFPA 70.
B. Products: Listed and classified by UL as suitable for the purpose specified and indicated.

## PART 2 - PRODUCTS

2.1 ROD ELECTRODES

A. Material: Copper.
B. Diameter: 3/4-inch.
C. Length: 10 feet.

2.2 MECHANICAL CONNECTORS

A. Description: In lieu of exothermic connections, high compression type as manufactured by Burndy using the 12 ton Hy-Ground series.

2.3 EXOTHERMIC CONNECTIONS

A. Manufacturers: Cadweld.

2.4 WIRE

A. Material: Stranded copper.
B. Grounding Electrode Conductor: Minimum size to meet NFPA 70 requirements or as indicated on the Drawings.

## PART 3 - EXECUTION

3.1 EXAMINATION

A. Refer to Section 01 30 00 "Administrative Requirements" for verification of existing conditions prior to beginning Work.
B. Verify that final backfill and compaction has been completed before driving rod electrodes.

3.2 INSTALLATION

A. Refer to Section 01 40 00 "Quality Requirements" for manufacturer's instructions.
B. Install rod electrodes. Install additional rod electrodes as required to achieve a resistance to ground of 10 ohms or less. Rods shall be installed with a minimum separation of 6 feet.
C. Provide bonding to meet Regulatory Requirements.

D. Bond together metal siding not attached to grounded structure; bond to ground.
E. Equipment Grounding Conductor: Provide separate, insulated conductor within each feeder and branch circuit raceway. Terminate each end on suitable lug, bus, or bushing.
F. Grounding Electrode System: The new grounding electrode system shall consist of the common bonding of building steel, underground steel water piping and supplemental ground rods, concrete re-enforcing bar, as detailed on the Drawings.
G. Provide proper bonding of the electrical system's grounded conductor (neutral) and the grounding electrode system sized in accordance with NEC Article 250. This bonding shall occur at all locations where there are separately derived systems.

3.3 FIELD QUALITY CONTROL

A. Refer to Section 01 40 00 "Quality Requirements" for field inspection, testing, and adjusting.
B. Inspect and test in accordance with NETA ATS, except Section 4.
C. Perform inspections and tests listed in NETA ATS, Section 7.13.

END OF SECTION

# SECTION 26 05 29 - SUPPORTING DEVICES

## PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Supports for conduit and equipment.
   2. Anchors and fasteners.
B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.

1.2 REFERENCES

A. NECA - National Electrical Contractors Association.
B. NFPA 70 - National Electrical Code.

1.3 REGULATORY REQUIREMENTS

A. Conform to requirements of NFPA 70.
B. Furnish products listed and classified by UL as suitable for purpose specified and shown.

## PART 2 - PRODUCTS

2.1 SUPPORTS

A. Provide materials, sizes, and types of anchors, fasteners and supports to carry the loads of equipment and conduit. Consider weight of wire in conduit when selecting products.

2.2 ANCHORS AND FASTENERS

A. Concrete Structural Elements: Use expansion anchors, powder actuated anchors, and preset inserts.
B. Steel Structural Elements: Use beam clamps, spring steel clips, and steel ramset fasteners.
C. Concrete Surfaces: Use self-drilling anchors and expansion anchors.
D. Sheet Metal: Use sheet metal screws.
E. Wood Elements: Use wood screws.
F. Roof Support/Jacks: Advanced supports products # SS1000A or approved equal.

2.3 MATERIALS AND FINISHES

A. Provide adequate corrosion resistance.

## PART 3 - EXECUTION

3.1 INSTALLATION

A. Install products in accordance with manufacturer's instructions.
B. Provide anchors, fasteners, and supports in accordance with NECA "Standard of Installation."
C. Do not fasten supports to pipes, ducts, mechanical equipment, and conduit.
D. Obtain permission from Engineer before drilling or cutting structural members.
E. Fabricate supports from structural steel as indicated on drawings. Rigidly weld members or use hexagon head bolts to present neat appearance with adequate strength and rigidity. Use lock washers under all nuts.
F. Install surface-mounted cabinets and panelboards with minimum of four anchors.
G. In wet and damp locations, use steel channel supports to stand cabinets and panelboards 1 inch off wall.
H. Install conduit supports a maximum spacing specified in the NEC.

PACKET 7.475 September 12, 2023
PACKET 11.477 November 14, 2023

# SECTION 26 05 33 - CONDUIT

## PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Metal conduit.
   2. Flexible metal conduit.
   3. Liquidtight flexible metal conduit.
   4. Electrical metallic tubing.
   5. Fittings and conduit bodies.

B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.
   2. Section 26 05 33.16 "Boxes."
   3. Section 26 05 53 "Electrical Identification."

1.2 REFERENCES

A. ANSI C80.1 - Rigid Steel Conduit, Zinc Coated.
B. ANSI C80.3 - Electrical Metallic Tubing, Zinc Coated.
C. ANSI/NEMA FB 1 - Fittings, Cast Metal Boxes, and Conduit Bodies for Conduit and Cable Assemblies.
D. NECA "Standard of Installation."
E. NEMA TC 3 - PVC Fittings for Use with Rigid PVC Conduit and Tubing.
F. NFPA 70 - National Electrical Code.

1.3 DESIGN REQUIREMENTS

A. Conduit Size: NFPA 70.

1.4 SUBMITTALS

A. Submit under provisions of Section 01 33 00 "Submittal Procedures."
B. Product Data: Provide for metallic conduit, flexible metal conduit, liquidtight flexible metal conduit, nonmetallic conduit, fittings and conduit bodies.

1.5 PROJECT RECORD DOCUMENTS

A. Submit under provisions of Section 01 70 00 "Execution and Closeout Requirements."
B. Accurately record actual routing of conduits.

1.6 REGULATORY REQUIREMENTS

A. Conform to requirements of ANSI/NFPA 70.
B. Furnish products listed and classified by UL as suitable for purpose specified and shown.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Deliver, store, protect, and handle products to site under provisions of Section 01 60 00 "Product Requirements."
B. Accept conduit on site. Inspect for damage.
C. Protect conduit from corrosion and entrance of debris by storing above grade. Provide appropriate covering.
D. Protect PVC conduit from sunlight.

1.8 PROJECT CONDITIONS

A. Verify that field measurements are as shown on Drawings.
B. Verify routing and termination locations of conduit prior to rough-in.
C. Conduit routing is shown on Drawings in approximate locations unless dimensioned. Route as required to complete wiring system.

**PART 2 - PRODUCTS**

2.1 CONDUIT REQUIREMENTS

A. Minimum Size: 3/4-inch for all branch circuits located above ceiling. Contractor may use 1/2-inch conduit down the wall to receptacles and light switches.
B. Wet and Damp Locations above grade: Use rigid steel or liquid tight flexible conduit.
C. Dry Locations: Use electrical metallic tubing for concealed and exposed locations.
D. Below Slab: Non-metallic PVC conduit is acceptable within limitations specified.
E. Below Grade: Use only PVC coated rigid galvanized steel, wrapped rigid steel, or non-metallic PVC conduit within limitations specified.
F. MC Cable: Shall not be utilized on this Project.

2.2 METAL CONDUIT

A. Manufacturers:
   1. Allied.
   2. Wheatland.
   3. Substitutions: Under provisions of Section 01 60 00 "Product Requirements."
B. Rigid Steel Conduit: ANSI C80.1.
C. Fittings and Conduit Bodies: ANSI/NEMA FB 1; all steel fittings.

2.3 FLEXIBLE METAL CONDUIT

A. Manufacturers:
   1. Allied Tube.
   2. Electri-Flex.
   3. Greenfield.
   4. Substitutions: Under provisions of Section 01 60 00 "Product Requirements."
B. Description: Interlocked steel construction. Aluminum is not permitted.

C. Fittings: ANSI/NEMA FB 1 with fittings approved for steel flex.
D. Applications: Use for final connections to motorized equipment, connections to recessed lighting fixtures located in accessible ceilings, and connections to dry type transformers. Utilization of 3/8-inch in lieu of the minimum 1/2-inch is acceptable under the limitations of the National Electrical Code.

2.4 LIQUIDTIGHT FLEXIBLE METAL CONDUIT

A. Manufacturers:
1. Electri-flex.
2. Ultratite.
3. Substitutions: Under provisions of Section 01 60 00 "Product Requirements."
B. Description: Interlocked steel construction with PVC jacket.
C. Fittings: ANSI/NEMA FB 1.
D. Applications: Use for final connections to motorized equipment in exterior locations and areas subjected to moisture (kitchen).

2.5 ELECTRICAL METALLIC TUBING (EMT)

A. Manufacturers:
1. Allied.
2. Substitutions: Under provisions of Section 01 60 00 "Product Requirements."
B. Description: ANSI C80.3; galvanized tubing.
C. Fittings and Conduit Bodies: ANSI/NEMA FB 1; all steel, compression or set screw.
D. Applications: Do not use below grade or in exterior locations. Use only in interior locations.

2.6 PVC COATED METAL CONDUIT

A. Manufacturers:
1. Levy.
2. Robroy Industries.
3. Substitutions: Under provisions of Section 01 60 00 "Product Requirements."
B. Description: NEMA RN-1, rigid steel conduit with external PVC coating, 20 mil thick.
C. General: Protective layer may be factory applied or galvanized rigid steel conduit may be applied with two layers of corrosion resistant tape.
D. Fittings and Conduit Bodies: ANSI/NEMA FB 1; steel fittings with external PVC coatings to match conduit.

2.7 NON-METALLIC PVC CONDUIT

A. Manufacturers:
1. Allied.
2. Carlon.
3. Substitutions: Under provisions of Section 01 60 00 "Product Requirements."
B. Description: NEMA TC2; Schedule 40 PVC. Flame retardant type resistant to bending and cracking.
C. Fittings and conduit bodies: NEMA TC3.
D. Vertical risers and ells installed below grade shall be rigid steel with wrapping.
E. Do not use above grade.

F. Joints made with PVC fittings shall be applied with solvent compound after thorough cleaning.
G. Refer to Part 3. Do not use PVC conduit for conduits passing vertically through the slab.

## PART 3 - EXECUTION

### 3.1 INSTALLATION

A. Install conduit in accordance with NECA "Standard of Installation."
B. Install nonmetallic conduit in accordance with manufacturer's instructions.
C. Arrange supports to prevent misalignment during wiring installation.
D. Support conduit using coated steel or malleable iron straps, lay-in adjustable hangers, clevis hangers, and split hangers.
E. Group related conduits; support using conduit rack. Construct rack using steel channel.
F. Fasten conduit supports to building structure and surfaces under provisions of Section 26 05 29 "Supporting Devices."
G. Do not support conduit with wire or perforated pipe straps. Remove wire used for temporary supports.
H. Do not attach conduit to ceiling support wires.
I. Arrange conduit to maintain headroom and present neat appearance.
J. Route exposed conduit parallel and perpendicular to walls.
K. Route conduit installed above accessible ceilings parallel and perpendicular to walls.
L. Maintain adequate clearance between conduit and piping.
M. Maintain 12-inch clearance between conduit and surfaces with temperatures exceeding 104 degrees F.
N. Cut conduit square using saw or pipecutter; de-burr cut ends.
O. Bring conduit to shoulder of fittings; fasten securely.
P. Use conduit hubs or sealing locknuts to fasten conduit to sheet metal boxes in damp and wet locations and to cast boxes.
Q. Install no more than equivalent of three 90-degree bends between boxes. Use conduit bodies to make sharp changes in direction, as around beams. Use factory elbows for bends in metal conduit larger than 2-inch size.
R. Avoid moisture traps; provide junction box with drain fitting at low points in conduit system.
S. Provide suitable fittings to accommodate expansion and deflection where conduit crosses control and expansion joints.
T. Provide suitable pull string in each empty conduit except sleeves and nipples.
U. Use suitable caps to protect installed conduit against entrance of dirt and moisture.
V. Ground and bond conduit under provisions of Section 26 05 26 "Grounding and Bonding."
W. Identify conduit under provisions of Section 26 05 53 "Electrical Identification."
X. Ducts shall be cleaned with a flexible mandrel assembly.
Y. All conduits passing vertically through slabs or through earth on grade shall be PVC-coated, rigid steel. Rigid steel conduits shall be applied with protective coatings as indicated herein. All transitions from PVC to rigid steel shall occur below the slab.
Z. Underground branch circuit extensions to parking lot lighting fixtures and other branch circuits may be direct buried PVC conduit. Service entrance PVC conduit shall be concrete encased in accordance with the Drawings unless otherwise approved by Engineer.

AA. Minimum cover for underground conduits shall be 24 inches unless otherwise noted.
BB. All conduit shall be routed concealed as much as possible including conduit serving roof-mounted equipment. Roof penetrations for conduits shall adhere to the requirements and details as indicated on the Architectural Drawings.

3.2 INTERFACE WITH OTHER PRODUCTS

A. Install conduit to preserve fire resistance rating of partitions and other elements.
B. Route conduit through roof openings for piping and ductwork or through suitable roof jack with pitch pocket. Coordinate location with roofing installation.

END OF SECTION

# SECTION 26 05 33.16 - BOXES

## PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Wall and ceiling outlet boxes.
   2. Pull and junction boxes.
B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.
   2. Section 26 27 26 "Wiring Devices" for wall plates in finished areas.

1.2 REFERENCES

A. NECA - Standard of Installation.
B. NEMA FB 1 - Fittings and Supports for Conduit and Cable Assemblies.
C. NEMA OS 1 - Sheet-Steel Outlet Boxes, Device Boxes, Covers, and Box Supports.
D. NEMA 250 - Enclosures for Electrical Equipment (1,000 Volts Maximum).
E. NFPA 70 - National Electrical Code.

1.3 SUBMITTALS FOR CLOSEOUT

A. Refer to Section 01 70 00 "Execution and Closeout Requirements" for Submittals for Project closeout.
B. Record actual locations and mounting heights of outlet, pull, and junction boxes on Project record documents.

1.4 REGULATORY REQUIREMENTS

A. Conform to requirements of NFPA 70.
B. Provide Products listed and classified by UL as suitable for the purpose specified and indicated.

## PART 2 - PRODUCTS

2.1 WALL AND CEILING OUTLET BOXES

A. Sheet Metal Outlet Boxes: NEMA OS 1, galvanized steel.
B. Luminaire and Equipment Supporting Boxes: Rated for weight of equipment supported; include 1/2-inch male fixture studs where required.
C. Cast Boxes: NEMA FB 1, Type FD, cast feralloy. Provide gasketed cover by box manufacturer.
D. Wall Plates for Finished Areas: As specified in Section 26 27 26 "Wiring Devices."

2.2 PULL AND JUNCTION BOXES

A. Sheet Metal Boxes: NEMA OS 1, galvanized steel.
B. Surface Mounted Cast Metal Box: NEMA 250, Type 4; flat-flanged, surface mounted junction box.
C. Material: Galvanized cast iron.
D. Cover: Furnish with ground flange, neoprene gasket, and stainless-steel cover screws.
E. Fiberglass boxes are allowed in landscaping areas. Equipment shall be pedestrian rated.

**PART 3 - EXECUTION**

3.1 EXAMINATION

A. Verify locations of outlets in all locations areas prior to rough-in.

3.2 INSTALLATION

A. Install boxes in accordance with NECA "Standard of Installation."
B. Install in locations as shown on Drawings, and as required for splices, taps, wire pulling, equipment connections and compliance with regulatory requirements.
C. Set wall mounted boxes at elevations to accommodate mounting heights specified in Section for outlet device.
D. Electrical boxes are shown on Drawings in approximate locations unless dimensioned. Adjust box location up to 10 feet if required to accommodate intended purpose.
E. Orient boxes to accommodate wiring devices oriented as specified in Section 26 27 26 "Wiring Devices."
F. Maintain headroom and present neat mechanical appearance.
G. Install pull boxes and junction boxes above accessible ceilings and in unfinished areas only.
H. Inaccessible Ceiling Areas: Install outlet and junction boxes no more than 6 inches from ceiling access panel or from removable recessed luminaire.
I. Install boxes to preserve fire resistance rating of partitions and other elements, using materials and methods specified in Section 07 84 13 "Penetration Firestopping."
J. Coordinate mounting heights and locations of outlets mounted above counters, benches, and backsplashes with Architectural Drawings and other trades.
K. Locate outlet boxes to allow luminaires positioned as shown on reflected ceiling plan.
L. Align adjacent wall mounted outlet boxes for switches, thermostats, and similar devices.
M. Use flush mounting outlet box in finished areas.
N. Locate flush mounting box in masonry wall to require cutting of masonry unit corner only. Coordinate masonry cutting to achieve neat opening.
O. Do not install flush mounting box back-to-back in walls; provide minimum 6-inch separation. Provide minimum 24-inch separation in acoustic rated walls.
P. Secure flush mounting box to interior wall and partition studs. Accurately position to allow for surface finish thickness.
Q. Use stamped steel bridges to fasten flush mounting outlet box between studs.
R. Install flush mounting box without damaging wall insulation or reducing its effectiveness.
S. Use adjustable steel channel fasteners for hung ceiling outlet box.
T. Do not fasten boxes to ceiling support wires.

U. Support boxes independently of conduit.
V. Use gang box where more than one device is mounted together. Do not use sectional box.
W. Use gang box with plaster ring for single device outlets.
X. Use cast outlet box in exterior locations exposed to the weather and wet locations and at all locations serving kitchen equipment.
Y. Large Pull Boxes: Use hinged enclosure in interior dry locations, surface-mounted cast metal box in other locations.
Z. Coordinate with other trades for box rough-in, such that control devices are grouped (i.e., thermostats, wall switches, volume controls, etc.).

## 3.3 INTERFACE WITH OTHER PRODUCTS

A. Coordinate installation of outlet box for equipment connected under Section 26 05 19 "Equipment Wiring Systems."

## 3.4 ADJUSTING

A. Refer to Section 01 70 00 "Execution and Closeout Requirements" for adjusting installed Work.
B. Adjust flush-mounting outlets to make front flush with finished wall material.
C. Install knockout closures in unused box openings.

## 3.5 CLEANING

A. Refer to Section 01 70 00 "Execution and Closeout Requirements" for cleaning installed Work.
B. Clean interior of boxes to remove dust, debris, and other material.
C. Clean exposed surfaces and restore finish.

## 3.6 REPAIR

A. Repair any areas or surfaces damaged during conduit installation.
B. Paint (resurface) to original condition.

END OF SECTION

# SECTION 26 05 53 - ELECTRICAL IDENTIFICATION

## PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Nameplates and labels.
   2. Wire, conduit, and box markers.
B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.

1.2 REFERENCES

A. ANSI/NFPA 70 - National Electrical Code.

## PART 2 - PRODUCTS

2.1 NAMEPLATES AND LABELS

A. Nameplates and Labels: Engraved three-layer laminated plastic, white letters on black background.
B. Locations:
   1. Each electrical distribution and control equipment enclosure.
   2. Communication cabinets and computer cabinets.
   3. Field disconnects, start stop stations, control panels.
C. Letter Size:
   1. Use 1/4-inch letters for identifying individual equipment and loads.
   2. Use 1/4-inch letters for identifying grouped equipment and loads.
   3. Use 3/8-inch letters for identifying main disconnect equipment.
   4. Use 1/4-inch letters for identifying receptacle and light switches.

2.2 WIRE, CONDUIT, AND BOX MARKERS

A. Description: Brady B-321 Heat-Shrink Polyolefin markers. Typed label to identify each termination end point of the conductor. DC conductors shall identify polarity.
B. Locations: Each conductor at wireway, pull boxes, outlet and junction boxes, and each load connection. All conduit penetrations identifying the location of each end.
C. Legend:
   1. Power and Lighting Circuits: Branch circuit or feeder number indicated on Drawings.
D. Boxes:
   1. Label each junction box in accessible locations to indicate the type of system (i.e.; security; power circuit - 1, 3, 5; etc.).
   2. Provide label in each light switch and receptacle back box.

E. Panelboards:
1. Provide phenolic label with maximum available fault current at main switchboard. Utilize number as indicated in panel schedule.
2. Provide warning labels with arc-flash hazard warning for all electrical equipment as indicated in Article 110.16 of NEC.

## PART 3 - EXECUTION

### 3.1 PREPARATION

A. Degrease and clean surfaces to receive nameplates and labels.

### 3.2 APPLICATION

A. Install nameplate and label parallel to equipment lines.
B. Secure nameplate to equipment front using screws or rivets.
C. Identify underground conduits using underground warning tape. Install one tape per trench at 12 inches below finished grade. Identify all conduit at exposed locations into all boxes, cabinets, etc. (see Specification Section 26 05 00 "Basic Electrical Methods").
D. Identify all conductors at every termination indicating endpoints of termination and tag identification as required.

| 120-208 Volts | Phase | 277/480 Volts |
|---|---|---|
| Black | A | Brown |
| Red | B | Orange |
| Blue | C | Yellow |
| White | Neutral | Gray |
| Green | Ground | Green |

E. Conductor phase and voltage identification shall be made by color-coded insulation for all conductors smaller than No. 6 AWG. For conductors No. 6 AWG and larger, identification shall be made by color-coded insulation, or conductors with black insulation may be furnished and identified by colored electrical tape. Conductor identification shall be provided within each enclosure where a tap, splice, or termination is made.

PACKET 11.487 November 14, 2023

# SECTION 26 18 39 - ENCLOSED MOTOR CONTROLLERS

## PART 1 - GENERAL

### 1.1 SUMMARY

A. Section Includes:
   1. Manual controllers.
   2. Automatic controllers.
   3. Disconnects.

B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.

### 1.2 REFERENCES

A. NFPA 70 - National Electrical Code.
B. UL 1 98C - High-Interrupting Capacity Fuses; Current Limiting Type.
C. UL 1 98E - Class R Fuses.
D. NECA "Standard of Installation," published by National Electrical Contractors Association.
E. NEMA ICS 2 - Industrial Control Devices, Controllers, and Assemblies.
F. NEMA ICS 6 - Enclosures for Industrial Controls and Systems.
G. NEMA KS 1 - Enclosed Switches.

### 1.3 SUBMITTALS

A. Submit under provisions of Section 01 33 00 "Submittal Procedures."
B. Product Data: Provide catalog sheets showing voltage, controller size, ratings and size of switching and overcurrent protective devices, short circuit ratings, dimensions, and enclosure details.
C. Test Reports: Indicate field test and inspection procedures and test results.
D. Manufacturer's Installation Instructions: Indicate application conditions and limitations of use stipulated by product testing agency specified under Regulatory Requirements. Include instructions for storage, handling, protection, examination, preparation, installation, and starting of product.

### 1.4 QUALITY ASSURANCE

A. Perform Work in accordance with NECA Standard of Installation.
B. Maintain one copy of each document on-site.

### 1.5 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this Section with minimum 3 years' documented experience.

1.6 REGULATORY REQUIREMENTS

A. Conform to requirements of NFPA 70.
B. Furnish products listed and classified by UL as suitable for purpose specified and indicated.

## PART 2 - PRODUCTS

2.1 MANUAL CONTROLLERS

A. Manual Motor Controller: NEMA ICS 2, AC general-purpose Class A manually operated, full-voltage controller with overload element, NO auxiliary contact, and toggle operator.
B. Fractional Horsepower Manual Controller: NEMA ICS 2, AC general-purpose Class A manually operated, full-voltage controller for fractional horsepower induction motors, with thermal Overload unit, and toggle operator.
C. Enclosure: NEMA ICS 6; Type 1.

2.2 AUTOMATIC CONTROLLERS

A. Magnetic Motor Controllers: NEMA ICS 2, AC general-purpose Class A magnetic controller for induction motors rated in horsepower.
B. Coil Operating Voltage: 120 volts, 60 Hertz.
C. Overload Relay: NEMA ICS; electronic type; with phase loss and unbalance protection.
D. Enclosure: NEMA ICS 6, Type 1.

2.3 PRODUCT OPTIONS AND FEATURES

A. Auxiliary Contacts: NEMA ICS 2, 2 each field convertible contacts in addition to seal-in contact.
B. Cover Mounted Pilot Devices: NEMA ICS 2, heavy duty type.
C. Pushbuttons: Recessed type.
D. Indicating Lights: LED type.
E. Selector Switches: Rotary type.
F. Relays: NEMA ICS 2.
G. Control Power Transformers: 120 volt secondary. Provide fused primary and secondary, and bond unfused leg of secondary to enclosure.

2.4 DISCONNECTS

A. Combination Controllers: Combine motor controllers with fusible switch disconnect in common enclosure.
B. Fusible Switch Assemblies: NEMA KS 1, enclosed knife switch with externally operable handle. Fuse clips: Designed to accommodate Class R fuses.

2.5 FUSES

A. Description: Dual element, current limiting, time delay, one-time fuse, 250V volt, UL 198E, Class RK 5.
B. Interrupting Rating: 200,000 rms amperes.

## PART 3 - EXECUTION

3.1 INSTALLATION

A. Install enclosed controllers where indicated, in accordance with manufacturer's instructions. Provide a motor controller for all equipment not furnished as integral with equipment. Coordinate actual motor loads with overload protection.
B. Install enclosed controllers plumb. Provide supports in accordance with Section 26 05 29 "Supporting Devices."
C. Height: 5 feet to operating handle.
D. Install fuses in fusible switches.
E. Select and install overload heater elements in motor controllers to match installed motor characteristics.
F. Provide engraved plastic nameplates under the provisions of Section 26 05 53 "Electrical Identification."
G. Provide neatly typed label inside each motor controller door identifying motor served, nameplate horsepower, full load amperes, code letter, service factor, and voltage/phase rating.

3.2 FIELD QUALITY CONTROL

A. Field inspection and testing will be performed under provisions of other Sections.
B. Inspect and test each enclosed controller to NEMA ICS 2.

PACKET 11.490 November 14, 2023

# SECTION 26 24 16 - PANELBOARDS

## PART 1 - GENERAL

### 1.1 SUMMARY

A. Section Includes:
   1. Distribution and branch circuit panelboards.
B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.
   2. Section 26 05 29 "Supporting Devices."
   3. Section 26 05 53 "Electrical Identification" for engraved nameplates.

### 1.2 REFERENCES

A. NECA (National Electrical Contractors Association) "Standard of Installation."
B. NEMA AB 1 - Molded Case Circuit Breakers.
C. NEMA ICS 2 - Industrial Control Devices, Controllers, and Assemblies.
D. NEMA KS 1 - Enclosed Switches.
E. NEMA PB 1 - Panelboards.
F. NEMA PB-2 - Switchboards.
G. NEMA PB 1.1 - Instructions for Safe Installation, Operation and Maintenance of Panelboards Rated 600 Volts or Less.
H. NFPA 70 - National Electrical Code.

### 1.3 SUBMITTALS

A. Shop Drawings: Indicate outline and support point dimensions, voltage, main bus ampacity, integrated short circuit ampere rating, circuit breaker, fusible switch arrangement, and sizes.
B. Manufacturer's Installation Instructions: Indicate application conditions and limitations of use stipulated by product testing agency. Include instructions for storage, handling, protection, examination, preparation, installation, and starting of product.
C. Switchboard and panelboard manufacturer shall provide short circuit and arc fault calculations per NEC requirements. Equipment shall be rated per calculations.

### 1.4 PROJECT RECORD DOCUMENTS

A. Submit under provisions of General Conditions. Record actual locations of products; indicate actual branch circuit arrangement.

### 1.5 OPERATION AND MAINTENANCE DATA

A. Submit under provisions of General Conditions. Maintenance Data: Include spare parts data listing; and recommended maintenance procedures and intervals.

### 1.6 QUALITY ASSURANCE

A. Perform Work in accordance with NECA Standard of Installation.

1.7 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this Section with minimum 5 years' experience.

1.8 REGULATORY REQUIREMENTS

A. Conform to requirements of NFPA 70. Furnish products listed and classified by UL as suitable for purpose specified and indicated.

1.9 FIELD MEASUREMENTS

A. Verify that field measurements are as indicated.

1.10 MAINTENANCE MATERIALS

A. Provide maintenance materials under provisions of General Conditions. Provide two of each panelboard key if required.

**PART 2 - PRODUCTS**

2.1 PANELBOARDS

A. Manufacturers:
   1. Eaton.
   2. G.E.
   3. Siemens.
   4. Square-D.

B. Description: NEMA PB-1, circuit breaker type.

C. Panelboard Bus: Copper with ratings as indicated. Provide a copper ground bus in each panelboard.

D. Minimum integrated short circuit rating: Fully rated devices with minimum levels as indicated. Series rated systems will not be allowed. Minimum calculated values are labeled on each panelboard and are indicated as "AIC."

E. Molded Case Circuit Breakers: NEMA AB 1, bolt-on, circuit breakers with integral thermal and instantaneous magnetic trip in each pole. Provide circuit breakers UL listed as type HACR for air-conditioning equipment loads and type SWD for switching applications.

F. Enclosure: NEMA PB-1, Type 1.

G. Cabinet Front: Surface or recessed type as indicated on the Drawings, fastened with concealed trim clamps, hinged door with flush lock, metal directory frame, and finished in manufacturer's standard gray enamel.

## PART 3 - EXECUTION

3.1 INSTALLATION

A. Install panelboards in accordance with NEMA PB 1.1. Install panelboards plumb. Provide supports in accordance with drawings and Section 26 05 29 "Supporting Devices." Height: 6-foot maximum to top of panelboard. Provide filler plates for unused spaces in panelboards. Provide typed circuit directory for each branch circuit panelboard. Revise directory to reflect circuiting changes required to balance phase loads. Spare slots shall be labeled as such in erasable pencil on directory. Provide engraved plastic nameplates under the provisions of Section 26 05 53 "Electrical Identification."

B. Provide two empty 1-inch conduits from each recessed panelboard to an accessible location above and label as "spare."

C. Ground each panelboard in accordance with Section 26 05 26 "Grounding and Bonding."

D. Prove a 4-inch concrete housekeeping pad for switchboard.

3.2 FIELD QUALITY CONTROL

A. Field inspection and test for grounds on each circuit after installation is completed. Measure steady state load currents at each panelboard feeder; rearrange circuits in the panelboard to balance the phase loads to within 20 percent of each other. Maintain proper phasing for multi-wire branch circuits.

B. Visual and Mechanical Inspection: Inspect for physical damage, proper alignment, anchorage, and grounding. Check proper installation and tightness of connections for circuit breakers, fusible switches, and fuses.

PACKET 7.491 September 12, 2023
PACKET 11.493 November 14, 2023

# SECTION 26 27 26 - WIRING DEVICES

## PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Wall switches.
   2. Receptacles.
   3. Wall plates.
B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.
   2. Section 26 05 33.16 "Boxes."

1.2 REFERENCES

A. NECA - Standard of Installation.
B. NEMA WD 1 - General Requirements for Wiring Devices.
C. NEMA WD 6 - Wiring Device - Dimensional Requirements.
D. NFPA 70 - National Electrical Code.

1.3 SUBMITTALS FOR REVIEW

A. Refer to Section 01 33 00 "Submittal Procedures."
B. Product Data: Provide manufacturer's catalog information showing dimensions, colors, and configurations.
C. Manufacturers with similar catalog numbers will not be considered as a basis for an equivalent product.

1.4 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this Section with minimum 3 years' documented experience.

1.5 REGULATORY REQUIREMENTS

A. Conform to requirements of NFPA 70.
B. Provide products listed and classified by UL as suitable for the purpose specified and indicated.

## PART 2 - PRODUCTS

2.1 WALL SWITCHES

A. Manufacturers:
   1. Hubbell PRO 1221-W.
   2. Substitutions: Refer to Section 01 60 00 "Product Requirements."
B. Description: NEMA WD 1, 20 amp, Heavy-Duty, AC only general-use snap switch.

C. Body and Handle: Nylon white handle.
D. Utilize equivalent series of manufacturer's numbers above for three-way, four-way, and two-pole applications.
E. Refer to drawings for Lighting Control Sequence Matrix for additional lighting control devices and requirements. Lighting Controls shall be equal to Acuity Brands, nLight system. All devices shall be white.

2.2 RECEPTACLES

A. Manufacturers:
1. Hubbell PRO 5352-W.
2. Substitutions: Refer to Section 01 60 00 "Product Requirements." Equivalent.
B. Description: NEMA WD 1, Heavy-duty, general-use receptacle, with triple wipe contacts and grounding contacts integral with backstrap (no rivets).
C. Device Body: White plastic.
D. Configuration: NEMA WD 6, type as specified and indicated.
E. Convenience Receptacle: Type 5-20.
F. GFCI Receptacle: Convenience receptacle with integral ground fault circuit interrupter to meet regulatory requirements. Hubbell GF5352-W or equivalent.

2.3 WALL PLATES

A. Decorative Cover Plate: Stainless steel.
B. Weatherproof Cover Plate: Gasketed cast metal with gasketed device cover on exterior devices.
C. Surface Mounted Plates: Galvanized steel plates.

**PART 3 - EXECUTION**

3.1 EXAMINATION

A. Refer to Section 01 30 00 "Administrative Requirements" for verification of existing conditions prior to beginning Work.
B. Verify that outlet boxes are installed at proper height.
C. Verify that wall openings are neatly cut and will be completely covered by wall plates.
D. Verify that branch circuit wiring installation is completed, tested, and ready for connection to wiring devices.
E. Verify installation location of all boxes to be installed in millwork with Engineer.

3.2 PREPARATION

A. Provide extension rings to bring outlet boxes flush with finished surface.
B. Clean debris from outlet boxes.

3.3 INSTALLATION

A. Install in accordance with NECA "Standard of Installation."
B. Install devices plumb and level.
C. Install switches with OFF position down.
D. Do not share neutral conductor on load side of dimmers.

E. Install receptacles with grounding pole located on the bottom as required by Owner.
F. Connect wiring device grounding terminal to branch circuit equipment grounding conductor.
G. Install decorative plates on switch, receptacle, and blank outlets in finished areas.
H. Connect wiring devices by wrapping conductor around screw terminal.
I. Use jumbo size plates for outlets installed in masonry walls.
J. Install galvanized steel plates on outlet boxes and junction boxes in unfinished areas, above accessible ceilings, and on surface mounted outlets.
K. Install blank cover plate to match other wall plates on all unused boxes.

3.4 INTERFACE WITH OTHER PRODUCTS

A. Coordinate locations of outlet boxes provided under Section 26 05 33.16 "Boxes" to obtain mounting heights specified and indicated on Drawings.
B. Install all wall switches, thermostats, and fire alarm pull stations at 48 inches above finished floor.
C. Install convenience receptacle 18 inches above finished floor.
D. Install convenience receptacle 6 inches above backsplash of counter unless otherwise directed by Engineer.
E. Install telephone jack 18 inches above finished floor.
F. Install telephone for jack wall telephone to position top of telephone at 48 inches above finished floor.

3.5 FIELD QUALITY CONTROL

A. Refer to Section 01 40 00 "Quality Requirements" for field inspection, testing, adjusting, and balancing.
B. Inspect each wiring device for defects.
C. Operate each wall switch with circuit energized and verify proper operation.
D. Verify that each receptacle device is energized.
E. Test each receptacle device for proper polarity.
F. Test each GFCI receptacle device for proper operation.

3.6 ADJUSTING

A. Refer to Section 01 70 00 "Execution and Closeout Requirements" for adjusting installed work.
B. Adjust devices and wall plates to be flush and level.

3.7 CLEANING

A. Refer to Section 01 70 00 "Execution and Closeout Requirements" for cleaning installed Work.
B. Clean exposed surfaces to remove splatters and restore finish.

END OF SECTION

# SECTION 26 28 16.16 - ENCLOSED SWITCHES

## PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Fusible switches.
   2. Non-fusible switches.
   3. Fuses.
B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.

1.2 REFERENCES

A. NEMA KS 1 - Enclosed Switches.
B. NFPA 70 - National Electrical Code.
C. UL 198C - High-Interrupting Capacity Fuses; Current Limiting Type.
D. UL 198E - Class R Fuses.
E. NEMA AB 1 - Molded Case Circuit Breakers.
F. NECA - Standard of Installation.

1.3 SUBMITTALS

A. Submit under provisions of Section 01 33 00 "Submittal Procedures."
B. Product Data: Provide switch ratings and enclosure dimensions.

1.4 QUALITY ASSURANCE

A. Perform Work in accordance with NECA Standard of Installation.

1.5 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this Section with minimum 3 years' documented experience.

1.6 REGULATORY REQUIREMENTS

A. Conform to requirements of NFPA 70.
B. Furnish products listed and classified by UL as suitable for purpose specified and shown.

## PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Eaton.
B. General Electric.
C. Siemens.
D. Square D.

2.2 ENCLOSED SWITCHES

A. Fusible or Non-fusible as indicated.
B. Switch Assemblies: NEMA KS 1, Type HD load interrupter enclosed knife switch with externally operable handle interlocked to prevent opening front cover with switch in ON position. Handle lockable in OFF position.
C. Fuse Clips: Designed to accommodate NEMA FU1, class R fuses.
D. Enclosures: NEMA KS 1.
E. Interior Dry Locations: Type 1.
F. Exterior Locations: Type 3R or 4.
G. NEMA ratings of enclosures as specified on Drawings take precedence over location Specification.
H. Current rating of switch to be equal to or greater than that of the circuit it is interrupting.

2.3 FUSES

A. Manufacturers:
   1. Bussman.
   2. Gould Shawmut.
   3. Littlefuse.
B. Dimensions and Performance: NEMA FU 1, Class as specified or indicated.
C. Voltage: Provide fuses with suitable voltage ratings for phase to phase voltages.
D. Service Entrance: Class L, Bussman Low-peak or equivalent.
E. General Purpose Loads: Class RK1, Bussman Low-peak or equivalent.
F. Motor Loads: Class RK5, Bussman Fusetron or equivalent.

**PART 3 - EXECUTION**

3.1 INSTALLATION

A. Install in accordance with NECA Standard of Installation.
B. Install fuses in all fusible disconnects.
C. Apply adhesive tag on the inside door of all disconnects indicating the NEMA class fuse and size installed.
D. Provide a disconnect switch for all equipment where indicated or required by the National Electrical Code. Coordinate with other disciplines to determine where disconnects are furnished with equipment.

END OF SECTION

# SECTION 26 51 00 - INTERIOR LIGHTING

## PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Luminaires.
   2. Exit signs.
B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.

1.2 REFERENCES

A. NEMA WD 6 - Wiring Devices-Dimensional Requirements.
B. NFPA 70 - National Electrical Code.
C. NFPA 101 - Life Safety Code.

1.3 SUBMITTALS

A. Refer to Section 01 33 00 "Submittal Procedures" for Submittals.
B. Shop Drawings: Indicate dimensions and components for each luminaire that is not a standard product of the manufacturer.
C. Product Data: Provide dimensions, ratings, and performance data.

1.4 SUBSTITUTIONS

A. Refer to Section 26 05 00 "Basic Electrical Methods" for requirements.

1.5 CLOSEOUT SUBMITTALS

A. Refer to Section 01 70 00 "Execution and Closeout Requirements" for Submittals for Project closeout.
B. Operation and Maintenance Data: Submit manufacturer's operation and maintenance instructions for each product.

1.6 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this Section with minimum 3 years' documented experience.

1.7 REGULATORY REQUIREMENTS

A. Conform to requirements of NFPA 70.
B. Conform to requirements of NFPA 101.
C. Products: Listed and classified by UL as suitable for the purpose specified and indicated.

## PART 2 - PRODUCTS

2.1 LUMINAIRES

A. Furnish products as scheduled. Refer to Section 01 60 00 "Product Requirements" for substitutions and product options.

2.2 EXIT SIGNS

A. Furnish products as scheduled.

## PART 3 - EXECUTION

3.1 INSTALLATION

A. Install suspended luminaires using pendants supported from swivel hangers. Provide pendant length required to suspend luminaire at indicated height.
B. Locate recessed ceiling luminaires as indicated on reflected ceiling plan.
C. Install surface mounted luminaires and exit signs plumb and adjust to align with building lines and with each other. Secure to prevent movement.
D. Exposed Grid Ceilings: Support surface mounted luminaires on grid ceiling directly from building structure.
E. Install recessed luminaires to permit removal from below.
F. Install recessed luminaires using accessories and firestopping materials to meet regulatory requirements for fire rating in locations where fire rated ceilings are present.
G. Install clips to secure recessed grid-supported luminaires in place.
H. Install wall mounted luminaires, emergency lighting units and exit signs at height as indicated on the Drawings or as scheduled.
I. Install accessories furnished with each luminaire.
J. Make wiring connections to branch circuit using building wire with insulation suitable for temperature conditions within luminaire.
K. Bond products and metal accessories to branch circuit equipment grounding conductor.
L. Install specified lamps in each emergency lighting unit, exit sign, and luminaire.

3.2 FIELD QUALITY CONTROL

A. Refer to Section 01 40 00 "Quality Requirements" for field inspection, testing, and adjusting.
B. Operate each luminaire after installation and connection. Inspect for proper connection and operation.

3.3 ADJUSTING

A. Refer to Section 01 70 00 "Execution and Closeout Requirements" for adjusting installed work.
B. Aim and adjust luminaires as directed.
C. Position exit sign directional arrows as indicated.
D. Contractor shall readjust occupancy sensor (time and sensitivity) at or before the end of 1-year warranty period.

3.4 CLEANING

A. Refer to Section 01 70 00 "Execution and Closeout Requirements" for cleaning installed Work.
B. Clean electrical parts to remove conductive and deleterious materials.
C. Remove dirt and debris from enclosures.
D. Clean photometric control surfaces as recommended by manufacturer.
E. Clean finishes and touch up damage.

3.5 DEMONSTRATION AND INSTRUCTIONS

A. Refer to Section 01 70 00 "Execution and Closeout Requirements" for demonstrating installed Work.

3.6 PROTECTION OF FINISHED WORK

A. Refer to Section 01 70 00 "Execution and Closeout Requirements" for protecting installed Work.
B. Replace luminaires that have failed prior to Substantial Completion.

END OF SECTION

# SECTION 27 13 43 - TELEPHONE COMMUNICATIONS CABLING

## PART 1 - GENERAL

### 1.1 SUMMARY

A. Section Includes:
   1. Fiber optic cable.
   2. Fiber optic patch panel.
   3. Optical fiber adapters.
   4. Optical fiber connectors.
   5. Jacks and patch panels.
   6. Equipment racks.

B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.

### 1.2 REFERENCES

A. Design, installation, and testing of all passive components shall be in compliance with the following referenced documents using latest edition, including any errata or additions:
   1. TIA J-STD-607 (2002a) - Commercial Building Grounding (Earthing) and Bonding Requirements for Telecommunications.
   2. TIA-526-14 (2010b) - OFSTP-14A Optical Power Loss Measurements of Installed Multimode Fiber Cable Plant.
   3. TIA-568-2 (2009c; Errata 2010) - Commercial Building Telecommunications Cabling Standard - Part 2: Balanced Twisted Pair Cable Components.
   4. TIA-568-C.1 (2009) - Commercial Building Telecommunications Cabling Standard.
   5. TIA-568-C.3 (2008; Corrections 2008) - Optical Fiber Cabling Components Standard.
   6. TIA-569 (2004b; Add 1 2009) - Commercial Building Standard for Telecommunications Pathways and Spaces.

### 1.3 SYSTEM DESCRIPTION AND DEFINITIONS

A. The communication system shall include Category 6 patch panels, Category 6 back bone cables, telephone and data outlets, equipment racks, and connecting hardware. Connecting hardware shall be rated for operation under ambient conditions of 32 degrees Fahrenheit to 140 degrees Fahrenheit.

B. All Work under this Section shall be performed by and all equipment shall be furnished and installed by a qualified telecommunications contractor, hereafter referred to as Contractor. Contractor shall have minimum of 3 years' experience in the application, installation, and testing of the specified systems and equipment.

C. The equipment and hardware provided under this Contract will be from manufacturers that have a minimum of 3 years' experience in producing the types of systems and equipment specified.

D. Cable Requirements and Definitions:
   1. Horizontal Distribution Wiring - Category 6 UTP:
      a. Intra-building cable that cross-connects the workstation data jack to the designated equipment closet. Horizontal wiring shall be four pair, 100-ohm plenum grade Unshielded Twisted Pair (UTP) cable meeting, at a minimum, Category 6 standards. RJ-45 modular connectors will be wired to meet EIA/TIA-568B standards and color code tables. Each connection shall include all eight wires of the four pair cable. All termination patch panels will comply with Category 6 standards. Additionally, all equipment selected will meet the manufacturer's end-to-end solution requirements for warranty. All horizontal wiring shall be secured and/or protected to safeguard against damage. All cables that drop below ceiling level will be concealed conduit.

E. Patch Panels: RJ-45 patch panels shall support all of the RJ-45 connections for a designated LAN zone. Provide fiber optic patch panel. Each port shall be labeled designating the port's destination outlet and port number. All conductors of all cables shall be terminated at both ends. Provide 48 port patch panels and quantity of patch panels required to support communciation cables required plus 2010 spare parts.

F. Data Outlets: Provide Category 6 RJ-45 Outlet as indicated on Drawings.

1.4 SUBMITTALS

A. Product Data: Submit for Category 6 outlet, Category 6 cable, Category 6 patch panel.

B. Test Reports: Reports shall show the field test performed to verify compliance with the specified performance criteria. Test reports shall include record of the physical parameters verified during testing.

## PART 2 - PRODUCTS

2.1 HORIZONTAL DISTRIBUTION WIRING SYSTEM REQUIREMENTS

A. The horizontal cable for communication outlet wiring is defined as multi-conductor, thermoplastic-insulated, copper cable, 24 AWG air core, with four unshielded twisted pairs rated to a performance criteria of Category 6.

B. Cable protection will be of the highest concern. The cable sheath shall be protected from sharp edges. Where cables pass over a sharp edge, a bushing or grommet shall be inserted to protect the cable.

C. To reduce EMI induced into the cabling from fluorescent lights, cable sheath shall be installed in a hanging pathway in the area above the drop ceilings to maintain proper clearance of 5 inches from fluorescent lights.

D. Testing after installation and termination will be required to ensure a rating to Category 6 performance.

E. The cable's outer sheath shall be "blue" in color for data.

F. Horizontal cabling shall be installed in a star topology. Each work area outlet must be cabled directly to a horizontal cross connect in the appropriate equipment closet.

G. Splices shall not be permitted for twisted-pair horizontal cabling.

H. Bridged taps (multiple appearances of the same cable pairs at several distribution points) shall not be permitted in the horizontal cable.

I. In all cases where the overall cable length allows, an additional 5 feet of slack shall be allowed for in the equipment closet.

J. In all cases where the overall cable length allows, an additional 12 inches of cable slack shall be allowed for at the outlet location.

K. In no case shall the slack allowances cause the overall length of the cable to exceed the limits as described in this Section.

L. Horizontal Cable Lengths: The maximum horizontal cable length from the cross connect panel to the workstation outlet shall not exceed 295 feet. An additional 33-foot allowance has been made for the combined length of patch cables and cables used to connect equipment in the work area and equipment rack.

M. Category 6 High Speed LAN Data Specifications:
   1. Electrical Specifications: Impedance 100 ohm plus or minus 15 percent.
   2. See testing specification for Category 6 performance - Execution for Attenuation and NEXT requirements.
   3. Mutual Capacitance: 17 pico Farad per foot maximum.

## 2.2 FIBER OPTIC CABLE

A. Provide in accordance with ICEA S-83-596, TIA/EI-568-C.3, UL and NFPA 70. Cable shall be imprinted with fiber count, fiber type, and aggregate length at regular intervals not to exceed 40 inches.

B. EIA TIA/EIA-492AAAA-A, multimode, 50/125-µm diameter, tight buffered fiber optic cable. Provide a 12 strand multimode fiber optic cable. Provide nonconductive optical fiber general purpose cable (OFN or OFNG), nonconductive optical fiber plenum cable (OFNP), and nonconductive optical fiber riser cable (OFNR) rated cable in accordance with NFPA 70 and UL 910. Type OFNP or OFNR may be substituted for type OFN or OFNG and type OFNP may be substituted for type OFNR in accordance with NFPA 70. The cable cordage jacket, fiber, unit, and group color shall be in accordance with EIA TIA/EIA-598.

C. Provide fiber optic cable from the main Demark room to the IT room serving the building.

## 2.3 FIBER OPTIC PATCH PANEL

A. Provide panel for maintenance and cross-connecting of optical fiber cables. Panel shall be constructed of 16 gauge steel minimum and shall be cabinet mounted and compatible with an EIA-310-D 19-inch equipment rack. Each panel shall be compatible with Type LC connectors. Provide dust cover for unused adapters. The rear of each panel shall have a cable management tray a minimum of 8 inches deep with removable cover, incoming cable strain-relief, and routing guides. Panels shall have each adapter factory numbered and be equipped with laminated plastic nameplates above each adapter. Provide fiber optic patch panel in each LAN hub enclosure.

## 2.4 OPTICAL FIBER ADAPTERS

A. Provide optical fiber adapters suitable for LC connectors. Provide dust cover for adapters. Optical fiber adapters shall comply with EIA TIA-455-21-A for 500 mating cycles.

PACKET 7.502 September 12, 2023
PACKET 11.504 November 14, 2023

2.5 OPTICAL FIBER CONNECTORS

A. Provide in accordance with EIA TIA-455-21-A. Optical fiber connectors shall be type LC in accordance with applicable EIA/TIA standards. The connectors shall provide a maximum attenuation of 0.3 dB at 850, 1,300, 1,310 and 1,550 µm with less than a 0.2 dB change after 500 mating cycles.

2.6 JACKS AND PATCH PANELS

A. Category 6 rating shall be applied to all connecting hardware appropriate for use with UTP cables specified in the EIA/TIA-568-C3. Components used shall be characterized up to a minimum 6 certification and typically intended for emerging technologies and applications. Provide a minimum of 10 percent spare ports in patch panel. Provide separate patch panels for telephone and data wiring.

2.7 EQUIPMENT RACKS

A. Provide 19-inch, 7-foot tall, 4-post. Refer to Drawings for additional rack information.
B. Provide number of racks to support equipment required including spaces as indicated.
C. Provide Cable Management System for each rack as manufactured by Panduit.
D. Provide rack with all associated hardware.

2.8 SUPPORT PRODUCTS

A. All data/telephone cabling shall be in conduit or cable tray.

**PART 3 - EXECUTION**

3.1 GENERAL

A. Contractor shall provide Category 6 cable, Category 6 patch panels, fiber optic patch panel, fiber optic cable, Category 6 outlets, equipment rack, and mounting hardware for LAN HUB. All communication cables shall be terminated and tested.

3.2 CABLE DISTRIBUTION

A. Contractor shall wire the building as indicated on the Contract Drawings in accordance with standards. The building shall be wired using a universal wire plan that must accommodate the cables described in this Specification. The wiring plan is designed to provide adequate pairs to support the campus LAN system's high-speed data connections.
   1. Two four-pair Category 6, 100-ohm plenum rated UTP cables shall be provided for each data port. Cable shall be rated CMP.
   2. Category 6, RJ-45 modular connections shall be wired to meet TIA/EIA 568-C.1 and TIA/EIA 568-C.2 pin, pair and color designation.
   3. Each connection shall include all eight conductors of each of the four pair cable.

PACKET 7.503 September 12, 2023
PACKET 11.505 November 14, 2023

4. Placement relative to nearby noise sources, such as electric power wiring, radio frequency (RF) sources, large motors and generators, induction heaters, fluorescent light ballast, etc., shall be avoided. If necessary, place exposed cables not closer than 4 feet from large motors or transformers, 1-foot from conduit and cables used for electrical power distribution and 5 inches from fluorescent lighting.
5. Unless otherwise instructed by this Specification installation shall be in compliance with EIA/TIA-568-C1, TIA-568-2, TIA-569, NFPA 70, UL Standards, Telecommunications Cabling Standard, EIA/TIA-569 Commercial Building Standard for Telecommunications Pathways and Spaces, and ANSI/NFPA 70 National Electric Code. Installation shall also meet any additional manufacturer's requirements to fulfill warranty Specifications.
6. Provide a minimum of 5 feet of cable slack in the equipment cabinets and 12 inches at the outlet for each cable run to accommodate for future cabling system changes.

3.3 USER WORK AREA

A. Distribution of drop locations will be as indicated on the Contract Documents. Provide the following at each outlet location: Minimum telephone/data: Two Category 6 jack (RJ-45) at each outlet (with two blue cables). Provide number of drops per outlet as indicated on Drawings.
   1. 1,000 Mbite/Sec, Fast Ehternet, Lockable.
   2. Labeling:
      a. All data outlets, patch panel ports, and both ends of each cable shall be clearly and neatly labeled. Two cable identification schemes will be used, one for the end of the cable in the work area, and one for the end of the cable at the patch panel. The labeling schemes shall be as follows:
   3. Work Area Scheme: The first digit of the I.D. number will use a numeric character, designating the LAN zone in which the jack is located. The first digit will be followed by a dash (-). The next character will be an alphabetic designator to identify the patch panel in which the cable is terminated. This character will be followed by a dash (-). The last digit will be a numeric designator corresponding with the patch panel port into which the cable is terminated. For example: The cable to the first port in the first patch panel in LAN Zone 1, will be designated as 1-A-1. The cable to the second port will be 1-A-2. Cables to the second patch panel will be labeled 1-B-1, 1-B-2, 1-B-3, etc. Contractor will be responsible for clearly and visibly labeling each patch panel in accordance with the scheme described above.

4. Patch Panel Scheme: The first portion of the I.D. number will correspond with the room number to which the cable runs. This number will be followed by a dash (-). The next portion of the I.D. number will be an alphabetic designator to identify the faceplate in the work area where the cable is terminated. This character will be followed by a dash (-). The last portion of the I.D. number will be a numeric designator that corresponds with the faceplate jack in which the cable is terminated. For example: The cable to the first jack in the first faceplate in Room 32 will be designated as 32-A-1. The cable to the second jack will be 32-A-2. Cables to the next faceplate in Room 32 will be labeled 32-B-1, 32-B-2, 32-B-3, etc. Contractor will be responsible for clearly and visibly labeling each faceplate in accordance with the scheme described above. Faceplates should be lettered in a clockwise sequence beginning at the main entrance into the room. Jacks on each faceplate will be sequenced in a clockwise direction beginning from the upper left-hand side of the faceplate. In situations where cable is run to an unnumbered room, Contractor will be responsible for coordinating with the appropriate government representative(s) to assign a number to the room.

## 3.4 EQUIPMENT CLOSETS

A. Equipment racks shall be bolted to the floor slab. Cable guides shall be bolted or screwed to racks. Racks shall be installed level.
   1. Patch Panels: High density, low profile patch panels shall be used in all locations. Patch panels may vary in number of ports provided, but shall be of the same manufacturer and series, for all closets. All patch panels will be populated with port counts that equal or exceed total ports needed, plus 10 percent, for each closet.
      a. UTP Patch Panels: All patch panels used to terminate UTP cables shall comply with selected vendors channel rating for Category 6.
         1) Patch cables connecting data work ports to the LAN switches shall be Category 6 compliant, both cordage and couplers. Patch cables shall be constructed of stranded cable. Although the switches and other active components will be provided by the Owner, all patch cables shall be provided by Contractor to provide connection to these active components. Contractor shall also provide each Site a quantity of spare patch cables equal to 10 percent of the total used at that Site. Patch cables shall be appropriately sized to allow for a neat and maintainable system.
         2) All ports will be labeled in accordance with the labeling scheme described in this Specification.

## 3.5 TESTING

A. Horizontal Wiring Testing: Testing of all data horizontal UTP cables shall be performed in accordance with EIA/TIA TSB-1152 to ensure rating of Category 6 performance. Test parameters shall include wire mapping, attenuation, NEXT, and noise measurements to verify a limit below 100 megavolts.

1. All distribution plant facilities associated with the new wiring system shall be tested and verified after installation activities and all major plant rearrangements have been completed. Tested copper pairs shall conform to the design guidelines as specified, as well as manufacturer's standards. Cable plant testing of the data jack will diagnose the presence of all open-loop conductors, noisy lines and distortion, low-loop current, high-loop loss, ringer failures, grounded, shorted or crossed conductors, dB loss, split connections, attenuation range, and/or near-end cross-talk. Contractor will supply complete testing and correction reports/information and explanation to the government, or designated representative, for review prior to acceptance of the system(s). Contractor and the government or designated representative will develop a mutually acceptable format for recording and reporting of testing results prior to the start of testing activities. All errors are to be corrected at Contractor's expense prior to providing the completed records.
    a. Perform Category 6 link tests in accordance with EIA TIA/EIA-568-C.1 and EIA TIA/EIA-568-C.2. Tests shall include wire map, length, insertion loss, NEXT, PSNEXT, ELFEXT, PSELFEXT, return loss, propagation delay, and delay skew.
2. A wire map test will be performed as per TIA/EIA TSB-568-C.3. This test will be used to verify pair to pin termination at each end and check for installation connectivity errors.

B. Horizontal Wiring Testing (Test from Both Ends):
1. The following parameters will be measured from both sides of the link:
    a. Attenuation: A measure of signal loss in the link.
    b. Near-End Crosstalk Loss (NEXT): A measure of signal coupling from one pair to another within a UTP cabling link and is derived from swept/stepping frequency voltage measurements.

C. Noise Testing:
1. The noise level testing associated with the data circuit will only be required if problems occur with the previous test procedures, or if the manufacturer requests it for warranty purposes. If tested, it shall be measured over seven different frequencies.
    a. Noise will be measured by recording interference from all outside sources (for example, power cables). The noise is generally steady throughout the entire frequency range and permanently exists. Acceptable levels will be the lower of the manufacturer's specifications or less than 100 megavolts.
    b. Noise peaks will be measured by adjusting a threshold. All peaks that exceed the threshold will be documented. Acceptable peaks will be determined by the manufacturer's specifications, or by IEEE 802.3 10BaseT Ethernet Standards.

D. Additional Testing:
1. Any additional testing and/or documentation required by the manufacturer to show full compliance with warranty requirements shall be provided to the government by Contractor. Final test results will meet manufacturer's guidelines for the cabling channel.

E. Telecommunications Cabling Testing:

1. Perform telecommunications cabling inspection, verification, and performance tests in accordance with TIA-568-C.1, EIA TIA/EIA-568-C.2, EIA TIA/EIA-568-C.3, and TIA-568-2. Perform optical fiber field inspection tests via attenuation measurements on factory reels and provide results along with manufacturer certification for factory reel tests. Remove failed cable reels from Project Site upon attenuation test failure. All fiber optic, data, and telephone cables shall be terminated and tested.
2. For multimode optical fiber, perform optical fiber end-to-end attenuation tests in accordance with EIA TIA/EIA-568-C.3 and EIA TIA/EIA-526-14 using Method A, Optical Power Meter and Light Source for multimode optical fiber.

END OF SECTION

# SECTION 28 15 00 - INTEGRATED ACCESS CONTROL HARDWARE DEVICES

## PART 1 - GENERAL

### 1.1 SUMMARY

A. This Section includes access control door hardware for the following:
   1. Swinging doors.
   2. Other doors to the extent indicated.
   3. Security or High Security keyed cylinders, including provisions for temporary construction keying, for mechanical override at access control locking hardware to be furnished under Division 08 71 00 "Door Hardware."
   4. Electrified and integrated access control card key door hardware.
   5. Security or high security keyed cylinders, including provisions for temporary construction keying, for mechanical override at access control locking hardware to be furnished under Division 08 71 00 "Door Hardware."

B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.
   2. Division 08 11 13 "Hollow Metal Doors and Frames."
   3. Division 08 41 13 "Aluminum-Framed Entrances and Storefronts."
   4. Division 08 71 00 "Door Hardware."
   5. Division 26 Section "Electrical" for connections to electrical power system and for low-voltage wiring work.
   6. Division 27 Section "Telephone Communications Cabling" for connections to the LAN.

### 1.2 REFERENCES

A. ANSI A117.1 (1998) - Accessible and Usable Buildings and Facilities.
B. IBC - International Building Code
C. NFPA 70 (2002) - National Electrical Code.
D. NFPA 80 (1999) - Fire Doors and Windows.
E. NFPA 101 (2006) - Life Safety Code.
F. UL 294 - Access Control Systems.
G. UL 1076 - Proprietary Burglar Alarm Units and Systems.

### 1.3 SUBMITTALS

A. Product Data: Manufacturer's product data sheets including installation details, material descriptions, dimensions of individual components and profiles, operational descriptions, and finishes.

B. System Operational Descriptions: Complete system operational narratives for the integrated access controlled openings defining the owner's prescribed requirements for the opening functionality. Narratives include, but are not limited to, the following situations: normal secured/unsecured state of door; authorized access; authorized egress; unauthorized access; unauthorized egress; fire alarm and loss of power conditions, and interfaces with other building control systems.

C. Shop Drawings: Details of electrified integrated locking hardware and access control firmware, indicating the following:
   1. Wiring Diagrams: Upon receipt of approved schedules, submit detailed system wiring diagrams for power, signaling, monitoring, communication, and control of the access control system electrified hardware and firmware. Differentiate between manufacturer-installed and field-installed wiring. Include the following:
      a. Elevation diagram of each unique access controlled opening showing location and interconnection of major system components with respect to their placement in the respective door openings.
      b. Complete (risers, point-to-point) access control system block wiring diagrams.
   2. Electrical Coordination: Coordinate with related Electrical Sections the voltages and wiring details required at electrically controlled and operated hardware openings.

D. Proof of Certification: Upon request provide a copy of manufacturer's official certification or accreditation document indicating proof of status as a qualified and authorized provider of the primary access control components.

E. Operating and Maintenance Manuals: Provide manufacturers operating and maintenance manuals for each item comprising the complete access control and site management installation in quantity as required in Division 01, Closeout Submittals. Manual to include name, address, and telephone number of the supplier/integrator providing the installation and the nearest service representatives for each item of equipment included in the system. The final copies delivered after completion of the installation test to include "as built" modifications made during installation, checkout, and acceptance.
   1. As-Built Drawings: During system installation, the Contractor to maintain a separate hard copy set of drawings, elevation diagrams, and wiring diagrams of the access control system to be used for record Drawings. This set to be kept up to date by the Contractor with all changes and additions to the access control system accurately recorded.

F. Warranties and Maintenance: Special warranties and maintenance agreements specified in this Section.

## 1.4 QUALITY ASSURANCE

A. Manufacturers Qualifications: Engage qualified manufacturers with a minimum of 5 years of documented experience in providing access control and security systems equipment and software similar to that indicated for this Project and that have a proven record of successful in-service performance.
   1. Software and access control systems components to have been previously and thoroughly tested together with proven installations similar in size and functionality to the design requirements indicated for this Project.

B. Supplier Qualifications: Supplier/dealers, verifiably authorized and in good standing with the primary product manufacturers, with a minimum of 3 years of experience supplying integrated access control systems similar in material, design, and scope to that indicated for this Project and whose work has resulted in construction with a proven record of successful in-service performance.

C. System Integrator Qualifications: Systems integrators, verifiably factory trained and certified by the primary product manufacturers, with a minimum of 3 years documented experience installing complete integrated access control systems similar in material, design, and scope to that indicated for this Project and whose work has resulted in construction with a proven record of successful in-service performance. Qualifications include, but are not necessarily limited, to the following:
   1. References: Provide a list of references for similar projects including contact name, phone number, name and type of project.
   2. Professional Staffing: Firms to have a dedicated access control systems integration department with full time, experienced professionals on staff experienced in providing on-site consulting services for both electrified door hardware and integrated access control systems installations.
   3. Factory Training: Installation and service technicians are to be competent factory trained and certified personnel capable of maintaining the system.
   4. Service Center: Firms to have a service center capable of providing training, in-stock parts, and emergency maintenance and repairs at the Project Site with 24-hour/7-days a week maximum response time.

D. Installer Qualifications: Certified technicians, verifiably authorized with the primary product manufacturers for installation of IP-Enabled, Wireless, and Power-over-Ethernet Access Control products in accordance with documented instructions and NFPA 80.
   1. ASSA ABLOY access control products are required to be installed only through designated "Preferred Installers."

E. Source Limitations: Obtain the access control door hardware, system firmware, and application software specified in this Section from a single source, qualified supplier/integrator unless otherwise indicated.
   1. Electrified modifications or enhancements made to a source manufacturer's product line by a secondary or third party source will not be accepted.
   2. Provide integrated access control door hardware from the same manufacturer as mechanical door hardware, unless otherwise indicated.

F. Regulatory Requirements: Comply with NFPA 70, NFPA 80, NFPA 101 and ANSI A117.1 requirements and guidelines as directed in the model building code including, but not limited to, the following:
   1. Comply with NFPA 70 "National Electrical Code", including electrical components, devices, and accessories listed and labeled as defined in Article 100 by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
   2. Where indicated to comply with accessibility requirements, comply with Americans with Disabilities Act (ADA), "Accessibility Guidelines for Buildings and Facilities (ADAAG)," ANSI A117.1.
   3. Comply with NFPA 101 "Life Safety Code" for doors in a means of egress.
   4. Comply with NFPA 80 "Fire Doors and Windows" for fire labeled opening assemblies.
   5. The installed access control system shall conform to all local jurisdiction requirements.

G. Keying Conference: Reference Section 08 71 00 "Door Hardware."

H. Pre-Submittal Conference: Conduct conference with attendance by representatives of supplier/dealer, systems integrator, and Contractor to review proper methods and procedures for receiving, handling, and installing the access control system hardware. At completion of installation, provide written documentation that components were applied to manufacturer's instructions and recommendations and according to approved schedules.
   1. Inspect and discuss Division 26 electrical roughing-in and similar preparatory Work performed by other trades.
   2. Review and verify sequence of operation descriptions for each unique access controlled opening.
   3. Review and finalize construction schedule and verify availability of materials.
   4. Review the required inspecting, testing, commissioning, and demonstration procedures.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Do not store electronic access control hardware, software or related accessories at Project Site without prior authorization.
   1. Access Control Firmware and Software: Where approved and directed, inventory upon receipt and store electronic access control equipment in a secure, temperature and humidity controlled environment in original manufacturer's sealed containers.

B. Tag each item or package separately with identification related to the final access control door Schedule, and include basic installation instructions with each item or package.

C. Deliver permanent keys, cores, access control credentials, software, and related accessories directly to Owner via registered mail or overnight package service. Instructions for delivery to the Owner established at the "Pre-Submittal Conference."

1.6 COORDINATION

A. Coordinate quantity and arrangement of assemblies with ceiling space configuration and with components occupying ceiling space, including structural members, pipes, air-distribution components, raceways, cable trays, recessed lighting fixtures, and other items.

B. Access Control System Electrical Coordination: Coordinate the layout and installation of scheduled electrified door hardware, and related access control equipment, with required connections to source power junction boxes, power supplies, detection and monitoring hardware, and fire alarm system.
   1. Door Hardware Interface: The card key access control system to interface and be connected to electronic door control hardware (electromechanical locks, electric strikes, magnetic locks, door position switches, other monitoring contacts, and related auxiliary control devices) as described under Section 08 71 00 "Door Hardware." Coordinate the installation and configuration of specified door hardware being monitored or controlled with the controls, software, and access control hardware specified in this Section.

C. Templates: Obtain and distribute to the parties involved templates for doors, frames, and other work specified to be factory prepared for installing electrified door hardware and access control system components. Check Shop Drawings of other Work to confirm that adequate provisions are made for locating and installing access control system hardware to comply with indicated requirements.

D. Door and Frame Preparation: Reference Division 08, Openings: Doors and corresponding frames are to be prepared, reinforced and pre-wired (if applicable) to receive the installation of the specified electrified, monitoring, signaling, and access control system hardware without additional in-field modifications.

1.7 WARRANTY

A. General Warranty: Reference Division 01, General Requirements. Special warranties specified in this Article will not deprive Owner of other rights Owner may have under other provisions of the Contract Documents and are in addition to, and run concurrent with, other warranties made by Contractor under requirements of the Contract Documents.

B. Warranty Period: Written warranty, executed by manufacturer(s), agreeing to repair or replace components of the installed access control system hardware and software that fails in materials or workmanship, including all related parts and labor, within specified warranty period after final testing and acceptance by the Owner. Failures include, but are not limited to, the following:
   1. Structural failures including excessive deflection, cracking, or breakage.
   2. Faulty operation of the hardware.
   3. Deterioration of metals, metal finishes, and other materials beyond normal weathering.
   4. Electrical component defects and failures within the systems operation.

C. Standard Warranty Period: One year from date of Substantial Completion, unless otherwise indicated.

D. Special Warranty Periods (Electrified Access Control Door Hardware):
   1. Two years for Electrified, Wiegand Output, and IP-Enabled Access Control Door Hardware.

E. Maintenance Support and Extended Service Agreement: Submit for Owner's consideration an optional extended Service Agreement for the installed access control system, including support for software related issues. The extended service agreement is considered elective and is without manufacturer's requirement stipulating mandatory coverage for Owner and/or vendor system support.
   1. A published copy of this agreement to be included with the Submittal package.
   2. Support for the installed access control system components is provided through the vendor under a 24 hour technical assistance program.
   3. Access control and management system components are to be available on a one-day turn around time frame from the manufacturer.
   4. Primary systems manufacturer to offer and provide remote modem or internet access for direct factory support to the vendor. The factory level support to include diagnostics and troubleshooting support on systems related issues at no additional cost to the owner.

F. Access Control Software Upgrades: Version upgrades and "fix" releases to the access control system software are available at no extra charge as long as the version of software provided under this specification remains the current manufacturer's version or for up to 2 years after a new version release.
   1. Major access control software revisions that provide new functionality to the product provided free of charge for up to 1 year from the date of Substantial Completion.

2. Access control system software is to be upgradable as may be required or as necessary, to expand and manage the Owner's Site or Sites. Upgrades are to be offered at a published flat fee for the primary system software, with single license modules included in the primary fee structure. System upgrades offered at a costing structure based upon the original number of licensed modules issued, or on those to be purchased at a future date, are not allowed.
3. As part of the Submittal package, provide a list of available software upgrades and/or expansions modules. List to identify related costs for upgrades, or expansions to the original system, up to the next qualifying operational level.

1.8 MAINTENANCE SERVICE

A. Maintenance Tools and Instructions: Furnish a complete set of specialized tools and maintenance instructions as needed for Owner's continued adjustment, maintenance, and removal and replacement of the installed access control system hardware and components.
B. Maintenance Service: Beginning at Substantial Completion, and running concurrent with the specified warranty period, provide continuous 6 months full maintenance by skilled employees of the systems integrator. Include repair or replacement of worn or defective components, lubrication, cleaning, and adjusting as required for proper door opening operation. Provide parts and supplies as used in the manufacture and installation of original products.

1.9 SCOPE OF WORK

A. On-Line Electronic Access Control System: Furnish and install at the indicated locations the specified electrified and integrated door hardware and access control firmware and software for a completely operational access control and security site management system. System includes, but is not necessarily limited, to the following:
1. Electrified integrated card reader locks and exit hardware, permanent and temporary override cylinders, network control processors, reader controller panels, I/O monitor/control interfaces, door position switches, remote card readers, keypads, and display terminals, access cards and credentials, system application software, special tools, operating manuals, and required cabling and accessories as detailed below and listed in the Access Control Hardware Sets at the end of Part 3.
a. Provide the appropriate number of reader controller panels and I/O monitoring/control expansion interfaces as needed to handle the number of card readers, locking devices, door status devices, and identified alarm inputs specified in this section, and as shown on the security Drawings.
b. Provide manufacturer approved integrated card reader locks, exit hardware, and remote mounted card readers, keypads, and display terminals that are functionally compatible with the specified access control equipment interfaces.
2. Access control system equipment to be installed in an enclosure box compatible with the specified components. This enclosure to include, but is not necessarily limited to, the network control processor, I/O monitor/control interface panels, power supplies, terminal strips, wire ducts, keyed lock cylinder, integrated outlet for A/C power, and standoffs.
a. Enclosure box to be located in the designated IT/Telecom room(s) with connection to local area network for communication back to the central server host.

3. Owner to provide the following:
   a. Central server host computer, client workstations, and hardware peripherals to be from an approved, major line computer manufacturer. Specific information detailing compliance with system requirements to be included in the Project Submittal package as specified.
   b. Owner will be responsible for ensuring that each computer hardware component includes the required interfaces, expansion boards, and peripherals that will be necessary to allow the system to operate as described within this Specification and as indicated on the Drawings.
   c. Power Sourcing and Network Switches: Quantity as required to accommodate installed access control (and video surveillance) devices.
   d. Network Control Processor Connections:
      1) LAN/Ethernet communication ports (jacks) and network interface cards as needed, CAT5e cabling from network router/switch to network control processor, outlet and cover plates, and/or patch cables required for network connection within each designated IT/Telecom room.
      2) Required static IP addresses.
4. Power Supplies, including battery back up and separately fused surge protection, required for the electrified door hardware and access control equipment.
5. Installation, final configuration, and commissioning of electrified door and access control system hardware, communication firmware, power supplies, and related accessories.
6. System application software including installation, programming, and end user training of the access control system demonstrating operating, repair, and maintenance procedures. Include no fewer than 8 hours of on-site central server training for designated personnel (facilities maintenance, security, IT, administration) by a factory certified representative.
7. Provide manufacturer required power controllers, interface boards, and programming that may be required for approved electric latch retraction exit devices supplied under Section 08 71 00 "Door Hardware."
8. Electrical Contractor to provide the following:
   a. Source power wiring (120VAC) as required for the electrified locking and access control hardware, equipment, accessories, and power supplies. This includes quad outlets as required on a dedicated circuit in the designated IT/Telecom room(s) and the related conduit, stub-in, junction boxes, and connectors required for the source power delivery and connections.
   b. Provide required conduit, stub-in, junction, and back boxes for both the electrified locking hardware and access control equipment at each of the access controlled or monitored openings per plan drawings and specs. Supply and install conduit between each of the aforementioned devices and between the electrical junction boxes, power supplies, and access control equipment located on or above the door opening.
      1) At wall mounted remote readers, provide conduit on the secured side of the door 36 inches from the finish floor and 6 inches from the edge of the frame, to the related power supplies and access control equipment.
      2) At electrical hardware power transfers, provide conduit on the secured side of the opening from the power transfer, thru-wire hinge, or serviceable panel location on the frame jamb to the related power supplies and access control equipment.
   c. Electrical Contractor to provide all 120VAC cabling connections and terminations from the electrical junction boxes to these electrical devices.

9. Access Control System Integrator to provide the following:
   a. Low voltage wiring (12/24VDC) and communication cabling (RS-232/RS-485) from network control processors to reader controllers, I/O monitor/control interface panels, electrified and integrated locking hardware, remote card readers, keypads, or display terminals, monitoring and signaling switches, and power supplies. Work includes related connectors, final terminations, and hook-ups required for a complete and functional access controlled opening in accordance with applicable codes and specified system operational narratives.
10. Elevator Contractor to provide the following:
   a. Interface or landing of interface cable onto the elevator call button will be performed by a certified elevator Contractor.
   b. Coordinate with access control systems integrator provisions for a card reader with output allowing the elevator call button to be activated. A validated card read will be required for activation.
11. Full and seamless integration of the Site intrusion alarm service if applicable, with the installed Site access control system software.
12. Final connections to fire alarm system, if required, by electrical and fire alarm system Contractors.
13. Provide permits, submittals, and approvals required by the authority having jurisdiction prior to commencing with Work.
14. Provide manufacturer required power controllers, interface boards, and programming that may be required for approved electric latch retraction exit devices supplied under Section 08 71 00 "Door Hardware."
15. Electrical Contractor Provides the Following:
   a. Provide required conduit, stub-in, junction, and back boxes for both the electrified locking hardware and access control equipment at each of the access controlled or monitored openings per plan drawings and specs. Supply and install conduit between each of the aforementioned devices and between the electrical junction boxes, power supplies, and access control equipment located on or above the door opening.
      1) At off-line remote readers, provide conduit on the secured side of the door 36 inches from the finish floor and 6 inches from the edge of the frame to the related power supplies and access control equipment.
      2) At electrified hardware power transfers provide conduit on the secured side of the opening from the power transfer, thru-wire hinge, or serviceable panel location on the frame jamb to the related power supplies and access control equipment.
   b. Electrical Contractor to provide all 120VAC cabling connections and terminations from the electrical junction boxes to these electrical devices.
16. Access Control System Supplier Provide the Following:
   a. Low voltage wiring (12/24VDC) for the electrified locking hardware, remote card readers, monitoring and signaling switches, and power supplies. Work includes related connectors, final terminations and hook-ups required for a complete and functional access controlled opening in accordance with applicable codes and specified system operational narratives.
17. Typical System Requirements (Owner Provided): Central server host computer, client workstations, and hardware peripherals to be from an approved, major line computer manufacturer. Specific information detailing compliance with system requirements to be included in the Project Submittal package as specified.

## PART 2 - PRODUCTS

2.1 CABLES AND WIRING

A. Data Line Supervision: System to include alarm initiation capability in response to opening, closing, shorting, or grounding of data transmission lines.
B. Install appropriate number of conductor pairs, in the wire gage (AWG) recommended by manufacturer, corresponding to the electronic locking functions specified, amperage drawn and distances covered between the power supplies, power transfer devices, electrified hardware, and access control equipment.

2.2 ACCESS CONTROL HARDWARE FINISHES

A. Standard: Comply with BHMA A156.18.
B. Protect mechanical finishes on exposed surfaces from damage by applying temporary protective coverings before shipping.
C. Where specified, finishes on integrated card key locksets or exit hardware to incorporate an FDA recognized antimicrobial coating (i.e., MicroShield™) listed for use on equipment as a suppressant to the growth and spread of a broad range of bacteria, algae, fungus, mold and mildew.
D. BHMA Designations: Comply with base material and finish as specified.

## PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine scheduled openings, with Installer present, for compliance with requirements for installation tolerances, labeled fire door assembly construction, wall and floor construction, and other conditions affecting performance of the installed access control system.
B. Examine roughing-in for electrical source power to verify actual locations of wiring connections before electrified and integrated access control door hardware installation.
C. Examine roughing-in for LAN and control cable conduit systems to PCs, controllers, card readers, and other cable-connected devices to verify actual locations of conduit and back boxes before device installation.
D. Notify Engineer of any discrepancies or conflicts between the Specifications, Drawings and scheduled access controlled hardware. Proceed only after such discrepancies or conflicts have been resolved in writing.

3.2 PREPARATION

A. Doors and frames at scheduled access controlled openings to be properly prepared to receive specified electrified and access control hardware and connections without additional in-field modifications.

3.3 INSTALLATION

A. Install each item of electronic integrated door hardware and access control equipment to comply with manufacturer's written instructions and according to Specifications.

B. Mounting Heights: Mount electronic integrated door hardware units at heights indicated in following applicable publications, unless specifically indicated or required to comply with governing regulations:
   1. Standard Steel Doors and Frames: DHI's "Recommended Locations for Engineerural Hardware for Standard Steel Doors and Frames."
   2. Wood Doors: DHI WDHS.3, "Recommended Locations for Engineerural Hardware for Wood Flush Doors."
   3. Where indicated to comply with accessibility requirements, comply with ANSI A117.1 "Accessibility Guidelines for Buildings and Facilities."

C. Boxed Power Supplies: Verify locations.
   1. Configuration: Provide the least number of power supplies required to adequately serve doors with access control hardware and equipment.

D. Final connect the system control switches (integrated card key locking hardware, remote readers, keypads, display terminals, biometrics), and monitoring, and signaling equipment to the related controller devices at each opening to properly operate the electrified door and access control hardware according to system operational narratives.

E. Retrofitting: Install each door hardware and access control item to comply with manufacturer's published templates and written instructions. Where cutting and fitting are required to install door hardware onto or into surfaces that are later to be painted or finished in another way, coordinate removal, storage, and reinstallation of surface protective trim units with finishing work specified in Division 9 Sections. Do not install surface-mounted items until finishes have been completed on substrates involved.

F. System Application Software: Install and test application(s) software and databases for the complete and proper operation of systems involved. Assign software license(s) to Owner.

## 3.4 FIELD QUALITY CONTROL

A. Field Inspection (Punch Report): Reference Sections 01 70 00 "Execution and Closeout Requirements." Produce Project punch report for each installed door opening indicating compliance with approved Submittals and verification hardware is properly installed, operating, and adjusted. Include list of items to be completed and corrected, indicating the reasons or deficiencies causing the Work to be incomplete or rejected.
   1. Organization of List: Include separate door opening and deficiencies, and corrective action lists organized by mark, opening remarks and comments, and related opening images and video recordings.

B. Commissioning and Testing Schedule: Prior to final acceptance of the access control system installation, the following testing and documentation to be performed and provided to the Owner.
   1. Inspection: Verify that units and controls are properly installed, connected, and labeled and that interconnecting wires and terminals are identified.
   2. Pre-testing: Program and adjust the system and pretest all components, wiring, and functions to verify they conform to specified requirements. Provide testing reports indicating devices tested, pass/fail status, and actions taken to resolve problem(s) on failed tests.
   3. Acceptance Test Schedule: Correct deficiencies identified by tests and observations and retest until specified requirements are met.
   4. Provide "as designed" Drawings showing each device and wiring connection and electronic enclosure legends indicating cabling in and out.
   5. Provide a complete set of operating instructions for access control hardware devices and a complete software user manual. The documentation includes module reference guides for each electronic enclosure.

3.5 ADJUSTING

A. Adjust and check each operating item of integrated access control door hardware, and each door opening to ensure proper secured operation and function of every unit. Replace units that cannot be adjusted to operate as intended.

3.6 CLEANING AND PROTECTION

A. Clean adjacent surfaces soiled by access control system installation.
B. Clean operating items as necessary to restore proper finish and provide final protection and maintain conditions that ensure access control door hardware is without damage or deterioration at time of owner occupancy.

3.7 DEMONSTRATION

A. Engage an authorized systems manufacturer representative to train Owner's maintenance personnel to adjust, operate, and maintain electronic integrated door hardware and the access control system.

3.8 ACCESS CONTROL HARDWARE SETS

A. The access control system hardware sets listed below represent the design intent and direction of the Owner, Engineer, and security consultant (as applicable). They are intended as a guideline only and should not be considered a detailed opening Schedule. Discrepancies, conflicting, and missing items should be brought to the attention of the Engineer with corrections made prior to the bidding process. Omitted items not included in a hardware set should be scheduled with the appropriate additional hardware required for proper application and functionality.
B. The supplier is responsible for handing and sizing all products and providing the correct option for the appropriate door type and material where more than one is presented in the hardware sets. Quantities listed are for each pair of doors or for each single door.
C. Refer to Section 08 71 00 "Door Hardware" for hardware sets.

PACKET 11.520 November 14, 2023

# SECTION 31 10 00 - SITE CLEARING

## PART 1 - GENERAL

### 1.1 SUMMARY

A. Section Includes:
   1. Removing surface debris.
   2. Removing above- and below-grade site improvements.
   3. Removing designated trees, schrubs, and other plant life.
   4. Disconnecting, capping or sealing.

B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.
   2. Section 01 50 00 "Temporary Facilities and Controls" for temporary erosion- and sedimentation-control measures.

### 1.2 DEFINITIONS

A. Subsoil: Soil beneath the level of subgrade; soil beneath the topsoil layers of a naturally occurring soil profile typified by less than 1 percent organic matter and few soil organisms.

B. Surface Soil: Soil that is present at the top layer of the existing soil profile. In undisturbed areas, surface soil is typically called "topsoil," but in disturbed areas, such as urban environments, the surface soil can be subsoil.

C. Topsoil: Top layer of the soil profile consisting of existing native surface topsoil or existing in-place surface soil; the zone where plant roots grow.

D. Topsoil: Top layer of the soil profile consisting of existing native surface topsoil or existing in-place surface soil; the zone where plant roots grow. Its appearance is generally friable, pervious, and black or a darker shade of brown, gray, or red than underlying subsoil; reasonably free of subsoil, clay lumps, gravel, and other objects larger than 2 inches in diameter; and free of weeds, roots, toxic materials, or other nonsoil materials.

E. Plant-Protection Zone: Area surrounding individual trees, groups of trees, shrubs, or other vegetation to be protected during construction and indicated on Drawings.

F. Tree-Protection Zone: Area surrounding individual trees or groups of trees to be protected during construction and indicated on Drawings.

G. Vegetation: Trees, shrubs, groundcovers, grass, and other plants.

### 1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

### 1.4 MATERIAL OWNERSHIP

A. Except for materials indicated to be stockpiled or otherwise remain Owner's property, cleared materials shall become Contractor's property and shall be removed from Project site.

1.5 SUBMITTALS

A. Section 01 33 00 "Submittal Procedures" for requirements for submittals.
B. Product Data: Submit data for herbicide. Indicate compliance with applicable codes for environmental protection.

1.6 INFORMATIONAL SUBMITTALS

A. Existing Conditions: Documentation of existing trees and plantings, adjoining construction, and site improvements that establishes preconstruction conditions that might be misconstrued as damage caused by site clearing.
   1. Use sufficiently detailed photographs or video recordings.
   2. Include Plans and notations to indicate specific wounds and damage conditions of each tree or other plant designated to remain.
B. Topsoil stripping and stockpiling program.
C. Rock stockpiling program.
D. Record Drawings: Identifying and accurately showing locations of capped utilities and other subsurface structural, electrical, and mechanical conditions.
E. Burning: Documentation of compliance with burning requirements and permitting of authorities having jurisdiction. Identify location(s) and conditions under which burning will be performed.

1.7 QUALITY ASSURANCE

A. Conform to applicable codes for disposal of debris.
B. Perform Work in accordance with State of Texas Highways standard.
C. Topsoil Stripping and Stockpiling Program: Prepare a written program to systematically demonstrate the ability of personnel to properly follow procedures and handle materials and equipment during the Work. Include dimensioned diagrams for placement and protection of stockpiles.
D. Rock Stockpiling Program: Prepare a written program to systematically demonstrate the ability of personnel to properly follow procedures and handle materials and equipment during the Work. Include dimensioned diagrams for placement and protection of stockpiles.

1.8 FIELD CONDITIONS

A. Traffic: Minimize interference with adjoining roads, streets, walks, and other adjacent occupied or used facilities during site-clearing operations.
   1. Do not close or obstruct streets, walks, or other adjacent occupied or used facilities without permission from Owner and authorities having jurisdiction.
   2. Provide alternate routes around closed or obstructed trafficways if required by Owner or authorities having jurisdiction.
B. Improvements on Adjoining Property: Authority for performing site clearing indicated on property adjoining Owner's property will be obtained by Owner before award of Contract.
   1. Do not proceed with work on adjoining property until directed by Engineer.
C. Salvageable Improvements: Carefully remove items indicated to be salvaged and store on Owner's premises where indicated.
D. Utility Locator Service: Notify utility locator service for area where Project is located before site clearing.

E. Do not commence site clearing operations until temporary erosion- and sedimentation-control measures are in place.
F. Soil Stripping, Handling, and Stockpiling: Perform only when the soil is dry or slightly moist.

## PART 2 - PRODUCTS

2.1 MATERIALS

A. Satisfactory Soil Material: Requirements for satisfactory soil material are specified in Section 31 20 00 "Earth Moving."
1. Obtain approved borrow soil material off-site when satisfactory soil material is not available on-site.

## PART 3 - EXECUTION

3.1 PREPARATION

A. Call Local Utility Line Information service not less than 3 workings day before performing Work.
1. Request underground utilities to be located and marked within and surrounding construction areas.

3.2 PREPARATION

A. Protect and maintain benchmarks and survey control points from disturbance during construction.
B. Verify that trees, shrubs, and other vegetation to remain or to be relocated have been flagged and that protection zones have been identified and enclosed according to requirements in Section 01 56 39 "Temporary Tree and Plant Protection."
C. Protect existing site improvements to remain from damage during construction.
1. Restore damaged improvements to their original condition, as acceptable to Owner.
D. Identify waste area for placing removed materials.

3.3 TEMPORARY EROSION AND SEDIMENTATION CONTROL

A. Provide temporary erosion- and sedimentation-control measures to prevent soil erosion and discharge of soil-bearing water runoff or airborne dust to adjacent properties and walkways according to erosion- and sedimentation-control Drawings and requirements of authorities having jurisdiction.
B. Inspect, maintain, and repair erosion- and sedimentation-control measures during construction until permanent vegetation has been established.
C. Remove erosion and sedimentation controls and restore and stabilize areas disturbed during removal.

## 3.4 EXISTING UTILITIES

A. Owner will arrange for disconnecting and sealing indicated utilities that serve existing structures before site clearing, when requested by Contractor.
   1. Verify that utilities have been disconnected and capped before proceeding with site clearing.
B. Locate, identify, disconnect, and seal or cap utilities indicated to be removed.
   1. Arrange with utility companies to shut off indicated utilities.
   2. Owner will arrange to shut off indicated utilities when requested by Contractor.
C. Locate, identify, disconnect, cut, and plug utilities indicated to in place.
D. Interrupting Existing Utilities: Do not interrupt utilities serving facilities occupied by Owner or others, unless permitted under the following conditions, then only after arranging to provide temporary utility services according to requirements indicated:
   1. Notify Engineer not less than 2 days in advance of proposed utility interruptions.
   2. Do not proceed with utility interruptions without Engineer's written permission.
E. Excavate for and remove underground utilities indicated to be removed.
F. Removal of underground utilities is included in earthwork sections, in applicable fire suppression, plumbing, HVAC, electrical, communications, electronic safety and security, and utilities sections.

## 3.5 CLEARING AND GRUBBING

A. Remove obstructions, trees, shrubs, and other vegetation to permit installation of new construction.
   1. Do not remove trees, shrubs, and other vegetation indicated to remain or to be relocated.
   2. Grind down stumps and remove roots larger than 2 inches in diameter, obstructions, and debris to a depth of 18 inches below exposed subgrade.
   3. Use only hand methods or air spade for grubbing within protection zones.
   4. Chip removed tree branches and stockpile in areas approved by Engineer.
   5. Clear undergrowth and deadwood without disturbing subsoil.
   6. Apply herbicide to remaining remaining stumps to inhibit growth.
B. Fill depressions caused by clearing and grubbing operations with satisfactory soil material unless further excavation or earthwork is indicated.
   1. Place fill material in horizontal layers not exceeding a loose depth of 8 inches and compact each layer to a density equal to adjacent original ground.

## 3.6 TOPSOIL STRIPPING

A. Remove sod and grass before stripping topsoil.
B. Strip topsoil to depth indicated on Drawings in a manner to prevent intermingling with underlying subsoil or other waste materials.
   1. Remove subsoil and nonsoil materials from topsoil including clay lumps, gravel, other objects larger than 2 inches in diameter, trash, debris, weeds, roots, and other waste materials.

C. Stockpile topsoil away from edge of excavations without intermixing with subsoil or other materials. Grade and shape stockpiles to drain surface water. Cover to prevent windblown dust and erosion by water.
   1. Limit height of topsoil stockpiles to 72 inches.

2. Do not stockpile topsoil within protection zones.
3. Dispose of surplus topsoil. Surplus topsoil is that which exceeds quantity indicated to be stockpiled or reused.
4. Stockpile surplus topsoil to allow for respreading deeper topsoil.
5. Stockpile sufficient quantities of on-site topsoil to later spread a minimum 6-inch-thickness off topsoil on landscaped (non-paved) Project areas.

## 3.7 SITE IMPROVEMENTS

A. Remove existing above- and below-grade improvements as indicated and necessary to facilitate new construction.

B. Remove slabs, paving, curbs, gutters, and aggregate base as indicated.
1. Unless existing full-depth joints coincide with line of demolition, neatly saw-cut along line of existing pavement to remain before removing adjacent existing pavement. Saw-cut faces vertically.
2. Paint cut ends of steel reinforcement in concrete to remain with 2 coats of antirust coating following coating manufacturer's written instructions. Keep paint off surfaces that will remain exposed.

## 3.8 DISPOSAL OF SURPLUS AND WASTE MATERIALS

A. Remove surplus soil material, unsuitable topsoil, obstructions, demolished materials, and waste materials including trash and debris and legally dispose of them off Owner's property.

END OF SECTION

# SECTION 31 20 00 - EARTH MOVING

## PART 1 - GENERAL

### 1.1 SUMMARY

A. Section Includes:
1. Excavating and filling for rough grading the Site.
2. Preparing subgrades for slabs-on-grade, walks, pavements, turf and grasses, and plants.
3. Excavating and backfilling for buildings and structures.
4. Drainage course for concrete slabs-on-grade.
5. Subbase course for concrete pavements.
6. Subbase course and base course for asphalt paving.
7. Subsurface drainage backfill for walls and trenches.
8. Excavating and backfilling trenches for utilities and pits for buried utility structures.

B. Related Requirements:
1. Division 01 Specification Sections apply to Work of this Section.
2. Section 31 10 00 "Site Clearing" for site stripping, grubbing, stripping and stockpiling topsoil, and removal of above- and below-grade improvements and utilities.

### 1.2 DEFINITIONS

A. Backfill: Soil material or controlled low-strength material used to fill an excavation.
1. Initial Backfill: Backfill placed beside and over pipe in a trench including haunches to support sides of pipe.
2. Final Backfill: Backfill placed over initial backfill to fill a trench.

B. Base Course: Aggregate layer placed between the subbase course and hot-mix asphalt paving.

C. Bedding Course: Aggregate layer placed over the excavated subgrade in a trench before laying pipe.

D. Borrow Soil: Satisfactory soil imported from off-site for use as fill or backfill.

E. Drainage Course: Aggregate layer supporting the slab-on-grade that also minimizes upward capillary flow of pore water.

F. Excavation: Removal of material encountered above subgrade elevations and to lines and dimensions indicated.
1. Authorized Additional Excavation: Excavation below subgrade elevations or beyond indicated lines and dimensions as directed by Engineer. Authorized additional excavation and replacement material will be paid for according to Contract provisions for changes in the Work.
2. Bulk Excavation: Excavation more than 10 feet in width and more than 30 feet in length.
3. Unauthorized Excavation: Excavation below subgrade elevations or beyond indicated lines and dimensions without direction by Engineer. Unauthorized excavation, as well as remedial Work directed by Engineer shall be without additional compensation.

G. Fill: Soil materials used to raise existing grades.

H. Rock: Rock material in beds, ledges, unstratified masses, conglomerate deposits, and boulders of rock material 3/4 cubic yards or more in volume that exceed a standard penetration resistance of 100 blows/2 inches when tested by a geotechnical testing agency according to ASTM D1586.

I. Structures: Buildings, footings, foundations, retaining walls, slabs, tanks, curbs, mechanical and electrical appurtenances, or other man-made stationary features constructed above or below the ground surface.

J. Subbase Course: Aggregate layer placed between the subgrade and base course for hot-mix asphalt pavement or aggregate layer placed between the subgrade and a cement concrete pavement or a cement concrete or hot-mix asphalt walk.

K. Subgrade: Uppermost surface of an excavation or the top surface of a fill or backfill immediately below subbase, drainage fill, drainage course, or topsoil materials.

L. Utilities: On-site underground pipes, conduits, ducts, and cables as well as underground services within buildings.

1.3 INFORMATIONAL SUBMITTALS

A. Qualification Data: For qualified testing agency.

B. Material Test Reports: For each on-site and borrow soil material proposed for fill and backfill as follows:
   1. Classification according to ASTM D2487.
   2. Laboratory compaction curve according to ASTM D698.

C. Preexcavation Photographs or Videotape: Show existing conditions of adjoining construction and site improvements including finish surfaces that might be misconstrued as damage caused by earth-moving operations. Submit before earth moving begins.

1.4 FIELD CONDITIONS

A. Traffic: Minimize interference with adjoining roads, streets, walks, and other adjacent occupied or used facilities during earth-moving operations.
   1. Do not close or obstruct streets, walks, or other adjacent occupied or used facilities without permission from Owner and authorities having jurisdiction.
   2. Provide alternate routes around closed or obstructed traffic ways if required by Owner or authorities having jurisdiction.

B. Utility Locator Service: Notify utility locator service for area where Project is located before beginning earth-moving operations.

C. Do not commence earth-moving operations until temporary site fencing and erosion- and sedimentation-control measures specified in Section 01 50 00 "Temporary Facilities and Controls" and Section 31 10 00 "Site Clearing" are in place.

**PART 2 - PRODUCTS**

2.1 SOIL MATERIALS

A. General: Provide borrow soil materials when sufficient satisfactory soil materials are not available from excavations.

B. Satisfactory Soils: Soil Classification Groups GW, GP, GM, SW, SP, and SM according to ASTM D2487, or a combination of these groups; free of rock or gravel larger than 3 inches in any dimension, debris, waste, frozen materials, vegetation, and other deleterious matter.

C. Unsatisfactory Soils: Soil Classification Groups GC, SC, CL, ML, OL, CH, MH, OH, and PT according to ASTM D2487, or a combination of these groups.
   1. Unsatisfactory soils also include satisfactory soils not maintained within 2 percent of optimum moisture content at time of compaction.

D. Subbase Material: Naturally or artificially graded mixture of natural or crushed gravel, crushed stone, and natural or crushed sand; ASTM D2940; with at least 90 percent passing a 1-1/2-inch sieve and not more than 12 percent passing a No. 200 sieve.

E. Base Course: Naturally or artificially graded mixture of natural or crushed gravel, crushed stone, and natural or crushed sand; ASTM D2940; with at least 95 percent passing a 1-1/2-inch sieve and not more than 8 percent passing a No. 200 sieve.

F. Engineered Fill: Naturally or artificially graded mixture of natural or crushed gravel, crushed stone, and natural or crushed sand; ASTM D2940; with at least 90 percent passing a 1-1/2-inch sieve and not more than 12 percent passing a No. 200 sieve.

G. Bedding Course: Naturally or artificially graded mixture of natural or crushed gravel, crushed stone, and natural or crushed sand; ASTM D2940; except with 100 percent passing a 1-inch sieve and not more than 8 percent passing a No. 200 sieve.

H. Drainage Course: Narrowly graded mixture of washed crushed stone, or crushed or uncrushed gravel; ASTM D448; coarse-aggregate grading Size 57; with 100 percent passing a 1-1/2-inch sieve and zero to 5 percent passing a No. 8 sieve.

I. Filter Material: Narrowly graded mixture of natural or crushed gravel, or crushed stone and natural sand; ASTM D448; coarse-aggregate grading Size 67; with 100 percent passing a 1-inch sieve and zero to 5 percent passing a No. 4 sieve.

J. Sand: ASTM C33; fine aggregate.

K. Impervious Fill: Clayey gravel and sand mixture capable of compacting to a dense state.

2.2 ACCESSORIES

A. Detectable Warning Tape: Acid- and alkali-resistant, polyethylene film warning tape manufactured for marking and identifying underground utilities, a minimum of 6 inches-wide and 4 mils thick, continuously inscribed with a description of the utility, with metallic core encased in a protective jacket for corrosion protection, detectable by metal detector when tape is buried up to 30 inches deep; colored as follows:
   1. Red: Electric.
   2. Yellow: Gas, oil, steam, and dangerous materials.
   3. Orange: Telephone and other communications.
   4. Blue: Water systems.
   5. Green: Sewer systems.

## PART 3 - EXECUTION

3.1 PREPARATION

A. Protect structures, utilities, sidewalks, pavements, and other facilities from damage caused by settlement, lateral movement, undermining, washout, and other hazards created by earth-moving operations.

B. Protect and maintain erosion and sedimentation controls during earth-moving operations.

C. Protect subgrades and foundation soils from freezing temperatures and frost. Remove temporary protection before placing subsequent materials.

3.2 DEWATERING

A. Provide dewatering system of sufficient scope, size, and capacity to control hydrostatic pressures and to lower, control, remove, and dispose of ground water and permit excavation and construction to proceed on dry, stable subgrades.

B. Prevent surface water and ground water from entering excavations, from ponding on prepared subgrades, and from flooding Project site and surrounding area.

C. Protect subgrades from softening, undermining, washout, and damage by rain or water accumulation.

1. Reroute surface water runoff away from excavated areas. Do not allow water to accumulate in excavations. Do not use excavated trenches as temporary drainage ditches.

D. Dispose of water removed by dewatering in a manner that avoids endangering public health, property, and portions of Work under construction or completed. Dispose of water and sediment in a manner that avoids inconvenience to others.

3.3 EXPLOSIVES

A. Explosives: Do not use explosives.

3.4 EXCAVATION, GENERAL

A. Unclassified Excavation: Excavate to subgrade elevations regardless of the character of surface and subsurface conditions encountered. Unclassified excavated materials may include rock, soil materials, and obstructions. No changes in the Contract Sum or the Contract Time will be authorized for rock excavation or removal of obstructions.

1. If excavated materials intended for fill and backfill include unsatisfactory soil materials and rock, replace with satisfactory soil materials.
2. Remove rock to lines and grades indicated to permit installation of permanent construction without exceeding the following dimensions:
   a. 24 inches outside of concrete forms other than at footings.
   b. 12 inches outside of concrete forms at footings.
   c. 6 inches outside of minimum required dimensions of concrete cast against grade.
   d. Outside dimensions of concrete walls indicated to be cast against rock without forms or exterior waterproofing treatments.
   e. 6 inches beneath bottom of concrete slabs-on-grade.
   f. 6 inches beneath pipe in trenches and the greater of 24 inches wider than pipe or 42 inches wide.

3.5 EXCAVATION FOR STRUCTURES

A. Excavate to indicate elevations and dimensions within a tolerance of plus or minus 1-inch. If applicable, extend excavations a sufficient distance from structures for placing and removing concrete formwork, for installing services and other construction, and for inspections.

1. Excavations for Footings and Foundations: Do not disturb bottom of excavation. Excavate by hand to final grade just before placing concrete reinforcement. Trim bottoms to required lines and grades to leave solid base to receive other Work.

2. Pile Foundations: Stop excavations 6 to 12 inches above bottom of pile cap before piles are placed. After piles have been driven, remove loose and displaced material. Excavate to final grade leaving solid base to receive concrete pile caps.
3. Excavation for Underground Tanks, Basins, and Mechanical or Electrical Utility Structures: Excavate to elevations and dimensions indicated within a tolerance of plus or minus 1-inch. Do not disturb bottom of excavations intended as bearing surfaces.

## 3.6 EXCAVATION FOR WALKS AND PAVEMENTS

A. Excavate surfaces under walks and pavements to indicated lines, cross sections, elevations, and subgrades.

## 3.7 EXCAVATION FOR UTILITY TRENCHES

A. Excavate trenches to indicated gradients, lines, depths, and elevations.
   1. Beyond building perimeter, excavate trenches to allow installation of top of pipe below frost line.
B. Excavate trenches to uniform widths to provide the following clearance on each side of pipe or conduit. Excavate trench walls vertically from trench bottom to 12 inches higher than top of pipe or conduit unless otherwise indicated.
   1. Clearance: 12 inches each side of pipe or conduit.
C. Trench Bottoms: Excavate and shape trench bottoms to provide uniform bearing and support of pipes and conduit. Shape subgrade to provide continuous support for bells, joints, and barrels of pipes and for joints, fittings, and bodies of conduits. Remove projecting stones and sharp objects along trench subgrade.
   1. For pipes and conduit less than 6 inches in nominal diameter, hand-excavate trench bottoms and support pipe and conduit on an undisturbed subgrade.
   2. For pipes and conduit 6 inches or larger in nominal diameter, shape bottom of trench to support bottom 90 degrees of pipe or conduit circumference. Fill depressions with tamped sand backfill.
   3. For flat-bottomed, multiple-duct conduit units, hand-excavate trench bottoms and support conduit on an undisturbed subgrade.
   4. Excavate trenches 6 inches deeper than elevation required in rock or other unyielding bearing material to allow for bedding course.

## 3.8 SUBGRADE INSPECTION

A. Notify Engineer when excavations have reached required subgrade.
B. If Engineer determines that unsatisfactory soil is present, continue excavation and replace with compacted backfill or fill material as directed.
C. Proof-roll subgrade below the building slabs and pavements with a pneumatic-tired and loaded 10-wheel, tandem-axle dump truck weighing not less than 15 tons to identify soft pockets and areas of excess yielding. Do not proof-roll wet or saturated subgrades.
   1. Completely proof-roll subgrade in 1 direction, repeating proof-rolling in direction perpendicular to first direction. Limit vehicle speed to 3 mph.
   2. Excavate soft spots, unsatisfactory soils, and areas of excessive pumping or rutting, as determined by Engineer, and replace with compacted backfill or fill as directed.

D. Authorized additional excavation and replacement material will be paid for according to Contract provisions for changes in the Work.

E. Reconstruct subgrades damaged by freezing temperatures, frost, rain, accumulated water, or construction activities, as directed by Engineer, without additional compensation.

## 3.9 UNAUTHORIZED EXCAVATION

A. Fill unauthorized excavation under foundations or wall footings by extending bottom elevation of concrete foundation or footing to excavation bottom, without altering top elevation. Lean concrete fill, with 28-day compressive strength of 2,500 psi, may be used when approved by Engineer.
   1. Fill unauthorized excavations under other construction, pipe, or conduit as directed by Engineer.

## 3.10 STORAGE OF SOIL MATERIALS

A. Stockpile borrow soil materials and excavated satisfactory soil materials without intermixing. Place, grade, and shape stockpiles to drain surface water. Cover to prevent windblown dust.
   1. Stockpile soil materials away from edge of excavations. Do not store within drip line of remaining trees.

## 3.11 BACKFILL

A. Place and compact backfill in excavations promptly, but not before completing the following:
   1. Construction below finish grade including, where applicable, subdrainage, dampproofing, waterproofing, and perimeter insulation.
   2. Surveying locations of underground utilities for Record Documents.
   3. Testing and inspecting underground utilities.
   4. Removing concrete formwork.
   5. Removing trash and debris.
   6. Removing temporary shoring, bracing, and sheeting.
   7. Installing permanent or temporary horizontal bracing on horizontally supported walls.

B. Place backfill on subgrades free of mud, frost, snow, or ice.

## 3.12 UTILITY TRENCH BACKFILL

A. Place backfill on subgrades free of mud, frost, snow, or ice.

B. Place and compact bedding course on trench bottoms and where indicated. Shape bedding course to provide continuous support for bells, joints, and barrels of pipes and for joints, fittings, and bodies of conduits.

C. Trenches under Footings: Backfill trenches excavated under footings and within 18 inches of bottom of footings with satisfactory soil; fill with concrete to elevation of bottom of footings. Concrete is specified in Section 03 30 00 "Cast-in-Place Concrete."

D. Trenches under Roadways: Provide 4-inch thick, concrete-base slab support for piping or conduit less than 30 inches below surface of roadways. After installing and testing, completely encase piping or conduit in a minimum of 4 inches of concrete before backfilling or placing roadway subbase course. Concrete is specified in Section 03 30 00 "Cast-in-Place Concrete."

E. Backfill voids with satisfactory soil while removing shoring and bracing.

F. Initial Backfill:
   1. Soil Backfill: Place and compact initial backfill of satisfactory soil, free of particles larger than 1 inch in any dimension, to a height of 12 inches over the pipe or conduit.
      a. Carefully compact initial backfill under pipe haunches and compact evenly up on both sides and along the full length of piping or conduit to avoid damage or displacement of piping or conduit. Coordinate backfilling with utilities testing.
   2. Controlled Low-Strength Material: Place initial backfill of controlled low-strength material to a height of 12 inches over the pipe or conduit. Coordinate backfilling with utilities testing.

G. Final Backfill:
   1. Soil Backfill: Place and compact final backfill of satisfactory soil to final subgrade elevation.

H. Warning Tape: Install warning tape directly above utilities 12 inches below finished grade except 6 inches below subgrade under pavements and slabs.

## 3.13 SOIL FILL

A. Plow, scarify, bench, or break up sloped surfaces steeper than 1 vertical to 4 horizontal so fill material will bond with existing material.

B. Place and compact fill material in layers to required elevations as follows:
   1. Under grass and planted areas, use satisfactory soil material.
   2. Under walks and pavements, use satisfactory soil material.
   3. Under steps and ramps, use engineered fill.
   4. Under building slabs, use engineered fill.
   5. Under footings and foundations, use engineered fill.

C. Place soil fill on subgrades free of mud, frost, snow, or ice.

## 3.14 SOIL MOISTURE CONTROL

A. Uniformly moisten or aerate subgrade and each subsequent fill or backfill soil layer before compaction to within 2 percent of optimum moisture content.
   1. Do not place backfill or fill soil material on surfaces that are muddy, frozen, or contain frost or ice.
   2. Remove and replace, or scarify and air dry, otherwise satisfactory soil material that exceeds optimum moisture content by 2 percent and is too wet to compact to specified dry unit weight.

## 3.15 COMPACTION OF SOIL BACKFILLS AND FILLS

A. Place backfill and fill soil materials in layers not more than 8 inches in loose depth for material compacted by heavy compaction equipment and not more than 4 inches in loose depth for material compacted by hand-operated tampers.

B. Place backfill and fill soil materials evenly on all sides of structures to required elevations and uniformly along the full length of each structure.

C. Compact soil materials to not less than the following percentages of maximum dry unit weight according to ASTM D698:

1. Under structures, building slabs, steps, and pavements, scarify and recompact top 12 inches of existing subgrade and each layer of backfill or fill soil material at 95 percent.
2. Under walkways, scarify and recompact top 6 inches below subgrade and compact each layer of backfill or fill soil material at 92 percent.
3. Under turf or unpaved areas, scarify and recompact top 6 inches below subgrade and compact each layer of backfill or fill soil material at 85 percent.
4. For utility trenches, compact each layer of initial and final backfill soil material at 85 percent.

## 3.16 GRADING

A. General: Uniformly grade areas to a smooth surface, free of irregular surface changes. Comply with compaction requirements and grade to cross sections, lines, and elevations indicated.
   1. Provide a smooth transition between adjacent existing grades and new grades.
   2. Cut out soft spots, fill low spots, and trim high spots to comply with required surface tolerances.

B. Site Rough Grading: Slope grades to direct water away from buildings and to prevent ponding. Finish subgrades to elevations required to achieve indicated finish elevations, within the following subgrade tolerances:
   1. Turf or Unpaved Areas: Plus or minus 1 inch.
   2. Walks: Plus or minus 1 inch.
   3. Pavements: Plus or minus 1/2-inch.

C. Grading inside Building Lines: Finish subgrade to a tolerance of 1/2-inch when tested with a 10-foot straightedge.

## 3.17 SUBBASE AND BASE COURSES UNDER PAVEMENTS AND WALKS

A. Place subbase course and base course on subgrades free of mud, frost, snow, or ice.

B. On prepared subgrade, place subbase course and base course under pavements and walks as follows:
   1. Place base course material over subbase course under hot-mix asphalt pavement.
   2. Shape subbase course and base course to required crown elevations and cross-slope grades.
   3. Place subbase course and base course 6 inches or less in compacted thickness in a single layer.
   4. Place subbase course and base course that exceeds 6 inches in compacted thickness in layers of equal thickness with no compacted layer more than 6 inches thick or less than 3 inches thick.

C. Pavement Shoulders: Place shoulders along edges of subbase course and base course to prevent lateral movement. Construct shoulders, at least 12 inches wide of satisfactory soil materials and compact simultaneously with each subbase and base layer to not less than 95 percent of maximum dry unit weight according to ASTM D698.

## 3.18 FIELD QUALITY CONTROL

A. Testing Agency: Owner will engage a qualified geotechnical engineering testing agency to perform tests and inspections.

B. Allow testing agency to inspect and test subgrades and each fill or backfill layer. Proceed with subsequent earth moving only after test results for previously completed Work comply with requirements.

C. Footing Subgrade: At footing subgrades, at least 1 test of each soil stratum will be performed to verify design bearing capacities. Subsequent verification and approval of other footing subgrades may be based on a visual comparison of subgrade with tested subgrade when approved by Engineer.

D. Testing agency will test compaction of soils in place according to ASTM D1556, ASTM D2167, ASTM D2937, and ASTM D6938, as applicable. Tests will be performed at the following locations and frequencies:

1. Paved and Building Slab Areas: At subgrade and at each compacted fill and backfill layer, at least 1 test for every 2,000 sq. ft. or less of paved area or building slab but in no case fewer than 3 tests.
2. Foundation Wall Backfill: At each compacted backfill layer, at least 1 test for every 100 feet or less of wall length but no fewer than 2 tests.
3. Trench Backfill: At each compacted initial and final backfill layer, at least 1 test for every 150 feet or less of trench length but no fewer than 2 tests.

E. When testing agency reports that subgrades, fills, or backfills have not achieved degree of compaction specified, scarify and moisten or aerate, or remove and replace soil materials to depth required; recompact and retest until specified compaction is obtained.

## 3.19 PROTECTION

A. Protecting Graded Areas: Protect newly graded areas from traffic, freezing, and erosion. Keep free of trash and debris.

B. Repair and reestablish grades to specified tolerances where completed or partially completed surfaces become eroded, rutted, settled, or where they lose compaction due to subsequent construction operations or weather conditions.

1. Scarify or remove and replace soil material to depth as directed by Engineer; reshape and recompact.

C. Where settling occurs before Project correction period elapses, remove finished surfacing, backfill with additional soil material, compact, and reconstruct surfacing.

1. Restore appearance, quality, and condition of finished surfacing to match adjacent Work, and eliminate evidence of restoration to greatest extent possible.

## 3.20 DISPOSAL OF SURPLUS AND WASTE MATERIALS

A. Remove surplus satisfactory soil and waste materials, including unsatisfactory soil, trash, and debris, and legally dispose of them off Owner's property.

END OF SECTION

# SECTION 31 22 13 - ROUGH GRADING

## PART 1 - GENERAL

### 1.1 SUMMARY

A. Section Includes:
   1. Excavating topsoil.
   2. Excavating subsoil.
   3. Cutting, grading, filling, rough contouring, and compacting site for site structures and building pads.

B. Related Sections:
   1. Division 01 Specification Sections apply to Work of this Section.
   2. Section 31 10 00 "Site Clearing" for excavating topsoil.
   3. Section 31 23 23 "Fill" for general building area backfilling.

### 1.2 REFERENCES

A. ASTM International:
   1. ASTM C136 - Standard Test Method for Sieve Analysis of Fine and Coarse Aggregates.
   2. ASTM D698 - Standard Test Method for Laboratory Compaction Characteristics of Soil Using Standard Effort (12,400 ft-lbf/ft3 (600 kN-m/m3).
   3. ASTM D1556 - Standard Test Method for Density and Unit Weight of Soil in Place by the Sand-Cone Method.
   4. ASTM D1557 - Standard Test Methods for Laboratory Compaction Characteristics of Soil Using Modified Effort (56,000 ft-lbf/ft3 (2,700 kN-m/m3).
   5. ASTM D2167 - Standard Test Method for Density and Unit Weight of Soil in Place by the Rubber Balloon Method.
   6. ASTM D2419 - Standard Test Method for Sand Equivalent Value of Soils and Fine Aggregate.
   7. ASTM D2434 - Standard Test Method for Permeability of Granular Soils (Constant Head).
   8. ASTM D2922 - Standard Test Method for Density of Soil and Soil-Aggregate in Place by Nuclear Methods (Shallow Depth).
   9. ASTM D3017 - Standard Test Method for Water Content of Soil and Rock in Place by Nuclear Methods (Shallow Depth).

### 1.3 SUBMITTALS

A. Section 01 33 00 "Submittal Procedures."
B. Samples: Submit, in air-tight containers, 10-pound sample of each type of fill to testing laboratory.
C. Materials Source: Submit name of imported materials suppliers.
D. Manufacturer's Certificate: Certify Products meet or exceed specified requirements.

1.4 SUSTAINABLE DESIGN SUBMITTALS

A. Manufacturer's Certificate: Certify products meet or exceed specified sustainable design requirements.

1.5 CLOSEOUT SUBMITTALS

A. Section 01 70 00 "Execution and Closeout Requirements" for requirements for submittals.
B. Project Record Documents: Accurately record actual locations of utilities remaining by horizontal dimensions, elevations or inverts, and slope gradients.

1.6 QUALITY ASSURANCE

A. Perform Work in accordance with ASTM C136, ASTM D2419, and ASTM D2434.
B. Perform Work in accordance with Highways standard.

**PART 2 - PRODUCTS**

2.1 MATERIALS

A. Topsoil: Type S3 as specified in Section 31 05 13 "Soils for Earthwork."
B. Subsoil Fill: Type as specified in Section 31 05 13 "Soils for Earthwork."
C. Structural Fill: Type as specified in Section 31 05 13 "Soils for Earthwork."

**PART 3 - EXECUTION**

3.1 EXAMINATION

A. Section 01 30 00 "Administrative Requirements" for verification of existing conditions before starting work.
B. Verify survey benchmark and intended elevations for Work are as indicated on Drawings.

3.2 PREPARATION

A. Call Local Utility Line Information service not less than 3 working days before performing Work.
   1. Request underground utilities to be located and marked within and surrounding construction areas.
B. Identify required lines, levels, contours, and datum.
C. Notify utility company to remove and relocate utilities.
D. Protect utilities indicated to remain from damage.

E. Protect plant life, lawns, rock outcropping, and other features remaining as portion of final landscaping.
F. Protect bench marks, sidewalks, paving, and curbs from excavating equipment and vehicular traffic.

3.3 SUBSOIL EXCAVATION

A. Excavate subsoil from areas to be further excavated, relandscaped, or regraded.
B. Do not excavate wet subsoil or excavate and process wet material to obtain optimum moisture content.
C. When excavating through roots, perform Work by hand and cut roots with sharp axe.
D. Remove excess subsoil not intended for reuse from site.
E. Stockpile subsoil in area designated on site to depth not exceeding 8 feet and protect from erosion.
F. Benching Slopes: Horizontally bench existing slopes greater than 1:4 to key placed fill material to slope to provide firm bearing.
G. Stability: Replace damaged or displaced subsoil as specified for fill.

3.4 FILLING

A. Fill areas to contours and elevations with unfrozen materials.
B. Install Work in accordance with Highways standards.

3.5 TOLERANCES

A. Section 01 40 00 "Quality Requirements" for tolerances.
B. Top Surface of Subgrade: Plus or minus 1/10-foot from required elevation.

3.6 FIELD QUALITY CONTROL

A. Section 01 40 00 "Quality Requirements" for field inspecting, testing, adjusting, and balancing.
B. Perform laboratory material tests in accordance with ASTM D1557.
C. Perform in place compaction tests in accordance with the following:
    1. Density Tests: ASTM D2922.
    2. Moisture Tests: ASTM D3017.
D. When tests indicate Work does not meet specified requirements, remove Work, replace and retest.
    1. Paved and Building Slab Areas: At subgrade and at each compacted fill and backfill layer, at least one test for every 2,000 square feet or less of paved area or building slab, but in no case fewer than three tests.
    2. Foundation Walk Backfill: At each compacted backfill layer, at least one test for every 100 feet or less of wall length, but no fewer than two tests.
    3. Trench Backfill: At each compacted initial and final backfill layer, at least one tesst for every 150 feet or less of trench length but no fewer than two tests.

END OF SECTION

# SECTION 31 23 23 - FILL

## PART 1 - GENERAL

### 1.1 SUMMARY

A. Section Includes:
   1. Backfilling building perimeter to subgrade elevations.
   2. Backfilling site structures to subgrade elevations.
   3. Fill under slabs on grade.
   4. Fill under paving.
   5. Fill for over-excavation.

B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.
   2. Section 03 30 00 "Cast-in-Place Concrete" for concrete materials.
   3. Section 31 22 13 "Rough Grading" for Site filling.

### 1.2 REFERENCE STANDARDS

A. American Association of State Highway and Transportation Officials:
   1. AASHTO T 180 - Standard Method of Test for Moisture-Density Relations of Soils Using a 4.54-kg Rammer and a 457-mm Drop.

B. ASTM International:
   1. ASTM D698 - Standard Test Methods for Laboratory Compaction Characteristics of Soil Using Standard Effort (12,400 ft-lbf/ft3).
   2. ASTM D1556 - Standard Test Method for Density and Unit Weight of Soil in Place by Sand-Cone Method.
   3. ASTM D1557 - Standard Test Methods for Laboratory Compaction Characteristics of Soil Using Modified Effort (56,000 ft-lbf/ft3).
   4. ASTM D2167 - Standard Test Method for Density and Unit Weight of Soil in Place by the Rubber Balloon Method.
   5. ASTM D6031 - Standard Test Method for Logging In Situ Moisture Content and Density of Soil and Rock by the Nuclear Method in Horizontal, Slanted, and Vertical Access Tubes.
   6. ASTM D6938 - Standard Test Method for In-Place Density and Water Content of Soil and Soil-Aggregate by Nuclear Methods (Shallow Depth).

## PART 2 - PRODUCTS (Not Used)

## PART 3 - EXECUTION

### 3.1 EXAMINATION

A. Section 01 70 00 "Execution and Closeout Requirements" for installation examination.

B. Verify that subdrainage, dampproofing, and waterproofing installations have been inspected.

C. Verify that underground tanks are anchored to their own foundations to avoid flotation after backfilling.

D. Verify structural integrity of unsupported walls to support loads imposed by fill.

## 3.2 PREPARATION

A. Section 01 70 00 "Execution and Closeout Requirements" for installation preparation.
B. Compact subgrade to specified density requirements for subsequent backfill materials.
C. Soft Subgrade:
   1. Cut out soft areas of subgrade not capable of compaction in place.
   2. Backfill with structural fill and compact to density equal to or greater than specified requirements for subsequent fill material.
D. Scarify subgrade surface to depth of 6 inches.

## 3.3 BACKFILLING

A. Backfill areas to contours and elevations.
B. Systematically backfill to allow maximum time for natural settlement.
C. Do not backfill over porous, wet, frozen, or spongy subgrade surfaces and do not backfill with frozen materials.
D. Place fill material in continuous layers and compact.
E. Use placement method that does not disturb or damage tilities in trench.
F. Maintain optimum moisture content of fill materials to attain required compaction density.
G. Structures:
   1. Backfill against supported foundation walls.
   2. Backfill simultaneously on each side of unsupported foundation walls until supports are in place.
   3. Slope grade away from building minimum 2 percent slope for minimum distance of 10 feet.
H. Make gradual grade changes and blend slope into level areas.
I. Remove surplus backfill materials from Site.
J. Leave fill material stockpile areas free of excess fill materials.

## 3.4 TOLERANCES

A. Section 01 40 00 "Quality Requirements" for tolerances.
B. Top Surface of Backfilling within Building Areas: Plus or minus 1 inch from required elevations.
C. Top Surface of Backfilling under Paved Areas: Plus or minus 1 inch from required elevations.
D. Top Surface of General Backfilling: Plus or minus 1 inch from required elevations.

## 3.5 PROTECTION

A. Section 01 70 00 "Execution and Closeout Requirements" for protecting finished Work.
B. Reshape and recompact fills subjected to vehicular traffic during construction.

END OF SECTION

# SECTION 32 11 23 - AGGREGATE BASE COURSES

## PART 1 - GENERAL

### 1.1 SUMMARY

A. Section Includes:
   1. Aggregate subbase.
   2. Aggregate base course.

B. Related Sections:
   1. Division 01 Specification Sections apply to Work of this Section.
   2. Section 31 22 13 "Rough Grading" for preparation of site for base course.
   3. Section 32 05 16 "Aggregates for Exterior Improvements."
   4. Section 32 12 16 "Asphalt Paving:" Finish asphalt courses.

### 1.2 REFERENCES

A. American Association of State Highway and Transportation Officials:
   1. AASHTO M288 - Standard Specification for Geotextile Specification for Highway Applications.

B. ASTM International:
   1. ASTM D1556 - Standard Test Method for Density and Unit Weight of Soil in Place by the Sand-Cone Method.
   2. ASTM D2167 - Standard Test Method for Density and Unit Weight of Soil in Place by the Rubber Balloon Method.
   3. ASTM D2922 - Standard Test Method for Density of Soil and Soil-Aggregate in Place by Nuclear Methods (Shallow Depth).
   4. ASTM D2940 - Standard Specification for Graded Aggregate Material For Bases or Subbases for Highways or Airports.
   5. ASTM D3017 - Standard Test Method for Water Content of Soil and Rock in Place by Nuclear Methods (Shallow Depth).

### 1.3 SUBMITTALS

A. Section 01 33 00 "Submittal Procedures."

B. Product Data:
   1. Submit data for geotextile fabric and herbicide.

C. Samples: Submit, in air-tight containers, 10-pound sample of each type of aggregate fill to testing laboratory.

D. Materials Source: Submit name of aggregate materials suppliers.

E. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

### 1.4 QUALITY ASSURANCE

A. Furnish each aggregate material from single source throughout the Work.

B. Perform Work according to State of Texas Highways standards.

C. Maintain 1 copy of each document on site.

## PART 2 - PRODUCTS

2.1 AGGREGATE MATERIALS

A. Conform with requirementss of Type A, Grades 1 or 2, Item 247 of the TxDOT Standard Specifications for Construction of Highways, Street, and Bridges.

## PART 3 - EXECUTION

3.1 EXAMINATION

A. Section 01 30 00 "Administrative Requirements" for verification of existing conditions before starting Work.
B. Verify compacted substrate is dry.
   1. Proof roll substrate with in minimum 3 perpendicular passes to identify soft spots.
   2. Remove soft substrate and replace with compacted fill as specified in Section 31 23 23 "Fill."
C. Verify substrate has been inspected, gradients and elevations are correct.

3.2 PREPARATION

A. Correct irregularities in substrate gradient and elevation by scarifying, reshaping, and re-compacting.
B. Do not place fill on soft, muddy, or frozen surfaces.

3.3 AGGREGATE PLACEMENT

A. Spread aggregate over prepared substrate to total compacted thickness indicated on Drawings.
B. Roller compact aggregate to 95 percent maximum density.
C. Level and contour surfaces to elevations, profiles, and gradients indicated.
D. Add small quantities of fine aggregate to coarse aggregate when required to assist compaction.
E. Maintain optimum moisture content of fill materials to attain specified compaction density.
F. Use mechanical tamping equipment in areas inaccessible to compaction equipment.

3.4 TOLERANCES

A. Section 01 40 00 "Quality Requirements" for tolerances.
B. Maximum Variation From Flat Surface: 1/2-inch measured with 10-foot straight edge.
C. Maximum Variation From Thickness: 1/4-inch.
D. Maximum Variation From Elevation: 1/2-inch.

3.5 FIELD QUALITY CONTROL

A. Section 01 70 00 "Execution and Closeout Requirements" for field inspecting, testing, adjusting, and balancing.
B. Compaction testing will be performed according to ASTM D1557.

C. When tests indicate Work does not meet specified requirements, remove Work, replace and retest.

D. Frequency of Tests: One test for every 1,000 square yards of each layer compacted aggregate.

3.6 COMPACTION

A. Compact materials to 98 percent of maximum density as determined from test strip, according to ASTM D2940.

END OF SECTION

# SECTION 32 12 16 - ASPHALT PAVING

## PART 1 - GENERAL

### 1.1 SUMMARY

A. Section Includes:
   1. Asphalt materials.
   2. Aggregate materials.
   3. Aggregate subbase.
   4. Asphalt paving base course, binder course, and wearing course.
   5. Asphalt paving overlay for existing paving.
   6. Surface slurry.

B. Related Requirement:
   1. Division 01 Specification Sections apply to Work of this Section.
   2. Section 31 22 13 "Rough Grading" for preparation of site for paving.
   3. Section 32 11 23 "Aggregate Base Courses" for compacted subbase for paving.

### 1.2 REFERENCE STANDARDS

A. AASHTO M17 - Standard Specification for Mineral Filler for Bituminous Paving Mixtures.
B. AASHTO M29 - Standard Specification for Fine Aggregate for Bituminous Paving Mixtures.
C. AASHTO M140 - Standard Specification for Emulsified Asphalt.
D. AASHTO M208 - Standard Specification for Cationic Emulsified Asphalt.
E. AASHTO M288 - Standard Specification for Geotextile Specification for Highway Applications.
F. AASHTO M320 - Standard Specification for Performance-Graded Asphalt Binder.
G. AASHTO M324 - Standard Specification for Joint and Crack Sealants, Hot Applied, for Concrete and Asphalt Pavements.
H. AASHTO MP1a - Standard Specification for Performance-Graded Asphalt Binder.
I. AI MS-2 - Mix Design Methods for Asphalt Concrete and Other Hot- Mix Types.
J. AI MS-19 - Basic Asphalt Emulsion Manual.
K. AI SP-2 - Superpave Mix Design.
L. ASTM C1371-2004a - Standard Test Method for Determination of Emittance of Materials Near Room Temperature Using Portable Emissometers.
M. ASTM C1549-16 - Standard Test Method for Determination of Solar Reflectance Near Ambient Temperature Using a Portable Solar Reflectometer.
N. ASTM D242 - Standard Specification for Mineral Filler For Bituminous Paving Mixtures.
O. ASTM D692 - Standard Specification for Coarse Aggregate for Bituminous Paving Mixtures.
P. ASTM D946 - Standard Specification for Penetration-Graded Asphalt Cement for Use in Pavement Construction.
Q. ASTM D977 - Standard Specification for Emulsified Asphalt.
R. ASTM D1073 - Standard Specification for Fine Aggregate for Bituminous Paving Mixtures.

S. ASTM D1188 - Standard Test Method for Bulk Specific Gravity and Density of Compacted Bituminous Mixtures Using Coated Samples
T. ASTM D2027 - Standard Specification for Cutback Asphalt (Medium-Curing Type).
U. ASTM D2397 - Standard Specification for Cationic Emulsified Asphalt.
V. ASTM D2726 - Standard Test Method for Bulk Specific Gravity and Density of Non-Absorptive Compacted Bituminous Mixtures.
W. ASTM D2950 - Standard Test Method for Density of Bituminous Concrete in Place by Nuclear Methods.
X. ASTM D3381 - Standard Specification for Viscosity-Graded Asphalt Cement for Use in Pavement Construction.
Y. ASTM D3515 - Standard Specification for Hot-Mixed, Hot-Laid Bituminous Paving Mixtures.
Z. ASTM D3549 - Standard Test Method for Thickness or Height of Compacted Bituminous Paving Mixture Specimens.
AA. ASTM D3910 - Standard Practices for Design, Testing, and Construction of Slurry Seal.
BB. ASTM D6690 - Standard Specification for Joint and Crack Sealants, Hot Applied, for Concrete and Asphalt Pavements.
CC. ASTM E408-2019 - Standard Test Methods for Total Normal Emittance of Surfaces Using Inspection-Meter Techniques.
DD. ASTM E903-2012 - Standard Test Method for Solar Absorptance, Reflectance, and Transmittance of Materials Using Integrating Spheres.
EE. ASTM E1918-2016 - Standard Test Method for Measuring Solar Reflectance of Horizontal and Low-Sloped Surfaces in the Field.
FF. ASTM E1980-2019 - Standard Practice for Calculating Solar Reflectance Index of Horizontal and Low-Sloped Opaque Surfaces.
GG. Texas Department of Transportation (TxDOT) Standard Specifications for Construction of Highways, Streets, and Bridges, 2014 edition.

## 1.3 SUBMITTALS

A. Section 01 33 00 "Submittal Procedures."
B. Product Data:
   1. Submit product information for asphalt and aggregate materials.
   2. Submit mix design with laboratory test results supporting design.
C. Manufacturer's Certificate: Certify Products meet or exceed specified requirements.

## 1.4 QUALITY ASSURANCE

A. Mixing Plant: Conform to State of Texas Highways standard.

## 1.5 QUALIFICATIONS

A. Installer: Company specializing in performing Work of this Section with minimum 5 years' documented experience.

1.6 AMBIENT CONDITIONS

A. Section 01 50 00 "Temporary Facilities and Controls" for ambient conditions control facilities for product storage and installation.
B. Do not place asphalt mixture between November 1 and March 1.
C. Do not place asphalt mixture when ambient air or base surface temperature is less than 40 degrees F, or surface is wet or frozen.
D. Place asphalt mixture when temperature is not more than 15 degrees F less than initial mixing temperature.

**PART 2 - PRODUCTS**

2.1 ASPHALT PAVING

A. Performance / Design Criteria:
   1. Paving: Design for movement of trucks up to 30,000 pounds.
B. Asphalt Materials:
   1. Asphalt Binder: In accordance with State of Texas Highways standards.
   2. Primer: ASTM D2027, MC-70; medium curing, cutback asphalt. In accordance with State of Texas Highways standards.
   3. Tack Coat: In accordance with State of Texas Highways standards.
   4. Reclaimed Asphalt Pavement (RAP): Processed material obtained by milling or full depth removal of existing asphalt paving.
   5. Oil: In accordance with Municipality of Highways standards.
C. Aggregate Materials:
   1. Coarse Aggregate: In accordance with State of TexasHighways standards.
   2. Fine Aggregate: ASTM D1073; natural sand or sand manufactured from stone, gravel, or blast furnace slag.
D. Aggregate Subbase: Specified in Section 32 11 23 "Aggregate Base Courses."

2.2 MIXES

A. Use dry material to avoid foaming. Mix uniformly.
B. Asphalt Paving Mixtures: Designed in accordance with State of Texas Highways standards with maximum 5 percent by weight reclaimed asphalt pavement.
   1. Base Course: Type A, Grades 1 or 2 of Item 247 of the TxDOT Standard Specifications for Construction of Highways, Street, and Bridges..
   2. Surface Course.

2.3 ACCESSORIES

A. Geotextile Fabric: AASHTO M288; non-woven, polypropylene.
B. Sealant: ASTM D6690, Type I; hot applied type.

2.4 SOURCE QUALITY CONTROL

A. Section 01 40 00 "Quality Requirements" for testing, inspection and analysis requirements.
B. Submit proposed mix design of each class of mix for review prior to beginning of Work.
C. Test samples in accordance with AI MS-2.

## PART 3 - EXECUTION

3.1 EXAMINATION

A. Section 01 70 00 "Execution and Closeout Requirements:" Requirements for installation examination.
B. Verify utilities indicated under paving are installed with excavations and trenches backfilled and compacted.
C. Verify compacted subgrade subbase is dry.
   1. Proof roll subbase with in minimum 2 perpendicular passes to identify soft spots.
   2. Remove soft subbase and replace with compacted fill as specified in Section 31 23 23 "Fill."
D. Verify gradients and elevations of base are correct.

3.2 PREPARATION

A. Prepare subbase in accordance with State of Texas Highways standards. TxDOT Standard Specifications of Construction of Highways, Streets, and Bridges.

3.3 INSTALLATION

A. Subbase:
   1. Aggregate Subbase: Install as specified in Section 32 11 23 "Aggregate Base Courses."
   2. Prepare subbase in accordance with State of Texas Highways standards.
B. Primer:
   1. Apply primer in accordance with AI MS-2. State of Texas Highways standards.
C. Tack Coat:
   1. Apply tack coat in accordance with AI State of Texas Highways standards.
D. Single Course Asphalt Paving:
   1. Install Work in accordance with State of Texas Highways standards.
   2. Place asphalt within 24 hours of applying primer or tack coat.
   3. Place asphalt wearing course to thickness indicated on Drawings.
   4. Compact paving by rolling to specified density. Do not displace or extrude paving from position. Hand compact in areas inaccessible to rolling equipment.
   5. Perform rolling with consecutive passes to achieve even and smooth finish without roller marks.
E. Double Course Asphalt Paving:
   1. Place asphalt binder course within 24 hours of applying primer or tack coat.
   2. Place binder course to thickness indicated on Drawings.
   3. Place wearing course within 24 hours of placing and compacting binder course. When binder course is placed more than 24 hours before placing wearing course, clean surface and apply tack coat before placing wearing course.
   4. Place wearing course to thickness indicated on Drawings.
   5. Compact each course by rolling to specified density. Do not displace or extrude paving from position. Hand compact in areas inaccessible to rolling equipment.
   6. Perform rolling with consecutive passes to achieve even and smooth finish, without roller marks.

F. Surface Slurry:
   1. Install uniform thickness surface slurry over existing paving in accordance with ASTM D3910.
G. Allow slurry to cure.
   1. Roll paving to achieve uniform surface.

3.4 TOLERANCES

A. Section 01 40 00 "Quality Requirements."
B. Flatness: Maximum variation of 1/4-inch measured with 10-foot straight edge.
C. Scheduled Compacted Thickness: Within 1/4-inch.
D. Variation from Indicated Elevation: Within 1/2-inch.

3.5 FIELD QUALITY CONTROL

A. Take samples and perform tests including mat density tests in accordance with State of TexasHighways standards.
B. Asphalt Paving Mix Temperature: Measure temperature at time of placement.
C. Asphalt Paving Thickness: ASTM D3549; test one core sample from every 1,000 square yards compacted paving.
D. Asphalt Paving Density: ASTM D1188 or ASTM D2726; test 1 core sample from every 1,000 square yards compacted paving.

3.6 PROTECTION

A. Section 01 70 00 "Execution and Closeout Requirements" for protecting finished Work.
B. Immediately after placement, protect paving from mechanical injury for 8 hours or until surface temperature is less than 140 degrees F.

END OF SECTION

# SECTION 32 13 13 - CONCRETE PAVING

## PART 1 - GENERAL

### 1.1 SUMMARY

A. Section Includes concrete pavement, curb and gutter.
B. Section Applies:
   1. Where Contractor elects to remove, or required to remove, and replace concrete pavement, curb and gutter, driveway (alleys), and sidewalks.
   2. For repair or replacing facilities otherwise damaged by Contractor operations.
C. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.
   2. Section 03 30 00 "Cast-in-Place Concrete."
   3. Section 32 12 16 "Asphalt Paving."

### 1.2 DEFINITIONS

A. Cementitious Materials: Portland cement alone or in combination with one or more of blended hydraulic cement, expansive hydraulic cement, fly ash and other pozzolans, ground granulated blast-furnace slag, and silica fume.
B. TxDOT: Texas Department of Transportation "Standard Specifications for Construction and Maintenance of Highways, Streets, and Bridges" 2014.
C. DMS: TxDOT Department of Material Specifications.

### 1.3 SUBMITTALS

A. Submit product data per Section 01 33 00 "Submittal Procedures."
B. Product Data: For each type of manufactured material and product indicated.
C. Design Mixes: For each concrete pavement mix. Include alternate mix designs when characteristics of materials, Project conditions, weather, test results, or other circumstances warrant adjustments. Design shall indicate target unit weight of mix. Mix design shall not be in excess of 30 days old without Engineer approval.
D. Design mix submittals shall include:
   1. Fine aggregate gradation.
   2. Course aggregate gradation.
   3. Loss from five-cycle magnesium sulfate or sodium sulfate test on all aggregate.
   4. Cement content.
   5. Fly ash content.
   6. Water content.
   7. All admixtures.
   8. Maximum slump.
   9. Percent air entrainment.
   10. Seven-day flexural strength.
   11. Seven-day compressive strength.
   12. 28-day compressive strength.

E. Material Test Reports: From a qualified testing agency indicating and interpreting test results for compliance of the following with requirements indicated, based on flexural and comprehensive testing of current materials:
   1. Cementitious materials and aggregates.
   2. Steel reinforcement and reinforcement accessories.
   3. Fiber reinforcement.
   4. Admixtures.
   5. Curing compounds.
   6. Applied finish materials.
   7. Bonding agent or adhesive.
   8. Joint fillers.

F. Paving and Quality Control Plan (PQCP): Submit a PQCP for approval before beginning pavement construction operations. Include details of all operations in concrete paving process, including longitudinal construction joint layout, sequencing, curing, lighting, early opening, leave-outs, sawing, inspection, testing, construction methods, other details and description of all equipment. List certified personnel performing testing. Submit revisions to PQCP for approval.

## 1.4 QUALITY ASSURANCE

A. Installer Qualifications: Experienced installer who completed pavement work similar in material, design, and extent to that indicated for Project and whose work resulted in construction with a record of successful in-service performance.

B. Manufacturer Qualifications: Manufacturer of ready-mixed concrete products complying with ASTM C94 requirements for production facilities and equipment.
   1. Manufacturer must be certified per National Ready-Mix Concrete Association's Plant Certification Program.
   2. Inspection report signed and sealed by a licensed Professional Engineer showing concrete measuring, mixing, and delivery equipment meets all requirements of ASTM C94. New certification or signed/sealed report required every time plant is moved. Provide copy of certification or signed/sealed inspection report to Engineer.
   3. When equipment or facilities fail to meet specification requirements, remove from service until corrected.

C. Testing Agency Qualifications: Independent testing agency, acceptable to authorities having jurisdiction.

D. Source Limitations: Obtain each type or class of cementitious material of same brand from same manufacturer's plant and each aggregate from one source. For changes in material, brand, source, or chemical admixtures, reevaluate mix as a new mix design.

E. ACI Publications: Comply with ACI 301, "Specification for Structural Concrete," unless modified by Contract Document requirements. Refer to Section 03 30 00 "Cast-In-Place Concrete," for additional codes and standards.

F. Concrete Testing Service: Engage a qualified independent testing agency to perform material evaluation tests and design concrete mixes.

## 1.5 PROJECT CONDITIONS

A. Traffic Control: Maintain access for vehicular and pedestrian traffic as required for other construction activities and emergency services.

## PART 2 - PRODUCTS

2.1 FORMS

A. Pavement Forms: Provide metal side forms of sufficient cross section, strength and rigidity to support paving equipment and resist impact and vibration of operation without visible springing or settlement. Use forms free from kinks, bonds, or warps that affect ride quality or alignment.
   1. Use flexible or curved forms for curves of a radius 100 feet or less.
   2. Forms should be no less than 10 feet in length.

2.2 PLACING, CONSOLIDATING, AND FINISHING EQUIPMENT

A. Provide approved self-propelled paving equipment to uniformly distribute concrete with minimal segregation and provide a smooth machine-finished consolidated concrete pavement conforming to plan line and grade. Provide approved automatic grade control system on slip-forming equipment. Provide approved mechanically-operated finishing floats to produce a uniformly-smooth pavement surface. Provide equipment to provide fine, light-water fog mist.

B. Provide mechanically-operated vibratory equipment to adequately consolidate concrete. Provide immersion vibrators on paving equipment at sufficiently close intervals to provide uniform vibration and consolidation of concrete over entire width and depth of pavement per manufacturer recommendations. Provide immersion vibrator units to operate at least 8,000 cycles per minute frequency in air. Provide enough hand-operated immersion vibrators for timely and proper consolidation of concrete along forms, at joints, and areas not covered by other vibratory equipment. Surface vibrators may be used to supplement equipment-mounted immersion vibrators. Provide tachometers to verify proper operation of all vibrators.

C. For small/irregular areas or when approved, paving equipment described herein not required.

2.3 REINFORCING STEEL INSERTING EQUIPMENT

A. Inserting equipment may not be used in place of two-piece tie bars or drilled and epoxy bars.

2.4 TEXTURING EQUIPMENT

A. Carpet Drag. Provide carpet drag mounted on Work bridge or moveable support system. Provide single piece of carpet of sufficient transverse length to span full width of pavement placed and adjustable so a sufficient longitudinal length of carpet is in contact with concrete placed to produce desired texture. Obtain approval to vary length and width of carpet to accommodate specific applications. Use artificial grass-type carpet with molded polyethylene pile face with a 5/8- to 1-inch blade length, minimum 70-ounce-per-square-yard weight, and strong, durable, rot-resistant backing material bonded to facing.

B. Tining Equipment. Provide self-propelled transverse metal tine device equipped with 4- to 6-inch steel tines and with cross-section approximately 1/32-inch thick by 1/12-inch wide, spaced at 1 inch center-to-center. Only use hand-operated tining equipment to produce equivalent texture on small or irregularly-shaped areas or, when permitted, in emergencies due to equipment breakdown.

2.5 CURING EQUIPMENT

A. Provide self-propelled machine for applying membrane curing compound using mechanically-pressurized spraying equipment with atomizing nozzles. Provide equipment and controls to maintain required uniform rate of application over entire paving area. Provide curing equipment independent of all other equipment when production rates are so the first application of membrane curing compound cannot be accomplished immediately after texturing and after free moisture disappears. Only use hand-operated pressurized spraying equipment with atomizing nozzles on small or irregular areas or, when permitted, in emergencies due to equipment breakdown.

2.6 SAWING EQUIPMENT

A. Provide power-driven concrete saws to saw joints shown on Plans. Provide standby power-driven concrete saws during concrete sawing operations. Provide adequate illumination for nighttime sawing.

2.7 GRINDING EQUIPMENT

A. When required, provide self-propelled powered grinding equipment specifically designed to smooth and texture concrete pavement using circular diamond blades. Provide equipment with automatic grade control to grind at least a 3-foot-width longitudinally in each pass without damaging concrete.

2.8 TESTING EQUIPMENT

A. Provide testing equipment regardless of job-control testing responsibilities per TxDOT Item 421, "Hydraulic Cement Concrete," unless otherwise shown in Plans or specified.

2.9 CORING EQUIPMENT

A. When required, provide coring equipment to extract cores per requirements of Tex-424-A.

2.10 MISCELLANEOUS EQUIPMENT

A. Furnish both 10- and 15-foot steel or magnesium long-handled standard straightedges. Furnish enough Work bridges, long enough to span pavement, for finishing and inspection operations. Furnish date stencils to impress pavement placement dates into fresh concrete, with numerals approximately 2 inches high by 1 inch wide by 1/4-inch deep.

2.11 STEEL REINFORCEMENT

A. Plain-Steel Welded Wire Fabric: ASTM A185, fabricated from as-drawn steel wire into flat sheets, shall be 6- by 6-inch, 10-gauge welded wire fabric, or as shown on Plans.
B. Reinforcement Bars: ASTM A615, Grade 60, deformed.

C. Joint Dowel Bars: Plain steel bars, ASTM A615, Grade 60. Cut bars true to length with ends square and free of burrs.
D. Tie Bars: ASTM A615, Grade 60, deformed.
E. Hook Bolts: ASTM A307, Grade A, internally and externally threaded. Design hook-bolt joint assembly to hold coupling against pavement form and in position during concreting operations, and permit removal without damage to concrete or hook bolt.
F. Bar Supports: Bolsters, chairs, spacers, and other devices for spacing, supporting, and fastening reinforcement bars, welded-wire fabric, and dowels in place. Manufacture bar supports per CRSI "Manual of Standard Practice," from steel wire, plastic, or precast concrete or fiber-reinforced concrete of greater compressive strength than concrete, and:
   1. Equip wire bar supports with sand plates or horizontal runners where base material will not support chair legs.
   2. Space reinforcing supports at 5-foot maximum in any direction.
   3. Place vertical reinforcement supports drilled into sub-base material to prevent horizontal movement of reinforcing steel.

## 2.12 CONCRETE MATERIALS

A. Use same brand and type of cementitious material from same manufacturer throughout Project.
B. Portland Cement: ASTM C150, Types I, II, or III or ASTM G176 IA, IIA, or IIIA for air entrained. Fly ash may be substituted at up to a 30 percent rate by absolute volume of cement. Portland cement concrete should have minimum seven-day compressive strength of 3,500 psi or minimum 28-day compressive strength of 4,400 psi. Concrete material should comply with TXDOT Standard Specifications 2014, Item 360.
C. Aggregate: ASTM C33, uniformly graded, from a single source, as follows:
   1. Class: 4M.
   2. Maximum Aggregate Size: 1-1/2 inches nominal.
   3. Coarse aggregate for Class C or D concrete shall be crushed limestone (Brownwood type or equivalent). Aggregate shall be graded fine-to-coarse and conform to ASTM C136. Gradation for aggregate shall meet these requirements by weight:

| FINE AGGREGATE | | COARSE AGGREGATE | |
|---|---|---|---|
| Sieve | Percent Passing | Sieve | Percent Passing |
| 3/8-inch | 100 | 2 inch | 100 |
| No. 4 | 95-100 | 1-1/2 Inch | 100 |
| No. 8 | 80-100 | | |
| No. 16 | 50-85 | 3/4-inch | 35-70 |
| No. 30 | 25-60 | 3/8-inch | 10-30 |
| No. 50[1] | 5-30 | No. 4 | 0-5 |
| No. 100 | 0-10 | | |
| No. 200[2] | 0-3 | | |

[1] Range is 6-35 when sand equivalent volume is greater than 85.
[2] Range is 0-6 for manufactured sand.

   a. Maximum amounts of organic impurities shall conform to ASTM C40 and C87. Maximum amounts of impurities finer than #200 sieve shall conform to ASTM C117. Maximum amounts of soft particles shall conform to ASTM C123. Maximum amounts of friable particles shall conform to ASTM C142.
   b. Fine aggregate shall have sand equivalent at least 80 per Tex-203-F. Provide fine aggregate with fineness modules 2.3 - 3.1 per ASTM C33.

c. Protect stockpiles from dusty conditions by drift fences or other methods approved by Engineer. Stockpiling methods used shall not allow aggregate to roll down slope as added to existing stockpiles. Build stockpiles in layers of uniform thickness. Equipment not permitted to operate over same lift repeatedly.

4. Coarse aggregate shall have maximum 18 percent loss when subjected to five cycles of magnesium sulfate soundness test or maximum 12 percent loss when subjected to five cycles of a sodium sulfate soundness test (ASTM C88).
5. Percentage of wear shall be no more than 40 when tested per ASTM C131 or C535.
6. Aggregates delivered to mixer shall consist of crushed stone, crushed gravel, or natural sand. Crushing shall result in a product where coarse aggregate shall have at least 95 percent by weight of particles with one or more fractured faces and 75 percent by weight of particles with two or more fractured faces. Aggregate shall be composed of sound, tough, durable particles and meet requirements for deleterious substances given in ASTM C33. Aggregate in any size group shall not contain more than 8 percent by weight of flat or elongated pieces. A flat or elongated particle has a ratio between maximum and minimum dimensions of circumscribing rectangular prism exceeding 3 to 1.

D. Water: ASTM C94.

## 2.13 ADMIXTURES

A. Admixtures certified by manufacturer to contain no more than 0.1 percent water-soluble chloride ions by mass of cement and compatible with other admixtures.
B. Air-Entraining Admixture: ASTM C260. Certified by manufacturer compatible with other required admixtures.
C. Water-Reducing Admixture: ASTM C494, Type A.
D. High-Range, Water-Reducing Admixture: ASTM C494, Types F or G.
E. Water-Reducing and Accelerating Admixture: ASTM C494, Type E.
F. Water-Reducing and Retarding Admixture: ASTM C494, Type D.

## 2.14 FIBER REINFORCEMENT

A. Only use fiber reinforcement in place of wire mesh if approved by Engineer and Owner.
B. Fiber reinforcement shall be 100 percent virgin polypropylene, collated, fibrillated fibers, made for use as concrete reinforcement, containing no reprocessed olefin materials, and conforming to ASTM C1116, Type III.
C. Specific gravity: .91.
D. Tensile Strength: 70,000 - 100,000 psi.
E. Length: 2 inches.

## 2.15 CURING COMPOUND

A. Liquid-type membrane-forming curing compound with white pigment complying with ASTM C309, Type 2, Class A. Moisture loss not more than 1.0 pound per square yard when applied at 200 square feet per gallon.

## 2.16 EPOXY

A. Provide Type III epoxy per DMS-6100, "Epoxies and Adhesives," for installing all drilled-in reinforcing steel.

2.17 EVAPORATION RETARDANT

A. Provide evaporation retardant per DMS-4650, "Hydraulic Cement Concrete Curing Materials and Evaporation Retardants."

2.18 JOINT SEALANTS AND FILLERS

A. Provide Class 5 or 8 joint-sealant materials and fillers unless otherwise shown on Plans or approved and other sealant materials of size, shape, and type shown on Plans per DMS-6310, "Joint Sealants and Fillers."

2.19 RELATED MATERIALS

A. Expansion- and Isolation-Joint-Filler Strips: ASTM D1751, asphalt-saturated cellulosic fiber.
B. Texture Surface for Ramps
   1. Meet requirements of Texas Accessibility Standards.
   2. Concrete paver units shall meet all requirements of ASTM C936 and C33 and laid in a two by two-unit basket-weave pattern.
   3. Color as selected by Owner but a contrasting color with adjacent surfaces.
   4. Durabak with Safti-Traxx Detacable Warning System by Cote-L Distribution Company, or approved equal.
   5. Owner may modify texture surface requirements for ramps by Owner any time to comply with Texas Accessibility Standards. No additional compensation made for such modification.
C. Bonding Agent: Polyvinyl acetate or acrylic base.
D. Sand Cushion: Clean, manufactured, or natural sand with plasticity index of eight or less.

2.20 CONCRETE MIXES

A. Prepare design mixes, proportioned per ACI 301, for each type and strength of normal-weight concrete determined by laboratory trial mixes or field experience.
B. Use a qualified independent testing agency for preparing and reporting proposed mix designs for trial batch method. Do not use Owner's field quality-control testing agency as independent testing agency.
C. Classification. The following classes of concrete shall be used:
D. Proportion mixes to provide concrete with water-cementitious materials ratio noted.
E. Mix Design:
   1. At least 15 days before beginning any concrete pavement construction, Contractor shall submit the following to Engineer for approval:
      a. Test certificates from approved commercial testing laboratory on all proposed aggregate. Certificates shall indicate material source, gradation, and loss from five-cycle magnesium sulfate soundness test (not to exceed 18 percent) or loss from five cycles of sodium sulfate soundness test (not to exceed 12 percent).
      b. Mix design based on water-cement ratio.
      c. Results of flexural and compression tests per ASTM C39 and/or flexural tests per ASTM C78, made by approved commercial testing laboratory. Tests shall be made on six cylinders/beams at curing times appropriate to concrete class.

2. Engineer will approve/reject mix design and materials based on submittals. This approval is subject to additional testing during construction. Mix designs for various classes of concrete shall conform to:

| Class | Maximum Water/Cement Ratio | Maximum Slump Inches |
|---|---|---|
| A | .60 | 4 |
| B | .60 | 3 |
| C (slip formed) | .45 | 3 |
| COC (formed) | .45 | 6 |
| E | .45 | as specified by concrete batch plant |

3. Strength Requirements: Test at least three sets of design strength specimens with two specimens per set. Various classes of concrete shall conform to the following strengths in psi as determined by average of two test cylinders and beams:

| | | COMPRESSIVE | | FLEXURAL | |
|---|---|---|---|---|---|
| Class | 3-Day | 7-Day | 28-Day | 7-Day | 28-Day |
| A | | 2,100 | 3,000 | 425 | |
| B | 2,500 | 3,000 | - | 280 | |
| C | | 3,500 | 4,400 | 750 | 680 |
| D | | - | | - | |
| E | 2,600 (24-hr) | Unless otherwise specified | | 400 (24-hr) | |

F. Properties
1. Air Entrainment: 4 percent ASTM C260. If air content is more than 1 percentage points below/above required air, reject load of concrete.
2. Synthetic Fiber: Use manufacturer-recommended rate, but not less than 1.0 pound per cubic yard (where applicable).
3. Fly Ash: Not more than 30 percent by absolute volume of cement.

2.21 CONCRETE MIXING

A. Ready-Mixed Concrete: Comply with requirements, ASTM C94, and C1116 when synthetic fibers involved.
1. When air temperature is 85-90 degrees F, reduce mixing and delivery time from 90 to 75 minutes. When air temperature is above 90 degrees F, reduce mixing and delivery time to 60 minutes.
2. Mixing and delivery time starts at time of batching.

B. Project-Site Mixing: Comply with requirements and measure, batch, and mix concrete materials and concrete per ASTM C94. Mix concrete materials as appropriate and approved by Engineer.
1. For mixers of 1 cubic yard or smaller capacity, continue mixing at least 1.5 but not more than 5 minutes after ingredients are in mixer, before releasing any part of batch.
2. For mixers of capacity larger than 1 cubic yard, increase mixing time by 15 seconds for each additional 1 cubic yard.

3. Provide batch ticket for each batch discharged and used in Work, indicating Project identification name and number, date, mix type, mix time, quantity, and amount of water added. Batch ticket shall also indicate batching operation variances per ACI 304R.
   a. Cement and supplementary cementitious material within ±1 percent of desired weight.
   b. Aggregates measured within ±2 percent of desired weight (±1 percent when cumulative weight is taken).
   c. Allowable water adjusted for free moisture in aggregates.
   d. Admixtures discharged separately within a volumetric tolerance of ±3 percent using a method that does not allow concentrated admixtures to contact each other.
4. When using non-agitating equipment for transporting concrete, provide equipment with smooth, mortar-tight metal containers equipped with gates that prevent accidental discharge of concrete.

## PART 3 - EXECUTION

### 3.1 PREPARATION

A. Proof-roll prepared subbase surface to check for unstable areas and verify need for additional compaction. Proceed with pavement only after nonconforming conditions have been corrected and subgrade is ready to receive pavement.

B. Remove loose material from compacted subbase surface immediately before placing concrete.

### 3.2 PLACING AND REMOVING FORMS

A. Use clean and oiled forms. Secure forms on base or firm subgrade accurately graded providing stable support without deflection and movement by form-riding equipment. Pin every form at least at middle and near each end. Tightly join and key form sections together to prevent relative displacement.

B. Set side forms far enough in advance of concrete placement to permit inspection. Check conformity of grade, alignment, and stability of forms immediately before placing concrete. Make all necessary corrections. Use a straightedge or other approved method to test top of forms to ensure ride quality requirements for completed pavement is met. Stop paving operations if forms settle or deflect more than 1/8-inch under finishing operations. Reset forms to line and grade and refinish concrete surface to correct grade.

C. Avoid damage to edge of pavement when removing forms. Repair damage resulting from form removal and honeycombed areas with mortar mix within 24 hours after form removal, unless otherwise approved. Clean joint face and repair honeycombed or damaged areas within 24 hours after bulkhead for transverse construction joint removed, unless otherwise approved. When forms are removed before 72 hours after concrete placement, promptly apply membrane curing compound to edge of concrete pavement.

D. Forms not the same depth as pavement but within 2 inches of depth are permitted if subbase is trenched or full width and length of form base supported with firm material to produce required pavement thickness. Promptly repair form trench after use. Use flexible/curved wood or metal forms for curves of 100-foot radius or less.

## 3.3 STEEL REINFORCEMENT

A. Comply with CRSI "Manual of Standard Practice" for fabricating reinforcement and recommendations in CRSI "Placing Reinforcing Bars" for placing and supporting reinforcement.

B. Clean reinforcement of loose rust and mill scale, earth, ice, or other bond-reducing materials.

C. Arrange, space, and securely tie bars and bar supports to hold reinforcement in position during concrete placement. Maintain minimum cover to reinforcement.

D. Install welded wire fabric in lengths as long as practicable. Lap adjoining pieces at least one full mesh, and lace splices with wire. Offset laps of adjoining widths to prevent continuous laps in either direction.

## 3.4 JOINTS

A. Reinforcing Steel and Joint Assemblies: Accurately place and secure in position all reinforcing steel as shown on Plans. Place dowels at mid-depth of pavement slab, parallel to surface. Place dowels for transverse contraction joints parallel to pavement edge. Tolerances for location and alignment of dowels shown on Plans. Stagger longitudinal reinforcement splices to avoid more than one-third of splices within a 2-foot longitudinal length of each lane of pavement. Use multiple-piece tie bars or drill and epoxy grout tie bars at longitudinal construction joints. Verify tie bars drilled and epoxied into concrete at longitudinal construction joints develop a pullout resistance equal to minimum three quarters of yield strength of steel after 7 days. Test fifteen bars using ASTM E488, except alternate approved equipment may be used. All fifteen tested bars must meet required pullout strength. If any test results do not meet required minimum pullout strength, perform corrective measures to provide equivalent pullout resistance. Repair damage from testing. Acceptable corrective measures include but not limited to installation of additional or longer tie bars.

B. Construct isolation, contraction, construction joints and tool edgings true to line with faces perpendicular to surface plane of concrete. Construct transverse joints at right angles to centerline, unless otherwise indicated. When joining existing pavement, place transverse joints to align with previously placed joints, unless otherwise indicated.

C. Construction Joints: Set at side and end terminations of pavement and where pavement operations are stopped more than 0.5 hour, unless pavement terminates at isolation joints.
   1. Continue reinforcement across construction joints but do not continue reinforcement through sides of pavement strips, unless otherwise indicated.
   2. Provide tie bars at sides of pavement strips where indicated.
   3. Use bonding agent where fresh concrete is placed against hardened or partially-hardened concrete surfaces.

D. Isolation Joints: Form of preformed joint-filler strips abutting concrete curbs, catch basins, manholes, inlets, structures, walks, other fixed objects, and where indicated.
   1. Extend joint fillers full width and depth of joint.
   2. Terminate joint filler less than 1/2- or more than 1 inch below finished surface if joint sealant indicated.
   3. Place top of joint filler flush with finished concrete surface if joint sealant not indicated.

4. Furnish joint fillers in one-piece lengths. Where more than one length required, lace or clip joint-filler sections together.
5. Protect top edge of joint filler during concrete placement with metal, plastic, or other temporary preformed cap. Remove protective cap after concrete is placed on both sides of joint.

## 3.5 CONCRETE DELIVERY

A. Clean delivery equipment as necessary to prevent accumulation of old concrete before loading fresh concrete. Use agitated delivery equipment for concrete designed with a slump more than 5 inches. Segregated concrete is subject to rejection. Place agitated concrete within 60 minutes after batching. Place non-agitated concrete within 45 minutes after batching. In hot weather or under conditions causing quick setting concrete, times may be reduced by Engineer. Time limitations may be extended if Contractor can demonstrate concrete can be properly placed, consolidated, and finished without additional water.

## 3.6 CONCRETE PLACEMENT

A. For all roadway lane pavement, construct pavement with approved slip-form paving machine designed to spread, consolidate, screed, and float-finish freshly-placed concrete in one complete pass of machine so dense and homogeneous pavement is achieved with minimal hand finishing. Paver-finisher shall be heavy duty, self-propelled machine designed specifically for paving and finishing high-quality concrete pavements. Individual placement areas of less than 500 square yards, or irregular areas where inaccessible to slip-form paving equipment, place cement concrete pavement with approved placement and finishing equipment utilizing stationary side forms. Only utilize hand screeding and float finishing on small irregular areas as allowed by Engineer.

B. Concrete Placement: Do not allow pavement edge to deviate from established paving line by more than 1/2-inch at any point. Place concrete as near as possible to final location, and minimize segregation and rehandling. Where hand spreading necessary, distribute concrete using shovels. Do not use rakes or vibrators to distribute concrete.
   1. Pavement: Consolidate all concrete by approved mechanical vibrators operated on front of paving equipment. Use immersion-type vibrators to simultaneously consolidate full width of placement when machine finishing. Keep vibrators from dislodging reinforcement. Use hand-operated vibrators to consolidate concrete in areas inaccessible to machine-mounted vibrators. Do not operate machine-mounted vibrators while paving equipment is stationary. Vibrator operations subject to review.

C. Curbs and Gutters: When automatic machine placement is used for curb and gutter placement, submit revised mix design and laboratory test results to meet/exceed requirements. Produce curbs and gutters to required cross section, lines, grades, finish, and jointing as specified for formed concrete. If results not approved, remove and replace with formed concrete.

D. When adjoining pavement lanes are placed in separate pours, do not operate equipment on concrete until pavement attains 85 percent of 28-day compressive strength.

E. Cold-Weather Placement: Comply with ACI 306.1. Protect concrete Work from physical damage or reduced strength caused by frost, freezing actions, or low temperatures.
   1. When air temperature falls to, or is expected to fall below, 40 degrees F, uniformly heat water and aggregates before mixing to obtain a concrete mixture temperature not less than 50 nor more than 80 degrees F at point of placement.

2. Do not use frozen materials or materials containing ice or snow.
3. Do not use calcium chloride, salt, or other materials containing antifreeze agents or chemical accelerators, unless otherwise specified and approved in mix designs.

F. Hot-Weather Placement: Place concrete per recommendations in ACI 305R and as follows when hot-weather conditions exist:
1. Cool ingredients before mixing to maintain concrete temperature at time of placement below 90 degrees F. Chilled mixing water or chopped ice may be used to control temperature, if water equivalent of ice is calculated to total amount of mixing water. Using liquid nitrogen to cool concrete is Contractor option.
2. Cover reinforcement steel with water-soaked burlap so steel temperature will not exceed ambient air temperature immediately before embedding in concrete.
3. Fog-spray forms, reinforcement steel, and subgrade just before placing concrete. Keep subgrade moisture uniform without standing water, soft spots, or dry areas.

## 3.7 CONCRETE FINISHING

A. Finish all concrete pavement with approved self-propelled equipment. Use power-driven spreaders, vibrators, and strike-off, screed, or approved alternate equipment. Use transverse finishing equipment to compact and strike off concrete to required section and grade without surface voids. Use float equipment for final finishing. Use concrete with a consistency to allow completion of all finishing operations without addition of water to surface. Use minimal amount of water fog mist necessary to maintain moist surface. Reduce fogging if float or straightedge operations result in excess slurry.
1. Finished Surface: As soon as concrete hardens sufficiently, test pavement surface in transverse direction with 16-foot straightedge or other specified device. Surface smoothness deviations shall not exceed 1/4-inch from 16-foot straightedge at any location, including placement along and spanning any pavement joint or edge.
   a. Mark areas in slab showing high spots more than 1/4-inch but not exceeding 1/2-inch in 16 feet and immediately grind down with approved grinding machine to elevation that falls within tolerance of 1/4-inch or less. Where departure from correct cross section exceeds 1/2-inch, remove and replace pavement at expense of Contractor when Engineer directs.
2. Maintain Surface Moisture: Prevent surface drying of pavement before application of curing system. Accomplish by fog application of evaporation retardant on pavement surface. Apply evaporation retardant at manufacturer-recommended rate. Reapply evaporation retardant as needed to maintain concrete surface in a moist condition until curing system applied. Do not use evaporation retardant as finishing aid. Failure to take acceptable precautions to prevent surface drying of pavement is cause for shut down of pavement operations.
3. Surface Texturing: Perform using combination of carpet drag and metal tining. Complete final texturing before concrete attains initial set. Draw carpet drag longitudinally along pavement surface with carpet contact surface area adjusted to provide a satisfactory coarsely textured surface. Metal-tine texture finish required unless otherwise shown on Plans. Provide metal-tine finish immediately after concrete surface set enough for consistent tining. Operate metal-tine device to obtain grooves spaced at 1 inch, approximately 3/16-inch deep, minimum 1/8-inch depth, and approximately 1/12-inch wide. Do not overlap a previously-tined area. Use manual methods for achieving similar results on ramps and other irregular sections of pavements. Repair damage to edge of slab and joints immediately after texturing. Do not tine pavement to overlay.

a. Burlap Finish: For sidewalks, drag a seamless strip of damp burlap across float-finished concrete, perpendicular to line of traffic, to provide a uniform, gritty texture.
b. Medium-to-Fine-Textured Broom Finish: For curb and gutter, draw a soft bristle broom across float-finished concrete surface perpendicular to line of traffic to provide a uniform, fine-line texture.
c. Medium-to-Coarse-Textured Broom Finish: For fillets, driveways, and alleys, provide coarse finish by striating float-finished concrete surface 1/16- to 1/8-inch deep with stiff-bristled broom, perpendicular to line of traffic. Tined Finish: For concrete pavement, perform surface texturing using a combination carpet drag and metal tining. Complete final texturing before concrete attains initial set. Draw carpet drag longitudinally along pavement surface with carpet contact surface area adjusted to provide a satisfactory coarsely-textured surface.

4. Small or Irregular Placements. Where machine placements and finishing concrete pavement not practical, use hand equipment and procedures to produce a consolidated and finished pavement section to line and grade.
5. Emergency Procedures. Use hand-operated equipment for applying texture, evaporation retardant, and cure in event of equipment breakdown.

## 3.8 CONCRETE PROTECTION AND CURING

A. Curing: Keep concrete pavement surface from drying by water fogging until curing material is applied. If forms removed during day of placement, apply curing compound to exposed areas. When placing concrete pavement, place curing compound on backside of curb. Maintain and promptly repair damage to curing materials on exposed surfaces of concrete pavement continuously at least three curing days unless specified otherwise. A curing day is a 24-hour period when temperature taken in shade away from artificial heat is above 50 degrees F at least 19 hours or surface temperature of concrete is maintained above 40 degrees F, 24 hours. Curing begins when concrete curing system is applied. Stop concrete paving if curing compound not applied promptly and maintained adequately.

B. Protect freshly-placed concrete from excessive cold or hot temperatures. Comply with ACI 306.1 for cold-weather protection and follow recommendations in ACI 305R for hot-weather protection during curing. Submit for approval, proposed measures to protect concrete from anticipated freezing weather for first 72 hours after placement. Repair or replace all concrete damaged by freezing.

C. Evaporation Retarder: Apply to concrete surfaces if hot, dry, or windy conditions cause moisture loss approaching 0.2-pound per square foot by height before and during finishing operations. Apply per manufacturer-written instructions after placing, screeding, and bull floating or darbying concrete, but before float finishing.

D. Begin curing after finishing concrete but not before free water disappears from concrete surface.

E. Curing Methods: Cure concrete by moisture curing, moisture-retaining-cover curing, curing compound, or a combination:
1. Moisture Curing: Keep surfaces continuously moist no less than seven days with:
a. Water.
b. Continuous water-fog spray.
c. Absorptive cover, water saturated, kept continuously wet. Cover concrete surfaces and edges with 12-inch lap over adjacent absorptive covers.

2. Moisture-Retaining-Cover Curing: Cover concrete surfaces with moisture-retaining cover for curing concrete, placed in widest practicable width, with sides and ends lapped at least 12 inches, sealed by waterproof tape or adhesive. Immediately repair any holes or tears during curing period using cover material and waterproof tape. Curing Compound: After texturing and immediately after free surface moisture disappears, spray concrete surface uniformly with two coats of membrane-curing compound at individual application rate not more than 180 square feet per gallon. Apply first coat within 10 minutes after completing texturing operations. Apply second coat within 30 minutes after completing texturing operations. Before and during application, maintain curing compounds in uniformly-agitated condition, free of settlement. Do not thin or dilute curing compound. Where coating shows discontinuities, other defects, or rain falls on newly-coated surface before film dries enough to resist damage, apply additional compound at same rate of coverage to correct damage. Ensure curing compound coats sides of tining grooves.
3. Curing Class E Concrete: For all Class HES concrete pavement, provide membrane curing per Section 360.4.I.1, "Membrane Curing," followed promptly by moisture curing until opening strength achieved, but not less than 24 hours.

## 3.9 SAWING JOINTS

A. Saw joints to depth shown on Plans as soon as sawing accomplished without damage to pavement regardless of time of day or weather conditions. Once sawing commences, continue until completed. All such sawing must be completed within 12 hours of placement. Use chalk line, string line, sawing template, or other approved method to provide a true joint alignment. Provide enough saws to match paving production rate to ensure sawing completion at earliest possible time to avoid uncontrolled cracking. Reduce paving production if necessary to ensure timely sawing of joints. Promptly restore membrane cure damaged within first 72 hours of curing.

## 3.10 PROTECT PAVEMENT AND OPENING TO TRAFFIC

A. Testing for early opening is Contractor responsibility regardless of job-control testing responsibilities unless otherwise shown on Plans or directed. Testing result interpretation for opening to traffic is subject to Engineer approval.
   1. Protect Pavement: Erect and maintain barricades and other standard and approved devices to exclude all vehicles and equipment from newly-placed pavement for periods specified. Before opening to traffic, protect pavement from damage due to crossings using approved methods. Where detour not readily available or economically feasible, occasional crossing of roadway with overweight equipment may be permitted for relocating equipment only, but not for hauling material. When occasional crossing of overweight equipment permitted, temporary matting or other approved methods may be required. Maintain adequate supply of sheeting or other material to cover and protect fresh concrete surface from weather damage. Apply as needed to protect pavement surface from weather.
   2. Opening Pavement to All Traffic: Pavement 7 days old may be opened to all traffic. Before opening to traffic, clean pavement, place stable material against pavement edges, seal joints, and perform all other traffic safety-related Work.

3. Opening Pavement to Construction Equipment: Unless otherwise shown on Plans, concrete pavement may be opened early to concrete paving equipment and related delivery equipment after concrete is at least 48 hours old and opening strength is demonstrated per "Early Opening to All Traffic," before curing complete. Keep delivery equipment at least 2 feet from edge of concrete pavement. Keep tracks of paving equipment at least 1 foot from pavement edge. Protect textured surfaces from paving equipment. Restore damaged membrane curing as soon as possible. Repair pavement damaged by paving or delivery equipment before opening to all traffic.
4. Early Opening to All Traffic: Concrete pavement may be opened after curing is complete and concrete attains a flexural 450-psi strength or 2,800-psi compressive strength, except that pavement using Class HES concrete may be opened after 24 hours if specified strength achieved.
    a. Strength Testing: Test concrete specimens cured under same conditions as portion of pavement involved.
5. Emergency Opening to Traffic: Under emergency conditions, when pavement is at least 72 hours old, open pavement to traffic when directed in writing. Remove all obstructing materials, place stable material against pavement edges, and perform other Work involved in providing for safety of traffic as required for emergency opening.

## 3.11 PAVEMENT THICKNESS

A. Engineer will check thickness per Tex-423-A unless other methods shown on Plans. Engineer will perform one thickness test consisting of one reading at the approximate center of each lane every 500 feet or fraction thereof. Core where directed per Tex-424-A to verify deficiencies more than 0.2 inches from plan thickness and determine limits of deficiencies of more than 0.75 inches from plan thickness. Fill core holes using a concrete mixture and method approved by Engineer.
    1. Thickness Deficiencies Greater than 0.2-inch: When any depth test measured per Tex-423-A is deficient more than 0.2-inch from plan thickness, take one 4-inch diameter core at that location to verify measurement. If core is deficient more than 0.2 but not by more than 0.75-inch from plan thickness, take two additional cores from unit (as defined herein) at intervals at least 150 feet, locations selected by Engineer, and determine thickness of unit for payment purposes by average length of three cores. In calculations of average thickness of this unit of pavement, measure in excess of specified thickness more than 0.2-inch considered specified thickness +0.2 inches.
    2. Thickness Deficiencies Greater than 0.75-inch: If core is deficient more than 0.75, take additional cores at 10-foot intervals in each direction parallel to centerline to determine boundary of deficient area. Engineer will evaluate any area of pavement found deficient in thickness by more than 0.75-inch but not more than 1 inch. As directed, remove and replace deficient areas without additional compensation or retain deficient areas without compensation. Remove and replace any area of pavement found deficient in thickness by more than 1 inch without additional compensation.
    3. Pavement Units for Payment Adjustment: Limits for applying payment adjustment for deficient pavement thickness from 0.20-inch to not more than 0.75 inch, are 500 foot of pavement in each lane. Lane width as shown on typical sections and pavement design standards.

a. For greater than 0.75-inch deficient thickness, limits for applying zero payment or requiring removal defined by coring or equivalent nondestructive means as Engineer determines. Remaining portion of unit determined less than 0.75-inch deficient subject to payment adjustment based on average core thickness at each end of 10-foot interval investigation as Engineer determines.

b. Measure shoulders for thickness unless otherwise shown on Plans. Shoulders 6 feet wide or wider considered lanes. Shoulders less than 6 feet wide considered part of adjacent lane.

c. Limits for applying payment adjustment for deficient pavement thickness for ramps, widenings, acceleration and deceleration lanes, and other miscellaneous areas are 500 feet in length. Ares less than 500 feet in length will be individually evaluated for payment adjustment based on plan area.

4. Deficient Thickness Adjustment: Where average thickness of pavement is deficient in thickness more than 0.2-inch but not more than 0.75 inches, payment made using adjustment factor as specified in Table 2 applied to bid price for deficient area for each unit as defined herein.

**Table 2 - DEFICIENT THICKNESS PRICE ADJUSTMENT FACTOR**

| Deficiency in Thickness Determined by Cores (in.) | Proportional Part of Contract Price Allowed (adjustment factor) |
|---|---|
| Not deficient | 1.00 |
| Over 0.00 through 0.20 | 1.00 |
| Over 0.20 through 0.30 | 0.80 |
| Over 0.30 through 0.40 | 0.72 |
| Over 0.40 through 0.50 | 0.68 |
| Over 50.0 through 0.75 | 0.57 |

## 3.12 PAVEMENT MARKINGS

A. Permanent pavement markings shall be reflectorized multipolymer applied per manufacturer recommendations including surface preparation.

B. Materials and installation for surface markings shall be per TxDOT Specifications.

## 3.13 FIELD QUALITY CONTROL

A. Testing Agency: Contractor shall sample materials, perform tests, and submit test reports during concrete placement. Contractor personnel performing testing must be ACI-certified or qualified by recognized equivalent written and performance testing program for tests performed. Sampling and testing for quality control include those specified herein.

B. Job-Control Testing: Unless otherwise shown on Plans, perform all fresh and hardened concrete job-control testing at specified frequency. Using a commercial laboratory is acceptable. Maintain all testing equipment calibrated per pertinent test methods. Make strength-testing equipment available to Engineer for verification testing. Provide Engineer the opportunity to witness all tests. Engineer may require retest if not given opportunity to witness. Furnish copy of all tests results to Engineer daily. Engineer will direct random job-control sampling and testing. Immediately investigate and take corrective action as approved if any Contractor test results, including tests performed for verification purposes, does not meet specification requirements. When job-control testing by Contractor is waived by Plans, Engineer will perform testing; however, this does not waive Contractor responsibility for providing materials and Work per this Item.

C. Job-Control Strength: Unless otherwise shown on Plans or permitted by Engineer, use seven-day job-control strength testing per ASTM C78. When job-control concrete strength test value is more than 10 percent below required job-control strength or three consecutive job-control strength values fall below required job-control strength, investigate strength test procedures, quality of materials, concrete production operations, and other possible problem areas to determine cause. Take necessary action to correct problem, including redesigning concrete mix if needed. Owner may suspend concrete paving if Contractor unable to identify, document, and correct cause of low-strength test values in timely manner. If any job-control strength is more than 15 percent below required job-control strength, Engineer will evaluate structural adequacy of pavements. When directed, remove and replace pavements found structurally inadequate at no additional cost.

D. Testing Services: Performed per the following requirements:

1. Sampling Fresh Concrete: Obtain representative samples of fresh concrete per ASTM C172, except modified for slump to comply with ASTM C94.
2. Flexural and Compressive-Strength Tests: ASTM C78 and C39; one set for each day's pour of each concrete class exceeding five but less than 25 cubic yards, plus one set for each additional 50 cubic yards. Test one specimen at 7 days and two specimens at 28 days. Retain one specimen in reserve for later testing if required. Provide Engineer the opportunity to witness all tests. Engineer may require a retest if not given the opportunity to witness. Furnish a copy of all test results to Engineer daily. Check first few concrete loads for slump, air, and temperature on start-up production days to check for concrete conformance and consistency. Sample and prepare strength test specimens (two specimens per test) on first day of production and each 2,000 square yards or fraction thereof of concrete pavement thereafter. Prepare at least one set of strength-test specimens for each production day. Perform slump, air, and temperature tests each time strength specimens made. Monitor concrete temperature to ensure concrete is consistently within temperature requirements. Engineer will direct random job-control sampling and testing. Immediately investigate and take corrective action as approved if any Contractor test result, including tests performed for verification purposes, does not meet specification requirements.
3. When frequency of testing provide fewer than five strength tests for given class of concrete, test from at least five randomly-selected batches or from each batch if fewer than five are used.
4. Slump: ASTM C143; one test at point of placement for each strength test, but not less than one test for each day's pour of each type of concrete. Additional tests will be required when concrete consistency changes.
5. Air Content: ASTM C231, pressure method; one test for each strength test, but not less than one test for each day's pour of each type of air-entrained concrete.

6. Concrete Temperature: ASTM C1064; one test hourly when air temperature is 40 degrees F and below, 80 degrees F and above, and one test for each set of strength specimens.
7. Test Specimens: ASTM C31; one set of two standard beams and one set of four standard cylinders for each flexural and compressive-strength test, unless otherwise indicated. Flexural strength test specimens cured under same conditions as portion of pavement involved. Molded and stored cylinders for laboratory-cured test specimens unless field-cured test specimens required.

E. Report test results in writing to Engineer and Contractor within 24 hours of testing. Reports of strength tests shall contain Project identification name and number, date of concrete placement, name of concrete testing agency, concrete type and class, location of concrete batch in pavement, design strengths at required time, concrete mix proportions and materials, breaking strengths, and type of break for both 7- and 28-day tests.

F. Nondestructive Testing: Impact hammer, sonoscope, or other nondestructive device may be permitted by Engineer but not used as sole basis for approval/rejection.

G. Additional Tests: Contractor shall additionally test concrete when test results indicate slump, air entrainment, concrete strengths, or other requirements not met, as Engineer directed. Contractor may conduct tests to determine adequacy of concrete by cored cylinders complying with ASTM C42, or by other methods as directed.

H. Contractor shall pay for failing tests.

I. Questionable Concrete:
1. Concrete considered "Questionable Concrete" with any of these test evaluations:
   a. Individual test strength is below specified strength; or
   b. Samples of concrete for acceptance test cylinders or acceptance test beams not representative of concrete-in-place in pavement; or
   c. Insufficient or inadequate concrete curing; or
   d. Insufficient number of acceptance test cylinders or acceptance test beams for day's concreting made for testing.
   e. In-place core densities, on average, are less than 97 percent of original mix design density, or any one core is below 96 percent original mix design density.
2. Except where core tests impair strength of structure, core test as Owner directs made at no cost to Owner to resolve Questionable Concrete. If core tests fail to demonstrate test strength required by Contract Documents or structural analysis does not confirm adequacy of structure, Owner may, at his discretion, reject Work or require load tests or additional construction. Should structural analysis confirm adequacy of pavement, Owner may, at his discretion, accept concrete with credit for full value of concrete delivered to Site per General Conditions.
3. Contractor shall pay all costs incurred in providing the additional testing or analysis to resolve acceptability of Questionable Concrete.
4. Core Tests
   a. Take three representative cores from each member or area of concrete for each test considered questionable. Location of cores as directed by Owner to least impair strength of pavement. Replace damaged cores.
   b. Obtain and test cores per ASTM C42 except if concrete in structure will be dry under service conditions, cores shall be air dried (60-80 degrees F, and relative humidity less than 60 percent) for 7 days before test, tested dry. If concrete in structure is more than superficially wet under service conditions, cores shall be immersed in water at least 48 hours and tested wet.

3.14 REPAIRS AND PROTECTION

A. Remove and replace concrete pavement that is broken, damaged, or defective, or does not meet requirements herein.

B. Drill test cores where directed by Engineer when necessary to determine magnitude of cracks or defective areas. Fill drilled core holes in satisfactory pavement areas with Portland cement concrete bonded to pavement with epoxy adhesive.

C. Protect concrete from damage. Exclude traffic from pavement for at least 14 days after placement. When construction traffic permitted, maintain pavement as clean as possible by removing surface stains and spillage of materials as they occur.

D. Maintain concrete pavement free of stains, discoloration, dirt, and other foreign material from construction traffic. Sweep concrete pavement no more than two days before date scheduled for opening section to public traffic.

END OF SECTION

**RESOLUTION NO. _____**

**RESOLUTION RESCINDING RESOLUTION 2023-115; REJECTING THE SOLE PROPOSAL RECEIVED; AND AUTHORIZING THE CITY MANAGER TO ADVERTISE A REQUEST FOR COMPETITIVE SEALED PROPOSALS FOR THE NORTH CITIZEN COLLECTION STATION PROJECT AND THE WEST CITIZEN COLLECTION STATION PROJECT**

**WHEREAS**, Resolution 2023-115 awarded a contract for the North Citizen Collection Station Project and the West Citizen Collection Station Project to Onyx General Contractors, LLC; and

**WHEREAS**, said contract has not been executed by the City and Onyx General Contractors, LLC

**WHEREAS,** the City Council finds it to be in the public interest to rescind Resolution 2023-115: and

**WHEREAS**, the City Council finds it to be in the public interest to reject the sole proposal received for the North Citizen Collection Station Project and the West Citizen Collection Station Project and to authorize the City Manager to advertise a request for competitive sealed proposals for said projects pursuant to the statutes of the State of Texas for accomplishing the work set forth in the plans and specifications approved in Motion 079-2023;

**NOW, THEREFORE, BE IT RESOLVED BY THE CITY COUNCIL OF THE CITY OF MIDLAND, TEXAS:**

**SECTION ONE.** That the recitals stated above are hereby adopted and approved.

**SECTION TWO.** That Resolution 2023-115, awarding a contract for the North Citizen Collection Station Project and the West Citizen Collection Station Project to Onyx General Contractors, LLC, is hereby rescinded.

**SECTION THREE.** That the sole proposal received for the North Citizen Collection Station Project and the West Citizen Collection Station Project is hereby rejected.

**SECTION FOUR.** That the City Manager is hereby authorized and directed to

advertise a request for competitive sealed proposals for the North Citizen Collection Station Project and the West Citizen Collection Station Project pursuant to the statutes of the State of Texas for accomplishing the work approved in Motion 079-2023 and to negotiate an agreement for said work; provided, however, that said agreement shall not become effective until approved by the City Council.

On motion of Council member _____, seconded by Council member _____, the above and foregoing resolution was adopted by the City Council of the City of Midland at a regular meeting on the _____ day of _____, A.D., 2023, by the following vote:

Council members voting "AYE":

Council members voting "NAY":

| U-FACTOR | | |
| FIXED FENESTRATION | U-0.46 | |
| OPERABLE FENESTRATION | U-0.60 | |
| ENTRANCE DOORS | U-0.77 | |
| SHGC | | |
| ORIENTATION | SEW | N |
| PF < 0.2 | 0.25 | 0.33 |
| 0.2 ≤ PF < 0.5 | 0.30 | 0.37 |
| PF ≥ 0.5 | 0.40 | 0.40 |
| SKYLIGHTS | | |
| U-FACTOR | U-0.55 | |
| SHGC | 0.35 | |

## FIRE PROTECTION RQMTS (TAB 601)

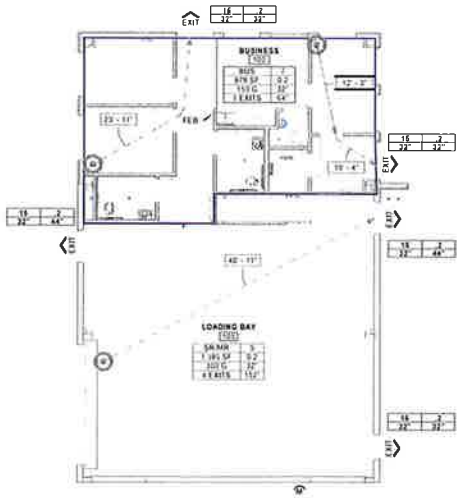
CONSTRUCTION TYPE: TYPE II-B
AUTOMATIC FIRE SPRINKLER SYSTEM: NO

| BUILDING ELEMENT PROTECTION | |
|---|---|
| PRIMARY STRUCTURAL FRAME (SEE SECTION 202) | 0 HOUR(S) |
| BEARING WALLS | |
| EXTERIOR | 0 HOUR(S) |
| INTERIOR | 0 HOUR(S) |
| NONBEARING WALLS AND PARTITIONS (TABLE 602) | |
| EXTERIOR | 0 HOUR(S) |
| NONBEARING WALLS AND PARTITIONS | |
| INTERIOR | 0 HOUR(S) |
| FLOOR CONSTRUCTION AND ASSOCIATED SECONDARY MEMBERS (SEE SECTION 202) | 0 HOUR(S) |
| ROOF CONSTRUCTION AND ASSOCIATED SECONDARY MEMBERS (SEE SECTION 202) | 0 HOUR(S) |

| PERIMETER CONTAINMENT | |
|---|---|
| METAL STUD FLY BY | SYSTEM |
| METAL STUD BEARING | SYSTEM |
| CURTAINWALL | SYSTEM |
| STOREFRONT | SYSTEM |

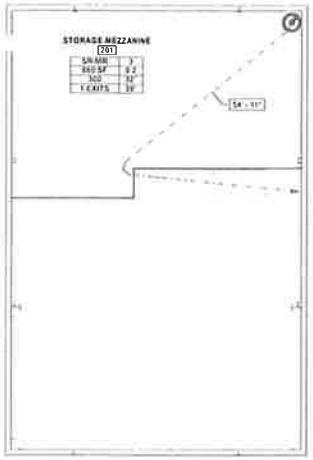
## EGRESS

| | |
|---|---|
| TOTAL OCCUPANT LOAD FOR THE BUILDING | 15 |
| TOTAL OCCUPANT LOAD EGRESS WILL ACCOMMODATE | 920 |
| REQUIRED CAPACITY BASED ON OCCUPANT LOAD (IN) | |
| 1% x 0.2 (SECTION 1005.3.1 STAIRWAYS) | 4.5 INCHES |
| 1% x 0.2 (SECTION 1005.3.2 OTHER EGRESS COMPONENTS) | 3 INCHES |
| PROVIDED CAPACITY (INCHES) | |
| STAIRWAYS | 36 INCHES |
| OTHER EGRESS COMPONENTS | 184 INCHES |



| | |
|---|---|
| MAXIMUM ALLOWABLE TRAVEL DISTANCE | 125 FEET |
| LONGEST TRAVEL DISTANCE | 55 FEET |

| | |
|---|---|
| MAXIMUM DEAD END LIMIT | 20 FEET |
| MAXIMUM DEAD END LIMIT PROVIDED | 0 FEET |



| | |
|---|---|
| COMMON PATH OF EGRESS TRAVEL | 100 FEET |
| COMMON PATH OF EGRESS TRAVEL PROVIDED | 12.25 FEET |

| | |
|---|---|
| TWO EXITS REQUIRED WHERE OCCUPANT LOAD EXCEEDS | 50 |

| MINIMUM NUMBER OF EXITS FOR OCCUPANT LOAD | |
|---|---|
| 1-500 | 2 EXITS |
| 501-1000 | 3 EXITS |
| MORE THAN 1000 | 4 EXITS |

SURVEYOR'S REPORT

1. BEARINGS AND COORDINATES SHOWN HEREON ARE BASED ON THE TEXAS STATE PLANE COORDINATE SYSTEM, CENTRAL ZONE (4203), NAD 83(93).
   HORIZONTAL DATUM: NAD83 (2011)
   COMBINED SCALE FACTOR: 0.99988106
2. DISTANCES REPORTED HEREON ARE AT GRID.
3. AREAS REPORTED HEREON ARE BASED ON CALCULATIONS MADE FROM GRID DISTANCES.
4. THIS SURVEY IS SUBJECT TO ANY FACTS WHICH MAY BE ASCERTAINED BY A FULL AND ACCURATE TITLE SEARCH. THIS MAY INCLUDE EASEMENTS, RESTRICTIONS, AND/OR COVENANTS THAT MAY BE FOUND IN PUBLIC RECORDS OF THE COUNTY.
5. LOCATION OF UNDERGROUND UTILITIES ARE DETERMINED FROM SURFACE EVIDENCE, AND/OR REPORTED LOCATION AND MAY OR MAY NOT CORRECTLY INDICATE THE ACTUAL LOCATION OF EXISTENCE OF THOSE UTILITIES. UTILITY REQUESTS WERE NOT MADE TO TEXAS 811. ADDITIONAL UTILITIES MAY EXIST WHICH THIS SURVEY DOES NOT INDICATE.
6. THIS PLAT IS VALID UNLESS IT BEARS THE SURVEYOR'S ORIGINAL SEAL AND SIGNATURE.
7. THIS IS NOT A BOUNDARY SURVEY.

I, THE UNDERSIGNED, DO HEREBY CERTIFY THAT THE PLAT AS SHOWN HEREON WAS PREPARED FROM AN ON-THE-GROUND SURVEY PERFORMED BY ME OR UNDER MY SUPERVISION AND CONFORMS TO THE CURRENT TSPS STANDARDS. IT IS MADE ON THE BASIS OF THE LOCATION OF ANY AND ALL EASEMENTS THAT MAY EXIST WITHIN THE BOUNDS OF THIS SURVEY.

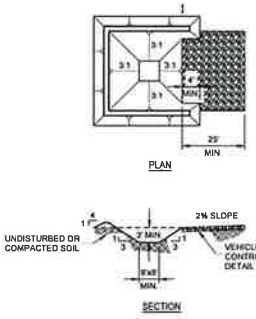
## EROSION CONTROL NOTES

1. SILT FENCING OR TEMPORARY BERMS SHALL BE INSTALLED PRIOR TO START OF CONSTRUCTION.
2. TEMPORARY SWALES AND DESILTING BASINS WILL BE PLACED WHERE NECESSARY IN ORDER TO CONVEY STORMWATER RUN-OFF.
3. A STABILIZED CONSTRUCTION ENTRANCE WILL BE PROVIDED TO HELP REDUCE VEHICLE TRACKING OF SEDIMENTS. THE PAVED STREET ADJACENT TO THE SITE ENTRANCE WILL BE SWEPT DAILY TO REMOVE ANY EXCESS MUD, DIRT OR ROCK TRACKED FROM THE SITE.
4. THE CONTRACTOR SHALL BE RESPONSIBLE FOR INSURING THAT ALL EROSION CONTROL METHODS ARE INSPECTED ON A WEEKLY BASIS OR AFTER EVERY ERODIBLE RAINFALL (1/2" OR MORE). ANY NECESSARY REPAIRS OR CLEANUP TO MAINTAIN THE EFFECTIVENESS OF THE EROSION CONTROL SHALL BE MADE AT THAT TIME.
5. THIS DRAWING IS PART OF A TPDES CONSTRUCTION POLLUTION PREVENTION PLAN. PLEASE REFER TO TEXT PORTION OF THIS PLAN FOR ADDITIONAL AND REQUIREMENTS.

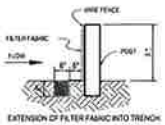
A1 STABILIZED CONSTRUCTION ENTRANCE (TxDOT TYPE 1)
NO SCALE

## CWA MAINTENANCE NOTES



1. INSPECT BMPs EACH WORKDAY, AND MAINTAIN THEM IN EFFECTIVE OPERATING CONDITION. MAINTENANCE OF BMPs SHOULD BE PROACTIVE, NOT REACTIVE. INSPECT BMPs AS SOON AS POSSIBLE (AND ALWAYS WITHIN 24 HOURS) FOLLOWING A STORM THAT CAUSES SURFACE EROSION, AND PERFORM NECESSARY MAINTENANCE.
2. FREQUENT OBSERVATIONS AND MAINTENANCE ARE NECESSARY TO MAINTAIN BMPs IN EFFECTIVE OPERATING CONDITION INSPECTIONS AND CORRECTIVE MEASURES SHOULD BE DOCUMENTED THOROUGHLY.
3. WHERE BMPs HAVE FAILED, REPAIR OR REPLACEMENT SHOULD BE INITIATED UPON DISCOVERY OF THE FAILURE.
4. THE CWA SHALL BE REPAIRED, CLEANED, OR ENLARGED AS NECESSARY TO MAINTAIN CAPACITY FOR CONCRETE WASTE, CONCRETE MATERIALS, ACCUMULATED IN PIT, SHALL BE REMOVED ONCE THE MATERIALS HAVE REACHED A DEPTH OF 2'.
5. CONCRETE WASHOUT WATER, WASTED PIECES OF CONCRETE AND ALL OTHER DEBRIS IN THE SUBSURFACE OF PIT SHALL BE TRANSPORTED FROM THE JOB SITE IN A WATER-TIGHT CONTAINER AND DISPOSED OF PROPERLY.
6. THE CWA SHALL REMAIN IN PLACE UNTIL ALL CONCRETE FOR THE PROJECT IS PLACED.
7. WHEN THE CWA IS REMOVED, COVER THE DISTURBED AREA WITH TOP SOIL, SEED AND MULCH OR OTHERWISE STABILIZED IN A MANNER APPROVED BY THE LOCAL JURISDICTION.

## GENERAL NOTES



1. THE CONSTRUCTION ENTRANCE FOUNDATION COURSE SHALL BE FLEXIBLE BASE, BITUMINOUS CONCRETE, PORTLAND CEMENT CONCRETE OR OTHER MATERIAL AS APPROVED BY THE ENGINEER.
2. THE GUIDELINES SHOWN HEREON ARE SUGGESTIONS ONLY AND MAY BE MODIFIED BY THE ENGINEER.
3. CONTRACTOR TO COORDINATE WITH ENGINEER PRIOR TO CONSTRUCTION.
4. CONTRACTOR TO COORDINATE WITH OWNER THE LOCATION OF THE STAGING AREA AND CONCRETE WASHOUT AREA.

## STABILIZED CONSTRUCTION NOTES

1. THE LENGTH OF THE TYPE 1 CONSTRUCTION EXIT SHALL BE AS INDICATED ON THE PLANS, BUT NOT LESS THAN 50'.
2. THE APPROACH SHOULD BE NO STEEPER THAN 6:1.
3. THE CONSTRUCTION EXIT SHALL BE GRADED TO ALLOW DRAINAGE TO A SEDIMENT TRAPPING DEVICE.
4. USE 4"-8" STONE OR EQUIVALENT AT A MINIMUM DEPTH OF 12" FOR STABILIZED CONSTRUCTION ENTRANCE.
5. FILTER FABRIC SHOULD BE PLACED UNDERNEATH STONE OF CONSTRUCTION ENTRANCE TO REDUCE THE AMOUNT OF RUTTING AND TO PREVENT STONE FROM BEING EMBEDDED INTO THE SOIL.

B3 CWA CONCRETE WASHOUT AREA
NO SCALE

B4 FILTER FABRIC BARRIER (SILT FENCE)
NO SCALE

## NOTES:

1. WOVEN WIRE FENCE TO BE FASTENED SECURELY TO FENCE POSTS WITH WIRE TIES OR STAPLES.
2. FILTER CLOTH TO BE FASTENED SECURELY TO WOVEN WIRE FENCE WITH TIES SPACED EVERY 24' AT THE TOP AND MIDSECTION.
3. WHEN TWO SECTIONS OF FILTER CLOTH ADJOIN EACH OTHER, THEY SHALL BE OVERLAPPED 6" AT THE POSTS AND FOLDED.
4. FENCE POSTS SHALL BE CAPABLE OF SUPPORTING FENCE AND MAY BE METAL OR WOOD.

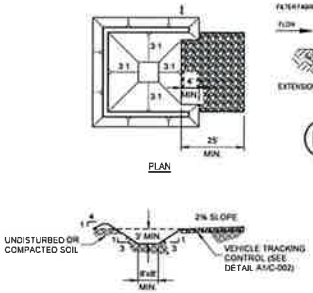
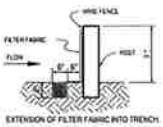
## CWA MAINTENANCE NOTES



1. INSPECT BMPs EACH WORKDAY, AND MAINTAIN THEM IN EFFECTIVE OPERATING CONDITION. MAINTENANCE OF BMPs SHOULD BE PROACTIVE, NOT REACTIVE. INSPECT BMPs AS SOON AS POSSIBLE (AND ALWAYS WITHIN 24 HOURS) FOLLOWING A STORM THAT CAUSES SURFACE EROSION, AND PERFORM NECESSARY MAINTENANCE.
2. FREQUENT OBSERVATIONS AND MAINTENANCE ARE NECESSARY TO MAINTAIN BMPs IN EFFECTIVE OPERATING CONDITION INSPECTIONS AND CORRECTIVE MEASURES SHOULD BE DOCUMENTED THOROUGHLY.
3. WHERE BMPs HAVE FAILED, REPAIR OR REPLACEMENT SHOULD BE INITIATED UPON DISCOVERY OF THE FAILURE.
4. THE CWA SHALL BE REPAIRED, CLEANED, OR ENLARGED AS NECESSARY TO MAINTAIN CAPACITY FOR CONCRETE WASTE, CONCRETE MATERIALS, ACCUMULATED IN PIT, SHALL BE REMOVED ONCE THE MATERIALS HAVE REACHED A DEPTH OF 2'.
5. CONCRETE WASHOUT WATER, WASTED PIECES OF CONCRETE AND ALL OTHER DEBRIS IN THE SUBSURFACE OF PIT SHALL BE TRANSPORTED FROM THE JOB SITE IN A WATER-TIGHT CONTAINER AND DISPOSED OF PROPERLY.
6. THE CWA SHALL REMAIN IN PLACE UNTIL ALL CONCRETE FOR THE PROJECT IS PLACED.
7. WHEN THE CWA IS REMOVED, COVER THE DISTURBED AREA WITH TOP SOIL, SEED AND MULCH OR OTHERWISE STABILIZED IN A MANNER APPROVED BY THE LOCAL JURISDICTION.

## GENERAL NOTES



1. THE CONSTRUCTION ENTRANCE FOUNDATION COURSE SHALL BE FLEXIBLE BASE, BITUMINOUS CONCRETE, PORTLAND CEMENT CONCRETE OR OTHER MATERIAL AS APPROVED BY THE ENGINEER.
2. THE GUIDELINES SHOWN HEREON ARE SUGGESTIONS ONLY AND MAY BE MODIFIED BY THE ENGINEER.
3. CONTRACTOR TO COORDINATE WITH ENGINEER PRIOR TO CONSTRUCTION
4. CONTRACTOR TO COORDINATE WITH OWNER THE LOCATION OF THE STAGING AREA AND CONCRETE WASHOUT AREA.

## STABILIZED CONSTRUCTION NOTES

1. THE LENGTH OF THE TYPE 1 CONSTRUCTION EXIT SHALL BE AS INDICATED ON THE PLANS, BUT NOT LESS THAN 50'.
2. THE APPROACH SHOULD BE NO STEEPER THAN 5:1.
3. THE CONSTRUCTION EXIT SHALL BE GRADED TO ALLOW DRAINAGE TO A SEDIMENT TRAPPING DEVICE.
4. USE 4"-8" STONE OR EQUIVALENT AT A MINIMUM DEPTH OF 12" FOR STABILIZED CONSTRUCTION ENTRANCE.
5. FILTER FABRIC SHOULD BE PLACED UNDERNEATH STONE OF CONSTRUCTION ENTRANCE TO REDUCE THE AMOUNT OF RUTTING AND TO PREVENT STONE FROM BEING EMBEDDED INTO THE SOIL.

B3 CWA CONCRETE WASHOUT AREA
NO SCALE

B4 FILTER FABRIC BARRIER (SILT FENCE)
NO SCALE

## NOTES:

1. WOVEN WIRE FENCE TO BE FASTENED SECURELY TO FENCE POSTS WITH WIRE TIES OR STAPLES.
2. FILTER CLOTH TO BE FASTENED SECURELY TO WOVEN WIRE FENCE WITH TIES SPACED EVERY 24' AT THE TOP AND MIDSECTION.
3. WHEN TWO SECTIONS OF FILTER CLOTH ADJOIN EACH OTHER, THEY SHALL BE OVERLAPPED 6" AT THE POSTS AND FOLDED.
4. FENCE POSTS SHALL BE CAPABLE OF SUPPORTING FENCE AND MAY BE METAL OR WOOD

## KEY NOTES

AS INDICATED BY (XX)

1. EXISTING WATER WELL, 2" WATER LINE CONNECTION
2. SEPTIC TANK, SEE DETAIL C3/C-503
3. ABSORPTIVE DRAINFIELD. SEE DETAIL C1/C-503
4. CLEANOUT. SEE DETAIL B1/C-503
5. 4" SEWER LINE
6. SEWER CONNECTION. SEE PLUMBING PLANS FOR CONTINUATION
7. 2" WATER LINE
8. WATER CONNECTION. SEE PLUMBING PLANS FOR CONTINUATION
9. BOLLARD. SEE DETAIL C3/C-501
10. DIVERTER VALVE

## GENERAL NOTES

1. CONTRACTOR SHALL OBTAIN A SOIL EVALUATION REPORT FOR SEPTIC SYSTEM SUITABILITY IN THE AREA PRIOR TO DESIGN AND CONSTRUCTION
2. CONTRACTOR SHALL SIZE THE SEPTIC TANK FOR THIS FACILITY IN ACCORDANCE WITH ALL RELEVANT REGULATION AND ORDINANCES.
3. CONTRACTOR SHALL SIZE THE ABSORPTION FIELD IN ACCORDANCE WITH ALL RELEVANT REGULATION AND ORDINANCES
4. FOR REDUNDANCY CONTRACTOR SHALL INSTALL TWO ADEQUATELY SIZED ABSORPTION FIELDS SEPARATED BY DIVERTER VALVE.
5. CONTRACTOR SHALL PROTECT SEPTIC TANK AND ABSORPTION FIELD WITH BOLLARDS. BOLLARDS SHALL BE OFFSET BY ONE FOOT FROM THE LIMITS OF THE INSTALLED SEPTIC TANK AND ABSORPTION FIELD
6. CONTRACTOR SHALL COORDINATE WITH LOCAL OSSF PERMITTING AUTHORITY TO ACQUIRE ALL NECESSARY AUTHORIZATION OF OSSF SYSTEM

SIGN

NO PARKING FIRE LANE
6" WIDE RED BACKGROUND STRIPE WITH 3" HIGH WHITE LETTERS WITH A ONE-HALF INCH STROKE STATING "FIRE LANE - TOW AWAY ZONE" TO BE PAINTED UPON THE RED STRIPE EVERY 50' ALONG THE ENTIRE LENGTH OF THE FIRE LANE.

NEW FIRE LANE SIGN AND TYPE. SEE DETAIL C5/C-104

| SITE DATA - PARKING | MIN. REQUIRED | PROVIDED |
|---|---|---|
| STANDARD SPACES | 2 | 3 |
| ACCESSIBLE SPACES | 1 | 2 |
| TOTAL | | 5 |

NOTE
PARKING SPACES ARE CALCULATED BASED ON CITY OF MIDLAND ZONING ORDINANCE SECTION 6.02 FOR AN INDUSTRIAL USE THAT IS NOT SPECIFICALLY LISTED IN TABLE 6. THE FACILITY IS REQUIRED TO HAVE ONE SPACE FOR EACH TWO EMPLOYEES PER MAXIMUM SHIFT OR ONE SPACE PER EACH 1,000 SQUARE FEET OF FLOOR AREA, WHICH EVER IS GREATER. THE BUILDING IS ~2,445 SQUARE FEET. THE MAXIMUM OCCUPANCY PER SHIFT IS EXPECTED TO BE 4.

FILE NAME: A:\2022\40015.22\03_DSGN\01_DWG\050_CIVIL\C-107-40015-22.dwg LAYOUT NAME: C-107 PRINTED: Tuesday, October 31, 2023 - 10:12am USER: SHarvey

NOTES

1. IT SHALL BE THE RESPONSIBILITY OF THE CONTRACTOR TO VERIFY, BOTH HORIZONTALLY AND VERTICALLY, THE LOCATIONS OF ALL EXISTING UTILITIES PRIOR TO CONSTRUCTION. TO MAKE ALL NECESSARY PRECAUTIONS IN ORDER TO PROTECT ALL FACILITIES ENCOUNTERED AND TO NOTIFY THE ENGINEER PROMPTLY OF ALL CONFLICTS OF THE WORK WITH EXISTING FACILITIES
2. SCORE CONCRETE SIDEWALK IN CONFORMANCE WITH SPECIFICATIONS AND DETAIL SHEET C-501
3. JOINT SPACING IS TO BE LESS THAN 30 TIMES THE CONCRETE SLAB THICKNESS IN FEET. E.G. 4"=0.33*30=10'
4. CONCRETE PANELS SHOULD BE SQUARE OR NEARLY SQUARE. THE LENGTH SHOULD NOT EXCEED 1.5 TIMES THE WIDTH. L-SHAPED PANELS SHOULD BE AVOIDED
5. THE JOINTING PLAN IS ONLY A RECOMMENDATION AND NOT A FINAL LAYOUT
6. MAINTAIN A MINIMUM 3 FOOT WIDTH ON ALL SIDEWALKS AND PATHS FOR HANDICAP ACCESSIBILITY
7. SEE SHEET C-301 FOR CROSS-SECTIONS

LETTERING - RED
BACKGROUND - WHITE
BORDER - BLACK

C5 FIRE LANE SIGNS
NOT TO SCALE

## NOTES

1. ALL STRIPING DIMENSIONS ARE MEASURED FROM CENTER OF STRIPE OR TO BACK OF CURB. MARKED WITH (F) DENOTES DIMENSIONED TO FACE OF CURB.
2. ALL STRIPING IS TO BE 4" WIDE WHITE STRIPE UNLESS OTHERWISE NOTED.
3. COORDINATE ANY ADDITIONAL SIGNAGE WITH OWNER.

## KEYED NOTES

1. ACCESSIBLE SPACE SIGN. SEE DETAIL C5/C-501
2. 4" WIDE WHITE STRIPE
3. METAL SIGN "DO NOT ENTER". SEE DETAIL D2/C-502
4. METAL SIGN "STOP". SEE DETAIL D2/C-502
5. METAL SIGN "ONE-WAY". SEE DETAIL D2/C-502
6. ADDRESS SIGN. SEE DETAIL D1/C-502
- NEW FIRE LANE SIGN AND TYPE. SEE DETAIL C5/C-104

## LEGEND

- SIGN
- NO PARKING FIRE LANE
  6" WIDE RED BACKGROUND STRIPE WITH 3" HIGH WHITE LETTERS WITH A ONE-HALF INCH STROKE STATING "FIRE LANE - TOW AWAY ZONE" TO BE PAINTED UPON THE RED STRIPE EVERY 50' ALONG THE ENTIRE LENGTH OF THE FIRE LANE.
- NEW FIRE LANE SIGN AND TYPE. SEE DETAIL C5/C-104.

| SITE DATA - PARKING | MIN. REQUIRED | PROVIDED |
|---|---|---|
| STANDARD SPACES | 2 | 3 |
| ACCESSIBLE SPACES | 1 | 2 |
| TOTAL | | 5 |

NOTE:
PARKING SPACES ARE CALCULATED BASED ON CITY OF MIDLAND ZONING ORDINANCE SECTION 8.02 FOR AN INDUSTRIAL USE THAT IS NOT SPECIFICALLY LISTED IN TABLE 6. THE FACILITY IS REQUIRED TO HAVE ONE SPACE FOR EACH TWO EMPLOYEES PER MAXIMUM SHIFT OR ONE SPACE PER EACH 1,000 SQUARE FEET OF FLOOR AREA, WHICH EVER IS GREATER. THE BUILDING IS ~2,445 SQUARE FEET. THE MAXIMUM OCCUPANCY PER SHIFT IS EXPECTED TO BE 4.

NOTES:
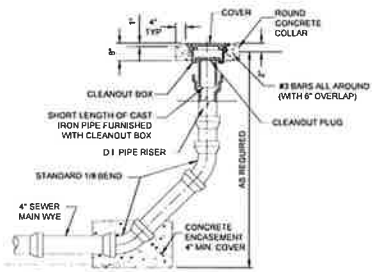
1. CONTRACTOR SHALL SIZE THE SEPTIC TANK FOR THIS FACILITY IN ACCORDANCE WITH ALL RELEVANT REGULATION AND ORDINANCES
2. CONTRACTOR SHALL PROTECT SEPTIC TANK WITH BOLLARDS.
3. SEPTIC TANK SHALL BE A PRECAST CONCRETE SEPTIC TANK OR APPROVED EQUAL
4. SEPTIC TANK SHALL HAVE MINIMUM CAPACITY AS RECOMMENDED IN SITE EVALUATION REPORT.

## C3 SEPTIC TANK
NOT TO SCALE

## DESIGN ANALYSIS



1 CONTRACTOR SHALL OBTAIN A SOIL EVALUATION REPORT FOR SEPTIC SYSTEM SUITABILITY IN THE AREA PRIOR TO DESIGN AND CONSTRUCTION

2 CONTRACTOR SHALL COORDINATE WITH LOCAL OSSF PERMITTING AUTHORITY TO ACQUIRE ALL NECESSARY AUTHORIZATION OF OSSF SYSTEM

## LEGEND

4" SANITARY SEWER (PVC, SDR-26)

## C1 ABSORPTIVE DRAINFIELD LAYOUT
1" = 4'-0"

## B1 CLEANOUT DETAIL
NOT TO SCALE

NOTES

1. CONTRACTOR SHALL OBTAIN A SOIL EVALUATION REPORT FOR SEPTIC SYSTEM SUITABILITY IN THE AREA PRIOR TO DESIGN AND CONSTRUCTION
2. CONTRACTOR SHALL SIZE THE ABSORPTION FIELD IN ACCORDANCE WITH ALL RELEVANT REGULATION AND ORDINANCES
3. FOR REDUNDANCY CONTRACTOR SHALL INSTALL TWO ADEQUATELY SIZED ABSORPTION FIELDS SEPARATED BY DIVERTER VALVE
4. CONTRACTOR SHALL PROTECT ABSORPTION FIELD WITH BOLLARDS
5. EXCAVATE TRENCHES TO PROPER WIDTH, AND PROPER DEPTH AS REQUIRED BY STATE AND LOCAL CODES
6. SMOOTH IRREGULARITIES IN THE EXCAVATION. A LEVEL, FLAT SURFACE IS NECESSARY
7. ASSEMBLE BIODIFFUSER LEACHING CHAMBERS AND UNIVERSAL ENDPLATES TOGETHER IN TRENCH(ES)
8. THE UNIVERSAL END PLATE IS CONSTRUCTED WITH TABS SO THAT THE EARTH FILL ON ONE SIDE WILL HOLD IT SECURELY IN PLACE AGAINST THE BIODIFFUSER
9. PUNCH OUT PIPE HOLE OPENINGS IN THE END PLATES AS NEEDED AND CONNECT INLET PIPES
10. FILL SIDEWALL AREA TO TOP OF CHAMBERS WITH NATIVE SOIL (COARSE SAND OR FINE GRAVEL MAY ALSO BE USED. NO HEAVY CLAY, SILT, OR DEBRIS SHALL BE INCLUDED)
11. "WALK IN" FILL TO COMPACT SOIL ALONG SIDES OF BIODIFFUSER
12. COVER BIODIFFUSER LEACHING CHAMBERS TO A MINIMUM OF 12" AFTER CONSOLIDATION
13. USE TRAFFIC RATED CLEANOUT COVER FOR ALL CLEANOUTS ADJACENT TO LEACH FIELD
14. CONTRACTOR SHALL COORDINATE WITH LOCAL OSSF PERMITTING AUTHORITY TO ACQUIRE ALL NECESSARY AUTHORIZATION OF OSSF SYSTEM
15. CONTRACTOR SHALL ADHERE TO RECOMMENDATIONS FROM SITE EVALUATION

## GENERAL REQUIREMENTS

A REFER TO SPECIFICATIONS FOR SPECIFIC REQUIREMENTS FOR MATERIALS, PRODUCTS, HANDLING, AND INSTALLATION
B THE CONTRACTOR IS RESPONSIBLE FOR THE STABILITY OF THE STRUCTURE UNTIL THE CONSTRUCTION OF THE STRUCTURE REACHES ITS FINAL CONDITION, AND ALL DIAPHRAGMS, BRACES, AND/OR SHEAR WALLS ARE INSTALLED
C THE CONTRACTOR IS SOLELY RESPONSIBLE FOR THE DESIGN, INSTALLATION, AND REMOVAL OF TEMPORARY BRACING AND CONSTRUCTION SUPPORTS FOR NEW AND EXISTING STRUCTURES, AS NECESSARY TO COMPLETE THE PROJECT. NO PORTION OF THE PROJECT WHILE UNDER CONSTRUCTION IS INTENDED TO BE STABLE IN THE ABSENCE OF THE CONTRACTOR'S TEMPORARY SUPPORTS AND BRACES. CONTRACTOR SHALL RETAIN A STRUCTURAL ENGINEER LICENSED IN THE STATE IN WHICH THE PROJECT IS LOCATED TO DESIGN TEMPORARY BRACING AND CONSTRUCTION SUPPORTS.
D APPLY DETAILS, SECTIONS, AND NOTES ON THE DRAWINGS WHERE CONDITIONS ARE SIMILAR TO THOSE INDICATED ON DETAILS, TITLES, OR NOTES.
E ONLY USE DIMENSIONS INDICATED ON THE DRAWINGS. DO NOT SCALE DRAWINGS.
F THE CONTRACTOR SHALL VERIFY ALL OPENING SIZES AND LOCATIONS WITH OTHER DISCIPLINES. THE DRAWINGS DO NOT SHOW ALL OPENINGS REQUIRED. ADDITIONAL OPENINGS, BLOCKOUTS, AND SLEEVES MAY BE REQUIRED BY OTHER DISCIPLINES AND SHALL BE CONSTRUCTED USING THE TYPICAL DETAILS AND/OR THE CRITERIA INDICATED ON THE DRAWINGS. OPENINGS REQUIRED BUT NOT SHOWN ON THE STRUCTURAL DRAWINGS MUST BE APPROVED BY THE STRUCTURAL ENGINEER.
G REFER TO ARCHITECTURAL, CIVIL, MEP, AND VERTICAL TRANSPORTATION CONTRACT DOCUMENTS FOR ADDITIONAL INFORMATION RELATING TO THE COORDINATION OF STRUCTURAL COMPONENTS INCLUDING, BUT NOT LIMITED TO
  a CIVIL
    1 SITING OF BUILDING GRID LINES WITH RESPECT TO CITY BENCHMARKS
    2 SITE PREPARATION
    3 BACKFILLING MATERIALS AND REQUIREMENTS
    4 PAVING AND SITE ELEMENTS OUTSIDE OF BUILDING ENVELOPE
    5 NEW AND EXISTING UTILITIES
  b ARCHITECTURAL
    1 PLAN DIMENSIONS AND PROJECT DATUM
    2 SLAB EDGE DIMENSIONS
    3 FINISH ELEVATION
    4 WATERPROOFING AND DAMP-PROOFING DETAILS
    5 RAMP GEOMETRY, PITS, SLAB SLOPES, AND DEPRESSIONS
    6 EMBEDMENTS, INSERTS, BLOCKOUTS, ETC.
    7 EXACT OPENING SIZES FOR PIPES, DUCT, ETC.
    8 CONCRETE FINISHES AND TOPPING SLABS
    9 CONCRETE CURBS AND HOUSEKEEPING PADS
    10 INTERIOR NON-STRUCTURAL MASONRY PARTITIONS
  c FIRE RATINGS/MEP
    1 PIPE AND DUCT SIZES FOR OPENINGS AND SLEEVE COORDINATION
    2 FLOOR DRAINS
    3 UNDERFLOOR AND PERIMETER DRAINAGE SYSTEMS
    4 EQUIPMENT CURBS
    5 CONDUITS AND EMBEDMENTS IN WALLS AND SLABS
H STRUCTURAL COMPONENTS ARE NOT DESIGNED FOR VIBRATING EQUIPMENT. MOUNT VIBRATING EQUIPMENT ON VIBRATING ISOLATORS.

## CODES

ALL FABRICATION, ERECTION, AND DESIGN OF STRUCTURAL MEMBERS SHALL MEET THE MINIMUM STANDARDS OF THE FOLLOWING CODES
A INTERNATIONAL BUILDING CODE (IBC) 2018
B AMERICAN CONCRETE INSTITUTE (ACI) ACI 318-14 AND OTHER APPLICABLE ACI STANDARDS
C AMERICAN INSTITUTE OF STEEL CONSTRUCTION (AISC) STEEL CONSTRUCTION MANUAL - SPECIFICATIONS FOR STRUCTURAL STEEL BUILDINGS - AISI/AISC 360 - 16
D AMERICAN SOCIETY OF CIVIL ENGINEERS (ASCE) - STANDARD 7-16
E AMERICAN WELDING SOCIETY (AWS)
F CONCRETE REINFORCING STEEL INSTITUTE ( CRSI)
G ASTM SPECIFICATIONS
H AMERICAN IRON AND STEEL INSTITUTE (AISI)

## MATERIAL PROPERTIES

| | |
|---|---|
| STEEL | |
| WIDE FLANGE MEMBERS | ASTM A992 - GRADE 50 |
| STEEL PIPE | ASTM A500 GRADE B - 50 KSI |
| STEEL TUBE | ASTM A500 GRADE B - 50 KSI |
| MISC STEEL | ASTM A36 - 36 KSI |
| CONCRETE | |
| SLABS | 4000 PSI |
| GRADE BEAMS & FOOTINGS | 4000 PSI |
| RETAINING WALLS | 4000 PSI |
| REINFORCING | |
| TYPICAL | ASTM A-615 - GRADE 60 |
| LOW ALLOY/WELDABLE | ASTM A-706 - GRADE 60 |
| ANCHOR RODS | ASTM F-1554 - GRADE 36 UNO |
| BOLTS | ASTM A325 (3/4" DIAMETER MINIMUM) |
| WELD | |
| STRUCTURAL STEEL | E70XX |
| LIGHT GAUGE METALS | E60XX |

## CONCRETE

A ALL EXTERIOR CONCRETE, INCLUDING WALKS AND CURBS OUTSIDE THE BUILDING LINE, SHALL BE AIR ENTRAINED
B PROVIDE STANDARD BAR CHAIRS AND SPACERS FOR REINFORCING AT A MAXIMUM OF 4 FOOT CENTERS FOR ALL SLABS AND BEAMS
C LAP CONTINUOUS UNSCHEDULED REINFORCING BARS AS FOLLOWS: BOTTOM BARS IN MEMBERS SUPPORTED BY COLUMNS OR FOOTINGS - 12 INCH AT SUPPORTS ONLY. ALL OTHERS - (36) BAR DIAMETERS MINIMUM
D ALL HORIZONTAL REINFORCING IN CONTINUOUS FOOTINGS AND WALLS SHALL BE CONTINUOUS AROUND CORNERS OR HAVE CORNER BARS OF THE SAME SIZE AND SPACING AS THE HORIZONTAL BARS AND LAP A MINIMUM OF (30) BAR DIAMETERS, OR 24 INCH MINIMUM
E THERE SHALL BE NO HORIZONTAL CONSTRUCTION JOINTS IN CONCRETE BEAM, FOOTING, OR SLAB POURS. ALL CONSTRUCTION JOINTS SHALL BE MADE WITHIN THE CENTER THIRD OF SPANS WITH VERTICAL BULKHEADS. THE LOCATION OF CONSTRUCTION JOINTS SHALL BE APPROVED BY THE STRUCTURAL ENGINEER.
F WHERE CONCRETE PILASTERS, COLUMNS, OR BEAMS ARE TO BE LEFT EXPOSED AND DO NOT ABUT OTHER MATERIALS, EXTERNAL CORNERS SHALL BE CHAMFERED 3/4 INCH.
G WHERE SLEEVES ARE REQUIRED THROUGH BEAMS OR JOISTS, VERTICAL OR HORIZONTAL PIPE SLEEVES SHALL BE PROVIDED AS SPECIFIED UNDER THE MECHANICAL AND ELECTRICAL SECTIONS OF THE SPECIFICATION. LOCATION OF ALL SUCH SLEEVES SHALL BE APPROVED BY THE STRUCTURAL ENGINEER. WHERE NECESSARY FOR STRUCTURAL REASONS, BEAMS OR JOISTS SHALL BE WIDENED TO COMPENSATE FOR THE LOSS OF CROSS SECTION DUE TO THE SLEEVE. ADD ONE EXTRA TIE OR STIRRUP ON BOTH SIDES OF EACH SLEEVE. WHERE TWO OR MORE PIPE SLEEVES ARE REQUIRED THROUGH CONCRETE SLABS, A DISTANCE EQUAL TO THREE TIMES THE LARGER SLEEVE DIAMETER SHALL BE PROVIDED BETWEEN SLEEVES

## DESIGN LOADS

A ALL APPLICABLE DEAD LOADS
B LIVE LOADS

| | |
|---|---|
| ROOF LIVE LOAD | 20 PSF |
| FLOOR LIVE LOAD | 100 PSF |
| MEZZANINE LIVE LOAD | 125 PSF |
| C COLLATERAL LOAD | 10 PSF |

D SNOW LOAD PER ASCE 7-10

| | |
|---|---|
| GROUND SNOW LOAD, $P_g$ | 5 PSF |
| FLAT-ROOF SNOW LOAD, $P_f$ | 5 PSF |
| DRIFT SURCHARGE LOAD(S) $P_d$ | NA |
| SNOW EXPOSURE FACTOR, $C_e$ | C |
| SNOW LOAD IMPORTANCE FACTOR, $I_s$ | I |
| THERMAL FACTOR, $C_t$ | 1.0 |
| SLOPE FACTOR(S) $C_s$ | 1.0 |
| WIDTH OF SNOW DRIFT(S), w | NA |

E LATERAL SOIL PRESSURE

| | |
|---|---|
| AT-REST | 56 PCF |
| ACTIVE | 37 PCF |
| PASSIVE | 360 PCF |

F WIND LOAD PER ASCE 7-16

| | |
|---|---|
| BASIC WIND SPEED | 105 MPH |
| EXPOSURE | C |
| CATEGORY | II |

G SEISMIC LOADS PER ASCE 7-16

| | |
|---|---|
| BUILDING CATEGORY | II |
| SEISMIC IMPORTANCE FACTOR, $I_e$ | 1.00 |
| MAPPED SPECTRAL RESPONSE ACCELERATION, $S_s$ | 12.4%g |
| MAPPED SPECTRAL RESPONSE ACCELERATION, $S_1$ | 3.3%g |
| SITE CLASS | D |
| SPECTRAL RESPONSE COEFFICIENT, $S_{DS}$ | 1.32 |
| SPECTRAL RESPONSE COEFFICIENT, $S_{D1}$ | 5.3 |
| SEISMIC DESIGN CATEGORY | A |
| BASIC SEISMIC FORCE RESISTING SYSTEM | |
| MEZZANINE | SHEAR WALL |
| PENB | INF |
| DESIGN BASE SHEAR, V MEZZANINE | 0.4 k |
| SEISMIC RESPONSE COEFFICIENT, $C_s$ | 2.01 |
| RESPONSE MODIFICATION FACTOR, R | A-15 |
| ANALYSIS PROCEDURE USED | EQUIVALENT LATERAL FORCE |

H DISTRIBUTE THE MAXIMUM LOAD HUNG FROM ANY STRUCTURAL MEMBER FOR MEP DUCTWORK, PIPING, ETC. OVER THE MEMBER'S TRIBUTARY AREA IN A WAY THAT THE DESIGN SUPERIMPOSED DEAD LOADS LISTED IN CONTRACT DOCUMENTS ARE NOT EXCEEDED. HANGING ITEMS FROM DECK IS STRICTLY PROHIBITED. THE CONTRACTOR SHALL COORDINATE THE LOADS OF ALL TRADES AND PROVIDE ADDITIONAL SUPPORT OR DISTRIBUTION FRAMING AS REQUIRED TO ACHIEVE THE ALLOWABLE LOAD DISTRIBUTION

## FOUNDATIONS

A ALL FOOTINGS ARE DESIGNED ON AN ALLOWABLE SOIL BEARING PRESSURE OF 3,500 POUNDS PER SQUARE FOOT AT A MINIMUM DEPTH OF 3'-0" FOOT BELOW 100'-0" FINISHED FLOOR ELEVATION
B PLACE 4 INCH GRANULAR FILL, MEETING TxDOT ITEM 247, GRADE 3, UNDER VAPOR BARRIER UNDER ALL UNSUPPORTED FLOOR SLABS ON FILL, EXCEPT AS OTHERWISE NOTED
C ALL EXTERIOR GRADE BEAMS SHALL BE CHAMFERED 3/4 INCH ON THE EXPOSED EXTERIOR CORNER
D REFER TO THE SOIL REPORT FOR SUBSOIL CONDITIONS THAT MAY BE ENCOUNTERED IN THE INSTALLATION OF FOUNDATIONS. AND OTHER INFORMATION RELEVANT TO FOUNDATIONS AND SITE PREPARATION
E DESIGN OF FOUNDATIONS AND STRUCTURAL COMPONENTS IN CONTACT WITH SOIL, AT THE WEST CCS BUILDING, IS BASED ON THE RECOMMENDATIONS GIVEN IN THE FOLLOWING GEOTECHNICAL REPORT

| | |
|---|---|
| REPORT BY | BEYOND ENGINEERING AND TESTING |
| DATE OF REPORT | JANUARY 5, 2022 |
| REPORT NUMBER | GT2111051 |

F DESIGN OF FOUNDATIONS AND STRUCTURAL COMPONENTS IN CONTACT WITH SOIL, AT THE NORTH CCS BUILDING, IS BASED ON THE RECOMMENDATIONS GIVEN IN THE FOLLOWING GEOTECHNICAL REPORT

| | |
|---|---|
| REPORT BY | TERRACON |
| DATE OF REPOT | JULY 14, 2023 |
| REPORT NUMBER | A4235100 |

## SITE PLANNING AND FILL NOTES

A PROPER CONSTRUCTION DRAINAGE SHALL BE PROVIDED AND MAINTAINED AT ALL TIMES DURING FOUNDATION CONSTRUCTION. PONDING OF WATER AT THE SITE SHOULD BE AVOIDED DURING ALL PHASES OF CONSTRUCTION.
B REMOVE SURFACE DEBRIS, VEGETATION, ORGANIC TOP SOIL, LOOSE SOIL AND MAJOR ROOT SYSTEMS. REMOVAL SHALL EXTEND 5 FOOT BEYOND BUILDING AREAS, CITIZENS DESPOSAL AREA AND 2 FOOT BEYOND PAVING AREAS
C COMPACT RESULTING SUBGRADE AND VERIFY STABILITY USING A PROOF-ROLL TEST. CONDUCT A PROOF-ROLL TESTS AS INDICATED IN THE GEOTECHNICAL REPORT. FOR SOFT SPOTS AND AREAS THAT EXHIBIT PUMPING, SCARIFY AND RECOMPACT TOP 6 INCHES OF SUBGRADE TO MINIMUM OF 98 PERCENT OF ASTM D698 OR ASTM D1557 MAXIMUM DENSITY
D BUILDING PAD SHALL BE RAISED TO PROPER ELEVATION USING SATISFACTORY SOILS COMPACTED IN 8 INCH MAXIMUM LOOSE LIFTS TO 98 PERCENT OF ASTM D698 MAXIMUM DENSITY, OR AS PRESCRIBED BY THE GEOTECHNICAL ENGINEER. MOISTURE SHALL BE CONTROLLED TO WITHIN 3 PERCENT OF OPTIMUM FOR COHESIVE SOILS AND 3 PERCENT FOR COHESIONLESS SOILS PER D698 DURING COMPACTION OPERATIONS
E FOOTINGS MAY BE BACK FILLED USING SATISFACTORY SOILS AS SPECIFIED, COMPACTED IN 6 INCH MAXIMUM LOOSE LIFTS TO 98 PERCENT OF MAXIMUM DENSITY PER ASTM D698
F UTILITY TRENCHES WITHIN BUILDING OR PAVING AREAS SHALL BE FILLED PER THE ABOVE CRITERIA

## PRE-ENGINEERED BUILDING

A THE BUILDING SHALL BE A MANUFACTURER'S STANDARD PREFABRICATED METAL STRUCTURE OF THE APPROXIMATE INSIDE AREA SHOWN, EXCEPT AS NOTED. RIGID FRAMES SHALL BE SPACED AS SHOWN ON THE DRAWINGS. BUT OVERALL DIMENSIONS AND CONSTRUCTION DETAILS MAY VARY TO SUIT MANUFACTURER'S STANDARD DESIGN. HOWEVER, MINIMUM WEB THICKNESS OF RIGID FRAMES SHALL BE 3/16 INCH
B THE BUILDING SHALL BE DESIGNED AND FABRICATED ACCORDING TO AISC, MBMA, AND AISI LATEST SPECIFICATIONS. THE DIMENSIONAL TOLERANCES APPLICABLE TO ROLL FORM STEEL UNDER THE AISC "STANDARD MILL PRACTICE" SECTION SHALL BE REQUIRED IN THE FABRICATION OF THE STEEL BUILDING FRAMES
C A COMPLETE DESIGN ANALYSIS SHOWING ALL CALCULATIONS FOR THE RIGID FRAMES, GIRTS, PURLINS, AND X-BRACING FOR WIND AND SEISMIC LOADS AND A LAYOUT OF ANCHOR BOLTS AND OTHER EMBEDDED ITEMS SHALL BE SUBMITTED FOR APPROVAL WITH THE SHOP DRAWINGS. SHOP DRAWINGS SHALL INCLUDE DETAILS OF MAIN MEMBERS, TYPICAL CONNECTIONS (SHOWING BOLT HOLES AND WELDS), AND ERECTION DRAWINGS
D THE BUILDING SHALL BE DESIGNED TO SUPPORT ALL MECHANICAL EQUIPMENT INCLUDING HEATERS, SPRINKLERS, EXHAUST SYSTEMS, AND ALL OTHER SUCH DEVICES. ADDITIONAL GIRTS OR PURLINS SHALL BE PLACED IN CONVENIENT LOCATIONS FOR ATTACHMENT OF ALL MECHANICAL EQUIPMENT

## CONCRETE MIX DESIGNS

ALL CONCRETE TO BE NORMAL WEIGHT CONCRETE. MAXIMUM FLY ASH CONTENT TO BE NO MORE THAN 25% OF TOTAL CEMENTITIOUS WEIGHT. IF TYPE 1L CEMENT USED, MIX DESIGN OR STRENGTH RESULTS MUST BE FOR TYPE 1L CEMENT.
A CONTINUOUS FOOTINGS, GRADE BEAMS AND TIE BEAMS
  a CEMENT TYPE I-II
  b MINIMUM COMPRESSIVE STRENGTH
    1 4,000 PSI AT 28 DAYS
  c MAXIMUM W/C RATIO
    1 0.50
  d MAXIMUM AGGREGATE SIZE
    1 3/4 INCH
  e SLUMP LIMIT
    1 4 INCHES SLUMP, ± 1 INCH
B RETAINING WALLS
  a CEMENT TYPE I-II
  b MINIMUM COMPRESSIVE STRENGTH
    1 4,000 PSI AT 28 DAYS
  c MAXIMUM W/C RATIO
    1 0.50
  d MAXIMUM AGGREGATE SIZE
    1 3/4 INCH
  e SLUMP LIMIT
    1 6 INCHES PLUS OR MINUS 1 INCH FOR CONCRETE WITH A VERIFIED SLUMP OF 3 INCHES ± 1 INCH
C SLABS ON-GRADE
  a CEMENT TYPE I-II
  b MINIMUM COMPRESSIVE STRENGTH
    1 4,000 PSI AT 28 DAYS
  c MAXIMUM W/C RATIO
    1 0.45
  d MAXIMUM AGGREGATE SIZE
    1 3/4 INCH
  e SLUMP LIMIT
    1 6 INCHES PLUS OR MINUS 1 INCH FOR CONCRETE WITH A VERIFIED SLUMP OF 3 INCHES ± 1 INCH
  f AIR CONTENT
    1 DO NOT ALLOW AIR CONTENT OF TROWEL-FINISHED FLOORS TO EXCEED 3%
  g MINIMUM CEMENTITIOUS MATERIALS CONTENT
    1 MINIMUM CEMENTITIOUS MATERIAL SHALL BE PER TABLE 4.2.2.1 IN ACI 301 RELATIVE TO THE MAXIMUM AGGREGATE SIZE

## FLOOR SLABS

A ELEVATED FLOOR SLABS SHALL BE POURED MONOLITHICALLY OR POUR STOPS MAY BE PLACED AT MOMENT FRAME LINES
B CURING SLABS ON GRADE
  a SLABS ON GRADE SHALL BE WET CURED FOR 7 DAYS AFTER CONCRETE PLACEMENT. WET CURING SHALL BEGIN IMMEDIATELY AFTER FINAL FINISHING OF SLAB SURFACE AND SHALL CONSIST OF CONTINUOUS MISTING BY SPRINKLER OR WET BURLAP. CONTRACTOR SHALL APPLY APPROVED CURING COMPOUND.
C CURING ELEVATED SLABS
  a ELEVATED SLABS SHALL BE CURED BY APPLYING SHEETS OF PLASTIC OVER THE SURFACE FOR 7 DAYS AFTER CONCRETE PLACEMENT. CONTRACTOR SHALL APPLY APPROVED CURING COMPOUND AFTER REMOVAL OF PLASTIC SHEETS.
D FLOOR SLAB ISOLATION JOINTS SHALL BE 30 POUND FELT, UNLESS NOTED OTHERWISE.
E CONCRETE FLOOR SLAB ON GRADE SHALL BE PLACED IN LANES. SPACING OF JOINTS SHALL BE AS SHOWN ON THE FOUNDATION PLANS. CONSTRUCTION JOINTS SHALL BE USED FOR THE JOINTS BETWEEN LANES, WHILE WEAKENED PLANE JOINTS SHALL BE USED ACROSS EACH LANE.
F CONSTRUCTION AND CONTRACTION JOINTS SHALL BE LOCATED AS INDICATED ON THE PLAN WHERE CONTRACTION JOINTS ARE INDICATED. SAW CUTTING SHALL BEGIN AS SOON AS POSSIBLE WITHOUT DAMAGING THE SLAB.

## REINFORCEMENT AND MISC STEEL

A UNLESS OTHERWISE NOTED, CONCRETE COVER OVER STEEL REINFORCEMENT SHALL CONFORM TO THE MINIMUMS REQUIRED BY THE AFOREMENTIONED EDITION OF ACI 318
B REINFORCEMENT DETAILING AND PLACEMENT SHALL CONFORM TO ACI 318 AND ACI 315, EXCEPT WHERE OTHERWISE INDICATED
C SUBSTITUTION OF EXPANSION ANCHORS FOR EMBEDDED ANCHORS SHOWN ON THE DRAWINGS WILL NOT BE PERMITTED
D ALL REINFORCING STEEL, ANCHOR BOLTS, AND EMBEDDED ANCHORS SHALL BE SECURELY SET IN PLACE PRIOR TO PLACEMENT OF CONCRETE

## LIGHT GAUGE STEEL

A PRODUCT IDENTIFICATION
  a NOMENCLATURE

  b THICKNESS

| GAUGE | DESIGN | MINIMUM | AISI |
|---|---|---|---|
| 20 | 0.0346" | 0.0329" | 33 mils |
| 18 | 0.0451" | 0.0428" | 43 mils |
| 16 | 0.0566" | 0.0538" | 54 mils |
| 14 | 0.0713" | 0.0677" | 68 mils |
| 12 | 0.1017" | 0.0966" | 97 mils |

B STUD FRAMING
  a ALL FIELD CUTTING OF STUDS MUST BE DONE BY SAWING, SHEARING, OR PLASMA CUTTING. OTHER TORCH CUTTING METHODS OF COLD-FORMED STEEL MEMBERS ARE UNACCEPTABLE.
  b NOTCHING OR COPING OF STUDS IS NOT ALLOWED, UNLESS NOTED OTHERWISE.
  c FRAMING FABRICATOR IS TO ENSURE PUNCH OUT ALIGNMENT WHEN ASSEMBLING LATERAL BRACING AND FIELD CUTTING STUDS TO LENGTH. LATERAL BRACING MUST BE INSTALLED AT THE TIME THE WALL IS ERECTED.
  d ALL HEADERS ARE TO BE CONSTRUCTED WITH UNPUNCHED MATERIAL ONLY.
  e THE MAXIMUM ALLOWABLE GAP (MEASURED BETWEEN THE WEB OF THE STUD AND THE WEB OF THE TRACK) FOR A STUD SEATED IN A TRACK IS 1/8". PRESSURE SHOULD BE APPLIED TO NEST THE STUDS INTO THE TRACK UNTIL THE AFOREMENTIONED TOLERANCE IS ACHIEVED.
C CONNECTIONS
  a FOR SCREW CONNECTIONS, A MINIMUM OF 1.5 x SCREW DIAMETER CLEARANCE MUST BE MAINTAINED FROM ALL EDGES OF STEEL MEMBERS. A MINIMUM OF 3.0 x SCREW DIAMETER ON-CENTER SPACING MUST BE MAINTAINED BETWEEN ADJACENT SCREWS.
  b IT IS THE RESPONSIBILITY OF THE GENERAL CONTRACTOR TO VERIFY THAT FASTENERS ARE INSTALLED ACCORDING TO THE MANUFACTURER'S INSTRUCTIONS

## POST-INSTALLED ANCHORS

EXCEPT WHERE INDICATED ON THE DRAWINGS, POST-INSTALLED ANCHORS SHALL CONSIST OF THE FOLLOWING ANCHOR TYPES, AS PROVIDED BY HILTI, INC OR APPROVED EQUAL. CONTACT HILTI AT (800) 879-8000 FOR PRODUCT RELATED QUESTIONS.
A ANCHORS TO CONCRETE
  a ADHESIVE ANCHORS FOR CRACKED AND UNCRACKED CONCRETE USE
    1 HILTI HIT-HY 200 V3 SAFE SET SYSTEM WITH HILTI HIT-Z ROD PER ICC ESR-3187
    2 HILTI HIT-HY 200 V3 SAFE SET SYSTEM WITH HILTI HOLLOW DRILL BIT (TE-CD OR TE-YD) AND VC 140 VACUUM SYSTEM WITH HAS-E-SS THREADED ROD PER ICC ESR-3187
    3 HILTI HIT-HY 200 V3 SAFE SET SYSTEM WITH HILTI ROUGHENING TOOL (HIT RT) WITH HAS-E THREADED ROD PER ICC ESR-3187 FOR DIAMOND CORED HOLES
    4 HILTI HIT-RE-500-V3 SAFE-SET SYSTEM WITH HILTI HOLLOW DRILL BIT (TE-CD OR TE-YD) AND VC 140 VACUUM WITH HAS-E-SS THREADED ROD PER ICC ESR-3814 FOR SLOW CURE APPLICATIONS
    5 HILTI HIT-RE 500 V3 SAFE SET SYSTEM WITH HILTI ROUGHENING TOOL (HIT RT) WITH HAS-E THREADED ROD PER ICC ESR-3814 FOR DIAMOND CURED HOLES
  b MEDIUM DUTY MECHANICAL ANCHORS FOR CRACKED AND UNCRACKED CONCRETE USE
    1 HILTI KWIK HUS EZ AND KWIK HUS EZ I SCREW ANCHORS SAFE SET SYSTEM WITH HOLLOW DRILL BIT AND VACUUM SYSTEM PER ICC ESR 3027
    2 HILTI KWIK BOLT-TZ2 EXPANSION ANCHORS SAFE SET SYSTEM WITH HOLLOW DRILL BIT AND VACUUM SYSTEM AND SI-AT-A22 WITH ADAPTIVE TORQUE PER ICC ESR-1917
    3 HILTI KWIK BOLT 1 (CARBON STEEL) OR KWIK BOLT 3 (OTHERS) EXPANSION ANCHOR SAFE SET SYSTEM WITH HOLLOW DRILL BIT AND VACUUM SYSTEM AND SI-AT-A22 WITH ADAPTIVE TORQUE (UNCRACKED CONCRETE ONLY) PER ICCC ESR-2302
  c HEAVY DUTY MECHANICAL ANCHORS FOR CRACKED AND UNCRACKED CONCRETE USE
    1 HILTI HDA UNDERCUT ANCHORS PER ICC ESR 1546
    2 HILTI HSL-3 EXPANSION ANCHORS PER ICC ESR 1545
B REBAR DOWELING INTO CONCRETE
  a ADHESIVE ANCHORS FOR CRACKED AND UNCRACKED CONCRETE USE
    1 HILTI HIT-HY 200 V3 SAFE SET SYSTEM WITH HOLLOW DRILL BIT (TE-CD OR TE-YD) AND VC 140 VACUUM SYSTEM WITH CONTINUOUSLY DEFORMED REBAR PER ICC ESR-3187
    2 HILTI HIT-HY 200 V3 SAFESET SYSTEM WITH HILTI ROUGHENING TOOL (HIT RT) WITH HAS-E THREADED ROD PER ICC ESR-3187 FOR DIAMOND CORED HOLES
    3 HILTI HIT-RE-500-V3 SAFE SET SYSTEM WITH HILTI HOLLOW DRILL BIT (TE-CD OR TE-YD) AND VC 140 VACUUM SYSTEM WITH CONTINUOUSLY DEFORMED REBAR PER ICC ESR-3814
    4 HILTI HIT-RE 500-V3 SAFE SET SYSTEM WITH HILTI ROUGHENING TOOL (HIT RT) WITH CONTINUOUSLY DEFORMED REBAR PER ICC ESR-3814 IN DIAMOND CORED HOLES
C ANCHORAGE TO SOLID GROUTED MASONRY
  a ADHESIVE ANCHORS USE
    1 HILTI HIT-HY 270 MASONRY ADHESIVE ANCHORING SYSTEM (ICC ESR-4143)
    2 STEEL ANCHOR ELEMENT SHALL BE HILTI HAS-E CONTINUOUSLY THREADED ROD (OR EQUAL) OR CONTINUOUSLY DEFORMED STEEL REBAR
  b MECHANICAL ANCHORS USE
    1 HILTI KWIK BOLT 1 (CARBON STEEL) OR KWIK BOLT 3 (OTHERS) EXPANSION ANCHORS PER ICC ESR-1385
D ANCHORAGE TO HOLLOW/MULTI-WYTHE MASONRY
  a ADHESIVE ANCHORS USE
    1 HILTI HIT-HY 270 MASONRY ADHESIVE ANCHORING SYSTEM PER ICC ESR-4144
    2 STEEL ANCHOR ELEMENT SHALL BE HILTI HAS-E CONTINUOUSLY THREADED ROD (OR EQUAL) OR CONTINUOUSLY DEFORMED STEEL REBAR
    3 THE APPROPRIATE SIZE SCREEN TUBE SHALL BE USED PER ADHESIVE MANUFACTURER'S RECOMMENDATION
E ANCHOR CAPACITY USED IN DESIGN SHALL BE BASED ON THE TECHNICAL DATA PUBLISHED BY HILTI OR SUCH OTHER METHOD AS APPROVED BY THE STRUCTURAL ENGINEER OF RECORD. SUBSTITUTION REQUESTS FOR ALTERNATE PRODUCTS MUST BE APPROVED IN WRITING BY THE STRUCTURAL ENGINEER OF RECORD PRIOR TO USE. CONTRACTOR SHALL PROVIDE CALCULATIONS DEMONSTRATING THAT THE SUBMITTED PRODUCT IS CAPABLE OF ACHIEVING THE PERFORMANCE VALUES OF THE SPECIFIED PRODUCT. SUBSTITUTIONS WILL BE EVALUATED BY THEIRS HAVING AN ICC ESR SHOWING COMPLIANCE WITH THE RELEVANT BUILDING CODE FOR SEISMIC USES, LOAD RESISTANCE, INSTALLATION CATEGORY, AND AVAILABILITY OF COMPREHENSIVE INSTALLATION INSTRUCTIONS. ADHESIVE ANCHOR EVALUATION WILL ALSO CONSIDER CREEP, IN-SERVICE TEMPERATURE AND INSTALLATION TEMPERATURE.
F INSTALL ANCHOR PER THE MANUFACTURER INSTRUCTION, AS INCLUDED IN THE ANCHOR PACKAGING.
G OVERHEAD ADHESIVE ANCHORS MUST BE INSTALLED USING THE HILTI PROFIS SYSTEM.
H THE CONTRACTOR SHALL ARRANGE FOR AN ANCHOR MANUFACTURER'S REPRESENTATIVE TO PROVIDE ON-SITE INSTALLATION TRAINING FOR ALL OF THEIR ANCHORING PRODUCTS SPECIFIED. THE STRUCTURAL ENGINEER OF RECORD MUST RECEIVE DOCUMENTED CONFIRMATION THAT ALL OF THE CONTRACTOR PERSONNEL WHO INSTALL ANCHORS ARE TRAINED PRIOR TO COMMENCEMENT OF INSTALLING ANCHORS.
I ANCHOR CAPACITY IS DEPENDENT UPON SPACING BETWEEN ADJACENT ANCHORS AND PROXIMITY OF ANCHORS TO EDGE OF CONCRETE. INSTALL ANCHORS IN ACCORDANCE WITH SPACING AND EDGE CLEARANCES INDICATED ON THE DRAWINGS.
J EXISTING REINFORCING BARS IN THE CONCRETE STRUCTURAL DRAWINGS MAY CONFLICT WITH SPECIFIC ANCHOR LOCATIONS. UNLESS NOTED OTHERWISE THAT THE BARS CAN BE CUT, THE CONTRACTOR SHALL REVIEW THE EXISTING STRUCTURAL DRAWINGS AND SHALL UNDERTAKE TO LOCATE THE POSITION OF THE REINFORCING BARS AT THE LOCATIONS OF THE CONCRETE ANCHORS BY HILTI FERROSCAN, GPR, X RAYING, CHIPPING, OR OTHER APPROVED MEANS

## PARTITION GENERAL NOTES

THE FOLLOWING PARTITION GRAPHIC SYMBOL AND THREE PART NOTATION SYSTEM IS USED IN THE CONSTRUCTION DOCUMENTS FOR THIS PROJECT NOTE THE PARTITION CONSTRUCTION WILL MAINTAIN ITS DESIGNATION TO THE POINT OF AN INTERSECTING PARTITION IF NO CHANGE IN DESIGNATION IS SHOWN BEYOND THE INTERSECTION THE PREVIOUS PARTITION CONSTRUCTION DESIGNATION APPLIES REFER TO CODE PLAN G-101 FOR RATED WALLS

- WHERE SOUND-ATTENUATION BLANKETS ARE SCHEDULED
  1. INSTALL ACOUSTICAL SEALANT AT ALL PENETRATIONS PER MANUFACTURER'S INSTRUCTIONS AT TOP AND BOTTOM OF WALLS (BOTH SIDES)
  2. PUTTY PADS AT ALL WALL PENETRATIONS INCLUDING ELECTRIC OUTLETS IT BACK BOXES
- ALL ASSEMBLY THICKNESSES LISTED IN THE PARTITION TYPES ARE BASED ON 5/8" THICK GYPSUM BOARD ALTERNATE GYPSUM BOARD THICKNESSES WILL HAVE A DIFFERENT ASSEMBLY THICKNESS
- WHERE RATED ASSEMBLY EXTENDS TO STRUCTURE ABOVE PROVIDE UL APPROVED FIRE RATED HEAD OF WALL ASSEMBLY TO MATCH RATING OF WALL WALL HEIGHTS EXCEEDING STUD MANUFACTURER'S MAXIMUM (LIMITING) SPAN USING SPSF LATERAL LOADING SHALL BE BRACED TO STRUCTURE ABOVE (LAY-IN CEILINGS ARE NOT ACCEPTABLE BRACING HARD CEILINGS ARE ACCEPTABLE)
- "STRUCTURE ABOVE" (AS NOTED IN THE PARTITION CONDITIONS) IS DEFINED AS THE UNDERSIDE OF ONE OR MORE OF THE FOLLOWING
  - COMPOSITE FLOOR SLAB
  - STAIR TREADS/RISERS
  - METAL ROOF DECK
  - STEEL BEAMS
- IN NO CASE SHALL THE BOTTOM OF STEEL JOISTS BE CONSIDERED BOTTOM OF STRUCTURE ABOVE
- NR = NOT RATED

## GENERAL FINISH NOTES

**FLOORS:**
- A GROUND LEVEL FLOORS SHALL RECEIVE (SCN1) UNO
- B STORAGE MEZZANINE SHALL RECEIVE (TPF1) UNO

**BASE:**
- A BASE SHALL BE (RB1) UNO

**WALLS:**
- A DRYWALL WALLS SHALL BE PAINTED (PT1) UNO
- B RESTROOM WALLS SHALL RECEIVE (FRP2) FROM FLOOR TO CEILING
- C JANITOR CLOSETS SHALL RECEIVE (FRP1) FROM FLOOR TO 4'-0" AFF ON ALL WET WALLS. WALLS SHALL BE PAINTED (PT1) ABOVE
- D LOADING BAY WALLS TO RECEIVE PLYWOOD TO 12' - 0" AFF. PLYWOOD TO RECEIVE (TPF1) UNO
- E MEZZANINE WALLS TO RECEIVE PLYWOOD TO 4' - 0" AFF. PLYWOOD TO RECEIVE (TPF1) UNO

**CEILINGS:**
- A ACOUSTICAL CEILING SHALL BE (ACT1) UNO
- B DRYWALL CEILINGS SHALL BE PAINTED (PT1) UNO

**MILLWORK:**
- A UPPER AND LOWER MILLWORK SHALL BE (PLAM1) UNO
- B COUNTERTOPS SHALL BE (PLAM1) UNO

**MISCELLANEOUS:**
- A DOOR AND WINDOW TRIM SHALL BE (PT#)
- B HANDRAILS SHALL BE (PT2)
- C PAINTED DOORS SHALL BE (PT#) UNO.

## GENERAL NOTES

- A REFER TO ACCESSIBILITY STANDARDS SHEETS FOR TYPICAL MOUNTING HEIGHTS/LOCATIONS FOR TOILET ROOM ACCESSORIES
- B ALL INTERIOR WALLS ARE A5a UNLESS NOTED OTHERWISE. REFER TO SHEET A-502 FOR INTERIOR PARTITION SCHEDULE
- C DIMENSIONS ARE TO FACE OF STUD, CMU, OR CENTERLINE OF STRUCTURE UNO
- D COORDINATE WITH MEP DRAWINGS FOR LOCATIONS OF FIXTURES. LOCATE AS SHOWN ON ARCHITECTURAL PLANS AND DETAILS. NOTIFY ARCHITECT OF CONFLICTS PRIOR TO CONSTRUCTION
- E CENTER DEVICES IN CEILING TILES UNO
- F REFER TO INTERIOR ELEVATIONS AND ROOM FINISH SCHEDULE FOR ADDITIONAL INFORMATION CONCERNING HEIGHTS, CEILING MATERIALS AND FURRED CEILINGS
- G AT LOCATIONS OF PERFORATED RETURN AIR GRILLES, WIRING, CABLING ETC. TO BE HELD CLEAR OF OPEN LINE OF SIGHT THROUGH GRILLE. IN CASES WHERE THIS IS UNAVOIDABLE, ITEMS VISIBLE ABOVE GRILLE ARE TO BE PAINTED FLAT BLACK

## PARTITION GENERAL NOTES

THE FOLLOWING PARTITION GRAPHIC SYMBOL AND THREE PART NOTATION SYSTEM IS USED IN THE CONSTRUCTION DOCUMENTS FOR THIS PROJECT. NOTE: THE PARTITION CONSTRUCTION WILL MAINTAIN ITS DESIGNATION TO THE POINT OF AN INTERSECTING PARTITION. IF NO CHANGE IN DESIGNATION IS SHOWN BEYOND THE INTERSECTION, THE PREVIOUS PARTITION CONSTRUCTION DESIGNATION APPLIES. REFER TO CODE PLAN G-101 FOR RATED WALLS.

## GENERAL NOTES

1. GENERAL NOTES ON THIS SHEET ARE APPLICABLE TO EACH MECHANICAL DRAWING OF THIS SET OF CONSTRUCTION DOCUMENTS. NOTES SPECIFIC TO INDIVIDUAL MECHANICAL DRAWINGS WILL BE SHOWN ON THE RESPECTIVE MECHANICAL DRAWING.
2. THE CONTRACTOR SHALL PROVIDE A COMPLETE HVAC SYSTEM TO INCLUDE ALL LABOR MATERIALS, TOOLS AND EQUIPMENT FOR A COMPLETE AND FUNCTIONAL SYSTEM INCLUDING ALL NECESSARY APPURTENANCES CUSTOMARILY INCLUDED IF NOT SPECIFICALLY CALLED OUT.
3. ENTIRE INSTALLATION, INCLUDING MATERIALS, EQUIPMENT AND WORKMANSHIP SHALL CONFORM WITH ALL APPLICABLE LAWS, CODES AND REGULATIONS.
4. THIS PROJECT SHALL CONFORM TO APPLICABLE ASHRAE, NFPA AND SMACNA STANDARDS AND OTHER REGULATORY BODIES HAVING JURISDICTION OVER THE CLASS OF WORK.
5. MATERIAL AND EQUIPMENT SHALL HAVE STAMPS OR SEALS OF AHRI, ASME, UL OR ASTM.
6. THE CONTRACTOR SHALL MAKE TESTS FOR ACCEPTANCE AND APPROVAL AS REQUIRED BY CODE AND THE REQUIREMENTS OF APPLICABLE REGULATORY AGENCIES. REQUIRED TESTS SHALL BE PERFORMED IN THE PRESENCE OF THE ENGINEER OF RECORD AND/OR OWNER UNLESS OTHERWISE WAIVED IN WRITING.
7. THE CONTRACTOR SHALL OBTAIN AND PAY FOR ALL PERMITS, LICENSES, DOCUMENTS AND SERVICES RELATED TO INSTALLATION OF THE WORK.
8. THE CONTRACTOR SHALL COORDINATE HIS WORK WITH THE OTHER TRADES IN ORDER TO RESOLVE ANY CONFLICTS THAT MIGHT ARISE DUE TO THE LOCATION OF EQUIPMENT OR THE USE OF SPACE.
9. EQUIPMENT OF DIFFERENT ELECTRICAL CHARACTERISTICS MAY BE FURNISHED PROVIDED SUCH PROPOSED EQUIPMENT IS APPROVED IN WRITING AND CONNECTING ELECTRICAL SERVICE, CIRCUIT BREAKERS AND CONDUIT ARE APPROPRIATELY MODIFIED AT NO COST TO THE OWNER.
10. RUN ALL HORIZONTAL PIPING AND DUCTWORK ABOVE THE CEILING UNLESS OTHERWISE NOTED.
11. MAKE DUCT PENETRATIONS OF ALL WALLS WITH SHEET METAL DUCTS. FLEXIBLE DUCT PENETRATION OF WALLS ARE NOT ACCEPTABLE.
12. INSTALL TURNING VANES WHERE SHOWN ON PLANS.
13. DO NOT INSTALL EQUIPMENT, PIPING OR DUCTWORK OVER ANY ELECTRICAL EQUIPMENT OR ELECTRICAL SERVICE SPACE.
14. LAYOUT OF PIPING AND DUCTWORK IS DIAGRAMMATIC. RUN ALL EXPOSED PIPING AND DUCTWORK AS HIGH AS POSSIBLE UNLESS OTHERWISE NOTED. ALLOW FOR RISES, DROPS AND OFFSETS AS REQUIRED.
15. INSTALL MECHANICAL EQUIPMENT TO FACILITATE SERVICING, MAINTENANCE AND REPAIR OR REPLACEMENT OF ELECTRICAL COMPONENTS. AS MUCH AS PRACTICAL, CONNECT EQUIPMENT FOR EASE OF DISCONNECTING, WITH A MINIMUM OF INTERFERENCE WITH OTHER INSTALLATIONS. PIPING SHALL NOT INTERFERE WITH FILTER PULL.
16. MECHANICAL CONTRACTORS SHALL PROVIDE AUTOMATIC CONTROL DEVICES SUCH AS STARTERS, VARIABLE FREQUENCY DRIVES (VFD), TEMPERATURE SENSORS, RELAYS, AND PRESSURE SWITCHES THAT ARE ASSOCIATED WITH MECHANICAL EQUIPMENT AND ASSOCIATED CONTROL WIRING FROM CONTROL POWER LOCATION TO THE CONTROL DEVICE. ELECTRICAL CONTRACTOR SHALL PROVIDE CONDUIT AND WIRING FROM POWER SOURCE TO DISCONNECT SWITCH, FROM DISCONNECT SWITCH TO STARTER OR VFD, AND FROM STARTER OR VFD TO THE EQUIPMENT.
17. FLASHING DETAILS FOR PIPES PENETRATING THE ROOF SHALL BE COORDINATED WITH ARCHITECTURE DETAILS.
18. LOCATE TEMPERATURE SENSORS AND CO2 SENSORS 48" ABOVE FINISHED FLOOR OR AS NOTED ON PLANS.
19. COORDINATE CURBS AND SIZE OF CURBS IN ACCORDANCE WITH ACTUAL EQUIPMENT PURCHASED.
20. CONTRACTOR IS TO PROVIDE AN ADJUSTABLE ROOF CURB OR TAPER AT CURB TO MATCH ROOF SLOPE FOR CURB MOUNTED EQUIPMENT. THE USE OF SHIMS TO LEVEL EQUIPMENT IS NOT ACCEPTABLE UNLESS THE CURB DIMENSIONS ARE SMALLER THAN 36" x 36".
21. CONTRACTOR TO VERIFY ALL ACCESS PANEL LOCATIONS. NOT ALL ACCESS PANELS REQUIRED ARE SHOWN. REFER TO SPECIFICATIONS FOR ACCESS PANEL REQUIREMENTS.
22. CONTRACTOR SHALL INSTALL ALL PLUMBING VENTS AND EXHAUST AIR OUTLETS A MINIMUM OF 10'-0" AWAY (PER CODE) FROM ALL OUTSIDE AIR INTAKES, OPERABLE DOORS AND/OR WINDOWS. CONSTRUCTION DRAWINGS ARE DIAGRAMMATIC BY NATURE. FINAL MEASUREMENTS SHOULD BE MADE AT THE PROJECT SITE.
23. NOT ALL SYMBOLS OR ABBREVIATIONS ARE USED.

## SYMBOL LEGEND

A REFER TO GENERAL NOTES ON M-001
B ALL INFORMATION SHOWN APPLIES TO 2 DIFFERENT BUILDINGS

## KEY NOTES

AS INDICATED BY ⓪

1 PROVIDE 8" EXHAUST CAP 10'-8" ABOVE GROUND
2 UP THRU MEZZANINE FLOOR TO CEILING SPACE. SEE M-111 A1 FOR CONTINUATION
3 CENTER OF LOUVER AT 3'-0" ABOVE FINISHED FLOOR
4 DOWN THRU MEZZANINE FLOOR TO CEILING SPACE. SEE M-111 A3 FOR CONTINUATION
5 BOTTOM OF UNIT HEATER SHALL BE AT 12'-0" ABOVE FINISHED FLOOR
6 CENTER OF FAN AT 4'-0" ABOVE MEZZANINE FINISHED FLOOR
7 PROVIDE LABELED WALL SWITCH TO OPERATE EF-2. L-1 SHALL OPEN WHEN EF-2 IS RUNNING. COORDINATE LOUVER INTERLOCK WITH ELECTRICAL CONTRACTOR
8 PROVIDE 8" SUPPLY CAP 14'-9" ABOVE GROUND
9 HEAT PUMP TO BE MOUNTED ON CONCRETE EQUIPMENT PAD. REFER TO MANUFACTURER FOR DETAIL
10 MOUNT 8"x8" SIDEWALL GRILL 10'-6" A.F.F.
11 BC-1 SHALL BE INSTALLED ON MEZZANINE FINISHED FLOOR

STORAGE 201

LOADING BAY-2 105-2

## BLOWER COIL SCHEDULE

| SYMBOL | TYPE | EXTERNAL S.P. (in W.G.) | BLOWER MOTOR HP/ DRIVE | TOTAL CFM | OUTSIDE AIR CFM | COOLING | | | | | HEATING | | ELECTRICAL | | | | WEIGHT, LBS | MANUFACTURER | INDOOR UNIT MODEL NUMBER |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | | | | | | MINIMUM TOTAL CAPACITY, MBH | MINIMUM SENSIBLE CAPACITY, MBH | ENTERING MIXED AIR TEMPERATURE, DB / WB, F | MINIMUM COOLING SEER | OUTDOOR AMBIENT TEMPERATURE, F | MINIMUM TOTAL CAPACITY AT 47F, MBH | MIXED ENTERING AIR TEMPERATURE, F | MINIMUM EFFICIENCY, HSPF | VOLTAGE | PHASE | MCA | MOCP | | | |
| BC-1 | UNITARY SPLIT SYSTEM | 0.53 | 0.5 | 1050 CFM | 150 | 34 k | 24.2 | 78.5/66.5 42 | 14.00 | 102 | 32.4 | 63.53 | 8.2 | 230 V | 1 | 5 | 15 | 155 lb | TRANE | TEM9A3C |

## HEAT PUMP SPLIT SYSTEM SCHEDULE

| SYMBOL | SERVES | ELECTRICAL | | | | TYPE OF REFRIGERANT | MANUFACTURER | MODEL NO. |
|---|---|---|---|---|---|---|---|---|
| | | VOLTAGE | PHASE | MCA | MOCP | | | |
| HP-1 | BC-1 | 230 V | 1 | 18 | 30 | R-410 | TRANE | 4TWR4036 |

NOTES
1. SCHEDULED UNITS ARE MANUFACTURED BY TRANE CARRIER AND LENNOX ARE CONSIDERED EQUIVALENT
2. EXTERNAL STATIC PRESSURE INCLUDES DUCTWORK DAMPERS AND AIR DEVICES PRESSURE DROP FOR WET COIL AND FILTERS IS CONSIDERED AS INTERNAL PRESSURE DROP
3. COOLING CAPACITIES AND SEER/EER RATINGS ARE COMBINATION RATINGS WITH OUTDOOR UNITS CAPACITIES ARE RATED AT ENTERING AIR TEMPERATURE AND AMBIENT AS LISTED SEER RATINGS ARE AT AHRI CONDITIONS AIRFLOW CONDITIONS ARE RATED AT LOCAL ALTITUDE
4. EACH OUTDOOR UNIT SHALL BE EQUIPPED WITH A HIGH PRESSURE SWITCH HARD START KIT ON SINGLE PHASE UNI ANTI-SHORT CYCLE TIMER SERVICE VALVES AND INDOOR BLOWER RELAY KIT
5. ELECTRICAL CONTRACTOR IS TO PROVIDE AND INSTALL ALL DISCONNECTS FOR EACH DEVICE IN THE SPLIT SYSTEM PACKAGE ELECTRICAL CONTRACTOR IS TO MAKE ALL CONNECTS AS PER DIVISION 16 SPECIFICATIONS
6. EACH SYSTEM SHALL BE PROVIDED WITH AN ELECTRONIC PROGRAMMABLE NIGHT SETBACK THERMOSTAT WITH ONE STAGE OF COOLING AND 2 STAGES OF HEATING MECHANICAL CONTRACTOR SHALL PROVIDE AND INSTALL THE THERMOSTAT AS PER DIVISION 16 SPECIFICATIONS FOR RUNNING WIRE AND CONDUIT

## COMBINATION LOUVER/DAMPER SCHEDULE

| SYMBOL | SERVES | LOUVER FUNCTION | WIDTH | HEIGHT | MAX FACE VELOCITY | MIN FREE AREA | AIRFLOW | FRAME TYPE | ACTUATOR VOLTAGE | FAIL POSITION | BIRDSCREEN | INSECT SCREEN | MANUFACTURER | MODEL NO. |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| L-1 | EF-2 | INTAKE | 36" | 24" | 750 FPM | 2.70 FT^2 | 2035 CFM | CHANNEL | 120 V | CLOSED | YES | NO | GREENHECK | EACC-601 |

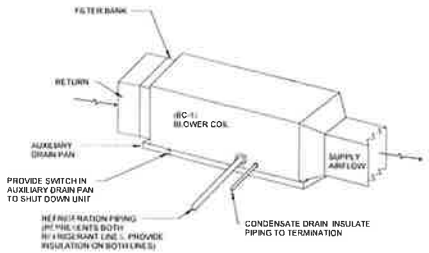
NOTES
1. UNITS ARE SCHEDULED TO BE MANUFACTURED BY GREENHECK RUSKIN AND CESCO ARE CONSIDERED EQUIVALENT
2. COORDINATE FRAME TYPE WITH ARCHITECT COORDINATE EXACT SIZE WITH ARCHITECTURAL DETAILS AND CMU BLOCK OR BRICK DIMENSIONS
3. COORDINATE LOUVER COLOR WITH ARCHITECT
4. INTERLOCK LOUVER TO OPEN WHEN EF-2 IS OPERATED

## EXHAUST FAN SCHEDULE

| SYMBOL | TYPE | CFM | DRIVE | E.S.P. (in W.G.) | SOUND LEVEL IN SONES | FAN MOTOR POWER - HP | NOMINAL FAN RPM | ELECTRICAL | | METHOD OF CONTROL | WEIGHT, LBS | MANUFACTURER | MODEL NO |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | | | | | | | | VOLTAGE | PHASE | | | | |
| EF-1 | IN LINE | 250 CFM | DIRECT | 0.32 | 6.8 | 1/10 | 1485 | 115 V | 1 | NOTE 7 | 30 | GREENHECK | SQ-85-VG |
| EF-2 | SIDEWALL PROP | 2035 CFM | DIRECT | 0.3 | 13.9 | 1/2 | 867 | 115 V | 1 | SWITCH | 186 | GREENHECK | AER-24/VG |

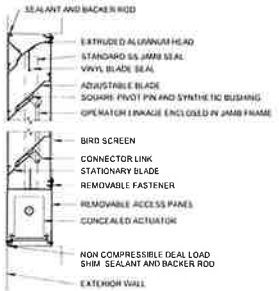
NOTES
1. FANS ARE SCHEDULED TO BE MANUFACTURED BY GREENHECK TWIN CITY AND COOK ARE CONSIDERED EQUIVALENT MANUFACTURERS
2. AIRFLOW CONDITIONS RATED AT LOCAL ALTITUDE
3. PROVIDE AND INSTALL FLEXIBLE CONNECTION ON FAN INLET DUCT CONNECTION
4. FANS SHALL HAVE MOTOR VIBRATION ISOLATION BACK DRAFT DAMPER AT UNIT AND LOCAL DISCONNECT SWITCH AT UNIT
5. FAN SELECTIONS SHALL BE SUBMITTED TO ALLOW FOR A MINIMUM +/- 10% IN SCHEDULED EXTERNAL STATIC AND CFM WITHIN THE PARAMETERS OF THE SCHEDULED MOTOR HP
6. PROVIDE EF-2 WITH WALL COLLAR 45°WEATHERHOOD WITH BIRDSCREEN GRAVITY OPERATED DAMPER AND INTERIOR WALL HOUSING WITH GAURD
7. EF-1 SHALL BE CONTROLLED USING WALL MOUNTED OCCUPANCY SENSORS IN MENS 109 AND WOMENs 110 COORDINATE WITH ELECTRICAL CONTRACTOR

## AIR DISTRIBUTION SCHEDULE



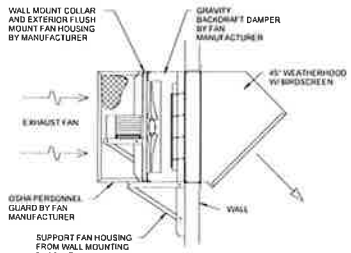
| SYMBOL | SYSTEM TYPE | DESCRIPTION | INSTALLATION TYPE | MANUFACTURER | MODEL NO. |
|---|---|---|---|---|---|
| S1 | SUPPLY | ALL STEEL, 24" x 24" NOMINAL FACE, FIXED AIR PATTERN, STEPPED WITH 4-CONES, SQUARE FACE AND ROUND NECK, SIZE NECK AS SHOWN ON DRAWINGS | LAY-IN/SURFACE MOUNT | NAILOR | RNS |
| S2 | SUPPLY | ALL STEEL, 12" x 12" NOMINAL FACE, FIXED AIR PATTERN, STEPPED WITH 4-CONES, SQUARE FACE AND ROUND NECK, SIZE NECK AS SHOWN ON DRAWINGS | LAY-IN/SURFACE MOUNT | NAILOR | RNS |
| R1 | RETURN | EGGCRATE RETURN GRILLE, 24"x 24" NOMINAL FACE, STEEL BORDER WITH ALUMINUM 1/2"x1/2"x1/2" CORE, SIZE NECK AS SHOWN ON DRAWINGS | LAY-IN/SURFACE MOUNT | NAILOR | 81EC |
| E1 | EXHAUST | EGGCRATE EXHAUST GRILLE, 12"x 12" NOMINAL FACE, ALL ALUMINUM 1/2" x 1/2" x 1/2" CORE, SIZE NECK AS SHOWN ON DRAWINGS | LAY-IN/SURFACE MOUNT | NAILOR | 51EC |
| E2 | EXHAUST | ALUMINUM, SIDEWALL EXHAUST GRILLE WITH FIXED HORIZONTAL BLADES 3/4" BLADE SPACING, SIZE NECK AS SHOWN ON DRAWINGS | SIDEWALL | NAILOR | S145H |

NOTES
1. AIR DEVICES SCHEDULED TO BE MANUFACTURED BY NAILOR PRICE, TITUS, AND RUSKIN ARE CONSIDERED EQUIVALENT MANUFACTURERS
2. UNLESS SCHEDULED OTHERWISE AIR DEVICES SHALL BE WHITE OR OFF-WHITE IN COLOR
3. ALL JOISTS, CONDUITS, PIPING AND EQUIPMENT ABOVE OPEN RETURN DEVICES SHALL BE PAINTED BLACK FOR AN AREA OF 2 FEET ON ALL SIDES OF THE AIR DEVICE
4. PROVIDE MANUAL BALANCING DAMPERS AT EACH SUPPLY AND EXHAUST AIR DUCT TAP INSTALL MBD AT MAIN DUCT TAP
5. PROVIDE INSULATING BLANKET ON BACK OF THE SUPPLY AND RETURN GRILLES



## ELECTRIC UNIT HEATER

| SYMBOL | AIR FLOW | TEMP RISE F | MINIMUM INPUT, kW | VOLTAGE | PHASE | WEIGHT, LBS | MANUFACTURER | MODEL NO |
|---|---|---|---|---|---|---|---|---|
| EUH-1 | 510 CFM | 18 | 3 | 240 V | 1 | 45 | REZNOR | EQH5AK2E |
| EUH-2 | 510 CFM | 18 | 3 | 240 V | 1 | 45 | REZNOR | EQH5AK2E |



NOTES
1. UNITS ARE SCHEDULED TO BE MANUFACTURED BY REZNOR INDECCO MARKEL AND TRANE ARE CONSIDERED EQUIVALENT MANUFACTURERS OTHERS BY PRIOR APPROVAL
2. ELECTRICAL UNIT HEATER AS SCHEDULED SHALL HAVE BUILT-IN CONTROL TRANSFORMER OVERHEAT PROTECTION INTERNAL 24V THERMOSTAT AND MOUNTING BRACKET MOUNT THERMOSTAT TO BACK OF UNIT HEATER
3. MANUFACTURER TO PROVIDE A LOCAL DISCONNECT THAT IS TO BE FIELD INSTALLED

## PLUMBING FIXTURE MOUNTING HEIGHT

| * ALL DIMENSIONS ARE IN INCHES AND FROM FINISHED FLOOR | AGES 13 THROUGH ADULTS | |
|---|---|---|
| | ADA/TAS | STANDARD (4) |
| **WATER CLOSETS** | | |
| TOP OF SEAT | 17 - 19 MAX | 15 - 16 MAX |
| FLUSH CONTROLS (HANDLE HEIGHT) | 30 MAX | 30 MAX |
| **URINALS** | | |
| RIM OF BASIN | 17 MAX | 24 MAX |
| MINIMUM DEPTH (5) | 13 1/2 MIN | 13 1/2 MIN |
| FLUSH CONTROLS (HANDLE HEIGHT) | 44 MAX | 44 MAX |
| **LAVATORIES AND SINKS** | | |
| RIM (10) | 34 MAX | 34 MAX |
| KNEE CLEARANCE | 27 MIN | 27 MIN |
| FRONT EDGE TO WALL FAUCET HANDLE | 20 -25 MAX | 20 -25 MAX |
| **DRINKING FOUNTAINS AND ELECTRIC WATER COOLERS** | | |
| SPOUT OUTLETS | | |
| HEIGHT (LOW) | 36 MAX | --- |
| HEIGHT (HIGH) | 38 - 43 MAX | --- |
| DISTANCE FROM FRONT EDGE | 5 MAX | --- |
| **SHOWERS** | | |
| FIXED HEAD (NON MEDICAL APPLICATION) | 48 MAX | 60 |
| ADJUSTABLE HEAD (9) | 48 MAX | 60 |
| HOSE LENGTH | 59 MIN | --- |

NOTES

1. CONTRACTOR SHALL REFER TO ARCHITECTURAL PLANS FOR LOCATIONS OF PLUMBING FIXTURES. GRAB BARS, DISPENSERS, ETC. WITH RESPECT TO WALLS, STALLS, ETC.
2. ACCESSIBILITY GUIDELINES SHOWN ARE FOR INFORMATIONAL PURPOSES ONLY, AND INTENDED TO SERVE AS A GUIDE FOR CONSTRUCTION PROFESSIONALS AND OWNERS.
3. SOME OF THE INFORMATION SHOWN HERE MAY NOT BE APPLICABLE TO THIS PROJECT.
4. STANDARD HEIGHT INFORMATION IS OBTAINED FROM ASPE (AMERICAN SOCIETY OF PLUMBING ENGINEERS). HEIGHTS NOT NOTED BY INFORMATION ON DRAWINGS.
5. DEPTH TO BE MEASURED FROM THE OUTER FACE OF THE URINAL RIM TO THE BACK OF THE FIXTURE.
6. KNEE CLEARANCE FOR LAVATORIES AND SINKS SHALL COMPLY WITH TAS.
7. REFER TO DETAIL FOR COUNTER MOUNTED SINKS WITH BUBBLERS FOR DIMENSIONS ON ARCHITECTURAL DRAWINGS.
8. DRINKING FOUNTAINS AND ELECTRIC WATER COOLER DISTANCES FROM FRONT EDGE INCLUDES BUMPERS. KNEE CLEARANCES MUST BE MAINTAINED THROUGH THE MIN./MAX. RANGE HEIGHT FOR THE SPOUT.
9. THE 30" SLIDE BAR SHALL BE MOUNTED AT A HEIGHT SO THE HAND HELD SHOWER WAND SHALL BE MOUNTED NO HIGHER THAN 48" ABOVE SHOWER FINISHED FLOOR.
10. THE CONTRACTOR SHALL COORDINATE WITH THE COUNTER TOP/BASE CABINET MANUFACTURER TO VERIFY THAT THE RIM OF THE LAVATORY/SINK IS INSTALLED AT NO MORE THAN THE MAXIMUM HEIGHT ALLOWED.

## GENERAL NOTES

1. GENERAL NOTES ON THIS SHEET ARE APPLICABLE TO EACH PLUMBING DRAWING OF THIS SET OF CONSTRUCTION DOCUMENTS. NOTES SPECIFIC TO INDIVIDUAL PLUMBING DRAWINGS WILL BE SHOWN ON THE RESPECTIVE PLUMBING DRAWING.
2. THE CONTRACTOR SHALL PROVIDE A COMPLETE PLUMBING SYSTEM TO INCLUDE ALL LABOR, MATERIALS, TOOLS AND EQUIPMENT FOR A COMPLETE AND FUNCTIONAL SYSTEM INCLUDING ALL NECESSARY APPURTENANCES CUSTOMARILY INCLUDED IF NOT SPECIFICALLY CALLED OUT.
3. ENTIRE INSTALLATION, INCLUDING MATERIALS, EQUIPMENT AND WORKMANSHIP SHALL CONFORM WITH ALL APPLICABLE LAWS, CODES AND REGULATIONS.
4. APPLICABLE STANDARDS AND REGULATORY BODIES HAVE JURISDICTION OVER THE CLASS OF WORK.
5. MATERIAL AND EQUIPMENT SHALL HAVE STAMPS OR SEALS OF AHRI, ASME, UL OR ASTM.
6. THE CONTRACTOR SHALL MAKE TESTS FOR ACCEPTANCE AND APPROVAL AS REQUIRED BY CODE AND THE REQUIREMENTS OF APPLICABLE REGULATORY AGENCIES. REQUIRED TESTS SHALL BE PERFORMED IN THE PRESENCE OF THE ENGINEER OF RECORD AND/OR OWNER UNLESS OTHERWISE WAIVED IN WRITING.
7. THE CONTRACTOR SHALL OBTAIN AND PAY FOR ALL PERMITS, LICENSES, DOCUMENTS AND SERVICES RELATED TO INSTALLATION OF THE WORK.
8. THE CONTRACTOR SHALL COORDINATE HIS WORK WITH THE OTHER TRADES IN ORDER TO RESOLVE ANY CONFLICTS THAT MIGHT ARISE DUE TO THE LOCATION OF EQUIPMENT OR THE USE OF SPACE.
9. EQUIPMENT OF DIFFERENT ELECTRICAL CHARACTERISTICS MAY BE FURNISHED PROVIDED SUCH PROPOSED EQUIPMENT IS APPROVED IN WRITING AND CONNECTING ELECTRICAL SERVICE, CIRCUIT BREAKERS AND CONDUIT ARE APPROPRIATELY MODIFIED AT NO COST TO THE OWNER.
10. RUN ALL HORIZONTAL DOMESTIC COLD WATER, DOMESTIC HOT WATER AND VENT PIPING ABOVE THE CEILING UNLESS OTHERWISE NOTED.
11. MAKE PIPE PENETRATIONS OF ALL WALLS WITH SLEEVES AS NOTED IN THE SPECIFICATIONS.
12. DO NOT INSTALL EQUIPMENT, PIPING OR DUCTWORK OVER ANY ELECTRICAL EQUIPMENT OR ELECTRICAL SERVICE SPACE.
13. LAYOUT OF PIPING IS DIAGRAMMATIC. RUN ALL EXPOSED PIPING AS HIGH AS POSSIBLE UNLESS OTHERWISE NOTED. ALLOW FOR RISERS, DROPS AND OFFSETS AS REQUIRED.
14. EXTEND CONDENSATE DRAIN LINES AS INDICATED. ALL CONDENSATE DRAIN PIPING SHALL BE TRAPPED AND PITCHED DOWN IN DIRECTION OF FLOW A MINIMUM OF 1/8 INCH PER 1 FOOT.
15. INSTALL EQUIPMENT TO FACILITATE SERVICING, MAINTENANCE AND REPAIR OR REPLACEMENT OF ELECTRICAL COMPONENTS, AS MUCH AS PRACTICAL. CONNECT EQUIPMENT FOR EASE OF DISCONNECTING, WITH A MINIMUM OF INTERFERENCE WITH OTHER INSTALLATIONS.
16. FLASHING DETAILS FOR PIPES PENETRATING THE ROOF SHALL BE COORDINATED WITH ARCHITECTURE DETAILS.
17. CONTRACTOR SHALL INSTALL ALL PLUMBING VENTS AND EXHAUST AIR OUTLETS A MINIMUM OF 10'-0" AWAY (PER CODE) FROM ALL OUTSIDE AIR INTAKES, OPERABLE DOORS AND/OR WINDOWS. CONSTRUCTION DRAWINGS ARE DIAGRAMMATIC BY NATURE. FINAL MEASUREMENTS SHOULD BE MADE AT THE PROJECT SITE.
18. CONTRACTOR TO PROVIDE MEANS TO CLEAR CONDENSATE DRAIN LINE WITHOUT CUTTING THE DRAIN LINE.
19. NOT ALL SYMBOLS OR ABBREVIATIONS ARE USED.

## PLUMBING ABBREVIATIONS

| | |
|---|---|
| AUX | AUXILIARY CONDENSATE DRAIN PIPING |
| AVG | AVERAGE |
| AFF | ABOVE FINISHED FLOOR |

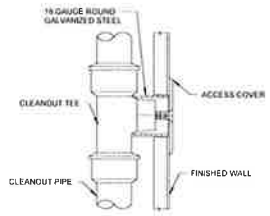
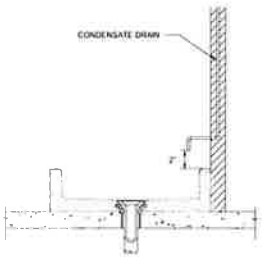
INSTALL IN MINIMUM OF 24" x 12" x 4" REINFORCED CONCRETE PAD WITH BEVELED EDGES | WATTS | (QTY-2) CO-200-RK | |

NOTES
1. MANUFACTURERS WITH MODEL NUMBERS ARE BASE ITEMS. OTHER MANUFACTURERS MUST BE EQUIVALENT MANUFACTURERS UNLESS NOTED OTHERWISE
2. FOR MOUNTING HEIGHTS OF INDIVIDUAL WALL MOUNTED FIXTURES, REFER TO P-001 SHEET
3. EACH UNDER SLAB OR CONCEALED P-TRAP SHALL BE A DEEP SEAL TYPE
4. PROVIDE EACH WALL MOUNTED PLUMBING FIXTURE, SUCH AS SINKS, LAVATORIES, ELECTRIC WATER COOLERS, DRINKING FOUNTAINS, ETC., WITH A FLOOR MOUNTED SUPPORT CARRIER WITH RECTANGULAR LEGS
5. UNLESS SCHEDULED OTHERWISE, PROVIDE EACH LAVATORY, SINK, WATER COOLER, ETC. WITH A P-TRAP ASSEMBLY CONSISTING OF A CHROME PLATED (C.P.) CAST BRASS TRAP WITH CLEANOUT PLUG, C.P. TUBING OUTLET (MIN. 17 GA.) AND C.P. CAST BRASS ESCUTCHEON WITH SETSCREW.
6. PROVIDE EACH FIXTURE WHICH REQUIRES COLD AND/OR HOT WATER (EXCEPT FLUSH VALVES) WITH A SUPPLY STOP ASSEMBLY CONSISTING OF A C.P. BRASS STOP VALVE (MIN. 1/2") WITH QUARTER STOPS AND LOCK SHIELD, STAINLESS STEEL FLEXIBLE RISER, C.P. BRASS NIPPLE, AND C.P. CAST BRASS ESCUTCHEON WITH SETSCREW.
7. FOR EACH PUBLIC LAVATORY OR SINK WITH EXPOSED DRAIN AND BOTH COLD AND HOT SUPPLY COMPONENTS, PROVIDE A MANUFACTURED INSULATION KIT MADE FROM MOLDED CLOSED CELL VINYL THAT IS ANTI-MICROBIAL AND SEAMLESS. EACH KIT SHALL COVER THE TAILPIECE, P-TRAP, WALL BEND, BOTH WATER SUPPLY STOPS, AND BOTH WATER RISERS. KITS SHALL BE EQUAL OR EQUIVALENT TO "PROWRAP" BY McGUIRE OR LAV-GUARD BY TRUEBRO.
8. WHERE ARCHITECTURAL PLANS SHOW WATER CLOSETS AND URINALS, PROVIDE AND INSTALL FLUSHING VALVE SUCH THAT FLUSH HANDLE IS ON WIDE SIDE OF WATER CLOSET.
9. PROVIDE WATER HAMMER ARRESTORS LOCATED AND SIZED ACCORDING TO PDI RECOMMENDATIONS.
10. PROVIDE ISOLATION VALVES IN CW, HW AND HWR PIPING AS NEED OR AS SHOWN FOR ALL GROUPS OF FIXTURES.
11. INSTALL PLUMBING FIXTURES IN ACCORDANCE WITH LATEST ADA AND TAS STANDARDS.



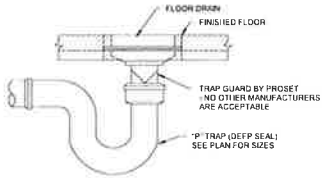
## WELL TANK SCHEDULE

| SYMBOL | LOCATION | TANK VOLUME | ACCEPTANCE FACTOR | DIMENSIONS | | DISCHARGE RATE (GPM) | GAUGE PRESSURE MAX/MIN (PSI) | DRAWDOWN (GAL) | MANUFACTURER | MODEL NO |
|---|---|---|---|---|---|---|---|---|---|---|
| | | | | DIAMETER (IN) | HEIGHT (IN) | | | | | |
| WT-1 | MECHAN 114 | 82 | 0.55 | 22 | 47 | 15 | 40/60 | 16.60 gal | WELLXTROL | WX-251 |



## ELECTRIC WATER HEATER SCHEDULE

| SYMBOL | LOCATION | STORAGE GALLONS | HTG ELEMENTS (QTY/KW) | ELECTRICAL | | RECOVERY (GPH) | WATER TEMPERATURE | | MANUFACTURER | MODEL NO |
|---|---|---|---|---|---|---|---|---|---|---|
| | | | | VOLTAGE | PHASE | | INLET | RISE | | |
| WH-1 | MECHAN 114 | 10 | 2 | 240 V | 1 | 15 | 67°F | 53°F | A.O. SMITH | DEL-10 |



NOTES
1. WATER HEATER SHALL HAVE A PORCELANIZED GLASSLINED TANK AND BE ADDITIONALLY PROTECT AGAINST PREMATURE FAILURE BY A FACTORY INSTALLED ANODE ROD. WATER HATER SHALL HAVE A PROPERLY SIZED FACTORY PROVIDED TEMPERATURE AND PRESSURE RELIEF VALVE
2. TANK SHALL HAVE A THREE-YEAR WARRANTY
3. WATER HEATER SHALL BE PROVIDED WITH NON-SIMULTANEOUS ELEMENTS

## GENERAL NOTES

A COORDINATE WITH THE UTILITY SERVICE PROVIDERS FOR ALL REQUIREMENTS FOR DELIVERING POWER SERVICE TO THE NEW BUILDING

B REFER TO THE LIGHT FIXTURE SCHEDULE FOR FIXTURE TYPES. PROVIDE THE NUMBER OF FIXTURES AND ORIENTATION NOTED FOR POLE-MOUNTED FIXTURES. POLE EPA RATINGS SHALL BE FOR THE NUMBER OF FIXTURES SHOWN

C CONTRACTOR SHALL VERIFY LOCATION OF ALL UNDERGROUND UTILITIES PRIOR TO ANY EARTH WORK.

## KEY NOTES

AS INDICATED BY (#)

1. PROVIDE (2)#8 AWG + #8 GND IN 3/4" CONDUIT
2. EXTEND AND CONNECT TO LIGHTING CONTROL RELAY PANEL LOCATED IN ELECTRICAL ROOM 113
3. NEW UNDERGROUND SECONDARY SERVICE ROUTED FROM OVERHEAD POLE MOUNTED TRANSFORMER. PROVIDE TRENCH CONDUIT AND BACKFILL. CONTRACTOR SHALL COORDINATE ALL REQUIREMENTS WITH ONCOR ELECTRIC DELIVERY. REFER TO ELECTRICAL RISER DIAGRAM ON SHEET E-501 FOR ADDITIONAL INFORMATION
4. POLE MOUNTED TRANSFORMERS AND OVERHEAD TO UNDERGROUND TRANSITION BY ONCOR DELIVERY

## SITE LIGHTING FIXTURE SCHEDULE

| TYPE | MOUNTING | VOLTAGE | MODEL NUMBER | LAMPS | REMARKS |

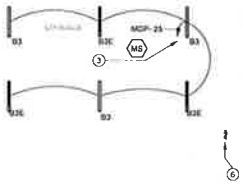
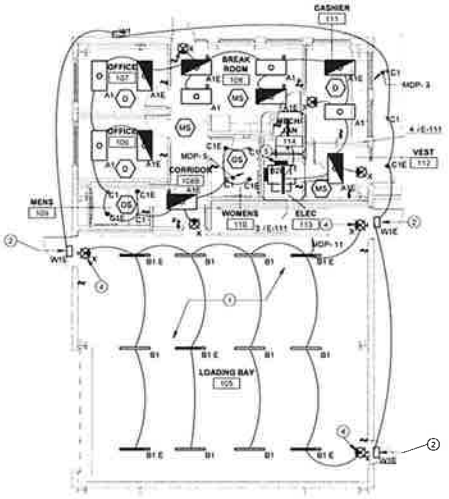
4 Lighting Plan - Callout 2

3 Lighting Plan - Callout 1



## GENERAL NOTES



A. COORDINATE LOCATION OF LIGHT FIXTURES WITH ARCHITECTURAL AND MECHANICAL.
B. ALL EMERGENCY AND EGRESS LIGHTING SHALL BE CONNECTED TO THE SAME BRANCH CIRCUIT SERVING THE NORMAL LIGHTS AND SHALL BE ON THE LINE SIDE OF RELAYS OR SWITCHING DEVICES.
C. REFER TO KEYED NOTES FOR CONTROL OF ADDITIONAL EMERGENCY LIGHTING. ALL EXIT SIGNS SHALL BE CONNECTED FOR CONTINUOUS OPERATION.
D. AT LOCATIONS WHERE ROOM LIGHT FIXTURES ARE CONTROLLED THROUGH THE USE OF OCCUPANCY SENSORS, PROVIDE THE NUMBER OF SENSORS AND LOCATE THE UNITS AS REQUIRED FOR COMPLETE ROOM COVERAGE. WHERE MORE THAN ONE SENSOR IS LOCATED IN A COMMON SPACE, CONNECT THE UNITS SUCH THAT DETECTION OF OCCUPANCY FROM EITHER UNIT WILL ENERGIZE THE LIGHTING. WHERE SWITCHES ARE SHOWN IN CONJUNCTION WITH OCCUPANCY SENSORS, CONNECT THE SWITCHES TO DE-ENERGIZE THE LIGHTING INDICATED REGARDLESS OF OCCUPANCY. ADJUST ALL SENSOR TIME DELAYS AND MOTION SENSITIVITIES DURING PROJECT CLOSEOUT TO MEET THE OPERATIONAL FUNCTION OF THE OWNER.
E. EXACT LOCATION AND PLACEMENT OF EXIT LIGHTING SHALL BE FIELD DETERMINED TO ENSURE PROPER LINES OF SIGHT.
F. PROVIDE DEDICATED NEUTRAL WIRE FOR ALL 120V BRANCH CIRCUITS. NO MULTI-WIRE BRANCH CIRCUITS SHALL BE ALLOWED.
G. ELECTRICAL FLOOR PLANS AND SCHEDULES ARE VALID FOR BOTH WEST AND NORTH SITES.

## KEY NOTES

AS INDICATED BY (#)

1. MOUNT FIXTURE AT 18'-0" AFF. TYPICAL OF ALL FIXTURES TYPE "B1" AND "B1E".
2. MOUNT EXTERIOR WALL PACK AT 9'-4 1/2" AFF. COORDINATE EXACT MOUNTING HEIGHT WITH ARCHITECTUAL. EXTEND AND CONNECT TO LIGHTING CONTROL RELAY PANEL FOR CONTROL.
3. MOUNT FIXTURE AT 7'-5" AFF. TO BASE OF FIXTURE. TYPICAL OF ALL FIXTURES TYPE "B2" AND "B2E".
4. MOUNT EXIT SIGN 1'-0" FROM THE TOP OF THE DOOR TO THE BOTTOM OF THE FIXTURE.
5. PROVIDE LIGHTING RELAY PANEL (LRP). ARP-INTENC08-NLT-4FCR-MVOLT-HLK-SM-DTC-ARPA-APS-OL OR EQUIVALENT. LIGHTING RELAY PANEL TO CONTROL EXTERIOR WALL PACK LIGHTS AND PARKING LOT LIGHTS. COORDINATE WITH MANUFACTURER FOR FURTHER DETAILS.
8. SECOND FLOOR LIGHT FIXTURES B3 AND B3E SHALL BE CONTROLLED BY LIGHT FIXTURE SWITCH LOCATED ON 1ST FLOOR.

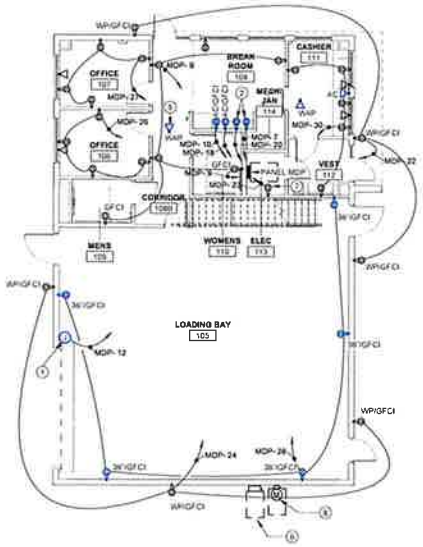
Electrical Lighting Plan

E-111

## GENERAL NOTES

A REFER TO THE MECHANICAL DRAWINGS FOR THE LOCATION AND NUMBER OF SUPPLY AND RETURN AIR DUCTS. FOR UNITS THAT ARE INDICATED TO HAVE SMOKE DETECTION COVERAGE, PROVIDE THE NUMBER OF DETECTORS AS REQUIRED TO COVER ALL OF THE DUCTS.
B ALL CONDUITS SERVING ROOF-MOUNTED EQUIPMENT SHALL BE EXTENDED INSIDE THE UNIT CURBS TO AVOID ADDITIONAL PITCHPANS. ALL EXTERIOR CONDUIT SHALL BE RIGID GALVANIZED STEEL OR LIQUID TIGHT FLEXIBLE CONDUIT AS SPECIFIED
C AT LOCATIONS WHERE A COMMON EXHAUST FAN IS CONTROLLED THROUGH INDEPENDENT WALL SWITCHES, CONNECT THE SWITCHES IN PARALLEL TO ALLOW EITHER SWITCH TO OPERATE THE FAN
D REFER TO THE MECHANICAL EQUIPMENT ELECTRICAL SCHEDULE FOR BRANCH CIRCUIT REQUIREMENTS FOR ALL MECHANICAL EQUIPMENT
E COORDINATE WITH SECURITY CONTRACTOR FOR ALL POWER REQUIREMENTS. REFER TO COMMUNICATION SHEETS FOR JUNCTION BOXES FOR MOTION DETECTORS, KEYPADS, DOOR CONTACTORS, ETC.
F CONTRACTOR IS RESPONSIBLE FOR PROVIDING CONNECTION OF ALL HVAC AND PLUMBING EQUIPMENT (BUT NOT LIMITED TO RTU'S, AHU'S, FANS, DAMPERS, LOUVERS, PUMPS AND CONTROLS)
G PROVIDE DEDICATED NEUTRAL WIRE FOR ALL 120V OR 277V BRANCH CIRCUITS. NO MULTI-WIRE BRANCH CIRCUITS SHALL BE ALLOWED
H ELECTRICAL FLOOR PLANS AND SCHEDULES ARE VALID FOR BOTH WEST AND NORTH SITES



## KEY NOTES

AS INDICATED BY ⊛

1 PROVIDE POWER FOR OVERHEAD DOOR EXTEND AND CONNECT (2)#12 AWG + #12 GND IN 3/4" CONDUIT. COORDINATE EXACT LOCATION AND CONTOL LOCATION WITH OVERHEAD DOOR MANUFACTURER
2 PROVIDE A DEDICATED RECEPTACLE FOR BELOW COUNTER ICE MAKE AND AND REFRIGERATOR AT 30" AFF
3 TYPICAL DATA DROP. PROVIDE SINGLE GANG BACK BOX AND 3/4" CONDUIT LOCATED TO AN ACCESSIBLE LOCATION ABOVE CEILING. PROVIDE BUSHING AT END OF CONDUIT. ROUTE CAT 6 CABLE LAN RACK, UTILIZING J-HOOKS
4 TYPICAL DATA DROP FOR WIRELESS ACCESS POINT( WAP). PROVIDE SINGLE GANG BACK BOX AS REQUIRED. ROUTE CAT 6 CABLE LAN RACK, UTILIZING J-HOOKS
5 WIRELESS ACCESS POINTS ARE TO BE CEILING MOUNTED. FIELD VERIFY FOR PROPER LOCATION
6 MOUNT 200A/2P, SERVICE RATED DISCONNECT, WITH 150-AMP FUSES ADJACENT TO ONCOR KWH METER. FIELD VERIFY FOR PROPER WORK SPACE CLEARANCE. REFER TO ELECTRIC RISER DIAGRAM FOR MORE INFORMATION
7 PROVIDE DEDICATED RECEPTACLE FOR IT/LAN RACK. COORDINATE WITH ARCHITECHTUAL FOR PROPER PLACEMENT
8 NEW KWH METER FOR SERVICE. COORDINATE WITH ONCOR ELECTRIC DELIVERY FOR ALL REQUIREMENTS

## LIGHTING CONTROL SEQUENCE MATRIX

| DESIGNATION | TYPICAL SPACES | DIMMING | NETWORKED | OCCUPANCY (AUTO ON) | OCCUPANCY (VACANCY) | STAND ALONE | TIME CLOCK | WIRELESS | DESCRIPTION OF LIGHTING CONTROL DEVICES WITHIN SPACE |
|---|---|---|---|---|---|---|---|---|---|
| O | •OFFICES | Yes | No | No | Yes | Yes | No | No | •WALL STATION WITH ON/OFF AND 0-10V DIMMING CAPABILITIES. PROVIDE CONNECTION FOR CONTROL OF LIGHTING THROUGH MULTIPLE SWITCH LOCATIONS.<br>•CEILING MOUNTED OCCUPANCY (VACANCY) SENSOR SHALL TURN ALL LUMINAIRES OFF AFTER TIMEOUT (20 MIN.) EXPIRES. |
| MS | •CORRIDORS<br>•LOBBIES<br>•VESTIBULES | No | No | Yes | No | Yes | Yes | No | •ON/OFF WALL SWITCH, PROVIDE CONNECTIONS REQUIRED FOR CONTROL OF LIGHTING THROUGH MULTIPLE SWITCH LOCATIONS.<br>•CEILING MOUNTED OCCUPANCY (AUTO "ON") SENSOR SHALL TURN ALL LUMINAIRES OFF AFTER TIMEOUT (20 MIN.) EXPIRES. SHALL AUTOMATICALLY TURN ALL LUMINAIRES ON TO 100% UPON DETECTION OF MAJOR OR MINOR MOTION.<br>•THIS AREA WILL BE PROGRAMMED WITH TIME CONTROL TO ALLOW FIXTURES TO STAY ON DURING OCCUPIED TIMES (COORDINATE OCCUPIED TIMES AND PROGRAMMING WITH OWNER). LIGHT SWITCH SHALL W,LLOW FOR OVERRIDE OF OCCUPANCY SENSORS, PHOTOCELLS, AND TIME PROGRAM. |
| OS | •SMALL RESTROOMS<br>•SMALL STORAGE ROOMS | No | No | No | Yes | Yes | No | No | •ON/OFF WALL SWITCH WITH INTEGRAL OCCUPANCY SENSOR. INTEGRAL OCCUPANCY SENSOR SHALL TURN ALL LUMINAIRES OFF AFTER (20 MIN.) EXPIRES.<br>•(NETWORK CONTROLS NOT REQUIRED, STAND-ALONE CONTROLS ONLY FOR THIS SPACE.) |
| SS | •ELECTRICAL ROOMS<br>•MECHANICAL/JANITOR ROOMS | No | No | No | No | Yes | No | No | •ON/OFF WALL SWITCH CONTROL (ONLY) TO AVOID POSSIBLE SAFETY CONCERN OF INADVERTENT OF THAT COULD BE CAUSED BY OCCUPANCY SENSING DEVICES.<br>•(NETWORK CONTROLS NOT REQUIRED, STAND-ALONE CONTROLS ONLY FOR THIS SPACE.) |

NOTES:

A REFER TO PLANS FOR LIGHTING DEVICE LOCATIONS AND OTHER INFORMATION
B SYMBOLS PROVIDED IN EACH SPACE (INDICATED IN THE LIGHTING CONTROLS SEQUENCE MATRIX SCHEDULE) ARE INTENDED TO DENOTE THE TYPES OF CONTROLS REQUIRED FOR EACH ASSOCIATED SPACES. THE SWITCH SYSMBOLS DENOTE REQUIRED LOCATIONS FOR THE CONTROL DEVICES IN EACH ASSOCIATED SPACE
C IN ADDITION TO CONTROL TYPES INDICATED, PROVIDE DAYLIGHT CONTROLS IN ALL AREAS SHOWN WITH DAYLIGHTING ZONES (INDICATED BY HATCHED AREAS ON PLANS). DIMMABLE DRIVERS IN EACH DAYLIGHT ZONE TO BE DIMMED SEPARATELY BY ZONE (CURRENT LIGHT LEVEL TO OFF, CONTINUOUS DIMMING, NO STEP DIMMING). DIMMING FUNCTION IN EACH DAYLIGHT ZONE IS TO MAINTAIN EVEN ILLUMINATION ACROSS THE ZONE, BASED ON THE SETTINGS OF THE SWITCH
D PROVIDE NUMBER OF RELAY PACKS, DIMMING RELAY PACKS, OCCUPANCY SENSORS AND PHOTOCELLS FOR COMPLETE AND PROPER OPERATION OF THE LIGHTING SYSTEM
E IN COMMON USE SPACES SUCH AS CORRIDORS, LOBBIES, CAFETERIA, AND HUBS/COLABS. PROVIDE CONNECTION TO FIRE ALARM TO BRING LIGHTING IN THESE AREAS/SPACES TO FULL "ON" IN THE EVENT OF AN ALARM
F LIGHTING CONTROLS SHALL COMPLY WITH THE REQUIREMENTS OF THE IECC 2015 AND SHALL BE COMMISIONED IN ACCORDANCE WITH THE REQUIREMENTS OF IECC 408
G REFER TO SPECIFICATION SECTION 26 09 43 NETWORKED LIGHTING CONTROLS FOR ADDITIONAL REQUIREMENTS
H ELECTRICAL LIGHTING CONTROLS SCHEDULES ARE VALID FOR BOTH WEST AND NORTH SITES

## LIGHTING FIXTURE SCHEDULE

# TABLE OF CONTENTS

**DIVISION 00 – PROCUREMENT AND CONTRACTING REQUIREMENTS**

| | |
|---|---|
| 00 11 20 | Request for Proposals |
| 00 21 16 | Instructions to Proposers |
| 00 26 00 | Procurement Substitution Procedures |
| 00 31 00 | Available Project Information |
| 00 31 32 | Geotechnical Data |
| | Geotechnical Report – Midland West CCS |
| | Geotechnical Report – Midland North CCS |
| 00 42 00 | Proposal Form |
| 00 43 00 | Procurement Form Supplements |
| 00 52 00 | Agreement Form |
| 00 54 10 | Midland |
| 00 80 10 | Owner Documents |

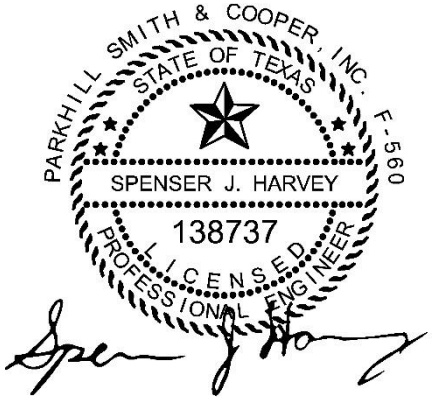
**DIVISION 01 – GENERAL REQUIREMENTS**

| | |
|---|---|
| 01 10 00 | Summary |
| 01 20 00 | Price and Payment Procedures |
| 01 25 00 | Substitution Procedures |
| 01 30 00 | Administrative Requirements |
| 01 30 01 | Digital Data Licensing Agreement |
| 01 32 16 | Construction Progress Schedule |
| 01 33 00 | Submittal Procedures |
| 01 40 00 | Quality Requirements |
| 01 43 26 | Testing Laboratory Services |
| 01 50 00 | Temporary Facilities and Controls |
| 01 57 23 | Temporary Stormwater Pollution Control |
| 01 60 00 | Product Requirements |
| 01 70 00 | Execution and Closeout Requirements |

**DIVISION 02 – EXISTING CONDITIONS**

Not Used

**DIVISION 03 – CONCRETE**



| | |
|---|---|
| 03 10 00 | Concrete Forming and Accessories |
| 03 20 00 | Concrete Reinforcing |
| 03 30 00 | Cast-In-Place Concrete |

**DIVISION 04 – MASONRY**

Not Used

**DIVISION 05 – METAL**

| | |
|---|---|
| 05 40 00 | Cold-Formed Metal Framing |

10/31/23

**DIVISION 06 – WOOD, PLASTICS, AND COMPOSITES**

06 16 13 Insulating Sheathing (Zip System R Sheathing)
06 41 16 Plastic-Laminate-Clad Architectural Cabinets
06 64 00 Plastic Paneling

**DIVISION 07 – THERMAL AND MOISTURE PROTECTION**

07 21 00 Thermal Insulation
07 62 00 Sheet Metal Flashing and Trim

**DIVISION 08 – OPENINGS**

08 11 13 Hollow Metal Doors and Frames
08 33 23 Overhead Coiling Doors
08 41 13 Hollow Metal Aluminum-Framed Entrances and Storefronts
08 80 00 Glazing

**DIVISION 09 – FINISHES**

09 22 16 Non-Structural Metal Framing
09 29 00 Gypsum Board
09 51 13 Acoustical Panel Ceilings
09 91 23 Interior Painting

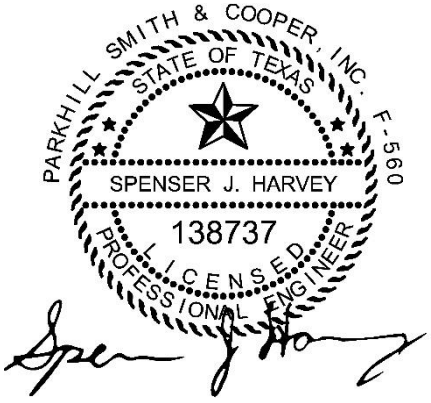
**DIVISION 10 – SPECIALTIES**

10 28 13 Toilet Accessories
10 44 16 Fire Extinguishers

**DIVISION 11 – EQUIPMENT**

11 40 00 Foodservice Equipment

**DIVISION 12 – FURNISHINGS**



Not Used

**DIVISION 13 – SPECIAL CONSTRUCTION**

13 34 19 Metal Building Systems

**DIVISIONS 14 – 21**

Not Used

10/31/23

**DIVISION 22 – PLUMBING**

22 05 29 Hangers and Supports
22 11 00 Facility Water Distribution
22 13 00 Facility Sanitary Sewerage
22 33 00 Electric Domestic Water Heaters
22 40 00 Plumbing Fixtures

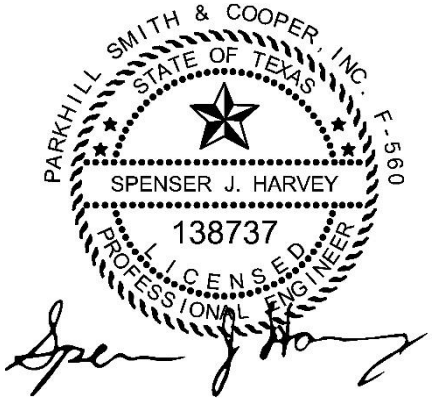
**DIVISION 23 – HEATING, VENTILATING, AND AIR-CONDITIONING (HVAC)**

23 05 00 General Mechanical Requirements
23 05 00.20 Basic Mechanical Materials and Methods
23 05 53 Identification for HVAC and Plumbing Piping and Equipment
23 07 05 HVAC and Plumbing Insulation
23 23 00 Refrigerant Piping
23 31 00 HVAC Ducts and Casings
23 33 00 Air Duct Accessories
23 34 00 HVAC Fans
23 37 00 Air Inlet and Outlets
23 81 26.20 Split System Heat Pumps
28 32 39 Unit Heaters

**DIVISION 24 – 25**

Not Used

**DIVISION 26 – ELECTRICAL**



26 05 00 Basic Electrical Methods
26 05 13 Building Wire and Cable
26 05 19 Equipment Wiring and Systems
26 05 26 Grounding Bonding
26 05 29 Supporting Devices
26 05 33 Conduit
26 05 33.16 Boxes
26 05 36 Cable Trays
26 05 53 Electrical Identification
26 18 39 Enclosed Motor Controllers
26 24 16 Switchboard and Panelboards
26 27 26 Wiring Devices
26 28 16.16 Enclosed Switches
26 51 00 Interior Lighting

**DIVISION 27 – COMMUNICATIONS**

27 13 43 Telephone Communications Cabling

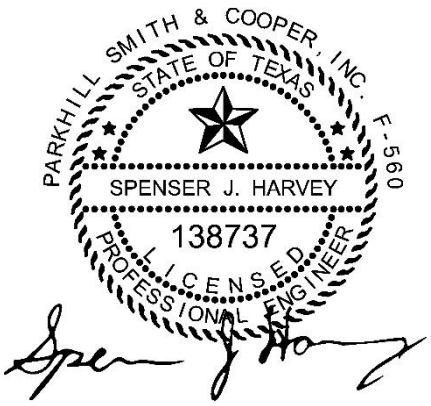
**DIVISION 28 – ELECTRONIC SAFETY AND SECURITY**

28 15 00 Integrated Access Control Hardware Devices

10/27/23

PACKET 11.641 November 14, 2023

**DIVISION 31 – EARTHWORK**



31 10 00 Site Clearing
31 20 00 Earth Moving
31 22 13 Rough Grade
31 23 23 Fill

**DIVISION 32 – EXTERIOR IMPROVEMENTS**

32 11 23 Aggregate Base Courses
32 12 16 Asphalt Paving
32 13 13 Concrete Paving

**DIVISIONS 33-46**

Not Used

10/27/23

# DOCUMENT 00 11 20 - REQUEST FOR PROPOSALS

1.1 OWNER

City of Midland
300 North Loraine Street
Midland, Texas 79701

1.2 PROJECT

West and North Citizens' Collection Stations

1.3 ARCHITECT

Parkhill
1700 W. Wall, Suite 100
Midland, Texas 79701
432.697.1447
Attn: R. Ashley Coco, AIA

1.4 DESCRIPTION

A. You are invited to submit a stipulated sum proposal on the attached forms for General Construction Work including mechanical, plumbing, electrical, Work and for furnishing of all labor, materials, services and equipment necessary for and incidental to the Work as called for on the Drawings and in the Project Manual. The construction is expected to commence by February 1, 2023.
B. Proposers may submit a proposal for the Work either individually or combined as indicated on the Proposal Form.
C. A contract may be awarded based on the proposal offering the best value to the Owner for the Project.

1.5 BASIS OF PROPOSALS

A. Owner will be utilizing the competitive sealed proposal procurement method as authorized by Texas Government Code, Title 10, Subtitle F., Chapter 2269, Subchapter D. The selection criteria used to evaluate each proposer's proposal is stipulated below in paragraph "D. Selection Criteria and Points."
B. The construction cost budget for this Project is $6,000,000.00.
C. Proposals shall be made on a stipulated sum basis on the attached Proposal Forms.
D. Selection Criteria and Points.
    1. (0-40 points) Construction Price - Base Proposal.
    2. (0-20 points) Construction Time.
    3. (0-10 points) Resume of Project manager.
    4. (0-10 points) Resume of job superintendent.
    5. (0-10 points) Past and current experience on Projects of similar scope, size, complexity, and location. Include the following information: Owner, Project Name, Date Completed, Project Duration, Proposal Cost, Final Cost, Project Manager and Job Superintendent. If a current employee constructed the Project while working for a different employer clearly delineate that relationship.

PACKET 11.647 November 14, 2023

6. (0-10 points) List of all litigation, claims, or lawsuits made against your company, an Owner or Architect in which you were the contractor, including any Projects that your company failed to fulfill the terms of the contract with an Owner in the last five years. Provide status of each.
7. Letter of Intent to issue Performance and Payment Bonds from proposer's bonding company listing availability of current bonding capacity and amount of Work currently under bond.
8. Ranking and selection of the proposers will be based on the scoring and evaluation of the listed selection criteria determined to provide the best value to the Owner.

E. Additional Requirements
1. For the Project Manager and Job Superintendent, provide the following for each:
   a. Daily responsibilities for the Project.
   b. Formal education level.
   c. History of Work experience.
   d. Personal references including name, position, owner, current telephone number and email address.
2. In addition to requirements of the proposal documents, Owner may require additional information to establish responsibility of Proposer. Owner may further require identification of proposed subcontractors, suppliers and/or other persons and/or organizations proposed for portions of the Work and substantial data to determine their qualifications and experience. If requested, Proposer must submit all data to the Owner. Owner may also consider and use as part of the evaluation the operating costs, maintenance requirements, performance data and guarantees of major items of material and equipment proposed for incorporation in the Work when such data is required to be submitted in the proposal documents or prior to the award of the contract.
3. Owner may conduct such investigations as Owner deems necessary to assist in the evaluation of any proposal and to establish the responsibility, qualifications, and financial ability of Proposer, proposed subcontractors, suppliers and other persons and organizations to perform and furnish the Work in accordance with the proposal documents to Owner's satisfaction within the prescribed time.

## 1.6 SUBMISSION OF PROPOSALS

A. Address to: City of Midland
Attn: City Secretary's Office
300 North Loraine Street
Midland, TX 79701
or Mail to:

B. Location: City of Midland
Attn: City Secretary's Office
P.O. Box 1152
Midland, TX 79702

C. Date: December 20, 2023

D. Time: 2:00 p.m., local time.

E. Proposals received after the submission time on the due date will not be accepted and will be returned unopened to Proposer.

PACKET 11.648 November 14, 2023

1.7 PROPOSAL DOCUMENTS

A. Proposal Documents may be examined at the Architect's office and at the following plan rooms:
   1. Dodge Data & Analytics
      806.794.2722
      Kim.mccallon@construction.com
   2. AGC Plan Room
      4500 W Illinois, Suite 201
      Midland, Texas 79703
      432.520.2220
      midland@wtagc.org
   3. Odessa Plan Room
      2706 Henderson
      Odessa, Texas 79764
      432.337.0912
      Odessaplanroom@gmail.com
   4. AGC-Abilene
      3125 S. 27th
      Abilene, Texas 79605
      325.676.7447
      wtagc@sbcglobal.net

B. Proposers may secure copies of Proposal Documents as follows:
   1. By contacting Pam Gonzales at pgonzales@parkhill.com. Additional information can be found at https://parkhill.com/projects-for-bid.
   2. Download documents (.PDF file extension format) from Parkhill's Info Exchange web site after registering as a plan holder with issuing Parkhill office. There is no cost or deposit required for this option.

C. Only Proposers who obtain Proposal Documents through Parkhill will be registered as a document holder (plan holder) and will therefore automatically receive addenda if/when issued.

1.8 ADDENDA

A. Addenda will be issued to document holders by 1 of the 2 following methods:
   1. E-mail notification to document holder with link to download addenda from Parkhill's Info Exchange web site.
   2. For document holders not having e-mail address, addenda may be picked up at the issuing Parkhill office or mailed via the United States Postal Service (USPS).

B. Addenda will not be faxed to document holders.

1.9 PRE-PROPOSAL CONFERENCE

A. A pre-proposal conference will be held on Tuesday, November 21, 2023 at the Project site at 2:00 p.m. local time. Attendance by Proposers is not mandatory.

1.10 PROPOSAL SECURITY

A. Proposal security in the sum of 5 percent of the total proposal amount and in the form of a cashier's check, certified check, or Surety Proposal Bond, shall accompany all proposals as stipulated in the Instructions to Proposers.

PACKET 11.649 November 14, 2023

1.11 OPENING OF PROPOSALS

A. Proposals will be publicly opened in the City Council Chambers immediately after closing of proposal time to identify the names of the proposer and their respective proposed contract amount. Other contents of the proposals will be afforded security sufficient to preclude disclosure of contents prior to award or rejection action.

B. After opening the Proposals, the Owner will evaluate and rank each Proposal with respect to the published selection criteria described in section titled BASIS OF PROPOSALS. After opening and ranking, an award may be made on the basis of the initially submitted Proposal, without discussion, clarification or modification, or the Owner may discuss with the selected proposer, offers for cost adjustment and other elements of the Proposal. Other than the data read at the Proposal opening, the Owner shall not disclose any information derived from the Proposals submitted by competing firms in conducting such discussions.

C. If the Owner determines that it is unable to reach a satisfactory agreement with the first ranked proposer, the Owner will terminate discussions with that proposer. The Owner will then proceed with negotiations with each successive proposer as they appear in the order of ranking until an agreement is reached, or until the Owner has rejected all Proposals. After termination of discussions with any proposer, Owner will not resume discussions with that proposer.

D. The Owner reserves the right to accept or reject any or all alternates or to accept any combination of alternates considered advantageous to the Owner.

E. The award or rejection action regarding this Proposal is at the sole discretion of the Owner and the Owner makes no warranty regarding this Proposal that a contract will be awarded to any proposer.

F. The Owner agrees that if the Contract is awarded, it will be awarded to the proposer offering the best value to the Owner. The Owner is not bound to accept the lowest priced Proposal if that Proposal is judged not to be the best value for the Owner, as determined by the Owner.

1.12 FORMALITIES

A. The City of Midland reserves the right to waive irregularities and to reject all proposals.

1.13 APPLICABLE GOVERNING LAWS AND REGULATIONS

A. In accordance with the Instruction to Proposers, all proposers shall comply with State Labor Laws concerning wage rates Texas Family Code concerning affidavit of eligibility to submit proposals non-discrimination in employment and employment of historically underutilized businesses.

END OF SECTION

# DOCUMENT 00 21 16 - INSTRUCTIONS TO PROPOSERS

ARTICLE 1 - DEFINITIONS

1.1 Proposal Documents include the Proposal Requirements and the proposed Contract Documents. The Proposal Requirements consist of the Request for Proposals, Instructions to Proposers, the proposal form, and other sample proposal and contract forms. The proposed Contract Documents consist of the form of Agreement between the Owner and Contractor, Conditions of the Contract (General, Supplementary and other Conditions), Drawings, Specifications and all Addenda issued prior to execution of the Contract.

1.2 Definitions set forth in the General Conditions of the Contract for Construction, or in other Contract Documents are applicable to the Proposal Documents.

1.3 Addenda are written, or graphic instruments issued by the Architect prior to the execution of the Contract which modify or interpret the Proposal Documents by additions, deletions, clarifications or corrections.

1.4 A Proposal is a complete and properly signed proposal to do the Work for the sums stipulated therein, submitted in accordance with the Proposal Documents.

1.5 The Base Proposal is the sum stated in the Proposal for which the Proposer offers to perform the Work described in the Proposal Documents as the base, to which Work may be added or from which Work may be deleted for sums stated in Alternate Proposals.

1.6 An Alternate Proposal (or Alternate) is an amount stated in the Proposal to be added to or deducted from the amount of the Base Proposal if the corresponding change in the Work, as described in the Proposal Documents, is accepted.

1.8 A Proposer is a person or entity who submits a Proposal.

1.9 A Sub-proposer is a person or entity who submits a proposal to a Proposer for materials, equipment or labor for a portion of the Work.

ARTICLE 2 - PROPOSER'S REPRESENTATIONS

2.1 The Proposer, by making a Proposal, represents that:

2.1.1 The Proposer has read and understands the Proposal Documents and the Proposal is made in accordance therewith.

2.1.2 The Proposer has read and understands the Proposal Documents or contract documents, to the extent that such documentation relates to the Work for which the Proposal is submitted.

2.1.3 The Proposer has visited the site, become familiar with local conditions under which the Work is to be performed and has correlated the Proposer's personal observations with the requirements of the proposed Contract Documents.

2.1.4 The Proposal is based upon the materials, equipment and systems required by the Proposal Documents without exception.

2.1.5 By submitting proposal, each proposer agrees to waive any claim it has or may have against the Owner, the Architect, the Engineer and their respective employees and offices, arising out of or in connection with the administration, evaluation, or recommendation of any proposal; waiver of any requirements under the Proposal Documents; or the Contract Documents; acceptance or rejection of any proposals; and award of the Contract.

ARTICLE 3 - PROPOSAL DOCUMENTS

3.1 COPIES

3.1.1 Proposal may obtain complete sets of the Proposal Documents from Parkhill as stated in Request for Proposals.

3.1.5 Proposal Documents will be issued directly to Subproposers or others unless specifically offered in Request for Proposals.

3.1.6 Proposers shall use complete sets of Proposal Documents in preparing Proposals; neither the Owner nor Architect assumes responsibility for errors or misinterpretations resulting from the use of incomplete sets of Proposal Documents.

3.1.7 In making copies of the Proposal Documents available on the above terms, the Owner and the Architect do so only for the purpose of obtaining Proposals on the Work and do not confer a license or grant permission for any other use of the Proposal Documents.

PACKET 11.651 November 14, 2023

3.2 INTERPRETATION OR CORRECTION OF PROPOSAL DOCUMENTS

3.2.1 The Proposer shall carefully study and compare the Proposal Documents with each other, and with other work being proposal concurrently or presently under construction to the extent that it relates to the Work for which the Proposal is submitted, shall examine the site and local conditions, and shall at once report to the Architect errors, inconsistencies or ambiguities discovered.

3.2.2 Proposers and Sub-proposers requiring clarification or interpretation of the Proposal Documents shall make a written request which shall reach the Architect at least seven days prior to the date for receipt of Proposals.

3.2.3 Interpretations, corrections and changes of the Proposal Documents will be made by Addendum. Interpretations, corrections and changes of the Proposal Documents made in another manner will not be binding, and Proposers shall not rely upon them.

3.3 SUBSTITUTIONS

3.3.1 The materials, products and equipment described in the Proposal Documents establish a standard of required function, dimension, appearance and quality to be met by any proposed substitution.

3.3.2 No substitution will be considered prior to receipt of Proposals unless written request for approval has been received by the Architect at least 7 days prior to the date for receipt of Proposals. Such requests shall include the name of the material or equipment for which it is to be substituted and a complete description of the proposed substitution including Drawings, performance and test data, and other information necessary for an evaluation. An item by item (line by line) comparison of each item listed in the specification shall be compiled and submitted comparing specified material/product with proposed substitution. A statement setting forth changes in other material, equipment or other portions of the Work including changes in the work of other contracts that incorporation of the proposed substitution would require shall be included. The burden of proof of the merit of the proposed substitution is upon the proposer. Architect's approval is for manufacturer only, and not specific material, system or equipment. Approved manufacturer's material, system or equipment is subject to additional and final review after award of contract and submitted for Architect's approval during Construction Administration submittal/shop drawing review process. The Architect's decision of approval or disapproval of a proposed substitution shall be final.

3.3.3 If the Architect approves a proposed substitution prior to receipt of Proposals, such approval will be set forth in an Addendum. Proposers shall not rely upon approvals made in any other manner.

3.4 ADDENDA

3.4.1 Addenda will be issued via the Architect's Newforma Info Exchange website or via mail (if internet service is not available) to all who are known by the issuing office to have received a complete set of Proposal Documents.

3.4.2 Copies of Addenda will be made available for inspection wherever Proposal Documents are on file for that purpose.

3.4.3 No Addenda will be issued later than 2 days prior to the date for receipt of Proposals except an Addendum withdrawing the request for Proposals or one which includes postponement of the date for receipt of Proposals.

3.4.4 Only Proposers who obtain Proposal Documents through Parkhill will be registered as a document holder (plan holder) and will therefore automatically receive addenda if/when issued.

3.4.5 Each Proposer shall ascertain, prior to submitting a Proposal, that the Proposer has received all Addenda issued, and the Proposer shall acknowledge their receipt in the Proposal.

ARTICLE 4 - PROPOSAL PROCEDURES

4.1 FORM AND STYLE OF PROPOSALS

4.1.1 Proposals shall be submitted on forms identical to the form included with the Proposal Documents.

4.1.2 All blanks on the proposal form shall be filled in by typewriter or manually, in ink.

4.1.3 Where so indicated by the makeup of the proposal form, sums shall be expressed in both words and figures, and in case of discrepancy between the two, the amount written in words shall govern.

4.1.4 Interlineations, alterations and erasures must be initialed by the signer of the Proposal.

4.1.5 All requested Alternates shall be proposed. If no change in cost to the Base Proposal is required, mark "No Change."

PACKET 11.652 November 14, 2023

4.1.5 Where two or more Proposals for designated portions of the Work have been requested, the Proposer may, without forfeiture of the proposal security, state the Proposer's refusal to accept award of less than the combination of Proposals stipulated by the Proposer. The Proposer shall make no additional stipulations on the proposal form nor qualify the Proposal in any other manner.

4.1.6 Each copy of the Proposal shall include the legal name of the Proposer and a statement that the Proposer is a sole proprietor, partnership, corporation or other legal entity. Each copy shall be signed by the person or persons legally authorized to bind the Proposer to a contract. A Proposal by a corporation shall further give the state of incorporation and have the corporate seal affixed. A Proposal submitted by an agent shall have a current power of attorney attached certifying the agent's authority to bind the Proposer.

4.1.8 All costs associated with the preparation, submission and delivery of Proposal is the sole responsibility of the Proposer.

4.2 PROPOSAL SECURITY

4.2.1 Each Proposal shall be accompanied by a proposal security as stipulated in the Request for Proposals, in the form and amount required, pledging that the Proposer will enter into a Contract with the Owner on the terms stated in the Proposal and will furnish bonds covering the faithful performance of the Contract and payment of all obligations arising thereunder. Should the Proposer refuse to enter into such Contract or fail to furnish such bonds, the amount of the proposal security shall be forfeited to the Owner as liquidated damages, not as a penalty. The amount of the proposal security shall not be forfeited to the Owner in the event the Owner fails to comply with Subparagraph 6.2.1.

4.2.2 The surety bond shall be written on AIA Document A310, Proposal Bond, or a similar standard form of the Surety, and the attorney-in-fact who executes the bond on behalf of the Surety, shall affix to the bond a certified and current copy of the power of attorney.

4.2.3 The Owner will have the right to retain the proposal security of Proposers to whom an award is being considered until either (a) the Contract has been executed and bonds have been furnished, or (b) the specified time has elapsed so that Proposals may be withdrawn, or (c) all Proposals have been rejected.

4.3 SUBMISSION OF PROPOSALS

4.3.1 All copies of the Proposal, the proposal security and other documents required to be submitted with the Proposal shall be enclosed in a sealed opaque envelope. The envelope shall be addressed as indicated in the Request for Proposals and shall be identified with the Project name, the Proposer's name, and address and, if applicable, the designated portion of the Work for which the Proposal is submitted. If the Proposal is sent by mail, the sealed envelope shall be enclosed in a separate mailing envelope with the notation "SEALED PROPOSAL ENCLOSED" on the face thereof.

4.3.2 Proposals shall be deposited at the designated location prior to the time and date for receipt of Proposals. Proposals received after the time and date for receipt of Proposals will be returned unopened.

4.3.3 The Proposer shall assume full responsibility for timely delivery at the location designated for receipt of Proposals.

4.3.4 Oral, telephonic or telegraphic Proposals are invalid and will not receive consideration.

4.3.5 The Proposer shall be responsible for all costs associated with preparing the Proposal Document response. The Owner and Architect shall not incur any costs associated with the production and printing of the Proposal Document and post proposal information.

4.3.6 The Proposer shall prepare 6hard copies and 1 copy in pdf. on a USB flash drive of his proposal information which will be sealed in an opaque envelope.

4.4 MODIFICATION OR WITHDRAWAL OF PROPOSAL

4.4.1 A Proposal may not be modified, withdrawn, or canceled by the Proposer during the stipulated time period following the time and date designated for the receipt of Proposals, and each Proposer so agrees in submitting a Proposal.

PACKET 11.653 November 14, 2023

4.4.2 Prior to the time and date designated for receipt of Proposals, a Proposal submitted may be modified or withdrawn by notice to the party receiving Proposals at the place designated for receipt of Proposals. Such notice shall be in writing over the signature of the Proposer or by telegram; if by telegram, written confirmation over the signature of the Proposer shall be mailed and postmarked on or before the date and time set for receipt of Proposals. A change shall be so worded as not to reveal the amount of the original Proposal.

4.4.3 Withdrawn Proposals may be resubmitted up to the date and time designated for the receipt of Proposals provided that they are then fully in conformance with these Instructions to Proposers.

ARTICLE 5 - CONSIDERATION OF PROPOSALS

5.1 OPENING OF PROPOSALS

5.1.1 As stated in the Request for Proposals, the properly identified Proposals, received on time, will be opened publicly and will be read aloud. An abstract of the same information may, at the discretion of the Owner, be made available to the Proposers within a reasonable time.

5.2 REJECTION OF PROPOSALS

5.2.1 The Owner shall have the right to reject any, or all Proposals, reject a Proposal not accompanied by a required proposal security, or by other data required by the Proposal Documents, or reject a Proposal which is in any way incomplete or irregular.

5.3 ACCEPTANCE OF PROPOSAL (AWARD)

5.3.1 It is the intent of the Owner to award a Contract to the lowest responsible Proposer provided the Proposal has been submitted in accordance with the requirements of the Proposal Documents and does not exceed the funds available. The Owner shall have the right to waive informalities or irregularities in a Proposal received and to accept the Proposal which, in the Owner's judgment, is in the Owner's own best interests. The issuance of this request for proposals does not obligate the Owner to enter into a contract.

5.3.2 The Owner shall have the right to accept Alternates in any order or combination, unless otherwise specifically provided in the Proposal Documents, and to determine the low Proposer on the basis of the sum of the Base Proposal and Alternates accepted.

5.3.3 Each proposer agrees to waive any claim it has or may have against the Owner, the Architect, and their respective employees, arising out of or in connection with the administration, evaluation, or recommendation of any proposal.

ARTICLE 6 - POST-PROPOSAL INFORMATION

6.1 CONTRACTOR'S QUALIFICATION STATEMENT

6.1.1 Proposers to whom award of a Contract is under consideration shall submit to the Architect, upon request, a properly executed AIA Document A305-2020, Contractor's Qualification Statement, Exhibit A, Exhibit B (except for paragraph B.1) and Exhibit C (except for paragraph C.2). Exhibits D and E are not required.

6.2 OWNER'S FINANCIAL CAPABILITY

6.2.1 The Owner shall, at the request of the Proposer to whom an award of a Contract is under consideration and no later than seven days prior to the expiration of the time for withdrawal of Proposals, furnish to the Proposer reasonable evidence that financial arrangements have been made to fulfill the Owner's obligations under the Contract. Unless such reasonable evidence is furnished, the Proposer will not be required to execute the Agreement between the Owner and Contractor.

6.3 SUBMITTALS

6.3.1 The Proposer shall, as soon as practicable, after notification of selection for the award of a Contract, furnish to the Owner through the Architect in writing:

6.3.1.1 a designation of the Work to be performed with the Proposer's own forces:

6.3.1.2 names of the manufacturers, products and the suppliers of principal items or systems of materials and equipment proposed for the Work; and

6.3.1.3 names of subcontractors, persons, or entities (including those who are to furnish materials or equipment fabricated to a special design) proposed for the principal portions of the Work.

6.3.2 The Proposer will be required to establish, to the satisfaction of the Architect and Owner, the reliability and responsibility of the persons or entities proposed to furnish and perform the Work described in the Proposal Documents.

PACKET 11.654 November 14, 2023

6.3.3 Prior to the award of the Contract, the Architect will notify the Proposer in writing if either the Owner or Architect, after due investigation, has reasonable objection to a person or entity proposed by the Proposer. If the Owner or Architect has reasonable objection to a proposed person or entity, the Proposer may, at the Proposer's option, (1) withdraw the Proposal, or (2) submit an acceptable substitute person or entity, with an adjustment in the Base Proposal or Alternate Proposal to cover the difference in cost occasioned by such substitution. The Owner may, accept the adjusted proposal price or disqualify, the Proposer. In the event of either withdrawal or disqualification, proposal security will not be forfeited.

6.3.4 Persons and entities proposed by the Proposer and to whom the Owner and Architect have made no reasonable objection must be used on the Work for which they were proposed and shall not be changed except with the written consent of the Owner and Architect.

ARTICLE 7 - PERFORMANCE BOND AND PAYMENT BOND

7.1 BOND REQUIREMENTS

7.1.1 The Proposer shall furnish bonds covering the faithful performance of the Contract and payment of all obligations arising thereunder.

7.1.2 The cost shall be included in the Proposal.

7.2 TIME OF DELIVERY AND FORM OF BONDS

7.2.1 The Proposer shall deliver the required bonds to the Owner prior to the execution of the Contract.

7.2.2 The bonds shall be written on AIA Document A312, Performance Bond and Payment Bond or the Bonding Company's standard bond forms. Both bonds shall be written in the amount of the Contract Sum.

7.2.3 The bonds shall be dated on or after the date of the Contract.

7.2.4 The Proposer shall require the attorney-in-fact who executes the required bonds on behalf of the surety, to affix thereto a certified and current copy of the power of attorney.

ARTICLE 8 - INSURANCE

8.1 INSURANCE REQUIREMENTS

8.1.1 The Proposer shall furnish insurance in the types and amount of coverage required, and shall be secured from sources as defined in the Owner/Contractor Agreement.

8.1.2 The cost shall be included in the Proposal.

8.2 TIME OF DELIVERY AND FORM OF INSURANCE

8.2.1 The Proposer shall deliver the required certificates of insurance coverage to the Owner upon its execution of the Contract.

8.2.2 The insurance certificate shall be written on a form acceptable to the Owner. Insurance shall be written in the amount required by the Contract.

8.2.3 The insurance certificates shall be dated on or before the date of the Contract.

ARTICLE 9 - FORM OF AGREEMENT BETWEEN OWNER AND CONTRACTOR

9.1 FORM TO BE USED

9.1.1 The Agreement for the Work will be written on Owner provided document.

ARTICLE 10 - APPLICABLE GOVERNING LAWS AND REGULATIONS

10.1 WAGE RATES

10.1.1 All Contractors must comply with State Labor Laws as required by current amended provisions of Section 2 of Article 5159a, Texas Civil Statutes. Contractor is required to pay not less than the specified minimum wage rates of the various applicable classes of labor.

10.1.2 The Contractor shall forfeit as a penalty to the State, sixty dollars ($60.00) for each laborer, workman or mechanic employed for each calendar day or portion thereof, if such laborer, workman or mechanic is paid less than the said stipulated rates for any work done under said contract, by Contractor or by their subcontractor.

PACKET 11.655 November 14, 2023

10.4 NON-DISCRIMINATION

10.4.2 During the proposal and performance of this Contract, the Contractor agrees as follows:

10.4.2.1 The Contractor shall not discriminate against any employee or applicant for employment because of race, color, religion, sex, age, or national origin. The Contractor shall take affirmative action to ensure that applicants are employed, and that employees are treated during employment without regard to their race, color, sex, religion, age, or national origin. Such action shall include, but not be limited to, the following: Employment, upgrading, demotion, or transfer; recruitment or recruitment advertising; layoff or termination; rates of pay or other forms of compensation; and selection for training, including apprenticeship. The Contractor agrees to post in conspicuous places, available to employees or applicants for employment, notices to be provided setting forth the provisions of this non-discrimination article.

10.5 HISTORICALLY UNDERUTILIZED BUSINESS

10.5.2 The Contractor shall include a "Historically Underutilized Business Policy Statement" in all subcontracts pertaining to the Work as follows:

City of Midland is committed to make efforts to assist Historically Underutilized Businesses (HUBs) to receive at least thirty percent (30%) of the total value of all contract awards issued by the state. Therefore, HUBs qualified to do so are encouraged to propose; and all business that propose are encouraged to give particular attention in preparing their proposals to include HUBs as subcontractors and material suppliers at any tier for a total value of at least 30% of the amount of their proposal. **Each proposer is required to state in its proposal (HUB Proposal Supplement) the percentage of the proposal amount represented by women owned HUBs, the percentage represented by minority-owned HUBs, and the combined total of each.**

HUB Subcontracting Program Reporting Policy, Responsibilities at the time of award:

The State of Texas operates under the basic principles of free and vigorous competition. In accordance with House Bill 2626, 73rd Legislature, all state agencies are to give a good faith effort to award at least thirty percent (30%) of the total value of all contracts to certified HUBs. Achievement of the goal may be reached by the state contracting directly with HUB vendors or by the state's general contractors establishing contracts with HUB vendors as subcontractors, suppliers or material providers.

All contractors are required to prepare the reporting forms within the designated time period stated on each form to assist City of Midland's efforts to document HUB vendor usage. Contractors that have demonstrated past HUB participation are still expected to provide documentation at the prescribed times.

General Services Commission (GSC) will assist contractors in identifying HUB businesses, call 512.463.3612. If contractors have difficulty in obtaining HUB vendors or meeting the goal targeted, contractor will be required to provide City of Midland with information under the good faith effort criteria listed below:

Delivery of a written notice to all HUB Subcontractors or Suppliers identified on the GSC HUB Certification Directory, contractor group listings, State Agency listings, other government agencies listings, and to any local HUB who requested information on the job. The notice will contain (1) adequate information about the plans, specifications, and requirements of the Contract and Subcontract work, and (2) a contact person within the Contractor's office to answer questions.

Provide documentation on the type of solicitations made for HUB participation, include records, and submit evidence of correspondence and responses from HUBs. In accordance with normal industry practices, divide contract into small, economically feasible segments which could be performed by HUBs, include dollar amount offered to HUB.

Evidence of the steps taken to assist in financing, bonding, and technical assistance services for HUBs where HUBs are otherwise qualified and information as to the Contractors bonding requirements, the procedure for obtaining any needed bond, and the telephone number of one or more acceptable surety companies contacted. Provide an explanation for rejection to any HUB whose proposal is rejected, unless another HUB is accepted for the same work, as follows: (1) where price competitiveness is not the reason, a written rejection notice will include the reason for rejection, and (2) where price competitiveness is the reason, a meeting will be held, if requested, with the price-rejected HUB to discuss the rejection.

PACKET 11.656 November 14, 2023

10.5.3 City of Midland will review and evaluate the above documentation on the basis of demonstrated "good faith effort". Additional positive efforts or technical assistance may be provided and/or suggested by GSC. GSC will assist contractors in affirmative action plans to achieve the state's HUB contracting goal, call .512.463.3612.

10.5.4 An Historically Underutilized Business is defined by stature as (a) a corporation formed for profit in which at least 51 percent of the equity is owned by one or more women or Black, Hispanic, Asian Pacific, or Indian Americans, (b) a sole proprietorship 100 percent owned, operated, and controlled by such person(s), (c) a partnership in which such person(s) own at least 51 percent of its assets and interest and have proportionate control of partnership affairs, (d) a joint venture of HUBs, or (e) a supplier contract between an HUB and a prime contractor under which the HUB manufactures, distributes, or warehouses and ships the supplies.

10.5.5 **The proposer shall indicate in the appropriate space on the HUB Proposal Supplement whether or not the proposer meets the definition of an Historically Underutilized Business.**

10.5.6 **The proposer shall also indicate in the appropriate space on the HUB Proposal Supplement whether or not the proposer meets the following definition of a small business:**
A Small Business is a corporation, partnership, sole proprietorship or other legal entity formed for the purpose of making a profit which is independently owned and operated and has either fewer than 100 employees or less than $1,000,000 in gross annual receipts during the past calendar or fiscal year.

PACKET 11.657 November 14, 2023

# DOCUMENT 00 26 00 - PROCUREMENT SUBSTITUTION PROCEDURES

## 1.1 DEFINITIONS

A. Procurement Substitution Requests: Requests for changes in products, materials, equipment, and methods of construction from those indicated in the Procurement and Contracting Documents, submitted prior to receipt of bids.

B. Substitution Requests: Requests for changes in products, materials, equipment, and methods of construction from those indicated in the Contract Documents, submitted following Contract award. See Section 01 25 00 "Substitution Procedures" for conditions under which substitution requests will be considered following Contract award.

## 1.2 QUALITY ASSURANCE

A. Compatibility of Substitutions: Investigate and document compatibility of proposed substitution with related products and materials. Engage a qualified testing agency to perform compatibility tests recommended by manufacturers.

## 1.3 PROCUREMENT SUBSTITUTIONS

A. Procurement Substitutions, General: By submitting a bid, the Bidder represents that its bid is based on materials and equipment described in the Procurement and Contracting Documents, including Addenda. Bidders are encouraged to request approval of qualifying substitute materials and equipment when the Specifications Sections list materials and equipment by product or manufacturer name.

B. Procurement Substitution Requests will be received and considered by Owner when the following conditions are satisfied, as determined by Architect; otherwise requests will be returned without action:
   1. Extensive revisions to the Contract Documents are not required.
   2. Proposed changes are in keeping with the general intent of the Contract Documents, including the level of quality of the Work represented by the requirements therein.
   3. The request is fully documented and properly submitted.

## 1.4 SUBMITTALS

A. Procurement Substitution Request: Submit to Architect. Procurement Substitution Request must be made in writing in compliance with the following requirements:
   1. Requests for substitution of materials and equipment will be considered if received no later than 7 days prior to date of bid opening.
   2. Submittal Format: Submit 3 copies or 1 PDF copy of each written Procurement Substitution Request, using CSI Substitution Request Form 1.5C. All copies must be legible.
   3. Provide product data in a side-by-side, line-by-line review. Substitution Request Form 1.5C received without product data will be returned unanswered. Additionally, provide appropriate drawings, samples, tests, and reports as necessary to support and clarify product data. Attach all as backup data to CSI Substitution Request Form 1.5C.

B. Architect's Action:
   1. Architect may request additional information or documentation necessary for evaluation of the Procurement Substitution Request. Architect will notify all bidders of acceptance of the proposed substitute by means of an Addendum to the Procurement and Contracting Documents.

C. Architect's approval of a substitute during bidding does not relieve Contractor of the responsibility to submit required Shop Drawings and to comply with all other requirements of the Contract Documents.

END OF DOCUMENT

# SECTION 00 31 00 – AVAILABLE PROJECT INFORMATION

## PART 1 - GENERAL

1.1 SUMMARY

A. Related Sections:
1. Division 01 Specification Sections apply to Work of this Section.

1.2 INFORMATION

A. Property Survey:
1. A survey of the property was authorized by the Owner, and the survey was made by:
Parkhill
1700 W Wall Street
Midland, TX 79701
(432) 697-1447
2. Site layout, Drawings and boundary traverse and closure information included in the Drawings.
3. Property survey and site improvement layout is available for Contractor's information.

1.3 RESPONSIBILITY

A. Proposers are expected to examine the site survey information then determine for themselves the validity of the information contained there-in as it relates to this Project.
B. Architect and Owner do not guarantee continuity of conditions indicated at boring locations and assume no responsibility for variations of subsoil quality or conditions.
C. Architect and Owner assume no responsibility for variations of site survey information.

## PART 2 - PRODUCTS (Not Used)

## PART 3 - EXECUTION (Not Used)

END OF SECTION

PACKET 11.660 November 14, 2023

# SECTION 00 31 32 - GEOTECHNICAL DATA

## PART 1 - GENERAL

1.1 SUMMARY

A. Related Requirements:
1. Division 01 Specification Sections apply to Work of this Section.

1.2 INFORMATION

A. Geotechnical Data:
1. An investigation of subsurface soil conditions at the construction site was authorized by Owner, and investigations at the West CCS Site were made by:

Beyond Engineering and Testing
011-B South County Road 1260
Midland, TX 79706
432.561.5780

Investigations at the North CCS Site were made by:

Terracon
10400 State Hwy 191
Miland, TX 79707
432.684.9600

2. The two reports, in their entirety, are bound at the end of this Section.

1.3 GEOTECHNICAL DATA

A. This Document with its referenced attachments is part of the Procurement and Contracting Requirements for Project. They provide Owner's information for Proposers' convenience and are intended to supplement rather than serve in lieu of [Proposers' own investigations. This Document and its attachments are not part of the Contract Documents.

B. Because subsurface conditions indicated by the soil borings are a sampling in relation to the entire construction area, and for other reasons, the Owner, Architect, Engineer, the Architect's or Engineer's consultants, and the firm reporting the subsurface conditions do not warranty the conditions below the depths of the borings or that the strata logged from the borings are necessarily typical of the entire site. Any party using the information described in the soil borings and geotechnical report shall accept full responsibility for its use.
1. The opinions expressed in this report are those of a geotechnical engineer and represent interpretations of subsoil conditions, tests, and results of analyses conducted by a geotechnical engineer. Owner is not responsible for interpretations or conclusions drawn from the data.
2. Any party using information described in the geotechnical report shall make additional test borings and conduct other exploratory operations that they may require to determine the character of subsurface materials that may be encountered.

3. Proposers are expected to examine the geotechnical data reports and then determine for themselves the validity of the information contained there-in as it relates to this Project.

BEYOND Project No. GT2111061

Dear Mr. Ahrlett:

Beyond Engineering and Testing, LLC (BEYOND) is pleased to present our geotechnical engineering study for the proposed Citizen's Collection Center project in Midland, Texas. City of Midland (Client) commissioned this geotechnical engineering study to explore and evaluate the subsurface conditions at the site, develop geotechnical design parameters, and provide related construction recommendations for the project. Our geotechnical report describes our field exploration and laboratory testing program, our engineering interpretation pertinent to the project, as well as earthwork guidelines for the project.

We appreciate the opportunity to serve you. We look forward to working with you on construction materials testing services during construction phase. Note that BEYOND is already under contract with Client for this project. As such, a simple change order is needed to approve testing services during construction phase. Please call us if you have any questions concerning this report or any of our other services.

Respectfully submitted,
**Beyond Engineering and Testing, LLC**

## 1.0 INTRODUCTION

Beyond Engineering and Testing, LLC (BEYOND) is pleased to present our subsurface exploration and geotechnical engineering evaluation for the proposed Citizen's Collection Station project. The proposed project site will be situated near 6400 West Highway 80 in Midland, Texas at GPS coordinates (31.955276, -102.159771). The approximate project location is shown on Figure 1, Project Site Location Map, within Appendix A.

The purpose of this geotechnical investigation and report is to:

- Explore subsurface conditions;
- Conduct field and laboratory testing to characterize the engineering properties of subsurface materials;
- Provide geotechnical engineering parameters for the design and construction of foundation systems;
- Provide pavement recommendations, and;
- Provide earthwork requirements.

The recommendations contained in this report are based upon field and laboratory test results, engineering analyses, experience with similar subsurface conditions, and our project understanding.

## 2.0 PROPOSED CONSTRUCTION

BEYOND understands the proposed project will comprise of Citizen's Collection Station facility which consists of 40 feet by 60 feet metal building, concrete pavement, a built-up ramp and retaining walls for roll-off drops.

## 3.0 FIELD EXPLORATION

BEYOND prepared and executed a field exploration program for the proposed project on November 19, 2021. The approximate boring locations are shown on Figure 2, Borehole Locations Map, within Appendix A of this report. A summary of approximate geographic latitude and longitude coordinates and depth of each boring drilled as part of the subsurface exploration program is presented in Table 3.0.1.

***Table 3.0.1 – Summary of Boring Locations and Depths***

| Boring No. | Latitude (degrees) | Longitude (degrees) | Total Boring Depth (feet) |
|---|---|---|---|
| B-1 | 31.955617 | -102.157978 | 19 |
| B-2 | 31.955419 | -102.158930 | 19 |
| B-3 | 31.955276 | -102.159771 | 19 |

Notes: Latitude and longitude coordinates provided in Table 3.0.1 were obtained from a hand-held GPS device with accuracy of approximate 15 to 20 feet.

BEYOND utilized air rotary drilling method to advance the boreholes. We collected samples using Standard Penetration Testing (SPT) split spoon samplers. We collected all samples from the samplers in the field, performed visual soil classification, labeled the samples as to location and depth, and bagged soil samples to minimize moisture changes. We conducted the SPT tests in general accordance with ASTM D1586: Standard Test Method for Standard Penetration Test (SPT) and Split-Barrel Sampling of Soils. SPT test results are shown on the attached Boring Logs under the "Field Data" column and are preceded by the letter "N". SPT testing was performed using automatic hammer.

BEYOND prepared field logs for each boring drilled. The field logs contain visual classifications of the materials encountered during drilling as well as interpolation of the subsurface conditions between samples. We also observed for groundwater level in the borehole while advancing the boreholes. These observations are discussed in subsequent sections of this report.

The project engineer reviewed the field logs, samples, and laboratory data to make appropriate modifications to the field logs. BEYOND classified soils in general accordance with the Unified Soil Classification System (USCS). The soil classification symbols on the boring logs are described in the *Boring Log Key* included in Appendix A. The final logs of boring include modifications based on our laboratory test results and observations performed on the soil samples collected in the field. The final logs of boring describe the materials encountered, strata thickness, the various depths at which the samples were obtained, as well as field test results.

## 4.0 SUBSURFACE CONDITIONS

### 4.1 Regional Geology

As per the geologic Atlas of Texas, Pecos sheet, the geology at the project site and in the vicinity consists of the following.

**Quaternary Period Units**

- **Playa Deposits** (Qp)**:** Shallow, closed, depressions that have filled mainly with clay and silt, along with minor amounts of sand.
- **Windblown Cover Sand** (Qcs/Qbd)**:** Eolian deposits comprised of fine- to medium-grained sand-sized quartz grains, silty in nature, with calcareous and caliche deposits being common. Windblown sediments can reach 10 feet in thickness.

Site vicinity geologic map is shown on Figure 3 within Appendix A of this report.

### 4.2 Subsurface Stratigraphy

As indicated on our logs of borings drilled as part of this study, native soils were encountered beneath approximately 2 inches of topsoil and extended to the bottom of the boring. The native soils generally encountered are as follows:

- Loose to very dense sand with varying amounts of clay, silt and gravel.

Bedrock was not encountered in any of the borings completed as part of this study.

The above descriptions are general and depth ranges are approximate because boundaries between different strata are seldom clear and abrupt in the field. In addition, the lines separating major strata types on the logs of borings do not necessarily represent distinct lines of demarcation of the various strata. Detailed logs of borings for locations drilled as part of this study, which present the stratum descriptions, types of sampling used, laboratory test data, and additional field data, are presented in Appendix A. The Boring Log Key, defining the terms and descriptive symbols used on each log of boring, is also presented in Appendix A.

### 4.3 Groundwater Conditions

BEYOND did not encountered groundwater during drilling operations.

Based on the Texas Water Development Board (TWDB) Groundwater Database of water wells within a 0.25-mile radius from the project site locations, groundwater levels at adjacent water wells were recorded at depths of 39 to 42 feet below ground surface. These measurements are from submitted driller's well reports from 2014.

It is imperative to note that the short-term groundwater level observations performed as part of this study are not an accurate evaluation of groundwater levels at the project site and should not be interpreted as a comprehensive groundwater study. The observations made during this investigation may also not represent conditions at the time of construction and it should be understood the presence of groundwater may have an effect on certain construction activities and long-term performance of foundations and pavements. Groundwater levels are highly dependent on climatic and hydrologic conditions before and after construction, and site development including irrigation demands, drainage and other factors. If a detailed groundwater study is desired, a groundwater hydrologist should be retained to perform these services.

## 5.0 LABORATORY TESTS

BEYOND performed various laboratory tests to determine the soil's physical properties. These tests allow us to classify soils and to assess soil performance under the project design conditions. Laboratory tests are presented in each respective *Log of Boring* and in the *Summary of Laboratory Tests* in Appendix A. The project geotechnical engineer assigned appropriate laboratory tests on selected soil samples. BEYOND performed the following laboratory methods for soil analyses:

- Standard Practice for Classification of Soils for Engineering Purposes (Unified Soil Classification System): ASTM D2487;
- Standard Test Methods for Laboratory Determination of Water (Moisture) Content of Soil and Rock by Mass: ASTM D2216;
- Standard Test Methods for Liquid Limit, Plastic Limit, and Plasticity Index of Soils: ASTM D4318;
- Standard Test Methods for Amount of Material in Soils Finer than No. 200 (75-µm) Sieve: ASTM D1140;
- Sulfate and Chlorides Content: EPA 300/300.1;

## 5.1 Geotechnical Laboratory Test Results

Moisture content tests were performed, in accordance with ASTM D2216, on selected soil samples. The test results are provided on Logs of Boring in Appendix A of the report as well as on the Summary of Laboratory Results in Appendix A of this report.

Percent finer than No. 200 (75-µm) sieve tests were performed, in accordance with ASTM D1140, on selected soil samples. The test results are provided on Logs of Boring in Appendix A of the report as well as on the Summary of Laboratory Results in Appendix A of this report.

Laboratory test results indicate that the native clay soils have liquid limit (LL) values range from non-plastic to 39% and plastic limit (PL) value ranging from non-plastic to 23%, with Plasticity Index (PI) values ranging from about non plastic to 23%. Based on FHWA-NHI-10-016 for the method of identifying potentially expansive soils as shown in Table 5.1.1, the soils at this proposed project site possess low swell potential.

***Table 5.1.1 – Method of Identifying Potentially Expansive Soils (from FHWA-NHI-10-016)***

| Liquid Limit (%) | Plasticity Index | Potential Swell (%) | Potential Swell Classification |
|---|---|---|---|
| < 50 | < 25 | < 0.5 | Low |
| 50 to 60 | 25 to 35 | 0.5 to 1.5 | Marginal |
| > 60 | > 35 | > 1.5 | High |

The Potential Vertical Rise (PVR) is the potential ability of a soil material to swell, at a given density, moisture and loading condition, when exposed to capillary or surface water. We estimate the PVR value for lightly loaded slabs-on-grade or shallow footings to be less than 1-inch, using the TxDOT method Tex-124-E.

A summary of laboratory testing results is presented in Appendix A of this report.

## 5.2 Soil Corrosiveness

BEYOND obtained the services of Xenco Laboratories to perform analytical tests to determine the content of soluble sulfate and chloride in the soils at or near foundation bearing depths. The results of soluble sulfate and chloride content are summarized in Table 5.2.1.

***Table 5.2.1 – Results of Soluble Sulfate and Chloride Content***

| Boring No. | Depth of Sample (feet) | Soluble Chlorides (mg/kg) | Soluble Sulfate (mg/kg) |
|---|---|---|---|
| B-1 | 0 | <4.95 | <4.95 |

These test results indicate non-corrosive chloride content and negligible sulfate contents. The Xenco test results are included within Appendix A.

# 6.0 FOUNDATION DESIGN AND GEOTECHNICAL RECOMMENDATIONS

BEYOND understands the proposed Citizen's Collection Station facility consists of a 40 foot by 60 foot metal building, concrete and asphalt pavement, a built-up ramp and retaining walls for roll-off drops.

Based on the site geotechnical conditions, shallow foundations may be used to support the proposed buildings. Earthwork requirements for the proposed buildings are provided under Section 7.

We recommend that BEYOND's geotechnical engineer or our qualified representative be retained to observe shallow foundation excavations in this area to assess the need for any over-excavation and re-compaction and/or replacement.

## 6.1 Shallow Foundations

We recommend that the spread footings at the site should have a minimum embedment of 2 feet below final site grade for confinement, and the strip footings should have a minimum embedment of 1.5 feet below final site grade. The footings should bear on soils placed in accordance with Section 7 of this report. We recommend a minimum width of 12 inches for strip footings and a minimum of 24 inches for spread footings.

For our engineering analyses, we utilized the strength parameters provided in Table 6.1.1. Site grading plans for the proposed project site were not available during preparation of this report. BEYOND assumes final grade of the drop area will be approximately 1 to 6 feet higher than existing site grade.

***Table 6.1.1 – Engineering Properties of Subsurface Materials for Shallow Foundation***

| Angle of Internal Friction, $\phi$' (degree) | Total Unit Weight, $\gamma$ (pcf) | Ultimate Coefficient of Friction, $\mu$ |
|---|---|---|
| 30 | 110 | 0.35 |

Table 6.1.2 provides the values for net allowable bearing pressures against general shear failure based on a factor of safety of 3 for continuous and footings that bear on soils placed in accordance with Section 7 of this report. We estimate total footing settlement should not exceed 1-inch based on the allowable bearing pressures provided in Table 6.1.2.

***Table 6.1.2 – Allowable Bearing Pressures for Shallow Foundations***

| Footing Type | Footing Width (feet) | Footing Depth (feet) | Allowable Bearing Pressure (psf) |
|---|---|---|---|
| Continuous Footing | 1.0 | 1.5 | 1,250 |
| Continuous Footing | 1.5 | 1.5 | 1,500 |
| Spread Footing | 2.0 | 2.0 | 2,500 |
| Spread Footing | 2.0 | 3.0 | 3,500 |

Proper drainage must be maintained during construction and throughout the life of the structures to provide for improved shallow foundation performance. Other design and construction recommendations as outlined in the ACI design manual should be followed.

### 6.2 Floating Floor Slab for Building

A floating slab-on-grade is structurally independent of the spread footings. This option is also viable for the proposed building. The slab-on-grade can be supported on properly prepared subgrade in accordance with Section 7.1 of this report. A properly prepared subgrade should provide a modulus of subgrade reaction, $K_1$, of about 90 psi/inch, where $K_1$ corresponds to modulus of subgrade reaction corresponds to a 1-ft x 1-ft plate.

For square footing on cohesionless soil subgrade, the subgrade modulus value may be modified for various foundation widths based upon the following equation:

$$K_s = K_1\left[\frac{B+1}{2B}\right]^2$$

Where:

$K_s$ = adjusted modulus of subgrade reaction based on actual footing width;
$K_1$ = modulus of subgrade reaction corresponds to a 1-ft x 1-ft plate;
B = footing width (in feet)

We recommend an optional crushed stone layer of four (4) inches in thickness immediately below the floor slab. The crushed stone should meet TxDOT Item 247, Grade 3. The crushed stone will provide increased support, assist in reducing differential floor settlements, and provide uniform friction across the bottom of the slab. Most importantly, the crushed stone allows truck traffic during construction without rutting. The design team may choose to avoid the crushed stone layer. With this option, we recommend using a pump to place concrete. Using a pump avoids truck traffic on the finished subgrade.

Based on our experience of similar projects, we provide the following guidelines for concrete floor slab design and construction. The concrete specifications should require a low water/cement ratio and the concrete should be placed with a relatively dry slump. Control joints should be constructed while the concrete is relatively green, before it shrinks. Spacing for control joints should be 15 to 20 feet to control shrinkage cracks.

In order to improve aesthetics by reducing shrinkage cracks and irregular surface textures, BEYOND also recommends the following: the ready-mix concrete should arrive at the target slump and the contractor should not be allowed to add water to the mixture. Water sprayed onto the slab during 'bull floating' must be minimal; otherwise, alligator cracking of the surface may develop. If vapor barriers are used, the designer should also consider adding a thin sand cushion on top of the vapor barrier. This bedding sand allows the concrete to cure evenly from top to bottom. Other design and construction recommendations as outlined in the ACI design manual should be followed.

### 6.3 Lateral Earth Pressures

Following are recommended equivalent fluid pressures for below-grade walls using native soils or imported materials as backfill. When backfilling adjacent to retaining walls, the contractor should be careful not to over-compact soils adjacent to the wall, thus inducing additional lateral stresses on the retaining walls. Proper drainage should be provided away from the walls during all phases of construction and post-construction grading. Below grade basement walls are considered as non-yielding walls due to restrained at the top to prevent sufficient movement to develop active condition. The at-rest lateral pressures are the appropriate earth pressures to use for design of basement walls. Active earth pressure may be for walls that exhibit a certain degree of horizontal movement, such as cantilevered retaining walls.

Positive drainage should be provided to prevent the buildup of hydrostatic water pressure on the walls. To prevent hydrostatic build-up, retaining walls should incorporate a wall drain for collection and removal of surface water behind the walls. A clean, granular, fee-draining materials with no more than 5% passing the No. 200 sieve is the preferred backfill for wall drains. Acceptable backfill would be crushed material with a gradation of in general conformance with ASTM C33, No. 57 or 67 aggregate. The high permeability of such material, combined with adequate drainage, such as weepholes at the bottom of the wall, prevents hydrostatic build-up. If no positive drainage is provided, hydrostatic water pressure should be considered in the design of the walls.

Backfill materials for the retaining wall should be placed and compacted to a minimum compaction of 95% of the maximum dry density as determined by ASTM D698 and moisture conditioned within +/- 2% of optimum moisture content. The loose thickness of each layer before compacting shall not exceed 8 inches. Close to retaining walls, smaller compactors should use to prevent excessive lateral pressures against the retaining walls from stress caused by heavy compactors.

***Table 6.3.1 – Equivalent Fluid Pressures for Lateral Earth Pressures***

| Soil Type | Lateral Earth Pressure Condition | Lateral Earth Pressure Coefficient | Equivalent Fluid Pressure (psf/ft) |
|---|---|---|---|
| Native or Imported Cohesionless Soils $\phi$'=31, $\gamma_t$=115 pcf | At-Rest Condition | $k_o$=0.48 | 56 |
| | Active Condition | $k_a$=0.32 | 37 |
| | Passive Condition | $k_p$=3.12 | 360 |

The values apply only to cases where the ground surface is level. BEYOND should be contacted to provide suitable values for cases where the ground surface is sloped. These earth pressure values do not include safety factors or hydrostatic pressure. Surcharge loads should also be considered.

### 6.4 Seismic Parameters

The following seismic parameters are based on the 2015 International Building Code (IBC) and a Site Class D for this project site. The Mapped Spectral Response Acceleration for the 1 second ($S_1$) and short periods ($S_S$) were computed using the U.S. Seismic Design Maps web-based application program developed by the Applied Technology Council (ATC). Table 6.4.1 summarizes recommended seismic parameters to be used in the design:

***Table 6.4.1 Recommended Seismic Parameters***

| Parameter | Calculated Value |
|---|---|
| $S_S$ – Mapped Spectral Response Acceleration at Short Period (0.2-Second) | 0.124 g |
| $S_1$ – Mapped Spectral Response Acceleration at 1-Second Period | 0.033 g |
| $F_a$ (Site Coefficient) – Site Class D | 1.6 |
| $F_v$ (Site Coefficient) – Site Class D | 2.4 |

Note: Seismic Parameters were obtained from https://hazards.atcouncil.org/#/

## 7.0 FOUNDATION CONSTRUCTION CRITERIA

In this section, we provide various specifications and construction recommendations to allow earthwork to meet the intent of the geotechnical parameters provided in Section 6. We recommend that BEYOND be retained to provide verification testing services during construction. This allows us to verify that construction of foundation items are in compliance with our recommendations.

### 7.1 Site Preparation

Prior to construction, the contractor should establish proper and positive drainage to maintain a relatively dry condition at the proposed construction site. This will be important if any work is attempted during prolonged rainfall periods. Water ponding in construction areas should be avoided.

Winter weather conditions can also impact the construction process. Newly placed fill should not be placed on frozen subgrade and frozen material should not be used for fill.

Site preparation should begin by removing surface debris, vegetation, organic topsoil, loose soil and major root systems, if any. Compact resulting subgrade and verify stability using a proof-roll test. Conduct a proof-roll tests using a loaded dump truck or loaded double-axle water truck with a minimum weight of 20 tons. Passing proof-roll tests must show less than ½-inch deflection and no area pumping. Any soft spots or areas that exhibit pumping should be excavated and re-compacted to a minimum compaction of 98% of the maximum dry density as determined by ASTM D698 and moisture conditioned within +/- 2% of optimum moisture content.

The base of each foundation excavation should be observed by the geotechnical engineer or a qualified representative prior to foundation installation.

### 7.2 Select Fill Below Foundation and Floor Slab

Select non-expansive fill material placed within foundation and floor slab areas should meet one of the following soil classifications: SC-SM, SM, SC, CL, GC or GW-GC. In addition, select fill shall possess a plasticity index, PI of less than 18 and shall not possess particle sizes greater than 3-inches. Native soils within the upper 5 feet below existing site grade may be used as select fill. Additional testing should be performed during construction to verify the suitability of native soils as select fill.

Select fill below the foundation should be placed in loose lifts not exceeding 8-inches and should be compacted to a minimum compaction of 98% of the maximum dry density as determined by ASTM D698 and moisture conditioned within +/- 2% of optimum moisture content for cohesive soils or moisture conditioned within +/- 3% of optimum moisture content for cohesionless soils. Compacted backfill density should be verified by nuclear density tests, with at least one test per 2,500 square feet for each lift under buildings and one test per 5,000 square feet in other areas.

### 7.3 Shallow Foundation Construction

The following construction criteria and general guidance should be observed during shallow foundation construction:

1. Remove loose soils from footing excavations. Do not allow loose, excavated soils from the footings to be spread out within the building pad. These loose soils will cause differential settlements.

2. Excavations for footings should be accomplished with a smooth-mouthed bucket. If a toothed bucket is used, excavation with this bucket should be terminated a few inches above final grade and the excavation completed with a smooth-mouthed bucket or by manual labor. Debris or loose material in the bottom of the excavation should be re-compacted or removed prior to placing concrete. This is especially important along footing excavations.

3. The foundation excavation should be sloped sufficiently to create internal sumps for runoff collection and removal. Foundation excavations subject to rainfall and possible deterioration from accumulated water should be protected using a protective "mud-slab" (concrete). If surface runoff water or groundwater seepage accumulates at the bottom of the foundation excavation, it should be collected and removed and not allowed to adversely affect the quality of the bearing surface.

4. The foundation excavations should be checked for size and cleaned of loose material and debris prior to the placement of reinforcing steel. Precautions should be taken during the placement of reinforcement and concrete to prevent the loose excavated material from falling into the excavation.

5. Prior to the placement of concrete, any water must be removed from the foundation excavation.

6. Prompt placement of concrete in the excavation as it is completed, cleaned, and observed is strongly recommended.

### 7.4 Open Excavations

Temporary construction slopes and/or permanent embankment slopes should be protected from surface runoff water. Site grading should be designed to allow drainage at planned areas where erosion protection is provided, instead of allowing surface water to flow down unprotected slopes. Surcharge loads, either static or dynamic, should not be applied to an excavation slope. Construction equipment should be prevented from traveling along or near the top of the excavation slope. Monitoring of temporary slopes, trenches, and dewatering during construction should be undertaken by the contractor to detect early warnings of movement within slopes, structures, pavements, etc.

In all cases of excavations in soils, sloped excavations and trench shields are required for excavations greater than four feet in depth. The contractor's "Competent Person" (as defined by OSHA) must inspect each trench to determine the type of bench or slope that is actually required. With all excavations, only a "competent person" shall determine whether sloped, benched, or trench shields can be used. OSHA and applicable state and local standards should be observed and followed. Site safety is the responsibility of the contractor.

### 7.5 Drainage

Proper drainage should be provided away from the foundation elements during all phases of construction and post-construction grading. Proper drainage is essential to the long-term stability of the structure. Ponding of water near the foundation elements from improper drainage should not be permitted. Downspouts should use splash blocks that divert water away from the foundation. Planters near buildings should be lined and should not allow saturation of soils near the foundation.

## 8.0 PAVEMENTS

The proposed pavement sections presented here are calculated based solely on engineering structural parameters. Construction cost is not included in this analysis. Daily traffic volume or 18-kips Equivalent Single-Axle Loads (ESALs) for the proposed pavement was not available during preparation of this report. We anticipate traffic will mainly consist of passenger cars, pick-up trucks and haul trucks to transport the trash receptacles. We understand the facility will utilize the pavement sections outlined in Table 8.1.1. Based on the proposed pavement sections and assumptions below we have calculated the estimated ESAL's that the pavement can support over a design life of 20 years.

### 8.1 Design Recommendations for Pavements

BEYOND calculated pavement section options in accordance with the *AASHTO Guide for Design of Pavement Structures 1993*. For pavement analysis we assumed the following parameters:

- Design life: 20 years;
- Reliability: 85% (Flexible) or 90% (Rigid);
- Overall Standard Deviation: 0.45 (Flexible) or 0.35 (Rigid);
- Initial Serviceability: 4.2 (Flexible) or 4.5 (Rigid);
- Terminal Serviceability: 2.0 (Flexible) or 2.5 (Rigid);
- Assumed CBR-value: 6.0
- Design Resilient Modulus (psi): 8,000
- Asphaltic Concrete: Layer structural coefficient of 0.44, and a drainage coefficient of 1.0; and
- Untreated Base Course: Layer structural coefficient of 0.14, and a drainage coefficient of 1.0.
- Concrete compressive strength: 3,500 psi

Table 8.1.1 presents our pavement sections based on our assumed design parameters.

***Table 8.1.1 Recommended Pavement Section***

| Option | Estimated ESAL's | Concrete Thickness (inches) | HMAC Thickness (inches) | Untreated Aggregate Base Course Thickness (inches) |
|---|---|---|---|---|
| Light Duty Asphalt | 25,000 | -- | 2.0 | 6.0 |
| Heavy Duty Asphalt | 275,000 | -- | 3.0 | 9.0 |
| Concrete Pavement | 900,000 | 8.0 | -- | 6.0 |

The concrete pavement should be designed by the Civil Engineer to have proper reinforcement. As a general guideline, a minimum of #3 reinforcing bars at 18 inches on-center-each-way (OCEW) is recommended for the proposed concrete pavement.

## 8.2 Material Specifications

The pavement should be specified, constructed, and tested to meet the following requirements:

1. *Natural Subgrade* – Remove all vegetation and construction debris. Scarify the resulting subgrade to at least 12 inches, moisture condition and compact to a minimum of 98% of the maximum density per ASTM D698 and moisture conditioned within +/- 2% of optimum moisture content for cohesive soils or moisture conditioned within +/- 3% of optimum moisture content for cohesionless soils. The compacted surface shall be proof-rolled using a loaded tandem-axle dump truck or water truck of 25 tons or heavier. Passing proof-roll tests must show less than 1-inch deflection and no area pumping. Soft spots or areas exhibiting pumping should be excavated and re-compacted. Use select fill placed in accordance with Section 7.3 to reach final target site grade.
2. *Crushed Limestone Base Material (Flexible Base)* - Crushed rock as per Texas Department of Transportation, Standard Specifications for Construction and Maintenance of Highways, Streets and Bridges (2014), Item 247, **Grade 2** or better. The material should be compacted to a minimum of **95%** of the maximum density as per **ASTM D1557**.
3. *Portland Cement Concrete* - BEYOND recommends using a TxDOT **Class P** concrete mix design, or similar.
4. *HMAC* – **Type B** Hot Mix Asphaltic Concrete surface course. This material should meet TxDOT Item 340 specifications.
5. *Prime Coat* – Texas Department of Transportation Item 310.

## 9.0 LIMITATIONS

Recommendations contained in this report are based on our field observations and subsurface explorations, limited laboratory tests, and our present knowledge of the proposed construction. It is possible that soil conditions will vary between or beyond the points explored. If soil conditions are encountered that differ from those described herein, we should be notified immediately. If the scope of the proposed design or construction changes from that described in this report, our data should also be reviewed.

We prepared this report in substantial compliance with the generally accepted geotechnical engineering practice, as it exists in the area at the time of our study. No warranty is expressed or implied. The recommendations provided in this report are based on the assumption that BEYOND will conduct an adequate program of tests and observations during the construction phase in order to evaluate compliance with our recommendations.

This report may be used only by the client, their design team, and only for the purposes stated, within three years from its issuance. Land use, site conditions (both on site and off site) or other factors may change over time, and additional work may be required with the passage of time. Any party other than the client who wishes to use this Report shall notify BEYOND of such intended use. Based on the intended use of the report, BEYOND may require that additional work

be performed and that an updated report be issued. Non-compliance with any of these requirements by the client or anyone else will release BEYOND from any liability resulting from the use of this report by any unauthorized party.

This is a geotechnical engineering report and is not intended to provide information about possible contaminated soils or the locations of any abandoned underground storage tanks. The owner should consult with an environmental specialist to determine whether this site is suitable from an environmental perspective.

Other standards or documents referenced in any given standard cited in this report, or otherwise relied upon by the authors of this report, are only mentioned in the given standard; they are not incorporated into it or "included by reference," as that latter term is used relative to contracts or other matters of law**.**

|---|---|---|
| SPT # blows/ft | SPT # blows/ft | |
| 0-6 | < 4 | Very Loose |
| 7-18 | 4-10 | Loose |
| 19-58 | 11-30 | Medium Dense |
| 59-98 | 31-50 | Dense |
| > 98 | > 50 | Very Dense |

-- TESTING SYMBOL DEFINITIONS --

N - STANDARD PENETRATION TEST RESISTANCE
P - POCKET PENETROMETER RESISTANCE
T - TXDOT CONE PENETRATION RESISTANCE
R - ROCK CORE RECOVERY
RQD - ROCK QUALITY DESIGNATION

## TYPICAL SOIL AND ROCK SYMBOLS (USCS CLASSIFICATION)

## DEGREE OF WEATHERING

1) Unweathered: No evidence of any chemical or mechanical alteration.
2) Slightly weathered: Slight discoloration on surface, slight alteration along discontinuities, less that 10% of the rock volume altered.
3) Moderately weathered: Discoloring evident, surface pitted and altered with alteration penetrating well below rock surfaces, weathering "halos" evident, 10 to 50% of the rock volume altered.
4) Highly weathered: Entire mass discolored, alteration pervading nearly all of the rock with some pockets of slightly weathered rock noticeable, some minerals leached away.
5) Decomposed: Rock reduced to a soil with relicit rock texture, generally molded and crumbled by hand.

## SOIL STRUCTURE

Calcareous..... Containing calcium carbonate
Slickensided..... The presence of planes of weakness having a slick and glossy appearance
Interbedded..... Alternating layers of varying material

Terracon Project No. A4235100

Dear Mr. Coco:

We have completed Geotechnical Engineering services for the above referenced project in general accordance with Terracon Email Quote dated May 25, 2023, and a Consulting Services Agreement between Parkhill and Terracon dated May 31, 2023. This report presents the findings of the subsurface exploration and provides geotechnical recommendations concerning earthwork and the design as well as construction of foundations, and pavements for the proposed project.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning this report or if we may be of further service, please contact us.

Sincerely,

Terracon

FOR

Kiran P. Acharya, Ph.D., P.E.
Project Engineer

Jitendra “JT” Thakur, Ph.D., P.E.
Geotechnical Department Manager

# Report Summary

| Topic [1] | Overview Statement [2] |
|---|---|
| Project Description | This project is to construct a small single-story pre-engineered metal building and a paved “Citizens Collection Station (CCS)” area for city of Midland Solid Waste department. |
| Geotechnical Characterization | Clayey gravel with sand was encountered within the upper about 2 feet of existing grades, underlain by very dense, cemented, calcareous materials, locally called “caliches”. We expect on-site subsurface materials have low potential for shrink/swell with fluctuations in moisture content. The on-site subsurface materials can generally be used as structural fill provided that the caliche materials are crushed into sizes less than 4 inches in maximum dimensions, and they meet structural fill requirements. Groundwater was not encountered during our field exploration. |
| Earthwork | Heavy duty equipment will generally be suitable for earthwork, and utility trench excavations on the project site. Controlled blasting could be required for utility trench excavations in confined areas. |
| Shallow Foundations | Shallow foundations such as spread and/or continuous strip footings can generally be used to support the building. Net allowable bearing pressure of 3,000 pounds per square foot (psf) be used for design of shallow foundations. |
| Pavements | Asphalt Pavement:<br>1.5” asphalt concrete over 8” of aggregate base course for Class I<br>2” asphalt concrete over 8” of aggregate base course for Class II<br>2.5” asphalt concrete over 10” of aggregate base course for Class III<br>Concrete Pavement:<br>5” PCC over 4” aggregate base for Category A<br>6” PCC over 4” aggregate base for Category D<br>7” PCC over 4” aggregate base for Category E |
| General Comments | This section contains important information about the limitations of this geotechnical engineering report. |

1. If the reader is reviewing this report as a pdf, the topics above can be used to access the appropriate section of the report by simply clicking on the topic itself.
2. This summary is for convenience only. It should be used in conjunction with the entire report for design purposes.

# Introduction

This report presents the results of our subsurface exploration and Geotechnical Engineering services performed for the Midland North CCS to be located about 2.5 Miles N-NW of Intersection of US Highway 349 and Occidental Parkway in Midland County, TX. The purpose of these services was to provide information and geotechnical engineering recommendations relative to:

- Subsurface soil conditions
- Groundwater conditions
- Seismic site classification per IBC
- Site preparation and earthwork
- Foundation design and construction
- Pavement design and construction

The geotechnical engineering scope of services for this project included the advancement of soil-test borings, laboratory testing, engineering analysis, and preparation of this report.

Drawings showing the site and boring locations are shown on the Site Location and Exploration Plan, respectively. The results of laboratory testing performed on soil samples obtained from the site during our field exploration are included on the boring logs in the Exploration Results section.

# Project Description

Our initial understanding of the project was provided in our proposal and was discussed during project planning. A period of collaboration has transpired since the project was initiated, and our final understanding of the project conditions is as follows:

| Item | Description |
|---|---|
| Information Provided | A project site location and a construction layout were received from Mr. R. Ashley Coco of Parkhill via an email on May 25, 2023. |
| Proposed Structures | This project includes construction of a small pre-engineered metal building on the southern end, and a paved area for trash collection at the northern portion of the site. The paved area will be a CCS for city of Midland Solid Waste department. |

| Item | Description |
|---|---|
| Foundation Types | We expect the building will be supported on shallow foundations, such as spread and/or continuous strip footings. |
| Finished Floor Elevation | Finished floor elevation is assumed to be within 2 feet of existing grades. |
| Maximum Loads (Assumed) | ■ Column loads: 50 kips<br>■ Wall loads: 1.5 kips per linear foot (klf)<br>■ Slab loads: 125 psf |
| Pavements (Assumed) | We understand that CCS area will be paved. We assume that the traffic classification for design of asphalt pavement will consist of:<br>■ Class I: Parking stalls for autos and pickup trucks [Equivalent Single Axle Loads (ESALs) = 7,000]<br>■ Class II: Traffic consisting of home delivery trucks, trash pickup (ESALs = 27,000)<br>■ Class III: Delivery lanes with up to ten 3-axle trucks per day (ESALs = 107,000)<br>The anticipated ACI traffic categories and daily truck traffic for design of concrete pavement are assumed to consist of:<br>■ Category A: Car and auto parking areas and access lanes, 10 trucks per day<br>■ Category D: Heavy-duty trucks, 1 truck per day<br>■ Category E: Fire or trash truck lanes, 1 truck per day<br>The pavement design period is 20 years. |

Terracon should be notified if any of the above information is inconsistent with the planned construction, especially the grading limits and structural loads, as modifications to our recommendations may be necessary.

## Site Conditions

The following description of site conditions is derived from our site visit in association with the field exploration and our review of publicly available geologic and topographic maps.

| Item | Description |
|---|---|
| Parcel Information | Midland North CCS site is located about 2.5 Miles N-NW of Intersection of US Highway 349 and Occidental Parkway in Midland County, TX. The coordinates of approximate center of the site are 32.1038°N, 102.0955°W. See Site Location |
| Existing Improvements | None |
| Current Ground Cover | Exposed soils, grasses, and mesquites |
| Existing Topography | Relatively flat |

We also collected photographs at the time of our field exploration program. Representative photos are provided in our Photography Log.

## Geotechnical Characterization

We have developed a general characterization of the subsurface conditions based upon our review of the subsurface exploration, laboratory data, geologic setting, and our understanding of the project. This characterization, termed GeoModel, forms the basis of our geotechnical calculations and evaluation of the site. Conditions observed at each exploration point are indicated on the individual log. The individual log can be found in the Exploration Results and the GeoModel can be found in the Figures attachment of this report.

As part of our analyses, we identified the following model layers within the subsurface profile. For a more detailed view of the model layer depths at the boring location, please refer to the GeoModel.

| Model Layer | Layer Name | General Description |
|---|---|---|
| 1 | Sand and Gravel | Clayey gravel with sand; very dense |
| 2 | Caliche | Silty clayey sand with gravel; very dense |

Excavation difficulties are generally anticipated within Model Layer 2.

Caliche is a calcium-carbonate-cemented material. Caliche has many resemblances to rock. It is difficult to excavate caliche materials.

The borings were advanced in the dry using air rotary drilling technique that allows short-term groundwater observation to be made while drilling. Groundwater seepage was not

encountered or observed in either of the borings within the maximum drilling depths of about 24 feet bgs at the time of our field exploration. Groundwater is not expected to affect shallow foundation construction at this site.

Groundwater conditions may be different at the time of construction. Groundwater conditions may change because of seasonal variations in rainfall, runoff, and other conditions not apparent at the time of drilling. The possibility of groundwater level fluctuations should be considered when developing the design and construction plans for the project. Long-term groundwater monitoring was outside the scope of services for this project.

## Seismic Site Class

The seismic design requirements for buildings and other structures are based on Seismic Design Category. Site Classification is required to determine the Seismic Design Category for a structure. The Site Classification is based on the upper 100 feet of the site profile defined by a weighted average value of either shear wave velocity, standard penetration resistance, or undrained shear strength in accordance with Section 20.4 of ASCE 7 and the International Building Code (IBC). Based on the soil/rock properties observed at the site and as described on the exploration log and results, our professional opinion is for that a Seismic Site Classification of C be considered for the project. Subsurface exploration at this site was extended to a maximum depth of about 24 feet bgs. The site properties below the boring depth to 100 feet were estimated based on our experience and knowledge of geologic conditions of the general area. Additional deeper boring or geophysical testing may be performed to confirm the conditions below the current boring depth.

## Geotechnical Overview

The area to the west of the project site is previously developed. Although no deleterious materials, such as construction debris, or organics were encountered during our field exploration or observed in the collected samples, we caution that potential existing fill that contains deleterious materials could exist on the project site in areas away from our borings. If deleterious materials are detected during construction, Terracon should be notified immediately to provide consultation. In general, deleterious materials can be replaced with structural fill.

The site appears suitable for the proposed development based upon geotechnical conditions encountered in the test borings, provided that the recommendations provided in this report are implemented in the design and construction phases of this project.

We expect on-site subsurface materials have low potential for shrink/swell with fluctuations in moisture content. Moisture-induced potential vertical movements are estimated to be less than 1 inch. The on-site soils are generally suitable for use as structural fill. Based on the conditions encountered and estimated load-settlement relationships, the proposed building can be supported on shallow spread/continuous strip footings.

According to the 2021 International Structures Code (Section 1613.3.2), IBC seismic site classification for this site is determined to be C. The recommendations contained in this report are based upon the results of field and laboratory testing (presented in the Exploration Results), engineering analyses, and our current understanding of the proposed project. The General Comments section provides an understanding of the report limitations.

# Earthwork

Earthwork will include clearing and grubbing, excavations, and fill placement. The following sections provide recommendations for use in the preparation of specifications for the work. Recommendations include critical quality criteria as necessary to render the site in the state considered in our geotechnical engineering evaluation for foundations.

## Site Preparation

Prior to placing fill, striping of existing topsoil, vegetations, and root mats should be performed in the proposed development area. The soil materials which contain less than 5 percent organics can be reused as structural fill provided the material is moisture conditioned and properly compacted.

## Subgrade Preparation

We suggest after site preparation operation is conducted; the entire site should be proofrolled. The proofrolling should be conducted with an adequately loaded vehicle such as a fully-loaded tandem-axle dump truck. The proofrolling should be performed under the observation of the Geotechnical Engineer or representative. Areas excessively deflecting under the proofrolling should be delineated and subsequently addressed by the Geotechnical Engineer. Excessively wet or dry material should either be removed, or moisture conditioned and recompacted as per Fill Placement and Compaction Requirements section.

All exposed areas which will receive fill, once properly cleared and benched where necessary, should be scarified to a minimum depth of 10 inches, and compacted per the

compaction requirements in this report. Compacted structural fill soils should then be placed to the proposed design grade and the moisture content and compaction of subgrade soils should be maintained until foundation or pavement construction.

## Excavation

Based on the conditions encountered, we believe heavy-duty equipment, such as a hoe ram, a heavy dozer equipped with a ripper, a rock saw or jack hammer or with rock trenching equipment, will generally be required for earthwork and utility-trench excavations. Controlled blasting (trench excavations) could be required for utility trench excavations in confined areas. The bottom of excavations should be thoroughly cleaned of loose soils and disturbed materials prior to backfill placement and/or construction.

The descriptions provided below are a guide to conditions generally encountered in the region of the project site. Required excavation techniques will vary based on weathering of the materials to be excavated, the fracturing, jointing and overall stratigraphy of the feature. Actual field conditions usually display a gradual weathering progression with poorly defined and uneven boundaries between layers of different materials. We recommend that the following definitions for rock in earthwork excavation be included in bid documents:

| Excavation Type | Definition |
|---|---|
| Mass Excavation | Any material occupying an original volume of more than 1 cubic yard which cannot be excavated with a single-toothed ripper drawn by a crawler tractor having a minimum draw bar pull rating of not less than 80,000 pounds usable pull (Caterpillar D-8 or larger). |
| Trench Excavation | Any material occupying an original volume of more than 1/2 cubic yard which cannot be excavated with a backhoe having a bucket curling rate of not less than 40,000 pounds, using a rock bucket and rock teeth (a John Deere 790 or larger). |

## Fill Material Types

Fill required to achieve design grade should be classified as structural fill and general fill. Structural fill is material used below, or within 10 feet of structures, pavements, or constructed slopes. General fill is material used to achieve grade outside of these areas.

Reuse of On-Site Soil: Excavated on-site soil may be re-used as fill. Material property requirements for on-site soil for use as general fill and structural fill are noted in the table below:

| Property | General Fill | Structural Fill |
|---|---|---|
| Composition | Free of deleterious material | Free of deleterious material |
| Maximum particle size | 6 inches | 4 inches |
| Fines content | Not limited | 10% to 50% Passing No. 200 sieve |
| Plasticity | Not limited | Maximum liquid limit of 35 and maximum plasticity index of 15 |
| GeoModel Layer Expected to be Suitable[1,2] | 1,2 | 1,2 |

1. Based on subsurface exploration. Actual material suitability should be determined in the field at time of construction.
2. Caliche materials should be crushed into sizes less than 4 inches in maximum dimensions and should meet structural fill requirements before they can be used as structural fill.

Imported Fill Materials: Imported fill materials should meet the following material property requirements. Regardless of its source, compacted fill should consist of approved materials that are free of organic matter and debris. Frozen material should not be used, and fill should not be placed on a frozen subgrade.

| Soil Type [1] | USCS Classification | Acceptable Parameters (for Structural Fill) |
|---|---|---|
| Low Plasticity Cohesive | CL, CL-ML | Liquid Limit less than 35<br>Plasticity index less than 15<br>25% to 50% retained on No. 200 sieve |
| Granular | GW, GP, GM, GC, SW, SP, SM, SC | 10% to 50% passing No. 200 sieve |

1. Structural and general fill should consist of approved materials free of organic matter and debris. A sample of each material type should be submitted to the Geotechnical Engineer for evaluation prior to use on this site.

## Fill Placement and Compaction Requirements

Structural and general fill should meet the following compaction requirements.

| Item | Structural Fill | General Fill |
|---|---|---|
| Maximum Lift Thickness | 8 inches or less in loose thickness when heavy, self-propelled compaction equipment is used<br>4 inches in loose thickness when hand-guided equipment (i.e., jumping jack or plate compactor) is used | Same as structural fill |
| Minimum Compaction Requirements [1,2] | At least 95% of the material's maximum dry density in all fill areas. | Same as structural fill |
| Water Content Range [1] | -2% to +2% of optimum moisture content | As required to achieve min. compaction requirements |

1. Maximum density and optimum water content as determined by the standard Proctor test (ASTM D 698).
2. If the granular material is a coarse sand or gravel, or of a uniform size, or has a low fines content, compaction comparison to relative density may be more appropriate. In this case, granular materials should be compacted to at least 70% relative density (ASTM D 4253 and D 4254).

## Utility Trench Backfill

Any soft or unsuitable materials encountered at the bottom of utility trench excavations should be removed and replaced with structural fill or bedding material in accordance with public works specifications for the utility be supported. This recommendation is particularly applicable to utility work requiring grade control and/or in areas where subsequent grade raising could cause settlement in the subgrade supporting the utility. Trench excavation should not be conducted below a downward 1:1 projection from existing foundations without engineering review of shoring requirements and geotechnical observation during construction.

Trench backfills should be mechanically placed and compacted as discussed earlier in this report. Compaction of initial lifts should be accomplished with hand-operated tampers or other lightweight compactors. Where trenches are placed beneath slabs or footings, the backfill should satisfy the gradation and plasticity index requirements of engineered fill discussed in this report. Flooding or jetting for placement and compaction of backfill is not recommended.

## Grading and Drainage

Positive drainage should be provided during construction and maintained throughout the life of the development. Infiltration of water into utility trenches or foundation excavations should be prevented during construction. Water retained next to the foundation areas can result in soil movements greater than those discussed in this report. Greater movements can result in unacceptable differential foundation movements. The roof should have gutters/drains with downspouts that discharge onto splash blocks at a distance of at least 10 feet from the building.

In areas where sidewalks or paving do not immediately adjoin structures, we recommend that protective slopes be provided with a minimum grade of approximately 5 percent for at least 10 feet from foundation areas. After foundations construction, final grades should be verified to document effective drainage has been achieved. Grades around the structures should also be periodically inspected and adjusted as necessary as part of the structures' maintenance program. Where paving or flatwork abuts the structure, a maintenance program should be established to effectively seal and maintain joints and prevent surface water infiltration.

## Earthwork Construction Considerations

Shallow excavations for the proposed structures are anticipated to be accomplished with heavy duty construction equipment. Upon completion of earthwork, care should be taken to maintain the subgrade water content prior to construction foundations. Construction traffic over the completed subgrades should be avoided. The site should also be graded to prevent ponding of surface water on the prepared subgrades or in excavations. Water collecting over or adjacent to construction areas should be removed. If the subgrade freezes, desiccates, saturates, or is disturbed, the affected material should be removed, or the materials should be scarified, moisture conditioned, and recompacted prior to foundation construction.

As a minimum, excavations should be performed in accordance with OSHA 29 CFR, Part 1926, Subpart P, "Excavations" and its appendices, and in accordance with any applicable local and/or state regulations.

Construction site safety is the sole responsibility of the contractor who controls the means, methods, and sequencing of construction operations. Under no circumstances shall the information provided herein be interpreted to mean Terracon is assuming responsibility for construction site safety or the contractor's activities; such responsibility shall neither be implied nor inferred.

Excavations or other activities resulting in ground disturbance have the potential to affect adjoining properties and structures. Our scope of services does not include review of available final grading information or consider potential temporary grading performed

by the contractor for potential effects such as ground movement beyond the project limits. A preconstruction/precondition survey should be conducted to document nearby property/infrastructure prior to any site development activity. Excavation or ground disturbance activities adjacent or near property lines should be monitored or instrumented for potential ground movements that could negatively affect adjoining property and/or structures.

### Construction Observation and Testing

The earthwork efforts should be monitored under the direction of the Geotechnical Engineer or representative. Monitoring should include documentation of adequate removal of vegetation and topsoil, proof-rolling and mitigation of areas delineated by the proof-roll to require mitigation.

Each lift of compacted fill should be tested, evaluated, and reworked as necessary until approved by the Geotechnical Engineer prior to placement of additional lifts. Each lift of fill should be tested for density and water content at a frequency of at least one test for every 2,500 square feet of compacted fill in the proposed structure areas, and at least one test for every 5,000 square feet of compacted fill in the proposed pavement construction area. One density and water content test should be conducted for every 50 linear feet of compacted utility trench backfill.

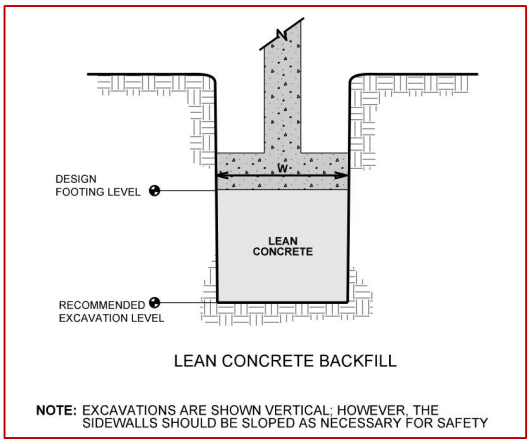
In areas of foundation excavations, the bearing subgrade should be evaluated under the direction of the Geotechnical Engineer or representative. In the event that unanticipated conditions are encountered, the Geotechnical Engineer should prescribe mitigation options.

In addition to the documentation of the essential parameters necessary for construction, the continuation of the Geotechnical Engineer into the construction phase of the project provides the continuity to maintain the Geotechnical Engineer's evaluation of subsurface conditions, including assessing variations and associated design changes.

## Shallow Foundations

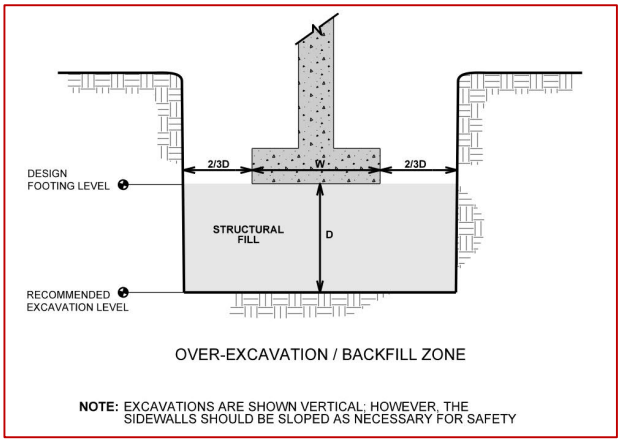
If the site has been prepared in accordance with the requirements noted in Earthwork, the following design parameters are applicable for shallow foundations.

## Design Parameters – Compressive Loads



| Item | Description |
|---|---|
| Maximum Net Allowable Bearing Pressure [1, 2] | 3,000 psf (footings) |
| Required Bearing Stratum [3] | GeoModel Layer 1 or 2 or properly compacted structural fill extending to undisturbed native soils) |
| Minimum Foundation Dimensions | 30 inches for spread footings<br>18 inches for continuous strip footings |
| Ultimate Passive Resistance[4] | 360 pcf |
| Sliding Resistance [5] | 0.35 |
| Minimum Embedment below Finished Grade [6] | 24 inches |
| Estimated Total Settlement from Structural Loads [2] | Less than 1 inch |
| Estimated Differential Settlement [2, 7] | Less than 1/2 inch |

1. The maximum net allowable bearing pressure is the pressure in excess of the minimum surrounding overburden pressure at the footing base elevation. Values assume that exterior grades are no steeper than 20% within 10 feet of structure.
2. Values provided are for the maximum loads noted in Project Description. Additional geotechnical consultation will be necessary if higher loads are anticipated.
3. Unsuitable or soft soils should be over-excavated and replaced per the recommendations presented in Earthwork.
4. Use of passive earth pressures require the sides of the excavation for the spread footing foundation to be nearly vertical and the concrete placed neat against these vertical faces or that the footing forms be removed, and compacted structural fill be placed against the vertical footing face. Assumes no hydrostatic pressure.
5. Can be used to compute sliding resistance where foundations are placed on suitable soil/materials. Frictional resistance for granular materials is dependent on the bearing pressure which may vary due to load combinations. For fine-grained materials, lateral resistance using cohesion should not exceed ½ the dead load.
6. Embedment necessary to minimize the effects of frost and/or seasonal water content variations. For sloping ground, maintain depth below the lowest adjacent exterior grade within 5 horizontal feet of the structure.
7. Differential settlements are noted for equivalent-loaded foundations and bearing elevation as measured over a span of 50 feet.



## Foundation Construction Considerations

As noted in Earthwork, the footing excavations should be evaluated under the observation of the Geotechnical Engineer. The base of all foundation excavations should be free of water and loose soil, prior to placing concrete. Concrete should be placed soon after excavating to reduce bearing soil disturbance. Care should be taken to prevent wetting or drying of the bearing materials during construction. Excessively wet or dry material or any loose/disturbed material in the bottom of the footing excavations should be removed/reconditioned before foundation concrete is placed.

If unsuitable bearing soils are observed at the base of the planned footing excavation, the excavation should be extended deeper to suitable soils, and the footings could bear directly on these soils at the lower level or on lean concrete backfill placed in the excavations. The lean concrete replacement zone is illustrated on the sketch below.

Alternatively, over-excavation for structural fill placement below footings should be conducted as shown below. The over-excavation should be backfilled up to the footing base elevation, with suitable fill placed, as recommended in the Earthwork section.

# Floor Slabs

## Floor Slab Design Parameters

Design parameters for floor slabs assume the requirements for Earthwork have been followed. Specific attention should be given to positive drainage away from the structure and positive drainage of the aggregate base beneath the floor slab.

| Item | Description |
|---|---|
| Floor Slab Support[1] | At least 12 inches of properly compacted native soils or properly compacted caliche materials (sizes less than 4 inches in maximum dimensions and meet structural fill requirement) or properly compacted structural fill as needed to achieve finished pad elevation. |
| Estimated Modulus of Subgrade Reaction[2] | 125 psi/inch for point loading conditions |

1. Floor slabs should be structurally independent of building footings or walls to reduce the possibility of floor slab cracking caused by differential movements between the slab and foundation.
2. Modulus of subgrade reaction is an estimated value based upon our experience with the subgrade condition, the requirements noted in Earthwork, and the floor slab support as noted in this table. It is provided for point loads. For large area loads the modulus of subgrade reaction would be lower.

A conventional slab-on-grade system can be used on the project site; no structural slab is necessary because on-site soils are not expansive soils. The use of a vapor retarder should be considered beneath concrete slabs on grade covered with wood, tile, carpet, or other moisture sensitive or impervious coverings, when the project includes humidity-controlled areas, or when the slab will support equipment sensitive to moisture. When conditions warrant the use of a vapor retarder, the slab designer should refer to ACI 302 and/or ACI 360 for procedures and cautions regarding the use and placement of a vapor retarder.

Saw-cut contraction joints should be placed in the slab to help control the location and extent of cracking. For additional recommendations, refer to the ACI Design Manual. Joints or cracks should be sealed with a waterproof, non-extruding compressible compound specifically recommended for heavy duty concrete pavement and wet environments.

Where floor slabs are tied to perimeter walls or turn-down slabs to meet structural or other construction objectives, our experience indicates differential movement between the walls and slabs will likely be observed in adjacent slab expansion joints or floor slab cracks beyond the length of the structural dowels. The Structural Engineer should account for potential differential settlement through use of sufficient control joints, appropriate reinforcing, or other means.

### Floor Slab Construction Considerations

Finished subgrade, within and for at least 5 feet beyond the floor slab, should be protected from traffic, rutting, or other disturbance and maintained in a relatively moist condition until floor slabs are constructed. If the subgrade should become damaged or desiccated prior to construction of floor slabs, the affected material should be removed, and structural fill should be added to replace the resulting excavation. Final conditioning of the finished subgrade should be performed immediately prior to placement of the floor slab support course.

The Geotechnical Engineer or representative should approve the condition of the floor slab subgrades immediately prior to placement of the floor slab support course, reinforcing steel, and concrete. Attention should be paid to high traffic areas that were rutted and disturbed earlier, and to areas where backfilled trenches are located.

## Pavements

### Pavement – Subgrade Preparation

The natural subgrade should be uniformly compacted to the criteria in section Fill Placement and Compaction Requirements of this report. It should then be protected and maintained in a moist condition until the pavement is placed. Pavement subgrades should be graded to prevent ponding and infiltration of excessive moisture on or adjacent to the pavement subgrade surface.

Site grading is generally accomplished early in the construction phase. However, as construction proceeds, the subgrade may be disturbed due to utility excavations, construction traffic, desiccation, or rainfall. Thus, the pavement subgrade may not be suitable for pavement construction and corrective action will be required. The subgrade should be carefully evaluated at the time of pavement construction for signs of disturbance or excessive rutting. If disturbance has occurred, pavement subgrade areas should be reworked, moisture conditioned, and properly compacted to the recommendations provided in this report immediately prior to paving.

## General Pavement Comments

Pavement designs are provided for the traffic conditions and pavement life conditions as noted in Project Description and in the following sections of this report. A critical aspect of pavement performance is site preparation. Pavement designs noted in this section must be applied to the site which has been prepared as recommended in the Earthwork section.

## Pavement Design Parameters

A California Bearing Ratio (CBR) of 4 was used for the subgrade for the asphaltic concrete (AC) pavement designs. A modulus of subgrade reaction of 125 pci was used for the portland cement concrete (PCC) pavement designs. The value was empirically derived based upon our experience with the similar subgrade soils and our expectation of the quality of the subgrade as prescribed by the Site Preparation conditions as outlined in Earthwork. A modulus of rupture of 550 psi was used in design for the concrete (based on correlations with a minimum 28-day compressive strength of 4,000 psi).

## Pavement Section Thicknesses

The following table provides our opinion of minimum thickness for Asphaltic Concrete (AC) sections:

Asphaltic Concrete Design

| Layer | Thickness (inches) | | |
|---|---|---|---|
| | Traffic Class I [1] | Traffic Class II [1] | Traffic Class III [1] |
| AC [2, 3] | 1.5 | 2 | 2.5 |
| Aggregate Base | 8 | 8 | 10 |

1. See Project Description for more specifics regarding traffic assumptions.
2. All materials should meet the Texas Department of Transportation (TXDOT) Standard Specifications for Highway Construction.
   - Asphaltic Surface – Plant mixed, hot laid Type C or D Surface, meeting the master specifications requirements of 2014 TXDOT Standard Specifications Item SS 3224 (2011) and specific criteria for the job mix formula.
   - Asphaltic Base - Crushed limestone base meeting all of the requirements of 2014 TxDOT Item 247, Type A, Grade 1-2.
3. A minimum 1.5-inch surface course should be used on AC pavements.

The following table provides our estimated minimum thickness of Portland Cement Concrete (PCC) pavements.

Portland Cement Concrete Design

| Layer | Thickness (inches) | | |
|---|---|---|---|
| | Traffic Category A [1] | Traffic Category D [1] | Traffic Category E [1] |
| PCC [2] | 5 | 6 | 7 |
| Aggregate Base | 4 | 4 | 4 |

1. See Project Description for more specifics regarding traffic classifications.
2. All materials should meet the Texas Department of Transportation (TXDOT) Standard Specifications for Highway Construction.

Areas for parking of heavy vehicles, concentrated turn areas, and start/stop maneuvers could require thicker pavement sections. Edge restraints (i.e., concrete curbs or aggregate shoulders) should be planned along curves and areas of maneuvering vehicles.

Although not required for structural support, a minimum 4-inch-thick base course layer is recommended to help reduce potential for slab curl, shrinkage cracking, and subgrade pumping through joints. Proper joint spacing will also be required to prevent excessive slab curling and shrinkage cracking. Joints should be sealed to prevent entry of foreign material and doweled where necessary for load transfer. PCC pavement details for joint spacing, joint reinforcement, and joint sealing should be prepared in accordance with ACI 330 and ACI 325.

Where practical, we recommend early-entry cutting of crack-control joints in PCC pavements. Cutting of the concrete in its “green” state typically reduces the potential for micro-cracking of the pavements prior to the crack control joints being formed, compared to cutting the joints after the concrete has fully set. Micro-cracking of pavements may lead to crack formation in locations other than the sawed joints, and/or reduction of fatigue life of the pavement.

Openings in pavements, such as decorative landscaped areas, are sources for water infiltration into surrounding pavement systems. Water can collect in the islands and migrate into the surrounding subgrade soils thereby degrading support of the pavement. Islands with raised concrete curbs, irrigated foliage, and low permeability near-surface soils are particular areas of concern. The civil design for the pavements with these conditions should include features to restrict or collect and discharge excess water from the islands. Examples of features are edge drains connected to the stormwater collection system, longitudinal subdrains, or other suitable outlets and impermeable barriers

preventing lateral migration of water such as a cutoff wall installed to a depth below the pavement structure.

## Pavement Drainage

Pavements should be sloped to provide rapid drainage of surface water. Water allowed to pond on or adjacent to the pavements could saturate the subgrade and contribute to premature pavement deterioration. In addition, the pavement subgrade should be graded to provide positive drainage within the granular base section. Appropriate sub-drainage or connection to a suitable daylight outlet should be provided to remove water from the granular subbase.

## Pavement Maintenance

The pavement sections represent minimum recommended thicknesses and, as such, periodic upkeep should be anticipated. Preventive maintenance should be planned and provided for through an on-going pavement management program. Maintenance activities are intended to slow the rate of pavement deterioration and to preserve the pavement investment. Pavement care consists of both localized (e.g., crack, and joint sealing and patching) and global maintenance (e.g., surface sealing). Additional engineering consultation is recommended to determine the type and extent of a cost-effective program. Even with periodic maintenance, some movements and related cracking may still occur, and repairs may be required.

Pavement performance is affected by its surroundings. In addition to providing preventive maintenance, the civil engineer should consider the following recommendations in the design and layout of pavements:

- Final grade adjacent to paved areas should slope down from the edges at a minimum 2%.
- Subgrade and pavement surfaces should have a minimum 2% slope to promote proper surface drainage.
- Install pavement drainage systems surrounding areas anticipated for frequent wetting.
- Install joint sealant and seal cracks immediately.
- Seal all landscaped areas in or adjacent to pavements to reduce moisture migration to subgrade soils.
- Place compacted, low permeability backfill against the exterior side of curb and gutter.
- Place curb, gutter and/or sidewalk directly on clay subgrade soils rather than on unbound granular base course materials.

# General Comments

Our analysis and opinions are based upon our understanding of the project, the geotechnical conditions in the area, and the data obtained from our site exploration. Variations will occur between exploration point locations or due to the modifying effects of construction or weather. The nature and extent of such variations may not become evident until during or after construction. Terracon should be retained as the Geotechnical Engineer, where noted in this report, to provide observation and testing services during pertinent construction phases. If variations appear, we can provide further evaluation and supplemental recommendations. If variations are noted in the absence of our observation and testing services on-site, we should be immediately notified so that we can provide evaluation and supplemental recommendations.

Our Scope of Services does not include either specifically or by implication any environmental or biological (e.g., mold, fungi, bacteria) assessment of the site or identification or prevention of pollutants, hazardous materials, or conditions. If the owner is concerned about the potential for such contamination or pollution, other studies should be undertaken.

Our services and any correspondence are intended for the sole benefit and exclusive use of our client for specific application to the project discussed and are accomplished in accordance with generally accepted geotechnical engineering practices with no third-party beneficiaries intended. Any third-party access to services or correspondence is solely for information purposes to support the services provided by Terracon to our client. Reliance upon the services and any work product is limited to our client and is not intended for third parties. Any use or reliance of the provided information by third parties is done solely at their own risk. No warranties, either express or implied, are intended or made.

Site characteristics as provided are for design purposes and not to estimate excavation cost. Any use of our report in that regard is done at the sole risk of the excavating cost estimator as there may be variations on the site that are not apparent in the data that could significantly affect excavation cost. Any parties charged with estimating excavation costs should seek their own site characterization for specific purposes to obtain the specific level of detail necessary for costing. Site safety and cost estimating including excavation support and dewatering requirements/design are the responsibility of others.

Construction and site development have the potential to affect adjacent properties. Such impacts can include damages due to vibration, modification of groundwater/surface water flow during construction, foundation movement due to undermining or subsidence from excavation, as well as noise or air quality concerns. Evaluation of these items on nearby properties are commonly associated with contractor means and methods and are not addressed in this report. The owner and contractor should consider a preconstruction/precondition survey of surrounding development. If changes in the

nature, design, or location of the project are planned, our conclusions and recommendations shall not be considered valid unless we review the changes and either verify or modify our conclusions in writing.

# Exploration and Testing Procedures

## Field Exploration

| Number of Borings | Boring Depth (feet) [1, 2] | Location |
|---|---|---|
| B-1 | 24 | Building Footprint Area |
| B-2 | 24 | Citizens Collection Station (CCS) Area |

1. Below ground surface
2. Borings were terminated at depths of about 1 foot shorter than the planned depths due to very dense caliche materials.

Boring Layout and Elevations: Terracon personnel provided the boring layout. Elevations were estimated at the boring locations using Google Earth Pro. We used handheld GPS equipment to locate borings with an estimated horizontal accuracy of +/- 20 feet. If more precise elevation and boring coordinates are desired, we recommend the borings be surveyed.

Subsurface Exploration Procedures: We advanced the borings with a truck-mounted rotary drill rig using air rotary drilling method. Five samples were obtained in the upper 10 feet of each boring and at intervals of 5 feet thereafter. In the split-barrel sampling procedure, a standard 2-inch outer diameter split-barrel sampling spoon was driven into the ground by a 140-pound automatic hammer falling a distance of 30 inches. The number of blows required to advance the sampling spoon the last 12 inches of a normal 18-inch penetration is recorded as the Standard Penetration Test (SPT) resistance value. The SPT resistance values, also referred to as N-values, are indicated on the boring logs at the test depths. For safety purposes, all borings were backfilled with auger cuttings after their completion.

We also observed the boreholes while drilling and at the completion of drilling for the presence of groundwater. Groundwater was not observed at these times in the boreholes.

The sampling depths, penetration distances, and other sampling information was recorded on the field boring logs. The samples were placed in appropriate containers and taken to our soil laboratory for testing and classification by a Geotechnical Engineer. Our exploration team prepared field boring logs as part of the drilling operations. These field logs included visual classifications of the materials observed during drilling and our interpretation of the subsurface conditions between samples. Final boring logs were prepared from the field logs. The final boring logs represent the Geotechnical Engineer's interpretation of the field logs and include modifications based on observations and tests of the samples in our laboratory.

## Laboratory Testing

The project engineer reviewed the field data and assigned laboratory tests. The laboratory testing program included the following types of tests:

- Moisture Content
- Dry Unit Weight
- Atterberg Limits

The laboratory testing program often included examination of soil samples by an engineer. Based on the results of our field and laboratory programs, we described and classified the soil samples in accordance with the Unified Soil Classification System.

## Descriptive Soil Classification

Soil classification as noted on the soil boring logs is based Unified Soil Classification System. Where sufficient laboratory data exist to classify the soils consistent with ASTM D2487 "Classification of Soils for Engineering Purposes" this procedure is used. ASTM D2488 "Description and Identification of Soils (Visual-Manual Procedure)" is also used to classify the soils, particularly where insufficient laboratory data exist to classify the soils in accordance with ASTM D2487. In addition to USCS classification, coarse grained soils are classified on the basis of their in-place relative density, and fine-grained soils are classified on the basis of their consistency. See "Strength Terms" table below for details. The ASTM standards noted above are for reference to methodology in general. In some cases, variations to methods are applied as a result of local practice or professional judgment.

## Location And Elevation Notes

Exploration point locations as shown on the Exploration Plan and as noted on the soil boring logs in the form of Latitude and Longitude are approximate. See Exploration and Testing Procedures in the report for the methods used to locate the exploration points for this project. Surface elevation data annotated with +/- indicates that no actual topographical survey was conducted to confirm the surface elevation. Instead, the surface elevation was approximately determined from topographic maps of the area.

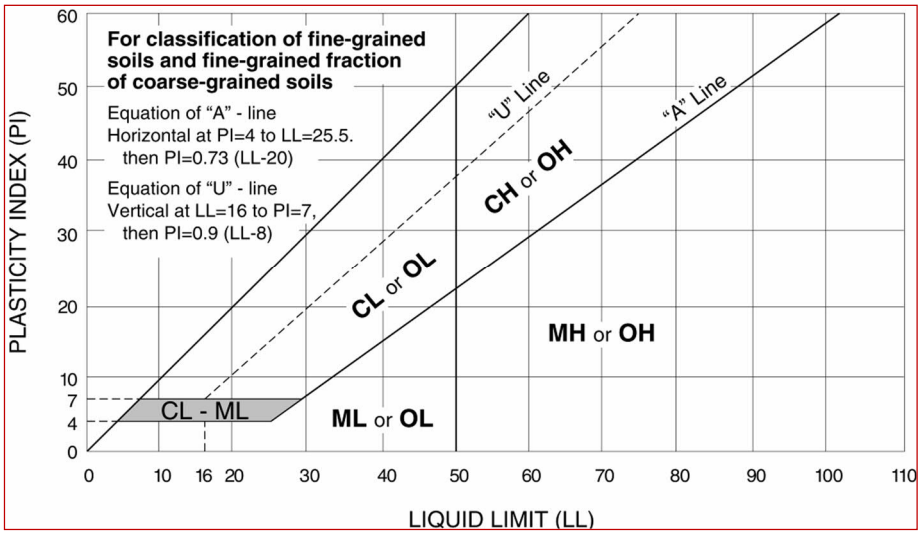
## Strength Terms

**Relative Density of Coarse-Grained Soils**
(More than 50% retained on No. 200 sieve.)
Density determined by Standard Penetration Resistance

| Relative Density | Standard Penetration or N-Value (Blows/Ft.) |
|---|---|
| Very Loose | 0 - 3 |
| Loose | 4 - 9 |
| Medium Dense | 10 - 29 |
| Dense | 30 - 50 |
| Very Dense | > 50 |

**Consistency of Fine-Grained Soils**
(50% or more passing the No. 200 sieve.)
Consistency determined by laboratory shear strength testing, field visual-manual procedures or standard penetration resistance

| Consistency | Unconfined Compressive Strength Qu (tsf) | Standard Penetration or N-Value (Blows/Ft.) |
|---|---|---|
| Very Soft | less than 0.25 | 0 - 1 |
| Soft | 0.25 to 0.50 | 2 - 4 |
| Medium Stiff | 0.50 to 1.00 | 4 - 8 |
| Stiff | 1.00 to 2.00 | 8 - 15 |
| Very Stiff | 2.00 to 4.00 | 15 - 30 |
| Hard | > 4.00 | > 30 |



## Relevance of Exploration and Laboratory Test Results

Exploration/field results and/or laboratory test data contained within this document are intended for application to the project as described in this document. Use of such exploration/field results and/or laboratory test data should not be used independently of this document.

## Unified Soil Classification System

| Criteria for Assigning Group Symbols and Group Names Using Laboratory Tests [A] | | | | Soil Classification | |
|---|---|---|---|---|---|
| | | | | Group Symbol | Group Name [B] |
| Coarse-Grained Soils: More than 50% retained on No. 4 sieve | Gravels: More than 50% of coarse fraction retained on No. 4 sieve | Clean Gravels: Less than 5% fines [C] | Cu≥4 and 1≤Cc≤3 [E] | GW | Well-graded gravel [F] |
| | | | Cu<4 and/or [Cc<1 or Cc>3.0] [E] | GP | Poorly graded gravel [F] |
| | | Gravels with Fines: More than 12% fines [C] | Fines classify as ML or MH | GM | Silty gravel [F, G, H] |
| | | | Fines classify as CL or CH | GC | Clayey gravel [F, G, H] |
| | Sands: 50% or more of coarse fraction passes No. 4 sieve | Clean Sands: Less than 5% fines [D] | Cu≥6 and 1≤Cc≤3 [E] | SW | Well-graded sand [I] |
| | | | Cu<6 and/or [Cc<1 or Cc>3.0] [E] | SP | Poorly graded sand [I] |
| | | Sands with Fines: More than 12% fines [D] | Fines classify as ML or MH | SM | Silty sand [G, H, I] |
| | | | Fines classify as CL or CH | SC | Clayey sand [G, H, I] |
| Fine-Grained Soils: 50% or more passes the No. 200 sieve | Silts and Clays: Liquid limit less than 50 | Inorganic: | PI > 7 and plots above "A" line [J] | CL | Lean clay [K, L, M] |
| | | | PI < 4 or plots below "A" line [J] | ML | Silt [K, L, M] |
| | | Organic: | $\frac{LL\ oven\ dried}{LL\ not\ dried} < 0.75$ | OL | Organic clay [K, L, M, N] |
| | | | | | Organic silt [K, L, M, O] |
| | Silts and Clays: Liquid limit 50 or more | Inorganic: | PI plots on or above "A" line | CH | Fat clay [K, L, M] |
| | | | PI plots below "A" line | MH | Elastic silt [K, L, M] |
| | | Organic: | $\frac{LL\ oven\ dried}{LL\ not\ dried} < 0.75$ | OH | Organic clay [K, L, M, P] |
| | | | | | Organic silt [K, L, M, Q] |
| Highly organic soils: | Primarily organic matter, dark in color, and organic odor | | | PT | Peat |

[A] Based on the material passing the 3-inch (75-mm) sieve.
[B] If field sample contained cobbles or boulders, or both, add "with cobbles or boulders, or both" to group name.
[C] Gravels with 5 to 12% fines require dual symbols: GW-GM well-graded gravel with silt, GW-GC well-graded gravel with clay, GP-GM poorly graded gravel with silt, GP-GC poorly graded gravel with clay.
[D] Sands with 5 to 12% fines require dual symbols: SW-SM well-graded sand with silt, SW-SC well-graded sand with clay, SP-SM poorly graded sand with silt, SP-SC poorly graded sand with clay.
[E] $Cu = D_{60}/D_{10}$ $Cc = \frac{(D_{30})^2}{D_{10} \times D_{60}}$
[F] If soil contains ≥ 15% sand, add "with sand" to group name.
[G] If fines classify as CL-ML, use dual symbol GC-GM, or SC-SM.
[H] If fines are organic, add "with organic fines" to group name.
[I] If soil contains ≥ 15% gravel, add "with gravel" to group name.
[J] If Atterberg limits plot in shaded area, soil is a CL-ML, silty clay.
[K] If soil contains 15 to 29% plus No. 200, add "with sand" or "with gravel," whichever is predominant.
[L] If soil contains ≥ 30% plus No. 200 predominantly sand, add "sandy" to group name.
[M] If soil contains ≥ 30% plus No. 200, predominantly gravel, add "gravelly" to group name.
[N] PI ≥ 4 and plots on or above "A" line.
[O] PI < 4 or plots below "A" line.
[P] PI plots on or above "A" line.
[Q] PI plots below "A" line.

**DOCUMENT 00 42 00 - PROPOSAL FORM**

Date: _____ 20___

City of Midland
300 North Loraine Street
Midland, Texas 79701

City Secretary:

The undersigned, having carefully examined the specifications, drawings, and related documents entitled:

WEST AND NORTH CITIZENS' COLLECTION STATIONS
MIDLAND, TEXAS

all as prepared by Parkhill 1700 West Wall Street, Suite 100, Midland, Texas 79701; 432.697.1447, as well as having attended a pre-proposal conference and made an on-site inspection of the premises and all other conditions affecting the cost and/or execution of the Work, proposes to furnish all materials, labor, and equipment necessary to complete the Work in accordance with said documents, of which this bid is a part, for the following sum:

**I.** ALTERNATE #1 PROPOSAL:_____

_____Dollars ($_____)

**II.** ALTERNATE #2 PROPOSAL:_____

_____Dollars ($_____)

TOTAL PROPOSAL INCLUDING BOTH ALTERNATES AS ONE PROJECT:

_____Dollars ($_____)

(**Note:** All amounts shall be shown in both written and figure form. In case of discrepancy between the written amount and the figure, the written amount will govern. For alternates, check whether it is an add, deduct or no change.)

We have included, in the Proposal sum, all applicable taxes and all material and contingency allowances described in Section 01 20 00 "Price and Payment Procedures."

The undersigned acknowledges receipt of ___addenda to the Drawings and Project Manual as follows:

| No. | Date | No. | Date | No. | Date |
|---|---|---|---|---|---|
| No. | Date | No. | Date | No. | Date |

(The Proposer is to fill in I.D. Number and date of each thereby acknowledging receipt of Addenda).
If awarded the contract, the undersigned agrees to commence work under this contract on or before

PACKET 11.732 November 14, 2023
REBID

a date to be specified in Written Notice to Proceed, and to substantially complete the project within _____ calendar days from said commencement date, unless modified in change order.

Proposer agrees to pay the Owner $500.00 per day, as liquidated damages, for each day the Substantial Completion of this Project extends beyond the stipulated Substantial Completion date.

If notified of the acceptance of this bid within 60 days of the time set for the opening of proposals, Proposer agrees within 10 days of notification, to execute a contract in the form provided by the City of Midland for the above Work, for the above stated compensation.

PROPOSAL SECURITY, as defined in the Request For Proposals and Instructions to Proposers, which the Undersigned agrees to disposition of, is attached to this Proposal.

Upon acceptance of this Proposal by Owner, Contractor shall furnish, at the time of the signing of the contract, a PERFORMANCE BOND AND LABOR/MATERIAL PAYMENT BOND, in the amount of 100 percent of the Contract Price. Surety shall meet requirements specified in the Owner/Contractor Agreement.

It is understood that the Owner reserves the right to accept or reject any and all Proposals and to waive all formalities in accordance with State law.

ATTACHMENTS

In accordance with Instructions to Proposers, complete the attached forms and submit with the Proposal Form.

Appendix A – List of Subcontractors: Include names of all subcontractors and portions of the Work each subcontractor will perform.

Appendix B – Resident Bidder Certification.

Respectfully Submitted,

By:_____

Title:_____

Business Address with Zip Code

(SEAL: If Proposal is by Corporation)

_____

_____

_____

Telephone Number with Area Code _____

Fill in the applicable information:

A Corporation, chartered in the State of _____.

Authorized to do business in the State of Texas.

A Partnership, composed of _____, and _____, and _____.

An Individual operating under the name of _____ _____.

Corporate Seal:

APPENDIX B - RESIDENT BIDDER CERTIFICATION

**RESIDENT BIDDER CERTIFICATION**

In order for the proposal to be considered, the following information must be provided. **Failure to complete may result in rejection of the proposal:**

As defined by Texas Government Code Section 2252.01 et seq., a "nonresident bidder" means a bidder whose principal place of business is not in Texas but excludes a contractor whose ultimate parent company or majority owner has its principal place of business in Texas.

I certify that my company is a "resident bidder":

Signature: _____ Date: _____

If you qualify as a "nonresident bidder," you must furnish the following information:
What is your resident state? (The state your principal place of business is located.)

City: _____ State: _____ Zip: _____

Company Name: _____ Address: _____

(A) Does your "residence state" require bidders whose principal place of business is in Texas to underbid bidders whose residence state is in the same as yours by a prescribed amount or percentage to receive a comparable contract? "Residence state" means the state in which the principal place of business is located. YES_____ NO_____

(B) What is the amount or percentage? _____%

I certify that the above information is correct.

_____

Typed Name/Position Company Name

**DOCUMENT 00 54 10 - WEATHER TABLE**
**(MIDLAND, TX)**

The number of calendar days indicated on Document 00 11 20 "Request for Proposals" is the contract time allowed to complete the project from Notice to Proceed to Substantial Completion, taking into account the normal weather occurrence as shown in the Table below. Weather occurrences exceeding those listed in the table will be taken into consideration when evaluating a request for extension in contract time.

| MONTH | MEAN NUMBER DAYS PRECIPITATION (0.01" OR MORE) | NORMAL PRECIPITATION (WATER EQUIVALENT) (INCHES) | MEAN NUMBER DAYS SNOWFALL (INCLUDING ICE PELLETS/SLEET) (1.0" OR MORE) | AVERAGE NUMBER OF DAYS THAT MIN. TEMP IS < 40 |
|---|---|---|---|---|
| JANUARY | 2.8 | 1.28 | 0 | 25.6 |
| FEBRUARY | 2.6 | 1.02 | 0.2 | 16.8 |
| MARCH | 4 | 1.95 | 0 | 4.8 |
| APRIL | 3 | 1.42 | 0 | 2 |
| MAY | 4.6 | 2.00 | 0 | 0 |
| JUNE | 5.2 | 2.01 | 0 | 0 |
| JULY | 4 | 1.47 | 0 | 0 |
| AUGUST | 5.6 | 2.06 | 0 | 0 |
| SEPTEMBER | 6.6 | 2.38 | 0 | 0 |
| OCTOBER | 3.8 | 1.58 | 0 | 3.4 |
| NOVEMBER | 2 | 0.89 | 0 | 8.6 |
| DECEMBER | 3.6 | 1.16 | 0 | 19.8 |
| ANNUALLY | 42.5 | 15.68 | 1.9 | 107.4 |

This table is based on information from NOAA and measured at the Midland International Airport, Midland, Texas.

Means, normals and averages are based on records covering a period of 5 years from 2016-2020.

## SECTION 00 80 10 – OWNER DOCUMENTS

### PART 1 - GENERAL

1.1 APPLICABLE DOCUMENT

A. Owner provided documents are as indicated below and that follows this Section.

1. Bid Bond.
2. Payment Bond.
3. Performance Bond.
4. Exhibit D- Building Wage Rate.
5. Conflict of Interest Reporting Requirements.
6. Conflict of Interest Questionnaire.
7. Affidavit of Eligibility.
8. Notice to Bidders.
9. General Conditions of Bidding.
10. Standard Purchase Terms and Conditions.
11. Contract.

# SECTION 01 10 00 - SUMMARY

## PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Work covered by Contract Documents.
   2. Contractor's use of Site and premises.
   3. Permits.
B. Related Requirements:
   1. Other Division 01 Specification Sections apply to Work of this Section.

1.2 WORK COVERED BY CONTRACT DOCUMENTS

A. Identification: West and North Citizens' Collection Stations.
B. Location: Midland, Texas.
C. Owner: City of Midland.
D. Work consists of construction of two citizen collection station facilities. Facility construction includes HMAC and concrete roadways, cast-in-place retaining wall, concrete paved parking lot, electrical services, light poles, and building construction. Building construction includes erection of prefabricated metal building, HVAC, plumbing, electrical, and interior finish.

1.3 CONTRACTOR'S USE OF SITE AND PREMISES

A. Limits on Use of Site:
   1. Owner occupancy.
   2. Work by others.
B. Construction Operations: Limited to areas noted on Drawings.
C. Time Restrictions for Performing Work:
   1. 7:00 a.m. to 7:00 p.m. Monday through Friday.
D. Utility Outages and Shutdowns:
   1. Coordinate and schedule utility outages/shutdown.
   2. Allowed only as preiously agreed upon.
   3. Schedule at least 1 week before outage/shutdown.
   4. Submit early request of outage/shutdown to Engineer itemizing dates, times, and durations.

1.4 PERMITS

A. Furnish all necessary permits for construction of Work including:
   1. Building permit.
   2. Stormwater permit.

**PART 2 - PRODUCTS (Not Used)**

**PART 3 - EXECUTION (Not Used)**

END OF SECTION

# SECTION 01 20 00 - PRICE AND PAYMENT PROCEDURES

## PART 1 - GENERAL

### 1.1 SUMMARY

A. Section Includes:
   1. Material allowances.
   2. Contingency allowance.
   3. Inspection and testing allowances.
   4. Schedule of Values.
   5. Application for Payment.
   6. Change Procedures.
   7. Alternates.

B. Related Requirements:
   1. Other Division 01 Specification Sections apply to Work of this Section.
   2. Section 01 30 00 "Administrative Requirements" for Project information management.
   3. Section 01 33 00 "Submittal Procedures" for Schedule of Values.
   4. Section 01 60 00 "Product Requirements" for product substitutions.

### 1.2 MATERIAL ALLOWANCES

A. Costs Included in Material Allowances: Cost of product (materials and equipment) to Contractor or subcontractor, less applicable trade discounts, delivery to Site, and applicable taxes.

B. Costs Not Included in Material Allowance, but Included in Contract Sum/Price: Handling at Site, including unloading, uncrating, and storage; protection of products from elements and from damage, labor, payroll (including taxes, benefits, pensions, insurance, and other employee wage costs), installation and finishing costs, bonds, project insurance (workers comp, auto, general liability, builders risk, and other insurance required by the Owner/Contractor agreement), overhead, profit, and other expenses contemplated for stated allowance amounts.

C. Engineer Responsibilities:
   1. Consult with Contractor in consideration and selection of product, suppliers.
   2. Select products in consultation with Owner and transmit decision to Contractor.
   3. Prepare Change Order.

D. Contractor Responsibilities:
   1. Assist Engineer in selection of product and suppliers.
   2. Obtain proposals from suppliers and offer recommendations.
   3. On notification of selection by Engineer, execute purchase agreement with designated supplier.
   4. Arrange for and process Shop Drawings, product data, and samples. Arrange for delivery.
   5. Promptly inspect products upon delivery for completeness, damage, and defects. Submit claims for transportation damage.

E. Funds will be drawn from Cash Allowances only by Change Order.

F. At closeout of Contract, funds remaining in Cash Allowances will be credited to Owner by Change Order.

1.3 CONTINGENCY ALLOWANCE

A. Include stipulated sum of $300,000.00 for use upon Owner's instruction.
B. Costs Included in Contingency Allowance: Contractor's costs for products, equipment, delivery, installation, labor, payroll (including taxes, benefits, pensions, insurance, and other employee wage costs), applicable taxes, and equipment rental; handling at Site, including unloading, uncrating, and storage; protection of products from elements and from damage; finishing costs.
C. Costs Not Included in Contingency Allowance, but Included in Contract Sum/Price: Bonds, project insurance (workers comp, auto, general liability, builders risk, and other insurances required by the Owner/Contractor agreement), overhead, profit, and other expenses contemplated for stated allowance amounts.
D. Funds will be drawn from Contingency Allowance only by Change Order.
E. At closeout of Contract, funds remaining in Contingency Allowance will be credited to Owner by Change Order.

1.4 INSPECTION AND TESTING ALLOWANCES

A. Costs Included in Allowances:
   1. Engaging an inspection/testing firm,
   2. Execute inspection/tests, and
   3. Report results.
B. Costs Not Included in Allowance but Included in Contract Price:
   1. Incidental labor and facilities required to assist inspection or testing firm.
   2. Costs of testing laboratory services required by Contractor separate from Contract Document requirements.
   3. Costs of retesting upon failure of previous tests as determined by Engineer.
C. Payment Procedures:
   1. Submit inspection or testing firm's invoice with next application for payment.
   2. Pay invoice upon Engineer approval.
D. Inspection and Testing Allowances: Include stipulated sum of $30,000.00 for payment of testing laboratory services.
E. Funds will be drawn from Inspection and Testing Allowances only by Change Order.
F. At Contract closeout, funds remaining in Inspection and Testing Allowances will be credited to Owner by Change Order.

1.5 SCHEDULE OF VALUES

A. Submit typed schedule on AIA Form G703 - Application and Certificate for Payment Continuation Sheet.
B. Submit Schedule of Values within 15 days after date established in Notice to Proceedor of Owner-Contractor Agreement.

C. Format: Utilize Table of Contents (TOC) of this Project Manual. Identify each line item with number and title of major Specifications , separating labor and material for each line item. Identify Site mobilization, general conditions, testing, bonds, and insurance as separate line items.
D. Include in each line item amount of Allowances specified in this Section.
E. Include separately from each line item, a directly proportional amount of Contractor's overhead and profit.

F. Revise schedule to list approved Change Orders with each Application For Payment.

1.6 APPLICATIONS FOR PAYMENT

A. Submit notarized application on AIA Form G702 - Application and Certification for payment and AIA G703 - Continuation Sheet.
B. Content and Format: Utilize Schedule of Values for listing items in Application for Payment.
C. Deposits on Material, Equipment, or Products:
   1. Material/Equipment Deposits: Owner will not pay for deposits for material, equipment or products that may be required of the Contractor in order to start the fabrication process of Work that will eventually be incorporated into the Project, but are not actually on the Project site. All material, equipment, or products must be on the Project site and properly stored before the Owner will make payment to the Contractor.
   2. The Owner will make payment for materials, equipment, or products that are properly delivered and stored on the Project site for subsequent incorporation into the Project as authorized in the Owner/Contractor Agreement.
   3. Owner may consider payment of materials, equipment, or products that are properly stored, secured, and insured in a third party warehouse within a 50 mile radius of the Project site that are in accordance with the requirements and authorized in the Owner/Contractor Agreement.
D. Payment Period: As defined in Owner-Contractor agreement.
E. Complete Application for Payment includes one copy of waiver of liens from each subconstractor, Construction progress schedule, and submittal schedule, all required to process Application for Payment.

1.7 CHANGE PROCEDURES

A. Engineer will advise of minor changes in the Work not involving adjustment to Contract Sum/Price or Contract Time as authorized by Owner/Contractor Agreement by issuing Engineer's supplemental instructions AIA Form G710.
B. Engineer may issue a Construction Change Request including a detailed description of proposed change with supplementary or revised Drawings and Specifications and a change in Contract Time for executing change. Contractor will prepare and submit proposed change in Contractor Price and/or Time within 7 days.
C. Contractor may propose changes by submitting a request for change to Engineer, describing proposed change, and its full effect on Work. Include a statement describing reason for change, effect on Contract Sum/Price and Time, and subcontractor with full documentation. Documt requested substitution in accordance with Section 01 60 00 "Product Requirements."
D. Stipulated Price Change Order: Based on Proposal Request and Contractor's fixed price quotation or Contractor's request as recommended by Engineer and accepted by Owner and Contractor.
E. Unit Price Change Order: For Contract unit prices and quantities, Change Order will be executed on a fixed unit price basis. For unit costs or quantities of units not predetermined, execute Work under Construction Change Directive as recommended by Engineer and accepted by Owner and Contractor. Changes in Contract Sum/Price or Contract Time will be computed as specified for Time and Material Change Order.

F. Construction Change Directive: Engineer may issue directive on AIA Form G713 Construction Change Directive signed by Owner, instructing Contractor to proceed with change in Work, for subsequent inclusion in Change Order. Document will describe changes in Work and designate method of determining any change in Contract Price or Time. Promptly execute change.

G. Time and Material Change Order:
   1. Submit itemized account and supporting data after completion of change, within time limits indicated in Conditions of the Contract.
   2. Engineer will determine change allowable in Contract Sum/Price and Contract Time as provided in Contract Documents.
   3. Maintain detailed records of work done on Time and Material basis.
   4. Provide full information required for evaluation of proposd changes, and to substantiate costs for changes in Work.

H. Change Order Forms: AIA G701 Change Order.

I. Execution of Change Orders: Engineer will issue Change Orders for signatures of parties as provided in Conditions of the Contract.

J. Change Order: Furnish an itemized breakdown, in form acceptable to Engineer, of costs and supporting information included, but not limited to, quantities and material prices, tier subcontracted work performed at labor rates, employer payments, and rental rates. Itemize breakdown detail shall be same for subcontractor work. Provide complete supporting information for profit and overhead or markups used when requested. Consider the following items a part of overhead or Constractor's and subcontractor's mark-up and do not include as separate cost item: Labor for superintendents, assistant superintendents, home office personnel, timekeepers, and maintenance mechanics at any level of contracting; individual pieces of equipment, hand tools, or instruments having a new value of $500.00 or less, whether or not consumed by use; on-site and main offices; modification to record Contract Documents; nor guarantee period costs.

1.8 ALTERNATES

A. Alternates quoted on Proposal Form will be reviewed or rejected by Owner. Accepted Alternates are identified in Owner/Contractor Agreement.

B. Coordinate related Work and modify surrounding Work as required.

C. Schedule of Alternates:
   1. Alternate No. 1: West Citizens' Collection Station.
   2. Alternate No. 2: North Citizens' Collection Station.

**PART 2 - PRODUCTS (Not Used)**

**PART 3 - EXECUTION (Not Used)**

END OF SECTION

# SECTION 01 25 00 - SUBSTITUTION PROCEDURES

## PART 1 - GENERAL

### 1.1 SUMMARY

A. Section includes administrative and procedural requirements for substitutions.
B. Related Requirements:
   1. Other Division 01 Specification Sections apply to Work of this Section.
   2. Section 00 26 00 "Procurement Substitution Procedures" for requirements for substitution requests prior to award of Contract.
   3. Section 01 60 00 "Product Requirements" for requirements for submitting comparable product submittals for products by listed manufacturers.

### 1.2 DEFINITIONS

A. Substitutions: Changes in products, materials, equipment, and methods of construction from those required by the Contract Documents.
   1. Substitutions for Cause: Changes proposed by Contractor that are required due to changed Project conditions, such as unavailability of product, regulatory changes, or unavailability of required warranty terms.
   2. Substitutions for Convenience: Changes proposed by Contractor or Owner that are not required to meet other Project requirements but may offer advantage to Owner.

### 1.3 ACTION SUBMITTALS

A. Substitution Requests: Submit documentation identifying product or fabrication or installation method to be replaced. Include Specification Section number and title and Drawing numbers and titles.
   1. Substitution Request Form: Use CSI Substitution Request Form 1.5C.
   2. Documentation: Show compliance with requirements for substitutions and the following, as applicable:
      a. Statement indicating why specified product or fabrication or installation method cannot be provided, if applicable.
      b. Coordination of information, including a list of changes or revisions needed to other parts of the Work and to construction performed by Owner and separate contractors that will be necessary to accommodate proposed substitution.
      c. Detailed comparison of significant qualities of proposed substitutions with those of the Work specified. Include annotated copy of applicable Specification Section. Significant qualities may include attributes, such as performance, weight, size, durability, visual effect, sustainable design characteristics, warranties, and specific features and requirements indicated. Indicate deviations, if any, from the Work specified.
      d. Product Data, including drawings and descriptions of products and fabrication and installation procedures.
      e. Samples, where applicable or requested.
      f. Certificates and qualification data, where applicable or requested.
      g. List of similar installations for completed projects, with project names and addresses as well as names and addresses of architects and owners.

h. Material test reports from a qualified testing agency, indicating and interpreting test results for compliance with requirements indicated.
i. Research reports evidencing compliance with building code in effect for Project, from ICC-ES.
j. Detailed comparison of Contractor's construction schedule using proposed substitutions with products specified for the Work, including effect on the overall Contract Time. If specified product or method of construction cannot be provided within the Contract Time, include letter from manufacturer, on manufacturer's letterhead, stating date of receipt of purchase order, lack of availability, or delays in delivery.
k. Cost information, including a proposal of change, if any, in the Contract Sum.
l. Contractor's certification that proposed substitution complies with requirements in the Contract Documents, except as indicated in substitution request, is compatible with related materials and is appropriate for applications indicated.
m. Contractor's waiver of rights to additional payment or time that may subsequently become necessary because of failure of proposed substitution to produce indicated results.

3. Architect's Action: If necessary, Architect will request additional information or documentation for evaluation within 7 days of receipt of a request for substitution. Architect will notify Contractor through Construction Manager of acceptance or rejection of proposed substitution within 15 days of receipt of request, or 7 days of receipt of additional information or documentation, whichever is later.
a. Forms of Acceptance: Change Order, Construction Change Directive, or Architect's Supplemental Instructions for minor changes in the Work.
b. Use product specified if Architect does not issue a decision on use of a proposed substitution within time allocated.

1.4 QUALITY ASSURANCE

A. Compatibility of Substitutions: Investigate and document compatibility of proposed substitution with related products and materials. Engage a qualified testing agency to perform compatibility tests recommended by manufacturers.

1.5 PROCEDURES

A. Coordination: Revise or adjust affected Work as necessary to integrate work of the approved substitutions.

1.6 SUBSTITUTIONS

A. Substitutions for Cause: Submit requests for substitution immediately on discovery of need for change, but not later than 15 days prior to time required for preparation and review of related submittals.
1. Conditions: Architect will consider Contractor's request for substitution when the following conditions are satisfied. If the following conditions are not satisfied, Architect will return requests without action, except to record noncompliance with these requirements:
a. Requested substitution is consistent with the Contract Documents and will produce indicated results.
b. Substitution request is fully documented and properly submitted.

c. Requested substitution will not adversely affect Contractor's construction schedule.
d. Requested substitution has received necessary approvals of authorities having jurisdiction.
e. Requested substitution is compatible with other portions of the Work.
f. Requested substitution has been coordinated with other portions of the Work.
g. Requested substitution provides specified warranty.
h. If requested substitution involves more than 1 contractor, requested substitution has been coordinated with other portions of the Work, is uniform and consistent, is compatible with other products, and is acceptable to all contractors involved.

B. Substitutions for Convenience: Architect will consider requests for substitution if received within 60 days after the Notice to Proceed. Requests received after that time may be considered or rejected at discretion of Architect.
1. Conditions: Architect will consider Contractor's request for substitution when the following conditions are satisfied. If the following conditions are not satisfied, Architect will return requests without action, except to record noncompliance with these requirements:
a. Requested substitution offers Owner a substantial advantage in cost, time, energy conservation, or other considerations, after deducting additional responsibilities Owner must assume. Owner's additional responsibilities may include compensation to Architect for redesign and evaluation services, increased cost of other construction by Owner, and similar considerations.
b. Requested substitution does not require extensive revisions to the Contract Documents.
c. Requested substitution is consistent with the Contract Documents and will produce indicated results.
d. Substitution request is fully documented and properly submitted.
e. Requested substitution will not adversely affect Contractor's construction schedule.
f. Requested substitution has received necessary approvals of authorities having jurisdiction.
g. Requested substitution is compatible with other portions of the Work.
h. Requested substitution has been coordinated with other portions of the Work.
i. Requested substitution provides specified warranty.
j. If requested substitution involves more than one contractor, requested substitution has been coordinated with other portions of the Work, is uniform and consistent, is compatible with other products, and is acceptable to all contractors involved.

**PART 2 - PRODUCTS (Not Used)**

**PART 3 - EXECUTION (Not Used)**

END OF SECTION

# SECTION 01 30 00 - ADMINISTRATIVE REQUIREMENTS

## PART 1 - GENERAL

### 1.1 SUMMARY

A. Section Includes:
   1. Project Information Management.
   2. Coordination.
   3. Preconstruction meeting.
   4. Electronic drawing file (digital data) request.
   5. Request for information.
   6. Progress meetings.
   7. Preinstallation meetings.

B. Related Requirements:
   1. Other Division 01 Specification Sections apply to Work of this Section.

### 1.2 PROJECT INFORMATION MANAGEMENT

A. Project Website:
   1. Use Newforma Info Exchange at https://projects.team-psc.com/UserWeb/Login to send and receive Project information.
   2. Contact Engineer to set up user name and password information.
   3. If Project is not listed when logged in, contact Engineer to add Project to your account.

B. Project information includes, but is not limited to:
   1. Product Submittals.
   2. Requests for Information (RFI).
   3. Applications for Payment.
   4. Schedules.
   5. Construction Change Requests (CCRs).
   6. Closeout Documents.
   7. Construction Document Files.

### 1.3 COORDINATION

A. Coordinate scheduling, submittals, and Work to assure efficient and orderly sequence of installation of construction elements.

B. Verify utility requirements and characteristics of operating equipment are compatible with building utilities. Coordinate work of various Sections having interdependent responsibilities for installing, connecting to, and placing such equipment in service.

C. Coordinate space requirements and installation of mechanical and electrical work indicated diagrammatically on Drawings. Follow routing as closely as practicable. Utilize spaces efficiently to maximize accessibility for other installations, maintenance, and repairs.

D. In finished building areas, except as otherwise indicated, conceal pipes, ducts, and wiring within construction. Coordinate locations of fixtures and outlets with finish elements as applicable.

E. Coordinate completion and clean-up of Work of separate Sections in preparation for Substantial Completion.
F. After Owner occupancy of premises, coordinate access to site with Owner for correction of defective Work and Work not in accordance with Contract Documents to minimize disruption of Owner's activities.

1.4 PRECONSTRUCTION MEETING

A. Engineer will schedule a meeting after Notice to Proceed.
B. Attendance Required:
   1. Owner.
   2. Engineer.
   3. Contractor.
   4. Major subcontractors.
C. Agenda:
   1. Distribute Contract Documents.
   2. Submit lists of subcontractors and products, Schedule of Values, submittal schedule, and progress schedule.
   3. Designate personnel representing each party in Contract and Engineer.
   4. Procedures and processing field decisions, submittals, substitutions, Applications for Payments, proposal request, Change Orders, Request for Information (RFI), and Contract closeout procedures.
   5. Review Notice to Proceed and Substantial/Final Completion Dates.
   6. Workmen's identification and background checks.
   7. Stormwater Pollution and Prevention Plan (SWPPP) if necessary.
   8. Scheduling:
      a. Use of premises by Owner and Contractor.
      b. Owner's requirements.
      c. Construction facilities and controls provided by Owner.
      d. Temporary utilities provided by Owner.
      e. Security and housekeeping procedures.
      f. Construction progress meetings.
      g. Procedures for testing.
      h. Procedures for maintaining record documents.
      i. Requirements for start-up of equipment.
      j. Inspection and acceptance of equipment put into service during construction.
   9. Scheduling activities of Construction Material Testing lab.
D. Engineer shall record minutes and distribute copies to participants.

1.5 ELECTRONIC DRAWING FILE (DIGITAL DATA) REQUEST

A. During Procurement Phase:
   1. Bidders and Proposers may purchase a Digital Data file. Digital Data file will be provided in software release currently used by Engineer. File will be provided via Engineer’s Project website.
   2. AutoCAD Drawing files (.dwg) are available for purchase from Engineer upon request. Cost of files are indicated below plus applicable tax.
      a. 1 – 3 Sheets: $100.00 per sheet.
      b. 4 – 6 Sheets: $400.00 flat fee.
      c. 7 – 9 Sheets: $500.00 flat fee.

3. Revit® BIM Model files (.rvt) are available for purchase from Engineer upon request. Cost of model files are $150.00 for each model plus applicable tax. All details, detail annotation, and reference are omitted and not part of the Model file.
4. Prior to delivery of file(s), purchaser shall sign a Digital Data Licensing Agreement. Payment for Digital Data file(s) shall occur upon delivery of file to purchaser.
5. Digital Data file(s) shall be used only for preparing Bids and Proposals required by this Project not used in any other form in whole or in part.

B. Upon Award of Contract:
1. At pre-construction meeting, Contractor shall bring the executed Digital Data Licensing Agreement (AIA C106-2013) at the end of this Section for release of electronic files. Upon Contractor submitting the executed Agreement to Engineer, Engineer will provide Contractor one electronic copy of the Revit® BIM Model file(s), AutoCAD (.dwg file(s), when Revit® BIM Model file is not available, and Portable Document Format (.pdf) file(s) at no charge within five working days. Note that CAD files associated with the Work can be accessed and exported from the Revit® BIM Model provided to Contractor through Revit® software; therefore, Engineer will not provide individual CAD files. Files and Formats to be as followed:
    a. Civil Overall master file in AutoCAD format.
        1) Overall Site Plan with utility and grading information.
        2) All details, detail annotation, and references are omitted and not part of the AutoCAD file.
    b. Landscape: Overall master file in AutoCAD format.
        1) Overall Site Plan with grading, flatwork, irrigation, and planting plans.
        2) All details, detail annotation, and references are omitted and not part of the AutoCAD file.
    c. Structural: Revit® BIM Model and associated working plans views.
        1) Overall Site Plan with utility and grading information.
        2) All details, detail annotation, and reference are omitted and not part of the AutoCAD file.
    d. Architectural/Interior: Revit® BIM Model and associated working plan views.
        1) Plan views contain overall and enlarged section plan view set-up of floor plans, floor patterns, reflected ceilings, and roof plans only. All plan views contain grids, dimensions, room names, and general annotation.
        2) Reflected Ceiling Plans contain ceilings grids and types only. Lighting and mechanical are provided as part of the MEP Model.
        3) Roof Plans contain grids and general annotation only. Mechanical is provided as part of the MEP Model.
        4) Interior and exterior elevations and schedules.
        5) Finish plans and finish schedules.
        6) All details, details annotation, and references are omitted and not part of the model life.
    e. Mechanical, Electrical, and Plumbing: Revit® BIM Model and associated working plan views.
        1) Plan views contain overall and enlarged plan section view set-up of mechanical, electrical lighting, electrical power, and plumbing plans only.
        2) All details, detail annotation, and references are omitted and not part of the model file.
    f. Other Disciplines: Revit® BIM Model and associated working plan views.

1) Plan views contain overall and enlarged plan section view set-up showing all device locations and general annotation.
2) All details, detail annotation and references are omitted and not part of the model file
3) The Revit All details, detail annotation, and references are omitted and not part of the model file.

2. Revit® BIM Model file provided to Contractor is NOT FOR CONSTRUCTION PURPOSES, but convenience only. This BIM Model will consist of the original model utilized for base bid. It is Contractor responsibility to coordinate all accepted alternated, addenda, RFI, Proposal Request, and any other changes realized during procurement and construction phases. Engineer will not provide up-to-date Contract Documents or update BIM Models to Contractor unless otherwise stated within the Owner/Engineer Agreement.
3. Conformed Construction Documents: If required by Owner/Engineer Agreement, they will be provided in PDF. Conformed Construction Documents are Drawings and Specifications modified to include any Addenda issued before execution of the Contract.
   a. To the extent Conformed Construction Documents are provided to Contractor, the following provisions shall apply:
      1) Conformed Construction Documents, and related information contained therein, are provided for Contractor's convenience only and does not relieve Contractor from Contract Document requirements. Specifically, to the extent that any discrepancy or conflict exist between Issue for Bid documents, including any Addenda issued prior to execution of Contact or Modifications issued after execution of Contact on the one hand, and Conformed Construction Documents on the other; Issue for Bid documents Addenda, and Modifications shall control unless otherwise specified in writing by Engineer.
      2) Contractor shall not use such Drawings, documents, or other data, in whole or in part, for any purpose or project other than this Project, in preparation of Shop Drawings and other submittals.
      3) Contractor acknowledges that such Drawings, documents, or other data obtained prior to use by them for any purpose.
      4) Any Conformed Construction Documents, including any Drawings Specifications, documents, or other data related thereto, are provided "as is" without representation or warranty by Engineer, either expressed or implied.
      5) Contractor acknowledges that Conformed Construction Documents provide by Engineer are as courtesy to Contractor at their specific request, and accordingly, CONTRACTOR HEREBY AGREES TO RELEASE, HOLD HARMLESS, DEFEND, AND INDEMNIFY ENGINEER AND OWNER FROM ANY AND ALL CLAIMS, DEMANDS, OR CAUSES OF ACTION, WHICH CONTRACTOR OR ANY THIRD PARTY MAY HAVE BY REASON OF ANY INJURY OR DAMAGE SUSTAINED BY CONTRACTOR OR THIRD PARTY ARISING OUT OF OR IN ANY WAY RELATED TO THE USE OF SUCH CONFORMED CONSTRUCTION DOCUMENTS.

1.6 REQUEST FOR INFORMATION (RFI)

A. RFI requests from subcontractors or material suppliers will not be considered.
B. Information indicated on RFI shall be complete before submission. If Engineer determines request can be answered with information provided, Engineer will assign RFI tracking number. If Engineer determines request is not an RFI, request will be returned to Contractor electronically and deleted from Engineer's electronic tracking software without assigning an RFI tracking number. A transmittal document returning denied RFI request will be provided with a response indicating action to be taken by Contractor.
C. RFIs may contain more than 1 item when items are related. Otherwise, only 1 item shall be addressed on each RFI request.
D. Allow 7 days for Engineer's response to each RFI.
E. Response to RFI will be issued to Contractor and Owner per Section 01 33 00 "Submittal Procedures."
F. Responses from Engineer are not changes unless issued with a change per Section 01 20 00 "Price and Payment Procedures."

1.7 PROGRESS MEETINGS

A. Schedule and administer monthly meetings throughout Work progress at minimum.
B. Engineer will arrange meetings, prepare agenda with copies for participants, preside at meetings.
C. Attendance Required:
    1. Owner.
    2. Job superintendent.
    3. Major subcontractors.
    4. Suppliers.
    5. Engineer.
    6. As appropriate to agenda topics for each meeting.
D. Agenda:
    1. Review minutes of previous meetings.
    2. Review Work progress.
    3. Field observations, problems, and decisions.
    4. Identify problems which impede planned progress.
    5. Review submittal schedule and status of submittals.
    6. Review off-site fabrication and delivery schedules.
    7. Maintenance of progress schedule.
    8. Corrective measures to regain projected schedules.
    9. Planned progress during succeeding Work period.
    10. Coordinate projected progress.
    11. Maintenance of quality and work standards.
    12. Effect of proposed changes on progress schedule and coordination.
    13. Testing.
    14. Other business relating to Work.
E. Record minutes and distribute copies within 5 days to Engineer, participants, and those affected by decisions made.

1.8 PREINSTALLATION MEETING

A. When required in individual Specifications, convene a preinstallation meeting at site before installing Work.
B. Require attendance of parties directly affecting, or affected by, Work.
C. Notify Engineer 14 days in advance of meeting date.
D. Prepare agenda and preside at meeting.
   1. Review conditions of installation, preparation, and installation procedures.
   2. Review coordination with related work.
E. Record minutes and distribute copies within 5 days after meeting to participants and copy Engineer.

**PART 3 - EXECUTION (Not Used)**

END OF SECTION

# AIA® Document C106™ – 2013

## *Digital Data Licensing Agreement*

**AGREEMENT** made as of the day of in the year
*(In words, indicate day, month and year.)*

**BETWEEN** the Party transmitting Digital Data ("Transmitting Party"):
*(Name, address and contact information, including electronic addresses)*

Parkhill.

and the Party receiving the Digital Data ("Receiving Party"):
*(Name, address and contact information, including electronic addresses)*

for the following Project:
*(Name and location or address)*

The Transmitting Party and Receiving Party agree as follows.

**TABLE OF ARTICLES**

1 GENERAL PROVISIONS

2 TRANSMISSION OF DIGITAL DATA

3 LICENSE CONDITIONS

4 LICENSING FEE OR OTHER COMPENSATION

5 DIGITAL DATA

**ARTICLE 1 GENERAL PROVISIONS**

**§ 1.1** The purpose of this Agreement is to grant a license from the Transmitting Party to the Receiving Party for the Receiving Party's use of Digital Data on the Project, and to set forth the license terms.

**§ 1.2** This Agreement is the entire and integrated agreement between the parties. Except as specifically set forth herein, this Agreement does not create any other contractual relationship between the parties.

**ADDITIONS AND DELETIONS:**
The author of this document has added information needed for its completion. The author may also have revised the text of the original AIA standard form. An *Additions and Deletions Report* that notes added information as well as revisions to the standard form text is available from the author and should be reviewed. A vertical line in the left margin of this document indicates where the author has added necessary information and where the author has added to or deleted from the original AIA text.

This document has important legal consequences. Consultation with an attorney is encouraged with respect to its completion or modification.

**User Notes:** (862876232)

**§ 1.3** For purposes of this Agreement, the term Digital Data is defined to include only those items identified in Article 5 below.

**§ 1.3.1** Confidential Digital Data is defined as Digital Data containing confidential or business proprietary information that the Transmitting Party designates and clearly marks as "confidential."

## ARTICLE 2 TRANSMISSION OF DIGITAL DATA

**§ 2.1** The Transmitting Party grants to the Receiving Party a nonexclusive limited license to use the Digital Data identified in Article 5 solely and exclusively to perform services for, or construction of, the Project in accordance with the terms and conditions set forth in this Agreement.

**§ 2.2** The transmission of Digital Data constitutes a warranty by the Transmitting Party to the Receiving Party that the Transmitting Party is the copyright owner of the Digital Data, or otherwise has permission to transmit the Digital Data to the Receiving Party for its use on the Project in accordance with the terms and conditions of this Agreement.

**§ 2.3** If the Transmitting Party transmits Confidential Digital Data, the transmission of such Confidential Digital Data constitutes a warranty to the Receiving Party that the Transmitting Party is authorized to transmit the Confidential Digital Data. If the Receiving Party receives Confidential Digital Data, the Receiving Party shall keep the Confidential Digital Data strictly confidential and shall not disclose it to any other person or entity except as set forth in Section 2.3.1.

**§ 2.3.1** The Receiving Party may disclose the Confidential Digital Data as required by law or court order, including a subpoena or other form of compulsory legal process issued by a court or governmental entity. The Receiving Party may also disclose the Confidential Digital Data to its employees, consultants or contractors in order to perform services or work solely and exclusively for the Project, provided those employees, consultants and contractors are subject to the restrictions on the disclosure and use of Confidential Digital Data as set forth in this Agreement.

**§ 2.4** The Transmitting Party retains its rights in the Digital Data. By transmitting the Digital Data, the Transmitting Party does not grant to the Receiving Party an assignment of those rights; nor does the Transmitting Party convey to the Receiving Party any right in the software used to generate the Digital Data.

**§ 2.5** To the fullest extent permitted by law, the Receiving Party shall indemnify and defend the Transmitting Party from and against all claims arising from or related to the Receiving Party's modification to, or unlicensed use of, the Digital Data.

## ARTICLE 3 LICENSE CONDITIONS

The parties agree to the following conditions on the limited license granted in Section 2.1:
*(State below rights or restrictions applicable to the Receiving Party's use of the Digital Data, requirements for data format, transmission method or other conditions on data to be transmitted.)*

This Digital Data is part of the Transmitting Party's Instruments of Service and shall not be used by Receiving Party or anyone else receiving this data through or from the Receiving Party for any purpose other than as a convenience in the preparation of bid submittals, shop drawings, coordination drawings, construction phase submittals, and field layout and staking required by the Owner for the exclusive use of the referenced Project. Any use or reuse by the Receiving Party or by others will be at the Receiving Party's sole risk and without liability or legal exposure to Transmitting Party. The Receiving Party agrees to make no claim and hereby waive, to the fullest extent permitted by law, any claim or cause of action of any nature against Transmitting Party, its officers, directors, employees, or subconsultants that may arise out of or in connection with Receiving Party's use of this Digital Data.
Receiving party or any third party, to the fullest extent permitted by law, shall indemnify and hold harmless the Transmitting Party against all damages, liabilities or costs, including reasonable attorney's fees and defense costs arising out of or resulting from Receiving Party or any third parties use of this Digital Data.

No representation as to the compatibility of this Digital Data with Receiving Party's hardware or software is provided.

This Digital Data is not a Construction Document. Differences may exist between this Digital Data and corresponding two-dimensional hard-copy Construction Document. The Transmitting Party makes no representation regarding the

This document was produced by AIA software at 10:39:56 ET on 06/31/2021 under Order No.7734716058 which expires on 11/18/2021, is not for resale, is licensed for one-time use only, and may only be used in accordance with the AIA Contract Documents® Terms of Service. To report copyright violations, e-mail copyright@aia.org.
**User Notes:** (862876232)

accuracy or completeness of the Digital Data the Receiving Party receives. In the event that a conflict arises between the signed/sealed two-dimensional hard-copy Construction Document prepared by Transmitting Party and the Digital Data, the signed/sealed two-dimensional hard-copy Construction Document shall govern. The Receiving Party is responsible for determining if any conflict exists. By the Receiving Party's use of this Digital Data, Receiving Party is not relieved of their duty to fully comply with the Contract Documents, including, and without limitation, the need to check, confirm and coordinate all dimensions and details, field measurements, verify field conditions and coordination of work with that of other contractors for the Project.

Because information presented in the Digital Data can be modified, unintentionally or otherwise, the Transmitting Party reserves the right to remove all indicia of ownership and/or involvement from each Digital Data.

Under no circumstances shall delivery of this Digital Data for use by the Receiving Party be deemed a sale of document ownership by Transmitting Party, and no warranties, either express or implied, of merchantability or fitness for any particular purpose is made. In no event shall the Transmitting Party be liable for any loss of profit or any consequential damages as a result of the Receiving Party's use or reuse of this Digital Data.

The Digital Data file does not necessarily contain all the information that is required to produce finished Construction Documents. Because of this, there may be data within the Digital Data that is missing, incomplete or even contradictory to the information provided in the final two dimensional Construction Documents.

Professional judgment will need to be used by the Receiving Party, along with reasonable expectations and interpretations in order to use the Digital Data for its intended purpose. Should the Transmitting Party provide revised and updated copies of the Digital Data to the Receiving Party throughout the Project, all terms and conditions of this agreement will be applicable and unchanged for all subsequent transmissions of the Digital Data.

## ARTICLE 4 LICENSING FEE OR OTHER COMPENSATION

The Receiving Party agrees to pay the Transmitting Party the following fee for the Receiving Party's use of the Digital Data:
*(State the fee, in dollars, or other method by which the Receiving Party will compensate the Transmitting Party for the Receiving Party's use of the Digital Data.)*

DURING PROCUREMENT PHASE

**.dwg Files**
1-3 Sheets $125.00 per sheet plus applicable tax
4-6 Sheets $500.00 flat fee plus applicable tax
7-9 Sheets $700 flat fee plus applicable tax

**.rvt Files**
Revit Models are $300.00 per model plus applicable tax

UPON AWARD OF CONTRACT:
No service fee will be required for delivery of the electronic file(s).

## ARTICLE 5 DIGITAL DATA

The Parties agree that the following items constitute the Digital Data subject to the license granted in Section 2.1:
*(Identify below, in detail, the information created or stored in digital form the parties intend to be subject to this Agreement.)*

[Revit Models (.rvt files)]
[AutoCAD (.dwg files)]
[Portable Document Format (.pdf)]

# SECTION 01 32 16 - CONSTRUCTION PROGRESS SCHEDULE

## PART 1 - GENERAL

### 1.1 SUMMARY

A. Section Includes:
   1. Submittals.
   2. Bar Gantt chart schedules.
   3. Review and evaluation.
   4. Updating schedules.
   5. Distribution.

B. Related Sections:
   1. Other Division 01 Specification Sections apply to Work of this Section.

### 1.2 SUBMITTALS

A. Post as electronic file to Project website.

B. Submit initial progress schedule for Engineer review within 15 days after established Notice to Proceed date.

C. Schedule Updates:
   1. Submit with each Application for Payment.
   2. Projected and actual percent of completion.
   3. Completion progress by listed activity and subactivity to within 5 working days prior to submittal.
   4. Changes in Work scope and activities modified since submittal.
   5. Delays in submittals or resubmittals, deliveries, or Work.
   6. Revised projections of progress and completion.

D. Narrative Progress Report:
   1. Submit with each Application for Payment.
   2. Summary of Work completed during past period between reports.
   3. Work planned during next period.
   4. Explanation of differences between summary of Work completed and Work planned in previously-submitted report.
   5. Current and anticipated delaying factors and estimated impact on other activities and completion milestones.
   6. Corrective action taken or proposed.

### 1.3 BAR GANTT CHART SCHEDULES

A. Format Bar Gantt chart Schedule to include at least:
   1. Identification and listing, in chronological order, activities reasonably required to complete Work including:
      a. Subcontract Work.
      b. Major equipment design, fabrication, factory testing, and delivery dates including required lead times.
      c. Move-in and other preliminary activities.

d. Equipment and equipment system test and startup activities.
e. Project closeout and cleanup.
f. Work sequences, constraints, and milestones.

2. Listings identified by Specification Section number.
3. Identification of:
   a. Horizontal time frame by year, month, and week.
   b. Duration, early start, and completion for each activity and subactivity.
   c. Critical activities and Project float.
   d. Sub-schedules to further define critical portions of Work.

1.4 REVIEW AND EVALUATION

A. Participate in joint review and evaluation of schedules with Engineer at each Progress Meeting or Application for Payment submittals.
B. Evaluate Project status to determine Work behind and ahead of schedule.
C. After review, revise schedules incorporating results of review and resubmit within 10 days.

1.5 UPDATING SCHEDULES

A. Maintain schedules to record actual start and finish dates of completed activities.
B. Indicate progress of each activity to date of revision with projected completion date of each activity. Update schedules to depict current status of Work.
C. Identify activities modified since previous submittal, major changes in Work, and other identifiable changes.
D. Upon approval of Change Order, include change in next schedule submittal.
E. Indicate changes required to maintain Date of Substantial Completion.
F. Prepare narrative report to define problem areas, anticipated delays, and impact on schedule. Report corrective action taken or proposed and effect.

1.6 DISTRIBUTION

A. Following joint review, distribute copies to subcontractors, suppliers, Engineer, Owner, and other concerned parties.
B. Instruct recipients to promptly report, in writing, problems anticipated by projections shown in schedules.

**PART 2 - PRODUCTS (Not Used)**

**PART 3 - EXECUTION (Not Used)**

END OF SECTION

# SECTION 01 33 00 - SUBMITTAL PROCEDURES

## PART 1 - GENERAL

### 1.1 SUMMARY

A. Section Includes:
   1. Submittal procedures.
   2. Resubmittal requirements.
   3. Proposed products list.
   4. Requirements for complete shop drawings.
   5. Product data.
   6. Samples.
   7. Test reports.
   8. Certificates.
   9. Manufacturer instructions.
   10. Manufacturer field reports.

B. Related Requirements:
   1. Other Division 01 Specification Sections apply to Work of this Section.

### 1.2 SUBMITTAL PROCEDURES

A. Submit to Engineer for review to check for conformance with information given and design concept expressed in Contract Documents.

B. Produce copies and distribute in accordance with this Article.

C. Use Project website to submit record documents as described in Section 01 70 00 "Execution and Closeout Requirements."

D. Transmit each submittal separately with Contractor's standard transmittal letter including Contractor name, address, and phone number. Each Submittal shall contain only one Specification Section.

E. Sequentially number transmittal forms using Section number or Contractor’s sequential numbering system.

F. Identify Project, Contractor, subcontractor, or supplier, pertinent Drawing sheet and detail number(s), and Specification Section number appropriate to Submittal.

G. Apply Contractor's stamp, signed or initialed certifying review, verification of products required, field dimensions, adjacent construction Work, and coordination of information, is per requirements of Work and Contract Documents.

H. Schedule Submittals to expedite Project and deliver to Engineer. Coordinate submission of related items.

I. For each Submittal for review, allow 10 working days excluding delivery time to and from Contractor.

J. Identify variations from Contract Documents and product or system limitations detrimental to successful performance of completed Work. Information, comments, field verifications, responses, or other notations marked on Submittals by Contractor shall be in blue or green colors only.

K. Distribute copies of reviewed Submittals to concerned parties. Instruct parties to promptly report any inability to comply with provisions.

L. Unrequested Submittals will not be recognized or processed.

M. Format:
   1. Submit all Submittals digitally using PDF file extension. Each Submittal shall be a single PDF file including transmittal letter. Multiple files for same Submittal will not be accepted.
   2. Submittals in any other format, including ZIP files, will be rejected.
   3. Hard copies, not accepted.
   4. To ensure each page is legible, PDF pages of Drawings shall be same size/scale as hard copy. Where applicable, provide scale symbols to indicate scale. Illegible submittals will be rejected.
   5. Upload Submittals to Project website.

N. Submittal procedures described herein apply to construction progress schedule, products list, Shop Drawings, product data, samples (actual samples and digital files of same), design data, test reports, certificates, manufacturer's instructions and field reports, erection Drawings, RFIs, and other Submittals submitted to Engineer.

## 1.3 RESUBMITTAL REQUIREMENTS

A. Revise Submittals as required and resubmit to meet requirements specified and noted on submittal reviews.
B. Mark as *Resubmittal*.
C. Reuse original transmittal number and supplement with sequential alphabetical or numeric suffix for each Resubmittal.

## 1.4 PROPOSED PRODUCTS LIST

A. Within 15 days after date of Notice to Proceed, submit complete list of major products proposed for use, with name of manufacturer, trade name, and model number of each product.
B. For products specified only by reference standards, give manufacturer, trade name, model or catalog designation, and reference standards.

## 1.5 REQUIREMENTS FOR COMPLETE SHOP DRAWINGS

A. Printable Image Size: Minimum 8.5 by 11 inches, maximum 30 by 42 inches.
B. Draw details to a noted scale.
C. Draw site plans to same scale indicated on Contract Drawings.
D. Engineer-issued Construction Documents (electronic or paper format) cannot be used in any shape, form, or fashion in creating and developing Shop Drawings, except electronic files containing floor, site plans, or layout plans purchased from Engineer may be used as backgrounds for Contractor, subcontractors, sub-subcontractors, and material suppliers in Shop Drawing process.

## 1.6 PRODUCT DATA

A. Mark each copy to identify applicable products, models, options, and other data. Supplement manufacturers' standard data to provide information unique to Project.
B. Include recommendations for application and use, and reference to compliance with specified standards of trade associations and testing agencies.
C. After review, distribute per Article 1.2 "Submittal Procedures," and provide copies for Record Documents described in Section 01 70 00 "Execution and Closeout Requirements."

1.7 SAMPLES

A. Submit samples to illustrate functional and aesthetic characteristics of product with integral parts and attachment devices. Accompany physical sample with color digital image (photo or scanned PDF) of sample. Coordinate sample Submittals for interfacing work.
B. Unless otherwise specified, submit samples of finishes from manufacturer's full range of standard colors, textures, and patterns, for Engineer selection.
C. Where variations in color, pattern, or texture are inherent in material or product, submit multiple samples to indicate approximate range or variations.
D. Include full Project information and identification of manufacturer, model number, type, style and color on each sample.
E. Submit number of samples specified in individual Specifications, one retained by Engineer.
F. Reviewed samples which may remain as part of Work indicated in individual Specifications.
G. Do not use Samples for testing unless specifically stated in individual Specifications.

1.8 TEST REPORTS

A. Submit for Engineer’s knowledge as Contract Administrator or Owner.
B. Submit test reports for information to assess conformance with information given and design concept expressed in Contract Documents.

1.9 CERTIFICATES

A. When specified in individual Specifications, submit certification by manufacturer, installation/application subcontractor, or Contractor, to Engineer.
B. Indicate material or product conforms to/exceeds specified requirements. Submit supporting reference data, affidavits, and certifications as appropriate.
C. Certificates may be recent or previous test results on material or product, but must be acceptable to Engineer.

1.10 MANUFACTURER'S INSTRUCTIONS

A. When specified in individual Specifications, submit manufacturer-printed instructions for delivery, storage, assembly, installation, startup, adjusting, and finishing.
B. Identify conflicts between manufacturers' instructions and Contract Documents.
C. Indicate special procedures, conditions requiring special attention and special environmental criteria required for application or installation.

1.11 MANUFACTURER'S FIELD REPORTS

A. Submit reports for Engineer's benefit as contract administrator or for Owner.
B. Submit report within 30 days of observation to Engineer for information.
C. Submit for information to assess conformance with information given and design concept expressed in Contract Documents.

**PART 2 - PRODUCTS (Not Used)**

**PART 3 - EXECUTION (Not Used)**

END OF SECTION

# SECTION 01 40 00 - QUALITY REQUIREMENTS

## PART 1 - GENERAL

### 1.1 SUMMARY

A. Section Includes:
   1. Quality control.
   2. Tolerances.
   3. References.
   4. Mockup requirements.
   5. Testing and inspection services.
   6. Manufacturer's field services.

B. Related Sections:
   1. Other Division 01 Specification Sections apply to Work of this Section.

### 1.2 QUALITY CONTROL

A. Monitor quality control over suppliers, manufacturers, products, services, Site conditions, and workmanship, to produce Work of specified quality.

B. Comply with manufacturer’s instructions. If manufacturer’s instructions conflict with Contract Documents, request clarification from Engineer before proceeding.

C. Perform Work using persons qualified to produce required and specified quality.

D. Products, materials, and equipment may be subject to inspection by Engineer at place of manufacture or fabrication. Such inspections shall not relieve Contractor of complying with requirements of Contract Documents.

E. Supervise performance of Work to ensure Work, whether completed or in progress, will not be subjected to harmful, dangerous, damaging, or otherwise deleterious exposure during construction.

### 1.3 TOLERANCES

A. Monitor fabrication and installation tolerance control of products to produce acceptable Work. Do not permit tolerances to accumulate.

B. Comply with manufacturer's recommended tolerances and tolerance requirements in reference standards. When tolerances conflict with Contract Documents, request clarification from Engineer before proceeding.

C. Adjust products to appropriate dimensions; position before securing products in place.

### 1.4 REFERENCES

A. For products or workmanship specified by association, trade, or other consensus standards, comply with requirements of standard except when more rigid requirements are specified or required by applicable codes.

B. Conform to reference standard by date of issue current as of date of Contract Documents except where specific date is established by code.

C. Obtain copies of standards and maintain onsite when required by product Specifications.

D. When requirements of indicated reference standards conflict with Contract Documents, request clarification from Engineer before proceeding.
E. Neither contractual relationships, duties, or responsibilities of parties in Contract, nor those of Engineer shall be altered from Contract Documents by mention or inference in reference documents.

1.5 TESTING AND INSPECTION SERVICES

A. Owner will employ and pay for specified services of an independent firm to perform testing and inspection.
B. Independent firm will perform tests, inspections, and other services specified in individual Specifications and as required by Engineer.
C. Testing, inspections, and source quality control may occur on or off Project Site. Perform off-site testing as required by Engineer.
D. Submit reports to Engineer, indicating observations and results of tests and compliance or noncompliance with Contract Documents.
E. Cooperate with independent firm. Furnish samples of materials, design mix, equipment, tools, storage, safe access, and assistance by incidental labor, as requested.
    1. Notify Engineer and independent firm 24 hours before expected time for operations requiring services.
    2. Pay for additional samples and tests required for Contractor use.
F. Employment of testing agency or laboratory shall not relieve Contractor of obligation to perform Work per requirements of Contract Documents.
G. Retesting or Re-inspection Required Because of Nonconformance with Specified or Indicated Requirements: Payment for retesting or re-inspection will be charged to Contractor by deducting testing charges from Contract Sum/Price.
H. Independent Firm Responsibilities:
    1. Test samples of mixes submitted by Contractor.
    2. Provide qualified personnel at Site. Cooperate with Engineer and Contractor in performance of services.
    3. Perform indicated sampling and testing of products per specified standards.
    4. Ascertain compliance of materials and mixes with Contract Document requirements.
    5. Promptly notify Engineer and Contractor of observed irregularities or nonconformance of Work or products.
    6. Perform additional tests required by Engineer.
    7. Attend preconstruction and progress meetings.
I. Independent Firm Reports. After each test, promptly submit report to Engineer and Contractor and provide interpretation of test results. Include:
    1. Date issued.
    2. Project title and number.
    3. Name of inspector.
    4. Date and time of sampling or inspection.
    5. Identification of product and Specifications.
    6. Location in Project.
    7. Type of inspection or test.
    8. Date of test.
    9. Results of tests.
    10. Conformance with Contract Documents.

1.6 MANUFACTURER'S FIELD SERVICES

A. When specified in individual Specifications, require material or product suppliers or manufacturers to provide qualified staff personnel to observe site conditions, conditions of surfaces and installation, quality of workmanship, equipment startup, testing, adjusting, and balancing equipment, commissioning, and other as applicable, and initiate instructions when necessary.
B. Submit qualifications of observer to Engineer 30 days before required observations. Observer is subject to Engineer approval.
C. Report observations and Site decisions or instructions given to applicators or installers that are supplemental or contrary to manufacturer's written instructions.
D. Refer to Section 01 33 00 "Submittal Procedures," Article 1.11 - Manufacturer's Field Reports.

**PART 2 - PRODUCTS (Not Used)**

**PART 3 - EXECUTION (Not Used)**

END OF SECTION

# SECTION 01 43 26 - TESTING LABORATORY SERVICES

## PART 1 - GENERAL

### 1.1 SUMMARY

A. Section Includes:
   1. Selection and payment.
   2. Contractor submittals.
   3. Laboratory responsibilities.
   4. Laboratory reports.
   5. Limits on testing laboratory authority.
   6. Contractor responsibilities.
   7. Schedule of inspections and tests.

B. Related Sections:
   1. Other Division 01 Specification Sections apply to Work of this Section.

### 1.2 REFERENCES

A. ASTM C1077 - Standard Practice for Agencies Testing Concrete and Concrete Aggregates for Use in Construction and Criteria for Testing Agency Evaluation.

B. ASTM D3666 - Standard Specification for Minimum Requirements for Agencies Testing and Inspecting Road and Paving Materials.

C. ASTM D3740 - Standard Practice for Minimum Requirements for Agencies Engaged in Testing/Inspection of Soil and Rock as Used in Engineering Design and Construction.

D. ASTM E329 - Standard Specification for Minimum Requirements for Agencies Engaged in Construction Inspection, Testing, or Special Inspection.

E. ISO/IEC 17025.

### 1.3 SELECTION AND PAYMENT

A. Contractor shall employ and pay for services of an independent testing laboratory to perform specified inspection and testing.

B. Employment of testing laboratory shall in no way relieve Contractor of obligation to perform work per Contract Document requirements.

### 1.4 QUALITY ASSURANCE

A. Comply with requirements of ASTM C1077, D3666, D3740, E329, and ISO/IEC 17025.

B. Laboratory: Authorized to operate in State of Texas.

C. Laboratory Staff: Maintain a full-time, on-staff, registered Engineer to review services.

### 1.5 CONTRACTOR SUBMITTALS

A. Before starting Work, submit testing laboratory name, address, and phone number, as well as names of full-time registered Engineer and responsible officer.

B. Submit copy of laboratory facility inspection report made by Materials Reference Laboratory of National Bureau of Standards during most recent inspection, with remedy memorandum of deficiencies, reported by inspection.

C. Submit Testing Laboratory firm's reports to the distribution list the Engineer provided at preconstruction conference, indicating observations and results of tests and indicating compliance or non-compliance with Contract Documents.
D. Testing and employment of testing agency or laboratory does not relieve Contractor from performing Work to Contract requirements.
E. Retest/reinspect required because of non-conformance to specified requirements using same testing agency or laboratory. Payment for retesting is Contractor responsibility.

1.6 LABORATORY RESPONSIBILITIES

A. Test samples of mixes submitted by Contractor.
B. Provide qualified personnel onsite. Cooperate with Engineer and Contractor in service performance.
C. Perform specified inspection, sampling, and testing of Products per specified standards.
D. Ascertain compliance of materials and mixes with Contract Document requirements.
E. Promptly notify Engineer and Contractor of observed irregularities or non-conformance of Work or Products.
F. Perform additional inspections and tests required by Engineer.
G. Attend pre-construction conferences.

1.7 LABORATORY REPORTS

A. After each inspection and test, promptly distribute reports to distribution list provided by Engineer at preconstruction conference.
B. Include:
    1. Date issued.
    2. Project title and number.
    3. Name of inspector.
    4. Date and time of sampling or inspection.
    5. Identification of product and Specification Section.
    6. Location in Project.
    7. Type of inspection or test.
    8. Date of test.
    9. Results of tests.
    10. Conformance with Contract Documents.
C. When requested by Engineer, provide interpretation of test results.

1.8 LIMITS ON TESTING LABORATORY AUTHORITY

A. Laboratory may not release, revoke, alter, or enlarge Contract Document requirements.
B. Laboratory may not approve or accept any portion of Work.
C. Laboratory may not assume any duties of Contractor.
D. Laboratory has no authority to stop the Work.

1.9 CONTRACTOR RESPONSIBILITIES

A. Deliver to laboratory at designated location, adequate samples of materials proposed to use which require testing along with proposed mix designs.
B. Cooperate with laboratory personnel and provide access to Work and manufacturer facilities.

C. Provide incidental labor and facilities to provide access to Work to test, obtain, and handle samples at site or source of products to test, facilitate tests and inspections, storage, and curing test samples.
D. Notify Engineer and laboratory 24 hours before expected time for operations requiring inspection and testing services.
E. Pay costs of testing laboratory services from Allowance specified in Section 01 20 00 "Price and Payment Procedures" on Engineer approval of invoices.
F. Employ services of a separate qualified testing laboratory, arrange with laboratory, and pay for additional samples and tests required by Contractor beyond specified requirements.

1.10 SCHEDULE OF INSPECTIONS AND TESTS

A. As indicated in individual Specifications.

**PART 2 - PRODUCTS (Not Used)**

**PART 3 - EXECUTION (Not Used)**

END OF SECTION

# SECTION 01 50 00 - TEMPORARY FACILITIES AND CONTROLS

## PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
1. Temporary Utilities:
a. Electricity.
b. Lighting.
c. Heating.
d. Cooling.
e. Ventilation.
f. Communication services.
g. Water.
h. Sanitary.
2. Construction Facilities:
a. Field offices and sheds.
b. Employee residential occupancy.
c. Vehicular access.
d. Parking.
e. Progress cleaning.
f. Project identification.
g. Traffic regulation.
3. Temporary Controls:
a. Barriers.
b. Fencing.
c. Enclosures.
d. Security.
e. Water control.
f. Dust control.
g. Erosion and sediment control.
h. Noise control.
i. Pest and rodent control.
j. Pollution control.
k. Protect Work.
4. Remove utilities, facilities, and controls.

B. Related Requirements:
1. Other Divisions 01 Specification Sections apply to Work of this Section.

1.2 ELECTRICITY

A. Provide and pay for required power service from existing electrical utility source.

1.3 LIGHTING

A. Do not utilize permanent building lighting during construction. Provide and maintain 1-watt-per-square-foot lighting to exterior staging and storage areas after dark for security purposes.

B. Provide and maintain 0.25-watt-per-square-foot HID lighting to interior work areas after dark for security purposes.
C. Provide branch wiring from power source to distribution boxes with lighting conductors, pigtails, and lamps, as required.
D. Maintain lighting and provide routine repairs.

1.4 VENTILATION

A. Ventilate enclosed areas to assist cure of materials, dissipate humidity, and prevent accumulation of dust, fumes, vapors, or gases.
B. Provide temporary fan units required to maintain clean air for construction operations.

1.5 COMMUNICATION SERVICES

A. At minimum, provide cell phone service for onsite superintendent and home office phone service.

1.6 WATER

A. Provide, maintain, and pay for suitable quality water service required for construction operations. Extend branch piping with outlets located so water is available by hoses with threaded connections.

1.7 SANITARY

A. Provide and maintain required facilities and enclosures.
B. Do not use existing facilities.

1.8 FIELD OFFICES AND SHEDS

A. Office
    1. Construction
        a. Portable/mobile building(s) or buildings constructed with floors raised above ground, securely fixed to foundations with steps and landings at entrance doors.
        b. Structurally-sound, secure, weathertight enclosure to maintain environmental conditions specified.
        c. Maintain during progress of Work.
        d. Temperature Transmission Resistance of Floors, Walls, and Ceilings: Compatible with occupancy and storage requirements.
        e. Exterior Materials: Weather resistant.
        f. Interior Materials in Offices: Sheet-type materials for walls and ceilings, prefinished or painted, resilient floors and bases.
    2. Lighting: Exterior lighting at entrance doors.
    3. Fire Extinguishers: Provide appropriate-type fire extinguisher at each building**.**
    4. Provide separate workstation, similarly equipped and furnished, for Engineer use.
    5. Office Heating, Cooling, and Ventilating: Automatic equipment to maintain comfort conditions.
B. Storage Areas and Sheds
    1. Size storage per Specifications allowing for access and orderly provision for product maintenance and inspection.

2. Fire Extinguishers: Appropriate-type fire extinguisher at each storage area.
3. Interior Materials in Storage Sheds: As required to provide specified environmental conditions for storage of products.
4. Heating and Ventilation: As required to maintain products per Contract Documents.
5. Lighting: As required for maintenance and inspection of products.

C. Prepare: Fill/grade sites for temporary structures sloped for drainage away from buildings.
D. Install office spaces ready for occupancy 15 days after date fixed in Notice to Proceed.
E. Maintenance and Cleaning
1. Weekly janitorial services for offices, periodic cleaning and maintenance for office and storage areas.
2. Maintain approach walks free of mud, water, and snow.
F. Removal: At Work completion remove buildings, foundations, utility services, and debris. Restore areas to original conditions.

1.9 EMPLOYEE RESIDENTIAL OCCUPANCY

A. Not allowed on Owner property.

1.10 VEHICULAR ACCESS

A. Construct temporary all-weather access roads from public thoroughfares to serve construction area, width and load-bearing capacity to accommodate unimpeded traffic for construction purposes.
B. Construct temporary bridges and culverts to span low areas and allow unimpeded drainage.
C. Extend and relocate vehicular access as Work progress requires, providing necessary detours for unimpeded traffic flow.
D. Location as indicated on Drawings**.**
E. Provide unimpeded access for emergency vehicles. Maintain 20-foot-wide driveways with turning space between and around combustible materials.
F. Provide and maintain access to fire hydrants and control valves free of obstructions.
G. Provide means of removing mud from vehicle wheels before entering public streets.
H. Do not use existing onsite roads for construction traffic.
I. Verify with local Authorities Having Jurisdiction regarding temporary fire lanes and related access.

1.11 PARKING

A. Construct temporary gravel-surfaced parking areas to accommodate construction personnel.
B. Locate as approved by Engineer**.**
C. When Site space is not adequate, provide additional off-site parking.

D. Use of existing on-site streets and driveways for construction traffic is not permitted.
E. Using designated areas of existing parking facilities by construction personnel is not permitted.
F. Do not allow heavy or tracked vehicles or construction equipment in parking areas.
G. Do not allow vehicle parking on existing pavement.
H. Designate one parking space for Engineer.
I. Permanent Pavements And Parking Facilities
1. Before Substantial Completion, bases for permanent roads and parking areas may be used for construction traffic.

2. Avoid traffic loading beyond paving design capacity. Tracked vehicles not allowed.
3. Use of permanent parking structures not permitted.

J. Maintenance
1. Maintain traffic and parking areas in sound condition free of excavated material, construction equipment, products, mud, snow, and ice**.**
2. Maintain existing and permanent paved areas used for construction. Promptly repair breaks, potholes, low areas, standing water, and other deficiencies, to maintain paving and drainage in original, or specified, condition.

K. Removal, Repair
1. Remove temporary materials and construction at Substantial Completion.
2. Remove underground work and compacted materials to 2-foot depth. Fill and grade site as specified.
3. Repair existing facilities damaged by use, to original condition.

L. Mud from Site Vehicles: Provide way to remove mud from wheels before entering streets.

## 1.12 PROGRESS CLEANING

A. Maintain areas free of waste materials, debris, and rubbish. Maintain a clean and orderly site.

B. Remove debris and rubbish from pipe chases, plenums, attics, crawl spaces, and other closed or remote spaces, before enclosing space.

C. Sweep and vacuum interior areas clean before surface finishing and continue cleaning to eliminate dust.

D. Remove waste materials, debris, and rubbish from site and dispose off-site as required to maintain clean site.

## 1.13 PROJECT IDENTIFICATION

A. Project Identification Sign
1. Size: Provide one 8 feet wide by 4 feet high.
2. Materials: 3/4-inch-thick exterior-grade plywood and solid-wood frame.
3. Background Paint: Exterior quality, two coats; sign background of color as selected**.**
4. Lettering: Exterior paint of quality adequate to withstand weathering, fading, and chipping for construction duration, contrasting colors as selected with exhibit lettering by professional sign painter.
5. Lettering: Precut vinyl self-adhesive products, white**.**
6. Design: Design indicated in Drawings**.**
7. Content:
   a. Project title, as indicated on Contract Documents.
   b. Owner’s name and logo.
   c. Names and titles of Engineer and consultants.
   d. Name of Prime Contractor.
   e. Name of major subcontractors.
8. Lettering: Series C of Standard Alphabet for Traffic Control Devices *Manual on Uniform Traffic Control Devices for Streets and Highways*, Federal Highway Administration.

B. Project Informational Signs
1. If required by other documents or Specifications, provide weather-protected signs for site-safety procedures, wage rates, and stormwater pollution prevention plan (SWPPP).
2. Erect sign on or adjacent to field office, if required.

C. Design sign and structure to withstand 90-mile-per-hour wind velocity.
D. Installation
   1. Install Project identification sign within 15 days after date fixed by Notice to Proceed.
   2. Erect at designated location.
   3. Erect supports and framing on secure foundation, rigidly braced and framed to resist wind loadings.
   4. Install sign surface plumb and level with butt joints. Anchor securely.
   5. Paint exposed surfaces of sign supports and framing.
E. No other signs allowed without Owner permission except those required by law.
F. Maintain clean signs and supports. Repair deterioration and damage.
G. Remove signs, framing, supports, and foundations at completion of Project and restore area.

## 1.14 TRAFFIC REGULATION

A. Contractor Responsibilities
   1. Provide Traffic Control Plan (TCP) as necessary for phased construction.
   2. TCP must be signed and sealed by a professional engineer licensed in [Texas].
   3. Designate a responsible individual for TCP replacement and maintenance.
B. Signs, Signals, And Devices
   1. Post- and Wall-Mounted Traffic Control and Informational Signs: As approved by authority having jurisdiction, Texas Manual on Uniform Traffic Control Devices (TMUTCD), and/or TxDOT Standards shown in Plans.
   2. Traffic Control Signals: As approved by local jurisdictions.
   3. Traffic Cones and Drums: As approved by authority having jurisdiction.
   4. Flares and Lights: As approved by authority having jurisdiction.
   5. Flagperson Equipment: As required by authority having jurisdiction.
C. Flagpersons: Provide trained and equipped flagpersons to regulate traffic when construction operations or traffic encroach on public traffic lanes.
D. Flares and Lights: Use during hours of low visibility to delineate traffic lanes and guide traffic.

E. Haul Routes
   1. Consult with authority having jurisdiction, establish public thoroughfares to use for haul routes and site access.
   2. Drawings indicate haul routes designated by authorities having jurisdiction for use of construction traffic.
   3. Confine construction traffic to designated haul routes.
   4. Provide traffic control at critical areas of haul routes to regulate traffic and minimize interference with public traffic.
F. Traffic Signs And Signals
   1. Provide signs at approaches to Site and on-site, crossroads, detours, parking areas, and elsewhere as needed to direct construction and affected public traffic.
   2. Provide, operate, and maintain automatic traffic control signals to direct and maintain orderly flow of traffic in areas under Contractor's control and areas affected by Contractor operations.
   3. Relocate as Work progresses to maintain effective traffic control.
G. Removal
   1. Remove equipment and devices when no longer required.
   2. Repair damage caused by installation.

3. Remove post settings to 2-foot depth.

1.15 BARRIERS

A. Provide barriers to prevent unauthorized entry to construction areas as well as protect existing facilities and adjacent properties from damage from construction operations**.** Allow for Owner's use of Site.
B. Provide barricades and covered walkways required by authorities having jurisdiction for:
   1. Public rights-of-way.
   2. Public access to existing building.
C. Replace damaged items condition to original condition and protect items designated to remain:
   1. Trees.
   2. Shrubbery.
   3. Lawns.
D. Protect Site improvements including but not limited to pavements, walkways, and drainage structures from damage. Replace damaged site improvements to original condition.
E. Protect non-owned vehicular traffic and stored materials from damage.

1.16 FENCING

A. Construction: Commercial-grade chain-link fence.
B. Provide 6-foot-high fence around construction site equipped with vehicular and pedestrian gates with locks.

1.17 ENCLOSURES

A. Provide temporary insulated weathertight closure of exterior openings to accommodate acceptable working conditions and protection for products, allow temporary heating, cooling, ventilation, and maintenance of required ambient temperatures identified in individual Specifications, and prevent entry of unauthorized persons. Provide access doors with self-closing hardware and locks.

1.18 SECURITY

A. Security Program
   1. Protect Work andexisting premises from theft, vandalism, and unauthorized entry.
   2. Initiate program at Project mobilization.
   3. Maintain program throughout construction period until Owner occupancy.
B. Entry Control
   1. Restrict entrance of persons and vehicles into Project Site.
   2. Allow entrance only to authorized persons with proper identification.
   3. Maintain log of workers and visitors and make available to Owner on request.

1.19 WATER CONTROL

A. Grade site to drain.
B. Maintain excavations free of water.
C. Provide, operate, and maintain pumping equipment.
D. Protect Site from puddling and running water. Provide water barriers required to protect site from soil erosion.

E. Provide water barriers required to protect existing buildings from puddling, ponding, or other water accumulation that may damage foundations or other subsurface construction.

1.20 DUST CONTROL

A. Execute Work to minimize raising dust from construction operations.
B. Provide positive means to prevent airborne dust from dispersing into atmosphere.

1.21 EROSION AND SEDIMENT CONTROL

A. Plan and execute construction to control surface drainage from cuts, fills, borrow, and waste disposal areas. Prevent erosion and sedimentation.
B. Minimize surface area of bare soil exposed at one time.
C. Provide temporary measures including berms, dikes, drains, and other devices to prevent water flow resulting in erosion.
D. Construct fill and waste areas by selective placement to avoid erosive surface silts or clays.
E. Periodically inspect earthwork to detect evidence of erosion and sedimentation. Promptly apply corrective measures.
F. Comply with site Section 01 57 23 "Temporary Stormwater Pollution Control."

1.22 NOISE CONTROL

A. Provide methods, means, and facilities to minimize disruption of Owner operations and activities due to noise produced by construction operations**.**
B. Conduct activities to produce noise that may interfere with Owner operations and activities only when agreed to by Owner**.**

1.23 PEST AND RODENT CONTROL

A. Provide methods, means, and facilities to prevent the following from damaging Work:
   1. Pests.
   2. Insects.
   3. Rodents.

1.24 POLLUTION CONTROL

A. Provide methods, means, and facilities to prevent contamination of soil, water, and atmosphere from discharge of noxious, toxic substances, and pollutants produced by construction operations.
B. Comply with pollution and environmental control requirements of authorities having jurisdiction.

1.25 PROTECT WORK

A. Protect installed Work and provide special protection where specified in Specifications.
B. Provide temporary and removable protection for installed Products. Control activity in immediate work area to minimize damage.
C. Provide protective coverings at openings in walls, roof, and soffits.
D. Protect finished walkways, drives, and other surfaces from traffic, dirt, wear, damage, or movement of heavy objects, by protecting with durable sheet materials.

E. Prohibit traffic or storage upon waterproofed or roofed surfaces. If traffic/activity necessary, obtain recommendations for protection from waterproofing or roofing material manufacturer.
F. Prohibit traffic from landscaped areas.

1.26 REMOVE UTILITIES, FACILITIES, AND CONTROLS

A. Remove temporary above-grade utilities, equipment, facilities, and materials as soon as permanent facilities can be utilized.
B. Remove risers for underground utilities to minimum 2-foot depth and cap.
C. Remove buried equipment, facilities, and materials completely to minimum 2-foot depth and cap.
D. Backfill excavations as specified in other sections and grade site as indicated.
E. Clean and repair damage caused by installation or temporary Work.
F. Restore existing facilities used during construction to original condition. Restore permanent facilities used during construction to specified condition.
G. Remove when no longer needed:
    1. Office.
    2. Storage sheds.

**PART 2 - PRODUCTS (Not Used)**

**PART 3 - EXECUTION (Not Used)**

END OF SECTION

# SECTION 01 57 23 - TEMPORARY STORMWATER POLLUTION CONTROL

## PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Contractor responsibilities.
   2. Submittals.
   3. Erosion and sediment controls.

B. Related Requirements:
   1. Local jurisdiction requirements.
   2. Division 01 Specification Sections apply to Work of this Section.

1.2 CONTRACTOR RESPONSIBILITIES

A. Contractor is solely responsible for meeting all TCEQ and EPA requirements for stormwater pollution prevention:
   1. Develop a Stormwater Pollution Prevention Plan (SWPPP) if not provided;
   2. File Notice of Intent (NOI) and include Owner as an "Operator;"
   3. Install and maintain all erosion control measures and best management practices (BMPs);
   4. Perform inspections and prepare reports; and
   5. File Notice of Termination (NOT).

1.3 SUBMITTALS

A. Submit to Engineer, SWPPP, Submittal Procedures, and all other related documentation conforming to Section 01 33 00 "Submittal Procedures."

1.4 EROSION AND SEDIMENT CONTROLS

A. Implement structural measures to divert flows from exposed soils, temporarily store flows, or otherwise limit run-off and discharge of pollutants from exposed areas of site. Timely implement structural practices as specified in SWPPP during construction to minimize erosion and sediment run-off.

B. Stabilized Ingress/Egress:
   1. Provide stabilized access to/from construction site as soon as practical per SWPPP.
   2. Ensure any soil tracked off-site is cleaned from existing roads, alleys, and any adjacent properties as soon as possible. Check for any pollutants (mud, silt, sand, cement, construction materials, etc.) tracked or washed off-site and perform necessary clean-up measures at the end of each work day.

C. Silt Fences/Diversion Berms: Provide as a temporary structural practice to minimize erosion and sediment runoff, as necessary. Properly install silt fences and/or diversion berms to effectively retain sediment immediately after completing each phase of Work where erosion would occur as sheet and rill erosion (clearing and grubbing, excavation, embankment, grading, etc.).

D. Sand/Gravel Bags: Provide as a temporary structural practice to minimize erosion and sediment runoff. Properly place bags to effectively retain sediment immediately after completing each phase of Work (clearing and grubbing, excavation, embankment, grading, etc.) in each independent runoff area (after clearing and grubbing between ridge and drain, place bags as Work progresses, remove/replace/relocate bags as needed for Work to progress in drainage area). Replace sand/gravel bags no longer in good condition, as needed.

E. Site Stabilization:
   1. Minimize surface area of base soil material at one time.
   2. Implement necessary stabilization measures including:
      a. Temporary/permanent seeding/sodding;
      b. Mulching;
      c. Geotextiles;
      d. Vegetative buffer strips;
      e. Paving;
      f. Rock riprap; and/or
      g. Rock-filled gabions.
      h. Inlet protection.
   3. Implement stabilization measures per SWPPP.

**PART 2 - PRODUCTS (Not Used)**

**PART 3 - EXECUTION (Not Used)**

END OF SECTION

# SECTION 01 60 00 - PRODUCT REQUIREMENTS

## PART 1 - GENERAL

### 1.1 SUMMARY

A. Section Includes:
   1. Products.
   2. Product delivery requirements.
   3. Product storage and handling requirements.

B. Related Sections:
   1. Other Division 01 Specification Sections apply to Work of this Section.

### 1.2 PRODUCTS

A. At minimum, comply with specified requirements and reference standards.

B. Specified products define standard of quality, type, function, dimension, appearance, and performance required.

C. Furnish products of qualified manufacturers suitable for intended use. Furnish products of each type by single manufacturer unless specified otherwise. Confirm manufacturer production capacity can provide sufficient product, on time, to meet Project requirements.

### 1.3 PRODUCT DELIVERY REQUIREMENTS

A. Transport and handle products per manufacturer instructions.

B. Promptly inspect shipments to ensure products comply with requirements, quantities are correct, and products are undamaged.

C. Provide equipment and personnel to handle products. Prevent soiling, disfigurement, or damage.

D. Owner will not assist in offloading or accepting product deliveries.

### 1.4 PRODUCT STORAGE AND HANDLING REQUIREMENTS

A. Store and protect products per manufacturer instructions.

B. Store products with seals and labels intact and legible.

C. Store sensitive products in weathertight, climate-controlled enclosures in an environment suitable to product.

D. For exterior storage of fabricated products, place products on sloped supports above ground.

E. Cover products subject to deterioration with impervious sheet covering. Provide ventilation to prevent condensation and degradation of products.

F. Store loose granular materials on solid flat surfaces in well-drained area. Prevent mixing with foreign matter.

G. Provide equipment and personnel to store products. Prevent soiling, disfigurement, or damage.

H. Arrange product storage to permit access for inspection. Periodically inspect to verify products are undamaged and maintained in acceptable condition.

**PART 2 - PRODUCTS (Not Used)**

**PART 3 - EXECUTION (Not Used)**

END OF SECTION

# SECTION 01 70 00 - EXECUTION AND CLOSEOUT REQUIREMENTS

## PART 1 - GENERAL

### 1.1 SUMMARY

A. Section Includes:
   1. Surveying.
   2. Closeout procedures.
   3. Starting systems.
   4. Demonstration and instructions.
   5. Testing, adjusting, and balancing.
   6. Project record documents.
   7. Operation and maintenance data.
   8. Manual for materials and finishes.
   9. Manual for equipment and systems.
   10. Spare parts and maintenance products.
   11. Product warranties and product bonds.
   12. Examination.
   13. Preparation.
   14. Execution.
   15. Protecting installed construction.
   16. Final cleaning.

B. Related Sections:
   1. Other Division 01 Specification Sections apply to Work of this Section.

### 1.2 SURVEYING

A. Employ land surveyor registered in State of Texas and acceptable to Engineer.

B. Locate and protect survey control and reference points. Promptly notify Engineer of discrepancies discovered.

C. Control datum for survey is indicated on Drawings.

D. Verify setbacks, easements, and rights of way. Confirm Drawing dimensions and elevations.

E. Provide field engineering services. Establish elevations, lines, and levels using recognized engineering survey practices.

F. Submit copy of Site Drawing signed by land surveyor certifying elevations and locations of Work are per Contract Documents.

G. Maintain complete and accurate log of control and survey Work as Work progresses.

H. Protect survey control points before starting Site Work. Preserve permanent reference points during construction.

I. Promptly report to Engineer loss or destruction of reference point or relocation required because of changes in grades or other reasons.

J. Replace dislocated survey control points based on original survey control. Make no changes without prior written notice to Engineer.

1.3 CLOSEOUT PROCEDURES

A. Prerequisites to Substantial Completion. Complete following items before requesting Certification of Substantial Completion either for entire Work or portions of Work:
   1. Submit maintenance manuals, Project Record Documents, and other similar final record data per this Section.
   2. Complete facility startup, testing, adjusting, balancing systems and equipment, demonstrations, and instructions to Owner's operating and maintenance personnel as specified per this Section.
   3. Conduct inspection to establish basis for request that Work is substantially complete. Create comprehensive list (initial punch list) indicating items to complete or correct, value of incomplete or nonconforming Work, reason for incompletion, and date of anticipated completion for each item. Include copy of list with request for Certificate of Substantial Completion.
   4. Obtain and submit releases enabling Owner's full, unrestricted use of Project and access to services and utilities. Include certificate of occupancy, operating certificates, and similar releases from authorities having jurisdiction and utility companies.
   5. Deliver tools, spare parts, extra stocks of material, and similar physical items to Owner.
   6. Change locks and transmit keys directly to Owner. Advise Owner's personnel of change-over in security provisions.
   7. Discontinue or change over and remove temporary facilities and services from Project Site along with construction tools, mockups, and similar elements.
   8. Perform final cleaning per this Section.

B. Substantial Completion Inspection:
   1. When Contractor considers Work substantially complete, submit to Engineer and Owner:
      a. Written certificate that Work, or designated portion, is substantially complete.
      b. List of items to complete or correct (initial punch list).
   2. Within 7 days after receipt of request for Substantial Completion, Engineer and Owner will inspect to determine if Work or designated portion is substantially complete.
   3. If Engineer and Owner determine Work is NOT substantially complete:
      a. Engineer and Owner will promptly notify Contractor, in writing, stating reasons for opinion.
      b. Contractor shall remedy deficiencies in Work and send second written request for Substantial Completion to Engineer and Owner.
      c. Engineer and Owner will reinspect Work.
      d. Repeat until Work passes inspection.
   4. When Engineer and Owner finds Work is substantially complete, they will:
      a. Prepare Certificate of Substantial Completion on EJCDC C-625, Certificate of Substantial Completion, accompanied by Contractor's list of items to complete or correct as verified and amended by Engineer and Owner (final punch list).
      b. Submit Certificate to Owner and Contractor for written acceptance of responsibilities assigned in Certificate.
   5. After Work is substantially complete:
      a. Allow Owner occupancy of Project under provisions stated in Certificate of Substantial Completion.

b. Complete Work listed for completion or correction within time stipulated.

C. Prerequisites for Final Completion. Complete following items before requesting final acceptance and final payment:
   1. When Contractor considers Work complete, submit written certification that:
      a. Contract Documents were reviewed.
      b. Work was examined for compliance with Contract Documents.
      c. Work was completed per Contract Documents.
      d. Work is complete and ready for final inspection.
   2. Submit:
      a. Final punch list indicating all items are complete or correct.
      b. Final payment request with final releases and supporting documentation not previously submitted and accepted. Include certificates of insurance for products and completed operations, where required.
      c. Specified warranties, workmanship/maintenance bonds, maintenance agreements, and other similar documents.
      d. Accounting statement for final changes to Contract Sum.
      e. Contractor's Affidavit of Payment of Debts and Claims on Contractor form.
      f. Contractor Affidavit of Release of Liens on Contractor form.
      g. Consent of Surety to Final Payment on Contractor form.
   3. Perform final cleaning for Contractor-soiled areas per this Section.

D. Final Completion Inspection:
   1. Within 7 days after receipt of request for final inspection, Engineer and Owner will inspect to determine if Work or designated portion is complete.
   2. If Engineer and Owner consider Work incomplete or defective:
      a. Engineer and Owner will promptly notify Contractor, in writing, listing incomplete or defective Work.
      b. Contractor shall remedy stated deficiencies and send second written request to Engineer and Owner that Work is complete.
      c. Engineer and Owner will reinspect Work.
      d. Redo and Inspect Deficient Work: Repeated until Work passes inspection.
      e. Engineer and Owner inspection.

## 1.4 STARTING SYSTEMS

A. Coordinate schedule for startup of various equipment and systems.
B. Notify Engineer 7 days before startup of each item.
C. Verify each piece of equipment or system was checked for proper lubrication, drive rotation, belt tension, control sequence, and conditions which may cause damage.
D. Verify tests, meter readings, and electrical characteristics agree with those required by equipment or system manufacturer.
E. Verify wiring and support components for equipment are complete and tested.
F. Execute startup under supervision of manufacturer representative or Contractor personnel per manufacturer's instructions.
G. When specified in individual Specifications, require manufacturer to provide authorized representative who will be present at Site to inspect, check, and approve equipment or system installation before startup and supervise placing equipment or system in operation.
H. Submit a written report per Section 01 33 00 "Submittal Procedures," that equipment or system has properly installed and functioning correctly.

1.5 DEMONSTRATION AND INSTRUCTIONS

A. Demonstrate operation and maintenance (O&M) of products to Owner personnel 2 weeks before date of Substantial Completion.
B. Demonstrate Project equipment by manufacturer's representative who is knowledgeable about Project.
C. Use O&M manuals as basis for instruction. Review contents of manual with Owner personnel in detail to explain all aspects of operation and maintenance.
D. Demonstrate startup, operation, control, adjustment, troubleshooting, servicing, maintenance, and shutdown of each item of equipment at agreed time, at equipment location.
E. Prepare and insert additional data in O&M manuals when need for additional data is apparent during instruction.
F. Required instruction time for each item of equipment and system is specified in individual Specifications.

1.6 TESTING, ADJUSTING, AND BALANCING

A. Owner will appoint and employ services of independent firm to perform testing, adjusting, and balancing. Contractor shall pay for services from cash allowance specified in Section 01 20 00 "Price and Payment Procedures."
B. Reports will be submitted by independent firm to Engineer indicating observations and results of tests and indicating compliance or noncompliance with requirements of Contract Documents.

1.7 PROJECT RECORD DOCUMENTS

A. Maintain on-site one set of these record documents and record actual revisions to Work:
    1. Drawings.
    2. Specifications.
    3. Addenda.
    4. Change Orders and other modifications to Contract.
    5. Reviewed Shop Drawings, product data, and Samples.
    6. Manufacturer's instruction for assembly, installation, and adjusting.
B. Ensure entries are complete and accurate enabling future reference by Owner.
C. Store record documents separate from documents used for construction.
D. Record information concurrent with construction progress not less than weekly.
E. Specifications: Legibly mark and record, at each product Section, description of actual products installed including:
    1. Manufacturer name, product model, and number.
    2. Product substitutions or alternates used.
    3. Changes made by Addenda and modifications.
F. Record Drawings. Legibly mark each item to record actual construction.
    1. Include Contract modifications such as Addenda, supplementary instructions, change directives, field orders, minor changes in Work, and change orders.
    2. Include locations of concealed elements of Work.
    3. Identify depth of buried utility lines and provide dimensions showing distances from permanent facility components parallel to utilities.
    4. Dimension ends, corners, and junctions of buried utilities to permanent facility components using triangulation.

5. Identify and locate existing buried or concealed items encountered during Project.
6. Measured depths of foundations in relation to finish floor datum.
7. Measured horizontal and vertical locations of underground utilities and appurtenances referenced to permanent surface improvements.
8. Measured locations of internal utilities and appurtenances concealed in construction, referenced to visible and accessible features of Work.
9. Field changes of dimension and detail.
10. Details not on original Drawings.

G. Submit marked-up paper copy documents to Engineer with claim for final Application for Payment.

H. Submit PDF electronic files of marked-up documents to Engineer with claim for final Application for Payment.

## 1.8 OPERATION AND MAINTENANCE DATA

A. Submit in PDF composite electronic indexed file.

B. Submit data bound in 8-1/2- by 11-inch text pages, 3 D-side-ring binders with durable plastic covers.

C. Prepare binder cover with printed *Operation and Maintenance Instructions*, title of Project**,** and subject matter of binder when multiple binders required.

D. Internally subdivide binder contents with permanent page dividers, logically organized as described, with tab titling clearly printed under reinforced laminated plastic tabs.

E. Drawings: Provide with reinforced punched binder tab. Bind in with text. Fold larger Drawings to size of text pages.

F. Contents: Prepare Table of Contents (TOC) for each volume, with each product or system description identified, typed on white paper, in three parts as:

1. Part 1: Directory, listing names, addresses, and phone numbers of Engineer, Contractor, subcontractors, and major equipment suppliers.
2. Part 2: O&M instructions, arranged by system and subdivided by Specification Section. For each category, identify names, addresses, and phone numbers of subcontractors and suppliers. Include:
    a. Significant design criteria.
    b. List of equipment.
    c. Parts list for each component.
    d. Operating instructions.
    e. Maintenance instructions for equipment and systems.
    f. Maintenance instructions for finishes including recommended cleaning methods and materials, and special precautions identifying detrimental agents.
    g. Safety precautions to take when operating and maintaining or working near equipment.
3. Part 3: Project documents and certificates, including:
    a. Shop Drawings and product data.
    b. Certificates.
    c. Originals of warranties.

## 1.9 MANUAL FOR MATERIALS AND FINISHES

A. Submit two copies of preliminary draft or proposed formats and outlines of contents before start of Work. Engineer will review draft and return one copy with comments.

B. For equipment or component parts of equipment put into service during construction and operated by Owner, submit documents within 10 days after acceptance.

C. Submit one copy of completed volumes 15 days before final inspection. Draft copy reviewed and returned after final inspection, with Engineer comments. Revise content of document sets as required before final submission.
D. Submit two sets of revised final volumes within 10 days after final inspection.
E. Submit in PDF composite electronic indexed file of final manual within 10 days after final inspection.
F. Building Products, Applied Materials, and Finishes: Include product data with catalog number, size, composition, and color and texture designations. Include information for reordering custom-manufactured products.
G. Instructions for Care and Maintenance: Include manufacturer recommendations for cleaning agents and methods, precautions against detrimental agents and methods, and recommended schedule for cleaning and maintenance.
H. Moisture Protection and Weather-Exposed Products: Include product data listing applicable reference standards, chemical composition, and details of installation. Include recommendations for inspections, maintenance, and repair.
I. Additional requirements as specified in individual product Specifications.
J. Include listing in TOC for design data with tabbed fly sheet and space for insertion of data.

1.10 MANUAL FOR EQUIPMENT AND SYSTEMS

A. Submit two copies of preliminary draft or proposed formats and outlines of contents before Work. Engineer will review draft and return one copy with comments.
B. For equipment or component parts of equipment put into service during construction and operated by Owner, submit documents within 10 days after acceptance.
C. Submit one copy of completed volumes 15 days before final inspection. Draft copy will be reviewed and returned after final inspection with Engineer comments. Revise content of document sets as required before final submission.
D. Submit two sets of revised final volumes within 10 days after final inspection.
E. Submit in PDF composite electronic indexed file of final manual within 10 days after final inspection.
F. Each System and Item of Equipment: Include description of unit/system and component parts. Identify function, normal operating characteristics, and limiting conditions. Include performance curves with engineering data and tests, complete nomenclature, and model number of replaceable parts.
G. Panelboard Circuit Directories: Provide electrical service characteristics, controls, and communications by label machine.
H. Include color-coded wiring diagrams as installed.
I. Operating Procedures: Include startup, break-in, and routine normal operating instructions and sequences. Include regulation, control, stopping, shutdown, and emergency instructions. Include summer, winter, and special operating instructions.
J. Maintenance Requirements: Include routine procedures and guide for preventative maintenance and troubleshooting; disassembly, repair, and reassembly instructions; and alignment, adjusting, balancing, and checking instructions.
K. Include servicing and lubrication schedule and list of lubricants required.
L. Include manufacturer-printed operation and maintenance instructions.
M. Include sequence of operation by controls manufacturer.
N. Include original manufacturer parts list, illustrations, assembly drawings, and diagrams required for maintenance.
O. Include control diagrams by controls manufacturer as installed.
P. Include Contractor coordination Drawings with color-coded piping diagrams as installed.

Q. Include charts of valve tag numbers, with location and function of each valve, keyed to flow and control diagrams.
R. Include list of original manufacturer's spare parts, current prices, and recommended quantities maintained in storage.
S. Include test and balancing reports per Section 01 40 00 "Quality Requirements."
T. Additional requirements as specified in individual product Specifications.
U. Include listing in TOC for design data with tabbed dividers and space for insertion of data.

1.11 SPARE PARTS AND MAINTENANCE PRODUCTS

A. Furnish spare parts, maintenance, and extra products in quantities specified in individual Specifications.
B. Deliver to place in location as directed by Owner. Obtain receipt before final payment.

1.12 PRODUCT WARRANTIES AND PRODUCT BONDS

A. Obtain warranties and bonds executed by responsible subcontractors, suppliers, and manufacturers within 10 days after completion of applicable item of Work.
B. Execute and assemble transferable warranty documents and bonds from subcontractors, suppliers, and manufacturers.
C. Verify documents are in proper form, contain full information, and are notarized.
D. Co-execute submittals when required.
E. Include TOC and assemble in three D-side-ring binders with durable plastic cover.
F. Submit before final Application for Payment.
G. Time of Submittals:
    1. For equipment or component parts of equipment put into service during construction with Owner permission, submit documents within 10 days after acceptance.
    2. Make other submittals within 10 days after date of Substantial Completion before final Application for Payment.
    3. For items of Work for which acceptance is delayed beyond Substantial Completion, submit within 10 days after acceptance listing date of acceptance as beginning of warranty or bond period.

**PART 2 - PRODUCTS (Not Used)**

**PART 3 - EXECUTION**

3.1 EXAMINATION

A. Verify existing Site conditions and substrate surfaces are acceptable for subsequent Work.
B. Beginning new Work means acceptance of existing conditions.
C. Verify existing substrate can structurally support or attach new Work applied.
D. Examine and verify specific conditions described in individual Specifications.
E. Verify utility services are available with correct characteristics and in correct locations.

3.2 PREPARATION

A. Clean substrate surfaces before applying next material or substance per manufacturer instructions.

B. Seal cracks or openings of substrate before applying next material or substance.
C. Apply manufacturer-required or -recommended substrate primer, sealer, or conditioner before applying new material or substance in contact or bond.

## 3.3 EXECUTION

A. Comply with manufacturer installation instructions performing each step in sequence. Maintain one set of manufacturer installation instructions at Project Site during installation and until completion of construction.
B. When manufacturer installation instructions conflict with Contract Documents, request clarification from Engineer before proceeding.
C. Verify field measurements are as indicated on approved Shop Drawings or as instructed by manufacturer.
D. Secure products in place with positive anchorage devices designed and sized to withstand stresses, vibration, physical distortion, or disfigurement.
    1. Secure Work true-to-line and level and within specified tolerances, or if not specified, industry-recognized tolerances.
    2. Physically separate products in place, provide electrical insulation, or provide protective coatings to prevent galvanic action or corrosion between dissimilar metals.
    3. Exposed Joints: Provide uniform joint width and arrange to obtain best visual effect. Refer questionable visual-effect choices to Engineer for final decision.
E. Allow for expansion of materials and building movement.
F. Climatic Conditions and Project Status: Install each unit of Work under conditions to ensure best possible results in coordination with entire Project.
    1. Isolate each unit of Work from incompatible Work necessary to prevent deterioration.
    2. Coordinate enclosure of Work with required inspections and tests to minimize necessity of uncovering Work for those purposes.
G. Mounting Heights: Where not indicated, mount individual units of Work at industry-recognized standard mounting heights for particular application indicated.
    1. Refer questionable mounting heights choices to Engineer for final decision.
    2. Elements Identified as Accessible to Handicapped: Comply with applicable codes and regulations.
H. Adjust operating products and equipment to ensure smooth and unhindered operation.
I. Clean and perform maintenance on installed Work as frequently as necessary through remainder of construction. Lubricate operable components recommended by manufacturer.

## 3.4 PROTECTING INSTALLED CONSTRUCTION

A. Protect installed Work and provide special protection where specified.
B. Provide temporary and removable protection for installed products. Control activity in immediate Work area to prevent damage.
C. Provide protective coverings at walls, projections, jambs, sills, and soffits of openings.
D. Use durable sheet materials to protect finished floors, stairs, and other surfaces from traffic, dirt, wear, damage, or movement of heavy objects.

E. Prohibit traffic or storage upon waterproofed or roofed surfaces. When traffic or activity necessary, obtain recommendations for protection from waterproofing or roofing material manufacturer.
F. Prohibit traffic from landscaped areas.

3.5 FINAL CLEANING

A. Execute final cleaning before final Project assessment. Employ experienced personnel or professional cleaning firm.
B. Clean interior and exterior glass and surfaces exposed to view. Remove temporary labels, stains, and foreign substances. Polish transparent and glossy surfaces and vacuum carpeted and soft surfaces.
C. Clean equipment and fixtures to sanitary condition with appropriate cleaning materials.
D. Clean filters of operating equipment.
E. Clean debris from roofs, gutters, downspouts, and drainage systems.
F. Clean site. Sweep paved areas and rake landscaped surfaces clean.
G. Remove waste and surplus materials, rubbish, and construction facilities from site.

END OF SECTION

# SECTION 03 10 00 - CONCRETE FORMING AND ACCESSORIES

## PART 1 - GENERAL

### 1.1 SUMMARY

A. Section Includes:
   1. Form-facing material for cast-in-place concrete.
   2. Shoring, bracing, and anchoring.

B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.
   2. Section 32 13 13 "Concrete Paving" for formwork related to concrete pavement and walks.

### 1.2 DEFINITIONS

A. Form-Facing Material: Temporary structure or mold for the support of concrete while the concrete is setting and gaining sufficient strength to be self-supporting.

B. Formwork: The total system of support of freshly placed concrete including the mold or sheathing that contacts the concrete as well as supporting members, hardware, and necessary bracing.

### 1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.
   1. Review the following:
      a. Special inspection and testing and inspecting agency procedures for field quality control.
      b. Construction, movement, contraction, and isolation joints
      c. Forms and form-removal limitations.
      d. Anchor rod and anchorage device installation tolerances.

### 1.4 ACTION SUBMITTALS

A. Product Data: For each of the following:
   1. Exposed surface form-facing material.
   2. Concealed surface form-facing material.
   3. Form ties.
   4. Form-release agent.

### 1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For testing and inspection agency.

B. Field quality-control reports.

C. Minutes of preinstallation conference.

## PART 2 - PRODUCTS

### 2.1 PERFORMANCE REQUIREMENTS

A. Concrete Formwork: Design, engineer, erect, shore, brace, and maintain formwork, shores, and reshores in accordance with ACI 301 to support vertical, lateral, static, and dynamic loads, and construction loads that might be applied, until structure can support such loads so that resulting concrete conforms to the required shapes, lines, and dimensions.
   1. Design wood panel forms in accordance with APA's "Concrete Forming Design/Construction Guide."
   2. Design formwork to limit deflection of form-facing material to 1/240 of center-to-center spacing of supports.

### 2.2 FORM-FACING MATERIALS

A. As-Cast Surface Form-Facing Material:
   1. Provide continuous, true, and smooth concrete surfaces.
   2. Furnish in largest practicable sizes to minimize number of joints.
   3. Acceptable Materials: As required to comply with Surface Finish designations specified in Section 03 30 00 "Cast-In-Place Concrete" and as follows:
      a. Plywood, metal, or other approved panel materials.
      b. Exterior-grade plywood panels, suitable for concrete forms, complying with DOC PS 1 and as follows:
         1) APA Structural 1 Plyform, B-B or better; mill oiled and edge sealed.

B. Concealed Surface Form-Facing Material: Lumber, plywood, metal, plastic, or another approved material.
   1. Provide lumber dressed on at least 2 edges and 1 side for tight fit.

### 2.3 RELATED MATERIALS

A. Chamfer Strips: Wood, metal, PVC, or rubber strips, 3/4-inch by 3/4-inch, minimum.

B. Form-Release Agent: Commercially formulated form-release agent that does not bond with, stain, or adversely affect concrete surfaces and does not impair subsequent treatments of concrete surfaces.
   1. Formulate form-release agent with rust inhibitor for steel form-facing materials.
   2. Form release agent for form liners shall be acceptable to form liner manufacturer.

C. Form Ties: Factory-fabricated, removable or snap-off, glass-fiber-reinforced plastic, or metal form ties designed to resist lateral pressure of fresh concrete on forms and to prevent spalling of concrete on removal.
   1. Furnish ties that, when removed, leave holes no larger than 1 inch in diameter in concrete surface.

## PART 3 - EXECUTION

### 3.1 INSTALLATION OF FORMWORK

A. Comply with ACI 301.

B. Construct formwork so concrete members and structures are of size, shape, alignment, elevation, and position indicated within tolerance limits of ACI 117, and to comply with the Surface Finish designations specified in Section 03 30 00 "Cast-In-Place Concrete" for as-cast finishes.

C. Limit concrete surface irregularities as follows:
   1. Surface Finish-2.0: ACI 117 Class B, 1/4-inch.

D. Construct forms tight enough to prevent loss of concrete mortar.
   1. Minimize joints.
   2. Exposed Concrete: Symmetrically align joints in forms.

E. Construct removable forms for easy removal without hammering or prying against concrete surfaces.
   1. Provide crush or wrecking plates where stripping may damage cast-concrete surfaces.
   2. Provide top forms for inclined surfaces steeper than 1.5 horizontal to 1 vertical.
   3. Install keyways, reglets, recesses, and other accessories for easy removal.

F. Do not use rust-stained, steel, form-facing material.

G. Set edge forms, bulkheads, and intermediate screed strips for slabs to achieve required elevations and slopes in finished concrete surfaces.
   1. Provide and secure units to support screed strips
   2. Use strike-off templates or compacting-type screeds.

H. Provide temporary openings for cleanouts and inspection ports where interior area of formwork is inaccessible.
   1. Close openings with panels tightly fitted to forms and securely braced to prevent loss of concrete mortar.
   2. Locate temporary openings in forms at inconspicuous locations.

I. Chamfer exterior corners and edges of permanently exposed concrete.

J. At construction joints, overlap forms onto previously placed concrete not less than 12 inches.

K. Form openings, chases, offsets, sinkages, keyways, reglets, blocking, screeds, and bulkheads required in the Work.
   1. Determine sizes and locations from trades providing such items.
   2. Obtain written approval of Engineer prior to forming openings not indicated on Drawings.

L. Construction and Movement Joints:
   1. Construct joints true to line with faces perpendicular to surface plane of concrete.
   2. Install so strength and appearance of concrete are not impaired at locations indicated or as approved by Architect.
   3. Place joints perpendicular to main reinforcement.
   4. Locate joints for beams, slabs, joists, and girders in the middle third of spans.
      a. Offset joints in girders a minimum distance of twice the beam width from a beam-girder intersection.
   5. Locate horizontal joints in walls and columns at underside of floors, slabs, beams, and girders and at the top of footings or floor slabs.
   6. Space vertical joints in walls as indicated on Drawings.
      a. Locate joints beside piers integral with walls, near corners, and in concealed locations where possible.

M. Provide temporary ports or openings in formwork where required to facilitate cleaning and inspection.

1. Locate ports and openings in bottom of vertical forms, in inconspicuous location, to allow flushing water to drain.
2. Close temporary ports and openings with tight-fitting panels, flush with inside face of form, and neatly fitted so joints will not be apparent in exposed concrete surfaces.

N. Clean forms and adjacent surfaces to receive concrete. Remove chips, wood, sawdust, dirt, and other debris just before placing concrete.

O. Retighten forms and bracing before placing concrete, as required, to prevent mortar leaks and maintain proper alignment.

P. Coat contact surfaces of forms with form-release agent, according to manufacturer's written instructions, before placing reinforcement.

## 3.2 INSTALLATION OF EMBEDDED ITEMS

A. Place and secure anchorage devices and other embedded items required for adjoining Work that is attached to or supported by cast-in-place concrete.
1. Use setting Drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
2. Install anchor rods, accurately located, to elevations required and complying with tolerances in Section 7.5 of AISC 303.
3. Clean embedded items immediately prior to concrete placement.

## 3.3 REMOVING AND REUSING FORMS

A. Formwork for sides of beams, walls, columns, and similar parts of the Work that does not support weight of concrete may be removed after cumulatively curing at not less than 50 degrees F for 24 hours after placing concrete. Concrete has to be hard enough to not be damaged by form-removal operations, and curing and protection operations need to be maintained.

B. Clean and repair surfaces of forms to be reused in the Work.
1. Split, frayed, delaminated, or otherwise damaged form-facing material are unacceptable for exposed surfaces.
2. Apply new form-release agent.

C. When forms are reused, clean surfaces, remove fins and laitance, and tighten to close joints.
1. Align and secure joints to avoid offsets.
2. Do not use patched forms for exposed concrete surfaces unless approved by Architect.

## 3.4 FIELD QUALITY CONTROL

A. Special Inspections: Owner will engage a special inspector and qualified testing and inspecting agenc to perform field tests and inspections and prepare test reports.

B. Inspections:
1. Inspect formwork for shape, location, and dimensions of the concrete member being formed.

END OF SECTION

# SECTION 03 20 00 - CONCRETE REINFORCING

## PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Steel reinforcement bars.
B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.

1.2 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.
   1. Review the following:
      a. Special inspection and testing and inspecting agency procedures for field quality control.
      b. Construction contraction and isolation joints.
      c. Steel-reinforcement installation.

1.3 ACTION SUBMITTALS

A. Product Data: For the following:
   1. Each type of steel reinforcement.
   2. Bar supports.
   3. Mechanical splice couplers.
B. Sustainable Design Submittals.
C. Shop Drawings: Comply with ACI SP-066:
   1. Include placing Drawings that detail fabrication, bending, and placement.
   2. Include bar sizes, lengths, materials, grades, bar schedules, stirrup spacing, bent bar diagrams, bar arrangement, location of splices, lengths of lap splices, details of mechanical splice couplers, tie spacing, and supports for concrete reinforcement.
D. Construction Joint Layout: Indicate proposed construction joints required to build the structure.
   1. Location of construction joints is subject to approval of the Architect.

1.4 INFORMATIONAL SUBMITTALS

A. Qualification Statements: For testing and inspection agency.
B. Material Test Reports: For the following from a qualified testing agency:
   1. Steel Reinforcement:
      a. For reinforcement to be welded, mill test analysis for chemical composition and carbon equivalent of the steel in accordance with ASTM A706/A706M.
   2. Mechanical splice couplers.
C. Field quality-control reports.
D. Minutes of preinstallation conference.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Steel Reinforcement: Deliver, store, and handle steel reinforcement to prevent bending and damage.
   1. Store reinforcement to avoid contact with earth.

**PART 2 - PRODUCTS**

2.1 STEEL REINFORCEMENT

A. Reinforcing Bars: ASTM A615, Grade 60, deformed.

2.2 REINFORCEMENT ACCESSORIES

A. Joint Dowel Plate: PNA-Diamond Dowel system.
B. Bar Supports: Bolsters, chairs, spacers, and other devices for spacing, supporting, and fastening reinforcing bars and welded-wire reinforcement in place.
   1. Manufacture bar supports from steel wire or plastic in accordance with CRSI's "Manual of Standard Practice."
      a. For concrete surfaces exposed to view, where legs of wire bar supports contact forms, use CRSI Class 1 plastic-protected steel wire, all-plastic bar supports, or CRSI Class 2 stainless steel bar supports.
C. Mechanical Splice Couplers: ACI 318 Type 2, same material of reinforcing bar being spliced; standard bar lock**.**
D. Steel Tie Wire: ASTM A1064, annealed steel, not less than 0.0508-inch in diameter.
   1. Finish: Plain, ASTM A884, Class A, Type 1.

2.3 FABRICATING REINFORCEMENT

A. Fabricate steel reinforcement according to CRSI's "Manual of Standard Practice."

**PART 3 - EXECUTION**

3.1 PREPARATION

A. Protection of In-Place Conditions:
   1. Do not cut or puncture vapor retarder.
   2. Repair damage and reseal vapor retarder before placing concrete.
B. Clean reinforcement of loose rust and mill scale, earth, ice, and other foreign materials that reduce bond to concrete.

3.2 INSTALLATION OF STEEL REINFORCEMENT

A. Comply with CRSI's "Manual of Standard Practice" for placing and supporting reinforcement.
B. Accurately position, support, and secure reinforcement against displacement.
   1. Locate and support reinforcement with bar supports to maintain minimum concrete cover.
   2. Do not tack weld crossing reinforcing bars.

C. Preserve clearance between bars of not less than 1 inch, not less than one bar diameter, or not less than 1-1/3-times size of large aggregate, whichever is greater.
D. Provide concrete coverage in accordance with ACI 318.
E. Set wire ties with ends directed into concrete not toward exposed concrete surfaces.
F. Splices: Lap splices as indicated on Drawings.
   1. Bars indicated to be continuous and all vertical bars shall be lapped not less than 36 bar diameters at splices or 24 inches, whichever is greater.
   2. Stagger splices in accordance with ACI 318.
   3. Mechanical Splice Couplers: Install in accordance with manufacturer's instructions.

3.3 JOINTS

A. Construction Joints: Install so strength and appearance of concrete are not impaired at locations indicated or as approved by Architect.
   1. Place joints perpendicular to main reinforcement.
   2. Do not continue reinforcement across construction joints unless otherwise indicated.
B. Doweled Joints: Install dowel plates and support assemblies at joints where indicated. Lubricate or asphalt coat one-half of plates length to prevent concrete bonding to one side of joint.

3.4 INSTALLATION TOLERANCES

A. Comply with ACI 117.

3.5 FIELD QUALITY CONTROL

A. Special Inspections: Owner will engage a special inspector and qualified testing and inspecting agency to perform field tests and inspections and prepare test reports.
B. Inspections:
   1. Steel-reinforcement placement.
   2. Steel-reinforcement mechanical splice couplers.

END OF SECTION

# SECTION 03 30 00 - CAST-IN-PLACE CONCRETE

## PART 1 - GENERAL

### 1.1 SUMMARY

A. Section Includes:
   1. Cast-in-place concrete, including concrete materials, mixture design, placement procedures, and finishes.

B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.
   2. Section 03 10 00 "Concrete Forming and Accessories" for form-facing materials.
   3. Section 03 20 00 "Concrete Reinforcing" for steel reinforcing bars.
   4. Section 31 20 00 "Earth Moving" for drainage fill under slabs-on-ground.
   5. Section 32 13 13 "Concrete Paving" for concrete pavement and walks.

### 1.2 DEFINITIONS

A. Cementitious Materials: Portland cement alone or in combination with one or more of the following: blended hydraulic cement, fly ash; materials subject to compliance with requirements.

B. Water/Cement Ratio (w/cm): The ratio by weight of water to cementitious materials.

### 1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.
   1. Require representatives of each entity directly concerned with cast-in-place concrete to attend including the following:
      a. Contractor's superintendent.
      b. Independent testing agency responsible for concrete design mixtures.
      c. Ready-mix concrete manufacturer.
      d. Concrete Subcontractor.
   2. Review the following:
      a. Special inspection and testing and inspecting agency procedures for field quality control.
      b. Construction joints, control joints, isolation joints, and joint-filler strips.
      c. Semirigid joint fillers.
      d. Vapor-retarder installation.
      e. Anchor rod and anchorage device installation tolerances.
      f. Cold and hot weather concreting procedures.
      g. Concrete finishes and finishing.
      h. Curing procedures.
      i. Forms and form-removal limitations.
      j. Methods for achieving specified floor and slab flatness and levelness.
      k. Floor and slab flatness and levelness measurements.
      l. Concrete repair procedures.
      m. Concrete protection.

1.4 ACTION SUBMITTALS

A. Product Data: For each of the following.
   1. Portland cement.
   2. Fly ash.
   3. Blended hydraulic cement.
   4. Aggregates.
   5. Admixtures:
      a. Include limitations of use including restrictions on cementitious materials, supplementary cementitious materials, air entrainment, aggregates, temperature at time of concrete placement, relative humidity at time of concrete placement, curing conditions, and use of other admixtures.
   6. Vapor retarders.
   7. Curing materials.
      a. Include documentation from color pigment manufacturer, indicating that proposed methods of curing are recommended by color pigment manufacturer.
   8. Joint fillers.
   9. Repair materials.

B. Sustainable Design Submittals:

C. Design Mixtures: For each concrete mixture, include the following:
   1. Mixture identification.
   2. Minimum 28-day compressive strength.
   3. Durability exposure class.
   4. Maximum w/cm.
   5. Slump limit.
   6. Air content.
   7. Nominal maximum aggregate size.
   8. Indicate amounts of mixing water to be withheld for later addition at Project site if permitted.
   9. Intended placement method.
   10. Submit alternate design mixtures when characteristics of materials, Project conditions, weather, test results, or other circumstances warrant adjustments.

D. Shop Drawings:
   1. Construction Joint Layout: Indicate proposed construction joints required to construct the structure.
      a. Location of construction joints is subject to approval of the Engineer.

E. Concrete Schedule: For each location of each Class of concrete indicated in "Concrete Mixtures" Article including the following:
   1. Concrete Class designation.
   2. Location within Project.
   3. Exposure Class designation.
   4. Formed Surface Finish designation and final finish.
   5. Final finish for floors.
   6. Curing process.

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For the following:
   1. Installer: Include copies of applicable ACI certificates.

2. Ready-mixed concrete manufacturer.
3. Testing agency: Include copies of applicable ACI certificates.

B. Material Certificates: For each of the following signed by manufacturers:
1. Cementitious materials.
2. Admixtures.
3. Curing compounds.
4. Bonding agents.
5. Adhesives.
6. Vapor retarders.
7. Semirigid joint filler.
8. Joint-filler strips.
9. Repair materials.

C. Material Test Reports: For the following from a qualified testing agency:
1. Portland cement.
2. Fly ash.
3. Blended hydraulic cement.
4. Aggregates.
5. Admixtures.

D. Floor surface flatness and levelness measurements report indicating compliance with specified tolerances.

E. Research Reports:
1. For concrete admixtures in accordance with ICC's Acceptance Criteria AC198.

F. Preconstruction Test Reports: For each mix design.

G. Field quality-control reports.

H. Minutes of preinstallation conference.

## 1.6 QUALITY ASSURANCE

A. Installer Qualifications: A qualified installer who employs Project personnel qualified as an ACI-certified Flatwork Technician and Finisher and a supervisor who is a certified ACI Flatwork Concrete Finisher/Technician or an ACI Concrete Flatwork Technician.
1. Post-Installed Concrete Anchors Installers: ACI-certified Adhesive Anchor Installer.

B. Ready-Mixed Concrete Manufacturer Qualifications: A firm experienced in manufacturing ready-mixed concrete products and that complies with ASTM C94 requirements for production facilities and equipment.
1. Manufacturer certified in accordance with NRMCA's "Certification of Ready Mixed Concrete Production Facilities."

## 1.7 PRECONSTRUCTION TESTING

A. Preconstruction Testing Service: Engage a qualified testing agency to perform preconstruction testing on each concrete mixture.
1. Include the following information in each test report:
a. Admixture dosage rates.
b. Slump.
c. Air content.
d. Seven-day compressive strength.
e. 28-day compressive strength.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Comply with ASTM C94 and ACI 301.

1.9 FIELD CONDITIONS

A. Cold-Weather Placement: Comply with ACI 301 and ACI 306.1 and as follows.
   1. Protect concrete Work from physical damage or reduced strength that could be caused by frost, freezing actions, or low temperatures.
   2. When average high and low temperature is expected to fall below 40 degrees F for 3 successive days, maintain delivered concrete mixture temperature within the temperature range required by ACI 301.
   3. Do not use frozen materials or materials containing ice or snow.
   4. Do not place concrete in contact with surfaces less than 35 degrees F, other than reinforcing steel.
   5. Do not use calcium chloride, salt, or other materials containing antifreeze agents or chemical accelerators unless otherwise specified and approved in mixture designs.

B. Hot-Weather Placement: Comply with ACI 301 and ACI 305.1, and as follows:
   1. Maintain concrete temperature at time of discharge to not exceed 95 degrees F.
   2. Fog-spray forms, steel reinforcement, and subgrade just before placing concrete. Keep subgrade uniformly moist without standing water, soft spots, or dry areas.

**PART 2 - PRODUCTS**

2.1 CONCRETE, GENERAL

A. ACI Publications: Comply with ACI 301 unless modified by requirements in the Contract Documents.

2.2 CONCRETE MATERIALS

A. Cementitious Materials:
   1. Portland Cement: ASTM C150, gray.
   2. Fly Ash: ASTM C618, Class F.
   3. Blended Hydraulic Cement: ASTM C595, Type IS, portland blast-furnace slag Type IL, portland-limestone cement.

B. Normal-Weight Aggregates: ASTM C33, Class 3S coarse aggregate or better, graded. Provide aggregates from a single source.
   1. Alkali-Silica Reaction: Comply with one of the following:
      a. Expansion Result of Aggregate: Not more than 0.04-percent at one-year when tested in accordance with ASTM C1293.
      b. Expansion Results of Aggregate and Cementitious Materials in Combination: Not more than 0.10-percent at an age of 16 days when tested in accordance with ASTM C1567.
      c. Alkali Content in Concrete: Not more than pounds per cubic yardfour for moderately reactive aggregate or pounds per cubic yardthree for highly reactive aggregate, when tested in accordance with ASTM C1293 and categorized in accordance with ASTM C1778, based on alkali content being calculated in accordance with ACI 301.

2. Maximum Coarse-Aggregate Size: One-and-three-fourth inch nominal.
3. Fine Aggregate: Free of materials with deleterious reactivity to alkali in cement.

C. Chemical Admixtures: Certified by manufacturer to be compatible with other admixtures that do not contribute water-soluble chloride ions exceeding those permitted in hardened concrete. Do not use calcium chloride or admixtures containing calcium chloride.
1. Water-Reducing Admixture: ASTM C494, Type A.
2. High-Range, Water-Reducing Admixture: ASTM C494, Type F.

## 2.3 VAPOR RETARDERS

A. Sheet Vapor Retarder, Class A: ASTM E1745, Class A, except with maximum water-vapor permeance of not less than 20-mils--thick. Include manufacturer's recommended adhesive or pressure-sensitive tape.

## 2.4 CURING MATERIALS

A. Evaporation Retarder: Waterborne, monomolecular film forming, manufactured for application to fresh concrete.
B. Absorptive Cover: AASHTO M 182, Class 2, burlap cloth made from jute or kenaf, weighing approximately 9 ouncees per square yard when dry.
C. Moisture-Retaining Cover: ASTM C171, polyethylene film burlap-polyethylene sheet.
1. Color:
a. Ambient Temperature Below 50 degrees F: Black.
b. Ambient Temperature between 50 degrees F and 85 degrees F: Any color.
c. Ambient Temperature Above 85 degrees F: White.
D. Water: Potable or complying with ASTM C1602.
E. Clear, Solvent-Borne, Membrane-Forming, Curing and Sealing Compound: ASTM C1315, Type 1, Class A.

## 2.5 RELATED MATERIALS

A. Expansion- and Isolation-Joint-Filler Strips: ASTM D1751, asphalt-saturated cellulosic fiber.
B. Semirigid Joint Filler: Two-component, semirigid, 100 percent solids, epoxy resin with a Type A shore durometer hardness of 80 in accordance with ASTM D2240.
C. Bonding Agent: ASTM C1059, Type II, nonredispersible, acrylic emulsion or styrene butadiene.
D. Epoxy Bonding Adhesive: ASTM C881, two-component epoxy resin, capable of humid curing and bonding to damp surfaces, of class suitable for application temperature and of grade and class to suit requirements, and as follows:
1. Types IV and V, load bearing, for bonding hardened or freshly mixed concrete to hardened concrete.

## 2.6 CONCRETE MIXTURES, GENERAL

A. Prepare design mixtures for each type and strength of concrete, proportioned on the basis of laboratory trial mixture or field test data, or both, in accordance with ACI 301.
1. Use a qualified testing agency for preparing and reporting proposed mixture designs, based on laboratory trial mixtures.
B. Cementitious Materials: Limit percentage, by weight, of cementitious materials other than portland cement in concrete as follows:

1. Fly Ash: 25 percent by mass.

C. Admixtures: Use admixtures in accordance with manufacturer's written instructions.
   1. Use water-reducing, high-range water-reducing, or plasticizing admixture in concrete, as required, for placement and workability.
   2. Use water-reducing admixture in pumped concreteand concrete with a w/cm below 0.50.

2.7 CONCRETE MIXTURES

A. Class A: Normal-weight concrete used for footings, grade beams, and tie beams.
   1. Exposure Class: ACI 318 F2.
   2. Minimum Compressive Strength: 4,000 psi at 28 days.
   3. Maximum w/cm: .50.
   4. Slump Limit: 4 inches, plus or minus 1 inch.

B. Class B: Normal-weight concrete used for foundation walls.
   1. Exposure Class: ACI 318.
   2. Minimum Compressive Strength: 4,000 psi at 28 days.
   3. Maximum w/cm: 0.50.
   4. Slump Limit: 6 inches, plus or minus 1 inch for concrete with verified slump of 3 inches plus or minus 1 inch before adding high-range water-reducing admixture or plasticizing admixture at Project Site.

C. Class C: Normal-weight concrete used for interior slabs-on-ground.
   1. Exposure Class: ACI 318 F0.
   2. Minimum Compressive Strength: 4,000 psi at 28 days.
   3. Maximum w/cm: 0.45.
   4. Minimum Cementitious Materials Content: Based on the requirements of ACI 301 for floors and relatee to nominal maximu aggregate sizes.
   5. Slump Limit: 6 inches, plus or minus 1 inch for concrete with verified slump of 3 inches plus or minus 1 inch before adding high-range water-reducing admixture or plasticizing admixture at Project site.
   6. Air Content:
      a. Do not use an air-entraining admixture or allow total air content to exceed 3 percent for concrete used in trowel-finished floors.

2.8 CONCRETE MIXING

A. Ready-Mixed Concrete: Measure, batch, mix, and deliver concrete in accordance with ASTM C94 and ASTM C1116, and furnish batch ticket information.

**PART 3 - EXECUTION**

3.1 EXAMINATION

A. Verification of Conditions:
   1. Before placing concrete, verify that installation of concrete forms, accessories, and reinforcement, and embedded items is complete and that required inspections have been performed.
   2. Do not proceed until unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Provide reasonable auxiliary services to accommodate field testing and inspections, acceptable to testing agency, including the following:
   1. Daily access to the Work.
   2. Incidental labor and facilities necessary to facilitate tests and inspections.
   3. Secure space for storage, initial curing, and field curing of test samples, including source of water and continuous electrical power at Project site during site curing period for test samples.
   4. Security and protection for test samples and for testing and inspection equipment at Project site.

3.3 INSTALLATION OF EMBEDDED ITEMS

A. Place and secure anchorage devices and other embedded items required for adjoining Work that is attached to or supported by cast-in-place concrete.
   1. Use setting Drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
   2. Install anchor rods, accurately located, to elevations required and complying with tolerances in Section 7.5 of ANSI/AISC 303.

3.4 INSTALLATION OF VAPOR RETARDER

A. Sheet Vapor Retarders: Place, protect, and repair sheet vapor retarder in accordance with ASTM E1643 and manufacturer's written instructions.
   1. Install vapor retarder with longest dimension parallel with direction of concrete pour.
   2. Face laps away from exposed direction of concrete pour.
   3. Lap vapor retarder Down footings and grade beams not less than 6 inches, sealing vapor retarder to concrete.
   4. Lap joints 6 inches and seal with manufacturer's recommended tape.
   5. Terminate vapor retarder at the top of floor slabs and grade beams sealing entire perimeter to floor slabs, grade beams, or foundation walls.
   6. Seal penetrations in accordance with vapor retarder manufacturer's instructions.
   7. Protect vapor retarder during placement of reinforcement and concrete.
      a. Repair damaged areas by patching with vapor retarder material, overlapping damages area by 6 inches on all sides, and sealing to vapor retarder.

3.5 JOINTS

A. Construct joints true to line, with faces perpendicular to surface plane of concrete.
B. Construction Joints: Coordinate with floor slab pattern and concrete placement sequence.
   1. Install so strength and appearance of concrete are not impaired, at locations indicated on Drawings or as approved by Engineer.
   2. Place joints perpendicular to main reinforcement.
      a. Cut reinforcement across construction joints unless otherwise indicated.
   3. Locate joints for beams, slabs, joists, and girders at third points of spans. Offset joints in girders a minimum distance of twice the beam width from a beam-girder intersection.

4. Locate horizontal joints in walls and columns at underside of floors, slabs, beams, and girders and at the top of footings or floor slabs.
5. Space vertical joints in walls as indicated on Drawings. Unless otherwise indicated on Drawings, locate vertical joints beside piers integral with walls, near corners, and in concealed locations where possible.
6. Use a bonding agent at locations where fresh concrete is placed against hardened or partially hardened concrete surfaces.

C. Control Joints in Slabs-on-Ground: Form weakened-plane control joints, sectioning concrete into areas as indicated. Construct control joints for a depth equal to at least one-fourth of concrete thickness as follows:
1. Sawed Joints: Form control joints with "early entry" proccess equipped with shatterproof abrasive or diamond-rimmed blades. Cut 1/8-inch-wide joints into concrete when cutting action does not tear, abrade, or otherwise damage surface and before concrete develops random cracks.

D. Isolation Joints in Slabs-on-Ground: After removing formwork, install joint-filler strips at slab junctions with vertical surfaces, such as column pedestals, foundation walls, grade beams, and other locations, as indicated.
1. Extend joint-filler strips full width and depth of joint, terminating flush with finished concrete surface unless otherwise indicated on Drawings.
2. Terminate full-width joint-filler strips not less than 1/2-inch or more than 1-inch below finished concrete surface, where joint sealants are indicated.
3. Install joint-filler strips in lengths as long as practicable. Where more than one length is required, lace or clip sections together.

E. Doweled Joints:
1. Install dowel plates and support assemblies at joints where indicated on Drawings.
2. Lubricate or asphalt coat one-half of dowel plates length to prevent concrete bonding to one side of joint.

F. Dowel Plates: Install dowel plates at joints where indicated on Drawings.

## 3.6 CONCRETE PLACEMENT

A. Before placing concrete, verify that installation of formwork, reinforcement, embedded items, and vapor retarder is complete and that required inspections are completed.
1. Immediately prior to concrete placement, inspect vapor retarder for damage and deficient installation, and repair defective areas.
2. Provide continuous inspection of vapor retarder during concrete placement and make necessary repairs to damaged areas as Work progresses.

B. Notify Engineer and testing and inspection agencies 24 hours prior to commencement of concrete placement.

C. Do not add water to concrete during delivery, at Project site, but not to exceed the amount indicated on the concrete delivery ticket.
1. Do not add water to concrete after adding high-range water-reducing admixtures to mixture.

D. Before test sampling and placing concrete, water may be added at Project site, subject to limitations of ACI 301, but not to exceed the amount indicated on the concrete delivery ticket.
1. Do not add water to concrete after adding high-range water-reducing admixtures to mixture.

E. Deposit concrete continuously in one layer or in horizontal layers of such thickness that no new concrete is placed on concrete that has hardened enough to cause seams or planes of weakness.

1. If a section cannot be placed continuously, provide construction joints as indicated.
2. Deposit concrete to avoid segregation.
3. Deposit concrete in horizontal layers of depth not to exceed formwork design pressures and in a manner to avoid inclined construction joints.
4. Consolidate placed concrete with mechanical vibrating equipment in accordance with ACI 301.
    a. Do not use vibrators to transport concrete inside forms.
    b. Insert and withdraw vibrators vertically at uniformly spaced locations to rapidly penetrate placed layer and at least 6 inches into preceding layer.
    c. Do not insert vibrators into lower layers of concrete that have begun to lose plasticity.
    d. At each insertion, limit duration of vibration to time necessary to consolidate concrete, and complete embedment of reinforcement and other embedded items without causing mixture constituents to segregate.

F. Deposit and consolidate concrete for floors and slabs in a continuous operation, within limits of construction joints, until placement of a panel or section is complete.
1. Do not place concrete floors and slabs in a checkerboard sequence.
2. Consolidate concrete during placement operations, so concrete is thoroughly worked around reinforcement and other embedded items and into corners.
3. Maintain reinforcement in position on chairs during concrete placement.
4. Screed slab surfaces with a straightedge and strike off to correct elevations.
5. Level concrete, cut high areas, and fill low areas.
6. Slope surfaces uniformly to drains where required.
7. Begin initial floating using bull floats or darbies to form a uniform and open-textured surface plane, before excess bleedwater appears on the surface.
8. Do not further disturb slab surfaces before starting finishing operations.

## 3.7 FINISHING FORMED SURFACES

A. As-Cast Surface Finishes:
1. ACI 301 Surface Finish SF-2.0: As-cast concrete texture imparted by form-facing material, arranged in an orderly and symmetrical manner with a minimum of seams.
    a. Patch voids larger than 3/4-inch wide or 1/2-inch deep.
    b. Remove projections larger than 1/4-inch.
    c. Patch tie holes.
    d. Surface Tolerance: ACI 117 Class B.
    e. Locations: Apply to concrete surfaces exposed to public view.

B. Related Unformed Surfaces:
1. At tops of walls, horizontal offsets, and similar unformed surfaces adjacent to formed surfaces, strike off smooth and finish with a color and texture matching adjacent formed surfaces.
2. Continue final surface treatment of formed surfaces uniformly across adjacent unformed surfaces unless otherwise indicated.

## 3.8 FINISHING FLOORS AND SLABS

A. Comply with ACI 302.1R recommendations for screeding, restraightening, and finishing operations for concrete surfaces. Do not wet concrete surfaces.

B. Float Finish:

1. When bleedwater sheen has disappeared and concrete surface has stiffened sufficiently to permit operation of specific float apparatus, consolidate concrete surface with power-driven floats or by hand floating if area is small or inaccessible to power-driven floats.
2. Repeat float passes and restraightening until surface is left with a uniform, smooth, granular texture and complies with ACI 117 tolerances for conventional concrete.
3. Apply float finish to surfaces to receive trowel finish.

C. Trowel Finish:
1. After applying float finish, apply first troweling and consolidate concrete by hand or power-driven trowel.
2. Continue troweling passes and restraighten until surface is free of trowel marks and uniform in texture and appearance.
3. Grind smooth any surface defects that would telegraph through applied coatings or floor coverings.
4. Do not add water to concrete surface.
5. Do not apply hard-troweled finish to concrete, which has a total air content greater than 3 percent.
6. Apply a trowel finish to surfaces exposed to view or to be covered with resilient flooring, carpet, ceramic tile.
7. Finish surfaces to the following tolerances, in accordance with ASTM E1155, for a randomly trafficked floor surface:
   a. Slabs on Ground:
      1) Finish and measure surface so gap at any point between concrete surface and an unleveled, freestanding, 10-feet long straightedge resting on two high spots and placed anywhere on the surface does not exceed 1/4-inch and also no more than 1/16-inch in 2 feet.

D. Broom Finish: Apply a broom finish to exterior concrete platforms, steps, ramps, and locations indicated on Drawings.
1. Immediately after float finishing, slightly roughen trafficked surface by brooming with fiber-bristle broom perpendicular to main traffic route.
2. Coordinate required final finish with Engineer before application.

## 3.9 INSTALLATION OF MISCELLANEOUS CONCRETE ITEMS

A. Filling In:
1. Fill in holes and openings left in concrete structures after Work of other trades is in place unless otherwise indicated.
2. Mix, place, and cure concrete, as specified, to blend with in-place construction.
3. Provide other miscellaneous concrete filling indicated or required to complete the Work.

B. Curbs: Provide monolithic finish to interior curbs by stripping forms while concrete is still green and by steel-troweling surfaces to a hard, dense finish with corners, intersections, and terminations slightly rounded.

C. Equipment Bases and Foundations:
1. Coordinate sizes and locations of concrete bases with actual equipment provided.
2. Construct concrete bases 6 inches high unless otherwise indicated on Drawings, and extend base not less than 6 inches in each direction beyond the maximum dimensions of supported equipment unless otherwise indicated on Drawings, or unless required for seismic anchor support.
3. Minimum Compressive Strength: 4,000 psi 3,000 psi at 28 days.

4. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch centers around the full perimeter of concrete base.
5. For supported equipment, install epoxy-coated anchor bolts that extend through concrete base and anchor into structural concrete substrate.
6. Prior to pouring concrete, place and secure anchorage devices.
    a. Use setting Drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
    b. Cast anchor-bolt insert into bases.
    c. Install anchor bolts to elevations required for proper attachment to supported equipment.

## 3.10 CONCRETE CURING

A. Protect freshly placed concrete from premature drying and excessive cold or hot temperatures.
    1. Comply with ACI 301 and ACI 306.1 for cold weather protection during curing.
    2. Comply with ACI 301 and ACI 305.1 for hot-weather protection during curing.

B. Curing Unformed Surfaces: Comply with ACI 308.1 as follows:
    1. Begin curing immediately after finishing concrete.
    2. Interior Concrete Floors:
        a. Floors to Receive Floor Coverings Specified in Other Sections: Contractor has option of the following:
            1) Absorptive Cover: As soon as concrete has sufficient set to permit application without marring concrete surface, install prewetted absorptive cover over entire area of floor.
                a) Lap edges and ends of absorptive cover not less than 12 inches.
                b) Maintain absorptive cover water saturated, and in place, for duration of curing period, but not less than 7 days.
            2) Moisture-Retaining-Cover Curing: Cover concrete surfaces with moisture-retaining cover for curing concrete, placed in widest practicable width, with sides and ends lapped at least 12 inches, and sealed by waterproof tape or adhesive.
                a) Immediately repair any holes or tears during curing period, using cover material and waterproof tape.
                b) Cure for not less than 7 days.
        b. Floors to Receive Curing Compound after moist cure:
            1) Apply uniformly in continuous operation by power spray or roller in accordance with manufacturer's written instructions.
            2) Recoat areas subjected to heavy rainfall within three hours after initial application.
            3) Maintain continuity of coating, and repair damage during curing period.
            4) Removal: After curing period has elapsed, remove curing compound without damaging concrete surfaces by method recommended by curing compound manufacturer unless manufacturer certifies curing compound does not interfere with bonding of floor covering used on Project.

3.11 TOLERANCES

A. Conform to ACI 117.

3.12 JOINT FILLING

A. Prepare, clean, and install joint filler in accordance with manufacturer's written instructions.
   1. Defer joint filling until concrete has aged at least one month.
   2. Do not fill joints until construction traffic has permanently ceased.
B. Remove dirt, debris, saw cuttings, curing compounds, and sealers from joints; leave contact faces of joints clean and dry.
C. Install semirigid joint filler full depth in saw-cut joints and at least 2 inches deep in formed joints.
D. Overfill joint, and trim joint filler flush with top of joint after hardening.

3.13 CONCRETE SURFACE REPAIRS

A. Defective Concrete:
   1. Repair and patch defective areas when approved by Engineer.
   2. Remove and replace concrete that cannot be repaired and patched to Engineer's approval.
B. Patching Mortar: Mix dry-pack patching mortar, consisting of one part portland cement to two and one-half parts fine aggregate passing a No. 16 sieve, using only enough water for handling and placing.
C. Repairing Formed Surfaces: Surface defects include color and texture irregularities, cracks, spalls, air bubbles, honeycombs, rock pockets, fins and other projections on the surface, and stains and other discolorations that cannot be removed by cleaning.
   1. Immediately after form removal, cut out honeycombs, rock pockets, and voids more than 1/2-inch in any dimension to solid concrete.
      a. Limit cut depth to 3/4-inch.
      b. Make edges of cuts perpendicular to concrete surface.
      c. Clean, dampen with water, and brush-coat holes and voids with bonding agent.
      d. Fill and compact with patching mortar before bonding agent has dried.
      e. Fill form-tie voids with patching mortar or cone plugs secured in place with bonding agent.
   2. Repair defects on surfaces exposed to view by blending white portland cement and standard portland cement, so that, when dry, patching mortar matches surrounding color.
      a. Patch a test area at inconspicuous locations to verify mixture and color match before proceeding with patching.
      b. Compact mortar in place and strike off slightly higher than surrounding surface.
   3. Repair defects on concealed formed surfaces that will affect concrete's durability and structural performance as determined by Engineer.
D. Repairing Unformed Surfaces:
   1. Test unformed surfaces, such as floors and slabs, for finish, and verify surface tolerances specified for each surface.
      a. Correct low and high areas.

b. Test surfaces sloped to drain for trueness of slope and smoothness; use a sloped template.

2. Repair finished surfaces containing surface defects, including spalls, popouts, honeycombs, rock pockets, crazing, and cracks in excess of 0.01-inch wide or that penetrate to reinforcement or completely through unreinforced sections regardless of width, and other objectionable conditions.
3. After concrete has cured at least 14 days, correct high areas by grinding.
4. Correct localized low areas during, or immediately after, completing surface-finishing operations by cutting out low areas and replacing with patching mortar.
   a. Finish repaired areas to blend into adjacent concrete.
5. Repair defective areas, except random cracks and single holes 1-inch or less in diameter, by cutting out and replacing with fresh concrete.
   a. Remove defective areas with clean, square cuts, and expose steel reinforcement with at least a 3/4-inch clearance all around.
   b. Dampen concrete surfaces in contact with patching concrete and apply bonding agent.
   c. Mix patching concrete of same materials and mixture as original concrete, except without coarse aggregate.
   d. Place, compact, and finish to blend with adjacent finished concrete.
   e. Cure in same manner as adjacent concrete.
6. Repair random cracks and single holes 1-inch or less in diameter with patching mortar.
   a. Groove top of cracks and cut out holes to sound concrete, and clean off dust, dirt, and loose particles.
   b. Dampen cleaned concrete surfaces and apply bonding agent.
   c. Place patching mortar before bonding agent has dried.
   d. Compact patching mortar and finish to match adjacent concrete.
   e. Keep patched area continuously moist for at least 72 hours.

E. Perform structural repairs of concrete, subject to Engineer's approval, using epoxy adhesive and patching mortar.

F. Repair materials and installation not specified above may be used, subject to Engineer's approval.

## 3.14 FIELD QUALITY CONTROL

A. Special Inspections: Owner will engage a special inspector to perform field tests and inspections and prepare testing and inspection reports.

B. Testing Agency: Owner will engage a qualified testing and inspecting agency to perform tests and inspections and to submit reports.
   1. Testing agency shall be responsible for providing curing container for composite samples on Site and verifying that field-cured composite samples are cured in accordance with ASTM C31.
   2. Testing agency shall immediately report to Engineer, Contractor, and concrete manufacturer any failure of Work to comply with Contract Documents.
   3. Testing agency shall report results of tests and inspections, in writing, to Owner, Engineer, Contractor, and concrete manufacturer within 48 hours of inspections and tests.
      a. Test reports shall include reporting requirements of ASTM C31, ASTM C39, and ACI 301, including the following as applicable to each test and inspection:

1) Project name.
2) Name of testing agency.
3) Names and certification numbers of field and laboratory technicians performing inspections and testing.
4) Name of concrete manufacturer.
5) Date and time of inspection, sampling, and field testing.
6) Date and time of concrete placement.
7) Location in Work of concrete represented by samples.
8) Date and time sample was obtained.
9) Truck and batch ticket numbers.
10) Design compressive strength at 28 days.
11) Concrete mixture designation, proportions, and materials.
12) Field test results.
13) Information on storage and curing of samples before testing, including curing method and maximum and minimum temperatures during initial curing period.
14) Type of fracture and compressive break strengths at 7 days and 28 days.

C. Batch Tickets: For each load delivered, submit three copies of batch delivery ticket to testing agency, indicating quantity, mix identification, admixtures, design strength, aggregate size, design air content, design slump at time of batching, and amount of water that can be added at Project site.

D. Inspections:
1. Headed bolts and studs.
2. Verification of use of required design mixture.
3. Concrete placement, including conveying and depositing.
4. Curing procedures and maintenance of curing temperature.
5. Batch Plant Inspections: On a random basis, as determined by Engineer.

E. Concrete Tests: Testing of composite samples of fresh concrete obtained in accordance with ASTM C 172 shall be performed in accordance with the following requirements:
1. Testing Frequency: Obtain one composite sample for each day's pour of each concrete mixture exceeding 5 cubic yards, but less than 25 cubic yards, plus one set for each additional 50 cubic yards or fraction thereof.
a. When frequency of testing provides fewer than five compressive-strength tests for each concrete mixture, testing shall be conducted from at least five randomly selected batches or from each batch if fewer than five are used.
2. Slump: ASTM C143:
a. One test at point of placement for each composite sample, but not less than one test for each day's pour of each concrete mixture.
b. Perform additional tests when concrete consistency appears to change.
3. Concrete Temperature: ASTM C1064/C1064M:
a. One test hourly when air temperature is 40 degrees F and below or 80 degrees F and above, and one test for each composite sample.
4. Compression Test Specimens: ASTM C31/C31M:
a. Cast and laboratory cure two sets of four 6-inch by 12-inch or 4-inch by 8-inch cylinder specimens for each composite sample.
5. Compressive-Strength Tests: ASTM C39.
a. Test one set of two laboratory-cured specimens at 7 days and one set of two specimens at 28 days.

b. A compressive-strength test shall be the average compressive strength from a set of two specimens obtained from same composite sample and tested at age indicated.

6. Strength of each concrete mixture will be satisfactory if every average of any three consecutive compressive-strength tests equals or exceeds specified compressive strength, and no compressive-strength test value falls below specified compressive strength by more than 500 psi if specified compressive strength is 5,000 psi, or no compressive strength test value is less than 10 percent of specified compressive strength if specified compressive strength is greater than 5,000 psi.
7. Nondestructive Testing: Impact hammer, sonoscope, or other nondestructive device may be permitted by Engineer but will not be used as sole basis for approval or rejection of concrete.
8. Additional Tests:
   a. Testing and inspecting agency shall make additional tests of concrete when test results indicate that slump, air entrainment, compressive strengths, or other requirements have not been met, as directed byEngineer.
   b. Testing and inspecting agency may conduct tests to determine adequacy of concrete by cored cylinders complying with ASTM C42 or by other methods as directed by Engineer.
      1) Acceptance criteria for concrete strength shall be in accordance with ACI 301 section 1.6.6.3.
9. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional Work with specified requirements.
10. Correct deficiencies in the Work that test reports and inspections indicate do not comply with the Contract Documents.

F. Measure floor and slab flatness and levelness in accordance with ASTM E1155 within 24 hours of completion of floor finishing and promptly report test results to Engineer.

## 3.15 PROTECTION

A. Protect concrete surfaces as follows:
1. Protect from petroleum stains.
2. Diaper hydraulic equipment used over concrete surfaces.
3. Prohibit vehicles from interior concrete slabs.
4. Prohibit use of pipe-cutting machinery over concrete surfaces.
5. Prohibit placement of steel items on concrete surfaces.
6. Prohibit use of acids or acidic detergents over concrete surfaces.

END OF SECTION

# SECTION 05 40 00 - COLD-FORMED METAL FRAMING

## PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Load-bearing fwall framing.
   2. Formed joist framing.

B. Related Requirements:
   1. Division 01 Specification Sections apply to Work of this Section.
   2. Section 05 50 00 "Metal Fabrications" for miscellaneous steel shapes, masonry shelf angles, and connections used with cold-formed metal framing.
   3. Section 09 22 16 "Non-Structural Metal Framing."

1.2 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference Project site.

1.3 ACTION SUBMITTALS

A. Product Data: For the following:
   1. Cold-formed steel framing materials.
   2. Load-bearing wall framing.
   3. Verical deflection clips.
   4. Double deflection track.
   5. Floor joist framing.
   6. Post-installed anchors.
   7. Power-actuated anchors.
   8. Sill sealer gasket.

B. Shop Drawings:
   1. Indicate layout, spacings, sizes, thicknesses, and type of cold-formedsteel framing; fabrication; and and fastening and anchorage details, includingmechanical fasteners,.
   2. Indicate reinforcing channels, opening framing, supplemental framing, strapping, bracing, bridges, splices, accessories, connection details, and attachment to adjoining work..

C. Delegated Design Submittals: For cold-formed steel framing.

1.4 INFORMATIONAL SUBMITTALS

A. Qualification Data: For testing agency.

B. Welding certificates.

C. Product Certificates: For each type of code-compliance certification for studs and tracks.

D. Product Test Reports: For each listed product, for tests performed by manufacturer and witnessed by a qualified testing agency.
   1. Steel sheet.
   2. Expansion anchors.

E. Power-actuated anchors.

1. Mechanical fasteners.
2. Vertical deflection clips.
3. Miscellaneous structural clips and accessories.

F. Research Reports:
1. For nonstandard cold-formed steel framing post-installed anchors and power-actuated fasteners from ICC-ES.
2. For sill sealer gasket/termite barrier, showing compliance with ICC-ES AC380.

1.5 QUALITY ASSURANCE

A. Testing Agency Qualifications: Qualified according to ASTM E329 for testing indicated.
B. Product Tests: Mill certificates or data from a qualified independent testing agency indicating steel sheet complies with requirements, including base-metal thickness, yield strength, tensile strength, total elongation, chemical requirements, and metallic-coating thickness.
C. Code-Compliance Certification of Studs and Tracks: Provide documentation that framing members are certified according to the product-certification program of the Certified Steel Stud Association or the Steel Stud Manufacturers Association.
D. Welding Qualifications: Qualify procedures and personnel according to the following:
1. AWS D1.1, "Structural Welding Code - Steel."
2. AWS D1.3, "Structural Welding Code- Sheet Steel."

1.6 DELIVERY, STORAGE, AND HANDLING

A. Protect and store cold-formed steel framing from corrosion, moisture staining, deformation, and other damage during delivery, storage, and handling as required in AISI S202,

**PART 2 - PRODUCTS**

2.1 PERFORMANCE REQUIREMENTS

A. Delegated Design: Engage a qualified Professional Engineer, as defined in Section 01 40 00 "Quality Requirements," to design cold-formed steel framing.
B. Structural Performance: Provide cold-fomed steel framing capable of withstanding design loads within limits and under conditions indicated.
1. Design Loads: As indicated on Drawings.
2. Deflection Limits: Design framing systems to withstand design loads without deflections greater than the following:
a. Exterior Load-Bearing Wall Framing: Horizontal deflection of 1/360 of the wall height.
b. Interior Load-Bearing Wall Framing: Horizontal defletion of 1/360 of the wall height under a horizontal load of 5 pound force per square feet.
c. Floor Joist Framing: Vertical deflection of 1/480 for live loads and 1/240 for total loads of the span.
3. Design framing sysems to provide for movement of framing members loccated outside the insulated building envelope without damage or over-stressing, sheathing failure, connection failure, undue strain on fasteners and anchors, or other detrimental effects when subject to a maximum ambient temperature change of 120 degrees F.

4. Cold-Formed Steel Framing Standards: Unless more stringent requirements are indicated, framing complies with AISI S100 and ASTM C955.

## 2.2 COLD-FORMED STEEL FRAMING MATERIALS

A. Framing Members, General: Comply with ASTM C955 for conditions indicated.
B. Steel Sheet: ASTM A1003, Structural Grade, Type H, metallic coated, of grade and coating designation as follows:
   1. Grade: As required by structural performance.
   2. Coating: G60.
C. Sheet Sheet for Vertical Deflection Clips: ATM A653, structural steel, zinc coated, of grade and coating as follows:
   1. Grade: As required by structural performance.
   2. Coating: G60.

## 2.3 LOAD-BEARING WALL FRAMING

A. Steel Studs: Manufacturer's standard C-shaped steel studs, off web depths indicated, punched, with stiffened flanges, and as follows:
   1. Minimum Base-Metal Thickness: 0.0538-inch.
   2. Flange Width: 1-5/8 inches.
B. Steel Track: Manufacturer's standard U-shaped steel tracck, of web depths indicated, unpunched, with straight flanges, and as follows:
   1. Minimum Base-Metal Thickness: Matching steel studs.
   2. Flange Width: 1-1/4 inches.
C. Steel Box or Back-to-Back Headers: Manufacturer's standard C-shapes used to form header beams, of web depths indicated, unpunched, with stiffened flanges, and as follows:
   1. Minimum Base-Metal Thickness: 0.0538-inch.
   2. Flange Width: 1-5/8 inches.
D. Single Deflection Track: Manufacturer's single, deep-leg, U-shaped steel track; unpunched, with unstiffened flanges, of web depth to contain studs while allowing free vertical movement, with flanges designed to support horizontal loads and transfer them to the primary structure, and as follows.
   1. Minimum Base-Metal Thickness: 0.0538-inch.
   2. Flange Width: 1 inch plus the design gap.
E. Double Deflection Tracks: Manufacturer's double, deep leg, U-shaped steel tracks, consisting of nested inner and outer track, unpunced, with unstiffened flanges.
   1. Out Track: Of web depth to allow free vertical movement of inner track, with flanges designedto support horizonal loads and transfer them to the primary structure, and as follows:
      a. Minimum Base-Metal Thickness: 0.0538-inch.
      b. Flange Width: 1 inch.
   2. Inner Track: Of web depth indicated and as follows:
      a. Minimum Base-Metal Thickness: 0.0538-inch.
      b. Flange Width: Dimension equal to sum of outer deflection track flange width plus 1 inch.

## 2.4 INTERIOR NON-LOAD-BEARING WALL FRAMING

A. Steel Studes: manufacturer's standard C-shaped steel studs, of web depths indicated, punchh, with stiffened flanges, and as follows:

1. Minimum Base-Metal Thickness: 0,0538-inch.
2. Flange Width: 1-5/8 inches.

B. Steel Track: Manufacturer's standard U-shaped steel track, of web depths indicated, unpunched, with unstiffened flanges, and as follows:
   1. Minimum Base-Metal Thickness: Matching steel studs.
   2. Flange Width: 1-1/4 inches.

C. Single Deflection Track: Manufacturer's single, deep-leg, U-shaped steel track, unpunched, with unstiffened flanges, of web depth to contain studs while allowing free vertical movement, with flanges designed to support horizontal loads and transfer them to primary structure, and as follows:
   1. Minimum Base-Metal Thickness: 0.0538-inch.
   2. Flange Width: 1 inch plus the design gap.

D. Double Deflection Track: Manufacturer's double, deep-leg, U-shaped steel tracks, consisting of nesed inner and outher tracks; unpunchhhed, with unstiffened flanges.
   1. Out Track: Of web depth to allow free vertical movement of inner track, with flanges designedto support horizonal loads and transfer them to the primary structure, and as follows:
      a. Minimum Base-Metal Thickness: 0.0538-inch.
      b. Flange Width: 1 inch plus the design gap.
   2. Inner Track: Of web depth indicated and as follows:
      a. Minimum Base-Metal Thickness: 0.0538-inch.
      b. Flange Width: Dimension equal to sum of outer deflection track flange width plus 1 inch.

## 2.5 FLOOR JOIST FRAMING

A. Steel Joists: Manufacturer's standard C-shaped steel joists, of web depth indicated, unpunched, wih stiffened flanges, and as follows:
   1. Minimum Base-Metal Thickness: 0.0677-inch.
   2. Flange Width: 2 inches minimum

B. Steel Joist Track: Manufacturer's standard U-shaped steel joist track, of web depths indicated, unpunches, wth unstiffened flanges, and as follows:
      a. Maching Matching steel joists.
      b. Flange Width: As required.

## 2.6 FRAMING ACCESSORIES

A. Fabricate steel-framing accessories from ASTM A1003, Structural Grade, Type H, metallic-coated steel sheet, of same grade, and coating designation used for framing members.

B. Provide accessories of manufacturer's standard thickness and configuration, unless otherwise indicated, as follows:
   1. Supplementary framing.
   2. Bracing, bridging, and solid blocking.
   3. Web stiffeners.
   4. Anchor clips.
   5. End clips.
   6. Foundaton clips
   7. Gusset plates.
   8. Stud kickers and knee braces.
   9. Joist hangers and end closures.

10. Hole-reinforcing plates.
11. Backer plates.

## 2.7 ANCHORS, CLIPS, AND FASTENERS

A. Steel Shapes and Clip: ASTM A36, zinc coated by hot-dip process according to ASTM A123.

B. Anchor Bolts: ASTM F1554, Grade 36, threaded carbon-steel hex-headed bolts, carbon-steel nuts, and flat, hardened-steel washers: zinc coated by hot-dip proccess according to ASTM 153, Class C.

C. Post-Installed Anchors: Fastener systems with bolts of same basic metal as fastened metal, if visible, unless otherwise indicted; with working capacity greater than or equal to the design load, according to an evaluation report acceptable to authorities having jurisdiction, based on ICC-ES AC01, ICC-ES AC193, ICC-ES AC58, OR ICC-ES AC308 as appropriate for the substrate.
   1. Uses: Securing cold-formed steel framing to structure.
   2. Type: Adhesive anchor.
   3. Material for Interior Locations: Carbon-steel components zinc plated to comply with ASTM B633 OR ASTM F1941, Class Fe/Zn 5, unless otherwise indicated.

D. Power-Actuated Anchors: Fastener systems with working capacity greater than or equal to the design load, according to an evaluation report acceptable to authorities having jurisdiction, based on ICC-ES AC70.

E. Mechanical Fasteners: ASTM C1513, corrosion-resistant-coated, self-drilling, self-tapping, steel drill screwes.
   1. Head Type: Low-profile head beneath sheathing, manufacturer's standard elsewhere.

F. Welding Electrodes: Comply with AWS standards.

## 2.8 MISCELLANEOUS MATERIALS

A. Galvanizing Repair Paint; ATM A780, MIL-P-21035B, OR SSPC-Paint 20.

B. Nonmetallic, Nonshrink Grout: Factory-packaged, nonmetallic, noncorrosive, nonstaining grout, complying with ASTM C1107, and with a fluid consisteny and 30-minute working time.

C. Shims: Load-bearing, high-density, multimonomer, nonleaching plastic; or cold-formed steel of same grade and metallic coating as framing members supported by shims.

D. Sill Sealer Gasket/Termite Barrier: Minimum 68-mil nominal thickness, self-adhering sheet consisting of 64 mils of rubberized asphalt laminated on one side to a 4-mil-thick, polyethylene-film reinforcement, and with release liner on adhesive side.
   1. Physical Properites:
      a. Peel Adhesion: 17.0 pounds per inch of width when tested in accordance with ASTM D412.
      b. Low-Temperature Flexibility: Pass at minus 25 degrees F when tested in accordance with ASTM D146.
      c. Water Vapor Permeance: 0.05 permeance maximum when tested in accordance with ASTM E96, Method B.
      d. Resistance to Termite Penetration: Comply with ICC-ES AC380.

2.9 FABRICATION

A. Fabricate cold-formed steel framing and accessories plumb, square, and true to line, and with connections securely fastened, according to referenced AISI's specifications and standards, manufacturer's written instructions, and requirements in this Section,
   1. Fabricate framing assemblies using jigs or templates.
   2. Cut framing members by sawing or shearing; do not torch out.
   3. Fasten cold-formed steel framing members by welding, screw fastening, clinch fastening, pneumatic pin fastening, or riveting as standard with fabricator. Wire tying of framing members is not permitted.
      a. Comply with AW D1.3 requirements and procedures for welding, appearance and qualty of welds, and methods used in correcting welding work.
      b. Locate mechanical fasteners and install according to Shop Drawings, with screws penetrating jointed members by no fewer than three exposed screw threads.
   4. Fasten other materials to cold-formed steel framing by welding, bolting, pneumatic pin fastening, or screw fastening according to Shop Drawings.

B. Reinforce, stiffen, and brace framing assemblies to withstand handling, delivery, and erection stresses. Lift fabricated assemblies by means that prevent damage or permanent distortion.

C. Tolerances: Fabricte assemblies level ,plumb, and true to line at a maximum allowable variation of 1/8-inch in 10 feet and as follows:
   1. Spacing: Space individual framing members no more than plus or minus 1/8-inch from plan location. Cumulative errors are not to exceed minimum fastening requiremens of sheathing or other finishing materials.
   2. Squareness: Fabricate each cold-formed steel framing assembly to a maximum out-of-square tolerance of 1/8-inch.

**PART 3 - EXECUTION**

3.1 EXAMINATION

A. Examine substrates, areas, conditions and butting structural framing for compliance with requirements for installation tolerances and other conditions affecting performance of Work.

B. Proceed with installation onlty after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Install load-bearing shims or grout between the underside of load-bearing wall bottom track and the top of foundation wall or slab at locations with a gap larger than 1/4-inch to ensure a uniform bearing surface on supporting concrete or masonry construction.

B. Install sill sealer gasket/termite barrier in accordance with manufacturer's written instructions at the underside of wall bottom track or rim track and at the top of foundation wall or slab at stud or joist locations.

## 3.3 INSTALLATION, GENERAL

A. Cold-formed steel framing may be shop or field fabricated for installation or it may be field assembled.
B. Install cold-formed steel framing according to AISI200, AISI S202, and manufacturer's written instructions unless more stringent requirements are indicated.
C. Install shop- or field-fabricted, cold-formed framing and securely anchor to supporting structure.
    1. Screw bolt, or weld wall panels at horizontal and vertical junctures to produce flush, even, true-to-line joints with maximum variation in plane and true position between fabricated panels not exceeding 1/16-inch.
D. Install cold-fired steel framing and accessories plumb, square, and true-to-line, and with connections securely fastened.
    1. Cut framing members by sawing or shearing; do not torch cut.
    2. Fasten, cold-formed steel framing members by welding, screw fastening, clinch fastening, or riveting. Wire tying of framing members is not permitted.
        a. Comply with AWS D1.3 requirements and procedures for welding, appearance and quality of welds, and methods used in correcting welding Work.
        b. Locate mechanical fastener, install according to Shop Drawings, and comply with requirements for spacing, edge distances, and screw penetration.
E. Install temporary bracing and supports to secure framing and support loads equal to those for which structure was designed. Maintain braces and supports in place, undisturbed, until entire integrated supporting structure has been completed and permanent connections to framing are secured.
F. Install insulation specified in Section 07 21 00 "Thermal Insulation," in framing-assembly members, such as headers, sills, boxed joists, and multiple studs at openings, that are inaccessible on completion of framing work
G. Fasten hole-reinforcing plate over web penetrations that exceed size of manufacturer's approved or standard punched openings.

## 3.4 INSTALLATION OF LOAD-BEARING WALL FRAMING

A. Install continuous top and bottom tracks sized to match studs. Align tracks accurately and securely anchor at corners and ends and at spacings as follows:
    1. Anchor Spacing: As shown on Shop Drawings.
B. Squarely seat studs against top and bottom tracks with gap not exceeding 1/8-inch between the end of wall-framing member and the web of track.
    1. Fasten both flanges of studs to top and bottom tracks.
    2. Space studs as follows:
        a. Stud Spacing: 16 inches.

C. Set studs plumb, except as needed for diagonal bracing or required for nonplumb walls or warped surfaces and similar configurations.
D. Align studs vertically where floor framing interrupts wall-framing continuity. Where studs cannot be aligned, continuously reinforce track to transfer loads.
E. Align floor and roof framing over studs according to AISI S200, Section C1. Where framing cannot be aligned, continuously reinforce track to transfer loads.
F. Anchor studs abutting structural columns or walls, including masonry walls, to supporting structure.

G. Install headers over wall openings wider than stud spacing. Locate headers above openings. Fabricate headers of compound shapes indicated or required to transfer load to supporting studs, complete with clip-angle connectors, web stiffeners, or gusset plates.
   1. Frame wall openings with not less than a double stud at each jamb of frame. Fasten jamb members together to uniformly distribute loads.
   2. Install tracks and jack studs above and below wall openings. Anchor tracks to jamb studs with clip angles or by welding, and space jack studs same as full-height wall studs.

H. Install supplementary framing, blocking, and bracing in stud framing indicted to support fixtures, equipment, services, casework, heavy trim, furnishings, and similar work requiring attachment to framing.
   1. If type of supplementary support is not indicated comply with stud manufacturer's written recommendations and industry standards in each case considering weight or load resulting from item supported.

I. Install horizontal bridging in stud system, spaced vertically 48 inches. Fasten at each stud intersection.
   1. Channel Bridging: Cold-rolled steel channel, welded or mechanically fastened to webs of punched studs with a minimum of two screws into each flange of the clip angle for framing members up to 6 inches deep.
   2. Strap Bridging: Combination of flat, taut, steel sheet straps of width and thickness indicated and stud-track solid blocking of width and thickness to match studs. Fasten flat straps to stud flanges and secure solid blocking to stud webs or flanges.
   3. Bar Bridging: Proprietary bridging bars installed according to manufacturer's written instructions.

J. Install miscellaneous framing and connections, including supplementary framing, web stiffeners, clip angles, continuous angles, anchors, and fasteners to provide a complete and stable wall-framing system.

## 3.5 INSTALLATION OF EXTERIOR NON-LOAD BEARING WALL FRAMING

A. Install continuous tracks sized to match studs. Align tracks accurately and securely anchor to supporting structure.

B. Fasten both flanges of studs to top and bottom tracks unless otherwise indicated. Space studs as follows:
   1. Stud Spacing: 16 inches.

C. Set studs plumb except as needed for diagonal bracing or required for non-plumb walls or warped surfaces and similar requirements.

D. Isolate non-load-bearing steel framing from building structure to prevent transfer to vertical loads while providing lateral support.
   1. Install single deep-leg deflection tracks and anchor to building structure.
   2. Install double deep-leg deflection tracks and anchor out track to building structure.

E. Install horizontal bridging in wall studs, spaced vertically in rows indicated on Shop Drawings but no more than 48 inches apart. Fasten at each stud intersection.
   1. Channel Bridging: Cold-rolled steel channel, welded or mechanically fastened, to webs of punched studs.
   2. Strap Bridging: Combination of flat, taut, steel sheet straps of width and thickness indicated and stud-track solid blocking of width and thickness to match studs. Fasten flat straps to stud flanges and secure solid blocking to stud webs or flanges.
   3. Bar Bridging: Proprietary bridging bars installed according to manufacturer's written instructions.

F. Top Bridging for Single Deflection Track: Install row of horizontal bridging within 12 inches of single deflection track. Install a combination of bridging and stud or stud-track solid blocking of width and thickness matching studs, secured to stud webs or flanges.
   1. Install solid bocking at 96-inch centers.
G. Install miscellaneous framing and connections, including stud kickers, web stiffeners, clip angles, continuous angles, anchors, and fasteners to provide a complete and stable wall-framing system.

## 3.6 INSTALLATION OF INTERIOR NON-LOAD BEARING WALL FRAMING

A. Install continuous tracks sized to match studs. Align tracks accurately and securely anchor to supporting structure.
B. Fasten both flanges of studs to top and bottom tracks unless otherwise indicated. Space studs as follows:
   1. Stud Spacing: 16 inches.
C. Set studs plumb, except as needed for diagonal bracing or required for non-plumb walls or warped surfaces and similar requirements.
D. Isolate non-load bearing steel framing from building structure to prevent transfer of vertical loads while providing lateral support.
   1. Install single deep-leg deflection tracks and anchor to building structure.
   2. Install double deep-leg deflection tracks and anchor outer track to buiding structure.
E. Install horizontal bridging in wall studs, spaced vertically in rows indicaed on Shop Drawings but not more than 48 inches apart. Fasten at each stud intersection.
   1. Channel Bridging: Cold-rolled steel channel, welded or mechanically fastened, to webs of punched studs.
   2. Strap Bridging: Combination of flat, taut, steel sheet straps of width and thickness indicated and stud-track solid blocking of width and thickness to match studs. Fasten flat straps to stud flanges and secure solid blocking to stud webs or flanges.
   3. Bar Bridging: Proprietary bridging bars installed according to manufacturer's written instructions.
F. Top Bridging for Single Deflection Track: Install row of horizontal bridging within 12 inches of single deflection track. Install a combination of bridging and stud or stud-track solid blocking of width and thickness matching studs, secured to stud webs or flanges.
   1. Install solid blocking at 96-inch centers.
G. Install miscellaneous framing and connections, including stud kickers, web stiffeners, clip angles, continuous angles, anchors, and fasteners to provide a complete and stable wall-framing system.

## 3.7 INSTALLATION OF JOIST FRAMING

A. Install continuous tracks sized to match studs. Align tracks accurately and securely anchor to supporting structure.
B. Fasten both flanges of studs to top and bottom tracks unless otherwise indicated. Space studs as follows:
   1. Stud Spacing: 16 inches.
C. Set studs plumb except as needed for diagonal bracing or required for non-plumb walls or warped surfaces and similar requirements.
D. Isolate non-load-bearing steel framing from building structure to prevent transfer to vertical loads while providing lateral support.
   1. Install single deep-leg deflection tracks and anchor to building structure.

2. Install double deep-leg deflection tracks and anchor out track to building structure.

E. Install horizontal bridging in wall studs, spaced vertically in rows indicated on Shop Drawings but no more than 48 inches apart. Fasten at each stud intersection.
   1. Channel Bridging: Cold-rolled steel channel, welded or mechanically fastened, to webs of punched studs.
   2. Strap Bridging: Combination of flat, taut, steel sheet straps of width and thickness indicated and stud-track solid blocking of width and thickness to match studs. Fasten flat straps to stud flanges and secure solid blocking to stud webs or flanges.
