1 - 12" GATE VALVE (MJ X MJ)
1 - 8" GATE VALVE (MJ X FL)

PACKET 8.931 December 15, 2020

811 Know what's below. Call before you dig.

CONSTRUCTION NOTES:

I) ALL WATER LATERALS TO BE 1" UNLESS OTHERWISE NOTED.

KEYED NOTES:

97 WL-B STA: 0+00.00
N: 10693092.8751
E: 1761873.8094
WATER FITTING INV = 2765.09
1 - 10" 45° BEND (MJ X MJ)
CONNECT TO EXISTING 10" WATER MAIN

98 WL-B STA: 0+05.00
WATER FITTING INV = 2762.77
1 - 10" 45° BEND (MJ X MJ)

99 WL-B STA: 0+39.95
EXISTING OVERHEAD ELECTRIC LINE CROSSING.
EXERCISE CAUTION!

100 WL-B STA: 0+43.69
EXISTING TELECOMMUNICATION LINE CROSSING.
MAINTAIN MINIMUM 2.0' VERTICAL SEPARATION BETWEEN
WATER MAIN AND TELECOMMUNICATION LINE.
EX. SURFACE = 2767.00
EX. TELECOMMUNICATION LINE = 2764.88 (APPROX.)
WATER MAIN INV = 2762.77 (4.6' DEPTH)
PROP. TELECOMMUNICATION LINE = 2760.71 (APPROX.)

101 WL-B STA: 0+45.53
EXISTING ABANDONED WATER LINE CROSSING.
EXERCISE CAUTION!
EX. SURFACE = 2767.23
EX. ABANDON WATER LINE = 2764.57 (APPROX.)
WATER MAIN INV = 2762.77 (4.6' DEPTH)

102 WL-B STA: 0+53.31
WL-A STA: 0+69.71
SEE KEYED NOTE 04 ON C-602

103 WL-B STA: 0+88.35
EXISTING TELECOMMUNICATION LINE CROSSING.
MAINTAIN MINIMUM 2.0' VERTICAL SEPARATION BETWEEN
WATER MAIN AND TELECOMMUNICATION LINE.
EX. SURFACE = 2767.00
EX. TELECOMMUNICATION LINE = 2763.00 (APPROX.)
WATER MAIN INV = 2762.77 (4.6' DEPTH)
PROP. TELECOMMUNICATION LINE = 2760.72 (APPROX.)

104 WL-B STA: 1+24.90
WATER FITTING INV = 2762.60
1 - 8" 45° BEND (MJ X MJ)

105 WL-B STA: 1+29.90
N: 10692967.4733
E: 1761905.6435
WATER FITTING INV = 2765.11
1 - 8" 45° BEND (MJ X MJ)
1 - 8" X 6" REDUCER (MJ X MJ)
CONNECT TO EXISTING 6" WATER MAIN

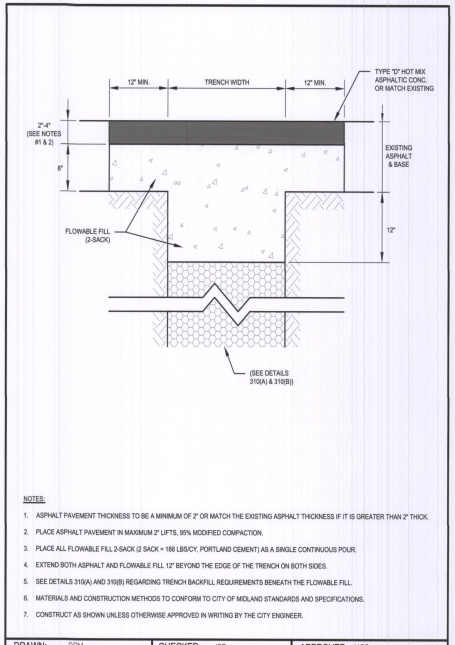
NOTES:
1. IF A SITE INCLUDES ALLEYS, OR IS ADJACENT TO EXISTING ALLEYS, THEN THE WASTEWATER MAIN IS TO BE LOCATED IN THE ALLEY AND NOT THE STREET RIGHT OF WAY.
2. ALL COVERS ARE FROM THE GUTTER FLOWLINE TO THE TOP OF PIPE.
3. ADDITIONAL UTILITY DEPTH MAY BE REQUIRED TO ACCOMMODATE LATERALS.
4. DRY UTILITY MAINS MUST MAINTAIN 7.0' MINIMUM COVER WHEN CROSSING RIGHT OF WAY. DRY UTILITY SERVICE LATERALS MUST MAINTAIN 2.0' MINIMUM COVER IN THE RIGHT OF WAY.
5. MATERIALS AND CONSTRUCTION METHODS TO CONFORM TO CITY OF MIDLAND STANDARDS AND SPECIFICATIONS.
6. CONSTRUCT AS SHOWN UNLESS OTHERWISE APPROVED IN WRITING BY THE CITY ENGINEER.

DRAWN: DPM	EFFECTIVE DATE: 10/01/2018	SCALE: NTS	DETAIL:
CHECKED: JCF	LOCAL STREET UTILITY MAIN SPACING		304
APPROVED: MCC			



MIDLAND Engineering Services

NOTES:
1. SEE CITY DETAIL 309 FOR NEW WASTEWATER MAIN REQUIREMENTS AT WATER MAIN CROSSINGS.
2. WASTEWATER MAINS AND MANHOLES MUST BE LOCATED AT LEAST 9.0' FROM ALL WATER MAINS IN ALL DIRECTIONS. IF THIS IS NOT POSSIBLE THEN AN ENGINEERING REPORT IS REQUIRED PER TAC TO JUSTIFY WHY, AND THE REQUIREMENTS OF THIS DETAIL WILL APPLY.
3. THIS DETAIL IS INTENDED TO COMPLY WITH TAC 217.53(d) AND TAC 290.44(e). IF TAC AND THIS DETAIL DIFFER THEN THE MORE RESTRICTIVE STANDARD GOVERNS.
4. WATER MAIN IS TO CROSS WASTEWATER MAIN AT 90° ANGLE.
5. NEW WATER MAINS ARE TO HAVE NO LESS THAN 2.0' VERTICAL SEPARATION OVER THE OUTER EDGE OF ANY EXISTING NON-PRESSURE RATED WASTEWATER MAIN, AND NO LESS THAN 0.5' VERTICAL SEPARATION OVER THE OUTER EDGE OF ANY EXISTING PRESSURE-RATED (150 PSI) WASTEWATER MAIN.
6. VERTICAL SEPARATION DIMENSION REQUIREMENTS FOR NEW WATER MAINS CROSSING OVER NEW WASTEWATER MAINS ARE COVERED IN CITY DETAIL 309.
7. NEW WATER MAINS CROSSING UNDER WASTEWATER MAINS ARE TO HAVE NO LESS THAN 2.0' VERTICAL SEPARATION FROM WASTEWATER MAIN WITH MINIMUM 18.0' LONG PIPE ENCASEMENT CENTERED ON THE CROSSING. SEE CITY DETAIL 855 FOR PIPE CASING.
8. VERTICAL SEPARATION DIMENSIONS TO BE MEASURED FROM OUTER EDGE OF ALL PIPE ENCASEMENTS.
9. WHEN CROSSING AN EXISTING WASTEWATER MAIN AND IT IS DISTURBED OR SHOW SIGNS OF LEAKING, THE WASTEWATER MAIN MUST BE REPLACED AT LEAST 9.0' IN BOTH DIRECTIONS FROM THE CROSSING WITH A SDR-26 PRESSURE-RATED PIPE EMBEDDED IN CEMENT STABILIZED SAND ENCASEMENT (2.5 SACKS / CUBIC YARD) FOR A TOTAL LENGTH OF ONE PIPE SEGMENT PLUS 1.0'
10. MATERIALS AND CONSTRUCTION METHODS TO CONFORM TO CITY OF MIDLAND STANDARDS AND SPECIFICATIONS.
11. CONSTRUCT AS SHOWN UNLESS OTHERWISE APPROVED IN WRITING BY THE CITY ENGINEER.

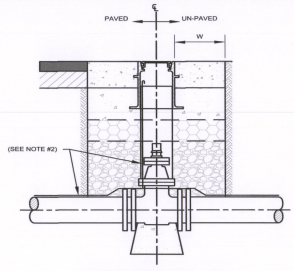
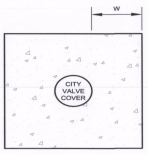
PACKET 8.942 December 5, 2020

PACKET



8.9.21

December 15, 2020



NOTES:
1. ALL WATER SERVICES TO BE 1" OR 2" DIAMETER.
2. THE DISTANCE FROM PROPERTY LINE SHOWN IS FOR 5' SIDEWALK AT THE PROPERTY LINE. WHEN 5' SIDEWALK IS PLACED AT THE BACK OF CURB, PLACE METER BOXES A MINIMUM OF 6.5' FROM THE BACK OF CURB.
3. TWO ADJACENT SERVICE LATERALS MAY BE PLACED IN THE SAME TRENCH. EACH TAP MUST BE SEPARATE AND HAVE BOTH A CORPORATION STOP AND A METER STOP. ("BULLHEAD TAPS ARE NOT PERMITTED".)
4. MATERIALS AND CONSTRUCTION METHODS TO CONFORM TO CITY OF MIDLAND STANDARDS AND SPECIFICATIONS.
5. CONSTRUCT AS SHOWN UNLESS OTHERWISE APPROVED IN WRITING BY THE CITY ENGINEER.

PLAN VIEW

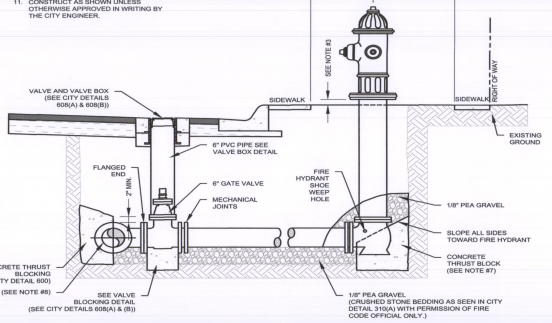
PROFILE VIEW

SPLICE VIEW



NOTES:
1. BEND ROTATION TO VERTICAL ALIGNMENT ANGLE NOTED ON PLAN & PROFILE SHEETS.
2. FORM ALL CONCRETE THRUST BLOCKING. DO NOT PLACE UN-FORMED THRUST BLOCKING.
3. ALL THRUST BLOCKING TO BE CLASS "A" CONCRETE, 3000 PSI, AND TO BE PLACED AGAINST UNDISTURBED EARTH. USE FIBER REINFORCEMENT THROUGHOUT.
4. "X" DIA. STAINLESS STEEL ALL THREAD RODS, FLAT WASHERS, AND TIE-BOLTS BETWEEN FITTINGS. IF ALL THREADS ARE NOT STAINLESS STEEL THEN THEY MUST BE POLY WRAPPED.
5. FITTINGS TO BE POLY WRAPPED BEFORE BLOCKING IS PLACED.
6. MATERIALS AND CONSTRUCTION METHODS TO CONFORM TO CITY OF MIDLAND STANDARDS AND SPECIFICATIONS.
7. CONSTRUCT AS SHOWN UNLESS OTHERWISE APPROVED IN WRITING BY THE CITY ENGINEER.

DRAWN: PAK	EFFECTIVE DATE: 07/14/2020	SCALE: NTS	DETAIL:
CHECKED: JCF	WATER MAIN VERTICAL & HORIZONTAL OFFSET		W1
APPROVED:			

NOTES:
1. SET ALL VALVE BOXES IN A CONCRETE COLLAR WHEN PLACED AT THEIR FINAL GRADE. (SEE CITY DETAILS 608(A) & (B))
2. ALL CONCRETE PAVEMENT TO BE CLASS "C" CONCRETE, 3600 PSI.
3. LEAVE VALVE BOX 6" TO 10" ABOVE GRADE FOR NEW DEVELOPMENT AND OTHER STREETS AND ALLEYS SCHEDULED FOR IMMEDIATE PAVING UNTIL STREET WORK IS DONE. PAVING CONTRACTOR TO ADJUST VALVE BOX TO FINISHED GRADE BEFORE PLACING LAST COURSE OF HMAC SURFACE.
4. SET FRANGIBLE FLANGE OF FIRE HYDRANT A MINIMUM OF 2" AND A MAXIMUM OF 8" ABOVE SIDEWALK ELEVATION.
5. ON STREETS WHERE NO SIDEWALK IS TO BE CONSTRUCTED, SET CENTERLINE OF FIRE-HYDRANT AT 3' FROM PROPERTY LINE WITHIN RIGHT OF WAY.
6. PLACE FIRE HYDRANT CUT-OFF VALVE A MINIMUM OF 3' FROM THE CENTER LINE OF THE FIRE HYDRANT. THIS MAY REQUIRE THE USE OF A 90° BEND TO OFFSET THE FIRE HYDRANT.
7. SHAPE CONCRETE THRUST BLOCKS SO THAT NO WATER DRAINS ARE BLOCKED.
8. A TEE FITTING IS REQUIRED FOR A CONNECTION TO A NEW WATER MAIN, AND A TAPPING SLEEVE IS REQUIRED FOR A CONNECTION TO AN EXISTING WATER MAIN.
9. DO NOT WRAP FIRE HYDRANT SHOE IN PLASTIC.
10. MATERIALS AND CONSTRUCTION METHODS TO CONFORM TO CITY OF MIDLAND STANDARDS AND SPECIFICATIONS.
11. CONSTRUCT AS SHOWN UNLESS OTHERWISE APPROVED IN WRITING BY THE CITY ENGINEER.

NOTE: 18" MIN. APPLIES WHEN SIDEWALK IS LOCATED AT BACK OF CURB.

NOTE: 12" MIN. APPLIES WHEN SIDEWALK IS AT RIGHT OF WAY.

PACKET 8.945 December 15, 2020

City Council Meeting

Item Number: 9

Meeting Date: December 15, 2020

To: City Council / City Manager

From: Erika Martinez, Manager, Purchasing

Subject: RESOLUTION AWARDING A CONTRACT TO GARNEY COMPANIES, INC., FOR THE MIDLAND NE WATER SYSTEMS IMPROVEMENTS - PUMP STATION, TRANSMISSION AND DISTRIBUTION (PACKET A) FOR A COST OF $22,063,309.00; AND AUTHORIZING THE APPROPRIATION OF FUNDS (GENERAL SERVICES)

Purpose:

Approval of a resolution authorizing the execution of a contract for the Midland NE Water Systems Improvements-Pump Station, Transmission and Distribution Pipelines (Packet A) for the Utilities Department.

Recommended City Council Action:

Approve

Fiscal Impact:

$22,063,309 is appropriated from Funds 375 and 394 into a project in Fund 370.

Discussion:

Motion 127-2020 approved plans and specifications and authorized advertisement for bids for the Midland NE Water Systems Improvements-Pump Station, Transmission and Distribution Pipelines (Packet A). Requests for proposals were issued to one hundred seventy-eight (178) vendors and we received three (3) bids. Staff recommends awarding the contract to Garney Construction. Please see the attached memo from Carl Craigo, Utilities Director, for additional information.

Therefore, please consider a resolution awarding a contract to Garney Construction of Midland, Texas for the Midland NE Water Systems Improvements-Pump Station, Transmission and

Distribution Pipelines (Packet A) in the amount of $22,063,309.00.

Morris William Jr.

City Manager's Office

INTEROFFICE MEMORANDUM

TO: Erika Martinez, Purchasing Manager

FROM: Carl Craigo, PE, Utilities Director

SUBJECT: Consider a resolution awarding a construction contract North East pump station and water transmission/distribution mains and appropriating CO funds.

DATE: December 15, 2020

Enprotec Hibbs and Todd under the Utilities on call program prepared plans and specification for the North East pump station, transmission main and distribution lines. The project is to construct a pump station at the water purification plant and a transmission line to the new NE elevated tower with a distribution line from the elevated tower and connected to water mains at Occidental and Fairgrounds. This project along with the elevated tower project will increase water pressures in the City of Midland and allow for 10,000 more connections into the system.

Council, under motion 127-2020, approved the prepared plans and specifications to send for proposal.

Three proposals were received on November 18, 2020. The scoring committee met on November 25, 2020 to evaluate the proposals and based on the scoring criteria selected Garney Companies, Inc. The contract price for the project is $22,063,309 and is expected to be completed in 459 days. Funds will be allocated from previous CO issuance.

The contract price has changed from the bid tab price based on needed design changes on Occidental Pkwy.

RESOLUTION NO. _____

RESOLUTION AWARDING A CONTRACT TO GARNEY COMPANIES, INC., FOR THE MIDLAND NE WATER SYSTEMS IMPROVEMENTS - PUMP STATION, TRANSMISSION AND DISTRIBUTION (PACKET A) FOR A COST OF $22,063,309.00; AND AUTHORIZING THE APPROPRIATION OF FUNDS

WHEREAS, Motion 127-2020 authorized the advertisement for bids for the Midland NE Water Systems Improvements - Pump Station, Transmission and Distribution (Packet A); and

WHEREAS, the bids were opened on November 18, 2020, with the lowest and most responsible bid being submitted by submitted by Garney Companies, Inc., as shown on the bid documents attached hereto as Exhibit A and incorporated herein for all purposes; and

WHEREAS, the City Council finds the amount proposed by Garney Companies, Inc., to be fair and reasonable; and

WHEREAS, the City Council finds it to be in the public interest to award a contract to Garney Companies, Inc., for the Midland NE Water Systems Improvements - Pump Station, Transmission and Distribution (Packet A);

NOW, THEREFORE, BE IT RESOLVED BY THE CITY COUNCIL OF THE CITY OF MIDLAND, TEXAS:

SECTION ONE. That the Interim City Manager and City Secretary are hereby authorized and directed to execute and attest, respectively, on behalf of the City of Midland, a contract with Garney Companies, Inc., for the Midland NE Water Systems Improvements - Pump Station, Transmission and Distribution (Packet A). Said contract to be kept on file in the office of the City Secretary, referenced by the date and number of this Resolution.

SECTION TWO. $22,063,309.00 is hereby appropriated from Funds 375 and 394 into a project in Fund 370.

SECTION THREE. That the City Comptroller is hereby authorized and directed to pay Garney Companies, Inc., pursuant to the terms of said contract from available project funds upon receipt of proper invoices or statements approved by the City Manager.

On motion of Council member _____, seconded by Council member _____, the above and foregoing resolution was adopted by the City Council of the City of Midland at a regular meeting on the _____ day of _____, A.D., 2020, by the following vote:

BID DOCUMENTS

ADVERTISEMENT

CITY OF MIDLAND
NORTHEAST WATER SYSTEM IMPROVEMENTS
BID PACKAGE A
REQUEST FOR PROPOSALS

The City of Midland (Owner) has issued a Request for Proposals (RFP) in order to evaluate pricing and qualifications of a contractor to construct the following Project:

City of Midland, Texas
Northeast Water System Improvements
Bid Package A
Part 1 – New Transfer Pump Station
Part 2 – New Transmission and Distribution Pipelines

Proposers shall deliver sealed proposals to the Owner at the following address:

City of Midland
Office of the City Secretary
300 N. Loraine, 3rd Floor
Midland, Texas 79701

Proposals must be received at the designated location no later than **2:00 PM, Wednesday, November 18, 2020**.

Proposal Documents may be obtained from Civcast at www.civcastusa.com. Neither Owner nor Engineer will be responsible for full or partial sets of Proposal Documents, including addenda, if any, obtained from sources other than the Issuing Office.

A Virtual Pre-Proposal Meeting will be held at **1:00 PM, Thursday November 5, 2020**. A link to access the Virtual Pre-Proposal Meeting will be posted by Addendum prior to event. Attendance is encouraged but not required.

For all further requirements regarding submittal, qualifications, procedures, and contract award, refer to the RFP.

The City of Midland reserves the right to reject any or all proposals or to waive any informalities in the proposals.

Date Issued: October 21, 2020
By: Amy Turner
Title: City Secretary

NOTICE TO BIDDERS

IF THIS PURCHASE REQUIRES A CONTRACT, THE ATTACHED **CONTRACT AND INSURANCE REQUIREMENTS ARE NON-NEGOTIABLE**. MODIFICATIONS BY BIDDER/COMPANY OF ANY MATERIAL TERM(S) TO THE CONTRACT DOCUMENTS WILL BE DEEMED A NON-RESPONSIVE BID. NON-RESPONSIVE BIDS WILL BE REJECTED. BIDDER/COMPANY MUST BE WILLING TO SIGN THE CONTRACT AS IS AND WITHOUT MODIFICATIONS, PROVIDE PROPERLY EXECUTED BONDS (IF APPLICABLE) AND PROVIDE INSURANCE SPECIFICALLY AS REQUIRED WITHIN THE CONTRACT DOCUMENTS **WITHIN 21 DAYS** OF THE DATE OF THE TRANSMITTAL LETTER.

IF THE SELECTED BIDDER/COMPANY CANNOT MEET THE ABOVE REQUIREMENTS, THEN **THE CITY RESERVES THE RIGHT TO AWARD THIS PURCHASE TO ANOTHER BIDDER**.

IMPORTANT NOTICE – IF THE CONTRACT DOCUMENTS REQUIRE WORKER'S COMPENSATION INSURANCE, BIDDER/COMPANY MUST CARRY WORKER'S COMPENSATION INSURANCE TO BE ELIGIBLE FOR THIS CONTRACT. IF YOU CANNOT PROVIDE WORKER'S COMPENSATION INSURANCE AS REQUIRED BY STATE OF TEXAS STATUTE, WE RESPECTFULLY REQUEST THAT YOU "NO BID" THIS WORK.

COMPLIANCE: Company agrees that it shall comply with Texas Government Code Section 2252.908, *et seq.*, as amended. Company agrees that it shall comply with Texas Local Government Code Section 176.006, *et seq.*, as amended. For further instructions on how to comply with Texas Government Code Section 2252.908 and Texas Local Government Code Section 176.006,

please go to https://www.ethics.state.tx.us/whatsnew/elf_info_form1295.htm and https://www.ethics.state.tx.us/filinginfo/conflict_forms.htm.

ANY VENDOR WHO FAILS TO COMPLY WITH THE TERMS OF THE AWARD **MAY BE DECLARED AN IRRESPONSIBLE VENDOR**. BIDS SUBMITTED BY SAID VENDOR SHALL NOT BE CONSIDERED AGAIN FOR A MINIMUM PERIOD OF SIX MONTHS AS DETERMINED BY THE CITY MANAGER.

IMPORTANT: READ CAREFULLY BEFORE MAKING BID
GENERAL CONDITIONS OF BIDDING

1. All bids are to be submitted as specified in the procurement document(s).

2. Each Bidder is requested to provide: Descriptive literature clearly marked to show each item on this bid. Any catalog or manufacturer's reference in this proposal is descriptive, but not restrictive, and is used only to indicate type and quality. If, however, the bidder proposes similar but not identical terms, he must furnish all particulars. If no mention is made of any exceptions, it is assumed that he is bidding on the article specified and not on an approved equal and he will be required to deliver exact article specified.

3. Prices should be itemized. (Indicate unit price and extend to show total price.) In case of discrepancy between the unit price and the extension, the unit price shall govern.

4. Unit price for each item offered shall include all discounts; e.g., trade, seasonal, etc. with net 30 days payment terms. Discounts shall not be shown as such but shall be incorporated in the base bid price. Any bid showing discounts will be considered an alternate bid. The City of Midland will not be responsible for any goods delivered without a purchase order number.

5. If the Contract is awarded, it will be awarded to either the lowest responsible bidder, or to the bidder who provides goods or services at the best value for the City of Midland. In determining the best value for the City of Midland, the City of Midland may consider the criteria enumerated in Section 252.043 of the Texas Local Government Code. The City of Midland reserves the right to award by item or by total bid, or to reject any or all bids or parts of bids. Further, the City of Midland reserves all rights granted by Section 271.027 of the Texas Local Government Code. The City of Midland reserves the right to award the bid to the lowest responsible bidder.

6. Time of proposed delivery shall be stated in number of calendar days.

7. NOTE: The City of Midland, Texas is exempt from all Federal, State and City tax. Please do not include these taxes in your bid price or invoice. Taxable items must be so designated, and the City will supply vendor with a Tax Exemption Certificate, properly executed.

8. All items are to be delivered, unloaded and stacked at the location indicated on the Bid Request and Purchase Order.

9. All items are to be delivered F.O.B. to the City of Midland, Texas with freight prepaid and included in the bid.

10. Detailed specifications rule over General specifications (headings, etc.)

11. The City of Midland reserves the right to remove a company from the bid list for (1) continued failure to respond to request for bids, (2) failure to deliver merchandise within promised time, or (3) delivery of substandard merchandise.

12. No officer or employee of the City shall have a financial interest, direct or indirect, in any contract with the City, or be financially interested, directly or indirectly, in the sale to the City of any lands, materials, supplies or services except as allowed under chapter 176 of the Local Government Code. Form CIQ shall be submitted and placed on file with the City of Midland.

13. The City shall determine the most advantageous bid for the City and accept the proposal of the responsible party submitting the lowest and/or most advantageous bid or reject any and all bids.

14. The City of Midland, Texas may consider as informal any bid not prepared and submitted in accordance with the provisions hereof, and may waive, in its sole discretion, any informalities.

QUALIFICATIONS STATEMENT

ARTICLE 1—GENERAL INFORMATION

1.01 Provide contact information for the Business:

Legal Name of Business:			
Corporate Office			
Name:		Phone number:	
Title:		Email address:	
Business address of corporate office:			
Local Office			
Name:		Phone number:	
Title:		Email address:	
Business address of local office:			

1.02 Provide information on the Business's organizational structure:

Form of Business:	☐ Sole Proprietorship ☐ Partnership ☐ Corporation		
☐ Limited Liability Company ☐ Joint Venture comprised of the following companies:			
	1.		
	2.		
	3.		
Provide a separate Qualification Statement for each Joint Venturer.			
Date Business was formed:		State in which Business was formed:	
Is this Business authorized to operate in the Project location?	☐ Yes ☐ No ☐ Pending		

1.03 Identify all businesses that own Business in whole or in part (25% or greater), or that are wholly or partly (25% or greater) owned by Business:

Name of business:		Affiliation:	
Address:			
Name of business:		Affiliation:	
Address:			
Name of business:		Affiliation:	
Address:

ARTICLE 4—SAFETY

4.01 Provide information regarding Business's safety organization and safety performance.

Name of Business's Safety Officer:		
Safety Certifications		
Certification Name	Issuing Agency	Expiration

4.02 Provide Worker's Compensation Insurance Experience Modification Rate (EMR), Total Recordable Frequency Rate (TRFR) for incidents, and Total Number of Recorded Manhours (MH) for the last 3 years and the EMR, TRFR, and MH history for the last 3 years of any proposed Subcontractor(s) that will provide Work valued at 10% or more of the Contract Price. Provide documentation of the EMR history for Business and Subcontractor(s).

Year									
Company	EMR	TRFR	MH	EMR	TRFR	MH	EMR	TRFR	MH

ARTICLE 5—FINANCIAL

5.01 Provide information regarding the Business's financial stability. Provide the most recent audited financial statement, and if such audited financial statement is not current, also provide the most current financial statement.

Financial Institution:		
Business address:		
Date of Business's most recent financial statement:		☐ Attached
Date of Business's most recent audited financial statement:		☐ Attached
Financial indicators from the most recent financial statement		
Contractor's Current Ratio (Current Assets ÷ Current Liabilities)		
Contractor's Quick Ratio ((Cash and Cash Equivalents + Accounts Receivable + Short Term Investments) ÷ Current Liabilities)		

ARTICLE 6—SURETY INFORMATION

6.01 Provide information regarding the surety company that will issue required bonds on behalf of the Business, including but not limited to performance and payment bonds.

EJCDC C-451, Qualifications Statement.
Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

Surety Name:			
Surety is a corporation organized and existing under the laws of the state of:			
Is surety authorized to provide surety bonds in the Project location?	☐ Yes ☐ No		
Is surety listed in "Companies Holding Certificates of Authority as Acceptable Sureties on Federal Bonds and as Acceptable Reinsuring Companies" published in Department Circular 570 (as amended) by the Bureau of the Fiscal Service, U.S. Department of the Treasury? ☐ Yes ☐ No			
Mailing Address (principal place of business):			
Physical Address (principal place of business):			
Phone (main):		Phone (claims):	

ARTICLE 7—INSURANCE

7.01 Provide information regarding Business's insurance company(s), including but not limited to its Commercial General Liability carrier. Provide information for each provider.

Name of insurance provider, and type of policy (CLE, auto, etc.):			
Insurance Provider		Type of Policy (Coverage Provided)	
Are providers licensed or authorized to issue policies in the Project location?		☐ Yes ☐ No	
Does provider have an A.M. Best Rating of A-VII or better?		☐ Yes ☐ No	
Mailing Address (principal place of business):			
Physical Address (principal place of business):			
Phone (main):		Phone (claims):	

ARTICLE 8—CONSTRUCTION EXPERIENCE

8.01 Provide information that will identify the overall size and capacity of the Business.

Average number of current full-time employees:	
Estimate of revenue for the current year:	
Estimate of revenue for the previous year:	

EJCDC C-451, Qualifications Statement.
Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

8.02 Provide information regarding the Business's previous contracting experience.

Years of experience with projects like the proposed project:				
As a general contractor:		As a joint venturer:		
Has Business, or a predecessor in interest, or an affiliate identified in Paragraph 1.03:				
Been disqualified as a bidder by any local, state, or federal agency within the last 5 years? ☐ Yes ☐ No				
Been barred from contracting by any local, state, or federal agency within the last 5 years? ☐ Yes ☐ No				
Been released from a bid in the past 5 years? ☐ Yes ☐ No				
Defaulted on a project or failed to complete any contract awarded to it? ☐ Yes ☐ No				
Refused to construct or refused to provide materials defined in the contract documents or in a change order? ☐ Yes ☐ No				
Been a party to any currently pending litigation or arbitration? ☐ Yes ☐ No				
Provide full details in a separate attachment if the response to any of these questions is Yes.				

8.03 List all projects currently under contract in Schedule A and provide indicated information.

8.04 List a minimum of three and a maximum of six projects completed in the last 5 years in Schedule B and provide indicated information to demonstrate the Business's experience with projects similar in type and cost of construction.

8.05 In Schedule C, provide information on key individuals whom Business intends to assign to the Project. Provide resumes for those individuals included in Schedule C. Key individuals include the Project Manager, Project Superintendent, Quality Manager, and Safety Manager. Resumes may be provided for Business's key leaders as well.

ARTICLE 9—REQUIRED ATTACHMENTS

9.01 Provide the following information with the Statement of Qualifications:

A. If Business is a Joint Venture, separate Qualifications Statements for each Joint Venturer, as required in Paragraph 1.02.

B. Diverse Business Certifications if required by Paragraph 3.01.

C. Certification of Business's safety performance if required by Paragraph 4.02.

D. Financial statements as required by Paragraph 5.01.

E. Attachments providing additional information as required by Paragraph 8.02.

F. Schedule A (Current Projects) as required by Paragraph 8.03.

G. Schedule B (Previous Experience with Similar Projects) as required by Paragraph 8.04.

H. Schedule C (Key Individuals) and resumes for the key individuals listed, as required by Paragraph 8.05.

I. Additional items as pertinent.

REQUEST FOR PROPOSALS (RFP)

CITY OF MIDLAND
NORTHEAST WATER SYSTEM IMPROVEMENTS
BID PACKAGE A

The City of Midland (Owner) is now accepting proposals in order to evaluate pricing and qualifications of a contractor to construct the work identified as Package A of the Northeast Water System Improvements Project. Sealed proposals will be received until **2:00 PM, WEDNESDAY NOVEMBER 18, 2020**. Proposers shall deliver sealed proposals to the Owner at the following address:

City of Midland
Office of the City Secretary
300 N. Loraine, 3rd Floor
Midland, Texas 79701

Proposal Documents may be obtained from Civcast at www.civcastusa.com. Neither Owner nor Engineer will be responsible for full or partial sets of Proposal Documents, including addenda, if any, obtained from sources other than the Issuing Office.

A Virtual Pre-Proposal Meeting will be held at **1:00 PM, THURSDAY NOVEMBER 5, 2020**. A link to access the Virtual Pre-Proposal Meeting will be posted by Addendum prior to the event. Attendance is encouraged but not required.

GENERAL INFORMATION AND OVERVIEW

The purpose of this RFP is to contract with a firm to construct the Northeast Water System Improvements, Package A. The work consists of the following primary elements:

- Part 1 – Construction of a new Transfer Pump Station (TPS) at the existing City of Midland Water Purification Plant site, including new pump station building with electrical room and bridge crane, three vertical turbine pumps and space for two future vertical turbine pumps, valves, yard piping, vaults, site earthwork, grading and paving, surface restoration, site electrical and MCC, coordination with City's SCADA System Integrator and all other work as shown and specified for a complete and operational system.

- Part 2 – Construction of approximately 18,000 linear feet (LF) of 30" and 50,000 LF of 24" new water transmission and distribution pipeline (PIPELINES), including right-of-way preparation, traffic control, sub-surface utility investigation, excavation, installation of pipe and appurtenances, backfill, surface restoration and all other work as shown and specified for a complete and operational system.

- Work requires coordination with construction of the Northeast Elevated Storage Tank (EST) Improvements being constructed under Package B.

The City of Midland reserves the right to reject any or all proposals or to waive any informalities in the proposals.

PROPOSAL PROCESS:

1. Requests for Information/Clarification (RFI/C's) shall be submitted to the Engineer no later than 72 hours prior to the RFP Submittal Deadline. RFI/C's to be requested in writing to:

   Mr. Joe Mangrem, PE
   Enprotec/Hibbs & Todd
   402 Cedar Street
   Abilene, TX 79601
   Phone: 325-698-5560
   Email: joe.mangrem@e-ht.com

2. Written responses to RFI/C's requiring Addendum will be made available to all Proposal holders on record no later than 24 hours prior to the RFP Submittal Deadline.

3. One (1) bound copy and one (1) digital PDF version of the Proposal shall be due by the date and time indicated. Proposals received after the closing hour of the due date shall not be considered.

4. Proposal packages must be hand delivered, mailed or shipped by means of a delivery tracking system to confirm delivery time, date, and person signing for delivery.

5. Proposals will be publicly opened and read aloud after the closing hour of the due date.

6. The Owner shall exercise sole discretion as to the schedule and process of evaluating the proposals according to the requirements contained herein.

7. Criteria for award of the Project will include a weighted matrix developed by the Owner, for a maximum number of 100 points, based on the following criteria:

a.	Proposal Pricing	40%
b.	Proposer Qualifications	30%
c.	Proposal Time	20%
d.	Proposer Safety Record	10%

PROPOSAL FORMAT & REQUIREMENTS:

1. The RFP shall be the basis for each proposal.

2. Proposals shall be addressed to the Owner, as indicated, in a sealed package that shall be independent of the mailing/shipping packages. The proposal package shall be clearly marked as "City of Midland, Northeast Water System Improvements, Bid Package A" on the package label. The package label shall include the name and address of the Respondent's company.

3. Proposals shall be submitted in bound documents.

4. Proposals sent by facsimile (fax) machine or by email shall be rejected as being non-responsive to the RFP.

5. Proposal Pricing shall be for the entirety of the work shown or specified and shall be listed on the Price Proposal Sheet of this RFP.

6. All exclusions shall be listed in specific terms, quantities, and values.

7. No Respondent may withdraw its Proposal within 60 days after the actual date of the opening thereof.

8. A Proposal may be withdrawn by an appropriate document duly executed in the same manner that a Proposal must be executed and delivered to the place where Proposals are to be submitted prior to the date and time of the RFP submittal deadline. Upon receipt of such notice, the unopened Proposal will be returned to the Respondent.

    a. If a Respondent wishes to modify its Proposal prior to the RFP submittal deadline, Respondent must withdraw its initial Proposal in the manner specified and submit a new Proposal prior to the date and time of the RFP submittal deadline.

    b. If within 24 hours after Proposals are opened any Respondent files a duly signed written notice with Owner and promptly thereafter demonstrates to the reasonable satisfaction of Owner that there was a material and substantial mistake in the preparation of its Proposal, that Respondent may withdraw its Proposal, and the Bid Security will be returned. Thereafter, if the Work is rebid, that Proposer will be disqualified from further bidding on the Work.

9. Respondents shall satisfy themselves of the accuracy of the requirements in the RFP by examination of the sites in addition to the review of the Proposal Documents. After proposals have been submitted, the Respondent shall not assert that there was a misunderstanding concerning the quantities of work or the nature of the work to be done. The RFP contains the provisions required for the construction of the Project. Information obtained from an officer, agent, or employee of the Owner or any other person shall not affect the risks or obligations assumed by the Respondent or relieve them from fulfilling any of the conditions of any Contract awarded under this RFP.

10. A certificate of insurance as provided for in the Proposal Documents, naming Owner and Engineer as co-insured, shall be required for any Contract awarded under this RFP. Respondent's insurance company shall be required to give a minimum of 30 days prior notice of policy or coverage cancellation.

11. A PERFORMANCE and PAYMENT BOND, each in the amount of 100 percent (100%) of the Contract Price, issued by a corporate surety authorized to conduct business in the State of Texas under Article 7.19-1, Texas Insurance Code, will be required for the faithful performance of any Contract awarded under this RFP. Attorneys-in-fact who sign PAYMENT BONDS and PERFORMANCE BONDS must file with each bond a certified and effective dated copy of the power of attorney. The party to whom the contract is awarded will be required to execute the Agreement and obtain the PERFORMANCE AND PAYMENT BONDS within ten (10) calendar days from the date when the NOTICE OF AWARD is delivered to the Proposer. The NOTICE OF AWARD shall be accompanied by the necessary Agreement, Bond Forms, and insurance requirements. These bonds shall remain in effect until one year after the date when final payment becomes due or until completion of the correction period.

12. Respondent must provide documentation with Proposal proving that they possess a Water Operator D license, or better, in the state of Texas, and the successful Respondent will be required to maintain said license throughout duration of the project.

13. Proposals shall include, at a minimum, the following sections and documentation in response to the RFP:

    a. Request for Proposal Document – A complete copy of this RFP, including addenda, if any, shall be submitted as a Proposal Section, in its entirety, to include the Price Proposal Sheet to be completed by the Respondent.

    b. Pricing, as follows:

        i. Pricing shall be submitted by item on the attached Price Proposal Sheet. Failure to price all listed items may be considered non-responsive to the RFP.

        ii. Pricing shall include all proposal development costs, mobilization, labor, material, transportation, equipment, incidentals, appurtenances, demolition, removal, demobilization, overhead, and profit to cover the finished work specified in this RFP document, achieving a fully functional system.

        iii. Pricing shall reflect the Owner's sales tax exempt status.

        iv. Pricing shall include all freight and handling costs, F.O.B., Owner's destination.

        v. Pricing shall include insurance and bonding costs.

    c. Statement of Qualifications Section shall include the following minimum information:

        i. Company Profile with listing of principals by percent ownership and their role in the company.

        ii. Type of company – corporation, sole proprietorship, etc.

        iii. Primary field of business interest (water/wastewater, industry, oil & gas, etc.), listed by percent of revenue.

        iv. Date of Incorporation and/or start-up.

        v. Number of years under the current ownership structure and business name.

        vi. Number and location of offices and technical support centers.

        vii. Percentage of this project, based on cost, that shall be:

            - Self-performed – completed by company personnel = what percent.
            - Sub-contracted – completed by personnel of other companies = what percent.

viii. Listing of all sub-contractors proposed to be used, including a complete Statement of Qualifications as required under this section to be completed by any sub-contractor anticipated to perform over 10% of the work by cost.

ix. Number of employees (not subcontractor employees) dedicated to construction, integration, and technical support.

x. Resume and experience of each person to be assigned to this project, to include:

- The individual's technical background as it relates to this project and related field of interest.
- The individual's duration with the Proposer's company.
- The individual's proximity to the Owner's facilities as a reasonable response expectation for technical and service support.
- The individual's company of employment if different from the Respondent.
- Detailed project-specific and Owner's references for the proposed Project Manager and Field Superintendent.

xi. Areas of specialization including required licenses and certifications.

xii. Area of geographical coverage of related project and service activities.

d. Reference Section shall include:

i. A listing of previous project referenced and experience shall be provided by the Proposer, information to include:

- Name of entity.
- Project name.
- Contact person.
- Phone number.
- City of office.
- Year work completed.

ii. A list of a minimum of three (3) similar projects that include the complexity and magnitude of work to be completed in this project, and that have been completed by the Proposer. The list must include contact names, titles, addresses, email addresses, and telephone numbers for references.

e. Safety Record:

i. Include Business's safety organization and safety performance required in Qualifications Statement.

f. Project Schedule:

i. Include with proposal a detailed project schedule from the Notice to Proceed for the timetable for completing the construction of the Work within the time proposed on the Price Proposal Sheet

ii. Final Completion shall be sixty (60) calendar days from the date established for Substantial Completion.

TERMS AND CONDITIONS:

1. The Owner hereby notifies all Respondents that:

   a. The purchase contemplated by this RFP shall be procured in strict compliance with the local, state and federal laws.

   b. There is no pre-disposition of award to any particular company at the time of advertisement of this RFP.

   c. An invitation to any Respondent, verbal or otherwise, does not waive any requirement set forth in this RFP.

   d. In regard to any agreement entered into pursuant to this document, minority business enterprises will be afforded equal opportunities to submit proposals in response to this invitation and will not be discriminated against on the grounds of race, color, sex, age, religion, or national origin in consideration for an award.

2. The Owner reserves the right to reject any and/or all proposals, to waive any and all technicalities and to accept any proposal, or part thereof, which in the opinion of the Owner, is most advantageous to the Owner. In case of ambiguity or lack of clarity in stating the prices in the proposal, the Owner reserves the right to consider the most advantageous proposal thereof or to reject the proposal.

3. Respondents may modify their proposal by written addendum at any time prior to the scheduled receipt of proposals, provided such communication is received by the Owner prior to the closing hour of the proposal due date. The addendum should not reveal the proposal pricing, but should provide the addition or subtraction or other modification so that the Owner will not know the final pricing or terms until the sealed proposal, and its addendum, is opened.

4. Owner will not provide interpretation of the meaning of Proposal Documents to any Respondent orally. Such communication must be in writing in the form of an RFI/C and directed to the Engineer as stated herein. Where this RFP is ambiguous or in conflict with on-site conditions, the Respondent shall bring forth questions for clarification, and shall assume all responsibility for a fully functional system prior to submitting a proposal. The Owner and Engineer shall determine the meaning and requirements of any questionable items.

5. Requests for Information/Clarification (RFI/C's) shall be submitted to the Engineer, as previously indicated.

6. Respondents shall assume all responsibility for verifying Engineer's receipt of Requests for Information/Clarification (RFI/C). Where applicable, an addendum or written clarification shall be provided to all Respondents to clarify the meaning of questionable items.

7. Evaluation of proposals will be based on the criteria stated herein. The best-value proposal submitted by a responsible, responsive, qualified Respondent will be selected for negotiations with the Owner. If proposal amounts exceed the available funds to finance the contract, the Owner may reject all proposals or may award the contract on a negotiated proposal to produce a net amount which is within available funds. The Owner reserves the right to waive any informalities or technical errors that in its judgment will best serve its interests.

8. At the time of the opening of proposals, each Respondent will be presumed to be thoroughly familiar with the technical requirements, including any addenda, as set forth herein. The failure or omission of any Respondent to examine any site condition, form, instrument, or document shall in no way relieve any Respondent from any obligation with respect to the proposal. It is the Respondent's responsibility to make inquiry as to any addenda issued. All such addenda shall become part of the Proposal Documents and all Respondents shall be bound by such addenda, whether or not received by the Respondents.

9. The Owner may make such investigations as deemed necessary to determine the ability of the Respondent to perform the work, and the Respondent shall furnish to the Owner all such information and data for this purpose as the Owner may request. The Owner reserves the right to reject any proposal if the evidence submitted by, or the investigation of, such Respondent fails to satisfy the Owner that such Respondent is properly qualified to carry out the obligations of the contract and to complete the work contemplated therein. Conditional proposals will not be accepted.

10. Respondents must inform themselves fully of the conditions relating to the construction of the project and the employment of labor therein. Failure to do so will not relieve a successful Respondent of their obligation to furnish all labor and material necessary to carry out the provisions of any Contract awarded under this RFP. The conduct of required work shall not cause any interruptions of, or interfere with, the work of any other contractors.

11. The Respondent's attention is directed to the fact that all applicable state laws, municipal ordinances, and the rules and regulations of all authorities having jurisdiction over construction of the project shall apply to the contract throughout, and they will be deemed to be included in the contract as though therein written out in full.

12. The Respondent is specifically advised that any person, firm, or other party to whom it is proposed to award a subcontract under this contract must be identified and shall be acceptable to the Owner.

13. With respect to all work performed under this Contract, the Respondent shall meet the following requirements, where scope of work is applicable:

    a. Comply with the safety standards and provisions of applicable laws, building and construction codes and the "Manual of Accident Prevention in Construction" published by the Associated General Contractors of America, and the requirements of the Occupational Safety and Health Act of 1970 (Public Law 91-596).

b. Exercise every precaution at all times for the prevention of accidents and the protection of persons, including employees, and property. Proposer shall conduct weekly safety meetings to insure a safe working environment. The Owner shall reserve the right to request documentation of such meetings and safety training practices.

14. **Provision of Texas Ethics Commission Form 1295 ("TEC Form 1295") by Respondents: Effective January 1, 2016, pursuant to Texas Government Code § 2252.908 (the "Interested Party Disclosure Act" or the "Act"), the Owner may not award the contract to a Respondent unless the Respondent has provided to the Owner a completed, signed and notarized TEC Form 1295 which has been assigned a certificate number by the Texas Ethics Commission (the "TEC"). Pursuant to the rules prescribed by the TEC, the TEC Form 1295 must be completed online through the TEC's website, assigned a certificate number, printed, signed and notarized, and provided to the Owner. The TEC Form 1295 may accompany the Proposal or may be submitted separately, but must be provided to the Owner prior to the award of the contract. For purposes of completing the TEC Form 1295, the entity's name is City of Midland; the contract ID number is 7227; and the description of goods and services is Northeast Water System Improvements Package A. Neither the Owner nor its consultants have the ability to verify the information included in a TEC Form 1295, and neither have an obligation nor undertake responsibility for advising any Respondent with respect to the proper completion of the TEC Form 1295.**

SELECTION OF PROPOSER:

Following the review and evaluation of the RFPs, the Owner will notify the most qualified Proposer providing the best-value proposal for the project in writing. Negotiations will be conducted with the selected Proposer to achieve a contract for the Project. If negotiations are unsuccessful, negotiations will be terminated with the Proposer and the Owner will enter into negotiations with the second most qualified, best-value Proposer.

A "Notice of Award" will be issued upon approval of the selected Proposer's contract. A "Notice-to-Proceed" may be issued by the Owner to initiate each work element of the project. The selected Proposer shall be prepared to arrive on site to initiate construction of the proposed improvements upon immediate readiness demanded by the proposed completion date. The selected Proposer shall coordinate its proposed construction schedule with the Owner and Engineer prior to mobilization.

PAYMENT:

Upon notice to proceed, the selected Proposer shall submit a schedule of values to the Engineer for approval as a basis of partial payment requests throughout the project. The selected Proposer may submit monthly invoices for work completed and materials purchased during the previous 30-day period based on the schedule of values. Piping material is not eligible for materials-on-hand. All invoices shall reflect a five percent (5%) retention from the amount of the draw request.

Owner shall remit the net amount of the invoice within 30 days of receipt of the invoice. All retained amounts shall be remitted upon final completion of the project as approved by the Owner and release of a Certificate of Completion.

CONDITIONS OF AWARD:

The Proposals will be considered and evaluated for award based upon the criteria set forth in this RFP.

The Price Proposal Sheet shall be completed with pricing of all items as required by the Proposal Documents of this RFP, and meet the terms thereof. All blank spaces for priced items must be filled in, in ink or typewritten, and the pricing form must be fully completed and executed when submitted. The Owner may waive any informalities or minor defects or reject any or all proposals. The Owner reserves the right to reject any and all proposals, in whole or in part; to waive any informality in any proposal, and to accept the proposal which, in its discretion, is in the best interest of the Owner. In case of ambiguity or lack of completeness in stating the prices in any proposal, the Owner reserves the right to consider the most advantageous thereof.

PACKAGE A, PART 1 & 2 – PROPOSAL TIME	
DESCRIPTION	**DAYS**
Total number of calendar days to substantially complete the Work*	_____

***Maximum allowable Proposal Time for substantial completion is 480 calendar days.**

Proposer agrees that the Work will be substantially complete, as provided in the General Conditions, within the number of calendar days shown above and completed and ready for final payment in accordance with the General Conditions within 60 calendar days after the date that substantial completion is reached.

Respectfully Submitted (Respondent):_____

SUBMITTED on _____, 20___.

State Contractor License No. _____. (If applicable

1. The undersigned Proposer proposes and agrees, if this Proposal is accepted, to enter into an Agreement with Owner in the form included in the Proposal Documents to perform and furnish all Work as specified or indicated in the Proposal Documents in accordance with the other terms and conditions of this RFP.

2. Proposer accepts all of the terms and conditions of the RFP, including without limitation those dealing with the disposition of pricing security. The Proposal will remain subject to acceptance for 45 days after the Proposal opening, or for such longer period of time that Proposer may agree to in writing upon request of Owner.

3. In submitting this Proposal, Proposer represents, as set forth in the Agreement, that:

   A. Proposer has examined and carefully studied the Proposal Documents, the other related data identified in the Proposal Documents, and the following Addenda, receipt of all which is hereby acknowledged.

Addendum No.	**Addendum Date**
_____	_____
_____	_____
_____	_____

   B. Proposer certifies Proposer is qualified to do business in the state where the Project is located as required by laws, rules, and regulations or, if allowed by stature, covenants to obtain such qualification prior to contract award.

   C. Proposer understands and agrees that this Proposal shall form the basis for an agreement with the Owner. Therefore, the undersigned agrees to enter into an agreement to perform and furnish all Work as specified or indicated in the Proposal Documents for the amounts indicated in this Proposal and in accordance with the other terms and conditions of the Proposal Documents.

D. Proposer accepts all of the terms and conditions of these Proposal Documents including, without limitation, those dealing with the disposition of Bid security, required bonds, and the liquidated damages that may be imposed. This Proposal shall remain subject to acceptance for a period of 45 days after the day of Proposal opening. The Proposer shall sign and submit the Agreement with the bonds and other required documents within 10 days after the receipt of Notice of Award from the Owner.

E. Proposer has given Engineer written notice of all conflicts, errors, ambiguities, or discrepancies that Proposer has discovered in the Proposal Documents, and the written resolution thereof by Engineer is acceptable to Proposer.

F. The Proposal Documents are generally sufficient to indicate and convey understanding of all terms and conditions for the performance of the Work for which this Proposal is submitted.

5. Proposer further represents that this Proposal is genuine and not made in the interest of or on behalf of any undisclosed individual or entity and is not submitted in conformity with any agreement or rules of any group, association, organization or corporation; Proposer has not directly or indirectly induced or solicited any other Proposer to submit a false or sham Proposal; Proposer has not solicited or induced any individual or entity to refrain from proposing; and Proposer has not sought by collusion to obtain for itself any advantage over any other Proposer or over Owner.

6. Proposer will complete the Work in accordance with the Proposal Documents for the prices proposed in the Price Proposal Sheet or as modified during negotiations with the Owner.

7. Proposer accepts the provisions of the Agreement as to liquidated damages in the event of failure to complete the Work within the Contract Times specified.

8. The following documents are attached to and made a condition of this Proposal:

A. Advertisement
B. Notice to Bidders
C. General Conditions of Bidding
D. Qualifications Statement
E. Standard Purchase Terms and Conditions
F. Non-Collusion Affidavit of Prime Proposer
G. Debarment / Suspension Certification
H. Bid Bond
I. Contract
J. Exhibit C – Bonding Requirements
K. Exhibit D – Heavy & Highway Wage Rates rev. 01/03/2020
L. Exhibit D – Building Water Rates rev. 01/03/2020
M. Performance Bond
N. Payment Bond
O. Standard General Conditions of the Construction Contract
P. Conflict of Interest Reporting Requirements
Q. Conflict of Interest Questionnaire
R. Consideration of Location of Bidder's Principal Place of Business

9. The Proposer is required to include their proposed construction schedule.

STANDARD PURCHASE TERMS AND CONDITIONS
PURCHASING DIVISION, CITY OF MIDLAND, TEXAS

"Seller", as used herein, has the same meaning as "Company". "Buyer", as used herein, has the same meaning as "City".

Seller and Buyer agree as follows:

1. SELLER TO PACKAGE GOODS - Seller will package goods in accordance with good commercial practice. Each shipping container shall be clearly and permanently marked as follows; (a) Seller's name and address, (b) Consignee's name, and address, and purchase order number, (c) Container number and total number of containers, e.g. box 1 of 4 boxes, and (d) the number of the container bearing the packing slip. Seller shall bear cost of packaging unless otherwise provided. Goods shall be suitably packed to secure lowest transportation costs and to conform with requirements of common carriers and any applicable specifications. Buyer's count or weight shall be final and conclusive on shipments not accompanied by packing lists.

2. SHIPMENT UNDER RESERVATION PROHIBITED - Seller is not authorized to ship the goods under reservation and no tender of a bill of lading will serve as a tender of goods.

3. TITLE & RISK OF LOSS - The title and risk of loss of the goods shall not pass to Buyer until Buyer actually receives and takes possession of the goods at the point or points of delivery in Midland, Texas.

4. NO REPLACEMENT OF DEFECTIVE TENDER - Every tender or delivery of goods must fully comply with all provisions of this contract as to time of delivery, quality and the like. If a tender is made which does not fully conform, this shall constitute a breach and Seller shall not have the right to substitute a conforming tender, provided, where the time for performance has yet expired, the Seller may reasonably notify Buyer of his intention to cure and may then make a conforming tender within the contract time but not afterward.

5. PLACE OF DELIVERY - The place of delivery shall be that set forth in the block of the purchase order entitled "deliver to".

6. INVOICES - Seller shall submit separate ORIGINAL invoices, on each purchase order. Invoices shall indicate the purchase order number. All invoices must be mailed to City of Midland, Accounts Payable, P.O. Box 1152, Midland, TX 79702-1152. Payment will be made within 30 days from the date the invoice and properly executed receiving documents are received by City of Midland, Accounts Payable at the above address. Invoices sent to any other address will delay payment.

7. GRATUITIES - The buyer may, by written notice to the seller, cancel this contract without liability to Seller, if it is determined by Buyer that gratuities, in the form of entertainment, gifts, or otherwise, were offered or given by the seller, or any agent or representative of the Seller, to any officer or employee of the City of Midland with a view toward securing a contract or securing favorable treatment with respect to performing of such a contract. In the event this contract is cancelled by Buyer pursuant to this provision, Buyer shall be entitled, in addition to any other rights and remedies, to recover or withhold the amount of the cost incurred by Seller in providing such gratuities.

8. WARRANTY - PRICE -

a. The price to be paid by the Buyer shall be that contained in Seller's bid which Seller warrants to be no higher than Seller's current prices on order by others for products of the kind and specifications covered by this agreement for similar quantities under similar or like conditions and methods of purchase. In the event Seller breaches this warranty, the prices of the items shall be reduced to the Seller's current prices on order by others, or in the alternative, Buyer may cancel this contract without liability to Seller for breach or Seller's actual expense.

b. The Seller warrants that no person or selling agency has been employed or retained to solicit or secure this contract upon an agreement or understanding for commission, percentage, brokerage, or contingent fee excepting bona fide employees or bona fide established commercial or selling agencies maintained by the Seller for the purpose of securing business. For breach or violation of this warranty the Buyer shall have the right or rights to cancel this contract without liability and to deduct from the contract price, or otherwise recover the full amount of such commission, percentage, brokerage or contingent fee.

9. WARRANTY - PRODUCT - Seller shall not limit or exclude any implied warranties and any attempt to do so shall render this contract voidable at the option of the Buyer. Seller warrants that the goods furnished will conform to the specification, drawings, and description listed in the bid invitation, and to the sample(s) furnished by Seller, if any. In the event of a conflict between the specifications, drawings and descriptions, the specifications shall govern.

10. SAFETY WARRANTY - Seller warrants that the product sold to Buyer shall conform to the standards promulgated by the U.S. Department of Labor under the Occupational Safety and Health Act of 1970. In the event the product does not conform to OSHA standards, Buyer may return the product for correction or replacement at the Seller's expense. In the event Seller fails to make the appropriate correction within a reasonable time, correction made by buyer will be at Seller's expense.

11. RIGHT OF INSPECTION - Buyer shall have the right to inspect the goods at delivery before accepting them.

12. CANCELLATION - Buyer shall have the right to cancel for default all or any part of the undelivered portion of this order if Seller breached any of the terms hereof including warranties of Seller if the Seller becomes insolvent or commits acts of bankruptcy. Such right of cancellation is in addition to and not in lieu of any other remedies which Buyer may have in law or equity.

13. TERMINATION - The performance of work under this order may be terminated in whole, or in part by the Buyer in accordance with this provision. Termination of work hereunder shall be effected by the delivery to Seller of a "Notice of Termination" specifying the extent to which performance of work under the order is terminated and the date upon which such termination becomes effective. Such right of termination is in addition to and not in lieu of the rights of Buyer set forth in Clause 13, herein.

14. FORCE MAJEURE - Neither party shall be held responsible for losses, resulting if the fulfillment of any terms or provisions of this contract is delayed or prevented by any cause not within the control of the party whose performance is interfered with, and which by the exercise of reasonable diligence said party is unable to prevent.

15. ASSIGNMENT - DELEGATION - No right or interest in this contract shall be assigned or delegation of any obligation made by Seller without the written permission of the Buyer. Any attempted assignment or delegation by the Seller shall be wholly void and totally ineffective for all purposes unless made in conformity with this paragraph.

16. MODIFICATIONS - This contract can be modified or rescinded only by a writing signed by both of the parties or their duly authorized agents.

17. INTERPRETATION - PAROL EVIDENCE - This writing, plus any specifications for bids and performance provided by Buyer in its advertisement for bids, is intended by the parties as a final expression of this agreement. No course of prior dealings between the parties and no usage of the trade shall be relevant to supplement or explain any term used in this agreement. Acceptance or acquiescence in a course of performance rendered under this agreement shall not be relevant to determine the meaning of this agreement even though the accepting or acquiescing party has knowledge of the performance and opportunity for objection. Whenever a term defined by the Uniform Commercial Code is used in this agreement, the definition contained in the Code is to control.

18. ADVERTISING - Seller shall not advertise or publish without Buyer's prior consent the fact that Buyer has entered into the contract, except to the extent necessary to comply with proper requests for information from an authorized representative of the federal, state or local government.

19. RIGHT TO ASSURANCE - Whenever one party to the contract in good faith has reason to question the other party's intent to perform he may demand that the other party give written assurance of this intent to perform. In the event that a demand is made and no assurance is given within five (5) days, the demanding party may treat this failure as an anticipatory repudiation of the contract.

20. PROTECTION AGAINST ROYALTIES OR PATENT INFRINGEMENT - The Seller shall pay all royalties and license fees, and shall provide for the use of any design, device, material or process covered by letters patent or copyright by suitable legal agreement with Patentee or Owner thereof. The Seller shall defend all suits or claims for infringement of any patent or copyrights and shall indemnify and save the Buyer harmless from any loss on account thereof, except that Buyer shall defend all such suits and claims and shall be responsible for all such loss when a particular design, device, material or process is allowed to the Seller, the Seller shall indemnify and save Buyer harmless from any loss on account thereof. If the material or process specified or required by Buyer is an infringement, the Seller shall be responsible for such loss unless he promptly gives written notice to the buyer of such infringement.

21. TIME - It is hereby expressly agreed and understood that time is of the essence for the performance of this contract, and any failure by contract to meet the time specifications of this agreement will cause Seller to be in default of this agreement.

22. TAX - The City of Midland is exempt from all Federal, State and City tax. Please do not include these taxes in your bid price or invoice. Taxable items must be so designated, and the City will supply vendor with a Tax Exemption Certificate, properly executed.

23. **INSURANCE –**

The following provisions apply unless the agreement is for the supply of goods only:

Seller shall at all times during the term of this agreement maintain and keep in full force and effect insurance in the following types and minimum amounts with companies authorized to do business in the State of Texas:

Commercial General Liability (including Contractual liability):	
-Personal Injury:	$1,000,000.00 per person
	$1,000,000.00 per occurrence
-Property Damage:	$500,000.00 per occurrence
Business Automobile Liability:	$250,000.00 combined single limit - Personal Injury and Property Damage
Worker's Compensation:	Statutory limits
Employers' Liability:	$500,000.00 per accident or occurrence

The Commercial General Liability shall be on a per project or policy aggregate, including completed operations, and shall be on an occurrence basis.

The Workers' Compensation coverage provided by Seller shall inure to the benefit of employees injured during the course and scope of their employment by Seller pursuant to this agreement.

The Business Automobile Liability insurance provided by Seller shall cover any auto for bodily injury and property damage, including owned vehicles, hired and non-owner vehicles, and employee non-ownership, and the amount of such policy shall be a minimum of $250,000.00 covering any vehicle used for the execution of the work that is the subject of this agreement.

All insurance required pursuant to this agreement, except for Worker's Compensation Insurance, shall name the Buyer as an additional insured on a claims occurred basis. All insurance required pursuant to this agreement, including Worker's Compensation Insurance, shall provide for a waiver of subrogation as to the Buyer.

The parties agree that, prior to the execution of the agreement, Seller shall provide one or more certificates of insurance showing that the requirements of this article have been met, and specifically containing, without limitations, the following endorsement:

"The City of Midland is included as an additional insured, on a claims occurred basis, on all policies except for Worker's Compensation. The Seller and Insurer hereby waive all rights of subrogation with respect to claims against the City of Midland, its agents, employees and officers, on all policies of insurance."
Buyer shall be provided the notice by Seller's insurance provider not later than thirty (30) days prior to any reduction or termination of such coverage. Buyer shall not be required to provide any insurance whatsoever pursuant to this agreement.

Seller shall contractually require all contractors, subcontractors, and sub-subcontractors that work on any portion of the work that is the subject of this agreement to obtain insurance coverage that meets or exceeds the policy requirements and minimum amounts specified herein. All contractors, subcontractors, and sub-subcontractors shall obtain insurance policies that provide blanket waivers of subrogation in favor of the City of Midland and policies that name the City of Midland as an additional insured on a claims occurred basis (except workers compensation).

24. ASSIGNMENT - Seller shall not, either directly or indirectly, assign all or any part of this agreement or any interest, right or privilege herein, without the prior written consent of the Buyer. The issue on whether or not to grant consent to an assignment is in the sole discretion of the Buyer.

25. RELEASE - NOTWITHSTANDING ANY OTHER PROVISIONS, SELLER HEREBY RELEASES, ACQUITS, RELINQUISHES AND FOREVER DISCHARGES BUYER, BUYER'S EMPLOYEES AND OFFICERS, FROM ANY AND ALL DEMANDS, CLAIMS, DAMAGES, OR CAUSES OF ACTION OF ANY KIND WHATSOEVER WHICH SELLER HAS OR MIGHT HAVE IN THE FUTURE, INCLUDING BUT NOT LIMITED TO BREACH OF CONTRACT, QUANTUM MERUIT, CLAIMS UNDER THE DUE PROCESS AND TAKINGS CLAUSES OF THE TEXAS AND UNITED STATES CONSTITUTIONS, TORT CLAIMS, OR BUYER'S NEGLIGENCE.

26. GOVERNING LAW AND VENUE - This agreement shall be governed by the laws of the State of Texas. All performance and payment made pursuant to this agreement shall be deemed to have occurred in Midland County, Texas. Exclusive venue for any claims, suits or any other action arising from or connected in any way to this agreement or the performance of this agreement shall be in Midland County, Texas. The obligations and undertakings of each of the parties to this agreement shall be deemed to have occurred in Midland County, Texas.

27. INDEPENDENT CONTRACTOR - It is expressly understood and agreed that Seller shall perform all work and services described herein as an independent contractor and not as an officer, agent, servant or employee of the Buyer; that Seller shall have exclusive control of and the exclusive right to control the details of the services and work performed hereunder, and all persons performing the same; and shall be solely responsible for the acts and omissions of its officers, agents, employees, contractors and subcontractors; that the doctrine of respondeat superior shall not apply as between Buyer and Seller, its officers, agents, employees, contractors and subcontractors; and that nothing herein shall be construed as creating a partnership or joint enterprise between Buyer and Seller. No person performing any of the work and services described hereunder by Seller shall be considered an officer, agent, servant or employee of the Buyer. Further, it is specifically understood and agreed that nothing in this agreement is intended or shall be construed as creating a "Community of Pecuniary Interest" or "An Equal Right of Control" which would give rise to vicarious liability. Seller shall be an independent contractor under this agreement and shall assume all of the rights, obligations and liabilities, applicable to it as such independent contractor hereunder. The Buyer does not have the power to direct the order in which the work is done. The Buyer shall not have the right to control the means, methods or details of the Seller's work. Seller shall assume exclusive responsibility for the work. Seller is entirely free to do the work in its own way.

28. NOTICE OF ALLEGED BREACH; STATUTORY PREREQUISITES - As a condition precedent to filing suit for alleged damages incurred by an alleged breach of an express or implied provision of this agreement, Seller or his legal representative, shall give the City Manager, or any other reasonable official of the Buyer, notice in writing (consisting of one original and seven copies of notice attached to a copy of this agreement) of such damages, duly verified, within one-hundred-twenty (120) days after the same has been sustained. The discovery rule does not apply to the giving of this notice. The notice shall include when, where and how the damages occurred, the apparent extent thereof, the amount of damages sustained, the amount for which the Seller will settle, the physical and mailing addresses of Seller at the time and date the claim was presented and the physical and mailing addresses of Seller for the six months immediately preceding the occurrence of such damages, and the names and addresses of the witnesses upon whom the Seller relies to establish its claim; and a failure to so notify the City Manager within the time and manner provided herein shall exonerate, excuse and except the Buyer from any liability whatsoever. The Buyer is under no obligation to provide notice to Seller that Seller's notice is insufficient. Buyer reserves the right to request reasonable additional information regarding the claim. Said additional information shall be supplied within thirty (30) days after receipt of notice.

The statutory prerequisites outlined herein constitute jurisdictional requirements pursuant to Section 271.154 of the Texas Local Government Code and Section 311.034 of the Texas Government Code. Notwithstanding any other provision, Seller's failure to comply with the requirements herein shall perpetually bar Seller's claim for damages under Chapter 271 of the Texas Local Government Code, and Section 311.034 of the Texas Government Code, regardless if Buyer has actual or constructive notice or knowledge of said claim or alleged damages. Seller agrees that the requirements of this entire agreement are reasonable.

29. INDEMNITY (NOT APPLICABLE TO PURCHASE AGREEMENTS) - SELLER WILL INDEMNIFY AND HOLD HARMLESS AND DEFEND BUYER AND ALL OF BUYER'S OFFICERS, AGENTS AND EMPLOYEES FROM ALL SUITS, ACTIONS, CLAIMS, DAMAGES, PERSONAL INJURIES, LOSSES, PROPERTY DAMAGE AND EXPENSES OF ANY CHARACTER WHATSOEVER, INCLUDING REASONABLE ATTORNEY'S FEES,

BROUGHT FOR OR ON ACCOUNT OF ANY INJURIES OR DAMAGES RECEIVED OR SUSTAINED BY ANY PERSON OR PERSONS OR PROPERTY, ON ACCOUNT OF ANY NEGLIGENT ACT OF SELLER, its agents or employees, or any subcontractor, arising out of, or resulting from, Seller's use of, or activities on, the agreement premises, and Seller will be required to pay any judgment with costs which may be obtained against Buyer or any of its officers, agents or employees, including reasonable attorney's fees.

SELLER SHALL INDEMNIFY AND HOLD HARMLESS AND DEFEND BUYER AND ALL OF BUYER'S OFFICERS, AGENTS AND EMPLOYEES FROM ALL SUITS, ACTIONS, CLAIMS, DAMAGES, ACCIDENTAL DEATH, PERSONAL INJURIES, PROPERTY DAMAGE, LOSSES, AND EXPENSE OF ANY CHARACTER WHATSOEVER INCLUDING REASONABLE ATTORNEY'S FEES, BROUGHT FOR OR ON ACCOUNT OF ANY INJURIES OR DAMAGES RECEIVED OR SUSTAINED BY ANY PERSON OR PERSONS OR PROPERTY, ON ACCOUNT OF ANY NEGLIGENT ACT OF BUYER, BUYER'S OFFICERS, AGENTS AND EMPLOYEES, WHETHER SUCH NEGLIGENT ACT WAS THE SOLE PROXIMATE CAUSE OF THE INJURY OR DAMAGE OR A PROXIMATE CAUSE JOINTLY AND CONCURRENTLY WITH SELLER OR SELLER'S EMPLOYEES, AGENTS OR SUBCONTRACTORS NEGLIGENCE, IN THE EXECUTION, SUPERVISION AND OPERATIONS GROWING OUT OF OR IN ANY WAY CONNECTED WITH THE PERFORMANCE OF THIS AGREEMENT AND SELLER WILL BE REQUIRED TO PAY ANY JUDGMENT WITH COSTS WHICH MAY BE OBTAINED AGAINST BUYER OR ANY OF BUYER'S OFFICERS, AGENTS OR EMPLOYEES, INCLUDING ATTORNEY'S FEES.

30. SOVEREIGN IMMUNITY - By executing this agreement the Buyer is not waiving its right of sovereign immunity. The Buyer is retaining its immunity from suit. The Buyer is not granting consent to be sued by legislative resolution or action. **THERE IS NO WAIVER OF SOVEREIGN IMMUNITY**.

31. THIRD PARTY BENEFICIARY - The Buyer's approval of this agreement does not create a third party beneficiary. There is no third party beneficiary to this agreement. No person or entity who is not a party to this agreement shall have any third party beneficiary or other rights hereunder.

32. <u>ATTORNEY FEES</u> - BY EXECUTING THIS AGREEMENT, SELLER AGREES TO WAIVE AND DOES HEREBY KNOWINGLY, CONCLUSIVELY, VOLUNTARILY AND INTENTIONALLY WAIVE ANY CLAIM IT HAS OR MAY HAVE IN THE FUTURE AGAINST THE BUYER, REGARDING THE AWARD OF ATTORNEY'S FEES, WHICH ARE IN ANY WAY RELATED TO THE AGREEMENT, OR THE CONSTRUCTION, INTERPRETATION OR BREACH OF THE AGREEMENT. THE SELLER SPECIFICALLY AGREES THAT IF THE SELLER BRINGS OR COMMENCES ANY LEGAL ACTION OR PROCEEDING RELATED TO THIS AGREEMENT, THE CONSTRUCTION, INTERPRETATION, VALIDITY OR BREACH OF THIS AGREEMENT, INCLUDING BUT NOT LIMITED TO ANY ACTION PURSUANT TO THE PROVISIONS OF THE TEXAS UNIFORM DECLARATORY JUDGMENTS ACT (TEXAS CIVIL PRACTICE AND REMEDIES CODE SECTION 37.001, ET. SEQ., AS AMENDED), OR CHAPTER 271 OF THE TEXAS LOCAL GOVERNMENT CODE, THE SELLER AGREES TO ABANDON, WAIVE AND RELINQUISH ANY AND ALL RIGHTS TO THE RECOVERY OF ATTORNEY'S FEES TO WHICH SELLER MIGHT OTHERWISE BE ENTITLED.

SELLER AGREES THAT THIS IS THE VOLUNTARY AND INTENTIONAL RELINQUISHMENT AND ABANDONMENT OF A PRESENTLY EXISTING KNOWN RIGHT. SELLER ACKNOWLEDGES THAT IT UNDERSTANDS ALL TERMS AND CONDITIONS OF THE AGREEMENT. THE SELLER FURTHER ACKNOWLEDGES AND AGREES THAT THERE WAS AND IS NO DISPARITY OF BARGAINING POWER BETWEEN THE BUYER AND THE SELLER. THIS SECTION SHALL NOT BE CONSTRUED OR INTERPRETED AS A WAIVER OF SOVEREIGN IMMUNITY.

THE SELLER AND BUYER ARE RELYING ON THEIR OWN JUDGMENT. EACH PARTY HAD THE OPPORTUNITY TO DISCUSS THIS AGREEMENT WITH LEGAL COUNSEL PRIOR TO ITS EXECUTION.

33. CONSIDERATION - The terms of this agreement are supported by good and valuable consideration, the receipt and sufficiency of which is hereby acknowledged by the parties named herein.

34. CERTIFICATION - In accordance with the Texas Local Government Code, the City of Midland Department of Facilities and Fleet Management does hereby certify that the City of Midland is in compliance with Sections 252, 271 and all applicable sections of the Texas Local Government Code and other state law as it applies to procurement and contracting issues.

35. FEDERAL WAGE REQUIREMENTS - If applicable, the Davis-Bacon Act, 29 CFR 5.5, and any related acts or regulations are hereby incorporated by reference and made a part of this agreement and all terms and requirements under said laws, by such incorporation, are made terms and requirements of this agreement, to which the parties to this agreement have agreed to be bound.

36. COMPLIANCE WITH FEDERAL, STATE AND LOCAL LAWS - Seller shall at all times during the term of this agreement comply with applicable federal, state, and local laws regarding Seller's activities pursuant to this agreement, including but not limited to all applicable sections of the Municipal Code of Midland, Texas, as may be amended, said sections being hereby incorporated by reference and made a part of this agreement for all legal purposes. Failure to abide by any such law mentioned herein constitutes grounds for the immediate termination of this agreement.

NON-COLLUSION AFFIDAVIT OF PRIME BIDDER

State of _____ §

County of _____ §

_____ , being first duly sworn, deposes and says that:

(1) He is _____ of _____ the Bidder that has submitted the attached Bid;

(2) He is fully informed respecting the preparation and contents of the attached bid and of all pertinent circumstances respecting such Bid;

(3) Such Bid is genuine and is not a collusive or sham Bid;

(4) Neither the said Bidder nor any of its officers, partners, owners, agents, representatives, employees or parties in interest, including this affiant, has in any way colluded, conspired, connived, or agreed, directly or indirectly, with any other Bidder, firm or person to submit a collusive or sham Bid in connection with the Contract for which the attached Bid has been submitted or to refrain from bidding in connection with such Contract, or has in any manner, directly or indirectly, sought by agreement or collusion or communication or conference with any other Bidder, firm or person to fix the price or prices in the attached Bid or of any other bidder, or to fix an overhead, profit or cost element of the Bid price or the Bid price of any other Bidder, or to secure through any advantage against the City of Midland or any person interested in the proposed contract; and

(5) The price or prices quoted in the attached Bid are fair and proper and are not tainted by any collusion, conspiracy, connivance or unlawful agreement on the part of the Bidder or any of its agents, representatives, owners, employees or parties in interest, including this affiant.

Name of Recipient

Verifying prime contractors and subcontractors for construction, equipment, supplies and services: Using the www.sam.gov website, the recipient must verify prior to awarding the contract that the prime contractor is not listed as an "excluded party" that is debarred, suspended or otherwise excluded from or ineligible. Once any subcontractors are known, they also must be verified as not listed as an "excluded party" prior to award of a subcontract. The recipient must print a dated record of the verification from the www.sam.gov website and retain a copy that is available for review by TWDB. The prime contractors and subcontractors must be verified prior to the contract award or the costs may be disallowed.

BID BOND

THE STATE OF TEXAS §

SURETY NO. _____

COUNTY OF MIDLAND §

KNOW ALL MEN BY THESE PRESENTS, THAT _____

_____

_____

(hereinafter called the Principal), as Principal, and _____

_____

_____

(hereinafter called the Surety), as Surety, are held and firmly bound unto the City of Midland, Texas a home rule municipal corporation of Midland County, Texas, (hereinafter called the Obligee), in the amount of _____

_____ DOLLARS

($_____), for the payment whereof the said Principal and Surety bind themselves, and their heirs, administrators, executors, successors and assigns, jointly and severally, firmly by these presents.

WHEREAS, the Principal has submitted a Bid or Proposal to enter into a certain written Contract with the obligee to_____

_____.

NOW, THEREFORE, THE CONDITION OF THIS OBLIGATION IS SUCH, that if the said Principal shall faithfully enter into such written Contract, then this obligation shall be void; otherwise to remain in full force and effect.

IT IS EXPRESSLY UNDERSTOOD AND AGREED that if said Principal should withdraw its Bid anytime after such Bid is opened and before official rejection to such Bid or, if successful in securing the award thereof, said Principal should fail to enter into the Contract and furnish satisfactory Performance Bond and Payment Bond, the Obligee, in either such events, shall be entitled and is hereby given the right to collect the full amount of this Bid Bond as liquidated damages.

PROVIDED, further that if any legal action be filed upon this Bond venue shall lie in Midland County, Texas

IN WITNESS THEREOF, THE SAID PRINCIPAL AND SURETY do sign and seal this instrument, this _____ day of _____, 20____.

NOTE: ATTACH POWER OF ATTORNEY

CONTRACT DOCUMENTS

THE CITY OF MIDLAND

CONTRACT

Contract No. 210000526

THIS CONTRACT, effective the 16th day of December, 2020, by and between the City of Midland, hereinafter referred to as "City", and Garney Companies, Inc., hereinafter referred to as "Company", is made for the following considerations:

1. **Cost:** Total Proposal: $ 22,063,309.00 DOLLARS

2. **Scope of Work:** Company shall perform all work described for Northeast Water System Improvements, Bid Package A, Part 1 – New Transfer Pump Station and Part 2 – New Pipelines in the following documents, attached hereto and incorporated herein by reference for all legal purposes.

EXHIBIT A..... Specifications, Proposal or Cost Summary
EXHIBIT B.....Intentionally Omitted
EXHIBIT C..... Bonding instructions for Public Works Contract of $50,000 and more
EXHIBIT D..... Wage Scale

3. **City:** The words "City's Representative" or "representative" shall mean Carl Craigo or the designee under whose supervision these contract documents, including the plans and specifications, were prepared, or who may inspect work performed under this Contract; or such other representative, supervisor, or inspector as may be authorized by City to act in any particular capacity under this Contract.

4. **City's Representative:** City's Representative may make periodic visits to the site to observe the progress and quality of the executed work and to determine, in general, if the work is proceeding in accordance with the contract documents. City's representative will not be required to make exhaustive or continuous on-site inspections to check the quality or quantity of the work, nor will such representative be responsible for the construction means, methods, techniques, sequences or procedures, or the safety precautions incident thereto. City's representative will not be responsible for Company's failure to perform the work in accordance with the contract.

5. **Company:** Unless otherwise stipulated, Company shall provide and pay for all materials, supplies, machinery, equipment, tools, superintendence, labor, insurance, and all water, light, power, fuel,

transportation and all other facilities necessary for the execution and completion of the work covered by the contract documents. Unless otherwise specified, all materials shall be new, and both workmanship and materials shall be of a good quality. Company shall, if required, furnish satisfactory evidence as to the kind and quality of materials.

5.1. Company shall, at its expense, obtain all permits and licenses necessary for the performance of this contract and pay all fees and taxes required by law, and comply with all laws, ordinances, rules and regulations governing Company's performance of the contract, including all environmental laws and regulations, whether state or federal.

5.2. All work shall be done and all materials furnished in strict conformity with the contract and specifications.

6. **Minor Work Not Mentioned:** All minor detail of the work not specifically mentioned in the Specifications but obviously necessary for the proper completion of the work, such as the proper connection of new work to old, shall be considered as incidental to and a part of the work for which the prices are named in the contract. Company will not be entitled to any additional compensation therefor unless specifically stated otherwise. Otherwise the term "extra work" as used in this contract shall mean and include all work that may be required by City to be done by Company to accomplish any alteration or addition to the work as shown on the Specifications.

6.1. Company shall perform all extra work under the direction of City's Representative when presented with a written work order signed by City's Representative, subject, however, to the right of the Company to require written confirmation of such extra work order by City. Payment for extra work shall be as agreed in the work order.

7. **Safety:** Company shall at all times exercise reasonable precaution for the safety of employees and others on or near the work and shall comply with all applicable provisions of federal, state and municipal laws. All machinery and equipment and other physical hazards shall be guarded in accordance with federal, state or municipal laws or regulations.

8. **INDEMNITY: COMPANY SHALL INDEMNIFY AND HOLD HARMLESS AND DEFEND CITY AND ALL OF CITY'S OFFICERS, AGENTS AND EMPLOYEES FROM ALL SUITS, ACTIONS, CLAIMS, DAMAGES, PERSONAL INJURIES, ACCIDENTAL DEATH, LOSSES, PROPERTY DAMAGE AND EXPENSES OF ANY CHARACTER WHATSOEVER, INCLUDING ATTORNEY'S FEES, BROUGHT FOR OR ON ACCOUNT OF ANY INJURIES OR DAMAGES RECEIVED OR SUSTAINED BY ANY PERSON OR PERSONS OR**

PROPERTY, ON ACCOUNT OF ANY NEGLIGENT ACT OF COMPANY, THEIR AGENTS OR EMPLOYEES, OR ANY SUBCONTRACTOR, IN THE EXECUTION, SUPERVISION AND OPERATIONS GROWING OUT OF OR IN ANY WAY CONNECTED WITH THE PERFORMANCE OF THIS CONTRACT, AND COMPANY WILL BE REQUIRED TO PAY ANY JUDGMENT WITH COSTS WHICH MAY BE OBTAINED AGAINST CITY OR ANY OF ITS OFFICERS, AGENTS OR EMPLOYEES, INCLUDING ATTORNEY'S FEES.

8.1. **COMPANY SHALL INDEMNIFY AND HOLD HARMLESS AND DEFEND CITY AND ALL OF CITY'S OFFICERS, AGENTS AND EMPLOYEES FROM ALL SUITS, ACTIONS, CLAIMS, DAMAGES, PERSONAL INJURIES, ACCIDENTAL DEATH, PROPERTY DAMAGE, LOSSES, AND EXPENSES OF ANY CHARACTER WHATSOEVER INCLUDING ATTORNEY'S FEES, BROUGHT FOR OR ON ACCOUNT OF ANY INJURIES OR DAMAGES RECEIVED OR SUSTAINED BY ANY PERSON OR PERSONS OR PROPERTY, ON ACCOUNT OF ANY NEGLIGENT ACT OF CITY, CITY'S OFFICERS, AGENTS AND EMPLOYEES, WHETHER SUCH NEGLIGENT ACT WAS THE SOLE PROXIMATE CAUSE OF THE INJURY OR DAMAGE OR A PROXIMATE CAUSE JOINTLY AND CONCURRENTLY WITH COMPANY OR COMPANY'S EMPLOYEES, AGENTS OR SUBCONTRACTORS NEGLIGENCE IN THE EXECUTION, SUPERVISION AND OPERATIONS GROWING OUT OF OR IN ANY WAY CONNECTED WITH THE PERFORMANCE OF THIS CONTRACT, AND COMPANY WILL BE REQUIRED TO PAY ANY JUDGMENT WITH COSTS WHICH MAY BE OBTAINED AGAINST CITY OR ANY OF ITS OFFICERS, AGENTS OR EMPLOYEES, INCLUDING ATTORNEY'S FEES.**

8.2. **COMPANY AGREES THAT IT WILL INDEMNIFY AND SAVE CITY HARMLESS FROM ALL CLAIMS GROWING OUT OF ANY DEMANDS OF SUBCONTRACTORS, LABORERS, WORKMEN, MECHANICS, MATERIALMEN, AND FURNISHERS OF MACHINERY AND PARTS THEREOF, EQUIPMENT, POWER TOOLS AND ALL SUPPLIES, INCURRED IN THE FURTHERANCE OF THE PERFORMANCE OF THIS CONTRACT. WHEN CITY SO DESIRES, COMPANY SHALL FURNISH SATISFACTORY EVIDENCE THAT ALL OBLIGATIONS OF THE NATURE HEREINABOVE DESIGNATED HAVE BEEN PAID, DISCHARGED OR WAIVED. COMPANY, ITS SURETIES AND INSURANCE CARRIERS SHALL DEFEND, INDEMNIFY AND SAVE HARMLESS CITY AND ALL OF ITS OFFICERS, AGENTS AND EMPLOYEES FROM ALL SUITS, ACTIONS, OR CLAIMS OF ANY CHARACTER WHATSOEVER, BROUGHT FOR OR ON ACCOUNT OF ANY INJURIES OR DAMAGES RECEIVED OR SUSTAINED BY ANY PERSON OR PERSONS OR**

PROPERTY, ARISING FROM ANY ACT OF COMPANY OR ANY SUBCONTRACTOR, THEIR AGENTS OR EMPLOYEES, IN THE EXECUTION AND SUPERVISION OF THIS CONTRACT, AND WILL BE REQUIRED TO PAY ANY JUDGMENT WITH COSTS WHICH MAY BE OBTAINED AGAINST CITY OR ANY OF ITS OFFICERS, AGENTS, OR EMPLOYEES INCLUDING ATTORNEY'S FEES.

9. **Start of Work:** Company shall commence work no later than ten (10) days after receipt of the execution of this document or other written release to proceed and shall complete such work no later than 459 calendar days after release to proceed.

10. **Clean Up:** Company shall promptly remove from City's premises all materials condemned by City's Representative on account of failure to conform to the contract, whether actually incorporated in the work or not, and Company shall at its own expense promptly replace such condemned materials with other materials conforming to the requirements of the contract. Company shall also bear the expense of restoring all work of other contractors damaged by any such removal or replacement. If Company does not remove and replace any such condemned materials within a reasonable time after a written notice by City, City may remove and replace such at Company's expense.

11. **Warranty:** Neither the final payment nor any provision in this contract shall relieve Company of responsibility for faulty materials or workmanship, and he shall remedy any defects due thereto and pay for any damage to other work resulting therefrom, which shall appear within a period of one (1) year from the date of substantial completion. City shall give notice of observed defects with reasonable promptness.

12. **Remedy:** City may, on account of subsequently discovered evidence, withhold whole or part of any payment to such extent as may be necessary to protect itself from loss on account of:

12.1. Defective work not remedied; or

12.2. Claims filed or reasonable evidence indicating possible filing of claims; or

12.3. Failure of Company to make payments promptly to subcontractors or for material or labor which City may pay as an agent for the Company; or

12.4. Damages to another contractor or subcontractor.

When the above grounds to withhold payment are removed, or Company provides a surety bond satisfactory to City, which will protect City in the amount withheld, payment may be released.

13. **Funding Out:** In the event no funds or insufficient funds are appropriated and budgeted or are otherwise available in any fiscal period for payment payments due under the contract, then this contract

shall terminate on the last day of the fiscal period for which full appropriations were made, without penalty or expense to City of any kind whatsoever.

14. **Wage Scale:** Company agrees to pay all workmen in his employ no less than the generally prevailing wage rate for employees of similar category in the Permian Basin Area, as is depicted in the wage rate scale attached hereto as EXHIBIT D, and incorporated herein by reference for all legal purposes.

14.1. If applicable, the Davis-Bacon Act, 29 CFR 5.5, and any related acts or regulations are hereby incorporated by reference and made a part of this Contract, and all terms and requirements under said laws, by such incorporation, are made terms and requirements of this Contract, to which the parties to this Contract have agreed to be bound.

15. **Prompt Pay Act:** City and Company agree that Texas Government Code, Chapter 2251, Payment for Goods and Services (the "Prompt Pay Act") does not waive governmental immunity.

16. **Payment; Retainage:** After all work is completed by Company, including all Change Orders altering the original scope and amount of the contract are completed, and the City has inspected and approved that the work is completed and in compliance with the contract and all subsequent Change Orders, the City may thereafter issue payment to Company in the amount of the contract and all Change Orders. The City shall be the final judge of when the work is completed by Company. The City, in its sole discretion, shall determine if the work under the contract and under any Change Orders has been done to the City's requirements.

16.1. The City may make periodic payments to Company; provided, however, such periodic payments may only be made pursuant to this section, and only after all work and all Change Orders are completed by Company and approved by the City. The approval shall be in the City's sole discretion. Requests for progress payments may be made to the extent of the materials and labor completed at the end of each month. Upon approval by the City or the City's representative, the request and invoice shall be forwarded for payment less 5% retainage. The total of these payments shall not exceed 95% of the total contract amount.

17. **Late Completion; Liquidated Damages:** It is hereby understood and mutually agreed, by and between Company and the City, that the date of beginning and the time for completion as specified in the contract of the work to be done hereunder are ESSENTIAL CONDITIONS of this contract; and it is further mutually understood and agreed that the work embraced in this contract shall be commenced on a date to be specified in the "Notice to Proceed." Company agrees that said work shall be prosecuted regularly, diligently, and uninterruptedly at such rate of progress as will insure full completion thereof

within the time specified. It is expressly understood and agreed, by and between Company and the City, that the time for the completion of the work described herein is a reasonable time for the completion of the same, taking into consideration the average climatic range and usual industrial conditions prevailing in this locality.

17.1. In the event Company shall neglect, fail or refuse to complete the work within the time herein specified, or any proper extension thereof granted by the City, then Company and Company's surety, if any, shall be liable for and does hereby agree, as a part consideration for the awarding of this contract, to pay to the City $500.00, not as a penalty but as liquidated damages for such breach of contract as hereinafter set forth, for each and every day that Company shall be in default after the time stipulated in the contract for completing the work. Further, the City shall have the right to cancel this contract for such delay. In the event the City cancels this contract pursuant to the terms of this section, the City shall pay to Company only those monies deemed appropriate by the City, in its sole discretion, to compensate Company for any work actually performed, less any liquidated damages Company owes the City.

17.2. The said amount is fixed and agreed upon by and between Company and the City because of the impracticability and extreme difficulty of fixing and ascertaining the actual damages the City would in such event sustain, and said amount is agreed to be the amount of damages which the City would sustain and said amount shall be retained from time to time by the City from current periodical estimates.

17.3. It is further agreed that time is of the essence of each and every portion of this contract and of the specifications wherein a definite and certain length of time is fixed for the performance of any act whatsoever; and where under the contract an additional time is allowed for the completion of any work, the new time limit fixed by such extension shall be of the essence of this contract. Provided, that Company shall not be charged with liquidated damages or any excess cost when the City determines, in its sole discretion, that Company is without fault and Company's reasons for the time extension are acceptable to the City. Provided, further, that Company shall not be charged with liquidated damages of any excess cost when the delay in completion of the work is due:

a. To any preference, priority or allocation order duly issued by the Government;

b. To unforeseeable cause beyond the control and without the fault or negligence of Company, including, but not restricted to, acts of God, or of the public enemy, acts of the City, acts of another contractor in the performance of a contract with the City, fires, floods, epidemics, quarantine restrictions, strikes, freight embargoes, and severe weather; and

c. To any delays of subcontractors or suppliers occasioned by any of the causes specified in subsections (a) and (b) of this article.

17.4. Provided, further, that Company shall, within ten (10) days from the beginning of such

delay, unless the City shall, in its sole discretion grant a further period of time prior to the date of final settlement of the contract, notify the City, in writing, of the causes of the delay, who shall ascertain the facts and extent of the delay and notify Company within a reasonable time of its decision in the matter.

17.5. **COMPANY AGREES THAT THE PAYMENT OF SUCH LIQUIDATED DAMAGES MAY BE RECOVERED BY THE CITY FROM RETAINAGE HELD BY THE CITY. NOTWITHSTANDING ANY OTHER PROVISION HEREOF, COMPANY HEREBY RELEASES, ACQUITS, RELINQUISHES AND FOREVER DISCHARGES CITY, CITY'S EMPLOYEES AND OFFICERS FROM ANY AND ALL DEMANDS, CLAIMS, DAMAGES, OR CAUSES OF ACTION OF ANY KIND WHATSOEVER ARISING FROM THE CITY WITHHOLDING PAYMENT FROM COMPANY AS LIQUIDATED DAMAGES FOR COMPANY'S FAILURE TO COMPLETE THE WORK WITHIN THE TIME SPECIFIED HEREIN, INCLUDING BUT NOT LIMITED TO BREACH OF CONTRACT, QUANTUM MERUIT, CLAIMS UNDER THE DUE PROCESS AND TAKINGS CLAUSES OF THE TEXAS AND UNITED STATES CONSTITUTIONS, TORT CLAIMS, OR CITY'S NEGLIGENCE.**

17.6. **COMPANY SHALL RECEIVE NO FINANCIAL COMPENSATION FOR DELAY OR HINDRANCE TO THE WORK. IN NO EVENT SHALL THE CITY BE LIABLE TO COMPANY OR ANY SUBCONTRACTOR OR SUPPLIER, ANY OTHER PERSON OR ANY SURETY FOR OR ANY EMPLOYEE OR AGENT OF ANY OF THEM, FOR ANY DAMAGES ARISING OUT OF OR ASSOCIATED WITH ANY DELAY OR HINDRANCE TO THE WORK, REGARDLESS OF THE SOURCE OF THE DELAY OR HINDRANCE, INCLUDING EVENTS OF FORCE MAJEURE, AND EVEN IF SUCH DELAY OR HINDRANCE RESULTS FROM, ARISES OUT OF OR IS DUE, IN WHOLE OR IN PART, TO THE NEGLIGENCE OF THE CITY. COMPANY'S SOLE REMEDY IN ANY SUCH CASE SHALL BE AN EXTENSION OF TIME.**

18. **No Third Party Beneficiary:** City's approval of this contract does not create a third party beneficiary. There is no third party beneficiary to this contract. No person or entity who is not a party to this contract shall have any third party beneficiary or other rights hereunder.

19. **WAIVER OF ATTORNEY FEES: BY EXECUTING THIS CONTRACT, COMPANY AGREES TO WAIVE AND DOES HEREBY KNOWINGLY, CONCLUSIVELY, VOLUNTARILY AND INTENTIONALLY WAIVE ANY CLAIM IT HAS OR MAY HAVE IN THE FUTURE AGAINST CITY, REGARDING THE AWARD OF ATTORNEY'S FEES, WHICH ARE IN ANY WAY RELATED TO THE CONTRACT, OR THE CONSTRUCTION,**

INTERPRETATION OR BREACH OF THE CONTRACT. COMPANY SPECIFICALLY AGREES THAT IF COMPANY BRINGS OR COMMENCES ANY LEGAL ACTION OR PROCEEDING RELATED TO THIS CONTRACT, THE CONSTRUCTION, INTERPRETATION, VALIDITY OR BREACH OF THIS CONTRACT, INCLUDING BUT NOT LIMITED TO ANY ACTION PURSUANT TO THE PROVISIONS OF THE TEXAS UNIFORM DECLARATORY JUDGMENTS ACT (TEXAS CIVIL PRACTICE AND REMEDIES CODE SECTION 37.001, ET SEQ., AS AMENDED), OR CHAPTER 271 OF THE TEXAS LOCAL GOVERNMENT CODE, COMPANY AGREES TO ABANDON, WAIVE AND RELINQUISH ANY AND ALL RIGHTS TO THE RECOVERY OF ATTORNEY'S FEES TO WHICH COMPANY MIGHT OTHERWISE BE ENTITLED.

COMPANY AGREES THAT THIS IS THE VOLUNTARY AND INTENTIONAL RELINQUISHMENT AND ABANDONMENT OF A PRESENTLY EXISTING KNOWN RIGHT. COMPANY ACKNOWLEDGES THAT IT UNDERSTANDS ALL TERMS AND CONDITIONS OF THE CONTRACT. COMPANY FURTHER ACKNOWLEDGES AND AGREES THAT THERE WAS AND IS NO DISPARITY OF BARGAINING POWER BETWEEN CITY AND COMPANY. THIS SECTION SHALL NOT BE CONSTRUED OR INTERPRETED AS A WAIVER OF GOVERNMENTAL IMMUNITY.

COMPANY AND CITY ARE RELYING ON THEIR OWN JUDGMENT. EACH PARTY HAD THE OPPORTUNITY TO DISCUSS THIS CONTRACT WITH COMPETENT LEGAL COUNSEL PRIOR TO ITS EXECUTION.

20. **Governmental Immunity:** By executing this contract City is not waiving its right of governmental immunity. City is retaining its immunity from suit. City is not granting consent to be sued by legislative resolution or action.

THERE IS NO WAIVER OF GOVERNMENTAL IMMUNITY.

21. **Insurance:**

Company shall at all times during the term of this Contract maintain and keep in full force and effect insurance in the following types and minimum amounts with companies authorized to do business in the State of Texas:

Commercial General Liability (including Contractual liability):

-Personal Injury:	$1,000,000.00 per person
	$1,000,000.00 per occurrence
-Property Damage:	$500,000.00 per occurrence

Business Automobile Liability:	$250,000.00 combined single limit - Personal Injury and Property Damage
Workers' Compensation:	Statutory limits
Employers' Liability:	$500,000.00 per accident or occurrence

The Commercial General Liability shall be on a per project aggregate, including completed operations, and shall be on a claims-occurred basis. This insurance shall name City as an additional insured and waive subrogation in favor of City.

The Business Automobile Liability insurance provided by Company shall cover any auto for bodily injury and property damage, including owned vehicles, hired and non-city vehicles, and employee non-ownership, and the amount of such policy shall be a minimum of $250,000.00 covering any vehicle used for the execution of the work that is the subject of this Contract. This insurance shall name City as an additional insured and waive subrogation in favor of City.

The Workers' Compensation coverage provided by Company shall inure to the benefit of employees injured during the course and scope of their employment by Company pursuant to this Contract. The Workers' Compensation shall waive all rights of subrogation in favor of City.

All insurance required pursuant to this Contract shall provide for a waiver of subrogation in favor of City. All insurance required pursuant to this Contract, except for Workers' Compensation Insurance, shall name City as an additional insured on a claims occurred basis. City shall be provided the notice by Company's insurance provider not later than thirty (30) days prior to any reduction or termination of such coverage.

Company shall contractually require all contractors, subcontractors, and sub-subcontractors that work on any portion of the work that is the subject of this Contract to obtain insurance coverage that meets or exceeds the policy requirements and minimum amounts specified herein. All contractors, subcontractors, and sub-subcontractors shall obtain insurance policies that provide blanket waivers of subrogation in favor of the City of Midland and policies that name the City of Midland as an additional insured on a claims occurred basis (except workers' compensation).

The parties agree that, prior to the execution of the Contract, Company shall provide one or more certificates of insurance specifically stating that these requirements have been met and subject to the approval of City. City shall not be required to provide any insurance whatsoever pursuant to this Contract.

Company certifies that the certificate of insurance provided as required herein complies with the requirements of Chapter 1811 of the Texas Insurance Code. Company shall not use an unapproved certificate of insurance or insert inappropriate language on a certificate. Compliance with state law is the sole responsibility of Company.

22. **Assignment**: Company shall not, either directly or indirectly, assign all or any part of this Contract

or any interest, right or privilege herein, without the prior written consent of City. The issue on whether or not to grant consent to an assignment is in the sole discretion of City.

23. **RELEASE: NOTWITHSTANDING ANY OTHER PROVISIONS, COMPANY HEREBY RELEASES, ACQUITS, RELINQUISHES AND FOREVER DISCHARGES CITY, CITY'S EMPLOYEES AND OFFICERS, FROM ANY AND ALL DEMANDS, CLAIMS, DAMAGES, OR CAUSES OF ACTION OF ANY KIND WHATSOEVER WHICH COMPANY HAS OR MIGHT HAVE IN THE FUTURE, INCLUDING BUT NOT LIMITED TO BREACH OF CONTRACT, QUANTUM MERUIT, CLAIMS UNDER THE DUE PROCESS AND TAKINGS CLAUSES OF THE TEXAS AND UNITED STATES CONSTITUTIONS, TORT CLAIMS, OR CITY'S NEGLIGENCE**.

24. **Governing Law and Venue:** This Contract shall be governed by the laws of the State of Texas. All performance and payment made pursuant to this Contract shall be deemed to have occurred in Midland County, Texas. Exclusive venue for any claims, suits or any other action arising from or connected in any way to this Contract or the performance of this Contract shall be in Midland County, Texas. The obligations and undertakings of each of the parties to this Contract shall be deemed to have occurred in Midland County, Texas. This Contract shall be governed by, interpreted, enforced and construed under the law of the State of Texas. The laws of the State of Texas shall govern, construe and enforce all the rights and duties of the parties, including but not limited to tort claims and any and all contractual claims or disputes, arising from or relating in any way to the subject matter of this Contract, without regard to conflict on laws and rules that would direct application of the laws of another jurisdiction.

25. **Independent Contractor:** It is expressly understood and agreed that Company shall perform all work and services described herein as an independent contractor and not as an officer, agent, servant or employee of City; that Company shall have exclusive control of and the exclusive right to control the details of the services and work performed hereunder, and all persons performing the same; and shall be solely responsible for the acts and omissions of its officers, agents, employees, contractors and subcontractors; that the doctrine of respondeat superior shall not apply as between City and Company, its officers, agents, employees, contractors and subcontractors; and that nothing herein shall be construed as creating a partnership or joint enterprise between City and Company. No person performing any of the work and services described hereunder by Company shall be considered an officer, agent, servant or employee of the City. Further, it is specifically understood and agreed that nothing in this Contract is intended or shall be construed as creating a "Community of Pecuniary Interest" or "An Equal Right of Control" which would give rise to vicarious liability. Company shall be an independent contractor under this Contract and shall assume all of the rights, obligations and liabilities, applicable to it as such

independent contractor hereunder. City does not have the power to direct the order in which the work is done. City shall not have the right to control the means, methods or details of the Company's work. Company shall assume exclusive responsibility for the work. Company is entirely free to do the work in its own way.

26. **Notice of Alleged Breach; Statutory Prerequisites:** As a condition precedent to filing suit for alleged damages incurred by an alleged breach of an express or implied provision of this Contract, Company or its legal representative, shall give the City Manager, or any other reasonable official of City, notice in writing (consisting of one original and seven copies of notice attached to a copy of this Contract) of such damages, duly verified, within one-hundred fifty (150) days after the same has been sustained. The discovery rule does not apply to the giving of this notice. The notice shall include when, where and how the damages occurred, the apparent extent thereof, the amount of damages sustained, the amount for which Company will settle, the physical and mailing addresses of Company at the time and date the claim was presented and the physical and mailing addresses of Company for the six months immediately preceding the occurrence of such damages, and the names and addresses of the witnesses upon whom Company relies to establish its claim; and a failure to so notify the City Manager within the time and manner provided herein shall exonerate, excuse and except City from any liability whatsoever. City is under no obligation to provide notice to Company that Company's notice is insufficient. City reserves the right to request reasonable additional information regarding the claim. Said additional information shall be supplied within thirty (30) days after receipt of notice.

The statutory prerequisites outlined herein constitute jurisdictional requirements pursuant to Section 271.154 of the Texas Local Government Code and Section 311.034 of the Texas Government Code. Notwithstanding any other provision, Company's failure to comply with the requirements herein shall perpetually bar Company's claim for damages under Chapter 271 of the Texas Local Government Code, and Section 311.034 of the Texas Government Code, regardless if City has actual or constructive notice or knowledge of said claim or alleged damages. Company agrees that the requirements of this entire Contract are reasonable.

27. **Consideration:** The terms of this Contract are supported by good and valuable consideration, the receipt and sufficiency of which is hereby acknowledged by the parties named herein.

28. **Termination At Will:** City may terminate this Contract at will for no or any reason upon giving at least one hundred eighty (180) days written notice to Company. The parties to this Contract understand and agree that it is in City's sole discretion to cancel the Contract during the term of the Contract without penalty to City. Company has no expectation and has received no guarantees that this Contract will not be

terminated before the end of the Contract term. The parties have bargained for the flexibility of terminating this Contract upon tender of the requisite notice at any time during the term of the Contract. All work and services under the Contract shall be suspended upon termination of the Contract becoming effective.

29. **Compliance:** Company agrees that it shall comply with Texas Government Code Section 2252.908, *et seq.*, as amended. Company agrees that it shall comply with Texas Local Government Code Section 176.006, *et seq.*, as amended.

30. To the extent that Tex. Gov't Code section 2270.002 applies to this Contract, Company hereby verifies that Company does not boycott Israel and will not boycott Israel during the term of this Contract. If Tex. Gov't Code section 2270.002 does not apply to this Contract, such verification is not required, and Company shall be deemed to have not made such verification.

31. **Records Retention and Production of Information.** To the extent that this Contract is a contract described by Section 552.371 of the Texas Government Code, Company shall (1) preserve all contracting information related to the Contract as provided by the records retention requirements applicable to City for the duration of the contract, (2) promptly provide to City any contracting information related to the Contract that is in the custody or possession of Company on request of City, and (3) on completion of the Contract, either (i) provide at no cost to City all contracting information related to the Contract that is in the custody or possession of Company, or (ii) preserve the contracting information related to the Contract as provided by the records retention requirements applicable to City.

32. **Public Information.** To the extent that this Contract is a contract described by Section 552.371 of the Texas Government Code, Company agrees as follows in accordance with Section 552.372(b) of the Texas Government Code: The requirements of Subchapter J, Chapter 552, Government Code, may apply to this contract, and the contractor or vendor agrees that the contract can be terminated if the contractor or vendor knowingly or intentionally fails to comply with a requirement of that subchapter.

33. **Conflict of Terms.** If a conflict of terms or language exists between (i) any of the provisions of this Contract and (ii) any of the provisions contained in Exhibit A, precedence shall be given to the provisions of this Contract. For the avoidance of any doubt, the provisions contained in this Contract shall supersede any and all conflicting provisions contained in Exhibit A.

EXECUTED IN DUPLICATE the day and year first above mentioned.

BEFORE ME, the undersigned authority, on this ____ day of _____, 20____ personally appeared, ._____ , an officer of Garney Companies,Inc. known to me to be the person and official whose name is subscribed to the forgoing instrument, and acknowledged to me that he executed the same as the act and deed of said corporation, for the purposes and consideration therein expressed, and in the capacity therein stated.

GIVEN UNDER MY HAND AND SEAL OF OFFICE this the ____day of _____, 20____.

_____
Notary Public, State of Texas

EXHIBIT C

Bonding Requirements

The successful bidder shall be required to furnish a Performance & Payment Bond* for bids in excess of $50,000.00, in an amount equal to one hundred percent (100%) of the total contract price, such bond to be executed in five (5) original counterparts by a Corporate Surety authorized to do business in the State of Texas and acceptable to the City of Midland. All bonds must be executed on forms contained in these contract documents. The form of agreement which the successful bidder, as contractor, will be required to execute is also included herewith. The form of agreement and the form of the bonds should be carefully examined by the bidder.

A certified check, cashier's check, bank money order, or irrevocable letter of credit issued by a bank satisfactory to the City, or a bidder's bond on the form provided, in the amount of five percent (5%) of the largest possible lump sum bid submitted, payable without recourse to the City, must accompany the bidder's proposal, as a guaranty that the bidder will enter a contract and execute the required payment bond and guaranty in the forms provided within fifteen (15) days after notice of award of contract to him. Bids or proposals without the required bid guaranty will not be considered. All bid sureties and payment bonds shall name the City of Midland as Obligee.

*A cash security such as a cashier's check or irrevocable letter of credit issued by a bank satisfactory to the City for 100 % of the contract amount may be supplied in lieu of the Performance and Payment Bonds. The check will be returned un-cashed upon satisfactory completion of the work and evidence of payment of all obligations due for the contract.

HEAVY & HIGHWAY CONSTRUCTION PROJECTS

Note: Under Executive Order (EO) 13658, an hourly minimum wage of $10.80 for calendar year 2020 applies to all contracts subject to the Davis-Bacon Act for which the contract is awarded (and any solicitation was issued) on or after January 1, 2015. If this contract is covered by the EO, the contractor must pay all workers in any classification listed on this wage determination at least $10.80 per hour (or the applicable wage rate listed on this wage determination, if it is higher) for all hours spent performing on the contract in calendar year 2020. If this contract is covered by the EO and a classification considered necessary for performance of work on the contract does not appear on this wage determination, the contractor must pay workers in that classification at least the wage rate determined through the conformance process set forth in 29 CFR 5.5(a)(1)(ii) (or the EO minimum wage rate, if it is higher than the conformed wage rate). The EO minimum wage rate will be adjusted annually. Please note that this EO applies to the above-mentioned types of contracts entered into by the federal government that are subject to the Davis-Bacon Act itself, but it does not apply to contracts subject only to the Davis-Bacon Related Acts, including those set forth at 29 CFR 5.1(a)(2)-(60). Additional information on contractor requirements and worker protections under the EO is available at www.dol.gov/whd/govcontracts.

Exhibit D - Heavy & Highway Wage Rates rev. 01/03/2020

Tandem Axle Tractor with Semi	$ 12.49

WELDERS - Receive rate prescribed for craft performing operation to which welding is incidental.

==========

Note: Executive Order (EO) 13706, Establishing Paid Sick Leave for Federal Contractors applies to all contracts subject to the Davis-Bacon Act for which the contract is awarded (and any solicitation was issued) on or after January 1, 2017. If this contract is covered by the EO, the contractor must provide employees with 1 hour of paid sick leave for every 30 hours they work, up to 56 hours of paid sick leave each year. Employees must be permitted to use paid sick leave for their own illness, injury or other health-related needs, including preventive care; to assist a family member (or person who is like family to the employee) who is ill, injured, or has other health-related needs, including preventive care; or for reasons resulting from, or to assist a family member (or person who is like family to the employee) who is a victim of, domestic violence, sexual assault, or stalking. Additional information on contractor requirements and worker protections under the EO is available at www.dol.gov/whd/govcontracts.

Unlisted classifications needed for work not included within the scope of the classifications listed may be added after award only as provided in the labor standards contract clauses (29CFR 5.5 (a) (1) (ii)).

The body of each wage determination lists the classification and wage rates that have been found to be prevailing for the cited type(s) of construction in the area covered by the wage determination. The classifications are listed in alphabetical order of ""identifiers"" that indicate whether the particular rate is a union rate (current union negotiated rate for local), a survey rate (weighted average rate) or a union average rate (weighted union average rate).
Union Rate Identifiers

A four letter classification abbreviation identifier enclosed in dotted lines beginning with characters other than ""SU"" or ""UAVG"" denotes that the union classification and rate were

prevailing for that classification in the survey. Example: PLUM0198-005 07/01/2014. PLUM is an abbreviation identifier of the union which prevailed in the survey for this classification, which in this example would be Plumbers. 0198 indicates the local union number or district council number

where applicable, i.e., Plumbers Local 0198. The next number, 005 in the example, is an internal number used in processing the wage determination. 07/01/2014 is the effective date of the most current negotiated rate, which in this example is July 1, 2014.

Union prevailing wage rates are updated to reflect all rate changes in the collective bargaining agreement (CBA) governing this classification and rate.

Survey Rate Identifiers

Classifications listed under the ""SU"" identifier indicate that no one rate prevailed for this classification in the survey and the published rate is derived by computing a weighted average rate based on all the rates reported in the survey for that classification. As this weighted average rate includes all rates reported in the survey, it may include both union and non-union rates. Example: SULA2012-007 5/13/2014. SU indicates the rates are survey rates based on a weighted average calculation of rates and are not majority rates. LA indicates the State of Louisiana. 2012 is the year of survey on which these classifications and rates are based. The next number, 007 in the example, is an internal number used in producing the wage determination. 5/13/2014 indicates the survey completion date for the classifications and rates under that identifier.

Survey wage rates are not updated and remain in effect until a new survey is conducted.

Union Average Rate Identifiers

Classification(s) listed under the UAVG identifier indicate that no single majority rate prevailed for those classifications; however, 100% of the data reported for the classifications was union data. EXAMPLE: UAVG-OH-0010 08/29/2014. UAVG indicates that the rate is a weighted union average rate. OH indicates the state. The next number, 0010 in the example, is an internal number used in producing the wage determination. 08/29/2014 indicates the survey completion date for the classifications and rates under that identifier.

A UAVG rate will be updated once a year, usually in January of each year, to reflect a weighted average of the current negotiated/CBA rate of the union locals from which the rate is based.

WAGE DETERMINATION APPEALS PROCESS

1.) Has there been an initial decision in the matter? This can be:

* an existing published wage determination
* a survey underlying a wage determination
* a Wage and Hour Division letter setting forth a position on a wage determination matter
* a conformance (additional classification and rate) ruling

On survey related matters, initial contact, including requests for summaries of surveys, should be with the Wage and Hour Regional Office for the area in which the survey was conducted because those Regional Offices have responsibility for the Davis-Bacon survey program. If the response from this initial contact is not satisfactory, then the process described in 2.) and 3.) should be followed.

With regard to any other matter not yet ripe for the formal process described here, initial contact should be with the Branch of Construction Wage Determinations. Write to:

Branch of Construction Wage Determinations
Wage and Hour Division
U.S. Department of Labor
200 Constitution Avenue, N.W.
Washington, DC 20210

2.) If the answer to the question in 1.) is yes, then an interested party (those affected by the action) can request review and reconsideration from the Wage and Hour Administrator (See 29 CFR Part 1.8 and 29 CFR Part 7). Write to:

Wage and Hour Administrator
U.S. Department of Labor
200 Constitution Avenue, N.W.
Washington, DC 20210

The request should be accompanied by a full statement of the interested party's position and by any information (wage payment data, project description, area practice material, etc.) that the requestor considers relevant to the issue.

3.) If the decision of the Administrator is not favorable, an interested party may appeal directly to the Administrative Review Board (formerly the Wage Appeals Board). Write to:

Administrative Review Board
U.S. Department of Labor
200 Constitution Avenue, N.W.
Washington, DC 20210

4.) All decisions by the Administrative Review Board are final.

==========

END OF GENERAL DECISION

EXHIBIT D - BUILDING WAGE RATES rev. 09/11/2020

"General Decision Number: TX20200261 09/11/2020

Superseded General Decision Number: TX20190261

State: Texas

Construction Type: Building

County: Midland County in Texas.

BUILDING CONSTRUCTION PROJECTS (does not include single family homes or apartments up to and including 4 stories).

Note: Under Executive Order (EO) 13658, an hourly minimum wage of $10.80 for calendar year 2020 applies to all contracts subject to the Davis-Bacon Act for which the contract is awarded (and any solicitation was issued) on or after January 1, 2015. If this contract is covered by the EO, the contractor must pay all workers in any classification listed on this wage determination at least $10.80 per hour (or the applicable wage rate listed on this wage determination, if it is higher) for all hours spent performing on the contract in calendar year 2020. If this contract is covered by the EO and a classification considered necessary for performance of work on the contract does not appear on this wage determination, the contractor must pay workers in that classification at least the wage rate determined through the conformance process set forth in 29 CFR 5.5(a)(1)(ii) (or the EO minimum wage rate,if it is higher than the conformed wage rate). The EO minimum wage rate will be adjusted annually. Please note that this EO applies to the above-mentioned types of contracts entered into by the federal government that are subject to the Davis-Bacon Act itself, but it does not apply to contracts subject only to the Davis-Bacon Related Acts, including those set forth at 29 CFR 5.1(a)(2)-(60). Additional information on contractor requirements and worker protections under the EO is available at www.dol.gov/whd/govcontracts.

==========

Note: Executive Order (EO) 13706, Establishing Paid Sick Leave for Federal Contractors applies to all contracts subject to the Davis-Bacon Act for which the contract is awarded (and any solicitation was issued) on or after January 1, 2017. If this contract is covered by the EO, the contractor must provide employees with 1 hour of paid sick leave for every 30 hours they work, up to 56 hours of paid sick leave each year. Employees must be permitted to use paid sick leave for their own illness, injury or other health-related needs, including preventive care; to assist a family member (or person who is like family to the employee) who is ill, injured, or has other health-related needs, including preventive care; or for reasons resulting from, or to assist a family member (or person who is like family to the employee) who is a victim of, domestic violence, sexual assault, or stalking. Additional information on contractor requirements and worker protections under the EO is available at www.dol.gov/whd/govcontracts.

Unlisted classifications needed for work not included within the scope of the classifications listed may be added after award only as provided in the labor standards contract clauses (29CFR 5.5 (a) (1) (ii)).

The body of each wage determination lists the classification and wage rates that have been found to be prevailing for the cited type(s) of construction in the area covered by the wage

determination. The classifications are listed in alphabetical order of ""identifiers"" that indicate whether the particular rate is a union rate (current union negotiated rate for local), a survey rate (weighted average rate) or a union average rate (weighted union average rate).

Union Rate Identifiers

A four letter classification abbreviation identifier enclosed in dotted lines beginning with characters other than ""SU"" or ""UAVG"" denotes that the union classification and rate were prevailing for that classification in the survey. Example: PLUM0198-005 07/01/2014. PLUM is an abbreviation identifier of the union which prevailed in the survey for this classification, which in this example would be Plumbers. 0198 indicates the local union number or district council number where applicable, i.e., Plumbers Local 0198. The next number, 005 in the example, is an internal number used in processing the wage determination. 07/01/2014 is the effective date of the most current negotiated rate, which in this example is July 1, 2014.

Union prevailing wage rates are updated to reflect all rate changes in the collective bargaining agreement (CBA) governing this classification and rate.

Survey Rate Identifiers

Classifications listed under the ""SU"" identifier indicate that no one rate prevailed for this classification in the survey and the published rate is derived by computing a weighted average rate based on all the rates reported in the survey for that classification. As this weighted average rate includes all rates reported in the survey, it may include both union and non-union rates. Example: SULA2012-007 5/13/2014. SU indicates the rates are survey rates based on a weighted average calculation of rates and are not majority rates. LA indicates the State of Louisiana. 2012 is the year of survey on which these classifications and rates are based. The next number, 007 in the example, is an internal number used in producing the wage determination. 5/13/2014 indicates the survey completion date for the classifications and rates under that identifier.

Survey wage rates are not updated and remain in effect until a new survey is conducted.

Union Average Rate Identifiers

Classification(s) listed under the UAVG identifier indicate that no single majority rate prevailed for those classifications; however, 100% of the data reported for the classifications was union data. EXAMPLE: UAVG-OH-0010 08/29/2014. UAVG indicates that the rate is a weighted union average rate. OH indicates the state. The next number, 0010 in the example, is an internal number used in producing the wage determination. 08/29/2014 indicates the survey completion date for the classifications and rates under that identifier.

A UAVG rate will be updated once a year, usually in January of each year, to reflect a weighted average of the current negotiated/CBA rate of the union locals from which the rate is based.

WAGE DETERMINATION APPEALS PROCESS

1.) Has there been an initial decision in the matter? This can be:

* an existing published wage determination
* a survey underlying a wage determination
* a Wage and Hour Division letter setting forth a position on a wage determination matter
* a conformance (additional classification and rate) ruling

On survey related matters, initial contact, including requests for summaries of surveys, should be with the Wage and Hour Regional Office for the area in which the survey was conducted because those Regional Offices have responsibility for the Davis-Bacon survey program. If the response from this initial contact is not satisfactory, then the process described in 2.) and 3.) should be followed.

With regard to any other matter not yet ripe for the formal process described here, initial contact should be with the Branch of Construction Wage Determinations. Write to:

Branch of Construction Wage Determinations
Wage and Hour Division
U.S. Department of Labor
200 Constitution Avenue, N.W.
Washington, DC 20210

2.) If the answer to the question in 1.) is yes, then an interested party (those affected by the action) can request review and reconsideration from the Wage and Hour Administrator (See 29 CFR Part 1.8 and 29 CFR Part 7). Write to:

Wage and Hour Administrator
U.S. Department of Labor
200 Constitution Avenue, N.W.
Washington, DC 20210

The request should be accompanied by a full statement of the interested party's position and by any information (wage payment data, project description, area practice material, etc.) that the requestor considers relevant to the issue.

3.) If the decision of the Administrator is not favorable, an interested party may appeal directly to the Administrative Review Board (formerly the Wage Appeals Board). Write to:

END OF GENERAL DECISION"

PERFORMANCE BOND

THE STATE OF TEXAS §

COUNTY OF MIDLAND § SURETY NO _____

KNOW ALL MEN BY THESE PRESENTS, THAT _____ (Hereinafter called the Principal[s]), as Principal(s), and _____ (Hereinafter called the Surety), as Surety, are held and firmly bound unto the City of Midland, Texas a home rule municipal corporation of Midland County, Texas, (hereinafter called the Obligee), in the amount of _____ DOLLARS ($ _____) for the payment whereof the said Principal and surety bind themselves, and their heirs, administrators, executors, successors and assigns, jointly and severally, firmly by these presents.

WHEREAS, the Principal has entered into a certain written contract with the Obligee, dated the _____day of _____ , 20___ , for the furnishing of materials and equipment to perform all labor and work necessary for the construction of _____ , specifically including in the scope of this work and bond, the additional maintenance guaranty provisions set forth in the contract conditions, which contract is hereby referred to and made a part hereof as fully and to the same extent as if copies at length herein, as well as the Principal's primary obligation to perform according to plans and specifications.

NOW, THEREFORE, THE CONDITION OF THIS OBLIGATION IS SUCH, that if the said Principal shall faithfully perform the work in accordance with the plans, specifications, instructions to bidder, general and special conditions and other contract documents, including any addendum thereto, then this obligation shall be void; otherwise to remain in full force and effect.

PROVIDED further that if any legal action be filed upon this Bond venue shall lie in Midland County, State of Texas.

Surety, for value received, stipulates and agrees that no change, extension of time, alteration or addition to the terms of the contract, or to the work performed thereunder, or the plans, specifications or drawings accompanying the same, or any assignment of the contract as may be provided for in the instructions to bidders, shall in anywise affect its obligation on this Bond, and it does waive notice of any such change, extension of time, alteration or addition to the terms of the contract, assignment thereof, or the work to be performed thereunder.

IN WITNESS WHEREOF, the said Principal and surety do sign and seal this instrument, this _____ day of _____ , 20___.

STANDARD GENERAL CONDITIONS OF THE CONSTRUCTION CONTRACT

ARTICLE 1—DEFINITIONS AND TERMINOLOGY

1.01 *Defined Terms*

A. Wherever used in the Bidding Requirements or Contract Documents, a term printed with initial capital letters, including the term's singular and plural forms, will have the meaning indicated in the definitions below. In addition to terms specifically defined, terms with initial capital letters in the Contract Documents include references to identified articles and paragraphs, and the titles of other documents or forms.

1. *Addenda*—Written or graphic instruments issued prior to the opening of Bids which clarify, correct, or change the Bidding Requirements or the proposed Contract Documents.

2. *Agreement*—The written instrument, executed by Owner and Contractor, that sets forth the Contract Price and Contract Times, identifies the parties and the Engineer, and designates the specific items that are Contract Documents.

3. *Application for Payment*—The document prepared by Contractor, in a form acceptable to Engineer, to request progress or final payments, and which is to be accompanied by such supporting documentation as is required by the Contract Documents.

4. *Bid*—The offer of a Bidder submitted on the prescribed form setting forth the prices for the Work to be performed.

5. *Bidder*—An individual or entity that submits a Bid to Owner.

6. *Bidding Documents*—The Bidding Requirements, the proposed Contract Documents, and all Addenda.

7. *Bidding Requirements*—The Advertisement or invitation to bid, Instructions to Bidders, Bid Bond or other Bid security, if any, the Bid Form, and the Bid with any attachments.

8. *Change Order*—A document which is signed by Contractor and Owner and authorizes an addition, deletion, or revision in the Work or an adjustment in the Contract Price or the Contract Times, or other revision to the Contract, issued on or after the Effective Date of the Contract.

9. *Change Proposal*—A written request by Contractor, duly submitted in compliance with the procedural requirements set forth herein, seeking an adjustment in Contract Price or Contract Times; contesting an initial decision by Engineer concerning the requirements of the Contract Documents or the acceptability of Work under the Contract Documents; challenging a set-off against payments due; or seeking other relief with respect to the terms of the Contract.

10. *Claim*

a. A demand or assertion by Owner directly to Contractor, duly submitted in compliance with the procedural requirements set forth herein, seeking an adjustment of Contract Price or Contract Times; contesting an initial decision by Engineer concerning the

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

requirements of the Contract Documents or the acceptability of Work under the Contract Documents; contesting Engineer's decision regarding a Change Proposal; seeking resolution of a contractual issue that Engineer has declined to address; or seeking other relief with respect to the terms of the Contract.

b. A demand or assertion by Contractor directly to Owner, duly submitted in compliance with the procedural requirements set forth herein, contesting Engineer's decision regarding a Change Proposal, or seeking resolution of a contractual issue that Engineer has declined to address.

c. A demand or assertion by Owner or Contractor, duly submitted in compliance with the procedural requirements set forth herein, made pursuant to Paragraph 12.01.A.4, concerning disputes arising after Engineer has issued a recommendation of final payment.

d. A demand for money or services by a third party is not a Claim.

11. *Constituent of Concern*—Asbestos, petroleum, radioactive materials, polychlorinated biphenyls (PCBs), lead-based paint (as defined by the HUD/EPA standard), hazardous waste, and any substance, product, waste, or other material of any nature whatsoever that is or becomes listed, regulated, or addressed pursuant to Laws and Regulations regulating, relating to, or imposing liability or standards of conduct concerning, any hazardous, toxic, or dangerous waste, substance, or material.

12. *Contract*—The entire and integrated written contract between Owner and Contractor concerning the Work.

13. *Contract Documents*—Those items so designated in the Agreement, and which together comprise the Contract.

14. *Contract Price*—The money that Owner has agreed to pay Contractor for completion of the Work in accordance with the Contract Documents.

15. *Contract Times*—The number of days or the dates by which Contractor shall: (a) achieve Milestones, if any; (b) achieve Substantial Completion; and (c) complete the Work.

16. *Contractor*—The individual or entity with which Owner has contracted for performance of the Work.

17. *Cost of the Work*—See Paragraph 13.01 for definition.

18. *Drawings*—The part of the Contract that graphically shows the scope, extent, and character of the Work to be performed by Contractor.

19. *Effective Date of the Contract*—The date, indicated in the Agreement, on which the Contract becomes effective.

20. *Electronic Document*—Any Project-related correspondence, attachments to correspondence, data, documents, drawings, information, or graphics, including but not limited to Shop Drawings and other Submittals, that are in an electronic or digital format.

21. *Electronic Means*—Electronic mail (email), upload/download from a secure Project website, or other communications methods that allow: (a) the transmission or communication of Electronic Documents; (b) the documentation of transmissions, including sending and receipt; (c) printing of the transmitted Electronic Document by the

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

recipient; (d) the storage and archiving of the Electronic Document by sender and recipient; and (e) the use by recipient of the Electronic Document for purposes permitted by this Contract. Electronic Means does not include the use of text messaging, or of Facebook, Twitter, Instagram, or similar social media services for transmission of Electronic Documents.

22. *Engineer*—The individual or entity named as such in the Agreement.

23. *Field Order*—A written order issued by Engineer which requires minor changes in the Work but does not change the Contract Price or the Contract Times.

24. *Hazardous Environmental Condition*—The presence at the Site of Constituents of Concern in such quantities or circumstances that may present a danger to persons or property exposed thereto.

    a. The presence at the Site of materials that are necessary for the execution of the Work, or that are to be incorporated into the Work, and that are controlled and contained pursuant to industry practices, Laws and Regulations, and the requirements of the Contract, is not a Hazardous Environmental Condition.

    b. The presence of Constituents of Concern that are to be removed or remediated as part of the Work is not a Hazardous Environmental Condition.

    c. The presence of Constituents of Concern as part of the routine, anticipated, and obvious working conditions at the Site, is not a Hazardous Environmental Condition.

25. *Laws and Regulations; Laws or Regulations*—Any and all applicable laws, statutes, rules, regulations, ordinances, codes, and binding decrees, resolutions, and orders of any and all governmental bodies, agencies, authorities, and courts having jurisdiction.

26. *Liens*—Charges, security interests, or encumbrances upon Contract-related funds, real property, or personal property.

27. *Milestone*—A principal event in the performance of the Work that the Contract requires Contractor to achieve by an intermediate completion date, or by a time prior to Substantial Completion of all the Work.

28. *Notice of Award*—The written notice by Owner to a Bidder of Owner's acceptance of the Bid.

29. *Notice to Proceed*—A written notice by Owner to Contractor fixing the date on which the Contract Times will commence to run and on which Contractor shall start to perform the Work.

30. *Owner*—The individual or entity with which Contractor has contracted regarding the Work, and which has agreed to pay Contractor for the performance of the Work, pursuant to the terms of the Contract.

31. *Progress Schedule*—A schedule, prepared and maintained by Contractor, describing the sequence and duration of the activities comprising Contractor's plan to accomplish the Work within the Contract Times.

32. *Project*—The total undertaking to be accomplished for Owner by engineers, contractors, and others, including planning, study, design, construction, testing, commissioning, and start-up, and of which the Work to be performed under the Contract Documents is a part.

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

33. *Resident Project Representative*—The authorized representative of Engineer assigned to assist Engineer at the Site. As used herein, the term Resident Project Representative (RPR) includes any assistants or field staff of Resident Project Representative.

34. *Samples*—Physical examples of materials, equipment, or workmanship that are representative of some portion of the Work and that establish the standards by which such portion of the Work will be judged.

35. *Schedule of Submittals*—A schedule, prepared and maintained by Contractor, of required submittals and the time requirements for Engineer's review of the submittals.

36. *Schedule of Values*—A schedule, prepared and maintained by Contractor, allocating portions of the Contract Price to various portions of the Work and used as the basis for reviewing Contractor's Applications for Payment.

37. *Shop Drawings*—All drawings, diagrams, illustrations, schedules, and other data or information that are specifically prepared or assembled by or for Contractor and submitted by Contractor to illustrate some portion of the Work. Shop Drawings, whether approved or not, are not Drawings and are not Contract Documents.

38. *Site*—Lands or areas indicated in the Contract Documents as being furnished by Owner upon which the Work is to be performed, including rights-of-way and easements, and such other lands or areas furnished by Owner which are designated for the use of Contractor.

39. *Specifications*—The part of the Contract that consists of written requirements for materials, equipment, systems, standards, and workmanship as applied to the Work, and certain administrative requirements and procedural matters applicable to the Work.

40. *Subcontractor*—An individual or entity having a direct contract with Contractor or with any other Subcontractor for the performance of a part of the Work.

41. *Submittal*—A written or graphic document, prepared by or for Contractor, which the Contract Documents require Contractor to submit to Engineer, or that is indicated as a Submittal in the Schedule of Submittals accepted by Engineer. Submittals may include Shop Drawings and Samples; schedules; product data; Owner-delegated designs; sustainable design information; information on special procedures; testing plans; results of tests and evaluations, source quality-control testing and inspections, and field or Site quality-control testing and inspections; warranties and certifications; Suppliers' instructions and reports; records of delivery of spare parts and tools; operations and maintenance data; Project photographic documentation; record documents; and other such documents required by the Contract Documents. Submittals, whether or not approved or accepted by Engineer, are not Contract Documents. Change Proposals, Change Orders, Claims, notices, Applications for Payment, and requests for interpretation or clarification are not Submittals.

42. *Substantial Completion*—The time at which the Work (or a specified part thereof) has progressed to the point where, in the opinion of Engineer, the Work (or a specified part thereof) is sufficiently complete, in accordance with the Contract Documents, so that the Work (or a specified part thereof) can be utilized for the purposes for which it is intended. The terms "substantially complete" and "substantially completed" as applied to all or part of the Work refer to Substantial Completion of such Work.

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

43. *Successful Bidder*—The Bidder to which the Owner makes an award of contract.

44. *Supplementary Conditions*—The part of the Contract that amends or supplements these General Conditions. Supplementary Conditions are established by redline edits to these Standard General Conditions of the Construction Contract.

45. *Supplier*—A manufacturer, fabricator, supplier, distributor, or vendor having a direct contract with Contractor or with any Subcontractor to furnish materials or equipment to be incorporated in the Work by Contractor or a Subcontractor.

46. *Technical Data*

    a. Those items expressly identified as Technical Data in the Supplementary Conditions, with respect to either (1) existing subsurface conditions at or adjacent to the Site, or existing physical conditions at or adjacent to the Site including existing surface or subsurface structures (except Underground Facilities) or (2) Hazardous Environmental Conditions at the Site.

    b. If no such express identifications of Technical Data have been made with respect to conditions at the Site, then Technical Data is defined, with respect to conditions at the Site under Paragraphs 5.03, 5.04, and 5.06, as the data contained in boring logs, recorded measurements of subsurface water levels, assessments of the condition of subsurface facilities, laboratory test results, and other factual, objective information regarding conditions at the Site that are set forth in any geotechnical, environmental, or other Site or facilities conditions report prepared for the Project and made available to Contractor.

    c. Information and data regarding the presence or location of Underground Facilities are not intended to be categorized, identified, or defined as Technical Data, and instead Underground Facilities are shown or indicated on the Drawings.

47. *Underground Facilities*—All active or not-in-service underground lines, pipelines, conduits, ducts, encasements, cables, wires, manholes, vaults, tanks, tunnels, or other such facilities or systems at the Site, including but not limited to those facilities or systems that produce, transmit, distribute, or convey telephone or other communications, cable television, fiber optic transmissions, power, electricity, light, heat, gases, oil, crude oil products, liquid petroleum products, water, steam, waste, wastewater, storm water, other liquids or chemicals, or traffic or other control systems. An abandoned facility or system is not an Underground Facility.

48. *Unit Price Work*—Work to be paid for on the basis of unit prices.

49. *Work*—The entire construction or the various separately identifiable parts thereof required to be provided under the Contract Documents. Work includes and is the result of performing or providing all labor, services, and documentation necessary to produce such construction; furnishing, installing, and incorporating all materials and equipment into such construction; and may include related services such as testing, start-up, and commissioning, all as required by the Contract Documents.

50. *Work Change Directive*—A written directive to Contractor issued on or after the Effective Date of the Contract, signed by Owner and recommended by Engineer, ordering an addition, deletion, or revision in the Work.

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

1.02 *Terminology*

A. The words and terms discussed in Paragraphs 1.02.B, C, D, and E are not defined terms that require initial capital letters, but, when used in the Bidding Requirements or Contract Documents, have the indicated meaning.

B. *Intent of Certain Terms or Adjectives*: The Contract Documents include the terms "as allowed," "as approved," "as ordered," "as directed" or terms of like effect or import to authorize an exercise of professional judgment by Engineer. In addition, the adjectives "reasonable," "suitable," "acceptable," "proper," "satisfactory," or adjectives of like effect or import are used to describe an action or determination of Engineer as to the Work. It is intended that such exercise of professional judgment, action, or determination will be solely to evaluate, in general, the Work for compliance with the information in the Contract Documents and with the design concept of the Project as a functioning whole as shown or indicated in the Contract Documents (unless there is a specific statement indicating otherwise). The use of any such term or adjective is not intended to and shall not be effective to assign to Engineer any duty or authority to supervise or direct the performance of the Work, or any duty or authority to undertake responsibility contrary to the provisions of Article 10 or any other provision of the Contract Documents.

C. *Day*: The word "day" means a calendar day of 24 hours measured from midnight to the next midnight.

D. *Defective*: The word "defective," when modifying the word "Work," refers to Work that is unsatisfactory, faulty, or deficient in that it:

1. does not conform to the Contract Documents;

2. does not meet the requirements of any applicable inspection, reference standard, test, or approval referred to in the Contract Documents; or

3. has been damaged prior to Engineer's recommendation of final payment (unless responsibility for the protection thereof has been assumed by Owner at Substantial Completion in accordance with Paragraph 15.03 or Paragraph 15.04).

E. *Furnish, Install, Perform, Provide*

1. The word "furnish," when used in connection with services, materials, or equipment, means to supply and deliver said services, materials, or equipment to the Site (or some other specified location) ready for use or installation and in usable or operable condition.

2. The word "install," when used in connection with services, materials, or equipment, means to put into use or place in final position said services, materials, or equipment complete and ready for intended use.

3. The words "perform" or "provide," when used in connection with services, materials, or equipment, means to furnish and install said services, materials, or equipment complete and ready for intended use.

4. If the Contract Documents establish an obligation of Contractor with respect to specific services, materials, or equipment, but do not expressly use any of the four words "furnish," "install," "perform," or "provide," then Contractor shall furnish and install said services, materials, or equipment complete and ready for intended use.

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

F. *Contract Price or Contract Times*: References to a change in "Contract Price or Contract Times" or "Contract Times or Contract Price" or similar, indicate that such change applies to (1) Contract Price, (2) Contract Times, or (3) both Contract Price and Contract Times, as warranted, even if the term "or both" is not expressed.

G. Unless stated otherwise in the Contract Documents, words or phrases that have a well-known technical or construction industry or trade meaning are used in the Contract Documents in accordance with such recognized meaning.

ARTICLE 2—PRELIMINARY MATTERS

2.01 *Delivery of Performance and Payment Bonds; Evidence of Insurance*

A. *Performance and Payment Bonds*: When Contractor delivers the signed counterparts of the Agreement to Owner, Contractor shall also deliver to Owner the performance bond and payment bond (if the Contract requires Contractor to furnish such bonds).

B. *Evidence of Contractor's Insurance*: When Contractor delivers the signed counterparts of the Agreement to Owner, Contractor shall also deliver to Owner, with copies to each additional insured (as identified in the Contract), the certificates, endorsements, and other evidence of insurance required to be provided by Contractor in accordance with Article 6, except to the extent the Supplementary Conditions expressly establish other dates for delivery of specific insurance policies.

C. *Evidence of Owner's Insurance*: After receipt of the signed counterparts of the Agreement and all required bonds and insurance documentation, Owner shall promptly deliver to Contractor, with copies to each additional insured (as identified in the Contract), the certificates and other evidence of insurance required to be provided by Owner under Article 6.

2.02 *Copies of Documents*

A. Owner shall furnish to Contractor four printed copies of the Contract (including one fully signed counterpart of the Agreement), and one copy in electronic portable document format (PDF). Additional printed copies will be furnished upon request at the cost of reproduction.

B. Owner shall maintain and safeguard at least one original printed record version of the Contract, including Drawings and Specifications signed and sealed by Engineer and other design professionals. Owner shall make such original printed record version of the Contract available to Contractor for review. Owner may delegate the responsibilities under this provision to Engineer.

2.03 *Before Starting Construction*

A. *Preliminary Schedules*: Within 10 days after the Effective Date of the Contract (or as otherwise required by the Contract Documents), Contractor shall submit to Engineer for timely review:

1. a preliminary Progress Schedule indicating the times (numbers of days or dates) for starting and completing the various stages of the Work, including any Milestones specified in the Contract;

2. a preliminary Schedule of Submittals; and

3. a preliminary Schedule of Values for all of the Work which includes quantities and prices of items which when added together equal the Contract Price and subdivides the Work

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

into component parts in sufficient detail to serve as the basis for progress payments during performance of the Work. Such prices will include an appropriate amount of overhead and profit applicable to each item of Work.

2.04 *Preconstruction Conference; Designation of Authorized Representatives*

A. Before any Work at the Site is started, a conference attended by Owner, Contractor, Engineer, and others as appropriate will be held to establish a working understanding among the parties as to the Work, and to discuss the schedules referred to in Paragraph 2.03.A, procedures for handling Shop Drawings, Samples, and other Submittals, processing Applications for Payment, electronic or digital transmittals, and maintaining required records.

B. At this conference Owner and Contractor each shall designate, in writing, a specific individual to act as its authorized representative with respect to the services and responsibilities under the Contract. Such individuals shall have the authority to transmit and receive information, render decisions relative to the Contract, and otherwise act on behalf of each respective party.

2.05 *Acceptance of Schedules*

A. At least 10 days before submission of the first Application for Payment a conference, attended by Contractor, Engineer, and others as appropriate, will be held to review the schedules submitted in accordance with Paragraph 2.03.A. No progress payment will be made to Contractor until acceptable schedules are submitted to Engineer.

1. The Progress Schedule will be acceptable to Engineer if it provides an orderly progression of the Work to completion within the Contract Times. Such acceptance will not impose on Engineer responsibility for the Progress Schedule, for sequencing, scheduling, or progress of the Work, nor interfere with or relieve Contractor from Contractor's full responsibility therefor.

2. Contractor's Schedule of Submittals will be acceptable to Engineer if it provides a workable arrangement for reviewing and processing the required submittals.

3. Contractor's Schedule of Values will be acceptable to Engineer as to form and substance if it provides a reasonable allocation of the Contract Price to the component parts of the Work.

4. If a schedule is not acceptable, Contractor will have an additional 10 days to revise and resubmit the schedule.

2.06 *Electronic Transmittals*

A. Except as otherwise stated elsewhere in the Contract, the Owner, Engineer, and Contractor may send, and shall accept, Electronic Documents transmitted by Electronic Means.

B. If the Contract does not establish protocols for Electronic Means, then Owner, Engineer, and Contractor shall jointly develop such protocols.

C. Subject to any governing protocols for Electronic Means, when transmitting Electronic Documents by Electronic Means, the transmitting party makes no representations as to long-term compatibility, usability, or readability of the Electronic Documents resulting from the recipient's use of software application packages, operating systems, or computer hardware differing from those used in the drafting or transmittal of the Electronic Documents.

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

ARTICLE 3—CONTRACT DOCUMENTS: INTENT, REQUIREMENTS, REUSE

3.01 *Intent*

A. The Contract Documents are complementary; what is required by one Contract Document is as binding as if required by all.

B. It is the intent of the Contract Documents to describe a functionally complete Project (or part thereof) to be constructed in accordance with the Contract Documents.

C. Unless otherwise stated in the Contract Documents, if there is a discrepancy between the electronic versions of the Contract Documents (including any printed copies derived from such electronic versions) and the printed record version, the printed record version will govern.

D. The Contract supersedes prior negotiations, representations, and agreements, whether written or oral.

E. Engineer will issue clarifications and interpretations of the Contract Documents as provided herein.

F. Any provision or part of the Contract Documents held to be void or unenforceable under any Law or Regulation will be deemed stricken, and all remaining provisions will continue to be valid and binding upon Owner and Contractor, which agree that the Contract Documents will be reformed to replace such stricken provision or part thereof with a valid and enforceable provision that comes as close as possible to expressing the intention of the stricken provision.

G. Nothing in the Contract Documents creates:

1. any contractual relationship between Owner or Engineer and any Subcontractor, Supplier, or other individual or entity performing or furnishing any of the Work, for the benefit of such Subcontractor, Supplier, or other individual or entity; or

2. any obligation on the part of Owner or Engineer to pay or to see to the payment of any money due any such Subcontractor, Supplier, or other individual or entity, except as may otherwise be required by Laws and Regulations.

3.02 *Reference Standards*

A. *Standards Specifications, Codes, Laws and Regulations*

1. Reference in the Contract Documents to standard specifications, manuals, reference standards, or codes of any technical society, organization, or association, or to Laws or Regulations, whether such reference be specific or by implication, means the standard specification, manual, reference standard, code, or Laws or Regulations in effect at the time of opening of Bids (or on the Effective Date of the Contract if there were no Bids), except as may be otherwise specifically stated in the Contract Documents.

2. No provision of any such standard specification, manual, reference standard, or code, and no instruction of a Supplier, will be effective to change the duties or responsibilities of Owner, Contractor, or Engineer from those set forth in the part of the Contract Documents prepared by or for Engineer. No such provision or instruction shall be effective to assign to Owner or Engineer any duty or authority to supervise or direct the performance of the Work, or any duty or authority to undertake responsibility

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

inconsistent with the provisions of the part of the Contract Documents prepared by or for Engineer.

3.03 *Reporting and Resolving Discrepancies*

A. *Reporting Discrepancies*

1. *Contractor's Verification of Figures and Field Measurements*: Before undertaking each part of the Work, Contractor shall carefully study the Contract Documents, and check and verify pertinent figures and dimensions therein, particularly with respect to applicable field measurements. Contractor shall promptly report in writing to Engineer any conflict, error, ambiguity, or discrepancy that Contractor discovers, or has actual knowledge of, and shall not proceed with any Work affected thereby until the conflict, error, ambiguity, or discrepancy is resolved by a clarification or interpretation by Engineer, or by an amendment or supplement to the Contract issued pursuant to Paragraph 11.01.

2. *Contractor's Review of Contract Documents*: If, before or during the performance of the Work, Contractor discovers any conflict, error, ambiguity, or discrepancy within the Contract Documents, or between the Contract Documents and (a) any applicable Law or Regulation, (b) actual field conditions, (c) any standard specification, manual, reference standard, or code, or (d) any instruction of any Supplier, then Contractor shall promptly report it to Engineer in writing. Contractor shall not proceed with the Work affected thereby (except in an emergency as required by Paragraph 7.15) until the conflict, error, ambiguity, or discrepancy is resolved, by a clarification or interpretation by Engineer, or by an amendment or supplement to the Contract issued pursuant to Paragraph 11.01.

3. Contractor shall not be liable to Owner or Engineer for failure to report any conflict, error, ambiguity, or discrepancy in the Contract Documents unless Contractor had actual knowledge thereof.

B. *Resolving Discrepancies*

1. Except as may be otherwise specifically stated in the Contract Documents, the provisions of the part of the Contract Documents prepared by or for Engineer take precedence in resolving any conflict, error, ambiguity, or discrepancy between such provisions of the Contract Documents and:

a. the provisions of any standard specification, manual, reference standard, or code, or the instruction of any Supplier (whether or not specifically incorporated by reference as a Contract Document); or

b. the provisions of any Laws or Regulations applicable to the performance of the Work (unless such an interpretation of the provisions of the Contract Documents would result in violation of such Law or Regulation).

3.04 *Requirements of the Contract Documents*

A. During the performance of the Work and until final payment, Contractor and Owner shall submit to the Engineer in writing all matters in question concerning the requirements of the Contract Documents (sometimes referred to as requests for information or interpretation—RFIs), or relating to the acceptability of the Work under the Contract Documents, as soon as possible after such matters arise. Engineer will be the initial interpreter of the requirements of the Contract Documents, and judge of the acceptability of the Work.

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

B. Engineer will, with reasonable promptness, render a written clarification, interpretation, or decision on the issue submitted, or initiate an amendment or supplement to the Contract Documents. Engineer's written clarification, interpretation, or decision will be final and binding on Contractor, unless it appeals by submitting a Change Proposal, and on Owner, unless it appeals by filing a Claim.

C. If a submitted matter in question concerns terms and conditions of the Contract Documents that do not involve (1) the performance or acceptability of the Work under the Contract Documents, (2) the design (as set forth in the Drawings, Specifications, or otherwise), or (3) other engineering or technical matters, then Engineer will promptly notify Owner and Contractor in writing that Engineer is unable to provide a decision or interpretation. If Owner and Contractor are unable to agree on resolution of such a matter in question, either party may pursue resolution as provided in Article 12.

3.05 *Reuse of Documents*

A. Contractor and its Subcontractors and Suppliers shall not:

1. have or acquire any title to or ownership rights in any of the Drawings, Specifications, or other documents (or copies of any thereof) prepared by or bearing the seal of Engineer or its consultants, including electronic media versions, or reuse any such Drawings, Specifications, other documents, or copies thereof on extensions of the Project or any other project without written consent of Owner and Engineer and specific written verification or adaptation by Engineer; or

2. have or acquire any title or ownership rights in any other Contract Documents, reuse any such Contract Documents for any purpose without Owner's express written consent, or violate any copyrights pertaining to such Contract Documents.

B. The prohibitions of this Paragraph 3.05 will survive final payment, or termination of the Contract. Nothing herein precludes Contractor from retaining copies of the Contract Documents for record purposes.

ARTICLE 4—COMMENCEMENT AND PROGRESS OF THE WORK

4.01 *Commencement of Contract Times; Notice to Proceed*

A. The Contract Times will commence to run on the 30th day after the Effective Date of the Contract or, if a Notice to Proceed is given, on the day indicated in the Notice to Proceed. A Notice to Proceed may be given at any time within 30 days after the Effective Date of the Contract. In no event will the Contract Times commence to run later than the 60th day after the day of Bid opening or the 30th day after the Effective Date of the Contract, whichever date is earlier.

4.02 *Starting the Work*

A. Contractor shall start to perform the Work on the date when the Contract Times commence to run. No Work may be done at the Site prior to such date.

4.03 *Reference Points*

A. Owner shall provide engineering surveys to establish reference points for construction which in Engineer's judgment are necessary to enable Contractor to proceed with the Work. Contractor shall be responsible for laying out the Work, shall protect and preserve the

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

established reference points and property monuments, and shall make no changes or relocations without the prior written approval of Owner. Contractor shall report to Engineer whenever any reference point or property monument is lost or destroyed or requires relocation because of necessary changes in grades or locations, and shall be responsible for the accurate replacement or relocation of such reference points or property monuments by professionally qualified personnel.

4.04 *Progress Schedule*

A. Contractor shall adhere to the Progress Schedule established in accordance with Paragraph 2.05 as it may be adjusted from time to time as provided below.

1. Contractor shall submit to Engineer for acceptance (to the extent indicated in Paragraph 2.05) proposed adjustments in the Progress Schedule that will not result in changing the Contract Times.

2. Proposed adjustments in the Progress Schedule that will change the Contract Times must be submitted in accordance with the requirements of Article 11.

B. Contractor shall carry on the Work and adhere to the Progress Schedule during all disputes or disagreements with Owner. No Work will be delayed or postponed pending resolution of any disputes or disagreements, or during any appeal process, except as permitted by Paragraph 16.04, or as Owner and Contractor may otherwise agree in writing.

4.05 *Delays in Contractor's Progress*

A. If Owner, Engineer, or anyone for whom Owner is responsible, delays, disrupts, or interferes with the performance or progress of the Work, then Contractor shall be entitled to an equitable adjustment in Contract Price or Contract Times.

B. Contractor shall not be entitled to an adjustment in Contract Price or Contract Times for delay, disruption, or interference caused by or within the control of Contractor. Delay, disruption, and interference attributable to and within the control of a Subcontractor or Supplier shall be deemed to be within the control of Contractor.

C. If Contractor's performance or progress is delayed, disrupted, or interfered with by unanticipated causes not the fault of and beyond the control of Owner, Contractor, and those for which they are responsible, then Contractor shall be entitled to an equitable adjustment in Contract Times. Such an adjustment will be Contractor's sole and exclusive remedy for the delays, disruption, and interference described in this paragraph. Causes of delay, disruption, or interference that may give rise to an adjustment in Contract Times under this paragraph include but are not limited to the following:

1. Severe and unavoidable natural catastrophes such as fires, floods, epidemics, and earthquakes;

2. Abnormal weather conditions;

3. Acts or failures to act of third-party utility owners or other third-party entities (other than those third-party utility owners or other third-party entities performing other work at or adjacent to the Site as arranged by or under contract with Owner, as contemplated in Article 8); and

4. Acts of war or terrorism.

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

5. Weather-Related Delays

   a. If "abnormal weather conditions" as set forth in Paragraph 4.05.C.2 of the General Conditions are the basis for a request for an equitable adjustment in the Contract Times, such request must be documented by data substantiating each of the following: 1) that weather conditions were abnormal for the period of time in which the delay occurred, 2) that such weather conditions could not have been reasonably anticipated, and 3) that such weather conditions had an adverse effect on the Work as scheduled.

   b. The existence of abnormal weather conditions will be determined on a month-by-month basis in accordance with the following:

      1) Every workday on which one or more of the following conditions exist will be considered a "bad weather day":

         i) Total precipitation (as rain equivalent) occurring between 7:00 p.m. on the preceding day (regardless of whether such preceding day is a workday) through 7:00 p.m. on the workday in question equals or exceeds 2 inches of precipitation (as rain equivalent, based on the snow/rain conversion indicated in the table entitled Foreseeable Bad Weather Days; such table is hereby incorporated in this SC-4.05.C by reference.

         ii) Ambient outdoor air temperature at 11:00 a.m. is equal to or less than the following low temperature threshold: 20 degrees Fahrenheit; or, at 3:00 p.m. the ambient outdoor temperature is equal to or greater than the following high temperature threshold: 110 degrees Fahrenheit.

      2) Determination of actual bad weather days during performance of the Work will be based on the weather records measured and recorded by National Weather Service weather monitoring station at Midland International Air and Space Port.

      3) Contractor shall anticipate the number of foreseeable bad weather days per month indicated in the table in Exhibit A—Foreseeable Bad Weather Days.

      4) In each month, every bad weather day exceeding the number of foreseeable bad weather days established in the table in Exhibit A—Foreseeable Bad Weather Days will be considered as "abnormal weather conditions." The existence of abnormal weather conditions will not relieve Contractor of the obligation to demonstrate and document that delays caused by abnormal weather are specific to the planned work activities or that such activities thus delayed were on Contractor's then-current Progress Schedule's critical path for the Project.

D. Contractor's entitlement to an adjustment of Contract Times or Contract Price is limited as follows:

   1. Contractor's entitlement to an adjustment of the Contract Times is conditioned on the delay, disruption, or interference adversely affecting an activity on the critical path to completion of the Work, as of the time of the delay, disruption, or interference.

   2. Contractor shall not be entitled to an adjustment in Contract Price for any delay, disruption, or interference if such delay is concurrent with a delay, disruption, or interference caused by or within the control of Contractor. Such a concurrent delay by

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

Contractor shall not preclude an adjustment of Contract Times to which Contractor is otherwise entitled.

3. Adjustments of Contract Times or Contract Price are subject to the provisions of Article 11.

E. Each Contractor request or Change Proposal seeking an increase in Contract Times or Contract Price must be supplemented by supporting data that sets forth in detail the following:

1. The circumstances that form the basis for the requested adjustment;

2. The date upon which each cause of delay, disruption, or interference began to affect the progress of the Work;

3. The date upon which each cause of delay, disruption, or interference ceased to affect the progress of the Work;

4. The number of days' increase in Contract Times claimed as a consequence of each such cause of delay, disruption, or interference; and

5. The impact on Contract Price, in accordance with the provisions of Paragraph 11.07.

Contractor shall also furnish such additional supporting documentation as Owner or Engineer may require including, where appropriate, a revised progress schedule indicating all the activities affected by the delay, disruption, or interference, and an explanation of the effect of the delay, disruption, or interference on the critical path to completion of the Work.

F. Delays, disruption, and interference to the performance or progress of the Work resulting from the existence of a differing subsurface or physical condition, an Underground Facility that was not shown or indicated by the Contract Documents, or not shown or indicated with reasonable accuracy, and those resulting from Hazardous Environmental Conditions, are governed by Article 5, together with the provisions of Paragraphs 4.05.D and 4.05.E.

G. Paragraph 8.03 addresses delays, disruption, and interference to the performance or progress of the Work resulting from the performance of certain other work at or adjacent to the Site.

ARTICLE 5—SITE; SUBSURFACE AND PHYSICAL CONDITIONS; HAZARDOUS ENVIRONMENTAL CONDITIONS

5.01 *Availability of Lands*

A. Owner shall furnish the Site. Owner shall notify Contractor in writing of any encumbrances or restrictions not of general application but specifically related to use of the Site with which Contractor must comply in performing the Work.

B. Upon reasonable written request, Owner shall furnish Contractor with a current statement of record legal title and legal description of the lands upon which permanent improvements are to be made and Owner's interest therein as necessary for giving notice of or filing a mechanic's or construction lien against such lands in accordance with applicable Laws and Regulations.

C. Contractor shall provide for all additional lands and access thereto that may be required for temporary construction facilities or storage of materials and equipment.

5.02 *Use of Site and Other Areas*

A. *Limitation on Use of Site and Other Areas*

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

1. Contractor shall confine construction equipment, temporary construction facilities, the storage of materials and equipment, and the operations of workers to the Site, adjacent areas that Contractor has arranged to use through construction easements or otherwise, and other adjacent areas permitted by Laws and Regulations, and shall not unreasonably encumber the Site and such other adjacent areas with construction equipment or other materials or equipment. Contractor shall assume full responsibility for (a) damage to the Site; (b) damage to any such other adjacent areas used for Contractor's operations; (c) damage to any other adjacent land or areas, or to improvements, structures, utilities, or similar facilities located at such adjacent lands or areas; and (d) for injuries and losses sustained by the owners or occupants of any such land or areas; provided that such damage or injuries result from the performance of the Work or from other actions or conduct of the Contractor or those for which Contractor is responsible.

2. If a damage or injury claim is made by the owner or occupant of any such land or area because of the performance of the Work, or because of other actions or conduct of the Contractor or those for which Contractor is responsible, Contractor shall (a) take immediate corrective or remedial action as required by Paragraph 7.13, or otherwise; (b) promptly attempt to settle the claim as to all parties through negotiations with such owner or occupant, or otherwise resolve the claim by arbitration or other dispute resolution proceeding, or in a court of competent jurisdiction; and (c) to the fullest extent permitted by Laws and Regulations, indemnify and hold harmless Owner and Engineer, and the officers, directors, members, partners, employees, agents, consultants and subcontractors of each and any of them, from and against any such claim, and against all costs, losses, and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all court or arbitration or other dispute resolution costs) arising out of or relating to any claim or action, legal or equitable, brought by any such owner or occupant against Owner, Engineer, or any other party indemnified hereunder to the extent caused directly or indirectly, in whole or in part by, or based upon, Contractor's performance of the Work, or because of other actions or conduct of the Contractor or those for which Contractor is responsible.

B. *Removal of Debris During Performance of the Work*: During the progress of the Work the Contractor shall keep the Site and other adjacent areas free from accumulations of waste materials, rubbish, and other debris. Removal and disposal of such waste materials, rubbish, and other debris will conform to applicable Laws and Regulations.

C. *Cleaning*: Prior to Substantial Completion of the Work Contractor shall clean the Site and the Work and make it ready for utilization by Owner. At the completion of the Work Contractor shall remove from the Site and adjacent areas all tools, appliances, construction equipment and machinery, and surplus materials and shall restore to original condition all property not designated for alteration by the Contract Documents.

D. *Loading of Structures*: Contractor shall not load nor permit any part of any structure to be loaded in any manner that will endanger the structure, nor shall Contractor subject any part of the Work or adjacent structures or land to stresses or pressures that will endanger them.

5.03 *Subsurface and Physical Conditions*

A. *Reports and Drawings*: The Supplementary Conditions identify:

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

1. Those reports of explorations and tests of subsurface conditions at or adjacent to the Site that contain Technical Data;

2. Those drawings of existing physical conditions at or adjacent to the Site, including those drawings depicting existing surface or subsurface structures at or adjacent to the Site (except Underground Facilities), that contain Technical Data; and

3. Technical Data contained in such reports and drawings.

B. *Underground Facilities*: Underground Facilities are shown or indicated on the Drawings, pursuant to Paragraph 5.05, and not in the drawings referred to in Paragraph 5.03.A. Information and data regarding the presence or location of Underground Facilities are not intended to be categorized, identified, or defined as Technical Data.

C. *Reliance by Contractor on Technical Data*: Contractor may rely upon the accuracy of the Technical Data expressly identified in the Supplementary Conditions with respect to such reports and drawings, but such reports and drawings are not Contract Documents. If no such express identification has been made, then Contractor may rely upon the accuracy of the Technical Data as defined in Paragraph 1.01.A.46.b.

D. *Limitations of Other Data and Documents*: Except for such reliance on Technical Data, Contractor may not rely upon or make any claim against Owner or Engineer, or any of their officers, directors, members, partners, employees, agents, consultants, or subcontractors, with respect to:

1. the completeness of such reports and drawings for Contractor's purposes, including, but not limited to, any aspects of the means, methods, techniques, sequences, and procedures of construction to be employed by Contractor, and safety precautions and programs incident thereto;

2. other data, interpretations, opinions, and information contained in such reports or shown or indicated in such drawings;

3. the contents of other Site-related documents made available to Contractor, such as record drawings from other projects at or adjacent to the Site, or Owner's archival documents concerning the Site; or

4. any Contractor interpretation of or conclusion drawn from any Technical Data or any such other data, interpretations, opinions, or information.

E. The following table lists the reports of explorations and tests of subsurface conditions at or adjacent to the Site that contain Technical Data, and specifically identifies the Technical Data in the report upon which Contractor may rely:

Report Title	Date of Report	Technical Data
Appendix 1 – Geotechnical Investigation Report	April 26, 2019	Geotechnical Investigation for the Northeast High Service Pump Station
Appendix 2 – Geotechnical Bore Logs	March 5, 2019	Log of boring for Pipelines

F. The following table lists the drawings of existing physical conditions at or adjacent to the Site, including those drawings depicting existing surface or subsurface structures at or adjacent to the Site (except Underground Facilities), that contain Technical Data, and specifically identifies the Technical Data upon which Contractor may rely:

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

Drawings Title	Date of Drawings	Technical Data
None.		

5.04 *Differing Subsurface or Physical Conditions*

A. *Notice by Contractor*: If Contractor believes that any subsurface or physical condition that is uncovered or revealed at the Site:

1. is of such a nature as to establish that any Technical Data on which Contractor is entitled to rely as provided in Paragraph 5.03 is materially inaccurate;

2. is of such a nature as to require a change in the Drawings or Specifications;

3. differs materially from that shown or indicated in the Contract Documents; or

4. is of an unusual nature, and differs materially from conditions ordinarily encountered and generally recognized as inherent in work of the character provided for in the Contract Documents;

then Contractor shall, promptly after becoming aware thereof and before further disturbing the subsurface or physical conditions or performing any Work in connection therewith (except in an emergency as required by Paragraph 7.15), notify Owner and Engineer in writing about such condition. Contractor shall not further disturb such condition or perform any Work in connection therewith (except with respect to an emergency) until receipt of a written statement permitting Contractor to do so.

B. *Engineer's Review*: After receipt of written notice as required by the preceding paragraph, Engineer will promptly review the subsurface or physical condition in question; determine whether it is necessary for Owner to obtain additional exploration or tests with respect to the condition; conclude whether the condition falls within any one or more of the differing site condition categories in Paragraph 5.04.A; obtain any pertinent cost or schedule information from Contractor; prepare recommendations to Owner regarding the Contractor's resumption of Work in connection with the subsurface or physical condition in question and the need for any change in the Drawings or Specifications; and advise Owner in writing of Engineer's findings, conclusions, and recommendations.

C. *Owner's Statement to Contractor Regarding Site Condition*: After receipt of Engineer's written findings, conclusions, and recommendations, Owner shall issue a written statement to Contractor (with a copy to Engineer) regarding the subsurface or physical condition in question, addressing the resumption of Work in connection with such condition, indicating whether any change in the Drawings or Specifications will be made, and adopting or rejecting Engineer's written findings, conclusions, and recommendations, in whole or in part.

D. *Early Resumption of Work*: If at any time Engineer determines that Work in connection with the subsurface or physical condition in question may resume prior to completion of Engineer's review or Owner's issuance of its statement to Contractor, because the condition in question has been adequately documented, and analyzed on a preliminary basis, then the Engineer may at its discretion instruct Contractor to resume such Work.

E. *Possible Price and Times Adjustments*

1. Contractor shall be entitled to an equitable adjustment in Contract Price or Contract Times, to the extent that the existence of a differing subsurface or physical condition, or any related delay, disruption, or interference, causes an increase or decrease in

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

Contractor's cost of, or time required for, performance of the Work; subject, however, to the following:

a. Such condition must fall within any one or more of the categories described in Paragraph 5.04.A;

b. With respect to Work that is paid for on a unit price basis, any adjustment in Contract Price will be subject to the provisions of Paragraph 13.03; and,

c. Contractor's entitlement to an adjustment of the Contract Times is subject to the provisions of Paragraphs 4.05.D and 4.05.E.

2. Contractor shall not be entitled to any adjustment in the Contract Price or Contract Times with respect to a subsurface or physical condition if:

a. Contractor knew of the existence of such condition at the time Contractor made a commitment to Owner with respect to Contract Price and Contract Times by the submission of a Bid or becoming bound under a negotiated contract, or otherwise;

b. The existence of such condition reasonably could have been discovered or revealed as a result of any examination, investigation, exploration, test, or study of the Site and contiguous areas expressly required by the Bidding Requirements or Contract Documents to be conducted by or for Contractor prior to Contractor's making such commitment; or

c. Contractor failed to give the written notice required by Paragraph 5.04.A.

3. If Owner and Contractor agree regarding Contractor's entitlement to and the amount or extent of any adjustment in the Contract Price or Contract Times, then any such adjustment will be set forth in a Change Order.

4. Contractor may submit a Change Proposal regarding its entitlement to or the amount or extent of any adjustment in the Contract Price or Contract Times, no later than 30 days after Owner's issuance of the Owner's written statement to Contractor regarding the subsurface or physical condition in question.

F. *Underground Facilities; Hazardous Environmental Conditions*: Paragraph 5.05 governs rights and responsibilities regarding the presence or location of Underground Facilities. Paragraph 5.06 governs rights and responsibilities regarding Hazardous Environmental Conditions. The provisions of Paragraphs 5.03 and 5.04 are not applicable to the presence or location of Underground Facilities, or to Hazardous Environmental Conditions.

5.05 *Underground Facilities*

A. *Contractor's Responsibilities*: Unless it is otherwise expressly provided in the Supplementary Conditions, the cost of all of the following are included in the Contract Price, and Contractor shall have full responsibility for:

1. reviewing and checking all information and data regarding existing Underground Facilities at the Site;

2. complying with applicable state and local utility damage prevention Laws and Regulations;

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

3. verifying the actual location of those Underground Facilities shown or indicated in the Contract Documents as being within the area affected by the Work, by exposing such Underground Facilities during the course of construction;

4. coordination of the Work with the owners (including Owner) of such Underground Facilities, during construction; and

5. the safety and protection of all existing Underground Facilities at the Site, and repairing any damage thereto resulting from the Work.

B. *Notice by Contractor*: If Contractor believes that an Underground Facility that is uncovered or revealed at the Site was not shown or indicated on the Drawings, or was not shown or indicated on the Drawings with reasonable accuracy, then Contractor shall, promptly after becoming aware thereof and before further disturbing conditions affected thereby or performing any Work in connection therewith (except in an emergency as required by Paragraph 7.15), notify Owner and Engineer in writing regarding such Underground Facility.

C. *Engineer's Review*: Engineer will:

1. promptly review the Underground Facility and conclude whether such Underground Facility was not shown or indicated on the Drawings, or was not shown or indicated with reasonable accuracy;

2. identify and communicate with the owner of the Underground Facility; prepare recommendations to Owner (and if necessary issue any preliminary instructions to Contractor) regarding the Contractor's resumption of Work in connection with the Underground Facility in question;

3. obtain any pertinent cost or schedule information from Contractor; determine the extent, if any, to which a change is required in the Drawings or Specifications to reflect and document the consequences of the existence or location of the Underground Facility; and

4. advise Owner in writing of Engineer's findings, conclusions, and recommendations.

During such time, Contractor shall be responsible for the safety and protection of such Underground Facility.

D. *Owner's Statement to Contractor Regarding Underground Facility*: After receipt of Engineer's written findings, conclusions, and recommendations, Owner shall issue a written statement to Contractor (with a copy to Engineer) regarding the Underground Facility in question addressing the resumption of Work in connection with such Underground Facility, indicating whether any change in the Drawings or Specifications will be made, and adopting or rejecting Engineer's written findings, conclusions, and recommendations in whole or in part.

E. *Early Resumption of Work*: If at any time Engineer determines that Work in connection with the Underground Facility may resume prior to completion of Engineer's review or Owner's issuance of its statement to Contractor, because the Underground Facility in question and conditions affected by its presence have been adequately documented, and analyzed on a preliminary basis, then the Engineer may at its discretion instruct Contractor to resume such Work.

F. *Possible Price and Times Adjustments*

1. Contractor shall be entitled to an equitable adjustment in the Contract Price or Contract Times, to the extent that any existing Underground Facility at the Site that was not shown

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

or indicated on the Drawings, or was not shown or indicated with reasonable accuracy, or any related delay, disruption, or interference, causes an increase or decrease in Contractor's cost of, or time required for, performance of the Work; subject, however, to the following:

a. With respect to Work that is paid for on a unit price basis, any adjustment in Contract Price will be subject to the provisions of Paragraph 13.03;

b. Contractor's entitlement to an adjustment of the Contract Times is subject to the provisions of Paragraphs 4.05.D and 4.05.E; and

c. Contractor gave the notice required in Paragraph 5.05.B.

2. If Owner and Contractor agree regarding Contractor's entitlement to and the amount or extent of any adjustment in the Contract Price or Contract Times, then any such adjustment will be set forth in a Change Order.

3. Contractor may submit a Change Proposal regarding its entitlement to or the amount or extent of any adjustment in the Contract Price or Contract Times, no later than 30 days after Owner's issuance of the Owner's written statement to Contractor regarding the Underground Facility in question.

4. The information and data shown or indicated on the Drawings with respect to existing Underground Facilities at the Site is based on information and data (a) furnished by the owners of such Underground Facilities, or by others, (b) obtained from available records, or (c) gathered in an investigation conducted in accordance with the current edition of ASCE 38, Standard Guideline for the Collection and Depiction of Existing Subsurface Utility Data, by the American Society of Civil Engineers. If such information or data is incorrect or incomplete, Contractor's remedies are limited to those set forth in this Paragraph 5.05.F.

5.06 *Hazardous Environmental Conditions at Site*

A. *Reports and Drawings*: The Supplementary Conditions identify:

1. those reports known to Owner relating to Hazardous Environmental Conditions that have been identified at or adjacent to the Site;

2. drawings known to Owner relating to Hazardous Environmental Conditions that have been identified at or adjacent to the Site; and

3. Technical Data contained in such reports and drawings.

4. The following table lists the reports known to Owner relating to Hazardous Environmental Conditions at or adjacent to the Site, and the Technical Data (if any) upon which Contractor may rely:

Report Title	Date of Report	Technical Data
None		

5. The following table lists the drawings known to Owner relating to Hazardous Environmental Conditions at or adjacent to the Site, and Technical Data (if any) contained in such Drawings upon which Contractor may rely:

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

Drawings Title	Date of Drawings	Technical Data
None		

B. *Reliance by Contractor on Technical Data Authorized*: Contractor may rely upon the accuracy of the Technical Data expressly identified in the Supplementary Conditions with respect to such reports and drawings, but such reports and drawings are not Contract Documents. If no such express identification has been made, then Contractor may rely on the accuracy of the Technical Data as defined in Paragraph 1.01.A.46.b. Except for such reliance on Technical Data, Contractor may not rely upon or make any claim against Owner or Engineer, or any of their officers, directors, members, partners, employees, agents, consultants, or subcontractors, with respect to:

1. the completeness of such reports and drawings for Contractor's purposes, including, but not limited to, any aspects of the means, methods, techniques, sequences and procedures of construction to be employed by Contractor, and safety precautions and programs incident thereto;

2. other data, interpretations, opinions, and information contained in such reports or shown or indicated in such drawings; or

3. any Contractor interpretation of or conclusion drawn from any Technical Data or any such other data, interpretations, opinions or information.

C. Contractor shall not be responsible for removing or remediating any Hazardous Environmental Condition encountered, uncovered, or revealed at the Site unless such removal or remediation is expressly identified in the Contract Documents to be within the scope of the Work.

D. Contractor shall be responsible for controlling, containing, and duly removing all Constituents of Concern brought to the Site by Contractor, Subcontractors, Suppliers, or anyone else for whom Contractor is responsible, and for any associated costs; and for the costs of removing and remediating any Hazardous Environmental Condition created by the presence of any such Constituents of Concern.

E. If Contractor encounters, uncovers, or reveals a Hazardous Environmental Condition whose removal or remediation is not expressly identified in the Contract Documents as being within the scope of the Work, or if Contractor or anyone for whom Contractor is responsible creates a Hazardous Environmental Condition, then Contractor shall immediately: (1) secure or otherwise isolate such condition; (2) stop all Work in connection with such condition and in any area affected thereby (except in an emergency as required by Paragraph 7.15); and (3) notify Owner and Engineer (and promptly thereafter confirm such notice in writing). Owner shall promptly consult with Engineer concerning the necessity for Owner to retain a qualified expert to evaluate such condition or take corrective action, if any. Promptly after consulting with Engineer, Owner shall take such actions as are necessary to permit Owner to timely obtain required permits and provide Contractor the written notice required by Paragraph 5.06.F. If Contractor or anyone for whom Contractor is responsible created the Hazardous Environmental Condition in question, then Owner may remove and remediate the Hazardous Environmental Condition, and impose a set-off against payments to account for the associated costs.

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

F. Contractor shall not resume Work in connection with such Hazardous Environmental Condition or in any affected area until after Owner has obtained any required permits related thereto, and delivered written notice to Contractor either (1) specifying that such condition and any affected area is or has been rendered safe for the resumption of Work, or (2) specifying any special conditions under which such Work may be resumed safely.

G. If Owner and Contractor cannot agree as to entitlement to or on the amount or extent, if any, of any adjustment in Contract Price or Contract Times, as a result of such Work stoppage, such special conditions under which Work is agreed to be resumed by Contractor, or any costs or expenses incurred in response to the Hazardous Environmental Condition, then within 30 days of Owner's written notice regarding the resumption of Work, Contractor may submit a Change Proposal, or Owner may impose a set-off. Entitlement to any such adjustment is subject to the provisions of Paragraphs 4.05.D, 4.05.E, 11.07, and 11.08.

H. If, after receipt of such written notice, Contractor does not agree to resume such Work based on a reasonable belief it is unsafe, or does not agree to resume such Work under such special conditions, then Owner may order the portion of the Work that is in the area affected by such condition to be deleted from the Work, following the contractual change procedures in Article 11. Owner may have such deleted portion of the Work performed by Owner's own forces or others in accordance with Article 8.

I. To the fullest extent permitted by Laws and Regulations, Owner shall indemnify and hold harmless Contractor, Subcontractors, and Engineer, and the officers, directors, members, partners, employees, agents, consultants, and subcontractors of each and any of them, from and against all claims, costs, losses, and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals, and all court, arbitration, or other dispute resolution costs) arising out of or relating to a Hazardous Environmental Condition, provided that such Hazardous Environmental Condition (1) was not shown or indicated in the Drawings, Specifications, or other Contract Documents, identified as Technical Data entitled to limited reliance pursuant to Paragraph 5.06.B, or identified in the Contract Documents to be included within the scope of the Work, and (2) was not created by Contractor or by anyone for whom Contractor is responsible. Nothing in this Paragraph 5.06.I obligates Owner to indemnify any individual or entity from and against the consequences of that individual's or entity's own negligence.

J. To the fullest extent permitted by Laws and Regulations, Contractor shall indemnify and hold harmless Owner and Engineer, and the officers, directors, members, partners, employees, agents, consultants, and subcontractors of each and any of them, from and against all claims, costs, losses, and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all court or arbitration or other dispute resolution costs) arising out of or relating to the failure to control, contain, or remove a Constituent of Concern brought to the Site by Contractor or by anyone for whom Contractor is responsible, or to a Hazardous Environmental Condition created by Contractor or by anyone for whom Contractor is responsible. Nothing in this Paragraph 5.06.J obligates Contractor to indemnify any individual or entity from and against the consequences of that individual's or entity's own negligence.

K. The provisions of Paragraphs 5.03, 5.04, and 5.05 do not apply to the presence of Constituents of Concern or to a Hazardous Environmental Condition uncovered or revealed at the Site.

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

ARTICLE 6—BONDS AND INSURANCE

6.01 *Performance, Payment, and Other Bonds*

A. Contractor shall furnish a performance bond and a payment bond, each in an amount at least equal to the Contract Price, as security for the faithful performance and payment of Contractor's obligations under the Contract. These bonds must remain in effect until one year after the date when final payment becomes due or until completion of the correction period specified in Paragraph 15.08, whichever is later, except as provided otherwise by Laws or Regulations, the terms of a prescribed bond form, the Supplementary Conditions, or other provisions of the Contract.

B. Contractor shall also furnish such other bonds (if any) as are required by the Supplementary Conditions or other provisions of the Contract.

C. All bonds must be in the form included in the Bidding Documents or otherwise specified by Owner prior to execution of the Contract, except as provided otherwise by Laws or Regulations, and must be issued and signed by a surety named in "Companies Holding Certificates of Authority as Acceptable Sureties on Federal Bonds and as Acceptable Reinsuring Companies" as published in Department Circular 570 (as amended and supplemented) by the Bureau of the Fiscal Service, U.S. Department of the Treasury. A bond signed by an agent or attorney-in-fact must be accompanied by a certified copy of that individual's authority to bind the surety. The evidence of authority must show that it is effective on the date the agent or attorney-in-fact signed the accompanying bond.

D. Contractor shall obtain the required bonds from surety companies that are duly licensed or authorized, in the state or jurisdiction in which the Project is located, to issue bonds in the required amounts.

E. If the surety on a bond furnished by Contractor is declared bankrupt or becomes insolvent, or the surety ceases to meet the requirements above, then Contractor shall promptly notify Owner and Engineer in writing and shall, within 20 days after the event giving rise to such notification, provide another bond and surety, both of which must comply with the bond and surety requirements above.

F. If Contractor has failed to obtain a required bond, Owner may exclude the Contractor from the Site and exercise Owner's termination rights under Article 16.

G. Upon request to Owner from any Subcontractor, Supplier, or other person or entity claiming to have furnished labor, services, materials, or equipment used in the performance of the Work, Owner shall provide a copy of the payment bond to such person or entity.

H. Upon request to Contractor from any Subcontractor, Supplier, or other person or entity claiming to have furnished labor, services, materials, or equipment used in the performance of the Work, Contractor shall provide a copy of the payment bond to such person or entity.

6.02 *Insurance—General Provisions*

A. Owner and Contractor shall obtain and maintain insurance as required in this article and in the Supplementary Conditions.

B. All insurance required by the Contract to be purchased and maintained by Owner or Contractor shall be obtained from insurance companies that are duly licensed or authorized in the state or jurisdiction in which the Project is located to issue insurance policies for the

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

required limits and coverages. Unless a different standard is indicated in the Supplementary Conditions, all companies that provide insurance policies required under this Contract shall have an A.M. Best rating of A-VII or better.

1. Contractor may obtain worker's compensation insurance from an insurance company that has not been rated by A.M. Best, provided that such company (a) is domiciled in the state in which the Project is located, (b) is certified or authorized as a worker's compensation insurance provider by the appropriate state agency, and (c) has been accepted to provide worker's compensation insurance for similar projects by the state within the last 12 months.

C. Alternative forms of insurance coverage, including but not limited to self-insurance and "Occupational Accident and Excess Employer's Indemnity Policies," are not sufficient to meet the insurance requirements of this Contract, unless expressly allowed in the Supplementary Conditions.

D. Contractor shall deliver to Owner, with copies to each additional insured identified in the Contract, certificates of insurance and endorsements establishing that Contractor has obtained and is maintaining the policies and coverages required by the Contract. Upon request by Owner or any other insured, Contractor shall also furnish other evidence of such required insurance, including but not limited to copies of policies, documentation of applicable self-insured retentions (if allowed) and deductibles, full disclosure of all relevant exclusions, and evidence of insurance required to be purchased and maintained by Subcontractors or Suppliers. In any documentation furnished under this provision, Contractor, Subcontractors, and Suppliers may block out (redact) (1) any confidential premium or pricing information and (2) any wording specific to a project or jurisdiction other than those applicable to this Contract.

E. Owner shall deliver to Contractor, with copies to each additional insured identified in the Contract, certificates of insurance and endorsements establishing that Owner has obtained and is maintaining the policies and coverages required of Owner by the Contract (if any). Upon request by Contractor or any other insured, Owner shall also provide other evidence of such required insurance (if any), including but not limited to copies of policies, documentation of applicable self-insured retentions (if allowed) and deductibles, and full disclosure of all relevant exclusions. In any documentation furnished under this provision, Owner may block out (redact) (1) any confidential premium or pricing information and (2) any wording specific to a project or jurisdiction other than those relevant to this Contract.

F. Failure of Owner or Contractor to demand such certificates or other evidence of the other party's full compliance with these insurance requirements, or failure of Owner or Contractor to identify a deficiency in compliance from the evidence provided, will not be construed as a waiver of the other party's obligation to obtain and maintain such insurance.

G. In addition to the liability insurance required to be provided by Contractor, the Owner, at Owner's option, may purchase and maintain Owner's own liability insurance. Owner's liability policies, if any, operate separately and independently from policies required to be provided by Contractor, and Contractor cannot rely upon Owner's liability policies for any of Contractor's obligations to the Owner, Engineer, or third parties.

H. Contractor shall require:

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

1. Subcontractors to purchase and maintain worker's compensation, commercial general liability, and other insurance that is appropriate for their participation in the Project, and to name as additional insureds Owner and Engineer (and any other individuals or entities identified in the Supplementary Conditions as additional insureds on Contractor's liability policies) on each Subcontractor's commercial general liability insurance policy; and

2. Suppliers to purchase and maintain insurance that is appropriate for their participation in the Project.

I. If either party does not purchase or maintain the insurance required of such party by the Contract, such party shall notify the other party in writing of such failure to purchase prior to the start of the Work, or of such failure to maintain prior to any change in the required coverage.

J. If Contractor has failed to obtain and maintain required insurance, Contractor's entitlement to enter or remain at the Site will end immediately, and Owner may impose an appropriate set-off against payment for any associated costs (including but not limited to the cost of purchasing necessary insurance coverage), and exercise Owner's termination rights under Article 16.

K. Without prejudice to any other right or remedy, if a party has failed to obtain required insurance, the other party may elect (but is in no way obligated) to obtain equivalent insurance to protect such other party's interests at the expense of the party who was required to provide such coverage, and the Contract Price will be adjusted accordingly.

L. Owner does not represent that insurance coverage and limits established in this Contract necessarily will be adequate to protect Contractor or Contractor's interests. Contractor is responsible for determining whether such coverage and limits are adequate to protect its interests, and for obtaining and maintaining any additional insurance that Contractor deems necessary.

M. The insurance and insurance limits required herein will not be deemed as a limitation on Contractor's liability, or that of its Subcontractors or Suppliers, under the indemnities granted to Owner and other individuals and entities in the Contract or otherwise.

N. All the policies of insurance required to be purchased and maintained under this Contract will contain a provision or endorsement that the coverage afforded will not be canceled, or renewal refused, until at least 10 days prior written notice has been given to the purchasing policyholder. Within three days of receipt of any such written notice, the purchasing policyholder shall provide a copy of the notice to each other insured and Engineer.

6.03 *Contractor's Insurance*

A. *Required Insurance*: Contractor shall purchase and maintain Worker's Compensation, Commercial General Liability, and other insurance pursuant to the specific requirements of the Supplementary Conditions.

B. *General Provisions*: The policies of insurance required by this Paragraph 6.03 as supplemented must:

1. include at least the specific coverages required;

2. be written for not less than the limits provided, or those required by Laws or Regulations, whichever is greater;

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

3. remain in effect at least until the Work is complete (as set forth in Paragraph 15.06.D), and longer if expressly required elsewhere in this Contract, and at all times thereafter when Contractor may be correcting, removing, or replacing defective Work as a warranty or correction obligation, or otherwise, or returning to the Site to conduct other tasks arising from the Contract;

4. apply with respect to the performance of the Work, whether such performance is by Contractor, any Subcontractor or Supplier, or by anyone directly or indirectly employed by any of them to perform any of the Work, or by anyone for whose acts any of them may be liable; and

5. include all necessary endorsements to support the stated requirements.

C. *Additional Insureds*: The Contractor's commercial general liability, automobile liability, employer's liability, umbrella or excess, pollution liability, and unmanned aerial vehicle liability policies, if required by this Contract, must:

1. include and list as additional insureds Owner and Engineer, and any individuals or entities identified as additional insureds in the Supplementary Conditions;

2. include coverage for the respective officers, directors, members, partners, employees, and consultants of all such additional insureds;

3. afford primary coverage to these additional insureds for all claims covered thereby (including as applicable those arising from both ongoing and completed operations);

4. not seek contribution from insurance maintained by the additional insured; and

5. as to commercial general liability insurance, apply to additional insureds with respect to liability caused in whole or in part by Contractor's acts or omissions, or the acts and omissions of those working on Contractor's behalf, in the performance of Contractor's operations.

D. Reference Item 23 of the City of Midland Standard Purchasing Terms and Conditions.

6.04 *Builder's Risk and Other Property Insurance*

A. *Builder's Risk*: Unless otherwise provided in the Supplementary Conditions, Contractor shall purchase and maintain builder's risk insurance upon the Work on a completed value basis, in the amount of the Work's full insurable replacement cost (subject to such deductible amounts as may be provided in the Supplementary Conditions or required by Laws and Regulations). The specific requirements applicable to the builder's risk insurance are set forth in the Supplementary Conditions.

B. *Property Insurance for Facilities of Owner Where Work Will Occur*: Owner is responsible for obtaining and maintaining property insurance covering each existing structure, building, or facility in which any part of the Work will occur, or to which any part of the Work will attach or be adjoined. Such property insurance will be written on a special perils (all-risk) form, on a replacement cost basis, providing coverage consistent with that required for the builder's risk insurance, and will be maintained until the Work is complete, as set forth in Paragraph 15.06.D.

C. *Property Insurance for Substantially Complete Facilities*: Promptly after Substantial Completion, and before actual occupancy or use of the substantially completed Work, Owner will obtain property insurance for such substantially completed Work, and maintain such

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

property insurance at least until the Work is complete, as set forth in Paragraph 15.06.D. Such property insurance will be written on a special perils (all-risk) form, on a replacement cost basis, and provide coverage consistent with that required for the builder's risk insurance. The builder's risk insurance may terminate upon written confirmation of Owner's procurement of such property insurance.

D. *Partial Occupancy or Use by Owner*: If Owner will occupy or use a portion or portions of the Work prior to Substantial Completion of all the Work, as provided in Paragraph 15.04, then Owner (directly, if it is the purchaser of the builder's risk policy, or through Contractor) will provide advance notice of such occupancy or use to the builder's risk insurer, and obtain an endorsement consenting to the continuation of coverage prior to commencing such partial occupancy or use.

E. *Insurance of Other Property; Additional Insurance*: If the express insurance provisions of the Contract do not require or address the insurance of a property item or interest, then the entity or individual owning such property item will be responsible for insuring it. If Contractor elects to obtain other special insurance to be included in or supplement the builder's risk or property insurance policies provided under this Paragraph 6.04, it may do so at Contractor's expense.

6.05 *Property Losses; Subrogation*

A. The builder's risk insurance policy purchased and maintained in accordance with Paragraph 6.04 (or an installation floater policy if authorized by the Supplementary Conditions), will contain provisions to the effect that in the event of payment of any loss or damage the insurer will have no rights of recovery against any insureds thereunder, or against Engineer or its consultants, or their officers, directors, members, partners, employees, agents, consultants, or subcontractors.

1. Owner and Contractor waive all rights against each other and the respective officers, directors, members, partners, employees, agents, consultants, and subcontractors of each and any of them, for all losses and damages caused by, arising out of, or resulting from any of the perils, risks, or causes of loss covered by such policies and any other property insurance applicable to the Work; and, in addition, waive all such rights against Engineer, its consultants, all individuals or entities identified in the Supplementary Conditions as builder's risk or installation floater insureds, and the officers, directors, members, partners, employees, agents, consultants, and subcontractors of each and any of them, under such policies for losses and damages so caused.

2. None of the above waivers extends to the rights that any party making such waiver may have to the proceeds of insurance held by Owner or Contractor as trustee or fiduciary, or otherwise payable under any policy so issued.

B. Any property insurance policy maintained by Owner covering any loss, damage, or consequential loss to Owner's existing structures, buildings, or facilities in which any part of the Work will occur, or to which any part of the Work will attach or adjoin; to adjacent structures, buildings, or facilities of Owner; or to part or all of the completed or substantially completed Work, during partial occupancy or use pursuant to Paragraph 15.04, after Substantial Completion pursuant to Paragraph 15.03, or after final payment pursuant to Paragraph 15.06, will contain provisions to the effect that in the event of payment of any loss or damage the insurer will have no rights of recovery against any insureds thereunder, or against Contractor, Subcontractors, or Engineer, or the officers, directors, members, partners,

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

employees, agents, consultants, or subcontractors of each and any of them, and that the insured is allowed to waive the insurer's rights of subrogation in a written contract executed prior to the loss, damage, or consequential loss.

1. Owner waives all rights against Contractor, Subcontractors, and Engineer, and the officers, directors, members, partners, employees, agents, consultants and subcontractors of each and any of them, for all losses and damages caused by, arising out of, or resulting from fire or any of the perils, risks, or causes of loss covered by such policies.

C. The waivers in this Paragraph 6.05 include the waiver of rights due to business interruption, loss of use, or other consequential loss extending beyond direct physical loss or damage to Owner's property or the Work caused by, arising out of, or resulting from fire or other insured peril, risk, or cause of loss.

D. Contractor shall be responsible for assuring that each Subcontract contains provisions whereby the Subcontractor waives all rights against Owner, Contractor, all individuals or entities identified in the Supplementary Conditions as insureds, the Engineer and its consultants, and the officers, directors, members, partners, employees, agents, consultants, and subcontractors of each and any of them, for all losses and damages caused by, arising out of, relating to, or resulting from fire or other peril, risk, or cause of loss covered by builder's risk insurance, installation floater, and any other property insurance applicable to the Work.

6.06 *Receipt and Application of Property Insurance Proceeds*

A. Any insured loss under the builder's risk and other policies of property insurance required by Paragraph 6.04 will be adjusted and settled with the named insured that purchased the policy. Such named insured shall act as fiduciary for the other insureds, and give notice to such other insureds that adjustment and settlement of a claim is in progress. Any other insured may state its position regarding a claim for insured loss in writing within 15 days after notice of such claim.

B. Proceeds for such insured losses may be made payable by the insurer either jointly to multiple insureds, or to the named insured that purchased the policy in its own right and as fiduciary for other insureds, subject to the requirements of any applicable mortgage clause. A named insured receiving insurance proceeds under the builder's risk and other policies of insurance required by Paragraph 6.04 shall maintain such proceeds in a segregated account, and distribute such proceeds in accordance with such agreement as the parties in interest may reach, or as otherwise required under the dispute resolution provisions of this Contract or applicable Laws and Regulations.

C. If no other special agreement is reached, Contractor shall repair or replace the damaged Work, using allocated insurance proceeds.

ARTICLE 7—CONTRACTOR'S RESPONSIBILITIES

7.01 *Contractor's Means and Methods of Construction*

A. Contractor shall be solely responsible for the means, methods, techniques, sequences, and procedures of construction.

B. If the Contract Documents note, or Contractor determines, that professional engineering or other design services are needed to carry out Contractor's responsibilities for construction

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

means, methods, techniques, sequences, and procedures, or for Site safety, then Contractor shall cause such services to be provided by a properly licensed design professional, at Contractor's expense. Such services are not Owner-delegated professional design services under this Contract, and neither Owner nor Engineer has any responsibility with respect to (1) Contractor's determination of the need for such services, (2) the qualifications or licensing of the design professionals retained or employed by Contractor, (3) the performance of such services, or (4) any errors, omissions, or defects in such services.

7.02 *Supervision and Superintendence*

A. Contractor shall supervise, inspect, and direct the Work competently and efficiently, devoting such attention thereto and applying such skills and expertise as may be necessary to perform the Work in accordance with the Contract Documents.

B. At all times during the progress of the Work, Contractor shall assign a competent resident superintendent who will not be replaced without written notice to Owner and Engineer except under extraordinary circumstances.

7.03 *Labor; Working Hours*

A. Contractor shall provide competent, suitably qualified personnel to survey and lay out the Work and perform construction as required by the Contract Documents. Contractor shall maintain good discipline and order at the Site.

B. Contractor shall be fully responsible to Owner and Engineer for all acts and omissions of Contractor's employees; of Suppliers and Subcontractors, and their employees; and of any other individuals or entities performing or furnishing any of the Work, just as Contractor is responsible for Contractor's own acts and omissions.

C. Except as otherwise required for the safety or protection of persons or the Work or property at the Site or adjacent thereto, and except as otherwise stated in the Contract Documents, all Work at the Site will be performed during regular working hours, Monday through Friday. Contractor will not perform Work on a Saturday, Sunday, or any legal holiday. Contractor may perform Work outside regular working hours or on Saturdays, Sundays, or legal holidays only with Owner's written consent, which will not be unreasonably withheld.

7.04 *Services, Materials, and Equipment*

A. Unless otherwise specified in the Contract Documents, Contractor shall provide and assume full responsibility for all services, materials, equipment, labor, transportation, construction equipment and machinery, tools, appliances, fuel, power, light, heat, telephone, water, sanitary facilities, temporary facilities, and all other facilities and incidentals necessary for the performance, testing, start up, and completion of the Work, whether or not such items are specifically called for in the Contract Documents.

B. All materials and equipment incorporated into the Work must be new and of good quality, except as otherwise provided in the Contract Documents. All special warranties and guarantees required by the Specifications will expressly run to the benefit of Owner. If required by Engineer, Contractor shall furnish satisfactory evidence (including reports of required tests) as to the source, kind, and quality of materials and equipment.

C. All materials and equipment must be stored, applied, installed, connected, erected, protected, used, cleaned, and conditioned in accordance with instructions of the applicable Supplier, except as otherwise may be provided in the Contract Documents.

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

7.05 *"Or Equals"*

A. *Contractor's Request; Governing Criteria*: Whenever an item of equipment or material is specified or described in the Contract Documents by using the names of one or more proprietary items or specific Suppliers, the Contract Price has been based upon Contractor furnishing such item as specified. The specification or description of such an item is intended to establish the type, function, appearance, and quality required. Unless the specification or description contains or is followed by words reading that no like, equivalent, or "or equal" item is permitted, Contractor may request that Engineer authorize the use of other items of equipment or material, or items from other proposed Suppliers, under the circumstances described below.

1. If Engineer in its sole discretion determines that an item of equipment or material proposed by Contractor is functionally equal to that named and sufficiently similar so that no change in related Work will be required, Engineer will deem it an "or equal" item. For the purposes of this paragraph, a proposed item of equipment or material will be considered functionally equal to an item so named if:

    a. in the exercise of reasonable judgment Engineer determines that the proposed item:

        1) is at least equal in materials of construction, quality, durability, appearance, strength, and design characteristics;

        2) will reliably perform at least equally well the function and achieve the results imposed by the design concept of the completed Project as a functioning whole;

        3) has a proven record of performance and availability of responsive service; and

        4) is not objectionable to Owner.

    b. Contractor certifies that, if the proposed item is approved and incorporated into the Work:

        1) there will be no increase in cost to the Owner or increase in Contract Times; and

        2) the item will conform substantially to the detailed requirements of the item named in the Contract Documents.

B. *Contractor's Expense*: Contractor shall provide all data in support of any proposed "or equal" item at Contractor's expense.

C. *Engineer's Evaluation and Determination*: Engineer will be allowed a reasonable time to evaluate each "or-equal" request. Engineer may require Contractor to furnish additional data about the proposed "or-equal" item. Engineer will be the sole judge of acceptability. No "or-equal" item will be ordered, furnished, installed, or utilized until Engineer's review is complete and Engineer determines that the proposed item is an "or-equal," which will be evidenced by an approved Shop Drawing or other written communication. Engineer will advise Contractor in writing of any negative determination.

D. *Effect of Engineer's Determination*: Neither approval nor denial of an "or-equal" request will result in any change in Contract Price. The Engineer's denial of an "or-equal" request will be final and binding, and may not be reversed through an appeal under any provision of the Contract.

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

E. *Treatment as a Substitution Request*: If Engineer determines that an item of equipment or material proposed by Contractor does not qualify as an "or-equal" item, Contractor may request that Engineer consider the item a proposed substitute pursuant to Paragraph 7.06.

7.06 *Substitutes*

A. *Contractor's Request; Governing Criteria*: Unless the specification or description of an item of equipment or material required to be furnished under the Contract Documents contains or is followed by words reading that no substitution is permitted, Contractor may request that Engineer authorize the use of other items of equipment or material under the circumstances described below. To the extent possible such requests must be made before commencement of related construction at the Site.

1. Contractor shall submit sufficient information as provided below to allow Engineer to determine if the item of material or equipment proposed is functionally equivalent to that named and an acceptable substitute therefor. Engineer will not accept requests for review of proposed substitute items of equipment or material from anyone other than Contractor.

2. The requirements for review by Engineer will be as set forth in Paragraph 7.06.B, as supplemented by the Specifications, and as Engineer may decide is appropriate under the circumstances.

3. Contractor shall make written application to Engineer for review of a proposed substitute item of equipment or material that Contractor seeks to furnish or use. The application:

   a. will certify that the proposed substitute item will:

      1) perform adequately the functions and achieve the results called for by the general design;

      2) be similar in substance to the item specified; and

      3) be suited to the same use as the item specified.

   b. will state:

      1) the extent, if any, to which the use of the proposed substitute item will necessitate a change in Contract Times;

      2) whether use of the proposed substitute item in the Work will require a change in any of the Contract Documents (or in the provisions of any other direct contract with Owner for other work on the Project) to adapt the design to the proposed substitute item; and

      3) whether incorporation or use of the proposed substitute item in connection with the Work is subject to payment of any license fee or royalty.

   c. will identify:

      1) all variations of the proposed substitute item from the item specified; and

      2) available engineering, sales, maintenance, repair, and replacement services.

   d. will contain an itemized estimate of all costs or credits that will result directly or indirectly from use of such substitute item, including but not limited to changes in

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

Contract Price, shared savings, costs of redesign, and claims of other contractors affected by any resulting change.

B. *Engineer's Evaluation and Determination*: Engineer will be allowed a reasonable time to evaluate each substitute request, and to obtain comments and direction from Owner. Engineer may require Contractor to furnish additional data about the proposed substitute item. Engineer will be the sole judge of acceptability. No substitute will be ordered, furnished, installed, or utilized until Engineer's review is complete and Engineer determines that the proposed item is an acceptable substitute. Engineer's determination will be evidenced by a Field Order or a proposed Change Order accounting for the substitution itself and all related impacts, including changes in Contract Price or Contract Times. Engineer will advise Contractor in writing of any negative determination.

C. *Special Guarantee*: Owner may require Contractor to furnish at Contractor's expense a special performance guarantee or other surety with respect to any substitute.

D. *Reimbursement of Engineer's Cost*: Engineer will record Engineer's costs in evaluating a substitute proposed or submitted by Contractor. Whether or not Engineer approves a substitute so proposed or submitted by Contractor, Contractor shall reimburse Owner for the reasonable charges of Engineer for evaluating each such proposed substitute. Contractor shall also reimburse Owner for the reasonable charges of Engineer for making changes in the Contract Documents (or in the provisions of any other direct contract with Owner) resulting from the acceptance of each proposed substitute.

E. *Contractor's Expense*: Contractor shall provide all data in support of any proposed substitute at Contractor's expense.

F. *Effect of Engineer's Determination*: If Engineer approves the substitution request, Contractor shall execute the proposed Change Order and proceed with the substitution. The Engineer's denial of a substitution request will be final and binding, and may not be reversed through an appeal under any provision of the Contract. Contractor may challenge the scope of reimbursement costs imposed under Paragraph 7.06.D, by timely submittal of a Change Proposal.

7.07 *Concerning Subcontractors and Suppliers*

A. Contractor may retain Subcontractors and Suppliers for the performance of parts of the Work. Such Subcontractors and Suppliers must be acceptable to Owner. The Contractor's retention of a Subcontractor or Supplier for the performance of parts of the Work will not relieve Contractor's obligation to Owner to perform and complete the Work in accordance with the Contract Documents.

B. Contractor shall retain specific Subcontractors and Suppliers for the performance of designated parts of the Work if required by the Contract to do so.

C. Subsequent to the submittal of Contractor's Bid or final negotiation of the terms of the Contract, Owner may not require Contractor to retain any Subcontractor or Supplier to furnish or perform any of the Work against which Contractor has reasonable objection.

D. Prior to entry into any binding subcontract or purchase order, Contractor shall submit to Owner the identity of the proposed Subcontractor or Supplier (unless Owner has already deemed such proposed Subcontractor or Supplier acceptable during the bidding process or

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

otherwise). Such proposed Subcontractor or Supplier shall be deemed acceptable to Owner unless Owner raises a substantive, reasonable objection within 5 days.

E. Owner may require the replacement of any Subcontractor or Supplier. Owner also may require Contractor to retain specific replacements; provided, however, that Owner may not require a replacement to which Contractor has a reasonable objection. If Contractor has submitted the identity of certain Subcontractors or Suppliers for acceptance by Owner, and Owner has accepted it (either in writing or by failing to make written objection thereto), then Owner may subsequently revoke the acceptance of any such Subcontractor or Supplier so identified solely on the basis of substantive, reasonable objection after due investigation. Contractor shall submit an acceptable replacement for the rejected Subcontractor or Supplier.

F. If Owner requires the replacement of any Subcontractor or Supplier retained by Contractor to perform any part of the Work, then Contractor shall be entitled to an adjustment in Contract Price or Contract Times, with respect to the replacement; and Contractor shall initiate a Change Proposal for such adjustment within 30 days of Owner's requirement of replacement.

G. No acceptance by Owner of any such Subcontractor or Supplier, whether initially or as a replacement, will constitute a waiver of the right of Owner to the completion of the Work in accordance with the Contract Documents.

H. On a monthly basis, Contractor shall submit to Engineer a complete list of all Subcontractors and Suppliers having a direct contract with Contractor, and of all other Subcontractors and Suppliers known to Contractor at the time of submittal.

I. Contractor shall be solely responsible for scheduling and coordinating the work of Subcontractors and Suppliers.

J. The divisions and sections of the Specifications and the identifications of any Drawings do not control Contractor in dividing the Work among Subcontractors or Suppliers, or in delineating the Work to be performed by any specific trade.

K. All Work performed for Contractor by a Subcontractor or Supplier must be pursuant to an appropriate contractual agreement that specifically binds the Subcontractor or Supplier to the applicable terms and conditions of the Contract for the benefit of Owner and Engineer.

L. Owner may furnish to any Subcontractor or Supplier, to the extent practicable, information about amounts paid to Contractor for Work performed for Contractor by the Subcontractor or Supplier.

M. Contractor shall restrict all Subcontractors and Suppliers from communicating with Engineer or Owner, except through Contractor or in case of an emergency, or as otherwise expressly allowed in this Contract.

7.08 *Patent Fees and Royalties*

A. Contractor shall pay all license fees and royalties and assume all costs incident to the use in the performance of the Work or the incorporation in the Work of any invention, design, process, product, or device which is the subject of patent rights or copyrights held by others. If an invention, design, process, product, or device is specified in the Contract Documents for use in the performance of the Work and if, to the actual knowledge of Owner or Engineer, its

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

use is subject to patent rights or copyrights calling for the payment of any license fee or royalty to others, the existence of such rights will be disclosed in the Contract Documents.

B. To the fullest extent permitted by Laws and Regulations, Owner shall indemnify and hold harmless Contractor, and its officers, directors, members, partners, employees, agents, consultants, and subcontractors, from and against all claims, costs, losses, and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals, and all court or arbitration or other dispute resolution costs) arising out of or relating to any infringement of patent rights or copyrights incident to the use in the performance of the Work or resulting from the incorporation in the Work of any invention, design, process, product, or device specified in the Contract Documents, but not identified as being subject to payment of any license fee or royalty to others required by patent rights or copyrights.

C. To the fullest extent permitted by Laws and Regulations, Contractor shall indemnify and hold harmless Owner and Engineer, and the officers, directors, members, partners, employees, agents, consultants and subcontractors of each and any of them, from and against all claims, costs, losses, and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all court or arbitration or other dispute resolution costs) arising out of or relating to any infringement of patent rights or copyrights incident to the use in the performance of the Work or resulting from the incorporation in the Work of any invention, design, process, product, or device not specified in the Contract Documents.

7.09 *Permits*

A. Unless otherwise provided in the Contract Documents, Contractor shall obtain and pay for all construction permits, licenses, and certificates of occupancy. Owner shall assist Contractor, when necessary, in obtaining such permits and licenses. Contractor shall pay all governmental charges and inspection fees necessary for the prosecution of the Work which are applicable at the time of the submission of Contractor's Bid (or when Contractor became bound under a negotiated contract). Owner shall pay all charges of utility owners for connections for providing permanent service to the Work.

7.10 *Taxes*

A. Contractor shall pay all sales, consumer, use, and other similar taxes required to be paid by Contractor in accordance with the Laws and Regulations of the place of the Project which are applicable during the performance of the Work.

B. Owner is exempt from payment of sales and compensating use taxes of the State of Texas and of cities and counties thereof on all materials to be incorporated into the Work.

1. Owner will furnish the required certificates of tax exemption to Contractor for use in the purchase of supplies and materials to be incorporated into the Work.

2. Owner's exemption does not apply to construction tools, machinery, equipment, or other property purchased by or leased by Contractor, or to supplies or materials not incorporated into the Work.

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

7.11 *Laws and Regulations*

A. Contractor shall give all notices required by and shall comply with all Laws and Regulations applicable to the performance of the Work. Neither Owner nor Engineer shall be responsible for monitoring Contractor's compliance with any Laws or Regulations.

B. If Contractor performs any Work or takes any other action knowing or having reason to know that it is contrary to Laws or Regulations, Contractor shall bear all resulting costs and losses, and shall indemnify and hold harmless Owner and Engineer, and the officers, directors, members, partners, employees, agents, consultants, and subcontractors of each and any of them, from and against all claims, costs, losses, and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all court or arbitration or other dispute resolution costs) arising out of or relating to such Work or other action. It is not Contractor's responsibility to make certain that the Work described in the Contract Documents is in accordance with Laws and Regulations, but this does not relieve Contractor of its obligations under Paragraph 3.03.

C. Owner or Contractor may give written notice to the other party of any changes after the submission of Contractor's Bid (or after the date when Contractor became bound under a negotiated contract) in Laws or Regulations having an effect on the cost or time of performance of the Work, including but not limited to changes in Laws or Regulations having an effect on procuring permits and on sales, use, value-added, consumption, and other similar taxes. If Owner and Contractor are unable to agree on entitlement to or on the amount or extent, if any, of any adjustment in Contract Price or Contract Times resulting from such changes, then within 30 days of such written notice Contractor may submit a Change Proposal, or Owner may initiate a Claim.

7.12 *Record Documents*

A. Contractor shall maintain in a safe place at the Site one printed record copy of all Drawings, Specifications, Addenda, Change Orders, Work Change Directives, Field Orders, written interpretations and clarifications, and approved Shop Drawings. Contractor shall keep such record documents in good order and annotate them to show changes made during construction. These record documents, together with all approved Samples, will be available to Engineer for reference. Upon completion of the Work, Contractor shall deliver these record documents to Engineer.

7.13 *Safety and Protection*

A. Contractor shall be solely responsible for initiating, maintaining, and supervising all safety precautions and programs in connection with the Work. Such responsibility does not relieve Subcontractors of their responsibility for the safety of persons or property in the performance of their work, nor for compliance with applicable safety Laws and Regulations.

B. Contractor shall designate a qualified and experienced safety representative whose duties and responsibilities are the prevention of Work-related accidents and the maintenance and supervision of safety precautions and programs.

C. Contractor shall take all necessary precautions for the safety of, and shall provide the necessary protection to prevent damage, injury, or loss to:

1. all persons on the Site or who may be affected by the Work;

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

2. all the Work and materials and equipment to be incorporated therein, whether in storage on or off the Site; and

3. other property at the Site or adjacent thereto, including trees, shrubs, lawns, walks, pavements, roadways, structures, other work in progress, utilities, and Underground Facilities not designated for removal, relocation, or replacement in the course of construction.

D. All damage, injury, or loss to any property referred to in Paragraph 7.13.C.2 or 7.13.C.3 caused, directly or indirectly, in whole or in part, by Contractor, any Subcontractor, Supplier, or any other individual or entity directly or indirectly employed by any of them to perform any of the Work, or anyone for whose acts any of them may be liable, shall be remedied by Contractor at its expense (except damage or loss attributable to the fault of Drawings or Specifications or to the acts or omissions of Owner or Engineer or anyone employed by any of them, or anyone for whose acts any of them may be liable, and not attributable, directly or indirectly, in whole or in part, to the fault or negligence of Contractor or any Subcontractor, Supplier, or other individual or entity directly or indirectly employed by any of them).

E. Contractor shall comply with all applicable Laws and Regulations relating to the safety of persons or property, or to the protection of persons or property from damage, injury, or loss; and shall erect and maintain all necessary safeguards for such safety and protection.

F. Contractor shall notify Owner; the owners of adjacent property; the owners of Underground Facilities and other utilities (if the identity of such owners is known to Contractor); and other contractors and utility owners performing work at or adjacent to the Site, in writing, when Contractor knows that prosecution of the Work may affect them, and shall cooperate with them in the protection, removal, relocation, and replacement of their property or work in progress.

G. Contractor shall comply with the applicable requirements of Owner's safety programs, if any. Any Owner's safety programs that are applicable to the Work are identified or included in the Supplementary Conditions or Specifications.

H. Contractor shall inform Owner and Engineer of the specific requirements of Contractor's safety program with which Owner's and Engineer's employees and representatives must comply while at the Site.

I. Contractor's duties and responsibilities for safety and protection will continue until all the Work is completed, Engineer has issued a written notice to Owner and Contractor in accordance with Paragraph 15.06.C that the Work is acceptable, and Contractor has left the Site (except as otherwise expressly provided in connection with Substantial Completion).

J. Contractor's duties and responsibilities for safety and protection will resume whenever Contractor or any Subcontractor or Supplier returns to the Site to fulfill warranty or correction obligations, or to conduct other tasks arising from the Contract Documents.

7.14 *Hazard Communication Programs*

A. Contractor shall be responsible for coordinating any exchange of safety data sheets (formerly known as material safety data sheets) or other hazard communication information required to be made available to or exchanged between or among employers at the Site in accordance with Laws or Regulations.

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

7.15 *Emergencies*

A. In emergencies affecting the safety or protection of persons or the Work or property at the Site or adjacent thereto, Contractor is obligated to act to prevent damage, injury, or loss. Contractor shall give Engineer prompt written notice if Contractor believes that any significant changes in the Work or variations from the Contract Documents have been caused by an emergency, or are required as a result of Contractor's response to an emergency. If Engineer determines that a change in the Contract Documents is required because of an emergency or Contractor's response, a Work Change Directive or Change Order will be issued.

7.16 *Submittals*

A. *Shop Drawing and Sample Requirements*

1. Before submitting a Shop Drawing or Sample, Contractor shall:

a. review and coordinate the Shop Drawing or Sample with other Shop Drawings and Samples and with the requirements of the Work and the Contract Documents;

b. determine and verify:

1) all field measurements, quantities, dimensions, specified performance and design criteria, installation requirements, materials, catalog numbers, and similar information with respect to the Submittal;

2) the suitability of all materials and equipment offered with respect to the indicated application, fabrication, shipping, handling, storage, assembly, and installation pertaining to the performance of the Work; and

3) all information relative to Contractor's responsibilities for means, methods, techniques, sequences, and procedures of construction, and safety precautions and programs incident thereto;

c. confirm that the Submittal is complete with respect to all related data included in the Submittal.

2. Each Shop Drawing or Sample must bear a stamp or specific written certification that Contractor has satisfied Contractor's obligations under the Contract Documents with respect to Contractor's review of that Submittal, and that Contractor approves the Submittal.

3. With each Shop Drawing or Sample, Contractor shall give Engineer specific written notice of any variations that the Submittal may have from the requirements of the Contract Documents. This notice must be set forth in a written communication separate from the Submittal; and, in addition, in the case of a Shop Drawing by a specific notation made on the Shop Drawing itself.

B. *Submittal Procedures for Shop Drawings and Samples*: Contractor shall label and submit Shop Drawings and Samples to Engineer for review and approval in accordance with the accepted Schedule of Submittals.

1. *Shop Drawings*

a. Contractor shall submit the number of copies required in the Specifications.

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

b. Data shown on the Shop Drawings must be complete with respect to quantities, dimensions, specified performance and design criteria, materials, and similar data to show Engineer the services, materials, and equipment Contractor proposes to provide, and to enable Engineer to review the information for the limited purposes required by Paragraph 7.16.C.

2. *Samples*

a. Contractor shall submit the number of Samples required in the Specifications.

b. Contractor shall clearly identify each Sample as to material, Supplier, pertinent data such as catalog numbers, the use for which intended and other data as Engineer may require to enable Engineer to review the Submittal for the limited purposes required by Paragraph 7.16.C.

3. Where a Shop Drawing or Sample is required by the Contract Documents or the Schedule of Submittals, any related Work performed prior to Engineer's review and approval of the pertinent submittal will be at the sole expense and responsibility of Contractor.

C. *Engineer's Review of Shop Drawings and Samples*

1. Engineer will provide timely review of Shop Drawings and Samples in accordance with the accepted Schedule of Submittals. Engineer's review and approval will be only to determine if the items covered by the Submittals will, after installation or incorporation in the Work, comply with the requirements of the Contract Documents, and be compatible with the design concept of the completed Project as a functioning whole as indicated by the Contract Documents.

2. Engineer's review and approval will not extend to means, methods, techniques, sequences, or procedures of construction, or to safety precautions or programs incident thereto.

3. Engineer's review and approval of a separate item as such will not indicate approval of the assembly in which the item functions.

4. Engineer's review and approval of a Shop Drawing or Sample will not relieve Contractor from responsibility for any variation from the requirements of the Contract Documents unless Contractor has complied with the requirements of Paragraph 7.16.A.3 and Engineer has given written approval of each such variation by specific written notation thereof incorporated in or accompanying the Shop Drawing or Sample. Engineer will document any such approved variation from the requirements of the Contract Documents in a Field Order or other appropriate Contract modification.

5. Engineer's review and approval of a Shop Drawing or Sample will not relieve Contractor from responsibility for complying with the requirements of Paragraphs 7.16.A and B.

6. Engineer's review and approval of a Shop Drawing or Sample, or of a variation from the requirements of the Contract Documents, will not, under any circumstances, change the Contract Times or Contract Price, unless such changes are included in a Change Order.

7. Neither Engineer's receipt, review, acceptance, or approval of a Shop Drawing or Sample will result in such item becoming a Contract Document.

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

8. Contractor shall perform the Work in compliance with the requirements and commitments set forth in approved Shop Drawings and Samples, subject to the provisions of Paragraph 7.16.C.4.

D. *Resubmittal Procedures for Shop Drawings and Samples*

1. Contractor shall make corrections required by Engineer and shall return the required number of corrected copies of Shop Drawings and submit, as required, new Samples for review and approval. Contractor shall direct specific attention in writing to revisions other than the corrections called for by Engineer on previous Submittals.

2. Contractor shall furnish required Shop Drawing and Sample submittals with sufficient information and accuracy to obtain required approval of an item with no more than two resubmittals. Engineer will record Engineer's time for reviewing a third or subsequent resubmittal of a Shop Drawing or Sample, and Contractor shall be responsible for Engineer's charges to Owner for such time. Owner may impose a set-off against payments due Contractor to secure reimbursement for such charges.

3. If Contractor requests a change of a previously approved Shop Drawing or Sample, Contractor shall be responsible for Engineer's charges to Owner for its review time, and Owner may impose a set-off against payments due Contractor to secure reimbursement for such charges, unless the need for such change is beyond the control of Contractor.

E. *Submittals Other than Shop Drawings, Samples, and Owner-Delegated Designs*

1. The following provisions apply to all Submittals other than Shop Drawings, Samples, and Owner-delegated designs:

a. Contractor shall submit all such Submittals to the Engineer in accordance with the Schedule of Submittals and pursuant to the applicable terms of the Contract Documents.

b. Engineer will provide timely review of all such Submittals in accordance with the Schedule of Submittals and return such Submittals with a notation of either Accepted or Not Accepted. Any such Submittal that is not returned within the time established in the Schedule of Submittals will be deemed accepted.

c. Engineer's review will be only to determine if the Submittal is acceptable under the requirements of the Contract Documents as to general form and content of the Submittal.

d. If any such Submittal is not accepted, Contractor shall confer with Engineer regarding the reason for the non-acceptance, and resubmit an acceptable document.

2. Procedures for the submittal and acceptance of the Progress Schedule, the Schedule of Submittals, and the Schedule of Values are set forth in Paragraphs 2.03. 2.04, and 2.05.

F. Owner-delegated Designs: Submittals pursuant to Owner-delegated designs are governed by the provisions of Paragraph 7.19.

7.17 *Contractor's General Warranty and Guarantee*

A. Contractor warrants and guarantees to Owner that all Work will be in accordance with the Contract Documents and will not be defective. Engineer is entitled to rely on Contractor's warranty and guarantee.

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

B. Owner's rights under this warranty and guarantee are in addition to, and are not limited by, Owner's rights under the correction period provisions of Paragraph 15.08. The time in which Owner may enforce its warranty and guarantee rights under this Paragraph 7.17 is limited only by applicable Laws and Regulations restricting actions to enforce such rights; provided, however, that after the end of the correction period under Paragraph 15.08:

1. Owner shall give Contractor written notice of any defective Work within 60 days of the discovery that such Work is defective; and

2. Such notice will be deemed the start of an event giving rise to a Claim under Paragraph 12.01.B, such that any related Claim must be brought within 30 days of the notice.

C. Contractor's warranty and guarantee hereunder excludes defects or damage caused by:

1. abuse, or improper modification, maintenance, or operation, by persons other than Contractor, Subcontractors, Suppliers, or any other individual or entity for whom Contractor is responsible; or

2. normal wear and tear under normal usage.

D. Contractor's obligation to perform and complete the Work in accordance with the Contract Documents is absolute. None of the following will constitute an acceptance of Work that is not in accordance with the Contract Documents, a release of Contractor's obligation to perform the Work in accordance with the Contract Documents, or a release of Owner's warranty and guarantee rights under this Paragraph 7.17:

1. Observations by Engineer;

2. Recommendation by Engineer or payment by Owner of any progress or final payment;

3. The issuance of a certificate of Substantial Completion by Engineer or any payment related thereto by Owner;

4. Use or occupancy of the Work or any part thereof by Owner;

5. Any review and approval of a Shop Drawing or Sample submittal;

6. The issuance of a notice of acceptability by Engineer;

7. The end of the correction period established in Paragraph 15.08;

8. Any inspection, test, or approval by others; or

9. Any correction of defective Work by Owner.

E. If the Contract requires the Contractor to accept the assignment of a contract entered into by Owner, then the specific warranties, guarantees, and correction obligations contained in the assigned contract will govern with respect to Contractor's performance obligations to Owner for the Work described in the assigned contract.

7.18 *Indemnification*

A. To the fullest extent permitted by Laws and Regulations, and in addition to any other obligations of Contractor under the Contract or otherwise, Contractor shall indemnify and hold harmless Owner and Engineer, and the officers, directors, members, partners, employees, agents, consultants and subcontractors of each and any of them, from losses, damages, costs, and judgments (including but not limited to all fees and charges of engineers,

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

architects, attorneys, and other professionals, and all court or arbitration or other dispute resolution costs) arising from third-party claims or actions relating to or resulting from the performance or furnishing of the Work, provided that any such claim, action, loss, cost, judgment or damage is attributable to bodily injury, sickness, disease, or death, or to damage to or destruction of tangible property (other than the Work itself), including the loss of use resulting therefrom, but only to the extent caused by any negligent act or omission of Contractor, any Subcontractor, any Supplier, or any individual or entity directly or indirectly employed by any of them to perform any of the Work, or anyone for whose acts any of them may be liable.

B. In any and all claims against Owner or Engineer, or any of their officers, directors, members, partners, employees, agents, consultants, or subcontractors, by any employee (or the survivor or personal representative of such employee) of Contractor, any Subcontractor, any Supplier, or any individual or entity directly or indirectly employed by any of them to perform any of the Work, or anyone for whose acts any of them may be liable, the indemnification obligation under Paragraph 7.18.A will not be limited in any way by any limitation on the amount or type of damages, compensation, or benefits payable by or for Contractor or any such Subcontractor, Supplier, or other individual or entity under workers' compensation acts, disability benefit acts, or other employee benefit acts.

7.19 *Delegation of Professional Design Services*

A. Owner may require Contractor to provide professional design services for a portion of the Work by express delegation in the Contract Documents. Such delegation will specify the performance and design criteria that such services must satisfy, and the Submittals that Contractor must furnish to Engineer with respect to the Owner-delegated design.

B. Contractor shall cause such Owner-delegated professional design services to be provided pursuant to the professional standard of care by a properly licensed design professional, whose signature and seal must appear on all drawings, calculations, specifications, certifications, and Submittals prepared by such design professional. Such design professional must issue all certifications of design required by Laws and Regulations.

C. If a Shop Drawing or other Submittal related to the Owner-delegated design is prepared by Contractor, a Subcontractor, or others for submittal to Engineer, then such Shop Drawing or other Submittal must bear the written approval of Contractor's design professional when submitted by Contractor to Engineer.

D. Owner and Engineer shall be entitled to rely upon the adequacy, accuracy, and completeness of the services, certifications, and approvals performed or provided by the design professionals retained or employed by Contractor under an Owner-delegated design, subject to the professional standard of care and the performance and design criteria stated in the Contract Documents.

E. Pursuant to this Paragraph 7.19, Engineer's review, approval, and other determinations regarding design drawings, calculations, specifications, certifications, and other Submittals furnished by Contractor pursuant to an Owner-delegated design will be only for the following limited purposes:

1. Checking for conformance with the requirements of this Paragraph 7.19;

2. Confirming that Contractor (through its design professionals) has used the performance and design criteria specified in the Contract Documents; and

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

3. Establishing that the design furnished by Contractor is consistent with the design concept expressed in the Contract Documents.

F. Contractor shall not be responsible for the adequacy of performance or design criteria specified by Owner or Engineer.

G. Contractor is not required to provide professional services in violation of applicable Laws and Regulations.

ARTICLE 8—OTHER WORK AT THE SITE

8.01 *Other Work*

A. In addition to and apart from the Work under the Contract Documents, the Owner may perform other work at or adjacent to the Site. Such other work may be performed by Owner's employees, or through contracts between the Owner and third parties. Owner may also arrange to have third-party utility owners perform work on their utilities and facilities at or adjacent to the Site.

B. If Owner performs other work at or adjacent to the Site with Owner's employees, or through contracts for such other work, then Owner shall give Contractor written notice thereof prior to starting any such other work. If Owner has advance information regarding the start of any third-party utility work that Owner has arranged to take place at or adjacent to the Site, Owner shall provide such information to Contractor.

C. Contractor shall afford proper and safe access to the Site to each contractor that performs such other work, each utility owner performing other work, and Owner, if Owner is performing other work with Owner's employees, and provide a reasonable opportunity for the introduction and storage of materials and equipment and the execution of such other work.

D. Contractor shall do all cutting, fitting, and patching of the Work that may be required to properly connect or otherwise make its several parts come together and properly integrate with such other work. Contractor shall not endanger any work of others by cutting, excavating, or otherwise altering such work; provided, however, that Contractor may cut or alter others' work with the written consent of Engineer and the others whose work will be affected.

E. If the proper execution or results of any part of Contractor's Work depends upon work performed by others, Contractor shall inspect such other work and promptly report to Engineer in writing any delays, defects, or deficiencies in such other work that render it unavailable or unsuitable for the proper execution and results of Contractor's Work. Contractor's failure to so report will constitute an acceptance of such other work as fit and proper for integration with Contractor's Work except for latent defects and deficiencies in such other work.

F. The provisions of this article are not applicable to work that is performed by third-party utilities or other third-party entities without a contract with Owner, or that is performed without having been arranged by Owner. If such work occurs, then any related delay, disruption, or interference incurred by Contractor is governed by the provisions of Paragraph 4.05.C.3.

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

8.02 *Coordination*

A. If Owner intends to contract with others for the performance of other work at or adjacent to the Site, to perform other work at or adjacent to the Site with Owner's employees, or to arrange to have utility owners perform work at or adjacent to the Site, the following will be set forth in the Supplementary Conditions or provided to Contractor prior to the start of any such other work:

1. The identity of the individual or entity that will have authority and responsibility for coordination of the activities among the various contractors;

2. An itemization of the specific matters to be covered by such authority and responsibility; and

3. The extent of such authority and responsibilities.

B. Unless otherwise provided in the Supplementary Conditions, Owner shall have sole authority and responsibility for such coordination.

8.03 *Legal Relationships*

A. If, in the course of performing other work for Owner at or adjacent to the Site, the Owner's employees, any other contractor working for Owner, or any utility owner that Owner has arranged to perform work, causes damage to the Work or to the property of Contractor or its Subcontractors, or delays, disrupts, interferes with, or increases the scope or cost of the performance of the Work, through actions or inaction, then Contractor shall be entitled to an equitable adjustment in the Contract Price or the Contract Times. Contractor must submit any Change Proposal seeking an equitable adjustment in the Contract Price or the Contract Times under this paragraph within 30 days of the damaging, delaying, disrupting, or interfering event. The entitlement to, and extent of, any such equitable adjustment will take into account information (if any) regarding such other work that was provided to Contractor in the Contract Documents prior to the submittal of the Bid or the final negotiation of the terms of the Contract, and any remedies available to Contractor under Laws or Regulations concerning utility action or inaction. When applicable, any such equitable adjustment in Contract Price will be conditioned on Contractor assigning to Owner all Contractor's rights against such other contractor or utility owner with respect to the damage, delay, disruption, or interference that is the subject of the adjustment. Contractor's entitlement to an adjustment of the Contract Times or Contract Price is subject to the provisions of Paragraphs 4.05.D and 4.05.E.

B. Contractor shall take reasonable and customary measures to avoid damaging, delaying, disrupting, or interfering with the work of Owner, any other contractor, or any utility owner performing other work at or adjacent to the Site.

1. If Contractor fails to take such measures and as a result damages, delays, disrupts, or interferes with the work of any such other contractor or utility owner, then Owner may impose a set-off against payments due Contractor, and assign to such other contractor or utility owner the Owner's contractual rights against Contractor with respect to the breach of the obligations set forth in this Paragraph 8.03.B.

2. When Owner is performing other work at or adjacent to the Site with Owner's employees, Contractor shall be liable to Owner for damage to such other work, and for the reasonable direct delay, disruption, and interference costs incurred by Owner as a result of Contractor's failure to take reasonable and customary measures with respect to Owner's

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

other work. In response to such damage, delay, disruption, or interference, Owner may impose a set-off against payments due Contractor.

C. If Contractor damages, delays, disrupts, or interferes with the work of any other contractor, or any utility owner performing other work at or adjacent to the Site, through Contractor's failure to take reasonable and customary measures to avoid such impacts, or if any claim arising out of Contractor's actions, inactions, or negligence in performance of the Work at or adjacent to the Site is made by any such other contractor or utility owner against Contractor, Owner, or Engineer, then Contractor shall (1) promptly attempt to settle the claim as to all parties through negotiations with such other contractor or utility owner, or otherwise resolve the claim by arbitration or other dispute resolution proceeding or at law, and (2) indemnify and hold harmless Owner and Engineer, and the officers, directors, members, partners, employees, agents, consultants and subcontractors of each and any of them from and against any such claims, and against all costs, losses, and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all court or arbitration or other dispute resolution costs) arising out of or relating to such damage, delay, disruption, or interference.

ARTICLE 9—OWNER'S RESPONSIBILITIES

9.01 *Communications to Contractor*

A. Except as otherwise provided in these General Conditions, Owner shall issue all communications to Contractor through Engineer.

9.02 *Replacement of Engineer*

A. Owner may at its discretion appoint an engineer to replace Engineer, provided Contractor makes no reasonable objection to the replacement engineer. The replacement engineer's status under the Contract Documents will be that of the former Engineer.

9.03 *Furnish Data*

A. Owner shall promptly furnish the data required of Owner under the Contract Documents.

9.04 *Pay When Due*

A. Owner shall make payments to Contractor when they are due as provided in the Agreement.

9.05 *Lands and Easements; Reports, Tests, and Drawings*

A. Owner's duties with respect to providing lands and easements are set forth in Paragraph 5.01.

B. Owner's duties with respect to providing engineering surveys to establish reference points are set forth in Paragraph 4.03.

C. Article 5 refers to Owner's identifying and making available to Contractor copies of reports of explorations and tests of conditions at the Site, and drawings of physical conditions relating to existing surface or subsurface structures at the Site.

9.06 *Insurance*

A. Owner's responsibilities, if any, with respect to purchasing and maintaining liability and property insurance are set forth in Article 6.

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

9.07 *Change Orders*

A. Owner's responsibilities with respect to Change Orders are set forth in Article 11.

9.08 *Inspections, Tests, and Approvals*

A. Owner's responsibility with respect to certain inspections, tests, and approvals is set forth in Paragraph 14.02.B.

9.09 *Limitations on Owner's Responsibilities*

A. The Owner shall not supervise, direct, or have control or authority over, nor be responsible for, Contractor's means, methods, techniques, sequences, or procedures of construction, or the safety precautions and programs incident thereto, or for any failure of Contractor to comply with Laws and Regulations applicable to the performance of the Work. Owner will not be responsible for Contractor's failure to perform the Work in accordance with the Contract Documents.

9.10 *Undisclosed Hazardous Environmental Condition*

A. Owner's responsibility in respect to an undisclosed Hazardous Environmental Condition is set forth in Paragraph 5.06.

9.11 *Evidence of Financial Arrangements*

A. Upon request of Contractor, Owner shall furnish Contractor reasonable evidence that financial arrangements have been made to satisfy Owner's obligations under the Contract (including obligations under proposed changes in the Work).

9.12 *Safety Programs*

A. While at the Site, Owner's employees and representatives shall comply with the specific applicable requirements of Contractor's safety programs of which Owner has been informed.

B. Owner shall furnish copies of any applicable Owner safety programs to Contractor.

ARTICLE 10—ENGINEER'S STATUS DURING CONSTRUCTION

10.01 *Owner's Representative*

A. Engineer will be Owner's representative during the construction period. The duties and responsibilities and the limitations of authority of Engineer as Owner's representative during construction are set forth in the Contract.

10.02 *Visits to Site*

A. Engineer will make visits to the Site at intervals appropriate to the various stages of construction as Engineer deems necessary in order to observe, as an experienced and qualified design professional, the progress that has been made and the quality of the various aspects of Contractor's executed Work. Based on information obtained during such visits and observations, Engineer, for the benefit of Owner, will determine, in general, if the Work is proceeding in accordance with the Contract Documents. Engineer will not be required to make exhaustive or continuous inspections on the Site to check the quality or quantity of the Work. Engineer's efforts will be directed toward providing for Owner a greater degree of confidence that the completed Work will conform generally to the Contract Documents. On

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

the basis of such visits and observations, Engineer will keep Owner informed of the progress of the Work and will endeavor to guard Owner against defective Work.

B. Engineer's visits and observations are subject to all the limitations on Engineer's authority and responsibility set forth in Paragraph 10.07. Particularly, but without limitation, during or as a result of Engineer's visits or observations of Contractor's Work, Engineer will not supervise, direct, control, or have authority over or be responsible for Contractor's means, methods, techniques, sequences, or procedures of construction, or the safety precautions and programs incident thereto, or for any failure of Contractor to comply with Laws and Regulations applicable to the performance of the Work.

10.03 *Resident Project Representative*

A. If Owner and Engineer have agreed that Engineer will furnish a Resident Project Representative to represent Engineer at the Site and assist Engineer in observing the progress and quality of the Work, then the authority and responsibilities of any such Resident Project Representative will be as provided in the Supplementary Conditions, and limitations on the responsibilities thereof will be as provided in the Supplementary Conditions and in Paragraph 10.07.

B. If Owner designates an individual or entity who is not Engineer's consultant, agent, or employee to represent Owner at the Site, then the responsibilities and authority of such individual or entity will be as provided in the Supplementary Conditions.

C. The Resident Project Representative (RPR) will be Engineer's representative at the Site. RPR's dealings in matters pertaining to the Work in general will be with Engineer and Contractor. RPR's dealings with Subcontractors will only be through or with the full knowledge or approval of Contractor. The RPR will:

1. *Conferences and Meetings:* Attend meetings with Contractor, such as preconstruction conferences, progress meetings, job conferences, and other Project-related meetings (but not including Contractor's safety meetings), and as appropriate prepare and circulate copies of minutes thereof.

2. *Safety Compliance:* Comply with Site safety programs, as they apply to RPR, and if required to do so by such safety programs, receive safety training specifically related to RPR's own personal safety while at the Site.

3. *Liaison*

   a. Serve as Engineer's liaison with Contractor. Working principally through Contractor's authorized representative or designee, assist in providing information regarding the provisions and intent of the Contract Documents.

   b. Assist Engineer in serving as Owner's liaison with Contractor when Contractor's operations affect Owner's on-Site operations.

   c. Assist in obtaining from Owner additional details or information, when required for Contractor's proper execution of the Work.

4. *Review of Work; Defective Work*

   a. Conduct on-Site observations of the Work to assist Engineer in determining, to the extent set forth in Paragraph 10.02, if the Work is in general proceeding in accordance with the Contract Documents.

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

b. Observe whether any Work in place appears to be defective.

c. Observe whether any Work in place should be uncovered for observation, or requires special testing, inspection or approval.

5. *Inspections and Tests*

a. Observe Contractor-arranged inspections required by Laws and Regulations, including but not limited to those performed by public or other agencies having jurisdiction over the Work.

b. Accompany visiting inspectors representing public or other agencies having jurisdiction over the Work.

6. *Payment Requests:* Review Applications for Payment with Contractor.

7. *Completion*

a. Participate in Engineer's visits regarding Substantial Completion.

b. Assist in the preparation of a punch list of items to be completed or corrected.

c. Participate in Engineer's visit to the Site in the company of Owner and Contractor regarding completion of the Work, and prepare a final punch list of items to be completed or corrected by Contractor.

d. Observe whether items on the final punch list have been completed or corrected.

D. The RPR will not:

1. Authorize any deviation from the Contract Documents or substitution of materials or equipment (including "or-equal" items).

2. Exceed limitations of Engineer's authority as set forth in the Contract Documents.

3. Undertake any of the responsibilities of Contractor, Subcontractors, or Suppliers.

4. Advise on, issue directions relative to, or assume control over any aspect of the means, methods, techniques, sequences or procedures of construction.

5 Advise on, issue directions regarding, or assume control over security or safety practices, precautions, and programs in connection with the activities or operations of Owner or Contractor.

6. Participate in specialized field or laboratory tests or inspections conducted off-site by others except as specifically authorized by Engineer.

7. Authorize Owner to occupy the Project in whole or in part.

10.04 *Engineer's Authority*

A. Engineer has the authority to reject Work in accordance with Article 14.

B. Engineer's authority as to Submittals is set forth in Paragraph 7.16.

C. Engineer's authority as to design drawings, calculations, specifications, certifications and other Submittals from Contractor in response to Owner's delegation (if any) to Contractor of professional design services, is set forth in Paragraph 7.19.

D. Engineer's authority as to changes in the Work is set forth in Article 11.

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

E. Engineer's authority as to Applications for Payment is set forth in Article 15.

10.05 *Determinations for Unit Price Work*

A. Engineer will determine the actual quantities and classifications of Unit Price Work performed by Contractor as set forth in Paragraph 13.03.

10.06 *Decisions on Requirements of Contract Documents and Acceptability of Work*

A. Engineer will render decisions regarding the requirements of the Contract Documents, and judge the acceptability of the Work, pursuant to the specific procedures set forth herein for initial interpretations, Change Proposals, and acceptance of the Work. In rendering such decisions and judgments, Engineer will not show partiality to Owner or Contractor, and will not be liable to Owner, Contractor, or others in connection with any proceedings, interpretations, decisions, or judgments conducted or rendered in good faith.

10.07 *Limitations on Engineer's Authority and Responsibilities*

A. Neither Engineer's authority or responsibility under this Article 10 or under any other provision of the Contract, nor any decision made by Engineer in good faith either to exercise or not exercise such authority or responsibility or the undertaking, exercise, or performance of any authority or responsibility by Engineer, will create, impose, or give rise to any duty in contract, tort, or otherwise owed by Engineer to Contractor, any Subcontractor, any Supplier, any other individual or entity, or to any surety for or employee or agent of any of them.

B. Engineer will not supervise, direct, control, or have authority over or be responsible for Contractor's means, methods, techniques, sequences, or procedures of construction, or the safety precautions and programs incident thereto, or for any failure of Contractor to comply with Laws and Regulations applicable to the performance of the Work. Engineer will not be responsible for Contractor's failure to perform the Work in accordance with the Contract Documents.

C. Engineer will not be responsible for the acts or omissions of Contractor or of any Subcontractor, any Supplier, or of any other individual or entity performing any of the Work.

D. Engineer's review of the final Application for Payment and accompanying documentation, and all maintenance and operating instructions, schedules, guarantees, bonds, certificates of inspection, tests and approvals, and other documentation required to be delivered by Contractor under Paragraph 15.06.A, will only be to determine generally that their content complies with the requirements of, and in the case of certificates of inspections, tests, and approvals, that the results certified indicate compliance with the Contract Documents.

E. The limitations upon authority and responsibility set forth in this Paragraph 10.07 also apply to the Resident Project Representative, if any.

10.08 *Compliance with Safety Program*

A. While at the Site, Engineer's employees and representatives will comply with the specific applicable requirements of Owner's and Contractor's safety programs of which Engineer has been informed.

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

ARTICLE 11—CHANGES TO THE CONTRACT

11.01 *Amending and Supplementing the Contract*

A. The Contract may be amended or supplemented by a Change Order, a Work Change Directive, or a Field Order.

B. If an amendment or supplement to the Contract includes a change in the Contract Price or the Contract Times, such amendment or supplement must be set forth in a Change Order.

C. All changes to the Contract that involve (1) the performance or acceptability of the Work, (2) the design (as set forth in the Drawings, Specifications, or otherwise), or (3) other engineering or technical matters, must be supported by Engineer's recommendation. Owner and Contractor may amend other terms and conditions of the Contract without the recommendation of the Engineer.

11.02 *Change Orders*

A. Owner and Contractor shall execute appropriate Change Orders covering:

1. Changes in Contract Price or Contract Times which are agreed to by the parties, including any undisputed sum or amount of time for Work actually performed in accordance with a Work Change Directive;

2. Changes in Contract Price resulting from an Owner set-off, unless Contractor has duly contested such set-off;

3. Changes in the Work which are: (a) ordered by Owner pursuant to Paragraph 11.05, (b) required because of Owner's acceptance of defective Work under Paragraph 14.04 or Owner's correction of defective Work under Paragraph 14.07, or (c) agreed to by the parties, subject to the need for Engineer's recommendation if the change in the Work involves the design (as set forth in the Drawings, Specifications, or otherwise) or other engineering or technical matters; and

4. Changes that embody the substance of any final and binding results under: Paragraph 11.03.B, resolving the impact of a Work Change Directive; Paragraph 11.09, concerning Change Proposals; Article 12, Claims; Paragraph 13.02.D, final adjustments resulting from allowances; Paragraph 13.03.D, final adjustments relating to determination of quantities for Unit Price Work; and similar provisions.

B. If Owner or Contractor refuses to execute a Change Order that is required to be executed under the terms of Paragraph 11.02.A, it will be deemed to be of full force and effect, as if fully executed.

11.03 *Work Change Directives*

A. A Work Change Directive will not change the Contract Price or the Contract Times but is evidence that the parties expect that the modification ordered or documented by a Work Change Directive will be incorporated in a subsequently issued Change Order, following negotiations by the parties as to the Work Change Directive's effect, if any, on the Contract Price and Contract Times; or, if negotiations are unsuccessful, by a determination under the terms of the Contract Documents governing adjustments, expressly including Paragraph 11.07 regarding change of Contract Price.

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

B. If Owner has issued a Work Change Directive and:

1. Contractor believes that an adjustment in Contract Times or Contract Price is necessary, then Contractor shall submit any Change Proposal seeking such an adjustment no later than 30 days after the completion of the Work set out in the Work Change Directive.

2. Owner believes that an adjustment in Contract Times or Contract Price is necessary, then Owner shall submit any Claim seeking such an adjustment no later than 60 days after issuance of the Work Change Directive.

11.04 *Field Orders*

A. Engineer may authorize minor changes in the Work if the changes do not involve an adjustment in the Contract Price or the Contract Times and are compatible with the design concept of the completed Project as a functioning whole as indicated by the Contract Documents. Such changes will be accomplished by a Field Order and will be binding on Owner and also on Contractor, which shall perform the Work involved promptly.

B. If Contractor believes that a Field Order justifies an adjustment in the Contract Price or Contract Times, then before proceeding with the Work at issue, Contractor shall submit a Change Proposal as provided herein.

11.05 *Owner-Authorized Changes in the Work*

A. Without invalidating the Contract and without notice to any surety, Owner may, at any time or from time to time, order additions, deletions, or revisions in the Work. Changes involving the design (as set forth in the Drawings, Specifications, or otherwise) or other engineering or technical matters will be supported by Engineer's recommendation.

B. Such changes in the Work may be accomplished by a Change Order, if Owner and Contractor have agreed as to the effect, if any, of the changes on Contract Times or Contract Price; or by a Work Change Directive. Upon receipt of any such document, Contractor shall promptly proceed with the Work involved; or, in the case of a deletion in the Work, promptly cease construction activities with respect to such deleted Work. Added or revised Work must be performed under the applicable conditions of the Contract Documents.

C. Nothing in this Paragraph 11.05 obligates Contractor to undertake work that Contractor reasonably concludes cannot be performed in a manner consistent with Contractor's safety obligations under the Contract Documents or Laws and Regulations.

11.06 *Unauthorized Changes in the Work*

A. Contractor shall not be entitled to an increase in the Contract Price or an extension of the Contract Times with respect to any work performed that is not required by the Contract Documents, as amended, modified, or supplemented, except in the case of an emergency as provided in Paragraph 7.15 or in the case of uncovering Work as provided in Paragraph 14.05.C.2.

11.07 *Change of Contract Price*

A. The Contract Price may only be changed by a Change Order. Any Change Proposal for an adjustment in the Contract Price must comply with the provisions of Paragraph 11.09. Any Claim for an adjustment of Contract Price must comply with the provisions of Article 12.

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

B. An adjustment in the Contract Price will be determined as follows:

1. Where the Work involved is covered by unit prices contained in the Contract Documents, then by application of such unit prices to the quantities of the items involved (subject to the provisions of Paragraph 13.03);

2. Where the Work involved is not covered by unit prices contained in the Contract Documents, then by a mutually agreed lump sum (which may include an allowance for overhead and profit not necessarily in accordance with Paragraph 11.07.C.2); or

3. Where the Work involved is not covered by unit prices contained in the Contract Documents and the parties do not reach mutual agreement to a lump sum, then on the basis of the Cost of the Work (determined as provided in Paragraph 13.01) plus a Contractor's fee for overhead and profit (determined as provided in Paragraph 11.07.C).

C. *Contractor's Fee*: When applicable, the Contractor's fee for overhead and profit will be determined as follows:

1. A mutually acceptable fixed fee; or

2. If a fixed fee is not agreed upon, then a fee based on the following percentages of the various portions of the Cost of the Work:

a. For costs incurred under Paragraphs 13.01.B.1 and 13.01.B.2, the Contractor's fee will be 15 percent;

b. For costs incurred under Paragraph 13.01.B.3, the Contractor's fee will be 5 percent;

c. Where one or more tiers of subcontracts are on the basis of Cost of the Work plus a fee and no fixed fee is agreed upon, the intent of Paragraphs 11.07.C.2.a and 11.07.C.2.b is that the Contractor's fee will be based on: (1) a fee of 15 percent of the costs incurred under Paragraphs 13.01.B.1 and 13.01.B.2 by the Subcontractor that actually performs the Work, at whatever tier, and (2) with respect to Contractor itself and to any Subcontractors of a tier higher than that of the Subcontractor that actually performs the Work, a fee of 5 percent of the amount (fee plus underlying costs incurred) attributable to the next lower tier Subcontractor; provided, however, that for any such subcontracted Work the maximum total fee to be paid by Owner will be no greater than 27 percent of the costs incurred by the Subcontractor that actually performs the Work;

d. No fee will be payable on the basis of costs itemized under Paragraphs 13.01.B.4, 13.01.B.5, and 13.01.C;

e. The amount of credit to be allowed by Contractor to Owner for any change which results in a net decrease in Cost of the Work will be the amount of the actual net decrease in Cost of the Work and a deduction of an additional amount equal to 5 percent of such actual net decrease in Cost of the Work; and

f. When both additions and credits are involved in any one change or Change Proposal, the adjustment in Contractor's fee will be computed by determining the sum of the costs in each of the cost categories in Paragraph 13.01.B (specifically, payroll costs, Paragraph 13.01.B.1; incorporated materials and equipment costs, Paragraph 13.01.B.2; Subcontract costs, Paragraph 13.01.B.3; special consultants costs, Paragraph 13.01.B.4; and other costs, Paragraph 13.01.B.5) and applying to

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

each such cost category sum the appropriate fee from Paragraphs 11.07.C.2.a through 11.07.C.2.e, inclusive.

11.08 *Change of Contract Times*

A. The Contract Times may only be changed by a Change Order. Any Change Proposal for an adjustment in the Contract Times must comply with the provisions of Paragraph 11.09. Any Claim for an adjustment in the Contract Times must comply with the provisions of Article 12.

B. Delay, disruption, and interference in the Work, and any related changes in Contract Times, are addressed in and governed by Paragraph 4.05.

11.09 *Change Proposals*

A. *Purpose and Content*: Contractor shall submit a Change Proposal to Engineer to request an adjustment in the Contract Times or Contract Price; contest an initial decision by Engineer concerning the requirements of the Contract Documents or relating to the acceptability of the Work under the Contract Documents; challenge a set-off against payment due; or seek other relief under the Contract. The Change Proposal will specify any proposed change in Contract Times or Contract Price, or other proposed relief, and explain the reason for the proposed change, with citations to any governing or applicable provisions of the Contract Documents. Each Change Proposal will address only one issue, or a set of closely related issues.

B. *Change Proposal Procedures*

1. *Submittal*: Contractor shall submit each Change Proposal to Engineer within 30 days after the start of the event giving rise thereto, or after such initial decision.

2. *Supporting Data*: The Contractor shall submit supporting data, including the proposed change in Contract Price or Contract Time (if any), to the Engineer and Owner within 15 days after the submittal of the Change Proposal.

    a. Change Proposals based on or related to delay, interruption, or interference must comply with the provisions of Paragraphs 4.05.D and 4.05.E.

    b. Change proposals related to a change of Contract Price must include full and detailed accounts of materials incorporated into the Work and labor and equipment used for the subject Work.

    The supporting data must be accompanied by a written statement that the supporting data are accurate and complete, and that any requested time or price adjustment is the entire adjustment to which Contractor believes it is entitled as a result of said event.

3. *Engineer's Initial Review*: Engineer will advise Owner regarding the Change Proposal, and consider any comments or response from Owner regarding the Change Proposal. If in its discretion Engineer concludes that additional supporting data is needed before conducting a full review and making a decision regarding the Change Proposal, then Engineer may request that Contractor submit such additional supporting data by a date specified by Engineer, prior to Engineer beginning its full review of the Change Proposal.

4. *Engineer's Full Review and Action on the Change Proposal*: Upon receipt of Contractor's supporting data (including any additional data requested by Engineer), Engineer will conduct a full review of each Change Proposal and, within 30 days after such receipt of the Contractor's supporting data, either approve the Change Proposal in whole, deny it in

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

whole, or approve it in part and deny it in part. Such actions must be in writing, with a copy provided to Owner and Contractor. If Engineer does not take action on the Change Proposal within 30 days, then either Owner or Contractor may at any time thereafter submit a letter to the other party indicating that as a result of Engineer's inaction the Change Proposal is deemed denied, thereby commencing the time for appeal of the denial under Article 12.

5. *Binding Decision*: Engineer's decision is final and binding upon Owner and Contractor, unless Owner or Contractor appeals the decision by filing a Claim under Article 12.

C. *Resolution of Certain Change Proposals*: If the Change Proposal does not involve the design (as set forth in the Drawings, Specifications, or otherwise), the acceptability of the Work, or other engineering or technical matters, then Engineer will notify the parties in writing that the Engineer is unable to resolve the Change Proposal. For purposes of further resolution of such a Change Proposal, such notice will be deemed a denial, and Contractor may choose to seek resolution under the terms of Article 12.

D. *Post-Completion*: Contractor shall not submit any Change Proposals after Engineer issues a written recommendation of final payment pursuant to Paragraph 15.06.B.

11.10 *Notification to Surety*

A. If the provisions of any bond require notice to be given to a surety of any change affecting the general scope of the Work or the provisions of the Contract Documents (including, but not limited to, Contract Price or Contract Times), the giving of any such notice will be Contractor's responsibility. The amount of each applicable bond will be adjusted to reflect the effect of any such change.

ARTICLE 12—CLAIMS

12.01 *Claims*

A. *Claims Process*: The following disputes between Owner and Contractor are subject to the Claims process set forth in this article:

1. Appeals by Owner or Contractor of Engineer's decisions regarding Change Proposals;

2. Owner demands for adjustments in the Contract Price or Contract Times, or other relief under the Contract Documents;

3. Disputes that Engineer has been unable to address because they do not involve the design (as set forth in the Drawings, Specifications, or otherwise), the acceptability of the Work, or other engineering or technical matters; and

4. Subject to the waiver provisions of Paragraph 15.07, any dispute arising after Engineer has issued a written recommendation of final payment pursuant to Paragraph 15.06.B.

B. *Submittal of Claim*: The party submitting a Claim shall deliver it directly to the other party to the Contract promptly (but in no event later than 30 days) after the start of the event giving rise thereto; in the case of appeals regarding Change Proposals within 30 days of the decision under appeal. The party submitting the Claim shall also furnish a copy to the Engineer, for its information only. The responsibility to substantiate a Claim rests with the party making the Claim. In the case of a Claim by Contractor seeking an increase in the Contract Times or Contract Price, Contractor shall certify that the Claim is made in good faith, that the

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

supporting data are accurate and complete, and that to the best of Contractor's knowledge and belief the amount of time or money requested accurately reflects the full amount to which Contractor is entitled.

C. *Review and Resolution*: The party receiving a Claim shall review it thoroughly, giving full consideration to its merits. The two parties shall seek to resolve the Claim through the exchange of information and direct negotiations. The parties may extend the time for resolving the Claim by mutual agreement. All actions taken on a Claim will be stated in writing and submitted to the other party, with a copy to Engineer.

D. *Mediation*

1. At any time after initiation of a Claim, Owner and Contractor may mutually agree to mediation of the underlying dispute. The agreement to mediate will stay the Claim submittal and response process.

2. If Owner and Contractor agree to mediation, then after 60 days from such agreement, either Owner or Contractor may unilaterally terminate the mediation process, and the Claim submittal and decision process will resume as of the date of the termination. If the mediation proceeds but is unsuccessful in resolving the dispute, the Claim submittal and decision process will resume as of the date of the conclusion of the mediation, as determined by the mediator.

3. Owner and Contractor shall each pay one-half of the mediator's fees and costs.

E. *Partial Approval*: If the party receiving a Claim approves the Claim in part and denies it in part, such action will be final and binding unless within 30 days of such action the other party invokes the procedure set forth in Article 17 for final resolution of disputes.

F. *Denial of Claim*: If efforts to resolve a Claim are not successful, the party receiving the Claim may deny it by giving written notice of denial to the other party. If the receiving party does not take action on the Claim within 90 days, then either Owner or Contractor may at any time thereafter submit a letter to the other party indicating that as a result of the inaction, the Claim is deemed denied, thereby commencing the time for appeal of the denial. A denial of the Claim will be final and binding unless within 30 days of the denial the other party invokes the procedure set forth in Article 17 for the final resolution of disputes.

G. *Final and Binding Results*: If the parties reach a mutual agreement regarding a Claim, whether through approval of the Claim, direct negotiations, mediation, or otherwise; or if a Claim is approved in part and denied in part, or denied in full, and such actions become final and binding; then the results of the agreement or action on the Claim will be incorporated in a Change Order or other written document to the extent they affect the Contract, including the Work, the Contract Times, or the Contract Price.

ARTICLE 13—COST OF THE WORK; ALLOWANCES; UNIT PRICE WORK

13.01 *Cost of the Work*

A. *Purposes for Determination of Cost of the Work*: The term Cost of the Work means the sum of all costs necessary for the proper performance of the Work at issue, as further defined below. The provisions of this Paragraph 13.01 are used for two distinct purposes:

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

1. To determine Cost of the Work when Cost of the Work is a component of the Contract Price, under cost-plus-fee, time-and-materials, or other cost-based terms; or

2. When needed to determine the value of a Change Order, Change Proposal, Claim, set-off, or other adjustment in Contract Price. When the value of any such adjustment is determined on the basis of Cost of the Work, Contractor is entitled only to those additional or incremental costs required because of the change in the Work or because of the event giving rise to the adjustment.

B. *Costs Included*: Except as otherwise may be agreed to in writing by Owner, costs included in the Cost of the Work will be in amounts no higher than those commonly incurred in the locality of the Project, will not include any of the costs itemized in Paragraph 13.01.C, and will include only the following items:

1. Payroll costs for employees in the direct employ of Contractor in the performance of the Work under schedules of job classifications agreed upon by Owner and Contractor in advance of the subject Work. Such employees include, without limitation, superintendents, foremen, safety managers, safety representatives, and other personnel employed full time on the Work. Payroll costs for employees not employed full time on the Work will be apportioned on the basis of their time spent on the Work. Payroll costs include, but are not limited to, salaries and wages plus the cost of fringe benefits, which include social security contributions, unemployment, excise, and payroll taxes, workers' compensation, health and retirement benefits, sick leave, and vacation and holiday pay applicable thereto. The expenses of performing Work outside of regular working hours, on Saturday, Sunday, or legal holidays, will be included in the above to the extent authorized by Owner.

2. Cost of all materials and equipment furnished and incorporated in the Work, including costs of transportation and storage thereof, and Suppliers' field services required in connection therewith. All cash discounts accrue to Contractor unless Owner deposits funds with Contractor with which to make payments, in which case the cash discounts will accrue to Owner. All trade discounts, rebates, and refunds and returns from sale of surplus materials and equipment will accrue to Owner, and Contractor shall make provisions so that they may be obtained.

3. Payments made by Contractor to Subcontractors for Work performed by Subcontractors. If required by Owner, Contractor shall obtain competitive bids from subcontractors acceptable to Owner and Contractor and shall deliver such bids to Owner, which will then determine, with the advice of Engineer, which bids, if any, will be acceptable. If any subcontract provides that the Subcontractor is to be paid on the basis of Cost of the Work plus a fee, the Subcontractor's Cost of the Work and fee will be determined in the same manner as Contractor's Cost of the Work and fee as provided in this Paragraph 13.01.

4. Costs of special consultants (including but not limited to engineers, architects, testing laboratories, surveyors, attorneys, and accountants) employed or retained for services specifically related to the Work.

5. Other costs consisting of the following:

a. The proportion of necessary transportation, travel, and subsistence expenses of Contractor's employees incurred in discharge of duties connected with the Work.

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

b. Cost, including transportation and maintenance, of all materials, supplies, equipment, machinery, appliances, office, and temporary facilities at the Site, which are consumed in the performance of the Work, and cost, less market value, of such items used but not consumed which remain the property of Contractor.

1) In establishing included costs for materials such as scaffolding, plating, or sheeting, consideration will be given to the actual or the estimated life of the material for use on other projects; or rental rates may be established on the basis of purchase or salvage value of such items, whichever is less. Contractor will not be eligible for compensation for such items in an amount that exceeds the purchase cost of such item.

c. *Construction Equipment Rental*

1) Rentals of all construction equipment and machinery, and the parts thereof, in accordance with rental agreements approved by Owner as to price (including any surcharge or special rates applicable to overtime use of the construction equipment or machinery), and the costs of transportation, loading, unloading, assembly, dismantling, and removal thereof. All such costs will be in accordance with the terms of said rental agreements. The rental of any such equipment, machinery, or parts must cease when the use thereof is no longer necessary for the Work.

~~2) Costs for equipment and machinery owned by Contractor or a Contractor-related entity will be paid at a rate shown for such equipment in the equipment rental rate book specified in the Supplementary Conditions. An hourly rate will be computed by dividing the monthly rates by 176. These computed rates will include all operating costs.~~

2) The equipment rental rate book that governs the included costs for the rental of machinery and equipment owned by Contractor (or a related entity) under the Cost of the Work provisions of this Contract is the most current edition of the Rental Rate Blue Book for Construction Equipment.

3) With respect to Work that is the result of a Change Order, Change Proposal, Claim, set-off, or other adjustment in Contract Price ("changed Work"), included costs will be based on the time the equipment or machinery is in use on the changed Work and the costs of transportation, loading, unloading, assembly, dismantling, and removal when directly attributable to the changed Work. The cost of any such equipment or machinery, or parts thereof, must cease to accrue when the use thereof is no longer necessary for the changed Work.

d. Sales, consumer, use, and other similar taxes related to the Work, and for which Contractor is liable, as imposed by Laws and Regulations.

e. Deposits lost for causes other than negligence of Contractor, any Subcontractor, or anyone directly or indirectly employed by any of them or for whose acts any of them may be liable, and royalty payments and fees for permits and licenses.

f. Losses and damages (and related expenses) caused by damage to the Work, not compensated by insurance or otherwise, sustained by Contractor in connection with the performance of the Work (except losses and damages within the deductible amounts of builder's risk or other property insurance established in accordance with

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

Paragraph 6.04), provided such losses and damages have resulted from causes other than the negligence of Contractor, any Subcontractor, or anyone directly or indirectly employed by any of them or for whose acts any of them may be liable. Such losses include settlements made with the written consent and approval of Owner. No such losses, damages, and expenses will be included in the Cost of the Work for the purpose of determining Contractor's fee.

g. The cost of utilities, fuel, and sanitary facilities at the Site.

h. Minor expenses such as communication service at the Site, express and courier services, and similar petty cash items in connection with the Work.

i. The costs of premiums for all bonds and insurance that Contractor is required by the Contract Documents to purchase and maintain.

C. *Costs Excluded*: The term Cost of the Work does not include any of the following items:

1. Payroll costs and other compensation of Contractor's officers, executives, principals, general managers, engineers, architects, estimators, attorneys, auditors, accountants, purchasing and contracting agents, expediters, timekeepers, clerks, and other personnel employed by Contractor, whether at the Site or in Contractor's principal or branch office for general administration of the Work and not specifically included in the agreed upon schedule of job classifications referred to in Paragraph 13.01.B.1 or specifically covered by Paragraph 13.01.B.4. The payroll costs and other compensation excluded here are to be considered administrative costs covered by the Contractor's fee.

2. The cost of purchasing, renting, or furnishing small tools and hand tools.

a. For purposes of this paragraph, "small tools and hand tools" means any tool or equipment whose current price if it were purchased new at retail would be less than $500.

3. Expenses of Contractor's principal and branch offices other than Contractor's office at the Site.

4. Any part of Contractor's capital expenses, including interest on Contractor's capital employed for the Work and charges against Contractor for delinquent payments.

5. Costs due to the negligence of Contractor, any Subcontractor, or anyone directly or indirectly employed by any of them or for whose acts any of them may be liable, including but not limited to, the correction of defective Work, disposal of materials or equipment wrongly supplied, and making good any damage to property.

6. Expenses incurred in preparing and advancing Claims.

7. Other overhead or general expense costs of any kind and the costs of any item not specifically and expressly included in Paragraph 13.01.B.

D. *Contractor's Fee*

1. When the Work as a whole is performed on the basis of cost-plus-a-fee, then:

a. Contractor's fee for the Work set forth in the Contract Documents as of the Effective Date of the Contract will be determined as set forth in the Agreement.

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

b. for any Work covered by a Change Order, Change Proposal, Claim, set-off, or other adjustment in Contract Price on the basis of Cost of the Work, Contractor's fee will be determined as follows:

1) When the fee for the Work as a whole is a percentage of the Cost of the Work, the fee will automatically adjust as the Cost of the Work changes.

2) When the fee for the Work as a whole is a fixed fee, the fee for any additions or deletions will be determined in accordance with Paragraph 11.07.C.2.

2. When the Work as a whole is performed on the basis of a stipulated sum, or any other basis other than cost-plus-a-fee, then Contractor's fee for any Work covered by a Change Order, Change Proposal, Claim, set-off, or other adjustment in Contract Price on the basis of Cost of the Work will be determined in accordance with Paragraph 11.07.C.2.

E. *Documentation and Audit*: Whenever the Cost of the Work for any purpose is to be determined pursuant to this Article 13, Contractor and pertinent Subcontractors will establish and maintain records of the costs in accordance with generally accepted accounting practices. Subject to prior written notice, Owner will be afforded reasonable access, during normal business hours, to all Contractor's accounts, records, books, correspondence, instructions, drawings, receipts, vouchers, memoranda, and similar data relating to the Cost of the Work and Contractor's fee. Contractor shall preserve all such documents for a period of three years after the final payment by Owner. Pertinent Subcontractors will afford such access to Owner, and preserve such documents, to the same extent required of Contractor.

13.02 *Allowances*

A. It is understood that Contractor has included in the Contract Price all allowances so named in the Contract Documents and shall cause the Work so covered to be performed for such sums and by such persons or entities as may be acceptable to Owner and Engineer.

B. *Cash Allowances*: Contractor agrees that:

1. the cash allowances include the cost to Contractor (less any applicable trade discounts) of materials and equipment required by the allowances to be delivered at the Site, and all applicable taxes; and

2. Contractor's costs for unloading and handling on the Site, labor, installation, overhead, profit, and other expenses contemplated for the cash allowances have been included in the Contract Price and not in the allowances, and no demand for additional payment for any of the foregoing will be valid.

C. *Owner's Contingency Allowance*: Contractor agrees that an Owner's contingency allowance, if any, is for the sole use of Owner to cover unanticipated costs.

D. Prior to final payment, an appropriate Change Order will be issued as recommended by Engineer to reflect actual amounts due Contractor for Work covered by allowances, and the Contract Price will be correspondingly adjusted.

13.03 *Unit Price Work*

A. Where the Contract Documents provide that all or part of the Work is to be Unit Price Work, initially the Contract Price will be deemed to include for all Unit Price Work an amount equal to the sum of the unit price for each separately identified item of Unit Price Work times the estimated quantity of each item as indicated in the Agreement.

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

B. The estimated quantities of items of Unit Price Work are not guaranteed and are solely for the purpose of comparison of Bids and determining an initial Contract Price. Payments to Contractor for Unit Price Work will be based on actual quantities.

C. Each unit price will be deemed to include an amount considered by Contractor to be adequate to cover Contractor's overhead and profit for each separately identified item.

D. Engineer will determine the actual quantities and classifications of Unit Price Work performed by Contractor. Engineer will review with Contractor the Engineer's preliminary determinations on such matters before rendering a written decision thereon (by recommendation of an Application for Payment or otherwise). Engineer's written decision thereon will be final and binding (except as modified by Engineer to reflect changed factual conditions or more accurate data) upon Owner and Contractor, and the final adjustment of Contract Price will be set forth in a Change Order, subject to the provisions of the following paragraph.

~~E. *Adjustments in Unit Price*~~

~~1. Contractor or Owner shall be entitled to an adjustment in the unit price with respect to an item of Unit Price Work if:~~

~~a. the quantity of the item of Unit Price Work performed by Contractor differs materially and significantly from the estimated quantity of such item indicated in the Agreement; and~~

~~b. Contractor's unit costs to perform the item of Unit Price Work have changed materially and significantly as a result of the quantity change.~~

~~2. The adjustment in unit price will account for and be coordinated with any related changes in quantities of other items of Work, and in Contractor's costs to perform such other Work, such that the resulting overall change in Contract Price is equitable to Owner and Contractor.~~

~~3. Adjusted unit prices will apply to all units of that item.~~

E. *Adjustments in Unit Price*

1. Contractor or Owner shall be entitled to an adjustment in the unit price with respect to an item of Unit Price Work if:

   a. the extended price of a particular item of Unit Price Work amounts to 5 percent or more of the Contract Price (based on estimated quantities at the time of Contract formation) and the variation in the quantity of that particular item of Unit Price Work actually furnished or performed by Contractor differs by more than 25 percent from the estimated quantity of such item indicated in the Agreement; and

   b. Contractor's unit costs to perform the item of Unit Price Work have changed materially and significantly as a result of the quantity change.

2. The adjustment in unit price will account for and be coordinated with any related changes in quantities of other items of Work, and in Contractor's costs to perform such other Work, such that the resulting overall change in Contract Price is equitable to Owner and Contractor.

3. Adjusted unit prices will apply to all units of that item.

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

ARTICLE 14—TESTS AND INSPECTIONS; CORRECTION, REMOVAL, OR ACCEPTANCE OF DEFECTIVE WORK

14.01 *Access to Work*

A. Owner, Engineer, their consultants and other representatives and personnel of Owner, independent testing laboratories, and authorities having jurisdiction have access to the Site and the Work at reasonable times for their observation, inspection, and testing. Contractor shall provide them proper and safe conditions for such access and advise them of Contractor's safety procedures and programs so that they may comply with such procedures and programs as applicable.

14.02 *Tests, Inspections, and Approvals*

A. Contractor shall give Engineer timely notice of readiness of the Work (or specific parts thereof) for all required inspections and tests, and shall cooperate with inspection and testing personnel to facilitate required inspections and tests.

B. Owner shall retain and pay for the services of an independent inspector, testing laboratory, or other qualified individual or entity to perform all inspections and tests expressly required by the Contract Documents to be furnished and paid for by Owner, except that costs incurred in connection with tests or inspections of covered Work will be governed by the provisions of Paragraph 14.05.

C. If Laws or Regulations of any public body having jurisdiction require any Work (or part thereof) specifically to be inspected, tested, or approved by an employee or other representative of such public body, Contractor shall assume full responsibility for arranging and obtaining such inspections, tests, or approvals, pay all costs in connection therewith, and furnish Engineer the required certificates of inspection or approval.

D. Contractor shall be responsible for arranging, obtaining, and paying for all inspections and tests required:

1. by the Contract Documents, unless the Contract Documents expressly allocate responsibility for a specific inspection or test to Owner;

2. to attain Owner's and Engineer's acceptance of materials or equipment to be incorporated in the Work;

3. by manufacturers of equipment furnished under the Contract Documents;

4. for testing, adjusting, and balancing of mechanical, electrical, and other equipment to be incorporated into the Work; and

5. for acceptance of materials, mix designs, or equipment submitted for approval prior to Contractor's purchase thereof for incorporation in the Work.

Such inspections and tests will be performed by independent inspectors, testing laboratories, or other qualified individuals or entities acceptable to Owner and Engineer.

E. If the Contract Documents require the Work (or part thereof) to be approved by Owner, Engineer, or another designated individual or entity, then Contractor shall assume full responsibility for arranging and obtaining such approvals.

F. If any Work (or the work of others) that is to be inspected, tested, or approved is covered by Contractor without written concurrence of Engineer, Contractor shall, if requested by

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

Engineer, uncover such Work for observation. Such uncovering will be at Contractor's expense unless Contractor had given Engineer timely notice of Contractor's intention to cover the same and Engineer had not acted with reasonable promptness in response to such notice.

14.03 *Defective Work*

A. *Contractor's Obligation*: It is Contractor's obligation to assure that the Work is not defective.

B. *Engineer's Authority*: Engineer has the authority to determine whether Work is defective, and to reject defective Work.

C. *Notice of Defects*: Prompt written notice of all defective Work of which Owner or Engineer has actual knowledge will be given to Contractor.

D. *Correction, or Removal and Replacement*: Promptly after receipt of written notice of defective Work, Contractor shall correct all such defective Work, whether or not fabricated, installed, or completed, or, if Engineer has rejected the defective Work, remove it from the Project and replace it with Work that is not defective.

E. *Preservation of Warranties*: When correcting defective Work, Contractor shall take no action that would void or otherwise impair Owner's special warranty and guarantee, if any, on said Work.

F. *Costs and Damages*: In addition to its correction, removal, and replacement obligations with respect to defective Work, Contractor shall pay all claims, costs, losses, and damages arising out of or relating to defective Work, including but not limited to the cost of the inspection, testing, correction, removal, replacement, or reconstruction of such defective Work, fines levied against Owner by governmental authorities because the Work is defective, and the costs of repair or replacement of work of others resulting from defective Work. Prior to final payment, if Owner and Contractor are unable to agree as to the measure of such claims, costs, losses, and damages resulting from defective Work, then Owner may impose a reasonable set-off against payments due under Article 15.

14.04 *Acceptance of Defective Work*

A. If, instead of requiring correction or removal and replacement of defective Work, Owner prefers to accept it, Owner may do so (subject, if such acceptance occurs prior to final payment, to Engineer's confirmation that such acceptance is in general accord with the design intent and applicable engineering principles, and will not endanger public safety). Contractor shall pay all claims, costs, losses, and damages attributable to Owner's evaluation of and determination to accept such defective Work (such costs to be approved by Engineer as to reasonableness), and for the diminished value of the Work to the extent not otherwise paid by Contractor. If any such acceptance occurs prior to final payment, the necessary revisions in the Contract Documents with respect to the Work will be incorporated in a Change Order. If the parties are unable to agree as to the decrease in the Contract Price, reflecting the diminished value of Work so accepted, then Owner may impose a reasonable set-off against payments due under Article 15. If the acceptance of defective Work occurs after final payment, Contractor shall pay an appropriate amount to Owner.

14.05 *Uncovering Work*

A. Engineer has the authority to require additional inspection or testing of the Work, whether or not the Work is fabricated, installed, or completed.

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

B. If any Work is covered contrary to the written request of Engineer, then Contractor shall, if requested by Engineer, uncover such Work for Engineer's observation, and then replace the covering, all at Contractor's expense.

C. If Engineer considers it necessary or advisable that covered Work be observed by Engineer or inspected or tested by others, then Contractor, at Engineer's request, shall uncover, expose, or otherwise make available for observation, inspection, or testing as Engineer may require, that portion of the Work in question, and provide all necessary labor, material, and equipment.

1. If it is found that the uncovered Work is defective, Contractor shall be responsible for all claims, costs, losses, and damages arising out of or relating to such uncovering, exposure, observation, inspection, and testing, and of satisfactory replacement or reconstruction (including but not limited to all costs of repair or replacement of work of others); and pending Contractor's full discharge of this responsibility the Owner shall be entitled to impose a reasonable set-off against payments due under Article 15.

2. If the uncovered Work is not found to be defective, Contractor shall be allowed an increase in the Contract Price or an extension of the Contract Times, directly attributable to such uncovering, exposure, observation, inspection, testing, replacement, and reconstruction. If the parties are unable to agree as to the amount or extent thereof, then Contractor may submit a Change Proposal within 30 days of the determination that the Work is not defective.

14.06 *Owner May Stop the Work*

A. If the Work is defective, or Contractor fails to supply sufficient skilled workers or suitable materials or equipment, or fails to perform the Work in such a way that the completed Work will conform to the Contract Documents, then Owner may order Contractor to stop the Work, or any portion thereof, until the cause for such order has been eliminated; however, this right of Owner to stop the Work will not give rise to any duty on the part of Owner to exercise this right for the benefit of Contractor, any Subcontractor, any Supplier, any other individual or entity, or any surety for, or employee or agent of any of them.

14.07 *Owner May Correct Defective Work*

A. If Contractor fails within a reasonable time after written notice from Engineer to correct defective Work, or to remove and replace defective Work as required by Engineer, then Owner may, after 7 days' written notice to Contractor, correct or remedy any such deficiency.

B. In exercising the rights and remedies under this Paragraph 14.07, Owner shall proceed expeditiously. In connection with such corrective or remedial action, Owner may exclude Contractor from all or part of the Site, take possession of all or part of the Work and suspend Contractor's services related thereto, and incorporate in the Work all materials and equipment stored at the Site or for which Owner has paid Contractor but which are stored elsewhere. Contractor shall allow Owner, Owner's representatives, agents and employees, Owner's other contractors, and Engineer and Engineer's consultants access to the Site to enable Owner to exercise the rights and remedies under this paragraph.

C. All claims, costs, losses, and damages incurred or sustained by Owner in exercising the rights and remedies under this Paragraph 14.07 will be charged against Contractor as set-offs against payments due under Article 15. Such claims, costs, losses and damages will include

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

but not be limited to all costs of repair, or replacement of work of others destroyed or damaged by correction, removal, or replacement of Contractor's defective Work.

D. Contractor shall not be allowed an extension of the Contract Times because of any delay in the performance of the Work attributable to the exercise by Owner of Owner's rights and remedies under this Paragraph 14.07.

ARTICLE 15—PAYMENTS TO CONTRACTOR; SET-OFFS; COMPLETION; CORRECTION PERIOD

15.01 *Progress Payments*

A. *Basis for Progress Payments*: The Schedule of Values established as provided in Article 2 will serve as the basis for progress payments and will be incorporated into a form of Application for Payment acceptable to Engineer. Progress payments for Unit Price Work will be based on the number of units completed during the pay period, as determined under the provisions of Paragraph 13.03. Progress payments for cost-based Work will be based on Cost of the Work completed by Contractor during the pay period.

B. *Applications for Payments*

1. At least 20 days before the date established in the Agreement for each progress payment (but not more often than once a month), Contractor shall submit to Engineer for review an Application for Payment filled out and signed by Contractor covering the Work completed as of the date of the Application and accompanied by such supporting documentation as is required by the Contract Documents.

2. If payment is requested on the basis of materials and equipment not incorporated in the Work but delivered and suitably stored at the Site or at another location agreed to in writing, the Application for Payment must also be accompanied by: (a) a bill of sale, invoice, copies of subcontract or purchase order payments, or other documentation establishing full payment by Contractor for the materials and equipment; (b) at Owner's request, documentation warranting that Owner has received the materials and equipment free and clear of all Liens; and (c) evidence that the materials and equipment are covered by appropriate property insurance, a warehouse bond, or other arrangements to protect Owner's interest therein, all of which must be satisfactory to Owner.

3. Beginning with the second Application for Payment, each Application must include an affidavit of Contractor stating that all previous progress payments received by Contractor have been applied to discharge Contractor's legitimate obligations associated with prior Applications for Payment.

4. The amount of retainage with respect to progress payments will be as stipulated in the Agreement.

C. *Review of Applications*

1. Engineer will, within 10 days after receipt of each Application for Payment, including each resubmittal, either indicate in writing a recommendation of payment and present the Application to Owner, or return the Application to Contractor indicating in writing Engineer's reasons for refusing to recommend payment. In the latter case, Contractor may make the necessary corrections and resubmit the Application.

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

2. Engineer's recommendation of any payment requested in an Application for Payment will constitute a representation by Engineer to Owner, based on Engineer's observations of the executed Work as an experienced and qualified design professional, and on Engineer's review of the Application for Payment and the accompanying data and schedules, that to the best of Engineer's knowledge, information and belief:

    a. the Work has progressed to the point indicated;

    b. the quality of the Work is generally in accordance with the Contract Documents (subject to an evaluation of the Work as a functioning whole prior to or upon Substantial Completion, the results of any subsequent tests called for in the Contract Documents, a final determination of quantities and classifications for Unit Price Work under Paragraph 13.03, and any other qualifications stated in the recommendation); and

    c. the conditions precedent to Contractor's being entitled to such payment appear to have been fulfilled in so far as it is Engineer's responsibility to observe the Work.

3. By recommending any such payment Engineer will not thereby be deemed to have represented that:

    a. inspections made to check the quality or the quantity of the Work as it has been performed have been exhaustive, extended to every aspect of the Work in progress, or involved detailed inspections of the Work beyond the responsibilities specifically assigned to Engineer in the Contract; or

    b. there may not be other matters or issues between the parties that might entitle Contractor to be paid additionally by Owner or entitle Owner to withhold payment to Contractor.

4. Neither Engineer's review of Contractor's Work for the purposes of recommending payments nor Engineer's recommendation of any payment, including final payment, will impose responsibility on Engineer:

    a. to supervise, direct, or control the Work;

    b. for the means, methods, techniques, sequences, or procedures of construction, or the safety precautions and programs incident thereto;

    c. for Contractor's failure to comply with Laws and Regulations applicable to Contractor's performance of the Work;

    d. to make any examination to ascertain how or for what purposes Contractor has used the money paid by Owner; or

    e. to determine that title to any of the Work, materials, or equipment has passed to Owner free and clear of any Liens.

5. Engineer may refuse to recommend the whole or any part of any payment if, in Engineer's opinion, it would be incorrect to make the representations to Owner stated in Paragraph 15.01.C.2.

6. Engineer will recommend reductions in payment (set-offs) necessary in Engineer's opinion to protect Owner from loss because:

    a. the Work is defective, requiring correction or replacement;

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

b. the Contract Price has been reduced by Change Orders;

c. Owner has been required to correct defective Work in accordance with Paragraph 14.07, or has accepted defective Work pursuant to Paragraph 14.04;

d. Owner has been required to remove or remediate a Hazardous Environmental Condition for which Contractor is responsible; or

e. Engineer has actual knowledge of the occurrence of any of the events that would constitute a default by Contractor and therefore justify termination for cause under the Contract Documents.

D. *Payment Becomes Due*

1. Ten days after presentation of the Application for Payment to Owner with Engineer's recommendation, the amount recommended (subject to any Owner set-offs) will become due, and when due will be paid by Owner to Contractor.

E. *Reductions in Payment by Owner*

1. In addition to any reductions in payment (set-offs) recommended by Engineer, Owner is entitled to impose a set-off against payment based on any of the following:

a. Claims have been made against Owner based on Contractor's conduct in the performance or furnishing of the Work, or Owner has incurred costs, losses, or damages resulting from Contractor's conduct in the performance or furnishing of the Work, including but not limited to claims, costs, losses, or damages from workplace injuries, adjacent property damage, non-compliance with Laws and Regulations, and patent infringement;

b. Contractor has failed to take reasonable and customary measures to avoid damage, delay, disruption, and interference with other work at or adjacent to the Site;

c. Contractor has failed to provide and maintain required bonds or insurance;

d. Owner has been required to remove or remediate a Hazardous Environmental Condition for which Contractor is responsible;

e. Owner has incurred extra charges or engineering costs related to submittal reviews, evaluations of proposed substitutes, tests and inspections, or return visits to manufacturing or assembly facilities;

f. The Work is defective, requiring correction or replacement;

g. Owner has been required to correct defective Work in accordance with Paragraph 14.07, or has accepted defective Work pursuant to Paragraph 14.04;

h. The Contract Price has been reduced by Change Orders;

i. An event has occurred that would constitute a default by Contractor and therefore justify a termination for cause;

j. Liquidated or other damages have accrued as a result of Contractor's failure to achieve Milestones, Substantial Completion, or final completion of the Work;

k. Liens have been filed in connection with the Work, except where Contractor has delivered a specific bond satisfactory to Owner to secure the satisfaction and discharge of such Liens; or

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

l. Other items entitle Owner to a set-off against the amount recommended.

2. If Owner imposes any set-off against payment, whether based on its own knowledge or on the written recommendations of Engineer, Owner will give Contractor immediate written notice (with a copy to Engineer) stating the reasons for such action and the specific amount of the reduction, and promptly pay Contractor any amount remaining after deduction of the amount so withheld. Owner shall promptly pay Contractor the amount so withheld, or any adjustment thereto agreed to by Owner and Contractor, if Contractor remedies the reasons for such action. The reduction imposed will be binding on Contractor unless it duly submits a Change Proposal contesting the reduction.

3. Upon a subsequent determination that Owner's refusal of payment was not justified, the amount wrongfully withheld will be treated as an amount due as determined by Paragraph 15.01.D.1 and subject to interest as provided in the Agreement.

F. For contracts in which the Contract Price is based on the Cost of Work, if Owner determines that progress payments made to date substantially exceed the actual progress of the Work (as measured by reference to the Schedule of Values), or present a potential conflict with the Guaranteed Maximum Price, then Owner may require that Contractor prepare and submit a plan for the remaining anticipated Applications for Payment that will bring payments and progress into closer alignment and take into account the Guaranteed Maximum Price (if any), through reductions in billings, increases in retainage, or other equitable measures. Owner will review the plan, discuss any necessary modifications, and implement the plan as modified for all remaining Applications for Payment.

15.02 *Contractor's Warranty of Title*

A. Contractor warrants and guarantees that title to all Work, materials, and equipment furnished under the Contract will pass to Owner free and clear of (1) all Liens and other title defects, and (2) all patent, licensing, copyright, or royalty obligations, no later than 7 days after the time of payment by Owner.

15.03 *Substantial Completion*

A. When Contractor considers the entire Work ready for its intended use Contractor shall notify Owner and Engineer in writing that the entire Work is substantially complete and request that Engineer issue a certificate of Substantial Completion. Contractor shall at the same time submit to Owner and Engineer an initial draft of punch list items to be completed or corrected before final payment.

B. Promptly after Contractor's notification, Owner, Contractor, and Engineer shall make an inspection of the Work to determine the status of completion. If Engineer does not consider the Work substantially complete, Engineer will notify Contractor in writing giving the reasons therefor.

C. If Engineer considers the Work substantially complete, Engineer will deliver to Owner a preliminary certificate of Substantial Completion which will fix the date of Substantial Completion. Engineer shall attach to the certificate a punch list of items to be completed or corrected before final payment. Owner shall have 7 days after receipt of the preliminary certificate during which to make written objection to Engineer as to any provisions of the certificate or attached punch list. If, after considering the objections to the provisions of the preliminary certificate, Engineer concludes that the Work is not substantially complete, Engineer will, within 14 days after submission of the preliminary certificate to Owner, notify

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

Contractor in writing that the Work is not substantially complete, stating the reasons therefor. If Owner does not object to the provisions of the certificate, or if despite consideration of Owner's objections Engineer concludes that the Work is substantially complete, then Engineer will, within said 14 days, execute and deliver to Owner and Contractor a final certificate of Substantial Completion (with a revised punch list of items to be completed or corrected) reflecting such changes from the preliminary certificate as Engineer believes justified after consideration of any objections from Owner.

D. At the time of receipt of the preliminary certificate of Substantial Completion, Owner and Contractor will confer regarding Owner's use or occupancy of the Work following Substantial Completion, review the builder's risk insurance policy with respect to the end of the builder's risk coverage, and confirm the transition to coverage of the Work under a permanent property insurance policy held by Owner. Unless Owner and Contractor agree otherwise in writing, Owner shall bear responsibility for security, operation, protection of the Work, property insurance, maintenance, heat, and utilities upon Owner's use or occupancy of the Work.

E. After Substantial Completion the Contractor shall promptly begin work on the punch list of items to be completed or corrected prior to final payment. In appropriate cases Contractor may submit monthly Applications for Payment for completed punch list items, following the progress payment procedures set forth above.

F. Owner shall have the right to exclude Contractor from the Site after the date of Substantial Completion subject to allowing Contractor reasonable access to remove its property and complete or correct items on the punch list.

15.04 *Partial Use or Occupancy*

A. Prior to Substantial Completion of all the Work, Owner may use or occupy any substantially completed part of the Work which has specifically been identified in the Contract Documents, or which Owner, Engineer, and Contractor agree constitutes a separately functioning and usable part of the Work that can be used by Owner for its intended purpose without significant interference with Contractor's performance of the remainder of the Work, subject to the following conditions:

1. At any time, Owner may request in writing that Contractor permit Owner to use or occupy any such part of the Work that Owner believes to be substantially complete. If and when Contractor agrees that such part of the Work is substantially complete, Contractor, Owner, and Engineer will follow the procedures of Paragraph 15.03.A through 15.03.E for that part of the Work.

2. At any time, Contractor may notify Owner and Engineer in writing that Contractor considers any such part of the Work substantially complete and request Engineer to issue a certificate of Substantial Completion for that part of the Work.

3. Within a reasonable time after either such request, Owner, Contractor, and Engineer shall make an inspection of that part of the Work to determine its status of completion. If Engineer does not consider that part of the Work to be substantially complete, Engineer will notify Owner and Contractor in writing giving the reasons therefor. If Engineer considers that part of the Work to be substantially complete, the provisions of Paragraph 15.03 will apply with respect to certification of Substantial Completion of that part of the Work and the division of responsibility in respect thereof and access thereto.

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

4. No use or occupancy or separate operation of part of the Work may occur prior to compliance with the requirements of Paragraph 6.04 regarding builder's risk or other property insurance.

15.05 *Final Inspection*

A. Upon written notice from Contractor that the entire Work or an agreed portion thereof is complete, Engineer will promptly make a final inspection with Owner and Contractor and will notify Contractor in writing of all particulars in which this inspection reveals that the Work, or agreed portion thereof, is incomplete or defective. Contractor shall immediately take such measures as are necessary to complete such Work or remedy such deficiencies.

15.06 *Final Payment*

A. *Application for Payment*

1. After Contractor has, in the opinion of Engineer, satisfactorily completed all corrections identified during the final inspection and has delivered, in accordance with the Contract Documents, all maintenance and operating instructions, schedules, guarantees, bonds, certificates or other evidence of insurance, certificates of inspection, annotated record documents (as provided in Paragraph 7.12), and other documents, Contractor may make application for final payment.

2. The final Application for Payment must be accompanied (except as previously delivered) by:

a. all documentation called for in the Contract Documents;

b. consent of the surety, if any, to final payment;

c. satisfactory evidence that all title issues have been resolved such that title to all Work, materials, and equipment has passed to Owner free and clear of any Liens or other title defects, or will so pass upon final payment.

d. a list of all duly pending Change Proposals and Claims; and

e. complete and legally effective releases or waivers (satisfactory to Owner) of all Lien rights arising out of the Work, and of Liens filed in connection with the Work.

3. In lieu of the releases or waivers of Liens specified in Paragraph 15.06.A.2 and as approved by Owner, Contractor may furnish receipts or releases in full and an affidavit of Contractor that: (a) the releases and receipts include all labor, services, material, and equipment for which a Lien could be filed; and (b) all payrolls, material and equipment bills, and other indebtedness connected with the Work for which Owner might in any way be responsible, or which might in any way result in liens or other burdens on Owner's property, have been paid or otherwise satisfied. If any Subcontractor or Supplier fails to furnish such a release or receipt in full, Contractor may furnish a bond or other collateral satisfactory to Owner to indemnify Owner against any Lien, or Owner at its option may issue joint checks payable to Contractor and specified Subcontractors and Suppliers.

B. *Engineer's Review of Final Application and Recommendation of Payment*: If, on the basis of Engineer's observation of the Work during construction and final inspection, and Engineer's review of the final Application for Payment and accompanying documentation as required by the Contract Documents, Engineer is satisfied that the Work has been completed and Contractor's other obligations under the Contract have been fulfilled, Engineer will, within 10

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

days after receipt of the final Application for Payment, indicate in writing Engineer's recommendation of final payment and present the final Application for Payment to Owner for payment. Such recommendation will account for any set-offs against payment that are necessary in Engineer's opinion to protect Owner from loss for the reasons stated above with respect to progress payments. Otherwise, Engineer will return the Application for Payment to Contractor, indicating in writing the reasons for refusing to recommend final payment, in which case Contractor shall make the necessary corrections and resubmit the Application for Payment.

C. *Notice of Acceptability*: In support of its recommendation of payment of the final Application for Payment, Engineer will also give written notice to Owner and Contractor that the Work is acceptable, subject to stated limitations in the notice and to the provisions of Paragraph 15.07.

D. *Completion of Work*: The Work is complete (subject to surviving obligations) when it is ready for final payment as established by the Engineer's written recommendation of final payment and issuance of notice of the acceptability of the Work.

E. *Final Payment Becomes Due*: Upon receipt from Engineer of the final Application for Payment and accompanying documentation, Owner shall set off against the amount recommended by Engineer for final payment any further sum to which Owner is entitled, including but not limited to set-offs for liquidated damages and set-offs allowed under the provisions of this Contract with respect to progress payments. Owner shall pay the resulting balance due to Contractor within 30 days of Owner's receipt of the final Application for Payment from Engineer.

15.07 *Waiver of Claims*

A. By making final payment, Owner waives its claim or right to liquidated damages or other damages for late completion by Contractor, except as set forth in an outstanding Claim, appeal under the provisions of Article 17, set-off, or express reservation of rights by Owner. Owner reserves all other claims or rights after final payment.

B. The acceptance of final payment by Contractor will constitute a waiver by Contractor of all claims and rights against Owner other than those pending matters that have been duly submitted as a Claim, or appealed under the provisions of Article 17.

15.08 *Correction Period*

A. If within one year after the date of Substantial Completion (or such longer period of time as may be prescribed by the Supplementary Conditions or the terms of any applicable special guarantee required by the Contract Documents), Owner gives Contractor written notice that any Work has been found to be defective, or that Contractor's repair of any damages to the Site or adjacent areas has been found to be defective, then after receipt of such notice of defect Contractor shall promptly, without cost to Owner and in accordance with Owner's written instructions:

1. correct the defective repairs to the Site or such adjacent areas;

2. correct such defective Work;

3. remove the defective Work from the Project and replace it with Work that is not defective, if the defective Work has been rejected by Owner, and

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

4. satisfactorily correct or repair or remove and replace any damage to other Work, to the work of others, or to other land or areas resulting from the corrective measures.

B. Owner shall give any such notice of defect within 60 days of the discovery that such Work or repairs is defective. If such notice is given within such 60 days but after the end of the correction period, the notice will be deemed a notice of defective Work under Paragraph 7.17.B.

C. If, after receipt of a notice of defect within 60 days and within the correction period, Contractor does not promptly comply with the terms of Owner's written instructions, or in an emergency where delay would cause serious risk of loss or damage, Owner may have the defective Work corrected or repaired or may have the rejected Work removed and replaced. Contractor shall pay all costs, losses, and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all court or arbitration or other dispute resolution costs) arising out of or relating to such correction or repair or such removal and replacement (including but not limited to all costs of repair or replacement of work of others). Contractor's failure to pay such costs, losses, and damages within 10 days of invoice from Owner will be deemed the start of an event giving rise to a Claim under Paragraph 12.01.B, such that any related Claim must be brought within 30 days of the failure to pay.

D. In special circumstances where a particular item of equipment is placed in continuous service before Substantial Completion of all the Work, the correction period for that item may start to run from an earlier date if so provided in the Specifications.

E. Where defective Work (and damage to other Work resulting therefrom) has been corrected or removed and replaced under this paragraph, the correction period hereunder with respect to such Work will be extended for an additional period of one year after such correction or removal and replacement has been satisfactorily completed.

F. Contractor's obligations under this paragraph are in addition to all other obligations and warranties. The provisions of this paragraph are not to be construed as a substitute for, or a waiver of, the provisions of any applicable statute of limitation or repose.

ARTICLE 16—SUSPENSION OF WORK AND TERMINATION

16.01 *Owner May Suspend Work*

A. At any time and without cause, Owner may suspend the Work or any portion thereof for a period of not more than 90 consecutive days by written notice to Contractor and Engineer. Such notice will fix the date on which Work will be resumed. Contractor shall resume the Work on the date so fixed. Contractor shall be entitled to an adjustment in the Contract Price or an extension of the Contract Times directly attributable to any such suspension. Any Change Proposal seeking such adjustments must be submitted no later than 30 days after the date fixed for resumption of Work.

16.02 *Owner May Terminate for Cause*

A. The occurrence of any one or more of the following events will constitute a default by Contractor and justify termination for cause:

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

1. Contractor's persistent failure to perform the Work in accordance with the Contract Documents (including, but not limited to, failure to supply sufficient skilled workers or suitable materials or equipment, or failure to adhere to the Progress Schedule);
2. Failure of Contractor to perform or otherwise to comply with a material term of the Contract Documents;
3. Contractor's disregard of Laws or Regulations of any public body having jurisdiction; or
4. Contractor's repeated disregard of the authority of Owner or Engineer.

B. If one or more of the events identified in Paragraph 16.02.A occurs, then after giving Contractor (and any surety) 10 days' written notice that Owner is considering a declaration that Contractor is in default and termination of the Contract, Owner may proceed to:
1. declare Contractor to be in default, and give Contractor (and any surety) written notice that the Contract is terminated; and
2. enforce the rights available to Owner under any applicable performance bond.

C. Subject to the terms and operation of any applicable performance bond, if Owner has terminated the Contract for cause, Owner may exclude Contractor from the Site, take possession of the Work, incorporate in the Work all materials and equipment stored at the Site or for which Owner has paid Contractor but which are stored elsewhere, and complete the Work as Owner may deem expedient.

D. Owner may not proceed with termination of the Contract under Paragraph 16.02.B if Contractor within 7 days of receipt of notice of intent to terminate begins to correct its failure to perform and proceeds diligently to cure such failure.

E. If Owner proceeds as provided in Paragraph 16.02.B, Contractor shall not be entitled to receive any further payment until the Work is completed. If the unpaid balance of the Contract Price exceeds the cost to complete the Work, including all related claims, costs, losses, and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals) sustained by Owner, such excess will be paid to Contractor. If the cost to complete the Work including such related claims, costs, losses, and damages exceeds such unpaid balance, Contractor shall pay the difference to Owner. Such claims, costs, losses, and damages incurred by Owner will be reviewed by Engineer as to their reasonableness and, when so approved by Engineer, incorporated in a Change Order. When exercising any rights or remedies under this paragraph, Owner shall not be required to obtain the lowest price for the Work performed.

F. Where Contractor's services have been so terminated by Owner, the termination will not affect any rights or remedies of Owner against Contractor then existing or which may thereafter accrue, or any rights or remedies of Owner against Contractor or any surety under any payment bond or performance bond. Any retention or payment of money due Contractor by Owner will not release Contractor from liability.

G. If and to the extent that Contractor has provided a performance bond under the provisions of Paragraph 6.01.A, the provisions of that bond will govern over any inconsistent provisions of Paragraphs 16.02.B and 16.02.D.

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

16.03 *Owner May Terminate for Convenience*

A. Upon 7 days' written notice to Contractor and Engineer, Owner may, without cause and without prejudice to any other right or remedy of Owner, terminate the Contract. In such case, Contractor shall be paid for (without duplication of any items):

1. completed and acceptable Work executed in accordance with the Contract Documents prior to the effective date of termination, including fair and reasonable sums for overhead and profit on such Work;

2. expenses sustained prior to the effective date of termination in performing services and furnishing labor, materials, or equipment as required by the Contract Documents in connection with uncompleted Work, plus fair and reasonable sums for overhead and profit on such expenses; and

3. other reasonable expenses directly attributable to termination, including costs incurred to prepare a termination for convenience cost proposal.

B. Contractor shall not be paid for any loss of anticipated profits or revenue, post-termination overhead costs, or other economic loss arising out of or resulting from such termination.

16.04 *Contractor May Stop Work or Terminate*

A. If, through no act or fault of Contractor, (1) the Work is suspended for more than 90 consecutive days by Owner or under an order of court or other public authority, or (2) Engineer fails to act on any Application for Payment within 30 days after it is submitted, or (3) Owner fails for 30 days to pay Contractor any sum finally determined to be due, then Contractor may, upon 7 days' written notice to Owner and Engineer, and provided Owner or Engineer do not remedy such suspension or failure within that time, terminate the contract and recover from Owner payment on the same terms as provided in Paragraph 16.03.

B. In lieu of terminating the Contract and without prejudice to any other right or remedy, if Engineer has failed to act on an Application for Payment within 30 days after it is submitted, or Owner has failed for 30 days to pay Contractor any sum finally determined to be due, Contractor may, 7 days after written notice to Owner and Engineer, stop the Work until payment is made of all such amounts due Contractor, including interest thereon. The provisions of this paragraph are not intended to preclude Contractor from submitting a Change Proposal for an adjustment in Contract Price or Contract Times or otherwise for expenses or damage directly attributable to Contractor's stopping the Work as permitted by this paragraph.

ARTICLE 17—FINAL RESOLUTION OF DISPUTES

17.01 *Methods and Procedures*

A. *Disputes Subject to Final Resolution*: The following disputed matters are subject to final resolution under the provisions of this article:

1. A timely appeal of an approval in part and denial in part of a Claim, or of a denial in full, pursuant to Article 12; and

2. Disputes between Owner and Contractor concerning the Work, or obligations under the Contract Documents, that arise after final payment has been made.

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

B. *Final Resolution of Disputes*: For any dispute subject to resolution under this article, Owner or Contractor may:

1. elect in writing to invoke the dispute resolution process provided for in the Supplementary Conditions;
2. agree with the other party to submit the dispute to another dispute resolution process; or
3. if no dispute resolution process is provided for in the Supplementary Conditions or mutually agreed to, give written notice to the other party of the intent to submit the dispute to a court of competent jurisdiction.

ARTICLE 18—MISCELLANEOUS

18.01 *Giving Notice*

A. Whenever any provision of the Contract requires the giving of written notice to Owner, Engineer, or Contractor, it will be deemed to have been validly given only if delivered:

1. in person, by a commercial courier service or otherwise, to the recipient's place of business;
2. by registered or certified mail, postage prepaid, to the recipient's place of business; or
3. by e-mail to the recipient, with the words "Formal Notice" or similar in the e-mail's subject line.

18.02 *Computation of Times*

A. When any period of time is referred to in the Contract by days, it will be computed to exclude the first and include the last day of such period. If the last day of any such period falls on a Saturday or Sunday or on a day made a legal holiday by the law of the applicable jurisdiction, such day will be omitted from the computation.

18.03 *Cumulative Remedies*

A. The duties and obligations imposed by these General Conditions and the rights and remedies available hereunder to the parties hereto are in addition to, and are not to be construed in any way as a limitation of, any rights and remedies available to any or all of them which are otherwise imposed or available by Laws or Regulations, by special warranty or guarantee, or by other provisions of the Contract. The provisions of this paragraph will be as effective as if repeated specifically in the Contract Documents in connection with each particular duty, obligation, right, and remedy to which they apply.

18.04 *Limitation of Damages*

A. With respect to any and all Change Proposals, Claims, disputes subject to final resolution, and other matters at issue, neither Owner nor Engineer, nor any of their officers, directors, members, partners, employees, agents, consultants, or subcontractors, shall be liable to Contractor for any claims, costs, losses, or damages sustained by Contractor on or in connection with any other project or anticipated project.

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

18.05 *No Waiver*

A. A party's non-enforcement of any provision will not constitute a waiver of that provision, nor will it affect the enforceability of that provision or of the remainder of this Contract.

18.06 *Survival of Obligations*

A. All representations, indemnifications, warranties, and guarantees made in, required by, or given in accordance with the Contract, as well as all continuing obligations indicated in the Contract, will survive final payment, completion, and acceptance of the Work or termination of the Contract or of the services of Contractor.

18.07 *Controlling Law*

A. This Contract is to be governed by the law of the state in which the Project is located.

18.08 *Assignment of Contract*

A. Unless expressly agreed to elsewhere in the Contract, no assignment by a party to this Contract of any rights under or interests in the Contract will be binding on the other party without the written consent of the party sought to be bound; and, specifically but without limitation, money that may become due and money that is due may not be assigned without such consent (except to the extent that the effect of this restriction may be limited by law), and unless specifically stated to the contrary in any written consent to an assignment, no assignment will release or discharge the assignor from any duty or responsibility under the Contract.

18.09 *Successors and Assigns*

A. Owner and Contractor each binds itself, its successors, assigns, and legal representatives to the other party hereto, its successors, assigns, and legal representatives in respect to all covenants, agreements, and obligations contained in the Contract Documents.

18.10 *Headings*

A. Article and paragraph headings are inserted for convenience only and do not constitute parts of these General Conditions.

IMPORTANT NOTICE

Conflict Of Interest Reporting Requirements

Compliance with LOCAL GOVERNMENT CODE TITLE 5. MATTERS AFFECTING PUBLIC OFFICERS AND EMPLOYEES SUBTITLE C. MATTERS AFFECTING PUBLIC OFFICERS AND EMPLOYEES OF MORE THAN ONE TYPE OF LOCAL GOVERNMENT CHAPTER 176. DISCLOSURE OF CERTAIN RELATIONSHIPS WITH LOCAL GOVERNMENT OFFICERS; PROVIDING PUBLIC ACCESS TO CERTAIN INFORMATION.

Form CIQ: This questionnaire reflects changes made to the law by H.B. 23, 84th Leg., Regular Session. This questionnaire shall be filed in accordance with Chapter 176, Local Government Code, by a vendor who has a business relationship as defined by Section 176.001(1-a) with a local governmental entity and the vendor meets requirements under Section 176.006(a). By law this questionnaire must be filed with the records administrator of the local governmental entity not later than the 7th business day after the date the vendor becomes aware of facts that require the statement to be filed. See Section 176.006(a-1), Local Government Code. A vendor commits an offense if the vendor knowingly violates Section 176.006, Local Government Code. An offense under this section is a misdemeanor.

Bidders are responsible for filing Conflict of Interest form "CIQ" in accordance with the above referenced statute. Failure to do so is a class C Misdemeanor. Contracts or Purchase Orders awarded to a vendor that has violated this law is subject to termination at such time that the violation is discovered with no recourse to the City of Midland. The bidder will be subsequently removed from the bidders list for a minimum of one year.

When there is no known conflict of interest as defined by the statute, it is not necessary to file/submit the Form CIQ. The form must be submitted if a conflict is subsequently discovered.

By submitting a response to this request, vendor represents that it complies with the requirements of Chapter 176 of the Texas Local Government Code.

For a current list of the local government officers go to: http://www.midlandtexas.gov/

Upon completion of the form, sign and submit with bid or mail to:

City of Midland
Attn: City Secretary
PO Box 1152
Midland, Texas 79702

CONFLICT OF INTEREST QUESTIONNAIRE

FORM CIQ

For vendor doing business with local governmental entity

This questionnaire reflects changes made to the law by H.B. 23, 84th Leg., Regular Session.

This questionnaire is being filed in accordance with Chapter 176, Local Government Code, by a vendor who has a business relationship as defined by Section 176.001(1-a) with a local governmental entity and the vendor meets requirements under Section 176.006(a).

By law this questionnaire must be filed with the records administrator of the local governmental entity not later than the 7th business day after the date the vendor becomes aware of facts that require the statement to be filed. *See* Section 176.006(a-1), Local Government Code.

A vendor commits an offense if the vendor knowingly violates Section 176.006, Local Government Code. An offense under this section is a misdemeanor.

OFFICE USE ONLY

Date Received

1 **Name of vendor who has a business relationship with local governmental entity.**

2 ☐ **Check this box if you are filing an update to a previously filed questionnaire.** (The law requires that you file an updated completed questionnaire with the appropriate filing authority not later than the 7th business day after the date on which you became aware that the originally filed questionnaire was incomplete or inaccurate.)

3 **Name of local government officer about whom the information is being disclosed.**

Name of Officer

4 **Describe each employment or other business relationship with the local government officer, or a family member of the officer, as described by Section 176.003(a)(2)(A). Also describe any family relationship with the local government officer. Complete subparts A and B for each employment or business relationship described. Attach additional pages to this Form CIQ as necessary.**

A. Is the local government officer or a family member of the officer receiving or likely to receive taxable income, other than investment income, from the vendor?

☐ Yes ☐ No

B. Is the vendor receiving or likely to receive taxable income, other than investment income, from or at the direction of the local government officer or a family member of the officer AND the taxable income is not received from the local governmental entity?

☐ Yes ☐ No

5 **Describe each employment or business relationship that the vendor named in Section 1 maintains with a corporation or other business entity with respect to which the local government officer serves as an officer or director, or holds an ownership interest of one percent or more.**

6 ☐ Check this box if the vendor has given the local government officer or a family member of the officer one or more gifts as described in Section 176.003(a)(2)(B), excluding gifts described in Section 176.003(a-1).

CONFLICT OF INTEREST QUESTIONNAIRE
For vendor doing business with local governmental entity

A complete copy of Chapter 176 of the Local Government Code may be found at http://www.statutes.legis.state.tx.us/Docs/LG/htm/LG.176.htm. For easy reference, below are some of the sections cited on this form.

Local Government Code § 176.001(1-a): "Business relationship" means a connection between two or more parties based on commercial activity of one of the parties. The term does not include a connection based on:

(A) a transaction that is subject to rate or fee regulation by a federal, state, or local governmental entity or an agency of a federal, state, or local governmental entity;

(B) a transaction conducted at a price and subject to terms available to the public; or

(C) a purchase or lease of goods or services from a person that is chartered by a state or federal agency and that is subject to regular examination by, and reporting to, that agency.

Local Government Code § 176.003(a)(2)(A) and (B):

(a) A local government officer shall file a conflicts disclosure statement with respect to a vendor if:

***

(2) the vendor:

(A) has an employment or other business relationship with the local government officer or a family member of the officer that results in the officer or family member receiving taxable income, other than investment income, that exceeds $2,500 during the 12-month period preceding the date that the officer becomes aware that

(i) a contract between the local governmental entity and vendor has been executed; or

(ii) the local governmental entity is considering entering into a contract with the vendor;

(B) has given to the local government officer or a family member of the officer one or more gifts that have an aggregate value of more than $100 in the 12-month period preceding the date the officer becomes aware that:

(i) a contract between the local governmental entity and vendor has been executed; or

(ii) the local governmental entity is considering entering into a contract with the vendor.

Local Government Code § 176.006(a) and (a-1)

(a) A vendor shall file a completed conflict of interest questionnaire if the vendor has a business relationship with a local governmental entity and:

(1) has an employment or other business relationship with a local government officer of that local governmental entity, or a family member of the officer, described by Section 176.003(a)(2)(A);

(2) has given a local government officer of that local governmental entity, or a family member of the officer, one or more gifts with the aggregate value specified by Section 176.003(a)(2)(B), excluding any gift described by Section 176.003(a-1); or

(3) has a family relationship with a local government officer of that local governmental entity.

(a-1) The completed conflict of interest questionnaire must be filed with the appropriate records administrator not later than the seventh business day after the later of:

(1) the date that the vendor:

(A) begins discussions or negotiations to enter into a contract with the local governmental entity; or

(B) submits to the local governmental entity an application, response to a request for proposals or bids, correspondence, or another writing related to a potential contract with the local governmental entity; or

(2) the date the vendor becomes aware:

(A) of an employment or other business relationship with a local government officer, or a family member of the officer, described by Subsection (a);

(B) that the vendor has given one or more gifts described by Subsection (a); or

(C) of a family relationship with a local government officer.

Consideration of Location of Bidder's Principal Place of Business
For Bids of $50,000 up to $100,000 for Services and $500,000 for Commodities
Affidavit of Eligibility

Pursuant to Texas Local Government Code 271.9051, in purchasing real property, personal property that is not affixed to real property, or services, if the City receives one or more bids from a bidder whose principal place of business is in the City of Midland and whose bid is within five percent (5%) of the lowest bid price received by the City from a bidder who is not a resident of the City of Midland, the City may enter into a contract with:

(1) the lowest bidder; or

(2) the bidder whose principal place of business is in the City of Midland if the City Council determines, in writing, that the local bidder offers the City the best combination of contract price and additional economic development opportunities for the City of Midland created by the contract award, including the employment of residents of the City of Midland and increased tax revenues to the City of Midland.

In order to receive consideration, bidders must submit this affidavit to:

Regina Stephenson
Purchasing Manager
City of Midland
300 N. Loraine St.,
PO BOX 1152
Midland, TX 79702-1152

Complete all areas below. Incomplete affidavits may be rejected.

Local Business Name: _____

Local Address (must be within the City limits): _____

1. Is the above address the principal place of business for the business named above? ☐ Yes ☐ No
2. How many residents of the City of Midland are employed at the above business location? _____
3. Year your business was established in the City of Midland: _____
4. If you collect sales tax for ANY class of customer, provide the following Reseller information:

   Reseller Permit Number: _____

   Company Name and Address (as it appears on permit):

   _____

   _____

   _____

5. Does your business have more than one office in the State of Texas? ☐ Yes ☐ No
   If Yes, identify the office location considered as the point-of sale for the purpose of sales tax calculation:

   _____

   _____

6. Was the local business required to pay business and/or real property tax for the most recent tax year?

   ☐ Yes ☐ No

   If Yes, did the local business pay any of this tax to the City of Midland? ☐ Yes ☐ No

Under penalty of perjury, the undersigned states that the foregoing statements are true and correct. It is further acknowledged that any person, firm, corporation or entity intentionally submitting false information to the City in an attempt to qualify for eligibility shall be prohibited from bidding on City of Midland products and services for a period of one (1) year.

Authorized Signature: _____ Date: _____

Printed Name and Title: _____

PART 1
TECHNICAL SPECIFICATIONS

SECTION 01010

SUMMARY OF WORK

PART 1 GENERAL

1.1 SECTION INCLUDES:

A. Contract Description:

1. Construction of a new transfer pump station, pump station building, and site piping at the existing Water Purification Plant.

2. Coordination with contractor(s) constructing the associated Transmission/Distribution Mains and Elevated Storage Tank for completion and startup of interdependent components of the work.

3. Scope includes:

a. Pump station building with electrical room and bridge crane.

b. Three (3) vertical turbine pumps and space for two (2) future vertical turbine pumps. Five (5) pump cans for new and future pumps are included in this contract.

c. Three (3) 12-inch pump control valves, one (1) 12-inch surge anticipator valve, one (1) 2" motorized ball valve, one (1) backflow preventer, pressure reducing valves, manual AWWA butterfly valves, and other miscellaneous valves. The surge anticipator valve shall be installed in a vault in the pump station floor that includes a sump pump for dewatering.

d. Pump station and yard piping that includes ductile, PVC and stainless steel.

e. Concrete vaults for manual 42-inch butterfly valve and 30" mag-meter, including motorized ventilation fan at the valve vault, a sump pump in each vault for dewatering, and miscellaneous electrical.

f. HVAC at transfer pump station building and electrical room.

g. Site work including earthwork, grading, hydro-mulch and new asphalt driveway connecting the existing Water Purification Plant driveway.

h. Instrumentation including one (1) 30-inch mag-meter, one (1) pressure indicating analyzer, two (2) total chlorine analyzers with common controller, one (1) ammonia chloramine analyzer, two (2) turbidimeters with common controller, pressure gauges and switches.

i. Site electrical and MCC.

j. Contractor's control system integrator shall be responsible for supplying, installing, and configuring all instrumentation, control equipment, panels and associated conduit/wiring.

k. Per Contract A Part 1 SCADA allowance, the City of Midland's SCADA integrator (Signature Automation) shall be responsible for all RTU, PLC, HMI/OIT software installation, programming and subsequent testing.

1.2 CONTRACTOR USE OF SITE:

A. WPP Site may be used as follows:

1. Site is available for Contractor's use; ample space is available.

2. Contractor shall keep all construction activities on Owner's property or within Owner's easements and/or rights of ways.

B. Comply with Owner's Security protocols.

1. Provide names and photographs of any Contractor or Sub-Contractor personnel who will be at the project site.

2. Administration and maintenance buildings are OFF LIMITS unless accompanied by the Owner.

3. Contractor and its sub-contractor(s) / vendor(s) shall use the back gate for site access. Provide and maintain access security.

4. Contractor's personnel, including sub-contractors and vendors, shall attend the Owner's chlorine and ammonia safety awareness class prior to working on-site.

C. Limit use of existing facilities to allow:

1. Uninterrupted delivery of potable water from the Midland WPP and existing water distribution system. Short interruptions necessary for tie-ins of the new pipeline(s) shall be coordinated a minimum of 48 hours in advance with Owner and Engineer.

END OF SECTION

SECTION 01019

CONTRACT CONSIDERATIONS

PART 1 GENERAL

1.1 SECTION INCLUDES:

A. Materials Testing.

B. Schedule of Values.

C. Order of Construction and Construction Schedule

D. Application for Payment.

E. Change Procedures.

F. Measurement and Payment.

1.2 MATERIALS TESTING:

A. Engineer will engage a recognized construction materials testing firm.

B. Contractor shall be responsible for:

1. Costs of incidental labor and facilities required to assist testing firm.

2. Costs of testing laboratory services used by Contractor separate from Contract Document or Owner requirements.

3. Costs of retesting upon failure of previous tests as determined by Engineer.

1.3 SCHEDULE OF VALUES:

A. Where a Contract includes items bid on a lump sum basis, the Contractor shall file with the Engineer a balanced price segregation of his lump sum bid into items similar to the various subdivisions of the general and detailed specifications, the sum of which shall equal the lump sum bid. Provide in accordance with Article 2, Paragraph 2.05 of the General Conditions.

1. The cost of various materials shall be furnished upon request of the Engineer, and such data will then be used as a basis for making progress estimates.

2. Breakdown cost itemized Specification Section by trade, and distribute cost to individual applicable units and structures.

3. Where structures, units, equipment or other components are identified by a specific series or, identification number, utilize said designation throughout cost breakdown.

4. Provide detailed breakdown for individual yard piping or conduit runs and identify approximate quantities involved to satisfaction of the Engineer.

5. Provide separate breakdown for change order items requested.

6. The detail and format of cost breakdown and stored materials tabulation sheet shall be fully approved by Engineer.

7. Use EJCDC 1910-8-E, or equivalent.

B. A reasonable allocation of the Contract Price to the component parts of the Work will be approved if component parts of the Work have values assigned to them that are well-balanced with respect to relative values for similar work established by published estimating guides.

1. Unless otherwise agreed to at the Preconstruction Conference, Means Estimator Guide or other similar nationally recognized estimating guide shall be used for resolving differences between Engineer's and Contractor's opinions of allocation of values.

2. Consent of Surety: If Contractor and Engineer cannot mutually agree on a Schedule of Values, Engineer will approve a Schedule of Values approved by the Surety providing the Performance Bond.

C. Contractor's costs shall not govern the allocation of values when application of Contractor's costs to a component part of the Work results in any other component part or combination of component parts being under-valued in relation to conventional estimating guides.

D. Schedule of Values shall be agreed upon prior to first Application for Payment.

1.4 ORDER OF CONSTRUCTION AND CONSTRUCTION SCHEDULE:

A. In accordance with Article 2, Paragraph 2.05 of the General Conditions, submit for approval a critical path type baseline schedule.

1. Account for schedule of Subcontracts.

2. Include proper sequence of construction, various crafts, purchasing time, Shop Drawing approval, material delivery, equipment fabrication, start-up, demonstration, and similar time consuming factors.

3. Show on schedule as a minimum, earliest starting, earliest completion, latest starting, latest finish, and free and total float for each task or item.

4. Critical Path Method Network Analysis:

a. Application software: Microsoft Project or Primavera.

b. Do not utilize or incorporate date or time constraints or other constraints that corrupt the CPM mathematical model.

i The following CPM schedule outputs will be rejected without further review:

- Schedules indicating the start of the critical path at a date point beyond the "Start Date."
- Schedules with multiple critical paths.
- Schedules indicating a completion date beyond the contractual completion date.

c. Show the order and interdependence of activities.

i The start of an activity shall be dependent on the completion of a preceding activity(ies), with Notice to Proceed being the initial activity.

ii Limit activities to a maximum of 20 days.

iii Network analysis diagram shall flow left to right.

d. Critical (path) activities are defined to have zero (0) total float.

e. Do not use leads and lags in lieu of an activity description such as "concrete cure time."

i When lags are necessary, they shall not have a negative value.

5. Provide the electronic native file on compact disc along with two (2) paper copies printed in color.

B. Evaluate schedule no less than monthly.

1. Update, correct, and rerun schedule and submit to Engineer with pay application to show rescheduling necessary to reflect true job conditions.

2. When shortening of various time intervals is necessary to correct for behind schedule conditions, indicate actions to implement to accomplish work in shorter duration.

3. Information shall be submitted to Engineer in writing with revised schedule.

4. Default progress data disallowed:

a. Actual start and finish dates shall not be automatically updated by default mechanisms that may be included in the CPM scheduling software system.

i Actual start and actual finish dates on the CPM schedule shall be reported.

b. Work activities will be updated by actual work progression rather than being cash flow driven.

i The updating of the percent complete and the remaining duration of any activity shall be independent functions:

- Program features that calculate one of these parameters from the other shall be disabled.

- Out-of-sequence progress (if applicable) shall be handled through retained logic, not the default option of progress override.

5. Submit electronic native files on compact disc along with two (2) paper copies printed in color.

C. If Contractor does not take necessary action to accomplish work according to schedule, Contractor may be ordered by Owner in writing to take necessary and timely action to improve work progress.

1. Owner may require increased work forces, extra equipment, extra shifts or other action as necessary.

2. Should Contractor refuse or neglect to take such action authorized, under provisions of this contract, Owner may take necessary actions including, but not necessarily limited to, withholding of payment and termination of Contract.

D. Upon receipt of approved "Work Schedule," within 10 days, submit to Engineer a cost-loaded schedule (electronically) and an estimated payment schedule by each month of project duration.

1. Include a composite curve to show estimated value of work complete and stored materials less specified retainage.

2. Establish key months when work will be 50, 80, 90, and 100 percent complete.

3. During the course of work, update with new composite curves at key months or whenever variation is expected to be more than plus or minus 10 percent.

4. Retain original or previous composite curves as dashed curves on all updates.

5. Include a heavy plotted curve to show ACTUAL payment curve on all updates.

E. Provide four-week look-ahead schedules every four (4) weeks.

1.5 APPLICATIONS FOR PAYMENT:

A. Contractor's electronic media driven form or EJCDC 1910-8-E.

B. Content and Format: Utilize Schedule of Values for listing items in Application for Payment.

C. Period: Submit by end of each month.

D. Include executed Contractor Affidavit for Partial Payment with each Application for Payment.

E. Submit certification by Contractor of Labor Standards compliance with each Application for Payment.

1.6 CHANGE PROCEDURES:

A. The Engineer will advise of minor changes in the Work not involving an adjustment to Contract Sum/Price or Contract Time by issuing supplemental instructions in writing.

B. The Engineer may issue a Notice of Change which includes a detailed description of a proposed change with supplementary or revised Drawings and Specifications, a change in contract time for executing the change and the period of time during which the requested price will be considered valid. Contractor will prepare and submit an estimate within 10 days.

C. The Contractor may propose changes by submitting a request for change to the Engineer, describing the proposed change and its full effect on the Work. Include a statement describing the reason for the change, and the effect on the Contract Sum/Price and Contract Time with full documentation. Document any requested substitutions in accordance with Section 01600.

D. Stipulated Sum/Price Change Order: Based on Notice of Change and Contractor's fixed price quotation or Contractor's request for a Change Order as approved by Engineer.

E. Work Directive Change: Engineer may issue a directive, on EJCDC 1910-8-F Work Directive Change signed by the Owner, instructing the Contractor to proceed with a change in the Work, for subsequent inclusion in a Change Order. Document will describe changes in the Work, and designate method of determining any change in Contract Sum/Price or Contract Time. Promptly execute the change.

F. Change Order Forms: EJCDC 1910-8-B or Engineer’s standard electronic media driven form.

G. Execution of Change Orders: Engineer will issue Change Orders for signatures of parties as provided in the Conditions of the Contract, including a TWDB representative.

1.7 MEASUREMENT AND PAYMENT:

A. Authority: Work under this Contract shall be measured by the Item Unit or Lump Sum Price as indicated on the Bid Schedule or Schedule of Values. Where the Item Lump Sum Price applies, the work will be considered as a complete installation as shown and specified.

Unit Quantities: Quantities and measurements indicated in the Bid Form are for contract purposes only. Quantities and measurements supplied or placed in the Work shall determine payment. The bid price for any Unit Price method item shall be in effect for any actual quantity encountered within plus or minus 25 percent of the estimated quantity. Payment or adjustment for quantities greater than plus or minus 25 percent will be subject to negotiation.

B. Payment Includes: Full compensation for required labor, Products, tools, equipment, plant, transportation, services and incidentals; erection, application or installation of an item of the Work; overhead and profit.

C. Defect Assessment: Replace the Work, or portions of the Work, not conforming to specified requirements. If, in the opinion of the Engineer, it is not practical to remove and replace the Work, the Engineer will direct an appropriate remedy or adjust payment.

END OF SECTION

SECTION 01039

COORDINATION AND MEETINGS

PART 1 GENERAL

1.1 SECTION INCLUDES:

A. Coordination.

B. Field Engineering.

C. Preconstruction Meeting.

D. Progress Meetings.

1.2 COORDINATION:

A. Coordinate scheduling, submittal, and Work of the various sections of the Project Manual to assure efficient and orderly sequence of installation of interdependent construction elements.

B. Coordinate completion and clean up of Work of separate sections in preparation for Substantial Completion.

C. After Owner occupancy of premises, coordinate access to site for correction of defective Work and Work not in accordance with Contract Documents, to minimize disruption of Owner's activities.

1.3 FIELD ENGINEERING:

A. Engineer will locate survey control and reference points; refer to Drawings.

B. Control datum for survey is that shown on Drawings.

C. Contractor to verify set-backs and easements, confirm drawing dimensions and elevations. Notify Engineer in writing immediately upon identification of potential conflict.

D. Contractor to provide field engineering services as required to support his work. Establish elevations, lines, and levels, utilizing recognized engineering survey practices.

1.4 PRECONSTRUCTION MEETING:

A. Engineer will schedule a meeting after Notice of Award.

B. Attendance Required: Owner, Engineer, and Contractor.

C. Agenda:

1. Distribution of Owner-Contractor Agreement / Contract Document.

2. Submission of executed bonds and insurance certificates.

3. Submission of list of Subcontractors, list of Products, schedule of values, and progress schedule.

4. Designation of personnel representing the parties in Contract, and the Engineer.

5. Procedures and processing of field decisions, submittal, substitutions, applications for payments, proposal request, Change Orders, and Contract closeout procedures.

6. Scheduling.

7. Coordination with other agencies/organizations.

D. Engineer to record minutes and distribute copies after meeting to participants.

1.5 PROGRESS MEETINGS:

A. The Engineer will arrange and conduct monthly Progress Meetings (Construction Status Meetings). The Engineer will prepare an agenda for these meetings and will conduct the meetings.

B. The purpose of these meetings will be to facilitate the work of the Contractor and any subcontractors, resolve conflicts, identify and resolve any potential delays or necessary changes in the work, and in general coordinate and facilitate the execution of the work.

C. The Construction schedule is required to be updated and presented at these meetings.

D. The Contractor shall bring up-to-date record drawings to each meeting.

PART 2 PRODUCTS

Not used.

PART 3 EXECUTION

Not used.

END OF SECTION

SECTION 01300

SUBMITTALS

PART 1 GENERAL

1.1 SECTION INCLUDES:

A. Submittal Procedures.

B. Construction Progress Schedules.

C. Shop Drawings.

D. Product Data.

E. Manufacturer's Installation Instructions.

F. Manufacturers' Certificates.

1.2 SUBMITTAL PROCEDURES:

A. Transmit each submittal with Engineer accepted form.

B. Sequentially number the transmittal form. Revise submittals with original number and a sequential alphabetic suffix.

C. Each submittal shall be limited to a single specification section or material topic. Where equipment packages, assemblies, and the like are interrelated, the submittals should be provided together facilitating review of the Contractor’s purposed offering. When related portions of an equipment package or system are not provided, the submittals may be returned without review.

D. Identify Project, Contractor, Subcontractor or supplier; pertinent Drawing and detail number, and Specification section number, as appropriate.

E. Apply Contractor's stamp, signed or initialed, certifying that review, verification of Products required, field dimensions, adjacent construction Work, and coordination of information, is in accordance with the requirements of the Work and Contract Documents.

F. Schedule submittals to expedite the Project, and deliver to Engineer at business address. Coordinate submission of related items.

G. For each submittal for review, allow 20 days excluding delivery time to and from the Contractor.

H. Identify variations from Contract Documents and Product or system limitations which may be detrimental to successful performance of the completed Work.

I. Provide space for Contractor and Engineer review stamps.

J. Revise and resubmit, identify all changes made since previous submission.

K. Distribute copies of reviewed submittals as appropriate. Instruct parties to promptly report any inability to comply with provisions.

L. Submittals not requested will not be recognized or processed.

1.3 CONSTRUCTION PROGRESS SCHEDULES:

A. Submit initial schedule in duplicate within 20 days after date established in Notice to Proceed.

B. Revise and resubmit as required.

C. Submit revised schedules with each Application for Payment, identifying changes since previous version.

D. Submit a horizontal bar chart with separate line for each major section of Work or operation, identifying first work day of each week.

E. Indicate estimated percentage of completion for each item of Work on each Application for Payment submission.

1.4 SHOP DRAWINGS:

A. Submit the number of reproductions which Contractor requires, plus three copies which will be retained by Engineer.

B. Shop Drawings: Submit for review. After review, produce copies and distribute in accordance with the SUBMITTAL PROCEDURES article above and for record documents purposes described in Section 01700--CONTRACT CLOSEOUT.

1.5 PRODUCT DATA:

A. Submit the number of copies which the Contractor requires, plus three copies which will be retained by the Engineer.

B. Mark each copy to identify applicable products, models, options, and other data. Supplement manufacturers' standard data to provide information unique to this Project.

C. After review, distribute in accordance with the Submittal Procedures article above and provide copies for record documents described in Section 01700 - CONTRACT CLOSEOUT.

1.6 MANUFACTURER INSTALLATION INSTRUCTIONS:

A. When specified in individual Specification sections, submit printed instructions for delivery, storage, assembly, installation, start-up, adjusting, and operating, to Engineer in quantities specified for Product Data.

1.7 MANUFACTURER OPERATION AND MAINTENANCE INSTRUCTIONS:

A. When specified in individual specification sections, submit printed instructions for operations and maintenance (O&M), to Engineer, in quantities specified for Product Data.

B. O&M information shall include but not necessarily be limited to parts lists, disassembly drawings, electrical schematics, and other information required for proper operation and maintenance.

1.8 MANUFACTURER CERTIFICATES:

A. When specified in individual Specification sections, submit certification by manufacturer to Engineer, in quantities specified for Product Data.

B. Indicate material or Product conforms to or exceeds specified requirements. Submit supporting reference data, affidavits, and certifications as appropriate.

C. Certificates may be recent or previous test results on material or Product, but must be acceptable to Engineer.

PART 2 PRODUCTS

Not used.

PART 3 EXECUTION

Not used.

END OF SECTION

SECTION 01400

QUALITY CONTROL

PART 1 GENERAL

1.1 SECTION INCLUDES:

A. Quality Assurance--Control of Installation.

B. Tolerances.

C. References.

D. Testing Laboratory Services.

E. Manufacturers' Field Services and Reports.

1.2 QUALITY ASSURANCE--CONTROL OF INSTALLATION:

A. Monitor quality control over suppliers, manufacturers, Products, services, site conditions, and workmanship, to produce Work of specified quality.

B. Comply with manufacturers' instructions, including each step in sequence.

C. Should manufacturers' instructions conflict with Contract Documents, request clarification from Engineer before proceeding.

D. Comply with specified standards as minimum quality for the Work except where more stringent tolerances, codes, or specified requirements indicate higher standards or more precise workmanship.

E. Perform Work by persons qualified to produce workmanship of specified quality.

F. Secure Products in place with positive anchorage devices designed and sized to withstand stresses, vibration, physical distortion, or disfigurement.

1.3 TOLERANCES:

A. Monitor tolerance control of installed Products to produce acceptable Work. Do not permit tolerances to accumulate.

B. Comply with manufacturers' tolerances. Should manufacturers' tolerances conflict with Contract Documents, request clarification from Engineer before proceeding.

C. Adjust Products to appropriate dimensions; position before securing Products in place.

1.4 REFERENCES:

A. For Products or workmanship specified by association, trade, or other consensus standards, comply with requirements of the standard, except when more rigid requirements are specified or are required by applicable codes.

B. Conform to reference standard by date of issue current on date of Contract Documents, except where a specific date is established by code.

C. Obtain copies of standards where required by product Specification sections.

D. The contractual relationship, duties, and responsibilities of the parties in Contract and of the Engineer, shall not be altered from the Contract Documents by mention or inference otherwise in any reference document.

1.5 TESTING LABORATORY SERVICES:

A. Engineer will appoint and employ services of a material testing firm to perform testing.

B. The testing firm will perform tests, and other services specified in individual Specification sections and as required by the Engineer or the Owner.

C. Inspecting, testing, and source quality control may occur on or off the project site. Perform off-site inspecting or testing as required by the Engineer or the Owner.

D. Reports will be submitted by the testing firm to the Engineer and Contractor, in duplicate, indicating observations and results of tests and indicating compliance or non-compliance with Contract Documents.

E. Cooperate with testing firm; furnish samples of materials, design mix, equipment, tools, storage, safe access, and assistance by incidental labor as requested.

1. Notify Engineer and independent firm 24 hours prior to expected time for operations requiring services.

2. Make arrangements with testing firm and pay for additional samples and tests required for Contractor's use.

F. Testing or inspecting does not relieve the Contractor of his responsibility to perform Work to contract requirements.

G. Retesting required because of non-conformance to specified requirements shall be performed by the same independent firm on instructions by the Engineer. Payment for retesting shall be the Contractor's responsibility.

H. Contractor shall provide all testing services in connection with the following:

1. Concrete materials and design mixtures.

2. Masonry units, masonry grout and mortar materials and design mixtures.

1.6 MANUFACTURERS' FIELD SERVICES AND REPORTS:

A. When specified, require material or Product suppliers or manufacturers to provide qualified staff personnel to observe site conditions, conditions of surfaces and installation, quality of workmanship, start-up of equipment, as applicable, and to initiate instructions when necessary.

B. Report observations and site decisions or instructions that are supplemental or contrary to manufacturers' written instructions.

C. Submit report in duplicate within 30 days of observation to Engineer for information.

PART 2 PRODUCTS

Not used.

PART 3 EXECUTION

Not used.

END OF SECTION

SECTION 01500

CONSTRUCTION FACILITIES AND TEMPORARY CONTROLS

PART 1 GENERAL

1.1 SECTION INCLUDES:

A. Contractor Provided Field Office

B. Temporary Utilities: Electricity, water, and sanitary facilities.

C. Temporary Controls: Barriers, protection of the work, and water control.

D. Construction Facilities: Access roads, parking, progress cleaning, and material storage areas.

1.2 CONTRACTOR PROVIDED FIELD OFFICE:

A. Contractor to provide separate Field Office for Contractor's use and Owner/Engineer's use for this project.

B. Establish field offices on the north fence line of the WPP as directed by the Owner.

C. Connect to Owner-provided electrical and water hook-ups.

D. At this office, maintain complete field file of Shop Drawings, posted Contract Drawings and Specifications, and other files of field operations including provisions for maintaining "As Recorded Drawings."

E. Remove field offices from site upon acceptance of the entire work by the Owner.

F. General Construction:

1. New or reconditioned mobile office trailer.

2. Interior paneling.

3. Vinyl tile flooring.

4. 8 FT high acoustic tile ceiling.

5. At least one (1) private office area at one end of the trailer, one (1) reception-conference room area, and private washroom.

6. Windows:

a. Minimum two (2) per room, excepting washroom, with one (1) each on opposing walls.
b. Combination screen-storm windows.
c. Provide horizontal louver blinds on each window.

7. Nominal 60 FT long and 12 FT wide.

8. Two (2) exterior doors (with cylinder deadbolt locks) with outer screens, exterior lights and exterior stairs and railings.

9. Water system to provide water service for restroom fixtures and sinks.

10. Waste holding tank for restroom and other field office drains.

G. Electrical System:

1. All fixtures, outlets, and wiring of Underwriters Laboratories, Inc. (UL) approved devices.

2. All circuits protected by circuit breakers; fuses are not acceptable.

3. Electrical system shall meet requirements of the latest National Electric Code.

4. System suitable for temporary power supplied by Owner.

5. Any transformers or other devices required to match this supply to the mobile office shall be provided and connected.

6. Provide a circuit breaker for the incoming service.

7. Each interior room except the washroom shall have at least four (4) 110 V duplex electrical convenience outlets.

H. Central Combination Electric Heating, Air-Conditioning System:

1. Fan-forced air.
2. Thermostatically controlled.
3. Individual room units are acceptable.
4. Freeze protect and insulate all piping.
5. System sized to maintain 75 Deg F constant temperature in each room.

I. Lighting System:

1. Fluorescent type producing 100 footcandles at desk top height.

2. Ample ceiling fixtures provided to ensure adequate lighting throughout.

J. Standard Washroom:

1. Flush toilet, sink, hot and cold running water.
2. Electric water heater.
3. Mirror.
4. Electric ceiling or wall vent.
5. Sound insulated partitions.

K. Furnishings:

1. Full width built-in desk at end in the office, with a nominal depth of 30 IN and overhead book shelves 12 IN deep.

2. One (1) plan table 39 x 84 IN x 36 IN wide, with one (1) locking equipment drawer.

3. One (1) L-shaped secretary desk with main desk 36 x 72 x 36 IN high with locking lap drawer, side drawer, and hanging file drawer.

   a. The desk shall have a typewriter leaf with a typing paper filing cabinet.

4. Two (2) 30 x 72 IN folding tables.

5. One (1) 48 x 60 IN liquid marking board with minimum four-color set of compatible markers.

6. One (1) 48 x 60 cork bulletin board.

7. Two (2) four-drawer legal size filing cabinets.

8. Two (2) cushioned swivel arm chairs.

9. Two (2) conference chairs.

10. Fourteen (14) folding chairs.

11. Two (2) sets of bookcases, each composed of three (3) shelves 36 IN long and 12 IN wide.

    a. The units shall be a minimum of 3 FT high.

12. Three (3) standard size waste paper baskets.

13. One (1) 2.7 CF refrigerator.

14. Hot and cold electric water cooler.

L. Maintenance:

1. Contractor shall provide all maintenance and upkeep of trailers and equipment.

a. Equipment breakdowns shall be repaired promptly by Contractor.

2. Janitorial service.

a. Weekly:

i. Floor sweeping using dust suppressing compound.
ii. Wet mopping with floor detergent.

b. Inclement weather: Conduct weekly requirements on daily basis.

c. Monthly: Wash windows and clean window blinds.

3. Utility costs by Owner.

4. Maintain at least until acceptance of the entire work by the Owner or until otherwise suspended by the Engineer.

5. Provide and pay for waste removal/disposal from waste holding tank.

6. Provide and pay for 5 gallon bottles of drinking water for electric water cooler.

1.3 TEMPORARY ELECTRICITY:

A. Contractor to arrange for temporary construction power. Owner is responsible for paying for temporary electrical service during construction.

B. Complement existing power service capacity and characteristics as required.

C. Provide power outlets for construction operations, with branch wiring and distribution boxes located as required. Provide flexible power cords as required.

1.4 TEMPORARY WATER SERVICE:

A. Connect to existing water source for construction operations using Owner provided fire hydrant meter.

B. Owner will pay cost of water used. Exercise measures to conserve water.

1.5 TEMPORARY SANITARY FACILITIES:

A. Provide and maintain required facilities and enclosures.

1.6 BARRIERS:

A. Provide barriers to prevent unauthorized entry to construction areas and to protect existing facilities and adjacent properties from damage from construction operations.

B. Protect non-owned vehicular traffic, stored materials, site, and structures from damage.

1.7 WATER CONTROL:

A. Grade site to drain. Maintain excavations free of water. Provide, operate, and maintain pumping equipment.

B. Protect site from puddles or running water. Provide water barriers as required to protect site from soil erosion.

1.8 PROTECTION OF INSTALLED WORK:

A. Protect installed work and provide special protection where specified in individual specification sections.

B. Provide temporary and removable protection for installed products. Control activity in immediate work area to prevent damage.

1.9 ACCESS ROADS:

A. Construct and maintain temporary roads accessing public thoroughfares to serve construction area.

B. Extend and relocate as work progress requires. Provide detours necessary for unimpeded traffic flow.

C. Provide and maintain access to fire hydrants, free of obstructions.

D. Provide means of removing mud from vehicle wheels before entering streets.

1.10 PARKING:

A. Arrange for temporary surface parking areas to accommodate construction personnel.

B. When site space is not adequate, provide additional off-site parking.

1.11 PROGRESS CLEANING AND WASTE REMOVAL:

A. Maintain areas free of waste materials, debris, and rubbish. Maintain site in a clean and orderly condition.

B. Collect and remove waste materials, debris, and rubbish from site periodically and dispose off-site.

1.12 REMOVAL OF UTILITES, FACILITIES, AND CONTROLS:

A. Remove temporary utilities, equipment, facilities, and materials prior to final inspection.

B. Remove underground installations to a minimum depth of 2 feet. Grade site as indicated.

C. Clean and repair damage caused by installation or use of temporary work.

D. Restore existing facilities used during construction to original condition. Restore permanent facilities used during construction to specified condition.

PART 2 PRODUCTS

PART 3 EXECUTION

Not used.

END OF SECTION

SECTION 01564

STORM WATER POLLUTION PREVENTION DURING CONSTRUCTION

PART 1 GENERAL

1.1 SECTION INCLUDES:

A. Shared Storm Water Pollution Prevention Plan (SWP3)

B. Notice of Intent (NOI).

C. Termination of General Permit Coverage.

1.2 REFERENCES:

A. Texas Pollutant Discharge Elimination System (TPDES) General Permit No. TXR150000, administered by the Texas Commission of Environmental Quality (TCEQ).

1.3 DEFINITIONS:

A. All definitions per Part I, Section B, Texas Pollutant Discharge Elimination System (TPDES) General Permit No. TXR150000 (TPDES General Permit).

B. CONTRACTOR: Primary Operator, as defined in the TPDES General Permit.

C. OWNER: Primary Operator, as defined in the TPDES General Permit.

D. Shared SWP3: as described in TPDES General Permit, Part III, Section A.

E. NOI – Notice of Intent.

F. NOT – Notice of Termination.

1.4 SUBMITTALS:

A. Procedures for Submittals: Section 01300.

B. Submit Shared SWP3 for signature by CONTRACTOR and OWNER at Pre-Construction Meeting.

PART 2 PRODUCTS

Not used.

PART 3 EXECUTION

3.1 SHARED STORM WATER POLLUTION PREVENTION PLAN (SWP3):

A. A Shared SWP3 is required for this project. The CONTRACTOR and OWNER shall share one SWP3.

B. CONTRACTOR shall prepare and implement a single, comprehensive SWP3 for the entire construction site in accordance with TPDES General Permit at CONTRACTOR's expense.

1. CONTRACTOR shall clearly list all Operators in the Shared SWP3, including themselves and the OWNER as Primary Operators, and any other Operators participating in the shared SWP3.

2. In the Shared SWP3, the CONTRACTOR must clearly state the following:

a. The CONTRACTOR has day-to-day operational control of those activities at a construction site that are necessary to ensure compliance with the shared SWP3;

b. The OWNER has the ability to make modifications to the construction plans and specifications; and

c. The OWNER has no responsibilities regarding implementation of the SWP3 unless CONTRACTOR fails to perform and complete contractual obligations.

3. The CONTRACTOR shall provide a signature page, in accordance with TPDES General Permit Part III, Section A.1, for the Shared SWP3 to the OWNER at the Pre-Construction Meeting.

4. CONTRACTOR shall prepare, certify, and post the Construction Site Notice in accordance with the applicable section of the TPDES General Permit.

5. If applicable, the CONTRATOR shall submit the Construction Site Notice to operator(s) of any municipal separate sewer system (MS4), in accordance with TPDES General Permit, Part II, Section E.2(c). CONTRACTOR shall determine applicability of this Section.

1.1 NOTICE OF INTENT (NOI):

A. CONTRACTOR shall submit a copy of CONTRACTOR's Notice of Intent (NOI) to OWNER at the Pre-Construction Meeting.

B. CONTRACTOR shall submit CONTRACTOR's NOI to TCEQ in accordance with TPDES General Permit, Part II, Section E.3(b), at least seven (7) days prior to commencing construction activities, or if utilizing electronic submittal, prior to commencing construction, at CONTRACTOR's expense.

1.2 TERMINATION OF GENERAL PERMIT COVERAGE:

A. Within 30 days of meeting any of the conditions in TPDES General Permit, Part II, Section F.3(b), the CONTRACTOR shall:

1. Remove the Construction Site Notices;

2. Complete the applicable portion of the Construction Site Notices related to removal; and

3. Submit the completed Construction Site Notices to the operator(s) if any MS4 receiving the discharge.

B. CONTRACTOR shall submit CONTRACTOR's NOT as required by the TPDES General Permit.

END OF SECTION

SECTION 01600

MATERIAL AND EQUIPMENT

PART 1 GENERAL

1.1 SECTION INCLUDES:

A. Transportation and Handling.

B. Storage and Protection.

C. Product Options.

D. Substitutions.

E. Storage Facilities.

F. Field Quality Control

1.2 TRANSPORTATION AND HANDLING:

A. Schedule delivery of products or equipment as required to allow timely installation and to avoid prolonged storage.

B. Transport and handle products in accordance with manufacturer's instructions.

C. Promptly inspect shipments to ensure that products comply with requirements, quantities are correct, and products are undamaged.

D. Provide equipment and personnel to handle products by methods to prevent soiling, disfigurement, or damage.

E. Pipe to be transported with exposed ends tarped to prevent accumulation of airborne contaminates during transport.

1.3 STORAGE AND PROTECTION:

A. Store and protect products in accordance with manufacturer's instructions, with seals and labels intact and legible.

B. Store sensitive products in weather tight, climate controlled enclosures.

C. For exterior storage of fabricated products, place on sloped supports, above ground.

D. Provide off-site storage and protection when site does not permit on-site storage or protection.

E. Cover products subject to deterioration with impervious sheet covering. Provide ventilation to avoid condensation or potential degradation of product.

F. Store loose granular materials on solid flat surfaces in a well-drained area. Prevent mixing with foreign matter.

G. Provide equipment and personnel to store products by methods to prevent soiling, disfigurement, or damage.

H. Arrange storage of products to permit access for inspection. Periodically inspect to verify products are undamaged and are maintained in acceptable condition.

1.4 PRODUCT OPTIONS:

A. Products Specified by Reference Standards or by Description Only: Any product meeting those standards or description.

B. Products Specified by naming one or more Manufacturers: Products of manufacturers named and meeting Specifications, no options or substitutions allowed.

C. Products Specified by naming one or more Manufacturers with a Provision for Substitutions: Submit a request for substitution for any manufacturer not named in accordance with the following article. Where terms such as "or equal," "or equivalent" are used in this Contract, they shall be taken to mean "or approved equivalent." Proposed equivalents shall be offered as substitutions.

1.5 SUBSTITUTIONS:

A. Engineer will consider requests for Substitutions only within 45 days after date established in Notice to proceed.

B. Substitutions may be considered when a product becomes unavailable through no fault of the Contractor.

C. Document each request with complete data substantiating compliance of proposed Substitution with Contract Documents.

D. A request constitutes a representation that the Contractor:

1. Has investigated proposed product and determined that it meets or exceeds the quality level of the specified product.

2. Will provide the same warranty for the Substitution as for the specified product.

3. Will coordinate installation and make changes to other work which may be required for the work to be complete with no additional cost to Owner.

4. Waives claims for additional costs or time extension which may subsequently become apparent as a result of the Substitution.

E. Substitutions will not be considered when they are indicated or implied on shop drawing or product data submittals, without separate written request, or when acceptance will require revision to the Contract Documents.

F. Substitution Submittal Procedure:

1. Submit copies of request for Substitution for consideration. Number of copies as specified in Sub-Section 01300-1.5. Limit each request to one proposed Substitution.

2. Submit shop drawings, product data, and certified test results attesting to the proposed product equivalence. Burden of proof is on proposer.

3. The Engineer will notify Contractor in writing of decision to accept or reject request.

PART 2 PRODUCTS

Not used.

PART 3 EXECUTION

3.1 STORAGE FACILITIES:

A. Material staging area is located at the WPP site as shown.

1. Provide weatherproof temporary storage containers as necessary, specifically for the purpose of providing for protection of products and equipment.

a. Size containers to accommodate anticipated storage items.
b. Equip containers with lockable doors.

2. Provide methods of storage of products and equipment off the ground.

3. Return area to natural condition prior to final inspection.

3.2 FIELD QUALITY CONTROL:

A. Inspect Deliveries:

1. Inspect all products or equipment delivered to the site prior to unloading.

a. Reject all products or equipment that are damaged, used, or in any other way unsatisfactory for use on Project.

B. Monitor Storage Area: Monitor storage area to ensure suitable conditions are maintained as required by manufacturer or as appropriate for particular items.

END OF SECTION

SECTION 01650

STARTING OF SYSTEMS

PART 1 GENERAL

1.1 SECTION INCLUDES:

A. Starting Equipment Systems.

B. Demonstration and Instructions.

PART 2 PRODUCTS

Not used.

PART 3 EXECUTION

3.1 STARTING EQUIPMENT SYSTEMS:

A. Coordinate schedule for start-up of various equipment with other portions of the work that are interdependent to the start-up of this contract.

B. Notify Engineer seven days prior to start-up of each item.

C. Verify that each piece of equipment has been checked for proper lubrication, drive rotation, belt tension, control sequence, or for other conditions which may cause damage.

D. Verify that tests, meter readings, and specified electrical characteristics agree with those required by the equipment manufacturer.

E. Verify wiring and support components for equipment are complete and tested.

F. Execute start-up under supervision of applicable manufacturer's representative in accordance with manufacturers' instructions.

G. When specified in individual specification Sections, require manufacturer to provide authorized representative to be present at site to inspect, check, and approve equipment or system installation prior to start-up, and to supervise placing equipment in operation.

H. Submit a written report in accordance with Section 01400 that equipment or system has been properly installed and is functioning correctly.

3.2 DEMONSTRATION AND INSTRUCTIONS:

A. Utilize operation and maintenance manuals as basis for instruction. Review contents of manual with Owners' personnel in detail to explain all aspects of operation and maintenance.

B. Demonstrate start-up, operation, control, adjustment, trouble-shooting, servicing, maintenance, and shutdown of each item of equipment during equipment start-up services.

C. Prepare and insert additional data in operations and maintenance manuals when need for additional data becomes apparent during instruction.

D. As a minimum, the amount of time required for instruction on each item of equipment and system is that specified in individual sections.

END OF SECTION

SECTION 01700

CONTRACT CLOSEOUT

PART 1 GENERAL

1.1 SECTION INCLUDES:

A. Closeout procedures.

B. Adjusting.

C. Final Cleaning.

D. Project record documents.

E. Warranty.

F. Spare Parts and Maintenance Materials.

1.2 CLOSEOUT PROCEDURES:

A. Submit written certification that contract documents have been reviewed, work has been inspected, and that work is complete in accordance with contract documents and ready for Engineer's review.

B. Provide submittals to Engineer that are required by governing or other authorities.

C. Submit final Application for Payment identifying total adjusted Contract sum, previous payments, and sum remaining due.

D. Submit executed Affidavit of Bills paid with final Application for payment. Affidavit shall state all bills for labor, materials, and incidentals incurred in the construction of the project have been paid in full, and that there are no claims pending of which the Contractor has been notified.

1.3 ADJUSTING:

A. Adjust operating products and equipment to ensure smooth and unhindered operation.

1.4 FINAL CLEANING:

A. Execute final cleaning prior to final project assessment.

B. Clean debris from roofs, and drainage systems.

C. Clean site; sweep paved areas, rake clean landscaped surfaces.

D. Remove waste and surplus materials, rubbish, and construction facilities from the site.

1.5 PROJECT RECORD DOCUMENTS:

A. Maintain on site, one set of the following record documents; record actual revisions to the work:

1. Drawings.

2. Specifications.

3. Addenda.

4. Change Orders and other modifications to the Contract.

5. Reviewed Shop Drawings, Product Data, and Samples.

6. Manufacturer's instruction for assembly, installation, and start-up of products and equipment.

B. Ensure entries are complete and accurate, enabling future reference by Owner.

C. Store record documents separate from documents used for construction.

D. Record information concurrent with construction progress.

E. Specifications: Legibly mark and record at each product section description of actual products installed, including the following:

1. Manufacturer's name and product model and number.

2. Product substitutions or alternates utilized.

3. Changes made by Addenda and modifications.

F. Record Documents and shop drawings: Legibly mark each item to record actual construction including:

1. Measured horizontal and vertical locations of underground utilities and appurtenances, referenced to permanent surface improvements.

2. Measured locations of internal utilities and appurtenances concealed in construction, referenced to visible and accessible features of the work.

3. Field changes of dimension and detail.

4. Details not on original contract drawings.

G. Remove Engineer title block and seal from all documents.

H. Submit documents to Engineer with claim for final Application for Payment.

1.6 WARRANTY:

A. The Contractor shall guarantee the work performed under this contract against defective materials and workmanship for a period of one year from the date of Substantial Completion or acceptance of individual work elements. The Contractor shall arrange to have his performance bond remain in effect for a period of one year after this date to cover his guarantee as stipulated under this item and in the General Conditions.

B. If defective materials and/or workmanship are discovered which require repairs made under this guarantee, all such repairs shall be done by the Contractor at his own expense within ten days after written notice of such defect. Should the Contractor fail to repair of correct such deficiency within ten days after notification, the Owner may make the necessary repairs and charge the Contractor with the applicable costs of all labor and materials required to correct the deficiency.

1.7 SPARE PARTS AND MAINTENANCE MATERIALS:

A. Provide products, spare parts, maintenance and extra materials in quantities specified in individual specification sections.

B. Deliver to project site and place in location as directed; obtain receipt prior to final payment.

PART 2 PRODUCTS

Not used.

PART 3 EXECUTION

Not used.

END OF SECTION

SECTION 02110

SITE CLEARING AND GRUBBING

PART 1 GENERAL

1.1 SECTION INCLUDES:

A. General

B. Preparation for Work.

C. Protection of Existing Features.

D. Clearing and Grubbing.

E. Debris Removal.

F. Erosion Control.

PART 2 PRODUCTS

Not used.

PART 3 EXECUTION

3.1 GENERAL:

A. Site clearing and grubbing shall consist of the removal and disposal of trees, stumps, brush, roots, vegetation, logs, rubbish and other objectionable matter from the construction area.

B. Contractor shall take care to preserve and protect all existing trees on the project site. At no time shall Contractor park vehicles or equipment or store materials within 10' of the drip-line of any existing trees.

3.2 PREPARATION FOR WORK:

A. Verify that existing plant life designated to remain, if any, is tagged or identified and protected.

B. Verify and protect survey control.

3.3 PROTECTION OF EXISTING FEATURES:

A. Locate, identify and protect the utilities to remain from damage.

B. Protect trees, plant growth and features designated to remain.

C. Protect benchmarks and survey control from damage or displacement.

3.4 CLEARING AND GRUBBING:

A. The designated construction area shall be cleared of all trees, brush, shrubbery and plants, not indicated to be preserved. Trees and brush designated to be left in place shall be carefully trimmed as directed and shall be protected from scarring, barking, or other injuries during construction operations. Pruned limbs over two inches in diameter shall be treated by painting the exposed ends with an approved asphaltic material. Stumps, roots and other objectionable materials sources are to be removed to the complete extent necessary to prevent objectionable matter from becoming mixed with the material to be used in construction.

B. Unless otherwise provided, all merchantable timber removed as previously specified shall become the property of the Contractor. It is the intent of this Specification to provide for the removal and disposal of all obstructions and objectionable materials not designated to remain.

C. Remove existing concrete and asphalt paving, curb, gutter, walks and other items shown, or described to be removed.

D. Remove trees, shrubs and other plant life within the site shown, or described to be removed. Remove trees and shrub stumps and root system to a depth of 24 inches below existing grades. Remove grass and ground cover root system to a depth of 6 inches.

3.5 DEBRIS REMOVAL:

A. Removed material shall become the property of the Contractor. Contractor shall remove debris, rock and extracted plant life from site and legally dispose.

3.6 EROSION CONTROL:

A. Provide erosion control measures necessary to maintain site. Protect against both wind and rainfall erosion.

B. Provide erosion control as specified in Section 01564.

END OF SECTION

SECTION 02210

GRADING AND EARTHWORK

PART 1 GENERAL

1.1 SECTION INCLUDES:

A. Grading and earthwork which occur in areas other than under structures, under paving, or trenching for utilities.

B. Earthwork consists of operations required for the excavation of materials on-site; excavation of borrow material from designated areas; compaction of natural or improved sub-grades; finish grading; disposal of excess or unsuitable materials; and other required operations. Earthwork shall conform with dimensions and typical sections shown, and with lines and grades established.

1.2 REFERENCES:

A. ASTM D698 — Test for Moisture-Density Relations of Soils (Standard).

B. ASTM D1557 — Test for Moisture-Density Relations of Soils (Modified).

C. ASTM D2487 — Classification of Soils for Engineering Purposes.

D. ASTM D2922 — Density of Soil and Soil Aggregate In-Place by Nuclear Methods.

E. ASTM D3017 — Moisture Content of Soil and Soil Aggregate In-Place by Nuclear Methods.

1.3 DEFINITIONS:

A. Classification: Earthwork materials are classified in accordance with definitions in this Article.

B. Topsoil: Top 6 inches of natural surface soil possessing the characteristics of representative soils on the site that produce growths of grass or other vegetation. Topsoil includes roots and other vegetation.

C. General Site Fill: Suitable, clean material excavated on-site or imported borrow material meeting specified characteristics.

D. Select Fill: Imported borrow material as required for construction, and as defined.

E. Subgrade: Natural soil at the established lines and grades.

F. Borrow: Material taken from designated areas to make up any deficit of excavated material and used for general site or select fill. Obtain from area that is normally dry and well drained. Borrow does not include top soil.

G. Finish Grading: Operations required for smoothing disturbed areas that are not overlaid with pavement.

H. Excavation: Excavation of every description and of whatever substances encountered within the limits of the project to the lines and grades indicated.

I. Compaction: Compaction of soil materials shall be measured as a percent of Standard Proctor density as determined by ASTM D698.

1.4 SUBMITTALS:

A. Procedures for Submittals: Section 01300.

B. Samples: Adequate samples of material as required by the testing laboratory.

C. Quality Control Submittals: For information only.

1. Test Reports: Laboratory analysis of each soil material, including on-site and borrow materials proposed for use on project.

a. General Site Fill: Soil type, liquid limit and plasticity index. Moisture-density relations; identify maximum density optimum moisture.

b. Select Fill: Soil type, liquid limit, plasticity index and gradation. Moisture-density relations; identify maximum density/optimum moisture.

c. Topsoil: Soil type, liquid limit, and plasticity index.

1.5 EXISTING UTILITIES:

A. Where pipes, ducts, and structures are encountered in the excavation but are not shown, immediately notify the Engineer.

PART 2 PRODUCTS

2.1 SELECT FILL:

A. Source: Select fill shall be imported borrow material from borrow areas approved by the Engineer. Material from source shall be tested for compliance with project requirements and approved by the Engineer.

B. Suitability: Use the best material available, suitability of select fill is subject to the Engineer's approval.

C. Quality: Select fill material must be free of clay lumps larger than 1 inch, rocks larger than ½-inch, and/or excessive silts. Do not use soil containing brush, roots, sod, or similar organic materials.

D. Characteristics: Materials shall conform to ASTM D2487 Class II or Class III and shall have a liquid limit less than 35 with a plasticity index less than 15 but greater than 4.

2.2 GENERAL SITE FILL:

A. Source: Obtain general site fill from required excavation or, if excavated material is not sufficient, from borrow areas approved by the Engineer.

B. Suitability: Use the best material available from excavation or borrow. Suitability of general site fill material is subject to the Engineer's approval.

C. Quality: Fill material shall be free of lumps larger than 3 inches, rock larger than 2 inches, and excessive silts. Do not use soil containing brush, roots, sod, or similar organic materials.

D. Characteristics: General site fill material shall conform to ASTM D2487 Class II or Class III Soils.

2.3 TOP SOIL:

A. Source: Obtain top soil from the required excavation, or if sufficient material is not available, from borrow areas approved by the Engineer.

B. Suitability: Use the best material available. Suitability of material is subject to the Engineer's approval.

C. Quality: Material shall be free of large roots or branches, stumps, brush, rubbish, or other objectionable matter.

D. Characteristics: Soils possessing the characteristics that produce growth of grasses or other vegetation.

2.4 SOURCE QUALITY CONTROL:

A. Provide materials of each type from same source throughout the project.

B. A change in source requires sampling, testing, and approval by Engineer.

PART 3 EXECUTION

3.1 STRIP AND STOCKPILE:

A. Remove topsoil at all non-paved areas where excavation of topsoil is required or where fill material will be added for site grading.

B. Remove top 6 inches of topsoil where necessary and stockpile on the Owner's property. Protect stockpiled topsoil from other excavated materials, dumping of unwanted material, dumping by the public, and erosion. Upon completion of rough grading, replace topsoil in 4-inch minimum layer to finish grade elevations as shown on the Grading Plan.

C. Removal of topsoil in building areas and paving areas is further described in Sections 02224.

3.2 EXCAVATION:

A. Objective: Excavate to lines, grades, and elevations as shown or required for subsequent construction. All excavation shall be made in such manner as to permit all surfaces to be brought to final line and grade within ±0.1 foot. Over-excavation shall be restored by the Contractor at his own expense. Finish grades consistently high or low will not be acceptable and shall be corrected by the Contractor at his expense and no additional cost to the Owner.

B. Drainage: During excavation, maintain grades as required to maintain drainage; or, as directed by the Owner or Engineer, install temporary drains or drainage ditches to intercept or divert surface water and prevent interference or delay of the work.

C. Stockpiling: If at time of excavation it is not possible to place material in the proper section of permanent construction, stockpile the material in Owner or Engineer approved areas for later use.

D. Stone or Rock: Stones or rock fragments larger than 2 inches in their greatest dimension will not be permitted in top 6 inches of subgrade.

E. Dressing: Uniformly dress-cut and fill slopes to slope, cross section, and alignment, as shown.

F. Rock: Break with hydraulic ram to obtain near neat line excavation. Blasting will not be allowed.

G. Classification: Excavation is unclassified.

3.3 TREATMENT OF SUBGRADES:

A. Topsoil and vegetation in excavation, or fill areas, shall be stripped from the ground surface and stockpiled, exposing sound undisturbed subgrade soils.

B. Fill Areas: Scarify subgrade to a depth of 6 inches and recompact to a density of 95% of maximum density per ASTM D698 at a moisture content of ±2% of optimum.

C. Cut Areas: Scarify exposed subgrade to a depth of 6 inches and recompact to a density of 95% of the maximum density per ASTM D698 at a Moisture content of ±2% of optimum.

D. Undercut any soft or compressible areas detected during the recompaction process to sound subgrade soils and recompact. General or select fill shall be used to bring the soft or compressive areas to grade. Work shall precede placement of topsoil, walks, drives, or structure foundations. Allow for placement of minimum 4-inch layer of topsoil in areas not covered by structures or pavement.

3.4 PLACING FILL:

A. Examination of Subgrade: Do not place fill until the subgrade preparation has been accepted by the Engineer.

B. Removing Debris: Remove all roots, stone, and debris that are uncovered in the fill material.

C. Spreading Fill and Backfill: Spread the material in horizontal layers over the entire fill area. The thickness of each layer before compaction shall not exceed 8 inches unless otherwise directed by the Engineer.

D. Attaining Proper Bond: If the compacted surface of a layer is too smooth to bond with succeeding layers, loosen the surface before continuing the work.

E. Place materials to lines and grades shown allowing for depth of topsoil.

F. Maintain aggregate drainage throughout construction.

G. The material shall be blended sufficiently to secure the best degree of compaction.

3.5 DISTRIBUTION OF TOPSOIL:

A. Perform rough grading and topsoil/finish grading work.

B. Preparation:

1. Prior to placing topsoil, scarify the subgrade to a depth of 2 inches to provide effective bonding.

2. Shape areas designated, including cut and fill areas, to receive a minimum of 4 inches of topsoil.

C. Placement:

1. Do not haul or place wet topsoil. Also prohibited is placement of topsoil on a subgrade that is excessively wet, extremely dry, or in a condition otherwise detrimental to proper grading or planting.

2. Distribute topsoil uniformly and spread evenly. Correct irregularities in the surface to prevent formation of depressions where water could stand.

3. Perform the spreading operation so that planting can proceed with little additional tillage or soil preparation. Leave the area smooth and suitable for planting.

4. Lightly compact topsoil to obtain proper bond with previously placed or prepared material.

D. Maintenance: Where any portion of the surface becomes eroded or otherwise damaged, repair the affected area to establish the condition and grade prior to topsoil placement; then replace topsoil.

3.6 MATERIAL DISPOSAL:

A. Remove waste and excess excavated material from the construction site before Pre-final Inspection. Legally dispose of material at a licensed site or with written and notarized permission from the property owner for a private disposal site. All costs associated with waste material removal and disposal shall be paid for by the Contractor.

END OF SECTION

SECTION 02220

TRENCH AND EXCAVATION SAFETY SYSTEM

PART 1 GENERAL

1.1 SECTION INCLUDES:

A. Requirements for a Trench and Excavation Safety System to be designed and furnished by the Contractor for the safety and health of personnel.

B. Submission of a written Plan describing the System in detail.

1.2 PAYMENT:

A. Payment will be as stipulated on the Bid Form.

1. If no individual line item is identified, include in appropriate Lump Sum bid item(s). Provide as a Schedule of Values project element in accordance with Section 01019.

2. If individual line item is identified on the Bid Form and is presented as unit cost per linear foot, the Trench Safety Plan shall include appropriate trench safety for excavation that may be required for any relevant lines, structures, etc. Include associated costs in unit cost presented on bid.

1.3 REFERENCES:

A. 29CFR1926 - Occupational Safety and Health Standards - Excavations, United States Department of Labor, latest edition.

B. Others - Other applicable Federal, State, and local rules for Trench Construction or Excavations.

1.4 REQUIREMENTS:

A. The Contractor shall develop, design, and implement a System. The Contractor shall bear the sole responsibility for the adequacy of the System.

B. The requirements of 29CFR1926 shall be the minimum requirements for this specification and is adopted as a part of this specification. Other regulations relating to trench and excavation safety shall also be considered a part of this specification as if referenced directly.

C. Should the System require wider trenches than shown, the Contractor shall be responsible for the costs associated with determining adequacy of pipe bedding and class, as well as, purchase and installation of alternate materials.

1.5 SUBMITTALS:

A. Submit copies of the System Plan for information only. The Engineer will not review the System Plan for sufficiency, adequacy, or other engineering aspects. Submission is only to record the presence or absence of the System Plan.

1.6 QUALITY ASSURANCE:

A. The Trench Safety System shall be designed by an Engineer registered as a Professional Engineer in the State of Texas. The System Plan shall be sampled with the Engineer's seal, signed, and dated.

PART 2 PRODUCTS

Not used.

PART 3 EXECUTION

3.1 GENERAL:

A. Implement the system in accordance with the written System Plan and conduct affected work in accordance with the same.

END OF SECTION

SECTION 02224

EXCAVATION, BACKFILLING and COMPACTING FOR STRUCTURES

PART 1 GENERAL

1.1 SECTION INCLUDES:

A. Excavating, Backfilling and Compacting for Structures.

1.2 REFERENCES:

A. ASTM C136 — Sieve Analysis of fine and course aggregates.

B. ASTM D698 — Standard Methods of Test for Moisture-Density Relations of Soil (Standard).

C. ASTM D1557 — Test for Moisture-Density Relations of Soil (Modified).

D. ASTM D2992 — Density of Soil and Soil Aggregate In-Place by Nuclear Methods.

E. ASTM D3017 — Moisture Content of Soil and Soil Aggregate In-Place by Nuclear Methods.

1.3 SUBMITTALS:

A. Procedures for Submittals: Section 01300.

B. Samples: Aggregate samples of material as required by the testing laboratory.

C. Quality Control Submittals: For information only.

1.4 PROJECT CONDITIONS:

A. Protection:

1. Erect sheeting, shoring and bracing as necessary for protection of person, improvements and excavations.

2. Provide dewatering and drainage necessary to keep excavations free of water.

B. Coordination: Coordinate backfill operations with installation of utilities.

PART 2 PRODUCTS

2.1 EXCAVATED MATERIAL:

A. Source: Select fill shall be imported borrow material from borrow areas and/or on-site materials approved by the Engineer. Material from source shall

be tested for compliance with project requirements and approved by the Engineer.

B. Suitability: Use the best material available, suitability of select fill is subject to the Engineer's approval.

C. Quality: Select fill material must be free of clay lumps larger than 1 inch, rocks larger than 2-inches and/or excessive silts. Do not use soil containing brush, roots, sod, or similar organic materials.

D. Characteristics: Materials shall conform to ASTM D2487 Class II or Class III and shall have a liquid limit less than 35 with a plasticity index less than 15 but greater than 4.

2.2 GENERAL SITE FILL:

A. Source: Obtain general site fill from required excavation or, if excavated material is not sufficient, from borrow areas approved by the Engineer.

B. Suitability: Use the best material available from excavation or borrow. Suitability of general site fill material is subject to the Engineer's approval.

C. Quality: Fill material shall be free of lumps larger than 3 inches, rock larger than 2 inches and excessive silts. Do not use soil containing brush, roots, sod, or similar organic materials.

D. Characteristics: General site fill material shall conform to ASTM D2487 Class II or Class III Soils.

2.3 AGGREGATE:

A. Free-draining, well-grade crushed rock, gravel, or sand per ASTM 136, Coarse Aggregate Section.

2.4 TOP SOIL:

A. Source: Obtain top soil from the required excavation, or if sufficient material is not available, from borrow areas approved by the Engineer.

B. Suitability: Use the best material available. Suitability of material is subject to the Engineer's approval.

C. Quality: Material shall be free of large roots or branches, stumps, brush, rubbish, or other objectionable matter.

D. Characteristics: Soils possessing the characteristics that produce growth of grasses or other vegetation.

2.5 SOURCE QUALITY CONTROL:

A. Provide materials of each type from same source throughout the project.

B. A change in source requires sampling, testing and approval by Engineer.

PART 3 EXECUTION

3.1 EXAMINATION AND PREPARATION:

A. Examine project site and investigate existing subsurface conditions to determine nature, kind and character of materials and conditions to be encountered.

B. Prior to commencing excavation operations, disconnect and cap or protect existing utility services, if any, in accordance with the requirements of the owning companies and applicable ordinances and regulations.

C. Provide for surface drainage.

D. Keep excavations free of water during entire progress of the work.

E. Prior to backfilling against grade beams and below grade walls, verify that beams, walls and footings have properly cured.

F. Verify that forms, trash, debris and applicable temporary shoring have been removed.

G. Verify that walls are supported at top and bottom.

3.2 EXCAVATION:

A. Excavate beneath structures to lines, grades and elevations as shown. Over-excavation shall be restored by the Contractor at his own expense.

B. Scarify exposed surfaces to a depth of 8 inches and recompact to a density of 95% of the maximum dry density when tested by the Standard Proctor Compaction Test (ASTM D698), at or above optimum moisture content.

C. Remove weak or highly organic soils noted by probing and replace with general site fill. Place fill in 8-inch lifts and compact to 95% of maximum dry density (ASTM D698) at or above optimum moisture content.

D. Do not extend structure fill beyond structure lines or as shown.

E. Excavation is unclassified. Break rock with hydraulic ram to obtain near neat line excavation. Blasting is not allowed.

3.3 BACKFILL:

A. Schedule backfilling to expedite construction progress.

B. Backfill in manner to prevent excessive pressure against previously completed work and to prevent damage or displacement to utility systems.

C. Place backfill materials for grade beams as follows:

1. Exterior Face of Grade Beams: Where required, backfill with select fill. Place backfill in layers of approximately 8 inches loose lifts and compact to minimum 95% of maximum dry density percent at or above optimum moisture content. Standard Proctor Density (ASTM D698).

2. Place backfill at grade beams as soon as forms are removed. Keep grade beam excavations dry at all times. If rain occurs before backfill is placed, remove water for excavations immediately.

D. Backfill structure walls with free-draining coarse aggregate backfill. Consolidate by tamping to uniform density to prevent settling. Do not over compact.

E. Exercise care to prevent over compaction of backfills.

F. Where top of below grade structure backfill is not covered with paving or other impervious barrier, the final two feet of backfill shall be general site fill. Place fill in 8-inch thick lifts and compact to minimum 95% of maximum dry density at or above optimum moisture content. Allow for 4 inches of top soil placement.

G. Undercut any soft or compressible areas detected during the recompacting process to sound subgrade soils and recompact. General or select fill shall be used to bring the soft or compressive areas to grade. Work shall precede placement of topsoil, walks, drives, or structure foundations. Allow for placement of minimum 4-inch layer of topsoil in areas not covered by structures or pavement.

3.4 MATERIAL DISPOSAL:

A. Remove waste and excess excavated material from the construction site before final inspection. Legally dispose of material at a licensed site or with written and notarized permission from the property Owner for a private disposal site. All costs associated with waste material removal and disposal shall be paid for by the Contractor.

3.5 TESTING:

A. Laboratory Testing and Inspection Services: As specified in Section 01400-1.5, Testing Laboratory Services.

B. Soil Moisture and Density: Perform a minimum of 3 tests per lift.

END OF SECTION

SECTION 02225

EXCAVATION, BACKFILLING AND COMPACTING FOR UTILITIES

PART 1 GENERAL

1.1 SECTION INCLUDES:

A. Unclassified excavation, trenching, bedding, backfilling and compacting for potable water mains, gravity-flow sanitary sewers, manholes, valves, and other utility systems and appurtenances, and the disposal of excess excavated material.

1.2 REFERENCES:

A. ASTM C33 – Coarse Aggregates.

B. ASTM D698 – Moisture-Density Relations of Soil (Standard).

C. ASTM D1557 – Test for Moisture-Density Relations of Soil (Modified).

D. ASTM D2321 – Underground Installation of Thermoplastic Pipe for Sewers and Other Gravity – Flow Applications.

E. ASTM D2487 – Classification of Soils for Engineering Purposes.

F. ASTM D4254 – Minimum Index Density and Unit Weight of Soils and Calculations of Relative Density.

G. ASTM D4318 – Test for Liquid Limit, Plastic Limit and Plasticity Index of Soils.

H. OSHA – Occupational Safety and Health Administration and Related Regulations.

1.3 SUBMITTALS:

A. Procedures for Submittals: Section 01300.

B. Submit sample(s) of material(s) proposed to be used for bedding in the pipe zone and backfill of fiberglass structures.

1. One (1) set to materials testing lab for classification.
2. One (1) set to Engineer for approval.

1.4 PROTECTION OR REMOVAL OF EXISTING UTILITIES:

A. The Contractor shall anticipate all underground obstructions, such as but not limited to, water mains, gas lines, storm and sanitary sewers, telephone or electric light or power ducts, concrete and debris. Any such lines or obstructions indicated on the Drawings show only the approximate locations and shall be verified in the field by the Contractor. The Owner and Engineer

will endeavor to familiarize the Contractor with all known utilities and obstructions, but this shall not relieve the Contractor from full responsibility in anticipating all underground obstructions whether or not shown on the Drawings.

B. The Contractor shall, at his own expense, maintain in proper working order and without interruption of service all existing utilities and services which may be encountered in the work. With the consent of the Engineer and utility owner such service connections may be temporarily interrupted to permit the Contractor to remove designated lines or to make temporary changes in the locations of services. The cost of making any temporary changes shall be the responsibility of the Contractor.

C. Notify all utility companies involved to have their utilities located and marked in the field. All underground utilities in a particular segment of the project shall then be uncovered to verify location and elevation before construction begins in that segment of the project.

D. The Contractor shall obtain necessary permits, except County right-of-way permits, required for completion of the project.

1.5 DEFINITIONS:

A. All excavation associated with the project is unclassified.

B. Bedding: Includes the area from the trench bottom to the bottom of the pipe where material is placed to bring the trench bottom up to grade. A compacted depth of approximately 4 to 6 inches is generally sufficient bedding thickness.

C. Haunching: Includes the area from the bottom of the pipe to the spring line of the pipe. Material in this area must be placed and consolidated to provide adequate side support while avoiding both vertical and lateral displacement of the pipe. **The type and density of the material in this area are the most important factors affecting the performance and deflection of the pipe.**

D. Initial Backfill: Includes the area from the spring line of the pipe to a point at least 6 inches over the top of the pipe.

E. Final Backfill: Includes the area above the initial backfill, up to final grade or the bottom of the flexible base material in the pavement section.

F. Pipe Zone: Includes areas of bedding, haunching and initial backfill as defined above.

PART 2 PRODUCTS

2.1 PIPE ZONE:

A. Unless otherwise indicated on the drawings, materials for use within the pipe zone and within 24 inches of fiberglass structures shall be in accordance with following Table 2.1:

TABLE 2.1
DESCRIPTION OF MATERIAL CLASSIFICATION
(as defined in ASTM D2321)

Class	Type	Soil Group Symbol	Description ASTM D2487	% Passing Sieve Sizes			Atterberg Limits		Coefficients	
				1½ in (40 mm)	#4 (4.75 mm)	#200 (0.075 mm)	LL[b]	PI[c]	Uniformity C_u	Curvature C_c
I	Manufactured, Processed Aggregate; dense-graded, clean	None	Angular, granular, crushed stone or rock, crushed gravel, and stone/sand mixtures with gradations selected to minimize migration of adjacent soils; contain little or no fines	100%	≤50%	<5%	Non Plastic			
II	Coarse-Grained Soils, clean	GW	Well-graded gravels and gravel-sand mixtures; little or no fines	100%	<50% of Coarse Fraction	<5%	Non-Plastic		>4	1 to 3
		GP	Poorly-graded gravels and gravel-sand mixtures; little or no fines						<4	<1 or >3
		SW	Well-graded sands and gravelly sands; little or no fines		>50% of Coarse Fraction				>6	1 to 3
		SP	Poorly-graded sands and gravelly sands; little or no fines						<6	<1 or >3
	Coarse-Grained Soils, borderline clean to w/fines	e.g. GW-GC, SP-SM.	Sands and gravels which are borderline between clean and with fines	100%	Varies	5% to 12%			Same as for GW, GP, SW and SP	
III	Coarse-Grained Soils with Fines	GM	Silty gravels, gravel-sand-silt mixtures	100%	<50% of Coarse Fraction	>12% to <50%		<4 or <"A" Line		
		GC	Clayey gravels, gravel-sand-clay mixtures					<7 and >"A" Line		
		SM	Silty sands, sand-silt mixtures	>50% of Coarse Fraction				>4 or <"A" Line		
		SC	Clayey sands, sand-clay mixtures					>7 and >"A" Line		
IV[a]	Fine-Grained Soils (inorganic)	ML	Inorganic silts and very fine sands, rock flour, silty or clayey fine sands, silts with slight plasticity	100%	100%	>50%	<50	<4 or <"A" Line		
		CL	Inorganic clays of low to medium plasticity, gravelly clays, sandy clays, silty clays, lean clays					>7 and >"A" Line		

[a] Includes Test Method ASTM D2487 borderline classifications and dual symbols depending on plasticity and liquid limits.

[b] LL = Liquid Limit.

[c] PI = Plasticity Index.

B. Unless otherwise indicated on the drawings, Class I or II materials as described in Table 2.1 above are approved for the pipe zone or within 24 inches of fiberglass structures. In addition to these materials the following

materials are approved for the pipe zone or within 24 inches of fiberglass structures:

1. Lean Concrete/Flowable Fill: Free-flowing grout, mixed one (1) sack of cement per cubic yard of sand.

2. Structural Concrete: Concrete for encasement shall be 3000 psi compressive strength as specified in Division 3.

2.2 FINAL BACKFILL MATERIALS:

A. Earth Backfill: Earth backfill may be excavated and reused from trench or obtained from an approved borrow area. Material shall be processed to ensure that only select material is used for backfilling operations. Material shall be free of lumps, clods, large rocks, debris, trash, organic, spongy or otherwise objectionable material. The presence of such material in the backfill may preclude uniform compaction and result in excessive localized point loads on or deflections in the piping system or fiberglass structure.

B. Open Areas:

1. All materials included in Table 2.1 above are approved for final backfill in open areas, including earth backfill from excavated material.

C. Pavement Section or within limits of service roads regardless of surface condition:

1. Class I or II materials as described in Table 2.1 above are approved for final backfill above the pipe zone to below the road base material, or

2. Flexible base material as specified in SECTION 02231.

PART 3 EXECUTION:

3.1 EXAMINATION AND PREPARTATION:

A. Examine utility routes and coordinate excavation work to eliminate installation conflicts.

B. Allow room for stockpiling excavated material and utility construction material during utility construction.

C. Contractor shall provide erosion controls as necessary to prevent stockpiled material from washing into adjacent water courses or streets in the event of rain. Maintain controls in place until applicable area has been restored to original or final grade. Refer to the Site SWPPP.

3.2 TRENCH EXCAVATION:

A. Procedure: Excavated to indicated or specified depths.

1. Excavate by open cut method.

2. During excavation, stockpile material suitable for backfilling in an orderly manner far enough from the bank of the trench to avoid overloading, slides, or cave-ins.

3. Grade as necessary to prevent surface water from flowing into trenches or other excavations.

4. Cut walls of trench as close to vertical as the stability of the material and trench safety will allow. Remove stones as necessary to avoid point-bearing. Over-excavate wet or unstable soil from the trench bottom to permit construction of a more stable bed for pipe. Over excavation shall be filled and tamped with clean dry sand, pea gravel, or other approved material to the required grade.

5. Excavate the trench the proper width as shown, or as required by the Contractor's Trench Safety Program. If the trench width below the top of pipe is wider than specified in this section or shown, install additional backfill. No additional payment will be made for additional material or work required for installation.

6. Accurately grade the trench bottom to provide proper bedding as required for pipe installation.

7. If any excavation is carried beyond the lines and grades required or authorized, the Contractor shall, at his own expense, fill such space with suitable material and properly compact the material as directed by the Engineer. No additional payment will be made.

B. Sheeting and Bracing: If trench safety methods do not include sloping of trench walls, install sheeting and bracing; or use appropriate trench box necessary to support the sides of trenches and other excavations with vertical sides, as required by current OSHA regulations.

C. Water in Excavation: Keep work free from ground or surface water at all times. Provide pumps of adequate capacity or other approved method to remove water from the excavation in such a manner that it will not interfere with the progress of the work or the proper placing of other work.

D. Existing Lawns and Shrubbery: The Contractor shall take particular care to preserve existing lawns and shrubbery. Make minor pipe alignment as may be necessary.

E. Existing Pavement: Existing pavement over trenches shall be removed to a width of 6 inches outside of the trench on each side. Remove to a neat line by sawing method. Take appropriate measures to prevent damage to existing pavement adjacent to the trench by wheels, tracks and/or stabilizers of excavating equipment. Remove brick pavement by hand, deliver and stack as directed by the Owner.

3.3 PIPE BEDDING:

A. Concrete Encasement:

1. Where shown, the Contractor shall install the pipe in concrete encasement.

2. Concrete for encasement shall be 3000 psi compressive strength as specified in Section 03300.

3. Precautions shall be used to prevent pipe floating, movement or deflection during construction.

4. Concrete for encasement, shall be included in the unit price bid per linear foot in place.

B. Within the Pipe Zone (unless otherwise indicated on the drawings):

1. Accurately grade the bottom of the trench 4 inches below the bottom of the pipe and to the limits of the clear space on either side of the pipe.

2. Install Class I or II materials which comply with Table 2.1 above accordance with "Pipe Bedding Detail" shown on the Drawings.

3. The initial layer of embedment material placed to receive the pipe shall be brought up to a grade slightly higher than that required for the bottom of the pipe and the pipe shall be placed thereon and brought to grade by tamping, or by removal of the slight excess amount of embedment under the pipe.

4. Adjustment to grade line shall be made by scraping away or filling with embedment materials. Wedging or blocking up of pipe will not be permitted.

5. Each pipe section shall have a uniform bearing on the embedment for the full length of the pipe, except immediately at the joint.

6. After each pipe has been graded, aligned, placed in final position on the bedding material and joint made, sufficient embedment material shall be deposited and compacted under and around each side of the pipe and back of the bell or end thereof to hold the pipe in proper position and alignment during subsequent pipe jointing and embedment operations.

7. Sheeting and shoring will not be allowed in the pipe zone during or after installation of the pipe or embedment material, unless special provisions are made to ensure the specified compaction of bedding and pipe alignment is maintained after removal of sheeting and shoring.

8. Minimum compaction effort within the pipe zone and adjacent to fiberglass structures shall be in accordance with the following Table 3.3 based on the classification of bedding material used:

TABLE 3.3
MINIMUM REQUIRED COMPACTION
FOR MATERIAL USED WITHIN PIPE ZONE

Classification of Bedding Material	Standard Proctor Density[a] (Relative Density[b] shown in parentheses)
Class I	Dumped
Class II	≥85% standard (≥40% relative)
Class III	Not approved
Class IV	Not approved
Class V	Not approved

[a] Standard Proctor Density per ASTM D698, moisture content shall be ± 2% of optimum.
[b] Relative Density per ASTM D4254.

3.4 UTILITY INSTALLATION:

A. Water Mains: Provide a minimum of 36 inches of cover over the top of the pipe. Avoid interference of water lines with other utilities. Provide class of bedding as shown. Install piping and appurtenances as specified.

B. Sanitary Sewers: Install piping to the lines and grades as shown on the Drawings. Limit clear space on either side of the pipe to 12 inches. Above the pipe, cut as wide as necessary to sheet and brace and properly perform the work. Provide class of bedding as shown. Install piping and appurtenances as specified.

C. Excavation for Appurtenances: Excavate sufficiently for valves, fittings, manholes, valve vaults, utility pull boxes and similar structures to leave at least 18 inches clear between the outer surfaces and the embankment or shoring that may be used to hold and protect the embankment wall. Install valves, fittings, manholes or valve vault structure, piping and appurtenances as specified. Any other-depth excavation will be refilled with lean concrete or other suitable compacted material approved by the Engineer, at no additional cost to the Owner.

3.5 FINAL BACKFILL:

A. Criteria: Backfill trenches to ground surface with material as specified. Reopen trenches improperly backfilled to depth required for proper compaction. Refill and compact as specified, or otherwise correct the condition in an approved manner.

B. Take care to avoid contacting pipe or structure to be backfilled with compaction equipment. Do not use compaction equipment directly over the pipe until sufficient initial backfill has been placed to assure such equipment will not be damage or disturb the pipe.

C. All forms, lumber, trash and debris shall be removed from trenches, manholes and other utility structures prior to backfilling.

D. Dispose of unacceptable backfill material and provide suitable material for backfill at no additional cost to the Owner.

E. Open Areas:

1. Above the pipe zone, deposit backfill material in 6 to 8 inch lifts, compact to minimum of 85 percent of maximum density per ASTM D698, while maintaining moisture within ± 2 percent of optimum. Excavated material placed shall be free of rock greater than two (2) inches in any direction.

2. Backfill for valves, fittings, manholes, utility pull boxes and other utility structures shall be placed in accordance with applicable Specification Sections.

F. Pavement Section or within limits of service roads regardless of surface condition:

1. Above the pipe zone to below the flexible base material, deposit backfill material in 6-inch lifts, compact to minimum of 95 percent of maximum density per ASTM D698, while maintaining moisture within ± 2 percent of optimum; or deposit ASTM D2487 Class I or II material in 6-inch lifts, compact to 40 percent relative density according to ASTM D4254.

2. For valves, fittings, manholes, valve vaults or boxes in pavement sections, backfill with Class I or II material to bottom of proposed pavement. Backfill material shall be deposited in 6-inch lifts. Class I or II material must be compacted to 40 percent relative density according to ASTM D4254.

3.6 TESTING:

A. Testing Laboratory Services: In-place moisture-density testing may be ordered by Engineer to insure that all trench backfill complies with the requirements of the Specification. Tests will be performed by a recognized independent laboratory, and all costs of tests showing proper compaction will be paid for by the Owner. Testing showing improper compaction shall be paid for by the Contractor. Copies of all test results will be furnished to the Contractor. If improper compaction is identified, Contractor shall repair the area to meet the specification. All costs associated with repair and re-testing to prove the repaired installation meets the specification will be the responsibility of the Contractor.

B. See Section 01400.

3.7 DISPOSAL OF EXCESS MATERIAL:

A. Remove waste and excess excavated material from the construction site before final inspection. Legally dispose of material:

1. At a licensed and approved site.

2. On adjacent private property with written and notarized permission from the property owner.

3. On Owner property with written and notarized permission from the Owner.

B. All cost associated with waste material removal and disposal shall be the responsibility of the Contractor.

END OF SECTION

SECTION 02226

EXCAVATION, BACKFILLING AND COMPACTING FOR PAVEMENT

PART 1 GENERAL

1.1 SECTION INCLUDES:

A. Excavating, Backfilling and Compacting for establishing pavement subgrade elevations. Installation of flexible base material as a finished roadway material, or as a subgrade material for asphaltic concrete paving.

1.2 REFERENCES:

A. ASTM D698 — Moisture — Density Relations of soils (standard).

B. ASTM D1557 – Moisture-Density Relations of soils (modified).

C. ASTM D4318 — Test for liquid limit, plastic limit and plasticity index of soils.

D. ASTM D3017 — Moisture content of Soil and Soil Aggregate In-Place by Nuclear Methods.

E. ASTM D2992 — Density of Soil and Soil Aggregate In-Place by Nuclear Methods.

F. TxDOT — Texas Department of Transportation Standard Specifications.

1.3 SUBMITTALS:

A. Procedures for submittals: Reference paragraph 1.3, Section 02210.

1.4 DEFINITION:

A. Classification: Earthwork materials are classified in accordance with definitions in this article.

B. Topsoil: Top 6 inches of natural surface soil possessing the characteristics of representative soils on the site that produce growths of grass or other vegetation. Topsoil includes roots and other vegetation.

C. Pavement Fill: Fill material excavated on-site or off-site consisting of inorganic sandy clay or clayey sand.

D. Natural Subgrade: Consists of that portion of the surface on which a compacted embankment or pavement is constructed, after removal of 6-inch topsoil layer, as described in Section 02110.

E. Compacted Fill: A subgrade under pavement consisting of fill placed and compacted between the top of the compacted natural subgrade and

underside of pavement and including fill areas adjacent to paving within limits shown on typical cross sections.

F. Borrow: Material taken from approved areas to makeup any deficit of excavated material.

G. Finish grading: Operations required for smoothing disturbed areas that are not overlaid with pavement.

H. Excavation: Excavation of every description and of whatever substance encountered within the grading limits of the project to the lines and grades indicated in the drawings.

I. Compaction: Compaction of soil materials shall be measured as a percent of standard or modified proctor density at the specified moisture content as determined by ASTM D698 or ASTM D1557.

J. Flexible Base: Material meeting TxDOT Item 247, "Flexible Base".

1.5 EXISTING UTILITIES:

A. Where pipes, ducts and structures are encountered in the excavation but are not shown on the drawings, immediately notify the Engineer.

PART 2 PRODUCTS

2.1 MATERIALS:

A. Fill under pavement:

1. On-site excavated material or material excavated from approved source.

2. Plasticity index between 6 and 15.

3. Liquid limit of 35 or less.

4. No rock or pieces larger than 3 inches greatest dimension.

5. All fill soils shall be free of organic material and debris.

B. Flexible Base: TxDOT Item 247, Type A, Grade 2, or better.

PART 3 EXECUTION:

3.1 HANDLING OF TOPSOIL:

A. Remove top 6 inches of topsoil within limits of the paving section and area adjacent to paving section as required and stockpile. Protect stockpiles of topsoil from other excavated materials, dumping of unwanted material and dumping by the public.

3.2 STRIPPING OF GROUND SURFACE:

A. All vegetation, all decayed vegetable matter, rubbish and other unsuitable material within areas to be graded, not removed by clearing, shall be stripped or otherwise removed to ground level before grading or other earthwork is started. In no case will such material be allowed to remain in or on the areas to be graded.

3.3 EXCAVATION:

A. Objective: Excavate to lines, grades and elevations required for subsequent construction of pavement fill, flexible base, or pavement. Remove materials within the indicated limits and dispose as directed.

B. Drainage: During excavation, maintain grades for complete drainage. When directed, install temporary drains or drainage ditches to intercept or divert water and prevent interference or delay or the work.

C. Stockpiling: If at time of excavation it is not possible to place material in the proper section of permanent construction, stockpile the material in Owner or Engineer approved areas for later use.

D. Stone or Rock: Stones or rock fragments larger than 2 inches in their greatest dimension will not be permitted in top 6 inches of subgrade.

E. Dressing: Uniformly dress, cut and fill slope, cross section and alignment.

3.4 NATURAL SUBGRADE UNDER PAVEMENTS:

A. Remove existing earth as required for placement of pavement section. Proof roll excavated surface with 20 ton or larger roller to identify soft or undesirable material and remove such soft or undesirable material to suitable material beneath. Break down sides of holes or depressions to flatten the slopes.

B. Fill any such holes or depression with appropriate soil with similar classification, moisture content and density as adjacent soils.

C. Grade adjustments within pavement construction limits shall be accomplished with pavement fill, placed in maximum 8-inch lifts moistened and compacted as specified in this section.

D. After depressions have been filled, grade adjustments made and immediately before placement of pavement section, thoroughly loosen the material to depth of 6 inches. Remove roots and debris turned up while loosening the soil. Adjust moisture and recompact the subgrade.

3.5 PLACING PAVEMENT FILL FOR GRADE ADJUSTMENTS:

A. Inspection of natural subgrade: Do not place pavement fill for grade adjustments to the natural subgrade until the surface has been examined by the Engineer.

B. Prior to placing pavement fill, scarify the natural subgrade to a depth of 6 inches. As needed, adjust the moisture content to between optimum and plus 4 percent. Recompact the subgrade to a density between 95% and 98% of the maximum standard proctor density, as determined by ASTM D698.

C. Removing Debris: During the dumping and spreading process, remove all roots, stones and debris that are uncovered in the fill material.

D. Spreading Fill: After dumping, spread the pavement fill in horizontal layers over the entire fill area. The thickness of each layer before compaction shall not exceed 8 inches. Place fill adjacent to pavement section to elevations indicated.

E. Attaining proper bond: If the compacted surface of a layer is too smooth to bond with succeeding layers, loosen the surface by harrowing or other approved method before continuing work.

F. Flexible Base Course: Place and compact flexible base course under pavement sections, or for roadways where indicated. Compact to a density between 95 and 100 percent of the maximum dry density at ±2 percent of optimum moisture content per ASTM D1557. The thickness of each layer before compaction shall not exceed 8 inches.

3.6 MOISTURE CONTROL:

A. Intent: Developing the maximum density obtainable with the natural moisture of the material is preferred. However, the moisture content of the pavement fill and flexible base fill shall not vary from the optimum, as determined by ASTM D698 or ASTM 1557, by ranging between -2 and +4 percent of optimum. The moisture content of the natural subgrade under pavement sections, including grade adjustments with pavement fill, as determined by ASTM D698 shall range from optimum to +4 percent of optimum.

B. Adjustment: If the moisture content is too high, adjust to within the specified limits by spreading the material and permitting it to dry. Assist the drying process by dicing or harrowing if necessary. When the material is too dry, sprinkle each layer with water. Work the moisture into the soil by harrowing or other approved method.

3.7 COMPACTION:

A. Compact each layer of pavement select fill with suitable rollers as necessary to obtain a dry density of 95% to 98% maximum dry density within the specified range of the moisture content, according to ASTM D698.

B. Compact each layer of flex base as necessary to obtain a dry density of 95% to 100% maximum dry density within the specified range of the moisture content, according to ASTM D1557.

3.8 MATERIAL DISPOSAL:

A. Excess excavated material (soil material free of trees, stumps, logs, brush, roots, rubbish and other objectionable matter which has been accepted). Remove excess excavated material from the construction site before pre-final inspection. Legally dispose of material at a licensed site or with written and notarized permission from the property Owner for a private disposal site. All costs associated with waste material removal and disposal shall be paid for by the Contractor.

B. Waste material (soil material including trees, stumps, logs, brush, roots, rubbish and other objectionable matter which has been accepted). Remove waste material from the project site before pre-final inspection.

3.9 TESTING:

A. Laboratory testing and inspection services: As specified in Section 01400 - Quality Control.

END OF SECTION

SECTION 02231

AGGREGATE BASE COURSE

PART 1 GENERAL

1.1 SECTION INCLUDES:

A. Aggregate base material, consisting of crushed or uncrushed coarse and fine aggregate material, as necessary to meet the requirements herein and in conformity with lines, grades, compacted thickness and typical sections shown.

1.2 REFERENCES:

A. TxDOT Item 247--Flexible Base.

B. ASTM D698--Test Methods for Moisture-Density Relations of Soils (Standard).

1.3 SUBMITTALS:

A. Refer to Section 01300 for submittal requirements.

B. Samples: Aggregate samples of material as required by the testing laboratory.

1.4 DELIVERY, STORAGE AND HANDLING:

A. Aggregate Base Course shall be hauled in tight trucks previously cleaned of all dirt and foreign material.

B. Place aggregate base course the same day as delivered to the jobsite unless otherwise approved by the Engineer.

PART 2 PRODUCTS

2.1 MATERIALS:

A. Aggregate Base Course shall meet the requirements TxDOT Item 247--Flexible Base, Type A Grade 2, with material larger than 3 inches removed.

PART 3 EXECUTION

3.1 EXAMINATION:

A. Place material only after the subgrade has been properly constructed and inspected.

3.2 PREPARATION:

A. Do not place fill or base on soft, muddy, or frozen surfaces.

3.3 AGGREGATE PLACEMENT:

A. Place aggregate in maximum 8 inch layers and compact to 98% standard density± 2% of optimum moisture. For thicknesses over 8 inches, construct in multiple courses of equal thickness.

B. Upon completion, the material shall be smooth and in conformity with the typical sections as shown.

C. Use mechanical tamping equipment in areas inaccessible to compaction equipment.

3.4 TOLERANCES:

A. Correct any deviation in by loosening, adding or removing material, reshaping and recompacting at the Contractor's expense.

3.5 FIELD QUALITY CONTROL:

A. If the aggregate base material should lose the required density or finish before foundation is complete, it shall be reworked, recompacted, refinished and retested at the Contractor's expense.

END OF SECTION

SECTION 02510

ASPHALTIC CONCRETE PAVING

PART 1 GENERAL

1.1 SECTION INCLUDES:

A. Surface course, consisting of compacted mixture of coarse and fine aggregates and asphaltic material, placed on stabilized base in conformity with lines, grades, compacted thickness and typical cross sections shown.

1.2 REFERENCES:

A. TxDOT Item 300 - Asphalts, Oils and Emulsions.

B. TxDOT Item 310 - Prime Coat (cutback asphaltic material only).

C. TxDOT Item 340 - Dense graded Hot Mix Asphalt (method).

D. TxDOT Item 666 – Reflectorized Pavement Markings

1.3 SUBMITTALS:

A. Procedures for Submittals: Section 01300.

B. Contractor shall certify the mixing plant will conform to the requirements of TxDOT.

C. Certified weight tickets shall be submitted with each delivery of asphaltic concrete to the work site.

D. Contractor shall submit design mixtures, including additive modifiers, for review and approval at least 30 days before any asphaltic pavement is placed. The design mixes shall be prepared by a certified independent testing laboratory employed and paid by the Contractor.

1.4 DELIVERY, STORAGE and HANDLING:

A. Asphaltic concrete material shall be hauled in tight trucks previously cleaned of all dirt and foreign material with the load completely covered by canvas.

B. All material shall be delivered so that material can be placed and rolled during daylight hours.

1.5 DELIVERY, STORAGE and HANDLING:

A. Asphaltic concrete shall not be placed when the ambient temperature is below 60 degrees F and is falling.

B. Asphaltic concrete may be mixed and placed when the ambient temperature is above 50 degrees F and rising.

PART 2 PRODUCTS

2.1 PRIME COAT:

A. Asphaltic Materials: TxDOT Item 300, "Asphalts, Oils and Emulsions".

B. Provide grade MC-30 or AE-P.

2.2 TACK COAT:

A. Asphaltic Materials: TxDOT Item 300, "Asphalts, Oils and Emulsions".

B. Provide grade RC-250, CSS-1H, or SS-1H. Do not dilute emulsions.

2.3 HOT MIX ASPHALTIC CONCRETE SURFACE COURSE:

A. The asphaltic concrete surface course shall be plant mixed, hot laid Type D (Fine Graded Surface Course) meeting requirements in TxDOT Item 340 and specific criteria for the job mix formula.

B. The mix shall be designed for stability of at least 35 as determined by test method Tex-227-F and shall be compacted to between 92 and 98 percent of the maximum theoretical density and determined under test method Tex-207-F.

C. The asphalt cement content by percent of total mixture weight shall fall within a tolerance of ±0.3 percent asphalt cement from the specific mix. In addition, the mix shall be designed so that 75 to 85 percent of the voids in the mineral aggregate (VMA) are filled with asphalt cement.

2.4 STRIPING

A. Striping shall be in accordance with TxDOT Item 666 and all related manufacturers and application requirements.

B. Provide TxDOT Type II striping as designated on plans.

PART 3 EXECUTION

3.1 PRIME COAT:

A. Apply with an approved sprayer. Prime coat shall be applied at a rate of 0.20 to 0.30 gallons per square yard as shown on contract drawings over compacted flexible base and shall be cured for 24 hours minimum. The actual rate of application to be determined in the field based on actual conditions.

3.2 TACK COAT:

A. Apply with approved sprayer. Thoroughly clean pavement surface and apply tack coat at a rate of 0.05 to 0.15 gallons per square yard of pavement

contact surface. The actual rate of application to be determined in the field based on actual conditions.

3.3 LAYING:

A. Placement: Haul the asphaltic concrete mixture, which has been heated and prepared as specified, to the project in tight vehicles previously cleaned of foreign material. The mixture shall be at a temperature between 200 degrees Fahrenheit and 350 degrees Fahrenheit when laid. The Engineer will determine the lowest acceptable temperature; a variance of 30 F upward will be allowed. Spread the material into place with approved mechanical finishing machine of screening or tamping type. Use a tire or track-mounted finish machine capable of maintaining uniform grade WITHIN SPECIFIED TOLERANCES while placing directly on the flexible base subgrade.

B. Surface Course Material: A surface course 2 inches or less in thickness may be spread in one lift. Spread all lifts in such a manner that when compacted, the finished course will be smooth, of uniform density and to section, line and grade shown.

3.4 LAYERING IN RESTRICTED AREAS:

A. If use of a paver is impractical, asphalt surface courses may be spread and finished by hand. Use wood or steel forms rigidly supported to assure correct grade and cross section. Carefully place materials to avoid segregation of the mix. Broadcasting the material will not be permitted. Any lumps that do not break down readily shall be removed. Place asphalt courses in the same sequence as if placed by machine.

3.5 ROLLING:

A. Begin rolling while pavement is still hot and as soon as it will bear the roller without undue displacement or hair cracking. To prevent adhesion of surface mixture to the roller, keep wheels properly moistened with water. Excessive use of water will not be permitted.

B. Compress the surface thoroughly and uniformly, first with power-driven, 3-wheel, or tandem rollers weighing 10 tons. Obtain subsequent compression by starting at the side and rolling longitudinally toward the center of the pavement, overlapping on successive trips by at least one-half width of rear wheels. Make alternate trips slightly different in length. Continue rolling until further compression cannot be contained and all rolling marks are eliminated.

C. Use a tandem roller for the final rolling. Double coverage with an approved pneumatic roller on asphaltic concrete surface is acceptable after flat wheel and tandem rolling has been completed.

3.6 HAND TAMPING:

A. Along walls, curbs, headers and similar structures and in all locations not accessible to rollers, compact the mixture thoroughly with a vibrating plate compactor.

3.7 DENSITY:

A. Compact the base surface course to the density shown. If, during the construction, the results of density tests show that the surface has a density less than specified, an additional rolling with a 3-wheel or pneumatic roller will be required. Such a rolling shall be done before the mix cools if it is to be successful.

3.8 SURFACE TESTS:

A. The completed surface, when tested with a 16-foot straightedge laid parallel to the center line of the pavement, shall show no deviation in excess of 1/16 inch per foot from the nearest point of contact. The maximum ordinate measured from the face of the straightedge shall not exceed 1/4 inch at any point. Furnish approved templates for checking subgrade in finished sections. The strength and rigidity of templates shall be such that if a support is transferred to center, no deflection in excess of 1/8 inch will be observed.

3.9 CONSTRUCION JOINTS:

A. Place courses as nearly continuously as possible. Pass the roller over unprotected ends of the freshly laid mixture only when the mixture has become chilled. When work is resumed, cut back the laid material to produce a slightly beveled edge for the fill thickness of the course. Remove old material which has been cut away and lay the new mix against the fresh cut.

B. When new asphaltic is laid against existing or old asphalt, the existing or old asphalt shall be cut to provide a straight smooth joint. A tack coat is to be applied against this sawed joint face before applying new hot mix.

3.10 DEFFECTIVE PAVEMENT:

A. Recompact pavement sections not meeting specified densities or replace them with new asphaltic concrete material. Replace with new material section of surface course pavement not meeting surface test requirements or having an unacceptable surface texture. Patch asphaltic pavement sections in accordance with procedures established by the Asphalt Institute. Replace asphalt pavement sections which did not meet the specifications.

3.11 FIELD QUALITY CONTROL:

A. Laboratory Testing and Inspection Services: As specified in 01400.

3.12 DEFICIENT SURFACE THICKNESS:

A. Any area of asphalt surface found deficient in thickness by more than 0.25 inches shall be removed and replaced, at the Contractor's expense, with asphalt surface of the thickness shown. Care should be taken not to damage or remove the pavement below the asphalt surface. Should damage to the pavement below the asphalt surface occur, it shall be removed and replaced at the Contractor's expense.

B. No additional payment will be made for any asphalt surface of a thickness exceeding 0.25 inches greater than that required by the contract documents.

END OF SECTION

SECTION 02665

WATER SYSTEMS

PART 1 GENERAL

1.1 SECTION INCLUDES:

A. Water mains including valves, valve boxes, blocking, fittings, and other appurtenances for potable water distribution systems.

1.2 REFERENCES:

A. American Society for Testing and Materials (ASTM):

1. ASTM A53 - Pipe, Steel, Black and Hot Dipped, Zinc-Coated Welded and Seamless.

2. ASTM A126 - Gray Iron Castings for Valves, Flanges and Pipe Fittings.

3. ASTM A307 - Specification for Carbon Steel Bolts and Studs 60,000 psi Tensile.

4. ASTM A536 - Ductile Iron Castings.

5. ASTM D1784 - Rigid Polyvinyl Chloride (PVC) Compounds and Chlorinated Polyvinyl Chloride (CPVC) Compounds.

6. ASTM D1785 - Polyvinyl Chloride (PVC) Plastic Pipe, Schedules 40, 80, and 120.

7. ASTM D2241 - Polyvinyl Chloride (PVC) Plastic Pipe (SDR-PR).

8. ASTM D2466 - Polyvinyl Chloride (PVC) Plastic Pipe Fittings, Schedule 40.

9. ASTM D2737 - Polyethylene (PE) Plastic Tubing.

10. ASTM D2855 - Making Solvent-Cemented Joints with Polyvinyl Chloride (PVC) Pipe and Fittings.

11. ASTM D3139 - Joints for Plastic Pressure Pipes using Flexible Elastomeric Seals.

12. ASTM F477 - Elastomeric Seals (Gaskets) for Joining Plastic Pipe.

B. American Water Works Association (AWWA):

1. AWWA C104 - Cement-Mortar Lining for Ductile Iron Pipe and Fittings for Water.

2. AWWA C105 - Polyethylene Encasement for Ductile Iron Piping for Water and other Liquids.

3. AWWA C110 - Ductile-Iron and Gray-Iron Fittings, 3 inches through 48 inches, for Water and other Liquids.

4. AWWA C150 - Thickness Design of Ductile Iron Pipe.

5. AWWA C151 - Ductile Iron Pipe.

6. AWWA C153 - Ductile Iron Compact Fittings, 3 inches through 12 inches, for Water and other Liquids.

7. AWWA C500 - Metal-Seated Gate Valves, for Water Systems.

8. AWWA C509 - Resilient-Seated Gate Valves for Water Systems.

9. AWWA C550 - Protective Interior Coatings for Valves and Hydrants.

10. AWWA C600 - Installation of Ductile-Iron Water Mains and Appurtenances.

11. AWWA C700 - Cold Water Meters Displacement-Type, Bronze Main Case.

12. AWWA C900 - Polyvinyl Chloride (PVC) Pressure Pipe, 4 inches through 12 inches, for water.

13. AWWA C901 - Polyethylene (PE) Pressure Pipe, Tubing, and Fittings, 1/2 inch through 3 inches for Water.

14. AWWA C905 - Polyvinyl Chloride (PVC) Water Transmission Pipe, Nominal Diameters 14 inches through 36 inches.

C. ANSI 16.1 - Cast Iron Pipe Flanges and Flanged Fittings.

D. 30 TAC 290, Texas Administrative Code, Volume 30, Chapter 290, Water Hygiene.

1.3 SUBMITTALS:

A. Procedures for submittals: Section 01300.

B. Product Data: Manufacturer's product data sheets on all materials incorporated into work.

C. Quality Control Submittals: For information only.

1. Certificates: Manufacturer's certificates attesting compliance with applicable specifications for grades, types, classes, and other properties.

2. Test Reports: Results of field quality control tests including hydrostatic tests and bacteriological tests.

D. Contract Closeout Submittals: Refer to Section 01700.

1. Protect Record Documents: Submit documents in accordance with Section 01700. Accurately record installed location of valves, hydrants, piping and service connections, and accessories.

1.4 QUALITY ASSURANCE:

A. Pipeline installation shall be in accordance with manufacturer's recommendations and as supplemented by these Specifications.

B. Pipe shall be kept clean of all foreign matter.

1. At temporary termination of pipe laying, provide suitable cover to close open end until burying operations are resumed.

C. Jointing shall be by trained employees.

1.5 DELIVERY, STORAGE, AND HANDLING:

A. Deliver, store, and handle products under provisions of Section 01600.

B. Each load of pipe delivered to the job site shall be inspected by the Engineer.

1. Pipe transported without adequate protection shall be rejected and removed immediately from the job site.

2. Inadequate wall thickness or tolerances greater than specified: Randomly selected samples of the pipe shall be forwarded immediately to an approved testing laboratory with instructions to check the pipe for compliance with applicable product standards, ASTM Specifications, and other applicable Specifications.

3. When the testing laboratory reports concur that the pipe does not meet Specifications, the defective pipe shall be removed immediately from the job site by the Contractor.

4. If defective, all costs for shipping of samples, laboratory testing, removal of defective pipe, and replacement pipe shall be the sole responsibility of the Contractor.

PART 2 PRODUCTS

2.1 PIPE:

A. PVC Water and Drain Pipe - (6 inches or less): ASTM D1784:

1. Schedule 40 or 80 as specified on drawings.
2. Solvent weld joints, ASTM D2855.

3. All pipe shall bear NSF 61 seal of approval.

B. Ductile Iron Water Pipe: AWWA C151.

1. Pressure Class 150, 250, or 350 as specified.
2. American Ductile Iron Flex-Ring Joint Pipe required with pressure rating between 250-350 psi. Or Engineer Approved Equivalent.
3. Cement lined interior, AWWA C104.
4. Exterior of buried piping shall be bituminous coated, AWWA C151. Exterior of above grade piping shall include primer compatible with coating system given in Section 09800.
5. Wrap buried pipe with 8 mil polyethylene encasement, AWWA C105.

C. Galvanized and Steel Pipe: ASTM A53:

1. Galvanized, standard wall; threaded.

2.2 FITTINGS:

A. Ductile Iron Buried Fittings (size 3 inches through 48 inches):

1. Ductile Iron, AWWA C110 (non-compact) or AWWA C153 (compact).
2. Cement lined interior, AWWA C104.
3. Exterior shall be bituminous coated.
4. Fittings shall be mechanical joint unless otherwise shown.
5. Wrap buried fittings with 8-mil polyethylene encasement, AWWA C105.
6. Working pressure rated to 350 psi.

B. PVC Above-Grade and Buried Fittings (6-inch and smaller) for use with ASTM D1784 pipe:

1. PVC, ASTM 2466 Sch 40 socket, ASTM 2467 Sch 80 socket.
2. Solvent weld joints, ASTM D2855.
3. NSF approved and marked for potable water use.

C. Ductile iron Above-Grade Fittings (size 3 inch through 48 inch):

1. Ductile Iron Flanged Fittings, AWWA C110.
2. Cement lined interior AWWA C104.
3. Exterior shall include primer compatible with coating system given in Section 09800.
4. Working pressure rated at 350 psi.
5. Face and drill in accordance with ANSI B16.1 for Class 150 or 300 flanges, as required.

D. Above-grade Fittings (smaller than 3 inch):

1. Galvanized steel, ASTM A53.
2. Standard wall; threaded.

2.3 COUPLINGS:

A. Restrained Flanged Coupling Adapters for Ductile Iron:

1. Conform with AWWA C219.

2. Star Pipe and Products is an acceptable manufacturer.

3. Products:

a. 3″-24″ Romac Style RFCA with 316 stainless steel t-bolt hardware and NSF61 certification. Working pressure rating 275 psi for 3″-16″ and 250 psi for 18″-24″. Coupling shall have a total pipe insertion differential of at least 4.3″ for 10″-12″ couplings and 3.5″ for 6″-8″ couplings; coupling shall be installed with a minimum pipe insertion depth of 3.5″. Flange compatible with ANSI Class 125/150. Or Engineer approved equivalent.

b. 30″- 48″ Flange-Lock Restrained FCA, Smith-Blair Series 911. Flange shall be AWWA C207 Class D for working pressure of 150 psi and maximum pressure rating of 250 psi. 30″ coupling shall have a total pipe insertion differential of at least 7″; 30″ coupling shall be installed with a minimum pipe insertion depth of 5″. Gasket and 316 stainless steel t-bolt hardware shall be included. Or Engineer approved equivalent.

B. Restrained MJ Retainer Glands for Ductile Iron Pipe:

1. Mechanical joint fittings to PVC: Ductile Iron, ASTM A536, Grade 65-45-12.

a. Product: Uni-flange Series 1300, or approved equivalent.

b. Device shall include gasket, MJ gland, restraint, and 304 stainless steel bolting hardware.

2. Mechanical joint fittings to Ductile Iron: Ductile Iron ASTM A536, Grade 65-45-12.

a. Product: EBAA Iron Series 1100, or approved equivalent.

b. Device shall include restraint, gasket and 304 stainless steel bolting hardware.

C. Restrained Dismantling Joint for Ductile Iron Pipe:

1. Romac DJ400 that conforms with AWWA C219. Flange ends per AWWA C207 Class D for 42″ dismantling joint at valve vault. 316 stainless steel tie rods shall be included. Or Engineer approved equivalent.

D. Restrained PE x PE Pipe Coupling for Ductile Iron Pipe:

1. Smith-Blair Pipe-Lock Series 471. Working pressure rating 350 psi for 3"-16" and 250 psi for 20"-48". Gasket and 316 stainless steel studs/nuts shall be included. Or Engineer approved equivalent.

2.4 FLANGE BOLTS AND GASKETS:

A. Flange gaskets shall conform to ASME B16.21.

B. Flange Bolts shall be high-strength 316 stainless steel suitable for pipe pressure class.

2.5 NSF61 CERTIFICATION:

A. All products listed in this section that have potable water wetted parts must be **NSF 61 certified or approved**.

PART 3 EXECUTION

3.1 PREPARATION:

A. Stake locations of fittings, valves, and accessories prior to installation for review by Engineer.

B. Prior to installing valves, remove foreign matter from within the valves. Inspect the valves in open and closed position to verify that parts are in satisfactory working condition.

3.2 SETTING VALVES AND VALVE BOXES:

A. Install valves and valve boxes where shown. Set valves plumb and as detailed. Center valve boxes on valves. Locate valves away from roads or streets. Carefully tamp earth around each valve box for a minimum radius of 4 feet, or to undisturbed trench face if less than 4 feet.

B. Provide Class B concrete thrust blocking as shown.

3.3 PIPE INSTALLATION:

A. Preparation:

1. Do not lay pipe in water, or when trench or weather are unsuitable for work. Keep water out of trench until jointing is complete and bedding is placed to top of pipe. When work is not in progress, close ends of pipe and fittings securely so that no trench water, earth or other substances will enter pipes or fittings.

2. Keep inside of pipe free from foreign matter during operations by plugging or other approved method.

3. Place pipe so that full length of each section rests solidly upon pipe bed, with recesses excavated to accommodate bells and joints. Take up and re-lay pipe when grade or joint is disturbed after laying.

4. Handle pipe and accessories so that pipe placed in trench is sound and undamaged. Take particular care not to injure pipe coating when applicable.

5. Cut neatly, using approved type mechanical cutter without damaging pipe. Use wheel cutters when practicable.

6. Wrap ductile iron pipe, fittings, and valves with 8 mil polyethylene film, AWWA C105, with edges overlapped and securely taped with duct tape to prevent contact between pipe and surrounding bedding. Repair punctures with duct tape to restore the protective continuous wrap before backfilling.

B. Pipe Bedding and Backfilling: In accordance with Section 02225, Excavating, Backfilling, and Compacting for Utilities.

C. Placing and Laying:

1. Bury water lines as shown.

2. Do not exceed 75 percent of pipe manufacturer's recommendations for deflections from straight line or grade as required by vertical curves, horizontal curves, or offsets. If alignment requires deflections in excess of these limitations, use fittings.

3. Intersecting lines shall be joined by an appropriate fitting.

4. Maintain separation of water line from sewer lines in accordance with 30 TAC 290.

5. Perform no work in fill areas until embankment or fill has been properly completed to at least 2 feet above top of pipe elevation.

D. Joints:

1. Install mechanical joints in accordance with manufacturer's recommendations.

2. Make push-on joints in accordance with manufacturer's recommendations.

E. Anchorage of Fittings - Thrust blocks not allowed. Restrained mechanical couplings required for all fitting and pipe joints.

3.4 DISINFECTION:

A. Disinfect completed water lines with chlorine in accordance with Section 02675.

B. Open and close valves in lines being sterilized several times during contact period.

3.5 FIELD QUALITY CONTROL TESTING:

A. Hydrostatic Tests: Pressure test completed water lines hydrostatically. Provide pumps, gauges, meters, and other equipment necessary for performance of tests.

1. Pressure in the test section shall be at least 100 percent, but not more than 120 percent of pressure rating of the pipe.

2. Leakage shall not exceed 10 gallons per inch of pipe diameter per mile of pipe per 24 hours.

3. Minimum test duration shall be 4 hours.

4. Maintain records of:

a. Date tests were performed.
b. Names of people in attendance.
c. Location of test section.
d. Brand name of pipe and pressure rating.

5. Failed test sections shall be repaired and retested at the Contractor's expense.

B. Bacteriological Tests: After disinfecting and flushing mains, obtain representative samples and conduct bacteriological tests. Test in accordance with Section 02675.

C. Dielectric Testing Methods and Criteria:

1. Provide electrical check between metallic non-ferrous pipe or appurtenances and ferrous elements of construction to assure discontinuity has been maintained.

2. Wherever electrical contact is demonstrated by such test, locate the point or points of continuity and correct the condition with insulating or dielectric component, or other means.

END OF SECTION

SECTION 02675

WATER SYSTEM DISINFECTION

PART 1 GENERAL

1.1 SECTION INCLUDES:

A. Disinfection of water treatment structures and reservoirs.

B. Testing and reporting results.

1.2 REFERENCES:

A. AWWA B300 - Standard for Hypochlorite's.

B. AWWA B301 - Standard for Liquid Chlorine.

C. AWWA C652 - Disinfection of Water Storage Facilities.

D. 30 TAC 290.38 through 290.49 - Rules and Regulations for Public Water Systems, *Texas Administrative Code*.

1.3 SUBMITTALS FOR INFORMATION:

A. Section 01300 - Submittals: Procedures for Submittals.

B. Test Reports: Indicate results comparative to specified requirements.

C. Certificate: Certify that cleanliness of water storage tank meets or exceeds specified requirements.

1.4 PROJECT RECORD DOCUMENTS:

A. Submit under provisions of Section 01700.

B. Disinfection Report:

1. Type and form of disinfectant used.

2. Date and time of disinfectant injection start and time of completion.

3. Test locations.

4. Initial and 24-hour disinfectant residuals (quantity in treated water) in ppm for each outlet tested.

5. Date and time of flushing start and completion.

6. Disinfectant residual after flushing in ppm for each outlet tested.

C. Bacteriological Report:

1. Date issued, project name and testing laboratory name, address and telephone number.

2. Time and date of water sample collection.

3. Name of person collecting samples.

4. Test locations.

5. Initial and 24-hour disinfectant residuals in ppm for each outlet tested.

6. Coliform bacteria test results for each outlet tested.

7. Certification that water conforms, or fails to conform, to bacterial standards of AWWA C652 and 30 TAC 290.38 through 290.46.

1.5 QUALITY ASSURANCE:

A. Perform work in accordance with AWWA C652.

B. Testing Firm: Approved laboratory by the Texas Department of Health, Bureau of Laboratories.

C. The Contractor may use the:

City of Midland Water Lab
3303 W. Illinois
Space 22
Midland, TX 79703

Phone: 432-681-7618

Water is analyzed in this laboratory at the following times:
Monday – Thursday
8:00 AM – 12:00 PM and 1:00 PM – 3:00 PM

D. Submit bacteriologist's signature and authority associated with testing.

E. Bacteriologist tests shall indicate negative. If other than negative disinfection, shall be repeated at contractor's expense.

1.6 REGULATORY REQUIREMENTS:

A. Conform to AWWA C652 and 30 TAC 290.38 through 290.46 for performing the work of this section.

PART 2 PRODUCTS

2.1 DISINFECTION:

A. Chemicals: AWWA B300, Hypochlorite and AWWA B301, Liquid Chlorine.

PART 3 EXECUTION

3.1 EXAMINATION:

A. Verify that piping system and structures have been cleaned, inspected and pressure tested.

B. Perform scheduling and disinfecting activity with start-up, testing, adjusting and balancing, demonstration procedures, including coordination with related systems.

3.2 EXECUTION:

A. Provide and attach equipment required to perform the work of this section.

B. Inject disinfectant into piping system, tank, or structure while filling. Disinfection agent may be introduced with permanent chlorination equipment when possible, or other means of application. Application of chlorine gas under pressure directly to the water is not permitted.

C. Maintain disinfectant in system for 24 hours.

D. Flush, circulate and clean until required cleanliness is achieved; use municipal domestic water.

E. Replace permanent system devices removed for disinfection.

3.3 FIELD QUALITY CONTROL:

A. Section 01400 - Quality Assurance: Field Inspection and Testing.

B. Analyze samples in accordance with AWWA C652 and 30 TAC 290.44.

C. New water tower shall be thoroughly disinfected, then sampled in accordance with AWWA C652.

D. Two (2) samples shall be collected for microbiological analysis to check the effectiveness of the disinfection procedure, which shall be repeated if contamination persists. A minimum of two (2) samples are required.

END OF SECTION

SECTION 02685

CLEANING OF POTABLE WATER PIPES

PART 1 GENERAL

1.1 SUMMARY:

A. General:

1. Before any newly constructed potable water lines are placed into service at the Water Purification Plant, they shall be cleaned in advance of testing and disinfection.

B. Related Specification Sections include, but are not necessarily limited to:

1. Section 02665 – Water Systems.
2. Section 02675 – Water System Disinfection.

1.2 REFERENCES:

A. Reference Standards:

1. Reference standards cited in this Specification refer to the current reference standard published at the time of the latest revision date.

2. American Water Works Association/American (AWWA):

a. C301, Prestressed Concrete Pressure Pipe, Steel-Cylinder Type.

b. C303, Concrete Pressure Pipe, Bar-Wrapped, Steel-Cylinder Type.

c. C651, Disinfecting Water Mains.

d. C655, Field De-Chlorination.

1.3 SUBMITTALS:

A. Submittals:

For 24-inch and larger water mains, provide the following:

1. Cleaning Plan – Prior to the start of construction, submit a cleaning plan for new potable water piping at the new pump station site detailing the methods and schedule, including:

a. A detailed description of cleaning procedures.
b. Flushing procedures.
c. Plans and hydraulic calculations to demonstrate adequate flushing velocities.

d. Control of water.
e. Disposal.

2. Disinfection Plan – prior to the start of construction submit a disinfection plan including:

a. The method of mixing and introducing chlorine.
b. Flushing.
c. De-chlorination.
d. Sampling.

PART 2 PRODUCTS

Not used.

PART 3 EXECUTION

3.1 CLEANING:

A. General:

1. All water mains shall be cleaned prior to bacteriological testing.

a. Flushing is the only method permitted for cleaning potable water lines at the Water Purification Plant.

B. Flushing Method:

1. Prepare the potable water lines by installing blow-offs at appropriate locations, of sufficient sizes and numbers, and with adequate flushing to achieve a minimum velocity in the main of 2.5 feet per second.

a. Minimum blow-off sizes for various pipe sizes are as follows:

i 4-inch through 8-inch main – ¾-inch blow-off.
ii 10-inch through 12-inch main – 1-inch blow-off.
iii 16-inch and greater main – 2-inch blow-off.

b. Flushing shall be subject to the following limitations:

i Limit the volume of water for flushing to 3 times the volume of the water line.
ii Do not unlawfully discharge chlorinated water.
iii Do not damage Water Purification Plant property.
iv Do not impede traffic or interrupt daily operations within the Water Purification Plant site.

c. Once Flushing is complete:

i Corporations stops used for flushing shall be plugged.

C. Pipe installation cleaning procedures:

1. Wipe joints and then inspect for proper installation.

2. Sweep each joint and keep clean during construction.

3. Install a temporary plug on all exposed potable water lines at the end of each working day or an extended period of work stoppage.

END OF SECTION

SECTION 02723

PRECAST CONCRETE VAULTS

PART 1 GENERAL

1.1 SECTION INCLUDES:

A. Design and install precast concrete vaults with access cover hatches as shown on the drawings and specified herein.

1.2 REFERENCES:

A. ASTM C33 - Concrete Aggregates.

B. ASTM C330 - Concrete Aggregates.

C. ASTM C150 - Portland Cement Concrete.

D. ASTM A36 - Structural Steel.

E. ASTM A615 - Specification for Deformed and Plain Billet Steel Bars for Concrete Reinforcement.

1.3 SUBMITTALS FOR REVIEW:

A. Section 01300 - Submittals: Procedures for submittals.

B. Submit shop drawings of structures with dimensions and sufficient information to verify conformance with specifications.

PART 2 PRODUCTS

2.1 VAULT MATERIALS:

A. All precast concrete vault sections shall be manufactured by a plant specifically designed for that purpose, such as New Basis Company - Precast Concrete Products, or approved equal.

B. All units shall be square, plumb, true, and conform to the design and dimensions shown on the rectangular, drawings. All work shall be done under strict plant controlled supervision.

C. Concrete:

1. Aggregate: All aggregates fine and coarse other than lightweight aggregate shall conform to ASTM C33. Lightweight aggregates fine and coarse shall conform to ASTM C330. Aggregates shall be free of deleterious substances causing reactivity with oxidized hydrogen sulfide. Both types of aggregate shall be graded in a manner so as to produce a homogeneous concrete mix. All materials shall be accurately weighed at a central batching facility for mixing.

2. Cement: All cement shall be Portland Cement conforming to ASTM C150. Type I, Type III or Type V if specified. Cement content shall be sufficient to produce minimum compressive strength of 4,500 p.s.i., or other design strength if specified.

D. All reinforcing steel, including welded wire mesh, shall be of the size and in the location as shown on the plans. All reinforcing shall be sufficiently tied to withstand and displacement during the pouring operation. All bars shall be intermediate or hard grade billet steel conforming to ASTM A615 or A706 Grade 60. Welded wire mesh shall conform to ASTM A497 Grade 70. Bars other than ¼ inch round or smaller, shall be deformed in accordance with ASTM A305.

E. Other incidental hardware needed shall be as shown and as approved by the Engineer.

2.2 DESIGN LOADS:

A. Design loads shall consist of dead load, live load, impact, loads due to water table if present, and any other loads which may be imposed on the structure.

B. Live loads shall be for H-20 per AASHTO Standard Specifications for Highway Bridges with revisions. Design wheel load shall be 16 kips. The load case shall be that which produces the maximum shears and bending moments in the structure.

PART 3 EXECUTION

3.1 EXAMINATION:

A. Verify items provided by other sections of Work are properly sized and located.

B. Verify that built-in items are in proper location, and ready for roughing into Work.

3.2 PREPARATION:

A. Coordinate placement of inlet and outlet pipe required by other sections.

B. Using approved drawings to obtain dimensions, Contractor shall prepare the excavation for the correct elevation after the base material has been properly installed. The depth of the base and the material used shall meet the specified requirements for the type of soil at the setting location. The base material shall be properly compacted and level.

3.3 PLACING PRECAST CONCRETE VAULTS:

A. Install valve/flow meter vault level and plumb. Ensure vault is parallel to the lift station discharge piping.

B. If joint sealant is necessary, utilize sealant provided by vault manufacturer. Install in accordance with manufacturer's instructions.

C. Install vault drain line as depicted on the Drawings. Ensure floor of vault drains to the drain opening such that no water stands in the valve/flow meter vault.

D. Backfill material shall be free flowing, granular material, placed in lifts of approximately two (2) feet around the vault so as not to shift the structure.

E. Excavation and backfilling shall meet the requirements of Section 02225.

F. Access covers / hatches shall be per Section 02725.

END OF SECTION

SECTION 02725

ACCESS COVERS/HATCHES

PART 1 GENERAL

1.1 SECTION INCLUDES:

A. Standard access hatches for wet wells and vaults.

1.2 SUBMITTALS:

A. Provide the following information in accordance with Section 01300:

1. Manufacturer's catalog information.

2. Installation dimensional drawings indicating compliance with minimum open area dimensions and suitability for specific submersible pumps used in wetwells.

3. Installation dimensional drawings indicating compliance with minimum open area dimensions and suitability for use on each valve vault.

1.3 DELIVERY, STORAGE, AND HANDLING:

A. Storage: Store access hatches and appurtenances in accordance with the manufacturer’s written instructions. Protect from damage until final acceptance by Owner.

PART 2 PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS:

A. Hatches shall comply with minimum opening sizes depicted on Drawings.

B. Approved Hatch Manufacturers:

1. Halliday Products, Orlando, FL.
2. Engineer approved equal.

2.2 SIZE:

A. Hatches shall have minimum opening size shown on Drawings.

2.3 FEATURES:

A. Unit shall have lockable cover(s).

B. Unit shall have a door support ledge on a minimum of two (2) sides.

C. Door shall incorporate enclosed stainless steel compression spring assist allowing the door to close flush with the frame.

D. Door shall open to 90 degrees and automatically lock with a stainless steel hold-open arm with corrosion-resistant release handle.

E. Where indicated on Drawings, hatches shall be water-tight, with a channel frame that prevents water infiltration into the hatch (Halliday W series).

F. Where indicated on Drawings, cover shall be H-20 rated for off-street locations that may occasionally receive vehicle wheel loads.

2.4 MATERIALS:

A. Frame - Minimum ¼--inch thick, one piece, mill finish, extruded aluminum, incorporating a continuous concrete anchor.

B. Door Panel - Minimum ¼-inch thick aluminum diamond plate.

C. Hinges and fastening hardware - stainless steel.

PART 3 EXECUTION

3.1 INSTALLATION:

A. Install access hatches as per manufacturer's instructions and as indicated on Drawings.

B. Ensure that the hatch and frame are adequately anchored to the wetwell top or the valve vault, as applicable, and that both the frame and door ledge are adequately supported.

C. Location of access hatch hinges and orientation of installation shall be such that hatch does not interfere with hoisting equipment operation or pump removal, when hatch is in the open position.

END OF SECTION

SECTION 02911

TOPSOILING AND FINISHED GRADING

PART 1 GENERAL

1.1 SECTION INCLUDES:

A. Topsoiling and finished grading.

1.2 SUBMITTALS:

A. Shop Drawings:

1. See Section 01300 for requirements for the mechanics and administration of the submittal process.

2. Project Data: Test reports for furnished topsoil.

1.3 PROJECT CONDITIONS:

A. Location of Work: All areas within limits of grading designated on the Drawings and all areas outside limits of grading which are disturbed in the course of the work.

PART 2 PRODUCTS

2.1 MATERIALS:

A. Topsoil:

1. Original surface soil typical of the area.

2. Existing topsoil stockpiled under Section 02110 – Site Clearing and Grubbing.

3. Capable of supporting native plant growth.

2.2 TOLERANCE:

A. Finish Grading Tolerance: 0.1 FT plus/minus from required elevations.

PART 3 EXECUTION

3.1 PREPARATION:

A. Correct, adjust and/or repair rough graded areas.

1. Cut off mounds and ridges.

2. Fill gullies and depressions.

3. Perform other necessary repairs.

4. Bring all sub-grades to specified contours, even and properly compacted.

B. Loosen surface to depth of 2 inches, minimum.

C. Remove all stones and debris over 2 inches in any dimension.

3.2 ROUGH GRADE REVIEW:

A. Reviewed by Engineer in Section 02110, Site Clearing & Grubbing.

3.3 PLACING TOPSOIL:

A. Do not place when subgrade is wet or frozen enough to cause clodding.

B. Spread to compacted depth of 4 inches for all areas designated to receive hydro mulch seeding.

C. Provide finished surface free of stones, sticks, or other material 1 inch or more in any dimension.

D. Provide finished surface smooth and true to required grades.

E. Restore stockpile area to condition of rest of finished work.

F. Placing topsoil is incidental to hydro mulch seeding, Section 02921.

3.4 ACCEPTANCE:

A. Upon completion of topsoiling, obtain Engineer's acceptance of grade and surface.

B. Make test holes where directed to verify proper placement and thickness of topsoil.

END OF SECTION

SECTION 02921

HYDRO MULCH SEEDING

PART 1 GENERAL

1.1 SECTION INCLUDES:

A. Seeding, fertilizing, mulching, and maintenance of areas indicated on Drawings.

1.2 SUBMITTALS:

A. Conform to requirements of Section 01300.

B. Submit certification from supplier that each type of seed conforms to these specifications and requirements of Texas Seed Law. Certification shall accompany seed delivery.

C. Submit certificate stating that fertilizer complies with these specifications and requirements of Texas Fertilizer Law.

PART 2 PRODUCTS

2.1 MATERIALS:

A. Topsoil: Conform to material requirements of Section 02911 – Topsoil and Finished Grading.

B. Seed: Conform to U.S. Department of Agriculture rules and regulations of Federal Seed Act and Texas Seed Law. Seed shall be certified 90 percent pure and furnish 80 percent germination and meet following requirements:

1. Rye: Fresh, clean, Italian rye grass seed (lollium multi-florum), mixed in labeled proportions. As tested, minimum percentages of impurities and germination must be labeled. Deliver in original unopened containers.

2. Bermuda: Extra-fancy, treated, lawn type common bermuda (Cynodon dactylon). Deliver in original, unopened container showing weight, analysis, name of vendor, and germination test results.

3. Wet, moldy, or otherwise damaged seed will not be accepted.

4. Seed requirements, application rates, and planting dates are:

TYPE	APPLICATION RATE POUNDS/A	PLANTING DATE
Hulled Common Bermuda Grass 98/88 Unhulled Common Bermuda Grass 98/88	40 40	Jan 1 to Mar 31
Hulled Common Bermuda Grass 98/88	40	Apr 1 to Sep 30
Hulled Common Bermuda Grass 98/88 Unhulled Common Bermuda Grass 98/88 Annual Rye Grass (Gulf)	40 40 30	Oct 1 to Dec 31

C. Fertilizer: Dry and free flowing, inorganic, water soluble commercial fertilizer, which is uniform in composition. Deliver in unopened containers which bear manufacturers guaranteed analysis. Caked, damaged, or otherwise unsuitable fertilizer will not be accepted. Fertilizer shall contain minimum percentages of following elements:

1. Nitrogen: 10 Percent
2. Phosphoric Acid: 20 Percent
3. Potash: 10 Percent

D. Mulch:

1. Virgin wood cellulose fibers from whole wood chips having minimum of 20 percent fibers 0.42 inches in length and 0.01 inches in diameter.

2. Cellulose fibers manufactured from recycled newspaper and meeting same fiber content and size as for cellulose fibers from wood chips.

3. Dye mulch green for coverage verification purposes.

E. Soil Stabilizer: "Terra Tack 1" or approved equal.

F. Weed control agent: Pre-emergent herbicide for grass areas, such as "Benefin," or approved equal.

PART 3 EXECUTION

3.1 PREPARATION:

A. Place and compact topsoil in accordance with requirements of Section 02310 – Topsoil and Finished Grading.

3.2 APPLICATION:

A. Seed: Apply uniformly at rates given in Paragraph 2.1 B for type of seed and planting date.

B. Fertilizer: Apply uniformly at rate of 500 pounds per acre.

C. Mulch: Apply uniformly at rate of 50 pounds per 1000 square feet.

D. Soil Stabilizer: Apply uniformly at rate of 40 pounds per acre.

E. Weed Control Agent: Apply at manufacturer's recommended rate prior to hydro mulching.

F. Suspend operations under conditions of drought, excessive moisture, high winds, or extreme or prolonged cold. Obtain Engineer approval before resuming operations.

G. Hydro mulch shall be applied to all disturbed areas.

3.3 MAINTENANCE:

A. Maintain grassed areas minimum of 90 days, or as required to establish an acceptable cover. For areas seeded in fall, continue maintenance following spring until acceptable cover is established.

B. Maintain grassed areas by watering, fertilizing, weeding, and trimming.

C. Repair areas damaged by erosion by regrading, rolling and replanting.

D. Reseed small, sparse grass areas. When sparse areas exceed 20 percent of planted area, reseed by hydro mulch.

E. Mow grass when height reaches 3 1/2 inches or greater on average before final acceptance. Mow to height of 2 1/2 inches.

END OF SECTION

SECTION 03300

CAST-IN-PLACE CONCRETE

PART 1 GENERAL

1.1 SUMMARY

A. Section includes cast-in-place concrete, including formwork, reinforcement, concrete materials, mixture design, placement procedures, and finishes.

B. Related Requirements:

1. Division 01 Specification Sections apply to Work of this Section.

1.2 DEFINITIONS

A. Cementitious Materials: Portland cement alone or in combination with one or more of the following: blended hydraulic cement, fly ash, slag cement, other pozzolans, and silica fume; materials subject to compliance with requirements.

B. W/C Ratio: The ratio by weight of water to cementitious materials.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Design Mixtures: For each concrete mixture. Submit alternate design mixtures when characteristics of materials, Project conditions, weather, test results, or other circumstances warrant adjustments.

1. Indicate amounts of mixing water to be withheld for later addition at Project site.

C. Steel Reinforcement Shop Drawings: Placing Drawings that detail fabrication, bending, and placement. Include bar sizes, lengths, material, grade, bar schedules, stirrup spacing, bent bar diagrams, bar arrangement, splices and laps, mechanical connections, tie spacing, hoop spacing, and supports for concrete reinforcement.

1.4 INFORMATIONAL SUBMITTALS

A. Material Certificates: For each of the following, signed by manufacturers:

1. Cementitious materials.

2. Admixtures.

3. Curing compounds.

B. Field quality-control reports.

1.5 QUALITY ASSURANCE

A. Installer Qualifications: A qualified installer who employs on Project personnel qualified as ACI-certified Flatwork Technician and Finisher and a supervisor who is an ACI-certified Concrete Flatwork Technician.

B. Manufacturer Qualifications: A firm experienced in manufacturing ready-mixed concrete products and that complies with ASTM C 94/C 94M requirements for production facilities and equipment.

C. Testing Agency Qualifications: An independent agency, acceptable to authorities having jurisdiction, qualified according to ASTM C 1077 and ASTM E 329 for testing indicated.

1. Personnel conducting field tests shall be qualified as ACI Concrete Field Testing Technician, Grade 1, according to ACI CP-1 or an equivalent certification program.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Steel Reinforcement: Deliver, store, and handle steel reinforcement to prevent bending and damage.

B. Waterstops: Store waterstops under cover to protect from moisture, sunlight, dirt, oil, and other contaminants.

1.7 FIELD CONDITIONS

A. Cold-Weather Placement: Comply with ACI 306.1 and as follows. Protect concrete work from physical damage or reduced strength that could be caused by frost, freezing actions, or low temperatures.

1. When average high and low temperature is expected to fall below 40 deg F for three successive days, maintain delivered concrete mixture temperature within the temperature range required by ACI 301.

2. Do not use frozen materials or materials containing ice or snow. Do not place concrete on frozen subgrade or on subgrade containing frozen materials.

3. Do not use calcium chloride, salt, or other materials containing antifreeze agents or chemical accelerators unless otherwise specified and approved in mixture designs.

B. Hot-Weather Placement: Comply with ACI 301 and ACI 305.1, and as follows:

1. Maintain concrete temperature below 90 deg F at time of placement. Chilled mixing water or chopped ice may be used to control temperature, provided water equivalent of ice is calculated to total amount of mixing water. Using liquid nitrogen to cool concrete is Contractor's option.

2. Fog-spray forms, steel reinforcement, and subgrade just before placing concrete. Keep subgrade uniformly moist without standing water, soft spots, or dry areas.

PART 2 PRODUCTS

2.1 CONCRETE, GENERAL

A. ACI Publications: Comply with the following unless modified by requirements in the Contract Documents:

1. ACI 301.

2. ACI 117.

2.2 FORM-FACING MATERIALS

A. Smooth-Formed Finished Concrete: Form-facing panels that provide continuous, true, and smooth concrete surfaces. Furnish in largest practicable sizes to minimize number of joints.

1. Plywood, metal, or other approved panel materials.

B. Rough-Formed Finished Concrete: Plywood, lumber, metal, or another approved material. Provide lumber dressed on at least two edges and one side for tight fit.

C. Chamfer Strips: Wood, metal, PVC, or rubber strips, 3/4 by 3/4 inch, minimum.

D. Form-Release Agent: Commercially formulated form-release agent that does not bond with, stain, or adversely affect concrete surfaces and does not impair subsequent treatments of concrete surfaces.

1. Formulate form-release agent with rust inhibitor for steel form-facing materials.

E. Form Ties: Factory-fabricated, removable or snap-off glass-fiber-reinforced plastic or metal form ties designed to resist lateral pressure of fresh concrete on forms and to prevent spalling of concrete on removal.

1. Furnish units that leave no corrodible metal closer than 1 inch to the plane of exposed concrete surface.

2. Furnish ties that, when removed, leave holes no larger than 1 inch in diameter in concrete surface.

3. Furnish ties with integral water-barrier plates to walls indicated to receive dampproofing or waterproofing.

2.3 STEEL REINFORCEMENT

A. Reinforcing Bars: ASTM A 615/A 615M, Grade 60, deformed.

B. Low-Alloy-Steel Reinforcing Bars: ASTM A 706/A 706M, deformed.

C. Plain-Steel Welded-Wire Reinforcement: ASTM A 1064/A 1064M, plain, fabricated from as-drawn steel wire into flat sheets.

2.4 REINFORCEMENT ACCESSORIES

A. Joint Dowel Bars: ASTM A 615/A 615M, Grade 60, plain-steel bars, cut true to length with ends square and free of burrs.

B. Bar Supports: Bolsters, chairs, spacers, and other devices for spacing, supporting, and fastening reinforcing bars and welded-wire reinforcement in place. Manufacture bar supports from steel wire, plastic, or precast concrete according to CRSI's "Manual of Standard Practice," of greater compressive strength than concrete and as follows:

1. For concrete surfaces exposed to view, where legs of wire bar supports contact forms, use CRSI Class 1 plastic-protected steel wire or CRSI Class 2 stainless-steel bar supports.

2.5 CONCRETE MATERIALS

A. Source Limitations: Obtain each type or class of cementitious material of the same brand from the same manufacturer's plant, obtain aggregate from single source, and obtain admixtures from single source from single manufacturer.

B. Cementitious Materials:

1. Portland Cement: ASTM C 150/C 150M, Type I, Type II, or Type I/II, gray.

2. Fly Ash: ASTM C 618, Class F or C.

C. Normal-Weight Aggregates: ASTM C 33/C 33M, Class 3M coarse aggregate or better, graded. Provide aggregates from a single source with documented service record data of at least 10 years' satisfactory service in similar applications and service conditions using similar aggregates and cementitious materials.

1. Maximum Coarse-Aggregate Size: 1-1/2 inches nominal.

2. Fine Aggregate: Free of materials with deleterious reactivity to alkali in cement.

D. Air-Entraining Admixture: ASTM C 260/C 260M.

E. Chemical Admixtures: Certified by manufacturer to be compatible with other admixtures and that do not contribute water-soluble chloride ions exceeding those permitted in hardened concrete. Do not use calcium chloride or admixtures containing calcium chloride.

1. Water-Reducing Admixture: ASTM C 494/C 494M, Type A.

2. High-Range, Water-Reducing Admixture: ASTM C 494/C 494M, Type F.

F. Water: ASTM C 94/C 94M and potable.

2.6 WATERSTOPS

A. Flexible PVC Waterstops: CE CRD-C 572, with factory-installed metal eyelets, for embedding in concrete to prevent passage of fluids through joints. Factory fabricate corners, intersections, and directional changes.

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

a. BoMetals, Inc.

b. Sika Corporation.

2. Profile: Ribbed without center bulb.

3. Dimensions: 6 inches by 3/8 inch thick; nontapered.

2.7 CURING MATERIALS

A. Absorptive Cover: AASHTO M 182, Class 2, burlap cloth made from jute or kenaf, weighing approximately 9 oz./sq. yd. when dry.

B. Moisture-Retaining Cover: ASTM C 171, polyethylene film or white burlap-polyethylene sheet.

C. Water: Potable.

D. Clear, Waterborne, Membrane-Forming Curing Compound: ASTM C 309, Type 1, Class B, dissipating.

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

   a. Dayton Superior.

   b. Euclid Chemical Company (The); an RPM company.

2.8 RELATED MATERIALS

A. Expansion- and Isolation-Joint-Filler Strips: ASTM D 1751, asphalt-saturated cellulosic fiber.

2.9 REPAIR MATERIALS

A. Repair Underlayment: Cement-based, polymer-modified, self-leveling product that can be applied in thicknesses from 1/8 inch and that can be feathered at edges to match adjacent floor elevations.

   1. Cement Binder: ASTM C 150/C 150M, portland cement or hydraulic or blended hydraulic cement as defined in ASTM C 219.

   2. Primer: Product of underlayment manufacturer recommended for substrate, conditions, and application.

   3. Aggregate: Well-graded, washed gravel, 1/8 to 1/4 inch or coarse sand as recommended by underlayment manufacturer.

   4. Compressive Strength: Not less than 4100 psi at 28 days when tested according to ASTM C 109/C 109M.

B. Repair Overlayment: Cement-based, polymer-modified, self-leveling product that can be applied in thicknesses from 1/4 inch and that can be filled in over a scarified surface to match adjacent floor elevations.

   1. Cement Binder: ASTM C 150/C 150M, portland cement or hydraulic or blended hydraulic cement as defined in ASTM C 219.

   2. Primer: Product of topping manufacturer recommended for substrate, conditions, and application.

   3. Aggregate: Well-graded, washed gravel, 1/8 to 1/4 inch or coarse sand as recommended by topping manufacturer.

   4. Compressive Strength: Not less than 5000 psi at 28 days when tested according to ASTM C 109/C 109M.

2.10 CONCRETE MIXTURES, GENERAL

A. Prepare design mixtures for each type and strength of concrete, proportioned on the basis of laboratory trial mixture or field test data, or both, according to ACI 301.

1. Use a qualified independent testing agency for preparing and reporting proposed mixture designs based on laboratory trial mixtures.

B. Cementitious Materials: Limit percentage, by weight, of cementitious materials other than portland cement in concrete as follows:

1. Fly Ash: 25 percent.

C. Limit water-soluble, chloride-ion content in hardened concrete to 0.15 percent by weight of cement.

D. Admixtures: Use admixtures according to manufacturer's written instructions.

1. Use water-reducing high-range water-reducing or plasticizing admixture in concrete, as required, for placement and workability.

2. Use water-reducing admixture in pumped concrete, concrete required to be watertight, and concrete with a w/c ratio below 0.50.

2.11 CONCRETE MIXTURES FOR BUILDING ELEMENTS

A. Footings: Normal-weight concrete.

1. Minimum Compressive Strength: 4000 psi at 28 days.

2. Maximum W/C Ratio: 0.50.

3. Slump Limit: 8 inches for concrete with verified slump of 2 to 4 inches before adding high-range water-reducing admixture or plasticizing admixture, plus or minus 1 inch.

B. Foundation Walls: Normal-weight concrete.

1. Minimum Compressive Strength: 4000 psi at 28 days.

2. Maximum W/C Ratio: 0.45.

3. Slump Limit: 8 inches for concrete with verified slump of 2 to 4 inches before adding high-range water-reducing admixture or plasticizing admixture, plus or minus 1 inch.

4. Air Content: l4 percent, plus or minus 1.5 percent at point of delivery for 1-1/2-inch nominal maximum aggregate size.

C. Slabs-on-Grade: Normal-weight concrete.

1. Minimum Compressive Strength: 4000 psi at 28 days.

2. Maximum W/C Ratio: 0.45.

3. Air Content: Do not allow air content of trowel-finished floors to exceed 3 percent.

D. Suspended Slabs: Normal-weight concrete.

1. Minimum Compressive Strength: 3000 psi at 28 days.

2. Maximum W/C Ratio: 0.50.

3. Slump Limit: 5 inches, plus or minus 1 inch.

E. Building Walls: Normal-weight concrete.

1. Minimum Compressive Strength: 4000 psi at 28 days.

2. Maximum W/C Ratio: 0.45.

3. Slump Limit: 5 inches, plus or minus 1 inch.

2.12 FABRICATING REINFORCEMENT

A. Fabricate steel reinforcement according to CRSI's "Manual of Standard Practice."

2.13 CONCRETE MIXING

A. Ready-Mixed Concrete: Measure, batch, mix, and deliver concrete according to ASTM C 94/C 94M, and furnish batch ticket information.

1. When air temperature is between 85 and 90 deg F, reduce mixing and delivery time from 1-1/2 hours to 75 minutes; when air temperature is above 90 deg F, reduce mixing and delivery time to 60 minutes.

PART 3 EXECUTION

3.1 FORMWORK INSTALLATION

A. Design, erect, shore, brace, and maintain formwork, according to ACI 301, to support vertical, lateral, static, and dynamic loads, and construction loads that might be applied, until structure can support such loads.

B. Construct formwork so concrete members and structures are of size, shape, alignment, elevation, and position indicated, within tolerance limits of ACI 117.

C. Limit concrete surface irregularities, designated by ACI 347 as abrupt or gradual, as follows:

1. Class A, 1/8 inch for smooth-formed finished surfaces.

2. Class B, 1/4 inch for rough-formed finished surfaces.

D. Construct forms tight enough to prevent loss of concrete mortar.

E. Construct forms for easy removal without hammering or prying against concrete surfaces. Provide crush or wrecking plates where stripping may damage cast-concrete surfaces. Provide top forms for inclined surfaces steeper than 1.5 horizontal to 1 vertical.

1. Install keyways, reglets, recesses, and the like, for easy removal.

2. Do not use rust-stained steel form-facing material.

F. Set edge forms, bulkheads, and intermediate screed strips for slabs to achieve required elevations and slopes in finished concrete surfaces. Provide and secure units to support screed strips; use strike-off templates or compacting-type screeds.

G. Provide temporary openings for cleanouts and inspection ports where interior area of formwork is inaccessible. Close openings with panels tightly fitted to forms and securely braced to prevent loss of concrete mortar. Locate temporary openings in forms at inconspicuous locations.

H. Chamfer exterior corners and edges of permanently exposed concrete.

I. Form openings, chases, offsets, sinkages, keyways, reglets, blocking, screeds, and bulkheads required in the Work. Determine sizes and locations from trades providing such items.

J. Clean forms and adjacent surfaces to receive concrete. Remove chips, wood, sawdust, dirt, and other debris just before placing concrete.

K. Retighten forms and bracing before placing concrete, as required, to prevent mortar leaks and maintain proper alignment.

L. Coat contact surfaces of forms with form-release agent, according to manufacturer's written instructions, before placing reinforcement.

3.2 EMBEDDED ITEM INSTALLATION

A. Place and secure anchorage devices and other embedded items required for adjoining work that is attached to or supported by cast-in-place concrete. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.

1. Install anchor rods, accurately located, to elevations required and complying with tolerances in Section 7.5 of AISC 303.

2. Install reglets to receive waterproofing and to receive through-wall flashings in outer face of concrete frame at exterior walls, where flashing is shown at lintels, shelf angles, and other conditions.

3. Install dovetail anchor slots in concrete structures as indicated.

3.3 REMOVING AND REUSING FORMS

A. General: Formwork for sides of beams, walls, columns, and similar parts of the Work that does not support weight of concrete may be removed after cumulatively curing at not less than 50 deg F for 24 hours after placing concrete. Concrete has to be hard enough to not be damaged by form-removal operations, and curing and protection operations need to be maintained.

1. Leave formwork for beam soffits, joists, slabs, and other structural elements that support weight of concrete in place until concrete has achieved at least 70 percent of its 28-day design compressive strength.

2. Remove forms only if shores have been arranged to permit removal of forms without loosening or disturbing shores.

B. Clean and repair surfaces of forms to be reused in the Work. Split, frayed, delaminated, or otherwise damaged form-facing material are not acceptable for exposed surfaces. Apply new form-release agent.

C. When forms are reused, clean surfaces, remove fins and laitance, and tighten to close joints. Align and secure joints to avoid offsets. Do not use patched forms for exposed concrete surfaces unless approved by Engineer.

3.4 SHORING AND RESHORING INSTALLATION

A. Comply with ACI 318 and ACI 301 for design, installation, and removal of shoring and reshoring.

B. Plan sequence of removal of shores and reshore to avoid damage to concrete. Locate and provide adequate reshoring to support construction without excessive stress or deflection.

3.5 STEEL REINFORCEMENT INSTALLATION

A. General: Comply with CRSI's "Manual of Standard Practice" for fabricating, placing, and supporting reinforcement.

1. Do not cut or puncture vapor retarder. Repair damage and reseal vapor retarder before placing concrete.

B. Clean reinforcement of loose rust and mill scale, earth, ice, and other foreign materials that reduce bond to concrete.

C. Accurately position, support, and secure reinforcement against displacement. Locate and support reinforcement with bar supports to maintain minimum concrete cover. Do not tack weld crossing reinforcing bars.

1. Weld reinforcing bars according to AWS D1.4/D 1.4M, where indicated.

D. Set wire ties with ends directed into concrete, not toward exposed concrete surfaces.

E. Install welded-wire reinforcement in longest practicable lengths on bar supports spaced to minimize sagging. Lap edges and ends of adjoining sheets at least one mesh spacing. Offset laps of adjoining sheet widths to prevent continuous laps in either direction. Lace overlaps with wire.

3.6 JOINTS

A. General: Construct joints true to line with faces perpendicular to surface plane of concrete.

B. Construction Joints: Install so strength and appearance of concrete are not impaired, at locations indicated or as approved by Engineer.

1. Place joints perpendicular to main reinforcement. Continue reinforcement across construction joints unless otherwise indicated. Do not continue reinforcement through sides of strip placements of floors and slabs.

2. Locate joints for beams, slabs, joists, and girders in the middle third of spans. Offset joints in girders a minimum distance of twice the beam width from a beam-girder intersection.

3. Locate horizontal joints in walls and columns at underside of floors, slabs, beams, and girders and at the top of footings or floor slabs.

4. Space vertical joints in walls as indicated. Locate joints beside piers integral with walls, near corners, and in concealed locations where possible.

C. Contraction Joints in Slabs-on-Grade: Form weakened-plane contraction joints, sectioning concrete into areas as indicated. Construct contraction joints for a depth equal to at least one-fourth of concrete thickness as follows:

1. Sawed Joints: Form contraction joints with power saws equipped with shatterproof abrasive or diamond-rimmed blades. Cut 1/8-inch-wide joints into concrete when cutting action does not tear, abrade, or otherwise damage surface and before concrete develops random contraction cracks.

D. Isolation Joints in Slabs-on-Grade: After removing formwork, install joint-filler strips at slab junctions with vertical surfaces, such as column pedestals, foundation walls, grade beams, and other locations, as indicated.

1. Extend joint-filler strips full width and depth of joint, terminating flush with finished concrete surface unless otherwise indicated.

2. Terminate full-width joint-filler strips not less than 1/2 inch or more than 1 inch below finished concrete surface where joint sealants, specified in Section 07 92 00 "Joint Sealants," are indicated.

3. Install joint-filler strips in lengths as long as practicable. Where more than one length is required, lace or clip sections together.

E. Doweled Joints: Install dowel bars and support assemblies at joints where indicated. Lubricate or asphalt coat one-half of dowel length to prevent concrete bonding to one side of joint.

3.7 WATERSTOP INSTALLATION

A. Flexible Waterstops: Install in construction joints and at other joints indicated to form a continuous diaphragm. Install in longest lengths practicable. Support and protect exposed waterstops during progress of the Work. Field fabricate joints in waterstops according to manufacturer's written instructions.

3.8 CONCRETE PLACEMENT

A. Before placing concrete, verify that installation of formwork, reinforcement, and embedded items is complete and that required inspections are completed.

B. Do not add water to concrete during delivery, at Project site, or during placement unless approved by Engineer.

C. Before test sampling and placing concrete, water may be added at Project site, subject to limitations of ACI 301.

1. Do not add water to concrete after adding high-range water-reducing admixtures to mixture.

D. Deposit concrete continuously in one layer or in horizontal layers of such thickness that no new concrete is placed on concrete that has hardened enough to cause seams or planes of weakness. If a section cannot be placed continuously, provide construction joints as indicated. Deposit concrete to avoid segregation.

1. Deposit concrete in horizontal layers of depth not to exceed formwork design pressures and in a manner to avoid inclined construction joints.

2. Consolidate placed concrete with mechanical vibrating equipment according to ACI 301.

3. Do not use vibrators to transport concrete inside forms. Insert and withdraw vibrators vertically at uniformly spaced locations to rapidly penetrate placed layer and at least 6 inches into preceding layer. Do not insert vibrators into lower layers of concrete that have begun to lose plasticity. At each insertion, limit duration of vibration to time necessary to consolidate concrete and complete embedment of reinforcement and other embedded items without causing mixture constituents to segregate.

E. Deposit and consolidate concrete for floors and slabs in a continuous operation, within limits of construction joints, until placement of a panel or section is complete.

1. Consolidate concrete during placement operations, so concrete is thoroughly worked around reinforcement and other embedded items and into corners.

2. Maintain reinforcement in position on chairs during concrete placement.

3. Screed slab surfaces with a straightedge and strike off to correct elevations.

4. Slope surfaces uniformly to drains where required.

5. Begin initial floating using bull floats or darbies to form a uniform and open-textured surface plane, before excess bleedwater appears on the surface. Do not further disturb slab surfaces before starting finishing operations.

3.9 FINISHING FORMED SURFACES

A. Rough-Formed Finish: As-cast concrete texture imparted by form-facing material with tie holes and defects repaired and patched. Remove fins and other projections that exceed specified limits on formed-surface irregularities.

1. Apply to concrete surfaces not exposed to public view.

B. Smooth-Formed Finish: As-cast concrete texture imparted by form-facing material, arranged in an orderly and symmetrical manner with a minimum of seams. Repair and patch tie holes and defects. Remove fins and other projections that exceed specified limits on formed-surface irregularities.

1. Apply to concrete surfaces exposed to public view, .

C. Rubbed Finish: Apply the following to smooth-formed-finished as-cast concrete where indicated:

1. Smooth-Rubbed Finish: Not later than one day after form removal, moisten concrete surfaces and rub with carborundum brick or another abrasive until producing a uniform color and texture. Do not apply cement grout other than that created by the rubbing process.

2. Grout-Cleaned Finish: Wet concrete surfaces and apply grout of a consistency of thick paint to coat surfaces and fill small holes. Mix 1 part portland cement to 1-1/2 parts fine sand with a 1:1 mixture of bonding admixture and water. Add white portland cement in amounts determined by trial patches, so color of dry grout matches adjacent surfaces. Scrub grout into voids and remove excess grout. When grout whitens, rub surface with clean burlap and keep surface damp by fog spray for at least 36 hours.

3. Cork-Floated Finish: Wet concrete surfaces and apply a stiff grout. Mix 1 part portland cement and 1 part fine sand with a 1:1 mixture of bonding agent and water. Add white portland cement in amounts determined by trial patches, so color of dry grout matches adjacent surfaces. Compress grout into voids by grinding surface. In a swirling motion, finish surface with a cork float.

D. Related Unformed Surfaces: At tops of walls, horizontal offsets, and similar unformed surfaces adjacent to formed surfaces, strike off smooth and finish with a texture matching adjacent formed surfaces. Continue final surface treatment of formed surfaces uniformly across adjacent unformed surfaces unless otherwise indicated.

3.10 FINISHING FLOORS AND SLABS

A. General: Comply with ACI 302.1R recommendations for screeding, restraightening, and finishing operations for concrete surfaces. Do not wet concrete surfaces.

B. Scratch Finish: While still plastic, texture concrete surface that has been screeded and bull-floated or darbied. Use stiff brushes, brooms, or rakes to produce a profile amplitude of 1/4 inch in one direction.

1. Apply scratch finish to surfaces to receive concrete floor toppings.

C. Float Finish: Consolidate surface with power-driven floats or by hand floating if area is small or inaccessible to power-driven floats. Restraighten, cut down high spots, and fill low spots. Repeat float passes and restraightening until surface is left with a uniform, smooth, granular texture.

1. Apply float finish to surfaces to receive trowel finish.

D. Trowel Finish: After applying float finish, apply first troweling and consolidate concrete by hand or power-driven trowel. Continue troweling passes and restraighten until surface is free of trowel marks and uniform in texture and appearance. Grind smooth any surface defects that would telegraph through applied coatings or floor coverings.

1. Apply a trowel finish to surfaces exposed to view.

2. Finish surfaces to the following tolerances, according to ASTM E 1155, for a randomly trafficked floor surface:

   a. Specified overall values of flatness, F(F) 30; and of levelness, F(L) 20; with minimum local values of flatness, F(F) 24; and of levelness, F(L) 15; for suspended slabs.

3. Finish and measure surface, so gap at any point between concrete surface and an unleveled, freestanding, 10-ft.- long straightedge resting on two high spots and placed anywhere on the surface does not exceed 3/16 inch.

E. Broom Finish: Apply a broom finish to exterior concrete platforms, steps, ramps, and elsewhere as indicated.

1. Immediately after float finishing, slightly roughen trafficked surface by brooming with fiber-bristle broom perpendicular to main traffic route. Coordinate required final finish with Engineer before application.

3.11 MISCELLANEOUS CONCRETE ITEM INSTALLATION

A. Filling In: Fill in holes and openings left in concrete structures after work of other trades is in place unless otherwise indicated. Mix, place, and cure concrete, as specified, to blend with in-place construction. Provide other miscellaneous concrete filling indicated or required to complete the Work.

B. Curbs: Provide monolithic finish to interior curbs by stripping forms while concrete is still green and by steel-troweling surfaces to a hard, dense finish with corners, intersections, and terminations slightly rounded.

C. Equipment Bases and Foundations:

1. Coordinate sizes and locations of concrete bases with actual equipment provided.

2. Minimum Compressive Strength: 4000 psi at 28 days.

3. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch centers around the full perimeter of concrete base.

4. For supported equipment, install epoxy-coated anchor bolts that extend through concrete base and anchor into structural concrete substrate.

5. Prior to pouring concrete, place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.

6. Cast anchor-bolt insert into bases. Install anchor bolts to elevations required for proper attachment to supported equipment.

3.12 CONCRETE PROTECTING AND CURING

A. General: Protect freshly placed concrete from premature drying and excessive cold or hot temperatures. Comply with ACI 306.1 for cold-weather protection and ACI 305.1 for hot-weather protection during curing.

B. Formed Surfaces: Cure formed concrete surfaces, including underside of beams, supported slabs, and other similar surfaces. If forms remain during curing period, moist cure after loosening forms. If removing forms before end of curing period, continue curing for remainder of curing period.

C. Unformed Surfaces: Begin curing immediately after finishing concrete. Cure unformed surfaces, including floors and slabs, concrete floor toppings, and other surfaces.

D. Cure concrete according to ACI 308.1, by one or a combination of the following methods:

1. Moisture Curing: Keep surfaces continuously moist for not less than seven days with the following materials:

a. Water.

b. Continuous water-fog spray.

c. Absorptive cover, water saturated, and kept continuously wet. Cover concrete surfaces and edges with 12-inch lap over adjacent absorptive covers.

2. Moisture-Retaining-Cover Curing: Cover concrete surfaces with moisture-retaining cover for curing concrete, placed in widest practicable width, with sides and ends lapped at least 12 inches, and sealed by waterproof tape or adhesive. Cure for not less than seven days. Immediately repair any holes or tears during curing period, using cover material and waterproof tape.

a. Moisture cure or use moisture-retaining covers to cure concrete surfaces to receive floor coverings.

b. Moisture cure or use moisture-retaining covers to cure concrete surfaces to receive penetrating liquid floor treatments.

3. Curing Compound: After a minimum of four days of moist curing as described above, apply uniformly in continuous operation by power spray or roller according to manufacturer's written instructions. Recoat areas subjected to heavy rainfall within three hours after initial application. Maintain continuity of coating and repair damage during curing period.

a. Removal: After curing period has elapsed, remove curing compound without damaging concrete surfaces by method recommended by curing compound manufacturer.

3.13 JOINT FILLING

A. Prepare, clean, and install joint filler according to manufacturer's written instructions.

1. Defer joint filling until concrete has aged at least six month(s). Do not fill joints until construction traffic has permanently ceased.

B. Remove dirt, debris, saw cuttings, curing compounds, and sealers from joints; leave contact faces of joints clean and dry.

3.14 CONCRETE SURFACE REPAIRS

A. Defective Concrete: Repair and patch defective areas when approved by Engineer. Remove and replace concrete that cannot be repaired and patched to Engineer's approval.

B. Patching Mortar: Mix dry-pack patching mortar, consisting of 1 part portland cement to 2-1/2 parts fine aggregate passing a No. 16 sieve, using only enough water for handling and placing.

C. Repairing Formed Surfaces: Surface defects include color and texture irregularities, cracks, spalls, air bubbles, honeycombs, rock pockets, fins and other projections on the surface, and stains and other discolorations that cannot be removed by cleaning.

1. Immediately after form removal, cut out honeycombs, rock pockets, and voids more than 1/2 inch in any dimension to solid concrete. Limit cut depth to 3/4 inch. Make edges of cuts perpendicular to concrete surface. Clean, dampen with water, and brush-coat holes and voids with bonding agent. Fill and compact with patching mortar before bonding agent has dried. Fill form-tie voids with patching mortar or cone plugs secured in place with bonding agent.

2. Repair defects on surfaces exposed to view by blending white portland cement and standard portland cement so that, when dry, patching mortar matches surrounding color. Patch a test area at inconspicuous locations to verify mixture and color match before proceeding with patching. Compact mortar in place and strike off slightly higher than surrounding surface.

3. Repair defects on concealed formed surfaces that affect concrete's durability and structural performance as determined by Engineer.

D. Repairing Unformed Surfaces: Test unformed surfaces, such as floors and slabs, for finish and verify surface tolerances specified for each surface. Correct low and high areas. Test surfaces sloped to drain for trueness of slope and smoothness; use a sloped template.

1. Repair finished surfaces containing defects. Surface defects include spalls, popouts, honeycombs, rock pockets, crazing and cracks in excess of 0.01 inch wide or that penetrate to reinforcement or completely through unreinforced sections regardless of width, and other objectionable conditions.

2. After concrete has cured at least 14 days, correct high areas by grinding.

3. Correct localized low areas during or immediately after completing surface finishing operations by cutting out low areas and replacing with patching mortar. Finish repaired areas to blend into adjacent concrete.

4. Correct other low areas scheduled to receive floor coverings with a repair underlayment. Prepare, mix, and apply repair underlayment and primer according to manufacturer's written instructions to produce a smooth, uniform, plane, and level surface. Feather edges to match adjacent floor elevations.

5. Correct other low areas scheduled to remain exposed with a repair topping. Cut out low areas to ensure a minimum repair topping depth of 1/4 inch to match adjacent floor elevations. Prepare, mix, and apply repair topping and primer according to manufacturer's written instructions to produce a smooth, uniform, plane, and level surface.

6. Repair defective areas, except random cracks and single holes 1 inch or less in diameter, by cutting out and replacing with fresh concrete. Remove defective areas with clean, square cuts and expose steel reinforcement with at least a 3/4-inch clearance all around. Dampen concrete surfaces in contact with patching concrete and apply bonding agent. Mix patching concrete of same materials and mixture as original concrete, except without coarse aggregate. Place, compact, and finish to blend with adjacent finished concrete. Cure in same manner as adjacent concrete.

7. Repair random cracks and single holes 1 inch or less in diameter with patching mortar. Groove top of cracks and cut out holes to sound concrete and clean off dust, dirt, and loose particles. Dampen cleaned concrete surfaces and apply bonding agent. Place patching mortar before bonding agent has dried. Compact patching mortar and finish to match adjacent concrete. Keep patched area continuously moist for at least 72 hours.

E. Perform structural repairs of concrete, subject to Engineer's approval, using epoxy adhesive and patching mortar.

F. Repair materials and installation not specified above may be used, subject to Engineer's approval.

3.15 FIELD QUALITY CONTROL

A. Testing Agency: Engage a qualified testing and inspecting agency to perform tests and inspections and to submit reports.

B. Inspections:

1. Steel reinforcement placement.

2. Verification of use of required design mixture.

3. Concrete placement, including conveying and depositing.

4. Curing procedures and maintenance of curing temperature.

C. Concrete Tests: Testing of composite samples of fresh concrete obtained according to ASTM C 172/C 172M shall be performed according to the following requirements:

1. Testing Frequency: Obtain at least one composite sample for each 100 cu. yd. or fraction thereof of each concrete mixture placed each day.

a. When frequency of testing provides fewer than five compressive-strength tests for each concrete mixture, testing shall be conducted from at least five randomly selected batches or from each batch if fewer than five are used.

2. Slump: ASTM C 143/C 143M; one test at point of placement for each composite sample, but not less than one test for each day's pour of each concrete mixture. Perform additional tests when concrete consistency appears to change.

3. Air Content: ASTM C 231/C 231M, pressure method, for normal-weight concrete; one test for each composite sample, but not less than one test for each day's pour of each concrete mixture.

4. Concrete Temperature: ASTM C 1064/C 1064M; one test hourly when air temperature is 40 deg F and below or 80 deg F and above, and one test for each composite sample.

5. Compression Test Specimens: ASTM C 31/C 31M.

a. Cast and laboratory cure two sets of two standard cylinder specimens for each composite sample.

6. Compressive-Strength Tests: ASTM C 39/C 39M; test one set of two laboratory-cured specimens at 7 days and one set of two specimens at 28 days.

a. A compressive-strength test shall be the average compressive strength from a set of two specimens obtained from same composite sample and tested at age indicated.

7. Strength of each concrete mixture will be satisfactory if every average of any three consecutive compressive-strength tests equals or exceeds specified compressive strength and no compressive-strength test value falls below specified compressive strength by more than 500 psi.

8. Test results shall be reported in writing to Engineer, concrete manufacturer, and Contractor within 48 hours of testing. Reports of compressive-strength tests shall contain Project identification name and number, date of concrete placement, name of concrete testing and inspecting agency, location of concrete batch in Work, design compressive strength at 28 days, concrete mixture proportions and materials, compressive breaking strength, and type of break for both 7- and 28-day tests.

9. Nondestructive Testing: Impact hammer, sonoscope, or other nondestructive device may be permitted by Engineer but will not be used as sole basis for approval or rejection of concrete.

10. Additional Tests: Testing and inspecting agency shall make additional tests of concrete when test results indicate that slump, air entrainment, compressive strengths, or other requirements have not been met, as directed by Engineer. Testing and inspecting agency may conduct tests to determine adequacy of concrete by cored cylinders complying with ASTM C 42/C 42M or by other methods as directed by Engineer.

11. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

12. Correct deficiencies in the Work that test reports and inspections indicate do not comply with the Contract Documents.

D. Measure floor and slab flatness and levelness according to ASTM E 1155 within 48 hours of finishing.

END OF SECTION

SECTION 03450

PRECAST ARCHITECTURAL CONCRETE

PART 1 GENERAL

1.1 SUMMARY

A. Section Includes:

1. Architectural precast concrete cladding units.

1.2 DEFINITIONS

A. Design Reference Sample: Sample of approved architectural precast concrete color, finish and texture, preapproved by Architect.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals:

1. Product Data: For recycled content, indicating postconsumer and preconsumer recycled content and cost.

2. Product Certificates: For regional materials, indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include distance to Project and cost for each regional material.

3. Environmental Product Declaration: For each product.

4. Health Product Declaration: For each product.

5. Sourcing of Raw Materials: Corporate sustainability report for each manufacturer.

6. Product Certificates: For indigenous materials, indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include distance to Project, means of transportation, and cost for each indigenous material.

7. Environmental Product Declaration: For each product.

8. Product Certificates: For regional materials, indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include distance to Project, means of transportation, and cost for each regional material.

9. Environmental Product Declaration: For each product.

10. Environmental Product Declaration: For each product.

11. Third-Party Certifications: For each product.

12. Third-Party Certified Life Cycle Assessment: For each product.

C. Design Mixtures: For each precast concrete mixture. Include compressive strength and water-absorption tests.

D. Shop Drawings:

1. Detail fabrication and installation of architectural precast concrete units.

2. Indicate locations, plans, elevations, dimensions, shapes, and cross sections of each unit.

3. Indicate joints, reveals, drips, chamfers, and extent and location of each surface finish.

4. Indicate details at building corners.

E. Samples: Design reference samples for initial verification of design intent, for each type of finish indicated on exposed surfaces of architectural precast concrete units, in sets of three, representative of finish, color, and texture variations expected; approximately 12 by 12 by 2 inches.

F. Delegated-Design Submittal: For architectural precast concrete indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.5 INFORMATIONAL SUBMITTALS

A. Welding certificates.

B. Material certificates.

C. Material Test Reports: For aggregates.

D. Field quality-control[and special inspection] reports.

1.6 QUALITY ASSURANCE

A. Fabricator Qualifications: A firm that assumes responsibility for engineering architectural precast concrete units to comply with performance requirements. This responsibility includes preparation of Shop Drawings and comprehensive engineering analysis by a qualified professional engineer.

1. Designated as a PCI-certified plant for Group A, Category A1 - Architectural Cladding and Load Bearing Units at time of bidding or designated as an APA-certified plant for production of architectural precast concrete products.

B. Quality-Control Standard: For manufacturing procedures and testing requirements, quality-control recommendations, and dimensional tolerances for types of units required, comply with PCI MNL 117, "Manual for Quality Control for Plants and Production of Architectural Precast Concrete Products."

C. Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D.1.1M, "Structural Welding Code - Steel"; and AWS D1.4/D1.4M, "Structural Welding Code - Reinforcing Steel."

D. Sample Panels: After sample approval and before fabricating architectural precast concrete units, produce a minimum of two sample panels approximately 16 sq. ft. in area for review by Architect. Incorporate full-scale details of architectural features, finishes, textures, and transitions in sample panels.

1.7 COORDINATION

A. Furnish loose connection hardware and anchorage items to be embedded in or attached to other construction without delaying the Work. Provide locations, setting diagrams, templates, instructions, and directions, as required, for installation.

PART 2 PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Delegated Design: Engage a qualified professional engineer, as defined in Section 01 40 00 "Quality Requirements," to design architectural precast concrete units.

B. Design Standards: Comply with ACI 318 and design recommendations of PCI MNL 120, "PCI Design Handbook - Precast and Prestressed Concrete," applicable to types of architectural precast concrete units indicated.

C. Structural Performance: Provide architectural precast concrete units and connections capable of withstanding design loads indicated within limits and under conditions indicated.

2.2 REINFORCING MATERIALS

A. Reinforcing Bars: ASTM A615/A615M, Grade 60, deformed.

B. Low-Alloy-Steel Reinforcing Bars: ASTM A706/A706M, deformed.

C. Plain-Steel Welded Wire Reinforcement: ASTM A185/A185M, fabricated from as-drawn galvanized-steel wire into flat sheets.

D. Deformed-Steel Welded Wire Reinforcement: ASTM A497/A497M, flat sheet.

E. Supports: Suspend reinforcement from back of mold or use bolsters, chairs, spacers, and other devices for spacing, supporting, and fastening reinforcing bars and welded wire reinforcement in place according to PCI MNL 117.

2.3 CONCRETE MATERIALS

A. Portland Cement: ASTM C150/C150M, Type I or Type III, gray, unless otherwise indicated.

1. For surfaces exposed to view in finished structure, use gray or white cement, of same type, brand, and mill source.

B. Supplementary Cementitious Materials:

1. Fly Ash: ASTM C618, Class C or F, with maximum loss on ignition of 3 percent.

2. Metakaolin: ASTM C618, Class N.

3. Silica Fume: ASTM C1240, with optional chemical and physical requirement.

4. Ground Granulated Blast-Furnace Slag: ASTM C989, Grade 100 or 120.

5. Blended Hydraulic Cement: ASTM C595, Type IS, portland blast-furnace slag Type IP, portland-pozzolan Type I (PM), pozzolan-modified portland Type I (SM), slag-modified portland cement.

C. Normal-Weight Aggregates: Except as modified by PCI MNL 117, ASTM C33/C33M, with coarse aggregates complying with Class 5S. Stockpile fine and coarse aggregates for each type of exposed finish from a single source (pit or quarry) for Project.

1. Face-Mixture-Coarse Aggregates: Selected, hard, and durable; free of material that reacts with cement or causes staining; to match selected finish sample.

a. Gradation: Uniformly graded To match design reference sample.

2. Face-Mixture-Fine Aggregates: Selected, natural or manufactured sand compatible with coarse aggregate; to match approved finish sample.

D. Coloring Admixture: ASTM C979/C979M, synthetic or natural mineral-oxide pigments or colored water-reducing admixtures, temperature stable, and nonfading.

E. Water: Potable; free from deleterious material that may affect color stability, setting, or strength of concrete and complying with chemical limits of PCI MNL 117.

F. Air-Entraining Admixture: ASTM C260, certified by manufacturer to be compatible with other required admixtures.

G. Chemical Admixtures: Certified by manufacturer to be compatible with other admixtures and to not contain calcium chloride, or more than 0.15 percent chloride ions or other salts by weight of admixture.

2.4 STEEL CONNECTION MATERIALS

A. Carbon-Steel Shapes and Plates: ASTM A36/A36M.

B. Carbon-Steel-Headed Studs: ASTM A108, AISI 1018 through AISI 1020, cold finished, AWS D1.1/D1.1M, Type A or Type B, with arc shields and with minimum mechanical properties of PCI MNL 117, Table 3.2.3.

C. Carbon-Steel Plate: ASTM A283/A283M, Grade C.

D. Malleable Iron Castings: ASTM A47/A47M, Grade 32510 or Grade 35028.

E. Carbon-Steel Castings: ASTM A27/A27M, Grade 60-30.

F. High-Strength, Low-Alloy Structural Steel: ASTM A572/A572M.

G. Carbon-Steel Structural Tubing: ASTM A500/A500M, Grade B or Grade C.

H. Wrought Carbon-Steel Bars: ASTM A675/A675M, Grade 65.

I. Deformed-Steel Wire or Bar Anchors: ASTM A496/A496M or ASTM A706/A706M.

J. Carbon-Steel Bolts and Studs: ASTM A307, Grade A or ASTM F1554, Grade 36; carbon-steel, hex-head bolts and studs; carbon-steel nuts, ASTM A563; and flat, unhardened steel washers, ASTM F844.

K. High-Strength Bolts, Nuts, and Washers: ASTM F3125/F3125M,Grade A325 Type 1, heavy-hex steel structural bolts; ASTM A563, Grade DH, heavy-hex carbon-steel nuts; and ASTM F436/F436M, Type 1, hardened carbon-steel washers.

L. Zinc-Coated Finish: For exterior steel items, steel in exterior walls, and items indicated for galvanizing, apply zinc coating by hot-dip process according to ASTM A123/A123M or ASTM A153/A153M electrodeposition according to ASTM B633, SC 3, Types 1 and 2.

1. Galvanizing Repair Paint: High-zinc-dust-content paint with dry film containing not less than 94 percent zinc dust by weight, and complying with DOD-P-21035B or SSPC-Paint 20.

M. Shop-Primed Finish: Prepare surfaces of nongalvanized steel items, except those surfaces to be embedded in concrete, according to requirements in SSPC-SP 3 and shop-apply lead- and chromate-free, rust-inhibitive primer, complying with performance requirements in MPI 79 SSPC-Paint 25 according to SSPC-PA 1.

2.5 GROUT MATERIALS

A. Sand-Cement Grout: Portland cement, ASTM C150/C150M, Type I, and clean, natural sand, ASTM C144 or ASTM C404. Mix at ratio of 1 part cement to 2-1/2 to 3 parts sand, by volume, with minimum water required for placement and hydration. Water-soluble chloride ion content less than 0.06 percent by weight of cement when tested according to ASTM C1218/C1218M.

B. Nonmetallic, Nonshrink Grout: Packaged, nonmetallic, noncorrosive, nonstaining grout containing selected silica sands, portland cement, shrinkage-compensating agents, plasticizing and water-reducing agents, complying with ASTM C1107/C1107M, Grade A for drypack and Grades B and C for flowable grout and of consistency suitable for application within a 30-minute working time. Water-soluble chloride ion content less than 0.06 percent by weight of cement when tested according to ASTM C1218/C1218M.

C. Epoxy-Resin Grout: Two-component, mineral-filled epoxy resin; ASTM C881/C881M, of type, grade, and class to suit requirements.

2.6 CONCRETE MIXTURES

A. Prepare design mixtures for each type of precast concrete required.

B. Limit use of fly ash and ground granulated blast-furnace slag to 20 percent of portland cement by weight; limit metakaolin and silica fume to 10 percent of portland cement by weight.

C. Design mixtures may be prepared by a qualified independent testing agency or by qualified precast plant personnel at architectural precast concrete fabricator's option.

D. Limit water-soluble chloride ions to maximum percentage by weight of cement permitted by ACI 318 or PCI MNL 117 when tested according to ASTM C1218/C1218M.

E. Normal-Weight Concrete Mixtures: Proportion mixtures by either laboratory trial batch or field test data methods according to ACI 211.1, with materials to be used on Project, to provide normal-weight concrete with the following properties:

1. Compressive Strength (28 Days): 5000 psi minimum.

F. Water Absorption: 6 percent by weight or 14 percent by volume, tested according to ASTM C642, except for boiling requirement.

G. Add air-entraining admixture at manufacturer's prescribed rate to result in concrete at point of placement having an air content complying with PCI MNL 117.

H. When included in design mixtures, add other admixtures to concrete mixtures according to manufacturer's written instructions.

2.7 FABRICATION

A. Cast-in Anchors, Inserts, Plates, Angles, and Other Anchorage Hardware: Fabricate anchorage hardware with sufficient anchorage and embedment to comply with design requirements. Accurately position for attachment of loose hardware, and secure in place during precasting operations. Locate anchorage hardware where it does not affect position of main reinforcement or concrete placement.

1. Weld-headed studs and deformed bar anchors used for anchorage according to AWS D1.1/D1.1M and AWS C5.4, "Recommended Practices for Stud Welding."

B. Furnish loose hardware items including steel plates, clip angles, seat angles, anchors, dowels, cramps, hangers, and other hardware shapes for securing architectural precast concrete units to supporting and adjacent construction.

C. Cast-in reglets, slots, holes, and other accessories in architectural precast concrete units as indicated on the Contract Drawings.

D. Reinforcement: Comply with recommendations in PCI MNL 117 for fabricating, placing, and supporting reinforcement.

E. Reinforce architectural precast concrete units to resist handling, transportation, and erection stresses and specified in-place loads.

F. Prestress tendons for architectural precast concrete units by either pretensioning or post-tensioning methods. Comply with PCI MNL 117.

G. Comply with requirements in PCI MNL 117 and requirements in this Section for measuring, mixing, transporting, and placing concrete. After concrete batching, no additional water may be added.

H. Place face mixture to a minimum thickness after consolidation of the greater of 1 inch or 1.5 times the maximum aggregate size, but not less than the minimum reinforcing cover specified.

I. Place concrete in a continuous operation to prevent cold joints or planes of weakness from forming in precast concrete units.

1. Place backup concrete mixture to ensure bond with face-mixture concrete.

J. Thoroughly consolidate placed concrete by internal and external vibration without dislocating or damaging reinforcement and built-in items, and minimize pour lines, honeycombing, or entrapped air voids on surfaces. Use equipment and procedures complying with PCI MNL 117.

1. Place self-consolidating concrete without vibration according to PCI TR-6, "Interim Guidelines for the Use of Self-Consolidating Concrete in Precast/Prestressed Concrete Institute Member Plants." Ensure adequate bond between face and backup concrete, if used.

K. Comply with PCI MNL 117 for hot- and cold-weather concrete placement.

L. Identify pickup points of architectural precast concrete units and orientation in structure with permanent markings, complying with markings indicated on Shop Drawings. Imprint or permanently mark casting date on each architectural precast concrete unit on a surface that does not show in finished structure.

M. Cure concrete, according to requirements in PCI MNL 117, by moisture retention without heat or by accelerated heat curing using low-pressure live steam or radiant heat and moisture. Cure units until compressive strength is high enough to ensure that stripping does not have an effect on performance or appearance of final product.

N. Discard and replace architectural precast concrete units that do not comply with requirements, including structural, manufacturing tolerance, and appearance, unless repairs meet requirements in PCI MNL 117 and Architect's approval.

2.8 FABRICATION TOLERANCES

A. Fabricate architectural precast concrete units to shapes, lines, and dimensions indicated so each finished unit complies with PCI MNL 117 product tolerances as well as position tolerances for cast-in items.

2.9 FINISHES

A. Exposed faces shall be free of joint marks, grain, and other obvious defects. Corners, including false joints shall be uniform, straight, and sharp. Finish exposed-face surfaces of architectural precast concrete units to match approved design reference sample and as follows:

1. Design Reference Sample: Panels of existing buildings on project site.

2. PCI's "Architectural Precast Concrete - Color and Texture Selection Guide," of plate numbers indicated.

3. Exposed-Aggregate Finish: Use chemical retarding agents applied to concrete forms and washing and brushing procedures to expose aggregate and surrounding matrix surfaces after form removal.

B. Finish unexposed surfaces of architectural precast concrete units with as cast finish.

2.10 SOURCE QUALITY CONTROL

A. Quality-Control Testing: Test and inspect precast concrete according to PCI MNL 117 requirements. If using self-consolidating concrete, also test and inspect according to PCI TR-6, ASTM C1610/C1610M, ASTM C1611/C1611M, ASTM C1621/C1621M, and ASTM C1712.

B. Contractor will employ an independent testing agency to evaluate architectural precast concrete fabricator's quality-control and testing methods.

PART 3 EXECUTION

3.1 INSTALLATION

A. Install clips, hangers, bearing pads, and other accessories required for connecting architectural precast concrete units to supporting members and backup materials.

B. Erect architectural precast concrete level, plumb, and square within specified allowable tolerances. Provide temporary supports and bracing as required to maintain position, stability, and alignment of units until permanent connections are completed.

1. Maintain horizontal and vertical joint alignment and uniform joint width as erection progresses.

2. Unless otherwise indicated, maintain uniform joint widths of 3/4 inch.

C. Connect architectural precast concrete units in position by bolting, welding, grouting, or as otherwise indicated on Shop Drawings. Remove temporary shims, wedges, and spacers as soon as practical after connecting and grouting are completed.

D. Welding: Comply with applicable requirements in AWS D1.1/D1.1M and AWS D1.4/D1.4M for welding, welding electrodes, appearance, quality of welds, and methods used in correcting welding work.

E. At bolted connections, use lock washers, tack welding, or other approved means to prevent loosening of nuts after final adjustment.

F. Grouting or Dry-Packing Connections and Joints: Grout connections where required or indicated. Retain flowable grout in place until hard enough to support itself. Alternatively, pack spaces with stiff dry-pack grout material, tamping until voids are completely filled. Place grout and finish smooth, level, and plumb with adjacent concrete surfaces. Promptly remove grout material from exposed surfaces before it affects finishes or hardens. Keep grouted joints damp for not less than 24 hours after initial set.

3.2 ERECTION TOLERANCES

A. Erect architectural precast concrete units level, plumb, square, and in alignment without exceeding the noncumulative erection tolerances of PCI MNL 117, Appendix I.

3.3 FIELD QUALITY CONTROL

A. Special Inspections: Contractor will engage a qualified special inspector to perform the following special inspections and prepare reports:

1. Erection of loadbearing precast concrete members.

2. Insert special inspections.

B. Testing Agency: Contractor will engage a qualified testing agency to perform tests and inspections and prepare test reports.

C. Visually inspect field welds and test according to ASTM E165 or to ASTM E709 and ASTM E1444. High-strength bolted connections are subject to inspections.

D. Testing agency will report test results promptly and in writing to Contractor and Architect.

E. Repair or remove and replace work where tests and inspections indicate that it does not comply with specified requirements.

F. Additional testing and inspecting, at Contractor's expense, shall be performed to determine compliance of replaced or additional work with specified requirements.

3.4 REPAIRS

A. Repair architectural precast concrete units if permitted by Architect. Architect reserves the right to reject repaired units that do not comply with requirements.

B. Mix patching materials and repair units so cured patches blend with color, texture, and uniformity of adjacent exposed surfaces and show no apparent line of demarcation between original and repaired work, when viewed in typical daylight illumination from a distance of 20 feet.

C. Prepare and repair damaged galvanized coatings with galvanizing repair paint according to ASTM A780/A780M.

D. Wire brush, clean, and paint damaged prime-painted components with same type of shop primer.

E. Remove and replace damaged architectural precast concrete units when repairs do not comply with requirements.

3.5 CLEANING

A. Clean surfaces of precast concrete units exposed to view.

B. Clean mortar, plaster, fireproofing, weld slag, and other deleterious material from concrete surfaces and adjacent materials immediately.

C. Clean exposed surfaces of precast concrete units after erection and completion of joint treatment to remove weld marks, other markings, dirt, and stains.

1. Perform cleaning procedures, if necessary, according to precast concrete fabricator's recommendations. Protect other work from staining or damage due to cleaning operations.

2. Do not use cleaning materials or processes that could change the appearance of exposed concrete finishes or damage adjacent materials.

END OF SECTION

SECTION 04200

UNIT MASONRY

PART 1 GENERAL

1.1 SUMMARY

A. Section Includes:

1. Concrete masonry units.

2. Mortar and grout.

3. Steel reinforcing bars.

4. Masonry-joint reinforcement.

5. Ties and anchors.

6. Miscellaneous masonry accessories.

7. Masonry-cell fill.

B. Products Installed but not Furnished under This Section:

1. Steel lintels in unit masonry.

C. Related Requirements:

1. Division 01 Specification Sections apply to Work of this Section.

2. Section 04815 "Glass Unit Masonry" for glass block.

1.2 DEFINITIONS

A. CMU(s): Concrete masonry unit(s).

B. Reinforced Masonry: Masonry containing reinforcing steel in grouted cells.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals:

1. Product Certificates: For regional materials, indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include distance to Project and cost for each regional material.

C. Shop Drawings: For the following:

1. Masonry Units: Show sizes, profiles, coursing, and locations of special shapes.

2. Stone Trim Units: Show sizes, profiles, and locations of each stone trim unit required.

3. Reinforcing Steel: Detail bending, lap lengths, and placement of unit masonry reinforcing bars. Comply with ACI 315.

1.4 INFORMATIONAL SUBMITTALS

A. Qualification Data: For testing agency.

B. Material Certificates: For each type and size of the following:

1. Masonry units.

a. Include material test reports substantiating compliance with requirements.

2. Integral water repellent used in CMUs.

3. Cementitious materials. Include name of manufacturer, brand name, and type.

4. Mortar admixtures.

5. Preblended, dry mortar mixes. Include description of type and proportions of ingredients.

6. Grout mixes. Include description of type and proportions of ingredients.

7. Reinforcing bars.

8. Joint reinforcement.

9. Anchors, ties, and metal accessories.

C. Mix Designs: For each type of mortar and grout. Include description of type and proportions of ingredients.

1. Include test reports for mortar mixes required to comply with property specification. Test according to ASTM C 109/C 109M for compressive strength, ASTM C 1506 for water retention, and ASTM C 91/C 91M for air content.

2. Include test reports, according to ASTM C 1019, for grout mixes required to comply with compressive strength requirement.

D. Statement of Compressive Strength of Masonry: For each combination of masonry unit type and mortar type, provide statement of average net-area compressive strength of masonry units, mortar type, and resulting net-area compressive strength of masonry determined according to TMS 602/ACI 530.1/ASCE 6.

E. Cold-Weather Procedures: Detailed description of methods, materials, and equipment to be used to comply with requirements.

1.5 QUALITY ASSURANCE

A. Testing Agency Qualifications: Qualified according to ASTM C 1093 for testing indicated.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Store masonry units on elevated platforms in a dry location. If units are not stored in an enclosed location, cover tops and sides of stacks with waterproof sheeting, securely tied. If units become wet, do not install until they are dry.

B. Store cementitious materials on elevated platforms, under cover, and in a dry location. Do not use cementitious materials that have become damp.

C. Store aggregates where grading and other required characteristics can be maintained and contamination avoided.

D. Deliver preblended, dry mortar mix in moisture-resistant containers. Store preblended, dry mortar mix in delivery containers on elevated platforms in a dry location or in covered weatherproof dispensing silos.

E. Store masonry accessories, including metal items, to prevent corrosion and accumulation of dirt and oil.

1.7 FIELD CONDITIONS

A. Protection of Masonry: During construction, cover tops of walls, projections, and sills with waterproof sheeting at end of each day's work. Cover partially completed masonry when construction is not in progress.

1. Extend cover a minimum of 24 inches down both sides of walls, and hold cover securely in place.

2. Where one wythe of multiwythe masonry walls is completed in advance of other wythes, secure cover a minimum of 24 inches down face next to unconstructed wythe, and hold cover in place.

B. Do not apply uniform floor or roof loads for at least 12 hours and concentrated loads for at least three days after building masonry walls or columns.

C. Stain Prevention: Prevent grout, mortar, and soil from staining the face of masonry to be left exposed or painted. Immediately remove grout, mortar, and soil that come in contact with such masonry.

1. Protect base of walls from rain-splashed mud and from mortar splatter by spreading coverings on ground and over wall surface.

2. Protect sills, ledges, and projections from mortar droppings.

3. Protect surfaces of window and door frames, as well as similar products with painted and integral finishes, from mortar droppings.

D. Cold-Weather Requirements: Do not use frozen materials or materials mixed or coated with ice or frost. Do not build on frozen substrates. Remove and replace unit masonry damaged by frost or by freezing conditions. Comply with cold-weather construction requirements contained in TMS 602/ACI 530.1/ASCE 6.

1. Cold-Weather Cleaning: Use liquid cleaning methods only when air temperature is 40 deg F and higher and will remain so until masonry has dried, but not less than seven days after completing cleaning.

E. Hot-Weather Requirements: Comply with hot-weather construction requirements contained in TMS 602/ACI 530.1/ASCE 6.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Source Limitations for Masonry Units: Obtain exposed masonry units of a uniform texture and color, or a uniform blend within the ranges accepted for these characteristics, from single source from single manufacturer for each product required.

B. Source Limitations for Mortar Materials: Obtain mortar ingredients of a uniform quality, including color for exposed masonry, from single manufacturer for each cementitious component and from single source or producer for each aggregate.

2.2 UNIT MASONRY, GENERAL

A. Masonry Standard: Comply with TMS 602/ACI 530.1/ASCE 6, except as modified by requirements in the Contract Documents.

B. Defective Units: Referenced masonry unit standards may allow a certain percentage of units to contain chips, cracks, or other defects exceeding limits stated. Do not use units where such defects are exposed in the completed Work.

1. Where fire-resistance-rated construction is indicated, units shall be listed and labeled by a qualified testing agency acceptable to authorities having jurisdiction.

2.3 CONCRETE MASONRY UNITS

A. Regional Materials: CMUs shall be manufactured within 100 miles of Project site from aggregates and cement that have been extracted, harvested, or recovered, as well as manufactured, within 100 miles of Project site.

B. Shapes: Provide shapes indicated and as follows, with exposed surfaces matching exposed faces of adjacent units unless otherwise indicated.

1. Provide special shapes for lintels, corners, jambs, sashes, movement joints, headers, bonding, and other special conditions.

2. Provide bullnose units for exposed outside corners at jambs of door openings indicated.

C. Integral Water Repellent: Provide units made with integral water repellent .

1. Integral Water Repellent: Liquid polymeric, integral water-repellent admixture that does not reduce flexural bond strength. Units made with integral water repellent, when tested according to ASTM E 514/E 514M as a wall assembly made with mortar containing integral water-repellent manufacturer's mortar additive, with test period extended to 24 hours, shall show no visible water or leaks on the back of test specimen.

a. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:

1) ACM Chemistries; RainBloc.
2) BASF Corporation-Construction Systems; MasterPel 240 (Pre-2014: Rheopel Plus) or MasterPel 200HD (Pre-2014: Rheopel 200HD).
3) Grace Construction Products; W.R. Grace & Co. -- Conn.; Dry-Block.

D. CMUs: ASTM C 90.

1. Density Classification: Medium weight.

2. Size (Width): Manufactured to dimensions 3/8 inch less than nominal dimensions.

2.4 MASONRY LINTELS

A. Masonry Lintels: Prefabricated or built-in-place masonry lintels made from bond beam CMUs matching adjacent CMUs in color, texture, and density classification, with reinforcing bars placed as indicated and filled with coarse grout. Cure precast lintels before handling and installing. Temporarily support built-in-place lintels until cured.

2.5 MORTAR AND GROUT MATERIALS

A. Portland Cement: ASTM C 150/C 150M, Type I or II, except Type III may be used for cold-weather construction. Provide natural color or white cement as required to produce mortar color indicated.

1. Alkali content shall not be more than 0.1 percent when tested according to ASTM C 114.

B. Hydrated Lime: ASTM C 207, Type S.

C. Portland Cement-Lime Mix: Packaged blend of portland cement and hydrated lime containing no other ingredients.

D. Aggregate for Mortar: ASTM C 144.

E. Aggregate for Grout: ASTM C 404.

F. Delete "Epoxy Pointing Mortar" Paragraph below if not needed for pre-faced CMUs, glazed brick, or glazed structural clay facing tile.

G. Retain "Refractory Mortar Mix" Paragraph below if using firebox brick and clay flue linings.

H. "Cold-Weather Admixture" Paragraph below is an example of a requirement for a concrete admixture often used in cold weather as an antifreeze. Appendix X1 in ASTM C 270 and BIA generally recommend not using admixtures unless they are known to have no adverse effects. Before approving the use of cold-weather admixtures, verify their acceptability by laboratory testing with mortar mix used.

I. Retain "Products" Subparagraph and list of manufacturers and products below to require specific products or a comparable product from other manufacturers.

J. Water-Repellent Admixture: Liquid water-repellent mortar admixture intended for use with CMUs containing integral water repellent from same manufacturer.

1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:

a. ACM Chemistries; RainBloc for Mortar.

b. BASF Corporation-Construction Systems; MasterPel 240MA (Pre-2014: Rheopel Plus Mortar Admixture) or MasterPel 210D (Pre-2014: Rheopel Plus D).

c. Grace Construction Products; W.R. Grace & Co. -- Conn.; Dry-Block Mortar Admixture.

K. Water: Potable.

2.6 REINFORCEMENT

A. Uncoated-Steel Reinforcing Bars: ASTM A 615/A 615M or ASTM A 996/A 996M, Grade 60.

B. Reinforcing Bar Positioners: Wire units designed to fit into mortar bed joints spanning masonry unit cells and to hold reinforcing bars in center of cells. Units are formed from 0.148-inch steel wire, hot-dip galvanized after fabrication. Provide units designed for number of bars indicated.

1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:

   a. Dur-O-Wal; a Hohmann & Barnard company; D/A 810, D/A 812 or D/A 817.

   b. Heckmann Building Products, Inc.; No. 376 Rebar Positioner.

   c. Hohmann & Barnard, Inc.; #RB or #RB-Twin Rebar Positioner.

   d. Wire-Bond; O-Ring or Double O-Ring Rebar Positioner.

C. Masonry-Joint Reinforcement, General: ASTM A 951/A 951M.

1. Interior Walls: Hot-dip galvanized carbon steel.

2. Exterior Walls: Hot-dip galvanized carbon steel.

3. Wire Size for Side Rods: 0.148-inch diameter.

4. Wire Size for Cross Rods: 0.148-inch diameter.

5. Spacing of Cross Rods, Tabs, and Cross Ties: Not more than 16 inches o.c.

6. Provide in lengths of not less than 10 feet, with prefabricated corner and tee units.

D. Masonry-Joint Reinforcement for Single-Wythe Masonry: Ladder or truss type with single pair of side rods.

E. Masonry-Joint Reinforcement for Multiwythe Masonry:

2.7 TIES AND ANCHORS

A. General: Ties and anchors shall extend at least 1-1/2 inches into veneer but with at least a 5/8-inch cover on outside face.

B. Materials: Provide ties and anchors specified in this article that are made from materials that comply with the following unless otherwise indicated:

1. Hot-Dip Galvanized, Carbon-Steel Wire: ASTM A 82/A 82M, with ASTM A 153/A 153M, Class B-2 coating.

2. Galvanized-Steel Sheet: ASTM A 653/A 653M, Commercial Steel, G60 zinc coating.

3. Steel Sheet, Galvanized after Fabrication: ASTM A 1008/A 1008M, Commercial Steel, with ASTM A 153/A 153M, Class B coating.

C. Adjustable Anchors for Connecting to Concrete: Provide anchors that allow vertical or horizontal adjustment but resist tension and compression forces perpendicular to plane of wall.

2.8 MISCELLANEOUS MASONRY ACCESSORIES

A. Compressible Filler: Premolded filler strips complying with ASTM D 1056, Grade 2A1; compressible up to 35 percent; of width and thickness indicated; formulated from [neoprene] [urethane] [or] [PVC].

B. Preformed Control-Joint Gaskets: Made from styrene-butadiene-rubber compound, complying with ASTM D 2000, Designation M2AA-805 and designed to fit standard sash block and to maintain lateral stability in masonry wall; size and configuration as indicated.

2.9 MASONRY CLEANERS

A. Proprietary Acidic Cleaner: Manufacturer's standard-strength cleaner designed for removing mortar/grout stains, efflorescence, and other new construction stains from new masonry without discoloring or damaging masonry surfaces. Use product expressly approved for intended use by cleaner manufacturer and manufacturer of masonry units being cleaned.

2.10 MORTAR AND GROUT MIXES

A. General: Do not use admixtures, including pigments, air-entraining agents, accelerators, retarders, water-repellent agents, antifreeze compounds, or other admixtures unless otherwise indicated.

1. Do not use calcium chloride in mortar or grout.

2. Use portland cement-lime mortar unless otherwise indicated.

B. Mortar for Unit Masonry: Comply with ASTM C 270, Property Specification. Provide the following types of mortar for applications stated unless another type is indicated or needed to provide required compressive strength of masonry.

1. For exterior, above-grade, load-bearing and non-load-bearing walls and parapet walls; for interior load-bearing walls; for interior non-load-bearing partitions; and for other applications where another type is not indicated, use Type N.

2. For interior non-load-bearing partitions, Type O may be used instead of Type N.

C. Grout for Unit Masonry: Comply with ASTM C 476.

1. Use grout of type indicated or, if not otherwise indicated, of type (fine or coarse) that will comply with TMS 602/ACI 530.1/ASCE 6 for dimensions of grout spaces and pour height.

2. Proportion grout in accordance with ASTM C 476, Table 1 or paragraph 4.2.2 for specified 28-day compressive strength indicated, but not less than 2,000 psi.

3. Provide grout with a slump of 8 to 11 inches as measured according to ASTM C 143/C 143M.

PART 3 EXECUTION

3.1 EXAMINATION

A. Examine conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

1. For the record, prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.

2. Verify that foundations are within tolerances specified.

3. Verify that reinforcing dowels are properly placed.

4. Verify that substrates are free of substances that impair mortar bond.

B. Before installation, examine rough-in and built-in construction for piping systems to verify actual locations of piping connections.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION, GENERAL

A. Thickness: Build cavity and composite walls and other masonry construction to full thickness shown. Build single-wythe walls to actual widths of masonry units, using units of widths indicated.

B. Build chases and recesses to accommodate items specified in this and other Sections.

C. Leave openings for equipment to be installed before completing masonry. After installing equipment, complete masonry to match construction immediately adjacent to opening.

D. Use full-size units without cutting if possible. If cutting is required to provide a continuous pattern or to fit adjoining construction, cut units with motor-driven saws; provide clean, sharp, unchipped edges. Allow units to dry before laying unless wetting of units is specified. Install cut units with cut surfaces and, where possible, cut edges concealed.

E. Select and arrange units for exposed unit masonry to produce a uniform blend of colors and textures. Mix units from several pallets or cubes as they are placed.

3.3 TOLERANCES

A. Dimensions and Locations of Elements:

1. For dimensions in cross section or elevation, do not vary by more than plus 1/2 inch or minus 1/4 inch.

2. For location of elements in plan, do not vary from that indicated by more than plus or minus 1/2 inch.

3. For location of elements in elevation, do not vary from that indicated by more than plus or minus 1/4 inch in a story height or 1/2 inch total.

B. Lines and Levels:

1. For bed joints and top surfaces of bearing walls, do not vary from level by more than 1/4 inch in 10 feet, or 1/2-inch maximum.

2. For conspicuous horizontal lines, such as lintels, sills, parapets, and reveals, do not vary from level by more than 1/8 inch in 10 feet, 1/4 inch in 20 feet, or 1/2-inch maximum.

3. For vertical lines and surfaces, do not vary from plumb by more than 1/4 inch in 10 feet, 3/8 inch in 20 feet, or 1/2-inch maximum.

4. For conspicuous vertical lines, such as external corners, door jambs, reveals, and expansion and control joints, do not vary from plumb by more than 1/8 inch in 10 feet, 1/4 inch in 20 feet, or 1/2-inch maximum.

5. For lines and surfaces, do not vary from straight by more than 1/4 inch in 10 feet, 3/8 inch in 20 feet, or 1/2-inch maximum.

6. For vertical alignment of exposed head joints, do not vary from plumb by more than 1/4 inch in 10 feet or 1/2-inch maximum.

7. For faces of adjacent exposed masonry units, do not vary from flush alignment by more than 1/16 inch except due to warpage of masonry units within tolerances specified for warpage of units.

C. Joints:

1. For bed joints, do not vary from thickness indicated by more than plus or minus 1/8 inch, with a maximum thickness limited to 1/2 inch.

2. For exposed bed joints, do not vary from bed-joint thickness of adjacent courses by more than 1/8 inch.

3. For head and collar joints, do not vary from thickness indicated by more than plus 3/8 inch or minus 1/4 inch.

4. For exposed head joints, do not vary from thickness indicated by more than plus or minus 1/8 inch. Do not vary from adjacent bed-joint and head-joint thicknesses by more than 1/8 inch.

5. For exposed bed joints and head joints of stacked bond, do not vary from a straight line by more than 1/16 inch from one masonry unit to the next.

3.4 LAYING MASONRY WALLS

A. Lay out walls in advance for accurate spacing of surface bond patterns with uniform joint thicknesses and for accurate location of openings, movement-type joints, returns, and offsets. Avoid using less-than-half-size units, particularly at corners, jambs, and, where possible, at other locations.

B. Bond Pattern for Exposed Masonry: Unless otherwise indicated, lay exposed masonry in running bond; do not use units with less-than-nominal 4-inch horizontal face dimensions at corners or jambs.

C. Stopping and Resuming Work: Stop work by stepping back units in each course from those in course below; do not tooth. When resuming work, clean masonry surfaces that are to receive mortar, remove loose masonry units and mortar, and wet brick if required before laying fresh masonry.

D. Built-in Work: As construction progresses, build in items specified in this and other Sections. Fill in solidly with masonry around built-in items.

E. Fill space between steel frames and masonry solidly with mortar unless otherwise indicated.

F. Where built-in items are to be embedded in cores of hollow masonry units, place a layer of metal lath, wire mesh, or plastic mesh in the joint below, and rod mortar or grout into core.

G. Fill cores in hollow CMUs with grout 24 inches under bearing plates, beams, lintels, posts, and similar items unless otherwise indicated.

H. Build non-load-bearing interior partitions full height of story to underside of solid floor or roof structure above unless otherwise indicated.

3.5 MORTAR BEDDING AND JOINTING

A. Lay CMUs as follows:

1. Bed face shells in mortar and make head joints of depth equal to bed joints.

2. Bed webs in mortar in all courses of piers, columns, and pilasters.

3. Bed webs in mortar in grouted masonry, including starting course on footings.

4. Fully bed entire units, including areas under cells, at starting course on footings where cells are not grouted.

5. Fully bed units and fill cells with mortar at anchors and ties as needed to fully embed anchors and ties in mortar.

B. Tool exposed joints slightly concave when thumbprint hard, using a jointer larger than joint thickness unless otherwise indicated.

1. For glazed masonry units, use a nonmetallic jointer 3/4 inch or more in width.

C. Cut joints flush for masonry walls to receive plaster or other direct-applied finishes (other than paint) unless otherwise indicated.

3.6 MASONRY-JOINT REINFORCEMENT

A. General: Install entire length of longitudinal side rods in mortar with a minimum cover of 5/8 inch on exterior side of walls, 1/2 inch elsewhere. Lap reinforcement a minimum of 6 inches.

1. Space reinforcement not more than 16 inches o.c.

2. Space reinforcement not more than 8 inches o.c. in foundation walls and parapet walls.

3. Provide reinforcement not more than 8 inches above and below wall openings and extending 12 inches beyond openings in addition to continuous reinforcement.

B. Interrupt joint reinforcement at control and expansion joints unless otherwise indicated.

C. Provide continuity at corners by using prefabricated L-shaped units.

D. Cut and bend reinforcing units as directed by manufacturer for continuity at[corners,] returns, offsets, column fireproofing, pipe enclosures, and other special conditions.

3.7 ANCHORING MASONRY TO STRUCTURAL STEEL AND CONCRETE

A. Anchor masonry to structural steel and concrete, where masonry abuts or faces structural steel or concrete, to comply with the following:

1. Provide an open space not less than [1/2 inch] [1 inch] [2 inches] wide between masonry and structural steel or concrete unless otherwise indicated. Keep open space free of mortar and other rigid materials.

2. Anchor masonry with anchors embedded in masonry joints and attached to structure.

3. Space anchors as indicated, but not more than 24 inches o.c. vertically and 36 inches o.c. horizontally.

3.8 CONTROL AND EXPANSION JOINTS

A. General: Install control- and expansion-joint materials in unit masonry as masonry progresses. Do not allow materials to span control and expansion joints without provision to allow for in-plane wall or partition movement.

B. Form control joints in concrete masonry using one of the following methods:

1. Fit bond-breaker strips into hollow contour in ends of CMUs on one side of control joint. Fill resultant core with grout, and rake out joints in exposed faces for application of sealant.

2. Install preformed control-joint gaskets designed to fit standard sash block.

3. Install interlocking units designed for control joints. Install bond-breaker strips at joint. Keep head joints free and clear of mortar, or rake out joint for application of sealant.

4. Install temporary foam-plastic filler in head joints, and remove filler when unit masonry is complete for application of sealant.

3.9 LINTELS

A. Install steel lintels where indicated.

B. Provide masonry lintels where shown and where openings of more than 12 inches for brick-size units and 24 inches for block-size units are shown without structural steel or other supporting lintels.

3.10 FIELD QUALITY CONTROL

A. Testing and Inspecting: Owner will engage special inspectors to perform tests and inspections and prepare reports. Allow inspectors access to scaffolding and work areas as needed to perform tests and inspections. Retesting of materials that fail to comply with specified requirements shall be done at Contractor's expense.

B. Inspections: Special inspections according to Level B in TMS 402/ACI 530/ASCE 5.

1. Begin masonry construction only after inspectors have verified proportions of site-prepared mortar.

2. Place grout only after inspectors have verified compliance of grout spaces and of grades, sizes, and locations of reinforcement.

3. Place grout only after inspectors have verified proportions of site-prepared grout.

C. Testing Prior to Construction: One set of tests.

D. Testing Frequency: One set of tests for each 5,000 sq. ft. of wall area or portion thereof.

E. Clay Masonry Unit Test: For each type of unit provided, according to ASTM C 67 for compressive strength.

F. Concrete Masonry Unit Test: For each type of unit provided, according to ASTM C 140 for compressive strength.

G. Mortar Test (Property Specification): For each mix provided, according to ASTM C 780. Test mortar for mortar air content and compressive strength.

H. Grout Test (Compressive Strength): For each mix provided, according to ASTM C 1019.

END OF SECTION

SECTION 04815

GLASS UNIT MASONRY

PART 1 GENERAL

1.1 SUMMARY

A. Section Includes:

1. Glass block set in mortar.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Samples: Glass-block units.

PART 2 PRODUCTS

2.1 GLASS BLOCK

A. Hollow Glass Block: Hollow units made from transparent glass, with manufacturer's standard edge coating.

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

a. Mulia Inc.; distributed by Glass Blocks Unlimited.

b. Mulia Inc.; distributed by Mulia, Inc.

c. Pittsburgh Corning Corporation.

d. Seves; distributed by Glass Blocks Unlimited.

e. Seves; distributed by Glass Block Warehouse, LC.

f. Vetroarredo Sediver S.p.A.; distributed by International Product Supply.

g. J. Weck GmbH & Co. KG; distributed by Glashaus, Inc.

h. J. Weck GmbH & Co. KG; distributed by Glass Blocks Unlimited.

i. WGS Westerwald Glasstein GmbH. Solaris Glasstein; distributed by Glass Blocks Unlimited.

2. Glass Color: Colorless.

3. Pattern: Smooth, undistorted inner and outer faces.

4. Edge-Coating Color: White .

5. Thick-Faced Block: Units with faces at least 3/4 inch thick.

2.2 MORTAR MATERIALS

A. Portland Cement: ASTM C 150/C 150M, Type I or Type II. Provide natural color or white cement as required to produce mortar color indicated.

1. Where joints are indicated to be raked out and pointed, gray cement may be used for setting mortar.

B. Hydrated Lime: ASTM C 207, Type S.

C. Portland Cement-Lime Mix: Packaged blend of portland cement and hydrated lime containing no other ingredients.

D. Aggregate: ASTM C 144, with 100 percent passing No. 8 sieve.

1. For pointing mortar and joints narrower than 1/4 inch, use aggregate graded with 100 percent passing No. 16 sieve.

2. White Aggregates: Natural white sand or crushed white stone.

E. Water-Repellent Admixture: Dry mixture of stearates, water-reducing agents, and fine aggregates intended to reduce capillarity in mortar.

1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:

a. BASF Corporation, Construction Chemicals; Hydrocide Powder.

F. Water: Potable.

2.3 GLASS UNIT MASONRY ACCESSORIES

A. Panel Reinforcement: Ladder-type units, butt welded, not lapped and welded; complying with ASTM A 951/A 951M in straight lengths of not less than 10 feet, and as follows:

1. Exterior Walls: Hot-dip galvanized, carbon -steel wire.

2. Wire Size: W1.7 or 0.148-inch diameter.

3. Width: 1-5/8 inches.

4. Spacing of Cross Rods: Not more than 16 inches apart.

B. Panel Anchors: Glass-block manufacturer's standard perforated steel strips, 0.0359 inch by 1-3/4 inches wide by 24 inches long, hot-dip galvanized after fabrication to comply with ASTM A 153/A 153M.

C. Fasteners, General: Unless otherwise indicated, provide Type 304 or Type 316 stainless-steel fasteners at exterior walls and zinc-plated fasteners with coating complying with ASTM B 633, Class Fe/Zn 5, at interior walls. Select fasteners for type, grade, and class required.

D. Asphalt Emulsion: Cold-applied asphalt emulsion complying with ASTM D 1187/D 1187M or ASTM D 1227.

E. Sealant Accessories: Provide sealant accessories, including primers, bond-breaker tape, and cylindrical sealant backing, that comply with applicable requirements in Section 07900 "Joint Sealers."

2.4 MORTAR MIXES

A. General: Do not use admixtures unless otherwise indicated.

1. For mortar in exterior panels, use water-repellent admixture according to admixture manufacturer's written instructions.

2. Limit cementitious materials in mortar to portland cement and lime.

B. Mortar for Glass Unit Masonry Assemblies: Comply with ASTM C 270, Proportion Specification for Type S mortar.

PART 3 EXECUTION

3.1 INSTALLING GLASS BLOCK WITH MORTAR

A. Apply a heavy coat of asphalt emulsion to sill and adhere expansion strips to jambs and heads with asphalt emulsion. Allow asphalt emulsion to dry before placing mortar. Trim expansion strips to width required to fit glass block and to full lengths of heads and jambs.

B. Set glass block with completely filled bed and head joints, with no furrowing, accurately spaced and coordinated with other construction. Maintain 1/4-inch exposed joint widths.

C. Install panel reinforcement in horizontal joints at spacing indicated and continuously from end to end of panels; comply with the following requirements:

1. Vertical Spacing of Panel Reinforcement for Exterior Panels: Every other course but not more than 16 inches o.c., starting with first course above sill.

2. Do not bridge expansion joints with panel reinforcement.

3. Place panel reinforcement in joints immediately above and below all openings within glass unit masonry assemblies.

4. Lap panel reinforcement not less than 6 inches if more than one length is necessary.

D. Install panel anchors at locations indicated and in same horizontal joints where panel reinforcement occurs. Extend panel anchors at least 12 inches into joints, and bend within expansion joints at edges of panels and across the head. Attach panel anchors as follows:

E. Use plastic spacers or temporary wedges in mortar joints to produce uniform joint widths and to prevent mortar from being squeezed out of joints.

F. Keep expansion joints free of mortar.

G. Rake out joints indicated to be pointed to a uniform depth sufficient to accommodate pointing material, but not less than joint width.

1. Point joints at both faces of exterior panels with mortar.

H. Point joints with mortar by filling raked joints and voids. Place and compact pointing mortar in layers not more than 3/8 inch thick. Compact each layer thoroughly and allow to become thumbprint hard before applying next layer.

1. Tool exposed joints slightly concave when pointing mortar is thumbprint hard. Use a smooth plastic jointer larger than joint width.

I. Point joints by filling with sealant to comply with requirements in Section 07 92 00 "Joint Sealants."

J. Install sealant at jambs, heads, mullions, and other locations indicated. Prepare joints, including installation of primer and bond-breaker tape or cylindrical sealant backing, and apply elastomeric sealants to comply with requirements in Section 07900 "Joint Sealers."

3.2 CLEANING

A. Perform final cleaning of glass unit masonry assemblies when surface is not exposed to direct sunlight. Start at top of panel using generous amounts of clean water. Remove water with clean, dry, soft cloths; change cloths frequently to eliminate dried mortar particles and aggregate.

END OF SECTION

SECTION 05120

STRUCTURAL STEEL

PART 1 GENERAL

1.1 SUMMARY

A. Section Includes:

1. Structural steel.

2. Grout.

B. Related Requirements:

1. Division 01 Specification Sections apply to Work of this Section.

1.2 DEFINITIONS

A. Structural Steel: Elements of the structural frame indicated on Drawings and as described in AISC 303, "Code of Standard Practice for Steel Buildings and Bridges."

1.3 COORDINATION

A. Coordinate installation of anchorage items to be embedded in or attached to other construction without delaying the Work. Provide setting diagrams, sheet metal templates, instructions, and directions for installation.

1.4 ACTION SUBMITTALS

A. Shop Drawings: Show fabrication of structural-steel components.

1. Include details of cuts, connections, splices, camber, holes, and other pertinent data.

2. Include embedment Drawings.

3. Indicate welds by standard AWS symbols, distinguishing between shop and field welds, and show size, length, and type of each weld. Show backing bars that are to be removed and supplemental fillet welds where backing bars are to remain.

4. Indicate type, size, and length of bolts, distinguishing between shop and field bolts. Identify pretensioned and slip-critical, high-strength bolted connections.

1.5 INFORMATIONAL SUBMITTALS

A. Welding certificates.

B. Field quality-control and special inspection reports.

1.6 QUALITY ASSURANCE

A. Fabricator Qualifications: A qualified fabricator that participates in the AISC Quality Certification Program and is designated an AISC-Certified Plant, Category STD.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Store materials to permit easy access for inspection and identification. Keep steel members off ground and spaced by using pallets, dunnage, or other supports and spacers. Protect steel members and packaged materials from corrosion and deterioration.

1. Do not store materials on structure in a manner that might cause distortion, damage, or overload to members or supporting structures. Repair or replace damaged materials or structures as directed.

B. Store fasteners in a protected place in sealed containers with manufacturer's labels intact.

1. Fasteners may be repackaged provided Owner's testing and inspecting agency observes repackaging and seals containers.

2. Clean and relubricate bolts and nuts that become dry or rusty before use.

3. Comply with manufacturers' written recommendations for cleaning and lubricating ASTM F 3125/F 3125M, Grade F1852 bolt assemblies and for retesting bolt assemblies after lubrication.

PART 2 PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Connections: Provide details of connections required by the Contract Documents to be selected or completed by structural-steel fabricator to withstand loads indicated and comply with other information and restrictions indicated.

1. Select and complete connections using schematic details indicated andAISC 360.

2. Use Load and Resistance Factor Design; data are given at factored-load level.

B. Moment Connections: Type FR, fully restrained.

C. Construction: Braced frame.

2.2 STRUCTURAL-STEEL MATERIALS

A. W-Shapes: ASTM A 992/A 992M.

B. Channels, Angles-Shapes: ASTM A 36/A 36M.

C. Plate and Bar: ASTM A 36/A 36M.

D. Cold-Formed Hollow Structural Sections: ASTM A 500/A 500M, Grade C, structural tubing.

2.3 BOLTS, CONNECTORS, AND ANCHORS

A. High-Strength Bolts, Nuts, and Washers: ASTM F 3125/F 3125M, Grade A325, Type 1, heavy-hex steel structural bolts; ASTM A 563, Grade DH, heavy-hex carbon-steel nuts; and ASTM F 436/F 436M, Type 1, hardened carbon-steel washers; all with plain finish.

1. Direct-Tension Indicators: ASTM F 959/F 959M, Type 325-1, compressible-washer type with plain finish.

B. Tension-Control, High-Strength Bolt-Nut-Washer Assemblies: ASTM F 3125/F 3125M, Grade F1852, Type 1, heavy-hex head assemblies consisting of steel structural bolts with splined ends; ASTM A 563, Grade DH, heavy-hex carbon-steel nuts; and ASTM F 436/F 436M, Type 1, hardened carbon-steel washers.

1. Finish: Mechanically deposited zinc coating.

C. Shear Connectors: ASTM A 108, Grades 1015 through 1020, headed-stud type, cold-finished carbon steel; AWS D1.1/D1.1M, Type B.

D. Unheaded Anchor Rods: ASTM F 1554, Grade 36.

1. Configuration: Straight.

2. Nuts: ASTM A 563 heavy-hex carbon steel.

3. Plate Washers: ASTM A 36/A 36M carbon steel.

4. Washers: ASTM F 436, Type 1, hardened carbon steel.

5. Finish: Hot-dip zinc coating, ASTM A 153/A 153M, Class C.

2.4 GROUT

A. Nonmetallic, Shrinkage-Resistant Grout: ASTM C 1107/C 1107M, factory-packaged, nonmetallic aggregate grout, noncorrosive and nonstaining, mixed with water to consistency suitable for application and a 30-minute working time.

2.5 FABRICATION

A. Structural Steel: Fabricate and assemble in shop to greatest extent possible. Fabricate according to AISC 303, "Code of Standard Practice for Steel Buildings and Bridges," and to AISC 360.

1. Camber structural-steel members where indicated.

2. Fabricate beams with rolling camber up.

3. Identify high-strength structural steel according to ASTM A 6/A 6M and maintain markings until structural steel has been erected.

4. Mark and match-mark materials for field assembly.

5. Complete structural-steel assemblies, including welding of units, before starting shop-priming operations.

B. Thermal Cutting: Perform thermal cutting by machine to greatest extent possible.

1. Plane thermally cut edges to be welded to comply with requirements in AWS D1.1/D1.1M.

C. Bolt Holes: Cut, drill, mechanically thermal cut, or punch standard bolt holes perpendicular to metal surfaces.

D. Finishing: Accurately finish ends of columns and other members transmitting bearing loads.

E. Cleaning: Clean and prepare steel surfaces that are to remain unpainted according to SSPC-SP 3, "Power Tool Cleaning."

F. Shear Connectors: Prepare steel surfaces as recommended by manufacturer of shear connectors. Use automatic end welding of headed-stud shear connectors according to AWS D1.1/D1.1M and manufacturer's written instructions.

G. Holes: Provide holes required for securing other work to structural steel and for other work to pass through steel members.

1. Cut, drill, or punch holes perpendicular to steel surfaces. Do not thermally cut bolt holes or enlarge holes by burning.

2. Baseplate Holes: Cut, drill, mechanically thermal cut, or punch holes perpendicular to steel surfaces.

3. Weld threaded nuts to framing and other specialty items indicated to receive other work.

2.6 SHOP CONNECTIONS

A. High-Strength Bolts: Shop install high-strength bolts according to RCSC's "Specification for Structural Joints Using ASTM A 325 or A 490 Bolts" for type of bolt and type of joint specified.

1. Joint Type: Snug tightened.

B. Weld Connections: Comply with AWS D1.1/D1.1M for tolerances, appearances, welding procedure specifications, weld quality, and methods used in correcting welding work.

2.7 GALVANIZING

A. Hot-Dip Galvanized Finish: Apply zinc coating by the hot-dip process to structural steel according to ASTM A 123/A 123M.

1. Fill vent and drain holes that are exposed in the finished Work unless they function as weep holes, by plugging with zinc solder and filing off smooth.

2. Galvanize shelf angles attached to structural-steel frame and located in exterior walls.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify, with certified steel erector present, elevations of concrete- and masonry-bearing surfaces and locations of anchor rods, bearing plates, and other embedments for compliance with requirements.

1. Prepare a certified survey of existing conditions. Include bearing surfaces, anchor rods, bearing plates, and other embedments showing dimensions, locations, angles, and elevations.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Provide temporary shores, guys, braces, and other supports during erection to keep structural steel secure, plumb, and in alignment against temporary construction loads and loads equal in intensity to design loads. Remove temporary supports when permanent structural steel, connections, and bracing are in place unless otherwise indicated.

3.3 ERECTION

A. Set structural steel accurately in locations and to elevations indicated and according to AISC 303 and AISC 360.

B. Baseplates and Bearing Plates: Clean concrete- and masonry-bearing surfaces of bond-reducing materials, and roughen surfaces prior to setting plates. Clean bottom surface of plates.

1. Set plates for structural members on wedges, shims, or setting nuts as required.

2. Weld plate washers to top of baseplate.

3. Snug-tighten anchor rods after supported members have been positioned and plumbed. Do not remove wedges or shims but, if protruding, cut off flush with edge of plate before packing with grout.

4. Promptly pack grout solidly between bearing surfaces and plates so no voids remain. Neatly finish exposed surfaces; protect grout and allow to cure. Comply with manufacturer's written installation instructions for shrinkage-resistant grouts.

C. Maintain erection tolerances of structural steel within AISC 303, "Code of Standard Practice for Steel Buildings and Bridges."

D. Align and adjust various members that form part of complete frame or structure before permanently fastening. Before assembly, clean bearing surfaces and other surfaces that are in permanent contact with members. Perform necessary adjustments to compensate for discrepancies in elevations and alignment.

1. Level and plumb individual members of structure.

2. Make allowances for difference between temperature at time of erection and mean temperature when structure is completed and in service.

E. Splice members only where indicated.

F. Do not use thermal cutting during erection unless approved by Engineer. Finish thermally cut sections within smoothness limits in AWS D1.1/D1.1M.

G. Do not enlarge unfair holes in members by burning or using drift pins. Ream holes that must be enlarged to admit bolts.

H. Shear Connectors: Prepare steel surfaces as recommended by manufacturer of shear connectors. Use automatic end welding of headed-stud shear connectors according to AWS D1.1/D1.1M and manufacturer's written instructions.

3.4 FIELD CONNECTIONS

A. High-Strength Bolts: Install high-strength bolts according to RCSC's "Specification for Structural Joints Using ASTM A 325 or A 490 Bolts" for type of bolt and type of joint specified.

1. Joint Type: Snug tightened.

B. Weld Connections: Comply with AWS D1.1/D1.1M for tolerances, appearances, welding procedure specifications, weld quality, and methods used in correcting welding work.

1. Comply with AISC 303 and AISC 360 for bearing, alignment, adequacy of temporary connections, and removal of paint on surfaces adjacent to field welds.

2. Remove backing bars or runoff tabs, back gouge, and grind steel smooth.

3.5 FIELD QUALITY CONTROL

A. Special Inspections: Engage a qualified special inspector to perform the following special inspections:

1. Verify structural-steel materials and inspect steel frame joint details.

2. Verify weld materials and inspect welds.

3. Verify connection materials and inspect high-strength bolted connections.

B. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

C. Bolted Connections: Inspect and test bolted connections according to RCSC's "Specification for Structural Joints Using ASTM A 325 or A 490 Bolts."

D. Welded Connections: Visually inspect field welds according to AWS D1.1/D1.1M.

1. In addition to visual inspection, test and inspect field welds according to AWS D1.1/D1.1M and the following inspection procedures, at testing agency's option:

a. Liquid Penetrant Inspection: ASTM E 165.

b. Magnetic Particle Inspection: ASTM E 709; performed on root pass and on finished weld. Cracks or zones of incomplete fusion or penetration are not accepted.

c. Ultrasonic Inspection: ASTM E 164.

d. Radiographic Inspection: ASTM E 94.

3.6 REPAIRS AND PROTECTION

A. Galvanized Surfaces: Clean areas where galvanizing is damaged or missing and repair galvanizing to comply with ASTM A 780/A 780M.

END OF SECTION

SECTION 05500

METAL FABRICATIONS

PART 1 GENERAL

1.1 SUMMARY

A. Section Includes:

1. Steel framing and supports for overhead doors.

2. Metal ladders.

3. Ladder safety devices.

4. Metal bollards.

B. Products furnished, but not installed, under this Section include the following:

1. Loose steel lintels.

2. Anchor bolts, steel pipe sleeves, slotted-channel inserts, and wedge-type inserts indicated to be cast into concrete or built into unit masonry.

3. Steel weld plates and angles for casting into concrete for applications where they are not specified in other Sections.

1.2 COORDINATION

A. Coordinate selection of shop primers with topcoats to be applied over them. Comply with paint and coating manufacturers' written recommendations to ensure that shop primers and topcoats are compatible with one another.

B. Coordinate installation of metal fabrications that are anchored to or that receive other work. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.

1.3 ACTION SUBMITTALS

A. Shop Drawings: Show fabrication and installation details. Include plans, elevations, sections, and details of metal fabrications and their connections. Show anchorage and accessory items. Provide Shop Drawings for the following:

1. Steel framing and supports for overhead doors.

2. Metal ladders.

3. Metal bollards.

1.4 INFORMATIONAL SUBMITTALS

A. Welding certificates.

B. Paint Compatibility Certificates: From manufacturers of topcoats applied over shop primers, certifying that shop primers are compatible with topcoats.

1.5 QUALITY ASSURANCE

A. Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."

B. Welding Qualifications: Qualify procedures and personnel according to the following:

1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."

1.6 FIELD CONDITIONS

A. Field Measurements: Verify actual locations of walls and other construction contiguous with metal fabrications by field measurements before fabrication.

PART 2 PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Structural Performance of Aluminum Ladders: Aluminum ladders[, including landings,] shall withstand the effects of loads and stresses within limits and under conditions specified in ANSI A14.3.

B. Structural Performance of Alternating Tread Devices: Alternating tread devices shall withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated.

1. Uniform Load: 100 lbf/sq. ft..

2. Concentrated Load: 300 lbf applied on an area of 4 sq. in..

3. Uniform and concentrated loads need not be assumed to act concurrently.

4. Alternating Tread Device Framing: Capable of withstanding stresses resulting from railing loads in addition to loads specified above.

C. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes acting on exterior metal fabrications by preventing buckling, opening of joints, overstressing of components, failure of connections, and other detrimental effects.

1. Temperature Change: 120 deg F, ambient; 180 deg F, material surfaces.

2.2 METALS

A. Metal Surfaces, General: Provide materials with smooth, flat surfaces unless otherwise indicated. For metal fabrications exposed to view in the completed Work, provide materials without seam marks, roller marks, rolled trade names, or blemishes.

B. Steel Plates, Shapes, and Bars: ASTM A 36/A 36M.

C. Rolled-Steel Floor Plate: ASTM A 786/A 786M, rolled from plate complying with ASTM A 36/A 36M or ASTM A 283/A 283M, Grade C or D.

D. Steel Tubing: ASTM A 500/A 500M, cold-formed steel tubing.

E. Steel Pipe: ASTM A 53/A 53M, Standard Weight (Schedule 40) unless otherwise indicated.

F. Slotted Channel Framing: Cold-formed metal box channels (struts) complying with MFMA-4.

1. Size of Channels: 1-5/8 by 1-5/8 inches.

2. Material: Galvanized steel, ASTM A 653/A 653M, structural steel, Grade 33, with G90 coating; 0.079-inch nominal thickness.

G. Cast Iron: Either gray iron, ASTM A 48/A 48M, or malleable iron, ASTM A 47/A 47M, unless otherwise indicated.

H. Aluminum Plate and Sheet: ASTM B 209, Alloy 6061-T6.

I. Aluminum Extrusions: ASTM B 221, Alloy 6063-T6.

J. Aluminum-Alloy Rolled Tread Plate: ASTM B 632/B 632M, Alloy 6061-T6.

K. Aluminum Castings: ASTM B 26/B 26M, Alloy 443.0-F.

L. Bronze Extrusions: ASTM B 455, Alloy UNS No. C38500 (extruded architectural bronze).

M. Bronze Castings: ASTM B 584, Alloy UNS No. C83600 (leaded red brass) or No. C84400 (leaded semired brass).

N. Nickel Silver Extrusions: ASTM B 151/B 151M, Alloy UNS No. C74500.

O. Nickel Silver Castings: ASTM B 584, Alloy UNS No. C97600 (20 percent leaded nickel bronze).

2.3 FASTENERS

A. General: Unless otherwise indicated, provide Type 304 stainless-steel fasteners for exterior use and zinc-plated fasteners with coating complying with ASTM B 633 or ASTM F 1941, Class Fe/Zn 5, at exterior walls. Select fasteners for type, grade, and class required.

1. Provide stainless-steel fasteners for fastening aluminum.

2. Provide stainless-steel fasteners for fastening stainless steel.

3. Provide stainless-steel fasteners for fastening nickel silver.

4. Provide bronze fasteners for fastening bronze.

B. Steel Bolts and Nuts: Regular hexagon-head bolts, ASTM A 307, Grade A; with hex nuts, ASTM A 563; and, where indicated, flat washers.

C. Stainless-Steel Bolts and Nuts: Regular hexagon-head annealed stainless-steel bolts, ASTM F 593; with hex nuts, ASTM F 594; and, where indicated, flat washers; Alloy Group 1.

D. Anchors, General: Anchors capable of sustaining, without failure, a load equal to six times the load imposed when installed in unit masonry and four times the load imposed when installed in concrete, as determined by testing according to ASTM E 488/E 488M, conducted by a qualified independent testing agency.

E. Cast-in-Place Anchors in Concrete: Either threaded type or wedge type unless otherwise indicated; galvanized ferrous castings, either ASTM A 47/A 47M malleable iron or ASTM A 27/A 27M cast steel. Provide bolts, washers, and shims as needed, all hot-dip galvanized per ASTM F 2329.

F. Post-Installed Anchors: [Torque-controlled expansion anchors] [or] [chemical anchors].

1. Material for Interior Locations: Carbon-steel components zinc plated to comply with ASTM B 633 or ASTM F 1941, Class Fe/Zn 5, unless otherwise indicated.

2. Material for Exterior Locations and Where Stainless Steel Is Indicated: Alloy Group 1 stainless-steel bolts, ASTM F 593, and nuts, ASTM F 594.

2.4 MISCELLANEOUS MATERIALS

A. Shop Primers: Provide primers that comply with Section 09800 "Painting."

B. Galvanizing Repair Paint: High-zinc-dust-content paint complying with SSPC-Paint 20 and compatible with paints specified to be used over it.

C. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D 1187/D 1187M.

D. Concrete: Comply with requirements in Section 03300 "Cast-in-Place Concrete" for normal-weight, air-entrained, concrete with a minimum 28-day compressive strength of 3000 psi.

2.5 FABRICATION, GENERAL

A. Shop Assembly: Preassemble items in the shop to greatest extent possible. Disassemble units only as necessary for shipping and handling limitations. Use connections that maintain structural value of joined pieces. Clearly mark units for reassembly and coordinated installation.

B. Cut, drill, and punch metals cleanly and accurately. Remove burrs and ease edges to a radius of approximately 1/32 inch unless otherwise indicated. Remove sharp or rough areas on exposed surfaces.

C. Form bent-metal corners to smallest radius possible without causing grain separation or otherwise impairing work.

D. Form exposed work with accurate angles and surfaces and straight edges.

E. Weld corners and seams continuously to comply with the following:

1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.

2. Obtain fusion without undercut or overlap.

3. Remove welding flux immediately.

4. At exposed connections, finish exposed welds and surfaces smooth and blended so no roughness shows after finishing and contour of welded surface matches that of adjacent surface.

F. Form exposed connections with hairline joints, flush and smooth, using concealed fasteners or welds where possible. Where exposed fasteners are required, use Phillips flat-head (countersunk) fasteners unless otherwise indicated. Locate joints where least conspicuous.

G. Fabricate seams and other connections that are exposed to weather in a manner to exclude water. Provide weep holes where water may accumulate.

H. Cut, reinforce, drill, and tap metal fabrications as indicated to receive finish hardware, screws, and similar items.

I. Provide for anchorage of type indicated; coordinate with supporting structure. Space anchoring devices to secure metal fabrications rigidly in place and to support indicated loads.

J. Where units are indicated to be cast into concrete or built into masonry, equip with integrally welded steel strap anchors, 1/8 by 1-1/2 inches, with a minimum 6-inch embedment and 2-inch hook, not less than 8 inches from ends and corners of units and 24 inches o.c., unless otherwise indicated.

2.6 MISCELLANEOUS FRAMING AND SUPPORTS

A. General: Provide steel framing and supports not specified in other Sections as needed to complete the Work.

B. Fabricate units from steel shapes, plates, and bars of welded construction unless otherwise indicated. Fabricate to sizes, shapes, and profiles indicated and as necessary to receive adjacent construction.

1. Fabricate units from slotted channel framing where indicated.

2. Furnish inserts for units installed after concrete is placed.

2.7 METAL LADDERS

A. General:

1. Comply with ANSI A14.3.

B. Steel Ladders:

1. Space siderails 18 inches apart unless otherwise indicated.

2. Siderails: Continuous, 1/2-by-2-1/2-inch steel flat bars, with eased edges.

3. Rungs: 3/4-inch- diameter steel bars.

4. Fit rungs in centerline of siderails; plug-weld and grind smooth on outer rail faces.

5. Provide nonslip surfaces on top of each rung, either by coating rung with aluminum-oxide granules set in epoxy-resin adhesive or by using a type of manufactured rung filled with aluminum-oxide grout.

6. Provide nonslip surfaces on top of each rung by coating with abrasive material metallically bonded to rung.

a. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1) Harsco Industrial IKG, a division of Harsco Corporation.
2) ROSS TECHNOLOGY CORP.
3) SlipNOT Metal Safety Flooring; W.S. Molnar Company.

7. Support each ladder[at top and bottom and not more than 60 inches o.c.] with welded or bolted steel brackets.

8. Prime exterior ladders, including brackets and fasteners, with zinc-rich primer.

2.8 LADDER SAFETY DEVICES

A. General: Provide on rigid rail system on ladders taller than 20 feet. Devices to comply with OSHA 1910.27. Mounting hardware shall be part of safety device system. Mounting hardware shall be designed to fit ladder rung.

B. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:

1. 3M; Railok 90 Series.

2. FallTech; 776000 Series.

3. FrenchCreek; Rigid rail climbing system.

4. Honeywell; Miller GlideLoc or Saf-T-Climb Series.

C. Manufacture Restrictions: Ladder safety device and user devices must be provided by one manufacture.

D. Materials: Rail and accessories:

1. Interior Ladders: Galvanized.

2. Exterior Ladders: Galvanized.

E. User Devices: Provide two sets to Owner. User devices include user's harness and equipment to connect harness to rail system.

F. Dismount:

1. Provide dismount at top and bottom.

2. Provide removable extension [at ladders with hatch] [where noted in Drawings].

2.9 METAL BOLLARDS

A. Fabricate metal bollards from Schedule 40 steel pipe.

B. Prime bollards with primer specified in Section 09800 Painting

2.10 STEEL WELD PLATES AND ANGLES

A. Provide steel weld plates and angles not specified in other Sections, for items supported from concrete construction as needed to complete the Work. Provide each unit with no fewer than two integrally welded steel strap anchors for embedding in concrete.

2.11 FINISHES, GENERAL

A. Finish metal fabrications after assembly.

B. Finish exposed surfaces to remove tool and die marks and stretch lines, and to blend into surrounding surface.

2.12 STEEL AND IRON FINISHES

A. Galvanizing: Hot-dip galvanize items as indicated to comply with ASTM A 153/A 153M for steel and iron hardware and with ASTM A 123/A 123M for other steel and iron products.

1. Do not quench or apply post galvanizing treatments that might interfere with paint adhesion.

B. Preparation for Shop Priming Galvanized Items: After galvanizing, thoroughly clean railings of grease, dirt, oil, flux, and other foreign matter, and treat with metallic phosphate process.

C. Shop prime iron and steel items not indicated to be galvanized unless they are to be embedded in concrete, sprayed-on fireproofing, or masonry, or unless otherwise indicated.

1. Shop prime with primers specified in Section 09900 "Painting."

D. Preparation for Shop Priming: Prepare surfaces to comply with requirements indicated below:

1. Exterior Items: SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."

2. Items Indicated to Receive Zinc-Rich Primer: SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."

3. Items Indicated to Receive Primers Specified in Section 09800 "Painting." SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."

4. Other Items: SSPC-SP 3, "Power Tool Cleaning."

E. Shop Priming: Apply shop primer to comply with SSPC-PA 1, "Paint Application Specification No. 1: Shop, Field, and Maintenance Painting of Steel," for shop painting.

1. Stripe paint corners, crevices, bolts, welds, and sharp edges.

PART 3 EXECUTION

3.1 INSTALLATION, GENERAL

A. Cutting, Fitting, and Placement: Perform cutting, drilling, and fitting required for installing metal fabrications. Set metal fabrications accurately in location, alignment, and elevation; with edges and surfaces level, plumb, true, and free of rack; and measured from established lines and levels.

B. Fit exposed connections accurately together to form hairline joints. Weld connections that are not to be left as exposed joints but cannot be shop welded because of shipping size limitations. Do not weld, cut, or abrade surfaces of exterior units that have been hot-dip galvanized after fabrication and are for bolted or screwed field connections.

C. Field Welding: Comply with the following requirements:

1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.

2. Obtain fusion without undercut or overlap.

3. Remove welding flux immediately.

4. At exposed connections, finish exposed welds and surfaces smooth and blended so no roughness shows after finishing and contour of welded surface matches that of adjacent surface.

D. Fastening to In-Place Construction: Provide anchorage devices and fasteners where metal fabrications are required to be fastened to in-place construction. Provide threaded fasteners for use with concrete and masonry inserts, toggle bolts, through bolts, lag screws, wood screws, and other connectors.

E. Provide temporary bracing or anchors in formwork for items that are to be built into concrete, masonry, or similar construction.

F. Corrosion Protection: Coat concealed surfaces of aluminum that come into contact with grout, concrete, masonry, wood, or dissimilar metals with the following:

1. Cast Aluminum: Heavy coat of bituminous paint.

2. Extruded Aluminum: Two coats of clear lacquer.

3.2 INSTALLING MISCELLANEOUS FRAMING AND SUPPORTS

A. General: Install framing and supports to comply with requirements of items being supported, including manufacturers' written instructions and requirements indicated on Shop Drawings.

3.3 INSTALLING LADDER SAFETY DEVICES

A. Install ladder safety devices per manufacturer's instructions.

3.4 INSTALLING METAL BOLLARDS

A. Anchor bollards in place with concrete footings. Center and align bollards in holes 3 inches above bottom of excavation. Place concrete and vibrate or tamp for consolidation. Support and brace bollards in position until concrete has cured.

B. Fill bollards solidly with concrete, mounding top surface to shed water.

1. Do not fill removable bollards with concrete.

3.5 ADJUSTING AND CLEANING

A. Touchup Painting: Immediately after erection, clean field welds, bolted connections, and abraded areas. Paint uncoated and abraded areas with the same material as used for shop painting to comply with SSPC-PA 1 for touching up shop-painted surfaces.

1. Apply by brush or spray to provide a minimum 2.0-mil dry film thickness.

B. Galvanized Surfaces: Clean field welds, bolted connections, and abraded areas and repair galvanizing to comply with ASTM A 780/A 780M.

END OF SECTION

SECTION 05501

METAL FABRICATIONS (APPLIES TO CIVIL AND MECHANICAL DRAWINGS ONLY)

PART 1 GENERAL

1.1 SECTION INCLUDES:

A. Shop Fabrication of Ferrous Metal items, Prime Painted.

B. Aluminum Floor Grating and Frames.

C. Stair Nosings.

D. Stainless Steel Ladders.

1.2 REFERENCES:

A. ASTM A36 - Structural Steel.

B. ASTM A283 - Carbon Steel Plats, Shapes, and Bars.

C. ASTM A307 - Carbon Steel Externally Threaded Standard Fasteners.

D. AWS A2.0 - Standard Welding Symbols.

E. AWS D1.1 - Structural Welding Code.

F. WWT 700/6 - Federal Specification.

1.3 SUBMITTALS:

A. Submit under provisions of Section 01300.

B. Shop drawings: Indicate profiles, sizes, connection attachments, reinforcing, anchorage, size, and type of fasteners, and accessories. Include erection drawings, elevations, and details where applicable.

C. Indicate welded connections using standard AWS A2.0 welding symbols.

1.4 FIELD MEASUREMENTS:

A. Verify that field measurements are as indicated on shop drawings.

1.5 SEQUENCING:

A. Inserts and Anchorage: Furnish inserts and anchoring devices which must be set in concrete for installation of miscellaneous metal work. Provide setting drawings, templates, instructions and directions for installation of anchorage devices. Coordinate delivery with other work to avoid delay.

PART 2 PRODUCTS

2.1 MATERIALS:

A. Steel Sections: ASTM A36.

B. Plates: ASTM A283.

C. Bolts, Nuts, and Washers: ASTM A325.

D. Welding Materials: AWS D1.1; Type required for materials being welded.

E. Shop and Touch-up Primer: SSPC 15, Type 1, red oxide.

2.2 FABRICATION:

A. Fit and shop-assemble in largest practical sections, for delivery to site.

B. Fabricate items with joints tightly fitted and secured.

C. Seal joined members by intermittent welds.

D. Grind exposed joints in flush and smooth with adjacent finish surface. Make exposed joints butt tight, flush, and hairline. Ease exposed edges to small uniform radius.

E. Exposed Mechanical Fastenings: Flush countersunk screws or bolts; unobtrusively located; consistent with design of component, except where specifically noted otherwise.

F. Supply components required for anchorage of fabrications. Fabricate anchors and related components of same material and finish as fabrication, except where specifically noted otherwise.

2.3 FINISHES:

A. Prepare surfaces to be primed in accordance with SSPC SPC2.

B. Do not prime surfaces in direct contact with concrete or where field welding is required.

C. Prime paint items with one coat. All exposed steel (except stainless steel) shall be painted according to specifications after being properly primed.

D. Coordinate prime coatings with specified finishes in Section 09800.

E. All carbon steel metal fabrications shall be hot-dipped galvanized after fabrication unless shown otherwise.

2.4 FLOOR GRATINGS AND FRAMES:

A. Floor gratings shall be designed to support a live load of 250 pounds per square foot for the spans indicated with minimum depth of 1 inch for loadings and/or

as shown on the plans and unless otherwise indicated shall conform to Federal Specification RR-G-661. Edges of gratings shall be banded with bars of the same size as bearing bars. Frames shall be provided with welded-on anchors. Floor gratings and frames shall be aluminum and located where indicated. No opening in the floor shall remain open. An aluminum plate and frame or aluminum grating and frame shall be supplied for all openings.

2.5 SAFTEY TREAD STAIR NOSING:

A. IKG Industries, Mebac Cast-in-Place-type or equal. Nosings shall be aluminum with bonded aluminum oxide grit surface. Surface shall exceed OSHA 0.50, coefficient of function standard when wet or coated with oil.

2.6 STEEL BOLLARDS:

A. Steel bollards shall be constructed as indicated of ASTM A53 Grade B or A501 galvanized steel pipe. Pipes shall be set into concrete footings as indicated.

2.7 VAULT LADDERS ONLY:

A. Fabricate ladders for the locations shown, with dimensions, spacing's, details, and anchorages as indicated. Comply with the requirements of ANSI A 14.3, except as otherwise indicated.

1. Unless otherwise shown, provide 1/2" x 2-1/2" continuous structural steel flat bar side rails with eased edges, spaced 18-inches apart.

2. Provide 3/4-inch diameter solid structural steel bar rungs, spaced 12-inches o.c.

B. Fit rungs in centerline of side rails, plug weld and grind smooth on outer rail faces.

C. Support each ladder at top and bottom and at intermediate points spaced not more than 5'-0" o.c. unless other indicated on drawings. Use welded or bolted steel brackets, designed for adequate support and anchorage, and to hold the ladder clear of the wall surface with a minimum of 7 inches clearance for wall to centerline of rungs.

D. Provide non-slip surface on the top of each rung, either by coating the rung with aluminum oxide granules set in epoxy resign adhesive, or by using a type of manufactured rung which is filled with aluminum oxide grout.

E. All vault ladders shall be constructed of 316 stainless steel and be attached with 316 stainless steel epoxy anchors suitable for the application.

F. Ladder design shall comply with all applicable OSHA standards. If ladder specifications listed above conflict with applicable OSHA standards, OSHA standards shall govern.

2.8 LADDER SAFETY DEVICES

A. General: Provide rigid rail system on ladders taller than 20 feet. Devices to comply with OSHA 1910. 27. Mounting hardware shall be a part of the safety device system. Mounting hardware shall be designed to fit ladder rung.

B. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:

1. 3M; Railok 90 Series
2. FallTech; 776000 Series.
3. FrenchCreek: Rigid rail climbing system
4. Honeywell; Miller GlideLoc of Saf-T-Climb Series.

C. Manufacture Restrictions: Ladder safety devices and user devices for all new construction at the Midland NE TPS must be provided by one manufacturer.

D. Manufacture Restrictions: Ladder safety device and user devices must be provided by one manufacture.

E. Dismount:

1. Provide dismount at top and bottom.
2. Provide removable ladder extension where indicated on drawings.

PART 3 EXECUTION

3.1 EXAMINATION:

A. Verify that field connections are acceptable and are ready to receive work.

B. Beginning of installation means erector accepts existing conditions.

3.2 PREPARATION:

A. Clean and strip primed steel items to bare metal where site welding is required.

B. Supply items required to be cast into concrete or embedded in masonry with setting templates.

3.3 INSTALLATION:

A. Install items plumb and level, accurately fitted, free from distortion or defects.

B. Allow for erection loads, and for sufficient temporary bracing to maintain true alignment until completion of erection and installation of permanent attachments.

C. Obtain Engineer's approval prior to site cutting or making adjustments not scheduled.

END OF SECTION

SECTION 07190

WATER REPELLENTS

PART 1 GENERAL

1.1 SUMMARY

A. Section includes penetrating water-repellent treatments for the following vertical and horizontal surfaces:

1. Cast-in-place concrete.

2. Precast concrete.

1.2 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Samples: For each type of water repellent and substrate indicated.

1.4 INFORMATIONAL SUBMITTALS

A. Product certificates.

1.5 QUALITY ASSURANCE

A. Applicator Qualifications: An employer of workers trained and approved by manufacturer.

PART 2 PRODUCTS

2.1 PENETRATING WATER REPELLENTS

A. Silane/Siloxane-Blend, Penetrating Water Repellent: Clear, silane and siloxane blend with 400 g/L or less of VOCs.

1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:

a. BASF Construction Chemicals - Building Systems; MasterProtect H 107.

b. Chemical Products Industries, Inc.; Siloxane WB Concentrate.

c. Euclid Chemical Company (The), an RPM company; Chemstop WB Heavy Duty.

d. L&M Construction Chemicals, Inc.; Hydropel WB.

e. OKON Inc., Division of Rust-Oleum Corporation, an RPM company; OKON S-20.

f. PROSOCO, Inc.; Siloxane WB Concentrate.

g. Rainguard Products Company; MicroSeal.

h. Tnemec Company, Inc..; Series 633 Prime-A-Pell H2O.

PART 3 EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Applicator present, for compliance with requirements and conditions affecting performance of the Work.

1. Verify that surfaces are clean and dry according to water-repellent manufacturer's requirements. Check moisture content in representative locations by method recommended by manufacturer.

2. Verify that there is no efflorescence or other removable residues that would be trapped beneath the application of water repellent.

3. Verify that required repairs are complete, cured, and dry before applying water repellent.

B. Test pH level according to water-repellent manufacturer's written instructions to ensure chemical bond to silica-containing or siliceous minerals.

3.2 PREPARATION

A. New Construction and Repairs: Allow concrete and other cementitious materials to age before application of water repellent, according to repellent manufacturer's written instructions.

B. Cleaning: Before application of water repellent, clean substrate of substances that could impair penetration or performance of product according to water-repellent manufacturer's written instructions.

C. Coordination with Mortar Joints: Do not apply water repellent until pointing mortar for joints adjacent to surfaces receiving water-repellent treatment has been installed and cured.

D. Coordination with Sealant Joints: Do not apply water repellent until sealants for joints adjacent to surfaces receiving water-repellent treatment have been installed and cured.

1. Water-repellent work may precede sealant application only if sealant adhesion and compatibility have been tested and verified using substrate, water repellent, and sealant materials identical to those required.

3.3 APPLICATION

A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect the substrate before application of water repellent and to instruct Applicator on the product and application method to be used.

B. Apply coating of water repellent on surfaces to be treated using low-pressure spray to the point of saturation. Apply coating in dual passes of uniform, overlapping strokes. Remove excess material; do not allow material to puddle beyond saturation. Comply with manufacturer's written instructions for application procedure unless otherwise indicated.

1. Precast Concrete: At Contractor's option, first application of water repellent may be completed before installing units. Mask mortar and sealant bond surfaces to prevent water repellent from migrating onto joint surfaces. Remove masking after repellent has cured.

C. Apply a second saturation coating, repeating first application. Comply with manufacturer's written instructions for limitations on drying time between coats and after rainstorm wetting of surfaces between coats. Consult manufacturer's technical representative if written instructions are not applicable to Project conditions.

3.4 CLEANING

A. Immediately clean water repellent from adjoining surfaces and surfaces soiled or damaged by water-repellent application as work progresses. Correct damage to work of other trades caused by water-repellent application.

B. Comply with manufacturer's written cleaning instructions.

END OF SECTION

SECTION 07222

ROOF BOARD INSULATION

PART 1 GENERAL

1.1 REFERENCES (INCLUDING LATEST REVISIONS)

A. Comply with governing local, state, and federal regulations, safety standards, and codes.

B. Testing Laboratory Services: Test results shall meet or exceed established standards.

C. Underwriters Laboratories, Inc. (Roofing Covering): Class A fire hazard classification.

D. American Society of Testing Materials (ASTM)

1. C 177 Test Method for Steady-State Heat Flux Measurements and Thermal Transmission Properties by Means of the Guarded-Hot-Plate Apparatus

2. C 209 Methods of Testing Insulating Board (Cellulosic Fiber), Structural and Decorative

3. C 728 Perlite Thermal Insulation Board

4. D 41 Asphalt Primer Used in Roofing and Waterproofing

5. D 312 Asphalt Used in Roofing

6. D 1621 Test Method for Compressive Properties of Rigid Cellular Plastics

7. D 4601 Asphalt Coated Glass Fiber Base Sheet Used in Roofing

E. The National Roofing Contractors Association (NRCA) - Roofing and Waterproofing Manual

F. American National Standards Institute/Single Ply Roofing Industry (ANSI/SPRI)

G. American Society of Civil Engineers - ASCE 7 Minimum Design Loads for Buildings and Other Structures (for wind uplift criteria)

1.2 QUALITY ASSURANCE

A. Regulatory Requirements

1. Classified by Underwriter's Laboratories (UL) as Class A roof covering.

2. Follow local, state, and federal regulations, safety standards, and codes.

B. Installation

1. Installation shall be in accordance with manufacturer's current published application procedures, NRCA general recommendations, and ASCE 7 wind uplift criteria.

2. Roof system manufacturer's technical specifications shall be considered part of this specification and shall be used as reference for specific application procedures.

C. Contract Documents

1. In the case of an inconsistency between the drawings and specifications or within either document not clarified by addendum, the better quality or greater quantity of work shall be provided in accordance with the Project Manager's/Architect's interpretation.

1.3 SUBMITTALS

A. Product Data: Submit Manufacturer's product data sheets for each product.

B. Certification: Submit roof manufacturer's certification in writing that insulation is acceptable as substrate for application of specified roof system.

1.4 DELIVERY, STORAGE, AND HANDLING

A. Store materials in accordance with manufacturer's recommendations.

B. When stored outdoors:

1. Tarp and shield insulation from moisture and ultraviolet rays.

2. Elevate insulation above substrate four inches minimum.

3. Secure insulation to resist high winds.

4. Distribute insulation stored on roof deck to prevent concentrated loads that would impose excessive stress or stain on deck or structural members. Verify that structure can accommodate additional loading.

5. Wet insulation, or insulation that has been wet but which has dried, may not be used and shall be removed completely and immediately from the job site.

6. Do not double stack bundles of insulation on the rooftop.

1.5 SEQUENCING AND SCHEDULING

A. Substrate Acceptance: Roof system manufacturer's representative shall inspect roof deck and associated substrates and provide written acceptance of conditions.

B. Manufacturer's approved roofing contractor shall inspect and approve deck and substrates.

C. Plan roof layout with respect to roof deck slope to prevent rainwater drainage into completed roofing.

D. Do not install more insulation than can be covered with complete roof system in same day.

1.6 PRODUCT CONDITIONS

A. Environmental Requirements:

1. Apply roofing and insulation in dry weather.

2. Do not proceed with roof construction during inclement weather or when precipitation is predicted 40% or more possibility.

3. Do not apply insulation over wet or moist deck or in foggy conditions.

4. Days with wind speeds of 30 mph or greater shall be considered "Bad Weather" days.

B. Emergency Equipment: Maintain on-site equipment and material necessary to apply emergency temporary seals in the event of sudden storms or inclement weather.

C. Costs for emergency roofing shall be borne by Contractor.

PART 2 PRODUCTS

2.1 INSULATION – FLAT STOCK

A. All insulation shall be approved in writing by the membrane manufacturer as to thickness, type, and manufacturer. All insulation must be approved for the specific application, Underwriters Laboratory approved, and be listed in the FM Global Approval Guide.

B. Polyisocyanurate Roof Insulation: Insulation shall be one layers of rigid polyisocyanurate foam board; meeting Federal Specification No. HH-I-1972/1 or 2 with 20 psi minimum compressive strength and 2.0 pcf minimum density. First layer shall be a minimum thickness of four inch (4"). Average R-value over each roof area shall meet or exceed R-25. Board shall be surfaced on two (2) sides with non-asphaltic facer material.

2.2 COVER BOARD

A. Shall be fiberboard thickness of 1/2", board size four feet by eight feet (4' x 8'), impregnated six (6) sides with asphalt, Underwriters Laboratory approved and listed in the FM Global Approval Guide.

2.3 ASPHALT ROOF PRIMER

A. Quick-dry asphalt-based primer for priming of asphalt roof surfaces, as manufactured by GAF, or approved equal.

Applicable Federal Specification	SS-A-701B
ASTM	D 41
Flash Point	105° F
Viscosity at 80° F (ASTM D 217)	50-60 K.U.
Weight per gallon	7.4 pounds
Drying time (to touch)	Min. 4 hours

2.4 BITUMEN

A. Shall be ASTM D 312 Type IV extra steep asphalt.

2.5 FASTENERS

A. Fasteners and fastening plates and/or termination bars shall be FM Approved and shall be listed in the FM Global Approval Guide, and as recommended by the insulation/fastener manufacturer for the specific application to meet the minimal requirements for wind uplift as required by the local jurisdiction and/or FM Global.

B. Heavy Duty Fastener for Steel Applications for 18-22 gauge Steel and Wood Substrates: Shall be a #14 fastener with a minimum .190 diameter shank and a thread diameter of .245 with ten (10) threads per inch and a 30 degree spade point. Fasteners shall be fluorocarbon coated with CR-10 corrosion resistant coating when subjected to 30 Kesternich cycles (DIN 50018) shows less than 15% red rust which surpasses FM Global Approval Standard 4470, as manufactured by OMG Roofing Products, or approved equal. All fasteners shall be used in conjunction with the manufacturers approved round pressure plate. Fasteners, plates, and/or bars shall be FM approved and listed in the FM Global Approval Guide.

PART 3 EXECUTION

3.1 PROTECTION OF ROOFING

A. Provide special protection from traffic on completed work.

3.2 EXAMINATION AND PREPARATION

A. Do not install until defects are corrected and deck substrate meets roof system manufacturer's requirements.

B. Do not apply insulation unless asphalt application temperature, EVT of approximately 375° F to 425° F, can be maintained or when water or moisture is present on substrate. Do not heat asphalt above flashing point, or 525° F.

C. Examine substrate and related surfaces, and verify that there are no conditions such as inadequate anchorage, foreign materials, moisture, ridges, depressions, or other conditions which would prevent satisfactory installation of roof system.

D. Start of work constitutes acceptance of deck substrate and site conditions.

E. Sweep deck substrate clean of dust and debris immediately prior to installation of insulation.

3.3 APPLICATION OF INSULATION – GENERAL INSTRUCTIONS

A. Manufacturer's Instructions: In regard to attachment, the manufacturer's instructions or specifications shall determine the suitability for an application. Installation must meet ASCE 7 criteria and meet local governing building codes.

3.4 APPLICATION OF INSULATION OVER METAL DECK - MECHANICALLY FASTENED ADHERED

A. Specified flat stock insulation shall be mechanically fastened to conform to the ASCE 7 criteria for wind uplift as dictated by wind zone applicable to location of project. Fasteners and fastening patterns shall be determined by building height, location and geographical area of the United States. It is the contractor's responsibility to consult current publications, literature, and bulletins of IBC and the manufacturer that are in effect at the time of this project. Boards shall be staggered and butted as close as possible with voids over one-fourth inch (1/4") to be filled.

B. Insulation shall be laid with edges parallel to flutes and bearing on deck surface/flats. The long dimension of base insulation layer must be fully supported by the top flange of the metal deck. The edges of insulation boards must not cantilever over the flutes of the metal deck.

C. The top surface of the preceding layer of insulation shall be coated with hot asphalt using twenty-five pounds (25#) ±20%, per one hundred (100) square feet of surface, and specified cover board shall be applied using offset joints, so that each layer breaks joints to a minimum of six inches (6") both ways with the preceding layer, and immediately walked in place.

3.5 BACKNAILING/STRAPPING

A. On slopes greater than one inch (1") in twelve inches (12"), refer to NRCA and/or manufacturer's guidelines for backnailing procedures and follow the more stringent guidelines for all specified materials.

Slope	Interply& Top Pour	Backnail	Strap
0 - ½" per 12"	Type IV	No	No
½" - 2" per 12"	Type IV	Yes	Strap if possible
2" - 3" per 12"	Type IV	Yes	Yes

3.6 ADJUSTING

A. Remove insulation which has been damaged (broken, cracked, punctured, wet, etc.) and install acceptable new units before installation of roof system.

3.7 CLEANING

A. Remove debris and material wrappers from jobsite. Leave insulation clean and dry, ready to receive roofing membrane.

END OF SECTION

SECTION 07545

SBS ASPHALT MODIFIED BITUMEN ROOF SYSTEM

PART 1 GENERAL

1.1 SECTION INCLUDES

A. New SBS asphalt modified bitumen roofing and related membrane and penetration flashings.

1.2 INSTALLER QUALIFICATIONS

A. Roofing installer must be:

1. Currently prequalified with the Owner in accordance with Owner's prequalification requirements.

2. Currently in good standing with the manufacturer.

3. Installer must be an experienced single firm specializing in the type of roofing repair and/or removal and replacement work required, employing only experienced workers for the class of work in which they are employed, having at least five (5) years successful experience on projects similar in size and scope and acceptable as applicators by the Owner's representative.

4. Contractor must have successfully completed previous projects warranted by the manufacturer.

B. It shall remain each Bidder's responsibility to determine his current status with the manufacturer's certification plan.

1.3 QUALITY ASSURANCE

A. Testing Laboratory Services: Test results shall meet or exceed established standards.

B. Underwriters Laboratories, Inc. (Roofing Covering): Class A fire hazard classification.

C. Comply with governing local, state, and federal regulations, safety standards, and codes.

D. Regulatory Requirements:

1. System shall be classified by Underwriters Laboratories Inc., UL 790, as Class A roof covering.

2. System shall be classified by FM Global as 1-90 approved assembly. Follow installation requirements for 1-90.

3. Follow local, state, and federal requirements, safety standards, and codes.

4. Refer to applicable building codes for roofing system installation requirements and limitations. When conflict exists, the more restrictive document will govern.

E. Pre-installation Conference:

1. Prior to roofing installation, conduct pre-installation conference at project site.

2. Attendance: Owner, Consultant, Contractor, project superintendent, roof applicator, and roof manufacturer's technical representative.

3. Agenda:

a. Scheduling of roofing operation.

b. Daily production anticipated.

c. Designation of key individuals and their respective responsibilities.

d. Processing procedures of field and change orders.

e. Review of staging and material storage locations.

f. Accommodations for temporary services (water, power).

g. Coordination of work by other trades.

h. Protection of completed roofing.

i. Emergency rain protection procedures.

j. Discussion of process for manufacture's inspection and acceptance of completed roofing and flashings.

k. Manufacturer's deck inspection to be performed.

F. Installation:

1. Installation shall be in accordance with procedures and standards set forth by National Roofing Contractors Association.

2. Installation shall be in accordance with manufacturer's current published application procedures and general recommendations of National Roofing Contractor's Association. Follow Underwriters Laboratories' requirements acceptable for use with specified products or systems.

3. Roofing shall be as described in this section and shall be provided and approved by roof system manufacturer. Materials not manufactured or provided by manufacturer shall have written approval from manufacturer stating that materials are acceptable and are compatible with other materials and systems required.

G. There shall be no deviations made from manufacturer's published specification, this specification, or approved shop drawings without prior written approval of Owner's representative and Roof Membrane Manufacturer.

H. Perform work on this section in accordance with best standards of practice relating to trades involved.

I. Pullout Tests: Conduct pullout test on deck using appropriate fastener prior to roof system installation. Submit pullout results for manufacturer's review to determine specific fastening pattern for this project, minimum uplift requirements shall conform to current ASCE 7 criteria.

J. Material Manufacturer's Inspection Paid for By Contractor: Minimum of two inspections shall be made during Project schedule by authorized representative of roof system manufacturer to ensure that said Project is installed in accordance with manufacturer's requirements. Manufacturer shall provide written report to the Owner's representative within five days of each inspection stating acceptance of Contractor procedures and outlining items of non-compliance with manufacturer's requirements.

K. Material Manufacturer's Final Inspection:

1. Manufacturer's authorized representative shall provide final inspection at completion of project to ensure that project has been completed in accordance with manufacturer's requirements. Upon approval and acceptance of project, manufacturer's warranty certification shall be written, executed, and furnished to Owner.

2. Contractor shall pay for manufacturer's final inspection and additional inspections.

L. Laboratory Testing and Samples:

1. At Owner's request, obtain 3 field samples of completed roof membrane and assembly. Take samples at locations designated by Owner's representative, Owner's representative, and test for compliance with requirements on Contract Documents and with manufacturer's published performance criteria. Test shall be performed by nationally recognized testing laboratory in accordance with accepted ASTM methods. Contractor shall assume costs for extraction and patch of samples. Owner will assume costs for testing of field sample.

2. Correct deficiencies in accordance with manufacture's recommended procedures at no cost to Owner.

3. If, for any reason, areas that are tested by Owner fail to meet manufacturer's requirements, then subsequent expense for retesting of those areas will be borne by Contractor.

1.4 REFERENCES (INCLUDING LATEST REVISIONS)

2. National Roofing Contractor's Association (NRCA) - Technical Developments Bulletin 2-91

3. Sheet Metal and Air Conditioning Contractors National Association (SMACNA) - Architectural Sheet Metal Manual

4. American Society of Civil Engineers – ASCE 7

1.5 SUBMITTALS

A. Samples and Manufacturer's Submittals: Submit prior to delivery or installation.

1. Samples of all roofing system components including all specified accessories.

2. Submit samples of proposed warranty complete with any addenda necessary to meet the warranty requirements as specified.

3. Submit latest edition of manufacturer's specifications and installation procedures. Submit only those items applicable to this project.

4. A written statement from the roofing materials manufacturer approving the installer, specifications and drawings as described and/or shown for this project and stating the intent to guarantee the completed project.

5. Manufacturer's Equiviscous Temperatures (EVT) for the specified bitumens.

B. Shop Drawings: Provide manufacturer's approved details of all perimeter conditions, projection conditions, and any additional special job conditions which require details other than indicated in the drawings.

C. Maintenance Procedures: Within ten days of the date of Substantial Completion of the project, deliver to the Owner three copies of the manufacturer's printed instructions regarding care and maintenance of the roof.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials in manufacturer's original, unopened containers and rolls with all labels intact and legible including labels indicating appropriate warnings, storage conditions, lot numbers, and usage instructions. Materials damaged in shipping or storage shall not be used.

B. Manufacturer's packaging and/or roll plastic is not acceptable for exterior storage. Tarpaulin with grommets shall be minimum acceptable for exterior coverings. All materials stored as above shall be minimum of four inches (4") off the substrate, and the tarpaulin tied off with rope.

C. Deliver materials requiring fire resistance classification to the job with labels attached and packaged as required by labeling service.

D. Deliver materials in sufficient quantity to allow continuity of work.

E. Handle and store material and equipment in such a manner as to avoid damage. Liquid products shall be delivered sealed, in original containers.

F. Handle rolled goods so as to prevent damage to edge or ends.

G. Select and operate material handling equipment so as not to damage existing construction or applied roofing.

H. Moisture-sensitive products shall be maintained in dry storage areas and properly covered. Provide continuous protection of materials against wetting and moisture absorption. Store roofing and flashing materials on clean raised platforms with weather protective covering when stored outdoors.

I. Store rolled goods on end.

J. Protect materials against damage by construction traffic.

K. The proper storage of materials is the sole responsibility of the contractor and any wet or damaged roofing materials shall be discarded, removed from the project site, and replaced prior to application.

L. Comply with fire and safety regulations, especially with materials which are extremely flammable and/or toxic. Use safety precautions indicated on labels.

M. Products liable, such as emulsions, to degrade as a result of being frozen shall be maintained above 40° F in heated storage.

N. No storage of materials shall be permitted on roof areas other than those materials that are to be installed the same day. Any exception must be in written form.

1.7 SITE CONDITIONS

A. Job Condition Requirements:

1. Coordinate the work of the contractor with the work to be performed by the Owner's personnel, to ensure proper sequencing of the entire work. The Owner's personnel will be erecting interior protection for equipment, if required. The contractor is to schedule his work so that adequate time is allowed for the Owner's personnel to perform this work. No roof work shall be performed until the Owner's personnel have completed erection of the interior protection in that area.

2. Apply roofing in dry weather.

3. Do not apply roofing when ambient temperature is below 40° F (4° C).

4. Proceed with roofing work only when weather conditions are in compliance with manufacturer's recommended limitations, and when conditions will permit the work to proceed in accordance with specifications.

5. For further information regarding roofing material manufacturer's recommendations for project conditions, refer to the manufacturer's published application manual.

6. Schedule the work so the building will be left watertight at the end of each day. Do not remove more roofing or insulation material than can be reinstalled in any working day.

7. Phased application of roofing plies is not recommended. However, if conditions do not allow installation of the complete roof membrane and the area must be left exposed overnight, it is recommended that the incomplete membrane be visually inspected and sealed with hot bitumen before leaving the work area for the night. A glaze coat of hot asphalt should be applied in a relatively thin film. The surface should be dry and clean before installing additional plies.

8. All surfaces to receive new roofing shall be smooth, dry, and free from dirt, debris, and foreign material before any of this work is installed. Competent operators shall be in attendance at all times equipment is in use. Materials shall be stored neatly in areas designated by the Owner. Load placed on the roof at any point shall not exceed the safe load for which the roof is designed.

9. The contractor shall take all necessary precautions to protect the roof mat and deck from damage. The contractor shall be responsible for repairing all new areas of damage caused by the negligence of the contractor, at the contractor's expense. The Owner's on-site representative shall determine damage caused by contractor negligence.

10. The contractor is to be aware of the potential for roof leaks on the existing roof as a result of ruptured blisters and/or roof mat damage caused by the vacuum process, foot traffic, or material and equipment storage. The contractor is to take all necessary precautions to prevent damage to the existing roof. All damage to the existing roof that could result in roof leaks is to be repaired on a daily basis by the roofing contractor.

11. The contractor shall follow local, state, and federal regulations, safety standards, and codes for the removal, handling, and disposal of asbestos containing materials, if present. When a conflict exists, use the stricter document.

12. Follow insurance underwriter's requirements acceptable for use with specified products or systems.

13. Due caution should be exercised so as not to alter the structural integrity of the deck. When cutting through any deck, care should be taken so as not to damage the deck or any part of the deck, such as post tension cables, etc.

14. All kettles shall have a fume recovery system and temperature gauge, all in working order.

15. The contractor is to verify the location of all interior ducts, electrical lines, piping, conduit, and/or similar obstructions. The contractor is to perform all work in such a manner as to avoid contact with the above mentioned items.

16. Surface and air temperatures should be a minimum 45° F during applications of cleaner and waterproof coating and remain above 45° F for a minimum of four (4) hours following applications. Verify compatibility of cleaner with coatings, paints, primers and joint sealers specified. Advise Owner's representative of any problems in this regard prior to commencing cleaning operations.

B. Protection of Work and Property:

1. Work: The contractor shall maintain adequate protection of all his work from damage and shall protect the Owner's and adjacent property from injury or loss arising from this contract. He shall provide and maintain at all times any OSHA required danger signs, guards, and/or obstructions necessary to protect the public and his workmen from any dangers inherent with or created by the work in progress. All federal, state, and city rules and requirements pertaining to safety and all EPA standards, OSHA standards, NESHAP regulations pertaining to asbestos as required shall be fulfilled by the contractor as part of his proposal.

2. Property: Protect existing planting and landscaping as necessary or required to provide and maintain clearance and access to the work of this contract. Examples of two categories or degrees of protection are generally as follows: a) removal, protection, preservation, or replacement and replanting of plant materials; b) protection of plant materials in place, and replacement of any damage resulting from the contractor's operations.

3. Twenty-four Hour Call: The contractor shall have personnel on call 24 hours per day, seven (7) days per week for emergencies during the course of a job. The Owner's Project Manager is to have the 24-hour numbers for the contact. Contractor must be able to respond to any emergency call and have personnel on-site within two (2) hours after contact. Numbers available to the Owner's Project Manager are to be both home and office numbers for:

a) Job Foreman
b) Job Superintendent
c) Owner or Company Officer

C. Damage to Work of Others: The contractor shall repair, refinish, and make good any damage to the building or landscaping resulting from any of his operation. This shall include, but is not limited to, any damage to plaster, tile work, wall covering, paint, ceilings, floors, or any other finished work. Damage done to the building, equipment, or grounds must be repaired at the successful contractor's expense holding the Owner harmless from any other claims for property damage and/or personal injury.

D. Measurements: It will be the contractor's responsibility to obtain and/or verify any necessary dimensions by visiting the job site, and the contractor shall be responsible for the correctness of same. Any drawings supplied are for reference only.

E. Use of Premises:

1. The contractor is advised that the Owner will occupy the building at all times, and the contractor must provide all safeguards required to protect personnel and to keep noise levels as low as reasonably possible for each operation.
2. The contractor shall:

a) Coordinate work in such a manner as to not interfere with the normal operation of the building.
b) Assume full responsibility for protection and safekeeping of products stored on premises.
c) Agree to hold the Owner harmless in any and all liability of every nature and description which may be suffered through bodily injuries, including death of any persons by reason of negligence of the contractor, agents, employees, or subcontractors.

F. Cleaning and Disposal of Materials:

1. Contractor shall keep the job clean and free from all loose materials and foreign matter. Contractor shall take necessary precautions to keep outside walls clean and shall allow no roofing materials to remain on the outside walls.
2. All waste materials, rubbish, etc., shall be removed from the Owner's premises as accumulated. Rubbish shall be carefully handled to reduce the spread of dust. A suitable scrap chute or hoist must be used to lower any debris. At completion, all work areas shall be left broom clean and all contractor's equipment and materials removed from the site.
3. All bituminous or roofing related materials shall be removed from ladders, stairs, railings, and similar parts of the building.
4. Debris shall be deposited at an approved disposal site.

1.8 SEQUENCING AND SCHEDULING

A. Coordinate roofing schedule with work of other trades.

B. Plan lay up roofing membrane with respect to deck slope. Avoid situations where excessive drainage could pass into completed roofing.

C. Maintain communication with roofing manufacturer's representative to inform of progress and to schedule periodic sample testing.

D. All penetrations shall be made in roof prior to beginning with roof installation.

1.9 WARRANTY

A. Roofing - Manufacturer: Project shall be installed in such a manner that the roofing material manufacturer will furnish a written twenty (20) year NDL type warranty from the date of substantial completion of the completed project.

B. Roofing - Contractor: The contractor, jointly with any subcontractors employed by him, shall guarantee the work required and performed under this contract will be free from defects in workmanship and materials, and that the building will be and remain waterproof for a two (2) year warranty period, after the Owner accepts the work as substantially complete. The warranty shall be in approved notarized written form, to obligate the contractor and his subcontractors, if any, to make good the requirements of the warranty.

C. Warranty repairs shall be performed by a certified installer. The repairs shall be performed in accordance with the manufacturer's written instructions and recommended procedures so as to not void the warranty. Repair of the system, including materials and labor, shall be done at no cost to the Owner.

D. During the proposal period each Bidder shall make arrangements with the material manufacturer to provide the required warranty.

PART 2 PRODUCTS

2.1 GENERAL

A. All materials shall be furnished, specified, or approved in writing by the manufacturer issuing the warranty.

B. Samples of all materials used on the project, which are not supplied by the membrane manufacturer, shall be submitted to the membrane manufacturer for written approval prior to work starting.

C. No asbestos containing materials shall be used on job site or incorporated into work.

2.2 MEMBRANE

A. Modified Bitumen Base Sheet: Shall be smooth reinforced SBS modified asphalt base membrane, one hundred eighteen mil (118) mils in thickness, reinforced with fiberglass – 2.0 pounds/100 square feet, or approved equal.

Physical Properties (ASTM D 5147 Test Method):

Tensile Strength (@ 0° F & 0.08 in/min)	MD = 164 LBF/IN CD = 121 LBF/IN
Elongation (@ 0° F & 0.08 in/min)	MD = 45% CD = 50%
Strain Energy (@ 0° F & 0.08 in/min)	MD = 60 IN-LB/IN^2 CD = 51 IN-LB/IN^2
Tear Strength	MD = 156 LBS CD = 133 LBS
Low Temp Flex CD = -20° F	MD = -20° F

B. Finish Ply: Shall be granule surfaced white in color reinforced modified asphalt membrane, one hundred sixty-five (165) mils in thickness, DynaWeld 250 FR or approved equal.

Physical Properties (ASTM D 5147 Test Method):

Tensile Strength (@ 0° F & 0.08 in/min)	MD = 181 LBF/IN CD = 135 LBF/IN
Elongation (@ 0° F & 0.08 in/min)	MD = 53% CD = 59%
Strain Energy (@ 0° F & 0.08 in/min)	MD = 72 IN-LB/IN^2 CD = 59 IN-LB/IN^2
Tear Strength	MD = 185 LBS CD = 139 LBS
Low Temp Flex	MD = -15° F CD = -15° F

2.3 FLASHING

A. Shall be granulated surfaced, white in color, reinforced polyester mat saturated with asphalt and coated on both sides.

B. Flashing materials shall be supplied by roofing material manufacturer.

Physical Properties (ASTM D 5147 Test Method):

Tensile Strength (@ 0° F & 0.08 in/min)	MD = 125 LBF/IN CD = 87 LBF/IN
Elongation (@ 0° F & 0.08 in/min)	MD = 45% CD = 47%
Strain Energy (@ 0° F & 0.08 in/min)	MD = 42 IN-LB/IN^2 CD = 31 IN-LB/IN^2
Tear Strength	MD = 127 LBS CD = 101 LBS
Low Temp Flex CD = -15° F	MD = -15° F

2.4 FLASHING FOR UP AND OVER PARAPET WALL

A. The flashing membrane shall be a white polyester reinforced flexible sheet, as supplied by the roof membrane manufacturer

2.5 BITUMEN

A. Shall be ASTM D 312, Type IV extra steep asphalt, and as acceptable by roofing manufacturer to comply with warranty requirements

2.6 ROOF DRAINS

A. Shall be all cast iron, minimum four inch (4"), as manufactured by Josam, or approved equal.

2.7 LEAD JACKS

A. Shall be four pound (4#) lead and of dimensions required to completely cover existing plumbing stack.

2.8 LEAD FLASHING DRAINS

A. Shall be four pound (4#) lead, minimum thirty-six inches by thirty-six inches (36" x 36"), used for flashing of internal drains.

2.9 PITCH PAN SEALANT

A. Shall be one-part, self-leveling polyurethane sealant meeting Federal Specification No. TT-S-00230C, Type I, Class A, ASTM C 920, Type S, Grade P, Class 25, for use in new pitch pans as manufactured by Sonneborn (RC-710), or approved equal.

2.10 TERMINATION/PRESSURE BARS

A. Aluminum strip shall be extruded channel bar with a mill finish, height to be one inch (1"), thickness to be 0.25" ± 0.1", leg height to be one-fourth inch (1/4") top and bottom, leg angle to be ninety degrees (90°), for perimeter and curb anchorage, having predrilled holes six inches (6") on center, as manufactured by Olympic Fasteners, or approved equal.

2.11 ASPHALT ROOF PRIMER

A. Quick-dry asphalt-based primer for priming of asphalt roof surfaces, , as manufactured by Johns-Manville or GAF Roofing Products, Inc., or approved equal.

Applicable Federal Specification	SS-A-701B
ASTM	D 41
Flash Point	105° F
Viscosity at 80° F (ASTM D 217)	50-60 K.U.
Weight per gallon	7.4 pounds
Drying time (to touch)	Min. 4 hours

2.12 ICE AND WATER SHIELD

A. A premium heavyweight, self-adhering underlayment, to use as an ice and water shield, such as: All Climate as manufactured by Elk Premium Building Products; Tamko TW Metal and Tile Underlayment as manufactured by Tamko Roofing Products, Inc.; or Vycor Ultra, as manufactured by Grace Construction Products; or approved equal.

2.13 DELIVERY AND STORAGE

A. All materials shall be delivered with appropriate carton and can labels indicating appropriate warnings, storage conditions, lot numbers, and usage instructions. Materials damaged in shipping or storage shall not be used.

2.14 PRECAUTIONS

A. Some of the indicated materials are extremely flammable and/or toxic. Use precautions indicated on can and carton labels.

2.15 MISCELLANEOUS MATERIALS

A. Other materials shall be as specified or of the best grade for the proposed use as recommended by the manufacturer.

PART 3 - EXECUTION

3.1 REFERENCE

A. The roofing membrane manufacturer's Reference Manual shall be considered part of this specification, and should be referred to for more specific application procedures and recommendations.

B. Application of materials shall be in strict accordance with the manufacturer's recommendations and current NRCA, Underwriters Laboratory and IBC guidelines, except where more stringent requirements are shown or specified. In the instance of a conflict between these specifications and those of the manufacturer and/or current NRCA, Underwriters Laboratory and IBC guidelines, the more stringent specifications shall take precedence.

C. General Installation:

1. Comply with governing local, state, and federal regulations, safety standards, and codes.

2. Protect adjacent areas with tarpaulin or other durable materials.

3. Contractor shall prevent overspray, and be responsible for parking lot areas and/or adjoining areas not part of this contract.

4. Contractor shall be responsible for sealing, as required, all openings that may allow bitumen migration or drippage, i.e. pitch dams, envelopes, and filler strips.

5. Prepare surfaces according to manufacturer's or applicator's published instructions. All metal that is to receive bitumen, or come in contact with bitumen or adhesive, shall be first primed with appropriate primer. Any prefinished galvanized sheet steel that is to receive bitumen, or come in contact with bitumen or adhesive, shall be scored, scuffed or abraded before receiving primer application.

6. Use cleaning materials or primers necessary to render an acceptable surface/substrate.

7. All surfaces/substrates shall be clean and dry prior to application of materials.

8. Bitumen kettle shall have a fume recovery system, and visible thermometer to provide positive monitoring of the bitumen temperature when it is heated in accordance with manufacturer's instructions.

9. Ambient temperature shall be 45° F and rising.

10. The maximum heating temperature of Type IV asphalt shall be 525° F.

11. The temperature of Type IV asphalt shall be approximately 475° F ± at the point of application.

12. Do maintain kettle and/or tanker temperature at least 25° F below the actual flash point of the bituminous materials used.

13. Never heat the bituminous materials at high temperatures for prolonged periods of time.

14. Do not allow bituminous materials to stand in luggers for long periods.

15. Do circulate bituminous materials.

16. Do insulate hot transport lines if required.

17. The base sheets and the field membranes are to be laid in the direction of maximum roof slope, working from bottom of slope toward ridge.

18. Wrinkles, buckles, kinks, and fishmouths are not acceptable when laying felt and membrane.

19. Dry voids of felt on felt or membrane on membrane are not acceptable.

20. Where deteriorated base flashing is removed, primed cant strips shall be installed at the intersection of the deck and the vertical surfaces. All flashings shall be mechanically top-fastened with a termination bar a minimum of six inches (6") on center at the top leading edge, and be a minimum of eight inches (8") in height from finished membrane.

3.2 SUBSTRATE PREPARATION

A. New Construction: Substrate shall be smooth and free of debris, sharp edges, and other surface irregularities prior to work starting. Substrate repair shall be performed as required to minimum of NRCA standards.

B. Prepare other surfaces according to respective manufacturer's or applicator's published instructions.

C. Use cleaning materials necessary to render an acceptable surface.

D. Use compatible materials on voids and joints so finished deck surface will be even and smooth.

E. Protect adjacent areas with tarpaulin or other durable materials.

F. Damaged decking shall be replaced with like materials as authorized on unit cost basis using procedures as recommended by the manufacturer.

H. Contractor shall be responsible for sealing, as required, all openings that may allow bitumen migration or drippage, i.e. pitch dams, envelopes, filler strips, etc.

3.3 NAILERS

A. Wooden nailers shall be installed at gravel stops, drip edges, and expansion joints on outside perimeter of building according to NRCA, Underwriters Laboratory and IBC guidelines.

3.4 CANTS

A. Toe of cant shall be level with the surface to receive new roof membrane and in all cases anchored according to NRCA, Underwriters Laboratory and IBC guidelines.

3.5 APPLICATION OF MEMBRANE PLIES

A. First Ply and Top Ply: Shall be installed with three inches (3") side laps and six inch (6") end laps. Membrane ply shall be installed in appropriate grade of hot asphalt at a rate of approximately twenty pounds (20#) per one hundred (100) square feet per ply. No voids or holidays are acceptable. All end laps shall be staggered a minimum of eighteen inches (18"). All membranes shall be laid starting at the low edge, with top ply staggered from first ply.

B. Install membrane materials in accordance with manufacturer's current published application instructions.

C. Apply roofing membrane using felt laying machine or mop-in by hand.

D. Place plies with exposures as determined, and depicted by manufacturer's published details and drawings.

3.6 PERIMETER FASTENING

A. Wood nailers are required for perimeter gravel stops or drip edges. Field membrane and all plies shall be mechanically fastened to nailer on twelve inch (12") centers maximum.

3.7 FLASHINGS AND CURBS

A. Bridge all junctures of vertical and horizontal surfaces with 45□ cant strips. First ply membrane is not to be attached to the cant strip.

B. Base flashings: The flashing system shall be a component of or attached to the roof deck or roof deck system. Flashings should not be applied until the field roofing membrane has been installed.

1. With nailing facilities: Install in accordance with manufacturer's current published details.
2. Without nailing facilities: Install in accordance with manufacturer's approval of deviation from recommended details.
3. Roofing membrane manufacturer's accepted flashing details are included and are part of the general specification.

C. Replace all deteriorated equipment supports. New supports shall be installed in accordance with roof material manufacturer's recommended details.

D. All curbs/flashings shall be a minimum of eight inches (8") in height from finished surface, and a minimum of six inches (6") onto the field membrane. Any deviation shall be in writing from manufacturer.

3.8 EDGING FLASHINGS

A. An NRCA-approved gravel stop/fascia system shall be installed in strict accordance with published instructions.

B. The roof membrane shall extend over the roof edge and down to base of nailer, and be fastened six inches (6") on center. A metal edge of proper gauge and dimensions shall be mechanically fastened, using a continuous clip fastened six inches (12") on center, to the wood nailer over the membrane. The metal shall have a minimum of a three inch (3") flange, set in asphalt mastic and fastened into nailer a minimum of six inches (6") on center, and a minimum of a four inch (4") fascia (match existing). The metal edge shall have a minimum of one inch (1") gravel stop, and the bottom edge of the new metal edge shall be the same elevation as existing.

3.9 EXPANSION JOINT DETAILS

A. Expansion joints at walls and field of the roof shall be curbed as outlined in accordance with NRCA and SMACNA guidelines. The curbs will be flashed as outlined above in Flashings and Curbs.

3.10 MEMBRANE PROTECTION

A. Where equipment pads, wood sleepers, or walkway slabs are to be installed over the roofing membrane, an additional layer of the roofing membrane shall be installed between the roofing membrane and the pad, sleeper, or slab. Due caution shall be exercised to prevent roofing membrane damage during placement. Where required, membrane shall be welded to field membrane to prevent slippage.

3.11 WALK TREADS

A. Install manufacturer's walk pad continuously on each side of each air-handling/mechanical unit on the roof, or as shown on drawings in accordance with the manufacturer's recommended procedures.

3.12 PIPING/CONDUIT

A. Piping/conduit shall be raised to NRCA recommended heights, and new supports furnished. Permanent supports shall be installed upon pads approved by membrane manufacturer. Coordinate work with Owner's representative.

B. All gas lines, piping, and conduits shall be coated with commercial grade yellow paint / specified aluminum coating.

3.13 PIPE/EQUIPMENT SUPPORTS

A. All gas lines, piping, and conduit must be supported on specified stands or hangars.

3.14 DRAINS

A. Insulation shall be tapered at drains and scuppers to provide proper drainage.

B. Sump to drain shall be four foot x four foot sump (4'x4').

3.15 DRAIN FLASHINGS

A. All drains shall receive new lead flashings. Flashings shall be installed in strict accordance with manufacturer's recommendations and with practices as set forth in the NRCA Roofing Manual.

B. Drain shall be covered with the roofing membrane and underlayment plies as specified, slitting the membranes over the drain hole with an "X".

C. Lead flashings as specified shall be installed and primed with asphalt base primer and allowed to dry prior to application of flashing layers.

D. Lead flashing shall be covered with flashing membranes consisting of one layer of smooth surfaced base sheet and one layer of roofing membrane. Each layer shall be installed in a solid bed of asphalt bitumen as specified and shall extend a minimum of twelve inches (12") past the outer edges of the three by three foot (3' x 3') lead flashing. Flashing membranes and lead flashing shall be slit over the drain hole with an "X", cutting excess material from the interior of the drain bowl.

END OF SECTION

SECTION 07620

SHEET METAL AND MISCELLANEOUS ACCESSORIES

PART 1 GENERAL

1.1 SUMMARY

A. Section Includes:

1. Provide flashing and sheet metal components for moisture protection.

2. Related accessories.

1.2 SUBMITTALS

A. Product Data: Submit shop drawings, product data and mockups of all sheet metal.

1.3 QUALITY ASSURANCE

A. Comply with governing local, state, and federal regulations, safety standards, and codes. Provide products of acceptable manufacturers in satisfactory use in similar service for five years. Use experienced installers. Deliver, handle and store materials in accordance with manufacturer's instructions.

B. Reference Standards: Applicable portions of SMACNA, ASTM and NAAMM publications.

1.4 WARRANTIES

A. Manufacturer's Product Warranty: Submit manufacturer's standard limited product warranty signed by the manufacturer's authorized official, guaranteeing to correct failures in product which may occur during the warranty period, without reducing or otherwise limiting any other rights to correction which the Owner/Project Consultant may have under the contract documents. Failure is defined to include product failure which leads to interruption of a watertight installation. Correction may include repair or replacement of failed product.

B. Contractor's Warranty period: For roofing flashing and sheet metal, provide a written warranty which shall warrant work to be free of leaks and defects in materials and workmanship for two years, starting from date of substantial completion.

C. Defects of the sheet metal occurring during the warranty period shall be promptly corrected by the contractor, and defects of the roofing shall be promptly corrected by the manufacturer at no additional cost to the Owner. Upon notification from the Owner or the Owner's representative that evidence of a defect exists, the responsible party shall immediately inform the Owner's representative of the date on which corrective work will be scheduled, and shall notify the Owner's representative when the corrective work has been completed.

PART 2 PRODUCTS

2.1 SHEET METAL MATERIAL

A. Prefinished for use as counterflashings, and expansion joints: Minimum 24-gauge, G-90, hot-dipped galvanized metal, commercial quality, ASTM A 525.

B. Stainless Steel for use as pitch pans: Minimum 24-gauge, commercial quality, ASTM A 525.

C. Hot-dipped Galvanized Steel for use as continuous clips: Minimum 22-gauge, G-90, hot-dipped galvanized metal, commercial quality, ASTM A 525.

D. Coping Cap ASTM B 209 - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate; 2001. Material: 0.032 inch aluminum, ASTM B 209 3105-H14 alloy Material: 0.040 inch aluminum, ASTM B 209 3105-H14 alloy.

E. Stainless Steel: QQ-S-766, Class 301, 302, 304, or 316; or ASTM A 167, Type 301, 302, 304, or 316; form and condition most suitable for the purpose.

F. Aluminum and Aluminum Alloy Plate and Sheet: QQ-A-250; form, alloy, and temper shall be that most suitable for the purpose.

G. Sheet Lead: QQ-L-201, Grade B.

H. All existing sheet metal shall be replaced with new metal of like gauge and type, or as specified on drawings.

2.2 FASTENERS

A. Fasteners shall be same metal as flashing/sheet metal, or other non-corrosive metal as recommended by sheet manufacturer for the specific application. Match finish of exposed heads with material being fastened.

B. Fasteners and fastening plates or bars shall be listed in the FM Global Approval Guide.

C. Fastener for Brick: Shall be 1/4 inch by 2 inches, zinc with plated steel or stainless steel nail, one piece unit, flat head.

D. Screws: Self-taping sheet metal type with neoprene washer, as appropriate.

E. Pop Rivets: Full stainless steel Series 42 or 44, as appropriate.

F. Continuous Clip: Concealed hold-down clip type; of same materials as coping, gravel guard, sized to suit application. Use a continuous clip, minimum 22-gauge G-90 galvanized.

2.3 RELATED MATERIAL

A. Plastic Cement: FS SS-C-153, cutback asphalt type.

B. Solder: QQ-S-571 composition best suited for purpose; use high tin content, minimum 60/40, for stainless steel and monel alloy.

C. Solder: For use with galvanized steel or copper, provide 50-50 tin/lead solder (ASTM B 32), with rosin flux.

D. Sealant (for Sheet Metal): One-component polyurethane, conforming to requirements of FS TT-S-230C, non-staining and non-bleeding.

F. Miscellaneous Materials:

1. Downspout Boots: Cast iron by Neenah Foundry Company, or pre-approved equal, provide and install.

2. Splash Blocks: Concrete, 3000 psi, 28 days. Provide and install with protection pads at all downspouts. Dimensions shall be a minimum 18 inches wide by 36 inches long.

3. Metal Accessories: Provide sheet metal clips, straps, anchoring devices, and similar accessory units as required for installation of work, matching or compatible with material being installed, non-corrosive, size, and gauge required for performance.

PART 3 EXECUTION

3.1 INSPECTION

A. Verify roof openings, curbs, pipes, sleeves, ducts or vents through roof are solidly set, cant strips and reglets in place, substrates are smooth and clean and nailing strips located.

B. Verify membrane termination and base flashings are in place, sealed and secure.

C. Beginning of installation means acceptance of conditions.

3.2 PREPARATION

A. Field measure site conditions prior to fabricating work. Provide all shop drawings and mock-ups one month prior to installation to the Owner/Project Consultant for approval.

B. Install starter and edge strips and cleats before starting installation.

3.3 FABRICATION - GENERAL

A. Shop-fabricate work to greatest extent possible. Comply with details shown, and with applicable requirements of SMACNA "Architectural Sheet Metal Manual" and other recognized industry practices. Fabricate for waterproof and weather-resistant performance; with expansion provisions for running work, sufficient to permanently prevent leakage, damage or deterioration of the work. Form work to fit substrates. Comply with material manufacturer's instructions and recommendations. Form exposed sheet metal work without excessive oil-canning, buckling, and tool marks, true to line and levels as indicated, with exposed edges folded back to form hems.

B. Form sheet metal on bending brake.

C. Shape, trim and hand seam metal on bench insofar as practicable.

D. Form materials with straight lines, sharp angles and smooth curves.

E. Fold back edges on concealed side of exposed edge to form hem (1/2" minimum).

F. Weld or solder joints on parts that are to be permanently and rigidly assembled.

G. Submit sheet metal models for approval by the Owner/Project Consultant.

H. Limit single-piece lengths to 10 feet.

I. Fabricate corner pieces with 18-inch extensions, metered and sealed by forming as one piece.

J. Surface sand flange prior to applying any primers on Kynar metal.

K. Backpaint flashing in contact with masonry or dissimilar materials with bituminous paint.

L. Install new metal rooftop projections. New rooftop projection details shall be as recommended in NRCA or SMACNA handbooks. All rooftop projections shall be cleaned, all joints sealed, and painted with a rust inhibitive paint. Standard color to be selected by the Owner/Project Consultant.

M. All existing or missing metal rooftop projections shall be replaced. New rooftop projection details shall be as recommended in NRCA or SMACNA handbooks. All rooftop projections shall be cleaned, all joints sealed, and painted with a rust inhibitive paint. Standard color to be selected by the Owner/Project Consultant.

N. All sheet metal shall be sealed and watertight.

O. Metal work should be secured so as to prevent damage from buckling or wind. Where clips are shown, these are to be continuous.

P. All metal to receive bitumen or adhesive shall be first primed with asphalt primer.

Q. All prefinished metal shall be sanded and/or abraded prior to receiving primer.

R. Seams: Fabricate non-moving seams in sheet metal with flat-lock seams. For metal other than aluminum, tin edges are to be seamed, form seams, and solder.

S. Expansion Provisions: Form expansion joints of intermeshing hooked flanges, not less than 1 inch deep, filled with mastic sealant (concealed within joints).

T. Sealant Joints: Where movable, non-expansion type joints are indicated or required for proper performance of work, form metal to provide for proper installation of elastomeric sealant, in compliance with industry standards.

U. Separations: Provide for separation of metal from non-compatible metal or corrosive substrates by coating concealed surfaces at locations of contact, with bituminous coating or other permanent separation as recommended by manufacturer/fabricator.

V. Bed flanges of work in a thick coat of bituminous roofing cement where required for waterproof performance.

3.4 INSTALLATION

A. General: All sheet metal termination to vertical wall shall have a through-wall with receiver installed on masonry walls or prefabricated "Z" bar flashing pre-installed to fluid applied wall finished prior to installation of sheet metal termination. This applies to edge metal, base flashing closures and all vertical surface intersections. Refer to NRCA, SMACNA, and metal manufacturer's guidelines.

B. Gravel Guard/Fascia:

1. Shall be installed with expansion joints, 10 feet on center, 1/4 inch expansion leeway, with a cover plate.

2. Secure metal flashings per specifications.

3. Lock seams and end joints.

4. Form sections identical to profiles as shown or approved similar, to match existing building.

5. Fabricate corner pieces with minimum 18-inch, maximum 48-inch extensions, formed and sealed with rivets and sealant, as one piece.

6. Hem exposed edges 3/4 inch minimum.

7. Backpaint flashing in contact with masonry or dissimilar materials with bituminous paint. Surface sand before applying primers.

8. Integrate flashing in a manner consistent with detailing.

9. Provide and install continuous clip around perimeter.

10. Shall be fabricated in accordance with all SMACNA provisions.

11. Color as selected from manufacturer's full range of colors including metallics.

C. Coping:

1. Install new metal coping as required for a permanent watertight installation.

2. Remove existing and replace with new metal coping as required for a permanent watertight installation.

3. All coping shall be manufactured with low profile standing seam metal.

4. Shall be minimum 24-gauge prefinished Kynar aluminum installed in 10-foot sections maximum.

5. Vertical fascia shall extend minimum 2-1/2 inches or be minimum 1-1/2 inches below bottom of nailer, whichever is greater.

6. Secure metal flashings per specifications.

7. Lock seams and end joints.

8. Form sections identical to profiles as shown or approved similar, to match existing building.

9. Fabricate corner pieces with minimum 18-inch, maximum 48-inch extensions, formed and sealed with rivets and sealant, as one piece.

10. Hem exposed edges 3/4 inch minimum.

11. Backpaint flashing in contact with masonry or dissimilar materials with bituminous paint. Surface sand before applying primers.

12. Integrate flashing in a manner consistent with detailing.

13. Provide and install continuous clip, minimum 22-gauge.

14. Shall be fabricated in accordance with all SMACNA provisions.

15. Color as selected from manufacturer's full range of colors including metallics.

D. Expansion Joint Field and at Wall:

1. Shall be as outlined by details, and be in full compliance with all provisions of SMACNA and FM Global requirements for attachment, installation and recommendations.

2. Secure metal flashings per specifications.

3. Lock seams and end joints.

4. Form sections identical to profiles as shown or approved similar, to match existing building.

5. Fabricate corner pieces with minimum 18-inch, maximum 48-inch extensions, formed and sealed with rivets and sealant, as one piece.

6. Hem exposed edges 3/4 inch minimum.

7. Backpaint flashing in contact with masonry or dissimilar materials with bituminous paint. Surface sand before applying primers.

8. Integrate flashing in a manner consistent with detailing.

9. Provide and install continuous clip around perimeter.

10. Shall be fabricated in accordance with all SMACNA provisions.

E. Counterflashing:

1. Install new metal counterflashing as required for a permanent watertight installation.

2. Remove existing and replace with new metal counterflashing as required for a permanent watertight installation.

3. Saw cut brick mortar joint to receive friction fit reglet and removable counterflashing as detailed and SMACNA Figure 4-3E.

F. Gutter and Downspout:

1. Fabrication:

a. Fabricate gutter and downspout of profile and size indicated.

b. Field measure site conditions prior to fabricating work.

c. Fabricate with required connection pieces.

d. Fabricate section square, true, and accurate in size, in maximum possible lengths and free of distortion or defects detrimental to appearance or performance.

e. Hem exposed edges of metal.

f. Form and seal all metal joints; provide for expansion joints per SMACNA.

2. Installation:

a. Install collector head, downspout, and accessories.

b. Join lengths with seams pop riveted and sealed watertight. Flash and seal collector head to downspouts and accessories.

c. Seal all metal joints watertight for full metal surface contact.

d. Collector Head: SMACNA style profile; submit detail for approval.

e. Downspouts: Rectangular profile. Seal all joints, 6 inches by 6 inches.

f. Support Brackets, Joint Fasteners: Profiled to suit gutters and downspouts.

g. Anchorage Devices: SMACNA requirements. Type recommended by fabricator.

h. Collector Head Support: Kynar. Color and Finish to match, as recommended by SMACNA.

i. Downspout Supports: Straps, Kynar. Color and Finish to match.

j. Color as selected from manufacturer's full range of colors including metallics.

G. Overflow Scupper, Collector Head and Downspout:

1. Fabrication:

a. Fabricate overflow scupper, collector head and downspout of profile and size indicated, taking care that the roof drain leader fits properly into the back of the collector head. Seal the pipe to the collector head for watertightness.

b. Field measure site conditions prior to fabricating work.

c. Fabricate with required connection pieces.

d. Fabricate section square, true, and accurate in size, in maximum possible lengths and free of distortion or defects detrimental to appearance or performance.

e. Hem exposed edges of metal.

f. Form and seal all metal joints; provide for expansion joints per SMACNA.

2. Installation:

a. Install collector head, downspout, and accessories.

b. Join lengths with seams pop riveted and sealed watertight. Flash and seal collector head to downspouts and accessories.

c. Seal all metal joints watertight for full metal surface contact.

d. Collector Head: SMACNA style profile; submit detail for approval.

e. Downspouts: Rectangular profile. Seal all joints, 4 inches by 6 inches.

f. Support Brackets, Joint Fasteners: Profiled to suit gutters and downspouts.

g. Anchorage Devices: SMACNA requirements. Type recommended by fabricator.

h. Collector Head Support: Kynar. Color and Finish to match, as recommended by SMACNA.

i. Downspout Supports: Straps, Kynar. Color and Finish to match.

H. Pitch Pans: Shall be as recommended by the roof membrane manufacturer issuing the warranty.

I. Bonnets/Hoods:

1. Fabricate and install above all pitch pans, where necessary, or reinstall as applicable, metal bonnets over all pitch pans, NO EXCEPTIONS.

2. Bonnets/Hoods shall be manufactured with metal compatible with metal to which bonnet is to be attached.

3. On beams and other steel, weld in place bonnets fabricated from 1/4 inch steel plate.

4. Draw band bonnets fabricated from 22-gauge galvanized steel may be used on circular projections.

3.5 FINISH

A. Backpaint concealed metal surfaces with bituminous paint where expected to be in contact with cementitious materials or dissimilar metals. Exposed surfaces to be provided with a factory applied fluorocarbon Kynar finish meeting ASTM A 446 and AAMA specification 605.2 for high performance coating.

END OF SECTION

SECTION 07710

ROOF SPECIALTIES

PART 1 GENERAL

1.1 SUMMARY

A. Section Includes:

1. Copings.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Shop Drawings: For roof specialties.

1. Include plans, elevations, expansion-joint locations, keyed details, and attachments to other work. Distinguish between plant- and field-assembled work.

C. Samples: For each type of roof specialty and for each color and texture specified.

1.3 WARRANTY

A. Roofing-System Warranty: Roof specialties are included in warranty provisions in Section <Insert Section number> "<Insert roof Section title>."

B. Special Warranty on Painted Finishes: Manufacturer agrees to repair finish or replace roof specialties that show evidence of deterioration of factory-applied finishes within specified warranty period.

1. Fluoropolymer Finish: Deterioration includes, but is not limited to, the following:

a. Color fading more than 5 Delta E units when tested according to ASTM D2244.

b. Chalking in excess of a No. 8 rating when tested according to ASTM D4214.

c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.

2. Finish Warranty Period: 20 years from date of Substantial Completion.

PART 2 PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. FM Approvals' Listing: Manufacture and install copings that are listed in FM Approvals' "RoofNav" and approved for windstorm classification, Class 1-90. Identify materials with FM Approvals' markings.

B. SPRI Wind Design Standard: Manufacture and install copings tested according to SPRI ES-1 and capable of resisting the following design pressures:

1. Design Pressure: As indicated on Drawings.

C. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes to prevent buckling, opening of joints, hole elongation, overstressing of components, failure of joint sealants, failure of connections, and other detrimental effects. Provide clips that resist rotation and avoid shear stress as a result of thermal movements. Base calculations on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.

1. Temperature Change (Range): 120 deg F, ambient; 180 deg F, material surfaces.

2.2 COPINGS

A. Metal Copings: Manufactured coping system consisting of metal coping cap in section lengths not exceeding 12 feet, concealed anchorage; with corner units, end cap units, and concealed splice plates with finish matching coping caps.

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

a. Architectural Products Company.

b. Cheney Flashing Company.

c. Hickman Company, W. P.

d. PAC-CLAD; Petersen Aluminum Corporation.

2. Metallic-Coated Steel Sheet Coping Caps: Zinc-coated (galvanized) steel, nominal 0.028-inch thickness 0.034-inch thickness thickness as required to meet performance requirements Insert thickness.

a. Surface: Smooth, flat finish.

b. Finish: Premium fluoropolymer coating produced with Kynar 500 resins.

c. Color: As selected by Architect from manufacturer's full range.

3. Corners: Factory mitered and soldered continuously welded mechanically clinched and sealed watertight.

4. Coping-Cap Attachment Method: face leg hooked to continuous cleat with back leg fastener exposed, fabricated from coping-cap material.

a. Face-Leg Cleats: Concealed, continuous galvanized-steel sheet.

2.3 MATERIALS

A. Zinc-Coated (Galvanized) Steel Sheet: ASTM A653/A653M, G90 coating designation.

B. Aluminum Sheet: ASTM B209, alloy as standard with manufacturer for finish required, with temper to suit forming operations and performance required.

C. Stainless Steel Sheet: ASTM A240/A240M or ASTM A666, Type 304.

D. Copper Sheet: ASTM B370, cold-rolled copper sheet, H00 or H01 temper.

2.4 UNDERLAYMENT MATERIALS

A. Self-Adhering, High-Temperature Sheet: Minimum 30 to 40 mils thick, consisting of slip-resisting polyethylene-film top surface laminated to layer of butyl or SBS-modified asphalt adhesive, with release-paper backing; cold applied. Provide primer when recommended by underlayment manufacturer.

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

a. Carlisle Residential; a division of Carlisle Construction Materials.

b. GCP Applied Technologies Inc.

c. Henry Company.

d. Metal-Fab Manufacturing, a Drexel Metals Company.

e. Owens Corning.

f. Protecto Wrap Company.

g. SDP Advanced Polymer Products Inc.

2. Thermal Stability: ASTM D1970/D1970M; stable after testing at 240 deg F.

3. Low-Temperature Flexibility: ASTM D1970/D1970M; passes after testing at minus 20 deg F.

B. Felt: ASTM D226/D226M, Type II (No. 30), asphalt-saturated organic felt, nonperforated.

2.5 MISCELLANEOUS MATERIALS

A. Fasteners: Manufacturer's recommended fasteners, suitable for application and designed to meet performance requirements. Furnish the following unless otherwise indicated:

1. Fasteners for Zinc-Coated (Galvanized) Steel Sheet: Series 300 stainless steel or hot-dip zinc-coated steel according to ASTM A153/A153M or ASTM F2329.

B. Elastomeric Sealant: ASTM C920, elastomeric polyurethane polymer sealant of type, grade, class, and use classifications required by roofing-specialty manufacturer for each application.

C. Butyl Sealant: ASTM C1311, single-component, solvent-release butyl rubber sealant; polyisobutylene plasticized; heavy bodied for hooked-type joints with limited movement.

D. Bituminous Coating: Cold-applied asphalt emulsion complying with ASTM D1187/D1187M.

E. Asphalt Roofing Cement: ASTM D4586, asbestos free, of consistency required for application.

2.6 FINISHES

A. Coil-Coated Galvanized-Steel Sheet Finishes:

1. High-Performance Organic Finish: Prepare, pretreat, and apply coating to exposed metal surfaces to comply with ASTM A755/A755M and coating and resin manufacturers' written instructions.

a. Two-Coat Fluoropolymer: AAMA 621. Fluoropolymer finish containing not less than 70 percent polyvinylidene fluoride (PVDF) resin by weight in color coat.

PART 3 EXECUTION

3.1 INSTALLATION OF UNDERLAYMENT

A. Self-Adhering Sheet Underlayment: Apply primer if required by manufacturer. Comply with temperature restrictions of underlayment manufacturer for installation. Apply wrinkle free, in shingle fashion to shed water, and with end laps of not less than 6 inches staggered 24 inches between courses. Overlap side edges not less than 3-1/2 inches. Roll laps with roller. Cover underlayment within 14 days.

1. Apply continuously under copings.

2. Coordinate application of self-adhering sheet underlayment under roof specialties with requirements for continuity with adjacent air barrier materials.

B. Slip Sheet: Install with tape or adhesive for temporary anchorage to minimize use of mechanical fasteners under roof specialties. Apply in shingle fashion to shed water, with lapped joints of not less than 2 inches.

3.2 INSTALLATION, GENERAL

A. Install roof specialties according to manufacturer's written instructions. Anchor roof specialties securely in place, with provisions for thermal and structural movement. Use fasteners, solder, protective coatings, separators, underlayments, sealants, and other miscellaneous items as required to complete roof-specialty systems.

1. Install roof specialties level, plumb, true to line and elevation; with limited oil-canning and without warping, jogs in alignment, buckling, or tool marks.

2. Provide uniform, neat seams with minimum exposure of solder and sealant.

3. Install roof specialties to fit substrates and to result in weathertight performance. Verify shapes and dimensions of surfaces to be covered before manufacture.

4. Torch cutting of roof specialties is not permitted.

5. Do not use graphite pencils to mark metal surfaces.

B. Metal Protection: Protect metals against galvanic action by separating dissimilar metals from contact with each other or with corrosive substrates by painting contact surfaces with bituminous coating or by other permanent separation as recommended by manufacturer.

1. Bed flanges in thick coat of asphalt roofing cement where required by manufacturers of roof specialties for waterproof performance.

C. Expansion Provisions: Allow for thermal expansion of exposed roof specialties.

1. Space movement joints at a maximum of 12 feet with no joints within 18 inches of corners or intersections unless otherwise indicated on Drawings.

2. When ambient temperature at time of installation is between 40 and 70 deg F, set joint members for 50 percent movement each way. Adjust setting proportionately for installation at higher ambient temperatures.

D. Fastener Sizes: Use fasteners of sizes that penetrate wood blocking or sheathing not less than 1-1/4 inches for nails and not less than 3/4 inch for wood screws.

E. Seal concealed joints with butyl sealant as required by roofing-specialty manufacturer.

F. Seal joints as required for weathertight construction. Place sealant to be completely concealed in joint. Do not install sealants at temperatures below 40 deg F.

3.3 INSTALLATION OF COPING

A. Install cleats, anchor plates, and other anchoring and attachment accessories and devices with concealed fasteners.

B. Anchor copings with manufacturer's required devices, fasteners, and fastener spacing to meet performance requirements.

1. Interlock face-leg drip edge into continuous cleat anchored to substrate at 16-inch centers. Anchor back leg of coping with screw fasteners and elastomeric washers at 16-inch centers.

3.4 INSTALLATION OF ROOF-EDGE SPECIALITIES

A. Install cleats, cants, and other anchoring and attachment accessories and devices with concealed fasteners.

B. Anchor roof edgings with manufacturer's required devices, fasteners, and fastener spacing to meet performance requirements.

3.5 CLEANING AND PROTECTION

A. Clean exposed metal surfaces of substances that interfere with uniform oxidation and weathering.

B. Clean and neutralize flux materials. Clean off excess solder and sealants.

C. Remove temporary protective coverings and strippable films as roof specialties are installed.

END OF SECTION

SECTION 07900

JOINT SEALANTS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Nonstaining silicone joint sealants.

2. Mildew-resistant joint sealants.

3. Butyl joint sealants.

4. Latex joint sealants.

B. Related Requirements:

1. Division 01 Specification Sections apply to Work of this Section.

1.2 ACTION SUBMITTALS

A. Product Data: For each joint-sealant product.

B. Joint-Sealant Schedule: Include the following information:

1. Joint-sealant application, joint location, and designation.

2. Joint-sealant manufacturer and product name.

3. Joint-sealant formulation.

4. Joint-sealant color.

1.3 FIELD CONDITIONS

A. Do not proceed with installation of joint sealants under the following conditions:

1. When ambient and substrate temperature conditions are outside limits permitted by joint-sealant manufacturer or are below 40 deg F.

2. When joint substrates are wet.

3. Where joint widths are less than those allowed by joint-sealant manufacturer for applications indicated.

4. Where contaminants capable of interfering with adhesion have not yet been removed from joint substrates.

PART 2 - PRODUCTS

2.1 JOINT SEALANTS, GENERAL

A. Compatibility: Provide joint sealants, backings, and other related materials that are compatible with one another and with joint substrates under conditions of service and application, as demonstrated by joint-sealant manufacturer, based on testing and field experience.

B. Colors of Exposed Joint Sealants: As selected by Architect from manufacturer's standard range. Do not paint sealants to achieve color.

2.2 NONSTAINING SILICONE JOINT SEALANTS

A. Nonstaining Joint Sealants: No staining of substrates when tested according to ASTM C 1248.

B. Silicone, Nonstaining, S, NS, 50, NT: Nonstaining, single-component, nonsag, plus 50 percent and minus 50 percent movement capability, nontraffic-use, neutral-curing silicone joint sealant; ASTM C 920, Type S, Grade NS, Class 50, Use NT.

1. Products: Subject to compliance with requirements, provide the following:

a. Dow Corning Corporation; 756 SMS or 795.

b. GE Construction Sealants; Momentive Performance Materials Inc; SilPruf NB.

c. May National Associates, Inc., a subsidiary of Sika Corporation U.S.; Bondaflex Sil 295 FPS NB.

d. Pecora Corporation; 864NST, 895NST, or 898NST.

e. Tremco Incorporated; Spectrem 2 or Spectrem 3.

2.3 MILDEW-RESISTANT JOINT SEALANTS

A. Mildew-Resistant Joint Sealants: Formulated for prolonged exposure to humidity with fungicide to prevent mold and mildew growth.

B. Silicone, Mildew Resistant, Acid Curing, S, NS, 25, NT: Mildew-resistant, single-component, nonsag, plus 25 percent and minus 25 percent movement capability, nontraffic-use, acid-curing silicone joint sealant; ASTM C 920, Type S, Grade NS, Class 25, Use NT.

1. Products: Subject to compliance with requirements, provide the following:

a. Dow Corning Corporation; 786-M White.

b. GE Construction Sealants; Momentive Performance Materials Inc.; SCS1700 Sanitary.

c. May National Associates, Inc., a subsidiary of Sika Corporation U.S.; Bondaflex Sil 100 WF.

d. Soudal USA; RTV GP.

e. Tremco Incorporated; Tremsil 200.

2.4 BUTYL JOINT SEALANTS

A. Butyl-Rubber-Based Joint Sealants: ASTM C 1311.

1. Products: Subject to compliance with requirements, provide the following:

a. Bostik, Inc.; Chem-Calk 300.

b. Pecora Corporation; BC-158.

2.5 LATEX JOINT SEALANTS

A. Acrylic Latex: Acrylic latex or siliconized acrylic latex, ASTM C 834, Type OP, Grade NF.

1. Products: Subject to compliance with requirements, provide the following:

a. BASF Construction Chemicals - Building Systems; Sonolac.

b. May National Associates, Inc., a subsidiary of Sika Corporation U.S.; Bondaflex 600 or Bondaflex Sil-A 700.

c. Pecora Corporation; AC-20.

d. Sherwin-Williams Company (The); 850A, 950A, or PowerHouse.

e. Tremco Incorporated; Tremflex 834.

2.6 JOINT-SEALANT BACKING

A. Sealant Backing Material, General: Nonstaining; compatible with joint substrates, sealants, primers, and other joint fillers; and approved for applications indicated by sealant manufacturer based on field experience and laboratory testing.

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

a. BASF Construction Chemicals - Building Systems.

b. Construction Foam Products, a division of Nomaco, Inc.

B. Cylindrical Sealant Backings: ASTM C 1330, Type C (closed-cell material with a surface skin), and of size and density to control sealant depth and otherwise contribute to producing optimum sealant performance.

C. Bond-Breaker Tape: Polyethylene tape or other plastic tape recommended by sealant manufacturer for preventing sealant from adhering to rigid, inflexible joint-filler materials or joint surfaces at back of joint. Provide self-adhesive tape where applicable.

2.7 MISCELLANEOUS MATERIALS

A. Primer: Material recommended by joint-sealant manufacturer where required for adhesion of sealant to joint substrates indicated, as determined from preconstruction joint-sealant-substrate tests and field tests.

B. Cleaners for Nonporous Surfaces: Chemical cleaners acceptable to manufacturers of sealants and sealant backing materials, free of oily residues or other substances capable of staining or harming joint substrates and adjacent nonporous surfaces in any way, and formulated to promote optimum adhesion of sealants to joint substrates.

C. Masking Tape: Nonstaining, nonabsorbent material compatible with joint sealants and surfaces adjacent to joints.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine joints indicated to receive joint sealants, with Installer present, for compliance with requirements for joint configuration, installation tolerances, and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Surface Cleaning of Joints: Clean out joints immediately before installing joint sealants to comply with joint-sealant manufacturer's written instructions and the following requirements:

1. Remove all foreign material from joint substrates that could interfere with adhesion of joint sealant, including dust, paints (except for permanent, protective coatings tested and approved for sealant adhesion and compatibility by sealant manufacturer), old joint sealants, oil, grease, waterproofing, water repellents, water, surface dirt, and frost.

2. Clean porous joint substrate surfaces by brushing, grinding, mechanical abrading, or a combination of these methods to produce a clean, sound substrate capable of developing optimum bond with joint sealants. Remove loose particles remaining after cleaning operations above by vacuuming or blowing out joints with oil-free compressed air. Porous joint substrates include the following:

a. Concrete.

b. Masonry.

c. Unglazed surfaces of ceramic tile.

d. Exterior insulation and finish systems.

B. Remove laitance and form-release agents from concrete.

1. Clean nonporous joint substrate surfaces with chemical cleaners or other means that do not stain, harm substrates, or leave residues capable of interfering with adhesion of joint sealants. Nonporous joint substrates include the following:

a. Metal.

b. Glass.

c. Porcelain enamel.

d. Glazed surfaces of ceramic tile.

C. Joint Priming: Prime joint substrates where recommended by joint-sealant manufacturer or as indicated by preconstruction joint-sealant-substrate tests or prior experience. Apply primer to comply with joint-sealant manufacturer's written instructions. Confine primers to areas of joint-sealant bond; do not allow spillage or migration onto adjoining surfaces.

D. Masking Tape: Use masking tape where required to prevent contact of sealant or primer with adjoining surfaces that otherwise would be permanently stained or damaged by such contact or by cleaning methods required to remove sealant smears. Remove tape immediately after tooling without disturbing joint seal.

3.3 INSTALLATION OF JOINT SEALANTS

A. General: Comply with joint-sealant manufacturer's written installation instructions for products and applications indicated, unless more stringent requirements apply.

B. Sealant Installation Standard: Comply with recommendations in ASTM C 1193 for use of joint sealants as applicable to materials, applications, and conditions indicated.

C. Install sealant backings of kind indicated to support sealants during application and at position required to produce cross-sectional shapes and depths of installed sealants relative to joint widths that allow optimum sealant movement capability.

1. Do not leave gaps between ends of sealant backings.

2. Do not stretch, twist, puncture, or tear sealant backings.

3. Remove absorbent sealant backings that have become wet before sealant application, and replace them with dry materials.

D. Install bond-breaker tape behind sealants where sealant backings are not used between sealants and backs of joints.

E. Install sealants using proven techniques that comply with the following and at the same time backings are installed:

1. Place sealants so they directly contact and fully wet joint substrates.

2. Completely fill recesses in each joint configuration.

3. Produce uniform, cross-sectional shapes and depths relative to joint widths that allow optimum sealant movement capability.

F. Tooling of Nonsag Sealants: Immediately after sealant application and before skinning or curing begins, tool sealants according to requirements specified in subparagraphs below to form smooth, uniform beads of configuration indicated; to eliminate air pockets; and to ensure contact and adhesion of sealant with sides of joint.

1. Remove excess sealant from surfaces adjacent to joints.

2. Use tooling agents that are approved in writing by sealant manufacturer and that do not discolor sealants or adjacent surfaces.

3. Provide concave joint profile per Figure 8A in ASTM C 1193 unless otherwise indicated.

3.4 CLEANING

A. Clean off excess sealant or sealant smears adjacent to joints as the Work progresses by methods and with cleaning materials approved in writing by manufacturers of joint sealants and of products in which joints occur.

3.5 PROTECTION

A. Protect joint sealants during and after curing period from contact with contaminating substances and from damage resulting from construction operations or other causes so sealants are without deterioration or damage at time of Substantial Completion. If, despite such protection, damage or deterioration occurs, cut out, remove, and repair damaged or deteriorated joint sealants immediately so installations with repaired areas are indistinguishable from original work.

3.6 JOINT-SEALANT SCHEDULE

A. Joint-Sealant Application: Exterior joints in vertical surfaces and horizontal nontraffic surfaces JS03.

1. Joint Locations:

a. Construction joints in cast-in-place concrete.

b. Joints between plant-precast architectural concrete units.

c. Control and expansion joints in unit masonry.

d. Joints in dimension stone cladding.

e. Joints in glass unit masonry assemblies.

f. Joints in exterior insulation and finish systems.

g. Joints between metal panels.

h. Joints between different materials listed above.

i. Perimeter joints between materials listed above and frames of doors windows and louvers.

j. Control and expansion joints in ceilings and other overhead surfaces.

2. Joint Sealant: Silicone, nonstaining, S, NS, 50, NT.

3. Joint-Sealant Color: As selected by Architect from manufacturer's full range of colors.

B. Joint-Sealant Application: Interior joints in vertical surfaces and horizontal nontraffic surfaces.

1. Joint Locations:

a. Control and expansion joints on exposed interior surfaces of exterior walls.

b. Tile control and expansion joints.

c. Vertical joints on exposed surfaces of unit masonry, concrete, walls, and partitions.

d. Joints on underside of plant-precast structural concrete beams and planks.

2. Joint Sealant: Silicone, nonstaining, S, NS, 50, NT.

C. Joint-Sealant Application: Mildew-resistant interior joints in vertical surfaces and horizontal nontraffic surfaces.

1. Joint Locations: Joints between plumbing fixtures and adjoining walls, floors, and counters.

2. Joint Sealant: Silicone, mildew resistant, acid curing, S, NS, 25, NT.

3. Joint-Sealant Color: As selected by Architect from manufacturer's full range of colors.

D. Joint-Sealant Application: Concealed mastics.

1. Joint Locations:

a. Thresholds.

b. Sill plates.

c. Concealed joints in metal roof or flashing conditions.

2. Joint Sealant: Butyl-rubber based.

END OF SECTION

SECTION 08110

HOLLOW METAL DOORS AND FRAMES

PART 1 GENERAL

1.1 SUMMARY

A. Section includes hollow-metal work.

B. Related Requirements:

1. Division 01 Specification Sections apply to Work of this Section.

2. Section 08710 "Door Hardware" for door hardware for hollow-metal doors.

1.2 DEFINITIONS

A. Minimum Thickness: Minimum thickness of base metal without coatings according to NAAMM-HMMA 803 or SDI A250.8.

1.3 COORDINATION

A. Coordinate anchorage installation for hollow-metal frames. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors. Deliver such items to Project site in time for installation.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include construction details, material descriptions, core descriptions, and finishes.

B. Shop Drawings: Include the following:

1. Elevations of each door type.

2. Details of doors, including vertical- and horizontal-edge details and metal thicknesses.

3. Frame details for each frame type, including dimensioned profiles and metal thicknesses.

4. Locations of reinforcement and preparations for hardware.

5. Details of each different wall opening condition.

6. Details of anchorages, joints, field splices, and connections.

7. Details of accessories.

8. Details of moldings, removable stops, and glazing.

9. Details of conduit and preparations for power, signal, and control systems.

C. Schedule: Provide a schedule of hollow-metal work prepared by or under the supervision of supplier, using same reference numbers for details and openings as those on Drawings. Coordinate with final Door Hardware Schedule.

1.5 INFORMATIONAL SUBMITTALS

A. Product Test Reports: For each type of hollow-metal door and frame assembly, for tests performed by a qualified testing agency.

B. Oversize Construction Certification: For assemblies required to be fire rated and exceeding limitations of labeled assemblies.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Deliver hollow-metal work palletized, packaged, or crated to provide protection during transit and Project-site storage. Do not use non-vented plastic.

1. Provide additional protection to prevent damage to factory-finished units.

B. Store hollow-metal work vertically under cover at Project site with head up. Place on minimum 4-inch- high wood blocking. Provide minimum 1/4-inch space between each stacked door to permit air circulation.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. Amweld International, LLC.

2. Ceco Door; ASSA ABLOY.

3. Curries Company; ASSA ABLOY.

4. Republic Doors and Frames.

5. Rocky Mountain Metals, Inc.

6. Security Metal Products Corp.

7. Steelcraft; an Ingersoll-Rand company.

B. Source Limitations: Obtain hollow-metal work from single source from single manufacturer.

2.2 INTERIOR DOORS AND FRAMES

A. Construct interior doors and frames to comply with the standards indicated for materials, fabrication, hardware locations, hardware reinforcement, tolerances, and clearances, and as specified.

B. Heavy-Duty Doors and Frames: SDI A250.8, Level 2.

1. Physical Performance: Level B according to SDI A250.4.

2. Doors:

a. Type: As indicated in the Door and Frame Schedule.

b. Thickness: 1-3/4 inches.

c. Face: Metallic-coated, cold-rolled steel sheet, minimum thickness of 0.042 inch.

d. Edge Construction: Model 2, Seamless.

e. Core: Manufacturer's standard kraft-paper honeycomb, polystyrene, polyurethane, polyisocyanurate, mineral-board, or vertical steel-stiffener core at manufacturer's discretion.

3. Frames:

a. Materials: Metallic-coated steel sheet, minimum thickness of 0.053 inch.

b. Construction: Face welded.

4. Exposed Finish: Prime.

2.3 EXTERIOR HOLLOW-METAL DOORS AND FRAMES

A. Construct exterior doors and frames to comply with the standards indicated for materials, fabrication, hardware locations, hardware reinforcement, tolerances, and clearances, and as specified.

B. Maximum-Duty Doors and Frames: SDI A250.8, Level 4. At locations indicated in the Door and Frame Schedule.

1. Physical Performance: Level A according to SDI A250.4.

2. Doors:

a. Type: As indicated in the Door and Frame Schedule.

b. Thickness: 1-3/4 inches

c. Face: Metallic-coated steel sheet, minimum thickness of 0.067 inch, with minimum A40 coating.

d. Edge Construction: Model 2, Seamless.

e. Core: Manufacturer's standard kraft-paper honeycomb, polystyrene, polyurethane, polyisocyanurate, mineral-board, or vertical steel-stiffener core at manufacturer's discretion. Provide doors fabricated with thermal-resistance value (R-value) of not less than 2.1 deg F x h x sq. ft./Btu when tested according to ASTM C 1363.

3. Frames:

a. Materials: Metallic-coated steel sheet, minimum thickness of 0.067 inch, with minimum A40 coating.

b. Construction: Face welded.

4. Exposed Finish: Prime.

2.4 FRAME ANCHORS

A. Jamb Anchors:

1. Masonry Type: Adjustable strap-and-stirrup or T-shaped anchors to suit frame size, not less than 0.042 inch thick, with corrugated or perforated straps not less than 2 inches wide by 10 inches long; or wire anchors not less than 0.177 inch thick.

2. Postinstalled Expansion Type for In-Place Concrete or Masonry: Minimum 3/8-inch- diameter bolts with expansion shields or inserts. Provide pipe spacer from frame to wall, with throat reinforcement plate, welded to frame at each anchor location.

B. Floor Anchors: Formed from same material as frames, minimum thickness of 0.042 inch, and as follows:

1. Monolithic Concrete Slabs: Clip-type anchors, with two holes to receive fasteners.

2. Separate Topping Concrete Slabs: Adjustable-type anchors with extension clips, allowing not less than 2-inch height adjustment. Terminate bottom of frames at finish floor surface.

2.5 MATERIALS

A. Metallic-Coated Steel Sheet: ASTM A 653/A 653M, Commercial Steel (CS), Type B.

B. Frame Anchors: ASTM A 879/A 879M, Commercial Steel (CS), 04Z coating designation; mill phosphatized.

1. For anchors built into exterior walls, steel sheet complying with ASTM A 1008/A 1008M or ASTM A 1011/A 1011M, hot-dip galvanized according to ASTM A 153/A 153M, Class B.

C. Inserts, Bolts, and Fasteners: Hot-dip galvanized according to ASTM A 153/A 153M.

D. Power-Actuated Fasteners in Concrete: Fastener system of type suitable for application indicated, fabricated from corrosion-resistant materials, with clips or other accessory devices for attaching hollow-metal frames of type indicated.

E. Grout: ASTM C 476, except with a maximum slump of 4 inches, as measured according to ASTM C 143/C 143M.

F. Mineral-Fiber Insulation: ASTM C 665, Type I (blankets without membrane facing); consisting of fibers manufactured from slag or rock wool; with maximum flame-spread and smoke-developed indexes of 25 and 50, respectively; passing ASTM E 136 for combustion characteristics.

G. Glazing: Comply with requirements in Section 08 80 00 "Glazing."

H. Bituminous Coating: Cold-applied asphalt mastic, compounded for 15-mil dry film thickness per coat. Provide inert-type noncorrosive compound free of asbestos fibers, sulfur components, and other deleterious impurities.

2.6 FABRICATION

A. Fabricate hollow-metal work to be rigid and free of defects, warp, or buckle. Accurately form metal to required sizes and profiles, with minimum radius for metal thickness. Where practical, fit and assemble units in manufacturer's plant. To ensure proper assembly at Project site, clearly identify work that cannot be permanently factory assembled before shipment.

B. Hollow-Metal Doors:

1. Steel-Stiffened Door Cores: Provide minimum thickness 0.026 inch, steel vertical stiffeners of same material as face sheets extending full-door height, with vertical webs spaced not more than 6 inches apart. Spot weld to face sheets no more than 5 inches o.c. Fill spaces between stiffeners with glass- or mineral-fiber insulation.

2. Fire Door Cores: As required to provide fire-protection[and temperature-rise] ratings indicated.

3. Vertical Edges for Single-Acting Doors: Bevel edges 1/8 inch in 2 inches.

4. Top Edge Closures: Close top edges of doors with inverted closures, except provide flush closures at exterior doors of same material as face sheets.

5. Bottom Edge Closures: Close bottom edges of doors with end closures or channels of same material as face sheets.

6. Exterior Doors: Provide weep-hole openings in bottoms of exterior doors to permit moisture to escape. Seal joints in top edges of doors against water penetration.

PACKET 9.1344 December 15, 2020
November 17, 2020

C. Hollow-Metal Frames: Where frames are fabricated in sections due to shipping or handling limitations, provide alignment plates or angles at each joint, fabricated of same thickness metal as frames.

1. Sidelite and Transom Bar Frames: Provide closed tubular members with no visible face seams or joints, fabricated from same material as door frame. Fasten members at crossings and to jambs by butt welding.

2. Provide countersunk, flat- or oval-head exposed screws and bolts for exposed fasteners unless otherwise indicated.

3. Grout Guards: Weld guards to frame at back of hardware mortises in frames to be grouted.

4. Floor Anchors: Weld anchors to bottoms of jambs with at least four spot welds per anchor; however, for slip-on drywall frames, provide anchor clips or countersunk holes at bottoms of jambs.

5. Jamb Anchors: Provide number and spacing of anchors as follows:

a. Masonry Type: Locate anchors not more than 16 inches from top and bottom of frame. Space anchors not more than 32 inches o.c., to match coursing, and as follows:

1) Two anchors per jamb up to 60 inches (1,524 mm) high.
2) Three anchors per jamb from 60 to 90 inches high.
3) Four anchors per jamb from 90 to 120 inches high.
4) Four anchors per jamb plus one additional anchor per jamb for each 24 inches or fraction thereof above 120 inches high.

b. Postinstalled Expansion Type: Locate anchors not more than 6 inches from top and bottom of frame. Space anchors not more than 26 inches o.c.

D. Fabricate concealed stiffeners and edge channels from either cold- or hot-rolled steel sheet.

E. Hardware Preparation: Factory prepare hollow-metal work to receive templated mortised hardware; include cutouts, reinforcement, mortising, drilling, and tapping according to SDI A250.6, the Door Hardware Schedule, and templates.

1. Reinforce doors and frames to receive non-templated, mortised, and surface-mounted door hardware.

2. Comply with applicable requirements in SDI A250.6 and BHMA A156.115 for preparation of hollow-metal work for hardware.

F. Stops and Moldings: Provide stops and moldings around glazed lites and louvers where indicated. Form corners of stops and moldings with mitered hairline joints.

1. Single Glazed Lites: Provide fixed stops and moldings welded on secure side of hollow-metal work.

2. Multiple Glazed Lites: Provide fixed and removable stops and moldings so that each glazed lite is capable of being removed independently.

3. Provide fixed frame moldings on outside of exterior and on secure side of interior doors and frames.

4. Provide loose stops and moldings on inside of hollow-metal work.

5. Coordinate rabbet width between fixed and removable stops with glazing and installation types indicated.

2.7 STEEL FINISHES

A. Prime Finish: Clean, pretreat, and apply manufacturer's standard primer.

1. Shop Primer: Manufacturer's standard, fast-curing, lead- and chromate-free primer complying with SDI A250.10; recommended by primer manufacturer for substrate; compatible with substrate and field-applied coatings despite prolonged exposure.

PART 3 EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Examine roughing-in for embedded and built-in anchors to verify actual locations before frame installation.

C. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.

D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Drill and tap doors and frames to receive non-templated, mortised, and surface-mounted door hardware.

3.3 INSTALLATION

A. General: Install hollow-metal work plumb, rigid, properly aligned, and securely fastened in place. Comply with Drawings and manufacturer's written instructions.

B. Hollow-Metal Frames: Install hollow-metal frames for doors, transoms, sidelites, borrowed lites, and other openings, of size and profile indicated. Comply with SDI A250.11 or NAAMM-HMMA 840 as required by standards specified.

1. Set frames accurately in position; plumbed, aligned, and braced securely until permanent anchors are set. After wall construction is complete, remove temporary braces, leaving surfaces smooth and undamaged.

   a. Where frames are fabricated in sections because of shipping or handling limitations, field splice at approved locations by welding face joint continuously; grind, fill, dress, and make splice smooth, flush, and invisible on exposed faces.

   b. Install frames with removable stops located on secure side of opening.

   c. Install door silencers in frames before grouting.

   d. Remove temporary braces necessary for installation only after frames have been properly set and secured.

   e. Check plumb, square, and twist of frames as walls are constructed. Shim as necessary to comply with installation tolerances.

   f. Field apply bituminous coating to backs of frames that will be filled with grout containing antifreezing agents.

2. Floor Anchors: Provide floor anchors for each jamb and mullion that extends to floor, and secure with postinstalled expansion anchors.

   a. Floor anchors may be set with power-actuated fasteners instead of postinstalled expansion anchors if so indicated and approved on Shop Drawings.

3. Masonry Walls: Coordinate installation of frames to allow for solidly filling space between frames and masonry with grout.

4. Concrete Walls: Solidly fill space between frames and concrete with mineral-fiber insulation.

5. In-Place Concrete or Masonry Construction: Secure frames in place with postinstalled expansion anchors. Countersink anchors, and fill and make smooth, flush, and invisible on exposed faces.

6. In-Place Metal or Wood-Stud Partitions: Secure slip-on drywall frames in place according to manufacturer's written instructions.

7. Installation Tolerances: Adjust hollow-metal door frames for squareness, alignment, twist, and plumb to the following tolerances:

PACKET 9.1347 December 15, 2020
November 17, 2020

a. Squareness: Plus or minus 1/16 inch, measured at door rabbet on a line 90 degrees from jamb perpendicular to frame head.

b. Alignment: Plus or minus 1/16 inch, measured at jambs on a horizontal line parallel to plane of wall.

c. Twist: Plus or minus 1/16 inch, measured at opposite face corners of jambs on parallel lines, and perpendicular to plane of wall.

d. Plumbness: Plus or minus 1/16 inch, measured at jambs at floor.

C. Hollow-Metal Doors: Fit hollow-metal doors accurately in frames, within clearances specified below. Shim as necessary.

1. Non-Fire-Rated Steel Doors:

a. Between Door and Frame Jambs and Head: 1/8 inch plus or minus 1/32 inch.

b. Between Edges of Pairs of Doors: 1/8 inch to 1/4 inch plus or minus 1/32 inch.

c. At Bottom of Door: [3/4 inch] [5/8 inch] plus or minus 1/32 inch.

d. Between Door Face and Stop: 1/16 inch to 1/8 inch plus or minus 1/32 inch.

D. Glazing: Comply with installation requirements in Section 08 80 00 "Glazing" and with hollow-metal manufacturer's written instructions.

1. Secure stops with countersunk flat- or oval-head machine screws spaced uniformly not more than 9 inches o.c. and not more than 2 inches o.c. from each corner.

3.4 ADJUSTING AND CLEANING

A. Final Adjustments: Check and readjust operating hardware items immediately before final inspection. Leave work in complete and proper operating condition. Remove and replace defective work, including hollow-metal work that is warped, bowed, or otherwise unacceptable.

B. Remove grout and other bonding material from hollow-metal work immediately after installation.

C. Metallic-Coated Surface Touchup: Clean abraded areas and repair with galvanizing repair paint according to manufacturer's written instructions.

D. Touchup Painting: Cleaning and touchup painting of abraded areas of paint are specified in painting Sections.

SECTION 08331

OVERHEAD COILING DOORS

PART 1 GENERAL

1.1 SUMMARY

A. Section Includes:

1. Insulated service doors.

B. Related Requirements:

1. Section 05500 "Metal Fabrications" for miscellaneous steel supports, door-opening framing, corner guards, and bollards.

1.2 ACTION SUBMITTALS

A. Product Data: For each type and size of overhead coiling door and accessory.

B. Shop Drawings: For each installation and for special components not dimensioned or detailed in manufacturer's product data.

1. Include points of attachment and their corresponding static and dynamic loads imposed on structure.

2. Show locations of controls, locking devices detectors or replaceable fusible links, and other accessories.

3. Include diagrams for power, signal, and control wiring.

1.3 INFORMATIONAL SUBMITTALS

A. Sample warranty.

1.4 CLOSEOUT SUBMITTALS

A. Special warranty.

B. Maintenance data.

1.5 QUALITY ASSURANCE

A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer for both installation and maintenance of units required for this Project.

1.6 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of doors that fail in materials or workmanship within specified warranty period.

1. Warranty Period: Two years from date of Substantial Completion.

PART 2 PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Structural Performance, Exterior Doors: Capable of withstanding the following design wind loads:

1. Design Wind Load: 20 lbf/sq. ft., acting inward and outward.

2. Testing: According to ASTM E330/E330M.

2.2 DOOR ASSEMBLY 101C

A. Service Insulated Service Door: Overhead coiling door formed with curtain of interlocking metal slats.

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

a. ACME Rolling Doors.

b. Advanced Door Technologies.

c. Alpine Overhead Doors, Inc.

d. Alumatec Pacific Products.

e. ASTA Door Corporation.

f. City-Gates.

g. Dynamic Closures Corporation.

h. ENTREMATIC.

i. Lawrence Roll-Up Doors, Inc.

j. McKeon Rolling Steel Door Company, Inc.

k. Metro Door.

l. Overhead Door Company

m. Southwestern Rolling Steel Door Co.

n. Wayne-Dalton Corp.

B. Operation Cycles: Door components and operators capable of operating for not less than 20,000.

C. Curtain R-Value: R7.7.

D. Door Curtain Material: Galvanized steel.

E. Door Curtain Slats: Flat profile slats of 2-5/8-inch center-to-center height.

1. Vision Panels: Approximately 10- by 1-5/8-inch openings spaced approximately 2 inches apart and beginning 12 inches from end guides; in two three Insert number rows of slats at height indicated on Drawings; installed with insulated vision-panel glazing.

2. Insulated-Slat Interior Facing: Metal.

F. Bottom Bar: Two angles, each not less than 1-1/2 by 1-1/2 by 1/8 inch thick; fabricated from hot-dip galvanized steel and finished to match door.

G. Curtain Jamb Guides: Galvanized steel with exposed finish matching curtain slats.

H. Hood: Match curtain material and finish.

1. Mounting: As indicated on Drawings.

I. Electric Door Operator:

1. Usage Classification: Standard duty, up to 25 cycles per hour and up to 90 cycles per day.

2. Safety: Listed according to UL 325 by a qualified testing agency for commercial or industrial use.

3. Motor Exposure: Interior.

4. Motor Electrical Characteristics:

a. Horsepower: 1/2 1 2 3 As recommended by manufacturer.

b. Voltage: 115-V ac 208-V ac 230-V ac, single phase, 60 Hz.

c. Voltage: [208-V ac] [230-V ac] [460-V ac], three phase, 60 Hz.

5. Emergency Manual Operation: Chain type.

6. Obstruction-Detection Device: Automatic photoelectric sensor Insert type.

7. Control Station(s): Interior mounted.

J. Door Finish:

1. Factory Prime Finish: Manufacturer's standard color.

2. Stainless Steel Finish: ASTM A480/A480M No. 2B (bright, cold rolled) ASTM A480/A480M No. 4 (polished directional satin).

3. Interior Curtain-Slat Facing: Match finish of exterior curtain-slat face Finish as indicated by manufacturer's designations Finish matching Architect's sample Finish as selected by Architect from manufacturer's full range Insert finish.

2.3 MATERIALS, GENERAL

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.4 DOOR CURTAIN MATERIALS AND CONSTRUCTION

A. Door Curtains: Fabricate overhead coiling-door curtain of interlocking metal slats, designed to withstand wind loading indicated, in a continuous length for width of door without splices. Unless otherwise indicated, provide slats of thickness and mechanical properties recommended by door manufacturer for performance, size, and type of door indicated, and as follows:

1. Insulation: Fill slats for insulated doors with manufacturer's standard thermal insulation complying with maximum flame-spread and smoke-developed indexes of 75 and 450, respectively, according to ASTM E84 or UL 723. Enclose insulation completely within slat faces.

2. Metal Interior Curtain-Slat Facing: Match metal of exterior curtain-slat face, with minimum steel thickness of 0.010 inch.

B. Curtain Jamb Guides: Manufacturer's standard angles or channels and angles of same material and finish as curtain slats unless otherwise indicated, with sufficient depth and strength to retain curtain, to allow curtain to operate smoothly, and to withstand loading. Slot bolt holes for guide adjustment. Provide removable stops on guides to prevent overtravel of curtain.

2.5 HOODS

A. General: Form sheet metal hood to entirely enclose coiled curtain and operating mechanism at opening head. Contour to fit end brackets to which hood is attached. Roll and reinforce top and bottom edges for stiffness. Form closed ends for surface-mounted hoods and fascia for any portion of between-jamb mounting that projects beyond wall face. Equip hood with intermediate support brackets as required to prevent sagging.

1. Include automatic drop baffle on fire-rated doors to guard against passage of smoke or flame.

2. Exterior-Mounted Doors: Fabricate hood to act as weather protection and with a perimeter sealant-joint-bead profile for applying joint sealant.

2.6 LOCKING DEVICES

A. Slide Bolt: Fabricate with side-locking bolts to engage through slots in tracks for locking by padlock, located on both left and right jamb sides, operable from coil side.

B. Locking Device Assembly: Fabricate with cylinder lock, spring-loaded dead bolt, operating handle, cam plate, and adjustable locking bars to engage through slots in tracks.

1. Lock Cylinders: As standard with manufacturer and keyed to building keying system.

2. Keys: Three for each cylinder.

C. Chain Lock Keeper: Suitable for padlock.

D. Safety Interlock Switch: Equip power-operated doors with safety interlock switch to disengage power supply when door is locked.

2.7 CURTAIN ACCESSORIES

A. Smoke Seals: Equip each fire-rated door with replaceable smoke-seal perimeter gaskets or brushes for smoke and draft control as required for door listing and labeling by a qualified testing agency.

B. Weatherseals for Exterior Doors: Equip each exterior door with weather-stripping gaskets fitted to entire exterior perimeter of door for a weather-resistant installation unless otherwise indicated.

C. Astragal for Interior Doors: Equip each door bottom bar with a replaceable, adjustable, continuous, compressible gasket of flexible vinyl, rubber, or neoprene as a cushion bumper.

D. Push/Pull Handles: Equip each push-up-operated or emergency-operated door with lifting handles on each side of door, finished to match door.

E. Poll Hooks: Provide pole hooks and poles for doors more than 84 inches high.

2.8 COUNTERBALANCE MECHANISM

A. General: Counterbalance doors by means of manufacturer's standard mechanism with an adjustable-tension, steel helical torsion spring mounted around a steel shaft and contained in a spring barrel connected to top of curtain with barrel rings. Use grease-sealed bearings or self-lubricating graphite bearings for rotating members.

B. Brackets: Manufacturer's standard mounting brackets of either cast iron or cold-rolled steel plate.

2.9 ELECTRIC DOOR OPERATORS

A. General: Electric door operator assembly of size and capacity recommended and provided by door manufacturer for door and operation-cycles requirement specified, with electric motor and factory-prewired motor controls, starter, gear-reduction unit, solenoid-operated brake, clutch, control stations, control devices, integral gearing for locking door, and accessories required for proper operation.

1. Comply with NFPA 70.

2. Control equipment complying with NEMA ICS 1, NEMA ICS 2, and NEMA ICS 6, with NFPA 70 Class 2 control circuit, maximum 24-V ac or dc.

B. Usage Classification: Electric operator and components capable of operating for not less than number of cycles per hour indicated for each door.

C. Motors: Reversible-type motor with controller (disconnect switch) for motor exposure indicated for each door assembly.

1. Electrical Characteristics: Minimum as indicated for each door assembly. If not indicated, large enough to start, accelerate, and operate door in either direction from any position, at a speed not less than 8 in./sec. and not more than 12 in./sec., without exceeding nameplate ratings or service factor.

2. Operating Controls, Controllers, Disconnect Switches, Wiring Devices, and Wiring: Manufacturer's standard unless otherwise indicated.

D. Obstruction-Detection Devices: External entrapment protection consisting of indicated automatic safety sensor capable of protecting full width of door opening. For non-fire-rated doors, activation of device immediately stops and reverses downward door travel.

1. Photoelectric Sensor: Manufacturer's standard system designed to detect an obstruction in door opening without contact between door and obstruction.

a. Self-Monitoring Type: Designed to interface with door operator control circuit to detect damage to or disconnection of sensing device. When self-monitoring feature is activated, door closes only with sustained or constant pressure on close button.

2. Electric Sensor Edge: Automatic safety sensor edge, located within astragal or weather stripping mounted to bottom bar. Contact with sensor activates device. Connect to control circuit using manufacturer's standard take-up reel or self-coiling cable.

a. Self-Monitoring Type: Four-wire-configured device designed to interface with door operator control circuit to detect damage to or disconnection of sensor edge.

E. Control Station: Three-button control station in fixed location with momentary-contact push-button controls labeled "Open" and "Stop" and sustained- or constant-pressure push-button control labeled "Close."

1. Interior-Mounted Units: Full-guarded, surface-mounted, heavy-duty type, with general-purpose NEMA ICS 6, Type 1 enclosure.

2. Exterior-Mounted Units: Full-guarded, standard-duty, surface-mounted, weatherproof type, NEMA ICS 6, Type 4 enclosure, key operated.

F. Emergency Manual Operation: Equip each electrically powered door with capability for emergency manual operation. Design manual mechanism so required force for door operation does not exceed 25 lbf.

G. Emergency Operation Disconnect Device: Equip operator with hand-operated disconnect mechanism for automatically engaging manual operator and releasing brake for emergency manual operation while disconnecting motor without affecting timing of limit switch. Mount mechanism so it is accessible from floor level. Include interlock device to automatically prevent motor from operating when emergency operator is engaged.

H. Motor Removal: Design operator so motor may be removed without disturbing limit-switch adjustment and without affecting emergency manual operation.

I. Audible and Visual Signals: Audible alarm and visual indicator lights in compliance with the accessibility standard.

PART 3 EXECUTION

3.1 INSTALLATION

A. Install overhead coiling doors and operating equipment complete with necessary hardware, anchors, inserts, hangers, and equipment supports; according to manufacturer's written instructions and as specified.

B. Fire-Rated Doors: Install according to NFPA 80.

C. Smoke-Control Doors: Install according to NFPA 80 and NFPA 105.

D. Power-Operated Doors: Install according to UL 325.

3.2 DEMONSTRATION

A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain overhead coiling doors.

END OF SECTION

SECTION 08710

DOOR HARDWARE

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes commercial door hardware for the following:

1. Swinging doors.

2. Sliding doors.

3. Other doors to the extent indicated.

B. Door hardware includes, but is not necessarily limited to, the following:

1. Mechanical door hardware.

2. Cylinders specified for doors in other sections.

C. Related Sections:

1. Division 08 Section “Door Hardware Schedule”.

2. Division 08 Section “Hollow Metal Doors and Frames”.

D. Codes and References: Comply with the version year adopted by the Authority Having Jurisdiction.

1. ANSI A117.1 - Accessible and Usable Buildings and Facilities.

2. ICC/IBC - International Building Code.

3. NFPA 70 - National Electrical Code.

4. NFPA 80 - Fire Doors and Windows.

5. NFPA 101 - Life Safety Code.

6. NFPA 105 - Installation of Smoke Door Assemblies.

7. State Building Codes, Local Amendments.

E. Standards: All hardware specified herein shall comply with the following industry standards:

1. ANSI/BHMA Certified Product Standards - A156 Series

2. UL10C – Positive Pressure Fire Tests of Door Assemblies

1.2 SUBMITTALS

A. Product Data: Manufacturer's product data sheets including installation details, material descriptions, dimensions of individual components and profiles, operational descriptions and finishes.

B. Door Hardware Schedule: Prepared by or under the supervision of supplier, detailing fabrication and assembly of door hardware, as well as procedures and diagrams. Coordinate the final Door Hardware Schedule with doors, frames, and related work to ensure proper size, thickness, hand, function, and finish of door hardware.

1. Format: Comply with scheduling sequence and vertical format in DHI's "Sequence and Format for the Hardware Schedule."

2. Organization: Organize the Door Hardware Schedule into door hardware sets indicating complete designations of every item required for each door or opening. Organize door hardware sets in same order as in the Door Hardware Sets at the end of Part 3. Submittals that do not follow the same format and order as the Door Hardware Sets will be rejected and subject to resubmission.

3. Content: Include the following information:

a. Type, style, function, size, label, hand, and finish of each door hardware item.

b. Manufacturer of each item.

c. Fastenings and other pertinent information.

d. Location of door hardware set, cross-referenced to Drawings, both on floor plans and in door and frame schedule.

e. Explanation of abbreviations, symbols, and codes contained in schedule.

f. Mounting locations for door hardware.

g. Door and frame sizes and materials.

h. Warranty information for each product.

4. Submittal Sequence: Submit the final Door Hardware Schedule at earliest possible date, particularly where approval of the Door Hardware Schedule must precede fabrication of other work that is critical in the Project construction schedule. Include Product Data, Samples, Shop Drawings of other work affected by door hardware, and other information essential to the coordinated review of the Door Hardware Schedule.

C. Keying Schedule: After a keying meeting with the owner has taken place prepare a separate keying schedule detailing final instructions. Submit the keying schedule in electronic format. Include keying system explanation, door numbers, key set symbols, hardware set numbers and special instructions. Owner must approve submitted keying schedule prior to the ordering of permanent cylinders/cores.

D. Informational Submittals:

1. Product Test Reports: Indicating compliance with cycle testing requirements, based on evaluation of comprehensive tests performed by manufacturer and witnessed by a qualified independent testing agency.

E. Operating and Maintenance Manuals: Provide manufacturers operating and maintenance manuals for each item comprising the complete door hardware installation in quantity as required in Division 01, Closeout Submittals.

1.3 QUALITY ASSURANCE

A. Manufacturers Qualifications: Engage qualified manufacturers with a minimum 5 years of documented experience in producing hardware and equipment similar to that indicated for this Project and that have a proven record of successful in-service performance.

B. Installer Qualifications: A minimum 3 years documented experience installing both standard and electrified door hardware similar in material, design, and extent to that indicated for this Project and whose work has resulted in construction with a record of successful in-service performance.

C. Door Hardware Supplier Qualifications: Experienced commercial door hardware distributors with a minimum 5 years documented experience supplying both mechanical and electromechanical hardware installations comparable in material, design, and extent to that indicated for this Project. Supplier recognized as a factory direct distributor by the manufacturers of the primary materials with a warehousing facility in Project's vicinity. Supplier to have on staff a certified Architectural Hardware Consultant (AHC) available during the course of the Work to consult with Contractor, Architect, and Owner concerning both standard and electromechanical door hardware and keying.

D. Source Limitations: Obtain each type and variety of door hardware specified in this section from a single source unless otherwise indicated.

1. Electrified modifications or enhancements made to a source manufacturer's product line by a secondary or third party source will not be accepted.

E. Each unit to bear third party permanent label demonstrating compliance with the referenced standards.

F. Keying Conference: Conduct conference to comply with requirements in Division 01 Section "Project Meetings." Keying conference to incorporate the following criteria into the final keying schedule document:

1. Function of building, purpose of each area and degree of security required.

2. Plans for existing and future key system expansion.

3. Requirements for key control storage and software.

4. Installation of permanent keys, cylinder cores and software.

5. Address and requirements for delivery of keys.

G. Pre-Submittal Conference: Conduct coordination conference in compliance with requirements in Division 01 Section "Project Meetings" with attendance by representatives of Supplier(s), Installer(s), and Contractor(s) to review proper methods and the procedures for receiving, handling, and installing door hardware.

1. Prior to installation of door hardware, conduct a project specific training meeting to instruct the installing contractors' personnel on the proper installation and adjustment of their respective products. Product training to be attended by installers of door hardware (including electromechanical hardware) for aluminum, hollow metal and wood doors. Training will include the use of installation manuals, hardware schedules, templates and physical product samples as required.

2. Inspect and discuss electrical roughing-in, power supply connections, and other preparatory work performed by other trades.

3. Review sequence of operation narratives for each unique access controlled opening.

4. Review and finalize construction schedule and verify availability of materials.

5. Review the required inspecting, testing, commissioning, and demonstration procedures

H. At completion of installation, provide written documentation that components were applied to manufacturer's instructions and recommendations and according to approved schedule.

1.4 DELIVERY, STORAGE, AND HANDLING

A. Inventory door hardware on receipt and provide secure lock-up and shelving for door hardware delivered to Project site. Do not store electronic access control hardware, software or accessories at Project site without prior authorization.

B. Tag each item or package separately with identification related to the final Door Hardware Schedule, and include basic installation instructions with each item or package.

C. Deliver, as applicable, permanent keys, cylinders, cores, access control credentials, software and related accessories directly to Owner via registered mail or overnight package service. Instructions for delivery to the Owner shall be established at the "Keying Conference".

1.5 COORDINATION

A. Templates: Obtain and distribute to the parties involved templates for doors, frames, and other work specified to be factory prepared for installing standard and electrified hardware. Check Shop Drawings of other work to confirm that adequate provisions are made for locating and installing hardware to comply with indicated requirements.

B. Door and Frame Preparation: Doors and corresponding frames are to be prepared, reinforced and pre-wired (if applicable) to receive the installation of the specified electrified, monitoring, signaling and access control system hardware without additional in-field modifications.

1.6 WARRANTY

A. General Warranty: Reference Division 01, General Requirements. Special warranties specified in this Article shall not deprive Owner of other rights Owner may have under other provisions of the Contract Documents and shall be in addition to, and run concurrent with, other warranties made by Contractor under requirements of the Contract Documents.

B. Warranty Period: Written warranty, executed by manufacturer(s), agreeing to repair or replace components of standard and electrified door hardware that fails in materials or workmanship within specified warranty period after final acceptance by the Owner. Failures include, but are not limited to, the following:

1. Structural failures including excessive deflection, cracking, or breakage.

2. Faulty operation of the hardware.

3. Deterioration of metals, metal finishes, and other materials beyond normal weathering.

4. Electrical component defects and failures within the systems operation.

C. Standard Warranty Period: One year from date of Substantial Completion, unless otherwise indicated.

D. Special Warranty Periods:

1. Five years for exit hardware.

2. Fifteen years for manual surface door closer bodies.

3. Twenty five years for manual surface door closer bodies.

4. Twenty five years for manual surface door closer bodies.

5. Twenty five years for manual surface door closer bodies.

1.7 MAINTENANCE SERVICE

A. Maintenance Tools and Instructions: Furnish a complete set of specialized tools and maintenance instructions as needed for Owner's continued adjustment, maintenance, and removal and replacement of door hardware.

PART 2 - PRODUCTS

2.1 SCHEDULED DOOR HARDWARE

A. General: Provide door hardware for each door to comply with requirements in Door Hardware Sets and each referenced section that products are to be supplied under.

B. Designations: Requirements for quantity, item, size, finish or color, grade, function, and other distinctive qualities of each type of door hardware are indicated in the Door Hardware Sets at the end of Part 3. Products are identified by using door hardware designations, as follows:

1. Named Manufacturer's Products: Product designation and manufacturer are listed for each door hardware type required for the purpose of establishing requirements. Manufacturers' names are abbreviated in the Door Hardware Schedule.

C. Substitutions: Requests for substitution and product approval for inclusive mechanical and electromechanical door hardware in compliance with the specifications must be submitted in writing and in accordance with the procedures and time frames outlined in Division 01, Substitution Procedures. Approval of requests is at the discretion of the architect, owner, and their designated consultants.

2.2 HANGING DEVICES

A. Hinges: ANSI/BHMA A156.1 certified butt hinges with number of hinge knuckles and other options as specified in the Door Hardware Sets.

1. Quantity: Provide the following hinge quantity:

a. Two Hinges: For doors with heights up to 60 inches.

b. Three Hinges: For doors with heights 61 to 90 inches.

c. Four Hinges: For doors with heights 91 to 120 inches.

d. For doors with heights more than 120 inches, provide 4 hinges, plus 1 hinge for every 30 inches of door height greater than 120 inches.

2. Hinge Size: Provide the following, unless otherwise indicated, with hinge widths sized for door thickness and clearances required:

a. Widths up to 3'0": 4-1/2" standard or heavy weight as specified.

b. Sizes from 3'1" to 4'0": 5" standard or heavy weight as specified.

3. Hinge Weight and Base Material: Unless otherwise indicated, provide the following:

a. Exterior Doors: Heavy weight, non-ferrous, ball bearing or oil impregnated bearing hinges unless Hardware Sets indicate standard weight.

b. Interior Doors: Standard weight, steel, ball bearing or oil impregnated bearing hinges unless Hardware Sets indicate heavy weight.

4. Hinge Options: Comply with the following:

a. Non-removable Pins: Provide set screw in hinge barrel that, when tightened into a groove in hinge pin, prevents removal of pin while door is closed; for the all out-swinging lockable doors.

5. Manufacturers:

a. Hager Companies (HA) - CB Series.

b. McKinney Products; ASSA ABLOY Architectural Door Accessories (MK) - TA Series.

c. Stanley Hardware (ST) - CB Series.

B. Continuous Geared Hinges: ANSI/BHMA A156.26 Grade 1-600 certified continuous geared hinge. with minimum 0.120-inch thick extruded 6060 T6 aluminum alloy hinge leaves and a minimum overall width of 4 inches. Hinges are non-handed, reversible and fabricated to template screw locations. Factory trim hinges to suit door height and prepare for electrical cut-outs.

1. Manufacturers:

a. Hager Companies (HA).

b. Pemko Products; ASSA ABLOY Architectural Door Accessories (PE).

c. Stanley Hardware (ST).

2.3 CYLINDERS AND KEYING

A. General: Cylinder manufacturer to have minimum (10) years experience designing secured master key systems and have on record a published security keying system policy.

B. Source Limitations: Obtain each type of keyed cylinder and keys from the same source manufacturer as locksets and exit devices, unless otherwise indicated.

C. Cylinders: Original manufacturer cylinders complying with the following:

1. Mortise Type: Threaded cylinders with rings and cams to suit hardware application.

2. Rim Type: Cylinders with back plate, flat-type vertical or horizontal tailpiece, and raised trim ring.

3. Bored-Lock Type: Cylinders with tailpieces to suit locks.

4. Mortise and rim cylinder collars to be solid and recessed to allow the cylinder face to be flush and be free spinning with matching finishes.

5. Keyway: Match Facility Standard.

D. Keying System: Each type of lock and cylinders to be factory keyed.

1. Conduct specified "Keying Conference" to define and document keying system instructions and requirements.

2. Furnish factory cut, nickel-silver large bow permanently inscribed with a visual key control number as directed by Owner.

3. Existing System: Key locks to Owner's existing system.

E. Key Quantity: Provide the following minimum number of keys:

1. Change Keys per Cylinder: Two (2)

2. Master Keys (per Master Key Level/Group): Five (5).

3. Construction Keys (where required): Ten (10).

F. Construction Keying: Provide construction master keyed cylinders.

G. Key Registration List (Bitting List):

1. Provide keying transcript list to Owner's representative in the proper format for importing into key control software.

2. Provide transcript list in writing or electronic file as directed by the Owner.

H. Key Control Cabinet: Provide a key control system including envelopes, labels, and tags with self-locking key clips, receipt forms, 3-way visible card index, temporary markers, permanent markers, and standard metal cabinet. Key control cabinet shall have expansion capacity of 150% of the number of locks required for the project.

1. Manufacturers:

a. Lund Equipment (LU).

b. MMF Industries (MM).

c. Telkee (TK).

I. Key Control Software: Provide one network version of "Key Wizard" branded key management software package that includes one year of technical support and upgrades to software at no charge. Provide factory key system formatted for importing into “Key Wizard” software.

2.4 LOCK AND LATCH STRIKES

A. Strikes: Provide manufacturer's standard strike with strike box for each latch or lock bolt, with curved lip extended to protect frame, finished to match door hardware set, unless otherwise indicated, and as follows:

1. Flat-Lip Strikes: For locks with three-piece antifriction latchbolts, as recommended by manufacturer.

2. Extra-Long-Lip Strikes: For locks used on frames with applied wood casing trim.

3. Aluminum-Frame Strike Box: Provide manufacturer's special strike box fabricated for aluminum framing.

4. Double-lipped strikes: For locks at double acting doors. Furnish with retractable stop for rescue hardware applications.

B. Standards: Comply with the following:

1. Strikes for Mortise Locks and Latches: BHMA A156.13.

2. Strikes for Bored Locks and Latches: BHMA A156.2.

3. Strikes for Auxiliary Deadlocks: BHMA A156.36.

4. Dustproof Strikes: BHMA A156.16.

2.5 CONVENTIONAL EXIT DEVICES

A. General Requirements: All exit devices specified herein shall meet or exceed the following criteria:

1. At doors not requiring a fire rating, provide devices complying with NFPA 101 and listed and labeled for "Panic Hardware" according to UL305. Provide proper fasteners as required by manufacturer including sex nuts and bolts at openings specified in the Hardware Sets.

2. Where exit devices are required on fire rated doors, provide devices complying with NFPA 80 and with UL labeling indicating "Fire Exit Hardware". Provide devices with the proper fasteners for installation as tested and listed by UL. Consult manufacturer's catalog and template book for specific requirements.

3. Except on fire rated doors, provide exit devices with hex key dogging device to hold the pushbar and latch in a retracted position. Provide optional keyed cylinder dogging on devices where specified in Hardware Sets.

4. Devices must fit flat against the door face with no gap that permits unauthorized dogging of the push bar. The addition of filler strips is required in any case where the door light extends behind the device as in a full glass configuration.

5. Energy Efficient Design: Provide lock bodies which have a holding current draw of 15mA maximum, and can operate on either 12 or 24 volts. Locks are to be field configurable for fail safe or fail secure operation.

6. Lever Operating Trim: Where exit devices require lever trim, furnish manufacturer's heavy duty escutcheon trim with threaded studs for thru-bolts.

   a. Lock Trim Design: As indicated in Hardware Sets, provide finishes and designs to match that of the specified locksets.

   b. Where function of exit device requires a cylinder, provide a cylinder (Rim or Mortise) as specified in Hardware Sets.

7. Vertical Rod Exit Devices: Where surface or concealed vertical rod exit devices are used at interior openings, provide as less bottom rod (LBR) unless otherwise indicated. Provide dust proof strikes where thermal pins are required to project into the floor.

8. Narrow Stile Applications: At doors constructed with narrow stiles, or as specified in Hardware Sets, provide devices designed for maximum 2" wide stiles.

9. Dummy Push Bar: Nonfunctioning push bar matching functional push bar.

10. Rail Sizing: Provide exit device rails factory sized for proper door width application.

11. Through Bolt Installation: For exit devices and trim as indicated in Door Hardware Sets.

B. Conventional Push Rail Exit Devices (Heavy Duty): ANSI/BHMA A156.3, Grade 1 certified panic and fire exit hardware devices furnished in the functions specified in the Hardware Sets. Exit device latch to be stainless steel, pullman type, with deadlock feature.

1. Manufacturers:

a. Corbin Russwin Hardware (RU) - ED4000 / ED5000 Series.

b. Yale (YA) - 7000 Series.

C. Security Push Rail Exit Devices (Heavy Duty): ANSI/BHMA A156.3, Grade 1 certified rim panic and fire exit hardware devices furnished in the functions specified in the Hardware Sets. Exit device latch to be constructed of high grade, heat treated, corrosion resistant nickel steel alloy, and have a full 3/4" throw projection with slide action positive deadlocking.

1. Static Load Force Resistance: Minimum 3000 lbs certified independent tested.

2. Manufacturers:

a. Corbin Russwin Hardware (RU) - ED4000S / ED5000S Series.

b. Yale (YA) - 7050 Series.

D. Tube Steel Removable Mullions: ANSI/BHMA A156.3 removable steel mullions with malleable-iron top and bottom retainers and a primed paint finish.

1. Provide keyed removable feature where specified in the Hardware Sets.

2. Provide stabilizers and mounting brackets as required.

3. Provide electrical quick connection wiring options as specified in the hardware sets.

4. Manufacturers:

a. Corbin Russwin Hardware (RU) - 700/900 Series.

2.6 DOOR CLOSERS

A. All door closers specified herein shall meet or exceed the following criteria:

1. General: Door closers to be from one manufacturer, matching in design and style, with the same type door preparations and templates regardless of application or spring size. Closers to be non-handed with full sized covers including installation and adjusting information on inside of cover.

2. Standards: Closers to comply with UL-10C for Positive Pressure Fire Test and be U.L. listed for use of fire rated doors.

3. Cycle Testing: Provide closers which have surpassed 15 million cycles in a test witnessed and verified by UL.

4. Size of Units: Comply with manufacturer's written recommendations for sizing of door closers depending on size of door, exposure to weather, and anticipated frequency of use. Where closers are indicated for doors required to be accessible to the physically handicapped, provide units complying with ANSI ICC/A117.1.

5. Closer Arms: Provide heavy duty, forged steel closer arms unless otherwise indicated in Hardware Sets.

6. Closers shall not be installed on exterior or corridor side of doors; where possible install closers on door for optimum aesthetics.

7. Closer Accessories: Provide door closer accessories including custom templates, special mounting brackets, spacers and drop plates as required for proper installation. Provide through-bolt and security type fasteners as specified in the hardware sets.

B. Door Closers, Surface Mounted (Utility Grade): ANSI/BHMA 156.4, Grade 1 certified surface mounted, utility grade door closers with complete spring power adjustment, sizes 1 thru 6. Closers to be rack and pinion type, cast aluminum case construction, with adjustable backcheck, closing sweep, and latch speed control valves. Provide closer standard packed for regular, top-jamb, and parallel arm type mounting applications.

1. Manufacturers:

a. Norton Door Controls (NO) - 1601 Series.

b. Yale Locks and Hardware (YA) - 51BC Series.

2.7 ARCHITECTURAL TRIM

A. Door Protective Trim

1. General: Door protective trim units to be of type and design as specified below or in the Hardware Sets.

2. Size: Fabricate protection plates (kick, armor, or mop) not more than 2" less than door width (LDW) on stop side of single doors and 1" LDW on stop side of pairs of doors, and not more than 1" less than door width on pull side. Coordinate and provide proper width and height as required where conflicting hardware dictates. Height to be as specified in the Hardware Sets.

3. Where plates are applied to fire rated doors with the top of the plate more than 16" above the bottom of the door, provide plates complying with NFPA 80. Consult manufacturer's catalog and template book for specific requirements for size and applications.

4. Protection Plates: ANSI/BHMA A156.6 certified protection plates (kick, armor, or mop), fabricated from the following:

   a. Stainless Steel: 300 grade, 050-inch thick.

5. Options and fasteners: Provide manufacturer's designated fastener type as specified in the Hardware Sets. Provide countersunk screw holes.

6. Manufacturers:

   a. Rockwood Products; ASSA ABLOY Architectural Door Accessories (RO).

   b. Trimco (TC).

2.8 DOOR STOPS AND HOLDERS

A. General: Door stops and holders to be of type and design as specified below or in the Hardware Sets.

B. Door Stops and Bumpers: ANSI/BHMA A156.16, Grade 1 certified door stops and wall bumpers. Provide wall bumpers, either convex or concave types with anchorage as indicated, unless floor or other types of door stops are specified in Hardware Sets. Do not mount floor stops where they will impede traffic. Where floor or wall bumpers are not appropriate, provide overhead type stops and holders.

1. Manufacturers:

   a. Hiawatha, Inc. (HI).

   b. Rockwood Products; ASSA ABLOY Architectural Door Accessories (RO).

2.9 ARCHITECTURAL SEALS

A. General: Thresholds, weatherstripping, and gasket seals to be of type and design as specified below or in the Hardware Sets. Provide continuous weatherstrip gasketing on exterior doors and provide smoke, light, or sound gasketing on interior doors where indicated. At exterior applications provide non-corrosive fasteners and elsewhere where indicated.

B. Smoke Labeled Gasketing: Assemblies complying with NFPA 105 that are listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, for smoke control ratings indicated, based on testing according to UL 1784.

1. Provide smoke labeled perimeter gasketing at all smoke labeled openings.

C. Fire Labeled Gasketing: Assemblies complying with NFPA 80 that are listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, for fire ratings indicated, based on testing according to UL-10C.

1. Provide intumescent seals as indicated to meet UL10C Standard for Positive Pressure Fire Tests of Door Assemblies, and NPFA 252, Standard Methods of Fire Tests of Door Assemblies.

D. Sound-Rated Gasketing: Assemblies that are listed and labeled by a testing and inspecting agency, for sound ratings indicated.

E. Replaceable Seal Strips: Provide only those units where resilient or flexible seal strips are easily replaceable and readily available from stocks maintained by manufacturer.

F. Manufacturers:

1. National Guard Products (NG).

2. Pemko Products; ASSA ABLOY Architectural Door Accessories (PE).

2.10 FABRICATION

A. Fasteners: Provide door hardware manufactured to comply with published templates generally prepared for machine, wood, and sheet metal screws. Provide screws according to manufacturers recognized installation standards for application intended.

2.11 FINISHES

A. Standard: Designations used in the Hardware Sets and elsewhere indicate hardware finishes complying with ANSI/BHMA A156.18, including coordination with traditional U.S. finishes indicated by certain manufacturers for their products.

B. Provide quality of finish, including thickness of plating or coating (if any), composition, hardness, and other qualities complying with manufacturer's standards, but in no case less than specified by referenced standards for the applicable units of hardware

C. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine scheduled openings, with Installer present, for compliance with requirements for installation tolerances, labeled fire door assembly construction, wall and floor construction, and other conditions affecting performance.

B. Notify architect of any discrepancies or conflicts between the door schedule, door types, drawings and scheduled hardware. Proceed only after such discrepancies or conflicts have been resolved in writing.

3.2 PREPARATION

A. Hollow Metal Doors and Frames: Comply with ANSI/DHI A115 series.

B. Wood Doors: Comply with ANSI/DHI A115-W series.

3.3 INSTALLATION

A. Install each item of mechanical and electromechanical hardware and access control equipment to comply with manufacturer's written instructions and according to specifications.

1. Installers are to be trained and certified by the manufacturer on the proper installation and adjustment of fire, life safety, and security products including: hanging devices; locking devices; closing devices; and seals.

B. Mounting Heights: Mount door hardware units at heights indicated in following applicable publications, unless specifically indicated or required to comply with governing regulations:

1. Standard Steel Doors and Frames: DHI's "Recommended Locations for Architectural Hardware for Standard Steel Doors and Frames."

2. Wood Doors: DHI WDHS.3, "Recommended Locations for Architectural Hardware for Wood Flush Doors."

3. Where indicated to comply with accessibility requirements, comply with ANSI A117.1 "Accessibility Guidelines for Buildings and Facilities."

4. Provide blocking in drywall partitions where wall stops or other wall mounted hardware is located.

C. Retrofitting: Install door hardware to comply with manufacturer's published templates and written instructions. Where cutting and fitting are required to install door hardware onto or into surfaces that are later to be painted or finished in another way, coordinate removal, storage, and reinstallation of surface protective trim units with finishing work specified in Division 9 Sections. Do not install surface-mounted items until finishes have been completed on substrates involved.

D. Thresholds: Set thresholds for exterior and acoustical doors in full bed of sealant complying with requirements specified in Division 7 Section "Joint Sealants."

E. Storage: Provide a secure lock up for hardware delivered to the project but not yet installed. Control the handling and installation of hardware items so that the completion of the work will not be delayed by hardware losses before and after installation.

3.4 FIELD QUALITY CONTROL

A. Field Inspection: Supplier will perform a final inspection of installed door hardware and state in report whether work complies with or deviates from requirements, including whether door hardware is properly installed, operating and adjusted.

3.5 ADJUSTING

A. Initial Adjustment: Adjust and check each operating item of door hardware and each door to ensure proper operation or function of every unit. Replace units that cannot be adjusted to operate as intended. Adjust door control devices to compensate for final operation of heating and ventilating equipment and to comply with referenced accessibility requirements.

3.6 CLEANING AND PROTECTION

A. Protect all hardware stored on construction site in a covered and dry place. Protect exposed hardware installed on doors during the construction phase. Install any and all hardware at the latest possible time frame.

B. Clean adjacent surfaces soiled by door hardware installation.

C. Clean operating items as necessary to restore proper finish. Provide final protection and maintain conditions that ensure door hardware is without damage or deterioration at time of owner occupancy.

3.7 DEMONSTRATION

A. Instruct Owner's maintenance personnel to adjust, operate, and maintain mechanical and electromechanical door hardware.

3.8 DOOR HARDWARE SETS

A. The hardware sets represent the design intent and direction of the owner and architect. They are a guideline only and should not be considered a detailed hardware schedule. Discrepancies, conflicting hardware and missing items should be brought to the attention of the architect with corrections made prior to the bidding process. Omitted items not included in a hardware set should be scheduled with the appropriate additional hardware required for proper application and functionality.

B. The supplier is responsible for handing and sizing all products and providing the correct option for the appropriate door type and material where more than one is presented in the hardware sets. Quantities listed are for each pair of doors, or for each single door.

C. Manufacturer's Abbreviations:

D. Refer to Section 080671, Door Hardware Sets, for hardware sets.

1. MK - McKinney
2. PE - Pemko
3. RU - Corbin Russwin
4. OT - OTHER
5. BE - dormakaba Best
6. NO - Norton
7. RO - Rockwood

END OF SECTION

SECTION 09800

PAINTING

PART 1 GENERAL

1.1 SECTION INCLUDES:

A. The work of this section includes the coating of all interior and exterior surfaces.

1.2 REFERENCES:

A. ASTM D16 - Definitions of Terms Relating to Paint, Varnish, Lacquer, and Related Products.

B. ASTM D3359 - Method for Measuring Adhesion by Tape Test.

C. NACE (National Association of Corrosion Engineers) - Industrial Maintenance Painting.

D. NPCA (National Paint and Coating Association) - Guide to U.S. Government Paint Specifications.

E. SSPC (Society for Protective Coatings) - Steel Structures Painting Manual.

F. TACB (Texas Air Control Board) - 31 TAC Chapter 11.

G. TCEQ (Texas Commission on Environmental Quality) - TAC Chapter 290 – Public Drinking Water.

H. Paint manufacturer's printed instructions.

I. TAC - Texas Administrative Code.

1.3 DEFINITIONS:

A. Dft - Dry film thickness.

B. Mil(s) - a unit of measure equal to a thousandth of an inch (0.0254) mm.

C. VOC(s) - volatile organic compound(s).

1.4 INTERPRETATION:

A. The Engineer's decision shall be final in the interpretation and/or conflict between any of the referenced Specifications and Standards contained herein.

1.5 SUBMITTALS:

A. Information to be provided: Provide a list of materials to be used under this Section. Submit the list before the materials are delivered to the job site. Cross reference the list to the coating systems identified. Furnish with the list, the coating manufacturer's standard product data and color chart for each material to be used.

B. Manufacturer's color charts shall be submitted to the Engineer at least 30 days or prior to paint application. Coordinate work so as to allow sufficient time for paint to be delivered to the job site.

1.6 QUALITY ASSURANCE:

A. General: Use quality assurance procedures and practices to monitor all phases of surface preparation, application and inspection throughout the duration of the project. Procedures or practices not specifically defined herein may be utilized provided they meet recognized and accepted professional standards.

B. Surface Preparation: Surface preparation will be based upon comparison with: "Pictorial Surface Preparation Standards for Painting Steel Surfaces" SSPC-VIS 1-89 and ASTM Designation D2200, "Standard Methods of Evaluating Degree of Rusting on Painted Steel Surfaces" SSPC-VIS 2 and ASTM Designation D610, "Visual Standard for Surfaces of New Steel Air blast Cleaned with Sand Abrasive".

C. Application: No coating shall be applied: When the surrounding air temperature or the temperature of the surface to be coated or painted is below the minimum surface temperature for the products specified herein; or in rain; snow, fog, or mist; when the temperature is less than 5 degrees F above the dew point; when the air temperature is expected to drop below 35 degrees F within six hours after application of coating. Dew point shall be measured by use of an instrument such as a Sling Psychrometer in conjunction with U.S. Department of Commerce Weather Bureau Psychometric Tables. If the above conditions are forecast, coating or painting shall be completed in time to permit the film sufficient drying time prior to damage by atmospheric conditions.

D. Thickness and Holiday Checking (Steel Surfaces): Thickness of coatings shall be checked with a non-destructive, magnetic-type thickness gauge. Use an instrument such as a Tooke Gauge if a destructive tester is deemed necessary. The integrity of coated surfaces shall be checked with an approved inspection device. Non-destructive holiday detector shall not exceed the voltage recommended by the manufacturer of the coating system. For thickness between 10 and 20 mils, use a non-sudsing type wetting agent, such as Kodak Photo-Flow. Failures shall be marked, repaired in accordance with the manufacturer's printed recommendations and retested. No pinholes or other irregularities will be permitted in the final coating.

E. Inspection Devices: The Contractor shall furnish, until final acceptance of coating and painting, inspection devices in good working condition for detection of holidays and measurement of dry film thickness (dft) of coating. The Contractor shall also furnish U.S Department of Commerce; National Bureau of Standards certified thickness calibration plates to test accuracy of dft gauges and certified instrumentation to test accuracy of holiday detector. Dry film thickness gauges and holiday detectors shall be made available for the Engineer's use at all times until final acceptance of application. Holiday detection devices shall be operated in the presence of the Engineer.

F. Warranty Inspection: Warranty inspection shall be conducted during the eleventh month following completion of all coating and painting work. All defective work shall be repaired in accordance with this specification and to the satisfaction of the Engineer/Owner.

1.7 QUALIFICATIONS:

A. The Contractor shall have three years practical experience and successful history in the application of specified products to surfaces in water treatment, wastewater treatment, or industrial facilities. The Contractor shall be a knowledgeable and experienced professional, fully aware of the methods and regulatory requirements of coating removal and application. Upon request, he shall substantiate this requirement by furnishing a list of references and job completions.

1.8 SAFETY AND HEALTH REQUIREMENTS:

A. General: The Contractor shall perform all work in accordance with applicable local, state, and federal laws and regulations, and material manufacturer's instructions and recommendations pertaining to the methods, materials, or activities in the work. Some of these regulations are included in the following groups:

Occupational Safety and Health Act and derived regulations.

Clean Air Act and derived regulations, both federal and state.

The items listed below in the rest of this Paragraph are intended to call the Contractor's attention to some of the frequently necessary compliance activities. The Contractor is solely responsible for compliance with applicable regulations including, but not limited to, the areas identified in this Specification. The Contractor shall provide and require the use of personal protective equipment for persons working on or about the project.

B. Head and Face Protection and Respiratory Devices: Equipment shall include protective helmets which shall be worn by all persons while in the vicinity of the work. In addition, workers engaged in or near the work during sandblasting shall wear appropriate eye and face protection devices and air purifying, half mask or mouthpiece respirators with appropriate filters.

C. Ventilation: Where ventilation is used to control hazardous exposure, all equipment shall be explosion-proof. Ventilation shall reduce the concentration of air contaminants to the degree a hazard does not exist. Air circulation and exhausting of solvent vapors shall be continued until coatings have fully cured.

D. Sound Levels: Whenever the occupational noise exposure exceeds maximum allowable sound levels, the Contractor shall provide and require the use of approved ear protective devices.

E. Illumination: Adequate illumination shall be provided while work is in progress, including explosion-proof lights and electrical equipment. Whenever required by the Engineer, the Contractor shall provide additional illumination and necessary supports to cover all areas to be inspected. The level of illumination for inspection purposes shall be determined by the Engineer.

F. Temporary Ladders and Scaffolding: All temporary ladders and scaffolding shall confirm to applicable safety requirements. They shall be erected where requested by the Engineer to facilitate inspection and be moved by the Contractor to locations requested by the Engineer.

PART 2 PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS:

A. Materials specified are those that have been evaluated for the specific service. Products are listed to establish a standard of quality. Equivalent materials of other manufacturers may be substituted on written approval of the Engineer in accordance with Section 01600.

Requests for substitution shall include manufacturer's literature for each product giving name, product number, and generic type, descriptive information, solids by volume, recommended dft and certified laboratory test reports showing results to equal the performance criteria of the products specified herein. In addition, a list of five projects shall be submitted in which each product has been used and rendered satisfactory service. The listed projects shall be in the State of Texas, Oklahoma, Louisiana, or Arkansas.

2.2 DELIVERY AND STORAGE:

A. All materials shall be brought to jobsite in original sealed containers. They shall not be used until the Engineer has inspected contents and obtained data from information on containers or label. Materials exceeding storage life recommended by the manufacturer shall be rejected.

B. All coatings and paints shall be stored in enclosed structures to protect them from weather and excessive heat or cold. Flammable coatings or paint must be stored to conform with City, County, State, and Federal safety codes for flammable coating or paint materials. At all times coatings and paints shall be protected from freezing.

2.3 MATERIALS:

The number of coats called for in this schedule shall be considered minimum. If additional coats are required for complete coverage and uniform appearance, they shall be applied. Colors will be selected by the Owner. The system numbering may not be sequential or inclusive of all numbers from the first to last system or schedule numbers.

SYSTEM NO. 1

TYPE OF SURFACE: Metal or Pre-painted Metal (excluding stainless steel, galvanized steel, and aluminum)

TYPE OF STRUCTURE: Normal plant conditions such as: Machinery (if not factory coated), pipes, valves, equipment housing, ducts, pumps, motors, handrails, steel sash, doors, walkways, stairways, windows and structural steel.

EXPOSURE CONDITION: Non-Submerged; inside or outside

SURFACE PREPARATION: All surfaces should be clean, dry, free of oil, rust, loose and scaling paint and foreign material.

PAINTING SYSTEM:

First Coat:
Tnemec Series 1 Omnithane or Series 530 Omnithane 2.5 dft mils

Second Coat:

Tnemec Series 1074 Endura-Shield II (Gloss)	4.0 dft mils
Tnemec Series 1075 Endura-Shield II (S-G)	4.0 dft mils
Total Thickness Tnemec Series =	6.5 mils min.

SYSTEM NO. 5 (Must be NSF61 Certified)

TYPE OF SURFACE: Metal (excluding stainless steel, galvanized steel, and aluminum)

TYPE OF STRUCTURE: Normal plant conditions such as: Pipes, pumps, and pump cans.

EXPOSURE CONDITION: Submerged or Intermittently Submerged.

TYPE OF LIQUID HANDLED: Potable Water

SURFACE PREPARATION: SSPC-SP10 Near white metal blast clean.

PAINTING SYSTEM:

First Coat:

Tnemec Series 20-1211 Pota-Pox	4.0 dft mils

Second Coat:
Tnemec Series N140 Pota-Pox Plus 5.0 dft mils
Total Thickness Tnemec = 9.0 dft mils min.

Alternate First Coat:
Sherwin-Williams Catalyzed B62 series/B60V20 5.0-6.0 dft mils

Alternate Second Coat:
Sherwin-Wiliams Catalyzed Epoxy B62 series/B60V20 5.0-6.0 dft mils
Total Thickness Sherwin-Williams = 10.0 mils dft min.

SYSTEM NO. 6

TYPE OF SURFACE: Exterior Above-Grade Concrete

TYPE OF STRUCTURE: Exteriors of building structures.

EXOSURE CONDTION: Non-Submerged

SURFACE PREPARATION: All surfaces must be clean and in sound condition. Painted surface should be wire brushed to remove any chalkiness and loose or peeling paint. Extremely rough masonry block should be given a cement wash before painting to provide a smooth uniform surface. No primer or surface is needed on smooth surfaces.

PAINTING SYSTEM:

Surface Filler:
Tnemec Series 130-6602 60-80 sq. ft. per gallon

First and Second Coats:
Tnemec Series 156 Enviro-Crete
If rolled: 200 sq. ft. per gallon
If sprayed: 100 sq. ft. per gallon

Note: Top coat color selection shall match colors of nearby high service pump station.

SYSTEM NO. 7

TYPE OF SURFACE: Interior Concrete

TYPE OF STRUCTURE: Interior pre-cast concrete tilt-up walls only of new building.

EXPOSURE CONDITION: Non-Submerged

SURFACE PREPARATION: All surfaces must be clean and in sound condition. Painted surface should be wire brushed to remove any chalkiness and loose or peeling paint. Extremely rough concrete or masonry block should be given a cement wash before painting to provide a smooth uniform surface.

PAINTING SYSTEM:

Surface Filler:	
Tnemec Series 130-6602	65 sq. ft./gallon
First and Second Coats:	
Tnemec Series 66-Color Hi-Build Epoxy	6.0 dft mils/coat
Total Thickness Tnemec =	12.0 dft mils min.
Alternate First and Second Coats:	
Sherwin-Williams Sher-Tile Hi Solids Epoxy, B67	4.0 dft mils/coat
Total Thickness =	8.0 dft mils min.

Note: Top coat color selection shall match colors of nearby high service pump station.

SYSTEM NO. 10

TYPE OF SURFACE: Exterior Below-Grade Concrete

TYPE OF STRUCTURE: Exterior walls of new buildings, vaults, and manholes below grade

EXPOSURE CONDITION: Below grade

SURFACE PREPARATION: Concrete should be completely cured and brushed free of all form release compounds, laitance, loose particles and be completely dry. Previously coated surfaces must be cleaned of all loose paint, rust, grease, and dirt.

PAINTING SYSTEM:

First Coat:	
Tnemec Series 46H-413 H.B. Tnemec-Tar	16.0 dft mils
Alternate First Coat:	
Sherwin-Williams Hi-Mil Sher-Tar Epoxy B69B40/B60V40	16.0 - 24.0 dft mils

SYSTEM NO. 11

TYPE OF SURFACE: Concrete or CMU Masonry

TYPE OF STRUCTURE: Concrete Floor and Stem Walls Inside of New Pump Station Building. CMU masonry (inside and outside surfaces at electrical room).

SURFACE PREPARATION: Concrete should be completely cured and brushed free of all form release compounds, laitance, loose particles and be completely dry. Previously coated surfaces must be cleaned of all loose paint, rust, grease, and dirt. Consult supplier for additional surface preparation requirements.

PAINTING SYSTEM:

First and Second Coat:
Sherwin-Williams Clear Solvent-Borne Silane System 50-100 sq. ft./gallon
S-W Loxon® 40% Silane Water Repellant, LX31T40

SYSTEM NO. 21

TYPE OF SURFACE: Galvanized Steel

TYPE OF STRUCTURE: Throughout plant, galvanized steel repair e.g. chain link fence repair

EXPOSURE CONDTION: Atmospheric

SURFACE PREPARATION: SSPC-SP6: Commercial Blast Cleaning. Surface must be clean and dry.

PAINTING SYSTEM:

First Coat:
Tnemec Series 90G-1K97 Tnemec-Zinc 2.5-3.5 dft mils

Alternate First Coat:
Sherwin Williams Corothane I Zinc Primer B65A14 3.0-4.0 dft mils

SYSTEM NO. 22

TYPE OF SURFACE: Aluminum in Contact with Dissimilar Metal or Concrete

TYPE OF STRUCTURE: Throughout plant

EXPOSURE CONDTION: Atmospheric

SURFACE PREPARATION: As recommended by paint supplier.

PAINTING SYSTEM:

Thick layer of cold-applied asphalt paint complying with SSPC-Paint-12 compounded for 15 mil DFT per coat. Apply two (2) coats for total thickness of 30 mil DFT.

PART 3 EXECUTION

3.1 GENERAL:

A. All surface preparation, coating and painting shall conform to applicable standards of the Society for Protective Coatings and the manufacturer's printed instructions. Material applied to the surface prior to the approval of the Engineer shall be removed and re-applied to the satisfaction of the Engineer at the expense of the Contractor.

B. All work shall be performed by skilled craftsmen qualified to perform the required work in a manner comparable with the best standards of practice. Continuity of personnel shall be coordinated with the Engineer.

C. The Contractor shall provide a supervisor at the work site during cleaning and application operations. The supervisor shall have the authority to sign change orders, coordinate work and make decisions pertaining to the fulfillment of the contract.

D. Dust, dirt, oil, grease or any foreign matter that will affect the adhesion or durability of the finish must be removed by washing with clean rags dipped in an approved cleaning solvent and wiped dry with clean rags.

E. Coating and painting systems include surface preparation, prime coating and finish coatings. Unless otherwise approved by the Engineer, prime coating shall be field applied. Where prime coatings are shop applied, the Contractor shall instruct suppliers to provide the prime coat compatible with the finish coat specified. Any off-site work which does not conform to this specification or that is damaged during transportation, construction or installation shall be thoroughly cleaned and touched-up in the field as directed by the Engineer. The Contractor shall use repair procedures which insure the complete protection of all adjacent primer. The specified repair method and equipment may include wire brushing, hand or power tool cleaning, or dry-air blast cleaning. In order to prevent injury to surrounding painted areas, blast cleaning may require use of lower air pressure, smaller nozzle and abrasive particle sizes, or shorter blast nozzle distance from surface shielding and masking. If damage is too extensive or uneconomical to touch-up, then the item shall be re-cleaned and coated as directed by the Engineer.

F. The Contractor's coating and painting equipment shall be designed for application of materials specified and shall be maintained in first class working condition. Compressors shall have suitable traps and filters to remove water and oils from the air.

G. Application of the first coat shall follow immediately after surface preparation and cleaning and before rust bloom occurs. Any cleaned areas not receiving the first coat within this period shall be re-cleaned prior to application of the first coat.

H. Prior to assembly, all surfaces made inaccessible after assembly shall be prepared as specified herein and shall receive the coating or paint system specified.

3.2 SURFACE PREPARATION:

A. The latest revision of the following surface preparation specifications of the Society for Protective Coatings shall form a part of this Specification:

1. Solvent Cleaning (SSPC-SP1): Removal of oil, grease, soil and other contaminants by use of solvents, emulsions, cleaning compounds, steam cleaning or similar materials and methods which involve a

solvent or cleaning action.

2. Hand Tool Cleaning (SSPC-SP2): Removal of loose rust, loose mil scale and other detrimental foreign matter to degree specified by hand chipping, scraping, sanding and wire brushing.

3. Power Tool Cleaning (SSPC-SP3): Removal of loose rust, loose mil scale and other detrimental foreign matter to degree specified by power wire brushing, power impact tools or power sanders.

4. White Metal Blast Cleaning (SSPC-SP5): Blast cleaning to a gray-white uniform metallic color until each element of surface area is free of all visible residues.

5. Commercial Blast Cleaning (SSPC-SP6): Blast cleaning until at least two-thirds of each element or surface area is free of all visible residues.

6. Brush-Off Blast Cleaning (SSPC-SP7): Blast cleaning to remove loose rust, loose mil scale and other detrimental foreign matter to degree specified.

7. Near White Blast Cleaning (SSPC-SP10): The removal of all visible oil, grease, dirt, rust, mil scale, rust, paint, oxides, corrosion products and other foreign matter by compressed air nozzle blasting, centrifugal wheels or other specific method. Discoloration caused by certain stains shall be limited to no more than 5% of each square inch of surface area.

8. Power Tool Cleaning to Bare Metal (SSPC-SP11): The removal of all visible oil, grease, dirt, mil scale, rust, paint, oxide, corrosion products, and other foreign matter. Slight residues of rust and paint may be left in the lower portion of pits if the original surface is pitted. Differs from SSPC-SP3 in that it requires more thorough cleaning and a surface profile not less than 1 mil (25 microns). For areas where abrasive blasting is prohibited or not feasible.

B. Slag and weld metal accumulation and spatters not removed by the Fabricator, Erector, or Installer shall be removed by chipping and grinding. All sharp edges shall be penned, ground or otherwise blunted as required by the Engineer.

C. Field blast cleaning for all surfaces shall be by dry method unless otherwise directed.

D. Particle size of abrasive used in blast cleaning shall be that which will produce a 1.5-2.0 mils (37.5 microns-50.0 microns) surface profile or in accordance with recommendations of the manufacturer of the specified coating or paint system to be applied.

E. Abrasive used in blast cleaning operations shall be new, washed, graded and free of contaminants that would interfere with adhesion of coating or paint and shall not be reused unless specifically approved by the Engineer.

F. During blast cleaning operations, caution shall be exercised to insure that existing coatings or paint to remain intact are not exposed to abrasion from blast cleaning.

G. The Contractor shall keep the area of his work and the surrounding environment in a clean condition. He shall not permit blasting materials to accumulate as to constitute a nuisance or hazard to the accomplishment of the work, the operation of the existing facilities, or nuisance to the surrounding environment.

H. Blast cleaned surfaces shall be cleaned prior to application of specified coatings or paint. No coatings or paint shall be applied over damp or moist surfaces.

I. All welds shall be neutralized with suitable chemical compatible with the specified coating materials.

J. Specific Surface Preparation: Surface preparation for the specific system shall be as noted in Section 2.3.

3.3 APPLICATION:

A. Coating and paint application shall conform to the requirements of the Steel Structures Painting Council Paint Application Specification SSPC-PA1, latest revision, for "Shop, Field and Maintenance Painting", the American Water Works Association and the manufacturer of the coating and paint materials.

B. Thinning shall be permitted only as recommended by the manufacturer and approved by the Engineer.

C. Each application of coating or paint shall be applied evenly, free of brush marks, sags, runs, with no evidence of poor workmanship. Care shall be exercised to avoid lapping on glass or hardware. Coatings and paints shall be sharply cut to lines. Finished surfaces shall be free from defects or blemishes.

D. Protective coverings or drop cloths shall be used to protect floors, fixtures, and equipment. Care shall be exercised to prevent coatings or paints from being spattered onto surfaces which are not to be coated or painted. Report surfaces from which materials cannot be satisfactory removed to the Engineer.

E. When two coats of coating or paint are specified, where possible, the first coat shall contain sufficient approved color additive to act as an indicator of coverage or the two coats must be of contrasting color.

F. Film thickness per coat specified in Section 2.3 are minimum required. If roller application is deemed necessary, the Contractor shall apply additional coats to achieve the specified thickness.

G. All material shall be applied as specified.

H. All welds and irregular surfaces shall receive a brush coat of the specific product prior to application of the first complete coat.

3.4 COATING SYSTEM APPLICATION:

A. After completion of surface preparation as specified for the specific system, materials shall be applied as noted in Section 2.3.

3.5 COLOR SCHEME:

A. The Engineer shall select colors for the project. The Contractor shall submit a current chart of the manufacturer's available colors to the Engineer thirty days prior to the start of coating and painting.

B. The identification of pipe lines shall be accomplished by use of paint color. Color coding must be by solid color or banding. If bands are used, they shall be placed along the pipe at no greater than five foot intervals. The color code is as follows:

LABELS	COLOR OF PIPE
Potable Water	Light Blue
Drain	Dark Gray
Plant Water	Blue/Black
Sanitary Sewer	Dark Gray

3.6 DISINFECTION:

A. Disinfection may be required for interior surfaces of tanks or systems containing potable water. Refer to Section 02675. Coordinate painting with disinfection requirements.

3.7 VAPOR REMOVAL:

A. All solvent vapors shall be completely removed by suction-type exhaust fans and blowers before placing tank or system in operating service.

3.8 CLEAN UP:

A. Upon completion of the work, all staging, scaffolding and containers, waste blast abrasive, or other painting debris shall be removed from the site. Coating or paint spots or oil stains upon adjacent surfaces shall be removed and the jobsite cleaned. All damage to surfaces resulting from the work of this section shall be cleaned, repaired, or refinished to the satisfaction of the Engineer at no cost to the Owner.

3.9 SCHEDULE:

Follow general painting guidelines described above, including painting of pipe, valves, drywall, and other miscellaneous surfaces. Existing structures and equipment need not be repainted unless otherwise noted. Specific surfaces to be coated include the following:

PAINTING SCHEDULE	
Surface	**System No.**
Exposed ductile iron piping, valves, pumps, motors, bollards	1
PS Building interior walls	7
PS Building exterior walls below grade	10
Building exterior walls above grade	6
New valve vaults, flow meter vaults, and manholes exterior walls below grade	10
CMU walls, concrete floors, stem walls, interior of surge relief valve vault	11
Exposed aggregate exterior of building	Per Section 07190

END OF SECTION

SECTION 10523

FIRE EXTINGUISHERS

PART 1 GENERAL

1.1 SUMMARY

A. Section includes portable, hand-carried fire extinguishers and mounting brackets for fire extinguishers.

B. Related Requirements:

1. Divisions 01 Specification Sections apply to Work of this Section.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product. Include rating and classification, material descriptions, dimensions of individual components and profiles, and finishes for fire extinguisher and mounting brackets.

B. Product Schedule: For fire extinguishers. Coordinate final fire-extinguisher schedule with fire-protection cabinet schedule to ensure proper fit and function.

1.3 INFORMATIONAL SUBMITTALS

A. Warranty: Sample of special warranty.

1.4 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For fire extinguishers to include in maintenance manuals.

1.5 COORDINATION

A. Coordinate type and capacity of fire extinguishers with fire-protection cabinets to ensure fit and function.

1.6 WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace fire extinguishers that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:

a. Failure of hydrostatic test according to NFPA 10.

b. Faulty operation of valves or release levers.

2. Warranty Period: Six years from date of Substantial Completion.

PART 2 PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. NFPA Compliance: Fabricate and label fire extinguishers to comply with NFPA 10, "Portable Fire Extinguishers."

B. Fire Extinguishers: Listed and labeled for type, rating, and classification by an independent testing agency acceptable to authorities having jurisdiction.

1. Provide fire extinguishers approved, listed, and labeled by FM Global.

2.2 PORTABLE, HAND-CARRIED FIRE EXTINGUISHERS

A. Fire Extinguishers: Type, size, and capacity for each mounting bracket (FEB) indicated.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. JL Industries, Inc.; a division of the Activar Construction Products Group.

b. Larsens Manufacturing Company.

c. Potter Roemer LLC.

2. Valves: Manufacturer's standard.

3. Handles and Levers: Manufacturer's standard.

4. Instruction Labels: Include pictorial marking system complying with NFPA 10, Appendix B, and bar coding for documenting fire-extinguisher location, inspections, maintenance, and recharging.

B. Regular Dry-Chemical Type <Insert drawing designation>: UL-rated <Insert capacity> nominal capacity, with sodium bicarbonate-based dry chemical in manufacturer's standard enameled container.

2.3 MOUNTING BRACKETS (FEB)

A. Mounting Brackets: Manufacturer's standard galvanized steel, designed to secure fire extinguisher to wall or structure, of sizes required for types and capacities of fire extinguishers indicated, with plated or black baked-enamel finish.

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

a. Amerex Corporation.

b. Ansul Incorporated.

c. Badger Fire Protection.

d. Buckeye Fire Equipment Company.

e. Fire End & Croker Corporation.

f. Guardian Fire Equipment, Inc.

g. JL Industries, Inc.; a division of the Activar Construction Products Group.

h. Larsens Manufacturing Company.

i. Nystrom Building Products.

j. Potter Roemer LLC.

k. Strike First Corporation of America.

B. Identification: Lettering complying with authorities having jurisdiction for letter style, size, spacing, and location. Locate as indicated by Engineer.

1. Identify bracket-mounted fire extinguishers with the words "FIRE EXTINGUISHER" in red letter decals applied to mounting surface.

a. Orientation: Vertical.

PART 3 EXECUTION

3.1 EXAMINATION

A. Examine fire extinguishers for proper charging and tagging.

1. Remove and replace damaged, defective, or undercharged fire extinguishers.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. General: Install fire extinguishers and mounting brackets in locations indicated and in compliance with requirements of authorities having jurisdiction.

1. Mounting Brackets:

a. Fire extinguishers weighing 40 pounds or less: 42 inches above finished floor.

b. Fire extinguishers weighing more than 40 pounds: 42 inches above finished floor to top of cabinet.

B. Mounting Brackets: Fasten mounting brackets to surfaces, square and plumb, at locations indicated.

END OF SECTION

PACKET 9.1392 December 15, 2020

SECTION 11005

EQUIPMENT: BASIC REQUIREMENTS

PART 1 GENERAL

1.1 SUMMARY:

A. Section Includes:

1. Requirements of this Specification Section apply to all equipment provided on the Project including those found in other Divisions even if not specifically referenced in individual "Equipment" Articles of those Specification Sections.

1.2 QUALITY ASSURANCE:

A. Referenced Standards:

1. American Bearing Manufacturers Association (ABMA).
2. American Gear Manufacturers Association (AGMA).
3. ASTM International (ASTM):

a. E1934, Standard Guide for Examining Electrical and Mechanical Equipment with Infrared Thermography.

b. F593, Standard Specification for Stainless Steel Bolts, Hex Cap Screws, and Studs.

4. Hydraulic Institute (HI):

a. 9.6.4, Centrifugal and Vertical Pumps for Vibration Measurements and Allowable Valves.

5. International Electrotechnical Commission (IEC).
6. Institute of Electrical and Electronics Engineers, Inc. (IEEE).
7. International Organization for Standardization (ISO):

a. 1940, Mechanical Vibration - Balance Quality Requirements for Rotors in a Constant (Rigid) State - Part 1: Specification and Verification of Balance Tolerances.

8. National Electrical Manufacturers Association (NEMA):

a. 250, Enclosures for Electrical Equipment (1000 Volts Maximum).
b. ICS 6, Enclosures for Industrial Control and System.
c. MG 1, Motors and Generators.

9. InterNational Electrical Testing Association (NETA):

a. ATS, Acceptance Testing Specification for Electrical Power Distribution Equipment and Systems.

10. National Fire Protection Association (NFPA):

a. 70, National Electrical Code (NEC):

i Article 430, Motors, Motor Circuits, and Controllers.

11. National Institute for Certification in Engineering Technologies (NICET).
12. National Institute of Standards and Technology (NIST).
13. Occupational Safety and Health Administration (OSHA):

a. 29 CFR 1910, Occupational Safety and Health Standards, referred to herein as OSHA Standards.

14. Underwriters Laboratories, Inc. (UL).

a. 508, Standard for Safety Industrial Control Equipment.
b. 508A, Standard for Safety Industrial Control Panels.

15. Vibration Institute.

B. Miscellaneous:

1. A single manufacturer of a "product" to be selected and utilized uniformly throughout Project even though:

a. More than one (1) manufacturer is listed for a given "product" in Specifications.
b. No manufacturer is listed.

2. Equipment, electrical assemblies, related electrical wiring, instrumentation, controls, and system components shall fully comply with specific NEC requirements related to area classification and to NEMA 250 and NEMA ICS 6 designations and defined in Division 16.

3. Variable speed equipment applications: The driven equipment manufacturer shall have single source responsibility for coordination of the equipment and VFD system and sure their compatibility.

1.3 DEFINITIONS:

A. Product: Manufactured materials and equipment.

B. Major Equipment Supports - Supports for Equipment:

1. Located on or suspended from elevated slabs with supported equipment weighing 2000 LBS or greater, or;

2. Located on or suspended from roofs with supported equipment weighing 500 LBS or greater, or;

3. Located on slab-on-grade or earth with supported equipment weighing 5,000 LBS or more.

C. Equipment:

1. One (1) or more assemblies capable of performing a complete function.

2. Mechanical, electrical, instrumentation or other devices requiring an electrical, pneumatic, electronic or hydraulic connection.

3. Not limited to items specifically referenced in "Equipment" articles within individual Specifications.

D. Installer or Applicator:

1. Installer or applicator is the person actually installing or applying the product in the field at the Project site.

2. Installer and applicator are synonymous.

E. Inverter Duty Motor: An AC induction motor complying with all requirements of NEMA MG 1 Part 31 for definite-purpose inverter-fed motors.

F. Abbreviations:

1. ODP-Open Dripproof.
2. RTD-Resistance Temperature Detector.
3. TEFC-Totally Enclosed Fan Cooled.
4. WP-1-Weather Protected Type 1.
5. Motor Controllers:

a. FVNR-Full Voltage Non-Reversing.
b. RVAT-Reduced Voltage Autotransformer.

1.4 SUBMITTALS:

A. Shop Drawings:

1. General for all equipment:

a. See Division 01 for requirements for the mechanics and administration of the submittal process.

b. Data sheets that include manufacturer's name and complete product model number.

i Clearly identify all optional accessories that are included.

c. Acknowledgement that products submitted comply with the requirements of the standards referenced.

d. Manufacturer's delivery, storage, handling, and installation instructions.

e. Equipment identification utilizing numbering system and name utilized in Drawings.

f. Equipment installation details:

i Location of anchorage.
ii Type, size, and materials of construction of anchorage.
iii Anchorage setting templates.
iv Manufacturer's installation instructions.

g. Equipment area classification rating.

h. Shipping and operating weight.

i. Equipment physical characteristics:

i Dimensions (both horizontal and vertical).
ii Materials of construction and construction details.

j. Equipment factory primer and paint data.

k. Manufacturer's recommended spare parts list.

l. Equipment lining and coatings.

m. Equipment utility requirements include air, natural gas, electricity, and water.

n. Ladders and platforms provided with equipment:

i Certification that all components comply fully with OSHA requirements.
ii Full details of construction/fabrication.
iii Scaled plan and sections showing relationship to equipment.

2. Mechanical and process equipment:

a. Operating characteristics:

i Technical information including applicable performance curves showing specified equipment capacity, rangeability, and efficiencies.
ii Brake horsepower requirements.
iii Copies of equipment data plates.

b. Piping and duct connection size, type and location.
c. Equipment bearing life certification.
d. Equipment foundation data:

i Equipment center of gravity.
ii Criteria for designing vibration, special or unbalanced forces resulting from equipment operation.

3. Electric motor:

a. Identify each motor by driven machine identification.
b. Motor manufacturer and model number.
c. Complete motor nameplate data.
d. Weight.
e. NEMA design type.
f. Enclosure type.
g. Frame size.
h. Winding insulation class and temperature rise.
i. Starts per hour.
j. Performance data:

i Guaranteed minimum efficiencies at 100 percent, 75 percent, and 50 percent of full load.

ii Guaranteed minimum power factor at 100 percent, 75 percent, and 50 percent of full load.

iii Locked rotor and full load current at rated terminal voltage and minimum permissible or specified terminal voltage.

iv Starting, full load, and breakdown torque at rated terminal voltage and minimum permissible or specified terminal voltage.

v Motor speed-torque curve superimposed over driven machine speed-torque curve during start-up acceleration and at rated terminal voltage and minimum permissible or specified terminal voltage for all motors over 200 HP.

vi Time-current plots with acceleration verses current and thermal damage curves at the operating and ambient temperatures and at rated terminal voltage and minimum permissible or specified terminal voltage for all motors over 200 HP.

vii Hot and cold stall time damage points all motors over 200 HP.

k. Bearing data and lubrication system.

l. Thermal protection system including recommended alarm and trip settings for winding and bearing RTD's.

m. Fabrication and/or layout drawings:

i Dimensioned outlined drawing.

ii Connection diagrams including accessories (strip heaters, thermal protection, etc.).

n. Certifications:

i When utilized with a reduced voltage starter, certify that motor and driven equipment are compatible.

ii When utilized with a variable frequency controller, certify motor is inverter duty and the controller and motor are compatible.

- Include minimum speed at which the motor may be operated for the driven machinery.

o. Electrical gear:

i Unless specified in a narrow-scope Specification Section, provide the following:

- Equipment ratings: Voltage, continuous current, kVa, watts, short circuit with stand, etc., as applicable.

ii Control panels:

- Panel construction.
- Point-to-point ladder diagrams.
- Scaled panel face and subpanel layout.
- Technical product data on panel components.
- Panel and subpanel dimensions and weights.
- Panel access openings.
- Nameplate schedule.
- Panel anchorage.

4. Systems schematics and data:

a. Provide system schematics where required in system specifications.

i Acknowledge all system components being supplied as part of the system.

ii Utilize equipment, instrument and valving tag numbers defined in the Contract Documents for all components.

iii Provide technical data for each system component showing compliance with the Contract Document requirements.

iv For piping components, identify all utility connections, vents and drains which will be included as part of the system.

5. For factory painted equipment, provide paint submittals in accordance with Specification Section 09905.

B. Operation and Maintenance Manuals:

1. See Division 01 for requirements for:

a. The mechanics and administration of the submittal process.
b. The content of Operation and Maintenance Manuals.

C. Informational Submittals:

1. Sample form letter for equipment field certification.

2. Certification that equipment has been installed properly, has been initially started up, has been calibrated and/or adjusted as required, and is ready for operation.

3. Certification for major equipment supports that equipment foundation design loads shown on the Drawings or specified have been compared to actual loads exhibited by equipment provided for this Project and that said design loadings are equal to or greater than the loads produced by the equipment provided.

4. Field noise testing reports if such testing is specified in narrow-scope Specification Sections.

5. Notification, at least one (1) week in advance, that motor testing will be conducted at factory.

6. Certification from equipment manufacturer that all manufacturer-supplied control panels that interface in any way with other controls or panels have been submitted to and coordinated with the supplier/installer of those interfacing systems.

7. Motor test reports.

8. Certification prior to Project closeout that electrical panel drawings for manufacturer-supplied control panels truly represent panel wiring including any field-made modifications.

9. Provide three (3) bound final written reports documenting vibration monitoring and testing for specified equipment.

a. Include the acceptance criteria of all equipment tested.
b. Provide individual tabbed sections for information associated with each piece of tested equipment.

10. Preliminary field quality control testing format to be used as a basis for final field quality control reporting.

11. Testing and monitoring reports in accordance with PART 3 of this Specification Section.

12. Certification that driven equipment and VFD are compatible.

PART 2 PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS:

A. Subject to compliance with the Contract Documents, the following manufacturers are acceptable:

1. Motors:

a. Baldor.
b. General Electric.
c. Marathon Electric.
d. Reliance Electric.
e. U.S. Motors.
f. WEG.

B. Submit request for substitution in accordance with Division 01.

2.2 MANUFACTURED UNITS:

A. General:

1. Furnish equipment manufacturer's field quality control services and testing as specified in the individual equipment Specification Sections.

2. Execute pre-demonstration requirements in accordance with Division 01.

3. Perform and report on all tests required by the equipment manufacturer's Operation and Maintenance Manual.

4. Provide testing of electrical equipment and connections in accordance with Division 16.

5. Equip testing and analysis personnel with all appropriate project related reference material required to perform tests, analyze results, and provide documentation including, but not limited to:

a. Contract Drawings and Specifications.

b. Related construction change documentation.
c. Approved Shop Drawings.
d. Approved Operation and Maintenance Manuals.
e. Other pertinent information as required.

B. Equipment Monitoring and Testing Plans:

1. Approved in accordance with Shop Drawing submittal schedule.
2. Included as a minimum:

a. Qualifications of firm, field personnel, and analysis personnel doing the Work.

b. List and description of testing and analysis equipment to be utilized.

c. List of all equipment to be testing, including:

i Name and tag numbers identified in the Contract Documents.
ii Manufacturer's serial numbers.
iii Other pertinent manufacturer identification,

C. Instruments Used in Equipment and Connections Quality Control Testing:

1. Minimum calibration frequency:

a. Field analog instruments: Not more than 6 months.
b. Field digital instruments: Not more than 12 months.
c. Laboratory instruments: Not more than 12 months.
d. If instrument manufacturer's calibration requirements are more stringent, those requirements shall govern.

2. Carry current calibration status and labels on all testing instruments.
3. See individual testing programs for additional instrumentation compliance requirements.

D. Testing and Monitoring Program Documentation:

1. Provide reports with tabbed sections for each piece of equipment tested.

2. Include all testing results associated with each piece of equipment under that equipment's tabbed section.

a. Include legible copies of all forms used to record field test information.

3. Prior to start of testing, submit one (1) copy of preliminary report format for Engineer review and comment.

a. Include data gathering and sample test report forms that will be utilized.

4. In the final report, include as a minimum, the following information for all equipment tested:

a. Equipment identification, including:

i Name and tag numbers identified in the Contract Documents.
ii Manufacturer's serial numbers.
iii Other pertinent manufacturer identification.

b. Date and time of each test.

c. Ambient conditions including temperature, humidity, and precipitation.

d. Visual inspection report.

e. Description of test and referenced standards, if any, followed while conducting tests.

f. Results of initial and all retesting.

g. Acceptance criteria.

h. "As found" and "as left" conditions.

i. Corrective action, if required, taken to meet acceptance.

j. Verification of corrective action signed by the Contractor, equipment supplier, and Owner's representative.

k. Instrument calibration dates of all instruments used in testing.

5. Provide three (3) bound final reports prior to Project final completion.

E. Other Testing:

1. Perform tests and inspections not specifically listed but required to assure equipment is safe to energize and operate.

2. Subbase that supports the equipment base and that is made in the form of a cast iron or steel structure that has supporting beams, legs, and cross members that are cast, welded, or bolted shall be tested for a natural frequency of vibration after equipment is mounted.

a. The ratio of the natural frequency of the structure to the frequency of the disturbing force shall not be between 0.5 and 1.5.

F. Electric Motors:

1. General Requirements unless otherwise noted or specified:

a. Standards: NEMA MG 1.

b. Identify each motor by the driven machine identification.

c. An embossed or engraved stainless steel nameplate, with the required NFPA 70 and NEMA data, to be permanently attached to the motor.

d. Maximum motor loading shall not exceed motor nameplate horsepower rating, exclusive of service factor.

e. All motors shall be sized to carry continuously all loads, which may be imposed through their full range of operation.

f. NEMA MG 1, Design B (unless otherwise required), constant speed squirrel-cage induction type having normal starting torque with low starting current.

g. Suitable for the starting method indicated (e.g., full voltage, autotransformer, reduced voltage solid state, VFD, etc.).

h. Lifting devices: Motors weighing 265 LBS or more shall have suitable lifting eyes for installation and removal.

i. Grounding:

i Lug suitable to terminate ground wire in terminal box, sized as indicated on the Drawings.

j. Stator windings: Copper.

k. Rotor cage: Aluminum or copper.

l. Motor leads shall be non-wicking with permanent identifiers.

m. Totally enclosed motor to have one-way breather drains.

n. Efficiency:

i Meet the requirements of NEMA 1MG (NEMA Premium) efficiencies or provided motor labeled as "NEMA PREMIUM" efficient.

ii If motor type, horsepower or speed is not included in the NEMA requirements for NEMA Premium, provide manufacturer's "premium energy efficient" design.

o. Power factor:

i Minimum of 80 percent lagging at full load, except on motors with speed slower than 900 RPM.

p. Service factor:

i 100 hp or less: 1.15.
ii Greater than 100 hp: 1.0 unless noted otherwise.
iii Inverter duty: 1.0.

q. Standards: NEMA MG 1, UL 674, LU 1836.

2. Where used in conjunction with adjustable speed AC or DC drives, provide motors that are fully compatible with the speed controllers.

3. Design for full voltage starting.

4. Design for frequent starting duty equivalent to duty service required by driven equipment.

5. Design bearing life based upon actual operating load conditions imposed by driven equipment.

6. Size for altitude of project.

7. Furnish with stainless steel nameplates which include all data required by NEC Article 430.

8. Use of manufacturer's standard motor will be permitted on integrally constructed motor driven equipment specified by model number in which a redesign of the complete unit would be required in order to provide a motor with features specified.

9. AC electric motors less than 1/3 HP:

a. Single phase, 60 Hz, designed for the supply voltage shown on the Drawings.

b. Permanently lubricated sealed bearings conforming to ABMA standards.

c. Built-in manual reset thermal protector or integrally mounted manual motor starter with thermal overload element with stainless steel enclosure.

10. AC electric motors 1/3 to 1 HP:

a. Single or 3 PH, 60 Hz, designed for the supply voltage shown on the Drawings.

b. Permanently lubricated sealed bearings conforming to ABMA standards.

i For single phase motors, provide built-in manual reset thermal protector or integrally mounted manual motor starter with thermal overload element.

11. AC electric motors 1-1/2 to 10 HP:

a. Single or 3 PH, 60 Hz, designed for the supply voltage shown on the Drawings.

b. Permanently lubricated sealed bearings conforming to ABMA standards.

c. For vertical motors provide 15 year, average-life thrust bearings conforming to ABMA standards.

12. AC electric motors greater than 10 HP:

a. Single or 3 PH, 60 Hz, designed for the supply voltage shown on the Drawings.

b. Oil or grease lubricated antifriction bearings conforming to ABMA standards.

i Design bearing life for 90 percent survival rating at 50,000 HRS of operation for motors up to and including 100 HP.

ii For motors greater than 100 HP, design bearing life for 90 percent survival rating at 100,000 HRS of operation.

c. For vertical motors provide 15 year, average-life thrust bearings conforming to ABMA standards.

d. Thermal protection:

i For motors 50 HP and above controlled from a variable frequency drive and for all other motors 100 HP and above, provide integral thermal detectors with normally closed contacts that will open on overtemperature or resistance type temperature detector (RTD) complete with monitor and alarm panel having a normally closed contact that will open on overtemperature.

- Two (2) thermal sensing devices per phase in each phase hot-spot location.
- Monitor and alarm panel:

- For constant speed motors, install panel in and energize from the motor starter equipment.
- For variable speed motors, install panel in and energize from the variable speed drive equipment.

13. Severe duty motor to have the following minimum features:

a. All cast iron construction.
b. Gasketed conduit box.
c. Epoxy finish for corrosion protection.
d. Hydroscopic varnish on windings for corrosion protection.
e. Drain plug and breather.

G. Induction Motors, 600 Volt and Less:

1. Horizontal Shaft:

a. Electrical rating:

i Appropriate for the voltage system indicated, 3 PH, 60 Hz.

ii Dual voltage rated motors (e.g., 230/460 V) are acceptable, provided all leads are brought out to the terminal box and permanently marked.

b. Enclosed:

i Cast iron (exception: fan covers can be steel).
ii Type: TEFC unless otherwise specified.

c. Terminal box:

i Gasketed.

ii Diagonally split.

iii Field adjactable in 90-degree increments.

iv Oversized by NEMA standards. Box shall be suitable for the size and number of conduits indicated on the Drawings.

v Located on "F1" side unless specifically indicated to be on the "F2" side.

vi Separate terminal box with terminal blocks for winding thermal protection devices (RTD's) if applicable. Condulets with terminal blocks at bearing

thermal protection devices as required.

d. Bearings:

i 5 HP and less: Lubricated-for-Life ball bearings.
ii Greater than 5 HP:

- Relubricatable.
- Antifriction.
- Minimum rated ABMA L-10 life of 10 years or 100,000 HRS.

e. Insulation:

i Class F insulation with Class B temperature rise at nameplate horsepower.
ii VPI with non-hydroscopic varnish or epoxy.

f. Accessories: See the ACCESSORIES Article in Part 2.
g. Modifications:

i Inverter duty:

- At a minimum, applied to motors connected to a VFD.
- Windings insulated for 1600 peak volts and voltage rise times of 0.1 microseconds.
- Nameplate identification of meeting NEMA MG 1 Part 31 requirements.
- Having the following minimum turndown ratio without the use of a blower to provide continuous supply of cooling air over the motor.
    - Variable torque: 10:1.
    - Constant torque: 6:1.
- Insulated drive end bearing on all motors.
- Motors 100 HP and larger, insulated non-drive end bearings.
- Shaft grounding ring on all motors:
    - Factory installed, maintenance free, circumferential, bearing protection ring with conductive microfiber shaft contacting material.

- Electro Static Technology AEGIS SGR Bearing Protection Ring or approved equal.

ii Severe duty (includes requirements of Inverter Duty motors if applicable):

- Standard: IEEE 841.
- All cast iron enclosure.
- Terminal box threaded and gasketed.
- Internal and external epoxy base paint system.
- Drain and breather.

2. Vertical Solid or Hollow Shaft:

a. Electrical rating:

i Appropriate for the voltage system indicated, 3 PH, 60 Hz.

ii Dual voltage rated motors (e.g., 230/460 V) are acceptable, provided all leads are brought out to the terminal box and permanently marked.

b. Enclosure:

i Cast iron.
ii Type: TEFC unless otherwise specified.

c. Terminal box:

i Gasketed.

ii Diagonally split.

iii Oversized by NEMA standards. Box shall be suitable for the size and number of conduits indicated on the Drawings.

iv Separate terminal box with terminal blocks for winding thermal protection devices (if applicable). Condulets with terminal blocks at bearing thermal protection devices (if applicable).

d. Bearings (Solid Shaft):

i Relubricatable.
ii Antifriction.
iii Minimum rated AMBA L-10 life of 10 years or 100,000 HRS.

e. Bearings (Hollow Shaft):

i Relubricatable.
ii Antifriction.
iii Oil or grease lubricated thrust bearings.
iv Grease lubricated guide bearings.
v Minimum rated ABMA L-10 life of 10 years or 100,000 HRS.

f. Non-reverse ratchets.

g. Insulation:

i Class F Insulation with Class B temperature rise at nameplate horsepower.

ii VPI with non-hydroscopic varnish or epoxy.

h. Accessories: See the ACCEWSSORIES Article in PART 2.

i. Modifications:

i Inverter duty:

- At a minimum, applied to motors connected to a VFD.
- Windings insulated for 1600 peak volts and voltage rise times of 0.1 microseconds.
- Nameplate identification of meeting NEMA MG 1 Part 31 requirements.
- Having the following minimum turndown ratio without the use of a blower to provide continuous supply of cooling air over the motor.
    - Variable torque: 10:1.
    - Constant torque: 6:1.
- Insulated drive end bearing on all motors.
- Motors 100 HP and larger the non-drive end shall have an insulated bearing carrier.
- Shaft grounding ring on all motors:
    - Factory installed, maintenance free, circumferential, bearing protection ring with conductive microfiber shaft contacting material.

- Electro Static Technology AEGIS SGR Bearing Protection Ring or approved equal.

ii Severe duty (includes requirements of Inverter Duty motors if applicable):

- Standard: IEEE 841.
- All cast iron enclosure.
- Terminal box threaded and gasketed.
- Internal and external epoxy base paint system.
- Drain and breather.

iii Explosion proof rated motors shall be furnished for motors installed in Class I, Division 1 hazardous locations. Motors installed in Class I, Division 2 locations shall either be rated explosion proof, or shall have non arc-producing devices and motor frame temperatures shall not exceed the Temperature Code for the particular gas under normal operating conditions.

3. Motors to meet NEMA MG 1 (NEMA Premium) efficiencies.

4. Motor enclosure and winding insulation application:

a. The following shall apply unless modified by specific Specification Sections:

MOTOR LOCATION	MOTOR ENCLOSURE / WINDING INSULATION
Unclassified Indoor Areas	TEFC, Standard Insulation
Wet indoor Areas	TEFC, Standard Insulation
Wet outdoor Areas	TEFC, Extra Dip and Bake for Moisture
Corrosive Areas	TEFC, Severe/Chemical Duty

NOTE: Provide TENV motors in the smaller horsepower ratings where TEFC is not available.

5. Provide oversize conduit box complete with clamp type grounding terminals inside the conduit box.

H. Induction Motors, Greater than 600 Volt

1. Same as Induction Motors, 600 Volt and Less except for the following:

a. Windings: Form wound.
b. Insulation:

i Vacuum Pressure Impregnation (VPI) or Continuous Resin Flow Impregnation (CRFI).

ii Epoxy encapsulated.

iii NEMA MG 1 Type II terminal housing suitable for shielded cable terminations.

iv Surge protection: Three (3) surge arrestors and a surge capacitor mounted in terminal box.

v Bearing RTDs.

vi Bearing vibration detectors.

vii Accessory leads wired to separate terminal boxes.

viii Separate terminal boxes or boxes with a barrier shall be used to separate accessories leads of 50 V and less and accessories leads of higher voltage.

I. Submersible Motors: Refer to individual narrow-scope specification sections for submersible motor requirements.

2.3 COMPONENTS:

A. Gear Drives and Drive Components:

1. Size drive equipment capable of supporting full load including losses in speed reducers and power transmission.

2. Provide nominal input horsepower rating of each gear or speed reducer at least equal to nameplate horsepower of drive motor.

3. Design drive units for 24 HR continuous service, constructed so oil leakage around shafts is precluded.

4. Utilize gears, gear lubrication systems, gear drives, speed reducers, speed increasers and flexible couplings meeting applicable standards of AGMA.

5. Gear reducers:

a. Provide gear reducer totally enclosed and oil lubricated.

b. Utilize antifriction bearings throughout.

c. Provide worm gear reducers having a service factor of at least 1.20.

d. Furnish other helical, spiral bevel, and combination bevel-helical gear reducers with a service factor of at least 1.50.

2.4 ACCESSORIES:

A. Thermal Protection (as applicable): Unless otherwise specified or indicated on the Drawings, motors 50 HP up to but not including 200 HP controlled from a variable frequency drive, and all other motors 200 HP and above up to 400 HP, shall be provided with integral thermostats embedded in the motor windings. Motors 200 HP and above controlled from a variable frequency drive and all other motors 400 HP and above shall be provided with RTD's embedded in the motor windings.

1. Thermostats:

a. One (1) winding thermostat per phase for shutdown.
b. Snap action, bi-metallic, temperature-actuated switch type.
c. Normally closed, wired in series.
d. Automatic reset.
e. Switch point shall be pre-calibrated by the manufacturer.

2. RTD's:

a. One (1) winding RTD per phase imbedded in windings.
b. One (1) RTD per bearing (as required per individual equipment specification).
c. 100 ohm platinum.

B. Space Heaters:

1. Where specified or indicated on the Drawings, provide motor space heaters sized to prevent condensation. Heaters are to be silicone rubber type manufactured by sandwiching a resistance wire network between two pieces of high-temperature silicon rubber and bonding the silicone rubber pieces together.

2. 120 V rated, wired to a separate space heater conduit box.

3. Provided on:

a. All motors 10 HP and larger mounted outdoors.
b. Indoor motors in humid environments as indicated in individual equipment specification.

C. Guards:

1. Provide each piece of equipment having exposed moving parts with full length, easily removable guards, meeting OSHA requirements.

2. Interior applications:

a. Construct from expanded galvanized steel rolled to conform to shaft or coupling surface.

b. Utilize non-flattened type 16 GA galvanized steel with nominal 1/2 IN spacing.

c. Connect to equipment frame with hot-dip galvanized bolts and wing nuts.

3. Exterior applications:

a. Construct from 16 GA stainless steel or aluminum.
b. Construct to preclude entrance of rain, snow, or moisture.
c. Roll to conform to shaft or coupling surface.
d. Connect to equipment frame with stainless steel bolts and wing nuts.

D. Anchorage:

1. Cast-in-place anchorage:

a. Provide ASTM F593, Type 316 stainless steel anchorage for all equipment.

b. Configuration and number of anchor bolts shall be per manufacturer's recommendations.

c. Provide two (2) nuts for each bolt.

2. Drilled anchorage:

a. Adhesive anchors per Specification Section 05505.
b. Epoxy grout per Specification Section 03308.
c. Threaded rods same as cast-in-place.

E. Data Plate:

1. Attach a stainless steel data plate to each piece of rotary or reciprocating equipment.

2. Permanently stamp information on data plate including manufacturer's name, equipment operating parameters, serial number and speed.

F. Gages:

1. Provide gages in accordance with Division 17.

2. Provide at the following locations:

a. Inlet and outlet of all reciprocating, centrifugal and positive displacement mechanical and process equipment.
b. At locations identified on Drawings.

3. Utilize tapping sleeves for mounting per Specification Section 15060.

G. Lifting Eye Bolts or Lugs:

1. Provide on all equipment 50 LBS or greater.
2. Provide on other equipment or products as specified in the narrow-scope Specification Sections.

H. Platforms and Ladders:

1. Design and fabricate in accordance with OSHA Standards.

2. Fabricate components from aluminum unless specified or shown otherwise.

3. Provide platform surface: Non-skid grating, unless specified in narrow-scope specification sections.

2.5 FABRICATION:

A. Design, fabricate, and assemble equipment in accordance with modern engineering and shop practices.

B. Manufacture individual parts to standard sizes and gages so that repair parts, furnished at any time, can be installed in field.

C. Furnish like parts of duplicate units to be interchangeable.

D. Ensure that equipment has not been in service at any time prior to delivery, except as required by tests.

E. Furnish equipment which requires periodic internal inspection or adjustment with access panels which will not require disassembly of guards, dismantling of piping or equipment or similar major efforts.

1. Quick opening but sound, securable access ports or windows shall be provided for inspection of chains, belts, or similar items.

F. Provide common, lipped base plate mounting for equipment and equipment motor where said mounting is a manufacturer's standard option.

1. Provide drain connection for 3/4 IN PVC tubing.

G. Machine the mounting feet of rotating equipment.

H. Fabricate equipment which will be subject to Corrosive Environment in such a way as to avoid back to back placement of surfaces that cannot be properly prepared and painted.

1. When such back to back fabrication cannot be avoided, provide continuous welds to seal such surfaces from contact with corrosive environment.

2. Where continuous welds are not practical, after painting seal the back to back surfaces from the environment in accordance with Specification Section 07900.

I. Critical Speed:

1. All rotating parts accurately machined and in as near perfect rotational balance as practicable.

2. Excessive vibration is sufficient cause for equipment rejection.

3. Ratio of all rotative speeds to critical speed of a unit or components: Greater than 1.2.

J. Control Panels Engineered and Provided with the Equipment by the Manufacturer:

1. Manufacturer's standard design for components and control logic unless specific requirements are specified in the specific equipment Specification Section.

2. NEMA or IEC rated components are acceptable, whichever is used in the manufacturer's standard engineered design, unless specific requirements are required in the specific equipment Specification Section.

3. Affix entire assembly with a UL 508A label "Listed Enclosed Industrial Control Panel" prior to delivery.

a. Control panels without an affixed UL 508A label shall be rejected.

2.6 SHOP OR FACTORY PAINT FINISHES:

A. Electrical Equipment:

1. Provide factory-applied paint coating system(s) for all electrical equipment components except those specified in Specification Section 09905 to receive field painting.

a. Field painted equipment: See Specification Section 09905 for factory applied primer/field paint compatibility requirements.

B. Field paint other equipment in accordance with Specification Section 09905.

1. See Specification Section 09905 for factory applied primer/field paint compatibility requirements.

2.7 SOURCE QUALITY CONTROL:

A. Test motors in accordance with NEMA, IEEE and manufacturer procedures.

1. The test shall include but not necessarily be limited to the following:

    a. Routine test:

        i No-load current and speed at rated voltage and frequency.
        ii Locked rotor current.
        iii Winding resistance.
        iv Vibration check.
        v High potential

    b. Complete test (in addition to the routine tests):

        i Rated load temperature rise.
        ii Winding resistance.
        iii Slip test, measured in percent slip.
        iv Locked rotor amperes (3 PH, full voltage).
        v Locked rotor torque.
        vi Breakdown torque.
        vii Efficiencies tabulated at 100, 75, and 50 percent of full load.
        viii Power factor tabulated at 100, 75, and 50 percent of full load.

B. Motor to be tested:

1. All motors, at a minimum, to receive a routine test.
2. Motors 200 HP and above shall have a complete test performed.

C. The Owner reserves the right to select and have tested any motor included within the project.

1. If motor passes testing requirements, the Owner shall be responsible for any shipping and testing costs incurred.

2. Costs shall be determined by current freight rates and manufacturer's published rates at the time of the test.

3. If motor fails test, Supplier shall be responsible for all costs incurred.

4. If two (2) successive motors fail the test, the Owner has the right to reject any or all motors from that manufacturer.

5. The Owner also reserves the right to witness any routine or complete tests at the Owner's expense.

6. Notify the Owner a minimum of 14 days in advance of the testing.

PART 3 EXECUTION

3.1 INSTALLATION:

A. Install equipment as shown on Drawings and in accordance with manufacturer's directions.

B. Utilize templates for anchorage placement for slab-mounted equipment.

C. For equipment having drainage requirements such as seal water, provide 3/4 IN PVC or clear plastic tubing from equipment base to nearest floor or equipment drain.

1. Route clear of major traffic areas and as approved by Engineer.

D. DO NOT construct foundations until major equipment supports are approved.

E. Extend all non-accessible grease fittings using stainless steel tubing to a location which allows easy access of fittings from closest operating floor level.

F. Equipment Base:

1. Construct level in both directions.
2. Take particular care at anchor bolt locations so these areas are flat and level.

G. Machine Base:

1. Mount machine base of rotating equipment on equipment base.

a. Level in both directions, using a machinist level, according to machined surfaces on base.

2. Level machine base on equipment base and align couplings between driver and driven unit using steel blocks and shims.

a. Size blocks and shims to provide solid support at each mounting bolt location.

i Provide area size of blocks and shims approximately 1-1/2 times area support surface at each mounting bolt point.

b. Provide blocks and shims at each mounting bolt.

i Furnish blocks and shims that are square shape with "U" cut out to allow blocks and shims to be centered on mounting bolts.

c. After all leveling and alignment has been completed and before grouting, tighten mounting bolts to proper torque value.

H. Couplings:

1. Align in the annular and parallel positions.

a. For equipment rotating at 1200 rpm or less, align both annular and parallel within 0.001 IN tolerance for couplings 4 IN size and smaller.

i Couplings larger than 4 IN size: Increase tolerance 0.0005 IN per inches of coupling diameter, i.e., allow 6 IN coupling 0.002 IN tolerance, and allow a 10 IN coupling 0.004 IN tolerance.

b. For equipment rotating at speeds greater than 1200 rpm allow both annular and parallel positions within a tolerance rate of 0.00025 IN per inch coupling diameter.

2. If equipment is delivered as a mounted unit from factory, verify factory alignment on site after installation and realigned if necessary.

3. Check surfaces for runout before attempting to trim or align units.

I. Grouting:

1. After machine base has been shimmed, leveled onto equipment base, couplings aligned and mounting bolts tightened to correct torque value, place a dam or formwork around base to contain grouting between equipment base and equipment support pad.

a. Extend dam or formwork to cover leveling shims and blocks.
b. Do not use nuts below the machine base to level the unit.

2. Saturate top of roughened concrete subbase with water before grouting.

a. Add grout until entire space under machine base is filled to the top of the base underside.

b. Puddle grout by working a stiff wire through the grout and vent holes to work grout in place and release any entrained air in the grout or base cavity.

3. When the grout has sufficiently hardened, remove dam or formwork and finish the exposed grout surface to fine, smooth surface.

a. Cover exposed grout surfaces with wet burlap and keep covering sufficiently wet to prevent too rapid evaporation of water from the grout.

b. When the grout has fully hardened (after a minimum of seven (7) days) tighten all anchor bolts to engage equipment base to grout, shims, and equipment support pad.

c. Recheck driver-driven unit for proper alignment.

3.2 INSTALLATION CHECKS:

A. For all equipment specifically required in detailed specifications, secure services of experienced, competent, and authorized representative(s) of equipment manufacturer to visit site of work and inspect, check, adjust and approve equipment installation.

1. In each case, representative(s) shall be present during placement and start-up of equipment and as often as necessary to resolve any operational issues which may arise.

B. Secure from equipment manufacturer's representative(s) a written report certifying that equipment:

1. Has been properly installed and lubricated.

2. Is in accurate alignment.

3. Is free from any undue stress imposed by connecting piping or anchor bolts.

4. Has been operated under full load conditions and that it operated satisfactorily.

a. Secure and deliver a field written report to Owner immediately prior to leaving jobsite.

C. No separate payment shall be made for installation checks.

1. All or any time expended during installation check does not qualify as Operation and Maintenance training or instruction time when specified.

3.3 IDENTIFICATION OF EQUIPMENT AND HAZARD WARNING SIGNS:

A. Identify equipment and install hazard warning signs in accordance with Specification Section 10400.

3.4 FIELD PAINTING AND PROTECTIVE COATINGS:

A. For required field painting and protective coatings, comply with Specification Section 09905.

3.5 WIRING CONNECTIONS AND TERMINATION:

A. Clean wires before installing lugs and connectors.

B. Coat connection with oxidation eliminating compound for aluminum wire.

C. Terminate motor circuit conductors with copper lugs bolted to motor leads.

D. Tape stripped ends of conductors and associated connectors with electrical tape.

1. Wrapping thickness shall be 150 percent of the conductor insulation thickness.

E. Connections to carry full ampacity of conductors without temperature rise.

F. Terminate spare conductors with electrical tape.

3.6 FIELD QUALITY CONTROL:

A. Furnish equipment manufacturer services as specified in the individual equipment Specifications.

B. Inspect wire and connections for physical damage and proper connection.

C. After installation and prior to energizing the motor, provide insulation resistance test of all motors 125 HP and above.

1. Conduct test with 500 or 1000 Vdc megger.
2. Test each phase separately.
3. Disconnect all extraneous leads to the motor.
4. Comply with NEMA MG 1 safety requirements and test procedures.

D. Bump motor to check for correct rotation:

1. Ensure motor has been lubricated.
2. Check prior to connection to driven equipment.

3.7 DEMONSTRATION:

A. Demonstrate equipment in accordance with Specification Section 01650.

END OF SECTION

SECTION 11296

SURGE ANTICIPATOR VALVES

PART 1 GENERAL

1.1 SUMMARY

A. Furnish and install surge anticipator valve (SRV-01) at pump discharge header complete as shown on the plans and as specified herein.

1.2 QUALITY ASSURANCE

A. Referenced Standards:

1. American Water Works Association (AWWA).
2. American National Standard Institute.

1.3 SUBMITTALS

A. Submit under provisions of Division 01.

B. The following submittals are required, at a minimum:

1. Shop Drawings: See Specification Section 15100.
2. Operation and Maintenance Manuals:

a. See Division 01 for requirements for the contents of Operation and Maintenance Manuals.

C. Include any other information necessary for the Engineer to determine compliance with the specifications.

D. All deviations from Contract Documents shall be clearly identified and approved in writing by the Engineer.

E. Partial or incomplete submittals will not be reviewed by Engineer.

1.4 WARRANTY

A. The manufacturer shall provide a warranty on equipment against manufacturer's defects for twelve (12) months, commencing on the date of Owner-accepted substantial completion of the project. If the equipment should fail during the warranty period due to a defective part, it shall be replaced and the unit restored at no cost to the owner, including both service and parts.

1.5 EQUIPMENT LIST:

A. Surge Relief Valves shall be as follows:

SCHEDULE OF SURGE RELIEF VALVES						
Location	**Tag Number**	**Diameter (Size)**	**Low pressure pilot (CRA) psi range**	**High pressure pilot (CRL) psi range**	**Body Pattern**	**Appurtenances**
Raw Water Pump Station	SRV-01	12″	20-105	20-200	Globe	Limit Switch X105L

PART 2 PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS

A. Subject to compliance with the Contract Documents, the following manufacturers are acceptable:

1. Cla-Val model 52-03BKC X 105LCW.
2. Singer Surge Anticipating Relief Valve
3. Engineer-approved equivalent.

2.2 GENERAL

A. Valve shall control high pressures and power failure surges in pump discharge lines by releasing water from line under system pressure that exceeds the high pressure control setting, and also by opening a preset amount when sensed pressure decreases below a preset minimum in anticipation of a surge.

B. Valve shall be hydraulically operated, single diaphragm-actuated. The valve shall consist of three major components: the body with seat installed, the cover with bearings installed and the diaphragm assembly. The diaphragm assembly shall be the only moving part and shall form a sealed chamber in the upper portion of the valve separating operating pressure from line pressure. Packing glands and/or stuffing boxes are not permitted and there shall be no pistons operating the main valve or pilot controls.

C. Valve shall meet NSF-61/ANSI standards for drinking water.

D. End connections shall be 150 pound flanges.

E. Contractor shall supply and install pilot lines. Contractor shall supply and install stainless steel pilot pipe or tubing, minimum ¾″ inside diameter, to connect the sensing/pilot supply connection to the main header as shown.

F. Materials:

1. Main valve body and cover: ductile iron
2. Trim (disc guide, seat, and cover bearing): 316 stainless steel
3. Disc: Buna-N®
4. Diaphragm: nylon reinforced Buna-N®
5. Stem, nut, and spring: 316 stainless steel
6. Pilot system materials: lead free bronze with 316 stainless steel trim

G. Coating: FDA Fusion Bonded Epoxy Resin Process Applied 5-7 Mils thick.

H. Valve size and options shall be as listed in the Schedule below.

I. Valve shall include security cap to prevent unwarranted changes to the pressure relief set point.

J. Valve shall include isolation ball valves and pressure gauges.

2.3 MAINTENANCE MATERIALS

A. Provide one (1) set of any special tools required for operation or maintenance for each type valve.

PART 3 EXECUTION

3.1 INSTALLATION

A. See Specification Sections 11005 and 15100.

B. Contractor shall install valve in direct accordance with manufacturer's instructions.

3.2 VALVE STARTUP, TESTING AND TRAINING

A. A factory-trained representative from the manufacturer shall adjust and test valve function after it has been installed and the pump station is fully operational, as well as provide comprehensive hands-on instruction of valve operation and maintenance to the Owner's staff. Total time onsite for valve adjustment, testing and training shall a minimum of four (4) hours with a minimum of one (1) hour devoted to instruction of valve operation and maintenance.

3.3 EQUIPMENT STORAGE

A. The Contractor shall be responsible for receipt, protection and storage in accordance with manufacturer's recommendations of all items shipped to the site from the time of delivery until installation is completed and the units and equipment are ready for operation. The equipment shall be suitably covered and protected at all times.

END OF SECTION

SECTION 11297

PUMP CONTROL VALVES

PART 1 GENERAL

1.1 SECTION INCLUDES:

A. Pump control valves for transfer pump station (PVC-01, 02, and 03).

1.2 DESCRIPTION:

A. Globe-type control valve with solenoid valve control and limit switch to transmit valve position. Design shall include a built-in check valve.

B. The valve shall be designed for operation during pump starting and stopping. Valve shall be globe-type with 12 inch diameter flanged ends, 150 lb pressure class, 120 volt solenoid.

1.3 SUBMITTALS:

A. Submit manufacturer's information in accordance with Section 01300.

B. Submit operation and maintenance information in accordance with Section 01300.

PART 2 PRODUCTS

2.1 MANUFACTURERS:

A. Cla-Val Co. Model 60-BTKC with CSM11-HC.

B. Singer Booster Pump Control Valve.

C. Engineer Approved Equivalent.

2.2 MATERIALS:

A. Body: Ductile Iron.

B. Disc Retainer and Diaphragm Washer: Cast Iron.

C. Pilot Control: Low-lead Bronze.

D. Trim (Disc Guide Seat and Cover Bearing): Stainless Steel.

E. Gaskets and Diaphragm: Buna N.

F. Disc: Buna-N Rubber.

G. Diaphragm: Nylon Reinforced Buna-N Rubber.

2.3 ACCESSORIES:

A. Provide brass/bronze strainers at each connection to the process fluid.

2.4 SOLENOID VALVE:

A. Solenoid shall be NEMA Type 3 with aluminum body and stainless steel trim. Solenoid control power shall be 120 VAC 60 Hz. Solenoid valve shall have a manual override feature to enable operation without electric power.

2.5 NSF 61: Certification required.

PART 3 EXECUTION

3.1 INSTALLATION:

A. Install in accordance with manufacturer's instructions.

B. Contractor shall install valve in direct accordance with manufacturer's instructions.

3.2 VALVE STARTUP, TESTING AND TRAINING

A. A factory-trained representative from the manufacturer shall adjust and test valve function after it has been installed and the pump station is fully operational, as well as provide comprehensive hands-on instruction of valve operation and maintenance to Owner's staff. Total time onsite for valve adjustment, testing and training shall a minimum twelve (12) hours (1 ½ 8-hour days) with a minimum of two (2) hours devoted to instruction of valve operation and maintenance.

3.3 EQUIPMENT STORAGE

A. The Contractor shall be responsible for receipt, protection and storage in accordance with manufacturer's recommendations of all items shipped to the site from the time of delivery until installation is completed and the units and equipment are ready for operation. The equipment shall be suitably covered and protected at all times.

END OF SECTION

SECTION 11311

VERTICAL TURBINE PUMPS

PART 1 GENERAL

1.1 SECTION INCLUDES:

A. This Section specifies vertical turbine pumps (P-01, P-02, and P-03) for the Northeast Pump Station:

B. Furnish, install, test and place in satisfactory operation the vertical turbine pumps as shown in the drawings and specified herein.

C. See the pump schedule at the end of this section.

1.2 REFERENCES:

A. NSF 61: ANSI/NSF 61 National Sanitation Foundation Standard 61, Drinking Water Treatment Components.

B. American Society Of Mechanical Engineers (ASME): B16.1, Cast Iron Pipe Flanges and Flanged Fittings - Classes 25, 125 and 250.

C. Society of Automotive Engineers (SAE).

D. American Iron and Steel Institute (AISI)

E. Safe Drinking Water Act (SDWA)

1.3 SUBMITTALS:

A. Submit under provisions of Section 01300.

B. Product Data:

1. Submit product data for approval. As a minimum, include the following:

a. Manufacturer's standard descriptive bulletins, listing data including materials of construction and parts list.

b. Dimensional drawings of equipment.

c. Pump performance curves showing performance of pumps to be provided. Include curves for operation at 100% power and reduced power for pumps with VFDs. All extraneous information and curves shall be deleted. Specified operating points shall be indicated on the curve. Curves shall be 8-1/2 inch by 11 inch format. One pump application per curve. The performance curve shall indicate the following:

i Pump performance over the entire range from shutoff head to maximum flow.

ii Horsepower versus capacity over entire range.

d. Motor performance data, wiring diagrams, one-line diagrams and conduit entry dimensions and details.

C. Operation and Maintenance Information: Submit operation and maintenance information to include: procedures for routine maintenance; parts lists with illustrations; lubrication identification and recommendations.

1.4 WARRANTY

A. The manufacturer shall provide a warranty on equipment against manufacturer's defects for twelve (12) months, commencing on the date of Owner-accepted substantial completion of the project. If the equipment should fail during the warranty period due to a defective part, it shall be replaced and the unit restored at no cost to the owner, including both service and parts.

1.5 PERFORMANCE REQUIREMENTS:

A. Performance characteristics shall be such as to ensure stable operation and steady flow through the range of operating conditions. Pump curves shall rise continuously to shutoff. Pumps shall be capable of meeting the operating conditions shown in the schedule below.

B. Pump Characteristics:

1. Pump selection design point shall be within plus or minus 5 percent of the best efficiency point for the pump.

2. The submitted curve shall not exceed 95% of the nameplate horsepower rating at any point on the curve. When tested the pump shall not overload the nameplate horsepower of the motor at any point of operation.

PART 2 PRODUCTS:

2.1 MANUFACTURER:

A. Pumps and accessories:

1. Flowserve of Smith Pump
2. Hydroflo of Precision Pump Systems
3. Or Engineer pre-approved equal.

2.2 EQUIPMENT:

A. All wetted components of pumps shall consist of materials and coatings that comply with the Safe Drinking Water Act and are NSF 61 certified. **The maximum (average) chloride and total chlorine concentrations in the**

chloraminated potable water are estimated to be 350 - 400 mg/L (250 - 300 mg/L) and 8 - 10 (5 – 7) mg/L, respectively; wetted materials shall be selected to minimize chloride-related corrosion. If any of wetted materials listed below are not compatible with the given chloride and chlorine concentrations, pump supplier shall offer an alternate material that is compatible.

B. Bowl Assembly: The suction bell, suction bowl, intermediate bowls, and discharge adaptor shall be flanged-type from a close grained cast iron, and shall conform to ASTM A48, Class 30. Bowls shall have glass (enamel) or porcelain waterways per Owner selection. Intermediate bowls shall be of identical design for interchangeability.

1. The suction bowl shall be provided with a non-soluble grease packed bronze bearing, and a bronze or stainless-steel sand collar shall be incorporated in the pump design to protect the bearing from abrasives. The bearing housing shall have a sufficient opening at the bottom for easy removal of the bearing.

2. Impellers: The impellers shall be constructed from C958 nickel-aluminum-bronze. Either enclosed or open type impellers are acceptable. The impellers shall be free from defects and must be accurately cast, machined, balanced, and filed for optimum performance, and minimum vibration. Impellers shall be dynamically balanced per ISO 1940 G6.3. Impellers are to be standard product of the pump manufacturer and shall not contain special workmanship to temporarily increase efficiency. They shall be securely fastened to the bowl shaft with taper locks of Type 416 stainless steel. Impeller clearance shall be adjustable by means of a top shaft adjusting nut.

3. Wear rings: If of the enclosed impeller type, pumps 6 inches and larger shall be fitted with replaceable lead-free bronze (B271 Alloy C952) or stainless steel (CA-15) wear rings, in the suction bowl and intermediate bowls. Wear rings shall have the minimum practical clearance to the mating cylindrical surface of the impeller to provide adequate sealing independent of vertical positioning of the impellers. Integral wear rings are not acceptable.

4. Bowl Shaft: The bowl shaft shall be constructed from ASTM A582 Type 416 stainless steel. It shall be supported by water lubricated bearings suitable for application.

C. Column Assembly:

1. Water Lubricated Pumps: Pumps shall have intermediate column lengths with lineshaft bearing spacing not to exceed 8 feet. C927 Bronze or CA-15 stainless steel centering spiders of the drop-in-type shall be furnished for shaft stabilization at each column pipe coupling. Bearings shall be made of ARHT retained in the spider by a shoulder on each end of the bearing.

D. Column pipe: The column pipe shall be type A53 steel, grade A-B steel. Wall thickness shall be adequate for the bowl pressures under all operating conditions. Inside diameter of the pipe shall be such that the head losses shall not be over 5 feet per 100 feet of pipe. Pumps shall have intermediate column sections of a maximum length of 10 feet each. For dry pit installations, column pipe connections shall be flanged with Buna-N O-rings. For wet pit installations, either flanged or threaded sleeve coupling type connections are acceptable. For threaded connections, pipe ends shall be machined with 8 threads per inch with 3/16-inch taper and faced parallel to butt against centering spiders.

E. Line Shaft: Line shaft shall be of ample size to operate the pump without distortion or vibration. Diameter of the shaft shall be such that it is adequate to withstand the maximum torque and tensile forces imposed upon it. Shaft shall be furnished in interchangeable sections not over 8 feet in length, and shall be coupled with extra-strong threaded steel coupling machined from solid bar steel. Line shaft and couplings shall be Type 416 or Type 17-4PH stainless steel.

F. Discharge Head: The discharge head shall be ASTM A36 fabricated steel and A53 Gr. B pipe, designed to move resonant frequencies outside of the operating speed range. The discharge head shall have an ANSI class discharge flange rated for the expected operating pressure, but not rated less than the shut-off head for the pump provided. The flanges shall extend beyond the head base such that the pump can be removed without disturbing adjacent piping. The top shall have a register to ensure alignment of the pump driver. The discharge head shall include the head shaft, which extends through the pump driver. A base plate shall be provided such that the head can be seated on a flat, level surface. The head shaft shall terminate above the packing assembly, so that the driver can be removed without lifting over the shaft.

G. Mechanical Seal: A mechanical split seal shall be provided as part of the stuffing box: Flowserve PSS 4 split mechanical seal or approved equal. The mechanical seal shall be equipped with carbon and silicon carbon seal faces. The seal shall have a flushing/venting port, with FKM/EDPM secondary seals. The seal shall be anchored to the stuffing box with 18-8 stainless steel fasteners. Seal design shall not require external lubrication water. Seal lubrication shall be accomplished internally using pumped water, which shall be returned to the pump can through an NPT connection through the pump head base plate.

H. Fasteners: All fasteners shall be Type 316L stainless steel, including anchor bolts, other bolts, washers, and nuts.

I. Strainer: the pump suction bell shall be fitted with a heavy gauge wire woven basket type strainer, of Type 316L stainless steel. The strainer shall have a net inlet area equal to at least four times the suction pipe area. The maximum opening shall not be more than 75% of the minimum opening of the water passage through the bowl and impeller. The strainer shall be secured to the suction bell by means of Type 316L stainless steel cap screws, bolts, or clips as required.

J. Suction Barrels (Pump Cans): Quantity five (5) prefabricated stainless steel pump suction barrels shall be provided as shown on the plan sheets. They shall be constructed of 3/8" thick wall, low carbon Type 316 stainless steel. Mill test reports will be furnished if requested. The top surface shall have a minimum surface finish of 125 RMS and be perpendicular to the barrel vertical centerline within a tolerance of ± .020 inch. The top flange shall be minimum 1" thick with four threaded bolt holes and will include an o-ring groove with o-ring for sealing purposes. The barrel inlet shall be as shown on the plan sheets and shall be a flanged AWWA C207 Table 1 Class D Type 316L stainless steel weld flange. The bolting to attach the discharge head to the suction barrel shall be 18-8 SST and shall be furnished by the barrel manufacturer. The barrel length shall be as shown on the plan sheet and shall have a bottom cap plate of equal or greater thickness than top flange. The suction barrels shall be provided with a vent connection as shown on the drawings.

The installing Contractor must ensure that the top flange of the suction barrels is level to within .002 of an inch per foot of diameter. The Contractor must ensure that the level does not change during or after the concrete pour. The Contractor "must" us a machinist level to verify levelness. A carpenter's level will not be acceptable.

K. Driver: The pump driver shall meet the criteria listed in the "Performance Requirements" Section and the Schedule below. The power required to operate the bowl assembly, power losses in thrust bearings, and mechanical losses in shafting shall all be included in determining the driver load. The driver shall be sized not to have its nameplate rating overloaded at any operating condition from shut off to open flow. The driver shall house the pump thrust bearing that is to be rated for the maximum down thrust of the entire pump. The bearing shall also be capable of handling a momentary up thrust force equivalent to a maximum of 30 percent of its down thrust rating.

1. Electric Motor: The motor shall be a heavy duty squirrel cage induction type, NEMA design B vertical hollow shaft motor, with a non-reverse ratchet to prevent reverse rotation. A suitable thrust bearing shall be incorporated in the upper end of the motor adequate to receive the entire hydraulic thrust load of the pump unit plus the weight of the rotating parts under all conditions of operation.

2. For variable speed units the motor shall be Inverter Duty per NEMA MG1 part 31 for variable torque applications and provided with provisions to prevent premature bearing failure. At a minimum these provisions shall include a shaft grounding ring or brush, and an insulated end bearing.

3. Enclosure: WPI

4. Insulation Class: F

5. Service Factor: 1.15

6. Speed: 1800 rpm

7. Power Supply: 460 V, 60 Hz, 3 phase

2.3 PAINTS AND COATINGS:

A. All paints and coatings on wetted parts of pump (bowl, shaft, column, inside of head, etc.) and suction barrel/pump cans shall be suitable and NSF 61 certified as approved for potable water service. See Specification Section 09800, Painting.

PART 3 EXECUTION

3.1 INSTALLATION:

A. Install the equipment as indicated and in accordance with the manufacturer's written instructions.

3.2 EQUIPMENT STORAGE

A. The Contractor shall be responsible for receipt, protection and storage in accordance with manufacturer's recommendations of all items shipped to the site from the time of delivery until installation is completed and the units and equipment are ready for operation. The equipment shall be suitably covered and protected at all times.

3.3 FIELD QUALITY CONTROL:

A. Provide services of factory-trained manufacturer's representative to inspect installation and test pump operation after pump station, pipeline and elevated storage is a fully operational system so that potable water can be pumped from the WTP clearwells to the new elevated storage tank. Representative shall demonstrate satisfactory system operation and provide a minimum of four (4) hours of hands-on instruction to Owner's personnel on pump operation and maintenance. Site visit by manufacturer's representative shall be at least one full 8- hour working day for pump installation inspection and a total of two (2) additional 8-hour days for testing of P-01, P-02 and P-03 pump operation, as well as Owner instruction.

3.4 FIELD VIBRATION/OPERATION TEST:

A. Under the supervision of the manufacturer's representative, operate each pumping unit throughout its full range of operating heads. Unit shall be checked for excessive noise or vibration, misalignment, and any other operational problems.

B. Pumps and motors shall be tested per Hydraulic Institute Standard test method 1U at factory.

C. Record the following data during test and submit to Engineer:

1. Discharge pressure
2. Suction pressure (dry pit application only if available)
3. Motor voltage and current

4. Kilowatt consumption
5. Vibration levels in two axes at motor base. Measurements shall be made inline with pump discharge and at 90 degrees from discharge.
6. Shaft speed

Application/Location	**NE Transfer Pump Station**
Tag Number(s)	P-01 P-02 P-03
Number of Pumps	3
Environment	Indoor
Installation	Pump Cans
Primary Design Point: Capacity, each pump TDH	 3,000 gpm 350 feet
Secondary Design Point: Capacity, each pump TDH	 3,500 gpm 245 feet
Minimum Shut-off Head	425 feet
Minimum pump efficiency*	82%
Column pipe size	12 inches
Nominal discharge flange size	12 inches
Lubrication	Water
Column Pipe Coupling	Flanged
Operation	Constant Speed
Motor	350 h.p. Constant Speed
Motor Ambient Temperature Rating	40 °C

* Pump efficiency is not to be confused with bowl efficiency. The stated efficiency is for the entire pumping unit including the column assembly, head and bowl assembly.

END OF SECTION

SECTION 11313

SUMP PUMPS

PART 1 GENERAL

1.1 SECTION INCLUDES:

A. Electrically-operated sump pumps for pumping water.

1.2 SUBMITTALS:

A. Submit under provisions of Section 01300.

B. Product Data:

1. Submit product data for approval. As a minimum, include the following:

a. Manufacturer's standard descriptive bulletins.

b. Pump performance curve showing performance of pump to be provided. All extraneous information and curves shall be deleted. Specified operating points shall be indicated on the curve. The performance curve shall indicate the following:

i Pump performance over the entire range from shutoff head to maximum flow.

ii Horsepower vs capacity over entire range.

iii Curves shall be 8-1/2 inch by 11 inch format. One pump per curve.

c. Operation and Maintenance Information:

d. Submit operation and maintenance information to include: procedures for routine maintenance; parts lists with illustrations; lubrication identification and recommendations.

PART 2 PRODUCTS

2.1 SCHEDULE:

DESIGNATION	NO.	CAPACITY, GPM	TDH, FT.	DISCHARGE
Meter Vault Sump Pump	SP-01	25	15	1½" FNPT
Valve Vault	SP-02	20	35	2" FNPT
Surge Anticipator Valve Vault	SP-03	25	15	1½" FNPT

2.2 MANUFACTURERS:

A. Pumps and accessories:

Pentair Hydromatic SHEF Series with float switch – SHEF 45 for valve vault, and SHEF 30 for meter vault and surge valve vault.

2.3 EQUIPMENT:

A. General:

The equipment shall have the following features:

1. Solids handling capacity 3/4-inch.
2. Oil-cooled motor.
3. Shaded pole motor, 115 volts AC, single phase.
4. Motor housing cast iron.
5. Impeller cast iron for valve vault and thermoplastic vortex for meter vault.
6. Carbon and ceramic mechanical seal.
7. Integral float switch attached to pump for meter vault and separate float switch for valve vault.

2.4 MOTORS:

A. Motors shall be suitable for operation on 115 volts AC, 60 Hertz, single phase.

B. Provide enough feet electric cable attached to pump motors for connection to electrical outlet as shown on electrical drawings.

PART 3 EXECUTION

3.1 INSTALLATION:

A. Install the equipment as indicated and in accordance with the manufacturer's instructions.

3.2 FIELD TESTING:

A. Demonstrate proper operation of the pump and control by filling the sump with water and allowing the pump to operate. Cycle the pump on and off several times.

END OF SECTION

SECTION 13000

PROCESS CONTROL SYSTEMS - GENERAL PROVISIONS

PART 1 GENERAL

1.1 SCOPE OF WORK:

A. Process Control System Integrator (PCSI)

1. The General Contractor shall procure the services of a single PCSI to investigate, field verify, select, furnish, configure, customize, debug, install all control related equipment, materials, and labor and connect, calibrate, and place into operation all instrumentation, field mounted controllers, and control hardware, except for those services and materials specifically noted as being provided by the Application Service Provider (ASP), required to achieve a fully integrated and operational system as specified herein, and as indicated in the specifications and as shown on the P&ID and electrical drawings.

2. Equipment furnished under this contract as described in the specifications and as shown on the P&ID and electrical drawings shall be integrated into the overall Process Control System (PCS).

B. Application Service Provider (ASP)

1. Signature Automation, LLC shall be the Applications Service Provider (ASP). All work performed by the ASP shall be included under the SCADA Allowance shown on the Bid Form.

2. The ASP shall furnish all PCS programming work (PLC, OIT, SCADA, and HMI) required to achieve a fully integrated and operational system as specified herein.

3. Programmable Logic Controller (PLC), Operator Interface Terminal (OIT), Human Machine Interface (HMI) and Supervisory Control And Data Acquisition (SCADA) software purchase, installation and configuration, and other software configuration, including but not limited to loading of software on existing SCADA computers, operating system software configuration, ethernet and/or fiber optic configuration/communication (cable and conduit to be furnished and installed by the Electrical Contractor), configuration of Ethernet/Fiber Optic switches shall be provided by the ASP.

4. The ASP shall perform all work including:

a. PLC programming, testing of PLC logic, and start-up/training activities associated with programmed portions of the PLC.

b. Programming of the existing SCADA HMI, database development, and start-up/training activities associated with the configured portions of the HMI system.

c. SCADA historian programming to add historical data collection, trending, and calculations.

d. The PCSI and ASP shall coordinate, and schedule all required construction activities including startup, testing, inspection and training with the General Contractor, OWNER, and ENGINEER.

1.2 RELATED WORK:

A. General provisions of the Contract are included in Division 01 of the Specifications.

B. Specific control system and instrumentation materials and requirements are included in related sections of Division 13 and 16.

1.3 SUBMITTAL REQUIREMENTS:

A. General

1. Refer to Division 01 for general submittal requirements.

B. Final System Documentation

1. Submit in accordance with Division 01 O&M requirements.

2. The Final System Documentation shall consist of operations and maintenance manuals as specified herein. The manuals shall be bound in three-ring binders, maximum size of 3 inches, with drawings reduced to 11x17 (inch), then folded to 8.5x11 (inch) for inclusion.

Each section shall have a uniquely numbered tab divider, and each component within each section shall have a separate binder tab divider.

3. The operations and maintenance manuals shall be prepared specifically for this installation and shall include catalog data sheets, drawings, equipment lists, descriptions, parts lists and operating and maintenance instructions, at a minimum, contain the following information:

a. Table of Contents

i. A Table of Contents shall be provided for the entire manual with the specific contents of each volume clearly listed. The complete Table of Contents shall appear in each volume.

b. Instrument and Equipment Lists

i. The following lists shall be developed in Excel and provided not only as a hard copy in O&M, but also

electronically on a secure flash drive.

ii. An instrument list for all devices supplied including tag number, description, specification section and paragraph number, manufacturer, model number, serial number, range, span, location, manufacturer phone number, local supplier name, local supplier phone number, completion year replacement cost, and any other pertinent data.

iii. An equipment list for all non-instrument devices supplied listing description, specification section and paragraph number, manufacturer, model number, serial number, location, manufacturer phone number, local supplier name, local supplier phone number, completion year replacement cost, and any other pertinent data.

c. Data Sheets with Vendor Operations and Maintenance Information

i. ISA S20 style data sheets shall be provided for all field instruments.

ii. Cover page for each device, piece of equipment, and OEM software that lists, at a minimum, date, specification number, product name, manufacturer, model number, location(s), and power required. Preferred format for the cover page is ISA S20, general data sheet; however, other formats will be acceptable provided they contain all required information.

iii. Final vendor O&M documentation for each device, piece of equipment, or OEM software shall be either new documentation written specifically for this project or modified standard vendor documentation. All standard vendor documentation furnished shall have all portions that apply clearly indicated with arrows or circles. All portions that do not apply shall be neatly lined out or crossed out. Groups of pages that do not apply at all to the specific model supplied shall be removed.

iv. For any component requiring dip switch settings or custom software configuration, that information shall be included along with the corresponding data sheets and O&M information.

v. Complete parts list with stock numbers, including spare parts.

d. Operations and Maintenance manuals shall be constructed in accordance with Division 01 and shall include the following information:

i. Manufacturer's contact address and telephone number for parts and service.

ii. Instruction books and/or leaflets.

iii. Recommended renewal parts list.

iv. Record documents for the information required by the Submittals section above.

e. Software Programs

i. Provide native backup files of the programming code for each new controller.

- Programming code shall be fully annotated with comments describing the functionality of each section and group of coding.

ii. Provide native backup files of any modified SCADA HMI software files.

f. Communication Equipment

i. Provide documentation and backup files for all communications programming code, including all parameter settings.

g. As-Built Drawings

i. Complete as-built drawings, including all drawings and diagram specified in this section under the "Submittals" section. These drawings shall include all termination points on all equipment the system is connected to, including terminal points of equipment not supplied by the PCSI.

ii. As-built documentation shall include information from submittals, as described in this Specification, updated to reflect the as-built system. Any errors in or modifications to the system resulting from the Factory and/or Functional Acceptance Tests shall be incorporated in this documentation.

h. Original Licensed Software

i. Submit original software media of all software provided under this Contract. Submit original paper based and

electronic documentation for all software provided. Submit license agreement information including serial numbers, license agreements, User Registration Numbers and related information. All software provided under this Contract shall be licensed to the OWNER at the time of purchase. Provide media in software sleeves within O&M manual.

i. Electronic O&M Information

i. In addition to the hard copy of O&M data, provide an electronic version of all equipment manuals on a secure flash drive. Electronic documents shall be supplied in Adobe Acrobat (PDF) format.

ii. Provide electronic files for all custom-developed manuals. Text shall be supplied in both Microsoft Office format and Adobe Acrobat format.

iii. Provide electronic files for all drawings produced. Drawings shall be in AutoCAD ".dwg" format and in Adobe Acrobat format. Drawings shall be provided using the AutoCAD eTransmit feature to bind external references, pen/line styles, and fonts into individual zip files along with the drawing file.

iv. Each computer system hardware device shall be backed up onto a secure flash drive after Substantial Completion and shall be turned over to the OWNER.

v. If specified in the training section, provide digital copies of all training videos. Videos shall be in a format that is readable by standard DVD players and by standard PC DVD drives. Format and shall be a minimum of 800 by 900 pixels and shall include sound.

1.4 COORDINATION MEETINGS:

A. Refer to Division 01 Section for coordination meeting requirements.

B. PCSI Kick-off Meeting

1. The purpose of the meeting shall be to discuss the PCSI's and ASP's project plan and schedule, to summarize the PCSI's understanding of the project; discuss any proposed substitutions or alternatives; schedule testing and delivery deadline dates; provide a forum to coordinate hardware and software related issues; and request any additional information required from the OWNER. Prepare and distribute an agenda for this meeting a minimum of one week before the scheduled meeting date. The meeting will last up to one-half (1/2) business day.

C. PCSI Coordination Meeting

1. The PCSI shall decide for the meetings and prepare and send a proposed agenda to all participants at least one week before scheduled meetings. The PCSI shall be responsible for promptly preparing and distributing meeting minutes to all attendees.

2. The PCSI shall prepare meeting minutes and distribute them to all attendees and others affected by any decisions made at the meetings. The meeting minutes shall be distributed within one week following the meeting.

3. The meetings shall be held at the OWNER's facility, General Contractor's field office, or at the project site (as coordinated with the ENGINEER and OWNER) and shall include, at a minimum, attendance by the OWNER, ENGINEER, General Contractor's project engineer, PCSI/ASP project engineer, and the electrical subcontractor.

   a. The Field Startup Coordination Meeting shall be held no more than one month prior to site testing for each location.

   b. A typical agenda may include, but shall not be limited to, the following:

      i. Review of work progress.

      ii. Field observations, problems, and decisions.

      iii. Identification of problems which may impede planned progress.

      iv. Review of submittal schedule and submittal status.

      v. Review of offsite fabrications and delivery schedules.

      vi. Maintenance of progress schedule.

      vii. Corrective measures to regain projected schedules.

      viii. Planned activities for subsequent work period.

      ix. Coordination of projected progress.

      x. Maintenance of quality and work standards.

      xi. Effect of proposed changes on progress schedule and coordination.

      xii. Other business relating to work.

1.5 QUALITY ASSURANCE:

A. The Process Control System Integrator (PCSI) shall be a "systems integrator" regularly engaged in the design and the installation of instrumentation systems and their associated subsystems as they are applied to the municipal water and wastewater industry. For the purposes of this Specification Section, a "systems integrator" shall be interpreted to mean an organization that complies with the following criteria:

1. Employs personnel on this project who have experience installing and configuring process instrumentation and implementation of the specific programmable controllers, computers, and software proposed for this project. Key personnel shall hold ISA CCST Level 1 certification or have a minimum of five years of verifiable plant start-up experience. Key personnel shall include, as a minimum, the lead field technician.

2. Employs a registered professional Control Systems Engineer or Electrical Engineer in the state of Texas to supervise or perform the work required by this Specification Section.

3. Has successfully completed work of similar or greater complexity on at least three previous projects within the last five years. Successful completion shall be defined as a finished project completed on time, without any outstanding claims or litigation involving the PCSI. Potential references shall be for projects where the PCSI's contract was of similar size to this Project.

4. Has been in the water/wastewater industry performing the type of work specified in this specification section for a minimum of five continuous years.

B. The PCSI shall maintain a permanent, fully staffed and equipped service facility within 200 miles of the project site with full-time employees capable of designing, fabricating, configuring, installing, calibrating, and testing the systems specified herein. At a minimum, the PCSI shall be capable of responding to on-site problems within 12 hours of notice. Provide an on-site response within four hours of notification starting at two months before scheduled start-up to two months after start-up completion.

1.6 DELIVERY, STORAGE, AND HANDLING:

A. Delivery, storage, and handling shall be in accordance with Division 01, General Requirements.

1.7 WARRANTY:

A. Provide warranty per Division 01.

PART 2 PRODUCT

Not used.

PART 3 EXECUTION

3.1 GENERAL REQUIREMENTS – INSTALLATION:

A. The ASP shall support the PCSI, Contractor, and suppliers by providing guidance related to control system installation requirements defined within the contract documents.

B. The PCSI shall provide, install, and coordinate the overall implementation of the control system components defined within the contract documents. The ASP shall purchase and install all PLC, OIT, HMI, and SCADA software.

3.2 GENERAL REQUIREMENTS – TESTING:

A. The ASP and PCSI shall provide all testing, testing procedures, testing forms, and testing coordination with the OWNER/ENGINEER.

B. The PCSI shall supervise and/or perform the requirements of this Section. As part of these services, the PCSI shall include, for those equipment items not manufactured by him/her, the services of an authorized manufacturer's representative to check the equipment installation and place that portion of the equipment in operation. The manufacturer's representative shall be thoroughly knowledgeable about the installation, operation, and maintenance of the manufacturer’s equipment.

C. The PCSI and ASP shall provide all test equipment and staff necessary to perform the testing as specified herein:

1. All Process Control System hardware and software shall be thoroughly tested to verify proper operation as an integrated system.

2. Any defects or problems found during the testing activities shall be corrected and then retested to demonstrate proper operation.

3. Check and confirm the proper installation of all instrumentation and control components and all cable and wiring connections between the various system components prior to placing the various processes and equipment into operation.

4. Conduct a complete system checkout and adjustment, tuning of control loops, checking operation functions, and testing of final control actions. All problems encountered shall be promptly corrected to prevent any delays in startup of the various unit processes.

5. The PCSI and ASP working together shall be responsible for initial operation of the Process Control System and shall make any required changes, adjustment or replacements for operation, monitoring, and control of the various processes and equipment necessary to perform

the functions intended.

D. The PCSI shall provide the following documentation for use during the testing activities.

1. Complete panel schematic and internal point-to-point wiring interconnect Drawings.

2. Complete electrical control schematics in accordance with JIC standards.

3. Complete panel layout Drawings.

4. Complete field wiring diagrams.

5. Complete instrument loop diagrams.

6. Completed Calibration/Recalibration Certificates for all field and panel devices that require adjustment or calibration.

E. Contractor shall provide one set of the above-listed documentation for the OWNER's personnel, one set for the ENGINEER's use, one set for field use, and the required number of sets for the Contractor's use.

F. The Drawings corrected and modified during testing shall form the basis for the "As-Built" Record Drawing requirement.

G. Contractor shall furnish to ENGINEER two copies of an installation inspection report certifying that all equipment has been installed correctly and is operating properly. The report shall be signed by authorized representatives of both Contractor and the system supplier.

H. As part of the requirement of this Specification Section, it is the responsibility of the PCSI and ASP to provide a complete operational control system. Confirmation of an Operational control system is dependent upon results derived from test procedures as specified in this Section.

I. The PCSI and ASP shall test the system so that the OWNER/Engineer can verify all the points in the new process control system. The PCSI and ASP shall coordinate the Operational Readiness Tests (ORT) and Functional Demonstration Tests (FDT) with the OWNER/ENGINEER.

J. At a minimum, the testing shall include the following:

1. Factory Testing

   a. Unwitnessed Factory Test (UFT)
   b. System Integration Test (SIT)

2. Field Testing

   a. Operational Readiness Test (ORT)

b. Functional Demonstration Test (FDT)
c. 30-day Site Acceptance Test (SAT)

K. Each test shall be in the cause and effect format. The person conducting the test shall initiate an input (cause) and, upon the system's or subsystem's producing the correct result (effect), the specific test requirement will have been satisfied.

L. All tests shall be conducted in accordance with prior OWNER/ENGINEER approved procedures, forms, and all checklists as submitted by the PCSI and ASP. Each test to be performed shall be described and a space provided after it for sign-off by the appropriate parties after its satisfactory completion. The PCSI shall include "punchlist" forms with the test procedures to document issues that arise during the testing. Punchlist forms, at a minimum, shall include a specification cross reference; an issues description field; a resolution description field; and a sign-off area for the PCSI/ASP, OWNER, and ENGINEER.

M. Copies of the signed-off test procedures, forms, and checklists will constitute the required testing documentation. The test result forms shall be submitted to the OWNER/ENGINEER for approval within 10 days of completion of each test.

N. The PCSI shall provide all special testing materials and equipment. Wherever possible, perform tests using actual process variables, equipment, and data. Where it is not practical to test with real process variables, equipment, and data, the PCSI and ASP shall provide suitable means of simulation. These simulation techniques shall be defined in the test procedures.

O. The PCSI and ASP shall coordinate all required testing with the Contractor, all affected Subcontractors, the ENGINEER, and the OWNER.

P. The PCSI shall furnish the services of field service engineers, all special calibration and test equipment, and labor to perform the field tests.

Q. The OWNER/ENGINEER reserves the right to test or retest all specified functions, whether explicitly stated on the Test Procedures, as required, to determine compliance with the functional requirements of the overall system. Such testing required to determine compliance with the specified requirements shall be performed at no additional cost to the OWNER. The OWNER/ENGINEER's decision shall be final regarding the acceptability and completeness of all testing.

R. Correction of Deficiencies

1. All deficiencies in workmanship and/or items not meeting specified testing requirements shall be corrected to meet specification requirements at no additional cost to the OWNER.

2. Testing, as specified herein, shall be repeated after correction of deficiencies is made until the specified requirements are met. This work shall be performed at no additional cost to the OWNER.

3.3 FACTORY TESTING - UNWITNESSED FACTORY TEST (UFT):

A. Application Service Provider (ASP)

1. Prior to field testing, the ASP shall test all PLC, OIT, SCADA and HMI applications at the ASP's facility to ensure the system will operate as specified. All analog and discrete input/output points not interconnected at this time shall be simulated to ensure proper operation of all alarms, monitoring devices/functions, and control devices/functions.

2. An I/O point checkout shall be performed to verify proper operation of the input/output points. The verification of the signals will be accomplished via the use of the PLC programming software. At a minimum, the I/O checkout shall consist of four steps.

a. Digital input signals: Verification of proper alarming, statuses, etc., shall be performed utilizing the tools available in the PLC programming software.

b. Analog input signals: Verify at zero percent, 25 percent, 50 percent, 75 percent, and 100 percent of full scale. The appropriate scaled value shall be verified utilizing the tools available in the PLC programming software.

c. Digital output signals: Initiate by the user by writing to the signals utilizing the PLC programming software.

d. Analog output signals: Initiated by the user by writing to the signals utilizing the PLC programming software. Verify at zero percent, 25 percent, 50 percent, 75 percent, and 100 percent of full scale.

B. Process Control System Integrator (PCSI)

1. All panels, consoles, and assemblies, provided by the PCSI, shall be inspected and tested to verify their conformance with related submittals, Specifications, and Drawings.

2. Tests to be performed shall include, but not be limited to, the following. Each of these tests shall be specifically addressed in the Test Procedure submittal.

a. All panels and enclosures being provided shall undergo a thorough inspection to verify the integrity of the cabinet enclosures, frame structures, paint work and finish, etc. Additionally, the PCSI shall review the panel drawings with the OWNER/ENGINEER to ensure they accurately reflect the panel layout and wiring.

b. Panel wire pull tests shall be performed on all wiring to ensure it has been connected to the appropriate torque to prevent wires from coming loose.

c. For panels provided in new enclosures, heat loading tests shall be performed to ensure proper cooling/ventilation is being provided.

C. All control panels provided or modified shall be included in these tests. Upon successful completion of the UFT, the Contractor shall submit a record copy of the PCSI and ASP test results to the OWNER/ENGINEER and coordinate the scheduling of the ORT.

3.4 FACTORY TESTING – SYSTEM INTEGRATION TEST (SIT):

A. Before scheduling the SIT, the PCSI/ASP shall determine through their own UFT and through their internal quality assurance program that the equipment is ready for shipment to the job site.

B. All system tests performed and specified for the UFT shall be repeated in the presence of the OWNER/ENGINEER.

C. The SIT will be conducted at the PCSI facility. The PCSI/ASP shall notify the OWNER/ENGINEER in writing that the system is ready for the SIT. The OWNER/ENGINEER shall schedule a test date within 14 days of receipt of the "Ready to Test" letter. At the time of notification, the PCSI/ASP shall submit any revisions to the detailed test procedure previously approved by the OWNER/ENGINEER.

D. The purpose of the SIT is to verify the functionality, performance, and stability of the hardware and software. The system must operate continuously throughout the SIT without failure, except where initiated per the established test procedures. Any unanticipated failures may, at the OWNER/ENGINEER's option, result in the overall SIT being deemed unsuccessful. Successful completion of the SIT, as determined by the OWNER/ENGINEER, shall be the basis for approval of the system to be shipped to the job site.

E. The various tests performed during the SIT shall be designed to demonstrate that hardware and software fulfill all the requirements of the specifications and Contract Drawings. The test conditions shall resemble as closely as possible the actual installed conditions. Any additional hardware or software that may be required to successfully verify system operation shall be supplied at no cost to the OWNER.

F. Tests to be performed during the SIT shall include, but not be limited to, the following:

1. Perform a system audit to verify all components have been staged for the test.

2. Inspect the system inventory to verify all components have been documented properly with correct model numbers, serial numbers, etc.

3. For each hardware enclosure, inspection shall include, but not be limited to, cabinet enclosures, frame structure, paint work and finish, dimensions, and hardware operability (i.e., fans, door hinges, keylocks, etc.).

4. For each subpanel, inspection shall include, but not be limited to, I/O subsystem physical layout, power supply sizing and mounting, cable routing, wire runs across hinges properly installed, fans and blowers unobstructed and mounted to maximize air flow, power conditioning correctly installed, and overall layout and installation of components meets manufacturer's recommendations and standard industry-accepted practices.

5. Demonstrate operability of all equipment.

6. 100 percent point check of I/O, including wiring. Analog signals shall include verification of zero percent, 25 percent, 50 percent, 75 percent, and 100 percent of scale. Additionally, out-of-range testing (over and under scale) shall be accomplished.

7. Demonstrate the ability to monitor and change at least 20 pieces of digital and analog data in each PLC from the HMI software at all operator workstations.

8. Demonstrate the operability of all mass storage equipment.

9. Demonstrate communication failure and system restart.

10. Demonstrate total power failure and recovery. The UPS shall be removed for this test.

11. Demonstrate the ability of the UPS's to meet the runtime requirements upon loss of power.

12. Demonstrate logical failure conditions for control strategies (i.e., instrument failures, equipment failures, loss of communication between the Process I/O Server and the PLC, loss of peer-to-peer communication, etc.).

G. During the test, for a period of time equal to at least 20 percent of the test duration, the OWNER/ENGINEER shall have unrestricted access to the system to perform any additional testing desired or to re-test any previously tested components.

H. All analog control panels shall be included in these tests.

I. All deficiencies identified during these tests shall be corrected and re-tested prior to completing the SIT as determined by the OWNER/ENGINEER.

J. The following documentation shall be made available to the OWNER/ENGINEER at the test site both before and during the SIT:

1. All Contract Drawings and Specifications, addenda, and change orders.

2. Master copy of the test procedure.

3. Bill of material of the computer/PLC/LAN equipment and software to be tested including make, model, and serial number.

4. Design-related hardware submittal applicable to the equipment being tested.

5. Software licenses.

6. Software documentation submittal.

K. The daily schedule during these tests shall be as follows:

1. Morning meeting to review the day's test schedule.

2. Scheduled tests and sign-offs.

3. End of day meeting to review the day's test results and to review or revise the next day's test schedule.

4. Unstructured testing period by the witnesses.

L. All test data and procedures followed during testing shall be logged, and certified copies of the logs shall be provided to the OWNER/ENGINEER.

3.5 FIELD TESTING - OPERATIONAL READINESS TEST (ORT):

A. Following installation of the process control system components and prior to startup and the Functional Demonstration Test, the entire system shall be certified (inspected, wired, calibrated, tested, etc., and documented) that it is installed and ready for the ORT as defined below.

B. Loop/Component Inspections and Tests: The entire system shall be checked for proper installation, calibrated, and adjusted on a loop-by-loop and component-by-component basis to ensure that it is in conformance with related submittals and these Specifications.

1. The Loop/Component Inspections and Tests shall be implemented using OWNER/ENGINEER approved forms and checklists.

a. Each loop shall have a Loop Status Report to organize and track its inspection, adjustment, and calibration. These reports shall include the following information and check-off items with spaces for sign-off by the system supplier:

i. Project name, test date, PCSI/ASP name, and lead PCSI/ASP technician name.

ii. Loop number.

iii. Tag number for each component.

iv. Check-offs/sign-offs for each component: Tag/identification; installation; termination (wiring and tubing); scale, range, and setpoint as applicable; and calibration/adjustment (four-point for analog, setpoint for switches) rising and falling.

v. Check-offs/sign-offs for the loop: Panel interface terminations; I/O interface terminations; I/O signal operation; inputs/outputs operational (received/sent, processed, adjusted); total loop operation; process controller scaling and adjustment; and space for comments.

vi. Tag/identification.

vii. Installation.

viii. Termination – wiring.

ix. Calibration/adjustment – Check-offs/sign-offs for the loop.

x. Panel interface terminations.

xi. I/O interface terminations.

xii. I/O signal operation.

xiii. Inputs/outputs operational: Received/sent, processed, and adjusted.

xiv. Total loop operation: Provide space for comments.

b. Each active Analog subsystem element and each I/O module shall have a Component Calibration Sheet. These sheets shall have the following information, spaces for data entry, and a space for sign-off by the PCSI.

i. Project name.

ii. Loop number.

iii. Component tag number of I/O module number.

iv. Component code number analog system.

v. Manufacturer (for Analog system element).

vi. Model number/serial number (for Analog system).

vii. Summary of functional requirements shall include, but not be limited to, scale and chart ranges of indicators, recorders, and transmitters/converters; functions of computing elements; and parameters of controllers (i.e., proportional, integral, derivative, reverse/forward acting, etc.).

- Indicators: Scale.
- Transmitters/Converters: Scale.
- Computing Elements: Function.
- Controllers: Action (direct/reverse) control Modes (PID).
- Switching Elements: Unit range, differential (FIXED/ADJUSTABLE), Preset (AUTO/MANUAL).
- I/O Modules: Input or output.

2. Calibrations

a. Analog Devices: Required and actual inputs and outputs at 0, 25, 50, 75, and 100 percent of span, rising and falling.

b. Discrete Devices: Required and actual trip points and reset points.

c. Controllers: Mode settings (PID).

d. I/O Modules: Required and actual inputs or outputs for 0, 25, 50, 75, and 100 percent of span, rising and falling.

i. Provide space for comments.
ii. Space for sign-off by the PCSI.

C. The PCSI shall maintain the Loop Status Reports sheets at the job site and make them available to the OWNER/ENGINEER at any time.

D. These inspections, calibrations, and tests do not require witnessing. However, the OWNER/ENGINEER will review Loop Status Sheets and spot check the PCSI/ASP test process periodically. Any deficiencies found shall be corrected by the PCSI/ASP prior to commencement of the Functional Acceptance Test.

E. Prior to checkout of the I/O to the SCADA HMI, the PCSI and ASP shall thoroughly test all I/O from the field devices to the PLC terminals, and verify the PLC is powered up and the PLC is communicating to the SCADA servers. After the PCSI and ASP has successfully tested all I/O from the field devices

to the PLC terminals, the PCSI and ASP shall test all I/O from the SCADA HMI to the field devices.

F. Computer-Manual (i.e., Remote-Manual) start/stop, open/close commands of all devices controlled by the SCADA system shall be verified by the PCSI and ASP during the ORT.

G. For all panels with enclosures (new and existing) modified by this Contract, heat load tests shall be performed to ensure proper cooling/ventilation is being provided.

H. Upon successful completion of the ORT, the Contractor shall submit a record copy of the PCSI and ASP test results to the OWNER/ENGINEER and request the scheduling of the FDT as noted in the following section.

3.6 FIELD TESTING - FUNCTIONAL DEMONSTRATION TEST (FDT):

A. Prior to startup and the 30-day Site Acceptance Test, the entire installed instrument and control system shall be certified that it is ready for operation. All preliminary testing, inspection, and calibration shall be complete as defined in the ORT. The FDT will be a joint test by the PCSI, ASP and the equipment suppliers. PCSI shall coordinate with the OWNER/ENGINEER to allow for OWNERS/ENGINEER presence during this test.

B. The Midland NE Transfer Pump Station (TPS), Transfer Pipeline and Elevated Storage Tank (EST) must be fully operational and ready for continuous water transfer prior to the start of the FDT. Upon successful startup of the entire NE water transfer system, the entire system including the process control system shall operate for a continuous 100 hours without failure before the FDT is started.

C. Once a process area has been started up and is operating, a witnessed FDT shall be performed on that system to demonstrate that it is operating and is in compliance with these Specifications. A witnessed FDT shall be performed on each process area. Each specified function shall be demonstrated on a paragraph-by-paragraph, loop-by-loop, and site-by-site basis.

D. Loop-specific and non-loop-specific tests shall be the same as specified under ORT, except that the entire installed system shall be tested, and all functions demonstrated using live field-based data to the greatest extent possible.

E. Updated versions of the documentation specified to be provided for during the factory tests shall be made available to the OWNER/ENGINEER at the job site both before and during the tests. In addition, one copy of all O&M Manuals shall be available for reference at the job site, both before and during testing.

F. During the FDT, a demonstration of communication failure and recovery shall be accomplished. This test shall be scheduled and coordinated with OWNER's personnel to minimize the impact on plant operations.

G. Punchlist items and resolutions noted during the test shall be documented on the Punchlist/Resolution form. In the event of rejection of any part or function test procedure, the PCSI and ASP shall perform repairs, replacement, and/or retest within 10 days.

H. Upon successful completion of the FDT, the Contractor shall submit a record copy of the PCSI and ASP test results to the OWNER/ENGINEER and request the scheduling of the SAT as noted in the following section.

3.7 FIELD TESTING - 30-DAY SITE ACCEPTANCE TEST (SAT):

A. After completion of the Operational Readiness and Functional Demonstration Tests, the PCSI and ASP shall be responsible for operation of the entire system for a period of 30 consecutive days (Site Acceptance Test – SAT), under conditions of full plant process operation, without a single non-field-repairable malfunction.

B. During this test plant operation, PCSI and ASP personnel shall be present from 8 am to 5 pm on the first day of the SAT and as required during the remainder of the SAT to address any potential issues that would impact the overall system operation. The PCSI and ASP are expected to provide personnel for this test who have an intimate knowledge of the hardware, software, field wiring, and network configuration of the system.

C. The PCSI and ASP is expected to provide personnel for this test who have an intimate knowledge of the software programming of the system. When PCSI and ASP personnel are not on site, the PCSI and ASP shall provide cell phone/pager numbers that OWNER personnel can use to ensure that support staff is available by phone and/or on site within four hours of a request by operations staff.

D. While this test is proceeding, the OWNER/ENGINEER shall have full use of the system. Only plant operating personnel shall be allowed to operate equipment associated with live plant processes. Plant operations shall remain the responsibility of OWNER, and the decision of plant operators regarding plant operations shall be final.

E. Any malfunction during the tests shall be analyzed and corrections made by the PCSI or ASP for programming, hardware, software, field wiring, and network configuration issues. The OWNER/ENGINEER will determine whether any such malfunctions are sufficiently serious to warrant a repeat of this test.

F. Any malfunction during this 30 consecutive day test period which cannot be corrected by the PCSI or ASP personnel within 24 hours of occurrence, or more than two similar failures of any duration, will be considered as a non-field-repairable malfunction.

G. The PCSI or ASP shall perform repairs or replacement within 10 days in the event of rejection of any part or function of the hardware, software, field wiring, and network configuration systems.

H. After successful completion of repairs by the PCSI and/or ASP and the OWNER/ENGINEER have accepted and signed off on the repairs, the SAT will be re-started from the beginning of the 30-day period.

I. All database, process controller logic, and graphical interface system errors must be functioning as required per the specifications prior to the start of each test period. The 30-day test will not be considered successful until all database points and logic functions are tested and verified to be correct.

J. The total availability of the system shall be greater than 99.5 percent (99.5%) during this test period. Availability shall be defined as:

Availability in percent = 100 * (Total Testing Time – Down Time) / Total Testing Time

K. Down times due to power outages or other factors outside the normal protection devices or backup power supplies provided shall not contribute to the availability test times above.

L. Throughout the duration of the 30-day SAT, no software or hardware modifications shall be made to the system without prior approval from the OWNER/ENGINEER.

M. Upon successful completion of the 30-day operation test and subsequent review and approval of complete system final documentation, the system shall be considered substantially complete and the warranty period shall commence.

N. Certification of Installation: Following successful completion of the 30-day test, the Contractor shall issue a Certification of Installation. Certification shall be on Contractor corporate letterhead and signed by an officer of the firm. Certification shall state that the contract, including process control system, has been completed in conformance with plans and specifications. Certification shall be submitted to the OWNER/ENGINEER as specified herein.

3.8 GENERAL REQUIREMENTS – TRAINING:

A. PCSI shall provide a minimum of four (4) hours of onsite training on the O&M of all field instrumentation and control equipment, detailed explanation of the control strategy, and detailed demonstration of local manual control at MCC and field control panels.

B. The ASP onsite training shall cover plant operation with the automatic control system using the OIT, SCADA HMI display screens, including at a minimum all the following items:

1. Basics of OIT and SCADA HMI control and navigation.

2. Alarming and Interlocks.

3. Auto functionality of automated processes and OIT and SCADA HMI control.

4. Failure modes of OIT and SCADA HMI equipment and operator responses.

A minimum of two (2) 2-hour training sessions are required.

C. PCSI and ASP training personnel shall be intimately familiar with both the Control System and the Plant Process and shall be familiar with the designed operations of the plant and how the control system executes the operation.

D. The PCSI and ASP shall, at a minimum, distribute the Final O&M Manual as a teaching aid during the Plant Operator field training sessions.

END OF SECTION

SECTION 13320

INSTRUMENTATION SYSTEM

PART 1 GENERAL

1.1 SECTION INCLUDES:

A. Instrumentation Devices.

B. Control Panels including PLC/HMI.

C. Appendices:

1. Appendix A Control Strategies.

1.2 SUBMITTALS:

A. Product Data: Under provisions of Section 1300:

1. Block Diagram: A diagram showing all major PLC components. Identify components by manufacturer and model number. Include diagram of interconnecting cables.

2. Descriptive Information: Catalog information, descriptive literature, performance specifications, internal wiring diagrams, power and grounding requirements, power consumption, and heat dissipation for all elements specified herein. Clearly mark all options and features proposed for this project.

3. Schematics, wiring diagrams, and other documentation to show details and operation of proposed system.

4. Outline Drawings: Equipment envelope drawings showing: external dimensions, enclosure materials, conduit connections, and installation requirements.

5. Input/Output List: For each I/O point, list the point type, tag number of the source or final control element, equipment description, PLC number, PLC terminal identification, and PLC address.

6. Installation Details: Any modifications or further details as may be required to supplement the Contract Documents and adequately define the installation of the PLC elements.

B. Operation and Maintenance Information, including As-Built Drawings and Schematics. Information to include detailed descriptions of system operations.

C. Vendor Qualifications showing compliance with paragraph 2.2.

D. Instrumentation and control system integrator shall take responsibility for installing and configuring all instrumentation and control-related equipment.

Via the SCADA allowance, the City of Midland's SCADA integrator (Signature Automation) shall install all PLC/HMI software and provide all programming and testing of PLC/HMI (RTU-1) after control equipment and instrumentation is installed.

PART 2 PRODUCTS

2.1 STANDARDS:

A. All aspects of Instrumentation and Control System shall comply with the applicable standards of the Instrumentation Society of America.

B. Instrument installations shall comply with manufacturer's written installation instructions and American Petroleum Institute RP550.

2.2 ACCEPTABLE MANUFACTURERS AND VENDORS:

A. Control system integrator shall demonstrate at least five (5) years experience in design, manufacture, and installation of similar instrumentation systems. **NOTE: Control system integrator is not responsible for programming PLC and HMI and related testing. The City of Midland's SCADA Integrator (Signature Automation) shall install all PLC/HMI software and provide programming and testing after equipment is installed via a separate SCADA allowance. Refer to Section 13000 for more detail on the SCADA Integrator responsibilities.**

2.3 SYSTEM DESCRIPTION:

A. PLC Control Panel Cabinet (RTU-1)

1. The PLC control panel cabinet (RTU-1) shall be a NEMA 12 carbon steel enclosure suitable for use inside climate-controlled room. The front panel of the cabinet shall contain operator interface and push buttons, as detailed within this specification. The PLC based control panel shall also include an operator interface display mounted on the front of the control panels. The internal portion of the cabinet shall contain all rack mounted PLC equipment, power supply, processor and interface cards. Relays, terminal strips and surge suppressors shall also be contained within the cabinet. Terminal strips for all field wiring shall be furnished within the panel.

2. Circuit breakers shall be provided within the panel. A duplex outlet and fluorescent panel light shall be included within the panel.

3. One surge suppression device on the 120 VAC main supply line shall be installed.

4. On all analog input signals, current isolators shall be installed to galvanically separate external and internal 4-20 mA current loops.

5. All analog inputs and outputs shall also be protected from surges.

6. All digital outputs shall be provided with isolated relay contacts.

B. Devices for Operator Interface

External face mounted devices for operator interface shall be as follows:

1. Push buttons and selector switches shall be SQ-D class 9001 30 mm, Telemecanique XB2 22 mm, or Engineer Approved Equivalent.

2. Color Touchscreen Operator Interface Display (HMI) shall be included and mounted on the front of the enclosure and be rated with same NEMA rating as the control panel. The Display shall allow the operator to view and modify system variables within the PLC. The display shall be a minimum of 12" and be capable of communicating via Ethernet to the PLC located within the cabinet. The unit shall include a real-time clock with battery back-up, color touchscreen. HMI display shall be Schneider Harmony or Engineer Approved Equivalent. Note: The PLC/HMI software shall be supplied separately by the SCADA integrator under the SCADA allowance.

C. PLC-based Control Panel I/O Field Interface Signals

1. All PLC ladder logic shall reside within the PLC based control panel. The PLC ladder logic shall perform all necessary monitoring and control for the new Transfer Pump Station and associated equipment.

2. All necessary I/O cards shall be supplied to monitor and control the field signals. All PLC and I/O racks shall be supplied with 10% spare I/O.

3. All I/O (Analog Inputs, Analog Outputs, Digital Inputs, and Digital Outputs) shall be confirmed for proper operation from the PLC to the terminals within PLC control panel.

D. Control Panel Components

PLC control panel shall consist of the following components:

1. NEMA 12 freestanding control panel
2. PLC CPU Card
3. PLC I/O Racks
4. PLC Field Interface Cards
5. HMI
6. Power Supply
7. Signal Isolators
8. Surge Protectors
9. Circuit Breakers
10. Terminal Strips
11. Miscellaneous Wire and Conduit

E. Programmable Logic Controller (PLC)

1. Programmable Logic Controller with the required memory and functional capacity to perform the specified sequence of operation

with the scheduled input and output points.

2. PLC shall be designed for up to 1024 points of I/O. The PLC shall provide enhanced processing and communication options and shall be a chassis mounted modular system.

3. The PLC shall have a variety of processors available. Each processor shall be capable of being programmed via a USB port with a PC. The processor shall have an embedded web-server supplied with pre-developed and installed system diagnostics screens viewable from any commercial web-browser. The processor shall have a USB terminal port, and a multi-protocol serial port capable of Modbus communication. The processor shall accept an SD memory card with sufficient memory for required application and data files.

4. PLC shall support 10/100Mb Modbus TCP Ethernet, ASi V2 Master, Modbus, ASCII, CANopen, and Unitelway without the need for third party modules.

5. The PLC shall have a configurable alarming capability. Each alarm point can be configured to display an alphanumeric message in the alarm buffer. The alarm buffer can be displayed via a web page, or on an operator interface screen.

6. Unterminated connector cables shall be available for interfacing to the discrete and analog cards. These cables shall have one end terminated to HE10 terminal block modules. The other end shall be unterminated to allow custom interface to panel devices.

   Terminated connector cables shall be available for interfacing to the discrete and analog cards. These cables shall have one end terminated to interface to terminal block, or FCN socket, cards. The other end shall be terminated to interface with HE10 terminal block modules.

7. PLC shall be Modicon MD M340 platform or Engineer Approved Equal.

F. The control cabinet shall be provided with a universal power supply (UPS) double conversion online. The UPS shall be sized to provide power to the PLC, HMI, DC power supplies and instruments. All ancillary equipment within the RTU-1 (e.g. lights, power receptacles) shall not be powered from the UPS. The UPS shall provide 15 minutes of backup power at half load. The UPS shall have an internal automatic static bypass switch such that an overload condition shall transfer load to incoming line power. An external maintenance bypass switch shall be installed in order to service the UPS without losing power to the control panel components. The following UPS status/alarms shall be wired to the PLC and transmitted to the plant SCADA system: external maintenance bypass status, static bypass status, common alarm, power failure. The UPS shall be Sola Hevi-Duty, American Power Conversion or equal.

G. INSTRUMENTS:

Provide the instruments listed in the Section 13321, complete and ready and in operation.

PART 3 EXECUTION

3.1 I&C SYSTEM INTEGRATOR RESPONSIBILITY:

Provide cable, instrumentation, interface devices, hardware, and other labor, supervision, and engineering required to provide a complete and workable control system. Conduit and wiring to and from the MCP shall be provided by others; however, it is the responsibility of the of I&C system integrator to terminate all wiring inside the MCP.

System integrator shall provide all inspection/testing of control wiring from the field back to the PLC, I/O signals, control loops, instrument functionality, PLC/HMI functionality, etc. The Operational Readiness Test (ORT) and Functional Demonstration Test (FDT) described in Section 13000 provides more detail on inspection/testing required by the control system integrator, as well as the required coordination between the control system integrator and the SCADA integrator.

3.2 INSTRUMENT INSTALLATION:

Install and connect instruments in accordance with American Petroleum Institute recommended practice 550 and the manufacturer’s directions and recommendations.

3.3 TRAINING:

Provide four (4) hours of onsite training for Owner's personnel in operation and maintenance of the instrumentation and RTU-1 control panel equipment. PLC/HMI software and related control functionality training shall be done separately by the SCADA integrator under the SCADA allowance.

END OF SECTION

SECTION 13320

APPENDIX A

CONTROL STRATEGIES

The following describes the General Control System operational requirements and goals. Contractor shall develop the Control System as required to fulfill the items described in this Section and/or shown.

Control System Overview:

The Midland NE Transfer Pump Station (TPS) shall be controlled and monitored by a new PLC/HMI (RTU-1/HMI-1) located inside the new TPS electrical room that shall communicate with the existing Midland Water Treatment Plant (WTP) SCADA system via fiber cable. All pump station functionality and system monitoring established at RTU-1 HMI shall be duplicated at the WTP SCADA computer. The major components of the control system are:

1. Programmable Logic Controller and Cabinet (RTU-1)
2. Human-Machine Interface (HMI-1)
3. Motor Control Center (MCC-1)
4. Instrumentation

The text discussion that follows is intended to assist the reader in interpreting the contract documents and, electrical drawings, and P&IDs. All specifications and drawings are intended to be complimentary to each other and not exclusive. Items shown and described in one place in the documents shall be considered as if shown in all appropriate locations.

1. Three (3) new vertical turbine pumps (P-01, P-02, and P-03) are included in this design and shall operate in a lead, lag and standby configuration. An operator adjustable PLC timer (24-hour default setpoint) shall be programmed to automatically change the lead, lag, and standby pump assignments in a sequential manner to balance the run times. The standby pump shall start automatically with the failure of either the lead or lag pump, or when a pump in operation is placed in HAND. The operator shall also be able to manually assign the lead, lag and standby pumps from HMI-1.

   MCC-1 in the electrical room shall contain the control panels for the three pumps, each with an HOA (HAND-OFF-AUTO) switch and status lights. In HAND, each pump shall operate until manually turned OFF. In AUTO, each pump shall operate as programmed at the RTU-1 PLC. An HOA switch shall also be included for each pump at the RTU-1 PLC/HMI to allow for remote manual start/stop of the pump via a dry-contact discrete output signal. Pump and alarm status values generated at MCC-1 for each pump and transmitted to RTU-1 are as follows:

   a) HOA switch position (dry-contact discrete input signal)
   b) PUMP RUN (dry-contact discrete input signal)
   c) PUMP STOP (dry-contact discrete input signal)
   d) SOFT START FAIL (dry-contact discrete input signal)
   e) HIGH MOTOR/BEARING TEMPERATURE ALARM (digital input signal from RTD)
   f) HIGH PRESSURE ALARM (dry-contact discrete input signal)
   g) PCV OPEN (dry-contact discrete input signal)
   h) PCV CLOSED (dry-contact discrete input signal)
   i) PCV OPEN FAIL (dry-contact discrete input signal)
   j) PCV CLOSE FAIL (dry-contact discrete input signal)

k) PUMP SYSTEM READY (dry-contact discrete input signal)

Automatic start/stop of the pumps shall be based on the EST level setpoints based on EST level reading obtained from the WTP SCADA computer. The operator adjustable level setpoints shall be as follows:

High Level Alarm Setpoint = 50 ft Default
Lead Pump Stop Setpoint = 48 ft Default
Lag Pump Stop Setpoint = 46 ft Default
Lead Pump Start Setpoint = 10 ft Default
Lag Pump Start Setpoint = 8 ft Default
Low Level Alarm Setpoint = 6 ft Default

Each pump shall include a solenoid actuated pump control valve (PCV-01, 02, and 03) that slowly opens and closes the valve in conjunction with pump start and stop, respectively, to prevent surge conditions from developing in the transfer pipeline. Initiation of pump start/stop shall occur via dry-contact discrete output signals from RTU-1 to MCC-1. A pressure switch shall be included on the discharge of each pump that is electrically interlocked with the pump operation. To prevent the pressure switch from stopping the pump during pump startup, an adjustable delay timer is included in the pump control circuit design.

All pumps shall include an RTU-1 PLC interlock with the clearwell low-level lockout setpoint transmitted to RTU-1 from the WTP SCADA computer.

2. A surge anticipator valve (SRV-01) shall be installed in the valve vault located inside the TPS building. The surge valve is hydraulically operated based on low pressure condition in the pump station discharge header. When the surge valve opens, a dry contact discrete signal from the valve position switch shall be sent to RTU-1 PLC/HMI-1. The RTU-1 PLC shall be programmed to monitor the surge valve position and open/close the surge relief line drain valve (BV-01) once the surge valve has closed after a surge event. Dry-contact discrete output signals from RTU-1 shall automatically open/close the motorized drain valve (BV-01) based upon an operator adjustable PLC timer (5-minute default timer setpoint).

   The motorized drain valve (BV-01) shall include a local control panel on inside of building wall mounted near the surge valve vault. The control panel shall include an HA (HAND-AUTO) switch, O/C (OPEN-CLOSE) switch, POWER ON light, VALVE OPEN light, VALVE CLOSED light. When valve is in HAND, the operator shall have the ability to manually open/close the valve via the spring-loaded O/C switch (allows the valve to be partially opened/closed). When the switch is in AUTO, the valve shall operate automatically according the RTU-1 PLC program. The valve shall be controlled and monitored at the RTU-1 PLC/HMI-1 via dry-contact discrete signals. Valve HA and O/C switches shall also be included at RTU-1 PLC/HMI-1 to allow for remote manual open/close. The position of the HA switch and valve open and close positions shall be monitored at the RTU-1 PLC/HMI-1.

3. A magnetic flowmeter (FE-01) shall be installed in the flowmeter vault outside of the TPS pump station building. The flowmeter shall be scaled from 0.6 – 18 MGD or 420 – 12,500 gpm as selected by OWNER. The flowmeter shall be wired to a flow indicating transmitter (FIT-01) located inside the TPS pump station building on the north wall that communicates the flow reading to RTU-1 via a 4-20mA signal.

   An operator adjustable low flowrate alarm (0.7 MGD or 490 gpm default setpoint) and high flowrate alarm (10 MGD or 6,950 gpm default setpoint) shall be programmed at the RTU-1 PLC/

HMI. The low flow rate alarm shall only be active when one or more of the TPS pumps are in operation and low flowrate alarm time delays shall be established for TPS pump start and stop. A PLC-level interlock shall be established between low flowrate alarm and pump station operation; all pumps shall be stopped when low flow conditions occurs.

4. The TPS pressure transmitter (PE/PIT-01) shall be installed on the pump station discharge header pipe inside the surge relief valve vault. Pressure transmitter shall be scaled from 0.0 to 200.0 psig. Pressure transmitter reading shall be communicated from PIT-01 to RTU-1 via a 4-20mA signal.

   An operator adjustable low-pressure alarm (PAL 10 psig default setpoint) and high-pressure alarm (PAH 150 psig default setpoint) shall be programmed at the RTU-1 PLC/HMI-1.

5. One (1) monochloramine/ammonia analyzer (AE/AIT-01), two (2) total chlorine analyzers (AE-02 and AE-03/AIT-02), and two (2) turbidity analyzers (AE-04 and AE-05/AIT-03) shall be installed on the instrument panel inside the TPS building and piped to receive sample water from the pump station discharge header. The monochloramine/ ammonia analyzer includes a built-in controller/transmitter (AIT-01) that shall transmit total ammonia and monochloramine readings via two (2) 4-20mA signals. Both chlorine analyzers shall be hard-wired to a single controller (AIT-02) located on the instrument panel that communicates chlorine readings to RTU-1 via two 4-20mA signals. In addition, both turbidity analyzers shall be hard-wired to a single controller (AIT-03) located on instrument panel that communicates turbidity readings to RTU-1 via two 4-20mA signals.

   Operator adjustable low and high value alarms shall be programmed for each analyzer at the RTU-1 PLC/HMI-1. Exact default low and high value alarms TBD.

6. The flowmeter, suction line valve, and surge valve vaults shall each include a float switch (LSH-01 for suction line vault, LSH-02 for flowmeter vault, and LSH-03 for the surge valve vault) to alarm a flooded vault condition. Each float switch shall be wired to send a dry contact discrete signal to RTU-1.

SECTION 13321

MONITORING AND SENSING DEVICES

PART 1 GENERAL

1.1 SECTION INCLUDES:

A. Magmeter, pressure gauges, pressure analyzer, pressure switches, total chlorine analyzers, ammonia chloramine analyzer, and turbidimeters.

1.2 RELATED SECTIONS:

A. Division 16 – Electrical

1.3 SUBMITTALS:

A. In accordance with Section 01300, submit complete descriptive literature for each component.

PART 2 PRODUCTS

2.1 MAGNETIC FLOW METERS:

A. Acceptable manufacturers:

1. McCrometer ULTRAMAG UM-08 with Signal Converter.
2. ABB WaterMaster Mag Meter
3. Endress-Hauser Proline Mag Meter
4. Or Engineer Approved Equal.

B. Design and fabrication:

1. Meter shall be a velocity sensing electromagnetic type flanged tube meter with sealed housing for 300 PSI working pressure.

2. Meter Tube: 30-inch with AWWA Class F steel flanges rated for 300 psig. Tube shall be 316 SS and lined with NSF 61 approved fusion bonded epoxy. Electrodes shall be constructed of 316 SS.

3. Meter shall include a digital indicating transmitter having a range of 0.6 to 18 MGD or 420 – 12,500 gpm) and be equipped with a 9-digit digital totalizer reading in units of MG.

4. Mag Shield shall be welded to the tube providing a completely sealed environment for all coils, electrode connections and wiring harness capable of NEMA 6P/IP68 operation.

5. The meter assembly shall operate within a range of 0.2 FPS to 6 ft/s.

6. Operating pressure:

   a. Maximum of 300 psi.

7. Process temperature range: 35°F to 100°F. Ambient temperature range: 10°F to 120°F

8. Grounding requirements: 316 SS grounding rings shall be supplied with meter tube.

9. Accuracy:

   a. Accuracy: ±0.5% of actual flow.
   b. Repeatability: ±0.1%.

10. 4-20 mA DC isolated output, suitable for proportional output of flow measurement to PLC/SCADA system.

11. Power supply 100-240VAC/60 Hz or 10 -35VDC.

12. Magmeter shall be installed in meter vault with transmitter in sealed IP67 rated enclosure attached to wall inside of transfer pump station building (refer to electrical drawings for exact location). Sensor cable shall be adequate for distance from sensor to transmitter.

13. Transmitter electronics shall use microprocessor-based architecture and be configured using parameters. Device shall include four separate digital programmable outputs.

14. Provide configuration / diagnostic tool.

Schedule of Flow Transmitters

TAG NUMBER	SERVICE	SPAN
FE/FIT-01	Transfer Pump Station Discharge Line (Potable Water)	0.6 – 18 MGD (420 – 12,500 gpm)

2.2 PRESSURE GAUGES:

A. Acceptable manufacturers:

1. Ashcroft.
2. Ametek.
3. Rosemount.

B. Materials:

1. Bourdon tube, socket/process connection, connecting tube: 316 stainless steel.
2. Case: Phenolic.
3. Pressure snubber:

a. Filter disc: 316 stainless steel.
b. Housing: 316 stainless steel.

C. Accessories:

1. Utilize pressure snubbers with porous metal discs to provide pulsation dampening on gauge.

D. Design and fabrication:

1. All components suitable for service at:

a. 250 Deg F.
b. The maximum process temperature to which the gauge is to be exposed.

2. Provide viewer protection from element rupture.

3. Calibrate gauges at jobsite for pressure and temperature in accordance with manufacturer's instructions.

4. Unless otherwise required by codes, provide stem mounted or flush mounted, as required, and as follows:

Tag Number	DIAL SIZE	PROCESS CONNECTION	SERVICE	OPERATING PRESSURE
PG-01, PG-02, PG-03	4-1/2 IN	½" MNPT	Transfer Pump Discharge (Potable Water)	200 PSIG
PG-04, PG-05, PG-06, PG-07	4-1/2 IN	½" MNPT	Sample Line to Instruments and Water Line to Hose Bibbs (Potable Water)	150 PSIG

5. Equip with white faces, black numerals and black pointers.

6. Gauge tapping position to be clear of equipment functions and movements, and protected from maintenance and operation of equipment. Gauge to be readable from an accessible standing position.

7. Gauge accuracy: 1 percent of full range.

8. Select gauge range so that:

a. The normal operating value is in the middle third of the dial.
b. Maximum operating pressure does not exceed 75 percent of the full-scale range.

9. Provide pressure gauges on discharge of each pump or otherwise specified.

2.3 PRESSURE INDICATING TRANSMITTERS:

A. Acceptable manufacturers:

1. Endress & Hauser Cerabar S PMP71
2. Or Engineer Approved Equal

B. Materials:

1. Isolating diaphragm: 316 stainless steel.
2. Process adapter: 316 stainless steel ½" MNPT.
3. Housing: Aluminum.
4. Fill fluid: Silicone

C. Design and fabrication:

1. 2-wire, piezoresistive pressure transmitter with integrally mounted 4-line LCD scaled in units of psig.

2. Pressure transmitter shall be capable of handling surge pressures to 400 psig without damage to instrument.

3. Smart transmitter utilizing microprocessor-based electronics and self-diagnostic capability. The transmitter shall be programmable via Hall magnetic switch external pushbuttons without pressure source or hand-held device.

4. Output: 4-20 mA DC proportional to pressure measurement with HART protocol.

5. Unit shall use DC loop-power supply 10.5 to 45 VDC with self-diagnostic capability and a non-volatile memory.

6. Adjustable zero and span.

7. The unit shall be rated for process temperature inclusive of 35°F to 100°F and an ambient environment of 10 degrees F to 120 degrees F.

8. Damping: Adjustable between 0 and 60 seconds.

9. Reference accuracy shall be +/- .05% of calibrated span including non-linearity hysteresis and non-reproducibility in accordance with IEC 60770. Total performance accuracy including non-linearity hysteresis and non-reproducibility in addition to thermal change of the zero point shall be +/- .2% URL.

Schedule of Pressure Transmitters for Water Service (PE/PIT)		
TAG NUMBER	SERVICE	SPAN
PE/PIT-01	Transfer Pump Discharge (Potable Water)	0 - 200 psi

2.4 PRESSURE SWITCHES:

A. Acceptable manufacturers:

1. Ashcroft B-Series
2. Or Engineer Approved Equal

B. Materials:

1. Diaphragm: 316 stainless steel.
2. Process adapter: 316 stainless steel ½" MNPT.
3. Housing: Aluminum.

C. Design and fabrication:

1. Diaphragm piston actuator type.
2. Switch shall be field adjustable.
3. Enclosure rating shall be NEMA 4X IP66.
4. Electrical output shall SPDT.
5. Electrical termination shall be ¾" FNPT.

Schedule of Pressure Transmitters for Water Service (PE/PIT)		
TAG NUMBER	SERVICE	SPAN
PSH-01, PSH-02, PSH-03	Transfer Pump Discharge (Potable Water)	0 - 200 psi

2.5 FLOAT SWITCHES:

A. Acceptable manufacturers:

1. High level float switches:

a. Anchor Scientific, Eco-Float Model G

B. Design and fabrication:

1. The float switch shall be mercury-free for controlling liquid levels.

2. Device shall be a snap-action float switch, activated by a steel ball rolling back and forth within a switching tube in a polypropylene 3" diameter x 4.25" long plastic float housing.

3. Minimum differential between "on" and "off" of approximately 3.5 inches.

4. Switch shall be attached to a stainless-steel sump pump discharge pipe at each vault.

5. Electrical rating 7A @ 115VAC.

6. Cable length shall be as required for application.

7. Circuit configuration shall be normally open (NO).

TAG NUMBER	SERVICE
LSH – 01 ,02, and 03	Vault Flood Indication

2.6 CHLORINE RESIDUAL SENSORS AND TRANSMITTERS:

A. Acceptable manufacturers:

1. Total and residual chlorine analyzer:

a. Hach CL17SC

B. Design and fabrication:

1. Method of measurement shall be colorimetric employing the DPD method. Analyzer shall operate with an LED light source at a peak wavelength of 510 nm.

2. Analyzer shall include pump, colorimetric measuring cell with viewing window, flow meter and total chlorine buffer/indicator solutions.

3. Analyzer housing shall be NEMA 4X (IP66) with gasketed door and include wall mount kit.

4. Capable of measurement every 2.5 minutes that is displayed on Hach SC200 controller.

5. Shall operate on 115 VAC power.

6. The analyzer must perform a self-test and auto-blanking between analysis points to compensate for sample color, turbidity, and changes in light intensity due to voltage fluctuations or light source aging.

7. Analyzer controller shall be a Hach SC200 and have two (2) standard isolated analog outputs, selectable as 0/4 to 20mA, field programmable over any portion of the analyzer range. The analyzer shall have four standard SPDT relay alarms, with contacts. Alarm options include low and high setpoint, low and high deadband, and on/off delay. **One (1) controller shall be shared for two (2) total chlorine analyzers.**

8. Include 6-months of buffer and indicator solutions. Each replacement set of solutions shall provide a minimum of 30 days of operation.

9. Analyzer shall include installation kit, tubing kit, cell cleaning kit, calibration verification kit, de-gassing standpipe installation kit and any other accessories for a fully functional system.

Schedule of Chlorine Analyzers			
TAG NUMBER	SERVICE	SPAN	TYPE
AE-02 and 03 AIT-02	Transfer Pump Station Water (Chloraminated Potable Water)	0-10 PPM	Total chlorine

2.7 AMMONIA MONOCHLORAMINE SENSOR AND TRANSMITTER:

A. Acceptable manufacturers:

1. Hach 5500 SC Ammonia Chloramine Analyzer
2. Design and fabrication:

a. The analyzer shall measure total ammonia and monochloramine in drinking water and determine free ammonia concentration. The chemical analysis shall be a modified phenate method to measure monochloramine concentration directly by colorimetry. In parallel analysis, an excess of hypochlorite at the correct pH generates total ammonia values measured directly by colorimetry. Immediately after, the analyzer calculates the free ammonia values out of the difference between the directly measured parameters.

b. The analyzer shall operate with an LED light source at a peak wavelength of 650nm.

c. Analyzer shall be of a microprocessor-controlled design to continually monitor concentration of free and total ammonia and monochloramine in a sample stream. The analyzer also has the capability to intake grab samples for internal measurement and dispense grab samples for external verification.

d. Analyzer housing shall be NEMA 12 (IP62) with gasketed door and include wall mount kit.

e. The analyzer shall be capable of a continual measurement of every 4.5 minutes or a user selectable interval between measurements of 4.5 to 240 minutes.

f. The display screen shall be a colored 5.7" LCD screen, and shall include a dashboard view, with measurements recent calibration information, and reagent status.

g. The analyzer must be able to conduct 2-point automatic calibration using installed standards.

h. Shall operate on 100 - 240 VAC 60 Hz power.

i. The analyzer must perform a self-test and auto-blanking between analysis points to compensate for sample color, turbidity, and changes in light intensity due to voltage fluctuations or light source aging.

j. Four analog 0/4-20 mA outputs and four SPDT relays shall be provided.

k. Include 6-months of reagents, standards and cleaning solution. Each replacement set of reagents shall provide a minimum of 30 days of operation.

Schedule of Ammonia Chloramine Analyzers

TAG NUMBER	SERVICE	SPAN	TYPE
AE/AIT-01	Transfer Pump Station Water (Chloraminated Potable Water)	0-2 PPM as N	Free Ammonia Total Ammonia Monochloramine

2.8 Turbidity Analyzer:

A. Acceptable manufacturers

1. Potable water service:

a. Hach TU 5300 Laser Turbidimeter

B. Design and fabrication:

1. Sensor: Low range online laser turbidimeter consisting of a Class 1 650nm laser light source and 360° x 90° detection system with predictive diagnostics designed to continuously monitor turbidity in a sample stream.

2. Continuous particle removal using a vortex created by the fluid path.

3. Analyzer controller shall be a Hach SC200 and have two (2) standard isolated analog outputs, selectable as 0/4 to 20mA, field programmable over any portion of the analyzer range. The analyzer shall have four standard SPDT relay alarms, with contacts. Alarm options include low and high setpoint, low and high deadband, and on/off delay. **One (1) controller shall be shared for two (2) total chlorine analyzers.**

4. 100 - 240 VAC 60 Hz or 24 VDC power requirement.

5. Required options include flow sensor, automatic cleaning module, bubble trap, turbidimeter maintenance kit, and glass calibration /verification rod.

6. Provide with 6-months supply of calibration standards.

Schedule of Turbidimeters		
TAG NUMBER	SERVICE	RANGE
AE-04 and 05 AIT-03	Transfer Pump Station Water (Potable Water)	0-5 NTU

2.9 PIPE, TUBING, AND FITTINGS:

A. Acceptable Manufacturers:

1. Subject to compliance with the Contract Documents, the following manufacturers are acceptable:

a. Tube fittings:

i Parker CPI.
ii Swagelok.

B. Submit requests for substitution in accordance with Specification Section 01640.

C. Instrument Tubing and Fittings:

1. Material:

a. Tubing: ASTM A269, Grade TP 316 stainless steel.
b. Straight fittings: 316 stainless steel per ASME SA-479 or ASTM A276.
c. Shaped bodies: ASME SA-182 F316 stainless steel.

2. Design and fabrication:

a. Tubing:

i Seamless.
ii Fully annealed.
iii Maximum hardness: 80 Rb.
iv Free from surface scratches and imperfections.
v Diameter: 1/2 IN OD unless specified otherwise.
vi Wall thickness:

- Meet requirements of paragraph 122.3 of ASME B31.1.
- Minimum 0.049 IN for 1/2 IN OD tubing.

b. Fittings:

i Flareless.
ii Compression type.

D. Instrument Piping:

1. For applications where the instrument is supported solely by the sensing line, (e.g. pressure gauge directly mounted to process line) utilize piping as specified below.

a. Diameter: 1/2 IN unless specified otherwise.
b. Schedule 80.
c. 316 stainless steel.

2.10 INSTRUMENT VALVES:

A. Process instrument multi-valve manifolds, isolation, vent and blow-down valves:

1. Acceptable manufacturers:

a. Subject to compliance with the Contract Documents, the following manufacturers are acceptable:

i Whitey Co.
ii Anderson-Greenwood USA, Inc.

b. Submit requests for substitution in accordance with Specification Section 01640.

2. Materials:

a. Packing:

i 450 DegF and above: Graphite.
ii Below 450 DegF: Graphite or Teflon.

b. Body: 316 stainless steel per ASTM A479.
c. Stem: 316 stainless steel per ASTM A276.
d. Ball: 316 stainless steel per ASTM A276.
e. Support rings: 316 stainless steel per ASTM A276.
f. Seats:

i Metal:

- 316 stainless steel per ASTM A276.

ii Soft:

- Teflon, Delrin, or equivalent.
- Only utilized on applications where manufacturer's temperature and pressure ratings exceed process design conditions.

3. Design and fabrication:

a. Either of the following:

i Ball valve with 1/4 turn activation.
ii Free-swiveling ball stem.

b. Provide body wall thickness sufficient for process design conditions per ASME B31.1.

c. Temperature: Manufacturer's temperature rating for all components shall exceed process design conditions.

B. Isolation Valves in Copper Instrument Air Tubing:

1. Acceptable manufacturers:

a. Subject to compliance with the Contract Documents, the following manufacturers are acceptable:

i Whitey Co.
ii Or equal.

b. Submit requests for substitution in accordance with Specification Section 01640.

2. Materials:

a. Packing: Graphite or Teflon.
b. Body: Brass per ASTM B16.
c. Stem: 316 stainless steel per ASTM A276.
d. Ball: 316 stainless steel per ASTM A276.
e. Support rings: 316 stainless steel per ASTM A276.
f. Seats:

i Metal:

- 316 stainless steel per ASTM A276.

ii Soft:

- Teflon, Delrin, or equivalent.
- Only utilized on applications where manufacturer's temperature and pressure ratings exceed process design conditions.

3. Design and fabrication:

a. Ball valve with 1/4 turn activation.
b. Provide body wall thickness sufficient for process design conditions per ASME B31.1.

2.11 ACCESSORIES:

A. Furnish all mounting brackets, hardware and appurtenances required for mounting primary elements and transmitters.

1. Materials, unless otherwise specified, shall be as follows:

a. Bolts, nuts, washers, expansion anchors: 316 stainless steel.
b. Mounting brackets:

i Standard: 316 stainless steel.
ii Highly corrosive areas: Aluminum.

c. Mounting plates, angles:

i Standard: Carbon steel.
ii Corrosive areas: 316 Stainless steel.

d. Instrument pipe stands:

i Standard: Hot-dip galvanized 2 IN schedule 40, ASTM A106, Grade B carbon steel.
ii Corrosive areas: 316 stainless steel.

B. Tubing Support Angles and Brackets

1. Any of the following materials are acceptable:

a. Aluminum support with dielectric material between support and tubing.
b. Type 316 stainless steel.
c. Fiberglass.

C. Tubing Tray or Channel: Aluminum

1. Provide dielectric material between tray or channel and tubing.

D. Provide handheld communicator compatible with all intelligent transmitters furnished. Hand held communicator shall provide capability to check calibration, change transmitter range, and provide diagnostics. If these features are provided with the intelligent transmitter, the hand held communicator is not required.

E. Cable lengths between sensors and transmitters shall be continuous (without splices) and as required to accommodate locations as shown on Drawings.

PART 3 EXECUTION

3.1 INSTALLATION:

A. Install products in accordance with manufacturer's instructions.

B. Install instrument mounting pipe stands level and plumb.

C. Instrument Valves:

1. Orient stems for proper operation.

2. Install arrays orderly and neat in appearance with true horizontal and vertical lines.

3. Provide a minimum of 2 IN clearance between valve handle turning radii where there are multiple valve handles appearing in a straight line.

4. Valves shall have bonnets and any soft seals removed during welding or soldering into the line. When cool, reassemble the valves.

5. Support each valve individually. The tubing system does not qualify as support for the valve.

D. Locate instrument piping and tubing so as to be free of vibration and interference with other piping, conduit, or equipment.

E. Keep foreign matter out of the system.

F. Remove all oil on piping and tubing with solvent before piping and tubing installation.

G. Plug all open ends and connections to keep out contaminants.

H. Tubing Installation:

1. General:

a. Install such that tube shows no sign of crumpling, bends of too short a radius, or flattening, etc.

b. Make tube runs straight and parallel or perpendicular to the floor, equipment and piping runs.

c. For liquid and steam applications, slope continuously from the process to the instrument with a minimum slope of 0.50 IN per foot.

d. For gas and air applications, slope continuously from the instrument to the process with a minimum slope of 0.50 IN per foot.

e. If the sensing line cannot be continuously sloped, install high point vents and low point drains.

f. Keep instrument tubing clean during all phases of work.

g. Blow out with clean, dry, oil-free air immediately before final assembly.

h. Cut by sawing only and debur.

2. Bending:

a. Make each bend with tube bender of the correct size for the tube.

b. Make all bends smooth and continuous.

c. Rebending is not permitted.

d. Make bends true to angle and radius.

e. Maintain a true circular cross section of tubing without buckling or undue stretch of tube wall.

f. Allowable tolerance for flattening out of tubing bends: Maximum of 8 percent of the OD for stainless steel tubing.

g. Minimum bending radius for stainless steel tubing:

TUBE OD INCHES	MINIMUM BENDING RADIUS, INCHES
1/4	9/16
3/8	15/16
1/2	1-1/2

h. Minimum bending radius for type L, hard (drawn) copper.

TUBE OD INCHES	MINIMUM BENDING
3/8	1-3/4
1/2	2-1/2

3. Tubing support:

a. Intermittently support by clamping to support angle.

b. Install supports to be self-draining, supported by hangers, or cantilevered from walls or structural beams.

c. Support at 5 FT-0 IN maximum spans for horizontal or vertical runs.

d. Use tubing trays in areas where spans between supports are greater than 5 FT and for all signal tubing support.

e. Support each tubing tray at 10 FT maximum spans.

f. Align tubing in orderly rows and retain in the tray by bolted clips. The use of spring or speed clips is not acceptable.

g. Maintain order of the tubing throughout the length of the tray.

h. Locate angle, channel and tray installation to protect tubing from spills and mechanical damage.

i. Locate support members to clear all piping, conduit, equipment, hatchways, monorails, and personnel access ways and allow access for equipment operation and maintenance.

j. Support trays to prevent torsion, sway or sag.

k. Permanently attach supports to building steel or other permanent structural members.

l. Arrange supports and trays so that they do not become a trough or trap.

4. Routing and orientation:

a. Route to maintain a minimum headroom clearance of 8 FT.

b. Locate and orient valves and specialties so that they are accessible for operation and maintenance from the operating floor. Do not route through or over equipment removal areas, below monorails or cranes nor above or below hatches.

5. Expansion and vibration provisions:

a. Provide horizontal expansion loops at the process connections.

b. Route tubing parallel to relative motion through sleeved supports that allow linear tube movement.

c. Cold springing of tubing to compensate for thermal expansion is prohibited.

d. Utilize flexible hoses to connect pneumatic tubing to air users which may move or vibrate.

I. Air Supply:

1. Connect all instruments requiring air to air supply piping and tubing. Provide connections as follows:

a. Terminate branch supply line not more than 36 IN from the device with a 1/2 IN isolation valve.

b. For remaining line, use 1/4 or 3/8 IN tubing of a length to allow for normal equipment movement and vibration.

c. Use flexible hoses to connect pneumatic tubing to air users which may experience significant movement or vibration.

d. Make branch connections to individual instruments from the top of the supply header.

e. Purge instrument air piping of extraneous material by blowing clean, dry, oil-free air through the system prior to final connection.

J. Threaded Connection Seals:

1. Use Tite-Seal or acceptable alternate.
2. Use of lead base pipe dope or Teflon tape is not acceptable.
3. Do not apply Tite-Seal to tubing threads of compression fittings.

K. Capillary Tubing:

1. Route capillary tubing in tubing tray.
2. Install capillary tubing with a 2 IN minimum bend radius which does not kink or pinch the capillaries.
3. Do not cut or disconnect at any point.
4. Coil excess capillary tubing and secure at the instrument.

L. Instrument Mounting:

1. Mount all instruments where they will be accessible from fixed ladders, platforms, or grade.

2. Mount all local indicating instruments with face forward toward the normal operating area, within reading distance, and in the line of sight.

3. Mount instruments level, plumb, and support rigidly.

4. Mount to provide:

a. Protection from heat, shock, and vibrations.
b. Accessibility for maintenance.
c. Freedom from interference with piping, conduit and equipment.

3.2 DEVICE OPERATION:

Demonstrate device operation and calibration in conjunction with overall instrumentation system testing, checkout, and operator training.

END OF SECTION

SECTION 14630

BRIDGE CRANE

PART 1 GENERAL

1.1 SECTION INCLUDES:

A. The WORK of this Section includes providing an electrically operated bridge crane of the low headroom type, designed for travel in both directions and mounted on structural sections.

B. Bridge crane to be provided in this project includes one (1) bridge crane rated at three (3) tons.

1.2 REFERENCES:

A. CMAA – Crane Manufacturer's Association of America.

B. OSHA – Occupational Safety and Health Administration.

1.3 SUBMITTALS:

A. Submit under provisions of Section 01300.

B. Provide Operation and Maintenance information that includes parts list, operation instructions, illustrations, drawings, safe procedures for operation, lubrication, and preventative maintenance procedures.

1.4 QUALITY ASSURANCE:

A. Equipment shall comply with latest OSHA standards and CMAA specifications.

B. Provide services of manufacturer's factory service engineer specifically trained in the installation, operation, and maintenance of bridge cranes. Service engineer to supervise installation, inspect and approve installation, supervise initial adjustment, supervise and assist in testing, instruct owner and owner's representative in proper start-up and O&M.

1.5 QUALIFICATIONS:

A. Supplier/Manufacturer: Company specializing in performing the work of this Section with a minimum of five (5) years experience.

B. Structural connections to be designed under the direct supervision of a Professional Structural Engineer licensed in the State of Texas.

1.6 WARRANTY:

A. The manufacturer shall provide a warranty on equipment against manufacturer's defects for twelve (12) months, commencing on the date of Owner-accepted substantial completion of the project. If the equipment should fail during the warranty period due to a defective part, it shall be replaced and the unit restored at no cost to the owner, including both service and parts.

1.7 DELIVERY AND STORAGE:

A. Delivery, storage, and handling shall be in full accordance with manufacturer's instructions.

PART 2 PRODUCTS

2.1 MANUFACTURERS:

A. Ace-Gaffey (Ace Industries, Inc.), 1-800-233-8179

B. Or Engineer-Approved Equivalent.

2.2 GENERAL REQUIREMENTS:

A. Requirements:

1. The bridge crane system shall be controlled from a pendant pushbutton station and shall include safety devices and overload protection.

2. The power supply shall be from enclosed, UL-approved conductor bar systems.

3. The rails shall be standard I-beams, or fabricated steel sections anchored to the structure as indicated and as required by the UBC for seismic loads.

4. The track deflection shall not exceed 1/800 of the span, or 1-1/4 inches, whichever is less.

5. The crane system, except the tracks, shall be the product of a crane manufacturer regularly engaged in the manufacture of such equipment.

B. Site Conditions: The bridge crane shall be capable of service in an indoor environment lacking climate control.

C. Design Criteria: The bridge crane system shall comply with the following:

1. Bridge Crane (Refer to drawings):

a. Type of Crane - top running

b. Type of Bridge - single girder
c. Capacity (tons) - 3-ton
d. Maximum Lift (feet) – 19′-8″
e. Length of Track (feet) – 56′-0″
f. Length of Bridge (feet) - 61′-7″
g. Span Between Rails (feet) 61′-0″
h. Speed Control – Bridge and Trolley: Variable Speed
– Hoist: Two Speed
i. Lifting Speed (fpm) – 20 / 3.3 FPM
j. Trolley Speed (fpm) – 26 – 65 FPM VFD
k. Bridge Speed (fpm) – 100 FPM VFD
l. Hoist Motor (hp) – 7.5 / 1.0 HP
m. Trolley Motor (hp) – 1.0 HP
n. Bridge Motor (hp) - (2) 1.0 HP
o. Power Supply (V-ph-Hz) - 480-3-60
p. Coating – Factory Installed 2-part epoxy or System No. 1 per Specification 09800.

2.3 FABRICATION:

A. Hook and Wire Rope:

1. The lifting hook shall be fabricated of drop-forged, heat-treated stainless steel and shall include 360-degree swivel on a shielded roller thrust bearing with safety spring latch.

2. The wire ropes shall be fabricated of Type 316 stainless steel with stainless steel center complete and shall include swaged fittings.

B. Hoist and Drive:

1. The hoisting drum shall be deep grooved flanged drum with at least 2 full turns of rope remaining on the drum at the lowest hook position and shall include heavy-duty pre-lubricated sealed bearings.

2. The drum shall be driven by a helical gear reducer with external spur drum gear enclosed in an oil-tight housing.

3. The housing motor shall be a standard, 30-minute duty- motor, 1750 rpm, with NEMA-type shaft extension.

4. The hoisting mechanism shall include dc magnet-actuated disc motor brake with hook drift.

5. The motor shall be rated at minimum of 150 percent of full load torque, with gravity type upper and lower hook limit switch, and an overload cut-off switch designed to interrupt the raising circuit.

C. Trolley Assembly:

1. The trolley assembly shall be a top-running type with structural frame welded into an assembly for proper wheel and bearing alignment.

2. The trolley assembly shall be supported by trolley wheels with tapered tread surfaces hardened to 375 to 425 Brinell.

3. Each wheel shall be supported on tapered roller bearings suitable to take radial and thrust loads.

4. The wheel mounting shall be designed so that axles and wheels can be removed without affecting alignment.

5. The wheel tread shall be smooth, true, and uniform within 0.010-inch tread diameter on all wheels.

D. Trolley Drive:

1. The trolley shall be driven by a 30-minute-duty-cycle rated motor with oil-tight gear reducer conforming to NEMA Specifications.

2. The trolley VFD shall be programmed to include cushion start and allow for smooth travel and load control.

3. The driver shall provide synchronous drive from gear reducer to both drive wheels.

4. The trolley drive shall include integrally mounted spring set and an electrically-released drag brake.

E. Crane Bridge Assembly:

1. The crane bridge assembly shall be a single beam top-running type.

2. The bridge beam shall be designed in accordance with the specifications of the Crane Manufacturers Association of America.

3. It shall be fabricated of standard structural shapes complying with AISC Specifications.

4. At full load, the beam shall be designed to limit the deflection to 1/600 of the span, but not to exceed 1-1/4-inch maximum deflection.

5. An ASCE rail shall be provided on top of the beam securely fastened in place to maintain center distance.

6. Provision shall be made to prevent creeping of bridge rails by means of positive stops at the ends of the rails.

7. Crane shall be reinforced with outrigger to provide squareness with end truck, adequate lateral stiffness with a minimum lateral moment of inertia of 1/20 that of the vertical beam.

8. Outrigger shall be designed to support squaring shaft and the crane drive motor and gear reducer assembly.

F. End Trucks:

1. The end trucks shall be traversed by stable assembly of structural shapes welded together to provide proper wheel and bearing alignment.

2. The end truck wheel base shall be minimum of 1/7 of the crane span.

3. One wheel of each end truck shall be geared and meshed with the pinion mounted on the crane squaring shaft.

4. The crane and trucks shall contain diaphragm members welded to truck frames to maintain alignment and distribute truck loads on inner and outer truck members.

5. The truck shall be designed so that, in case of a wheel axle or wheel failure, the drop of the load will be limited to one inch.

6. The end trucks shall be fastened to the bridge beams with bolts to ensure alignment.

G. Crane Wheels:

1. Crane wheels shall have tread surfaces hardened to 375 to 425 Brinell.

2. Treads shall be tapered to provide proper running alignment.

3. Each wheel shall be supported on tapered roller bearings mounted on stationary axles, designed for radial and thrust loads.

4. The wheels shall be lubricated at the factory with a sodium base grease, and shall include adequate reservoir of lubricant to eliminate the need for field lubrication.

5. Wheel axles must have mounting nuts for bearing adjustment.

6. Wheel mounting shall be designed so that axles and wheels can be removed without disturbing alignment.

7. Wheel treads shall be smooth, true, and uniform within 0.01-inch tread diameter on all wheels.

H. Crane Drive:

1. The crane drive motors shall be totally enclosed, 30-minute cycle rated.

2. The motors shall be integral with a fully enclosed oil splash lubricated gear reduction.

3. The motors and the gear reduction shafts shall be supported by permanently lubricated precision ball or roller bearings.

4. The crane drives shall include integrally-mounted spring set electrically released dc rectified disc brake.

I. Bearing Life:

1. Bearings in crane wheels and bearings supporting the drive and gear reduction shafts shall be designed for 5,000 hrs L-10 bearing life minimum.

J. Gearing:

1. Gears shall be cut from solid blanks with 20-degree pressure angle involute shape for high strength and shall comply with AGMA specifications for load ratings.

2. Gears operating at higher than 20 fpm pitch line speed shall be fully enclosed in oil-tight housings and lubricated by splash principle.

3. Gear teeth shall have ductile cores and be surface hardened to RC40 minimum.

4. The gear shall provide for a minimum service of 4,000 hr.

K. Bridge Stops:

1. The bridge shall be provided with bumpers capable of stopping the crane (not including the lifted load) at a rate of deceleration not to exceed 3 fps^2 when traveling in either direction at 20 percent of rated speed.

2. The bumpers shall have sufficient energy absorbing capacity to stop the crane when traveling at a speed of at least 40 percent of the rated load speed.

3. Bridge trucks shall be equipped with sweeps which extend below the top of the rail and project in front of the crane wheel.

L. Runway Beams and Rails:

1. The runway beams and rails shall comply with the indicated requirements.

2. The rails shall be an ASCE type securely fastened into the runway beams.

3. The runway beams shall be designed from an ASTM A36 structural steel shape and shall have a maximum deflection not to exceed 1/800 of the span.

4. The beams shall be equipped with stops on both ends capable of withstanding the impact of the fully loaded crane at 50 percent of rated speed, and shall be field-adjustable.

5. Necessary column supports or clamps, hanger rods, bolts, and fittings shall be provided.

M. Electrical Controls:

1. Electrical controls shall be variable/multiple-speed as specified.

2. Bridge control shall include a mainline magnetic contactor, manually-operated fused mainline disconnect with lock-out provisions, branch circuit fuses, reversing bridge control, and transformer with fused secondary.

3. Bridge control shall be mounted on bridge in an enclosure, NEMA 4/12 rated, actuated from a pendant pushbutton station suspended from movable trolley, by means of a retractable cable to permit operation at 4 feet above all floor levels.

4. Motors shall include cushion start.

N. Conductor and Wirings:

1. The runway shall be provided with a conductor bar type electrification.

2. The bridge shall have a rigid truck festoon type electrification.

3. Other wiring of the crane shall be in rigid or flexible conduit and in accordance with National Electrical Code and complying with Fire Underwriters specifications.

4. When a crane is shipped knocked down, the wiring shall terminate in terminal boxes and the wire end shall be provided with permanent marking tags.

PART 3 EXECUTION

3.1 EXAMINATION:

A. Verify that field conditions are acceptable and are ready to receive work.

B. Beginning of installation means erector accepts existing conditions.

3.2 ERECTION:

A. Allow for erection loads, and for sufficient temporary bracing to maintain to maintain structure safe, plumb, and in true alignment until completion of erection and installation.

B. Do not field-cut or alter structural members.

3.3 FIELD TESTING:

A. Demonstrate proper operation with full test load. Traverse entire area with load.

B. Manufacturer shall demonstrate operation of all limit switches.

3.4 SERVICES OF MANUFACTURER:

A. The authorized manufacturer's representative shall visit the site for not less than 8 hours.

3.5 CERTIFICATION:

A. Provide certification that cranes are in accordance with standards and regulations.

END OF SECTION

SECTION 15000

GENERAL PROVISIONS FOR MECHANICAL

PART 1 GENERAL

1.1 CHECKING DOCUMENTS:

A. The drawings and the specification are numbered consecutively. The contractor shall check the drawings and specifications thoroughly and shall notify the Engineer of any discrepancies or omissions of sheets or pages. Upon notification, the Engineer will promptly provide the Contractor with any missing portions of the drawings or specifications. Discrepancies or omissions of sheets or pages of the contract documents will not relieve the Contractor of his duty to provide all work required by the complete contract documents.

1.2 GENERAL:

A. In general, the lines and ducts and units to be installed by the various trades under these specifications shall be run as indicated, as specified herein, as required by particular conditions at the site, and as required to conform to the generally accepted standards as to complete the work in a neat and satisfactorily workable manner. The following is a general outline concerning the running of various lines and ducts and is to be excepted where the drawings or conditions at the building necessitate deviating from these standards.

B. All piping and ductwork for the mechanical trades shall be concealed in chases in finished areas, except as indicated on the drawings. Horizontal lines run in areas that have ceilings shall be run concealed in those ceilings, unless otherwise specifically indicated or directed.

C. Piping and ductwork may be run exposed in machinery and equipment spaces, where serving as connections to motors and equipment items in finished rooms where exposed connections are required, and elsewhere as indicated on the drawings or required.

D. The Contractor shall thoroughly acquaint himself with the details of the construction and finishes before submitting his bid, as no allowances will be made because of the Contractor's unfamiliarity with these details. Place all inserts in masonry walls while they are under construction. All concealed lines shall be installed as required by the pace of the general construction to precede that general construction.

E. The mechanical and electrical plans do not give exact locations, etc., and do not show all the offsets, control lines, pilot lines and other installation details, The Contractor shall carefully lay out his work at the site to conform to the Engineering and structural conditions, to provide proper grading of lines, to avoid all obstruction, to conform to details of installation supplied by the manufacturers of the equipment to be installed, and thereby to provide an integrated, satisfactorily operating installation.

F. The mechanical plans do not give exact location of outlets, fixtures, equipment items, etc. The exact location of each item shall be determined by reference to the general plans and to all detail drawings, equipment drawings, roughing-in drawings, etc., by measurements at the building, and in cooperation with other sections. Minor relocations necessitated by the conditions at the site or as directed by the Engineer shall be made without any additional cost to the Owner.

G. The Contractor shall be responsible for the proper fitting of his material and apparatus into the space. Should the particular equipment which any bidder proposes to install require other space conditions than those indicated on the drawings, he shall arrange for such space with the Engineer before submitting his bid. Should changes become necessary on account of failure to comply with this clause, the Contractor shall make such necessary changes at his (the Contractor's) own expense.

H. The Contractor shall submit working scale drawings of all his apparatus and equipment which in any way varies from these specifications and plans, which shall be checked by the Engineer before the work is started, and interferences with the structural conditions shall be corrected by the Contractor before the work proceeds.

I. Order of precedence shall be observed in laying out the pipe, ductwork, material in order to fit the material into the space above the ceiling and in the chases and walls. The following order shall govern:

1. Items affecting the visual appearance of the inside of the building such as lighting fixtures, diffusers, grilles, outlets, panelboards, etc. Coordinate all items to avoid conflicts at the site.

2. Large ducts and pipes with critical clearances.

3. Water lines, and other lines whose routing is not critical and whose function would not be impaired by bends and offsets.

J. Piping and ducts serving outlets on items of equipment shall be run in the most appropriate manner. Where the equipment has built-in chases, the lines shall be contained therein. Where the equipment is of the open type, the lines shall be run as close as possible to the underside of the top and in a neat and inconspicuous manner.

K. Exceptions and inconsistencies in plans and specifications shall be brought to the Engineer's attention before the contract is signed. Otherwise, the Contractor shall be responsible for any and all changes and additions that may be necessary to accommodate his particular apparatus, material or equipment.

L. The Contractor shall distinctly understand that the work described herein and shown on the accompanying drawings shall result in a finished and working job, and any item required to accomplish this intent shall be included whether specifically mentioned or not.

M. Each bidder shall examine the plans and specifications for the General Construction. If these documents show any item requiring work under Division 15 and that work is not indicated on the respective "M" or "P" drawings, he shall notify the Engineer in sufficient time to clarify before bidding. If no notification so received, the Contractor is assumed to require no clarification, and shall install the work as indicated on the General Plans in accordance with the specifications.

1.3 DIMENSIONS:

A. Before ordering any material or doing any work, the Contractor shall verify all dimensions, including elevations, and shall be responsible for the correctness of the same. No extra charge or compensation will be allowed on account of differences between actual dimensions and measurements indicated on the drawings. Any difference which may be found shall be submitted to the Engineer for consideration before proceeding with the work.

1.4 MOTORS:

A. All motors furnished under any of the several sections of these specifications shall be of recognized manufacturers of adequate capacity for the loads involved and wound for the current characteristics shown on the electrical drawings. All motors shall conform to the standards of the manufacture and performance of the National Electrical Manufacturer's Association. They further shall be listed by Underwriters Laboratories.

1.5 MANUFACTURER'S DIRECTION:

A. All manufactured articles shall be applied, installed and handled as recommended by the manufacturer.

1.6 MATERIALS AND WORKMANSHIP:

A. All materials shall be new unless otherwise specified and of the quality specified. Materials shall be free from defects. All materials of a type for which the Underwriters Laboratories have established a standard shall be listed by the Underwriters Laboratories and shall bear their label.

B. Wherever the make of material or apparatus required is not definitely specified, the Contractor shall submit a sample to the Engineer before proceeding.

C. The Engineer reserves the right to call for samples for any item of material offered in substitution, together with a sample of the specified material, when, in the Engineer's opinion, the quality of the material and/or the appearance is involved and it is deemed that an evaluation of the two materials may be better made by visual inspection. This shall be limited to plumbing brass, grilles, registers, ceilings outlets and similar items an shall not be applicable to major manufacturers' items of equipment.

D. The Contractor shall be responsible for transportation of his materials to and on the job, and shall be responsible for the storage and protection of these materials and work until the final acceptance of the job.

E. The Contractor shall furnish all necessary scaffolding, tackle, tools and appurtenances of all kinds, and all labor required for the safe and expeditious execution of his contract.

F. The workmanship shall in all respects be of the highest grade and all construction shall be done according to the best practice of the trade.

1.7 SUBSTITUTION OF MATERIAL:

A. See Section 01600.

B. Where a definite material or only one manufacturer's name is mentioned in these specifications, it has been done in order to establish a standard. The product of the particular manufacturer mentioned is of satisfactory construction and any substitution must be of quality equal to or exceeding the named article. No substitution shall be made without review by the Engineer, who will be the sole judge of equality.

C. The Contractor shall submit for approval a complete list of the materials he proposes to use. This list shall give manufacturers' names and designations corresponding to each and every item and the submission shall be accompanied by complete descriptive literature and/or any supplementary data, drawings, etc., necessary to give full and complete details.

D. Should a substitution be acceptable under the provisions of the conditions of these specifications, and should this substitute prove to be defective or otherwise unsatisfactory for the service for which it is intended within the guarantee period, the Contractor who originally requested the substitution shall replace the substitute material with the specified material.

1.8 SHOP DRAWINGS:

A. See Section 01300.

B. Wherever shop drawings are called for in these specifications, they shall be furnished by the Contractor for the work involved after review by the Engineer as to the make and type of material and in sufficient time so that no delay or changes will be caused. This is done in order to facilitate progress on the job and failure on the part of the Contractor to comply shall render him liable to stand the expense of any and all delays, changes in construction, etc., occasioned by his failure to provide the necessary details. Also, if the Contractor fails to comply with this provision, the Engineer reserves the right to deal directly with the manufacturer he selects and secure any details he might deem necessary. Should there be any charges in connection with this, they shall be borne by the Contractor.

C. Shop drawings will be reviewed by the Engineer for general compliance with the design concept of the project and general with the information given in the contract documents. Review by the Engineer and any action by the Engineer in marking shop drawings is subject to the requirements of the entire contract documents. The Contractor will be held responsible for quantities, dimensions which shall be confirmed and correlated at the job site, fabrication processes, and techniques of construction, coordination of all trades, and the satisfactory performances of his work.

D. Shop drawings submitted shall not consist of manufacturers' catalogues or tear sheets that contain no indication of the exact item offered. Rather, the submission of individual items shall designate the exact item offered and shall clearly identify the item with the project.

E. All shop drawings shall be submitted at one time and shall consist of a bound catalogue of all shop drawings under each section properly indexed and certified that the Contractor has checked them.

F. The omission of any material from the shop drawings which has been shown on the contract drawings or specified, even though reviewed by the Engineer, shall not relieve the Contractor from furnishing and erecting same.

1.9 LAWS, CODES AND ORDINANCES:

A. All work shall be executed in strict accordance with all local, state and national codes, ordinances and regulations governing the particular class of work involved, as interpreted by the inspecting authority. The Contractor shall be responsible for the final execution of the work under this heading to suit those requirements. Where these specifications and the accompanying drawings conflict with these requirements, the Contractor shall report the matter to the Engineer, shall prepare any supplemental drawings required illustrating how the work may be installed so as to comply and, on approval, make the changes at no cost to the Owner. On completion of the various portions of the work the installation shall be tested by the constituted authorities, approved and, on completion of the work, the Contractor shall obtain and deliver to the Owner a final certificate of acceptance.

1.10 TERMINOLOGY:

A. Wherever the words "furnish, "provide", "furnish and install", "provide and install", and/or similar phrases occur, it is the intent that the materials and equipment described be furnished, installed and connected under this Division of the Specifications, complete for operation unless specifically noted to the contrary.

B. Where a material is described in detail, listed by catalogue number or otherwise called for, it shall be the Contractor's responsibility to furnish and install the material.

C. The use of the word "shall" conveys a mandatory condition to the contract.

D. "This section" always refers to the section in which the statement occurs.

E. "The project" includes all work in progress during the construction period.

F. "Concealed" areas are those areas which cannot be seen by the building occupants from the floor with all building components in place. "Exposed" areas are all areas which are exposed to view by the building occupants, including mechanical rooms.

G. In describing the various items of equipment, in general, each item will be described singularly, even though there may be a multiplicity of identical or similar items.

1.11 PAINTING:

A. All painting shall be done by the Contractor under Division 9. Following is a general outline of the required painting of Mechanical work under Divisions 15.

1. When the factory finish on any apparatus or equipment is marred, it shall be touched up and then given one coat of half flat half enamel, followed by a coat of machinery enamel of a color to match the original. Paint factory primed surfaces.

2. Paint all exposed pipe, hangers and supports.

3. Paint all insulated surfaces exposed to view, including piping, equipment, etc. Sand surfaces until a smooth, non-grainy surface is obtained.

1.12 ROUGH-IN AND FINAL CONNECTIONS FOR EQUIPMENT:

A. The shop drawings for all equipment are hereby made a part of these specifications. The Contractor under each section of the specification shall rough-in for the specifications or by the owner. The Contractor shall refer to all drawings and other sections of the specifications for the scope of work involved for the new required equipment connections for the Owner furnished equipment.

B. Should any of the equipment furnished require connections of a nature different from that shown on the drawings, report the matter to the Engineer and finally connect as directed by the Engineer.

C. Should any shop drawings not be available for equipment furnished under other contracts or by the Owner, the Contractor under each section of these specifications shall bid the work as detailed on the drawings.

D. Minor differences in the equipment furnished and that indicated on the drawings will not constitute grounds for additional payment to the Contractor.

1.13 PIPE IDENTIFICATION:

A. The Contractor shall mark all accessible piping systems.

1.14 IDENTIFICATION AND LABELING:

A. The Contractor shall make it possible for the personnel operating and maintaining the equipment and systems in this project to readily identify the various pieces of equipment, valves, piping, etc., by marking them. All items of equipment such as fans, pumps, etc., shall be clearly marked. The item of equipment shall indicate the same number as shown on the drawings. For example, pumps shall be identified as P-1, P-2, P-3, etc.; exhaust fans will be EF-1, EF-2, EF-3, etc.; Fan Coil Units will be FC-1, FC-2, etc.

1.15 OPERATING MANUALS:

A. Prepare and submit 3 copies of the operating manuals bound in hard covered three ring binders three weeks prior to completion of the work. The Engineer will check the manuals and any additional material necessary to complete the manuals shall be furnished and inserted by the Contractor.

B. Manuals shall contain the following data:

1. Catalogue data of all equipment.
2. Shop drawings of all equipment.
3. Wiring diagrams.
4. Recommended maintenance schedule for equipment.
5. Parts list for all items.
6. Name and address of each vendor.

1.16 GUARANTEE:

A. Unless a longer guarantee is hereinafter called for, all work, material and equipment items shall be guaranteed for a period of one year after acceptance by the Owner. All defects in labor and materials occurring during this period, as determined by the Engineer, shall be repaired and/or replaced to the complete satisfaction of the Owner. Guarantee shall be in writing and in triplicate.

1.17 COMPLETION REQUIREMENTS:

A. Before acceptance and final payment the Contractor under each Division of the specifications shall furnish the following:

1. Accurate record drawings, shown in red ink on blue line prints, furnished for that purpose, all changes from the original plans made during installation of the work. Drawings shall be filed with the Engineer when the work is completed.
2. All manufacturers' operating manuals.
3. All operating manuals.
4. Guarantee.
5. Test and Balance Report.

END OF SECTION

SECTION 15050

BASIC MECHANICAL MATERIALS

PART 1 GENERAL

1.1 RELATED DOCUMENTS:

A. Drawings and general provisions of Contract, including General and the Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY:

A. This Section includes the following basic mechanical materials and methods to complement other Division 15 Sections.

1. Piping materials and installation instructions common to most piping systems.
2. Concrete equipment base construction requirements.
3. Equipment nameplate data requirements.
4. Labeling and identifying mechanical systems and equipment is specified in Division 15 Section "Mechanical Identification."
5. Nonshrink grout for equipment installations.
6. Field-fabricated metal and wood equipment supports.
7. Installation requirements common to equipment specification Sections.
8. Mechanical demolition.
9. Cutting and patching.
10. Touchup painting and finishing.

B. Pipe and pipe fitting materials are specified in piping system Sections.

1.3 DEFINITIONS:

A. Pipe, pipe fittings, and piping include tube, tube fittings, and tubing.

B. Finished Spaces: Spaces other than mechanical and electrical equipment rooms, furred spaces, pipe and duct shafts, unheated spaces immediately below the roof, spaces above ceilings, unexcavated spaces, crawl spaces, and tunnels.

C. Exposed Interior Installations: Exposed to view indoors. Examples include finished occupied spaces and mechanical equipment rooms.

D. Exposed Exterior Installations: Exposed to view outdoors, or subject to outdoor ambient temperatures and weather conditions. Examples include rooftop locations.

E. Concealed Interior Installations: Concealed from view and protected from physical contact by building occupants. Examples include above ceilings and in duct shafts.

F. Concealed Exterior Installations: Concealed from view and protected from weather conditions and physical contact by building occupants, but subject to outdoor ambient temperatures. Examples include installations within unheated shelters.

1.4 SUBMITTALS:

A. General: Submit the following according to the Conditions of the Contract and Division 1 Specification Sections.

B. Product data for following piping specialties:

1. Mechanical sleeve seals.
2. Identification materials and devices.

C. Samples of color, lettering style, and other graphic representation required for each identification material and device.

D. Shop drawings detailing fabrication and installation for metal and wood supports and anchorage for mechanical materials and equipment.

E. Coordination drawings for access panel and door locations.

F. Prepare coordination drawings according to Division 1 Section "Submittals" to a 1/4 inch equals 1 foot (1:48) scale or larger. Detail major elements, components, and systems of mechanical equipment and materials in relationship with other systems, installations, and building components. Show space requirements for installation and access. Show where sequence and coordination of installations are important to the efficient flow of the Work. Include the following:

1. Proposed locations of piping, ductwork, equipment, and materials. Include the following:

a. Planned piping layout, including valve and specialty locations and valve stem movement.

b. Planned duct systems layout, including elbow radii and duct accessories.

c. Clearances for installing and maintaining insulation.

d. Clearances for servicing and maintaining equipment, including space for equipment disassembly required for periodic maintenance.

e. Equipment service connections and support details.

f. Exterior wall and foundation penetrations.

g. Fire-rated wall and floor penetrations.

h. Sizes and location of required concrete pads and bases.

2. Scheduling, sequencing, movement, and positioning of large equipment into the building during construction.

3. Floor plans, elevations, and details to indicate penetrations in floors, walls, and ceilings and their relationship to other penetrations and installations.

4. Reflected ceiling plans to coordinate and integrate installations, air outlets and inlets, light fixtures, communication systems components, sprinklers, and other ceiling-mounted items.

G. Welder certificates signed by Contractor certifying that welders comply with requirements specified under the "Quality Assurance" Article.

1.5 QUALITY ASSURANCE:

A. Qualify welding processes and operators for structural steel according to AWS D1.1 "Structural Welding Code--Steel."

B. Qualify welding processes and operators for piping according to ASME "Boiler and Pressure Vessel Code," Section IX, "Welding and Brazing Qualifications."

1. Comply with provisions of ASME B31 Series "Code for Pressure Piping."

2. Certify that each welder has passed AWS qualification tests for the welding processes involved and that certification is current.

C. ASME A13.1 for lettering size, length of color field, colors, and viewing angles of identification devices.

D. Equipment Selection: Equipment of greater or larger power, dimensions, capacities, and ratings may be furnished provided such proposed equipment is approved in writing and connecting mechanical and electrical services, circuit breakers, conduit, motors, bases, and equipment spaces are increased. No additional costs will be approved for these increases, if larger equipment is approved. If minimum energy ratings or efficiencies of the equipment are specified, the equipment must meet the design requirements and commissioning requirements.

1.6 DELIVERY, STORAGE, AND HANDLING:

A. Deliver pipes and tubes with factory-applied end-caps. Maintain end-caps through shipping, storage, and handling to prevent pipe-end damage and prevent entrance of dirt, debris, and moisture.

B. Protect stored pipes and tubes from moisture and dirt. Elevate above grade. When stored inside, do not exceed structural capacity of the floor.

C. Protect flanges, fittings, and piping specialties from moisture and dirt.

D. Protect stored plastic pipes from direct sunlight. Support to prevent sagging and bending.

1.7 SEQUENCING AND SCHEDULING:

A. Coordinate mechanical equipment installation with other building components.

B. Arrange for chases, slots, and openings in building structure during progress of construction to allow for mechanical installations.

C. Coordinate the installation of required supporting devices and set sleeves in poured-in-place concrete and other structural components as they are constructed.

D. Sequence, coordinate, and integrate installations of mechanical materials and equipment for efficient flow of the Work. Coordinate installation of large equipment requiring positioning prior to closing in the building.

E. Coordinate connection of electrical services.

F. Coordinate connection of mechanical systems with exterior underground and overhead utilities and services. Comply with requirements of governing regulations, franchised service companies, and controlling agencies.

G. Coordinate requirements for access panels and doors where mechanical items requiring access are concealed behind finished surfaces. Access panels and doors are specified in Division 8 Section "Access Doors."

H. Coordinate installation of identifying devices after completing covering and painting where devices are applied to surfaces. Install identifying devices prior to installing acoustical ceilings and similar concealment.

PART 2 PRODUCTS

2.1 PIPE AND PIPE FITTINGS:

A. Refer to individual piping system specification Sections for pipe and fitting materials and joining methods.

B. Pipe Threads: ASME B1.20.1 for factory-threaded pipe and pipe fittings.

2.2 JOINING MATERIALS:

A. Refer to individual piping system specification Sections in Division 15 for special joining materials not listed below.

B. Pipe Flange Gasket Materials: Suitable for the pressure, chemical, and thermal conditions of the piping system contents.

1. ASME B16.21, nonmetallic, flat, asbestos-free, 1/8-inch (3-mm) maximum thickness, except where thickness or specific material is indicated.

    a. Full-Face Type: For flat-face, Class 125 cast-iron and cast-bronze flanges.
    b. Narrow-Face Type: For raised-face, Class 250 cast-iron and steel flanges.

2. ASME B16.20 for grooved, ring-joint, steel flanges.

3. AWWA C110, rubber, flat face, 1/8 inch (3 mm) thick, except where other thickness is indicated; and full-face or ring type, except where type is indicated.

C. Flange Bolts and Nuts: ASME B18.2.1/B18.2.2 and ASTM F593/ASTM F594, 304 stainless steel, except where other material is indicated and shall be suited for pressure class of pipe.

D. Plastic Pipe Flange Gasket, Bolts, and Nuts: Type and material recommended by piping system manufacturer, except where other type or material is indicated.

E. Solder Filler Metal: ASTM B 32.

1. Alloy Sn95 or Alloy Sn94: Tin (approximately 95 percent) and silver (approximately 5 percent), having 0.10 percent lead content.

2. Alloy Sn50: Tin (50 percent) and lead (50 percent).

3. Alloy E: Tin (approximately 95 percent) and copper (approximately 5 percent), having 0.10 percent maximum lead content.

4. Alloy HA: Tin-antimony-silver-copper-zinc, having 0.10 percent maximum lead content.

5. Alloy HB: Tin-antimony-silver-copper-nickel, having 0.10 percent maximum lead content.

6. Alloy Sb5: Tin (95 percent) and antimony (5 percent), having 0.20 percent maximum lead content.

F. Brazing Filler Metals: AWS A5.8.

1. BCuP Series: Copper-phosphorus alloys.
2. BAg1: Silver alloy.

G. Welding Filler Metals: Comply with AWS D10.12 for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.

H. Solvent Cements: Manufacturer's standard solvents complying with the following:

1. Acrylonitrile-Butadiene-Styrene (ABS): ASTM D 2235.
2. Chlorinated Poly(Vinyl Chloride) (CPVC): ASTM F 493.
3. Poly(Vinyl Chloride) (PVC): ASTM D 2564.
4. PVC to ABS Transition: Made to requirements of ASTM D 3138, color other than orange.

I. Plastic Pipe Seals: ASTM F 477, elastomeric gasket.

J. Flanged, Ductile-Iron Pipe Gasket, Bolts, and Nuts: AWWA C110, rubber gasket, 304 stainless steel bolts and nuts.

K. Couplings: Refer to Specification Section 02665.

2.3 PIPING SPECIALTIES:

A. Escutcheons: Manufactured wall, ceiling, and floor plates; deep-pattern type where required to conceal protruding fittings and sleeves.

1. Inside Diameter: Closely fit around pipe, tube, and insulation.

2. Outside Diameter: Completely cover opening.

3. Cast Brass: One-piece, with set-screw.

a. Finish: Rough brass.
b. Finish: Polished chrome plate.

4. Cast Brass: Split casting, with concealed hinge and set-screw.

a. Finish: Rough brass.
b. Finish: Polished chrome plate.

5. Stamped Steel: One-piece, with set-screw and chrome-plated finish.

6. Stamped Steel: One-piece, with spring clips and chrome-plated finish.

7. Stamped Steel: Split plate, with concealed hinge, set-screw, and chrome-plated finish.

8. Stamped Steel: Split plate, with concealed hinge, spring clips, and chrome-plated finish.

9. Stamped Steel: Split plate, with exposed-rivet hinge, set-screw, and chrome-plated finish.

10. Stamped Steel: Split plate, with exposed-rivet hinge, spring clips, and chrome-plated finish.

11. Cast-Iron Floor Plate: One-piece casting.

B. Dielectric Fittings: Assembly or fitting having insulating material isolating joined dissimilar metals to prevent galvanic action and stop corrosion.

1. Description: Combination of copper alloy and ferrous; threaded, solder, plain, and weld neck end types and matching piping system materials.

2. Insulating Material: Suitable for system fluid, pressure, and temperature.

3. Dielectric Unions: Factory-fabricated, union assembly for 250-psig (1725-kPa) minimum working pressure at a 180 deg F (82 deg C) temperature.

4. Dielectric Flanges: Factory-fabricated, companion-flange assembly for 150- or 300-psig (1035-kPa or 2070-kPa) minimum pressure to suit system pressures.

5. Dielectric-Flange Insulation Kits: Field-assembled, companion-flange assembly, full-face or ring type. Components include neoprene or phenolic gasket, phenolic or polyethylene bolt sleeves, phenolic washers, and steel backing washers.

a. Provide separate companion flanges and steel bolts and nuts for 150- or 300-psig (1035kPa or 2070kPa) minimum working pressure to suit system pressures.

6. Dielectric Couplings: Galvanized-steel coupling, having inert and noncorrosive, thermoplastic lining, with threaded ends and 300-psig (2070-kPa) minimum working pressure at 225 deg F (107 deg C) temperature.

7. Dielectric Nipples: Electroplated steel nipple, having inert and noncorrosive thermoplastic lining, with combination of plain, threaded, or grooved end types and 300-psig (2070-kPa) working pressure at 225 deg F (107 deg C) temperature.

C. Mechanical Sleeve Seals: Modular, watertight mechanical type. Components include interlocking synthetic rubber links shaped to continuously fill annular space between pipe and sleeve. Connecting bolts and pressure plates cause rubber sealing elements to expand when tightened.

D. Sleeves: The following materials are for wall, floor, slab, and roof penetrations:

1. Steel Sheet-Metal: 24-gage (0.70mm) or heavier galvanized sheet metal, round tube closed with welded longitudinal joint.

2. Steel Pipe: ASTM A 53, Type E, Grade A, Schedule 40, galvanized, plain ends.

3. Cast-Iron: Cast or fabricated wall pipe equivalent to ductile-iron pressure pipe, having plain ends and integral water stop, except where other features are specified.

4. Wall Penetration Systems: Wall sleeve assembly, consisting of housing, gaskets, and pipe sleeve, with 1 mechanical-joint end conforming to AWWA C110 and 1 plain pipe-sleeve end.

   a. Penetrating Pipe Deflection: 5 percent without leakage.

   b. Housing: Ductile-iron casting having waterstop and anchor ring, with ductile-iron gland, steel studs and nuts, and rubber gasket conforming to AWWA C111, of housing and gasket size as required to fit penetrating pipe.

   c. Pipe Sleeve: AWWA C151, ductile-iron pipe.

   d. Housing-to-Sleeve Gasket: Rubber or neoprene push-on type of manufacturer's design.

5. Cast-Iron Sleeve Fittings: Commercially made sleeve having an integral clamping flange, with clamping ring, bolts, and nuts for membrane flashing.

   a. Underdeck Clamp: Clamping ring with set-screws.

6. PVC Plastic: Manufactured, permanent, with nailing flange for attaching to wooden forms.

7. PVC Plastic Pipe: ASTM D 1785, Schedule 40.

8. PE Plastic: Manufactured, reusable, tapered, cup-shaped, smooth outer surface, with nailing flange for attaching to wooden forms.

2.4 IDENTIFYING DEVICES AND LABELS:

A. General: Manufacturer's standard products of categories and types required for each application as referenced in other Division 15 Sections. Where more than one type is specified for listed application, selection is Installer's option, but provide single selection for each product category.

B. Equipment Nameplates: Metal nameplate with operational data engraved or stamped, permanently fastened to equipment.

1. Data: Manufacturer, product name, model number, serial number, capacity, operating and power characteristics, labels of tested compliances, and similar essential data.

2. Location: An accessible and visible location.

C. Stencils: Standard stencils, prepared for required applications with letter sizes conforming to recommendations of ASME A13.1 for piping and similar applications, but not less than 1-1/4-inch (30-mm) -high letters for ductwork and not less than 3/4-inch (19-mm) -high letters for access door signs and similar operational instructions.

1. Material: Fiberboard.

2. Material: Brass.

3. Stencil Paint: Standard exterior type stenciling enamel; black, except as otherwise indicated; either brushing grade or pressurized spray-can form and grade.

4. Identification Paint: Standard identification enamel of colors indicated or, if not otherwise indicated for piping systems, comply with ASME A13.1 for colors.

D. Snap-On Plastic Pipe Markers: Manufacturer's standard preprinted, semirigid snap-on, color-coded pipe markers, conforming to ASME A13.1.

E. Pressure-Sensitive Pipe Markers: Manufacturer's standard preprinted, permanent adhesive, color-coded, pressure-sensitive vinyl pipe markers, conforming to ASME A13.1.

F. Plastic Duct Markers: Manufacturer's standard laminated plastic, color coded duct markers. Conform to following color code:

1. Green: Cold air.
2. Yellow: Hot air.
3. Yellow/Green: Supply air.
4. Blue: Exhaust, outside, return, and mixed air.
5. For hazardous exhausts, use colors and designs recommended by ASME A13.1.
6. Nomenclature: Include following:

   a. Direction of air flow.
   b. Duct service (supply, return, exhaust, etc.).
   c. Duct origin (from).
   d. Duct destination (to).
   e. Design cfm.

G. Engraved Plastic-Laminate Signs: ASTM D 709, Type I, cellulose, paper-base, phenolic-resin-laminate engraving stock; Grade ES-2, black surface, black phenolic core, with white (letter color) melamine subcore, except when other colors are indicated.

1. Fabricate in sizes required for message.

2. Engraved with engraver's standard letter style, of sizes and with wording to match equipment identification.

3. Punch for mechanical fastening.

4. Thickness: 1/16 inch (1.5 mm), except as otherwise indicated.

5. Thickness: 1/8 inch (3 mm), except as otherwise indicated.

6. Thickness: 1/16 inch (1.5 mm) for units up to 20 square inches (13,000 sq. mm) or 8 inches (200 mm) long; 1/8 inch (3 mm) for larger units.

7. Fasteners: Self-tapping stainless-steel screws or contact-type permanent adhesive.

H. Plastic Equipment Markers: Laminated-plastic, color-coded equipment markers. Conform to following color code:

1. Green: Cooling equipment and components.

2. Yellow: Heating equipment and components.

3. Yellow/Green: Combination cooling and heating equipment and components.

4. Brown: Energy reclamation equipment and components.

5. Blue: Equipment and components that do not meet any of the above criteria.

6. For hazardous equipment, use colors and designs recommended by ASME A13.1.

7. Nomenclature: Include following, matching terminology on schedules as closely as possible:

a. Name and plan number.
b. Equipment service.
c. Design capacity.
d. Other design parameters such as pressure drop, entering and leaving conditions, and rpm.

8. Size: Approximately 2-1/2 by 4 inches (65 by 100 mm) for control devices, dampers, and valves; and 4-1/2 by 6 inches (115 by 150 mm) for equipment.

I. Lettering and Graphics: Coordinate names, abbreviations, and other designations used in mechanical identification, with corresponding designations indicated. Use numbers, lettering, and wording indicated for proper identification and operation/maintenance of mechanical systems and equipment.

1. Multiple Systems: Where multiple systems of same generic name are indicated, provide identification that indicates individual system

number as well as service such as "Boiler No. 3," "Air Supply No. 1H," or "Standpipe F12."

2.5 GROUT:

A. Nonshrink, Nonmetallic Grout: ASTM C 1107, Grade B.

1. Characteristics: Post-hardening, volume-adjusting, dry, hydraulic-cement grout, nonstaining, noncorrosive, nongaseous, and recommended for interior and exterior applications.
2. Design Mix: 5000-psi (34.50-MPa), 28-day compressive strength.
3. Packaging: Premixed and factory-packaged.

PART 3 EXECUTION

3.1 PIPING SYSTEMS--COMMON REQUIREMENTS:

A. General: Install piping as described below, except where system Sections specify otherwise. Individual piping system specification Sections in Division 15 specify piping installation requirements unique to the piping system.

B. General Locations and Arrangements: Drawings (plans, schematics, and diagrams) indicate general location and arrangement of piping systems. Indicated locations and arrangements were used to size pipe and calculate friction loss, expansion, pump sizing, and other design considerations. Install piping as indicated, except where deviations to layout are approved on coordination drawings.

C. Install piping at indicated slope.

D. Install components having pressure rating equal to or greater than system operating pressure.

E. Install piping in concealed interior and exterior locations, except in equipment rooms and service areas.

F. Install piping free of sags and bends.

G. Install exposed interior and exterior piping at right angles or parallel to building walls. Diagonal runs are prohibited, except where indicated.

H. Install piping tight to slabs, beams, joists, columns, walls, and other building elements. Allow sufficient space above removable ceiling panels to allow for ceiling panel removal.

I. Install piping to allow application of insulation plus 1-inch (25-mm) clearance around insulation.

J. Locate groups of pipes parallel to each other, spaced to permit valve servicing.

K. Install fittings for changes in direction and branch connections.

L. Install couplings according to manufacturer's printed instructions.

M. Install pipe escutcheons for pipe penetrations of concrete and masonry walls, wall board partitions, and suspended ceilings according to the following:

1. Chrome-Plated Piping: Cast-brass, one-piece, with set-screw, and polished chrome-plated finish. Use split-casting escutcheons, where required, for existing piping.

2. Uninsulated Piping Wall Escutcheons: Cast-brass or stamped-steel, with set-screw.

3. Uninsulated Piping Floor Plates in Utility Areas: Cast-iron floor plates.

4. Insulated Piping: Cast-brass or stamped-steel, with concealed hinge, spring clips, and chrome-plated finish.

5. Piping in Utility Areas: Cast-brass or stamped-steel, with set-screw or spring clips.

N. Sleeves are not required for core drilled holes.

O. Permanent sleeves are not required for holes formed by PE plastic (removable) sleeves.

P. Install sleeves for pipes passing through concrete and masonry walls, concrete floor and roof slabs, and where indicated.

Q. Install sleeves for pipes passing through concrete and masonry walls, gypsum-board partitions, concrete floor and roof slabs, and where indicated.

1. Cut sleeves to length for mounting flush with both surfaces.

a. Exception: Extend sleeves installed in floors of mechanical equipment areas or other wet areas 2 inches (50 mm) above finished floor level. Extend cast-iron sleeve fittings below floor slab as required to secure clamping ring where specified.

2. Build sleeves into new walls and slabs as work progresses.

3. Install large enough sleeves to provide 1/4-inch (6-mm) annular clear space between sleeve and pipe or pipe insulation. Use the following sleeve materials:

a. PVC Pipe Sleeves: For pipes smaller than 6 inches (150 mm).

b. Steel Pipe Sleeves: For pipes smaller than 6 inches (150 mm).

c. Steel Sheet-Metal Sleeves: For pipes 6 inches (150 mm) and larger that penetrate gypsum-board partitions.

d. Cast-Iron Sleeve Fittings: For floors having membrane waterproofing. Secure flashing between clamping flanges. Install section of cast-iron soil pipe to extend sleeve to 2 inches (50 mm) above finished floor level. Flashing is specified in Division 7 Section "Flashing and Sheet Metal."

i Seal space outside of sleeve fittings with nonshrink, nonmetallic grout.

4. Except for below-grade wall penetrations, seal annular space between sleeve and pipe or pipe insulation, using elastomeric joint sealants specified in Division 7 Section "Joint Sealants."

R. Above Grade, Exterior Wall, Pipe Penetrations: Seal penetrations using sleeves and mechanical sleeve seals. Size sleeve for 1-inch (25-mm) annular clear space between pipe and sleeve for installation of mechanical seals.

1. Install steel pipe for sleeves smaller than 6 inches (150 mm).
2. Install cast-iron wall pipes for sleeves 6 inches (150 mm) and larger.
3. Assemble and install mechanical seals according to manufacturer's printed instructions.

S. Below Grade, Exterior Wall, Pipe Penetrations: Install cast-iron wall pipes for sleeves. Seal pipe penetrations using mechanical sleeve seals. Size sleeve for 1-inch (25-mm) annular clear space between pipe and sleeve for installation of mechanical seals.

T. Below Grade, Exterior Wall, Pipe Penetrations: Install ductile-iron wall penetration system sleeves according to manufacturer's printed installation instructions.

U. Fire Barrier Penetrations: Maintain indicated fire rating of walls, partitions, ceilings, and floors at pipe penetrations. Seal pipe penetrations with firestopping sealant material. Firestopping materials are specified in Division 7 Section "Firestopping."

V. Verify final equipment locations for roughing in.

W. Refer to equipment specifications in other Sections for roughing-in requirements.

X. Piping Joint Construction: Join pipe and fittings as follows and as specifically required in individual piping system Sections.

1. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.

2. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.

3. Soldered Joints: Construct joints according to AWS "Soldering Manual," Chapter 22 "The Soldering of Pipe and Tube."

4. Brazed Joints: Construct joints according to AWS "Brazing Manual" in the "Pipe and Tube" chapter.

5. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full inside diameter. Join pipe fittings and valves as follows:

   a. Note the internal length of threads in fittings or valve ends, and proximity of internal seat or wall, to determine how far pipe should be threaded into joint.

   b. Apply appropriate tape or thread compound to external pipe threads (except where dry seal threading is specified).

   c. Align threads at point of assembly.

   d. Tighten joint with wrench. Apply wrench to valve end into which pipe is being threaded.

   e. Damaged Threads: Do not use pipe or pipe fittings having threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.

6. Welded Joints: Construct joints according to AWS D10.12 "Recommended Practices and Procedures for Welding Low Carbon Steel Pipe" using qualified processes and welding operators according to the "Quality Assurance" Article.

7. Flanged Joints: Align flange surfaces parallel. Select appropriate gasket material, size, type, and thickness for service application. Install gasket concentrically positioned. Assemble joints by sequencing bolt tightening to make initial contact of flanges and gaskets as flat and parallel as possible. Use suitable lubricants on bolt threads. Tighten bolts gradually and uniformly using torque wrench.

8. Plastic Pipe and Fitting Solvent-Cement Joints: Clean and dry joining surfaces by wiping with clean cloth or paper towels. Join pipe and fittings according to the following standards:

   a. Comply with ASTM F 402 for safe handling of solvent-cement and primers.

   b. Acrylonitrile-Butadiene-Styrene (ABS): ASTM D 2235 and ASTM D 2661.

   c. Chlorinated Poly(Vinyl Chloride) (CPVC): ASTM D 2846 and ASTM F 493.

d. Poly(Vinyl Chloride) (PVC) Pressure Application: ASTM D 2672.

e. Poly(Vinyl Chloride) (PVC) Non-Pressure Application: ASTM D 2855.

f. PVC to ABS (Non-Pressure) Transition: Procedure and solvent cement described in ASTM D 3138.

9. Plastic Pipe and Fitting Heat-Fusion Joints: Prepare pipe and fittings and join with heat-fusion equipment according to manufacturer's printed instructions.

a. Plain-End Pipe and Fittings: Butt joining.
b. Plain-End Pipe and Socket-Type Fittings: Socket joining.

Y. Piping Connections: Except as otherwise indicated, make piping connections as specified below.

1. Install unions in piping 2 inches (50 mm) and smaller adjacent to each valve and at final connection to each piece of equipment having a 2-inch (50-mm) or smaller threaded pipe connection.

2. Install flanges in piping 2-1/2 inches (65 mm) and larger adjacent to flanged valves and at final connection to each piece of equipment having flanged pipe connection.

3. Dry Piping Systems (Gas, Compressed Air, and Vacuum): Install dielectric unions and flanges to connect piping materials of dissimilar metals.

4. Wet Piping Systems (Water and Steam): Install dielectric coupling and nipple fittings to connect piping materials of dissimilar metals.

3.2 EQUIPMENT INSTALLATION--COMMON REQUIREMENTS:

A. Install equipment to provide the maximum possible headroom where mounting heights are not indicated.

B. Install equipment according to approved submittal data. Portions of the Work are shown only in diagrammatic form. Refer conflicts to the Architect.

C. Install equipment level and plumb, parallel and perpendicular to other building systems and components in exposed interior spaces, except where otherwise indicated.

D. Install mechanical equipment to facilitate servicing, maintenance, and repair or replacement of equipment components. Connect equipment for ease of disconnecting, with minimum of interference with other installations. Extend grease fittings to an accessible location.

E. Install equipment giving right-of-way to piping systems installed at a required slope.

3.3 LABELING AND IDENTIFYING:

A. Piping Systems: Install pipe markers on each system. Include arrows showing normal direction of flow.

1. Stenciled Markers: Complying with ASME A13.1.

2. Plastic markers, with application systems. Install on pipe insulation segment where required for hot noninsulated pipes.

3. Locate pipe markers wherever piping is exposed in finished spaces, machine rooms, accessible maintenance spaces (shafts, tunnels, plenums), and exposed exterior locations as follows:

a. Near each valve and control device.

b. Near each branch, excluding short take-offs for fixtures and terminal units. Mark each pipe at branch, where flow pattern is not obvious.

c. Near locations where pipes pass through walls, floors, ceilings, or enter inaccessible enclosures.

d. At access doors, manholes, and similar access points that permit view of concealed piping.

e. Near major equipment items and other points of origination and termination.

f. Spaced at a maximum of 50-foot (15-m) intervals along each run. Reduce intervals to 25 feet (7.5 m) in congested areas of piping and equipment.

g. On piping above removable acoustical ceilings, except omit intermediately spaced markers.

B. Equipment: Install engraved plastic laminate sign or equipment marker on or near each major item of mechanical equipment.

1. Lettering Size: Minimum 1/4-inch (6-mm) -high lettering for name of unit where viewing distance is less than 2 feet (0.6 m), 1/2-inch (13-mm) -high for distances up to 6 feet (1.8 m), and proportionately larger lettering for greater distances. Provide secondary lettering 2/3 to 3/4 of size of principal lettering.

2. Text of Signs: Provide text to distinguish between multiple units, inform operator of operational requirements, indicate safety and emergency precautions, and warn of hazards and improper operations, in addition to name of identified unit.

C. Duct Systems: Identify air supply, return, exhaust, intake, and relief ducts with duct markers; or provide stenciled signs and arrows, showing duct system service and direction of flow.

1. Location: In each space where ducts are exposed or concealed by removable ceiling system, locate signs near points where ducts enter into space and at maximum intervals of 50 feet (15 m).

D. Adjusting: Relocate identifying devices which become visually blocked by work of this Division or other Divisions.

3.4 PAINTING AND FINISHING:

A. Refer to Division 9 Section "Painting" for field painting requirements.

B. Damage and Touch Up: Repair marred and damaged factory-painted finishes with materials and procedures to match original factory finish.

3.5 CONCRETE BASES:

A. Construct concrete equipment bases of dimensions indicated, but not less than 4 inches (100 mm) larger than supported unit in both directions. Follow supported equipment manufacturer's setting templates for anchor bolt and tie locations. Use 3000-psi (20.70-MPa), 28-day compressive strength concrete and reinforcement as specified in Division 3 Section "Cast-in-Place Concrete."

3.6 ERECTION OF METAL SUPPORTS AND ANCHORAGE:

A. Cut, fit, and place miscellaneous metal supports accurately in location, alignment, and elevation to support and anchor mechanical materials and equipment.

B. Field Welding: Comply with AWS D1.1 "Structural Welding Code--Steel."

3.7 ERECTION OF WOOD SUPPORTS AND ANCHORAGE:

A. Cut, fit, and place wood grounds, nailers, blocking, and anchorage to support and anchor mechanical materials and equipment.

B. Select fastener sizes that will not penetrate members where opposite side will be exposed to view or will receive finish materials. Make tight connections between members. Install fasteners without splitting wood members.

C. Attach to substrates as required to support applied loads.

3.8 DEMOLITION:

A. Disconnect, demolish, and remove work specified under Division 15 and as indicated.

B. Where pipe, ductwork, insulation, or equipment to remain is damaged or disturbed, remove damaged portions and install new products of equal capacity and quality.

C. Accessible Work: Remove indicated exposed pipe and ductwork in its entirety.

D. Abandoned Work: Cut and remove buried pipe abandoned in place, 2 inches (50 mm) beyond the face of adjacent construction. Cap and patch surface to match existing finish.

E. Removal: Remove indicated equipment from the Project site.

F. Temporary Disconnection: Remove, store, clean, reinstall, reconnect, and make operational equipment indicated for relocation.

3.9 CUTTING AND PATCHING:

A. Cut, channel, chase, and drill floors, walls, partitions, ceilings, and other surfaces necessary for mechanical installations. Perform cutting by skilled mechanics of the trades involved.

B. Repair cut surfaces to match adjacent surfaces.

3.10 GROUTING:

A. Install nonmetallic nonshrink grout for mechanical equipment base bearing surfaces, pump and other equipment base plates, and anchors. Mix grout according to manufacturer's printed instructions.

B. Clean surfaces that will come into contact with grout.

C. Provide forms for placement of grout, as required.

D. Avoid air entrapment when placing grout.

E. Place grout to completely fill equipment bases.

F. Place grout on concrete bases to provide a smooth bearing surface for equipment.

G. Place grout around anchors.

H. Cure placed grout according to manufacturer's printed instructions.

END OF SECTION

SECTION 15062

PIPE: DUCTILE

PART 1 GENERAL

1.1 SUMMARY

A. Section Includes:

1. Ductile iron piping, fittings, and appurtenances.

B. Related Sections include but are not necessarily limited to:

1. Division 01 - General Requirements.
2. Section 15060 - Pipe and Pipe Fittings: Basic Requirements.

1.2 QUALITY ASSURANCE

A. Referenced Standards:

1. American Society of Mechanical Engineers (ASME):

a. B1.1, Unified Inch Screw Threads (UN and UNR Thread Form).

b. B16.1, Gray Iron Pipe Flanges and Flanged Fittings: Classes 25, 125, and 250.

2. ASTM International (ASTM):

a. B695, Standard Specification for Coatings of Zinc Mechanically Deposited on Iron and Steel.

3. American Water Works Association (AWWA):

a. C203, Standard for Coal-Tar Protective Coatings and Linings for Steel Water Pipelines - Enamel and Tape - Hot Applied.

b. C606, Standard for Grooved and Shouldered Joints.

4. American Water Works Association/American National Standards Institute (AWWA/ANSI):

a. C105/A21.5, Standard for Polyethylene Encasement for Ductile-Iron Pipe Systems.

b. C110/A21.10, Standard for Ductile-Iron and Gray-Iron Fittings.

c. C111/A21.11, Standard for Rubber-Gasket Joints for Ductile-Iron Pressure Pipe and Fittings.

d. C115/A21.15, Standard for Flanged Ductile-Iron Pipe with Ductile-Iron or Gray-Iron Threaded Flanges.

e. C150/A21.50, Standard for Thickness Design of Ductile-Iron Pipe.

f. C151/A21.51, Standard for Ductile-Iron Pipe, Centrifugally Cast, for Water.

5. Society of Automotive Engineers (SAE):

a. AMS-QQ-P-416, Cadmium Plating - Electro-deposited.

1.3 SUBMITTALS

A. Shop Drawings:

1. See Division 01 for requirements for the mechanics and administration of the submittal process.

2. Certification of factory hydrostatic testing.

3. If mechanical coupling system is used, submit piping, fittings, and appurtenant items which will be utilized to meet system requirements.

PART 2 PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS

A. Subject to compliance with the Contract Documents, the following manufacturers are acceptable:

1. Couplings: Refer to Specification Section 02665.

2. Polyethylene encasement tape:

a. Chase (Chasekote 750).
b. Kendall (Polyken 900).
c. 3 M (Scotchrap 50).

3. Restrained pipe joints: (required for all buried ductile pipe)

a. American (Flex-Ring) - 4 IN to 54 IN.
b. U.S. Pipe (TR-Flex) - 4 IN to 54 IN.
c. Pipe fittings shall be either flange or MJ as indicated on drawings and/or Section 02665.

B. Submit request for substitution in accordance with Specification Section 01640.

2.2 MATERIALS

A. Ductile Iron Pipe:

1. AWWA/ANSI C115/A21.15.
2. AWWA/ANSI C150/A21.50.
3. AWWA/ANSI C151/A21.51.

B. Fittings and Flanges:

1. AWWA/ANSI C110/A21.10.
2. AWWA/ANSI C153.
3. AWWA/ANSI C115/A21.15.
4. Flanges drilled and faced per ASME B16.1 for both 125 and 250 psi applications.

C. Nuts and Bolts:

1. 316 Stainless steel.
2. Heads and dimensions per ASME B1.1.
3. Threaded per ASME B1.1.
4. Project ends 1/4 to 1/2 IN beyond nuts.

D. Gaskets: Gasket rings shall be used and shall be made of best quality rubber composition with thickness and pressure rating as required for the application. Brand and quality shall be approved by the Engineer.

E. If mechanical coupling system is used, utilize pipe thickness and grade in accordance with AWWA C606.

F. Polyethylene Encasement: See AWWA/ANSI C105/A21.5.

2.3 MANUFACTURED UNITS

A. Couplings: Refer to Specification Section 02665

2.4 LININGS AND COATINGS

A. Pipe and Fittings Interior:

1. Cement lined per AWWA C104 suitable for potable water service per NSF 61.

B. Pipe and Fittings Exterior:

1. Above-Grade Piping: Provide shop coat primer required for the coating system specified in Division 9.

2. Buried Piping: Provide shop applied 1-mil bituminous coating system per AWWA C151 for pipe and fittings.

C. Encasement for Underground Metal Piping: ASTM A 674 or AWWA C105.

1. Form: Sheet or tube.

2. Material: LLDPE film of 0.008-inch minimum thickness or high-density, cross-laminated PE film of 0.004-inch minimum thickness.

2.5 SOURCE QUALITY CONTROL

A. Factory Test:

1. Subject pipe to hydrostatic test of not less than 500 psi with the pipe under the full test pressure for at least 10 seconds.

PART 3 EXECUTION

3.1 INSTALLATION

A. Joining Method - Push-On Mechanical (Gland-Type) Joints:

1. Install in accordance with AWWA/ANSI C111/A21.11.

2. Assemble mechanical joints carefully according to manufacturer's recommendations.

3. If effective sealing is not obtained, disassemble, thoroughly clean, and reassemble the joint.

4. Do not overstress bolts.

5. Where piping utilizes mechanical joints with tie rods, align joint holes to permit installation of harness bolts.

B. Joining Method - Push-On Joints:

1. Install in accordance with AWWA/ANSI C151/A21.51.

2. Assemble push-on joints in accordance with manufacturer's directions.

3. Bevel and lubricate spigot end of pipe to facilitate assembly without damage to gasket.

a. Use lubricant that is non-toxic, does not support the growth of bacteria, has no deteriorating effects on the gasket material, and imparts no taste or odor to water in pipe.

4. Assure the gasket groove is thoroughly clean.

5. For cold weather installation, warm gasket prior to placement in bell.

6. Taper of bevel shall be approximately 30 degrees with centerline of pipe and approximately 1/4 IN back.

C. Joining Method - Flanged Joints:

1. Install in accordance with AWWA/ANSI C115/A21.15.

2. Extend pipe completely through screwed-on flanged and machine flange face and pipe in single operation.

3. Make flange faces flat and perpendicular to pipe centerline.

4. When bolting flange joints, exercise extreme care to ensure that there is no restraint on opposite end of pipe or fitting which would prevent uniform gasket compression or would cause unnecessary stress, bending or torsional strains to be applied to cast flanges or flanged fittings.

5. Allow one (1) flange free movement in any direction while bolts are being tightened.

6. Do not assemble adjoining flexible joints until flanged joints in piping system have been tightened.

7. Gradually tighten flange bolts uniformly to permit even gasket compression.

D. Joining Method - Mechanical Coupling Joint:

1. Arrange piping so that pipe ends are in full contact.

2. Groove and shoulder ends of piping in accordance with manufacturer's recommendations.

3. Provide coupling and grooving technique assuring a connection which passes pressure testing requirements.

E. Cutting:

1. Do not damage interior lining material during cutting.
2. Use abrasive wheel cutters or saws.
3. Make square cuts.
4. Bevel and free cut ends of sharp edges after cutting.

F. Install buried piping in accordance with applicable Division 2 specs and as shown on the drawings.

G. Install restrained joint systems where specified in Section 02665.

3.2 FIELD QUALITY CONTROL

A. Test piping systems in accordance with Section 02665.

END OF SECTION

SECTION 15066

PIPE: STAINLESS STEEL

PART 1 GENERAL

1.1 SUMMARY

A. General work included in this Section:

1. Stainless steel tubing, piping, fittings and appurtenances.

B. Related Sections include but are not necessarily limited to:

1. Division 01 - General Requirements.

1.2 QUALITY ASSURANCE

A. Referenced Standards:

1. American National Standards Institute (ANSI):

a. B16.5, Pipe Flanges and Flanged Fittings.
b. B31.1, Power Piping.
c. B36.19, Stainless Steel Pipe.

2. American Society for Testing and Materials (ASTM):

a. A182, Standard Specification for Forged or Rolled Alloy Steel Pipe Flanges, Forged Fittings, and Valves and Parts for High Temperature Service.

b. A193 – Standard Specification for Alloy-Steel and Stainless Steel Bolting Materials for High-Temperature Service.

c. A269, Standard Specification for Seamless and Welded Austenitic Stainless Steel Tubing for General Service.

d. A320, Standard Specification for Alloy Steel Bolting Materials for Low Temperature Service.

e. A380 – Standard Specification for Cleaning, Descaling, and Passivation of Stainless Steel Parts, Equipment, and Systems.

f. A530, Specification for General Requirements for Specialized Carbon and Alloy Steel Pipe.

g. A774, As-Welded Wrought Austenitic Stainless Steel Fittings for General Corrosive Service at Low and Moderate Temperatures.

h. A778, Welded Unannealed Austenitic Stainless Steel Tubular Products.

i. A967 – Standard Specification for Chemical Passivation Treatment for Stainless Steel Parts.

3. American Water Works Association (AWWA).

a. C207, Standard for Steel Pipe Flange for Waterworks Service, 4-inch through 144-inch.

b. C208, Standard for Dimensions for Fabricated Steel Water Pipe Fittings.

c. C220, Standard for Stainless Steel Pipe, 4-inch and Larger.

d. M11, Steel Pipe - A Guide for Design and Installation.

1.3 SUBMITTALS

A. Certification and Testing.

B. Shop Drawings consistent with Division 01 and including:

1. Installation instructions for expansion bellows.

2. Fabrication details and specifications for all work to be done under this Section.

3. Field welding procedures for all pipe, fittings and appurtenances covered under this Section and when authorized per Paragraph 3.3.B of this Section.

a. Submit at least 30 days prior to beginning welding operations.

PART 2 PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS

A. Subject to compliance with the Contract Documents, the following manufacturers are acceptable:

1. Compression Fittings:

a. Imperial
b. Swagelok
c. Approved equal

2. Pressed Connection Piping:

a. Victaulic Press-fit
b. Viega ProPress

3. Expansion Joints (Air Piping):

a. Victualic
b. Anaconda
c. Pathway.

4. Expansion Couplings (Air Piping):

a. Straub
b. Engineer approved equal

5. Split Ring Couplings (Air Piping)

a. Victualic Depend-o-Lok
b. Approved equal

6. Anti-Sieze Compound

a. Nickel Anti-Seize Compound 725 by A.W. Chesterton
b. Permatex Nickel Anti-Seize Compound, ITW Devcon

B. Submit request for substitution in accordance with Division 01.

2.2 MATERIALS

A. Tubing: ASTM A269

1. Filler material: Extra low carbon (ELC) with 0.03 percent maximum carbon.
2. Type 316L.

B. Pipe:

1. ASTM A778, Type 316L (Sch 40 unless otherwise indicated).

C. Pipe Fittings:

1. ASTM A774, Type 316L (Sch 40 unless other indicated).

2. Wall thickness shall match the adjoining pipe.

3. Fittings shall be short radius, smooth formed (up to 24-inch) elbows, unless otherwise shown. Short radius is defined as the radius of the bend equals the diameter of the fitting.

4. Dimensions shall conform to AWWA C208.

D. Branch Connections

1. 3 IN and Smaller: Tee or reducing tee in conformance with the fittings above.

2. 4 IN and Larger: Butt-welded tee or reducing tee in accordance with the fittings above. Saddling/coping of branch connection is not permitted. Fabricated fittings are acceptable.

E. Flanges:

1. Flat faced.
2. Welding neck or slip on type.
3. ASTM A182, Type 316L, type to match piping system.

F. Nuts, Bolts and Washers:

1. ASTM A320, Type 316.
2. Two nuts provided for 1 IN DIA bolt applications and larger

G. Expansion Joints:

1. Bellows: Stainless steel, type to match piping system
2. Liner: Stainless steel, type to match piping system.
3. Flanges: Stainless steel, type to match piping system.
4. Control Tie-Rods: Stainless steel, type to match piping system.

H. Expansion Couplings:

1. Casing: Type 304 Stainless Steel
2. Bolts: Alloy steel or Type 316L Stainless Steel
3. Bars: Galvanized steel or Type 316L Stainless Steel
4. Anchor ring: Stainless Steel
5. Gasket: Nitrile or HNBR as appropriate up to 250 degree Fahrenheit

I. Split Ring Couplings:

1. Body and hardware: Stainless steel, type to match piping

J. Insulating Flange Sets:

1. 1/16 IN thick plastic.
2. Full length bolt sleeves.
3. 1/8 IN thick insulating washers and flat washers for each flange bolt.

2.3 FABRICATION

A. Shop welding of fabrications shall be done according to the procedures and by welders certified per ASME Section IX. Welds shall be done by an inert gas shielding process using only extra low carbon filler metals. Welds shall have a bead height of no more than 1/16 IN. Butt welds shall have 100 percent penetration to the interior backside of the weld joint.

B. All tube, piping, fitting product to be pickled subsequent to manufacturing and fabrication operations and prior to shipping.

1. Pickling solution of 6-10 percent nitric acid and 3-4 percent hydrofluoric acid.

2. Temperature and exact concentrations to be such only a modest etch is produced, but all oxidation and ferrous contamination is removed from metal surface.

3. All pickling solution residues are to be neutralized after pickling.

C. Diameter tolerance and wall thickness tolerance are to conform to ASTM A530. Wall thickness shall be as scheduled in Section 15060. Inside pipe diameter shall be a minimum of the nominal pipe diameter specified.

D. Joints.

1. Shop welded circumferential buttweld joints.
2. Flat faced flanges, Class 150.
3. ANSI B16.1, Class 150.

E. Expansion Joints:

1. Fabricate for 15 psi internal pressure and 250 Deg F operation.

2. Ensure aerial travel in expansion joints of 3.1 IN minimum for 15,000 cycles or 5.2 IN for 1000 cycles.

3. Furnish each assembly with minimum four control tie rods.

4. Fabricate with 125 LB flanged end connections.

F. Split Ring Couplings

1. Double arch cross section
2. Material thickness shall be 0.12 IN minimum
3. Rigid or expansion type as scheduled in 15060.
4. Restraint rings shall be factory welded to pipe.

2.4 Shop testing

A. Testing

1. Hydrostatic test pipe and fittings in accordance with AWWA C200.
2. Test 5 percent of all welds using ultrasonic or radiography testing performed by an independent certified welding inspector.

PART 3 EXECUTION

3.1 EXAMINATION

A. Prior to installation, inspect and verify condition of piping and appurtenances. Installation constitutes installer's acceptance of condition for satisfactory installation.

3.2 PREPARATION

A. Correct defects or conditions which may interfere with or prevent a satisfactory installation.

B. Ensure ends of pipe to be fitted with flanges have all protrusions ground flush.

3.3 INSTALLATION

A. Ensure all pipe cutting, threading and jointing conforms to requirements of ANSI B31.1. Lubricate all pipe threads with Teflon tape.

B. Shop pipe and fitting assemblies shall be connected using flanges, couplings, and other methods as discussed in Section 15060. Field welding will not be allowed unless approved in specific locations by the Owner's Representative.

C. Welding:

1. Provide welds sound and free from embedded scale or slag, and tensile strength at weld not less than pipe.

2. Perform butt welds only with an inert gas shielded process.

3. Adequate inert gas protection is to be provided to the top and under or backside of the weld to protect from atmospheric contamination.

4. Filler metal is to be applied to all manually-performed welds appropriate for the base material being welded.

5. Only inert gas shielded welding processes are to be used for spool fabrication.

6. Provide butt welds with 100 percent penetration to the interior or back side of the weld joint.

7. Weld reinforcement on both sides of the weld are to be smooth, uniform and no more than 1/16 IN in height.

D. Joining Method - Flanges:

1. Apply anti-seize compound to all hardware.

2. Leave 1/8 to 3/8 IN flange bolts projecting beyond face of nut after tightening. Coordinate dimensions and drillings of flanges with flanges for valves, pumps, equipment, and other systems. Tighten bolts evenly around pipe until following range of torques are achieved:

Bolt Size, IN	Ranges of Torque, FT-LB
5/8	40 – 60
3/4	60 – 90
1	70 – 100
1-1/4	90 - 120

E. Compression Sleeve Couplings:

1. Install coupling to allow space of not less than 1/4 IN but no more than 1 IN.

2. Provide harnessed joint unless otherwise shown on Drawings or specified. Use joint harness arrangements detailed in AWWA M11 or as indicated on Drawings.

F. Expansion Joints and Split Ring Couplings:

1. Install in accordance with manufacturer's instructions.
2. Install when outside temperature is between 50 to 70 Deg F.

3.4 FIELD QUALITY CONTROL

A. Test piping systems in accordance with Section 02665.

END OF SECTION

SECTION 15090

PIPE SUPPORT SYSTEMS

PART 1 GENERAL

1.1 SUMMARY

A. Section Includes:

1. Pipe support and anchor systems.

B. Related Specification Sections include but are not necessarily limited to:

1. Division 01 - General Requirements.

1.2 QUALITY ASSURANCE

A. Referenced Standards:

1. American Society of Mechanical Engineers (ASME):

a. B31.1, Power Piping.
b. B31.3, Process Piping.

2. ASTM International (ASTM):

a. A36, Standard Specification for Carbon Structural Steel.

b. A510, Standard Specification for General Requirements for Wire Rods and Coarse Round Wire, Carbon Steel.

c. A575, Standard Specification for Steel Bars, Carbon, Merchant Quality, M-Grades.

d. A576, Standard Specification for Steel Bars, Carbon, Hot-Wrought, Special Quality.

3. American Welding Society (AWS):

a. D1.1, Structural Welding Code - Steel.

4. Manufacturers Standardization Society of the Valve and Fittings Industry Inc. (MSS):

a. SP-58, Pipe Hangers and Supports - Materials, Design and Manufacture.

b. SP-69, Pipe Hangers and Supports - Selection and Application.

1.3 SUBMITTALS

A. Shop Drawings:

1. See Division 01 for requirements for the mechanics and administration of the submittal process.

2. Product technical data including:

a. Acknowledgement that products submitted meet requirements of standards referenced.

b. Manufacturer's installation instructions.

c. Itemized list of wall sleeves, anchors, support devices and all other items related to pipe support system.

d. Scale drawings showing guides, hangers, supports, anchors, structural members and appurtenances to describe the pipe support system.

PART 2 PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS

A. Subject to compliance with the Contract Documents, the manufacturers listed in the applicable Articles below are acceptable.

B. Submit request for substitution in accordance with Division 01.

2.2 MANUFACTURED UNITS

A. Hanger Rods: For use in all areas except hazardous locations. See Pipe Support Notes in Drawings for designation of hazardous locations.

1. Material: Type 316 Stainless Steel.

a. ASTM A575, Grade M1020.
b. Minimum allowable tensile stress of 12,000 psi at 650 DegF per MSS SP-58.

2. Continuously threaded.
3. Load limit:

NOMINAL ROD DIAMETER	MAXIMUM SAFE LOAD, (LBS)
3/8 IN DIA (min)	610
1/2 IN DIA	1,130
5/8 IN DIA	1,810
3/4 IN DIA	2,710
7/8 IN DIA	3,770
1 IN DIA	4,960

B. Hanger Rods: For use in hazardous locations.

1. Material: Type 316 Stainless steel.
2. Load limit: Modify load limit for steel hangers based on strength of rod. Obtain from manufacturer.

C. Hangers:

1. Hangers in all locations: Type 316 stainless steel.
2. Hanger types: as shown on Drawings.

D. Trapeze Hangers for Suspended Piping:

1. Material: Type 316 stainless steel unless otherwise indicated in Drawings.

2. Angles, channels, or other structural shapes.

3. Curved roller surfaces at support point corresponding with type of hanger required.

E. Pipe Supports:

1. Pipe supports shall be B-Line as shown on drawings.
2. All pipe supports shall be constructed of 316 stainless steel unless otherwise indicated.
3. 316 stainless steel expansion bolts or Hilti epoxy anchors shall be used to connect pipe supports to concrete surfaces. Epoxy anchors designed by supplier are required for connecting pipe supports to vertical and overhead concrete.

F. Pipe Support Risers:

1. Schedule 40 pipe.
2. Type 316 stainless steel.
3. Type 316 stainless steel in hazardous locations.
4. As recommended by saddle manufacturer.

G. Pipe Support Base Plate:

1. 4 IN larger than support.

2. Collar 3/16 IN thickness, circular in shape, and sleeve type connection to pipe.

3. Collar fitted over outside of support pipe and extended 2 IN from floor plate.

4. Collar welded to floor plate.

5. Edges ground smooth.

6. Type 316 stainless steel.

2.3 DESIGN REQUIREMENTS

A. Contractor is responsible for selection of pipe supports, design of supports, and placement.

1. Support configurations shown on Drawings or included in this Section may be used.

2. Submit alternative configurations, materials, manufactured units, etc. if those shown and specified do not meet Contractor requirements.

B. Supports capable of supporting the pipe for all service and testing conditions.

1. Provide 5 to 1 safety factor.

C. Allow free expansion and contraction of the piping to prevent excessive stress resulting from service and testing conditions or from weight transferred from the piping or attached equipment.

D. Design supports and hangers to allow for proper pitch of pipes.

E. Check all physical clearances between piping, support system and structure.

1. Provide for vertical adjustment after erection.

F. Support vertical pipe runs in pipe chases at base of riser.

1. Support pipes for lateral movement with clamps or brackets.

G. Place hangers on outside of pipe insulation.

1. Use a pipe covering protection saddle for insulated pipe at support point.

2. Insulated piping 1-1/2 IN and less: Provide a 9 IN length of 9 LB density fiberglass insulation at saddle.

3. Insulated piping over 1-1/2 IN: Provide a 12 IN length of 9 LB density fiberglass insulation on saddle.

H. Pipe Support Spacing:

1. General:

a. Factor loads by specific weight of liquid conveyed if specific weight is greater than water.

b. Locate pipe supports at maximum spacing scheduled unless indicated otherwise on the Drawings.

c. Provide at least one (1) support for each length of pipe at each change of direction and at each valve.

2. Stainless steel pipe support schedule:

PIPE SIZES - IN	MAXIMUM SPAN - FT
1-1/2 and less	5
2 thru 4	10
5 thru 8	15
10 and greater	20

3. Copper pipe support schedule:

PIPE SIZES - IN	MAXIMUM SPAN - FT
2-1/2 and less	5
3 thru 6	10
8 and greater	15

4. PVC pipe support schedule:

PIPE SIZES - IN	MAXIMUM SPAN - FT
1-1/4 and less	3
1-1/2 thru 3	4
4 and greater	5

* Maximum fluid temperature of 120 Deg F.

5. Support each length and every fitting:

a. Mechanical coupling joints:

i Place hanger within 2 FT of each side of fittings to keep pipes in alignment.

6. Provide continuous support for tubing.

PART 3 EXECUTION

3.1 INSTALLATION

A. Provide piping systems exhibiting pulsation, vibration, swaying, or impact with suitable constraints to correct the condition.

1. Included in this requirement are movements from:

a. Trap discharge.
b. Water hammer.
c. Similar internal forces.

B. Weld Supports:

1. AWS D1.1.

2. Weld anchors to pipe in accordance with ASME B31.3.

C. Locate piping and pipe supports as to not interfere with open accesses, walkways, platforms, and with maintenance or disassembly of equipment.

D. Inspect hangers for:

1. Design offset.

2. Adequacy of clearance for piping and supports in the hot and cold positions.

3. Guides to permit movement without binding.

4. Adequacy of anchors.

E. Inspect hangers after erection of piping systems and prior to pipe testing and flushing.

F. Welding:

1. Welding rods: ASTM and AWS standards.
2. Integral attachments:

a. Include welded-on ears, shoes, plates and angle clips.

b. Ensure material for integral attachments is of good weldable quality.

3. Preheating, welding and postheat treating: ASME B31.3, Chapter V.

END OF SECTION

SECTION 15100

VALVES: BASIC REQUIREMENTS

PART 1 GENERAL

1.1 SUMMARY

A. Section Includes:

1. Valving, actuators, and valving appurtenances.

1.2 QUALITY ASSURANCE

A. Referenced Standards:

1. American Society of Mechanical Engineers (ASME):

a. B1.20.1, Pipe Threads, General Purpose.
b. B16.1, Gray Iron Pipe Flanges and Flanged Fittings: Classes 25, 125, and 250.
c. B16.18, Cast Copper Alloy Solder Joint Pressure Fittings.
d. B16.34, Valves – Flanged, Threaded, and Welding End.

2. ASTM International (ASTM):

a. A126, Standard Specification for Gray Iron Castings for Valves, Flanges, and Pipe Fittings.

b. D256, Standard Test Methods for Determining the Izod Pendulum Impact Resistance of Plastics.

c. D638, Standard Test Method for Tensile Properties of Plastics.

d. D648, Standard Test Method for Deflection Temperature of Plastics Under Flexural Load in the Edgewise Position.

e. D695, Standard Test Method for Compressive Properties of Rigid Plastics.

f. D2240, Standard Test Method for Rubber Property-Durometer Hardness.

3. American Water Works Association (AWWA):

a. C207, Standard for Steel Pipe Flanges for Waterworks Service - Sizes 4 IN through 144 IN.

b. C500, Standard for Metal-Seated Gate Valves for Water Supply Service.

c. C504, Standard for Rubber-Seated Butterfly Valves.

d. C507, Standard for Ball Valves, 6 IN through 48 IN (150 MM through 1200 MM).

e. C509, Standard for Resilient-Seated Gate Valves for Water Supply Service.

f. {C541, Standard for Hydraulic and Pneumatic Cylinder and Vane-Type Actuators for Valves and Slide Gates.}

g. {C542, Standard for Electric Motor Actuators for Valves and Slide Gates.}

h. C550, Standard for Protective Coatings for Valves and Hydrants.

i. C606, Standard for Grooved and Shouldered Joints.

4. American Water Works Association/American National Standards Institute (AWWA/ANSI):

a. C111/A21.11, Standard for Rubber-Gasket Joints for Ductile-Iron Pressure Pipe and Fittings.

5. National Electrical Manufacturers Association (NEMA):

a. 250, Enclosures for Electrical Equipment (1000 Volts Maximum).
b. MG 1, Motors and Generators.

1.3 DEFINITIONS

A. The following are definitions of abbreviations used in this Specification Section or one (1) of the individual valve sections:

1. CWP: Cold water working pressure.
2. SWP: Steam working pressure.
3. WOG: Water, oil, gas working pressure.
4. WWP: Water working pressure.

1.4 SUBMITTALS

A. Shop Drawings:

1. See Division 01 for requirements for the mechanics and administration of the submittal process.

2. Product technical data including:

a. Acknowledgement that products submitted meet requirements of standards referenced.
b. Manufacturer's installation instructions.
c. Valve pressure and temperature rating.

d. Valve material of construction.
e. Special linings.
f. Valve dimensions and weight.
g. Valve flow coefficient.
h. Wiring and control diagrams for electric or cylinder actuators.

3. Test reports.

B. Operation and Maintenance Manuals:

1. See Division 1 for requirements for:

a. The mechanics and administration of the submittal process.
b. The content of Operation and Maintenance Manuals.

C. Informational Submittals:

1. Verification from valve actuator manufacturer that actuators have been installed properly, that all limit switches and position potentiometers have been properly adjusted, and that the valve actuator responds correctly to the valve position command.

PART 2 PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS

A. Subject to compliance with the Contract Documents, refer to individual valve Specification Sections for acceptable manufacturers.

2.2 MATERIALS

A. Refer to individual valve Specification Sections.

2.3 VALVE ACTUATORS

A. Valve Actuators - General:

1. Provide actuators as shown on Drawings or specified.

2. Counter clockwise opening as viewed from the top.

3. Direction of opening and the word OPEN to be cast in handwheel or valve bonnet.

4. Size actuator to produce required torque with a maximum pull of 80 LB at the maximum pressure rating of the valve provided and withstand without damage a pull of 200 LB on handwheel or chainwheel or 300 foot-pounds torque on the operating nut.

5. Unless otherwise specified, actuators for valves to be buried, submerged or installed in vaults or manholes shall be sealed to withstand at least 20 FT of submergence.

6. Extension stem:

   a. Install where shown or specified.
   b. Solid steel with actuator key and nut, diameter not less than stem of valve actuator shaft.
   c. Pin all stem connections.
   d. Center in valve box or grating opening band with guide bushing.

B. Buried Valve Actuators:

1. Provide screw or slide type adjustable cast iron valve box, 5 IN minimum diameter, 3/16 IN minimum thickness, and identifying cast iron cover rated for traffic load.

2. Box base to enclose buried valve gear box or bonnet.

3. Provide 2 IN standard actuator nuts complying with AWWA C500, Section 3.16.

4. Provide at least two (2) tee handle keys for actuator nuts, with 5 FT extension between key and handle.

5. Extension stem:

   a. Provide for buried valves greater than 4 FT below finish grade.
   b. Extend to within 6 IN of finish grade.

6. Provide concrete pad encasement of valve box as shown for all buried valves unless shown otherwise.

C. Plastic Valve Vault:

1. Provide in non-traffic areas only on valve applications 3-1/2 IN and less.

2. Nominal 7-1/2 IN DIA top section.

3. Design unit for screw type extension section having nominal 9 IN DIA bell.

4. Cast iron ring and lid.

5. Constructed of injection molded polyolefin compound with fibrous inorganic component reinforcing and UV stabilization.

6. Armor Access Boxes.

D. Exposed Valve Manual Actuators:

1. Provide for all exposed valves not having electric or cylinder actuators.

2. Provide handwheels for butterfly valves 6 IN and larger.

a. Size handwheels for valves in accordance with AWWA C500.

3. Provide lever actuators for butterfly valves and ball valves 4 IN DIA and smaller.

a. Lever actuators for butterfly valves shall have a minimum of 5 intermediate lock positions between full open and full close.

4. Gear actuators required for butterfly valves, and ball valves 4 IN DIA and larger.

5. Gear actuators to be totally enclosed, permanently lubricated and with sealed bearings.

6. Provide chain actuators for valves 6 FT or higher from finish floor to valve centerline.

a. Cadmium-plated chain looped to within 3 FT of finish floor.
b. Equip chain wheels with chain guides to permit rapid operation with reasonable side pull without "gagging" the wheel.

E. Electric Actuators (120 V, 1 PH) (Valves 4 IN and Smaller):

1. General:

a. Self-contained including motor, gearing, torque switch, limit switches and cast housing.

b. Electrical enclosure: IP68 submersible

c. Factory assembled requiring only field connection of power and control wires.

2. Motors:

a. Produce 1.5 times the required torque.
b. Sized for two (2) complete open-close cycles without overheating.
c. One (1) fully closed to fully open cycle to occur within 60 SEC.
d. Class F insulation.
e. Operate at plus or minus 10 percent voltage.
f. 120 Volt, single phase, 60 Hz.
g. Provide thermal cutout switch and internal heater for actuator enclosure.
h. Control wiring as shown on Drawing control diagrams.

3. Remote pushbutton station (where scheduled):

a. Enclosure: NEMA 4 stainless steel.

b. Control Switches and Push-Button Lights supplied according to P&IDs and electrical drawings.

c. Control wiring as shown on control diagrams.

d. Wire all components to an internal terminal strip and include mounted wiring diagram inside enclosure.

2.4 FABRICATION

A. End Connections:

1. Provide the type of end connections for valves as shown on the Drawings.

2. Comply with the following standards:

a. Threaded: ASME B1.20.1.

b. Flanged: ASME B16.1, Class 125 unless otherwise noted or AWWA C207.

c. Bell and spigot or mechanical (gland) type: AWWA/ANSI C111/A21.11.

d. Soldered: ASME B16.18.

e. Grooved: Rigid joints per Table 5 of AWWA C606.

B. Refer to individual valve Specification Sections for specifications of each type of valve used on Project.

C. Nuts, Bolts, and Washers:

1. Wetted or internal to be stainless steel (type 316).

a. Exposed to be zinc or cadmium plated.

D. On Insulated Piping: Provide valves with extended stems to permit proper insulation application without interference from handle.

E. Epoxy Interior Coating: Provide epoxy interior coating for all ferrous surfaces in accordance with AWWA C550.

PART 3 EXECUTION

3.1 INSTALLATION

A. Install products in accordance with manufacturer's instructions.

B. Painting Requirements: Comply with Specification Section 09905 for painting and protective coatings.

C. Setting Buried Valves:

1. Locate valves installed in pipe trenches where buried pipe indicated on Drawings.

2. Set valves and valve boxes plumb.

3. Place valve boxes directly over valves with top of box being brought to surface of finished grade.

4. Install in closed position.

5. Place valve on firm footing in trench to prevent settling and excessive strain on connection to pipe.

6. After installation, backfill up to top of box for a minimum distance of 4 FT on each side of box.

D. Support exposed valves and piping adjacent to valves independently to eliminate pipe loads being transferred to valve and valve loads being transferred to the piping.

E. For grooved coupling valves, install rigid type couplings.

F. Install electric or cylinder actuators above or horizontally adjacent to valve and gear box to optimize access to controls and external handwheel.

G. For threaded valves, provide union on one (1) side within 2 FT of valve to allow valve removal.

H. Install valves accessible for operation, inspection, and maintenance.

3.2 ADJUSTMENT

A. Adjust valves, actuators and appurtenant equipment to comply with Division 01.

1. Operate valve, open and close at system pressures.

B. For all 120 Vac and 480 Vac electric actuators, employ and pay for services of valve actuator manufacturer's field service representative to:

1. Inspect valve actuators covered by this Specification Section.

2. Supervise adjustments and installation checks:

a. Open and close valves electrically under local manual and demonstrate that all limit switches are properly adjusted and that switch contacts are functioning properly by verifying the inputs are received at the remote input/output (RIO) panels or local control panel as appropriate.

b. Simulate a valve position command signal at the RIO panel or local control panel as appropriate and demonstrate that the valve is controlled to the desired position without excessive hunting.

3. Provide Owner with a written statement that the valve actuator manufacturer has verified that the actuators have been installed properly, that all limit switches and position potentiometers have been properly adjusted and that the valve actuator responds correctly to the valve position command.

END OF SECTION

SECTION 15103

BUTTERFLY VALVES

PART 1 GENERAL

1.1 SUMMARY

A. Section Includes:

1. Butterfly valves (BFV-01, 02, 03, 04, and 05).

B. Related Sections include but are not necessarily limited to:

1. Division 01 - General Requirements.
2. Section 15100 - Valves: Basic Requirements.

1.2 QUALITY ASSURANCE

A. Referenced Standards:

1. American Society of Mechanical Engineers (ASME):

a. B16.5, Pipe Flanges and Flanged Fittings - NPS 1/2 through NPS 24.

2. ASTM International (ASTM):

a. A48, Standard Specification for Gray Iron Castings.

b. A126, Standard Specification for Gray Iron Castings for Valves, Flanges, and Pipe Fittings.

c. A276, Standard Specification for Stainless Steel Bars and Shapes.

d. A395, Standard Specification for Ferritic Ductile Iron Pressure-Retaining Castings for Use at Elevated Temperatures.

e. A436, Standard Specification for Austenitic Gray Iron Castings.

f. A536, Standard Specification for Ductile Iron Castings.

g. B148, Standard Specification for Aluminum-Bronze Sand Castings.

3. American Water Works Association (AWWA):

a. C504, Standard for Rubber-Seated Butterfly Valves.

1.3 SUBMITTALS

A. Shop Drawings:

1. See Division 01 for requirements for the mechanics and administration of the submittal process.

2. See Specification Section 15100.

3. For valves 8 IN and larger, furnish "Affidavit of Compliance" with Owner in accordance with AWWA C504.

B. Operation and Maintenance Manuals:

1. See Division 01 for requirements for:

a. The mechanics and administration of the submittal process.
b. The content of Operation and Maintenance Manuals.

PART 2 PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS

A. Subject to compliance with the Contract Documents, the following manufacturers are acceptable:

1. DeZurik.
2. Clow.
3. Mueller.
4. Pratt.
5. Crispin Valves.
6. Val-Matic.

B. Submit request for substitution in accordance with Division 01.

2.2 BUTTERFLY VALVES (AWWA C504)

A. Comply with AWWA C504.

B. Materials:

1. Valve bodies:

a. ASTM A126, Class B or ASTM A536 Grade 65-45-12 ductile iron.

b. Fully rubber lined or NSF 61 coating on inner body.

2. Valve shafts:

a. Stainless steel, 18-8, Type 316.

3. Valve discs:

a. Potable and nonpotable water:

i ASTM A48, Class 40 cast iron.
ii ASTM A536, Grade 65-45-12 ductile iron.
iii ASTM A436, Type 1 alloy cast iron.
iv Bronze in accordance with AWWA C504.
v Stainless steel disc edge.

4. Valve seats:

a. Potable and nonpotable water below 150 Deg F:

i Natural rubber or Buna-N.

5. Mating surfaces:

a. Valves less than 30 IN: ASTM A276, 18-8, stainless steel.
b. Valves 30 IN and larger: ASTM A276, 18-8, stainless steel.

6. NSF 61 Certified.

C. Design Requirements:

1. Seat type:

a. Resilient.
b. Comply with AWWA C504.

2. Exposed and submerged valves 3 through 20 IN.

a. Body type: Short body flange (laying length may vary from AWWA C504).

b. Class 150 B flanges per AWWA C504. Working pressure rated at 150 psi.

3. Exposed and submerged valves 24 IN and larger:

a. Body type: Short body flange.
b. Class 150 B flanges per AWWA C504. Working pressure rated at 150 psi.

2.3 ACCESSORIES

A. Refer to Drawings and/or valve schedule for type of actuators.

1. Furnish actuator integral with valve.

B. Refer to Section 15100 for actuator requirements.

PART 3 EXECUTION

3.1 INSTALLATION

A. See Section 15100.

END OF SECTION

SECTION 15104

BALL VALVES

PART 1 GENERAL

1.1 SUMMARY

A. Section Includes:

1. Ball valves, including motorized ball valve (BV-01).

B. Related Sections include but are not necessarily limited to:

1. Division 01 - General Requirements.
2. Section 15100 - Valves: Basic Requirements.

1.2 QUALITY ASSURANCE

A. Referenced Standards:

1. ASTM International (ASTM):

a. A48, Standard Specification for Gray Iron Castings.

b. A126, Standard Specification for Gray Iron Castings for Valves, Flanges, and Pipe Fittings.

c. D1784, Standard Specification for Rigid Poly(Vinyl Chloride) (PVC) Compounds and Chlorinated Poly(Vinyl Chloride) (CPVC) Compounds.

2. American Water Works Association (AWWA):

a. C507, Standard for Ball Valves, 6 IN through 48 IN.

3. Manufacturers Standardization Society of the Valve and Fittings Industry Inc. (MSS):

a. SP-72, Ball Valves with Flanged or Butt-Welding Ends for General Service.

b. SP-110, Ball Valves; Threaded, Socket-Welding, Solder Joint, Grooved and Flared Ends.

1.3 DEFINITIONS

A. PVDF: Polyvinylidene fluoride.

1.4 SUBMITTALS

A. Shop Drawings:

1. See Division 01 for requirements for the mechanics and administration of the submittal process.

2. See Specification Section 15100.

3. Test results for AWWA valves.

B. Operation and Maintenance Manuals:

1. See Division 01 for requirements for:

a. The mechanics and administration of the submittal process.
b. The content of Operation and Maintenance Manuals.

PART 2 PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS

A. Subject to compliance with the Contract Documents, the manufacturers listed in the applicable Articles below are acceptable.

B. Submit request for substitution in accordance with Division 01.

2.2 METALLIC BALL VALVES 1/4 TO 3 IN DIA **(BV-01)**

A. Acceptable Manufacturers:

1. JFlow Controls (Model DM3800FTTS)
2. Or Approved Equal

B. Materials:

1. Body: 316 Stainless Steel with FNPT end connections.
2. Stem, stem gland nut: Stainless Steel.
3. Ball: 316 Stainless Steel.
4. Seats, stuffing box ring, and thrust washer: Reinforced Teflon.
5. Handle: Stainless Steel, except for BV-01 that requires electric actuator.

C. Design Requirements:

1. Rated for at least 400 psi and 250 Deg F, WOG for threaded end applications

2. Handles showing direction of opening with locking feature.

3. Stem with reinforced Teflon stuffing box ring and blowout-proof design.

4. Renewable reinforced Teflon seats.

5. Ball design which does not allow media contact with stem.

6. Balancing stop for all applications.

7. Bodies with mounting pad for applications requiring actuators.

2.3 PLASTIC BALL VALVES: 1/2 IN TO 4 IN DIA

A. Acceptable Manufacturers:

1. Chemtrol.
2. Spears.
3. ASAHI/America.

B. Materials:

1. Body, stem, ball, handle, end connectors:

a. PVC ASTM D1784-12454B
b. CPVC ASTM D1784-23477-B

2. Ball Seat: Teflon.

3. O-rings:

a. General: Viton or PTFE encapsulated fluorocarbon.
b. NaOH or LAS Service: EPDM.

C. Design Requirements:

1. Rated at 150 psi at 75 Deg F.

2. Double or "true union" design.

3. Blocks both directions, upstream and downstream.

4. Union nut capable of compensating for seat wear.

5. Body with mounting pad for actuators where required.

6. Capable of being disconnected at downstream end under full line pressure.

7. Sodium hypochlorite service:

a. Provide "vented" ball valves for all service with greater than 5 percent concentrated sodium hypochlorite.

2.4 ACCESSORIES

A. Refer to Drawings for type of actuators.

1. Furnish actuator integral with motorized ball vale (BV-01).

B. Refer to Section 15100 for actuator requirements.

2.5 SOURCE QUALITY CONTROL

A. Furnish record of test.

PART 3 EXECUTION

3.1 INSTALLATION

A. See Section 15100.

3.2 FIELD QUALITY CONTROL

A. For AWWA C507 ball valves, and in accordance with Division 01 employ and pay for services of equipment manufacturer's field service representative(s) to:

1. Inspect equipment covered by these Specifications.

2. Supervise adjustments and installation checks.

3. Provide test equipment, tools, and instruments necessary to accomplish equipment testing.

4. Conduct startup of equipment and perform operational checks.

5. Provide Owner with a written statement that manufacturer's equipment has been installed properly, has been started up, and is ready for operation by Owner's personnel.

END OF SECTION

SECTION 15109

AIR VALVES

PART 1 GENERAL

1.1 SUMMARY

A. The contractor shall furnish and install air release, air/vacuum, and combination air valves made of composite materials, complete as shown on the plans and specified herein (CAV-01, 02, 03, 04, 05, and 06).

B. Related Sections:

1. Division 01 - General Requirements
2. Section 15100 “Valves: Basic Requirements”

1.2 QUALITY ASSURANCE

A. Referenced Standards:

1. American Water Works Association (AWWA):

a. C512, Standard for Air-Release, Air-Vacuum, and Combination Air Valves for Waterworks Service.

b. American National Standard Institute

1.3 SUBMITTALS

A. Submit under provisions of Division 01.

B. The following submittals are required, at a minimum:

1. Shop Drawings: See Specification Section 15100.

2. Operation and Maintenance Manuals:

a. See Division 01 for requirements for the contents of Operation and Maintenance Manuals.

C. Include any other information necessary for the ENGINEER to determine compliance with the specifications.

D. All deviations from Contract Documents shall be clearly identified and approved in writing by the ENGINEER.

E. Partial or incomplete submittals will not be reviewed by ENGINEER.

PART 2 PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS

A. Subject to compliance with the Contract Documents, the manufacturers listed in the applicable articles below are acceptable.

B. Acceptable:

1. Cla-Val – (Model 33AWS for 4" Pump Discharges Combination Aire/Vacuum Valve, Model 33AKC for 2" combination Air/Vacuum Valve downstream side of pump control valve).
2. APCO
3. Or approved equal.

2.2 GENERAL

A. Obtain all valves from a single manufacturer.

B. End connections to be compatible with those specified in the contract documents and shown on the Drawings. End connections shall be threaded male connection (National Pipe Thread).

C. All components shall be compatible with the process fluid as specified herein.

D. All valves specified under this section shall be furnished with 316 stainless steel ball valves equal to the size of the size of the connection in accordance with Section 15.

E. All valves shall be rated for a maximum working pressure of 250 psi.

F. Valves designated for service in solids-bearing liquids such as raw water or sludge shall incorporate appropriate provisions to prevent clogging of the valve mechanism.

2.3 VALVE TYPES

A. Air/Vacuum Valves

1. The valve shall automatically discharge and/or admit large volumes of air during the filling or draining of a pipeline.

B. Combination Air Valves

1. The combination air valve shall include (A) air and vacuum component and (B) air release component.

a. The air and vacuum component shall automatically discharge and/or admit large volumes of air during the filling or draining of a pipeline.

b. The air release component shall automatically release small volumes of air while the pipeline is full and operating under pressure.

C. Vacuum Breaker

1. The valve shall protect the pipeline from a vacuum by allowing large volumes of air into the pipeline.

2. The valve shall not allow any volume (small or large) to vent out of the pipeline.

D. Vacuum Guard

1. The valve shall allow air to be vented out of the pipeline.
2. The valve shall not allow any relief of a vacuum.

E. Surge Arrester (Non-Slam)

1. The valve shall protect the pipeline from water hammer effects.

2.4 MATERIALS OF CONSTRUCTION (NSF 61 Certification Required)

A. Body: Ductile Iron ASTM A536

B. Discharge Outlet: FNPT

C. Inlet: Flanged for 4" Pump Discharge CAV and FNPT for 2" CAV located downstream of pump control valve.

D. Seals and O-rings: Nitrile Rubber

E. Float: 304 stainless steel

F. Internal Trim Parts: Stainless steel and Delrin

G. Coating: Fusion-bonded epoxy

H. Bolt Hardware: Cadmium plated steel

2.5 ACCESSORIES

A. Furnish any accessories required to provide a completely operable valve.

2.6 SOURCE QUALITY CONTROL

A. Shop hydrostatically test in accordance with AWWA C512. Working pressure of valves 150 psi.

2.7 MAINTENANCE MATERIALS

A. Provide one (1) set of any special tools or wrenches required for operation or maintenance for each type valve.

PART 3 EXECUTION

3.1 INSTALLATION

A. See Specification Sections 11005 and 15100.

3.2 FIELD QUALITY CONTROL

A. Clean, inspect, and operate valve to ensure all parts are operable and valve seats properly.

B. Check and adjust valves and accessories in accordance with manufacturer's instructions and place into operation.

END OF SECTION

SECTION 15112

REDUCED PRESSURE PRINCIPLE BACKFLOW PREVENTERS

PART 1 GENERAL

1.1 SECTION INCLUDES:

A. Reduced pressure principle backflow preventers (BFP-01 and BFP-02).

1.2 EQUIPMENT LIST:

A. Backflow preventers shall be as follows:

SCHEDULE OF BACKFLOW PREVENTERS				
Location	**Tag Number**	**Connection Size, Type**	**Capacity (gpm)**	**Max pressure loss (psi)**
Sample Line to Instrument Panel (from Pump Station 30" Discharge Header Pipe)	BFP-01	½"	5	150
Hose Bibb and Electrical Room HVAC Supply Line (from Pump Station 30" Discharge Header Pipe)	BFP	¾"	10	150

1.3 QUALITY ASSURANCE:

A. REFERENCES:

This paragraph references the following document. It is a part of this section as specified and modified. In case of conflict between the requirements of this section and those of the listed document, the requirements of this section shall prevail.

1. AWWA C506 - Standard for Backflow Prevention Devices - Reduced Pressure Principle and Double Check Valve Types.

B. TESTING:

1. Backflow preventers shall meet the factory and field test provisions of AWWA C506.

1.2 SUBMITTALS:

A. Submit the following information:

1. Product data and dimensions.
2. Affidavit of Compliance with AWWA C506.
3. Certificate of Approval as specified in AWWA C506.

4. Written instructions for installation, testing, and maintenance.

PART 2 PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS:

A. Subject to compliance with the Contract Documents, the following manufacturers are acceptable:

1. Watts Series 009
2. Clayton.
3. Badger.
4. Or Engineer-approved equivalent.

2.2 MATERIALS

A. Backflow preventers shall be suitable for potable water service. Materials used shall be lead free.

PART 3 EXECUTION

Reduced pressure principle backflow preventers shall be installed and tested in accordance with the manufacturer's recommendations.

END OF SECTION

SECTION 15114

MISCELLANEOUS VALVES

PART 1 GENERAL

1.1 SUMMARY

A. Section Includes:

1. Pressure-reducing valves (PRV-01 and PRV-02).
2. Solenoid valves.

B. Related Sections:

1. Division 01 - General Requirements
2. Section 11005 “Equipment: Basic Requirements”
3. Section 15100 “Valves: Basic Requirements”

1.2 QUALITY ASSURANCE

A. Referenced Standards:

1. American Gas Association (AGA).

2. American Society of Mechanical Engineers (ASME):

a. B16.1, Cast Iron Pipe Flanges and Flanged Fittings - Classes 25, 125 and 250.

3. American Water Works Association (AWWA):

a. C512, Standard for Air-Release, Air-Vacuum, and Combination Air Valves for Waterworks Service.

b. C550, Standard for Protective Interior Coatings for Valves and Hydrants.

4. National Electrical Manufacturers Association (NEMA):

a. 250, Enclosures for Electrical Equipment (1000 Volts Maximum).

1.3 SUBMITTALS

A. Submit under provisions of Division 01.

B. The following submittals are required, at a minimum:

1. Shop Drawings: See Specification Section 15100.
2. Operation and Maintenance Manuals:

a. See Division 01 for requirements for the contents of Operation and Maintenance Manuals.

C. Include any other information necessary for the ENGINEER to determine compliance with the specifications.

D. All deviations from Contract Documents shall be clearly identified and approved in writing by the ENGINEER.

E. Partial or incomplete submittals will not be reviewed by ENGINEER.

PART 2 PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS

A. Subject to compliance with the Contract Documents, the manufacturers listed in the applicable articles below are acceptable.

B. Submit request for substitution in accordance with Division 01.

2.2 PRESSURE-REDUCING VALVES (2 IN AND SMALLER)

A. Water Pressure Regulators:

1. Acceptable manufacturers:

a. Watts Series LF 123 LP or LF223 as required for application.
b. Or Engineer-approved equal.

2. Materials:

a. Body: Stainless steel.
b. Strainer body: Stainless steel.
c. Strainer screen: Stainless steel.

3. Design requirements:

a. Self-contained diaphragm operated.

i Spring loaded.
ii Field adjustable.

b. Strainer: Y-type on supply.

c. **Size for inlet pressure 125 – 150 psi inlet and 30 psi outlet pressure**.

2.3 SOLENOID VALVES (1 IN AND SMALLER)

A. General Service (Air - Water):

1. Acceptable manufacturers:

a. ASCO.
b. Or Engineer-approved equal.

2. Materials:

a. Body: Stainless steel.
b. Seat: Buna-N.
c. Insulation: Class F.

3. Design requirements:

a. 110 Vac.
b. Two-way, normally closed.
c. Enclosure: Compatible with area classifications indicated on Drawings.
d. Working pressure, air and water: 125 psig.

4. Accessories: Provide strainer on supply.

2.4 ACCESSORIES

A. Furnish any accessories required to provide a completely operable valve.

2.5 FABRICATION

A. Completely shop assemble unit including any interconnecting piping, speed control valves, control isolation valves and electrical components.

B. Provide internal epoxy coating suitable for potable water for all iron body valves in accordance with AWWA C550.

2.6 SOURCE QUALITY CONTROL

A. Shop hydrostatically test to piping system test pressure.

2.7 MAINTENANCE MATERIALS

A. Provide one (1) set of any special tools or wrenches required for operation or maintenance for each type valve.

PART 3 EXECUTION

3.1 INSTALLATION

A. See Specification Sections 11005 and 15100.

B. Air Release, Vacuum Relief, and Pressure Relief Valves:

1. Pipe exhaust to a suitable disposal point or pipe according to drawings.

2. Where exhausted to a trapped floor drain, terminate exhaust line 6 IN minimum above floor.

C. Float-Operated Valves: Install baffle around float to minimize turbulence adjacent to float.

3.2 FIELD QUALITY CONTROL

A. Clean, inspect, and operate valve to ensure all parts are operable and valve seats properly.

B. Check and adjust valves and accessories in accordance with manufacturer's instructions and place into operation.

END OF SECTION

SECTION 16000

GENERAL REQUIREMENTS FOR ELECTRICAL WORK

PART 1 GENERAL

1.1 SECTION INCLUDES:

A. General requirements for electrical work. This includes quality standards and system testing.

1.2 REFERENCES:

A. The 2017 National Electrical Code (NFPA 70).

B. Local Amendments to the 2017 National Electrical Code.

C. The Life Safety Code (NFPA 101).

D. Americans With Disabilities Act (Public Law 101-336).

E. The International Building Code.

1.3 SUBMITTALS:

A. Submittals shall be provided in accordance with Section 01300. The submittals shall be identified by the specified equipment number and specification section.

B. Submit results of the testing services as specified herein.

1.4 QUALITY ASSURANCE:

A. All work shall be furnished, installed, and connected in accordance with the National Electrical Code, these specifications, and the drawings. All materials used in this work shall be new and shall bear the inspection label of Underwriter's Laboratories, Inc.

B. Installation shall be supervised by an electrician licensed as a "Master Electrician."

C. Field work shall be under the continuous supervision of a licensed "Journeyman or Master Electrician."

D. Licensing as a "Master" or "Journeyman" electrician shall mean to hold a current certification or license to that effect issued by the State of Texas. Additionally, if the local authority having jurisdiction requires a local license, the Contractor shall maintain licensed electricians that meet the requirements of the local authority. Submit copies of current licenses or certificates for persons employed on the work. Notify Engineer and remove from the work (within 10 days) any persons for whom a license or certificate is suspended, revoked, or is otherwise rendered void by the issuing agency.

E. The drawings and specifications are complementary. What is shown on one is binding whether shown or specified in the other or not. Failure to check both the drawings and the specifications will not be grounds for a change order if additional equipment or material is required to be provided by the Contractor after the Engineer reviews, or deficiencies are identified during testing, either in the Factory or the field.

1.5 EQUIPMENT ACCESSIBILITY:

A. All equipment requiring access for monitoring, controlling other equipment, or servicing shall be accessible. Motor starters and other control equipment shall be installed at a height that will allow an operator to view or control the equipment without stooping or without requiring a platform, stool, or raised floor to view or control the equipment. Generally, motor starters, panels, and similar equipment shall be installed with the top of the enclosure at approximately 5'-6" above floor level. Control stations, and other small enclosures that require normal access, shall be installed with the top of the enclosure at approximately 48-inches above floor level.

B. Equipment that is not considered accessible by the Engineer or Owner shall be relocated by the Contractor, at the request of the Engineer or Owner, at no additional cost to the Owner.

1.6 STORAGE OF MATERIALS AND EQUIPMENT:

Materials and equipment shall be stored so as to protect the materials and equipment during storage. Equipment and materials to be located outdoors may be stored outdoors if protected against moisture condensation. Equipment shall be stored at least 6 inches above ground. Equipment and materials to be located indoors shall be stored indoors. Instrumentation shall be stored indoors.

PART 2 PRODUCTS

2.1 COATING SYSTEM:

A. GENERAL:

Where specified, electrical equipment in Division 16 shall be painted by the manufacturer as specified below.

B. FINISH:

Unless otherwise required to be stainless steel, equipment shall be treated with zinc phosphate, bonderized or otherwise given a rust-preventative treatment. Equipment shall be primed, painted with enamel and baked. Minimum dry film thickness shall be 3 mils.

C. COLOR:

Exterior color shall be ANSI 61, gray. Interior shall be painted white. Nonmetallic electrical enclosures and equipment shall be the manufacturer's standard gray or beige color.

2.2 TERMINAL BLOCKS:

Unless otherwise specified, terminal blocks shall be screw terminal, heavy duty, rated at 600V AC. Minimum capacity for control service is 5 amps. Terminals shall be provided with integral marking strips which shall be permanently identified as shown on the shop drawings or required for installation.

2.3 MISCELLANEOUS METAL:

A. Miscellaneous metal installed in conjunction with electrical or instrumentation work shall be hot-dipped galvanized or stainless steel as specified or indicated on the drawings. Painted steel is not acceptable.

B. Materials included in this specification group includes, but is not limited to bars, rods, sheet, plate, channel, or other metal shapes used to, or incorporated in support frames, brackets, mounting plates, etc. Unless otherwise specified, steel parts shall be hot-dipped galvanized after fabrication. Pre-galvanized material used for fabrication shall have all nicks, dings, or other imperfections in the coating repaired. No welding is allowed on pre-galvanized materials. If fabrications require welding after galvanizing, the part or parts shall be regalvanized after welding.

C. Materials used in wet, damp, or corrosive locations shall be stainless steel.

D. Bolts, nuts, screws, washers, or similar ancillary materials used shall be 316 stainless steel for exterior areas, pump rooms, or corrosive locations. Carbon steel with galvanized or cadmium-plated finish may be used in dry, indoor areas.

E. All anchor bolts that are installed in floors shall be 316 stainless steel.

PART 3 EXECUTION

3.1 GENERAL:

A. Drawings are generally diagrammatic and show the arrangement and location of fixtures, equipment, and conduit. Not all conduit, wire, and cable are shown on the Engineers drawings. The Electrical Contractor shall provide all that is necessary for a complete and functional system. The Electrical Contractor shall carefully investigate the structural and finish conditions affecting his work and arrange his work accordingly.

B. Any discrepancy between the Contract Documents and the existing conditions or any provision of any Law or Regulation applicable to the performance of the Work or of any standard, specification, manual or code, the Electrical Contractor shall report to the Engineer in accordance with the Standard Conditions of the Contract.

C. Where exact locations are required by equipment for stubbing-up and terminating conduit concealed in floor slabs, the Electrical Subcontractor shall request shop drawings, equipment location drawings, foundation drawings, and any other data required by him to locate the concealed conduit before the floor slab is poured. Additional penetrations/openings not shown on the drawings shall not be made without preapproval by the Engineer.

D. Materials, equipment, or labor not indicated, but which can be reasonably inferred to be necessary for a complete installation shall be provided. Drawings and Specifications do not undertake to indicate every item of material, equipment, or labor required to produce a complete and properly operating installation.

E. The right by the Owner and Engineer is reserved to make reasonable changes in locations of equipment indicated on drawings prior to rough-in without increase in contract cost.

F. The Contractor shall not reduce the size or number of conduit runs indicated on the drawings without the written approval of the Engineer.

G. Locate pull boxes, panelboards, control pushbuttons, terminal cabinets, safety switches, and such other apparatus that may require periodic maintenance, operation, or inspection, so that they are easily accessible. If such items are shown on the plans in locations which are found to be inaccessible, the Engineer shall be advised of the situation before work is advanced to the point where extra costs will be involved.

H. All additional circuit connections to panelboards shall be preapproved by the Engineer.

I. Any work installed contrary to Contract Drawings shall be subject to change as directed by the Engineer, and no extra compensation will be allowed for making these changes.

J. The location of equipment fixture outlets, and similar devices shown on the Drawings are approximate only. Do not scale drawings. Obtain layout dimensions for equipment from Architectural plans unless indicated on electrical plans.

K. Review all drawings for door swings, cabinets, counters, and built-in equipment.

3.2 RACEWAY INSTALLATION:

Use the following raceway materials for raceways in the identified applications.

A. Rigid PVC: Buried Raceways.

B. Rigid Steel: Outdoors and indoors.

C. PVC Coated Rigid Steel: Where indicated or specified.

D. Flex: Provide a length of flexible conduit between fixed rigid conduit and connected equipment such as motors, instruments, or switching devices. Flexible section shall not be shorter than 12 inches and no longer than 42 inches. Flex not required for indoor lighting fixtures or devices. Liquid tight or flexible metal, as specified or indicated.

3.3 PHASE CONNECTIONS:

Phase connections for equipment shall be A, B, C, counting from front to back, top to bottom, and left to right as viewed from the operating mechanism side. Conductors shall be color coded as specified.

3.4 TESTING:

A. GENERAL:

Prior to energizing the electrical circuits, the following tests shall be performed. Unless otherwise specified, a 1000 volt megohmmeter shall be used for resistance measurements. Record and submit test results using form at the back of this Section.

B. INSULATION RESISTANCE MEASUREMENTS:

Test all energized electrical components including conductors for circuits 120V volts and higher. Conductors and devices with less than 50 megohms resistance to ground or between conductors or phases shall be removed and replaced. All conductors in a raceway shall be removed if a conductor in that raceway fails the insulation resistance test. The conductors shall not be reused.

C. MOTOR TESTS:

All motors shall have their insulation resistance measured before they are connected. Insulation resistance values less than 10 megohms are not acceptable. Verify that motors are connected to rotate in the correct direction. Verification may be accomplished by momentarily energizing the motor, provided the Contractor confirms that neither the motor nor the driven equipment will be damaged by reverse operation. Measure the full load current on each phase with the motor running at maximum operating load.

D. FUNCTIONAL CHECKOUT:

Protective devices shall be adjusted and operative during the testing period. Prior to start-up of each piece of equipment or system, perform a functional checkout on control circuits. The checkout shall consist of energizing each control circuit and operating each control, alarm, or malfunction device, and each interlock in turn to verify that the specified action occurs. This may be performed with the motor connected or disconnected, providing that no harm will be done to the equipment.

3.5 AS-BUILT DRAWINGS:

At the end of the project, provide one set of “red-lined” as-built drawings to the Engineer. As-built drawings shall show all addenda, change orders, or other modifications made by the contractor or directed by the Engineer/Owner. Drawings shall be complete and shall be accurate. Manholes and other in-ground structures shall be dimensioned from a known structure. Modifications to control schematics shall be marked on the drawings. Final payment will not be made until as-built drawings are accepted by the Engineer.

SECTION 16110

RACEWAYS AND FITTINGS

PART 1 GENERAL

1.1 SECTION INCLUDES:

A. The work shall include furnishing and installing all rigid steel and flexible metallic conduit, electrical metallic tubing, polyvinyl chloride conduit, wireways, pull and junction boxes and outlet boxes, together with all supporting devices and other accessories required.

1.2 SUBMITTALS:

A. Submit manufacturer's data on all materials, under provisions of Section 01300.

PART 2 PRODUCTS

2.1 CONDUITS:

A. Galvanized Rigid Steel Conduit (GRC): Rigid, threaded, thick-wall; galvanized inside and outside or galvanized outside with a protective coating inside; UL listed and labeled according to Standard UL6; conforming to ANSI Standard C80.1.

B. PVC-Coated Galvanized Rigid Steel Conduit: Hot dip galvanized inside and out with hot galvanized threads. 40 mil polyvinyl chloride exterior with 2 mil urethane interior. UL listed and labeled according to Standard UL6; conforming to ETL Verified PVC-001.

C. Flexible Metal Conduit: Spirally wound with hot dip galvanized steel strips (commercial Greenfield); to UL Standard UL 1 and UL listed and labeled.

D. Liquidtight Flexible Metal Conduit: Spirally wound with hot dip galvanized steel strips as for flexible metal conduit; with polyvinyl chloride cover extruded over the exterior to make conduit liquidtight. UL listed for grounding.

E. Rigid Nonmetallic Conduit: Rigid nonmetallic conduit shall be NEMA TC2, type EPC-40 or EPC-80 PVC high impact, polyvinyl chloride (PVC). Fittings used with PVC conduit shall be PVC solvent weld type. Nonmetallic conduits shall be UL listed for their respective applications. Minimum size shall be 3/4-inch.

1. Buried: Schedule 40.

2.2 CONDUIT FITTINGS:

A. Couplings, condulets, and Terminations for GRC: Factory made steel threaded condulets and couplings; gasketed, bushing at all boxes and cabinets, with locknuts inside and outside box or cabinet. Fittings shall be cast steel with threaded connections.

B. Couplings, condulets, and terminations for PVC Coated Galvanized Rigid Steel Conduit: Factory made condulets and couplings. All condulets, couplings, and other fittings shall be factory fabricated and shall meet the same standards as the PVC Coated Galvanized Rigid Steel Conduit.

C. Couplings and Terminations for Flexible Metal Conduit: T&B 440 Series couplings at connections between flexible and rigid conduit; T&B 3110 or 3130 Series nylon insulated throat, steel connectors at box or cabinet terminations.

D. Couplings and Terminations for Liquid Tight Flexible Metal Conduit: T&B 5271 Series adapters at connections between flexible and rigid conduit; T&B 5331 Series nylon insulated throat steel connectors at box or cabinet terminations.

E. Couplings and Terminations for Rigid Nonmetallic Conduit (PVC): PVC shall be solvent weld by male thread adapter, Schedule 40 or Schedule 80 as required. Other fittings shall be solvent weld connections.

2.3 WIREWAYS:

A. Interior Use: UL listed; enamel finished; sizes shown or required; hinged covers; complete with: all fittings, couplings, hangers and accessories; Universal Hoffman or equivalent. Wireway shall be positioned such that the cover opens downward. Wireway shall be positioned such that the cover opens downward.

B. Exterior Use: UL Listed; hot-dip galvanized finish; sizes indicated or required; removable front cover which is gasketed; weatherproof rainhood.

2.4 OUTLET BOXES:

A. UL listed of sizes and types specified.

B. Sheet Steel Boxes: Sheet panel not lighter than No. 14 gauge, galvanized after fabrication; Raco or Steel City.

C. Cast Metal Boxes: Cast iron or cast alloy with threaded hubs; Crouse-Hinds, Appleton, or O.Z./Gedney.

2.5 PULL BOXES AND JUNCTION BOXES:

A. Sheet steel, galvanized inside and outside, with galvanized covers.

B. Small Boxes: For boxes where the volume required is not over 100 cubic inches, use standard outlet boxes.

C. Larger Boxes: For boxes where the volume is over 100 cubic inches, use cabinets as specified for panelboard cabinets with covers of same gauge as boxes, secured with corrosion resistant bolts or screws.

PART 3 EXECUTION

3.1 INSTALLATION OF RACEWAYS:

A. All wiring of every description shall be run in conduit unless noted or specified otherwise. Conduits may be run exposed in machinery and electrical rooms and unfinished areas. All other conduits shall be run concealed unless otherwise noted. All exposed runs shall be installed parallel and plumb to the surface of the building or structure in a neat and orderly manner.

B. Types: All conduits installed outdoors or indoors shall be GRC conduits.

C. Conduits installed below grade, in slabs, or buried in earth shall be PVC.

D. Where PVC conduits stub up beneath electrical equipment into equipment maintenance pads, install an end bell at the termination of the conduit. Conduits stubbed up in maintenance pads with no equipment above shall be terminated with a coupling and flush plug.

E. PVC Coated Rigid Steel Conduit may be required for specific areas other than those specified herein as indicated on the drawings or specified herein.

F. Sizes: Size and install raceways so that conductors may be drawn in without injury or excessive strain. Make field bends with approved bending devices. Do not install bends or offsets in which conduit is crushed, deformed or otherwise injured. Sizes of conduits shown on the drawings are minimum sizes to be installed. Size conduits per applicable electrical code.

G. Connections: Use lengths of flexible metal conduit, not less than 12" long at final connections to all motors, controls, and other devices subject to movement because of vibration or mechanical adjustment. Flexible metal conduit may be used at connections to lighting fixtures. Use liquidtight flexible metal conduit at all other locations. Do not install liquidtight flexible metal conduit to other devices or between panelboards or enclosures unless specifically shown on the drawings or approved by the Engineer.

H. Around Heat Producing Equipment: Wherever possible, avoid installing raceways directly above or in close proximity to heaters and other like objects operating at high temperatures.

I. Damp or Wet Locations: In damp or wet locations make every effort to avoid installing raceways in a manner which will create moisture traps. Where they must be so installed, seal both ends of raceways with an approved sealing compound to prevent "breathing" and moisture condensation within the raceways.

J. Joining Rigid Conduits: Join with threaded couplings. Ream out all conduit ends after threading. Secure rigid conduits at panel boxes, junction boxes, pull boxes, switchboards, support boxes, or sheet metal outlet boxes by galvanized locknuts, inside and outside, with insulating bushing inside. Unthreaded set screw type couplings or connectors are not acceptable in rigid conduit systems. No running threads shall be used in conduit systems.

K. Install blank knock out plugs in all unused openings in boxes, enclosures, or panels.

L. Penetrations: Wherever raceways pass through floors, walls, partitions, etc., carefully fill all space between the outside of the raceway and the building material to prevent passage of air, water, smoke and fumes. Filling materials shall be fire resistive and in general, similar to the basic building materials through which the raceway passes.

3.2 SEALING CONDUITS:

A. Damp or Wet Locations: In damp or wet locations make every effort to avoid installing raceways in a manner which will create moisture traps. Where they must be so installed, seal both ends of raceways with an approved sealing compound to prevent "breathing" and moisture condensation within the raceways.

B. Protection of Raceways: Seal ends of all raceways with blank discs ("pennies"), push pennies or other approved closers during construction. Do not pull any conductors into raceways until all plastering and concrete finishing in the vicinity is completed. Swab out all raceways before pulling in conductors.

3.3 INSTALLATION OF PVC CONDUIT:

A. Transition from below grade PVC to above grade rigid steel or PVC coated rigid steel shall be before conduit rises out of ground. On conduits larger than 2 inches, use rigid steel elbow. Tape wrap the portion of rigid steel or PVC coated rigid steel conduit in the ground as specified in Section 16115.

B. PVC conduit shall not be installed above grade in outdoor areas unless specifically indicated on the drawings.

3.4 SPARE OR EMPTY CONDUITS:

A. Provide in every spare or empty raceway, not containing conductors to be installed by this Contractor, a suitable pull line to facilitate future installation of wiring. Lines shall be free from splices and shall have ample exposed length at each end.

B. All lines shall be nylon or polyethylene cord with a tensile strength not less than 200 pounds.

C. Identify each end of each line with a stainless steel tag bearing complete information as to the purpose of the raceway and the location of its other end.

D. All spare conduits, not terminated in an enclosure, shall be terminated using a conduit cap or plug.

3.5 CONDUIT SUPPORTS:

A. Support material installed shall be stainless steel, malleable iron, or hot-dipped galvanized.

B. All anchor bolts shall be stainless steel.

C. All supports that come in contact with the floor, roof, or where water may stand or accumulate, whether indoors or outdoors, shall be stainless steel.

D. All supports that are located below grade shall be stainless steel.

E. Support Spacing: Use minimum spacing as directed by National Electrical Code, but space hangers more closely where required by conditions.

F. Vertical Conduit Risers: Support vertical conduits at each floor by means of riser clamps or U-bolts, clamping them to a steel channel bridging the opening in the floor.

G. Individual Conduits: Support conduits running vertically or horizontally with galvanized malleable iron one hole clamps with backing plates and spacers. Carry individually supported horizontal conduits 1-1/4" and larger on B-Line hangers. Use no perforated strap iron as hanger material.

H. Multiple Conduits: Where multiple raceways are to run horizontally at the same elevations, they may be supported on trapezes formed of sections of Unistrut angle iron channels suspended on rods or pipes. Size trapeze members including the suspension rod for the number size and loaded weight of the conduits they are to support. Space them as required for the smallest conduit supported. Minimum hanger rod size is 3/8-inch diameter.

I. Supports provided with PVC Coated GRC conduit shall be corrosion resistant. Galvanized steel supports will not be acceptable.

J. All galvanized material cut during installation shall have the cut ends painted with a zinc rich paint.

3.6 INSTALLATION OF OUTLET BOXES:

A. Usage: Provide at each outlet or device of whatever character a metal outlet box in which conduits shall terminate.

B. Boxes Recessed in Construction: Sheet steel boxes.

C. For Lighting Fixture Outlets in the Electrical Room: 4" octagonal by 1-1/2" minimum.

D. For Lighting Fixture Outlets in the Pump Room: Cast metal boxes.

E. For Wall Switches, Receptacles and Communications in the Electrical Room: Use: Use 4" x 4" size.

F. For Wall Switches, Receptacles and Communications in the Pump Room: Use 4" x 4" size cast metal box.

G. Boxes for Exposed Work: Cast metal boxes.

H. Boxes for Outdoors: Cast metal boxes with gasketed covers.

3.7 INSTALLATION OF PULL AND JUNCTION BOXES:

A. Sizing: Size all pull and junction boxes in accordance with NEC, using larger sizes than required by code where job conditions so indicate.

B. Mounting: Fasten all boxes securely to the building construction, independent of conduit systems. On concealed conduit systems where boxes are not otherwise accessible, set box covers flush with finished surfaces for access.

C. Identification of Pull and Junction Boxes: Each pull and junction box shall be labeled with indelible ink to indicate the wiring contained inside the box. The label shall indicate the panel and circuit number of the wiring contained. The cover plates of boxes serving emergency circuits shall be painted red. Boxes servicing other systems shall be indicated by name.

END OF SECTION

SECTION 16115

UNDERGROUND ELECTRICAL DUCT AND CONDUIT

PART 1 GENERAL

1.1 SECTION INCLUDES:

A. Underground electrical duct and direct burial conduit, together with all other accessories required.

1.2 SUBMITTALS:

A. Submit manufacturer's data on all materials, under provisions of Section 01300.

PART 2 GENERAL

2.1 UNDERGROUND DUCTS:

A. Schedule 40, heavy wall, high impact rigid virgin polyvinyl chloride (PVC) conduit and fittings, conforming to NEMA Publications TC2 and TC3 and UL listed; Carlon or equivalent.

2.2 CONDUITS:

A. Underground PVC Conduit: Schedule 40, heavy wall, high impact rigid virgin PRECAST polyvinyl chloride (PVC) conduit and fittings, conforming to NEMA Publications TC2 and TC3 and UL listed for direct burial use; Carlon or equivalent.

B. Rigid Steel Conduit: As specified under Raceways and Fittings, Section 16110.

C. PVC-Coated Galvanized Rigid Steel Conduit: As specified under Raceways and Fittings, Section 16110.

PART 3 GENERAL

3.1 GENERAL:

A. After the affected electrical work has been installed, tested, and approved, backfill all excavations with suitable material. Include the cutting of all sidewalks, streets, and other pavement and repairing the openings in them to return the surface to approximately its original condition.

3.2 EXCAVATIONS:

A. Perform all excavations of every description of whatever substances encountered and to the depths required for installation of the work under this Division.

B. During excavation, stockpile material suitable for backfilling in an orderly manner a sufficient distance from the banks of the trenches to prevent slides or cave-ins. Remove all excavated material not required or suitable for backfill, or waste as directed. Control grading to prevent surface water from flowing into excavations and remove any accumulated water by pumping.

C. Use open cut grading and make trenches of the necessary width for proper installation of the lines with banks as nearly vertical as possible.

D. Grade the bottom of trenches accurately to provide uniform bearing and support for conduit or duct on undisturbed soil at every point along its entire length.

E. Except at locations where excavation of rock from the bottoms of trenches is required, take care not to excavate below the depths required. Where rock excavation is required, remove the rock to a minimum overdepth of 4 inches below the trench depths specified. Backfill the overdepth rock excavation and excess trench excavation to the proper level with sand prior to the installation of conduit or ducts. Whenever wet or otherwise unstable soil that is incapable of properly supporting conduits or ducts is encountered in the trench bottom, remove such soil to a depth required and backfill the trench to trench bottom grade with sand or other suitable material.

3.3 BACKFILLING:

A. Carefully backfill trenches with earth, sandy clay, sand and gravel, or other approved material free from large clods of earth or stone, deposited in thoroughly and carefully compacted 6-inch layers. Do not use blasted rock, broken concrete or pavement, or large boulders as backfill material. Settling the backfill with water will be permissible and will be required when so directed. Re-open any trenches improperly filled or where settlement occurs to the depth required for proper compaction the refill, mound over and smooth off.

B. Backfill open trenches across roadways or other areas to be paved as specified above except that the entire depth of trench shall be backfilled in 6-inch layers, each layer moistened and compacted to a density of not less than 95 percent Standard Proctor in such manner as to permit the rolling and compaction of the filled trench together with the adjoining earth to provide the required bearing valve and permit paving of the area immediately after backfilling is completed. Along all other portions of the trenches, grade the ground to a reasonable uniformity and leave the mounding over the trenches in a uniform and neat condition.

C. All trenches that settle shall be refilled by the contractor.

3.4 UNDERGROUND DUCT INSTALLATION:

A. Use PVC electrical ducts, installed with concrete encasement, with a minimum of 3" of concrete between ducts and earth, and with 2 inches of concrete between adjacent ducts. Provide minimum 30 inches of cover from the top of concrete to finished grade, or as indicated on the drawings. Install with uniform slope for drainage, with no low pockets to collect water.

B. Where ducts cross beneath roadways, or other locations as indicated on the drawings, reinforce the duct with rebar as indicated on the drawings.

C. After the concrete is poured, cover the entire surface of the concrete with a red dye. The red dye shall be provided with a uniform cover and shall be worked into the concrete a minimum of 2-3 inches.

D. Build up duct banks completely in the trench before placing concrete, using factory-fabricated plastic conduit spacers in staggered spacings, and securing the entire assembly with heavy twine or cord to ensure rigidity during pouring. Do not use metal for this purpose. Assemble conduits with staggered adjacent couplings so that no two couplings will lie in the same transverse plane, in a vertical direction. Use solvent cement as directed by the duct manufacturer in making up all joints.

E. Fabricate duct runs with standard factory-made fittings, elbows and accessories. Make all changes of direction, horizontal or vertical with long sweep bands having a minimum radius of 25 feet, except that manufactured bends at or near the ends of the runs may be used on short runs of 100 feet or less. Make long sweep bends with one or more curved or straight sections of duct. Manufactured bends, where permitted, shall have a minimum radius of 10 times the nominal duct diameter. Where manufactured ducts of greater than a 30 degree angle are required, use rigid hot dipped galvanized steel conduit bends. During construction, protect partially completed duct lines from entrance of dirt and debris by means of suitable factory-made duct plugs. After completion of installation, seal all ends of spare ducts with factory-made duct plugs.

F. Where ducts enter in or under buildings, or turn up through equipment pads, change from PVC duct to rigid galvanized steel conduit below grade outside the structure, using suitable factory adapters. At the point of change of materials, extend the concrete envelope to enclose at least 2 feet of steel conduit. Wrap all steel conduits and fittings buried in earth as specified elsewhere herein.

G. Install the concrete envelope for a given duct run in one pour where possible. Use concrete of 3000 psi compressive strength. In pouring concrete, do not allow heavy masses of concrete to fall on ducts. Direct flow of concrete down sides of assembly to bottom, forcing it to flow to center of bank and then to rise up in middle, filling all spaces uniformly. Spade concrete liberally and carefully with a long, flat slicing bar between vertical rows to eliminate voids. Weight or brace the duct bank assembly if necessary, to prevent the assembly from floating. Because of the fact that PVC conduits may expand considerably during construction, each run and its concrete envelope shall be installed starting at one end and processing toward the other with any necessary adjustments to length being made at the end toward which the work is progressing.

H. After ducts are installed, complete with envelope, and before pulling any cable, pull a mandrel through every duct to check for alignment and clear passage. Use an iron-shod mandrel with a diameter of 1/4 inch less than the nominal size of the duct and a length equal to the duct diameter. Mandrel shall have a leather or rubber gasket slightly larger than the duct hole. After testing the

ducts with the mandrel, pull a stiff-bristled brush through each duct until it is clear of all particles of earth, sand or gravel; then install duct plugs immediately.

3.5 UNDERGROUND PVC CONDUIT INSTALLATION:

A. Install at least 18 inches below finished grade unless indicated otherwise. Assemble and install raceways in accordance with manufacturer's instructions. Make joints with couplings and solvent cement. Fabricate bends of 30 degrees or more with factory-made elbows, or make field bends with proper heating equipment. Bends showing signs of overheating or flattening are unacceptable. Ream ends of all conduits before joining.

B. "Snake" PVC conduit in trench, from side to side, with a complete cycle every 40 feet to allow for expansion and contraction. Maintain this configuration during backfilling.

C. Where conduit turns up out of earth, or floor slabs, change from PVC to rigid galvanized steel conduit below grade and outside of such structures. Make similar change from PVC to rigid galvanized steel conduit at connections to underground pull or junction boxes. Wrap all steel conduits and fittings buried in earth as specified elsewhere herein.

D. Do not extend any PVC conduit above grade.

E. Install 6 inch wide detectable electrical warning tape above conduits.

3.6 UNDERGROUND RIGID STEEL CONDUIT INSTALLATION:

A. All rigid galvanized steel conduit exposed to earth shall be wrapped with 3M Company 0.020 inch thick No. 51 "Scotchrap" vinyl plastic tape, half lapped to give double thickness wrap. Remove all oil, grease and dirt from conduit with a suitable solvent, and clean and dry conduit before wrapping. If conduit is pre-wrapped in the shop and then cut and joined on the job, wrap all joints on the job, overlapping pipe wrapping 3" on both sides of joints.

B. All PVC coated rigid steel conduit connected to below grade PVC conduit shall be wrapped with 3M Company 0.020 inch thick No. 51 "Scotchrap" vinyl plastic tape, half lapped to give double thickness wrap, between the PVC coating and the PVC conduit to cover any steel conduit exposed. Remove all oil, grease and dirt from metal with a suitable solvent, and clean and dry conduit before wrapping.

3.7 EXISTING UNDERGROUND CONDUITS:

Existing underground conduits shall be removed in their entirety or abandoned in place, as indicated on the drawings or directed by the Engineer.

3.8 SPARE OR EMPTY CONDUITS:

A. Provide in every spare or empty raceway, not containing conductors to be installed by this Contractor, a suitable pull line to facilitate future installation of wiring. Lines shall be free from splices and shall have ample exposed length at

each end.

B. All lines shall be nylon or polyethylene cord with a tensile strength not less than 200 pounds.

C. Identify each end of each line with a stainless steel tag bearing complete information as to the purpose of the raceway and the location of its other end.

D. All spare conduits, not terminated in an enclosure, shall be terminated using a conduit cap or plug.

3.9 MANHOLES AND PULLBOXES:

A. Manholes and Pullboxes:

1. Precast manholes and pullboxes:

a. Grout or seal all joints, per manufacturer's instructions.

b. Provide a premolded joint compound between the precast lid and joints between any sections. Ram Nek, Kent Seal, or Engineer approved equal.

2. Covers and frames: Paint with two coats of asphalt paint before setting.

3. Support cables on walls by cable racks:

a. Provide a minimum of two (2) racks, install symmetrically on each wall of manholes.

i Provide additional cable racks, as required, so that both ends of cable splices will be supported horizontally.

b. Equip cable racks with adjustable hooks: Quantity of cable hooks as required by the number of conductors to be supported.

4. In each manhole and pullbox, drive ground rod into the earth with approximately 6 inch exposed above finished floor.

a. Drill opening in floor for ground rod.
b. Connect all metallic components to ground rod by means of #8 AWG minimum size wire with approved grounding clamps.

5. Place manhole on a foundation of compacted 1/4 to 1/2 inch crushed rock or gravel a minimum of 8 inch thick and 6 inch larger than manhole footprint on all sides. Install pullbox as indicated on the drawings.

6. Unless otherwise detailed on the Drawings:

a. In unpaved areas, install so that the top of cover is 1 inch above finished grade.

b. In paved areas, install so that cover is flush with finished grade.

c. Where existing grades are higher than finished grades, install sufficient number of courses of curved segmented concrete block between top of pullbox and manhole frame to temporarily elevate manhole cover to existing grade level. After final grade is achieved, modify blocks as required to achieve the specified top of cover. If necessary, provide fill material and grade area.

7. After installation is complete, backfill and compact soil around manholes and pullboxes.

8. Pullbox size:

a. As indicated on the Drawings or as required for the number and size of conduits entering.

9. Manhole size:

a. As indicated on the Drawings or as required for the number and size of conduits entering.

END OF SECTION

SECTION 16120

CONDUCTORS

PART 1 GENERAL

1.1 SECTION INCLUDES:

A. Conductors, together with all splices, connections, and identification, including pulling devices.

1.2 SUBMITTALS:

A. Submit manufacturer's data on all materials, under provisions of Section 01300.

PART 2 PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS

A. Subject to compliance with the Contract Documents, the following manufacturers are acceptable:

1. Building wire, power and control cable:

a. Alphawire.
b. General Cable.
c. Okonite Company.
d. Southwire Company.

2. Multi-conductor 600 Volt Power Cable:

a. General Cable.
b. Okonite Company.

3. Control Cable:

a. Alphawire.
b. General Cable.
c. Okonite Company.

4. Instrumentation cable:

a. Alphawire.
b. Belden Inc.

5. Ethernet Cable:

a. Belden.
b. DataTwist 4800 UTP Cables.
c. Engineer approved equal.

6. Fiber optic cable:

a. Corning.
b. Belden Inc.

2.2 CONDUCTORS (600 VOLTS AND UNDER):

A. Type: Soft drawn, annealed copper, UL listed, rated at 600 volts, continuous without weld, splice or joint, uniform cross-section, free from flaws, scale and other imperfections; Okonite, Triangle, or Simplex. No. 8 and larger shall be stranded; No. 10 and smaller shall be solid.

B. Insulation: Branch circuits shall have type THHN/THWN or XHHW insulation unless the type is specifically designated or specified. Service feeders shall be type THHN/THWN or XHHW. Feeder circuits shall be Type THHN/THWN or XHHW.

C. All conductors installed underground or in areas where exposed to damp or wet locations shall be rated THWN or XHHW.

D. Circuits Subjected to High Temperatures: Type XHHW 90 C conductors for wiring in proximity to boilers, and for motors and devices subject to high temperature because of high ambient temperature or convection or radiant heat.

E. Lighting Fixture Conductors: Type and size approved by the NEC for the purpose.

2.3 MULTI-CONDUCTOR POWER CABLE:

A. References: UL 1277, UL 1581, ICEA S-61-402 (NEMA WC5), ICEA T-29-520, IEEE 383.

B. Multiconductor cable, 3 or 4 conductor as required.

C. Bare stranded copper equipment grounding conductor sized in accordance with NEC Table 250.122.

D. Conductor: No. 12 AWG minimum, 7 or 19 strands, concentric-lay, uncoated copper. Maximum operating temperature 90° C.

E. UL listed for use in cable trays.

F. Conductor Insulation: Type XHHW.

G. Shield: None.

H. Cable assembly jacket: Black flame retardant chlorinated polyethylene compound or Solonon, applied over tape wrapped cable core, rated 600 volts.

I. Factory Tests: Insulted conductors shall conform to the UL requirements for Type XHHW. Assembly jacket shall meet the requirements of UL 1277. Cable shall conform to the flame test requirements of IEEE 383 and UL 1277 for Type TC power tray cable.

J. Conductor color coding for shall conform to ICEA Method 1, Table E-2.

2.4 CONTROL CABLE

A. Reference: UL 83, UL 1277, ICEA S-61-402 (NEMA WC5).

B. Multiconductor cable.

C. Conductor: No. 14 AWG minimum, 7 or 19 strands, concentric-lay, uncoated copper. Maximum operating temperature 90° C.

D. UL listed for use in cable trays.

E. Conductor Insulation: Type THHN/THWN.

F. Shield: None.

G. Cable assembly jacket: Black flame retardant PVC UL 1277, Table 10.17, applied over tape wrapped cable core, rated 600 volts.

H. Conductor color coding shall conform to ICEA Method 1, Table E-2.

I. Factory Tests: Insulated conductors shall conform to the requirements of UL 83 for Type THHN/THWN. Assembly jacket shall meet the requirements of UL 1277. Cable shall conform to the flame test requirements of UL 1277 for Type TC power and control tray cable.

2.5 INSTRUMENT CABLE

A. Reference: UL 2250, UL 1277.

B. The assembly shall be rated 600 volts, 90° C.

C. The assembly shall be UL listed as sunlight resistant, for cable tray use, and shall meet the requirements for types CL2 and CL3 cable.

D. Conductor: No 16 AWG minimum, 7 strand, concentric-lay, uncoated copper

E. Insulation: Polyvinyl chloride. Not less than 15 mils average thickness (13 mils minimum thickness), UL 62, Type TFFN.

F. Lay: Twisted pair or triad with 1-1/2 to 2-1/2 inch lay.

G. Shield: Each pair or triad and cable assemble shall have combination aluminum-polyester helically applied tape and 7 strand AWG minimum size, tinned copper drain wire, shield applied to achieve 100 percent cover over insulated conductor. Shield tape on pair and/or triad assemblies shall be applied in such a way as to give total shield isolation from all other pair or triad shields.

H. Cable assembly: Black flame retardant polyvinyl chloride, UL 1277 applied over tape wrapped cable core.

I. Conductor Identification: Single pair: One conductor black, one conductor white. Single triad: One conductor black, one conductor white, and one conductor red.

J. Factory Tests: Insulated conductors shall conform to the requirements of UL 62 for Type TFFN. Assembly jacket shall conform to the requirements of UL 1277. Cable shall meet the vertical-tray flame test requirements of UL 1277.

2.6 ETHERNET CABLE:

A. Data cable consisting of four twisted pairs of insulated copper conductors, Category 6 (TIA/EIA 568-C2-1) for high performance with 300 MHz channel bandwidth and a maximum data rate of 4.8 Gb/s. Temperature Rating: 60 0C.

B. Wire Size:

1. 23 AWG copper, insulated, designed for low Insertion Loss (flow signal Attenuation) and meeting performance standards of TIA/EIA-568-C2-1.
2. Provide Bonded–Pair design.

C. Cable Insulation Material:

1. Plenum: 100% FEP for Bonded Pair.
2. Riser and LSZH: Polyolefin.

D. Jacket Material:

1. Plenum: LSPVC
2. Riser: PVC
3. Lszh: Low smoke, zero halogen polymer alloy.
4. Jacket printed at intervals indicating cable code, AWG, listings (NEC Code), verification, date, manufacturing traceability code.

E. Connectors: Provide RJ-45 modular connectors, unshielded metal housing, field installable, compatible for Category 6 cables.

2.7 FIBER OPTIC CABLE

A. The following requirements pertain to fiber optic cable.

Table 1 Fiber Optic Cable Requirements	
Requirement	Value
Fiber type:	Multimode, graded index
Core Diameter:	50 microns
Cladding Diameter:	125 microns
Buffer Diameter:	250 microns
Maximum Attenuation:	2.9 dB/km @ 850 nm. 1.0 dB/km @ 1300 nm.
Minimum Bandwidth:	200 MHz-km @ 850 nm 500 MHz-km @ 1300 nm
Numerical Aperture:	0.275 ± 0.015
Buffer Type:	Loose Tube provided with a water swellable powder type water-blocking material.
Number of Fibers:	12 or as shown on Drawings
Inner Strength Members:	Epoxy Reinforced Glass Rods/PVC
Outer Strength Member:	Aramid Yarn Fibers
Inner Jacket:	Black PVC - .022" Nominal Wall
Outer Jacket:	UV & Moisture Resistant PVC 0.045" Nominal Wall Orange Color
Tensile Load:	600 lbf (2670N) max. - Installation, 135 lbf (600N) max. - in-service
Operating Temperature Range:	-40 °C to +70 °C
Crush Resistance:	500 lb-f/inch - maximum
Quantity (continuous length):	As required without splices

B. Fibers within the cable shall be color-coded so that each fiber may be individually identified. The color sequence suggested is as follows: blue, orange, green, brown, slate, white, red, black, yellow and violet. Dashed versions of the same colors may be used to continue the sequence, depending on the cable structure and fiber count.

C. The fibers shall not adhere to the inside walls of the loose buffer tube. Buffer tubes shall be kink resistant within the specified minimum bend radius.

D. Filler may be included in the cable core composition to lend symmetry to the cable cross-section where needed.

E. Buffer tubes shall be stranded around a central member using the reverse oscillation, or "S-Z", stranding process.

F. Binders shall be applied with sufficient tension to secure the buffer tubes to the member without crushing the buffer tubes. The binders shall be non-hygroscopic, non-wicking and dialectic with low shrinkage.

G. Tensile strength shall be provided by a combination of high tensile strength dielectric yarns. The high tensile strength dielectric yarns shall be helically

stranded evenly around the cable core.

H. The outer jackets of the cable shall be continuous, free from holes, splits, blisters or inclusions. The same requirement holds for any inner jackets within a given cable structure as well as for fiber coatings.

I. Systems Integrator shall furnish breakout kit for termination of loose tube fiber.

J. Connectors shall be as indicated on the drawings.

2.8 JOINTS AND SPLICES:

A. Stranded Copper Conductors: UL approved tin-plated, copper compression connectors, Thomas & Betts, Panduit, or Burndy. All connectors shall be of proper sizes to match conductor sizes. All compression connectors shall be applied with properly sized dies and tools. Split-bolt connectors or other mechanical connectors are not acceptable.

B. Do not splice control or instrument cables. Instrument or control cables shall only be terminated at devices or on terminal blocks. Conductors may be terminated without compression connector on terminal blocks with appropriate mechanical type terminals. Conductors terminated at terminal blocks with screw terminals shall be terminated with insulated, tin-plated copper locking fork terminals.

C. Solid Copper Conductors: UL approved electrical spring connectors of "Scotchlock", Ideal, T&B, or approved equivalent. All connectors shall be of proper sizes to match conductor sizes. Split bolt connectors are not acceptable.

D. Terminations at 600 volt motors shall use properly sized tin-plated, copper compression connectors on each motor lead and incoming power supply. Connectors shall be bolted together with zinc plated bolt, nut, flat washer, and lock washer. The connection shall be made using the 3M Series 5300 Motor Lead Splicing Kit, installed in accordance with the manufacturer's instructions.

E. For terminations at motors lower than 600 volts, Scotchfil shall be applied to round out the connection and the entire connection shall be wrapped with Scotch 88.

2.9 COLOR CODING:

A. Use standardized color-coding of conductors throughout. All color coding shall be continuous for the entire length of the conductors, and shall be permanent and readily distinguished after installation. In cases where they specified colors of insulated wire and cable are unavailable, such conductors shall be color-coded, as specified above, by means of Brady, or plastic tape at all pull boxes, support boxes, outlet boxes, panelboards, and other terminal and splicing points. Heat shrink sleeves for tight fit.

B. For No. 6 AWG and smaller conductors, color coding shall be provided by using conductors with continuous color imbedded in the insulation. For all conductors larger than No. 6, Scotch 35 marking tape, or equivalent may be used to color

code the cable. Where marking tape is used, the cable shall be identified at every accessible location. Provide a minimum of 2 inches of tape at each location.

C. Neutral conductors shall be white or natural gray. Grounding conductors shall be green or green with one or more yellow stripes.

D. Phase conductors shall be brown, orange, and yellow for phases A, B, and C respectively in the 480 volt system.

E. Phase conductors shall be black, red, and blue for phases A, B, and C respectively in the 208 volt system.

F. Phase conductors shall be black, orange, and blue for phases A, B, and C respectively in the 120/240 volt, 3-phase, 4-wire system. Identify the "high leg" with orange.

G. Color coding for multi conductor control circuits shall conform to ICEA Method 1, Table E-2.

PART 3 EXECUTION

3.1 CONTINUITY:

A. All conductors shall be continuous between points of termination.

B. Splices between points of termination are not acceptable unless specifically approved.

C. Splices in boxes permissible in 120-volt lighting and receptacle circuits only.

3.2 WIRE PULLING:

A. Provide suitable installation equipment for pulling conductors into raceways or conduits. Use ropes of polyethylene, nylon or other suitable material to pull in conductors. Attach pulling lines to conductors by means of woven basket grips or by pulling eyes attached directly to conductors. Grips and pulling eyes shall be Kellems or equivalent. All conductors to be installed in a single conduit shall be pulled in together. Pull no conductors into conduits until all work of a nature which may cause injury to conductors is completed. Use cable pulling compound where necessary.

B. Cable Lubricants: All cable lubricants shall be UL listed, and shall be certified by their manufacturer to be non-injurious to the insulation on which they are used.

3.3 WIRE INSTALLATION (600 VOLTS AND UNDER):

A. Feeders: Run all feeders their entire length in continuous pieces without joints or splices, insofar as practicable. Make joints in branch circuits only where circuits divide as shown on drawings. Such joints shall consist of one through circuit to which shall be spliced the tap circuit.

B. All circuits installed in manholes or pullboxes shall be multi-conductor type.

C. Branch Circuits: Not more than one power or lighting circuit shall be installed in a single conduit, except that one 3-wire circuit or one 4-wire circuit consisting of 2 different phase wires and a common neutral or 3 different phase wires and a common neutral may be installed in a single conduit. This provision shall not prohibit the installation in a single conduit of all conductors of a circuit with three and four-way switching.

D. Sizes: No wire shall be smaller than No. 12 except for control circuits.

E. Home runs on 120 volt, 20 ampere Lighting Branch lighting outlet exceeding 75 feet, use No. 10 conductors; otherwise use No. 12 conductors. Power and Lighting circuits of different system voltages (eg. 208Y/120 and 480Y/ 277 volts) shall not occupy the same conduit.

F. Joints and Splices: Only receptacle and lighting circuits will be allowed to be spliced. Make joints and splices in solid copper conductors only where necessary and only at outlet boxes and pull boxes. All joints shall be mechanically and electrically secure.

G. Wire and cable shall not be pulled tight against bushings nor pressed heavily against enclosures.

H. Bundling Conductors: Bundle all conductors in panelboards, cabinets and the like using nylon straps made for the purpose. Bundle conductors larger than No. 10 in individual circuits. Bundle smaller conductors in larger groups. Straps shall be Panduit, Thomas and Betts, or equivalent.

I. After wire and cable have been installed and connected, conduit ends shall be sealed with a non-hardening sealing compound (Duxseal or equal), forced into conduits to a minimum depth equal to the conduit diameter. This shall apply for all conduits, including spares, entering any structures or electrical enclosures from underground, or from wet/corrosive areas. Seal conduit at both ends of the conduit.

J. Ground the drain wire of shielded instrumentation cables at one (1) end only. Grounding location shall be at the load (e.g., control panel), not at the source (e.g., field mounted instrument).

3.4 CABLE IDENTIFICATION:

A. Identity Tags: Non-ferrous; stamped to clearly identify each circuit. Securely fasten tags to all cables, feeders and power circuits in pull boxes, lighting, power and distribution panelboards, motor control centers, control panels, etc.

3.5 FIBER OPTIC CABLE:

A. Fiber Optic Cable:

1. Unless indicated otherwise, install all fiber optic cable in conduit.

2. Optical fibers shall not be spliced.

3. Where exposed to contact with electric conductors, the noncurrent carrying metallic members (if applicable) of optical fiber cables entering buildings shall be grounded as close to the point of entrance as practicable in accordance with NFPA 70.

4. Install cables in accordance with the requirements of NFPA 70.

B. Perform the following tests per TIA/EIA/ANSI 455-78-B:

1. Optical time domain reflectometer test.
2. Power attenuation test.
3. Gain margin test.

C. Perform inspections and tests per NETA ATS 7.4.

D. Fiber optic cab les shall be tested as specified above. All optical test results shall be thoroughly and accurately documented and copies of the test results shall be saved in a permanent form, both hard copy and provided on a USB drive. Documentation of test results shall include the following information and shall be included as part of the Operation and Maintenance Manual.:

1. Cable type and length.
2. Splice and termination points.
3. Fiber type and size.
4. Connector types.
5. Splice types.
6. Cable paths.
7. End-to-end losses of completed transmitter-to-receiver links.

3.6 CONNECTIONS AND TERMINATIONS:

A. Cut conductor off square, trim insulation back the correct distance and prepare the conductor strands for termination as specified. Apply the proper lug or splice connector, making certain that the conductor strands are inserted full length of the barrel.

END OF SECTION

SECTION 16140

WIRING DEVICES

PART 1 GENERAL

1.1 SECTION INCLUDES:

A. Suitable outlet boxes, with the wiring devices indicated, coverplates, etc. All shall be properly connected to conductors so as to be operable.

1.2 SUBMITTALS:

A. Submit manufacturer's data on all materials, under provisions of Section 01300.

PART 2 PRODUCTS

2.1 MATERIALS:

A. Acceptable Manufacturers: The catalog numbers listed herein are generally of Hubbell manufacture. Equivalent devices of Arrow-Hart, Pass and Seymour, or Leviton are acceptable.

B. Classification: All wiring devices shall be "Specification Grade", and shall be UL listed.

C. Colors: All devices shall have an ivory finish where mounted in walls finished in light colors and a brown finish where mounted in walls finished in dark colors.

2.2 WALL SWITCHES:

A. Provide the following 120/277 volt switches:

Device	Hubbell Catalog No.
Single pole wall switch:	1221
Three-way wall switch:	1223
Four-way wall switch:	1224

2.3 RECEPTACLES:

A. Receptacle, 20-ampere, 125-volt, 2-pole, 3-wire grounding duplex: Hubbell No. 5362.

B. Receptacle, 20-ampere, 125-volt, 2-pole, 3-wire Grounding Duplex with Self-contained Ground Fault Circuit Interrupter: Hubbell No. GF 5362 (NEMA 5-20R).

C. Other receptacles as indicated on the drawings.

2.4 OTHER DEVICES:

A. Weatherproof Receptacles: Receptacles indicated to be installed outdoors shall be installed in an FD box with a weatherproof cover that meets the requirements of NEC Article 406.9(B)(2)(a). Cover shall be cast metal equal to Intermatic, Incorporated. Simplex or duplex, vertical or horizontal as indicated or required.

B. Switches indicated to be installed outdoors shall be provided with a malleable iron FD box with a Crouse Hinds DS-185 cover.

C. Provide coverplates for all wiring devices, telephone, signal outlets and other kindred devices.

D. Provide galvanized or cast cover for surface mounted boxes.

PART 3 EXECUTION

3.1 CIRCUIT IDENTIFICATION:

A. At each wiring device, install a label on the inside of the coverplate which shall identify the panel and circuit number to which the device is finally connected. The labels shall be made on the job with indentation-type Dynamo adhesive tape. Attach the label to the plate with contact cement or other suitable adhesive material. In lieu of a label, the panel and circuit number may be neatly marked on the inside of the coverplate with an indelible pencil.

3.2 MOUNTING HEIGHTS:

A. Where mounting heights are indicated on the drawings, the device shall be installed with the centerline of the device at the indicated height.

B. Wall switches shall be installed on the strike side of the door as finally hung.

C. Unless otherwise noted on the drawings, or directed, install device at the following heights:

Device	Mounting Height
Wall Switch	48"
Receptacle	18"
Exposed receptacles	36“

END OF SECTION

SECTION 16170

CIRCUIT AND MOTOR DISCONNECTS

PART 1 GENERAL

1.1 SECTION INCLUDES:

A. This Section specifies circuit and motor disconnect switches for general use.

1.2 SUBMITTALS:

A. Provide complete catalog data and drawings on all items of equipment, under provisions of Section 01300. Include all submittal data in the operation and maintenance manuals.

PART 2 PRODUCTS

2.1 DISCONNECT SWITCHES:

A. Unless otherwise noted or required, all disconnect switches shall be UL listed and shall meet the latest edition of NEMA Standard KS1 for Type HD heavy duty switches. Unless indicated otherwise on the drawings, switches shall be unfused; quick make, quick break; in NEMA 3R enclosures if installed outdoors, or in wet locations; elsewhere in NEMA 1 general purpose enclosures unless special enclosures are required. All motor circuit switches shall be horsepower rated.

B. Switches shall be of General Electric, Eaton, or Square D manufacture, equivalent to General Electric Type TH quick make, quick break switches.

C. Where space does not permit use of the above specified switches, such as within weatherproof fan housing, etc., use suitable horsepower rated tumbler switches as unfused disconnects; General Electric Type RB or equivalent.

D. Additional disconnect switches may be identified on the drawings. If so identified, provide the type called for on the drawings.

PART 3 EXECUTION

Not used.

END OF SECTION

SECTION 16195

ELECTRICAL IDENTIFICATION

PART 1 GENERAL

1.1 SECTION INCLUDES:

A. This Section specifies furnishing and installing identification signs on all electrical devices.

PART 2 PRODUCTS

2.1 NAMEPLATES:

A. Identify electrical equipment by attaching engraved nameplates constructed from laminated phenolic plastic, at least 1/16" thick, 2-ply, with black surfaces and white core. Engraving shall be condensed gothic, appropriately spaced. Nomenclature on the label shall include the name of the item or equipment served utilizing the equipment names shown on the drawings.

B. Nameplate lettering size shall be as follows:

1. ½" Minimum Height Letters:

Service Disconnects.

a. Secondary feeder breakers in distribution equipment with designation as required by the load served.

b. Special equipment housed in cabinets, as indicated on the drawings, or outside of door.

c. Panelboards, switchboards, as designated on the drawings, on outside of door.

2. 1/4" Minimum Height Letters:

a. Disconnects and starters for motors or fixed appliances.
b. Items listed in the “Equipment Schedule” on drawings.

3. 1/8" Minimum Height Letters:

a. Engraved black filled letters on devices plates for switches, dimmer controls, and receptacles where item controlled is not visible from switch, or as indicated on the drawings.

b. Lighting control relays.

c. Remote lighting control equipment.

PART 3 EXECUTION

3.1 EQUIPMENT:

A. Install nameplates on electrical equipment. Equipment to be labeled shall include but not be limited to the following:

1. Switchboards.
2. Panelboards.
3. Dry-type transformers.

3.2 CONTROL DEVICES:

A. Install nameplates on all electrical control devices to indicate the device served. Label electrical control devices regardless of proximity to the equipment served. Electrical control devices to be labeled shall include but not be limited to the following.

1. Contactors.
2. Motor starters.
3. Relays.
4. Relay panels.
5. Toggle switches used to control fans or other equipment.
6. Toggle switches used for local disconnects.
7. Disconnect switches.

3.3 ATTACHMENT:

A. Nameplates attached to the exterior of the enclosure shall be attached with self-tapping screws. Devices attached to the back side of panel fronts and on the interior of panels shall be attached with adhesive. Adhesive shall be waterproof and heat resisting up to 250 degrees Fahrenheit.

END OF SECTION

SECTION 16400

ELECTRICAL SERVICES

PART 1 GENERAL

1.1 SECTION INCLUDES:

A. The complete electrical service from the power company service point to the service entrance equipment, including all electric utility required modifications, whether primary or secondary. This shall include all poles, primary conductors, secondary conductors, transformers, metering equipment, or other equipment that might be required for the electric utility to extend or provide electric service to new Transfer Pump Station.

B. All costs associated with providing electrical service to the new facilities shall be included in the contractor's bid price, whether due to equipment or services provided by the electric utility or the Contractor. Contractor shall coordinate with the local electric and telephone utilities to determine all costs and requirements associated with providing service to the new facilities. Failure by the Contractor to fully investigate all aspects of the requirements for electrical and telephone service prior to submitting a bid shall not be grounds for a change order.

C. The electric utility is Oncor and the local contact is Gerri Coleman, Oncor PMDS/WTX, at 432-620-6216.

1.2 SUBMITTALS:

A. Submit for review catalog data and drawings for all equipment proposed for use under this Section, under provisions of Section 01300.

B. Submit reports of load balancing between phases.

1.3 NEW SERVICES:

A. Contractor shall arrange and pay for the installation of new electrical services as indicated. This shall include making contact with the electric utility representative. All outages required during the project construction shall be coordinated by the contractor. Electrical metering equipment shall be provided and installed by the electrical utility. Meter bases and all other equipment indicated on the drawings or required by the electric utility shall be provided and installed by the contractor.

PART 2 PRODUCTS

2.1 UNDERGROUND DUCTS:

A. As specified in Section 16115.

2.2 UNDERGROUND PLASTIC CONDUIT:

A. As specified in Section 16115.

2.3 METERING:

A. All metering for Power Company billing will be done by metering equipment furnished and installed by the Power Company.

B. Contractor shall provide meter bases, enclosures, and other equipment as required by the electric utility.

2.4 SYSTEMS OF WIRING:

A. Electrical Service: Combined 480/277 volts, 3-phase, 4 wire, 60 Hz. service for lighting and power.

B. Power Feeders: 480 volts, 3-phase, 3 or 4 wire as noted.

C. Lighting Feeders: 208/120 volts, 3-phase, 4 wire for lighting loads. 208/120 volts, 3-phase, 4-wire for receptacle and appliance loads.

D. Branch Circuits: 2, 3, or 4-wire as is most convenient for the contractor, or as required to properly serve the load.

2.5 LOAD BALANCING:

A. The contractor shall balance electrical loads between the various phases. When the facilities are under use at their heaviest loading periods, tests shall be run on the "hot" conductors in each feeder to a panel and any unbalances shall be corrected to a point that no conductor load shall be more than 5 percent high or low (maximum unbalance of 10 percent) in amperes. Submit reports of load balancing.

PART 3 EXECUTION

3.1 EXCAVATION AND BACKFILLING:

A. As specified under RACEWAYS AND FITTINGS.

3.2 UNDERGROUND DUCTS INSTALLATION:

A. Install as specified under UNDERGROUND ELECTRICAL DUCTS.

3.3 UNDERGROUND PLASTIC CONDUIT INSTALLATION:

A. Install as specified under UNDERGROUND ELECTRICAL DUCTS.

END OF SECTION

SECTION 16405

ARC-FLASH HAZARD ANALYSIS/SHORT
CIRCUIT/COORDINATION STUDY

PART 1 GENERAL

1.1 SCOPE:

A. The contractor shall furnish short-circuit and protective device coordination studies as prepared by a Registered Professional Electrical Engineer.

B. The contractor shall furnish an Arc-Flash Hazard Analysis Study per the requirements set forth in the latest edition of NFPA 70E - Standard for Electrical Safety in the Workplace. The arc-flash hazard analysis shall be performed according to the latest edition of IEEE Standard 1584, the IEEE Guide for Performing Arc-Flash Calculations.

1.2 RELATED SECTIONS:

A. Drawings and general provisions of the Contract.

1.3 REFERENCES:

A. Institute of Electrical and Electronics Engineers, Inc. (IEEE):

1. IEEE 141 – Recommended Practice for Electric Power Distribution and Coordination of Industrial and Commercial Power Systems.

2. IEEE 242 – Recommended Practice for Protection and Coordination of Industrial and Commercial Power Systems.

3. IEEE 399 – Recommended Practice for Industrial and Commercial Power System Analysis.

4. IEEE 241 – Recommended Practice for Electric Power Systems in Commercial Buildings.

5. IEEE 1015 – Recommended Practice for Applying Low-Voltage Circuit Breakers Used in Industrial and Commercial Power Systems.

6. IEEE 1584 Guide for Performing Arc-Flash Hazard Calculations.

B. American national Standards Institute (ANSI):

1. ANSI C57.12.00 – Standard General Requirements for Liquid-Immersed Distribution, Power, and Regulating Transformers.

2. ANSI C37.13 – Standard for Low Voltage AC Power Circuit Breakers Used in Enclosures.

3. ANSI C37.010 – Standard Application Guide for AC High Voltage Circuit Breakers Rated on a Symmetrical Current Basis.

4. ANSI C 37.41 – Standard Design Tests for High Voltage Fuses, Distribution Enclosed Single-Pole Air Switches, Fuse Disconnecting Switches and Accessories.

C. The National Fire Protection Association (NFPA):

1. NFPA 70 National Electrical Code, latest edition.
2. NFPA 70E – Standard for Electrical Safety in the Workplace

1.4 SUBMITTALS FOR REVIEW/APPROVAL:

A. The studies shall be submitted prior to receiving final approval of the distribution equipment shop drawings and/or prior to release of equipment drawings for manufacturing. If formal completion of the study may cause delays in equipment shipments, approval from the Engineer may be obtained for a preliminary submittal of data to ensure that the selection of device ratings and characteristics will be satisfactory to properly select the distribution equipment. The formal study shall be provided to verify preliminary findings.

B. Provide a final report that bears the stamp of the Registered Professional Electrical Engineer who is responsible charge of the study.

1.5 SUBMITTAL FOR CONSTRUCTION:

A. The results of the protective device coordination and arc-flash hazard analysis study shall be summarized in a final report. A minimum of five (5) bound copies of the complete final report shall be submitted. For large system studies, submittals requiring more than five (5) copies of the report shall be provided without the section containing the computer printout of the short-circuit input and output data. An electronic PDF copy of the final report shall also be provided.

B. The report shall include the following sections:

1. Executive Summary including Introduction, Scope of Work and Results/Recommendations.

2. Short-Circuit Methodology Analysis Results and Recommendations.

3. Short-Circuit Device Evaluation Table.

4. Protective Device Coordination Methodology Analysis Results and Recommendations.

5. Protective Device Settings Table.

6. Time-Current Coordination Graphs and Recommendations.

7. Arc-Flash Hazard Methodology Analysis Results and Recommendations including the details of the incident energy and flash protection boundary calculations, along with Arc-Flash boundary distances, working distances, Incident Energy levels and Personal Protection Equipment levels.

8. Arc-Flash Labeling section showing types of labels to be provided. Section shall contain descriptive information as well as typical label images.

9. One-line system diagram that shall be computer generated and shall clearly identify individual equipment buses, bus numbers used in the short-circuit analysis, cable and bus connections between the equipment, calculated maximum short-circuit current at each bus location, device numbers used in the time-current coordination analysis, and other information pertinent to the computer analysis.

1.6 QUALIFICATIONS:

A. The short-circuit, protective device coordination and arc-flash hazard analysis studies shall be conducted under the responsible charge and approval of a Registered Professional Electrical Engineer skilled in performing and interpreting the power system studies.

B. The Registered Professional Electrical Engineer shall be an employee of the equipment manufacturer or an approved engineering firm.

C. The Registered Professional Electrical Engineer shall have a minimum of five (5) years of experience in performing power system studies.

D. The engineering firm shall have a minimum of five (5) years' experience in performing power system studies.

1.7 COMPUTER ANALYSIS SOFTWARE:

The studies shall be performed using ETAP, with Arc-Flash Module, as produced by Operation Technology, Inc., SKM Systems Analysis Power Tools software programs, or approved equal.

PART 2 PRODUCTS

2.1 STUDIES:

A. The contractor shall furnish an Arc-Flash Hazard Analysis Study per NFPA 70E - Standard for Electrical Safety in the Workplace, reference Article 130.3 and Annex D. This study shall also include short-circuit and protective device coordination studies.

2.2 DATA:

A. Contractor shall furnish all data as required for the power system studies. The Engineer performing the short-circuit, protective device coordination and arc-flash hazard analysis studies shall furnish the Contractor with a listing of required data immediately after award of the contract. The Contractor shall expedite collection of the data to assure completion of the studies as required for final approval of the distribution equipment shop drawings and/or prior to the release of the equipment for manufacturing.

B. Source contribution may include present and future motors and generators.

C. Load data utilized may include existing and proposed loads obtained from Contract Documents provided by Owner, or Contractor.

D. If applicable, include fault contribution of existing motors in the study. The Contractor shall obtain required existing equipment data, if necessary, to satisfy the study requirements.

2.3 SHORT-CIRCUIT ANALYSIS:

A. Transformer design impedances shall be used when test impedances are not available.

B. Provide the following:

1. Calculation methods and assumptions.

2. Selected base per unit quantities.

3. One-line diagram of the system being evaluated that clearly identifies individual equipment buses, bus numbers used in the short-circuit analysis, cable and bus connections between the equipment, calculated maximum short-circuit current at each bus location and other information pertinent to the computer analysis.

4. The study shall include input circuit data including electric utility system characteristics, source impedance data, conductor lengths, number of conductors per phase, conductor impedance values, insulation types, transformer impedances and X/R ratios, motor contributions, and other circuit information as related to the short-circuit calculations.

5. Tabulations of calculated quantities including short-circuit currents, X/R ratios, equipment short-circuit interrupting or withstand current ratings and notes regarding adequacy or inadequacy of the equipment rating.

6. Results, conclusions, and recommendations. A comprehensive discussion section evaluating the adequacy or inadequacy of the equipment must be provided and include recommendations as appropriate for improvements to the system.

C. For solidly-grounded systems, provide a bolted line-to-ground fault current study for applicable buses as determined by the engineer performing the study.

D. Protective Device Evaluation:

1. Evaluate equipment and protective devices and compare to short circuit ratings.

2. Adequacy of switchgear, motor control centers, and panelboard bus bars to withstand short-circuit stresses.

3. The Contractor shall notify Owner in writing, of any circuit protective devices improperly rated for the calculated available fault current.

2.4 PROTECTIVE DEVICE TIME-CURRENT COORDINATION ANALYSIS:

A. Protective device coordination time-current curves (TCC) shall be displayed on log-log scale graphs.

B. Include on each TCC graph, a complete title with descriptive device names.

C. Terminate device characteristic curves at a point reflecting maximum symmetrical or asymmetrical fault current to which the device is exposed.

D. Identify the device associated with each curve by manufacturer type, function, and, if applicable, tap, time delay, and instantaneous settings recommended.

E. Plot the following characteristics on the TCC graphs, where applicable:

1. Electric utility's overcurrent protective device.

2. Medium voltage equipment overcurrent relays.

3. Medium and low voltage fuses including manufacturer's minimum melt, total clearing, tolerance, and damage bands.

4. Low voltage equipment circuit breaker trip devices, including manufacturer's tolerance bands.

5. Transformer full-load current, magnetizing inrush current, and ANSI through-fault protection curves.

6. Medium voltage conductor damage curves.

7. Ground fault protective devices, as applicable.

8. Pertinent motor starting characteristics and motor damage points, where applicable. Pertinent generator short-circuit decrement curve and generator damage point.

9. The largest feeder circuit breaker in each motor control center and applicable panelboard.

F. Provide adequate time margins between device characteristics such that selective operation is provided, while providing proper protection.

G. Provide the following:

1. A One-line diagram shall be provided which clearly identifies individual equipment buses, bus numbers, device identification numbers and the maximum available short-circuit current at each bus when known.

2. A sufficient number of log-log plots shall be provided to indicate the degree of system protection and coordination by displaying the time-current characteristics of series connected overcurrent devices and other pertinent system parameters.

3. Computer printouts shall accompany the log-log plots and shall contain descriptions for each of the devices shown, settings of the adjustable devices, and device identification numbers to aid in locating the devices on the log-log plots and the system one-line diagram.

4. The study shall include a separate, tabular printout containing the recommended settings of all located, and the device number corresponding to the device on the system one-line diagram.

a. A discussion section which evaluates the degree of system protection and service continuity with overcurrent devices, along with recommendations as required for addressing system protection or device coordination deficiencies.

b. The Contractor shall notify Owner in writing of any significant deficiencies in protection and/or coordination. Provide recommendations for improvements.

2.5 ARC-FLASH HAZARD ANALYSIS:

A. The arc-flash hazard analysis shall be performed according to the IEEE 1584 equations that are presented in NFPA70E-009, Annex D. The arc-flash hazard analysis shall be performed in conjunction with the short-circuit analysis and the protective device time-current coordination analysis.

B. The flash protection boundary and the incident energy shall be calculated at significant locations in the electrical distribution system (switchboards, switchgear, motor-control centers, panelboards, busway and splitters) where work could be performed on energized parts.

C. Circuits 240 volts or less fed by single transformer rated less than 125 kVA may be omitted from the computer model and will be assumed to have a hazard risk category “0” per NFPA 70E.

D. Working distances shall be based on IEEE 1584. The calculated arc-flash protection boundary shall be determined using those working distances.

E. When appropriate, the short circuit calculations and the clearing times of the phase overcurrent devices shall be retrieved from the short-circuit and coordination study model. Ground overcurrent relays should not be taken into consideration when determining the clearing time when performing incident energy calculations.

F. The short-circuit calculations and the corresponding incident energy calculations for multiple system scenarios shall be compared and the greatest incident energy shall be uniquely reported for each equipment location in a single table. Calculations shall be performed to represent the maximum and minimum contributions of fault current magnitude for normal and emergency operating conditions. The minimum calculation will assume that the utility contribution is at a minimum. Conversely, the maximum calculation will assume a maximum contribution from the utility. Calculations shall take into consideration the parallel operation of synchronous generators with the electric utility, where applicable as well as any standby generator applications.

1. The Arc-Flash Hazard Analysis shall be performed utilizing mutually agreed upon facility operational conditions, and the final report shall describe, when applicable, how these conditions differ from worst case bolted fault conditions.

G. The incident energy calculations shall consider the accumulation of energy over time when performing arc-flash calculations on buses with multiple sources. Iterative calculations must take into account the changing current contributions, as the sources are interrupted or decremented with time. Fault contribution from motors should be decremented as follows:

1. Fault contribution from induction motors should not be considered beyond 5 cycles.

H. For each piece of ANSI rated equipment with an enclosed main device, two calculations shall be made. A calculation shall be made for the main cubicle, sides, or rear; and shall be based on a device located upstream of the equipment to clear the arcing fault. A second calculation shall be made for the front cubicles and shall be based on the equipment's main device to clear the arcing fault. For all other non-ANSI rated equipment, only one calculation shall be required and it shall be based on a device located upstream of the equipment to clear the arcing fault.

I. When performing incident energy calculations on the line side of a main breaker (as required per above), the line side and load side contributions shall be included in the fault calculation.

J. Mis-coordination should be checked amongst all devices within the branch containing the immediate protective device upstream of the calculation location and the calculation should utilize the fastest device to compute the incident energy for the corresponding location.

K. Arc-Flash calculations shall be based on actual overcurrent protective device clearing time. A maximum clearing time of 2 seconds shall be used based on IEEE 1584 section B.1.2. Where it is not physically possible to move outside of

the flash protection boundary in less than 2 seconds during an arc-flash event, a maximum clearing time based on the specific location shall be utilized.

L. Provide the following:

1. Results of the Arc-Flash Hazard Analysis shall be submitted in tabular form, and shall include device or bus name, bolted fault and arcing fault current levels, flash protection boundary distances, working distances, personal protective equipment classes and AFIE (Arc-Flash Incident Energy) levels.

2. The Arc-Flash Hazard Analysis shall report incident energy values based on recommended device settings for equipment within the scope of the study.

3. The Arc-Flash Hazard Analysis may include recommendations to reduce AFIE levels and enhance worker safety.

PART 3 EXECUTION

3.1 FIELD ADJUSTMENT:

A. Contractor or equipment manufacturer shall adjust relay and protective device settings according to the recommended settings table provided by the coordination study.

B. Contractor or equipment manufacturer shall make minor modifications to equipment as required to accomplish conformance with short circuit and protective device coordination studies.

C. Contractor shall notify Owner in writing of any required major equipment modifications.

3.2 ARC-FLASH LABELS:

A. Contractor shall provide a 4.0 in. x 4.0 in. Brady thermal transfer type label of high adhesion polyester for each work location analyzed.

B. The labels shall be designed according to the following standards:

1. UL969 – Standard for Marking and Labeling Systems.
2. ANSI Z535.4 – Product Safety Signs and Labels.
3. NFPA 70 (National Electric Code) – Article 110.16.

C. The label shall include the following information:

1. System Voltage.
2. Flash protection boundary.
3. Personal Protective Equipment category.
4. Arc-Flash Incident energy value (cal/cm^2).
5. Limited, restricted, and prohibited Approach Boundaries.
6. Study report number and issue date.

D. Labels shall be printed by a thermal transfer type printer, with no field markings.

E. Arc-flash labels shall be provided for equipment as identified in the study and the respective equipment access areas per the following:

1. Floor Standing Equipment - Labels shall be provided on the front of each individual section. Equipment requiring rear and/or side access shall have labels provided on each individual section access area. Equipment lineups containing sections with multiple incident energy and flash protection boundaries shall be labeled as identified in the Arc-Flash Analysis table.

2. Wall Mounted Equipment – Labels shall be provided on the front cover or a nearby adjacent surface, depending upon equipment configuration.

3. General Use Safety labels shall be installed on equipment in coordination with the Arc-Flash labels. The General Use Safety labels shall warn of general electrical hazards associated with shock, arc-flash, and explosions, and instruct workers to turn off power prior to work.

F. Labels shall be field installed by Contractor or equipment manufacturer. The technician providing the installation shall have completed an 8-Hour instructor led Electrical Safety Training Course with includes NFPA 70E material including the selection of personal protective equipment.

3.3 ARC-FLASH TRAINING:

A. The vendor supplying the Arc-Flash Hazard Analysis shall train the owner's qualified electrical personnel of the potential arc-flash hazards associated with working on energized equipment (minimum of 4 hours). The training shall be certified for continuing education units (CEUs) by the International Association for Continuing Education Training (IACET) or equivalent. The trainer shall be an authorized OSHA Outreach instructor.

B. The vendor supplying the Arc-Flash Hazard Analysis shall offer instructor led and online NFPA 70E training classes.

END OF SECTION

SECTION 16406

SHORT CIRCUIT AND COORDINATION STUDY

PART 1 GENERAL

1.1 SCOPE:

A. The contractor shall furnish short-circuit and protective device coordination studies as prepared by a Registered Professional Electrical Engineer.

1.2 RELATED SECTIONS:

A. Drawings and general provisions of the Contract.

1.3 REFERENCES:

A. Institute of Electrical and Electronics Engineers, Inc. (IEEE):

1. IEEE 141 – Recommended Practice for Electric Power Distribution and Coordination of Industrial and Commercial Power Systems.

2. IEEE 242 – Recommended Practice for Protection and Coordination of Industrial and Commercial Power Systems.

3. IEEE 399 – Recommended Practice for Industrial and Commercial Power System Analysis.

4. IEEE 241 – Recommended Practice for Electric Power Systems in Commercial Buildings.

5. IEEE 1015 – Recommended Practice for Applying Low-Voltage Circuit Breakers Used in Industrial and Commercial Power Systems.

B. American national Standards Institute (ANSI):

4. ANSI C 37.41 – Standard Design Tests for High Voltage Fuses, Distribution Enclosed Single-Pole Air Switches, Fuse Disconnecting Switches and Accessories.

C. The National Fire Protection Association (NFPA):

1. NFPA 70 -National Electrical Code, latest edition.

1.4 SUBMITTALS FOR REVIEW/APPROVAL:

The study shall be submitted prior to receiving final approval of the Automatic Transfer Switch shop drawings and/or prior to release of equipment drawings for manufacturing. If formal completion of the study may cause delays in equipment shipments, approval from the Engineer may be obtained for a preliminary submittal of data to ensure that the selection of device ratings and characteristics will be satisfactory to properly select the distribution equipment. The formal study shall be provided to verify preliminary findings.

1.5 SUBMITTAL FOR CONSTRUCTION:

A. The results of the protective device coordination study shall be summarized in a final report. The final report shall bear the stamp of the Registered Professional Electrical Engineer who is responsible charge of the study.

B. An electronic PDF copy of the final report shall also be provided.

C. The report shall include the following sections:

1. Executive Summary including Introduction, Scope of Work and Results/Recommendations.

2. Short-Circuit Methodology Analysis Results and Recommendations.

3. Short-Circuit Device Evaluation Table.

4. Protective Device Coordination Methodology Analysis Results and Recommendations.

5. Protective Device Settings Table.

6. Time-Current Coordination Graphs and Recommendations.

7. One-line system diagram that shall be computer generated and shall clearly identify individual equipment buses, bus numbers used in the short-circuit analysis, cable and bus connections between the equipment, calculated maximum short-circuit current at each bus location, device numbers used in the time-current coordination analysis, and other information pertinent to the computer analysis.

1.6 QUALIFICATIONS:

A. The short-circuit protective device coordination study shall be conducted under the responsible charge and approval of a Registered Professional Electrical Engineer skilled in performing and interpreting the power system studies.

B. The Registered Professional Electrical Engineer shall be an employee of the equipment manufacturer or an approved engineering firm.

C. The Registered Professional Electrical Engineer shall have a minimum of five (5) years of experience in performing power system studies.

D. The engineering firm shall have a minimum of five (5) years' experience in performing power system studies.

1.7 COMPUTER ANALYSIS SOFTWARE:

The studies shall be performed using ETAP, as produced by Operation Technology, Inc., SKM Systems Analysis Power Tools software programs, or approved equal.

PART 2 PRODUCTS

2.1 STUDIES:

The contractor shall furnish a short-circuit and protective device coordination study.

2.2 DATA:

A. Contractor shall obtain all data as required for the power system studies. The Engineer performing the short-circuit protective device study shall furnish the Contractor with a listing of required data immediately after award of the contract. The Contractor shall expedite collection of the data to assure completion of the studies as required for final approval of the distribution equipment shop drawings and/or prior to the release of the equipment for manufacturing.

B. Source combination may include present and future motors.

C. Load data utilized may include existing and proposed loads obtained from Contract Documents provided by Owner, or Contractor.

D. If applicable, include fault contribution of existing motors in the study. The Contractor shall obtain required existing equipment data, if necessary, to satisfy the study requirements.

2.3 SHORT-CIRCUIT ANALYSIS:

A. The existing transformer impedance shall be used.

B. Provide the following:

1. Calculation methods and assumptions.

2. Selected base per unit quantities.

3. One-line diagram of the system being evaluated that clearly identifies individual equipment buses, bus numbers used in the short-circuit analysis, cable and bus connections between the equipment, calculated maximum short-circuit current at each bus location and other information pertinent to the computer analysis.

4. The study shall include input circuit data including electric utility system characteristics, source impedance data, conductor lengths, number of conductors per phase, conductor impedance values, insulation types,

transformer impedances and X/R ratios, motor contributions, and other circuit information as related to the short-circuit calculations.

5. Tabulations of calculated quantities including short-circuit currents, X/R ratios, equipment short-circuit interrupting or withstand current ratings and notes regarding adequacy or inadequacy of the equipment rating.

6. Results, conclusions, and recommendations. A comprehensive discussion section evaluating the adequacy or inadequacy of the equipment shall be provided and include recommendations as appropriate for improvements to the system.

C. For solidly-grounded systems, provide a bolted line-to-ground fault current study for applicable buses as determined by the engineer performing the study.

D. Protective Device Evaluation:

1. Evaluate equipment and protective devices and compare to short circuit ratings.

2. Adequacy of switchgear, motor control centers, and panelboard bus bars to withstand short-circuit stresses.

3. The Contractor shall notify Owner in writing, of any circuit protective devices improperly rated for the calculated available fault current.

2.4 PROTECTIVE DEVICE TIME-CURRENT COORDINATION ANALYSIS:

A. Protective device coordination time-current curves (TCC) shall be displayed on log-log scale graphs.

B. Include on each TCC graph, a complete title with descriptive device names.

C. Terminate device characteristic curves at a point reflecting maximum symmetrical or asymmetrical fault current to which the device is exposed.

D. Identify the device associated with each curve by manufacturer type, function, and, if applicable, tap, time delay, and instantaneous settings recommended.

E. Plot the following characteristics on the TCC graphs, where applicable:

1. Electric utility's overcurrent protective device.

2. Medium voltage equipment overcurrent relays.

3. Medium and low voltage fuses including manufacturer's minimum melt, total clearing, tolerance, and damage bands.

4. Low voltage equipment circuit breaker trip devices, including manufacturer's tolerance bands.

5. Transformer full-load current, magnetizing inrush current, and ANSI through-fault protection curves.

6. Ground fault protective devices, as applicable.

7. Pertinent motor starting characteristics and motor damage points, where applicable. Pertinent generator short-circuit decrement curve and generator damage point.

8. The largest feeder circuit breaker in each motor control center and applicable panelboard.

F. Provide adequate time margins between device characteristics such that selective operation is provided, while providing proper protection.

G. Provide the following:

1. A one-line diagram shall be provided which clearly identifies individual equipment buses, bus numbers, device identification numbers and the maximum available short-circuit current at each bus when known.

2. A sufficient number of log-log plots shall be provided to indicate the degree of system protection and coordination by displaying the time-current characteristics of series connected overcurrent devices and other pertinent system parameters.

3. Computer printouts shall accompany the log-log plots and shall contain descriptions for each of the devices shown, settings of the adjustable devices, and device identification numbers to aid in locating the devices on the log-log plots and the system one-line diagram.

4. The study shall include a separate, tabular printout containing the recommended settings of all located, and the device number corresponding to the device on the system one-line diagram.

a. A discussion section which evaluates the degree of system protection and service continuity with overcurrent devices, along with recommendations as required for addressing system protection or device coordination deficiencies.

b. The Contractor shall notify Owner in writing of any significant deficiencies in protection and/or coordination. Provide recommendations for improvements.

PART 3 EXECUTION

3.1 FIELD ADJUSTMENT:

A. Contractor or equipment manufacturer shall adjust relay and protective device settings according to the recommended settings table provided by the coordination study.

B. Contractor or equipment manufacturer shall make minor modifications to equipment as required to accomplish conformance with short circuit and protective device coordination studies.

C. Contractor shall notify Owner in writing of any required major equipment modifications.

END OF SECTION

SECTION 16450

GROUNDING

PART 1 GENERAL

1.1 SECTION INCLUDES:

A. Grounding systems as specified and in accordance with the National Electrical Code.

1.2 SUBMITTALS:

A. Submit manufacturer's data on all products, under provisions of Section 01300.

1.3 QUALITY ASSURANCE:

A. Comply with applicable sections of Article 250 of the NEC and local amendments.

B. Provide products specified in the Section that are listed and labeled by a nationally recognized testing laboratory.

C. Install products that comply with UL 467, "Grounding and Bonding Equipment."

PART 2 PRODUCTS

2.1 GROUNDING AND BONDING PRODUCTS:

A. Install types indicated and of sizes and ratings to comply with NEC. Where types, sizes, ratings, and quantities indicated are in excess of NEC requirements, the more stringent requirements and the greater size, rating, and quantity indications shall govern.

B. Material: Copper. Aluminum material is not acceptable for use in any location.

2.2 WIRE AND CABLE CONDUCTORS:

A. Equipment Grounding Conductor: Green insulated. Minimum size No. 12 AWG, unless otherwise indicated on the drawings.

B. Ground Grid or Grounding Electrode Conductor: Class B, concentric stranded.

1. Bare Copper conductors: Conform to the following:

a. Solid Conductors: ASTM B-3.
b. Stranded Conductors: ASTM B-8.
c. Tinned Conductors: ASTM B-33.

2.3 MISCELLANEOUS CONDUCTORS:

A. Ground Bus: Bare annealed copper bars of rectangular cross section.

B. Braided Bonding Jumpers: Copper tape, braided No. 30 gage bare copper wire, terminated with copper ferrules.

C. Bonding Strap Conductor/Connectors: Soft copper, 0.05 inch thick and 2 inches wide, except as indicated.

2.4 CONNECTOR PRODUCTS:

A. Listed and labeled as grounding connectors for the materials used.

B. Connector Material: Copper or bronze.

C. Pressure Connectors: High conductivity plated units.

D. Bolted Clamps: Heavy duty units listed for the application.

E. Exothermic Welded Connections: Provided in kit form and selected for the specific types, sized, and combinations of conductors and other items to be connected.

2.5 GROUNDING ELECTRODES:

A. Copper clad steel 5/8"X8' or ¾"X10' with high-strength steel core and electrolytic-grade copper outer sheath, molten welded to core.

B. Wherever the ground rod crosses the ground grid it shall be connected.

2.6 GROUNDING BUS BARS:

A. Grounding bus bars shall be a tin-plated copper bus bar, 12" long, 4" wide, ¼" thick. Erico TMGBA12L15PT, or equal.

B. Install bus bars as indicated on the drawings. The bus bar shall be grounded to the building ground grid. All equipment shall be grounded to the bus bar with copper ground conductor.

PART 3 EXECUTION

3.1 SERVICE AND EQUIPMENT GROUNDING:

A. Provide adequate and permanent service neutral and equipment grounding in accordance with the National Electrical Code, and subject to the following additional requirements.

B. Connect the service ground and equipment ground to a common point within the metallic enclosure containing the main service disconnecting means. From the common point of connection of the service ground and equipment ground, run in conduit a combined service and equipment grounding conductor without joints or splices to the grounding grid as shown. Grounding grid shall be constructed of copperclad steel ground rods with buried grounding conductors as indicated on the drawings.

C. Size grounding conductors in accordance with National Electrical Code Tables 250.66 and 250.122 or as indicated.

D. The building structural steel frame shall be grounded to the building service grounding electrode, using the conductor size specified in National Electrical Code Section 250.66.

E. Provide additional connections as may be required by the local authority. Contractor shall contact the local authority prior to bidding. Any additional connections that may be required by the local authority shall be provided by the Contractor at no increase in the bid price.

3.2 GROUNDING RACEWAYS:

A. Assure the electrical continuity of all metallic raceways systems, pulling up all conduits and/or locknuts wrench tight. Where expansion joints or telescoping joints occur, provide bonding jumpers. Where flexible metallic conduit is employed, provide a green-insulated grounding jumper installed in the flexible conduit. Install a separate green-insulated conductor in each conduit.

B. Provide grounding bushings on all service and feeder raceways terminating within switchboards, motor control centers, panel boards, cabinets, and all other enclosures. Provide grounding conductors from such bushings to the frame of the enclosure and to the ground bus or equipment grounding strap. Size grounding conductors in accordance with NEC Table 250.122.

3.3 EQUIPMENT GROUNDING CONDUCTORS:

A. Provide a separate, green-insulated equipment copper grounding conductor, with insulation of the same rating as phase conductors, for each feeder and for each branch circuit indicated. Install the grounding conductor in the same raceway with the related phase and neutral conductors, and connect the grounding conductor to pull boxes or outlet boxes at intervals of 100 feet or less. Where paralleled conductors in separate raceways occur, provide a grounding conductor in each raceway. Connect all grounding conductors to bare grounding bars in panel boards, and to ground buses in service equipment to the end that there will be an uninterrupted grounding circuit from the point of a ground fault back to the point of connection of the equipment ground and system neutral. Size all of these grounding conductors per NEC Table 250.122.

3.4 UNDERGROUND CONNECTIONS:

A. All underground connections shall be made using exothermic weld connections.

3.5 GROUNDING DRY-TYPE TRANSFORMERS:

A. Ground the secondary neutral point and the housing of each dry-type transformer. Connect these items together within the transformer housing and run a common grounding conductor from their point of connection to a point of grounding. The grounding electrode shall be in order of preference:

1. The nearest available effectively grounded structural metal member of the building or ground grid.

2. Other electrodes as specified in National Electrical Code Section 250.30 where the above described electrodes are not available.

END OF SECTION

SECTION 16460

DRY-TYPE TRANSFORMERS

PART 1 GENERAL

1.1 SECTION INCLUDES:

A. Dry-type, air-cooled, energy efficient transformers per NEMA TP1, with primary and secondary voltages 600 volts and less and capacity ratings 15 kVA through 750 kVA.

B. All transformers provided under this project shall meet the efficiency requirements of 10 CFR Part 431 "Energy Conservation Program: Energy Conservation Standards for Distribution Transformers; Final Rule," dated April 18, 2013, for transformers manufactured after January 1, 2016.

1.2 REFERENCES:

A. NFPA 70.

B. NEMA ST20.

C. UL 1561.

D. NEMA TP1.

E. NEMA TP2.

F. 10 CFR Part 431.

1.3 STANDARDS:

A. Transformer shall be listed by Underwriters Laboratories.

B. Conform to the requirements of NFPA 70.

C. Transformers shall be manufactured and tested in accordance with NEMA ST20.

D. Transformer losses shall be tested in accordance with NEMA TP2 procedures.

1.4 SUBMITTALS:

A. Provide complete catalog data and drawings on all items of equipment, under provisions of Section 01300.

B. Transformer manufacturer shall provide with submittal a statement that transformers have been designed, manufactured and tested in strict accordance with the NEMA and ANSI standards stated herein.

1.5 MANUALS:

Include all submittal data in the Operation and Maintenance Manuals.

PART 2 PRODUCTS

2.1 MANUFACTURERS:

A. Square D.

B. General Electric.

C. Eaton.

D. Engineer approved equivalent.

2.2 RATINGS INFORMATION:

A. All insulating materials shall exceed NEMA ST20 standards and shall be rated for 220°C UL component recognized insulation system.

B. Transformers 15 kVA and larger shall be provided with 150°C temperature rise above 40°C ambient. Transformers 25 kVA and larger shall be provided with 4-2-1/2% full capacity taps, 2 above and 2 below rated primary voltage.

C. The maximum temperature on the top of the enclosure shall not exceed 50°C temperature rise above 40°C ambient.

2.3 CONSTRUCTION:

A. Transformer coils shall be of the continuous wound construction and shall be impregnated with nonhygroscopic, thermosetting varnish.

B. All cores shall be constructed with low hysterysis and eddy current losses. Magnetic flux densities shall be kept well below the saturation point to prevent core overheating. Cores for transformers greater than 500 kVA shall be clamped utilizing insulated bolts through the core laminations to ensure proper pressure throughout the length of the core. The completed core and coil shall be bolted to the base of the enclosure by means rubber vibration-absorbing mounts. There shall be no metal-to-metal contact between the core and coil and the enclosure except for a flexible safety ground strap. Sound insulation systems requiring the complete removal of all fastening devices shall not be acceptable.

C. The core of the transformer shall be visibly grounded to the enclosure by means of a flexible grounding conductor sized in accordance with applicable UL and NEC standards.

D. The transformer enclosure shall be as indicated on the drawing or specified herein. If no indications are made on the drawings for enclosure type or style, transformer enclosure shall be ventilated and fabricated of heavy gauge, sheet steel construction. The entire enclosure shall be finished utilizing a continuous

process consisting of degreasing, cleaning, and phosphatizing, followed by electrostatic deposition of polymer polyester power coating and baking cycle to provide uniform coating of all edges and surfaces. The coating shall be UL recognized for outdoor use. The coating color shall be ANSI 49.

E. Suitable lifting brackets shall be provided.

F. All ventilating openings shall be arranged to prevent accidental access to live parts or the insertion or dropping of foreign objects into such live parts.

2.4 DRY-TYPE TRANSFORMERS:

A. Dry-type transformers shall be of the air cooled-type of ratings shown on drawings.

B. Transformers shall be low loss with minimum efficiencies in accordance with NEMA TP1 when operated at 35% of full load capacity. Efficiency shall be tested in accordance with NEMA TP2.

SINGLE-PHASE		THREE-PHASE	
kVA	EFFICIENCY	kVA	EFFICIENCY
15	97.7%	15	97.0%
25	98.0%	30	97.5%
37.5	98.2%	45	97.7%
50	98.3%	75	98.0%
75	98.5%	112.5	98.2%
100	98.6%	150	98.3%
167	98.7%	225	98.5%
250	98.8%	300	98.6%
333	98.9%	500	98.7%
		750	98.8%

C. Noise levels shall not exceed the following when measured in strict accordance with ANSI C89.1:

KVA	Decibels
15 to 50	40
51-150	47
151-300	55
301-500	60
501-700	62

D. Terminal compartments shall be located at the bottom of transformer housing.

E. Install all conductors to and from each transformer in flexible metallic conduit not less than 24 inches long. Provide neoprene grommets or neoprene padding to prevent metallic contact between conduit and transformer housing. Install copper wire grounding jumpers between conduit and housing.

F. Transformers: Three-phase or single-phase as required by rating.

G. Transformers shall be wall, floor, or platform mounted as shown or required. If platform mounting is indicated, construct the platform of welded or bolted angle iron. Support the platform from the building construction with steel rod hangers.

PART 3 EXECUTION

Not used.

END OF SECTION

SECTION 16470

PANEL BOARDS

PART 1 GENERAL

1.1 SECTION INCLUDES:

A. Electrical panel boards for general use.

1.2 SUBMITTALS:

A. Provide complete catalog data and drawings on all items of equipment, under provisions of Section 01300. Include all submittal data in the Operation and Maintenance Manuals.

B. Submit shop drawings of each panel board for review before commencing fabrication; drawings shall indicate number, size, interrupting rating and type of circuit protective devices; dimensions, gauges and type of construction of cabinets; size and material of main bus and lugs; and any other pertinent information necessary to determine compliance with the drawings and specifications.

1.3 QUALITY CONTROL:

A. All panel boards shall be listed by Underwriters' Laboratories, Inc., and the building main panel shall be listed as suitable for "Service Entrance Equipment."

PART 2 PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS:

A. Panel boards manufactured by Square D, General Electric, Siemens, or Eaton.

2.2 SURGE PROTECTIVE DEVICE:

Surge protective devices may be installed as part of the panelboard. Refer to Specification Section 16675.

2.3 PANEL BOARDS:

A. Panel board Cabinets: Furnish and install cabinets to serve the various panel boards, of sizes as required to house the panel boards. Provide NEMA rated enclosure as indicated on the drawings.

B. Service Equipment Approval: Listed for use as service equipment for panelboards having main service disconnects.

C. Cabinet Construction: Rigidly constructed of sheet steel of gauges conforming to Underwriters' Laboratories, Inc., requirements; corners overlapped or welded; edges turned over to receive trim.

D. Cabinet Fronts: Cut from single sheet of not less than No. 12 gauge cold rolled sheet steel; fastened in place by adjustable trim clamps which will allow plumbing; same size as the cabinet box if surface mounted; size to overlap the box a minimum of 3/4" on all sizes if flush mounted.

E. Each panel board shall be provided with a cover and a hinged door. Each door shall be provided with a substantial flush, cylinder tumbler lock and catch. On doors more than 48" high, provide a combination three point catch and lock with T-handle. Provide each lock with two keys, with all locks keyed alike.

F. Bus Requirements:

1. Bus Material: Copper.

2. Panelboards with buses rated 600 ampere and above shall be provided with silver-plated hard-drawn copper.

3. Main and Neutral Lugs: Mechanical.

4. Neutral: Ampacity and material equal to bus. Panelboards shall be provided with insulated neutral bars with grounding screw for field grounding to enclosure.

5. Equipment Ground Bus: Provide each panel board with a separate equipment grounding bus bar bonded to the panel board cabinet. Where indicated on the drawings, provide panel boards with an isolated grounding bus bar insulated from the panel board cabinet.

G. Additional requirements for subfeed breakers, lugs, or other accessories as indicated on the drawings.

H. Where a circuit protective device is scheduled as a "spare", provide the device complete for operation. Where such a device is scheduled as a "space" or "space only", provide proper space and all necessary connectors for future installation of the size of device scheduled. Where a breaker or switch is scheduled to serve a "future" load, provide the device complete for operation.

I. Panel boards shall have the number and sizes of bolted-in circuit breakers scheduled on the drawings with main circuit breakers or lugs only on the mains as scheduled.

J. All circuit breakers shall be fully rated for the current interrupting rating as indicated on the drawings, or at a minimum, as follow:

VOLTAGE RATING	INTERRUPTING RATING
120/240 Volts	10,000 Amps
277 Volts	42,000 Amps
480 Volts	42,000 Amps

K. All circuit breakers shall be quick make, quick break, trip free, thermal magnetic, indicating type unless noted otherwise. Provide all multiple pole breakers with common trip and single operating handle; handle ties between breakers are unacceptable. Branch circuit breakers shall be fully interchangeable without disturbing adjacent units.

L. Connect all circuit interrupting devices with sequence phasing.

M. Where a feeder serves more than one panel, first entering one panel and then proceeding through a side gutter to other panels, install the feeder full size in a continuous piece without joint or splice through the side gutter of the panels to serve the succeeding panels. Make the gutters on that side and on the top at least 4" greater than normal (more if necessary) to accommodate the wiring and make the tap from the feeder to the panels with suitable bolted pressure T-cable top connectors. Under no circumstances use feed-through lugs on a panel bus with the current drawn by a panel being carried through the buses of the preceding panel.

N. Finish: Panels shall be provided with galvanized back boxes; all exposed metal, including fronts, primed and finished in gray lacquer.

O. Mount all panel boards in cabinets as specified hereinbefore, arranged for flush or surface mounting as indicated on drawings.

P. Provide each panel board with a neatly typewritten directory of circuits. Install the directory in a cardholder on the inside of the panel board cabinet. Cover directory with transparent sheet plastic.

Q. Provide each panel board with a factory engraved nameplate which shall identify the panel board name and voltage.

PART 3 EXECUTION

3.1 Install panel boards in accordance with manufacturer's instructions and as specified or shown.

3.2 Test all elements of panel board with 1000-volt insulation resistance tester before energizing. Insulation resistance less than 50 megaohms is unacceptable.

END OF SECTION

SECTION 16481

MOTOR CONTROL CENTERS

PART 1 GENERAL

1.1 SECTION INCLUDES:

A. SCOPE:

1. This section specifies 600-volt motor control centers (MCC) including all devices.

2. The drawings and specifications are complementary. What is shown on one is binding whether shown or specified in the other or not. Failure to check both the drawings and the specifications will not be grounds for a change order if additional equipment or material is required to be provided by the Contractor after the Engineer reviews, or deficiencies are identified during testing, either in the Factory or the field.

1.2 GENERAL:

A. Provide Motor Control Centers in accordance with the one-line diagrams and schematics included with the Contract Documents.

B. In all cases where it is physically possible, all indicating lights, control switches, pushbuttons, and other devices (with the possible exception of the disconnecting means exterior handle) located on the exterior of a starter shall not exceed 5'-6" above the base of the motor control center. Submit drawings to verify this requirement is being met. No exceptions will be allowed. If equipment is supplied that does not meet this requirement, equipment shall be field modified as required to meet this requirement, up to and including complete replacement of the equipment.

1.3 REFERENCES:

A. NFPA 70 - 2014 National Electrical Code

B. ANSI C57.13, Requirements for Instrument Transformers.

C. ANSI C84.1 - Electric Power Systems and Equipment - Voltage Ratings (60Hz.)

D. UL 50 - Cabinets and Boxes.

E. UL 508 - UL Standard for Safety for Industrial Control Equipment.

F. UL508C - UL Standard for Safety for Power Conversion Equipment.

G. UL 845– UL Standard for Safety for Motor Control Centers.

H. NEMA ABI - Molded Case Circuit Breakers and Molded Case Switches.

I. NEMA ICS 1 - Industrial Control and Systems General Requirements.

J. NEMA ICS 2.3 - Instruction for Handling, Operation and Maintenance of Motor Control Centers.

K. NEMA ICS 18 - Motor Control Centers.

L. NEMA 250 - Enclosures for Electrical Equipment (1000 Volts Maximum).

1.4 QUALITY ASSURANCE:

A. The drawings indicate maximum dimensions for MCCs, including clearance between MCC and adjacent surfaces and equipment, based on the types and models indicated. MCCs of other manufacturers having equal performance characteristics and complying with the indicated maximum dimensions may be considered.

B. Inspect the MCC upon receipt for damage, defects, and conformance to approved drawings. Shipping damage shall be reported to the shipper and the manufacturer prior to acceptance by the Contractor. Damage or discrepancies shall be the responsibility of the Contractor.

C. The MCC and all equipment shall be manufactured by one supplier in an ISO 9001 certified facility.

D. Quality Assurance documentation shall be submitted with shipment of the equipment to verify successful completion of the above tests.

1.5 UNDERWRITERS LABORATORIES, INC., APPROVAL:

A. The complete motor control center shall be listed and labeled by the Underwriters Laboratories, Inc., (UL).

1.6 SUBMITTALS:

A. Submit the following:

1. Dimensions and weight and overall anchoring points.

2. Installation instructions.

3. Manufacturer's data on all components.

4. Front elevation including dimensions for the MCC front view, top and bottom conduit entry locations.

5. Electrical one-line and three-line diagrams including all devices and their current ratings.

6. Unit schedule for each MCC which shall include starter or drive output horsepower or electrical load rating, disconnect ratings, and nameplate legends for each starter, circuit breaker, AC drive controller or any other

starter or bucket.

7. Ratings, including short-time and short circuit ratings, and horizontal and vertical bus ampacities.

8. Elementary, connection, and interconnection diagrams for all equipment furnished. Elementary wiring diagrams shall included all power and control components, and documentation of any non-default settings programmed at the factory.

9. Time-current curves for all protection devices.

10. Instrument transformer performance curves and data.

11. Motor protection relay settings.

12. Manufacturer's certification that the following items are capable of withstanding the specified short circuit condition:

    a. Bus bar bracing.
    b. Feeder tap units.
    c. Starts units.

B. Each MCC shall be identified as indicated on the drawings. Each schematic shall be identified for the specific piece of equipment being served.

1.7 DELIVERY STORAGE, AND HANDLING

A. Deliver MCC's in shipping splits in lengths that will facilitate installation and not require special equipment for handling.

B. Store so condensation will not occur on or in MCCs. Provide temporary heaters as required to prevent condensation of as otherwise recommended by the manufacturer.

C. Handle MCCs in accordance with NECA ICS 2.3, "Instructions for Handling, Installation, Operation, and maintenance of Motor Control Centers." Use factory installed lifting provisions.

1.8 CLASSIFICATION:

A. Provide factory assembled, NEMA Class I, Type B Motor Control Centers, as defined in NEMA ICS 2, consisting of sections as indicated. Each motor control center shall conform to the voltage, current rating, arrangement, one-line diagram, and schematics as may be indicated on the drawings or specified herein.

PART 2 PRODUCTS

2.1 MANUFACTURERS:

A. Motor control manufacturer shall be Square D, Allen Bradley, General Electric, or approved equal.

B. All motor control centers and other equipment specified under this section shall be manufactured and provided by the same manufacture. Multiple manufactures of motor control equipment will not be allowed.

2.2 STRUCTURE AND CONSTRUCTION:

A. STRUCTURE:

1. Motor control center sections shall be 20 inches deep, 20" minimum width, with a height of 90 inches, or as indicated on the drawings or required for the main breaker, or starter provided.

2. The individual unit compartments shall be a minimum of 12 inches high. Compartments with small breakers may be 6 inches high. There shall be 72 inches available for stacking starter units.

3. Provide a full-height vertical wireway, 20-square inch minimum for each vertical motor control center section. The wireway shall contain full height hinged/removable doors. Provide horizontal wireways top and bottom, extending the length of motor control centers.

4. Bottom channel sills shall be mounted front and rear of the vertical sections extending the full length of the motor control center lineup. A removable lifting angle shall be mounted on top and shall extend the width of the motor control center lineup.

5. Mount components on draw-out assembly, properly guided by tracks or guide rails. Each unit shall be capable of being locked in the plug-in position or in a withdrawn and disconnected position. Units over 3 space units high may be bolt-in type. Provide door interlocks to prevent opening door unless unit is turned off, and to prevent energizing a control unit with its door open. Provide suitable screwdriver-operated "defeater" mechanism to allow bypassing of interlock mechanism.

6. Each vertical section shall be designed and fabricated so additional sections may be added.

B. CONSTRUCTION:

1. Unless otherwise indicated, the enclosure for motor control centers located in interior locations shall be NEMA 1, gasketed.

2. Starter units, size 4 and smaller, and feeder tap units less than 225 amperes shall be draw-out plug-in construction with hardened, plated copper free-floating stabs, steel spring backups. The door shall have

interference tabs which prevent door closure if unit is improperly installed. Units shall be latched in position to assure proper bus contact. The unit disconnect device shall be interlocked to prevent removal or reinsertion of a unit when the disconnect is in the "ON" or "TRIPPED" positions. Unit compartments shall have pan-type doors with the quarter turn hold-down latches and neoprene gaskets.

3. Fusible switch or circuit breaker disconnect operators shall be capable of accommodating three padlocks for lock in the "OPEN" position.

4. Hardware for mounting future starter and feeder tap units shall be provided at compartments specified as "FUTURE."

5. Individual motor starter units, feeder beaker units, transformers, lighting panels, distribution panels, and control device compartments shall be isolated from each other by metal barriers.

6. Each vertical section shall have a vertical wiring trough for power and control wiring, and wiring troughs, one top and bottom which are continuous through the entire control center.

7. Main incoming lines shall be bottom entry. Motor starters and other devices shall be designed for top or bottom feed.

C. The short-circuit current rating for each vertical section shall be not be less than the MCC bus bracing.

2.3 FINISH AND COLOR:

Exterior color shall be manufacturer's standard Gray color. Interior shall be painted white.

2.4 BUSING:

Bus shall be tin-plated copper with bolted connections between vertical and horizontal bus bars. Buses shall be hard-drawn 98-percent conductivity copper, Grade EC Flat bars. Access for tightening these connections shall be from the front, without the need for tools on the rear of the connection. Insulated horizontal and vertical bus barriers shall be provided. Barriers shall be fabricated from high-strength, glass-filled polyester resin. Unless otherwise specified, the bus shall be braced to withstand a full current of 65,000 amperes, RMS, symmetrical.

A. HORIZONTAL BUS:

Unless otherwise specified or indicated on the drawings, the main horizontal bus shall be rated a minimum 600 amperes continuous.

B. VERTICAL BUS:

Unless otherwise specified or required for the specific application, the vertical bus shall be rated a minimum 300 amperes continuous.

C. NEUTRAL BUS:

800 amp.

D. GROUND BUS:

Provide minimum 1/4-inch by 2-inch ground bus the full length of the motor control center. Locate ground bus at the bottom of the motor control center. Provide a lug to terminate a bare 4/0 AWG copper ground conductors at each end of the ground bus.

E. Isolation of Buses: The main bus shall be isolated from the horizontal wiring trough by a removable steel barrier. Permanent insulation on or in front of vertical buses except at control unit connection points shall prevent front contact with the buses while control units are removed.

2.5 FUNCTIONAL FEATURES

A. Terminals: Suitable solderless terminal blocks or lugs shall be provided for connection of all incoming and outgoing circuits. Terminal blocks shall be provided for control cables shown by the one-line diagrams and schematics on the drawings. No field wiring shall be connected to internal devices.

B. Combination Starter: All combination starter units shall be wired in accordance with the schematics shown on the drawings.

1. The combination starter (consisting of contactor, overload relays, circuit breaker, control transformer, control relays, lights, etc.) shall act as a motor controller, disconnecting means and branch circuit overcurrent protection. The protection shall be provided for motors operating within the range of 90 to 110 percent of the MCC-rated voltage. Unless otherwise indicated, the motors shall be full voltage across the line started and shall be squirrel cage induction motors. Horsepower shall be as indicated on the drawings.

2. The Contractor shall be responsible for a completely coordinated breaker, starter, and overload relay assembly.

C. Relays and Timers: Auxiliary relays and timers, if shown on the drawings, shall have coils for continuous duty in 40°C ambient and 10 ampere, 120 volt, AC contacts.

D. Nameplates: Each compartment shall have a lamicoid nameplate, black with white letters to designate the purpose of the compartment. The nameplates shall be fastened to the door with #6 stainless steel pan-head screws.

2.6 WIRING:

A. GENERAL:

All wiring shall be rated 600 volts. All starter units shall have terminal blocks for control wiring. Provide elementary and connection diagrams for each starter

unit and an interconnection diagram for the entire motor control center.

B. POWER WIRE:

Power wire shall be copper 90°C "MTW" insulated, sized to suit load; minimum power wire size shall be No. 12 AWG, tin plated copper stranded.

C. CONTROL WIRE:

Control wire shall be minimum No. 16 AWG, tin plated stranded copper wire, rated 90°C, and UL-listed for panel wiring.

D. TERMINATIONS:

1. Control wiring shall be lugged with ring-tongue or locking spade controls.

2. Each wire termination shall be provided with a machine printed, plastic sleeve wire marker.

2.7 FEEDER:

A. GENERAL:

Use thermal-magnet circuit breakers for feeder taps. Circuit breakers shall be as specified for feeder branch circuit protection.

B. CIRCUIT BREAKERS (THERMAL MAGNETIC):

Thermal-magnetic circuit breakers shall be molded case equipped with toggle-type handle, quick-make, quick-break over center switching mechanism that is trip-free so that breaker cannot be held closed against short circuits and abnormal currents. The tripped position shall be clearly indicated by breaker handle maintaining a position between "ON" and "OFF." All poles shall open, close, and trip simultaneously. Minimum short circuit capacity shall not be less than the rating of the MCC.

2.8 TRANSIENT VOLTAGE SURGE SUPPRESSORS (TVSS):

A. Transient voltage surge suppressor shall be provided as indicated on the drawings. The TVSS shall be installed in the motor control center and shall provide minimum 240 kA of surge capacity per phase.

B. The TVSS shall be provided with a surge counter, dry contacts, and an audible alarm with silence switch.

2.9 MOTOR STARTERS, GENERAL:

A. Coordinate the features of each motor starter with the ratings and characteristics of the supply circuit, the motor, the required control sequence, the duty cycle of the motor, drive, and load, and the pilot device, and control circuit affecting controller functions. Provide each motor with suitable starter

contactor or device complete with magnetic control of standard NEMA sizes. Provide controllers that are horsepower rated to suit the motor controlled.

B. Contacts shall open each ungrounded connection to the motor.

C. Solid state type overload relays with inverse-time current characteristics shall be provided. Provide with sensors in each phase matched to the nameplate full-load current of the specific motor to which connected with appropriate adjustment for duty cycle. As indicated on the drawings, provide current transformers.

D. Main line contacts shall be silver-coated, double-break type, with arc barriers of heat resistant insulation compound between breaker contacts. Two auxiliary convertible contacts, unless otherwise specified or required, shall be provided. All parts shall be readily accessible from the front for ease of maintenance or repair.

E. Provide starters designed to prevent freezing of contacts upon coil failure. The starter shall be provided with capabilities to install auxiliary contacts without removing starter from its enclosure.

F. Arrange control circuits for manual, auto, and other signal inputs from control panels, and arrange control power to de-energize control circuits whenever operating power supply to particular equipment is disconnected.

G. Where indicated, provide elapsed time meters. Meters shall be a five-figure, non-resettable hour meter rated 120 volts AC. The meter shall be mounted on the unit compartment door.

H. Provide pushbutton stations, pilot lights and HAND-OFF-AUTOMATIC switches as indicated. Provide auxiliary contacts on starters to accomplish interlocks and control as specified or as indicated. Equip each starter unit with a control power transformer with two primary fuses, a 120 volt secondary, a secondary fuse in one leg and the other secondary leg grounded.

I. Starter shall be front wired with conductors no smaller than No. 12 AWG for power wiring and No. 14 AWG for control wiring. All terminals shall be legibly marked, and connections to terminals made with solderless connectors. A wiring diagram of starter, with all terminals identified, shall be provided and attached to the inside of starter door. Schematic shall be specific to the motor controlled. Standard manufacturer schematic will not be acceptable unless starter is designated as spare. Provide terminal block and wiring as required.

J. Phase Failure Protection:

1. Provide an individual three-phase, phase failure-phase reversal undervoltage monitoring relay for each three-phase motor that is not provided with an adjustable frequency drive.

2. Arrange to open motor starter contacts at 10% voltage unbalance and automatically reset when voltage returns to normal with an adjustable time delay set at one second on drop out to prevent nuisance tripping

on momentary voltage dips. Provide with red indicating light with "Phase Failure/Phase Reversal" nameplate. Capable of detecting regenerated voltage. Provide a contact for remote indication.

2.10 SOLID STATE REDUCED VOLTAGE MOTOR STARTER (SOFT START):

A. The soft start shall be provided complete with:

1. Magnetic only circuit breaker. Short circuit withstand rating shall be based on the motor horsepower as defined in UL 508.

B. The solid-state reduced-voltage starter shall be an integrated unit with power SCRs, logic board, paralleling bypass contactor, and electronic overload relay.

C. Each solid state motor starter shall be selected based on severe duty application.

D. The motor shall be automatically protected from solid state component failure by one of the following means:

1. Shunt trip coil to trip disconnect in the event of a controller fault condition including a shorted thyristor.

2. Isolation contactor that opens when the motor is stopped or when the controller detects a fault condition including a shorted thyristor.

E. The soft start shall utilize a thyristor (SCR) bridge consisting of at least two SCRs per phase to control the starting and stopping of industry standard motors.

F. The soft start shall provide torque control for linear acceleration without external feedback in-dependent of motor load or type of application. The gating of the thyristors shall be controlled in such a manner to ensure smooth and stable acceleration ramp.

G. The soft start shall be controlled by a microprocessor that continuously monitors the current and controls the phasing the SCRs. Analog control algorithms shall not be allowed.

H. All soft start power ratings shall utilize the same control module.

I. A shorting contactor shall be supplied. Protective features and deceleration control options integral to the soft start shall be available even when the shorting contactor is employed.

J. The soft start shall be provided with a secondary surge arrester.

K. MOTOR DATA:

1. The soft start shall be designed to operate a NEMA design B motor as indicated on the drawings.

L. RATINGS:

1. The soft start shall be designed to operate in an ambient temperature 0° and 50°C, derate the current by 1.2% per °C above 40°C.

2. Storage temperature range shall be -25°C to 70°C.

3. Maximum relative humidity shall be 93% at 40°C, non-condensing.

4. The soft start shall be designed to operate in altitudes up to 3300 ft. For higher altitudes, derate by 0.5% for each additional 330 ft.

5. The soft start shall be capable of operation between -15% and +10% of nominal voltage rating.

6. The soft start shall automatically adapt for operation at 50 or 60 Hz. Frequency tolerance shall be ±5% when starting and between +5% and -15% during steady state operation.

7. The soft start shall be capable of supplying 200% of rated full load current for 30 seconds at maximum ambient temperature.

8. The SCRs shall have a minimum P.I.V. rating of 1400 Vac. Lower rated SCRs with protection by MOVs are not acceptable.

M. ADJUSTMENTS AND CONFIGURATIONS:

1. All dialogue functions, display units, remote functions, terminal blocks, configuration switches and adjustment potentiometers shall be accessible on the front of the control module. Exposure to control circuit boards or electrical power devices during routine adjustments is prohibited.

2. Digital indication shall provide, as a minimum, the following conditions:

   a. Soft start status - ready, starting/stopping, run.
   b. Motor status - current, torque, thermal state, power factor.
   c. Fault status - Motor thermal overload, starter thermal fault, phase fault, frequency fault, supply fault, locked rotor fault, motor underload, max start time exceeded, external fault, serial link fault, phase inversion, internal failure, overcurrent.

3. The starter shall be preset to the following for adjustment-free operation:

   a. Torque acceleration ramp of 10 seconds.
   b. Current limitation to 200% of the motor full load current rating.
   c. Class 10 overload protection.
   d. Motor current preset per NEC and UL tables for standard hp motors.

4. A digital keypad shall be utilized configure the following operation parameters as required.

   a. Motor full load amps adjustable from 50 to 130% of the controller's rating.

   b. Current limitation on starting adjustable from 1.5 to 7 times rated motor current.

   c. Torque ramp adjustable from 1 to 60 seconds.

   d. Initial torque adjustable from 10 to 100% of nominal motor torque.

   e. Torque limit adjustable from 10 to 200% of nominal motor torque.

   f. Maximum start time adjustable from 10 to 999 seconds.

   g. Voltage boost adjustable from 50 to 100% of the nominal supply voltage.

   h. Selection of freewheel, soft stop or braking.

   i. Adjustable soft stop torque ramp time from 1 to 60 seconds.

   j. Threshold to change to freewheel following a soft stop from 0 to 100% of the nominal motor torque.

   k. Braking torque level adjustable from 0 to 100% effectiveness.

   l. Selection of Class 2, 10, 10A, 15, 20, 25 or 30 motor thermal overload protection.

5. A digital keypad shall be utilized configure the following controller parameters as required:

   a. Selectable automatic reset operation.
   b. Cancellation of the torque control loop for multi-motor installations.
   c. Adjustment of the stator loss estimation for specialty motors.
   d. Assignment of controller inputs and outputs.
   e. Activation of phase reversal protection.
   f. Reset of motor thermal state.
   g. Return to factory settings.
   h. Activation of test mode for use with low power motors.
   i. Indication of elapsed time in hours of starting, running and stopping.

6. Output relays shall provide the following status indications:

   a. One form A and one form B minimum for indication of fault.

b. One form A and one form B for indication of control of an input isolation contactor.

c. One form A and one form B minimum for indication of control of an output isolation contactor if provided.

d. One form A for indication that torque ramp is complete and current is below 130% motor FLA (End of start).

7. Additional inputs and outputs shall be available to provide the following status indications:

a. One logic input for force to freewheel, indication of external fault, force to local control, control of cascading motors, or external motor overload reset.

b. One form C and a logic output for indication of motor thermal overload pre-alarm or presence of motor current and one logic output to indicate overcurrent alarm.

c. One analog output shall be available for 4 to 20 milliamp indication of motor current, torque, thermal state, or power factor.

8. Relay and I/O functions listed above shall be isolated with respect to common.

N. PROTECTION:

1. A microprocessor controlled thermal protection system shall be included which shall continuously calculate the temperature-rise of the motor and soft start and provide:

a. User adjustable overload protection.

b. An overload pre-alarm which indicates by relay contact that the motor has exceeded its rated temperature rise by 100%. This function shall be annunciation only.

c. A thermal fault condition which stops the motor if the temperature-rise exceeds 120% of the motor thermal capability.

d. An analog electronic circuit with a time-constant adjustable to the motor's thermal cooling time-constant ensuring the memorization of the thermal state even after power supply disconnection or shorting out of the power semiconductors.

2. The soft start shall provide phase loss, phase reversal, underload, stall, and jam protection. Provide form A contact for remote indication.

3. The integral protective features shall be active even if an external shorting contractor is used to bypass the SCRs during steady state

operation.

4. Provide automatic fault reset.

O. CONTROL OPTIONS:

1. The soft start's control circuit shall be fed from the line supply and be completely independent of the power circuit and separate from the control logic.

2. The peripheral soft start control circuitry shall be operated at 120 VAC 60 Hz from a control power transformer included within the enclosure.

3. Operator devices shall be door mounted and shall be as indicated on the drawings.

4. All operator devices shall be remote-mounted using supplied 120 VAC control logic. Clearly labeled terminals shall be provided for field installation.

P. Shorting Contactor

1. A microprocessor shall control the operation of the shorting contactor via an output relay.

2. The shorting contactor shall close, shorting the thyristors after the motor current is below 130% of motor FLA and voltage is below nominal voltage (indicating ramp complete), and open on a stop command to allow a deceleration ramp.

3. Overload protection integral to the soft start shall continue to protect the motor when shorting is utilized.

Q. Starter shall be provided with a Form C normally open (NO), normally closed (NC) contact that shall change state when a fault condition exists. Contacts shall be rated 60 VA (resistive load) and 20 VA (inductive load). In addition, an LED display on the device keypad shall indicate type of fault (Overtemperature, Phase Loss, Jam, Stall, Phase Reversal and Overload.)

2.11 AUXILIARY CONTROL DEVICES:

A. Pushbutton stations shall be of the heavy-duty oil type, NEMA Type 1. A lockout attachment, with provisions for padlocking, shall be furnished on stop button, to render the control inoperative with the lockout in place.

B. Selector switches shall be of the heavy duty, oil tight type, mounted on the starter cover.

C. The operator button shall be molded Bakelite and solid in color throughout the material. Painted buttons are not acceptable. A suitable and clearly legible nameplate shall be provided for each button to designate its function.

D. All contact blocks shall be made of molded, high arc resistant material and shall have a minimum of one normally open and one normally closed contact, with a continuous current rating of 10 amperes, 600 volts. All terminals shall be readily accessible. Contact blocks shall be easily changed and shall be arranged for the addition of contacts.

E. Pilot lights shall be an integral part of control station when indicated. Indicating lights shall be of the LED type, push to test. Contractor shall install pushbuttons and selector switches not factory mounted.

F. Provide adjustable 1-60 second "on" time delay relay set for 30 seconds, unless noted, to allow motors 10 HP and larger to stop prior to restarting.

G. All plug-in control relays shall be provided with pilot lights.

H. Current Sensors: Rated to suit application.

2.12 CURRENT TRANSFORMERS:

Provide current transformers meeting the following requirements:

A. Standard: IEEE C57.13.

B. Current ratios: As indicated on the Drawings.

C. Mechanical and thermal ratings coordinated with breaker ratings.

D. Window type current transformers shall be accessible from front of cubicle to permit changing or adding, without disconnecting bus joints.

E. Accuracy, minimum: Standard relay accuracy as listed in IEEE C37.20.2.

F. Ground sensor current transformers:

1. Window type.
2. Single ratio: 50/5.

2.13 POTENTIAL TRANSFORMERS:

Provide potential transformers meeting the following requirements:

A. Standard: IEEE C57.13.

B. Voltage ratio: As required.

C. Primary current-limiting fuses.

D. Secondary fuses or circuit breaker.

E. Accuracy class: 0.3 at burden W thru Z and 0.6 at burden ZZ.

F. Thermal burden rating: Exceed maximum connected burden.

2.14 MOTOR PROTECTION RELAY:

Motor protection relays (MPR) shall be Schweitzer Engineering Laboratories, Inc. model SEL-701. MPR s shall provide complete induction motor protection including, but not limited to the following:

A. Motor thermal protection.

B. Eleven internal RTD inputs.

C. Voltage inputs for three-phase delta PTs.

D. Three-phase current transformer inputs.

E. Zero sequence ground fault input.

F. RS-485 rear port Modbus RTU communications.

G. Connect the relay to trip the motor starter on actuation of motor trip condition.

H. Connect winding and bearing RTD circuits to the relay.

I. Provide relay settings to provide the following protection.

1. Locked rotor and motor running overload protection. Protection shall be based on the actual motor nameplate ratings.

2. Overcurrent protection including phase overcurrent and ground fault overcurrent settings.

3. Frequent starting protection.

4. Motor winding and bearing RTD settings based on manufacturer recommended settings. Set alarm and trip conditions.

5. Under voltage and phase failure.

2.15 POWER QUALITY METER:

A. The power quality meter shall be front mounted as indicated. All fuses and other components required for the power quality meter shall be provided.

B. Provide a front mounted display.

C. Provide an Ethernet card that provides 10/100BaseTx Ethernet and RS-485. Supported protocols shall be Modbus TCP/IP, FTP, SNMP MIB2, ARP, UDP, and HTTP.

D. Provide current transformers as required and as indicated on the drawings. Provide potential transformers if required for the monitor provided.

E. Provide finger safe fuse blocks for the three-phase input from the MCC bus.

F. Provide shorting terminal blocks for the CT connections to the Power Quality Meter.

PART 3 EXECUTION

3.1 INSTALLATION:

A. Install MCCs in accordance with NEMA ICS 2.3, "Instructions for the Handling, Installation, Operation, and Maintenance of MCCs" and with the manufacturers written installation instructions.

B. Anchor each motor control center assembly to channel sills arranged and sized in accordance with the manufacturer's recommendations. Attach a tack welding or bolting. Level and grout sills flush with the motor control center-mounting surface.

3.2 CONCRETE BASES:

A. Motor control centers shall be installed on 3-inch high concrete pads as indicated on the drawings.

B. Form concrete equipment bases using framing lumber with form release compounds. Locate as indicated and construct 1 inch larger in all directions than the supported unit. The pad shall be constructed with a 3/4" chamfer on top edges.

C. Install reinforcing bars, and place anchor bolts and sleeves using manufacturer's installation template.

D. Place concrete and allow curing before installation of equipment.

E. Remove temporary lifting eyes, channels, brackets, and temporary blocking of moving parts form MCC units and components after MCC is set.

F. Contractor shall coordinate floor openings required for conduits entering in the bottom of the MCC.

3.3 FIELD QUALITY CONTROL

A. Comply with applicable requirements of the International Electrical Testing Association (INETA) Standard, "Acceptance Testing Specifications for Electrical Power Distribution Equipment and Systems."

B. Perform the following preparations for tests:

1. Test the insulation resistance of MCC buses, components, and of connecting supply, feeder, and control circuits. For components with solid-state devices or other sensitive components, perform tests in accordance with the manufacturer's instructions.

2. Make continuity tests of circuits.

3. Provide the manufacturer's instructions for installation and testing of the MCC to the testing personnel.

4. Check anchoring of MCC, external clearance, and alignment and fit of components, including internal elements.

5. Perform operational tests and exercise of mechanical components and other operable devices in accordance with the manufacturer's instruction manual.

6. Check tightness of bolted electrical connections with calibrated torque wrench. Refer the manufacturer's instructions for proper torque values.

7. Perform visual and mechanical inspection and related work for motor control and protective devices.

8. Verify ratings and settings of overload relays, motor circuit protectors, and overcurrent protective devices.

C. Quality Control Testing Program. Assure MCC installation meets the specified requirements, is operational within the specified tolerances, and provides the appropriate protection for the systems and equipment.

1. Test and inspect the MCCs in accordance with the manufacturer's recommendations and these specifications.

2. Provide a manufacturer's factory certified technician to supervise the installation of adjustable frequency drives.

3. Schedule tests and provide notifications to the Owner at least 1 week in advance of the test commencement.

4. Prepare written reports of test results and observations. Report defective materials and workmanship. Include complete records of adjustments and corrective action taken.

5. Check phasing of supply source to the bus.

3.4 GROUNDING:

A. All conduits entering the MCC shall be individually bonded to the MCC ground bus. The size of bonding conductor shall be equal to the equipment-grounding conductor in the conduit.

B. Bond the MCC ground bus as indicated on the drawings.

3.5 CLEANING:

A. Each MCC shall be thoroughly cleaned inside and out to the satisfaction of the Owner/Engineer.

3.6 TRAINING:

A. Provide 8 hours of on-site training by a manufacturer for Owner personnel. Training shall be performed at the job site using the actual equipment installed. Training shall include the operations and maintenance manuals and shall consist of classroom training and actual hands on training.

3.7 DEMONSTRATION:

A. A schematic wiring diagram of each solid state or magnetic starter or VFD unit shall be provided and attached to the inside of starter door. The wiring diagram shall be specific to the equipment served by the starter. Manufacturer's standard wiring diagram will not be acceptable except where the starter is designated as a spare.

B. All output alarm contacts not indicated to be used for SCADA or control shall be paralleled to provide a single remote alarm.

END OF SECTION

SECTION 16491

AUTOMATIC TRANSFER SWITCH WITH BYPASS
AND SERVICE ENTRANCE RATED

PART 1 GENERAL

1.1 SECTION INCLUDES:

A. Automatic transfer and bypass-isolation switch (ATS/BPS), 480-volt, 3-phase for standby power service, with bypass.

B. Furnish an ATS that is U.L. rated for service entrance equipment. It shall provide all of the proper disconnecting, protection, grounding and bonding required for service entrance equipment. Unit shall have neutral and ground-disconnect links.

1.2 STANDARDS:

The automatic transfer switches and controls shall conform to the requirements of the following:

A. IEC 60947-6-1 Low-voltage Switchgear and Control gear; Multifunction equipment; Automatic Transfer Switching Equipment.

B. NFPA 70 - National Electrical Code.

C. NFPA 110 - Emergency and Standby Power Systems.

D. IEEE Standard 446 - IEEE Recommended Practice for Emergency and Standby Power Systems for Commercial and Industrial Applications.

E. NEMA Standard ICS10 (formerly ICS2-447) - AC Automatic Transfer Switches.

F. UL 508 Industrial Control Equipment.

G. UL 1008 - Standard for Transfer Switch Equipment.

1.3 SUBMITTALS:

A. Submit in accordance with 01300.

1.4 SERVICE REPRESENTATION:

The ATS/BPS manufacturer shall maintain a national service organization of company-employed personnel located throughout the contiguous United States. The service center's personnel shall be factory trained and on call 24 hours a day, 365 days a year. ATS manufacturer shall utilize technicians that are dedicated solely to switchgear and ATS maintenance and repair. ATS technicians shall arrive onsite in vehicle dedicated to repair and parts replacement of electrical switchgear and transfer switches.

PART 2 PRODUCTS

2.1 ACCEPTABLE MANUFACTURER:

A. The listed manufacturer below shall actually manufacture the transfer switches for this project. Companies that simply purchase switches and/or components or "rebrand" other manufacturers products are specifically prohibited. The engine generator set supplier shall provide specified automatic transfer switch to ensure one source of responsibility.

B. Manufacturers:

1. ASCO.
2. Russell.
3. Approved equivalent.

2.2 TRANSFER SWITCH EQUIPMENT:

A. Each automatic transfer and bypass-isolation switch shall consist of an inherently double throw power transfer switch mechanism and a microprocessor controller to provide automatic operation. All automatic transfer and bypass-isolation switches and controllers shall be the products of the same manufacturer.

B. Automatic transfer and bypass-isolation switch shall be 3-pole with solid neutral and ground bar, or as indicated on the drawings.

C. All transfer switch sizes shall use only one type of main operator for ease of maintenance and commonality of parts.

D. Ampacity shall be as indicated on the drawings.

E. Each complete factory-assembled automatic transfer and bypass-isolation system shall have the following features: electronic control designed for surge voltage isolation with voltage sensors on all phases of both sources; linear operator; permanently attached manual handles; positive mechanical and electrical interlocking; and mechanically-held contacts.

F. Designs utilizing components of molded-case circuit breakers, contactors, or parts thereof, which are not intended for continuous duty, repetitive switching or transfer between two active power sources will not be acceptable.

G. Inspection of all contacts shall be possible from the front of the switch without disassembly of operating linkages and without disconnection of power conductors. Switches rated 800 amps and higher shall have front removable and replaceable contacts. All stationary and moveable contacts shall be replaceable without removing power conductors and/or bus bars.

H. The switch shall be positively locked and unaffected by momentary outages, so that contact pressure is maintained at a constant value and contact temperature rise is minimized for maximum reliability and operating life.

I. The ATS/BPS shall be UL listed in accordance with UL 1008 and be labeled in accordance with that standard's 0.025 and 0.05 second, time based ratings. ATS/BPSs which are not tested and labeled with time based ratings and have series, or specific breaker ratings only, are not acceptable.

J. Provide transfer switch according to the following:

1. Transfer switch shall be rated to carry 100 percent of rated current continuously in the enclosure. Circuit breaker-type transfer switches are not acceptable.

2. Transfer switches shall be continuously rated in ambient temperatures of -40 to +50 degrees C, relative humidity up to 95 percent (non-condensing), and altitudes up to 10,000 feet.

3. Transfer switch equipment shall have a withstand and close-on rating (WCR) in RMS symmetrical amperes of 65,000A RMS symmetrical minimum.

4. Construction: Transfer switches shall be double-throw, electrically and mechanically interlocked, and mechanically-held in both positions.

5. Transfer switches shall be equipped with manual operators for use only under de-energized conditions.

6. Main switch contacts shall be high-pressure silver alloy. Contact assemblies shall have arc chutes for positive arc extinguishment. Arc chutes shall have insulating covers to prevent interphase flashover.

7. Provide two sets of Form C auxiliary contacts on both sides, operated by transfer switch positions, rated 10 amp 250 VAC.

2.3 ENCLOSURE:

A. Enclosure shall be NEMA 12, unless otherwise indicated.

B. All standard and optional door-mounted switches and pilot lights shall be 16-mm industrial grade type or equivalent for easy viewing & replacement. Door controls shall be provided on a separate removable plate.

2.4 BYPASS ISOLATION SWITCH:

A. A two-way bypass-isolation switch shall provide manual bypass of the load to either source and permit isolation of the automatic transfer switch from all source and load power conductors. All main contacts shall be manually driven.

B. Power interconnections shall be silver-plated copper bus bar. The only field installed power connections shall be at the service and load terminals of the bypass-isolation switch. All control interwiring shall be provided with

disconnect plugs.

C. Separate bypass and isolation handles shall be utilized to provide clear distinction between the functions. Handles shall be permanently affixed and operable without opening the enclosure door. Designs requiring insertion of loose operating handles or opening of the enclosure door to operate are not acceptable.

D. Bypass to the load-carrying source shall be accomplished with no interruption of power to the load (make before break contacts). Designs which disconnect the load when bypassing are not acceptable. The bypass handle shall have three operating modes: "Bypass to Normal," "Automatic," and "Bypass to Emergency." The operating speed of the bypass contacts shall be the same as the associated transfer switch and shall be independent of the speed at which the manual handle is operated. In the "Automatic" mode, the bypass contacts shall be out of the power circuit so that they will not be subjected to fault currents to which the system may be subjected.

E. The isolation handle shall provide three operating modes: "Closed," "Test," and "Open." The "Test" mode shall permit testing of the entire emergency power system, including the automatic transfer switches with no interruption of power to the load. The "Open" mode shall completely isolate the automatic transfer switch from all source and load power conductors. When in the "Open" mode, it shall be possible to completely withdraw the automatic transfer switch for inspection or maintenance to conform to code requirements without removal of power conductors or the use of any tools.

F. When the isolation switch is in the "Test" or "Open" mode, the bypass switch shall function as a manual transfer switch.

G. Designs requiring operation of key interlocks for bypass isolation or ATS which cannot be completely withdrawn when isolated are not acceptable.

2.5 SERVICE ENTRANCE DISCONNECT AND OVERCURRENT PROTECTIVE DEVICE:

A. The ATS shall be provided with a stationary mount, insulated case circuit breaker with a solid-state trip unit. The trip unit shall have an adjustable long time, short time, instantaneous, and ground fault trip settings. The insulated case circuit breaker shall trip open when the ground fault setting is exceeded.

B. The circuit breaker shall be provided with a Form “c” contact for remote SCADA position indication.

C. Square D Type RJF, or Engineer approved equal.

2.6 AUTOMATIC CONTROLS:

Control shall be solid-state and designed for a high level of immunity to power line surges and transients, demonstrated by test to IEEE Standard 587. The control shall have optically isolated logic inputs, high isolation transformers of AC inputs, and relays on all outputs.

A. Solid-state under-voltage sensors shall simultaneously monitor phases of both sources. Pick-up and drop-out settings shall be adjustable. Voltage sensors shall allow for adjustment to sense partial loss of voltage on any phase. Voltage sensor shall have field calibration of actual supply voltage to nominal system voltage.

B. Automatic controls shall signal the engine-generator set to start upon signal from normal source sensors. Solid-state time-delay start, adjustable from 0 to 15 seconds (factory-set at 2 seconds) shall avoid nuisance start-up. Battery voltage starting contacts shall be gold, dry-type contacts factory-wired to a field wiring terminal block. The start signal shall prevent dry cranking of the engine by requiring the generator set to reach proper output, and run for the duration of the cool down setting, regardless of whether the normal source restores before the load is transferred.

C. The switch shall transfer when the emergency source reaches the set point voltage and frequency. Provide a solid-state time delay on transfer, adjustable from 0 to 120 seconds.

D. The switch shall retransfer the load to the normal source after a time delay retransfer, adjustable from 0 to 30 minutes. Retransfer time delay shall be immediately bypassed if the emergency power source fails.

E. Controls shall signal the engine-generator set to stop after a time delay, adjustable from 0 to 10 minutes, beginning on return to the normal source.

F. Power for transfer operation shall be from the source to which the load is being transferred.

G. The control shall include latching diagnostic indicators to pinpoint the last successful step in the sequence of control functions, and to indicate the present status of the control functions in real time, as follows:

1. Source 1 OK.
2. Start Gen Set.
3. Source 2 OK.
4. Transfer Timing.
5. Transfer Complete.
6. Retransfer Timing.
7. Retransfer Complete.
8. Timing for Stop.

H. The control shall include provisions for remote transfer inhibit and area protection.

I. Front Panel Devices: Provide devices mounted on cabinet from consisting of:

1. A key-operated selector switch to provide the following positions and functions:

a. Test--Simulates normal power loss to control for testing of generator set. Controls shall provide for a test with or without load transfer.

b. Normal--Normal operating position.

c. Retransfer--Momentary position to override retransfer time delay and cause immediate return to normal source, if available.

J. The controller shall be connected to the transfer switch by an interconnecting wiring harness. The harness shall include a keyed disconnect plug to enable the controller to be disconnected from the transfer switch for routine maintenance. Sensing and control logic shall be provided on multi-layer printed circuit boards. Interfacing relays shall be industrial grade plug-in type with dust covers. The panel shall be enclosed with a protective cover and be mounted separately from the transfer switch unit for safety and ease of maintenance. The protective cover shall include a built-in pocket for storage of the operator's manuals.

The control panel shall be at minimum 4 lines, 20 character and shall give user clear indication of the status of the transfer switch. Control panel shall track and store the last 99 events.

K. The controller shall meet or exceed the requirements for Electromagnetic Compatibility (EMC) as follows:

1. EN 55011:1991: Emission standard - Group 1, Class A.
2. EN 50082-2:1995: Generic immunity standard, from which:

a. EN 61000-4-2:1995 - Electrostatic discharge (ESD) immunity.

b. ENV 50140:1993 - Radiated Electro-Magnetic field immunity.

c. EN 61000-4-4:1995 - Electrical fast transient (EFT) immunity.

d. EN 61000-4-5:1995 - Surge transient immunity.

e. EN 61000-4-6:1996 - Conducted Radio-Frequency field immunity.

2.7 TIME DELAYS:

A. An adjustable time delay of 0 to 6 seconds shall be provided to override momentary normal source outages and delay all transfer and engine starting signals. Capability shall be provided to extend this time delay to 60 minutes by providing an external 24 VDC power supply.

B. A time delay shall be provided on transfer to emergency, adjustable from 0 to 60 minutes, for controlled timing of transfer of loads to emergency.

C. Two time delay modes (which are independently adjustable) shall be provided on re-transfer to normal. One time delay shall be for actual normal power failures and the other for the test mode function. The time delays shall be adjustable from 0 to 60 minutes. Time delay shall be automatically bypassed if the emergency source fails and the normal source is acceptable.

D. A time delay shall be provided on shut down of engine generator for cool down, adjustable from 0 to 60 minutes.

E. A time delay activated output signal shall also be provided to drive an external relay(s) for selective load disconnect control. The controller shall have the ability to activate an adjustable 0 to 5 minute time delay in any of the following modes:

1. Prior to transfer only.
2. Prior to and after transfer.
3. Normal to emergency only.
4. Emergency to normal only.
5. Normal to emergency and emergency to normal.
6. All transfer conditions or only when both sources are available.

F. The controller shall also include the following built-in time delays for optional Closed Transition and Delayed Transition operation:

1. 1 to 5 minute time delay on failure to synchronize normal and emergency sources prior to closed transition transfer.

2. 0.1 to 9.99 second time delay on an extended parallel condition of both power sources during closed transition operation.

3. 0 to 5 minute time delay for the load disconnect position for delayed transition operation.

G. All time delays shall be adjustable in 1 second increments, except the extended parallel time, which shall be adjustable in .01 second increments.

H. All time delays shall be adjustable by using the LCD display and keypad or with a remote device connected to the serial communications port.

2.8 ACCESSORY ITEMS:

A. Transfer switches shall be equipped with accessories as follows:

1. Provide solid-state exerciser clock to set the day, time, week and duration of generator set exercise/test period. Provide a with/without load exercise period selector switch. At the end of the specified duration the switch shall transfer the load back to normal and run the generator for the specified cool down period. A 10-year life battery that supplies power to the real time clock in the event of a power loss will maintain all time and date information.

2. Exercise clock.

3. Programmed transition.

4. Over Voltage and Over/Under frequency sensing for normal source and emergency source.

5. Ground bar.

PART 3 EXECUTION

3.1 INSTALLATION:

A. Installation shall comply with NEC and National Fire Code. Install equipment in accordance with manufacturer's instruction and instructions included in the listing or labeling of UL listed products.

B. Prior to equipment's being energized, a factory representative shall inspect installation and issue to Owner and Engineer a certificate of proper installation.

3.2 FACTORY TESTS:

A. Provide a factory-certified record of the production testing.

1. The complete ATS/BPS shall be factory tested to ensure proper operation of the individual components and correct overall sequence of operation and to ensure that the operating transfer time, voltage, frequency and time delay settings are in compliance with the specification requirements.

2. The ATS/BPS manufacturer shall be certified to ISO 9001 International Quality Standard and the manufacturer shall have third party certification verifying quality assurance in design/development, production, installation and servicing in accordance with ISO 9001.

3. Factory tests shall include a complete functional test of transfer switch controls, including calibration of the voltage sensors.

3.3 FIELD TEST:

A. Responsible party under Specification Section 16620 shall demonstrate transfer switch operation with field tests of engine-generator system.

END OF SECTION

SECTION 16675

TRANSIENT VOLTAGE SURGE SUPPRESSION

PART 1 GENERAL

1.1 RELATED DOCUMENTS:

Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY:

A Section includes field-mounted SPDs for low-voltage (<1000 V) power distribution and control equipment.

1.3 DEFINITIONS:

A. VPR: Voltage Protection Rating.

B. SPD: Surge Protective Device(s)

C. I(n): Nominal Discharge Current

1.4 SUBMITTALS:

A. Product Data: For each type of product indicated. Include rated capacities, operating weights, electrical characteristics, furnished specialties, and accessories.

B. Qualification Data: For qualified testing agency.

C. Product Certificates: For SPDs from manufacturer.

D. Operation and Maintenance Data: For SPDs to include operation, and maintenance manuals.

E. Warranties: Sample of special warranties.

1.5 QUALITY ASSURANCE:

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a testing agency, and marked for intended location and application.

B. The unit shall be UL 1449 Listed and CUL Approved as a Surge Protective Device and UL 1283 Listed as an Electromagnetic Interference Filter.

C. Comply with IEEE C62.41.2 and test devices according to IEEE C62.45.

D. Comply with NFPA 70.

E. PROJECT CONDITIONS:

1. Service Conditions: Rate SPDs for continuous operation under the following conditions unless otherwise indicated:

a. Maximum Continuous Operating Voltage (MCOV) of not less than 115% for 277/480V and 125% for 120/208V nominal RMS operating system voltage.

b. Operating Temperature: 30 to 150 deg F.

c. Humidity: 0 to 95 percent, non-condensing.

d. Altitude: Less than 12,000 feet above sea level.

1.6 COORDINATION:

Coordinate location of field-mounted SPDs to allow adequate clearances for maintenance.

1.7 WARRANTY:

Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of surge suppressors that fails in materials or workmanship within specified warranty period.

Warranty Period: 10 years from date of Substantial Completion.

1.8 EXTRA MATERIALS:

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

B. Replaceable Protection Modules: one of each size and type installed.

PART 2 PRODUCTS

2.1 MANUFACTURER:

A. Square D.

B. MVC, Inc. (800) 583-4773

C. Approved Equal.

2.2 SERVICE ENTRANCE SUPPRESSORS:

A. Surge Protective Devices shall be:

1. ANSI/UL 1449 Listed.

2. Modular design (with field-replaceable modules).

3. Fuses, rated at 200-kA interrupting capacity.

4. Minimum ANSI/UL 1449-2006 withstand (In) rating to be 20kA per mode.

5. Tested with the ANSI/IEEE Category CHigh exposure waveform (20kV-1.2/50µs, 10kA-8/20µs).

6. Pulse life test: Capable of protecting against and surviving 20,000 ANSI/IEEE Category CHigh transients without failure or degradation of clamping voltage by more than 10%.

7. Bolted compression lugs for internal wiring.

8. Coordinated thermal and surge current fusing.

9. Redundant suppression circuits.

10. Replaceable modules, 1 per phase minimum.

11. LED indicator lights for power and protection status.

12. Audible alarm, with silencing switch, to indicate when protection has failed.

13. Form-C contacts rated at 2 A and 24-V ac minimum, one normally open and one normally closed, for remote monitoring of protection status. Contacts shall reverse on failure of any surge diversion module or on opening of any current-limiting device. Coordinate with building power monitoring and control system.

14. Six-digit transient-event counter set to totalize transient surges.

B. Peak Single-Impulse Surge Current Ratings to be selected by environment:

Category/Type	Application	Per Phase	Per Mode
C Type 2	Service Entrance	240 kA	120 kA
B Type 2	High Exposure Locations (Distribution Equipment)	160 kA	80 A

C. The ASNI/UL 1449 voltage protection rating (VPR) in grounded wye circuits, the SPDs shall not exceed the following:

Modes	208Y/120	480Y/277	600Y/347
L-N,L-G, N-G	800	1200	1500
L-L	1200	2000	2500

D. The ANSI/UL 1449 VPR for 240/120 V, 3-wire or 4-wire circuits with high leg shall not exceed the following:

Modes	240/120
L-N,L-G, N-G	1200/800

2.3 PANELBOARD SUPPRESSORS:

A. Surge Protective Devices shall be:

1. ANSI/UL 1449 Listed.

2. Modular design (with field-replaceable modules).

3. Fuses, rated at 200-kA interrupting capacity.

4. Minimum ANSI/UL 1449-2006 withstand (In) rating to be 20kA per mode.

5. Tested with the ANSI/IEEE Category CHigh exposure waveform (20kV-1.2/50µs, 10kA-8/20µs).

6. Pulse life test: Capable of protecting against and surviving 20,000 ANSI/IEEE Category CHigh transients without failure or degradation of clamping voltage by more than 10%.

7. Bolted compression lugs for internal wiring.

8. Coordinated thermal and surge current fusing.

9. Redundant suppression circuits.

10. Replaceable modules, 1 per phase minimum.

11. LED indicator lights for power and protection status.

12. Audible alarm, with silencing switch, to indicate when protection has failed.

13. Form-C contacts rated at 2 A and 24-V ac minimum, one normally open and one normally closed, for remote monitoring of protection status. Contacts shall reverse on failure of any surge diversion module or on opening of any current-limiting device. Coordinate with building power monitoring and control system.

14. Six-digit transient-event counter set to totalize transient surges.

B. Peak Single-Impulse Surge Current Rating

Category/Type	Application	Per Phase	Per Mode
B Type 2	High Exposure Locations (Distribution Equipment)	160 kA	80 kA
B Type 2	Branch Locations	120 kA	A

C. The ASNI/UL 1449 voltage protection rating (VPR) in grounded wye circuits, the SPDs shall not exceed the following:

Modes	208Y/120	480Y/277	600Y/347
L-N,L-G, N-G	800	1200	1500
L-L	1200	2000	2500

D. The ANSI /UL 1449 VPR for 240/120 V, 3-wire or 4-wire circuits with high leg shall not exceed the following:

Modes	240/120
L-N,L-G, N-G	1200/800

2.4 ENCLOSURES:

A. Indoor Enclosures: NEMA 250, Type 1.

B. Outdoor Enclosures: NEMA 250 Type 4X.

PART 3 EXECUTION

3.1 INSTALLATION:

A. Install SPDs at the service entrance on the load side, with ground lead bonded to service entrance ground.

B. Install SPDs for panelboards and auxiliary panels with conductors or buses between suppressor and points of attachment as short and straight as possible. Do not exceed manufacturer's recommended lead length. Do not bond neutral and ground.

C. Provide a 60 Amp circuit breaker as a dedicated disconnecting means for SPD unless otherwise indicated.

D. The SPDs ground shall be connected to the power system ground.

3.2 FIELD QUALITY CONTROL:

A. Ensure that interiors are free of foreign materials and dirt.

B. Check and test switches, pushbuttons, meters for proper operation.

C. Check and test indicating lights for proper operation and color.

D. Perform manufacturer's on site field test procedures.

3.3 STARTUP SERVICE:

A. Do not perform insulation resistance (MEGGER) tests of the distribution wiring equipment with the SPDs installed. Disconnect all wires, including neutral, before conducting insulation resistance tests, and reconnect immediately after the testing is over.

B. Test the unit status by pressing the buttons below the Phase LED on the diagnostic panel. The LED will turn from Green to Red while the button is pressed. The LED will return to Green upon release of the Phase button.

Re: Geotechnical Investigation
NE Water System Improvements
High Service Pump Station Building
Midland, Texas

Dear Mr. Craigo:

In accordance with your instructions, we have conducted a Geotechnical Investigation for the above referenced project. The conclusions and recommendations of this investigation are to be found in the attached report.

We trust that this will provide the information you have requested. We are also available for the geotechnical and materials testing services recommended in the Report during construction. If there are any further questions, please do not hesitate to call.

Sincerely,

Enprotec / Hibbs & Todd, Inc.

GEOTECHNICAL INVESTIGATION
NE WATER SYSTEM IMPROVEMENTS
HIGH SERVICE PUMP STATION BUILDING
MIDLAND, TEXAS

EXECUTIVE SUMMARY

GENERAL: This investigation was authorized by Ms. Laura Wilson, P.E., Utilities Director for the City of Midland, Texas (City) at the time the project was initiated. The purpose of this investigation is to provide foundation design information along with construction recommendations for the proposed High Service Pump Station Building (HSPS) to be located at the existing water purification plant in Midland, Texas.

The project includes an 8,500 square foot HSPS to be located just south of the existing HSPS. It is understood that the pump cans will extend about 25 to 30 feet below existing grade to match the elevation of the existing pump cans and piping. A concrete tilt-wall building is anticipated which will match the existing building. Detailed structural loading was not provided, however for this analysis it has been assumed that maximum column loads will be about 100 to 150 kips per column and maximum wall loads will be less than 2.5 kips per linear foot of wall, based on dead load plus design live load. Detailed site grading has also not been provided, although it has been assumed that the floor slab for the structure will be constructed at or near existing grades, exclusive of the recommendations contained herein.

SCOPE: The scope of the exploration and analysis to be performed by Enprotec/Hibbs & Todd, Inc. (eHT) included a site reconnaissance, the subsurface exploration, field and laboratory testing, and an engineering analysis and evaluation to provide design recommendations for the foundation and floor slab along with construction recommendations for the proposed HSPS. Details and results of the investigation are discussed in the following sections of this report.

LIMITATIONS: The Geotechnical Engineer warrants that the findings, recommendations, specifications, or professional advice contained herein have been made after being prepared in accordance with generally accepted professional engineering practice in the fields of foundation engineering, soil mechanics, and engineering geology. No other warranties are implied or

SITE DESCRIPTION

SITE LOCATION & TOPOGRAPHY: The proposed building site is located just south of the existing HSPS at the existing Midland Water Purification Plant in Midland, Texas. At the time of the subsurface exploration the site was mostly covered with short grasses. Site topography appeared relatively flat.

DESCRIPTION OF WORK

FIELD INVESTIGATION: Drilling and soil sampling activities were performed at select locations of the site on March 5, 2019. Two test borings were drilled to a depth of about 50 feet below the existing ground surface elevation at the locations shown on Figure 1 in Appendix A. The location of the HSPS was provided by Mr. Joe Mangrem, PE, Project Manager for eHT.

The test borings were drilled utilizing a truck-mounted Failing rotary drilling rig. The test borings were advanced utilizing dry sampling methods and rotary air drilling techniques which allow for accurate groundwater observations. Drilling and sampling activities were performed in general accordance with referenced ASTM and/or TxDOT procedures or other accepted methods.

Soil formations were sampled using a 3-inch diameter Shelby-type steel tube sampler (ASTM D 1587) and/or a 2-inch split barrel sampler (ASTM D 1586). Undisturbed soil samples were subjected to calibrated pocket penetrometer tests (Qp) to assist in evaluating the shear strength of the cohesive soils. Quantitative estimates of the foundation strata bearing capacity were also obtained from interpretation of the Standard Penetration Test (SPT), the Texas Highway Department Cone Penetrometer Test (TCP), and widely published empirical correlations. The reports of the field tests are reported on the Logs of Borings in Appendix C.

The borings were visually logged in the field, and all recovered samples were placed in core boxes for delivery to the laboratory. Push-tube samples, split barrel samples, and auger grab samples were placed in polyethylene plastic bags to minimize moisture changes. Samples will be retained for 60 days from the date of this report. The samples will then be discarded unless notified in writing by the client requesting that the samples be retained.

The borings were observed for groundwater at each test location, during and following the completion of the boring. These observations are shown on the Logs of Borings and discussed in a later section of this report. The borings were backfilled with on-site materials upon completion of the fieldwork. Logs of Borings were subsequently prepared, along with a legend titled EXPLANATION OF SYMBOLS AND TERMS USED ON BORING LOGS and GENERAL NOTES. The legend and general notes show typical soil and rock classifications, drilling symbols, weathering descriptions, and soil structure characteristics.

LABORATORY TESTING: Select materials recovered in the borings were tested in the laboratory and classified based on the laboratory test results. Laboratory testing was conducted in general accordance with ASTM procedures and standards. Atterberg Limits (ASTM D 4318) and Minus 200-Mesh Sieve Tests (ASTM D 1140) were performed on selected soil samples in order to classify and establish index properties and grain size characteristics of the soils. Appendix B summarizes the results of these classification tests. The soil classifications are based on the Unified Soil Classification System (USCS).

ENGINEERING ANALYSIS: The engineering analysis was conducted on the information obtained from the field and laboratory investigations and from information provided by Mr. Mangrem and Mr. Colden Rich, P.E., Project Manager for eHT. If revisions to the plans for the proposed project, or if deviations from the subsurface conditions presented in this report are encountered during construction, we should be notified to determine if changes in our recommendations are required.

SUBSURFACE MATERIALS AND CONDITIONS

SITE GEOLOGY: As shown on the Hobbs Sheet of the Geologic Atlas of Texas, the site is located in an area where Quaternary Age deposits of Windblown Sand Deposits are present at or near the ground surface. The Alluvium in the project area generally consists of silty, calcareous fine to medium grained quartz with calcareous caliche.

SITE STRATIGRAPHY: A detailed description of the site stratigraphy is provided on the Logs of Borings. Generally, the subsurface conditions at the site may be characterized as follows:

Loose to very dense clayey sands, some with calcareous nodules and/or gravel, were present from the surface to depths ranging from 29 to 31 feet at the test boring locations. The sands were underlain by conglomerate to a depth of at least 47 to 50 feet, the termination depth of the test borings.

GROUNDWATER: Groundwater was encountered at a depth of about 23½ to 28 feet within the test borings during and at completion of drilling activities. Groundwater may typically be found within the alluvial soils and particularly in contact with the denser sands and conglomerate. An accurate depiction of the groundwater depth would require leaving the test borings open for an extended period of time due to the moderately impermeable soils. Based upon the measured water levels and soil moisture contents the groundwater table was considered to exist at a depth of about 25 feet below current grades at the time of the subsurface exploration, although shallower perched water may be encountered across the site. The water table may fluctuate seasonally and during periods of heavy rainfall.

LABORATORY RESULTS: The results of the Atterberg Limits Testing indicate that the tested soils possess Liquid Limits (LL) ranging from 9 to 39 with corresponding Plasticity Indices (PI) of 20 to 61. One of the samples tested was determined to be non-plastic. Soil Classification Tests indicate that the soils exhibit a low to high expansive potential with a slight to very high degree of plasticity. The soils are classified as SC and SM materials according to the Unified Soil Classification System (USCS). Refer to Appendix B for the laboratory test results of the materials tested.

FOUNDATION DESIGN RECOMMENDATIONS

GENERAL: The proposed site is underlain by moderate strength, low to highly expansive clayey sands underlain by very dense sands and conglomerate. The Potential Vertical Rise (PVR) has been estimated using the *State of Texas Highway Department Materials and Testing Division Test Method TEX-124-E "Methods of Determining the Potential Rise"* for the existing soils. For this site, the PVR estimation was based on a plasticity index (PI) ranging from 9 to 39. The estimation assumed average seasonal minimum moisture corresponding to the "dry line" of the test method. The PVR for this site was estimated to be about 1 inch. A differential movement of half of the PVR can be assumed. However, differential movement can be equal to or even double the PVR in extreme conditions such as soils exposed to moisture and swelling in one area and drying and shrinkage in another.

DRILLED PIER FOUNDATION: A deep foundation consisting of straight drilled piers may be utilized for the proposed structure and would be considered the least risk option. The conglomerate at a depth of about 40 feet below existing grade is expected to provide a suitable bearing stratum for the drilled piers. The drilled piers should penetrate a minimum 10 feet into undisturbed conglomerate even if piers greater than 40 feet are required.

Design pier depths shown in the construction documents should ensure that the piers reach the minimum depth indicated above. The proper depth must be reached in order to ensure adequate bearing capacity. Piers founded in the conglomerate should be sized assuming a maximum net allowable end bearing pressure of 25 kips per square foot (ksf), based on a dead load plus design live load considerations. An allowable skin friction value of 1.5 ksf may be utilized within the bottom 8 feet of the undisturbed conglomerate. Note that pier settlements of 2 to 3 percent of the shaft diameter will occur to fully develop the skin friction. The allowable capacities are based on published correlations for STP field test data. The values include a safety factor of at least 3 against shear failure in the supporting soils.

The piers should have a minimum diameter of 18 inches for quality construction and inspection. Minimum on-center pier spacing should be 3 times the pier diameter at the bearing surface to eliminate an overlapping stress influence. The piers should be reinforced for their full depth to within 6 inches of the bottom of the pier to resist potential tensile forces which may develop due to swelling of the site soils and due to structural loads. It is recommended that each pier be reinforced with a minimum 0.75 percent reinforcing steel (based on the cross-sectional area of the pier shaft). The steel may be considered part of the reinforcement required by axial compressive loads, lateral load considerations, or the minimal reinforcement required by the codes.

Temporary casing must be used where necessary to stabilize pier holes if groundwater or caving soils are encountered during construction and should be anticipated based upon the groundwater encountered during drilling activities. Any accumulated water must be removed prior to the placement of concrete. If the pier hole has been cased, sufficient concrete should remain in the casing as the casing is withdrawn to prevent any discontinuities from forming within the concrete section. A hopper and 'tremie' should be utilized during concrete placement to control the maximum free fall of the wet concrete to less than 10 feet. Additionally, concrete placed in drilled piers should not be placed at slumps less than 6 inches unless it is consolidated full depth with a vibrator or by other means. Concrete placed in piers at a slump less than 5 inches increases the potential for honeycombing. All free water should be removed from the top of the pier following the removal of the casing to assure that only fresh concrete is in the pier hole at completion. For a given pier, excavation, steel reinforcement, and concrete placement should be completed within one working day.

FLOOR SLAB: If some differential movements can be tolerated, a soil supported floor slab may be used in conjunction with the drilled pier foundation. The slab-on-grade should be supported on a minimum 3 feet of select fill to provide a PVR of about 1 inch. Based upon the assumed floor slab live loads a minimum 5-inch thick concrete slab reinforced with at least #4 rebar 18 inches on center, each way, placed mid-height within the floor slab is recommended due to the underlying expansive soils. The structural engineer should provide the actual floor slab design based upon the remaining expansive soils and the anticipated equipment loads in the building.

PERIMETER MOISTURE CONTROL: Proper design of a foundation in expansive soils must include perimeter surface moisture control. Basically, soils experience volume changes when allowed to dry or when allowed access to moisture. Thus, if the soil moisture content remains constant, soil volume changes will be minimal. In reality, it is difficult to prevent seasonal soil-moisture fluctuations, but these moisture changes can be limited.

Proper grading and drainage around the foundation to prevent ponding of water is essential from construction through the life of the structure. Outlets for gutter systems must empty either into storm drains or onto paved surfaces to allow for quick discharge of water away from the area. Paving and sidewalk surfaces should extend to the building line where possible to serve as a barrier to soil moisture evaporation and infiltration. With proper site grading the less permeable fill will assist in shedding rain water away from the structure reducing the potential for water seepage below the structure which can cause additional swell.

FOUNDATION CONSTRUCTION RECOMMENDATIONS

SITE CLEARING/STRIPPING: Initial site preparation will require the removal of the 4 to 6 inches of moderately organic topsoil present across the site. Deeper organic removal will be necessary in areas of the site due to the removal of the rootballs from the trees present on the site. Removal depths should be verified in the field by a representative of the geotechnical engineer at the time of site grading based upon the subgrade soils and the subgrade stability.

BUILDING PAD PREPARATION: It is understood that excavation depths of 25 to 30 feet will be required to connect to the existing water line from the clearwell to the new facility. These excavations will be beneath the proposed structure. The material from the excavation may be stockpiled for re-use. Following pipe placement, the excavation may be backfilled with properly compacted on-site soils up to minus 3 feet of subgrade elevation. These soils should be moisture conditioned to within ±2 percent of optimum moisture and compacted to a minimum 100 percent of maximum dry density of Standard Proctor (ASTM D 698). The compacted soils should be placed in maximum 6 inch compacted lifts. The upper 3 feet of the building pad fill should meet the select fill criteria.

SELECT FILL: Select fill should be used within the upper three feet of the building pad backfill beneath the floor slab. Select fill should also be used in the leave-out backfill next to the tilt-walls. The select fill should consist of soil materials with sufficient plastic fines to minimize water transmission. The soils should be free of organics and other deleterious materials and should have a maximum liquid limit of 30, a plasticity index no less than 5 and no greater than 15, and have a maximum particle size of 2 inches. The select fill should also meet the USCS classification of SC, GC or CL. The structural fill should be compacted to a minimum 95 percent Standard Proctor within ±2 percent of optimum moisture content. The select fill should be placed in maximum 6 inch compacted lifts. A portion of the soils tested meet the select fill criteria.

VAPOR BARRIER: A vapor barrier such as polyethylene sheeting should be placed below the floor slab in moisture sensitive areas and where the floor will be covered with moisture sensitive materials. If the subgrade underlying the vapor barrier contains sharp or angled particles, a layer of cushion sand (approximately 1 to 2 inches thick) could be placed in contact with the sheet to provide protection against puncture.

FOUNDATION EXCAVATION: Excavations should be observed by the geotechnical consultant to make sure that the proper bearing material has been reached in accordance with the recommendations given herein. The excavations should be checked for size and observed to make sure that all loose material has been removed prior to concrete placement. Prompt placement of the concrete following building pad preparation is strongly recommended.

UTILITIES: Evidence of underground utilities was present across the site. Prior to construction all underground utilities should be located and, if present in the construction area, permanently capped and removed at the property line or rerouted around the proposed structure to preserve their function. Special attention should be performed in evaluating the backfill of utilities that will remain which may not be suitable for support of the proposed structure. The soils should be removed and recompacted as described herein if found unsuitable. A representative of the geotechnical engineer should make this determination during construction.

Granular material or "buckshot" should not be used to backfill new utility lines entering or beneath the building. If utilized, the granular material could provide a conduit for water to travel beneath the building and cause the underlying soils to swell and potentially heave the slab. A utility trench "plug" should be provided for all utility trenches entering the building footprint including electrical, gas, water and sewer, etc. The plug should extend a minimum 2 feet beyond the footing, each way, and from the bottom of the trench to the surface. The plug should be constructed of low permeable higher plasticity clays or a lean concrete. Utility excavations through the select fill pad beneath the structure shall be backfilled with select fill and compacted as specified for the building pad.

FOUNDATION CONSTRUCTION CONSIDERATIONS

WET WEATHER: If construction is performed during wet weather, disking or windrowing of the top 6 inches of wet unsuitable soils beneath structural areas may be necessary in order to dry out the soil. Following soils removal to a stable subgrade the excavated soils could be air-dried and reused. Mechanical stabilization through the use of a crushed limestone flex-base material "working mat" could also be considered. The actual depths and stabilization methods should be confirmed through continuous testing under the observation of a representative of the geotechnical engineer.

EXCAVATION SAFETY: All excavations should be in accordance with local and federal (OSHA) regulations and the trench safety plan. If instability problems occur, stability within the excavations should be maintained by flattening or widening slope sidewalls. In addition, the on-site soils are susceptible to erosion and disturbance by flowing water and construction traffic. If these soils are disturbed by construction traffic and excessive moisture they may become unstable. The site should therefore be graded to prevent water from ponding near the new foundation and running into excavations.

GENERAL: Many problems can be avoided or solved in the field if proper inspection and testing services are provided. eHT should be retained to perform testing and construction observation services sufficient to verify compliance with our recommendations. It is recommended that the site preparation, foundation, and floor slab construction be monitored by the geotechnical engineer or his representative. The following are recommended minimum sampling and testing frequencies.

EARTHWORK: During the earthwork phase of the project at least one Proctor test, Atterberg limits test, and minus 200 sieve test should be performed per soil type for subgrade, backfill, and fill materials. In the building area, at least 1 density and moisture content test per 2,500 square feet should be performed on the subgrade soils, and at least 1 density and moisture content test per 2,500 square feet should be performed for each compacted 6-inch thickness of fill. Testing of backfilled trenches should be at least 1 density and moisture content test per 100 linear feet of trench per 6 inch compacted lift thickness.

CONCRETE: At least 1 slump, air content (if required) and temperature test, and at least 1 set of 3 concrete cylinders should be molded for each type of concrete per 100 cubic yards or fraction thereof placed in a day. Each set of cylinders should be tested for compressive strength with 1 of the cylinders tested at 7 days and 2 of the cylinders tested at 28 days.

DRILLED PIER INSPECTION: Detailed inspection of pier construction should be performed by a representative of the geotechnical engineer to verify that the piers are vertical and founded in the proper bearing stratum, and to verify that all loose materials have been removed prior to concrete placement.

ENPROTEC, INC.

EXPLANATION OF SYMBOLS AND TERMS USED ON BORING LOGS

Water Encountered — Water Level Encountered During Drilling

Static Level (date) — Stabilized Water Level

UNIFIED SOIL CLASSIFICATION DESCRIPTION OF SYMBOLS AND DIVISIONS

- Well-Graded Gravels, Gravel Sand Mixtures (GW)
- Poorly-Graded Gravels, Gravel Sand Mixtures (GP)
- Silty Gravel, Gravel Sand-Silt Mixtures (GM)
- Clayey Gravels, Gravel-Sand-Clay Mixtures (GC)
- Well-Graded Sands, Gravelly Sands (SW)
- Poorly-Graded Sands, Gravelly Sands (SP)
- Silty Sands, Poorly-Graded, Sand-Silt Mixtures (SM)
- Clayey Sands, Poorly-Graded, Sand-Clay Mixtures (SC)
- Inorganic Silts and Very Fine Sands, Silty or Clayey Fine Sands (ML)
- Inorganic Clays of Low to Medium Plasticity Gravelly, Sandy or Silty Clays, Lean Clays (CL)
- Organic Silts and Organic Silty Clays of Low Plasticity (OL)
- Inorganic Silts, Micaceous or Diatomaceous Fine Sandy or Silty Soils (MH)
- Inorganic Clays of High Plasticity, Fat Clays (CH)
- Organic Clays of Medium to High Plasticity, Organic Silts (OH)
- Caliche and Other Impervious Layer (HP)

BEDROCK SYMBOLS

- Conglomerate (CGL)
- Sandstone (SS)
- Limestone (LS)
- Shale (Sh)
- Weathered Shale (WS)
- Sandy Shale (SSh)
- Shaley Limestone (Sh LS)
- Dolomite (DOL)

MISCELLANEOUS SYMBOLS

- Asphaltic Concrete (HMAC)
- Cement Grout (CMT)
- Bentonite (BENT)

The LOG of BORING is a representation of the subsurface material at specific boring location and within the depth explored. The transition between strata may be gradual and variations in material types and depths between borings can be expected. Water level observations represent those conditions at the time of exploration and may vary with time and location of site.

SOIL COLOR CLASSIFICATION
Determined by
MUNSELL SOIL COLOR CHARTS
1990 EDITION REVISED

GENERAL NOTES

SAMPLE IDENTIFICATION

Soil Samples are visually classified in general accordance with the Unified Soil Classification System (ASTM D2487 or D 2488)

DRILLING AND SAMPLING SYMBOLS

ST:	Shelby Tube - 3" O.D., except where noted
SS:	Split-Spoon
THD:	THD Cone Penetrometer
AU:	Auger Sample
DB:	Diamond Bit
CB:	Carbide Bit
WS:	Wash Sample

SOIL PROPERTY SYMBOLS

N:	Standard "N" penetration: Blows per foot, or fraction thereof, of a 140 pound hammer 30 inches on a split-spoon
Qp:	Calibrated Penetrometer Resistence, TSF
Qu:	Unconfined Compression Strength, TSF
LL:	Liquid Limit, %
PI:	Plasticity Index

SOIL STRENGTH CHARACTERISTICS

NON-COHESIVE (GRANULAR) SOILS

RELATIVE DENSITY	BLOWS PER FOOT(N)
Very Loose	0-4
Loose	5-10
Firm	11-30
Dense	31-50
Very Dense	51 +

COHESIVE (CLAYEY) SOILS

COMPARATIVE CONSISTENCY	BLOWS PER FOOT(N)	UNCONFINED COMPRESSIVE STRENGTH (Qu)
Very Soft	0-2	0 - 0.25
Soft	3-4	0.25 - 0.50
Medium Stiff	5-8	0.50 - 1.00
Stiff	9-15	1.00 - 2.00
Very Stiff	16-30	2.00 - 4.00
Hard	31 +	4.00 +

SOIL CHARACTERISTICS

PARTICLE SIZE

Boulders	8 in. +	Coarse Sand	5mm-0.6 mm	Silt	0.074mm-.005mm
Cobbles	8 in.-3 in.	Medium Sand	0.6mm-0.2mm	Clay	-0.005mm
Gravel	3 in.-5mm	Fine Sand	0.2mm-0.074 mm		

DEGREE OF EXPANSIVE POTENTIAL	PI
Low	0-15
Moderate	15-25
High	25 +

DEGREE OF PLASTICITY	PI
None to Slight	0-4
Slight	5-10
Moderate	11-30
High	31 +

PART 2
TECHNICAL SPECIFICATIONS

SECTION 01010

SUMMARY OF WORK

PART 1 GENERAL

1.1 SECTION INCLUDES:

A. Contract Description:

1. Construction of new potable water mains using material selected by the Owner.

2. Coordination with contractor(s) constructing the associated Transfer Pump Station and Elevated Storage Tank for completion and startup of interdependent components of the work.

3. Scope Includes:

a. Approximately 18,000 linear feet of 30" and approximately 50,000 linear feet of 24" DR-21 PVC potable water main.

b. All related work including clearing and grubbing, excavation, bedding and backfill, fittings, valves and appurtenances, trench safety systems, traffic control systems, interconnections, testing, disinfection, stormwater pollution controls, surface restoration, and all other related work as specified in the Drawings and Technical Specifications.

1.2 CONTRACTOR USE OF SITE:

A. WPP Site may be used as follows:

1. Site is available for Contractor's use; ample space is available.

2. Contractor shall keep all construction activities on Owner's property or within Owner's easements and/or rights of ways.

B. Comply with Owner's Security protocols.

1. Provide names and photographs of any Contractor or Sub-Contractor personnel who will be at the project site.

2. Administration and maintenance buildings are OFF LIMITS unless accompanied by the Owner.

3. Contractor and its sub-contractor(s) / vendor(s) shall use the back gate for site access. Provide and maintain access security.

4. Contractor's personnel, including sub-contractors and vendors, shall attend the Owner's chlorine and ammonia safety awareness class prior to working on-site.

C. Limit use of existing facilities to allow:

1. Uninterrupted delivery of potable water from the Midland WPP and existing water distribution system. Short interruptions necessary for tie-ins of the new pipeline(s) shall be coordinated a minimum of 48 hours in advance with Owner and Engineer.

D. Contractor shall comply with the terms and conditions of the U.S. Army Corps of Engineers Nationwide Permit 12 for Utility Line Activities (SWF-2016-00259).

E. Pipeline route crosses and parallels existing overhead electric transmission lines owned by Oncor. Contractor shall notify and coordinate with utility owners a minimum of 72 hours in advance of construction in or adjacent to existing facilities. Utility owners may require their personnel to be on-site during construction.

F. Pipeline route crosses and parallels multiple existing underground petroleum and natural gas product transmission lines. Contractor shall notify and coordinate with utility owners a minimum of 72 hours in advance of construction in or adjacent to existing facilities. Utility owners may require their personnel to be on-site during construction.

1.3 LANDOWNERS ASSOCIATED WITH PIPELINE ROUTE:

A. Contractor shall confine work to within designated easements, respect private land owner property during the course of the project, and comply with the requirements of the easements during construction.

B. The following table depicts the landowners along the pipeline route with their contact information:

Landowners and Contact Information

Landowner Entity	ID	Contact Name	Mailing Address	Phone #
City of Midland	1	Carl Craigo	P.O. Box 1152, Midland, TX 79702	(432) 685-7937
Western T Corporation	2	J. David Donnell	P.O. Box 10911, Midland, TX 79702	(432) 638-7036
Occidental Permian, LTD	3	Cody Wilbanks	6001 Deauville Blvd, Midland, TX 79706	(432) 553-0685
Shanendoaha Bar M Ranch	4	Troy G. Martin	6500 NCR 1150, Midland, TX 79705	(432) 238-5590
Jones Brothers Dirt and Paving	5	Stacey Bryant	1401 S Grandview Ave, Odessa, TX 79761	(432) 631-0614

END OF SECTION

SECTION 01019

CONTRACT CONSIDERATIONS

PART 1 GENERAL

1.1 SECTION INCLUDES:

A. Materials Testing.

B. Schedule of Values.

C. Order of Construction and Construction Schedule

D. Application for Payment.

E. Change Procedures.

F. Measurement and Payment.

1.2 MATERIALS TESTING:

A. Engineer will engage a recognized construction materials testing firm.

B. Contractor shall be responsible for:

1. Costs of incidental labor and facilities required to assist testing firm.

2. Costs of testing laboratory services used by Contractor separate from Contract Document or Owner requirements.

3. Costs of retesting upon failure of previous tests as determined by Engineer.

1.3 SCHEDULE OF VALUES:

A. Submit a printed schedule on EJCDC C-620. Contractor's standard form or electronic media printout will be considered.

B. Where a Contract includes items bid on a lump sum basis, the Contractor shall file with the Engineer a balanced price segregation of his lump sum bid into items similar to the various subdivisions of the general and detailed specifications, the sum of which shall equal the lump sum bid. Provide in accordance with Article 2, Paragraph 2.05 of the General Conditions.

1. The cost of various materials shall be furnished upon request of the Engineer, and such data will then be used as a basis for making progress estimates.

2. Breakdown cost itemized Specification Section by trade, and distribute cost to individual applicable units and structures.

3. Where structures, units, equipment or other components are identified by a specific series or, identification number, utilize said designation throughout cost breakdown.

4. Provide detailed breakdown for individual yard piping or conduit runs and identify approximate quantities involved to satisfaction of the Engineer.

5. Provide separate breakdown for change order items requested.

6. The detail and format of cost breakdown and stored materials tabulation sheet shall be fully approved by Engineer.

7. Use EJCDC 1910-8-E, or equivalent.

C. A reasonable allocation of the Contract Price to the component parts of the Work will be approved if component parts of the Work have values assigned to them that are well-balanced with respect to relative values for similar work established by published estimating guides.

1. Unless otherwise agreed to at the Preconstruction Conference, Means Estimator Guide or other similar nationally recognized estimating guide shall be used for resolving differences between Engineer's and Contractor's opinions of allocation of values.

2. Consent of Surety: If Contractor and Engineer cannot mutually agree on a Schedule of Values, Engineer will approve a Schedule of Values approved by the Surety providing the Performance Bond.

D. Contractor's costs shall not govern the allocation of values when application of Contractor's costs to a component part of the Work results in any other component part or combination of component parts being under-valued in relation to conventional estimating guides.

E. Schedule of Values shall be agreed upon prior to first Application for Payment.

1.4 ORDER OF CONSTRUCTION AND CONSTRUCTION SCHEDULE:

A. In accordance with Article 2, Paragraph 2.05 of the General Conditions, submit for approval a critical path type baseline schedule.

1. Account for schedule of Subcontracts.

2. Include proper sequence of construction, various crafts, purchasing time, Shop Drawing approval, material delivery, equipment fabrication, start-up, demonstration, and similar time consuming factors.

3. Show on schedule as a minimum, earliest starting, earliest completion, latest starting, latest finish, and free and total float for each task or item.

4. Critical Path Method Network Analysis:

a. Application software: Microsoft Project or Primavera.

b. Do not utilize or incorporate date or time constraints or other constraints that corrupt the CPM mathematical model.

i The following CPM schedule outputs will be rejected without further review:

- Schedules indicating the start of the critical path at a date point beyond the "Start Date."
- Schedules with multiple critical paths.
- Schedules indicating a completion date beyond the contractual completion date.

c. Show the order and interdependence of activities.

i The start of an activity shall be dependent on the completion of a preceding activity(ies), with Notice to Proceed being the initial activity.

ii Limit activities to a maximum of 20 days.

iii Network analysis diagram shall flow left to right.

d. Critical (path) activities are defined to have zero (0) total float.

e. Do not use leads and lags in lieu of an activity description such as "concrete cure time."

i When lags are necessary, they shall not have a negative value.

5. Provide the electronic native file on compact disc along with two (2) paper copies printed in color.

B. Evaluate schedule no less than monthly.

1. Update, correct, and rerun schedule and submit to Engineer with pay application to show rescheduling necessary to reflect true job conditions.

2. When shortening of various time intervals is necessary to correct for behind schedule conditions, indicate actions to implement to accomplish work in shorter duration.

3. Information shall be submitted to Engineer in writing with revised schedule.

4. Default progress data disallowed:

a. Actual start and finish dates shall not be automatically updated by default mechanisms that may be included in the CPM scheduling software system.

i Actual start and actual finish dates on the CPM schedule shall be reported.

b. Work activities will be updated by actual work progression rather than being cash flow driven.

i The updating of the percent complete and the remaining duration of any activity shall be independent functions:

- Program features that calculate one of these parameters from the other shall be disabled.

- Out-of-sequence progress (if applicable) shall be handled through retained logic, not the default option of progress override.

5. Submit electronic native files on compact disc along with two (2) paper copies printed in color.

C. If Contractor does not take necessary action to accomplish work according to schedule, Contractor may be ordered by Owner in writing to take necessary and timely action to improve work progress.

1. Owner may require increased work forces, extra equipment, extra shifts or other action as necessary.

2. Should Contractor refuse or neglect to take such action authorized, under provisions of this contract, Owner may take necessary actions including, but not necessarily limited to, withholding of payment and termination of Contract.

D. Upon receipt of approved "Work Schedule," within 10 days, submit to Engineer a cost-loaded schedule (electronically) and an estimated payment schedule by each month of project duration.

1. Include a composite curve to show estimated value of work complete and stored materials less specified retainage.

2. Establish key months when work will be 50, 80, 90, and 100 percent complete.

3. During the course of work, update with new composite curves at key months or whenever variation is expected to be more than plus or minus 10 percent.

4. Retain original or previous composite curves as dashed curves on all updates.

5. Include a heavy plotted curve to show ACTUAL payment curve on all updates.

E. Provide four-week look-ahead schedules every four (4) weeks.

1.5 APPLICATIONS FOR PAYMENT:

A. Contractor's electronic media driven form or EJCDC C-620.

B. Content and Format: Utilize Schedule of Values for listing items in Application for Payment.

C. Payment Period: Submit by end of each month.

D. Include executed Contractor Affidavit for Partial Payment with each Application for Payment.

E. Submit certification by Contractor of Labor Standards compliance with each Application for Payment.

1.6 CHANGE PROCEDURES:

A. The Engineer will advise of minor changes in the Work not involving an adjustment to Contract Sum/Price or Contract Time by issuing supplemental instructions in writing.

B. The Engineer may issue a Notice of Change which includes a detailed description of a proposed change with supplementary or revised Drawings and Specifications, a change in contract time for executing the change and the period of time during which the requested price will be considered valid. Contractor will prepare and submit an estimate within 10 days.

C. The Contractor may propose changes by submitting a request for change to the Engineer, describing the proposed change and its full effect on the Work. Include a statement describing the reason for the change, and the effect on the Contract Sum/Price and Contract Time with full documentation. Document any requested substitutions in accordance with Section 01600.

D. Stipulated Sum/Price Change Order: Based on Notice of Change and Contractor's fixed price quotation or Contractor's request for a Change Order as approved by Engineer.

E. Work Directive Change: Engineer may issue a directive, on EJCDC C-940 Work Directive Change signed by the Owner, instructing the Contractor to proceed with a change in the Work, for subsequent inclusion in a Change Order. Document will describe changes in the Work, and designate method of determining any change in Contract Sum/Price or Contract Time. Promptly execute the change.

F. Change Order Forms: EJCDC C-941 or Engineer’s standard electronic media driven form.

G. Execution of Change Orders: Engineer will issue Change Orders for signatures of parties as provided in the Conditions of the Contract, including a TWDB representative.

1.7 MEASUREMENT AND PAYMENT:

A. Authority: Work under this Contractor shall be measured by the Item Unit or Lump Sum Price as indicated on the Bid Schedule or Schedule of Values. Where the Item Lump Sum Price applies, the work will be considered as a complete installation as shown and specified.

Unit Quantities: Quantities and measurements indicated in the Bid Form are for contract purposes only. Quantities and measurements supplied or placed in the Work shall determine payment. The bid price for any Unit Price method item shall be in effect for any actual quantity encountered within plus or minus 25 percent of the estimated quantity. Payment or adjustment for quantities greater than plus or minus 25 percent will be subject to negotiation.

B. Payment Includes: Full compensation for required labor, Products, tools, equipment, plant, transportation, services and incidentals; erection, application or installation of an item of the Work; overhead and profit.

C. Defect Assessment: Replace the Work, or portions of the Work, not conforming to specified requirements. If, in the opinion of the Engineer, it is not practical to remove and replace the Work, the Engineer will direct an appropriate remedy or adjust payment.

END OF SECTION

SECTION 01039

COORDINATION AND MEETINGS

PART 1 GENERAL

1.1 SECTION INCLUDES:

A. Coordination.

B. Field Engineering.

C. Preconstruction Meeting.

D. Progress Meetings.

1.2 COORDINATION:

A. Coordinate scheduling, submittal, and Work of the various sections of the Project Manual to assure efficient and orderly sequence of installation of interdependent construction elements.

B. Coordinate completion and clean up of Work of separate sections in preparation for Substantial Completion.

C. After Owner occupancy of premises, coordinate access to site for correction of defective Work and Work not in accordance with Contract Documents, to minimize disruption of Owner's activities.

1.3 FIELD ENGINEERING:

A. Engineer will locate survey control and reference points.

B. Control datum for survey is that shown on Drawings.

C. Contractor to verify set-backs and easements, confirm drawing dimensions and elevations.

D. Contractor to provide field engineering services as required to support his work. Establish elevations, lines, and levels, utilizing recognized engineering survey practices.

1.4 PRECONSTRUCTION MEETING:

A. Engineer will schedule a meeting after Notice of Award.

B. Attendance Required: Owner, Engineer, and Contractor.

C. Agenda:

1. Distribution of Owner-Contractor Agreement / Contract Document.

2. Submission of executed bonds and insurance certificates.

3. Submission of list of Subcontractors, list of Products, schedule of values, and progress schedule.

4. Designation of personnel representing the parties in Contract, and the Engineer.

5. Procedures and processing of field decisions, submittal, substitutions, applications for payments, proposal request, Change Orders, and Contract closeout procedures.

6. Scheduling.

7. Coordination with other agencies/organizations.

8. Scheduling activities of a Geotechnical Engineer.

D. Engineer to record minutes and distribute copies after meeting to participants.

1.5 PROGRESS MEETINGS:

A. The Engineer will arrange and conduct monthly Progress Meetings (Construction Status Meetings). The Engineer will prepare an agenda for these meetings and will conduct the meetings.

B. The purpose of these meetings will be to facilitate the work of the Contractor and any subcontractors, resolve conflicts, identify and resolve any potential delays or necessary changes in the work, and in general coordinate and facilitate the execution of the work.

C. The Construction schedule is required to be updated and presented at these meetings.

D. The Contractor shall bring up-to-date record drawings to each meeting.

PART 2 PRODUCTS

Not used.

PART 3 EXECUTION

Not used.

END OF SECTION

SECTION 01300

SUBMITTALS

PART 1 GENERAL

1.1 SECTION INCLUDES:

A. Submittal Procedures.

B. Construction Progress Schedules.

C. Shop Drawings.

D. Product Data.

E. Manufacturer's Installation Instructions.

F. Manufacturers' Certificates.

1.2 SUBMITTAL PROCEDURES:

A. Transmit each submittal with Engineer accepted form.

B. Sequentially number the transmittal form. Revise submittals with original number and a sequential alphabetic suffix.

C. Each submittal shall be limited to a single specification section or material topic. Where equipment packages, assemblies, and the like are interrelated, the submittals should be provided together facilitating review of the Contractor’s purposed offering. When related portions of an equipment package or system are not provided, the submittals may be returned without review.

D. Identify Project, Contractor, Subcontractor or supplier; pertinent Drawing and detail number, and Specification section number, as appropriate.

E. Apply Contractor's stamp, signed or initialed, certifying that review, verification of Products required, field dimensions, adjacent construction Work, and coordination of information, is in accordance with the requirements of the Work and Contract Documents.

F. Schedule submittals to expedite the Project, and deliver to Engineer at business address. Coordinate submission of related items.

G. For each submittal for review, allow 20 days excluding delivery time to and from the Contractor.

H. Identify variations from Contract Documents and Product or system limitations which may be detrimental to successful performance of the completed Work.

I. Provide space for Contractor and Engineer review stamps.

J. Revise and resubmit, identify all changes made since previous submission.

K. Distribute copies of reviewed submittals as appropriate. Instruct parties to promptly report any inability to comply with provisions.

L. Submittals not requested will not be recognized or processed.

1.3 CONSTRUCTION PROGRESS SCHEDULES:

A. Submit initial schedule in duplicate within 20 days after date established in Notice to Proceed.

B. Revise and resubmit as required.

C. Submit revised schedules with each Application for Payment, identifying changes since previous version.

D. Submit a horizontal bar chart with separate line for each major section of Work or operation, identifying first work day of each week.

E. Indicate estimated percentage of completion for each item of Work on each Application for Payment submission.

1.4 SHOP DRAWINGS:

A. Submit the number of reproductions which Contractor requires, plus three copies which will be retained by Engineer.

B. Shop Drawings: Submit for review. After review, produce copies and distribute in accordance with the SUBMITTAL PROCEDURES article above and for record documents purposes described in Section 01700--CONTRACT CLOSEOUT.

1.5 PRODUCT DATA:

A. Submit the number of copies which the Contractor requires, plus three copies which will be retained by the Engineer.

B. Mark each copy to identify applicable products, models, options, and other data. Supplement manufacturers' standard data to provide information unique to this Project.

C. After review, distribute in accordance with the Submittal Procedures article above and provide copies for record documents described in Section 01700 - CONTRACT CLOSEOUT.

1.6 MANUFACTURER INSTALLATION INSTRUCTIONS:

A. When specified in individual Specification sections, submit printed instructions for delivery, storage, assembly, installation, start-up, adjusting, and operating, to Engineer in quantities specified for Product Data.

1.7 MANUFACTURER OPERATION AND MAINTENANCE INSTRUCTIONS:

A. When specified in individual specification sections, submit printed instructions for operations and maintenance (O&M), to Engineer, in quantities specified for Product Data.

B. O&M information shall include but not necessarily be limited to parts lists, disassembly drawings, electrical schematics, and other information required for proper operation and maintenance.

1.8 MANUFACTURER CERTIFICATES:

A. When specified in individual Specification sections, submit certification by manufacturer to Engineer, in quantities specified for Product Data.

B. Indicate material or Product conforms to or exceeds specified requirements. Submit supporting reference data, affidavits, and certifications as appropriate.

C. Certificates may be recent or previous test results on material or Product, but must be acceptable to Engineer.

PART 2 PRODUCTS

Not used.

PART 3 EXECUTION

Not used.

END OF SECTION

SECTION 01400

QUALITY CONTROL

PART 1 GENERAL

1.1 SECTION INCLUDES:

A. Quality Assurance--Control of Installation.

B. Tolerances.

C. References.

D. Testing Laboratory Services.

E. Manufacturers' Field Services and Reports.

1.2 QUALITY ASSURANCE--CONTROL OF INSTALLATION:

A. Monitor quality control over suppliers, manufacturers, Products, services, site conditions, and workmanship, to produce Work of specified quality.

B. Comply with manufacturers' instructions, including each step in sequence.

C. Should manufacturers' instructions conflict with Contract Documents, request clarification from Engineer before proceeding.

D. Comply with specified standards as minimum quality for the Work except where more stringent tolerances, codes, or specified requirements indicate higher standards or more precise workmanship.

E. Perform Work by persons qualified to produce workmanship of specified quality.

F. Secure Products in place with positive anchorage devices designed and sized to withstand stresses, vibration, physical distortion, or disfigurement.

1.3 TOLERANCES:

A. Monitor tolerance control of installed Products to produce acceptable Work. Do not permit tolerances to accumulate.

B. Comply with manufacturers' tolerances. Should manufacturers' tolerances conflict with Contract Documents, request clarification from Engineer before proceeding.

C. Adjust Products to appropriate dimensions; position before securing Products in place.

1.4 REFERENCES:

A. For Products or workmanship specified by association, trade, or other consensus standards, comply with requirements of the standard, except when more rigid requirements are specified or are required by applicable codes.

B. Conform to reference standard by date of issue current on date of Contract Documents, except where a specific date is established by code.

C. Obtain copies of standards where required by product Specification sections.

D. The contractual relationship, duties, and responsibilities of the parties in Contract and of the Engineer, shall not be altered from the Contract Documents by mention or inference otherwise in any reference document.

1.5 TESTING LABORATORY SERVICES:

A. Engineer will appoint and employ services of a material testing firm to perform testing.

B. The testing firm will perform tests, and other services specified in individual Specification sections and as required by the Engineer or the Owner.

C. Inspecting, testing, and source quality control may occur on or off the project site. Perform off-site inspecting or testing as required by the Engineer or the Owner.

D. Reports will be submitted by the testing firm to the Engineer and Contractor, in duplicate, indicating observations and results of tests and indicating compliance or non-compliance with Contract Documents.

E. Cooperate with testing firm; furnish samples of materials, design mix, equipment, tools, storage, safe access, and assistance by incidental labor as requested.

1. Notify Engineer and independent firm 24 hours prior to expected time for operations requiring services.

2. Make arrangements with testing firm and pay for additional samples and tests required for Contractor's use.

F. Testing or inspecting does not relieve the Contractor of his responsibility to perform Work to contract requirements.

G. Retesting required because of non-conformance to specified requirements shall be performed by the same independent firm on instructions by the Engineer. Payment for retesting shall be the Contractor's responsibility.

H. Contractor shall provide all testing services in connection with the following:

1. Concrete materials and design mixtures.

2. Masonry units, masonry grout and mortar materials and design mixtures.

1.6 MANUFACTURERS' FIELD SERVICES AND REPORTS:

A. When specified, require material or Product suppliers or manufacturers to provide qualified staff personnel to observe site conditions, conditions of surfaces and installation, quality of workmanship, start-up of equipment, as applicable, and to initiate instructions when necessary.

B. Report observations and site decisions or instructions that are supplemental or contrary to manufacturers' written instructions.

C. Submit report in duplicate within 30 days of observation to Engineer for information.

PART 2 PRODUCTS

Not used.

PART 3 EXECUTION

Not used.

END OF SECTION

SECTION 01500

CONSTRUCTION FACILITIES AND TEMPORARY CONTROLS

PART 1 GENERAL

1.1 SECTION INCLUDES:

A. Contractor's Field Office

B. Temporary Utilities: Electricity, water, and sanitary facilities.

C. Temporary Controls: Barriers, protection of the work, and water control.

D. Construction Facilities: Access roads, parking, progress cleaning, material storage areas, and project signage.

1.2 CONTRACTOR'S FIELD OFFICE:

A. Contractor to provide Field Office with Contract A, Part 1 that will be available for use with this project.

1.3 TEMPORARY ELECTRICITY:

A. Contractor to arrange for temporary construction power. Owner is responsible for paying for temporary electrical service during construction.

B. Complement existing power service capacity and characteristics as required.

C. Provide power outlets for construction operations, with branch wiring and distribution boxes located as required. Provide flexible power cords as required.

1.4 TEMPORARY WATER SERVICE:

A. Connect to existing water source for construction operations using Owner provided fire hydrant meter.

A. Owner will pay cost of water used. Exercise measures to conserve water.

1.5 TEMPORARY SANITARY FACILITIES:

A. Provide and maintain required facilities and enclosures.

1.6 BARRIERS:

A. Provide barriers to prevent unauthorized entry to construction areas and to protect existing facilities and adjacent properties from damage from construction operations.

B. Protect non-owned vehicular traffic, stored materials, site, and structures from damage.

1.7 WATER CONTROL:

A. Grade site to drain. Maintain excavations free of water. Provide, operate, and maintain pumping equipment.

B. Protect site from puddles or running water. Provide water barriers as required to protect site from soil erosion.

1.8 PROTECTION OF INSTALLED WORK:

A. Protect installed work and provide special protection where specified in individual specification sections.

B. Provide temporary and removable protection for installed products. Control activity in immediate work area to prevent damage.

1.9 ACCESS ROADS:

A. Construct and maintain temporary roads accessing public thoroughfares to serve construction area.

B. Extend and relocate as work progress requires. Provide detours necessary for unimpeded traffic flow.

C. Provide and maintain access to fire hydrants, free of obstructions.

D. Provide means of removing mud from vehicle wheels before entering streets.

1.10 PARKING:

A. Arrange for temporary surface parking areas to accommodate construction personnel.

B. When site space is not adequate, provide additional off-site parking.

1.11 PROGRESS CLEANING AND WASTE REMOVAL:

A. Maintain areas free of waste materials, debris, and rubbish. Maintain site in a clean and orderly condition.

B. Collect and remove waste materials, debris, and rubbish from site periodically and dispose off-site.

1.12 REMOVAL OF UTILITES, FACILITIES, AND CONTROLS:

A. Remove temporary utilities, equipment, facilities, and materials prior to final inspection.

B. Remove underground installations to a minimum depth of 2 feet. Grade site as indicated.

C. Clean and repair damage caused by installation or use of temporary work.

D. Restore existing facilities used during construction to original condition. Restore permanent facilities used during construction to specified condition.

SECTION 01564

STORM WATER POLLUTION PREVENTION DURING CONSTRUCTION

PART 1 GENERAL

1.1 SECTION INCLUDES:

A. Shared Storm Water Pollution Prevention Plan (SWP3)

1.2 REFERENCES:

A. Texas Pollutant Discharge Elimination System (TPDES) General Permit No. TXR150000, administered by the Texas Commission of Environmental Quality (TCEQ).

1.3 DEFINITIONS:

A. All definitions per Part I, Section B, Texas Pollutant Discharge Elimination System (TPDES) General Permit No. TXR150000 (TPDES General Permit).

B. CONTRACTOR: Primary Operator, as defined in the TPDES General Permit.

C. OWNER: Primary Operator, as defined in the TPDES General Permit.

D. Shared SWP3: as described in TPDES General Permit, Part III, Section A.

E. NOI – Notice of Intent.

F. NOT – Notice of Termination.

1.1 SUBMITTALS:

A. Procedures for Submittals: Section 01300.

B. Submit Shared SWP3 for signature by CONTRACTOR and OWNER at Pre-Construction Meeting.

PART 2 PRODUCTS

Not used.

PART 3 EXECUTION

3.1 SHARED STORM WATER POLLUTION PREVENTION PLAN (SWP3):

A. A Shared SWP3 is required for this project. The CONTRACTOR and OWNER shall share one SWP3.

B. CONTRACTOR shall prepare and implement a single, comprehensive SWP3 for the entire construction site in accordance with TPDES General Permit at CONTRACTOR's expense.

1. CONTRACTOR shall clearly list all Operators in the Shared SWP3, including themselves and the OWNER as Primary Operators, and any other Operators participating in the shared SWP3.

2. In the Shared SWP3, the CONTRACTOR must clearly state the following:

   a. The CONTRACTOR has day-to-day operational control of those activities at a construction site that are necessary to ensure compliance with the shared SWP3;

   b. The OWNER has the ability to make modifications to the construction plans and specifications; and

   c. The OWNER has no responsibilities regarding implementation of the SWP3 unless CONTRACTOR fails to perform and complete contractual obligations.

3. The CONTRACTOR shall provide a signature page, in accordance with TPDES General Permit Part III, Section A.1, for the Shared SWP3 to the OWNER at the Pre-Construction Meeting.

4. CONTRACTOR shall prepare, certify, and post the Construction Site Notice in accordance with the applicable section of the TPDES General Permit.

5. If applicable, the CONTRATOR shall submit the Construction Site Notice to operator(s) of any municipal separate sewer system (MS4), in accordance with TPDES General Permit, Part II, Section E.2(c). CONTRACTOR shall determine applicability of this Section.

1.1 NOTICE OF INTENT (NOI):

A. CONTRACTOR shall submit a copy of CONTRACTOR's Notice of Intent (NOI) to OWNER at the Pre-Construction Meeting.

B. CONTRACTOR shall submit CONTRACTOR's NOI to TCEQ in accordance with TPDES General Permit, Part II, Section E.3(b), at least seven (7) days prior to commencing construction activities, or if utilizing electronic submittal, prior to commencing construction, at CONTRACTOR's expense.

1.2 TERMINATION OF GENERAL PERMIT COVERAGE:

A. Within 30 days of meeting any of the conditions in TPDES General Permit, Part II, Section F.3(b), the CONTRACTOR shall:

1. Remove the Construction Site Notices;

2. Complete the applicable portion of the Construction Site Notices related to removal; and

3. Submit the completed Construction Site Notices to the operator(s) if any MS4 receiving the discharge.

B. CONTRACTOR shall submit CONTRACTOR's NOT as required by the TPDES General Permit.

END OF SECTION

SECTION 01600

MATERIAL AND EQUIPMENT

PART 1 GENERAL

1.1 SECTION INCLUDES:

A. Transportation and Handling.

B. Storage and Protection.

C. Product Options.

D. Substitutions.

E. Storage Facilities.

F. Field Quality Control

1.2 TRANSPORTATION AND HANDLING:

A. Schedule delivery of products or equipment as required to allow timely installation and to avoid prolonged storage.

B. Transport and handle products in accordance with manufacturer's instructions.

C. Promptly inspect shipments to ensure that products comply with requirements, quantities are correct, and products are undamaged.

D. Provide equipment and personnel to handle products by methods to prevent soiling, disfigurement, or damage.

E. Pipe to be transported with exposed ends tarped to prevent accumulation of airborne contaminates during transport.

1.3 STORAGE AND PROTECTION:

A. Store and protect products in accordance with manufacturer's instructions, with seals and labels intact and legible.

B. Store sensitive products in weather tight, climate controlled enclosures.

C. For exterior storage of fabricated products, place on sloped supports, above ground.

D. Provide off-site storage and protection when site does not permit on-site storage or protection.

E. Cover products subject to deterioration with impervious sheet covering. Provide ventilation to avoid condensation or potential degradation of product.

F. Store loose granular materials on solid flat surfaces in a well-drained area. Prevent mixing with foreign matter.

G. Provide equipment and personnel to store products by methods to prevent soiling, disfigurement, or damage.

H. Arrange storage of products to permit access for inspection. Periodically inspect to verify products are undamaged and are maintained in acceptable condition.

1.4 PRODUCT OPTIONS:

A. Products Specified by Reference Standards or by Description Only: Any product meeting those standards or description.

B. Products Specified by naming one or more Manufacturers: Products of manufacturers named and meeting Specifications, no options or substitutions allowed.

C. Products Specified by naming one or more Manufacturers with a Provision for Substitutions: Submit a request for substitution for any manufacturer not named in accordance with the following article. Where terms such as "or equal," "or equivalent" are used in this Contract, they shall be taken to mean "or approved equivalent." Proposed equivalents shall be offered as substitutions.

1.5 SUBSTITUTIONS:

A. Engineer will consider requests for Substitutions only within 45 days after date established in Notice to proceed.

B. Substitutions may be considered when a product becomes unavailable through no fault of the Contractor.

C. Document each request with complete data substantiating compliance of proposed Substitution with Contract Documents.

D. A request constitutes a representation that the Contractor:

1. Has investigated proposed product and determined that it meets or exceeds the quality level of the specified product.

2. Will provide the same warranty for the Substitution as for the specified product.

3. Will coordinate installation and make changes to other work which may be required for the work to be complete with no additional cost to Owner.

4. Waives claims for additional costs or time extension which may subsequently become apparent as a result of the Substitution.

E. Substitutions will not be considered when they are indicated or implied on shop drawing or product data submittals, without separate written request, or when acceptance will require revision to the Contract Documents.

F. Substitution Submittal Procedure:

1. Submit copies of request for Substitution for consideration. Number of copies as specified in Sub-Section 01300-1.5. Limit each request to one proposed Substitution.

2. Submit shop drawings, product data, and certified test results attesting to the proposed product equivalence. Burden of proof is on proposer.

3. The Engineer will notify Contractor in writing of decision to accept or reject request.

PART 2 PRODUCTS

Not used.

PART 3 EXECUTION

3.1 STORAGE FACILITIES:

A. Material staging area is located at the WPP site as shown.

1. Provide weatherproof temporary storage containers as necessary, specifically for the purpose of providing for protection of products and equipment.

a. Size containers to accommodate anticipated storage items.
b. Equip containers with lockable doors.

2. Provide methods of storage of products and equipment off the ground.

3. Return area to natural condition prior to final inspection.

3.2 FIELD QUALITY CONTROL:

A. Inspect Deliveries:

1. Inspect all products or equipment delivered to the site prior to unloading.

a. Reject all products or equipment that are damaged, used, or in any other way unsatisfactory for use on Project.

B. Monitor Storage Area: Monitor storage area to ensure suitable conditions are maintained as required by manufacturer or as appropriate for particular items.

END OF SECTION

SECTION 01650

STARTING OF SYSTEMS

PART 1 GENERAL

1.1 SECTION INCLUDES:

A. Starting Equipment Systems.

B. Demonstration and Instructions.

PART 2 PRODUCTS

Not used.

PART 3 EXECUTION

3.1 STARTING EQUIPMENT SYSTEMS:

A. Coordinate schedule for start-up of various equipment with other portions of the work that are interdependent to the start-up of this contract.

B. Notify Engineer seven days prior to start-up of each item.

C. Verify that each piece of equipment has been checked for proper lubrication, drive rotation, belt tension, control sequence, or for other conditions which may cause damage.

D. Verify that tests, meter readings, and specified electrical characteristics agree with those required by the equipment manufacturer.

E. Verify wiring and support components for equipment are complete and tested.

F. Execute start-up under supervision of applicable manufacturer's representative in accordance with manufacturers' instructions.

G. When specified in individual specification Sections, require manufacturer to provide authorized representative to be present at site to inspect, check, and approve equipment or system installation prior to start-up, and to supervise placing equipment in operation.

H. Submit a written report in accordance with Section 01400 that equipment or system has been properly installed and is functioning correctly.

3.2 DEMONSTRATION AND INSTRUCTIONS:

A. Utilize operation and maintenance manuals as basis for instruction. Review contents of manual with Owners' personnel in detail to explain all aspects of operation and maintenance.

B. Demonstrate start-up, operation, control, adjustment, trouble-shooting, servicing, maintenance, and shutdown of each item of equipment during equipment start-up services.

C. Prepare and insert additional data in operations and maintenance manuals when need for additional data becomes apparent during instruction.

D. As a minimum, the amount of time required for instruction on each item of equipment and system is that specified in individual sections.

END OF SECTION

SECTION 01700

CONTRACT CLOSEOUT

PART 1 GENERAL

1.1 SECTION INCLUDES:

A. Closeout procedures.

B. Adjusting.

C. Final Cleaning.

D. Project record documents.

E. Warranty.

F. Spare Parts and Maintenance Materials.

1.2 CLOSEOUT PROCEDURES:

A. Submit written certification that contract documents have been reviewed, work has been inspected, and that work is complete in accordance with contract documents and ready for Engineer's review.

B. Provide submittals to Engineer that are required by governing or other authorities.

C. Submit final Application for Payment identifying total adjusted Contract sum, previous payments, and sum remaining due.

D. Submit executed Affidavit of Bills paid with final Application for payment. Affidavit shall state all bills for labor, materials, and incidentals incurred in the construction of the project have been paid in full, and that there are no claims pending of which the Contractor has been notified.

1.3 ADJUSTING:

A. Adjust operating products and equipment to ensure smooth and unhindered operation.

1.4 FINAL CLEANING:

A. Execute final cleaning prior to final project assessment.

B. Clean debris from roofs, and drainage systems.

C. Clean site; sweep paved areas, rake clean landscaped surfaces.

D. Remove waste and surplus materials, rubbish, and construction facilities from the site.

1.5 PROJECT RECORD DOCUMENTS:

A. Maintain on site, one set of the following record documents; record actual revisions to the work:

1. Drawings.
2. Specifications.
3. Addenda.
4. Change Orders and other modifications to the Contract.
5. Reviewed Shop Drawings, Product Data, and Samples.
6. Manufacturer's instruction for assembly, installation, and start-up of products and equipment.

B. Ensure entries are complete and accurate, enabling future reference by Owner.

C. Store record documents separate from documents used for construction.

D. Record information concurrent with construction progress. Record Documents must be brought to monthly progress meetings for review. No pay applications will be processed until Record Documents have been reviewed for that period.

E. Specifications: Legibly mark and record at each product section description of actual products installed, including the following:

1. Manufacturer's name and product model and number.
2. Product substitutions or alternates utilized.
3. Changes made by Addenda and modifications.

F. Record Documents and shop drawings: Legibly mark each item to record actual construction including:

1. All installed improvements will be required to be located by GPS equipment once in place and prior to backfill. Equipment used must be of survey quality and able to provide accurate horizontal and vertical locations to within +/- 1 inch.

2. Survey data shall be in Texas State Plane Coordinates Central Zone NAD 83 and NAVD 88. Data shall be submitted to Engineer in AutoCAD .dwg file format and comma delimited .txt file format.

3. Surveyed locations and elevations of appurtenances, including but not limited to top of pipe every 1,000 feet, air release, air/vacuum, and blow off valves, manhole covers, in-line valves, connections, bends (horizontal and vertical) and outlets.

4. Any utilities found, not on drawings, shall be documented and submitted with as-built drawings at project closeout.

5. Field changes of dimension and detail shall be clearly marked on the drawings.

6. Details not on original contract drawings.

G. Remove Engineer title block and seal from all documents.

H. Submit documents to Engineer with claim for final Application for Payment.

1.6 WARRANTY:

A. The Contractor shall guarantee the work performed under this contract against defective materials and workmanship for a period of one year from the date of Substantial Completion or acceptance of individual work elements. The Contractor shall arrange to have his performance bond remain in effect for a period of one year after this date to cover his guarantee as stipulated under this item and in the General Conditions.

B. If defective materials and/or workmanship are discovered which require repairs made under this guarantee, all such repairs shall be done by the Contractor at his own expense within ten days after written notice of such defect. Should the Contractor fail to repair of correct such deficiency within ten days after notification, the Owner may make the necessary repairs and charge the Contractor with the applicable costs of all labor and materials required to correct the deficiency.

1.7 SPARE PARTS AND MAINTENANCE MATERIALS:

A. Provide products, spare parts, maintenance and extra materials in quantities specified in individual specification sections.

B. Deliver to project site and place in location as directed; obtain receipt prior to final payment.

PART 2 PRODUCTS

Not used.

PART 3 EXECUTION

Not used.

END OF SECTION

SECTION 02110

SITE CLEARING AND GRUBBING

PART 1 GENERAL

1.1 SECTION INCLUDES:

A. General

B. Preparation for Work.

C. Protection of Existing Features.

D. Clearing and Grubbing.

E. Debris Removal.

F. Erosion Control.

PART 2 PRODUCTS

Not used.

PART 3 EXECUTION

3.1 GENERAL:

A. Site clearing and grubbing shall consist of the removal and disposal of trees, stumps, brush, roots, vegetation, logs, rubbish and other objectionable matter from the construction area.

B. Contractor shall take care to preserve and protect all existing trees on the project site. At no time shall Contractor park vehicles or equipment or store materials within 10' of the drip-line of any existing trees.

3.2 PREPARATION FOR WORK:

A. Verify that existing plant life designated to remain, if any, is tagged or identified and protected.

B. Verify and protect survey control.

3.3 PROTECTION OF EXISTING FEATURES:

A. Locate, identify and protect from damage the utilities to remain.

B. Protect trees, plant growth and features designated to remain.

C. Protect benchmarks and survey control from damage or displacement.

3.4 CLEARING AND GRUBBING:

A. The full width of the permanent pipeline easement, and any part of the temporary construction easement requiring clearing to allow Contractor adequate working room, shall be cleared of all trees, brush, shrubbery and plants, not indicated to be preserved. Trees and brush designated to be left in place shall be carefully trimmed as directed and shall be protected from scarring, barking, or other injuries during construction operations. Pruned limbs over two inches in diameter shall be treated by painting the exposed ends with an approved asphaltic material. Stumps, roots and other objectionable materials sources are to be removed to the complete extent necessary to prevent objectionable matter from becoming mixed with the material to be used in construction.

B. Unless otherwise provided, all merchantable timber removed as previously specified shall become the property of the Contractor. It is the intent of this Specification to provide for the removal and disposal of all obstructions and objectionable materials not designated to remain.

C. Remove existing surface feature of old water line and other items shown, or described to be removed.

D. Remove trees, shrubs and other plant life within the site shown, or described to be removed. Remove trees and shrub stumps and root system to a depth of 24 inches below existing grades.

3.5 DEBRIS REMOVAL:

A. Removed material shall become the property of the Contractor.

B. Contractor shall remove debris, rock and extracted plant life from site and legally dispose; or stockpiled/disposed of on-site with written permission from landowner.

C. Copies of any agreements between Contractor and landowner shall be provided to Owner and Engineer.

3.6 EROSION CONTROL:

A. Provide erosion control measures necessary to maintain site. Protect against both wind and rainfall erosion.

B. Provide erosion control as specified in Section 01564.

END OF SECTION

SECTION 02220

TRENCH AND EXCAVATION SAFETY SYSTEM

PART 1 GENERAL

1.1 SECTION INCLUDES:

A. Requirements for a Trench and Excavation Safety System to be designed and furnished by the Contractor for the safety and health of personnel.

B. Submission of a written Plan describing the System in detail.

1.2 PAYMENT:

A. Payment will be as stipulated on the Bid Form.

1.3 REFERENCES:

A. 29CFR1926 - Occupational Safety and Health Standards - Excavations, United States Department of Labor, latest edition.

B. Others - Other applicable Federal, State, and local rules for Trench Construction or Excavations.

1.4 REQUIREMENTS:

A. The Contractor shall develop, design, and implement a System. The Contractor shall bear the sole responsibility for the adequacy of the System.

B. The requirements of 29CFR1926 shall be the minimum requirements for this specification and is adopted as a part of this specification. Other regulations relating to trench and excavation safety shall also be considered a part of this specification as if referenced directly.

C. Should the System require wider trenches than shown, the Contractor shall be responsible for the costs associated with determining adequacy of pipe bedding and class, as well as, purchase and installation of alternate materials.

1.5 SUBMITTALS:

A. Submit copies of the System Plan for information only. The Engineer will not review the System Plan for sufficiency, adequacy, or other engineering aspects. Submission is only to record the presence or absence of the System Plan.

1.6 QUALITY ASSURANCE:

A. The Trench Safety System shall be designed by an Engineer registered as a Professional Engineer in the State of Texas. The System Plan shall be sampled with the Engineer's seal, signed, and dated.

PART 2 PRODUCTS

Not used.

PART 3 EXECUTION

3.1 GENERAL:

A. Implement the system in accordance with the written System Plan and conduct affected work in accordance with the same.

END OF SECTION

SECTION 02225

EXCAVATION, BACKFILLING AND COMPACTING FOR UTILITIES

PART 1 GENERAL

1.1 SECTION INCLUDES:

A. Unclassified excavation, trenching, bedding, backfilling and compacting for water mains, boxes, vaults, valves, and other utility systems and appurtenances, and the disposal of excess excavated material.

1.2 REFERENCES:

A. ASTM C33 – Coarse Aggregates.

B. ASTM D698 – Moisture-Density Relations of Soil (Standard).

C. ASTM D1557 – Test for Moisture-Density Relations of Soil (Modified).

D. ASTM D2321 – Underground Installation of Thermoplastic Pipe for Sewers and Other Gravity – Flow Applications.

E. ASTM D2487 – Classification of Soils for Engineering Purposes.

F. ASTM D4254 – Minimum Index Density and Unit Weight of Soils and Calculations of Relative Density.

G. ASTM D4318 – Test for Liquid Limit, Plastic Limit and Plasticity Index of Soils.

H. OSHA – Occupational Safety and Health Administration and Related Regulations.

1.3 SUBMITTALS:

A. Procedures for Submittals: Section 01300.

B. Submit sample(s) of material(s) proposed to be used for bedding in the pipe zone and backfill of fiberglass structures.

1. One (1) set to materials testing lab for classification.
2. One (1) set to Engineer for approval.

1.4 PROTECTION OR REMOVAL OF EXISTING UTILITIES:

A. The Contractor shall anticipate all underground obstructions, such as but not limited to, water mains, gas lines, storm and sanitary sewers, telephone or electric light or power ducts, concrete and debris. Any such lines or obstructions indicated on the Drawings show only the approximate locations and shall be verified in the field by the Contractor. The Owner and Engineer will endeavor to familiarize the Contractor with all known utilities and obstructions, but this shall not relieve the Contractor from full responsibility in

anticipating all underground obstructions whether or not shown on the Drawings.

B. The Contractor shall, at his own expense, maintain in proper working order and without interruption of service all existing utilities and services which may be encountered in the work. With the consent of the Engineer and utility owner such service connections may be temporarily interrupted to permit the Contractor to remove designated lines or to make temporary changes in the locations of services. The cost of making any temporary changes shall be at the Contractor's expense.

C. Notify all utility companies involved to have their utilities located and marked in the field. All underground utilities in a particular segment of the project shall then be uncovered to verify location and elevation before construction begins in that segment of the project.

D. The Contractor shall obtain necessary permits, except County right-of-way permits, required for completion of the project.

1.5 DEFINITIONS:

A. All excavation associated with the project is unclassified.

B. Bedding: Includes the area from the trench bottom to the bottom of the pipe where material is placed to bring the trench bottom up to grade. A compacted depth of approximately 4 to 6 inches is generally sufficient bedding thickness.

C. Haunching: Includes the area from the bottom of the pipe to the spring line of the pipe. Material in this area must be placed and consolidated to provide adequate side support while avoiding both vertical and lateral displacement of the pipe. **The type and density of the material in this area are the most important factors affecting the performance and deflection of the pipe.**

D. Initial Backfill: Includes the area from the spring line of the pipe to a point at least 6 inches over the top of the pipe.

E. Final Backfill: Includes the area above the initial backfill, up to final grade or the bottom of the flexible base material in the pavement section.

F. Pipe Zone: Includes areas of bedding, haunching and initial backfill as defined above.

PART 2 PRODUCTS

2.1 PIPE ZONE:

A. Materials for use within the pipe zone and within 24 inches of fiberglass structures shall be in accordance with following Table 2.1:

B. Reference also the Construction Details.

TABLE 2.1
DESCRIPTION OF MATERIAL CLASSIFICATION
(as defined in ASTM D2321)

Class	Type	Soil Group Symbol	Description ASTM D2487	% Passing Sieve Sizes			Atterberg Limits		Coefficients	
				1½ in (40 mm)	#4 (4.75 mm)	#200 (0.075 mm)	LL[b]	PI[c]	Uniformity C_u	Curvature C_c
I	Manufactured, Processed Aggregate; dense-graded, clean	None	Angular, granular, crushed stone or rock, crushed gravel, and stone/sand mixtures with gradations selected to minimize migration of adjacent soils; contain little or no fines	100%	≤50%0	<5%	Non Plastic			
II	Coarse-Grained Soils, clean	GW	Well-graded gravels and gravel-sand mixtures; little or no fines	100%	<50% of Coarse Fraction	<5%	Non-Plastic		>4	1 to 3
		GP	Poorly-graded gravels and gravel-sand mixtures; little or no fines						<4	<1 or >3
		SW	Well-graded sands and gravelly sands; little or no fines		>50% of Coarse Fraction				>6	1 to 3
		SP	Poorly-graded sands and gravelly sands; little or no fines						<6	<1 or >3
	Coarse-Grained Soils, borderline clean to w/fines	e.g. GW-GC, SP-SM.	Sands and gravels which are borderline between clean and with fines	100%	Varies	5% to 12%			Same as for GW, GP, SW and SP	
III	Coarse-Grained Soils with Fines	GM	Silty gravels, gravel-sand-silt mixtures	100%	<50% of Coarse Fraction	>12% to <50%		<4 or <"A" Line		
		GC	Clayey gravels, gravel-sand-clay mixtures					<7 and >"A" Line		
		SM	Silty sands, sand-silt mixtures	>50% of Coarse Fraction				>4 or <"A" Line		
		SC	Clayey sands, sand-clay mixtures					>7 and >"A" Line		
IV[a]	Fine-Grained Soils (inorganic)	ML	Inorganic silts and very fine sands, rock flour, silty or clayey fine sands, silts with slight plasticity	100%	100%	>50%	<50	<4 or <"A" Line		
		CL	Inorganic clays of low to medium plasticity, gravelly clays, sandy clays, silty clays, lean clays					>7 and >"A" Line		

[a] Includes Test Method ASTM D2487 borderline classifications and dual symbols depending on plasticity and liquid limts.

[b] LL = Liquid Limit.

[c] PI = Plasticity Index.

C. In addition to the materials included in Table 2.1, the following materials are approved for the pipe zone or within 24 inches of fiberglass structures where shown:

1. Lean Concrete: Free-flowing grout, mixed one (1) sack of cement per cubic yard of sand.

2. Structural Concrete: Concrete for encasement shall be 3000 psi compressive strength as specified in Section 03300.

2.2 FINAL BACKFILL MATERIALS:

A. Earth Backfill: Earth backfill may be excavated and reused from trench or obtained from an approved borrow area. Material shall be processed to ensure that only select material is used for backfilling operations. Material shall be free of lumps, clods, rocks larger than 2", debris, trash, organic, spongy or otherwise objectionable material. The presence of such material in the backfill may preclude uniform compaction and result in excessive localized point loads on or deflections in the piping system or fiberglass structure.

B. All materials included in Table 2.1 above are approved for final backfill.

PART 3 EXECUTION:

3.1 EXAMINATION AND PREPARTATION:

A. Examine utility routes and coordinate excavation work to eliminate installation conflicts.

B. Allow room for stockpiling excavated material and utility construction material during utility construction.

3.2 TRENCH EXCAVATION:

A. Procedure: Excavated to indicated or specified depths.

1. Excavate by open cut method.

2. The Contractor shall excavate the top 6-inches of topsoil and stockpile it separately from the general excavation. A minimum of 6-inches of topsoil shall be replaced over all backfilled areas.

3. During excavation, stockpile material suitable for backfilling in an orderly manner far enough from the bank of the trench to avoid overloading, slides, or cave-ins.

4. Grade as necessary to prevent surface water from flowing into trenches or other excavations.

5. Cut walls of trench as close to vertical as the stability of the material and trench safety will allow. Remove stones as necessary to avoid point-bearing. Over-excavate wet or unstable soil from the trench bottom to permit construction of a more stable bed for pipe. Over excavation shall be filled and tamped with clean dry sand, pea gravel, or other approved material to the required grade.

6. Excavate the trench the proper width as shown, or as required by the Contractor's Trench Safety Program. If the trench width below the top of pipe is wider than specified in this section or shown, install additional backfill. No additional payment will be made for additional material or work required for installation.

7. Accurately grade the trench bottom to provide proper bedding as required for pipe installation.

8. If any excavation is carried beyond the lines and grades required or authorized, the Contractor shall, at his own expense, fill such space with suitable material and properly compact the material as directed by the Engineer. No additional payment will be made.

B. Sheeting and Bracing: If trench safety methods do not include sloping of trench walls, install sheeting and bracing; or use appropriate trench box necessary to support the sides of trenches and other excavations with vertical sides, as required by current OSHA regulations.

C. Water in Excavation: Keep work free from ground or surface water at all times. Provide pumps of adequate capacity or other approved method to remove water from the excavation in such a manner that it will not interfere with the progress of the work or the proper placing of other work.

D. Trenching Progress: Trenching operations for any individual utility work crew shall not be in excess of 100 feet ahead of pipe laying operations in city streets or 2,000 feet in open country. Not more than two (2) consecutive cross-streets may be closed to traffic by any individual utility work crew at any given time. Ensure no trenches are left open when work is not in progress. Temporarily backfill any open trenches with un-compacted material and install proper barricades at the end of each work day.

E. Existing Pavement: Existing pavement over trenches that is not to be bored shall be removed to a width of 6 inches outside of the trench on each side. Remove to a neat line by sawing method. Take appropriate measures to prevent damage to existing pavement adjacent to the trench by wheels, tracks and/or stabilizers of excavating equipment. Remove brick pavement by hand, deliver and stack as directed by the Owner.

3.3 PIPE BEDDING:

A. Concrete Encasement:

1. Where shown, the Contractor shall install the pipe in concrete encasement.

2. Concrete for encasement shall be 3000 psi compressive strength as specified in Section 03300.

3. Precautions shall be used to prevent pipe floating, movement or deflection during construction.

4. Concrete for encasement, shall be included in the unit price bid per linear foot in place.

B. Within the Pipe Zone or Adjacent to Fiberglass Structures:

1. Accurately grade the bottom of the trench 4 inches below the bottom of the pipe and to the limits of the clear space on either side of the pipe.

2. Install materials which comply with Table 2.1 above accordance with "Pipe Bedding Detail" shown on the Drawings.

3. The initial layer of embedment material placed to receive the pipe shall be brought up to a grade slightly higher than that required for the bottom of the pipe and the pipe shall be placed thereon and brought to grade by tamping, or by removal of the slight excess amount of embedment under the pipe.

4. Adjustment to grade line shall be made by scraping away or filling with embedment materials. Wedging or blocking up of pipe will not be permitted.

5. Each pipe section shall have a uniform bearing on the embedment for the full length of the pipe, except immediately at the joint.

6. After each pipe has been graded, aligned, placed in final position on the bedding material and joint made, sufficient embedment material shall be deposited and compacted under and around each side of the pipe and back of the bell or end thereof to hold the pipe in proper position and alignment during subsequent pipe jointing and embedment operations.

7. Sheeting and shoring will not be allowed in the pipe zone during or after installation of the pipe or embedment material, unless special provisions are made to ensure the specified compaction of bedding and pipe alignment is maintained after removal of sheeting and shoring.

8. Minimum compaction effort within the pipe zone and adjacent to fiberglass structures shall be in accordance with the following Table 3.3 based on the class of bedding material used:

TABLE 3.3
MINIMUM REQUIRED COMPACTION
FOR MATERIAL USED WITHIN PIPE ZONE OR FOR BACKFILL OF FIBERGLASS STRUCTURES

Classification of Bedding Material	Standard Proctor Density[a] (Relative Density[b] shown in parentheses)
Class I	Dumped
Class II	≥85% standard (≥40% relative)
Class III	86% - 95% standard (41% - 70% relative)
Class IV	>95% standard (>70% relative)
Class V	Not approved for bedding material

[a] Standard Proctor Density per ASTM D698, moisture content shall be ± 2% of optimum.
[b] Relative Density per ASTM D4254.

3.4 UTILITY INSTALLATION:

A. Water Lines: Limit clear on either side of the pipe to 12 inches. Above the pipe, cut as wide as necessary to sheet and brace and properly perform the work. Provide class of bedding as shown. Install piping and appurtenances as specified.

B. Excavation for Appurtenances: Excavate sufficiently for valves, fittings, manholes, valve vaults, utility pull boxes and similar structures to leave at least 18 inches clear between the outer surfaces and the embankment or shoring that may be used to hold and protect the embankment wall. Install valves, fittings, manholes or valve vault structure, piping and appurtenances as specified. Any other-depth excavation will be refilled with lean concrete or other suitable compacted material approved by the Engineer, at no additional cost to the Owner.

3.5 FINAL BACKFILL:

A. Criteria: Backfill trenches to ground surface with material as specified. Reopen trenches improperly backfilled to depth required for proper compaction. Refill and compact as specified, or otherwise correct the condition in an approved manner.

B. Take care to avoid contacting pipe or structure to be backfilled with compaction equipment. Do not use compaction equipment directly over the pipe until sufficient initial backfill has been placed to assure such equipment will not be damage or disturb the pipe.

C. All forms, lumber, trash and debris shall be removed from trenches, manholes and other utility structures prior to backfilling.

D. Dispose of unacceptable backfill material and provide suitable material for backfill at no additional cost to the Owner.

E. Open Areas:

1. Above the pipe zone, deposit earth backfill from excavated material, compact to minimum of 85 percent of maximum density per ASTM D698, while maintaining moisture within ± 2 percent of optimum. Excavated material placed shall be free of rock greater than two (2) inches in any direction. Provide small windrow above pipeline trench in open areas.

2. Backfill for valves, fittings, manholes, utility pull boxes and other utility structures shall be placed in accordance with applicable Specification Sections and Construction Details.

F. Pavement Section:

1. Reference the Construction Details.

2. Above the pipe zone to below the pavement, deposit crushed limestone flexible base, compact to minimum of 95 percent of maximum density per ASTM D698, while maintaining moisture within ± 2 percent of optimum; or deposit ASTM D2487 Class II material in 6-inch lifts, compact to 40 percent relative density according to ASTM D4254.

3. For valves, fittings, manholes, valve vaults or boxes in pavement sections, backfill with Class II material to bottom of proposed pavement. Backfill material shall be deposited in 6-inch lifts. Class II material must be compacted to 40 percent relative density according to ASTM D4254.

3.6 DISPOSAL OF EXCESS MATERIAL:

A. Remove waste and excess excavated material from the construction site before final inspection. Legally dispose of material:

1. At a licensed and approved site.

2. On adjacent private property with written and notarized permission from the property owner.

3. On Owner property with written and notarized permission from the Owner.

B. All cost associated with waste material removal and disposal shall be paid for by the Contractor.

END OF SECTION

SECTION 02231

AGGREGATE BASE COURSE

PART 1 GENERAL

1.1 SECTION INCLUDES:

A. Aggregate base material, consisting of crushed or uncrushed coarse and fine aggregate material, as necessary to meet the requirements herein and in conformity with lines, grades, compacted thickness and typical sections shown.

1.2 REFERENCES:

A. TxDOT Item 247--Flexible Base.

B. ASTM D698--Test Methods for Moisture-Density Relations of Soils (Standard).

1.3 SUBMITTALS:

A. Refer to Section 01300 for submittal requirements.

B. Samples: Aggregate samples of material as required by the testing laboratory.

1.4 DELIVERY, STORAGE AND HANDLING:

A. Aggregate Base Course shall be hauled in tight trucks previously cleaned of all dirt and foreign material.

B. Place aggregate base course the same day as delivered to the jobsite unless otherwise approved by the Engineer.

PART 2 PRODUCTS

2.1 MATERIALS:

A. Aggregate Base Course shall meet the requirements TxDOT Item 247--Flexible Base, Type A Grade 2, with material larger than 3 inches removed.

PART 3 EXECUTION

3.1 EXAMINATION:

A. Place material only after the subgrade has been properly constructed and inspected.

3.2 PREPARATION:

A. Do not place fill or base on soft, muddy, or frozen surfaces.

3.3 AGGREGATE PLACEMENT:

A. Place aggregate in maximum 8 inch layers and compact to 98% standard density± 2% of optimum moisture. For thicknesses over 8 inches, construct in multiple courses of equal thickness.

B. Upon completion, the material shall be smooth and in conformity with the typical sections as shown.

C. Use mechanical tamping equipment in areas inaccessible to compaction equipment.

3.4 TOLERANCES:

A. Correct any deviation in by loosening, adding or removing material, reshaping and recompacting at the Contractor's expense.

3.5 FIELD QUALITY CONTROL:

A. If the aggregate base material should lose the required density or finish before foundation is complete, it shall be reworked, recompacted, refinished and retested at the Contractor's expense.

END OF SECTION

SECTION 02280

TRAFFIC CONTROL

PART 1 GENERAL

1.1 SCOPE:

A. This section includes the development of a Traffic Control Plan (TCP) and the provision for proper traffic control within Texas Department of Transportation (TxDOT) and City of Midland (City) right-of-way.

B. Construction in areas outside of TxDOT or City right-of-way does not require a TCP; however, proper traffic control devices and procedures shall be used.

C. Proper traffic control shall consist of providing, installing, moving, replacing, maintaining, cleaning and removing upon completion of work, all barricades, signs, cones, lights and other such traffic control devices and handling of traffic during construction.

1.2 REGULATORY REQUIREMENTS:

A. All traffic control devices and procedures shall conform to those indicated in the Texas Manual on Uniform Traffic Control Devices (TMUTCD).

1.3 SUBMITTALS:

A. The Contractor shall develop a TCP responsive to the TMUTCD for the utility construction within TxDOT and City right-of-way. Submit TCP to Engineer for approval. Revise and resubmit as necessary.

B. Submit one copy of the approved TCP to Engineer, TxDOT and Owner's representative.

1.4 SCHEDULING:

A. Coordinate implementation of TCP with Owner's representative.

PART 2 PRODUCTS

2.1 DEVICES:

A. In accordance with TMUTCD.

PART 3 EXECUTION

3.1 IMPLEMENTATION:

A. Prior to beginning work within TxDOT and City right-of-way, the Contractor shall designate in writing, a competent person who will be responsible for the TCP and available on the project site or in the immediate area, to ensure devices and procedures are in compliance with the TCP.

B. The City, TxDOT or the Owner's representative will have the authority to assure compliance with the TCP. Work may be stopped for failure to comply, until such time Contractor brings the project site into compliance with the TCP.

C. Since utility construction in areas outside of TxDOT and City right-of-way does not require a TCP, Contractor may proceed with construction in these areas without TCP approval, however proper traffic control devices and procedures shall be used.

D. All reflective traffic control devices such as barricades, vertical panels, signs, etc., shall be maintained by cleaning, replacing or a combination thereof, such that during darkness and rain, the original reflective characteristics of the devices are maintained.

3.2 MEASUREMENT:

A. This item shall be measured as a lump sum as indicated in the Contract Documents.

3.3 PAYMENT:

A. The TCP, work performed, and materials furnished in accordance with this item will be paid for at the lump sum bid for "Barricades, Signs and Traffic Control." This price shall be full compensation for furnishing all labor, materials, supplies, equipment and incidentals necessary to complete the work as specified.

B. Payment will be made on the following basis:

1. Twenty five (25) percent of the lump sum bid price will be paid when a copy of the TxDOT/City approved TCP is submitted to the Engineer.

2. Fifty (50) percent of the lump sum bid price will be paid on the first payable monthly construction estimate after barricades, signs and traffic handling devices have been installed in accordance with the TCP and construction has begun within TxDOT/City right-of-way.

3. Twenty five (25) percent of the lump sum bid price will be paid when barricades, signs and traffic handling devices have been removed upon completion of work within TxDOT/City right-of-way, if such devices have been properly maintained in accordance with this Section.

C. Additional payment for this item <u>will not</u> be made for areas outside of TxDOT or City right-of-way, for approving designs, testing, material shortages, closed construction seasons, curing periods, test periods, nor delays caused directly or indirectly by requirements of the Contract. Contractor's cost for traffic control outside of TxDOT and City right-of-way shall be considered subsidiary to and included in the unit price for the work being performed.

D. If additional work is added within TxDOT or City right-of-way by an approved field change or extra work order, or if work is suspended for the convenience of TxDOT or the City, through no fault of the Contractor, additional payment for Traffic Control may be authorized when approved by field change.

END OF SECTION

SECTION 02310

HORIZONTAL BORING FOR UTILITIES

PART 1 GENERAL

1.1 SECTION INCLUDES:

A. Horizontal boring and welded steel encasement under existing roads, pipelines, creeks or other right-of-ways; including Texas Department of Transportation (TxDOT) right-of-way.

B. All materials, equipment and labor required for installing pipelines and encasement by boring and jacking as specified.

C. Construction, maintenance, and backfilling requirements of bore pits necessary for installing pipelines and encasement by methods of boring and jacking.

D. Mix design requirements, testing, furnishing and production of grout for:

1. Grouting voids in ground resulting from caving, loss of ground, or settlement.

1.2 MEASUREMENT AND PAYMENT:

A. Unit Prices.

1. Bore with encasement will be measured and paid for, at the unit price per linear foot. The unit price bid shall be full compensation for furnishing and placing all materials, equipment, labor, tools, carrier pipe, carrier pipe restraint, casing spacers, bore pits, encasement, grouting, support slabs, dewatering, monitoring plan, and incidentals necessary to complete the work.

2. Contractor shall pay for relocation of utilities, removal and replacement of surface improvements, such as sidewalks, asphaltic or concrete pavement, base and subbase, curbs, curb and gutter, driveways, topsoil, sodding, and hydro-mulch, as necessary for bore pit construction. No separate payment will be made for these items.

3. No separate payment will be made for grouting. Include all cost for pressure grouting of encasement, annular grouting, and grouting of voids in unit price for boring.

4. When open-cut construction is requested by Contractor for his convenience in areas designated for boring, and when approved in advance by Engineer, such areas shall be paid for at Unit Price for open-cut installation.

1.3 DEFINITIONS

A. Carrier Pipe: Sanitary or storm sewer or water line installed inside encasement.

B. Encasement: welded steel pipe installed for support of excavation.

C. Jacking: Installation of steel casing by use of hydraulic jacks while simultaneously removing spoils with the use of an auger.

D. Dry Augering Method: Installation of steel casing by excavating soil at advancing end of casing and transporting spoil through casing by otherwise uncased auger, while advancing casing by jacking at same rate as auger excavation progresses.

E. Wet Boring Method: Installation of casing or pipe by first drilling small diameter pilot hole from pit to pit, followed by removing excess soil and installing pipe or conduit by pull-back or jacking method.

F. Zone of Active Excavation: Area located within radial distance about surface point immediately above face of excavation equal to depth to bottom of excavation.

G. Critical Structure: Building, structure, bridge, pier, or similar construction partially or entirely located within zone of active excavation.

H. Ground Stabilization Grouting: Filling of voids, fissures, or under-slab settlement due to caving or loss of ground by injecting grout under gravity or pressure to fill void.

1.4 REFERENCES

A. ASME B 40.1 - Pressure Gauge and Gauge Attachments.

I. ASTM C 942. Standard Test Method for Compressive Strength of Grout for Pre-placed Aggregate Concrete into Laboratory.

J. ASTM C 1017. Standard Specification for Chemical Admixture for Use in Producing Flowing Concrete.

K. ASTM D 638 - Standard Test Method for Tensile Properties of Plastics.

L. ASTM D 648 - Standard Test Method for Deflection Temperature of Plastics under Flexural Load in the Edgewise Position.

M. ASTM D 695 - Standard Test Method for Compressive Properties of Rigid Plastics.

N. ASTM D 790 - Standard Test Method for Flexural Properties of Unreinforced and Reinforced Plastics and Electrical Insulating Materials.

1.5 REGULATORY REQUIREMENTS:

A. TxDOT: Comply with TxDOT-issued permit.

B. Copies of permits will be furnished by the Engineer.

1.6 SUBMITTALS

A. Conform to requirements of Section 01300 - Submittal Procedures.

B. Bore Pits.

1. Prior to installation of pits obtain Engineer's approval for pit locations, size, depth, and areas for storage, material, and spoil handling. Acceptance by Engineer does not relieve Contractor from responsibility to obtain specified results.

C. Grouting

1. Submit description of materials, grout mix, equipment and operational procedures to accomplish each grouting operation. Description may include sketches as appropriate, indicating type and location of mixing equipment, pumps, injection points, venting method, flow lines, pressure measurement, volume measurement, grouting sequence, schedule, and stage volumes.

1.7 DESIGN CRITERIA:

A. Bore Pits:

1. Design steel plate deck, when required, for H-20 loading.

B. Steel Casing:

1. Contractor shall be responsible for selection of casing, pipe, and pipe joints to carry anticipated thrust of jacks or loads. Thicknesses specified on the drawings or in this section are minimum allowable per regulatory requirements.

1.8 SCHEDULING:

A. Coordinate with TxDOT representative.

B. Notify Engineer 48 hours in advance of boring operations.

PART 2 PRODUCTS

2.1 PIPING AND FITTINGS: AS REQUIRED BY DRAWINGS OR SECTION 02665 - WATER SYSTEMS.

2.2 STEEL CASINGS:

A. Provide steel pipe encasement sleeves designed and manufactured in conformance with AWWA C 200 and AWWA M11 except as modified herein. Steel to be minimum of ASTM A36, ASTM A1011 Grade 36, ASTM A53 Grade B, ASTM A135 Grade B, or ASTM A139 Grade B. Alternatively, steel pipe encasement may meet the API Specification 5L, Grade B, or Grade X42.

B. Provide minimum wall thickness as shown on Drawings or listed in applicable permits.

C. Casing pipe shall be new uncoated welded steel. Verify casing diameter required with dimensions of casing spacers and joint restraint devices.

D. For pipes up to 12 inch nominal diameter, use 8 inch wide spacers. For pipes 12 inch to 36 inch nominal diameter, use 12 inch wide spacers. For pipes above 36 inch nominal diameter, submit a manufacturer selected spacer size.

E. All bolts, nuts, washers, and hardware shall be elctro-plated.

F. Restrained Joints where required on PVC pipe:

1. Restraint devices: Manufacture of high strength ductile iron, ASTM A 536 up to 24 inches, and ASTM A 36 for sizes greater than 30 inches. Working pressure rating twice that of design test pressure.

2. Bolts and connecting hardware: High strength low alloy material in accordance with ANSI A21.11/AWWA C111.

2.3 CASING SPACERS:

A. Polyethylene Casing Spacers

1. Acceptable Manufacturers.

   a. Advanced Products & Systems, Inc.
   b. Pipeline Seal & Insulator Co.
   c. Raci Spacers North America.

2. Wood skids or concrete “donuts” are not acceptable.

3. Spacers shall be manufactured from injection molded, high density polyethylene having high impact strength, a low coefficient of friction, chemical resistant, and high dielectric resistance.

4. Extensions shall be available to locate the carrier pipe inside the casing per the drawings.

2.4 CASING END SEALS

A. Acceptable Manufacturers

1. Advanced Products & Systems, Inc.
2. Pipeline Seal & Insulator Co.
3. Engineer Approved Equal.

B. End seals shall be manufactured from 1/8 inch thick neoprene rubber.

C. End seals shall be one piece “pull-on” type, and shall be custom manufactured to the specific size of the carrier pipe and the casing pipe.

D. End seals shall be secured to the carrier pie and the casing pipe with ½ inch wide T-304 stainless steel bands with 100% non-magnetic worm gear mechanism.

2.5 CONCRETE: MEETING REQUIREMENT OF SECTION 03300 – CAST-IN-PLACE CONCRETE.

2.6 GROUT:

A. Grouting materials: Conform to Section 03300 – Cast-In-Place Concrete except as modified in the following paragraphs.

B. Grout Type Applications.

1. Grout for pressure grouting, backfill grouting and annular grouting: Sand-cement mortar mix.

2. Ground stabilization: Sand-cement mortar mix.

C. Do not include toxic or poisonous substances in grout mix or otherwise inject such substances underground.

D. Employ and pay for commercial testing laboratory, acceptable to Engineer, to prepare and test grout mix design. Develop one or more mixes based on

following criteria as applicable:

1. Size of annular void between pipe line and tunnel liner plate, or size of void between tunnel liner plate and surrounding soil;
2. Absence or presence of groundwater;
3. Adequate retardation;
4. Non-shrink characteristics; and
5. Pumping distances.

E. Prepare mixes that satisfy required application. Provide materials conforming to the following standards:

1. Cement: ASTM C 150;
2. Fly Ash: ASTM C 618;
3. Water: Potable;
4. Slurry: ASTM C 138; and
5. Sand for sand-cement mortar mix: ASTM C 144.

F. Provide grout meeting the following minimum requirements:

1. Minimum 28-day unconfined compressive strength: 1500 psi for water lines.
2. Determine strength by ASTM C 942.
3. Maximum allowable density: Less than 130 pcf.

G. Admixtures:

1. Use admixtures meeting ASTM C 494 and ASTM C 1017 as required, to improve pump ability, control time of set, hold sand in suspension and reduce segregation and bleeding.

2. Ensure that admixtures used in mix are compatible. Provide written confirmation from admixture manufacturers of their compatibility.

PART 3 EXECUTION

3.1 PREPARATION:

A. Conform to applicable provisions of Section 02110 – Site Clearing and Grubbing.

B. Utility Relocations: Relocate utility lines clear of pit and zone of potential significant settlement or other ground disturbance. (Coordinate with applicable utility company)

C. Install casings as required by Drawings, in accordance with this Section.

D. Install temporary solid plug at open end of water line to prevent contamination.

E. Maintain clean working conditions inside bore pits.

3.2 BORING:

A. Welded Steel Encasement: Place by boring and jacking methods.

B. Pits:

1. Construct pits on segments of line and within right-of-way. Locate auger pits where there is minimum interference with traffic or access to property. Avoid locating pits close to storm drainage channels, ditches, storm water lines, culverts, or near potentially contaminated areas.

2. Pit Size: Size pits to provide adequate room to meet operational requirements for auger construction as well as structures indicated on Drawings. Provide minimum 6-inch space between pipe and walls of auger pit. Maximum allowable width of pit shall be 5 feet. Width of pit at surface shall not be less than at bottom. Maximum allowable length of pit shall be no more than 5 feet longer than one full section of pipe and shall not exceed 25 feet.

3. Excavate bore pits to finished grade at least 6 inches lower than grade indicated by stakes.

4. Backfill in accordance with Section 02225 – Excavation, Backfilling, and Compacting for Utilities.

5. Provide and properly maintain safety protection against traffic, and accidental or unauthorized entry. Provisions to include concrete traffic barriers or other suitable barrier around periphery of pit as appropriate. Fully cover and secure pits where no construction activity is in progress.

6. Install sheeting, lining, shoring, and bracing required for protection of workmen and public in accordance with Section 02220 - Trench and Excavation Safety Systems.

7. Provide groundwater control and drainage from pits while work is in progress and until pit is properly backfilled. Conform to requirements of Section 02225, Paragraph 3.2.C.

C. Wet Boring:

1. Auger from approved pit locations. Excavate for pits and install shoring as outlined above under Paragraph 3.2.B.6, Pits. Auger mechanically with use of pilot hole entire length of crossing and check for line and grade. Diameter of auger hole not to exceed pipe bell diameter plus 2 inches. Place excavated material outside working pit and dispose of as specified. Use water or other fluids in connection with boring operation only to lubricate cuttings; jetting is not permitted.

2. In unconsolidated soil formations, gel-forming colloidal drilling fluid may be used. Fluid is to consist of at least 10 percent of high-grade processed bentonite and shall consolidate cuttings of bit, seal walls of hole, and shall furnish lubrication for subsequent removal of cuttings and installation of pipe.

3. Depending on character of soil encountered during augering operation, conduct operations without interruption, insofar as practical, to prevent hole from collapsing or pipe from seizing up in hole before installation is complete.

4. Remove and replace pipe damaged in augering operations.

D. Limits on Bore Length Without Encasement:

1. Do not exceed 75 feet for length of auger hole for PVC pipe 12 inches and less in diameter without receiving pit.

2. Do not exceed 40 feet for length of auger hole for PVC pipe 14 inches to 36 inches in diameter without receiving pit.

3. Intermediate receiving pits may be constructed as necessary to comply with maximum lengths.

E. Dry Augering of Casing:

1. Provide jacks, mounted on frame or against backstop, of capacity suitable for forcing excavating auger and casing through soil conditions to be encountered. Operate jacks so that even pressure is applied to casing.

2. Provide steerable front section of casing to allow vertical grade adjustments. Provide water level or other means to allow monitoring of grade elevation of auger casing.

3. Bentonite slurry may be used to lubricate casing during installation. Use of water to facilitate removal of spoil and to lubricate exterior casing is permitted; however, water jetting for excavation of soil is not allowed when jacking casing.

4. Tolerances from lines and grades shown on Drawings for pipelines installed in casing are plus or minus 3 inches in horizontal alignment, and plus or minus 2 inches in elevation.

F. Jacking:

1. Comply with Section 02220 – Trench and Excavation Safety Systems for all pits, end trenches, and other excavations relating to work required by specifications. Dewater as required to provide safe working conditions.

2. Wherever end trenches are cut into sides of embankment or beyond it, sheath securely and brace such work to prevent earth caving.

3. Make up only one joint at time in pit or trench prior to jacking.

4. Do not interfere with operation of railroad, street, highway, or other facility, nor to weaken or damage embankment or structure.

5. Use heavy-duty jacks sized for forcing casing through embankment. Use appropriate jacking head, usually of timber, and bracing between jacks and jacking head and jacking frame or backstop. Apply jacking pressure uniformly around ring of casing. Set casing to be jacked on guides, properly braced together, to support section of casing and to direct it in proper line and grade. Place jacking assembly in line with direction and grade of casing. Excavate embankment material just ahead of casing and remove material through casing. Force casing through embankment with jacks into excavated auger hole.

6. Conform excavation for underside of casing to contour and grade of casing, for at least one third of circumference of casing. Provide clearance of not more than 2 inches for upper half of casing. Taper off upper clearance to zero at point where excavation conforms to contour of casing.

7. Excavation may extend beyond end of casing depending on character of material, but shall not exceed 2 feet. Decrease advance excavation at direction of Engineer, when character of material being excavated makes it desirable to keep advance excavation closer to end of casing.

8. Jack casing from low or downstream end. Variation in final position of casing from line and grade as shown on Drawings will be permitted only to extent of plus or minus 3 inches in horizontal alignment, and plus or minus 2 inches in elevation, provided such variation is regular and only in one direction and that final grade of flow line is in direction indicated on Drawings.

9. Use cutting edge of steel plate around head end of casing extending short distance beyond end of casing with inside angles or lugs to keep cutting edge from slipping back onto casing.

10. Once jacking of casing is begun, carry on without interruption, insofar as practicable, to prevent casing from becoming firmly set in embankment.

11. Remove and replace casing damaged in jacking operations.

12. Backfill pits or trenches excavated to facilitate jacking operations immediately after completion of jacking of casing.

13. Grout annular space between casing and excavated hole when loss of embankment occurs or when clearance of 2 inches is exceeded.

3.3 PIPELINE INSTALLATION IN ENCASEMENT:

A. Pipeline: Secure casing spacers as detailed on Drawings. Install in completed casing.

B. Spacer Installation:

1. There must be no inadvertent metallic contact between encasement and carrier pipe. Place spacers to ensure that carrier pipe is adequately supported throughout length, particularly at ends, to offset settling, and possible electrical shorting unless otherwise approved by Owner. Place end spacer within 6 inches of end of encasement pipe, regardless of size of encasement and carrier pipe or type of spacer used. Spacing between spacers depends largely on load bearing capabilities of pipe coating and flexibility of pipe.

2. Grade bottom of trench adjacent to each end of encasement to provide firm, uniform, and continuous support for carrier pipe. When trench requires some backfill to establish final trench bottom grade, place backfill material in 6-inch lifts (8" loose lifts) and compact to density of undisturbed soil.

3. Install spacers in accordance with manufacturer's instructions. Take special care to ensure that sub-components are correctly assembled and evenly tightened, and that no damage occurs during tightening of insulators or carrier pipe insertion.

4. Seal annulus between carrier pipe and encasement with end seals at each end of encasement.

5. Insulator Spacing:

a. Spacing shall be as shown on Drawing with maximum distance between spacers to be 10 feet for pipe sizes 4 to 14 inches and 8 feet for pipe sizes 16 to 36 inches.

b. For PVC pipe or bell-and-spigot pipe, install spacers within one foot on each side of bell or flange and one in center of joint when 18- to 20-foot-long joints are used.

c. If encasement or carrier pipe is angled, bent, or dented, reduce spacing as directed by Engineer. Provide encasement with smooth, continuous interior surface.

C. Pipe Transport:

1. Carrier pipe must be pulled through the completed encasement pipe. Care must be exercised in order to avoid damage to pipe or over-belling.

D. Final Cleanup:

1. Clean interior of pipe after interior work is completed. Remove loose material, dirt, and debris from completed pipeline. After completion of work inside pipe, prevent dirt, water, and other debris from entering until pipeline work is completed.

3.4 GROUND WATER CONTROL:

A. Provide necessary ground water control measures to perform work and to provide safe working conditions. Comply with provisions of Section 02225 - Excavation, Backfilling and Compacting for Utilities.

B. When Contractor chooses pumping installations to control ground water level or installs pervious liner through water bearing layers, install and maintain instrumentation system to monitor water level and to detect movement in adjacent structures and property.

3.5 TRAFFIC CONTROL:

A. Conform to applicable provisions of Section 01500 – Construction Facilities and Temporary Controls and 02280 – Traffic Control.

B. During construction operations, furnish, and maintain barricades and lights to safeguard traffic and pedestrians, until such time as backfill has been completed and removed from site. Provide additional barricades and lights as directed by Engineer.

3.6 DISPOSAL OF EXCESS MATERIAL:

A. Remove spoil from job site and dispose in accordance with Section 02225 – Excavation and Compacting for Utilities.

END OF SECTION

SECTION 02511

PAVEMENT REPLACEMENT

PART 1 GENERAL

1.1 SECTION INCLUDES:

A. The repair and replacement of an open-cut trench pavement section within the confines of an existing roadway pavement section including, but not limited to, asphalt (hot-mix, surface treatment, etc.), brick, concrete, gravel, oil-sand, and unimproved streets and roadways.

1.2 REFERENCES:

A. TxDOT Item 247—Flexible Base Material.

B. TxDOT Item 300—Asphalts, Oils, and Emulsions.

C. TxDOT Item 310—Prime Coat (cutback asphaltic material only).

D. TxDOT Item 334—Hot Mix Cold-Laid Asphaltic Concrete Pavement.

E. TxDOT Item 360—Concrete Pavement.

F. TxDOT Item 421—Portland Cement Concrete.

G. TxDOT Item 433—Joint Sealant and Fillers.

H. TxDOT Item 536—Membrane Curing.

I. ACI 301—Specifications for Structural Concrete.

J. ASTM A615—Deformed and Plain Billet Steel Bars.

K. ASTM A616—Rail Steel Deformed and Plain Bars.

L. ASTM C260—Air-Entraining Admixtures for Concrete.

M. ASTM C494—Chemical Admixtures for Concrete.

1.3 SUBMITTALS:

A. Procedures for Submittals: Section 01300.

B. Contractor shall certify the asphalt/concrete mixing plant will conform to the requirements of the TxDOT.

C. Contractor shall submit design mixtures for asphalt/concrete, including additive modifiers, for review and approval at least 30 days before any pavement is placed.

1.4 DELIVERY, STORAGE, AND HANDLING:

A. Asphaltic Concrete Material shall be hauled in tight trucks previously cleaned of dirt and foreign material.

B. All material shall be delivered and immediately placed or stockpiled. Care shall be taken when stockpiling to prevent contamination of materials.

1.5 ENVIRONMENTAL REQUIREMENTS:

A. Asphaltic Concrete shall not be placed when the ambient temperature is below 60 degrees F and is falling.

B. Asphaltic Concrete may be mixed and placed when the ambient temperature is above 50 degrees F and is rising.

C. Portland Cement Concrete shall not be placed when the ambient temperature is below 40 degrees F and falling.

D. Portland Cement Concrete may be placed when the ambient temperature is above 35 degrees F and rising.

E. Paving materials shall not be placed on wet or frozen subgrade.

PART 2 PRODUCTS

2.1 FLEXIBLE BASE:

A. TxDOT Item 247, Type A, Grade 1-2.

2.2 TACK COAT:

A. Asphaltic Materials: TxDOT Item 300, "Asphalts, Oils, and Emulsions".

B. Provide grade RC-250, or as approved by the Engineer.

2.3 HOT MIX, COLD-LAID ASPHALTIC CONCRETE SURFACE COURSE:

A. Shall meet the individual material and mixture material requirements as specified within TxDOT Item 334 for the type shown on the drawings.

2.4 REINFORCEMENT:

A. Reinforcing steel shall meet the requirements of ASTM A616, Grade 60 new billet steel bars.

B. Dowels for expansion joints shall meet the requirements of ASTM A615, Grade 60.

2.5 PORTLAND CEMENT CONCRETE:

A. Use either Type I or Type III, ASTM C-150 concrete.

B. Concrete mix shall have a minimum cement content of six sacks per cubic yard (3,000 psi compressive strength).

C. Mixing water shall be potable and not detrimental to the concrete.

D. The concrete shall contain 3 to 5 percent entrained air and shall meet the requirements of ASTM C260.

E. Do not use chemical admixtures such as water reducing, retarding and accelerating agents approved by the Engineer. If admixtures are approved, they shall meet the requirements of ASTM C494.

PART 3 EXECUTION

3.1 EXTENT OF REPAIR:

A. Roadway/street shall be restored to its original condition or better as depicted on the drawings.

B. The Contractor shall repair all pavement cuts, unless otherwise noted on the drawings.

3.2 FIELD QUALITY CONTROL:

A. The trench backfill supporting the pavement replacement shall be installed in accordance with Section 02225.

B. If, in the judgment of the Engineer, the quality of materials used or the completed installation (including compacted density, surface thickness or surface texture) is questionable, the Engineer may conduct the appropriate tests to verify the quality of the installation. These tests will be at the expense of the Contractor. If the installation does not meet the criteria listed in this section, the material shall be removed and replaced at the expense of the Contractor such that the installation meets the criteria in this section.

3.3 BARRICADES:

A. The Contractor shall maintain lights and barricades around the work areas until the pavement is ready for traffic.

B. Control work so as to minimize disruption of normal traffic flow and prevention of access to normal traffic routes.

3.4 GRAVEL, OIL-SAND AND OTHER NON-PERMANENT ROADWAYS:

A. Ensure trench is backfilled in accordance with Section 02225.

B. Place and compact a finished ten inch layer of flexible base material over the ditch as shown on the drawings for the finished surface of the roadway.

C. The thickness of each layer before compaction shall not exceed six inches.

3.5 ASPHALTIC CONCRETE ROADWAYS:

A. Ensure trench is backfilled in accordance with Section 02225.

B. Flexible Base Course:

1. Place and compact flexible base course under pavement sections over the ditch within roadways as shown on the drawings.

2. The thickness of each layer before compaction shall not exceed six inches.

C. Tack Coat:

1. Shall be applied to saw-cut edges, adjacent concrete or other appurtenances within the confines of the paved area. Apply at a rate of 0.15 gallons per square yard.

D. Laying:

1. Shall meet the requirements of TxDOT Item 334, or as approved by the Engineer.

E. Compacting:

1. Contractor shall use any equipment deemed necessary. All equipment shall be approved by the Engineer.

F. Density:

1. As specified within TxDOT Item 334.

G. Surface Tests:

1. The finished surface of the replacement asphalt shall be at the same elevation and grade as the original pavement before cutting, or as shown on the drawings.

2. The completed surface, when tested with a straight edge spanning between the undisturbed saw-cut pavement sections at the adjacent trench walls, shall show no deviation in excess of 1/16 inch per foot from the sawed edge.

H. Construction Joints:

1. Place courses as nearly continuously as possible. If work is interrupted, cut back the previously-laid material to produce a slightly beveled edge for the full thickness of the course. Remove old material which has been cut away and lay the new mix against the fresh cut.

2. When the asphalt is laid against existing or old asphalt, the existing or old asphalt shall be cut to provide a straight smooth joint.

3. Apply tack coat to old asphalt edge as previously described in this specification, prior to laying new material.

3.6 PORTLAND CEMENT CONCRETE PAVEMENT:

A. Ensure trench is backfilled in accordance with Section 02225.

B. Preparation:

1. Moisten underlying pavement layer to minimize absorption of water from fresh concrete.

2. Coat surfaces of manholes, drop inlets, etc. with oil to prevent bond with concrete.

C. Forming:

1. If available, use adjacent saw-cut edges of existing concrete pavement as forms to match grade.

2. Use forming as necessary to contain the placed concrete when saw-cut edges are not available on both sides of the trench (i.e. Ditch is parallel to and at the edge of the roadway).

3. Ensure completed edge of concrete matches the line and grade of adjacent roadway, if no grade changes are depicted on the drawings.

4. Thickness of placed concrete shall match existing pavement.

D. Reinforcement:

1. If reinforcement is required, the size and location will be shown on the plans.

E. Concrete Pavement:

1. Place concrete in accordance with TxDOT Item 360—Concrete Pavement, unless otherwise noted.

2. Place concrete over the ditch within roadways as shown on the drawings.

3. Ensure reinforcement, inserts, embedded parts, formed joints, etc. are not disturbed during concrete placement.

4. Match pattern of expansion/control joints in existing concrete pavement.

5. Finished surface of concrete shall match the existing pavement.

F. Surface Tests:

1. The finished surface of the replacement concrete shall be at the same elevation and grade as the original pavement before cutting, or as shown on the drawings.

2. The completed surface, when tested with a straight edge spanning between the undisturbed saw-cut pavement sections as the adjacent trench walls, shall show no deviation in excess of 1/16 inch per foot from the sawed edge.

3.7 MEASUREMENT AND PAYMENT:

A. Pavement replacement will be paid for by the unit identified in the bid form, which shall be the total payment for tamping the backfill, placing and compacting the base material, finishing and replacing the pavement as per this section.

END OF SECTION

SECTION 02520

CONCRETE PAVEMENT, SIDEWALKS, CURB AND GUTTER AND APPROACHES

PART 1 GENERAL

1.1 SECTION INCLUDES:

A. Portland cement concrete pavements with monolithic curb, sidewalks, curb and gutter and approaches on a prepared subgrade or subbase course in conformity with lines, grades and typical cross sections shown.

1.2 REFERENCES:

A. ACI 301—Specifications for Structural concrete.

B. ASTM A615—Deformed and Plain Billet-Steel Bars.

C. ASTM A616—Rail-Steel Deformed and Plain Bars.

D. ASTM C260—Air-Entraining Admixtures for concrete.

E. ASTM C494—Chemical Admixtures for concrete.

F. TxDOT Item 360—Concrete Pavement.

G. TxDOT Item 421—Hydraulic Cement Concrete.

H. TxDOT DMS 6310—Joint Sealants and Fillers.

I. TxDOT DMS 4650—Hydraulic Cement Concrete Curing Materials and Evaporation Retardants.

1.3 SUBMITTALS FOR REVIEW:

A. Refer to Section 01300 for submittal requirements.

B. Submit data on all joint materials and curing compounds to be incorporated into the project 30 days prior to use.

C. Submit design mixtures, including additive modifiers, for review and approval at least 30 days before any concrete pavement is placed. The design mixes shall be prepared by a certified independent testing laboratory employed and paid by the Contractor.

1.4 SITE CONDITIONS:

A. Do not place concrete when surface temperature is less than 40 degrees F or surface is wet or frozen.

PART 2 PRODUCTS

2.1 FORM MATERIALS:

A. Forms for concrete Pavement shall comply with the requirements of TxDOT Item 360—Concrete Pavement.

B. Forms for sidewalks, curb and gutter and concrete approaches shall be as approved by the Engineer.

2.2 REINFORCEMENT:

A. Reinforcing Steel shall meet the requirements of ASTM A616, Grade 60 new Billet-steel bars.

B. Dowels for expansion joints shall meet the requirements of ASTM A615, Grade 60.

2.3 CONCRETE MATERIALS:

A. Use Class "P" concrete as specified in TxDOT Item 421—Hydraulic Cement Concrete.

B. Mixing water shall be potable and not detrimental to the concrete.

C. The concrete shall contain 3 to 5 percent entrained air and shall meet the requirements of ASTM C260.

D. Do not use chemical mixtures such as water reducing, retarding and accelerating agents unless approved by the Engineer. The admixtures shall meet the requirements of ASTM C494.

2.4 ACCESSORIES:

A. Curing material shall meet the requirements of DMS 4650—Hydraulic Cement Concrete Curing Materials and Evaporation Retardants.

B. Joint fillers and backer rods shall meet the requirements of DMS 6310—Joint Sealants and Fillers.

2.5 CONCRETE MIX:

A. The concrete mix shall meet the requirements of Class "P" Portland cement concrete as specified in TxDOT Item 421—Hydraulic Cement Concrete.

B. The minimum concrete flexural strength shall be 680 psi at 28 days using third-point loading.

C. Use accelerating admixtures in cold weather only when approved by the Engineer. Use of admixtures will not relax cold weather placement requirements.

D. Use calcium chloride only when approved by Engineer.

E. Use set retarding admixtures during hot weather only when approved by Engineer.

2.6 SOURCE QUALITY CONTROL AND TESTS:

A. One set of three (3) test cylinders for each daily pour or for every 50 CY placed, whichever is greater.

B. Tests on cement and aggregate will be performed to ensure conformance with specified requirements.

PART 3 EXECUTION

3.1 EXAMINATION:

A. Place concrete only on approved underlying material.

B. Any underlying material determined to be unsatisfactory for any reason, shall be corrected at the Contractor's expense.

3.2 PREPARATION:

A. Moisten underlying pavement layer to minimize absorption of water from fresh concrete.

B. Coat surfaces of manholes, drop inlets, etc. with oil to prevent bond with concrete.

C. Notify Engineer minimum 24 hours prior to commencement of concreting operations.

3.3 FORMING:

A. Place and secure forms to correct location, dimension, profile and gradient.

B. Assemble formwork to permit easy stripping and dismantling without damaging concrete.

C. Place joint filler vertical in position, in straight lines. Secure to formwork during concrete placement.

3.4 REINFORCEMENT:

A. The size and location of reinforcement shall be as shown on the plans.

3.5 CONCRETE PAVEMENT:

A. Place concrete in accordance with TxDOT Item 360—Concrete Pavement unless noted within this specification.

B. Place concrete using the slip form technique. Other methods may be used if approved by the Engineer.

C. Ensure reinforcement, inserts, embedded parts, formed joints, etc. are not disturbed during concrete placement.

D. Place concrete continuously over the full width of the panel and between predetermined construction joints. Do not break or interrupt successive pours such that cold joints occur.

E. Concrete pavement panels shall have a maximum size of 25 feet by 25 feet. Typical joint layout shall be as shown.

3.6 SIDEWALKS:

A. Sidewalks shall be constructed in sections of approximately 32 feet in length. One-half inch expansion joints with filler board shall be constructed at the beginning and end of each sidewalk section. Filler board shall be approved by the Engineer. Expansion joints shall not contain dowels unless shown. A three inch cushion of granular material shall be placed on the subgrade, unless otherwise shown.

B. After the surface has been worked to a true plane, one inch deep control joints shall be made every five feet unless otherwise shown on the plans. Sidewalk thickness shall be as shown on the plans.

3.7 CURB AND GUTTER:

A. Curb and gutter adjacent to asphalt pavement shall be constructed in sections of approximately thirty feet in length and five feet in width, unless otherwise shown on the plans. Expansion joints shall be placed at every thirty feet section and at the beginning and end of every curb return. Where walks or other concrete improvements join the curb, a one-half inch wide expansion joint shall be placed at the back of the curb. The expansion joint will consist of a one-half inch filler board without dowels. Filler board shall be approved by the Engineer.

B. Control joints will be placed ten feet apart along the length of each section. Joints shall be cut through the curb and one and one-half inches below the surface of the curb and gutter.

C. Concrete pavement with monolithic curb shall be constructed as shown.

3.8 CONCRETE APPROACHES:

A. Concrete approaches shall be constructed as shown.

3.9 JOINTS:

A. Place joints as specified or shown.

B. For concrete pavement with monolithic curb, curb joints shall be of the same type and location as the adjacent concrete pavement.

C. Joint sealant for concrete pavement shall meet the requirements of TxDOT Class 5 joint sealant as described in DMS 6310—Joint Sealants and Fillers.

3.10 FINISHING:

A. Concrete surfaces shall receive a light broom finish.

B. Place curing compound on exposed concrete surfaces immediately after finishing. Apply in accordance with manufacturer's instructions.

3.11 JOINT SEALING:

A. Place sealant in accordance with manufacturer's recommendations.

B. Joint reservoir dimensions shall be as shown.

3.12 TOLERANCES:

A. Refer to Section 01400 for tolerance requirements.

B. The maximum variation of surface flatness shall be 1/4 inch in 10 ft for straight-line grades.

C. Horizontal tolerances shall be ± 1/4 inch in forms.

3.13 FIELD QUALITY CONTROL:

A. Field inspection and testing will be performed under the provisions of Section 01400.

B. Testing firm will take beams and perform slump and air entrainment tests in accordance with ACI 301.

C. One additional test beam will be taken during cold weather and cured on site under same conditions as concrete it represents.

D. One slump test will be taken for each set of test beams taken.

E. Maintain records of placed concrete items. Record date, location of pour, quantity, air temperature and test samples taken.

3.14 PROTECTION:

A. Immediately after placement, protect pavement from premature drying, excessive hot or cold temperatures and mechanical injury.

B. Do not permit vehicular traffic over pavement for at least 4 days minimum after finishing unless directed by the Engineer. This period may be extended if required by the Engineer.

END OF SECTION

SECTION 02665

WATER SYSTEMS

PART 1 GENERAL

1.1 SECTION INCLUDES:

A. Water lines including valves, valve boxes, service meters, hydrants, thrust restraint, fittings, and other appurtenances for water transmission systems.

1.2 MEASUREMENT AND PAYMENT:

A. Unit Prices.

1. Payment for water lines installed by open-cut, boring with or without casing, Horizontal Directional Drilling (HDD) is on linear foot basis for each size of pipe installed. Separate pay items are used for each type of installation.

a. Water lines installed by open cut.
b. Water lines in casing installed by open cut.
c. Water lines in casing installed by jack and bore.
d. Water lines that are installed by HDD (only with Engineer approval).
e. Trenchless installation methods may use alternate pipe materials with Engineer approval. Include all costs of pipe and fittings necessary for transition between materials in price of installation.

2. Payments for valves are on a Unit Price basis. Separate pay item are used for each type of installation.

a. Installation of gate vale assemblies (2 inches to 30 inches in diameter), including valve box or manhole as shown on the drawings.

b. Installation of combination air release valve assemblies, including all fittings, piping, isolation valve, enclosure, vent, and related accessories as shown on the drawings.

c. Installation of blow-off valve assemblies, including all fittings, piping, meter box, and related accessories as shown on the drawings.

3. Items without a separate pay item, but required for a complete installation and operational water transmission system are incidental to the bid. These items include, but are not limited to:

a. Fittings, sleeves, couplings and other appurtenances, including bends (vertical or horizontal), tees, caps, etc..
b. Mechanical joint restraint devices are required, thrust

blocking will not be allowed.

c. Tracer wire, connectors, and test stations.

d. Marking tape.

e. Hydrostatic testing.

f. Disinfection.

1.3 REFERENCES:

A. American Society for Testing and Materials (ASTM):

1. ASTM A126 - Gray Iron Castings for Valves, Flanges and Pipe Fittings.

2. ASTM A307 - Specification for Carbon Steel Bolts and Studs 60,000 psi Tensile.

3. ASTM A536 - Ductile Iron Castings.

4. ASTM D1784 - Rigid Polyvinyl Chloride (PVC) Compounds and Chlorinated Polyvinyl Chloride (CPVC) Compounds.

5. ASTM D1785 - Polyvinyl Chloride (PVC) Plastic Pipe, Schedules 40, 80, and 120.

6. ASTM D2466 - Polyvinyl Chloride (PVC) Plastic Pipe Fittings, Schedule 40.

7. ASTM D3139 - Joints for Plastic Pressure Pipes using Flexible Elastomeric Seals.

8. ASTM F477 - Elastomeric Seals (Gaskets) for Joining Plastic Pipe.

1. AWWA C104 - Cement-Mortar Lining for Ductile Iron Pipe and Fittings for Water.

2. AWWA C105 - Polyethylene Encasement for Ductile Iron Piping for Water and other Liquids.

3. AWWA C110 - Ductile-Iron and Gray-Iron Fittings, 3 inches through 48 inches, for Water and other Liquids.

4. AWWA C153 - Ductile Iron Compact Fittings, 3 inches through 12 inches, for Water and other Liquids.

5. AWWA C509 - Resilient-Seated Gate Valves for Water Systems.

6. AWWA C550 - Protective Interior Coatings for Valves and Hydrants.

7. AWWA C600 - Installation of Ductile-Iron Water Mains and Appurtenances.

8. AWWA C900 - Polyvinyl Chloride (PVC) Pressure Pipe, 4 inches through 48 inches, for water.

C. ANSI 16.1 - Cast Iron Pipe Flanges and Flanged Fittings.

D. 30 TAC 290, Texas Administrative Code, Volume 30, Chapter 290, Water Hygiene.

1.4 SUBMITTALS:

A. Procedures for submittals: Section 01300.

B. Product Data: Manufacturer's product data sheets on all materials incorporated into work.

C. Quality Control Submittals: For information only.

1. Certificates: Manufacturer's certificates attesting compliance with applicable specifications for grades, types, classes, and other properties.

2. Test Reports: Results of field quality control tests including hydrostatic tests/pressure tests.

D. Contract Closeout Submittals: Refer to Section 01700.

1. Protect Record Documents: Submit documents in accordance with Section 01700. Accurately record installed location of valves, hydrants, piping and service connections, and accessories.

1.5 QUALITY ASSURANCE:

A. Pipeline installation shall be in accordance with manufacturer's recommendations and as supplemented by these Specifications.

B. Pipe shall be kept clean of all foreign matter.

1. At temporary termination of pipe laying, provide suitable cover to close open end until burying operations are resumed.

C. Jointing shall be by trained employees.

1.6 DELIVERY, STORAGE, AND HANDLING:

A. Deliver, store, and handle products under provisions of Section 01600.

B. Each load of pipe delivered to the job site shall be inspected by the Engineer.

1. Pipe transported without adequate protection shall be rejected and removed immediately from the job site.

2. Inadequate wall thickness or tolerances greater than specified: Randomly selected samples of the pipe shall be forwarded immediately to an approved testing laboratory with instructions to check the pipe for compliance with applicable product standards, ASTM Specifications, and other applicable Specifications.

3. When the testing laboratory reports concur that the pipe does not meet Specifications, the defective pipe shall be removed immediately from the job site by the Contractor.

4. If defective, all costs for shipping of samples, laboratory testing, removal of defective pipe, and replacement pipe shall be the sole responsibility of the Contractor.

PART 2 PRODUCTS

2.1 PIPE:

A. PVC Water Pipe – AWWA C900 – Gasketed.

1. DR 21 – Pressure Rated 200 PSI.
2. All pipe shall bear NSF 61 seal of approval.
3. Joints shall be integral bell with flexible elastomeric seal.

B. PVC Water Pipe – AWWA C900 – Fusible.

1. DR 21 – Pressure Rated 200 PSI.
2. All pipe shall bear NSF 61 seal of approval.
3. Joints shall be fusion.

C. Ductile Iron Water Pipe – AWWA C151.

1. Pressure Class 200 PSI.
2. Cement lined interior, AWWA C104.
3. Exterior shall be bituminous coated, AWWA C151.
4. Wrap buried pipe with 8 mil polyethylene encasement, AWWA C105.

D. Service Line: High-Density Polyethylene (HDPE) pressure pipe per AWWA C901; ASTM D2737:

1. CTS SDR-11; PE4710, 200 PSI.
2. Provide stainless steel stiffeners at connections.
3. All pipe shall bear NSF 61 seal of approval.

E. PVC Water Pipe - (less than 2 inches): ASTM D1784:

1. Schedule 40 or 80, as shown.
2. Solvent weld joints, ASTM D2855.
3. All pipe shall bear NSF 61 seal of approval.

F. Galvanized and Steel Pipe: ASTM A53:

1. Galvanized, standard wall; threaded.

2.2 FITTINGS:

A. Buried Fittings (size 3 inches through 48 inches):

1. Ductile Iron, AWWA C110 (non-compact) or AWWA C153 (compact).

2. Cement lined interior, AWWA C104.

3. Exterior shall be bituminous coated.

4. Fittings shall be mechanical joint or flanged pipe as shown.

5. Wrap buried fittings with 8-inch polyethylene encasement, AWWA C105.

6. Working pressure rated to 350 psi.

B. Above-grade Fittings (size 3 inch through 48 inch):

1. Ductile Iron Flanged Fittings, AWWA C110.
2. Cement lined interior AWWA C104.
3. Exterior shall be bituminous coated.
4. Working pressure rated at 350 psi.
5. Face and drill in accordance with ANSI B16.1 for Class 150 or 300 flanges, as required.

C. Above-grade Fittings (smaller than 3 inch):

1. Galvanized steel, ASTM A53.
2. Standard wall; threaded.

2.3 COUPLINGS:

A. Flanged Coupling Adapters:

1. Conform to ASTM A536, Ductile Iron.
2. Products: Series 2100 MEGAFLANGE® Restrained Flange Adapter as produced by EBAA Iron, Inc., or approved equal.

B. Flexible Couplings:

1. Type: Gasketed, sleeve type, straight cast.

2. Products: Dresser Style 38 or style 162 (transition coupling), or approved equivalent.

3. Service: Supply couplings with working pressures which meet or exceed the joining pipe rating.

C. Retainer Glands:

1. Mechanical joint fittings to PVC: Ductile Iron, ASTM A536, Grade 65-45-12.

a. Product: EBAA Iron Series 2000, or Engineer-approved equivalent.

2. Mechanical joint fittings to Ductile Iron: Ductile Iron ASTM A536, Grade 60-10-10.

a. Product: EBAA Iron Series 1100, or Engineer-approved equivalent.

D. Service Clamps:

1. Product: Mueller, or approved equivalent.
2. Type: Bronze, two-piece with O-Ring seal.
3. Use: Copper tubing size (CTS) polyethylene pipe service connections.

2.4 Mechanical Joint Restraint Devices:

A. Restraint devices: Manufacture of high strength ductile iron, ASTM A 536 up to 24 inches, and ASTM A 36 for sizes greater than 30 inches. Working pressure rating twice that of design test pressure.

B. Bolts and connecting hardware: High strength low alloy material in accordance with ANSI A21.11/AWWA C111.

C. All mechanical joint fittings shall use followers capable of being secured to the pipe at all connections. Additionally, all gasketed joints within a specified distance from mechanical joint fittings shall have bell restraint harnesses installed. Refer to the Drawings to determine the number of bell harnesses required for each type of fitting.

1. Approved Manufacturer's:

a. EBAA Iron
b. Star Pipe and Products
c. Engineer Approved Equal

2.5 FLANGE BOLTS AND GASKETS:

A. Gaskets shall be 1/16-inch cloth insert, red rubber, and full face.

B. Bolts shall be in accordance with the following:
1. Pressure Applications: ASTM A307B.
2. 304 stainless steel.

2.6 TAPPING SLEEVES:

A. Material:

1. Shell: 304 Stainless Steel.
2. Lugs: 304 Stainless Steel.
3. Bolts, Washers & Nuts: NC Rolled Thread, 304 Stainless Steel.
4. Gaskets: Virgin SBR compounded for water service.
5. Outlet Flange:

a. 304 Stainless Steel or Ductile Iron, ASTM 536.
b. Meet or exceed all applicable requirements of ANSI B16.1, Class 125.

B. Certified to ANSI/NSF 61.

2.7 VALVES:

A. Approved Gate Valve Manufacturers (AWWA C515):

1. M&H
2. Clow
3. Mueller
4. Engineers approved equal.

B. Gate Valves (2-inch through 48-inch):

1. Type: Solid Wedge, resilient-seat type.

2. Standards: AWWA C509 and ANSI NSF 61 certified.

3. Material: Body, Bonnet, Wedge and Gland shall be cast of ASTM A536 Grade 65-45-12 ductile iron. Stem material, body bolts and bonnet bolts shall be stainless steel. The wedge shall be encapsulated with synthetic rubber to allow zero leakage at the rated pressure. The rubber seat shall be retained with a stainless steel ring with stainless steel bolts. All gaskets and O-rings are to be EPDM. Thirty (30) inch and larger valves shall have a 316 stainless steel track on both sides of the body which maintains a smooth surface between the rubber seating area and the iron body of the valve.

4. Working Pressure: Rated to 200 psi minimum.

5. Stem: Non-rising stem (NRS) with O-ring valve packing and 2-inch square nut, unless shown otherwise.

6. Joints: Mechanical (buried); Flanged (above grade).

7. Opening: Counter-clockwise.

8. Finish: Ferrous surfaces of valve interior epoxy-coated, AWWA C550.

9. Manufacturer: J&S Valve, Inc., Huffman, TX, or Engineer-approved equal.

10. Wrapping: Wrap valve body with 8 mil polyethylene encasement in a manner which will not interfere with valve operations, buried service.

C. Gate Valves (smaller than 2-inch):

1. Type: Iron body, bronze-mounted, double disc, parallel seat.

2. Standard: AWWA C500.

3. Working Pressure: Rated to 200 psi minimum.

4. Stem: Non-rising stem with O-ring valve packing and 2-inch square nut, except as shown otherwise.

5. Joints: Mechanical (buried), Flanged (above ground).

6. Opening: Counter-clockwise.

7. Finish: Ferrous surfaces of valve interior epoxy-coated, AWWA C550.

8. Wrapping: Wrap valve body with 8 mil polyethylene encasement in a manner which will not interfere with valve operations, buried service.

2.8 TEST TAPS:

A. Contractor shall install branch saddle tap with ¼-turn brass shutoff valve/corporation stop located on the top of the water line within approximately 5 feet of each gate valve along the pipeline route such that each section of pipe between gate valves has a single 2-inch tap for air relief and adding make-up water to that section during charging and pressure testing of the pipeline.

2.9 TRACER WIRE SYSTEM:

A. Tracer wire:

1. Tracer wire for open cut/open ditch and through casing pipe shall be a #12 AWG HS-CCS high-strength copper clad steel conductor (HS-CCS), insulated with a 30 mil, high-density, high molecular weight polyethylene (HDPE) insulation, and rated for direct burial use at 30 volts.

2. HS-CCS conductor must be at 21% conductivity for locate purposes, break load 250 lbs. minimum.

3. HDPE insulation shall be RoHS compliant and utilize virgin grade material. Insulation color shall meet the APWA color code standard for identification of buried utilities.

a. Manufacturers supplying copper clad steel tracer wire must have available detailed performance data including 5 years of underground testing in terms of durability related to damage of protective insulation and effects of potential corrosion of the specific copper clad steel used. Origin of copper clad steel manufacturer is required and steel core must be manufactured in the United States. If manufacturer has not completed 5 year corrosion testing, a 5 year warranty must be provided.

b. Tracer wire shall be Copperhead™ HS-CCS HDPE 30 mil or pre-approved equal and made in the USA.

i. Part# 1430B-HS in appropriate spool length.
ii. Utilize the least amount of connection/splice points as possible. Spools come in 500', 1000', and 2500' lengths to maximize continuous wire runs.

B. Anode:

1. The tracer wire system shall be terminated and grounded at all dead end points with the appropriate anode to complete the electrical circuit.

2. Anode shall be Copperhead™ Anode must be used or a pre-approved equal and made in the USA. Part # (Ano-1005), 1# x 1.315"D x 18.5"L, Magnesium Drive in Anode.

3. The anode provided is intended to include an HDPE cap and 10' of factory installed Copperhead™ red 14 AWG copper clad steel tracer wire with 30 mil high-density high molecular weight polyethylene (HDPE) insulation. The factory installed wire is rated for direct burial use at 30 volts. HDPE insulation shall be RoHS compliant and utilize virgin grade material. Package includes one Copperhead SnakeBite™ connector, part # SCB-01-SR, which is filled with non-hardening, dielectric, moisture displacement silicon for corrosion protection. The connector is provided to splice the factory installed anode tracer wire to the mainline tracer wire.

C. Connector:

1. Connectors shall be Copperhead™ SnakeBite Locking Connector or pre-approved equal and made in the USA, Part # LSC1430B-25.

2. Wire Type: Copperhead™ CCS 30 mil copper clad steel tracer wire, Range: Min #14 / Max #10.

3. Molded Plastic Temperature Rating: -45˚C (-49˚F) to 125˚C (257˚F).

4. Vertellus Moisture Displacement Gel Material Temperature Rating: 154˚C (309˚F).

D. Test Stations:

1. Test stations shall be Copperhead™ SnakePit™ or pre-approved equal and made in the USA, Part number LD14B Lite Duty Box.

2. The appropriate test station is intended to include encapsulated magnet, corrosion-resistant insulated brass wire lug, wax pad to cover wire connections after installation of wire, color-coded and tamper-proof locking lid with top access connection point. Lid removal shall not be required to use station.

3. Test stations shall be located at the beginning and the end of each continuous run of new water line installed, and at intervals along water line as recommended by the manufacturer.

2.10 MARKER TAPE:

A. Metallic Marking Tape

1. To be installed in trench with water line.

2. Tape characteristics:

a. Minimum width of 8 inches,
b. Total thickness of 5 mil. consisting of 1 mil. polypropylene clear film with reverse printing laminated to 0.5 mil. aluminum foil core, and 3.5 mil. polyethylene backing.

3. Tape shall be detectable with a non-ferrous metal detector.

4. Tape shall be provided by Pro-Line Safety Products Co., or approved equivalent.

5. Contractor shall furnish appropriate tape color for raw/untreated water in compliance with American Public Works Association standards, and tape shall be marked with “Caution - Buried Water Line Below” or Engineer-approved equivalent.

6. Tape shall be installed in trench approximately 24-inches above the top of pipe and compacted to provide a maximum of 24" finished cover above tape.

2.11 ACCESSORIES:

A. Valve markers:

1. Product: Carsonite Composite Utility Water Line marker, or approved equivalent.
2. Color: Blue.
3. Length: 6'0", Mark at 18" for proper burial depth.
4. Decal: "Water Valve" or “CAV” or “BOV” in white lettering.
5. Location: At all water valves.

B. Water line markers:

1. Product: Carsonite Composite Utility Water Line marker, or approved equivalent.
2. Color: Blue.
3. Length: 6'0", Mark at 18" for proper burial depth.
4. Decal: "Water Line" in white lettering.
5. Location: max 1,000 feet spacing along water line route.

C. Valve Boxes/Covers:

1. Product: Tyler Pipe 6850 Series telescoping cast iron valve box or a 6" PVC Class 160 riser or approved equivalent.
2. Cover: Cast Iron, marked, "Water" with a tight fit to valve box.

PART 3 EXECUTION

3.1 Preparation:

A. Conform to applicable installation specifications for types of pipe used.

B. Employ workmen who are skilled and experienced in laying pipe of type and joint configuration being furnished. Provide watertight pipe and pipe joints.

C. Lay pipe to lines and grades shown on Drawings.

D. Confirm that nine feet minimum separation from gravity sanitary sewers and manholes or separation of four feet minimum from force mains as specified in this Section in all directions unless special design is provided on Drawings.

E. Where above clearances cannot be attained, and special design has not been provided on Drawings, obtain direction from Engineer before proceeding with construction.

F. For projects involving multiple subdivisions or locations, limit water line installation to maximum of two project site locations. Maximizing 2 pipe installation crews shall be permitted, unless otherwise approved by Engineer.

G. Coordinate with the City of Missouri City Public Works and MUD operators for opening and closing of valves for connection and for chlorination.

H. If asbestos-cement (A.C.) pipe is encountered, follow safety practices outlined in American Water Works Association's publication, "Work Practices for A/C Pipe". Strictly adhere to "recommended practices" contained in this publication and make them "mandatory practices" for this Project.

I. Contractor is responsible for assuring chosen manufacturer fulfills requirements for extra fittings and, therefore, is responsible for costs due to downtime if requirements are not met.

3.2 Handling, Cleaning and Inspection:

A. Handling:

1. Place pipe along project site where storm water or other water will not enter or pass through pipe. Pipe ends shall remain sealed until pipe is ready to be installed. Contractor shall follow preventative and corrective measures during construction as stated in C-651 Sec. 4.3.

2. Load, transport, unload, and otherwise handle pipe and fittings to prevent damage of any kind. Handle and transport pipe with equipment designed, constructed and arranged to prevent damage to pipe, lining and coating. Do not permit bare chains, hooks, metal bars, or narrow skids or cradles to come in contact with coatings. Where required, provide pipe fittings with sufficient interior strutting or cross bracing to prevent deflection under their own weight.

3. Hoist pipe from trench side into trench by means of sling of smooth steel cable, canvas, leather, nylon or similar material.

4. For large diameter water lines, handle pipe only by means of sling of canvas, leather, nylon, or similar material. Sling shall be minimum 36 inches in width. Do not tear or wrinkle tape layers.

5. Use precautions to prevent injury to pipe, protective linings and coatings.

a. Package stacked pipe on timbers. Place protective pads under banding straps at time of packaging.

b. Pad for trucks with carpet or other suitable material. Use nylon straps around pipe for lift when relocating pipe with crane or backhoe.

c. Do not lift pipe using hooks at each end of pipe.

d. Do not place debris, tools, clothing, or other materials on pipe.

6. Repair damage to pipe or protective lining and coating before final acceptance.

7. Reject pipe with visible cracks (not meeting exceptions) and remove from project site.

B. Cleaning: Thoroughly clean and dry interior of pipe and fittings of foreign matter before installation, and keep interior clean until Work has been accepted. Keep joint contact surfaces clean until jointing is completed. Do not place debris, tools, clothing or other materials in pipe. Each joint of pipe 14" and larger shall be broom swept to remove all debris as the pipe is laid. After pipe laying and joining operations are completed, clean inside of pipe and remove debris. All pipe 14" and larger shall be broom swept to remove

all debris as the pipe is laid.

C. Inspection: Before installation, inspect each pipe and fitting for defects. Reject defective, damaged or unsound pipe and fittings and remove them from site.

3.3 Earthwork:

A. Conform to applicable provisions of Section 02225 – Excavation, Backfilling, and Compacting for Utilities.

B. Bedding: Use bedding materials in conformance with Section 02225 – Excavation, Backfilling, and Compacting for Utilities.

C. Backfill: Use bank run sand or earth or native soil as specified in Section 02225 – Excavation, Backfilling, and Compacting for Utilities. Backfill excavated areas in same day excavated. When not possible, cover excavated areas using steel plates on paved areas and other protective measures elsewhere.

D. Place material in uniform layers of prescribed maximum loose thickness and wet or dry material to approximately optimum moisture content. Compact to prescribed density Water tamping is not allowed.

E. Pipe Embedment: Including 6-inch pipe bedding and backfill to 6 inches above top of pipe.

3.4 Pipe Cutting:

A. Cut pipe 12 inches and smaller with standard wheel pipe cutters. Cut pipe larger than 12 inches in manner approved by Engineer. Make cuts smooth and at right angles to axis of pipe. Bevel plain end with heavy file or grinder to remove sharp edges.

3.5 Piping Installation:

A. General Requirements:

1. Lay pipe in subgrade free of water.

2. Make adjustments of pipe to line and grade by scraping away subgrade or filling in with granular material.

3. Properly form bedding to fully support bell without wedging or blocking up bell.

4. Open Cut Construction: Keep pipe trenches free of water which might impair pipe laying operations. Grade pipe to provide uniform support along bottom of pipe.

5. Excavate for bell holes after bottom has been graded and in advance of placing pipe. Lay not more than nominal city block length or not more than 300 feet of pipe in trench ahead of backfilling operations. Cover or backfill laid pipe if pipe laying operations are interrupted and during non-working hours. Place backfill carefully and simultaneously on each side of pipe to avoid lateral displacement of pipe and damage to joints. If adjustment of pipe is required after it has been laid, remove and re-lay as new pipe.

B. Install pipe continuously and uninterrupted along each street on which work is to be performed. Obtain approval of Engineer prior to skipping any portion of Work.

C. Protection of Pipeline: Securely place stoppers or bulkheads in openings and in end of line when construction is stopped temporarily and at end of each day's work.

D. Critical Location Investigation:

1. Horizontal and vertical location of various underground lines shown on Drawings, including but not limited to water lines, gas lines, storm sewers, sanitary sewers, telecommunication lines, electric lines or power ducts, pipelines, concrete and debris, are based on best information available but are only approximate locations. At Critical Locations shown on Drawings, field verify horizontal and vertical locations of such lines within zone 2 feet vertically and 4 feet horizontally of proposed work.

   a. Verify location of existing utilities minimum of 7 working days in advance of pipe laying activities based on daily pipe laying rate. Use extreme caution and care when uncovering these lines.

   b. Notify Engineer in writing immediately upon identification of obstruction. In event of failure to identify obstruction in minimum of 7 days, Contractor will not be entitled to extra cost for downtime including, but not limited to, payroll, equipment, overhead, demobilization and remobilization, until 7 days has passed from time Engineer is notified of obstruction.

2. Notify involved utility companies of date and time that investigation excavation will occur and request that their respective utility lines be marked in field. Comply with utility or pipeline company requirements that their representative be present during excavation. Provide Engineer with 48 hours notice prior to field excavation or related work.

3. Survey vertical and horizontal locations of obstructions relative to project baseline and datum and plot on 11 inch by 17 inch copy of Drawings. For large diameter water lines, submit to Engineer for approval, horizontal and vertical alignment dimensions for

connections to existing lines, tied into project baseline, signed and sealed by R.P.L.S.

E. Laying Large Diameter (12" or greater) Water Line:

1. Lay not more than 50 feet of pipe in trench ahead of backfilling operations.

2. Dig trench proper width as shown. When trench width below top of pipe becomes 4 feet wider than specified, install higher class of pipe or improved bedding, as determined by Engineer. No additional payment will be made for higher class of pipe or improved bedding.

3. Use adequate surveying methods and equipment; employ personnel competent in use of this equipment. Horizontal and vertical deviations from alignment as indicated on Drawings shall not exceed 0.10 feet. Measure and record "as-built" horizontal alignment and vertical grade at maximum of every 100 feet on record drawings.

4. Prevent damage to coating when placing backfill. Use backfill material free of large rocks or stones, or other material which could damage coatings.

5. Before assembling couplings, lightly coat pipe ends and outside of gaskets with cup grease or liquid vegetable soap to facilitate installation.

6. Prior to proceeding with critical tie-ins submit sequence of work based on findings from "critical location" effort.

F. For tie-ins to existing water lines, provide necessary material on hand to facilitate connection prior to shutting down existing water line. Provide City a minimum of two weeks notice prior to shutting down existing water line.

3.6 Joints and Jointing:

A. Rubber Gasketed Bell-and-Spigot Joints for PVC pipe.

1. After rubber gasket is placed in spigot groove of pipe, equalize rubber gasket cross section by inserting tool or bar recommended by manufacturer under rubber gasket and moving it around periphery of pipe spigot.

2. Lubricate gaskets with nontoxic water-soluble lubricant before pipe units are joined.

3. Fit pipe units together in manner to avoid twisting or otherwise displacing or damaging rubber gasket.

4. After pipe sections are joined, check gaskets to ensure that no displacement of gasket has occurred. If displacement has occurred, remove pipe section and remake joint as for new pipe. Remove old

gasket, inspect for damage and replace if necessary before remaking joint.

5. Where preventing movement of 16-inch diameter or greater pipe is necessary due to thrust, use restrained joints as shown on Drawings.

   a. Include buoyancy conditions for soil unit weight when computing thrust restraint calculations.
   b. Do not include passive resistance of soil in thrust restraint calculations.

B. Flanged Joints where required on Ductile Iron Pipe.

1. AWWA C 207. Prior to installation of bolts, accurately center and align flanged joints to prevent mechanical prestressing of flanges, pipe and equipment. Align bolt holes to straddle vertical, horizontal or north-south center line. Do not exceed 3/64 inch per foot inclination of flange face from true alignment.

2. Use full-face gaskets for flanged joints. Provide 1/8-inch-thick cloth inserted rubber gasket material. Cut gaskets at factory to proper dimensions.

3. Use stainless steel (304) nuts and bolts to match flange material. Use stainless steel nuts and bolts (304) underground. Tighten bolts progressively to prevent unbalanced stress. Maintain at all times approximately same distance between two flanges at points around flanges. Tighten bolts alternately (180° apart) until all are evenly tight. Draw bolts tight to ensure proper seating of gaskets. Provide Densco petroleum based tape or approved equal for all exposed portions of nuts, bolts and pipe.

4. Full length bolt isolating sleeves and washers shall be used with flanged connections. Furnish kits in accordance with City's "Approved Products List."

C. Restrained Joints:

1. Thrust restraint lengths shown on Drawings are minimum anticipated lengths. These lengths are based on deflections indicated and on use of PVC pipe. Adjustments in deflections or use of other pipe material may result in reduction or increase of thrust lengths. Perform calculations by pipe manufacturer to verify proposed thrust restraint lengths. Submit calculations for all pipe materials sealed by a registered Professional Engineer in State of Texas for review by Engineer. Make adjustments in thrust restraint lengths at no additional cost to City.

2. Passive resistance of soil will not be permitted in calculation of thrust restraint.

3. Installation.

a. Install restrained joints mechanism in accordance with manufacturer's recommendations.

b. Examine and clean mechanism; remove dirt, debris and other foreign material.

c. Apply gasket and joint NSF 61 FDA food grade approved lubricant.

d. Verify gasket is evenly seated.

e. Do not over stab pipe into mechanism.

4. Prevent any lateral movement of thrust restraints throughout pressure testing and operation.

D. Large Diameter Water Main Joint Testing: In addition to testing individual joints with feeler gauge approximately 1/2 inch wide and 0.015-inch thick, use other joint testing procedure approved or recommended by pipe manufacturer which will help ensure watertight installation prior to backfilling. Perform tests at no additional cost to City.

E. Make curves and bends by deflecting joints or other method as recommended by manufacturer and approved by Engineer. Submit details of other methods of providing curves and bends which exceed manufacturer's recommended deflection prior to installation.

1. Deflection of pipe joints shall not exceed maximum deflection recommended by pipe manufacturer, unless otherwise indicated on Drawings.

2. If deflection exceeds that specified but is less than 5 percent, repair entire deflected pipe section such that maximum deflection allowed is not exceeded.

3. If deflection is equal to or exceeds 5 percent from that specified, remove entire portion of deflected pipe section and install new pipe.

4. Replace, repair, or reapply coatings and linings as required.

5. Assessment of deflection may be measured by Engineer at location along pipe. Arithmetical averages of deflection or similar average measurement methods will not be deemed as meeting intent of standard.

6. When rubber gasketed pipe is laid on curve, join pipe in straight alignment and then deflect to curved alignment.

3.7 Securing, Supporting and Anchoring:

A. Support piping as shown on Drawings and as specified in this Section, to maintain line and grade and prevent transfer of stress to adjacent structures.

B. Use adequate temporary blocking of fittings when making connections to distribution system and during hydrostatic tests. Use sufficient anchorage and blocking to resist stresses and forces encountered while tapping existing water line.

3.8 Polyethylene Wrap for Ductile Iron Pipe:

A. Wrap pipe and appurtenances (except fire hydrants and fusion bond or polyurethane coated fittings) with 8-mil polyethylene film.

B. Do not use polyethylene wrap if pipe is cathodically protected.

C. Conform to requirements of AWWA C105.

3.9 Cleanup and Restoration:

A. Provide cleanup and restoration crews to work closely behind pipe laying crews, and where necessary, during disinfection and hydrostatic testing, service transfers, abandonment of old water lines, backfill and surface restoration.

B. For small diameter water lines do not exceed a total of 50% of total project linear feet of disturbed right-of-way and easement until site is restored.

1. Exceeding any of the above footage limitations shall be considered a material breach of the Contract and subject to termination in accordance with the General Conditions.

C. For large diameter water lines, do not install more than 2,000 linear feet of water line, without previous 2,000 linear feet being restored. Failure to comply with this requirement shall be considered a material breach of the Contract and subject to termination in accordance with the General Conditions.

3.10 Cleaning Piping Systems:

A. Remove construction debris or foreign material and thoroughly broom clean and flush piping systems. Provide temporary connections, equipment and labor for cleaning. City must inspect water line for cleanliness prior to filling.

3.11 Disinfection of Water Lines:

A. Conform to requirements of Section 02675 – Water System Disinfection.

3.12 Field Hydrostatic Tests:

A. Conform to requirements of Section 02670 - Hydrostatic Testing of Pipelines.

END OF SECTION

SECTION 02675

WATER SYSTEM DISINFECTION

PART 1 GENERAL

1.1 SECTION INCLUDES:

A. Disinfection of potable water distribution (and transmission) system.

B. Disinfection of all potable water piping inside of building.

C. Disinfection of water treatment structures and reservoirs.

D. Testing and reporting results.

1.2 REFERENCES:

A. AWWA B300 - Standard for Hypochlorite's.

B. AWWA B301 - Standard for Liquid Chlorine.

C. AWWA C651 - Standard for Disinfecting Water Mains.

D. AWWA C652 - Disinfection of Water Storage Facilities.

E. 30 TAC 290.38 through 290.49 - Rules and Regulations for Public Water Systems, *Texas Administrative Code*.

1.3 SUBMITTALS FOR INFORMATION:

A. Section 01300 - Submittals: Procedures for Submittals.

B. Test Reports: Indicate results comparative to specified requirements.

C. Certificate: Certify that cleanliness of water distribution system meets or exceeds specified requirements.

1.4 PROJECT RECORD DOCUMENTS:

A. Submit under provisions of Section 01700.

B. Disinfection Report:

1. Type and form of disinfectant used.

2. Date and time of disinfectant injection start and time of completion.

3. Test locations.

4. Initial and 24-hour disinfectant residuals (quantity in treated water) in ppm for each outlet tested.

5. Date and time of flushing start and completion.

6. Disinfectant residual after flushing in ppm for each outlet tested.

C. Bacteriological Report:

1. Date issued, project name and testing laboratory name, address and telephone number.

2. Time and date of water sample collection.

3. Name of person collecting samples.

4. Test locations.

5. Initial and 24-hour disinfectant residuals in ppm for each outlet tested.

6. Coliform bacteria test results for each outlet tested.

7. Certification that water conforms, or fails to conform, to bacterial standards of AWWA C651, C652 and 30 TAC 290.38 through 290.46.

1.5 QUALITY ASSURANCE:

A. Perform work in accordance with AWWA C651 and C652.

B. Testing Firm: Approved laboratory by the Texas Department of Health, Bureau of Laboratories.

C. The Contractor may use the:

City of Midland Water Lab
3303 W. Illinois
Space 22
Midland, TX 79703

Phone: 432-681-7618

Water is analyzed in this laboratory at the following times:
Monday – Thursday
8:00 AM – 12:00 PM and 1:00 PM – 3:00 PM

D. Submit bacteriologist's signature and authority associated with testing.

E. Bacteriologist tests shall indicate negative. If other than negative disinfection, shall be repeated at contractor's expense.

1.6 REGULATORY REQUIREMENTS:

A. Conform to AWWA C651 and C652 and 30 TAC 290.38 through 290.46 for performing the work of this section.

PART 2 PRODUCTS

2.1 DISINFECTION:

A. Chemicals: AWWA B300, Hypochlorite and AWWA B301, Liquid Chlorine.

PART 3 EXECUTION

3.1 EXAMINATION:

A. Verify that piping system and structures have been cleaned, inspected and pressure tested.

B. Perform scheduling and disinfecting activity with start-up, testing, adjusting and balancing, demonstration procedures, including coordination with related systems.

3.2 EXECUTION:

A. Provide and attach equipment required to perform the work of this section.

B. Inject disinfectant into piping system, tank, or structure while filling. Disinfection agent may be introduced with permanent chlorination equipment when possible, or other means of application. Application of chlorine gas under pressure directly to the water is not permitted.

C. Maintain disinfectant in system for 24 hours.

D. Flush, circulate and clean until required cleanliness is achieved; use municipal domestic water.

E. Replace permanent system devices removed for disinfection.

3.3 FIELD QUALITY CONTROL:

A. Section 01400 - Quality Assurance: Field Inspection and Testing.

B. Analyze samples in accordance with AWWA C651 and C652 and 30 TAC 290.44.

C. New water mains shall be thoroughly disinfected, then flushed and sampled on 2 consecutive days in accordance with AWWA C651. Section 5.1.1 before being placed into service.

D. Samples shall be collected for microbiological analysis to check the effectiveness of the disinfection procedure, which shall be repeated if contamination persists. A minimum of one sample for each 1,000 feet of completed water line is required, or the next available sampling joint beyond 1,000 feet as designated by the Engineer.

END OF SECTION

SECTION 02685

CLEANING OF POTABLE WATER PIPES

PART 1 GENERAL

1.1 SUMMARY:

A. General:

1. Before any newly constructed potable water mains will be permitted to be placed into service in the Water Distribution System, it shall be cleaned in advance of testing an disinfection of the new water main.

B. Related Specification Sections include, but are not necessarily limited to:

1. Section 02665 – Water Systems.
2. Section 02675 – Water System Disinfection.

1.2 PRICE AND PAYMENT PROCEDURES:

A. Measurement and Payment:

1. Measurement:

a. This Item is considered subsidiary to the water main being Cleaned and Tested.

2. Payment:

a. The work performed and the materials furnished in accordance with this Item are subsidiary to cleaning and shall be subsidiary to the unit price bid per linear foot of water pipe complete in place, and no other compensation will be allowed.

1.3 REFERENCES:

A. Reference Standards:

1. Reference standards cited in this Specification refer to the current reference standard published at the time of the latest revision date.

2. American Water Works Association/American (AWWA):

a. C301, Prestressed Concrete Pressure Pipe, Steel-Cylinder Type.
b. C303, Concrete Pressure Pipe, Bar-Wrapped, Steel-Cylinder Type.
c. C651, Disinfecting Water Mains.
d. C655, Field De-Chlorination.

1.4 SUBMITTALS:

A. Submittals:

For 24-inch and larger water mains, provide the following:

1. Cleaning Plan – Prior to the start of construction, submit a water main cleaning plan detailing the methods and schedule, including:

a. A detailed description of cleaning procedures.
b. Flushing procedures.
c. Plans and hydraulic calculations to demonstrate adequate flushing velocities.
d. Control of water.
e. Disposal.

2. Disinfection Plan – prior to the start of construction submit a disinfection plan including:

a. The method mixing and introducing chlorine.
b. Flushing.
c. De-chlorination.
d. Sampling.

PART 2 PRODUCTS

Not used.

PART 3 EXECUTION

3.1 CLEANING:

A. General:

1. All water mains shall be cleaned by flushing prior to bacteriological testing.

B. Flushing Method:

1. Prepare the main by installing blow-offs at appropriate locations, of sufficient sizes and numbers, and with adequate flushing to achieve a minimum velocity in the main of 2.5 feet per second.

a. Minimum blow-off sizes for various main sizes are as follows:

i 4-inch through 8-inch main – ¾-inch blow-off.
ii 10-inch through 12-inch main – 1-inch blow-off.
iii 16-inch and greater main – 2-inch blow-off.

b. Flushing shall be subject to the following limitations:

i Limit the volume of water for flushing to 3 times the volume of the water main.
ii Do not unlawfully discharge chlorinated water.
iii Do not damage private property.
iv Do not create a traffic hazard.

c. Once Flushing is complete:

i Corporations stops used for flushing shall be plugged.

C. Daily main cleaning:

1. Wipe joints and then inspect for proper installation.

2. Sweep each joint and keep clean during construction.

3. Install a temporary plug on all exposed mains at the end of each working day or an extended period of work stoppage.

END OF SECTION

SECTION 02750

FUSIBLE POLYVINYLCHLORIDE PIPE

PART 1 GENERAL

1.1 DESCRIPTION:

A. SCOPE:

1. This section specifies fusible polyvinylchloride pipe and appurtenances for water transmission systems, including standards for dimensionality, testing, quality, acceptable fusion practice, safe handling and storage.

B. PIPE DESCRIPTION:

1. Pipe supplier shall furnish fusible polyvinylchloride pipe conforming to all standards and procedures, and meeting all testing and material properties as described in this specification.

2. Pipe shall conform to the following dimensionality and general characteristics table:

Pipe Description	Nominal Diameter (in.)	DR	Color	Pressure Class (psi)	Required Inside Diameter (min in.)
AWWA C-900	30	21	Blue	200	28.00
AWWA C-900	24	21	Blue	200	22.00

1.2 QUALITY ASSURANCE:

A. REFERENCES:

1. This section contains references to the following documents. They are a part of this section as specified and modified. Where a referenced document contains references to other standards, those other standards are included as references under this section as if referenced directly. In the event of a conflict between the requirements of this section and those of the listed documents, the requirements of this section shall prevail.

2. Unless otherwise specified, references to documents shall mean the documents in effect at the time of design, bid, or construction, whichever is earliest. If referenced documents have been discontinued by the issuing organization, references to those documents shall mean the replacement documents issued or otherwise identified by that organization or, if there are no replacement documents, the last version of the document before it was discontinued.

3. Where document dates are given in the following listing, references to those documents shall mean the specific document version associated with that date, regardless of whether the document has been superseded by a version with a later date, discontinued or replaced.

Referenced	Title

B. MANUFACTURER REQUIREMENTS:

1. All piping shall be made from PVC compound conforming to cell classification 12454 per ASTM D1784.

C. FUSION TECHNICIAN REQUIREMENTS:

1. Fusion Technician shall be fully qualified by the pipe supplier to install fusible polyvinylchloride pipe of the type(s) and size(s) being used. Qualification shall be current as of the actual date of fusion performance on the project.

D. SPECIFIED PIPE SUPPLIERS:

1. Fusible polyvinylchloride pipe shall be used as manufactured under the trade names Fusible C-900®, Fusible C-905®, and FPVC®, for Underground Solutions, Inc., Poway, CA, (858) 679-9551. Fusion process shall be as patented by Underground Solutions, Inc., Poway, CA, Patent No. 6,982,051. Owner and engineer are aware of no other supplier of fusible polyvinylchloride pipe that is an equal to this specified pipe supplier and products.

E. WARRANTY:

1. The pipe shall be warranted for one year from Substantial Completion per the pipe supplier's standard terms.

2. In addition to the standard pipe warranty, the fusion services shall be warranted for one year from Substantial Completion per the fusion service provider's standard terms.

F. PRE-CONSTRUCTION SUBMITTALS:

1. The following PRODUCT DATA is required from the pipe supplier and/or fusion provider:

a. Pipe Size;
b. Dimensionality;
c. Pressure Class per applicable standard;
d. Color;
e. Recommended Minimum Bending Radius;
f. Recommended Maximum Safe Pull Force;
g. Fusion technician qualification indicating conformance with this specification.

G. POST-CONSTRUCTION SUBMITTALS:

1. The following AS-RECORDED DATA is required from the contractor and/or fusion provider to the owner or pipe supplier upon request:

a. Approved datalogger device reports.

b. Fusion joint documentation containing the following information:

i. Pipe Size and Thickness;
ii. Machine Size;
iii. Fusion Technician Identification;
iv. Job Identification;
v. Fusion Joint Number;
vi. Fusion, Heating, and Drag Pressure Settings;
vii. Heat Plate Temperature;
viii. Time Stamp;
ix. Heating and Cool Down Time of Fusion;
x. Ambient Temperature.

PART 2 PRODUCTS

2.1 FUSIBLE POLYVINYLCHLORIDE PRESSURE PIPE FOR POTABLE WATER:

A. Fusible polyvinylchloride pipe shall conform to AWWA C900, AWWA C905, ASTM D2241 or ASTM D1785 for standard dimensions, as applicable. Testing shall be in accordance with the referenced AWWA standards for all pipe types.

B. Fusible polyvinylchloride pipe shall be extruded with plain ends. The ends shall be square to the pipe and free of any bevel or chamfer. There shall be no bell or gasket of any kind incorporated into the pipe.

C. Fusible polyvinylchloride pipe shall be manufactured in a standard 40' nominal length, or custom lengths as specified.

D. Fusible polyvinylchloride pipe shall be blue in color for potable water use.

E. Pipe shall be marked as follows:

1. Nominal pipe size;
2. PVC;
3. Dimension Ratio, Standard Dimension Ratio, or Schedule;
4. AWWA pressure class, or standard pressure rating for non-AWWA pipe, as applicable;
5. AWWA standard designation number, or pipe type for non-AWWA pipe, as applicable;
6. NSF-61 mark verifying suitability for potable water service;
7. Extrusion production-record code;
8. Trademark or trade name;
9. Cell Classification 12454 and/or PVC material code 1120 may also be included.

F. Pipe shall be homogeneous throughout and be free of visible cracks, holes, foreign material, blisters, or other visible deleterious faults.

2.2 FUSION JOINTS:

A. Unless otherwise specified, fusible polyvinylchloride pipe lengths shall be assembled in the field with butt-fused joints. The Contractor shall follow the pipe supplier's written guidelines explicitly for this procedure. All fusion joints shall be completed as described in this specification.

2.3 CONNECTIONS AND FITTINGS FOR PRESSURE APPLICATIONS:

A. Connections shall be defined in conjunction with the coupling of project piping, as well as the tie-ins to other piping systems.

B. DUCTILE IRON MECHANICAL AND FLANGED FITTINGS:

1. Acceptable fittings for use with fusible polyvinylchloride pipe shall include standard ductile iron fittings conforming to AWWA/ANSI C110/A21.10, or AWWA/ANSI C153/A21.53 and AWWA/ANSI C111/A21.11.

2. Connections to fusible polyvinylchloride pipe may be made using a restrained retainer gland product for PVC pipe, as well as for MJ or flanged fittings.

3. Bends, tees and other ductile iron fittings shall be restrained with the use of mechanical joint restraint.

4. Ductile iron fittings and glands must be installed per the manufacturer's written instructions.

5. Interior linings for Ductile Iron fittings shall meet the following requirements for potable water service and be NSF-61 certified:

a. Liquid Epoxy shall be 100% solids liquid epoxy, Tnemec Epoxyline Series FC22.
b. Polyurethane shall be DuraShield 210-61 or 310-61.

6. Exterior coatings for Ductile Iron fittings shall meet the following requirements for buried service duty:

a. Polyurethane shall be DuraShield 210 or 310.
b. Liquid Epoxy shall be 100% solids liquid epoxy, Tnemec Epoxyline Series FC22.
c. Coal tar epoxy shall be Sherwin Williams Targuard.

C. FUSIBLE POLYVINYL CHLORIDE SWEEPS OR BENDS:

1. Fusible polyvinyl chloride sweeps or bends shall conform to the same sizing convention, diameter, dimensional tolerances and pressure class of the pipe being joined using the sweep or bend.

2. Fusible polyvinyl chloride sweeps or bends shall be manufactured from the same fusible polyvinyl chloride pipe being used for the

installation, and shall have at least 2 feet of straight section on either end of the sweep or bend to allow for fusion of the sweep to the pipe installation. There shall be no gasketed connections utilized with a fusible polyvinyl chloride sweep.

3. Standard fusible polyvinyl chloride sweep or bend angles shall not be greater than 22.5 degrees, and shall be used in nominal diameters ranging from 4 inch through 16 inch.

D. SLEEVE-TYPE COUPLINGS:

1. Sleeve-type mechanical couplings shall be manufactured for use with PVC pressure pipe, and shall be restrained as indicated in the construction documents.

2. Sleeve-type couplings shall be rated at the same or greater pressure carrying capacity as the pipe itself.

3. Sleeve-couplings, if used, must be installed per the manufacturer's written instructions.

E. EXPANSION AND FLEXIBLE COUPLINGS:

1. Expansion-type mechanical couplings shall be manufactured for use with PVC pipe, and may be restrained or unrestrained as indicated in the construction documents.

2. Expansion-type mechanical couplings shall be rated at the same or greater pressure carrying capacity as the pipe itself.

3. Expansion or flexible couplings, if used, must be installed per the manufacturer's written instructions.

F. CONNECTION HARDWARE:

1. Bolts and nuts for buried service shall be made of non-corrosive, high-strength, low-alloy steel having the characteristics specified in ANSI/AWWA C111/A21.11, regardless of any other protective coating.

PART 3 EXECUTION

3.1 DELIVERY AND OFF-LOADING:

A. All pipe shall be bundled or packaged in such a manner as to provide adequate protection of the ends during transportation to the site. Pipe ends shall be covered during transport. Any pipe damaged in shipment shall be replaced as directed by the Owner or Engineer.

B. Each pipe shipment should be inspected prior to unloading to see if the load has shifted or otherwise been damaged. Notify Owner or Engineer immediately if more than immaterial damage is found. Each pipe shipment

should be checked for quantity and proper pipe size, color, and type.

C. Pipe should be loaded, off-loaded, and otherwise handled in accordance with AWWA M23, and all of the pipe supplier's guidelines shall be followed.

D. Off-loading devices such as chains, wire rope, chokers, or other pipe handling implements that may scratch, nick, cut, or gouge the pipe are strictly prohibited.

E. During removal and handling, be sure that the pipe does not strike anything. Significant impact could cause damage, particularly during cold weather.

F. If appropriate unloading equipment is not available, pipe may be unloaded by removing individual pieces. Care should be taken to insure that pipe is not dropped or damaged. Pipe should be carefully lowered, not dropped, from trucks.

3.2 HANDLING AND STORAGE:

A. Any length of pipe showing a crack or which has received a blow that may have caused an incident fracture, even though no such fracture can be seen, shall be marked as rejected and removed at once from the work. Damaged areas, or possible areas of damage may be removed by cutting out and removing the suspected incident fracture area. Limits of the acceptable length of pipe shall be determined by the Owner or Engineer.

B. Any scratch or gouge greater than 10% of the wall thickness will be considered significant and can be rejected unless determined acceptable by the Owner or Engineer.

C. Pipe lengths should be stored and placed on level ground. Pipe should be stored at the job site in the unit packaging provided by the manufacturer. Caution should be exercised to avoid compression, damage, or deformation to the ends of the pipe. The interior of the pipe, as well as all end surfaces, should be kept free from dirt and foreign matter.

D. Pipe shall be handled and supported with the use of woven fiber pipe slings or approved equal. Care shall be exercised when handling the pipe to not cut, gouge, scratch or otherwise abrade the piping in any way.

E. If pipe is to be stored for periods of 1 year or longer, the pipe should be shaded or otherwise shielded from direct sunlight. Covering of the pipe which allows for temperature build-up is strictly prohibited. Pipe should be covered with an opaque material while permitting adequate air circulation above and around the pipe as required to prevent excess heat accumulation.

F. Pipe shall be stored and stacked per the pipe supplier's guidelines.

3.3 FUSION PROCESS:

A. GENERAL:

1. Fusible polyvinylchloride pipe will be handled in a safe and non-destructive manner before, during, and after the fusion process and in accordance with this specification and pipe supplier's guidelines.

2. Fusible polyvinylchloride pipe will be fused by qualified fusion technicians, as documented by the pipe supplier.

3. Each fusion joint shall be recorded and logged by an electronic monitoring device (data logger) connected to the fusion machine.

4. Only appropriately sized and outfitted fusion machines that have been approved by the pipe supplier shall be used for the fusion process. Fusion machines must incorporate the following elements:

    a. HEAT PLATE - Heat plates shall be in good condition with no deep gouges or scratches. Plates shall be clean and free of any debris or contamination. Heater controls shall function properly; cord and plug shall be in good condition. The appropriately sized heat plate shall be capable of maintaining a uniform and consistent heat profile and temperature for the size of pipe being fused, per the pipe supplier's guidelines.

    b. CARRIAGE – Carriage shall travel smoothly with no binding at less than 50 psi. Jaws shall be in good condition with proper inserts for the pipe size being fused. Insert pins shall be installed with no interference to carriage travel.

    c. GENERAL MACHINE - Overview of machine body shall yield no obvious defects, missing parts, or potential safety issues during fusion.

    d. DATA LOGGING DEVICE – An approved datalogging device with the current version of the pipe supplier's recommended and compatible software shall be used. Datalogging device operations and maintenance manual shall be with the unit at all times. If fusing for extended periods of time, an independent 110V power source shall be available to extend battery life.

5. Other equipment specifically required for the fusion process shall include the following:

    a. Pipe rollers shall be used for support of pipe to either side of the machine.

    b. A weather protection canopy that allows full machine motion of the heat plate, fusion assembly and carriage shall be provided for fusion in inclement, extreme temperatures, and /or windy weather, per the pipe supplier's recommendations.

    c. An infrared (IR) pyrometer for checking pipe and heat plate temperatures.

d. Fusion machine operations and maintenance manual shall be kept with the fusion machine at all times.

e. Facing blades specifically designed for cutting fusible polyvinylchloride pipe shall be used.

B. JOINT RECORDING:

1. Each fusion joint shall be recorded and logged by an electronic monitoring device (data logger) connected to the fusion machine. The fusion data logging and joint report shall be generated by software developed specifically for the butt-fusion of fusible polyvinyl chloride pipe. The software shall register and/or record the parameters required by the pipe supplier and these specifications. Data not logged by the data logger shall be logged manually and be included in the Fusion Technician's joint report.

3.4 GENERAL INSTALLATION:

A. Installation guidelines from the pipe supplier shall be followed for all installations.

B. The fusible polyvinylchloride pipe will be installed in a manner so as not to exceed the recommended bending radius.

C. Where fusible polyvinylchloride pipe is installed by pulling in tension, the recommended Safe Pulling Force established by the pipe supplier shall not be exceeded.

D. Installation shall be in accordance with Section 02665.

3.5 Horizontal Directional Drilling (HDD):

A. FPVC pipe to be installed by HDD shall follow applicable ASTM procedures.

B. The pipe supplier shall verify the pipe size, allowable tensile load, and DR selection for each HDD on the project to determine that it meets the minimum safety factors required per ASTM guidelines.

C. The use of rollers and pipe ballast may be required to facilitate pipe installation into the bore hole. Use of drilling mud and friction reducing methods to ensure that the maximum tensile loads are not exceeded during installation shall be the responsibility of the Contractor.

3.6 PREPARATION PRIOR TO MAKING CONNECTIONS INTO EXISTING PIPING SYSTEMS:

A. Approximate locations for existing piping systems are shown in the construction documents. Prior to making connections into existing piping systems, the contractor shall:

1. Field verify location, size, piping material, and piping system of the existing pipe.

2. Obtain all required fittings, which may include saddles, sleeve type couplings, flanges, tees, or others as shown in the construction documents.

3. Have installed all temporary pumps and/or pipes in accordance with established connection plans.

B. Unless otherwise approved, new piping systems shall be completely assembled and successfully tested prior to making connections into existing pipe systems.

3.7 PIPE SYSTEM CONNECTIONS:

A. Pipe connections shall be installed per applicable standards and regulations, as well as per the connection manufacturer's guidelines and as indicated in the construction documents. Pipe connections to structures shall be installed per applicable standards and regulations, as well as per the connection manufacturer's guidelines.

3.8 TAPPING FOR POTABLE AND NON-POTABLE WATER APPLICATIONS:

A. Tapping shall be performed using standard tapping saddles designed for use on PVC piping in accordance with AWWA C605. Tapping shall be performed only with use of tap saddles or sleeves. NO DIRECT TAPPING WILL BE PERMITTED. Tapping shall be performed in accordance with the applicable sections for Saddle Tapping per Uni-Pub-8.

B. All connections requiring a larger diameter than that recommended by the pipe supplier, shall be made with a pipe connection as specified and indicated on the Drawings.

C. Equipment used for tapping shall be made specifically for tapping PVC pipe:

1. Tapping bits shall be slotted "shell" style cutters, specifically made for PVC pipe. 'Hole saws' made for cutting wood, steel, ductile iron, or other materials are strictly prohibited.

2. Manually operated or power operated drilling machines may be used.

D. Taps may be performed while the pipeline is filled with water and under pressure ('wet' tap), or when the pipeline is not filled with water and not under pressure ('dry' tap).

3.9 TESTING:

A. Testing shall comply with all applicable jurisdictional building codes, statutes, standards, regulations, and laws. Installed pipeline shall be flushed clear of debris prior to initiation of hydrostatic testing.

B. HYDROSTATIC TESTING FOR PRESSURE PIPING:

1. Hydrostatic testing for piping systems that contain mechanical jointing as well as fused PVC jointing shall comply with AWWA C605.

2. Unless agreed to or otherwise designated by the Owner or Engineer, hydrostatic testing following installation shall use a pressure equal to 150% of working pressure at point of test, but not less than 125% of normal working pressure at highest elevation shall be applied. The duration of the pressure test shall be for two (2) hours.

3. In preparation for pressure testing the following parameters must be followed:

   a. All air must be vented from the pipeline prior to pressurization. This may be accomplished with the use of the air relief valves or corporation stop valves, vent piping in the testing hardware or end caps, or any other method which adequately allows air to escape the pipeline at all high points. Venting may also be accomplished by 'flushing' the pipeline in accordance with the parameters and procedures as described in AWWA C605.

   b. The pipeline must be fully restrained prior to pressurization. This includes complete installation of all mechanical restraints per the restraint manufacturer's guidelines, whether permanent or temporary to the final installation. This also includes the installation and curing of any and all required thrust blocking. All appurtenances included in the pressure test, including valves, blow-offs, and air-relief valves shall be checked for proper installation and restraint prior to beginning the test.

   c. Temporary pipeline alignments that are being tested, such as those that are partially installed in their permanent location shall be configured to minimize the amount of potentially trapped air in the pipeline.

C. PARTIAL TESTING:

1. Segments of the pipe may be tested separately in accordance with standard testing procedure and Section 02665, as approved by the Engineer.

END OF SECTION

SECTION 02911

TOPSOILING AND FINISHED GRADING

PART 1 GENERAL

1.1 SECTION INCLUDES:

A. Topsoiling and finished grading.

1.2 SUBMITTALS:

A. Shop Drawings:

1. See Section 01300 for requirements for the mechanics and administration of the submittal process.

2. Project Data: Test reports for furnished topsoil.

1.3 PROJECT CONDITIONS:

A. Location of Work: All areas within limits of grading designated on the Drawings and all areas outside limits of grading which are disturbed in the course of the work.

PART 2 PRODUCTS

2.1 MATERIALS:

A. Topsoil:

1. Original surface soil typical of the area.

2. Existing topsoil stockpiled under Section 02110 – Site Clearing and Grubbing.

3. Capable of supporting native plant growth.

2.2 TOLERANCE:

A. Finish Grading Tolerance: 0.1 FT plus/minus from required elevations.

PART 3 EXECUTION

3.1 PREPARATION:

A. Correct, adjust and/or repair rough graded areas.

1. Cut off mounds and ridges.

2. Fill gullies and depressions.

3. Perform other necessary repairs.

4. Bring all sub-grades to specified contours, even and properly compacted.

B. Loosen surface to depth of 2 inches, minimum.

C. Remove all stones and debris over 2 inches in any dimension.

3.2 ROUGH GRADE REVIEW:

A. Reviewed by Engineer in Section 02110, Site Clearing & Grubbing.

3.3 PLACING TOPSOIL:

A. Do not place when subgrade is wet or frozen enough to cause clodding.

B. Spread to compacted depth of 4 inches for all areas designated to receive hydro mulch seeding.

C. Provide finished surface free of stones, sticks, or other material 1 inch or more in any dimension.

D. Provide finished surface smooth and true to required grades.

E. Restore stockpile area to condition of rest of finished work.

F. Placing topsoil is incidental to hydro mulch seeding, Section 02921.

3.4 ACCEPTANCE:

A. Upon completion of topsoiling, obtain Engineer's acceptance of grade and surface.

B. Make test holes where directed to verify proper placement and thickness of topsoil.

END OF SECTION

SECTION 02921

HYDRO MULCH SEEDING

PART 1 GENERAL

1.1 SECTION INCLUDES:

A. Seeding, fertilizing, mulching, and maintenance of areas indicated on Drawings.

1.2 SUBMITTALS:

A. Conform to requirements of Section 01300.

B. Submit certification from supplier that each type of seed conforms to these specifications and requirements of Texas Seed Law. Certification shall accompany seed delivery.

C. Submit certificate stating that fertilizer complies with these specifications and requirements of Texas Fertilizer Law.

PART 2 PRODUCTS

2.1 MATERIALS:

A. Topsoil: Conform to material requirements of Section 02911 – Topsoil and Finished Grading.

B. Seed: Conform to U.S. Department of Agriculture rules and regulations of Federal Seed Act and Texas Seed Law. Seed shall be certified 90 percent pure and furnish 80 percent germination and meet following requirements:

1. Rye: Fresh, clean, Italian rye grass seed (lollium multi-florum), mixed in labeled proportions. As tested, minimum percentages of impurities and germination must be labeled. Deliver in original unopened containers.

2. Bermuda: Extra-fancy, treated, lawn type common bermuda (Cynodon dactylon). Deliver in original, unopened container showing weight, analysis, name of vendor, and germination test results.

3. Wet, moldy, or otherwise damaged seed will not be accepted.

4. Seed requirements, application rates, and planting dates are:

TYPE	APPLICATION RATE POUNDS/A	PLANTING DATE
Hulled Common Bermuda Grass 98/88 Unhulled Common Bermuda Grass 98/88	40 40	Jan 1 to Mar 31
Hulled Common Bermuda Grass 98/88	40	Apr 1 to Sep 30
Hulled Common Bermuda Grass 98/88 Unhulled Common Bermuda Grass 98/88 Annual Rye Grass (Gulf)	40 40 30	Oct 1 to Dec 31

C. Fertilizer: Dry and free flowing, inorganic, water soluble commercial fertilizer, which is uniform in composition. Deliver in unopened containers which bear manufacturers guaranteed analysis. Caked, damaged, or otherwise unsuitable fertilizer will not be accepted. Fertilizer shall contain minimum percentages of following elements:

1. Nitrogen: 10 Percent
2. Phosphoric Acid: 20 Percent
3. Potash: 10 Percent

D. Mulch:

1. Virgin wood cellulose fibers from whole wood chips having minimum of 20 percent fibers 0.42 inches in length and 0.01 inches in diameter.

2. Cellulose fibers manufactured from recycled newspaper and meeting same fiber content and size as for cellulose fibers from wood chips.

3. Dye mulch green for coverage verification purposes.

E. Soil Stabilizer: "Terra Tack 1" or approved equal.

F. Weed control agent: Pre-emergent herbicide for grass areas, such as "Benefin," or approved equal.

PART 3 EXECUTION

3.1 PREPARATION:

A. Place and compact topsoil in accordance with requirements of Section 02310 – Topsoil and Finished Grading.

3.2 APPLICATION:

A. Seed: Apply uniformly at rates given in Paragraph 2.1 B for type of seed and planting date.

B. Fertilizer: Apply uniformly at rate of 500 pounds per acre.

C. Mulch: Apply uniformly at rate of 50 pounds per 1000 square feet.

D. Soil Stabilizer: Apply uniformly at rate of 40 pounds per acre.

E. Weed Control Agent: Apply at manufacturer's recommended rate prior to hydro mulching.

F. Suspend operations under conditions of drought, excessive moisture, high winds, or extreme or prolonged cold. Obtain Engineer approval before resuming operations.

G. Hydro mulch shall be applied to all disturbed areas.

3.3 MAINTENANCE:

A. Maintain grassed areas minimum of 90 days, or as required to establish an acceptable cover. For areas seeded in fall, continue maintenance following spring until acceptable cover is established.

B. Maintain grassed areas by watering, fertilizing, weeding, and trimming.

C. Repair areas damaged by erosion by regrading, rolling and replanting.

D. Reseed small, sparse grass areas. When sparse areas exceed 20 percent of planted area, reseed by hydro mulch.

E. Mow grass when height reaches 3 1/2 inches or greater on average before final acceptance. Mow to height of 2 1/2 inches.

END OF SECTION

SECTION 03300

CAST-IN-PLACE CONCRETE

PART 1 GENERAL

1.1 SECTION INCLUDES:

A. Cast-in-place concrete consisting of Portland cement, aggregate, water, and admixtures.

B. Mix design requirements.

C. Formwork, reinforcement, joints, and placing requirements.

1.2 REFERENCES:

AMERICAN SOCIETY FOR TESTING AND MATERIALS (ASTM):

A. ASTM A615--Deformed and Plain Billet Steel Bars for Concrete Reinforcement.

B. ASTM C31--Making and Curing Concrete Test Specimens in the Field.

C. ASTM C33--Concrete Aggregates.

D. ASTM C39--Compressive Strength of Cylindrical Concrete Specimens.

E. ASTM C94--(1986; Rev. b) Ready-Mixed Concrete.

F. ASTM C143--Slump of Portland Cement Concrete.

G. ASTM C172--Sampling Freshly Mixed Concrete.

H. ASTM C173--Air Content of Freshly Mixed Concrete by the Volumetric Method.

1.3 SUBMITTALS:

A. Section 01300--Submittals: Procedures for submittals.

B. Certificates: Mill certificates for bulk cement.

C. Product Data: Manufacturer's data sheets for Engineer approved additives and bonding agents.

D. Submit test data on proposed design mixes for each type of concrete to be used in the project to verify that the Specification requirements are met or exceeded.

1.4 QUALITY ASSURANCE:

A. Project Controls: Provide necessary controls during evaluation of material, mix designs, production and delivery of concrete, placement, compaction, finishing and curing necessary to assure that Work will be accomplished in such a manner to produce the Work in accordance with Contract Documents.

1.5 DELIVERY, STORAGE, AND HANDLING:

A. Materials shall be delivered, stored, and handled in a manner to prevent deterioration, contamination, or any other circumstance that would be harmful to cast-in-place concrete.

1.6 PROJECT CONDITIONS:

A. Do not place concrete during rain, sleet, or snow unless protection is provided and approved by the Engineer.

B. Coordinate concrete placement schedule with other related work.

C. Notify Engineer at least 24 hours before placement.

PART 2 PRODUCTS

2.1 MATERIALS:

A. Cement: ASTM C 94, Type I cement, unless approved by the Engineer. Only one brand of any one type of cement shall be used for exposed concrete surfaces of any individual structure.

B. Fine Aggregate: Aggregate meeting the requirements of ASTM C33.

C. Coarse Aggregate: Aggregate sizes No. 467 or No. 57 according to ASTM C33 or as approved by the Engineer.

D. Water: Potable water free from detrimental chemicals and solids that will decrease the strength of the concrete.

E. Embedded Items: Embedded items shall be of the size and type shown or as needed for the application.

F. Curing Materials: Curing materials shall be burlap, impervious sheets, or membrane-forming compounds.

G. Dowels: Plain carbon steel bars, minimum yield point of 40,000 psi for use in slabs on grade.

H. Expansion Joint Filler Strips: Pre-molded non-extruding, resilient bituminous or non bituminous type for use in concrete paving or construction, thickness as shown.

I. Form Materials: Wood, metal or other Engineer approved materials that will produce the specified finishes without adversely affecting the concrete surfaces.

J. Form Coating: Non-staining form oil or form-release agent that will not deleteriously affect concrete surfaces nor impair subsequent applications.

K. Form Ties: Metal, factory-fabricated removable snap-off type, that will not leave holes less than 1/4 inch nor more than 1 inch deep and not more than 1 inch in diameter.

L. Joint Sealant: As shown or approved by Engineer for sealing joints in concrete against moisture infiltration.

M. Reinforcement: Bar reinforcement shall be deformed, Grade 60 conforming to ASTM A615. Mesh reinforcement shall be welded wire fabric with wires at right angles to each other.

N. Bonding Agent: As approved by Engineer.

O. Admixtures: Air-entraining, retarders, and other admixtures as approved by Engineer.

2.2 MIX DESIGN:

A. Concrete Class: Concrete mixes shall be proportioned to obtain the following characteristics:

1. Class "A": Minimum compressive strength of 3000 psi in 28 days with a minimum of 5 bags of cement per cubic yard.

2. Class "B": Minimum compressive strength of 2500 psi in 28 days with a minimum of 4 bags of cement per cubic yard.

B. All concrete shall be Class "A", unless specified otherwise.

C. Air Content: Total air content of exterior concrete shall be maintained at 5 to 7 percent by volume of concrete.

D. Slump: Slump shall be 3 to 5 inches. If admixtures are used, slump shall be as approved by Engineer.

2.3 STORAGE:

A. Materials shall be stored so as not to deteriorate or become contaminated.

PART 3 EXECUTION

3.1 FORMWORK:

A. Formwork shall be made mortar tight, properly aligned and adequately supported to produce concrete conforming accurately to the indicated

shapes, lines, dimensions, with surfaces free of offsets, waviness, or bulges.

B. Unless otherwise shown exposed external corners shall be chamfered, beveled, or rounded by moldings placed in the forms. Chamfer shall be 1" nominal.

C. Surfaces shall be thoroughly cleaned and coated before each use.

D. Forms shall be removed at a time and in a manner that will not damage the concrete.

3.2 REINFORCEMENT:

A. Reinforcement shall be fabricated to the shapes required.

B. Reinforcement shall be interrupted 2 inches clear on each side of expansion joints.

C. Reinforcement shall be continuous through contraction and construction joints.

D. Supports fabricated of plastic, or other Engineer approved material, shall be used to support reinforcement during placing operations.

E. Dowels and tie bars shall be installed at right angles to joints, accurately aligned parallel to the finished surface, and rigidly held in place and supported during concrete placement.

F. One end of dowels shall be oiled or greased.

3.3 INSTALLATION OF ANCHORAGE ITEMS:

A. Installation of anchorage items shall be as shown or required to ensure sufficient anchorage for purpose intended.

3.4 JOINTS:

A. Contraction Joints: Joints shall be installed as specified or shown.

B. Expansion Joints: Joints shall be installed as specified or shown.

C. Construction Joints: Construction joints shall be located as shown or approved by the Engineer.

3.5 PLACING:

A. Surfaces to receive concrete shall be clean and free from frost, ice, mud, and water.

B. Concrete may be placed directly on impervious surfaces that are thoroughly moistened but not muddy.

C. During cold weather, in-place concrete shall be protected from freezing weather, throughout the curing period.

D. During hot weather, a retarder may be used if approved by the Engineer.

E. Concrete to receive other construction shall be struck to the proper level leaving a textured surface to receive the additional construction.

3.6 CONSOLIDATION OF CONCRETE:

A. Except for slabs 4 inches or less, each layer of concrete shall be consolidated with internal concrete vibrators supplemented by hand-spading, rodding, and tamping.

B. Vibrating equipment shall be adequate to thoroughly consolidate the concrete.

C. Concrete in slabs 4 inches and less shall be consolidated by compacting and screening.

3.7 FINISHING CONCRETE:

A. Formed Surfaces:

1. Fins and loose material shall be removed.

2. Unsound concrete, voids over 1/2 inch in diameter, and tie-rod and bolt holes shall be cut back to solid concrete, reamed, brush-coated with cement grout, and filled solid with a stiff Portland-cement-sand mortar mix.

3. Patchwork shall finished flush with adjoining concrete surfaces and, where exposed, shall match adjoining surfaces in texture and color.

B. Unformed Surfaces:

1. Surfaces shall be finished to a true plane with no deviation exceeding 5/16 inch when tested with a 10-foot straightedge.

2. Surfaces shall be screed and floated to the required finish level with no coarse aggregate visible before finishing as specified below.

C. Monolithic Finish:

1. Monolithic finish shall be given to flatwork unless otherwise specified.

2. After the surface moisture has disappeared, floated surfaces shall be steel-troweled to a smooth, even, dense finish, free from blemish including trowel marks.

3. Edges shall be chamfered.

3.8 CURING:

A. Curing shall start as soon as free water has disappeared from concrete surfaces after placing and finishing.

B. Curing materials shall be applied and maintained so as to protect the concrete from moisture loss for 7 days.

C. Curing shall be accomplished by impervious sheet or membrane-forming curing compound.

D. Concrete surfaces shall be thoroughly wetted before covering with impervious sheet materials.

E. Membrane-forming curing compound shall be applied with mechanical spraying equipment at a coverage rate as recommended by manufacturer.

F. Curing compound shall not be used on surfaces receiving applications depending on adhesion or bonding.

3.9 TESTING:

A. The frequency and type of tests shall be determined by the Engineer.

B. Aggregates: Aggregates shall be sampled and tested in accordance with ASTM C33.

C. Sampling of Concrete: Samples of concrete for air, slump, unit weight, and strength tests shall be taken in accordance with ASTM C172.

D. Air Content: Tests for air content shall be performed in accordance with ASTM C173.

E. Slump: Tests shall be performed in accordance with ASTM C143.

F. Cylinders: Cylinders shall be molded and cured according to ASTM C31 and tested in accordance with ASTM C39.

END OF SECTION

SECTION 03600

GROUT

PART 1 GENERAL

1.1 SECTION INCLUDES:

A. Grout for leveling column base plates, steel beams bearing on masonry, machinery and other equipment and/or accessories.

1.2 REFERENCES:

A. ASTM C33 - Concrete Aggregates.

B. ASTM C109 - Compressive Strength of Hydraulic Cement Mortars.

C. ASTM C230 - Flow Table for use in Test of Hydraulic Cement.

D. CRD-C-611 - Methods of Test for Flow of Grout Mixtures (Flow-Cone Method).

E. CRD-C-621 - Specification for Non-Shrink Grout.

1.3 SUBMITTALS:

A. Procedures for Submittals: Section 01300.

B. Product Data: Manufacturer's product data sheets.

C. Quality Control Submittals: For information only.

1. Certification: Manufacturer's certification, or certified laboratory test reports, confirming that materials meet specification requirements.

2. Installation instructions.

1.4 DELIVERY, STORAGE AND HANDLING:

A. Deliver non-shrink grout to project site in unopened containers with manufacturer's labels intact.

B. Store non-shrink grout material in dry shelter and protect from moisture.

C. Containers that are torn or damaged such that non-shrink grout material has been exposed to elements shall be discarded.

PART 2 PRODUCTS

2.1 MANUFACTURERS:

A. Products of the following manufacturers are acceptable subject to meeting specification requirements:

1. Cormix Construction Chemicals (Gifford-Hill).
2. Dayton Superior Corp.
3. Euclid Chemical Co.
4. Five Star Products, Inc.
5. L&M Construction Chemicals.
6. Master Builders.
7. Symons.

B. Substitutions: Under provision of Section 01600.

2.2 NON-SHRINK GROUT:

A. Qualities: Premixed, non-metallic, non-shrink grout material manufactured under rigid quality control, especially for use in transferring heavy loads.

1. Non-metallic natural aggregate, non-staining and noncorrosive.

2. Resist attack by oil and water.

3. Minimum initial setting time of approximately one hour at 70 degrees Fahrenheit.

4. Minimum compressive strength of 8500 psi at 28 days when placed at a fluid consistency.

5. Free of gas-producing or gas-releasing agents.

6. Not greater than .04 expansion at 3, 14 and 28 days. Expansion at 28 days not less than expansion at 3 and 14 days.

B. Standards:

1. Overall Product: CRD-C-621.
2. Compressive Strength: ASTM C109, 2 inch cubes.
3. Bleed Performance: CRD-C-611.
4. Flow Factor: ASTM C230.

2.3 RELATED MATERIALS:

A. Water: Potable.

B. Pea Gravel: Clean pea gravel, ASTM C33, coarse aggregate graded so that at least 90 percent passes a 3/8 inch sieve and 90 percent is retained by a No. 4 sieve.

C. Membrane-Forming Curing Compound: As specified in Section 03300.

2.4 MIXING:

A. Mix materials in accordance with manufacturer's instructions.

B. Mix as close to area to be grouted as possible. Provide adequate means to transport mixed grout as quickly as possible, and in manner to prevent segregation.

C. No more grout shall be mixed at one time than can be placed in a period of 15 minutes. After grout has been mixed, do not re-temper by adding additional water.

D. For less than a 4-inch clearance, or where size or shape of space makes grouting difficult, grout mix shall consist of grout material and water.

E. For greater than 4-inch clearances where coarse aggregate will not obstruct free passage of grout, grout may be extended by adding clean pea gravel if allowed or recommended by the grout manufacturer. Follow manufacturer's recommendation for maximum amount of pea gravel that may be added to mixture.

F. Use minimum amount of water necessary to produce a flowable grout without causing either segregation or bleeding.

PART 3 EXECUTION

3.1 PROCEDURES:

A. Installation methods and procedures shall conform to the printed instructions of the grout manufacturer and these specifications. Where there is a conflict between these specifications and the printed instructions of the grout manufacturer, the printed instructions of the grout manufacturer shall take precedence.

3.2 PREPARATION:

A. Remove defective concrete, laitance, dirt, oil, grease and other foreign material from concrete surfaces by bush-hammering, chipping, or other similar means, until a second clean concrete surface is achieved.

B. Lightly roughen concrete, but not enough to interfere with proper placement of grout.

C. Remove foreign materials from surfaces in contact with grout.

D. Align, level and maintain final positioning of components to be grouted. Coat shim with a thin film of grease or wax to facilitate removal.

E. Provide relief holes to avoid trapping air beneath base plate.

F. Take special precautions during extreme weather conditions according to the manufacturer's written instructions.

G. Saturate concrete surfaces with clean water for period of time specified by manufacturer. Remove excess water just prior to grouting.

H. Immediately prior to grouting, clean surfaces free of contaminates.

3.3 FORMWORK:

A. Build leak proof forms that are strong and securely anchored and shored to withstand grout pressures. Build forms high enough to provide a "head" of grout where it is required to force grout into difficult locations.

B. Provide enough clearance between formwork and areas to be grouted to permit proper placement of grout.

3.4 PLACING:

A. Place grout in accordance with manufacturer's instructions.

B. Place non-shrink grouting material quickly and continuously by most practical means permissible; pouring, pumping, or under gravity pressure. Do not use either pneumatic-pressure or dry packing methods without authorization of Engineer.

C. When practical, apply grout from one side only to avoid entrapping air.

D. Final installation shall be thoroughly compacted and free from air pockets. To facilitate placement, a ½- to 1-inch chain or metal strap may be pulled back and forth under the equipment during grouting. Remove chain or strap before initial set takes place.

E. Do not vibrate place grout mixture or allow it to be placed if area is being vibrated by nearby equipment, except when approved by grout manufacturer.

F. Do not remove leveling shims for at least 48 hours after grout has been placed. After shims have been removed, fill voids with non-shrink grout.

3.5 CURING:

A. Cure grout for 3 days at a temperature of not less than 50 Fahrenheit after placing by keeping wet and covered with curing paper, by coating with a concrete membrane-forming curing compound, or by other approved methods.

END OF SECTION

SECTION 15100

VALVES: BASIC REQUIREMENTS

PART 1 GENERAL

1.1 SUMMARY

A. Section Includes:

1. Valving, actuators, and valving appurtenances.

1.2 QUALITY ASSURANCE

A. Referenced Standards:

1. American Society of Mechanical Engineers (ASME):

a. B1.20.1, Pipe Threads, General Purpose.

b. B16.1, Gray Iron Pipe Flanges and Flanged Fittings: Classes 25, 125, and 250.

c. B16.18, Cast Copper Alloy Solder Joint Pressure Fittings.

d. B16.34, Valves – Flanged, Threaded, and Welding End.

2. ASTM International (ASTM):

a. A126, Standard Specification for Gray Iron Castings for Valves, Flanges, and Pipe Fittings.

b. D256, Standard Test Methods for Determining the Izod Pendulum Impact Resistance of Plastics.

c. D638, Standard Test Method for Tensile Properties of Plastics.

d. D648, Standard Test Method for Deflection Temperature of Plastics Under Flexural Load in the Edgewise Position.

e. D695, Standard Test Method for Compressive Properties of Rigid Plastics.

f. D2240, Standard Test Method for Rubber Property-Durometer Hardness.

3. American Water Works Association (AWWA):

a. C207, Standard for Steel Pipe Flanges for Waterworks Service - Sizes 4 IN through 144 IN.

b. C500, Standard for Metal-Seated Gate Valves for Water Supply Service.

c. C504, Standard for Rubber-Seated Butterfly Valves.

d. C507, Standard for Ball Valves, 6 IN through 48 IN (150 MM through 1200 MM).

e. C509, Standard for Resilient-Seated Gate Valves for Water Supply Service.

f. {C541, Standard for Hydraulic and Pneumatic Cylinder and Vane-Type Actuators for Valves and Slide Gates.}

g. {C542, Standard for Electric Motor Actuators for Valves and Slide Gates.}

h. C550, Standard for Protective Coatings for Valves and Hydrants.

i. C606, Standard for Grooved and Shouldered Joints.

4. American Water Works Association/American National Standards Institute (AWWA/ANSI):

a. C111/A21.11, Standard for Rubber-Gasket Joints for Ductile-Iron Pressure Pipe and Fittings.

5. National Electrical Manufacturers Association (NEMA):

a. 250, Enclosures for Electrical Equipment (1000 Volts Maximum).

b. MG 1, Motors and Generators.

1.3 DEFINITIONS

A. The following are definitions of abbreviations used in this Specification Section or one (1) of the individual valve sections:

1. CWP: Cold water working pressure.
2. SWP: Steam working pressure.
3. WOG: Water, oil, gas working pressure.
4. WWP: Water working pressure.

1.4 SUBMITTALS

A. Shop Drawings:

1. See Division 01 for requirements for the mechanics and administration of the submittal process.

2. Product technical data including:

a. Acknowledgement that products submitted meet requirements of standards referenced.
b. Manufacturer's installation instructions.
c. Valve pressure and temperature rating.
d. Valve material of construction.
e. Special linings.
f. Valve dimensions and weight.
g. Valve flow coefficient.
h. Wiring and control diagrams for electric or cylinder actuators.

3. Test reports.

B. Operation and Maintenance Manuals:

1. See Division 1 for requirements for:

a. The mechanics and administration of the submittal process.
b. The content of Operation and Maintenance Manuals.

C. Informational Submittals:

1. Verification from valve actuator manufacturer that actuators have been installed properly, that all limit switches and position potentiometers have been properly adjusted, and that the valve actuator responds correctly to the valve position command.

PART 2 PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS

A. Subject to compliance with the Contract Documents, refer to individual valve Specification Sections for acceptable manufacturers.

2.2 MATERIALS

A. Refer to individual valve Specification Sections.

2.3 VALVE ACTUATORS

A. Valve Actuators - General:

1. Provide actuators as shown on Drawings or specified.

2. Counterclockwise opening as viewed from the top.

3. Direction of opening and the word OPEN to be cast in handwheel or valve bonnet.

4. Size actuator to produce required torque with a maximum pull of 80 LB at the maximum pressure rating of the valve provided and withstand without damage a pull of 200 LB on handwheel or chainwheel or 300 foot-pounds torque on the operating nut.

5. Unless otherwise specified, actuators for valves to be buried, submerged or installed in vaults or manholes shall be sealed to withstand at least 20 FT of submergence.

6. Extension stem:

   a. Install where shown or specified.
   b. Solid steel with actuator key and nut, diameter not less than stem of valve actuator shaft.
   c. Pin all stem connections.
   d. Center in valve box or grating opening band with guide bushing.

B. Buried Valve Actuators:

1. Provide screw or slide type adjustable cast iron valve box, 5 IN minimum diameter, 3/16 IN minimum thickness, and identifying cast iron cover rated for traffic load.

2. Box base to enclose buried valve gear box or bonnet.

3. Provide 2 IN standard actuator nuts complying with AWWA C500, Section 3.16.

4. Provide at least two (2) tee handle keys for actuator nuts, with 5 FT extension between key and handle.

5. Extension stem:

   a. Provide for buried valves greater than 4 FT below finish grade.
   b. Extend to within 6 IN of finish grade.

6. Provide concrete pad encasement of valve box as shown for all buried valves unless shown otherwise.

C. Plastic Valve Vault:

1. Provide in non-traffic areas only on valve applications 3-1/2 IN and less.

2. Nominal 7-1/2 IN DIA top section.

3. Design unit for screw type extension section having nominal 9 IN DIA bell.

4. Cast iron ring and lid.

5. Constructed of injection molded polyolefin compound with fibrous inorganic component reinforcing and UV stabilization.

6. Armor Access Boxes.

D. Exposed Valve Manual Actuators:

1. Provide for all exposed valves not having electric or cylinder actuators.

2. Provide handwheels for gate and globe valves.

a. Size handwheels for valves in accordance with AWWA C500.

3. Provide lever actuators for plug valves, butterfly valves and ball valves 3 IN DIA and smaller.

a. Lever actuators for butterfly valves shall have a minimum of 5 intermediate lock positions between full open and full close.

b. Provide at least two (2) levers for each type and size of valve furnished.

4. Gear actuators required for plug valves, butterfly valves, and ball valves 4 IN DIA and larger.

5. Provide gearing for gate valves 20 IN and larger in accordance with AWWA C500.

6. Gear actuators to be totally enclosed, permanently lubricated and with sealed bearings.

7. Provide chain actuators for valves 6 FT or higher from finish floor to valve centerline.

a. Cadmium-plated chain looped to within 3 FT of finish floor.

b. Equip chain wheels with chain guides to permit rapid operation with reasonable side pull without "gagging" the wheel.

8. Provide cast iron floor stands where shown on Drawings.

a. Stands to be furnished by valve manufacturer with actuator.

b. Stands or actuator to include thrust bearings for valve operation and weight of accessories.

E. Submerged Actuators:

1. Mount the valve actuator on top of an extension bonnet 3 FT above any adjacent personnel access, or as shown.

2. The valve and bonnet connection shall be flanged and watertight.

3. Provide a top brace support for the bonnet.

a. Mount the brace 6 IN below the top of the wall as shown.

4. Provide intermediate stem extension guides as required.

5. Materials:

a. Extension bonnet: Cast iron ASTM A126 or steel.
b. Braces and anchor bolts: Type 316 stainless steel.

F. Electric Actuators (480 V, 3 PH) (Valves 6 IN and Larger):

1. Conform to AWWA C542.

2. Provide electric valve actuators with integral control devices. Where scheduled, provide a remote pushbutton station.

3. Furnish electric actuator integral with valve consisting of:

a. Motor.
b. Gearing.
c. Handwheel.
d. Limit and torque switches.
e. Lubricants.
f. Heating elements.
g. Wiring.
h. Terminals for motor power and controls.
i. Drive nut.

4. Housing/enclosure:

a. Provide cast iron gear housing and cast iron load bearing enclosure.

b. Non load bearing enclosure and housing: Aluminum or cast iron.

c. Rated for area classification shown on Drawings.

d. Provide O-ring seals for covers and entries.

e. Terminal and limit switch compartment covers are to be fastened to gear housing by stainless steel fasteners with capture device to prevent loss.

5. Motors:

a. Provide motors that are totally enclosed, high torque design made expressly for valve actuator service and capable of operating the valve under full differential pressure for complete open-close and reverse cycle of travel at least twice in immediate succession without overheating.

b. Design motors in accordance with NEMA MG 1 standards, with Class B insulation, and to operate successfully at any voltage within 10 percent above or below rated voltage.

c. Provide positive method to ensure motor bearings are permanently lubricated.

d. Provide three (3) thermal switches imbedded in windings:

i. 120 degrees apart.
ii. Provide motor shutdown at high temperature.

e. Motor housing:

i. Aluminum or cast iron.
ii. Totally enclosed nonventilated with cooling fins.

f. Provide motor capable of operating in any position.

g. Provide motor sealed from gearcase to allow any mounting position.

h. Provide motors suitable for 480 V, 3 PH, 60 Hz.

6. Gearing:

a. Provide power gearing consisting of heat treated steel helical gears, carburized and hardened alloy steel worm, and alloy bronze worm gear, all grease or oil bath lubricated, designed for 100 percent overload, and effectively sealed against entrance of foreign matter.

b. Provide gearing mechanism constructed to permit field changes of reduction gear ratio.

c. Design actuators so that motor comes up to speed before stem load is encountered in either opening or closing operation.

d. Limit switch gearings and feedback device reduction gearing:

i. Steel or bronze.

e. Support rotating shafts with anti-friction bearings.

f. Provide separate drive nut/thrust bearing assembly:

i. Mounted to base of actuator.
ii. High tensile bronze.
iii. Quarter turn actuator: Provide 90 degree mounting intervals.
iv. Provide grease fitting on drive assembly.

7. Handwheel:

   a. Permanently attached for manual operation.

   b. Positive declutch mechanism to engage and disengage handwheel.

   c. Handwheel shall not rotate during motor operation.

   d. Inoperable motor shall not prevent manual operation.

8. Limit torque and thrust loads in both closing and opening directions by torque limit switches.

   a. Provide torque switches with micrometer adjustment and reference setting indicator.

      i. Assure adjustment variation of approximately 40 percent in torque setting.

   b. Provide switches having rating of not less than 6 A at 120 Vac and 2.2 A at 115 Vdc.

   c. Limit and torque switches shall have totally sealed contacts.

9. Furnish electric actuator with two (2) geared limit switch assemblies with each switch assembly having four (4) separate limit switches:

   a. Assure each limit switch assembly is geared to driving mechanism and is independently adjustable to trip at any point at and between the fully open and fully closed valve position.

   b. Provide minimum of two (2) normally open contacts and two (2) normally closed contacts at each end of valve travel.

   c. Provide switches with inductive contact rating of not less than 6 A at 120 Vac, 3 A at 240 Vac, 1.5 A at 480 Vac, 2.2 A at 115 Vdc and 1.1 A at 230 Vdc.

   d. Limit switches shall be fully adjustable when power is applied to actuator.

10. Provide space heating elements sized to prevent condensation in both motor and geared limit switch compartment(s).

    a. Furnish heating elements rated at 120 Vac with heaters continuously energized.

11. Open-close actuator controls:

a. Provide control assembly with necessary holding relays, reversing starter, control transformers of sufficient capacity to provide control power, space heating element power and valve position transmitter.

b. Provide control assembly in an enclosure rated for the defined area classification.

c. Controls for open/close actuator:

i. Provide remote pushbutton station where scheduled with enclosure rated for area classification shown on Drawings with:

- Open pushbutton.
- Close pushbutton.
- Stop pushbutton.
- Remote/local switch.
- Full open light.
- Full close light.
- Open and close relays as required.

ii. Provide control enclosure to accept:

- Remote open/close switches.

iii. Provide contacts in control enclosure:

- Remote/local contact.
- Full open contact.
- Full close contact.

iv. Wire all components to an internal terminal strip and include mounted wiring diagram inside enclosure.

12. Additional requirements for modulating valve actuators:

a. Proportional position servo-amplifier mounted integral with the actuator control compartment.

b. Positioning of valve shall be proportional to a 4-20 mA signal input to the position servo-amplifier when remote control has been selected.

c. Servo-amplifier adjustments shall include zero, span, gain, and dead-band.

d. Provide 4-20 mA signal position control as shown on the drawings that interfaces with the position control/position feedback instrumentation wiring to and from PLC.

G. Pneumatic Actuators

1. Acceptable manufacturers:

   a. K-Tork
   b. Or Engineer approved equal

2. Pneumatic actuators shall be designed and constructed as follows:

   a. Shall be vane with lip seals design housed in a split housing.

   b. The lip seal on the vane shall be dual opposed injection molded polyurethane and must totally isolate the shaft seals from the air supply.

   c. Stainless steel expanders shall be fitted beneath the vane lip seal to ensure continual seal-to-case contract. O-ring vane seals are unacceptable.

   d. Actuator housing shall be zinc (ILZRO-16) or aluminum (ASTM-380 or ASTM-356T%) and must be externally coated with corrosion resistant baked epoxy enamel coating. Actuator housing interior surfaces shall be electrolyses nickel plated, baked epoxy enamel or Teflon impregnated.

   e. Actuator shall have stainless steel threaded travel stops allowing adjustment at each end of stroke. All fasteners shall be stainless steel.

   f. The actuator shall be designed hold the valve in position without fluttering when in any position and during modulation.

   g. The actuator shall have a minimum working pressure of 150 psig and be designed with a minimum factor of safety of 3 based on the yield strength of the material.

3. Operators shall be sized to open and close valves based on customer supplied air of 80 psig. The rated torque capabilities of each operator shall be 1.25 times the maximum valve torque required to seat, unseat, operation (dynamic) without jerking the disc and hold the valve open under any operation condition. Visual position indication shall be provided on all actuators.

4. Provide handwheel operation between the valve and pneumatic operator to allow the valve to be manually opened or closed. Provide with handwheel operator engage/disengage lever. Pneumatic operator shall be provided with a manual air bleed to release air pressure and allow manual operation of the valve. Air bleed shall be an integral part of the actuator.

5. OPEN/CLOSE Actuators:

a. Shall consist of a solenoid (to control air to actuator vane), position indicator and limit switches housed in NEMA 4 enclosures.

b. Solenoid valve shall be four-way and control the actuator by exhausting or applying air to the appropriate side of the vane actuator.

c. Solenoid valves shall have integral manual override mechanisms to allow manual operation in the event of power failure.

d. Solenoid valve shall be the diaphragm type and ported to allow contaminants up to 40 microns.

e. Solenoid valves shall be sized to open valve in 45 seconds and have speed control devices that allow an increase or decrease by a factor of two in cycle time for both open and closed travel time.

f. Solenoid valves shall be a two position spring return and designed so that the valve being controlled will fall in the open or closed position as specified in the control strategy on loss or power, or control signal.

g. The solenoid valves may be either externally mounted or internally mounted. Externally mounted solenoid valves shall be manufactured by AUTOMATIC SWITCH CO or approved equal.

h. Solenoid valve body and internals shall be brass or stainless steel.

i. Provide all actuators with two limit switches for open-close limit stops. Limit switches shall be hermetically sealed proximity-type limit switches. Switches shall be solid state and include integral solid state voltage spike and current surge protection.

j. Provide all actuators with position indicators (green for open and red for closed).

k. Actuator components shall be designed for a 120 VAC power supply.

l. Provide wiring terminal strip pre-wired and labeled.

2.4 FABRICATION

A. End Connections:

1. Provide the type of end connections for valves as required in the Piping Schedules presented in Specification Section 15060 or as shown on the Drawings.

2. Comply with the following standards:

a. Threaded: ASME B1.20.1.

b. Flanged: ASME B16.1, Class 125 unless otherwise noted or AWWA C207.

c. Bell and spigot or mechanical (gland) type: AWWA/ANSI C111/A21.11.

d. Soldered: ASME B16.18.

e. Grooved: Rigid joints per Table 5 of AWWA C606.

B. Refer to individual valve Specification Sections for specifications of each type of valve used on Project.

C. Nuts, Bolts, and Washers:

1. Wetted or internal to be stainless steel (type 316).

a. Exposed to be zinc or cadmium plated.

D. On Insulated Piping: Provide valves with extended stems to permit proper insulation application without interference from handle.

E. Epoxy Interior Coating: Provide epoxy interior coating for all ferrous surfaces in accordance with AWWA C550.

PART 3 EXECUTION

3.1 INSTALLATION

A. Install products in accordance with manufacturer's instructions.

B. Setting Buried Valves:

1. Locate valves installed in pipe trenches where buried pipe indicated on Drawings.

2. Set valves and valve boxes plumb.

3. Place valve boxes directly over valves with top of box being brought to surface of finished grade.

4. Install in closed position.

5. Place valve on firm footing in trench to prevent settling and excessive strain on connection to pipe.

6. After installation, backfill up to top of box for a minimum distance of 4 FT on each side of box.

C. Support exposed valves and piping adjacent to valves independently to eliminate pipe loads being transferred to valve and valve loads being transferred to the piping.

D. For grooved coupling valves, install rigid type couplings.

E. Install electric or cylinder actuators above or horizontally adjacent to valve and gear box to optimize access to controls and external handwheel.

F. For threaded valves, provide union on one (1) side within 2 FT of valve to allow valve removal.

G. Install valves accessible for operation, inspection, and maintenance.

3.2 ADJUSTMENT

A. Adjust valves, actuators and appurtenant equipment to comply with Division 01.

1. Operate valve, open and close at system pressures.

B. For all 120 Vac and 480 Vac electric actuators, employ and pay for services of valve actuator manufacturer's field service representative to:

1. Inspect valve actuators covered by this Specification Section.

2. Supervise adjustments and installation checks:

a. Open and close valves electrically under local manual and demonstrate that all limit switches are properly adjusted and that switch contacts are functioning properly by verifying the inputs are received at the remote input/output (RIO) panels or local control panel as appropriate.

b. Simulate a valve position command signal at the RIO panel or local control panel as appropriate and demonstrate that the valve is controlled to the desired position without excessive hunting.

3. Provide Owner with a written statement that the valve actuator manufacturer has verified that the actuators have been installed properly, that all limit switches and position potentiometers have been properly adjusted and that the valve actuator responds correctly to the valve position command.

END OF SECTION

SECTION 15101

GATE VALVES

PART 1 GENERAL

1.1 SECTION INCLUDES:

A. Gate valves for water service.

1.2 REFERENCES:

A. ASTM B62--Standard Specifications for Composition Bronze or Ounce Metal Castings.

B. ANSI B16.1--Cast Iron Pipe Flanges and Flanged Fittings.

C. AWWA C509--Resilient Seated Gate Valve.

D. AWWA C500--Double Disc Gate Valve.

1.3 SYSTEM DESCRIPTION:

A. Valves 4-inch through 48-inch shall be manufactured in accordance with AWWA C509. Valves smaller than 4-inch shall be manufactured in accordance with AWWA C500.

B. Where the requirements of these specifications conflict with AWWA C509 and AWWA C500, these specifications shall govern.

1.4 SUBMITTALS:

A. Provide the following information in accordance with Section 01300:

1. Dimensional information.
2. Manufacturer's installation, operation, and maintenance instructions.
3. Recommended list of spare parts.

1.5 DELIVERY, STORAGE, AND HANDLING:

A. Storage: Store all valves and appurtenances in accordance with the manufacturer's written instructions. Protect all valves and appurtenances from damage.

PART 2 PRODUCTS

2.1 MANUFACTURERS:

A. Gate Valves (AWWA C515):

1. Clow.
2. EJ Iron Works.

3. Mueller.
4. M&H.
5. Approved equivalent.

2.2 VALVES:

A. Gate Valves (4-inch through 48-inch):

1. Type: Solid wedge, resilient-seat type.
2. Standard: AWWA C509.
3. Working Pressure: Rated to 200 psi minimum.
4. Stem: Non-rising stem with O-ring valve packing and 2-inch square nut, except as shown otherwise.
5. Joints: Mechanical (buried); Flanged (above grade).
6. Opening: Counterclockwise.
7. Finish: Ferrous surfaces of valve interior epoxy-coated, AWWA C550.
8. Wrapping: Wrap valve body with 8 mil polyethylene encasement in a manner which will not interfere with valve operation, buried service.

2.3 MANUAL VALVE ACTUATORS:

A. Provide manual actuators/operators for valves.

B. Manual actuators shall be locking lever-type on valves 8-inch diameter or less. Levers shall be capable of being locked in the "OPEN," "CLOSED," and at least 8 intermediate positions. Levers shall lock by means of a visible spring loaded locking system that must be released before operating the valve.

C. Manual actuators for valves 10-inch diameter and larger shall be rotary manual (gear) type. Rotary manual actuators shall have hand wheel input. Rotary manual actuators shall be enclosed lubricated, and sealed. Provide "OPEN" and "CLOSED" position stops that are externally adjustable. An external indicator shall show the position of the valve disc.

D. Actuators shall be factory-installed only. Attaching the actuators to the valves while in the field is not acceptable.

E. Actuator orientation shall be in accordance with the direction of the Owner and Engineer.

PART 3 EXECUTION

3.1 INSTALLATION:

A. Install valves in accordance with manufacturer's instructions and as shown.

B. Demonstrate valve operation by manual control at valve.

END OF SECTION

SECTION 15113

COMBINATION AIR RELEASE VALVES

PART 1 GENERAL

1.1 SECTION INCLUDES:

A. Standard combination air release valves for water service.

1.2 REFERENCES:

A. ASTM A48--Standard Specification for Composition Bronze or Ounce Metal Castings Class 30.

B. ASTM A240--Standard Specification for Heat Resisting Chromium and Chromium-Nickel Stainless Steel Plate, Sheet, and Strip for Pressure Vessels.

C. ASTM A270--Standard Specification for Seamless and Welded Austenitic Stainless Steel Sanitary Tubing.

D. ASTM A276--Standard Specification for Stainless Steel Bars and Shapes.

E. ASTM B124--Standard Specification for Copper and Copper Alloy Forging Rod, Bar, and Shapes.

1.3 DEFINITIONS:

A. Standard Combination Air Valve--A device with a single body that contains two valves to vent or admit air to the interior of a pipeline.

B. CAV--Combination air valve.

1.4 SUBMITTALS:

A. Provide the following information in accordance with Section 01300:

1. Manufacturer's catalog information.
2. Manufacturer's installation, operation, and maintenance instructions.
3. Recommended list of spare parts with illustration drawing.

1.5 SYSTEM DESCRIPTION:

A. CAVs shall be suitable at operation up to 200 pounds per square inch pressure.

B. The CAV shall allow large volumes of air to escape out the large orifice (valve) when filling a pipeline and closes when liquid enters the valve.

C. When the large orifice is closed, the small air release orifice shall open to allow small amounts of air to escape automatically.

D. The large orifice shall also allow large volumes of air to enter when the pipeline drained.

1.6 DELIVERY, STORAGE, AND HANDLING:

A. Storage: Store all valves and appurtenances in accordance with the manufacturer's written instructions. Protect all valves and appurtenances from damage.

PART 2 PRODUCTS

2.1 MANUFACTURERS:

A. Per the Construction Details.

2.2 MANUFACTURED UNITS:

A. CAVs shall have a bottom connection for the connection to the pipeline and a top connection for venting or admitting air.

B. Both connections shall be topped with female iron pipe threads.

PART 3 EXECUTION

3.1 INSTALLATION:

A. Install CAVs in accordance with manufacturer's instructions and as shown.

3.2 FINAL TESTING:

A. Demonstrate that materials or equipment furnished under this Specification are operating properly at the time of project final acceptance.

B. Rework or replace materials as required for proper operation.

EXPLANATION OF SYMBOLS AND TERMS USED ON BORING LOGS

Water Encountered — Water Level Encountered During Drilling

Static Level (date) — Stabilized Water Level

UNIFIED SOIL CLASSIFICATION DESCRIPTION OF SYMBOLS AND DIVISIONS

- Well-Graded Gravels, Gravel Sand Mixtures (GW)
- Poorly-Graded Gravels, Gravel Sand Mixtures (GP)
- Silty Gravel, Gravel Sand-Silt Mixtures (GM)
- Clayey Gravels, Gravel-Sand-Clay Mixtures (GC)
- Well-Graded Sands, Gravelly Sands (SW)
- Poorly-Graded Sands, Gravelly Sands (SP)
- Silty Sands, Poorly-Graded, Sand-Silt Mixtures (SM)
- Clayey Sands, Poorly-Graded, Sand-Clay Mixtures (SC)
- Inorganic Silts and Very Fine Sands, Silty or Clayey Fine Sands (ML)
- Inorganic Clays of Low to Medium Plasticity Gravelly, Sandy or Silty Clays, Lean Clays (CL)
- Organic Silts and Organic Silty Clays of Low Plasticity (OL)
- Inorganic Silts, Micaceous or Diatomaceous Fine Sandy or Silty Soils (MH)
- Inorganic Clays of High Plasticity, Fat Clays (CH)
- Organic Clays of Medium to High Plasticity, Organic Silts (OH)
- Caliche and Other Impervious Layer (HP)

BEDROCK SYMBOLS

- Conglomerate (CGL)
- Sandstone (SS)
- Limestone (LS)
- Shale (Sh)
- Weathered Shale (WS)
- Sandy Shale (SSh)
- Shaley Limestone (Sh LS)
- Dolomite (DOL)

MISCELLANEOUS SYMBOLS

- Asphaltic Concrete (HMAC)
- Cement Grout (CMT)
- Bentonite (BENT)

The LOG of BORING is a representation of the subsurface material at specific boring location and within the depth explored. The transition between strata may be gradual and variations in material types and depths between borings can be expected. Water level observations represent those conditions at the time of exploration and may vary with time and location of site.

SOIL COLOR CLASSIFICATION
Determined by
MUNSELL SOIL COLOR CHARTS
1990 EDITION REVISED

GENERAL NOTES

SAMPLE IDENTIFICATION

Soil Samples are visually classified in general accordance with the Unified Soil Classification System (ASTM D2487 or D 2488)

DRILLING AND SAMPLING SYMBOLS

City Council Meeting

Item Number: 10

Meeting Date: December 15, 2020

To: City Council / City Manager

From: Erika Martinez, Manager, Purchasing

Subject: RESOLUTION AWARDING A CONTRACT TO CB&I STORAGE TANK SOLUTIONS LLC, FOR THE MIDLAND NE WATER SYSTEMS IMPROVEMENTS - ELEVATED STORAGE TANK (PACKET B) FOR A COST OF $4,999,000.00; AND AUTHORIZING THE APPROPRIATION OF FUNDS (GENERAL SERVICES)

Purpose:

Approval of a resolution authorizing the execution of a contract for the Midland NE Water Systems Improvements-Elevated Storage Tank (Packet B) for the Utilities Department.

Recommended City Council Action:

Approve

Fiscal Impact:

$4,999,000 is appropriated from Fund 394 into a project in Fund 370.

Discussion:

Motion 128-2020 approved plans and specifications and authorized advertisement for bids for the Midland NE Water Systems Improvements-Elevated Storage Tank (Packet B). Request for proposals were issued to one hundred seventy-eight (178) vendors and we received three (3) bids. Staff recommends awarding the contract to CB&I Storage Tank Solutions LLC. Please see the attached memo from Carl Craigo, Utilities Director, for additional information.

Therefore, please consider a resolution awarding a contract to CB&I Storage Tank Solutions LLC of Houston, Texas for the Midland NE Water Systems Improvements-Elevated Storage Tank (Packet B) in the amount of $4,999,000.00.

City Manager's Office

INTEROFFICE MEMORANDUM

TO: Erika Martinez, Purchasing Manager

FROM: Carl Craigo, PE, Utilities Director

SUBJECT: Consider a resolution awarding a construction contract North East Elevated Tower and appropriating bond funds

DATE: December 15, 2020

Enprotec Hibbs and Todd under the Utilities on call program prepared plans and specification for the North East elevated tower project. The project is to construct and elevated tower on City/Airport land on the east side of 349 north of where the Craddick Hwy will eventually extend.

Council, under motion 128-2020, approved the prepared plans and specifications to send for proposal.

Three proposals were received on November 18, 2020. The scoring committee met on November 25, 2020 to evaluate the proposals and based on the scoring criteria selected CB&I Storage Tank Solutions, LLC has the recommended proposer.

The project is expected to cost $4,999,000 and take 480 days to complete once construction starts. Funds will be allocated from previous CO issuance.

RESOLUTION NO. _____

RESOLUTION AWARDING A CONTRACT TO CB&I STORAGE TANK SOLUTIONS LLC, FOR THE MIDLAND NE WATER SYSTEMS IMPROVEMENTS - ELEVATED STORAGE TANK (PACKET B) FOR A COST OF $4,999,000.00; AND AUTHORIZING THE APPROPRIATION OF FUNDS

WHEREAS, Motion 128-2020 approved plans and specifications authorized the advertisement for bids for the Midland NE Water Systems Improvements - Elevated Storage Tank (Packet B); and

WHEREAS, the bids were opened on November 18, 2020, with the lowest and most responsible bid being submitted by submitted by CB&I Storage Tank Solutions LLC, as shown on the bid documents attached hereto as Exhibit A and incorporated herein for all purposes; and

WHEREAS, the City Council finds the amount proposed by CB&I Storage Tank Solutions LLC, to be fair and reasonable; and

WHEREAS, the City Council finds it to be in the public interest to award a contract to CB&I Storage Tank Solutions LLC, for the Midland NE Water Systems Improvements - Elevated Storage Tank (Packet B);

NOW, THEREFORE, BE IT RESOLVED BY THE CITY COUNCIL OF THE CITY OF MIDLAND, TEXAS:

SECTION ONE. That the Interim City Manager and City Secretary are hereby authorized and directed to execute and attest, respectively, on behalf of the City of Midland, a contract with CB&I Storage Tank Solutions, for the Midland NE Water Systems Improvements - Elevated Storage Tank (Packet B). Said contract to be kept on file in the office of the City Secretary, referenced by the date and number of this Resolution.

SECTION TWO. $4,999,000.00 is hereby appropriated from Fund 394 into a project in Fund 370.

SECTION THREE. That the City Comptroller is hereby authorized and directed to pay CB&I Storage Tank Solutions LLC, pursuant to the terms of said contract from

available project funds upon receipt of proper invoices or statements approved by the City Manager.

On motion of Council member _____, seconded by Council member _____, the above and foregoing resolution was adopted by the City Council of the City of Midland at a regular meeting on the _____ day of _____, A.D., 2020, by the following vote:

Council members voting "AYE":

Council members voting "NAY":

_____
Patrick N. Payton, Mayor

ATTEST:

_____
Amy M. Turner, City Secretary

RECOMMENDED AND APPROVED:

_____
Robert Patrick, Interim City Manager

BID DOCUMENTS

ADVERTISEMENT

CITY OF MIDLAND
NORTHEAST WATER SYSTEM IMPROVEMENTS
BID PACKAGE B
REQUEST FOR PROPOSALS

The City of Midland (Owner) has issued a Request for Proposals (RFP) in order to evaluate pricing and qualifications of a contractor to construct the following Project:

City of Midland, Texas
Northeast Water System Improvements
Bid Package B
New Elevated Storage Tank

Proposers shall deliver sealed proposals to the Owner at the following address:

City of Midland
Office of the City Secretary
300 N. Loraine, 3rd Floor
Midland, Texas 79701

Proposals must be received at the designated location no later than **2:00 PM, Wednesday, November 18, 2020**.

Proposal Documents may be obtained from Civcast at www.civcastusa.com. Neither Owner nor Engineer will be responsible for full or partial sets of Proposal Documents, including addenda, if any, obtained from sources other than the Issuing Office.

A Virtual Pre-Proposal Meeting will be held at **3:00 PM, Thursday November 5, 2020**. A link to access the Virtual Pre-Proposal Meeting will be posted by Addendum prior to the event. Attendance is encouraged but not required.

For all further requirements regarding submittal, qualifications, procedures, and contract award, refer to the RFP.

The City of Midland reserves the right to reject any or all proposals or to waive any informalities in the proposals.

Date Issued: October 21, 2020
By: Amy Turner
Title: City Secretary

NOTICE TO BIDDERS

IF THIS PURCHASE REQUIRES A CONTRACT, THE ATTACHED **CONTRACT AND INSURANCE REQUIREMENTS ARE NON-NEGOTIABLE**. MODIFICATIONS BY BIDDER/COMPANY OF ANY MATERIAL TERM(S) TO THE CONTRACT DOCUMENTS WILL BE DEEMED A NON-RESPONSIVE BID. NON-RESPONSIVE BIDS WILL BE REJECTED. BIDDER/COMPANY MUST BE WILLING TO SIGN THE CONTRACT AS IS AND WITHOUT MODIFICATIONS, PROVIDE PROPERLY EXECUTED BONDS (IF APPLICABLE) AND PROVIDE INSURANCE SPECIFICALLY AS REQUIRED WITHIN THE CONTRACT DOCUMENTS **WITHIN 21 DAYS** OF THE DATE OF THE TRANSMITTAL LETTER.

IF THE SELECTED BIDDER/COMPANY CANNOT MEET THE ABOVE REQUIREMENTS, THEN **THE CITY RESERVES THE RIGHT TO AWARD THIS PURCHASE TO ANOTHER BIDDER**.

IMPORTANT NOTICE – IF THE CONTRACT DOCUMENTS REQUIRE WORKER'S COMPENSATION INSURANCE, BIDDER/COMPANY MUST CARRY WORKER'S COMPENSATION INSURANCE TO BE ELIGIBLE FOR THIS CONTRACT. IF YOU CANNOT PROVIDE WORKER'S COMPENSATION INSURANCE AS REQUIRED BY STATE OF TEXAS STATUTE, WE RESPECTFULLY REQUEST THAT YOU "NO BID" THIS WORK.

COMPLIANCE: Company agrees that it shall comply with Texas Government Code Section 2252.908, *et seq.*, as amended. Company agrees that it shall comply with Texas Local Government Code Section 176.006, *et seq.*, as amended. For further instructions on how to comply with Texas Government Code Section 2252.908 and Texas Local Government Code Section 176.006,

please go to https://www.ethics.state.tx.us/whatsnew/elf_info_form1295.htm and https://www.ethics.state.tx.us/filinginfo/conflict_forms.htm.

ANY VENDOR WHO FAILS TO COMPLY WITH THE TERMS OF THE AWARD **MAY BE DECLARED AN IRRESPONSIBLE VENDOR**. BIDS SUBMITTED BY SAID VENDOR SHALL NOT BE CONSIDERED AGAIN FOR A MINIMUM PERIOD OF SIX MONTHS AS DETERMINED BY THE CITY MANAGER.

IMPORTANT: READ CAREFULLY BEFORE MAKING BID
GENERAL CONDITIONS OF BIDDING

1. All bids are to be submitted as specified in the procurement document(s).

2. Each Bidder is requested to provide: Descriptive literature clearly marked to show each item on this bid. Any catalog or manufacturer's reference in this proposal is descriptive, but not restrictive, and is used only to indicate type and quality. If, however, the bidder proposes similar but not identical terms, he must furnish all particulars. If no mention is made of any exceptions, it is assumed that he is bidding on the article specified and not on an approved equal and he will be required to deliver exact article specified.

3. Prices should be itemized. (Indicate unit price and extend to show total price.) In case of discrepancy between the unit price and the extension, the unit price shall govern.

4. Unit price for each item offered shall include all discounts; e.g., trade, seasonal, etc. with net 30 days payment terms. Discounts shall not be shown as such but shall be incorporated in the base bid price. Any bid showing discounts will be considered an alternate bid. The City of Midland will not be responsible for any goods delivered without a purchase order number.

5. If the Contract is awarded, it will be awarded to either the lowest responsible bidder, or to the bidder who provides goods or services at the best value for the City of Midland. In determining the best value for the City of Midland, the City of Midland may consider the criteria enumerated in Section 252.043 of the Texas Local Government Code. The City of Midland reserves the right to award by item or by total bid, or to reject any or all bids or parts of bids. Further, the City of Midland reserves all rights granted by Section 271.027 of the Texas Local Government Code. The City of Midland reserves the right to award the bid to the lowest responsible bidder.

6. Time of proposed delivery shall be stated in number of calendar days.

7. NOTE: The City of Midland, Texas is exempt from all Federal, State and City tax. Please do not include these taxes in your bid price or invoice. Taxable items must be so designated, and the City will supply vendor with a Tax Exemption Certificate, properly executed.

8. All items are to be delivered, unloaded and stacked at the location indicated on the Bid Request and Purchase Order.

9. All items are to be delivered F.O.B. to the City of Midland, Texas with freight prepaid and included in the bid.

10. Detailed specifications rule over General specifications (headings, etc.)

11. The City of Midland reserves the right to remove a company from the bid list for (1) continued failure to respond to request for bids, (2) failure to deliver merchandise within promised time, or (3) delivery of substandard merchandise.

12. No officer or employee of the City shall have a financial interest, direct or indirect, in any contract with the City, or be financially interested, directly or indirectly, in the sale to the City of any lands, materials, supplies or services except as allowed under chapter 176 of the Local Government Code. Form CIQ shall be submitted and placed on file with the City of Midland.

13. The City shall determine the most advantageous bid for the City and accept the proposal of the responsible party submitting the lowest and/or most advantageous bid or reject any and all bids.

14. The City of Midland, Texas may consider as informal any bid not prepared and submitted in accordance with the provisions hereof, and may waive, in its sole discretion, any informalities.

QUALIFICATIONS STATEMENT

ARTICLE 1—GENERAL INFORMATION

1.01 Provide contact information for the Business:

Legal Name of Business:			
Corporate Office			
Name:		Phone number:	
Title:		Email address:	
Business address of corporate office:			
Local Office			
Name:		Phone number:	
Title:		Email address:	
Business address of local office:			

1.02 Provide information on the Business's organizational structure:

Form of Business:	☐ Sole Proprietorship ☐ Partnership ☐ Corporation		
☐ Limited Liability Company ☐ Joint Venture comprised of the following companies:			
	1.		
	2.		
	3.		
Provide a separate Qualification Statement for each Joint Venturer.			
Date Business was formed:		State in which Business was formed:	
Is this Business authorized to operate in the Project location?	☐ Yes ☐ No ☐ Pending		

1.03 Identify all businesses that own Business in whole or in part (25% or greater), or that are wholly or partly (25% or greater) owned by Business:

Name of business:		Affiliation:	
Address:			
Name of business:		Affiliation:	
Address:			
Name of business:		Affiliation:	
Address:

ARTICLE 4—SAFETY

4.01 Provide information regarding Business's safety organization and safety performance.

Name of Business's Safety Officer:		
Safety Certifications		
Certification Name	Issuing Agency	Expiration

4.02 Provide Worker's Compensation Insurance Experience Modification Rate (EMR), Total Recordable Frequency Rate (TRFR) for incidents, and Total Number of Recorded Manhours (MH) for the last 3 years and the EMR, TRFR, and MH history for the last 3 years of any proposed Subcontractor(s) that will provide Work valued at 10% or more of the Contract Price. Provide documentation of the EMR history for Business and Subcontractor(s).

Year									
Company	EMR	TRFR	MH	EMR	TRFR	MH	EMR	TRFR	MH

ARTICLE 5—FINANCIAL

5.01 Provide information regarding the Business's financial stability. Provide the most recent audited financial statement, and if such audited financial statement is not current, also provide the most current financial statement.

Financial Institution:		
Business address:		
Date of Business's most recent financial statement:		☐ Attached
Date of Business's most recent audited financial statement:		☐ Attached
Financial indicators from the most recent financial statement		
Contractor's Current Ratio (Current Assets ÷ Current Liabilities)		
Contractor's Quick Ratio ((Cash and Cash Equivalents + Accounts Receivable + Short Term Investments) ÷ Current Liabilities)		

ARTICLE 6—SURETY INFORMATION

6.01 Provide information regarding the surety company that will issue required bonds on behalf of the Business, including but not limited to performance and payment bonds.

EJCDC C-451, Qualifications Statement.
Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

Surety Name:			
Surety is a corporation organized and existing under the laws of the state of:			
Is surety authorized to provide surety bonds in the Project location?	☐ Yes ☐ No		
Is surety listed in "Companies Holding Certificates of Authority as Acceptable Sureties on Federal Bonds and as Acceptable Reinsuring Companies" published in Department Circular 570 (as amended) by the Bureau of the Fiscal Service, U.S. Department of the Treasury? ☐ Yes ☐ No			
Mailing Address (principal place of business):			
Physical Address (principal place of business):			
Phone (main):		Phone (claims):	

ARTICLE 7—INSURANCE

7.01 Provide information regarding Business's insurance company(s), including but not limited to its Commercial General Liability carrier. Provide information for each provider.

Name of insurance provider, and type of policy (CLE, auto, etc.):			
Insurance Provider		Type of Policy (Coverage Provided)	
Are providers licensed or authorized to issue policies in the Project location?		☐ Yes ☐ No	
Does provider have an A.M. Best Rating of A-VII or better?		☐ Yes ☐ No	
Mailing Address (principal place of business):			
Physical Address (principal place of business):			
Phone (main):		Phone (claims):	

ARTICLE 8—CONSTRUCTION EXPERIENCE

8.01 Provide information that will identify the overall size and capacity of the Business.

Average number of current full-time employees:	
Estimate of revenue for the current year:	
Estimate of revenue for the previous year:	

EJCDC C-451, Qualifications Statement.
Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

8.02 Provide information regarding the Business's previous contracting experience.

Years of experience with projects like the proposed project:				
As a general contractor:		As a joint venturer:		
Has Business, or a predecessor in interest, or an affiliate identified in Paragraph 1.03:				
Been disqualified as a bidder by any local, state, or federal agency within the last 5 years? ☐ Yes ☐ No				
Been barred from contracting by any local, state, or federal agency within the last 5 years? ☐ Yes ☐ No				
Been released from a bid in the past 5 years? ☐ Yes ☐ No				
Defaulted on a project or failed to complete any contract awarded to it? ☐ Yes ☐ No				
Refused to construct or refused to provide materials defined in the contract documents or in a change order? ☐ Yes ☐ No				
Been a party to any currently pending litigation or arbitration? ☐ Yes ☐ No				
Provide full details in a separate attachment if the response to any of these questions is Yes.				

8.03 List all projects currently under contract in Schedule A and provide indicated information.

8.04 List a minimum of three and a maximum of six projects completed in the last 5 years in Schedule B and provide indicated information to demonstrate the Business's experience with projects similar in type and cost of construction.

8.05 In Schedule C, provide information on key individuals whom Business intends to assign to the Project. Provide resumes for those individuals included in Schedule C. Key individuals include the Project Manager, Project Superintendent, Quality Manager, and Safety Manager. Resumes may be provided for Business's key leaders as well.

ARTICLE 9—REQUIRED ATTACHMENTS

9.01 Provide the following information with the Statement of Qualifications:

A. If Business is a Joint Venture, separate Qualifications Statements for each Joint Venturer, as required in Paragraph 1.02.

B. Diverse Business Certifications if required by Paragraph 3.01.

C. Certification of Business's safety performance if required by Paragraph 4.02.

D. Financial statements as required by Paragraph 5.01.

E. Attachments providing additional information as required by Paragraph 8.02.

F. Schedule A (Current Projects) as required by Paragraph 8.03.

G. Schedule B (Previous Experience with Similar Projects) as required by Paragraph 8.04.

H. Schedule C (Key Individuals) and resumes for the key individuals listed, as required by Paragraph 8.05.

I. Additional items as pertinent.

REQUEST FOR PROPOSALS (RFP)

CITY OF MIDLAND
NORTHEAST WATER SYSTEM IMPROVEMENTS
BID PACKAGE B

The City of Midland (Owner) is now accepting proposals in order to evaluate pricing and qualifications of a contractor to construct the work identified as Package B of the Northeast Water System Improvements Project. Sealed proposals will be received until **2:00 PM, WEDNESDAY, NOVEMBER 18, 2020**. Proposers shall deliver sealed proposals to the Owner at the following address:

City of Midland
Office of the City Secretary
300 N. Loraine, 3rd Floor
Midland, Texas 79701

Proposal Documents may be obtained from Civcast at www.civcastusa.com. Neither Owner nor Engineer will be responsible for full or partial sets of Proposal Documents, including addenda, if any, obtained from sources other than the Issuing Office.

A Virtual Pre-Proposal Meeting will be held at **3:00 PM, THURSDAY NOVEMBER 5, 2020**. A link to access the Virtual Pre-Proposal Meeting will be posted by Addendum prior to the event. Attendance is encouraged but not required.

GENERAL INFORMATION AND OVERVIEW

The purpose of this RFP is to contract with a firm to construct the Northeast Water System Improvements, Package B. The work consists of the following primary elements:

- Construction of a new 2 Million Gallon (MG) Elevated Storage Tank (EST) and associated site improvements, including concrete driveway and site paving, fencing, gates, site piping and vaults, concrete splash pad, drain field, electrical and communication improvements and all other work as shown and specified for a complete and operational system.

- Work requires coordination with construction of the Northeast Transfer Pump Station (TPS) and Transmission/Distribution Pipeline Improvements (PIPELINES) being constructed under Package A.

The City of Midland reserves the right to reject any or all proposals or to waive any informalities in the proposals.

PROPOSAL PROCESS:

1. Requests for Information/Clarification (RFI/C's) shall be submitted to the Engineer no later than 72 hours prior to the RFP Submittal Deadline. RFI/C's to be requested in writing to:

   Mr. Joe Mangrem, PE
   Enprotec/Hibbs & Todd
   402 Cedar Street
   Abilene, TX 79601
   Phone: 325-698-5560
   Email: joe.mangrem@e-ht.com

2. Written responses to RFI/C's requiring Addendum will be made available to all Proposal holders on record no later than 24 hours prior to the RFP Submittal Deadline.

3. One (1) bound copy and one (1) digital PDF version of the Proposal shall be due by the date and time indicated. Proposals received after the closing hour of the due date shall not be considered.

4. Proposal packages must be hand delivered, mailed or shipped by means of a delivery tracking system to confirm delivery time, date, and person signing for delivery.

5. Proposals will be publicly opened and read aloud after the closing hour of the due date.

6. The Owner shall exercise sole discretion as to the schedule and process of evaluating the proposals according to the requirements contained herein.

7. Criteria for award of the Project will include a weighted matrix developed by the Owner, for a maximum number of 100 points, based on the following criteria:

a.	Proposal Pricing	50%
b.	Proposer Qualifications	30%
c.	Proposal Time	10%
d.	Proposer Safety Record	10%

PROPOSAL FORMAT & REQUIREMENTS:

1. The RFP shall be the basis for each proposal.

2. Proposals shall be addressed to the Owner, as indicated, in a sealed package that shall be independent of the mailing/shipping packages. The proposal package shall be clearly marked as "City of Midland, Northeast Water System Improvements, Package B" on the package label. The package label shall include the name and address of the Respondent's company.

3. Proposals shall be submitted in bound documents.

4. Proposals sent by facsimile (fax) machine or by email shall be rejected as being non-responsive to the RFP.

5. Proposal pricing shall be for the entirety of the work shown or specified and shall be listed on the Price Proposal Sheet of this RFP.

6. All exclusions shall be listed in specific terms, quantities, and values.

7. No Respondent may withdraw its proposal within 60 days after the actual date of the opening thereof.

8. A Proposal may be withdrawn by an appropriate document duly executed in the same manner that a Proposal must be executed and delivered to the place where Proposals are to be submitted prior to the date and time of the RFP submittal deadline. Upon receipt of such notice, the unopened Proposal will be returned to the Respondent.

    a. If a Respondent wishes to modify its Proposal prior to the RFP submittal deadline, Respondent must withdraw its initial Proposal in the manner specified and submit a new Proposal prior to the date and time of the RFP submittal deadline .

    b. If within 24 hours after Proposals are opened any Respondent files a duly signed written notice with Owner and promptly thereafter demonstrates to the reasonable satisfaction of Owner that there was a material and substantial mistake in the preparation of its Proposal, that Respondent may withdraw its Proposal, and the Bid security will be returned. Thereafter, if the Work is rebid, that Proposer will be disqualified from further bidding on the Work.

9. Respondents shall satisfy themselves of the accuracy of the requirements in the RFP by examination of the sites in addition to the review of the Proposal Documents. After proposals have been submitted, the Respondent shall not assert that there was a misunderstanding concerning the quantities of work or the nature of the work to be done. The RFP contains the provisions required for the construction of the Project. Information obtained from an officer, agent, or employee of the Owner or any other person shall not affect the risks or obligations assumed by the Respondent or relieve them from fulfilling any of the conditions of any Contract awarded under this RFP.

10. A certificate of insurance as provided for in the Proposal Documents, naming Owner and Engineer as co-insured, shall be required for any Contract awarded under this RFP. Respondent's insurance company shall be required to give a minimum of 30 days prior notice of policy or coverage cancellation.

11. A PERFORMANCE and PAYMENT BOND, each in the amount of 100 percent (100%) of the Contract Price, issued by a corporate surety authorized to conduct business in the State of Texas under Article 7.19-1, Texas Insurance Code, will be required for the faithful performance of any Contract awarded under this RFP. Attorneys-in-fact who sign PAYMENT BONDS and PERFORMANCE BONDS must file with each bond a certified and effective dated copy of the power of attorney. The party to whom the contract is awarded will be required to execute the Agreement and obtain the PERFORMANCE AND PAYMENT BONDS within ten (10) calendar days from the date when the NOTICE OF AWARD is delivered to the Proposer. The NOTICE OF AWARD shall be accompanied by the necessary Agreement, Bond Forms, and insurance requirements. These bonds shall remain in effect until one year after the date when final payment becomes due or until completion of the correction period.

12. Respondent must provide documentation with Proposal proving that they possess a Water Operator D license, or better, in the state of Texas, and the successful Respondent will be required to maintain said license throughout duration of the project.

13. Proposals shall include, at a minimum, the following sections and documentation in response to the RFP:

    a. Request for Proposal Document – A complete copy of this RFP, including addenda, if any, shall be submitted as a Proposal Section, in its entirety, to include the Price Proposal Sheet to be completed by the Respondent.

    b. Pricing, as follows:

        i. Pricing shall be submitted by item on the attached Price Proposal Sheet. Failure to price all listed items may be considered non-responsive to the RFP.

        ii. Pricing shall include all proposal development costs, mobilization, labor, material, transportation, equipment, incidentals, appurtenances, demolition, removal, demobilization, overhead, and profit to cover the finished work specified in this RFP document, achieving a fully functional system.

        iii. Pricing shall reflect the Owner's sales tax exempt status.

        iv. Pricing shall include all freight and handling costs, F.O.B., Owner's destination.

        v. Pricing shall include insurance and bonding costs.

    c. Statement of Qualifications Section shall include the following minimum information:

        i. Company Profile with listing of principals by percent ownership and their role in the company.

        ii. Type of company – corporation, sole proprietorship, etc.

        iii. Primary field of business interest (water/wastewater, industry, oil & gas, etc.), listed by percent of revenue.

        iv. Date of Incorporation and/or start-up.

        v. Number of years under the current ownership structure and business name.

        vi. Number and location of offices and technical support centers.

        vii. Percentage of this project, based on cost, that shall be:

            - Self-performed – completed by company personnel = what percent.
            - Sub-contracted – completed by personnel of other companies = what percent.

viii. Listing of all sub-contractors proposed to be used, including a complete Statement of Qualifications as required under this section to be completed by any sub-contractor anticipated to perform over 10% of the work by cost.

ix. Number of employees (not subcontractor employees) dedicated to construction, integration, and technical support.

x. Resume and experience of each person to be assigned to this project, to include:

- The individual's technical background as it relates to this project and related field of interest.
- The individual's duration with the Proposer's company.
- The individual's proximity to the Owner's facilities as a reasonable response expectation for technical and service support.
- The individual's company of employment if different from the Respondent.
- Detailed project-specific and Owner's references for the proposed Project Manager and Field Superintendent.

xi. Areas of specialization including required licenses and certifications.

xii. Area of geographical coverage of related project and service activities.

d. Reference Section shall include:

i. A listing of previous project referenced and experience shall be provided by the Proposer, information to include:

- Name of entity.
- Project name.
- Contact person.
- Phone number.
- City of office.
- Year work completed.

ii. A list of a minimum of three (3) similar projects that include the complexity and magnitude of work to be completed in this project, and that have been completed by the Proposer. The list must include contact names, titles, addresses, email addresses, and telephone numbers for references.

e. Safety Record:

i. Include Business's safety organization and safety performance required in Qualifications Statement.

ii. Experience Modification Rate (EMR) for the last three (3) years.

iii. Total Recordable Incident Rate (TRIR) for last three (3) years.

iv. OSHA 300 Logs for the last three (3) years.

v. List and summary of recordable injuries and fatalities in the last three (3) years.

vi. Names and resumes of full-time, credentialed health and safety employees. To be considered credentialed, the minimum acceptable level of certification is the Certified Health and Safety Technician (CHST).

f. Project Schedule:

i. Include with proposal a detailed project schedule from the Notice to Proceed for the timetable for completing the construction of the Work within the time proposed on the Price Proposal Sheet.

ii. Final Completion shall be sixty (60) calendar days from the date established for Substantial Completion.

TERMS AND CONDITIONS:

1. The Owner hereby notifies all Respondents that:

   a. The purchase contemplated by this RFP shall be procured in strict compliance with the local, state and federal laws.

   b. There is no pre-disposition of award to any particular company at the time of advertisement of this RFP.

   c. An invitation to any Respondent, verbal or otherwise, does not waive any requirement set forth in this RFP.

   d. In regard to any agreement entered into pursuant to this document, minority business enterprises will be afforded equal opportunities to submit proposals in response to this invitation and will not be discriminated against on the grounds of race, color, sex, age, religion, or national origin in consideration for an award.

2. The Owner reserves the right to reject any and/or all proposals, to waive any and all technicalities and to accept any proposal, or part thereof, which in the opinion of the Owner, is most advantageous to the Owner. In case of ambiguity or lack of clarity in stating the prices in the proposal, the Owner reserves the right to consider the most advantageous proposal thereof or to reject the proposal.

3. Respondents may modify their proposal by written addendum at any time prior to the scheduled receipt of proposals, provided such communication is received by the Owner prior to the closing hour of the proposal due date. The addendum should not reveal the proposal pricing, but should provide the addition or subtraction or other modification so that the Owner will not know the final pricing or

terms until the sealed proposal, and its addendum, is opened.

4. Owner will not provide interpretation of the meaning of Proposal Documents to any Respondent orally. Such communication must be in writing in the form of an RFI/C and directed to the Engineer as stated herein. Where this RFP is ambiguous or in conflict with on-site conditions, the Respondent shall bring forth questions for clarification, and shall assume all responsibility for a fully functional system prior to submitting a proposal. The Owner and Engineer shall determine the meaning and requirements of any questionable items.

5. Requests for Information/Clarification (RFI/C's) shall be submitted to the Engineer, as previously indicated.

6. Respondents shall assume all responsibility for verifying Engineer's receipt of Requests for Information/Clarification (RFI/C). Where applicable, an addendum or written clarification shall be provided to all Respondents to clarify the meaning of questionable items.

7. Evaluation of proposals will be based on the criteria stated herein. The best-value proposal submitted by a responsible, responsive, qualified Respondent will be selected for negotiations with the Owner. If proposal amounts exceed the available funds to finance the contract, the Owner may reject all proposals or may award the contract on a negotiated proposal to produce a net amount which is within available funds. The Owner reserves the right to waive any informalities or technical errors that in its judgment will best serve its interests.

8. At the time of the opening of proposals, each Respondent will be presumed to be thoroughly familiar with the technical requirements, including any addenda, as set forth herein. The failure or omission of any Respondent to examine any site condition, form, instrument, or document shall in no way relieve any Respondent from any obligation with respect to the proposal. It is the Respondent's responsibility to make inquiry as to any addenda issued. All such addenda shall become part of the Proposal Documents and all Respondents shall be bound by such addenda, whether or not received by the Respondents.

9. The Owner may make such investigations as deemed necessary to determine the ability of the Respondent to perform the work, and the Respondent shall furnish to the Owner all such information and data for this purpose as the Owner may request. The Owner reserves the right to reject any proposal if the evidence submitted by, or the investigation of, such Respondent fails to satisfy the Owner that such Respondent is properly qualified to carry out the obligations of the contract and to complete the work contemplated therein. Conditional proposals will not be accepted.

10. Respondents must inform themselves fully of the conditions relating to the construction of the project and the employment of labor therein. Failure to do so will not relieve a successful Respondent of their obligation to furnish all labor and material necessary to carry out the provisions of any Contract awarded under this RFP. The conduct of required work shall not cause any interruptions of, or interfere with, the work of any other contractors.

11. The Respondent's attention is directed to the fact that all applicable state laws, municipal ordinances, and the rules and regulations of all authorities having jurisdiction over construction of the project shall apply to the contract throughout, and they will be deemed to be included in the contract as though therein written out in full.

12. The Respondent is specifically advised that any person, firm, or other party to whom it is proposed to award a subcontract under this contract must be identified and shall be acceptable to the Owner.

13. With respect to all work performed under this Contract, the Respondent shall meet the following requirements, where scope of work is applicable:

    a. Comply with the safety standards and provisions of applicable laws, building and construction codes and the "Manual of Accident Prevention in Construction" published by the Associated General Contractors of America, and the requirements of the Occupational Safety and Health Act of 1970 (Public Law 91-596).

    b. Exercise every precaution at all times for the prevention of accidents and the protection of persons, including employees, and property. Proposer shall conduct weekly safety meetings to insure a safe working environment. The Owner shall reserve the right to request documentation of such meetings and safety training practices.

14. **Provision of Texas Ethics Commission Form 1295 ("TEC Form 1295") by Respondents: Effective January 1, 2016, pursuant to Texas Government Code § 2252.908 (the "Interested Party Disclosure Act" or the "Act"), the Owner may not award the contract to a Respondent unless the Respondent has provided to the Owner a completed, signed and notarized TEC Form 1295 which has been assigned a certificate number by the Texas Ethics Commission (the "TEC"). Pursuant to the rules prescribed by the TEC, the TEC Form 1295 must be completed online through the TEC's website, assigned a certificate number, printed, signed and notarized, and provided to the Owner. The TEC Form 1295 may accompany the Proposal or may be submitted separately, but must be provided to the Owner prior to the award of the contract. For purposes of completing the TEC Form 1295, the entity's name is City of Midland; the contract ID number is 7227; and the description of goods and services is Northeast Water System Improvements Package B. Neither the Owner nor its consultants have the ability to verify the information included in a TEC Form 1295, and neither have an obligation nor undertake responsibility for advising any Respondent with respect to the proper completion of the TEC Form 1295.**

SELECTION OF PROPOSER:

Following the review and evaluation of the RFPs, the Owner will notify the most qualified Proposer providing the best-value proposal for the project in writing. Negotiations will be conducted with the selected Proposer to achieve a contract for the Project. If negotiations are unsuccessful, negotiations will be terminated with the Proposer and the Owner will enter into negotiations with the second most qualified, best-value Proposer.

A "Notice of Award" will be issued upon approval of the selected Proposer's contract. A "Notice-to-Proceed" may be issued by the Owner to initiate each work element of the project. The selected Proposer shall be prepared to arrive on site to initiate construction of the proposed improvements upon immediate readiness demanded by the proposed completion date. The selected Proposer shall coordinate its proposed construction schedule with the Owner and Engineer prior to mobilization.

PAYMENT:

Upon notice to proceed, the selected Proposer shall submit a schedule of values to the Engineer for approval as a basis of partial payment requests throughout the project. The selected Proposer may submit monthly invoices for work completed and materials purchased during the previous 30-day period based on the schedule of values. All invoices shall reflect a five percent (5%) retention from the amount of the draw request.

Owner shall remit the net amount of the invoice within 30 days of receipt of the invoice. All retained amounts shall be remitted upon final completion of the project as approved by the Owner and release of a Certificate of Completion.

CONDITIONS OF AWARD:

The Proposals will be considered and evaluated for award based upon the criteria set forth in this RFP.

The Price Proposal Sheet shall be completed with pricing of all items as required by the Proposal Documents of this RFP, and meet the terms thereof. All blank spaces for priced items must be filled in, in ink or typewritten, and the pricing form must be fully completed and executed when submitted. The Owner may waive any informalities or minor defects or reject any or all proposals. The Owner reserves the right to reject any and all proposals, in whole or in part; to waive any informality in any proposal, and to accept the proposal which, in its discretion, is in the best interest of the Owner. In case of ambiguity or lack of completeness in stating the prices in any proposal, the Owner reserves the right to consider the most advantageous thereof.

SUBMITTED on _____, 20___.

State Contractor License No. _____. (If applicable

1. The undersigned Proposer proposes and agrees, if this Proposal is accepted, to enter into an Agreement with Owner in the form included in the Proposal Documents to perform and furnish all Work as specified or indicated in the Proposal Documents and in accordance with the other terms and conditions of this RFP.

2. Proposer accepts all of the terms and conditions of the RFP, including without limitation those dealing with the disposition of Bid security. The Proposal will remain subject to acceptance for 60 days after the Proposal opening, or for such longer period of time that Proposer may agree to in writing upon request of Owner.

3. In submitting this Proposal, Proposer represents, as set forth in the Agreement, that:

   A. Proposer has examined and carefully studied the Proposal Documents, the other related data identified in the Proposal Documents, and the following Addenda, receipt of all which is hereby acknowledged.

Addendum No.	Addendum Date
_____	_____
_____	_____
_____	_____

   B. Proposer certifies Proposer is qualified to do business in the state where the Project is located as required by laws, rules, and regulations or, if allowed by stature, covenants to obtain such qualification prior to contract award.

   C. Proposer understands and agrees that this Proposal shall form the basis for an agreement with the Owner. Therefore, the undersigned agrees to enter into an agreement to perform and furnish all Work as specified or indicated in these Specifications for the amount indicated in this Proposal and in accordance with the other terms and conditions of these Contract Documents.

   D. Proposer accepts all of the terms and conditions of these Contract Documents including, without limitation, those dealing with the disposition of Bid security, required bonds, and the liquidated damages that may be imposed. This Proposal shall remain subject to acceptance for a period of 60 days after the day of Proposal opening. The Proposer shall sign and submit the Agreement with the bonds and other required documents within 10 days after the receipt of Notice of Award from the Owner.

   E. Proposer has given Engineer written notice of all conflicts, errors, ambiguities, or discrepancies that Proposer has discovered in the Proposal Documents, and the written resolution thereof by Engineer is acceptable to Proposer.

   F. The Proposal Documents are generally sufficient to indicate and convey understanding of all terms and conditions for the performance of the Work for which this Proposal is submitted.

5. Proposer further represents that this Proposal is genuine and not made in the interest of or on behalf of any undisclosed individual or entity and is not submitted in conformity with any agreement or rules of any group, association, organization or corporation; Proposer has not directly or indirectly induced or solicited any other Proposer to submit a false or sham Proposal; Proposer has not solicited or induced any individual or entity to refrain from proposing; and Proposer has not sought by collusion to obtain for itself any advantage over any other Proposer or over Owner.

6. Proposer will complete the Work in accordance with the Proposal Documents for the prices proposed in the Price Proposal Sheet or as modified during negotiations with the Owner.

7. Proposer accepts the provisions of the Agreement as to liquidated damages in the event of failure to complete the Work within the Contract Times specified.

8. The following documents are attached to and made a condition of this Proposal:

   A. Advertisement
   B. Notice to Bidders
   C. General Conditions of Bidding
   D. Qualifications Statement.
   E. Standard Purchase Terms and Conditions
   F. Non-Collusion Affidavit of Prime Proposer
   G. Debarment / Suspension Certification
   H. Bid Bond
   I. Contract
   J. Exhibit C – Bonding Requirements
   K. Exhibit D – Heavy & Highway Wage Rates rev. 01/03/2020
   L. Exhibit D – Building Water Rates rev. 01/03/2020
   M. Performance Bond
   N. Payment Bond
   O. Standard General Conditions of the Construction Contract
   P. Conflict of Interest Reporting Requirements
   Q. Conflict of Interest Questionnaire
   R. Consideration of Location of Bidder's Principal Place of Business

9. The Proposer is required to include their proposed construction schedule.

STANDARD PURCHASE TERMS AND CONDITIONS
PURCHASING DIVISION, CITY OF MIDLAND, TEXAS

"Seller", as used herein, has the same meaning as "Company". "Buyer", as used herein, has the same meaning as "City".

Seller and Buyer agree as follows:

1. SELLER TO PACKAGE GOODS - Seller will package goods in accordance with good commercial practice. Each shipping container shall be clearly and permanently marked as follows; (a) Seller's name and address, (b) Consignee's name, and address, and purchase order number, (c) Container number and total number of containers, e.g. box 1 of 4 boxes, and (d) the number of the container bearing the packing slip. Seller shall bear cost of packaging unless otherwise provided. Goods shall be suitably packed to secure lowest transportation costs and to conform with requirements of common carriers and any applicable specifications. Buyer's count or weight shall be final and conclusive on shipments not accompanied by packing lists.

2. SHIPMENT UNDER RESERVATION PROHIBITED - Seller is not authorized to ship the goods under reservation and no tender of a bill of lading will serve as a tender of goods.

3. TITLE & RISK OF LOSS - The title and risk of loss of the goods shall not pass to Buyer until Buyer actually receives and takes possession of the goods at the point or points of delivery in Midland, Texas.

4. NO REPLACEMENT OF DEFECTIVE TENDER - Every tender or delivery of goods must fully comply with all provisions of this contract as to time of delivery, quality and the like. If a tender is made which does not fully conform, this shall constitute a breach and Seller shall not have the right to substitute a conforming tender, provided, where the time for performance has yet expired, the Seller may reasonably notify Buyer of his intention to cure and may then make a conforming tender within the contract time but not afterward.

5. PLACE OF DELIVERY - The place of delivery shall be that set forth in the block of the purchase order entitled "deliver to".

6. INVOICES - Seller shall submit separate ORIGINAL invoices, on each purchase order. Invoices shall indicate the purchase order number. All invoices must be mailed to City of Midland, Accounts Payable, P.O. Box 1152, Midland, TX 79702-1152. Payment will be made within 30 days from the date the invoice and properly executed receiving documents are received by City of Midland, Accounts Payable at the above address. Invoices sent to any other address will delay payment.

7. GRATUITIES - The buyer may, by written notice to the seller, cancel this contract without liability to Seller, if it is determined by Buyer that gratuities, in the form of entertainment, gifts, or otherwise, were offered or given by the seller, or any agent or representative of the Seller, to any officer or employee of the City of Midland with a view toward securing a contract or securing favorable treatment with respect to performing of such a contract. In the event this contract is cancelled by Buyer pursuant to this provision, Buyer shall be entitled, in addition to any other rights and remedies, to recover or withhold the amount of the cost incurred by Seller in providing such gratuities.

8. WARRANTY - PRICE -

a. The price to be paid by the Buyer shall be that contained in Seller's bid which Seller warrants to be no higher than Seller's current prices on order by others for products of the kind and specifications covered by this agreement for similar quantities under similar or like conditions and methods of purchase. In the event Seller breaches this warranty, the prices of the items shall be reduced to the Seller's current prices on order by others, or in the alternative, Buyer may cancel this contract without liability to Seller for breach or Seller's actual expense.

b. The Seller warrants that no person or selling agency has been employed or retained to solicit or secure this contract upon an agreement or understanding for commission, percentage, brokerage, or contingent fee excepting bona fide employees or bona fide established commercial or selling agencies maintained by the Seller for the purpose of securing business. For breach or violation of this warranty the Buyer shall have the right or rights to cancel this contract without liability and to deduct from the contract price, or otherwise recover the full amount of such commission, percentage, brokerage or contingent fee.

9. WARRANTY - PRODUCT - Seller shall not limit or exclude any implied warranties and any attempt to do so shall render this contract voidable at the option of the Buyer. Seller warrants that the goods furnished will conform to the specification, drawings, and description listed in the bid invitation, and to the sample(s) furnished by Seller, if any. In the event of a conflict between the specifications, drawings and descriptions, the specifications shall govern.

10. SAFETY WARRANTY - Seller warrants that the product sold to Buyer shall conform to the standards promulgated by the U.S. Department of Labor under the Occupational Safety and Health Act of 1970. In the event the product does not conform to OSHA standards, Buyer may return the product for correction or replacement at the Seller's expense. In the event Seller fails to make the appropriate correction within a reasonable time, correction made by buyer will be at Seller's expense.

11. RIGHT OF INSPECTION - Buyer shall have the right to inspect the goods at delivery before accepting them.

12. CANCELLATION - Buyer shall have the right to cancel for default all or any part of the undelivered portion of this order if Seller breached any of the terms hereof including warranties of Seller if the Seller becomes insolvent or commits acts of bankruptcy. Such right of cancellation is in addition to and not in lieu of any other remedies which Buyer may have in law or equity.

13. TERMINATION - The performance of work under this order may be terminated in whole, or in part by the Buyer in accordance with this provision. Termination of work hereunder shall be effected by the delivery to Seller of a "Notice of Termination" specifying the extent to which performance of work under the order is terminated and the date upon which such termination becomes effective. Such right of termination is in addition to and not in lieu of the rights of Buyer set forth in Clause 13, herein.

14. FORCE MAJEURE - Neither party shall be held responsible for losses, resulting if the fulfillment of any terms or provisions of this contract is delayed or prevented by any cause not within the control of the party whose performance is interfered with, and which by the exercise of reasonable diligence said party is unable to prevent.

15. ASSIGNMENT - DELEGATION - No right or interest in this contract shall be assigned or delegation of any obligation made by Seller without the written permission of the Buyer. Any attempted assignment or delegation by the Seller shall be wholly void and totally ineffective for all purposes unless made in conformity with this paragraph.

16. MODIFICATIONS - This contract can be modified or rescinded only by a writing signed by both of the parties or their duly authorized agents.

17. INTERPRETATION - PAROL EVIDENCE - This writing, plus any specifications for bids and performance provided by Buyer in its advertisement for bids, is intended by the parties as a final expression of this agreement. No course of prior dealings between the parties and no usage of the trade shall be relevant to supplement or explain any term used in this agreement. Acceptance or acquiescence in a course of performance rendered under this agreement shall not be relevant to determine the meaning of this agreement even though the accepting or acquiescing party has knowledge of the performance and opportunity for objection. Whenever a term defined by the Uniform Commercial Code is used in this agreement, the definition contained in the Code is to control.

18. ADVERTISING - Seller shall not advertise or publish without Buyer's prior consent the fact that Buyer has entered into the contract, except to the extent necessary to comply with proper requests for information from an authorized representative of the federal, state or local government.

19. RIGHT TO ASSURANCE - Whenever one party to the contract in good faith has reason to question the other party's intent to perform he may demand that the other party give written assurance of this intent to perform. In the event that a demand is made and no assurance is given within five (5) days, the demanding party may treat this failure as an anticipatory repudiation of the contract.

20. PROTECTION AGAINST ROYALTIES OR PATENT INFRINGEMENT - The Seller shall pay all royalties and license fees, and shall provide for the use of any design, device, material or process covered by letters patent or copyright by suitable legal agreement with Patentee or Owner thereof. The Seller shall defend all suits or claims for infringement of any patent or copyrights and shall indemnify and save the Buyer harmless from any loss on account thereof, except that Buyer shall defend all such suits and claims and shall be responsible for all such loss when a particular design, device, material or process is allowed to the Seller, the Seller shall indemnify and save Buyer harmless from any loss on account thereof. If the material or process specified or required by Buyer is an infringement, the Seller shall be responsible for such loss unless he promptly gives written notice to the buyer of such infringement.

21. TIME - It is hereby expressly agreed and understood that time is of the essence for the performance of this contract, and any failure by contract to meet the time specifications of this agreement will cause Seller to be in default of this agreement.

22. TAX - The City of Midland is exempt from all Federal, State and City tax. Please do not include these taxes in your bid price or invoice. Taxable items must be so designated, and the City will supply vendor with a Tax Exemption Certificate, properly executed.

23. **INSURANCE –**

The following provisions apply unless the agreement is for the supply of goods only:

Seller shall at all times during the term of this agreement maintain and keep in full force and effect insurance in the following types and minimum amounts with companies authorized to do business in the State of Texas:

Commercial General Liability (including Contractual liability):	
-Personal Injury:	$1,000,000.00 per person
	$1,000,000.00 per occurrence
-Property Damage:	$500,000.00 per occurrence
Business Automobile Liability:	$250,000.00 combined single limit - Personal Injury and Property Damage
Worker's Compensation:	Statutory limits
Employers' Liability:	$500,000.00 per accident or occurrence

The Commercial General Liability shall be on a per project or policy aggregate, including completed operations, and shall be on an occurrence basis.

The Workers' Compensation coverage provided by Seller shall inure to the benefit of employees injured during the course and scope of their employment by Seller pursuant to this agreement.

The Business Automobile Liability insurance provided by Seller shall cover any auto for bodily injury and property damage, including owned vehicles, hired and non-owner vehicles, and employee non-ownership, and the amount of such policy shall be a minimum of $250,000.00 covering any vehicle used for the execution of the work that is the subject of this agreement.

All insurance required pursuant to this agreement, except for Worker's Compensation Insurance, shall name the Buyer as an additional insured on a claims occurred basis. All insurance required pursuant to this agreement, including Worker's Compensation Insurance, shall provide for a waiver of subrogation as to the Buyer.

The parties agree that, prior to the execution of the agreement, Seller shall provide one or more certificates of insurance showing that the requirements of this article have been met, and specifically containing, without limitations, the following endorsement:

"The City of Midland is included as an additional insured, on a claims occurred basis, on all policies except for Worker's Compensation. The Seller and Insurer hereby waive all rights of subrogation with respect to claims against the City of Midland, its agents, employees and officers, on all policies of insurance."
Buyer shall be provided the notice by Seller's insurance provider not later than thirty (30) days prior to any reduction or termination of such coverage. Buyer shall not be required to provide any insurance whatsoever pursuant to this agreement.

Seller shall contractually require all contractors, subcontractors, and sub-subcontractors that work on any portion of the work that is the subject of this agreement to obtain insurance coverage that meets or exceeds the policy requirements and minimum amounts specified herein. All contractors, subcontractors, and sub-subcontractors shall obtain insurance policies that provide blanket waivers of subrogation in favor of the City of Midland and policies that name the City of Midland as an additional insured on a claims occurred basis (except workers compensation).

24. ASSIGNMENT - Seller shall not, either directly or indirectly, assign all or any part of this agreement or any interest, right or privilege herein, without the prior written consent of the Buyer. The issue on whether or not to grant consent to an assignment is in the sole discretion of the Buyer.

25. RELEASE - NOTWITHSTANDING ANY OTHER PROVISIONS, SELLER HEREBY RELEASES, ACQUITS, RELINQUISHES AND FOREVER DISCHARGES BUYER, BUYER'S EMPLOYEES AND OFFICERS, FROM ANY AND ALL DEMANDS, CLAIMS, DAMAGES, OR CAUSES OF ACTION OF ANY KIND WHATSOEVER WHICH SELLER HAS OR MIGHT HAVE IN THE FUTURE, INCLUDING BUT NOT LIMITED TO BREACH OF CONTRACT, QUANTUM MERUIT, CLAIMS UNDER THE DUE PROCESS AND TAKINGS CLAUSES OF THE TEXAS AND UNITED STATES CONSTITUTIONS, TORT CLAIMS, OR BUYER'S NEGLIGENCE.

26. GOVERNING LAW AND VENUE - This agreement shall be governed by the laws of the State of Texas. All performance and payment made pursuant to this agreement shall be deemed to have occurred in Midland County, Texas. Exclusive venue for any claims, suits or any other action arising from or connected in any way to this agreement or the performance of this agreement shall be in Midland County, Texas. The obligations and undertakings of each of the parties to this agreement shall be deemed to have occurred in Midland County, Texas.

27. INDEPENDENT CONTRACTOR - It is expressly understood and agreed that Seller shall perform all work and services described herein as an independent contractor and not as an officer, agent, servant or employee of the Buyer; that Seller shall have exclusive control of and the exclusive right to control the details of the services and work performed hereunder, and all persons performing the same; and shall be solely responsible for the acts and omissions of its officers, agents, employees, contractors and subcontractors; that the doctrine of respondeat superior shall not apply as between Buyer and Seller, its officers, agents, employees, contractors and subcontractors; and that nothing herein shall be construed as creating a partnership or joint enterprise between Buyer and Seller. No person performing any of the work and services described hereunder by Seller shall be considered an officer, agent, servant or employee of the Buyer. Further, it is specifically understood and agreed that nothing in this agreement is intended or shall be construed as creating a "Community of Pecuniary Interest" or "An Equal Right of Control" which would give rise to vicarious liability. Seller shall be an independent contractor under this agreement and shall assume all of the rights, obligations and liabilities, applicable to it as such independent contractor hereunder. The Buyer does not have the power to direct the order in which the work is done. The Buyer shall not have the right to control the means, methods or details of the Seller's work. Seller shall assume exclusive responsibility for the work. Seller is entirely free to do the work in its own way.

28. NOTICE OF ALLEGED BREACH; STATUTORY PREREQUISITES - As a condition precedent to filing suit for alleged damages incurred by an alleged breach of an express or implied provision of this agreement, Seller or his legal representative, shall give the City Manager, or any other reasonable official of the Buyer, notice in writing (consisting of one original and seven copies of notice attached to a copy of this agreement) of such damages, duly verified, within one-hundred-twenty (120) days after the same has been sustained. The discovery rule does not apply to the giving of this notice. The notice shall include when, where and how the damages occurred, the apparent extent thereof, the amount of damages sustained, the amount for which the Seller will settle, the physical and mailing addresses of Seller at the time and date the claim was presented and the physical and mailing addresses of Seller for the six months immediately preceding the occurrence of such damages, and the names and addresses of the witnesses upon whom the Seller relies to establish its claim; and a failure to so notify the City Manager within the time and manner provided herein shall exonerate, excuse and except the Buyer from any liability whatsoever. The Buyer is under no obligation to provide notice to Seller that Seller's notice is insufficient. Buyer reserves the right to request reasonable additional information regarding the claim. Said additional information shall be supplied within thirty (30) days after receipt of notice.

The statutory prerequisites outlined herein constitute jurisdictional requirements pursuant to Section 271.154 of the Texas Local Government Code and Section 311.034 of the Texas Government Code. Notwithstanding any other provision, Seller's failure to comply with the requirements herein shall perpetually bar Seller's claim for damages under Chapter 271 of the Texas Local Government Code, and Section 311.034 of the Texas Government Code, regardless if Buyer has actual or constructive notice or knowledge of said claim or alleged damages. Seller agrees that the requirements of this entire agreement are reasonable.

29. INDEMNITY (NOT APPLICABLE TO PURCHASE AGREEMENTS) - SELLER WILL INDEMNIFY AND HOLD HARMLESS AND DEFEND BUYER AND ALL OF BUYER'S OFFICERS, AGENTS AND EMPLOYEES FROM ALL SUITS, ACTIONS, CLAIMS, DAMAGES, PERSONAL INJURIES, LOSSES, PROPERTY DAMAGE AND EXPENSES OF ANY CHARACTER WHATSOEVER, INCLUDING REASONABLE ATTORNEY'S FEES,

BROUGHT FOR OR ON ACCOUNT OF ANY INJURIES OR DAMAGES RECEIVED OR SUSTAINED BY ANY PERSON OR PERSONS OR PROPERTY, ON ACCOUNT OF ANY NEGLIGENT ACT OF SELLER, its agents or employees, or any subcontractor, arising out of, or resulting from, Seller's use of, or activities on, the agreement premises, and Seller will be required to pay any judgment with costs which may be obtained against Buyer or any of its officers, agents or employees, including reasonable attorney's fees.

SELLER SHALL INDEMNIFY AND HOLD HARMLESS AND DEFEND BUYER AND ALL OF BUYER'S OFFICERS, AGENTS AND EMPLOYEES FROM ALL SUITS, ACTIONS, CLAIMS, DAMAGES, ACCIDENTAL DEATH, PERSONAL INJURIES, PROPERTY DAMAGE, LOSSES, AND EXPENSE OF ANY CHARACTER WHATSOEVER INCLUDING REASONABLE ATTORNEY'S FEES, BROUGHT FOR OR ON ACCOUNT OF ANY INJURIES OR DAMAGES RECEIVED OR SUSTAINED BY ANY PERSON OR PERSONS OR PROPERTY, ON ACCOUNT OF ANY NEGLIGENT ACT OF BUYER, BUYER'S OFFICERS, AGENTS AND EMPLOYEES, WHETHER SUCH NEGLIGENT ACT WAS THE SOLE PROXIMATE CAUSE OF THE INJURY OR DAMAGE OR A PROXIMATE CAUSE JOINTLY AND CONCURRENTLY WITH SELLER OR SELLER'S EMPLOYEES, AGENTS OR SUBCONTRACTORS NEGLIGENCE, IN THE EXECUTION, SUPERVISION AND OPERATIONS GROWING OUT OF OR IN ANY WAY CONNECTED WITH THE PERFORMANCE OF THIS AGREEMENT AND SELLER WILL BE REQUIRED TO PAY ANY JUDGMENT WITH COSTS WHICH MAY BE OBTAINED AGAINST BUYER OR ANY OF BUYER'S OFFICERS, AGENTS OR EMPLOYEES, INCLUDING ATTORNEY'S FEES.

30. SOVEREIGN IMMUNITY - By executing this agreement the Buyer is not waiving its right of sovereign immunity. The Buyer is retaining its immunity from suit. The Buyer is not granting consent to be sued by legislative resolution or action. **THERE IS NO WAIVER OF SOVEREIGN IMMUNITY**.

31. THIRD PARTY BENEFICIARY - The Buyer's approval of this agreement does not create a third party beneficiary. There is no third party beneficiary to this agreement. No person or entity who is not a party to this agreement shall have any third party beneficiary or other rights hereunder.

32. <u>ATTORNEY FEES</u> - BY EXECUTING THIS AGREEMENT, SELLER AGREES TO WAIVE AND DOES HEREBY KNOWINGLY, CONCLUSIVELY, VOLUNTARILY AND INTENTIONALLY WAIVE ANY CLAIM IT HAS OR MAY HAVE IN THE FUTURE AGAINST THE BUYER, REGARDING THE AWARD OF ATTORNEY'S FEES, WHICH ARE IN ANY WAY RELATED TO THE AGREEMENT, OR THE CONSTRUCTION, INTERPRETATION OR BREACH OF THE AGREEMENT. THE SELLER SPECIFICALLY AGREES THAT IF THE SELLER BRINGS OR COMMENCES ANY LEGAL ACTION OR PROCEEDING RELATED TO THIS AGREEMENT, THE CONSTRUCTION, INTERPRETATION, VALIDITY OR BREACH OF THIS AGREEMENT, INCLUDING BUT NOT LIMITED TO ANY ACTION PURSUANT TO THE PROVISIONS OF THE TEXAS UNIFORM DECLARATORY JUDGMENTS ACT (TEXAS CIVIL PRACTICE AND REMEDIES CODE SECTION 37.001, ET. SEQ., AS AMENDED), OR CHAPTER 271 OF THE TEXAS LOCAL GOVERNMENT CODE, THE SELLER AGREES TO ABANDON, WAIVE AND RELINQUISH ANY AND ALL RIGHTS TO THE RECOVERY OF ATTORNEY'S FEES TO WHICH SELLER MIGHT OTHERWISE BE ENTITLED.

SELLER AGREES THAT THIS IS THE VOLUNTARY AND INTENTIONAL RELINQUISHMENT AND ABANDONMENT OF A PRESENTLY EXISTING KNOWN RIGHT. SELLER ACKNOWLEDGES THAT IT UNDERSTANDS ALL TERMS AND CONDITIONS OF THE AGREEMENT. THE SELLER FURTHER ACKNOWLEDGES AND AGREES THAT THERE WAS AND IS NO DISPARITY OF BARGAINING POWER BETWEEN THE BUYER AND THE SELLER. THIS SECTION SHALL NOT BE CONSTRUED OR INTERPRETED AS A WAIVER OF SOVEREIGN IMMUNITY.

THE SELLER AND BUYER ARE RELYING ON THEIR OWN JUDGMENT. EACH PARTY HAD THE OPPORTUNITY TO DISCUSS THIS AGREEMENT WITH LEGAL COUNSEL PRIOR TO ITS EXECUTION.

33. CONSIDERATION - The terms of this agreement are supported by good and valuable consideration, the receipt and sufficiency of which is hereby acknowledged by the parties named herein.

34. CERTIFICATION - In accordance with the Texas Local Government Code, the City of Midland Department of Facilities and Fleet Management does hereby certify that the City of Midland is in compliance with Sections 252, 271 and all applicable sections of the Texas Local Government Code and other state law as it applies to procurement and contracting issues.

35. FEDERAL WAGE REQUIREMENTS - If applicable, the Davis-Bacon Act, 29 CFR 5.5, and any related acts or regulations are hereby incorporated by reference and made a part of this agreement and all terms and requirements under said laws, by such incorporation, are made terms and requirements of this agreement, to which the parties to this agreement have agreed to be bound.

36. COMPLIANCE WITH FEDERAL, STATE AND LOCAL LAWS - Seller shall at all times during the term of this agreement comply with applicable federal, state, and local laws regarding Seller's activities pursuant to this agreement, including but not limited to all applicable sections of the Municipal Code of Midland, Texas, as may be amended, said sections being hereby incorporated by reference and made a part of this agreement for all legal purposes. Failure to abide by any such law mentioned herein constitutes grounds for the immediate termination of this agreement.

NON-COLLUSION AFFIDAVIT OF PRIME BIDDER

State of _____ §

County of _____ §

_____ , being first duly sworn, deposes and says that:

(1) He is _____ of _____ the Bidder that has submitted the attached Bid;

(2) He is fully informed respecting the preparation and contents of the attached bid and of all pertinent circumstances respecting such Bid;

(3) Such Bid is genuine and is not a collusive or sham Bid;

(4) Neither the said Bidder nor any of its officers, partners, owners, agents, representatives, employees or parties in interest, including this affiant, has in any way colluded, conspired, connived, or agreed, directly or indirectly, with any other Bidder, firm or person to submit a collusive or sham Bid in connection with the Contract for which the attached Bid has been submitted or to refrain from bidding in connection with such Contract, or has in any manner, directly or indirectly, sought by agreement or collusion or communication or conference with any other Bidder, firm or person to fix the price or prices in the attached Bid or of any other bidder, or to fix an overhead, profit or cost element of the Bid price or the Bid price of any other Bidder, or to secure through any advantage against the City of Midland or any person interested in the proposed contract; and

(5) The price or prices quoted in the attached Bid are fair and proper and are not tainted by any collusion, conspiracy, connivance or unlawful agreement on the part of the Bidder or any of its agents, representatives, owners, employees or parties in interest, including this affiant.

Name of Recipient

Verifying prime contractors and subcontractors for construction, equipment, supplies and services: Using the www.sam.gov website, the recipient must verify prior to awarding the contract that the prime contractor is not listed as an "excluded party" that is debarred, suspended or otherwise excluded from or ineligible. Once any subcontractors are known, they also must be verified as not listed as an "excluded party" prior to award of a subcontract. The recipient must print a dated record of the verification from the www.sam.gov website and retain a copy that is available for review by TWDB. The prime contractors and subcontractors must be verified prior to the contract award or the costs may be disallowed.

BID BOND

THE STATE OF TEXAS §

SURETY NO. _____

COUNTY OF MIDLAND §

KNOW ALL MEN BY THESE PRESENTS, THAT _____

_____

_____

(hereinafter called the Principal), as Principal, and _____

_____

_____

(hereinafter called the Surety), as Surety, are held and firmly bound unto the City of Midland, Texas a home rule municipal corporation of Midland County, Texas, (hereinafter called the Obligee), in the amount of _____

_____ DOLLARS

($_____), for the payment whereof the said Principal and Surety bind themselves, and their heirs, administrators, executors, successors and assigns, jointly and severally, firmly by these presents.

WHEREAS, the Principal has submitted a Bid or Proposal to enter into a certain written Contract with the obligee to_____

_____.

NOW, THEREFORE, THE CONDITION OF THIS OBLIGATION IS SUCH, that if the said Principal shall faithfully enter into such written Contract, then this obligation shall be void; otherwise to remain in full force and effect.

IT IS EXPRESSLY UNDERSTOOD AND AGREED that if said Principal should withdraw its Bid anytime after such Bid is opened and before official rejection to such Bid or, if successful in securing the award thereof, said Principal should fail to enter into the Contract and furnish satisfactory Performance Bond and Payment Bond, the Obligee, in either such events, shall be entitled and is hereby given the right to collect the full amount of this Bid Bond as liquidated damages.

PROVIDED, further that if any legal action be filed upon this Bond venue shall lie in Midland County, Texas

NOTE: ATTACH POWER OF ATTORNEY

CONTRACT DOCUMENTS

THE CITY OF MIDLAND

CONTRACT

Contract No. 210000527

THIS CONTRACT, effective the 16th day of December, 2020, by and between the City of Midland, hereinafter referred to as "City", and CB&I Storage Tank Solutions, LLC, hereinafter referred to as "Company", is made for the following considerations:

1. **Cost:** Total Proposal: $ 4,999,000.00 Four Million Nine Hundred Ninety-Nine Thousand DOLLARS

2. **Scope of Work:** Company shall perform all work described for Northeast Water System Improvements, Bid Package B – Elevated Storage Tank in the following documents, attached hereto and incorporated herein by reference for all legal purposes.

EXHIBIT A..... Specifications, Proposal or Cost Summary
EXHIBIT B.....Intentionally Omitted
EXHIBIT C..... Bonding instructions for Public Works Contract of $50,000 and more
EXHIBIT D..... Wage Scale

3. **City:** The words "City's Representative" or "representative" shall mean Carl Craigo or the designee under whose supervision these contract documents, including the plans and specifications, were prepared, or who may inspect work performed under this Contract; or such other representative, supervisor, or inspector as may be authorized by City to act in any particular capacity under this Contract.

4. **City's Representative:** City's Representative may make periodic visits to the site to observe the progress and quality of the executed work and to determine, in general, if the work is proceeding in accordance with the contract documents. City's representative will not be required to make exhaustive or continuous on-site inspections to check the quality or quantity of the work, nor will such representative be responsible for the construction means, methods, techniques, sequences or procedures, or the safety precautions incident thereto. City's representative will not be responsible for Company's failure to perform the work in accordance with the contract.

5. **Company:** Unless otherwise stipulated, Company shall provide and pay for all materials, supplies, machinery, equipment, tools, superintendence, labor, insurance, and all water, light, power, fuel,

transportation and all other facilities necessary for the execution and completion of the work covered by the contract documents. Unless otherwise specified, all materials shall be new, and both workmanship and materials shall be of a good quality. Company shall, if required, furnish satisfactory evidence as to the kind and quality of materials.

5.1. Company shall, at its expense, obtain all permits and licenses necessary for the performance of this contract and pay all fees and taxes required by law, and comply with all laws, ordinances, rules and regulations governing Company's performance of the contract, including all environmental laws and regulations, whether state or federal.

5.2. All work shall be done and all materials furnished in strict conformity with the contract and specifications.

6. **Minor Work Not Mentioned:** All minor detail of the work not specifically mentioned in the Specifications but obviously necessary for the proper completion of the work, such as the proper connection of new work to old, shall be considered as incidental to and a part of the work for which the prices are named in the contract. Company will not be entitled to any additional compensation therefor unless specifically stated otherwise. Otherwise the term "extra work" as used in this contract shall mean and include all work that may be required by City to be done by Company to accomplish any alteration or addition to the work as shown on the Specifications.

6.1. Company shall perform all extra work under the direction of City's Representative when presented with a written work order signed by City's Representative, subject, however, to the right of the Company to require written confirmation of such extra work order by City. Payment for extra work shall be as agreed in the work order.

7. **Safety:** Company shall at all times exercise reasonable precaution for the safety of employees and others on or near the work and shall comply with all applicable provisions of federal, state and municipal laws. All machinery and equipment and other physical hazards shall be guarded in accordance with federal, state or municipal laws or regulations.

8. **INDEMNITY: COMPANY SHALL INDEMNIFY AND HOLD HARMLESS AND DEFEND CITY AND ALL OF CITY'S OFFICERS, AGENTS AND EMPLOYEES FROM ALL SUITS, ACTIONS, CLAIMS, DAMAGES, PERSONAL INJURIES, ACCIDENTAL DEATH, LOSSES, PROPERTY DAMAGE AND EXPENSES OF ANY CHARACTER WHATSOEVER, INCLUDING ATTORNEY'S FEES, BROUGHT FOR OR ON ACCOUNT OF ANY INJURIES OR DAMAGES RECEIVED OR SUSTAINED BY ANY PERSON OR PERSONS OR**

PROPERTY, ON ACCOUNT OF ANY NEGLIGENT ACT OF COMPANY, THEIR AGENTS OR EMPLOYEES, OR ANY SUBCONTRACTOR, IN THE EXECUTION, SUPERVISION AND OPERATIONS GROWING OUT OF OR IN ANY WAY CONNECTED WITH THE PERFORMANCE OF THIS CONTRACT, AND COMPANY WILL BE REQUIRED TO PAY ANY JUDGMENT WITH COSTS WHICH MAY BE OBTAINED AGAINST CITY OR ANY OF ITS OFFICERS, AGENTS OR EMPLOYEES, INCLUDING ATTORNEY'S FEES.

8.1. **COMPANY SHALL INDEMNIFY AND HOLD HARMLESS AND DEFEND CITY AND ALL OF CITY'S OFFICERS, AGENTS AND EMPLOYEES FROM ALL SUITS, ACTIONS, CLAIMS, DAMAGES, PERSONAL INJURIES, ACCIDENTAL DEATH, PROPERTY DAMAGE, LOSSES, AND EXPENSES OF ANY CHARACTER WHATSOEVER INCLUDING ATTORNEY'S FEES, BROUGHT FOR OR ON ACCOUNT OF ANY INJURIES OR DAMAGES RECEIVED OR SUSTAINED BY ANY PERSON OR PERSONS OR PROPERTY, ON ACCOUNT OF ANY NEGLIGENT ACT OF CITY, CITY'S OFFICERS, AGENTS AND EMPLOYEES, WHETHER SUCH NEGLIGENT ACT WAS THE SOLE PROXIMATE CAUSE OF THE INJURY OR DAMAGE OR A PROXIMATE CAUSE JOINTLY AND CONCURRENTLY WITH COMPANY OR COMPANY'S EMPLOYEES, AGENTS OR SUBCONTRACTORS NEGLIGENCE IN THE EXECUTION, SUPERVISION AND OPERATIONS GROWING OUT OF OR IN ANY WAY CONNECTED WITH THE PERFORMANCE OF THIS CONTRACT, AND COMPANY WILL BE REQUIRED TO PAY ANY JUDGMENT WITH COSTS WHICH MAY BE OBTAINED AGAINST CITY OR ANY OF ITS OFFICERS, AGENTS OR EMPLOYEES, INCLUDING ATTORNEY'S FEES.**

8.2. **COMPANY AGREES THAT IT WILL INDEMNIFY AND SAVE CITY HARMLESS FROM ALL CLAIMS GROWING OUT OF ANY DEMANDS OF SUBCONTRACTORS, LABORERS, WORKMEN, MECHANICS, MATERIALMEN, AND FURNISHERS OF MACHINERY AND PARTS THEREOF, EQUIPMENT, POWER TOOLS AND ALL SUPPLIES, INCURRED IN THE FURTHERANCE OF THE PERFORMANCE OF THIS CONTRACT. WHEN CITY SO DESIRES, COMPANY SHALL FURNISH SATISFACTORY EVIDENCE THAT ALL OBLIGATIONS OF THE NATURE HEREINABOVE DESIGNATED HAVE BEEN PAID, DISCHARGED OR WAIVED. COMPANY, ITS SURETIES AND INSURANCE CARRIERS SHALL DEFEND, INDEMNIFY AND SAVE HARMLESS CITY AND ALL OF ITS OFFICERS, AGENTS AND EMPLOYEES FROM ALL SUITS, ACTIONS, OR CLAIMS OF ANY CHARACTER WHATSOEVER, BROUGHT FOR OR ON ACCOUNT OF ANY INJURIES OR DAMAGES RECEIVED OR SUSTAINED BY ANY PERSON OR PERSONS OR**

PROPERTY, ARISING FROM ANY ACT OF COMPANY OR ANY SUBCONTRACTOR, THEIR AGENTS OR EMPLOYEES, IN THE EXECUTION AND SUPERVISION OF THIS CONTRACT, AND WILL BE REQUIRED TO PAY ANY JUDGMENT WITH COSTS WHICH MAY BE OBTAINED AGAINST CITY OR ANY OF ITS OFFICERS, AGENTS, OR EMPLOYEES INCLUDING ATTORNEY'S FEES.

9. **Start of Work:** Company shall commence work no later than ten (10) days after receipt of the execution of this document or other written release to proceed and shall complete such work no later than 480 calendar days after release to proceed.

10. **Clean Up:** Company shall promptly remove from City's premises all materials condemned by City's Representative on account of failure to conform to the contract, whether actually incorporated in the work or not, and Company shall at its own expense promptly replace such condemned materials with other materials conforming to the requirements of the contract. Company shall also bear the expense of restoring all work of other contractors damaged by any such removal or replacement. If Company does not remove and replace any such condemned materials within a reasonable time after a written notice by City, City may remove and replace such at Company's expense.

11. **Warranty:** Neither the final payment nor any provision in this contract shall relieve Company of responsibility for faulty materials or workmanship, and he shall remedy any defects due thereto and pay for any damage to other work resulting therefrom, which shall appear within a period of one (1) year from the date of substantial completion. City shall give notice of observed defects with reasonable promptness.

12. **Remedy:** City may, on account of subsequently discovered evidence, withhold whole or part of any payment to such extent as may be necessary to protect itself from loss on account of:

12.1. Defective work not remedied; or

12.2. Claims filed or reasonable evidence indicating possible filing of claims; or

12.3. Failure of Company to make payments promptly to subcontractors or for material or labor which City may pay as an agent for the Company; or

12.4. Damages to another contractor or subcontractor.

When the above grounds to withhold payment are removed, or Company provides a surety bond satisfactory to City, which will protect City in the amount withheld, payment may be released.

13. **Funding Out:** In the event no funds or insufficient funds are appropriated and budgeted or are otherwise available in any fiscal period for continued payments due under the contract, then this contract

shall terminate on the last day of the fiscal period for which full appropriations were made, without penalty or expense to City of any kind whatsoever.

14. **Wage Scale:** Company agrees to pay all workmen in his employ no less than the generally prevailing wage rate for employees of similar category in the Permian Basin Area, as is depicted in the wage rate scale attached hereto as EXHIBIT D, and incorporated herein by reference for all legal purposes.

14.1. If applicable, the Davis-Bacon Act, 29 CFR 5.5, and any related acts or regulations are hereby incorporated by reference and made a part of this Contract, and all terms and requirements under said laws, by such incorporation, are made terms and requirements of this Contract, to which the parties to this Contract have agreed to be bound.

15. **Prompt Pay Act:** City and Company agree that Texas Government Code, Chapter 2251, Payment for Goods and Services (the "Prompt Pay Act") does not waive governmental immunity.

16. **Payment; Retainage:** After all work is completed by Company, including all Change Orders altering the original scope and amount of the contract are completed, and the City has inspected and approved that the work is completed and in compliance with the contract and all subsequent Change Orders, the City may thereafter issue payment to Company in the amount of the contract and all Change Orders. The City shall be the final judge of when the work is completed by Company. The City, in its sole discretion, shall determine if the work under the contract and under any Change Orders has been done to the City's requirements.

16.1. The City may make periodic payments to Company; provided, however, such periodic payments may only be made pursuant to this section, and only after all work and all Change Orders are completed by Company and approved by the City. The approval shall be in the City's sole discretion. Requests for progress payments may be made to the extent of the materials and labor completed at the end of each month. Upon approval by the City or the City's representative, the request and invoice shall be forwarded for payment less 5% retainage. The total of these payments shall not exceed 95% of the total contract amount.

17. **Late Completion; Liquidated Damages:** It is hereby understood and mutually agreed, by and between Company and the City, that the date of beginning and the time for completion as specified in the contract of the work to be done hereunder are ESSENTIAL CONDITIONS of this contract; and it is further mutually understood and agreed that the work embraced in this contract shall be commenced on a date to be specified in the "Notice to Proceed." Company agrees that said work shall be prosecuted regularly, diligently, and uninterruptedly at such rate of progress as will insure full completion thereof

within the time specified. It is expressly understood and agreed, by and between Company and the City, that the time for the completion of the work described herein is a reasonable time for the completion of the same, taking into consideration the average climatic range and usual industrial conditions prevailing in this locality.

17.1. In the event Company shall neglect, fail or refuse to complete the work within the time herein specified, or any proper extension thereof granted by the City, then Company and Company's surety, if any, shall be liable for and does hereby agree, as a part consideration for the awarding of this contract, to pay to the City $500.00, not as a penalty but as liquidated damages for such breach of contract as hereinafter set forth, for each and every day that Company shall be in default after the time stipulated in the contract for completing the work. Further, the City shall have the right to cancel this contract for such delay. In the event the City cancels this contract pursuant to the terms of this section, the City shall pay to Company only those monies deemed appropriate by the City, in its sole discretion, to compensate Company for any work actually performed, less any liquidated damages Company owes the City.

17.2. The said amount is fixed and agreed upon by and between Company and the City because of the impracticability and extreme difficulty of fixing and ascertaining the actual damages the City would in such event sustain, and said amount is agreed to be the amount of damages which the City would sustain and said amount shall be retained from time to time by the City from current periodical estimates.

17.3. It is further agreed that time is of the essence of each and every portion of this contract and of the specifications wherein a definite and certain length of time is fixed for the performance of any act whatsoever; and where under the contract an additional time is allowed for the completion of any work, the new time limit fixed by such extension shall be of the essence of this contract. Provided, that Company shall not be charged with liquidated damages or any excess cost when the City determines, in its sole discretion, that Company is without fault and Company's reasons for the time extension are acceptable to the City. Provided, further, that Company shall not be charged with liquidated damages of any excess cost when the delay in completion of the work is due:

a. To any preference, priority or allocation order duly issued by the Government;

b. To unforeseeable cause beyond the control and without the fault or negligence of Company, including, but not restricted to, acts of God, or of the public enemy, acts of the City, acts of another contractor in the performance of a contract with the City, fires, floods, epidemics, quarantine restrictions, strikes, freight embargoes, and severe weather; and

c. To any delays of subcontractors or suppliers occasioned by any of the causes specified in subsections (a) and (b) of this article.

17.4. Provided, further, that Company shall, within ten (10) days from the beginning of such

delay, unless the City shall, in its sole discretion grant a further period of time prior to the date of final settlement of the contract, notify the City, in writing, of the causes of the delay, who shall ascertain the facts and extent of the delay and notify Company within a reasonable time of its decision in the matter.

17.5. **COMPANY AGREES THAT THE PAYMENT OF SUCH LIQUIDATED DAMAGES MAY BE RECOVERED BY THE CITY FROM RETAINAGE HELD BY THE CITY. NOTWITHSTANDING ANY OTHER PROVISION HEREOF, COMPANY HEREBY RELEASES, ACQUITS, RELINQUISHES AND FOREVER DISCHARGES CITY, CITY'S EMPLOYEES AND OFFICERS FROM ANY AND ALL DEMANDS, CLAIMS, DAMAGES, OR CAUSES OF ACTION OF ANY KIND WHATSOEVER ARISING FROM THE CITY WITHHOLDING PAYMENT FROM COMPANY AS LIQUIDATED DAMAGES FOR COMPANY'S FAILURE TO COMPLETE THE WORK WITHIN THE TIME SPECIFIED HEREIN, INCLUDING BUT NOT LIMITED TO BREACH OF CONTRACT, QUANTUM MERUIT, CLAIMS UNDER THE DUE PROCESS AND TAKINGS CLAUSES OF THE TEXAS AND UNITED STATES CONSTITUTIONS, TORT CLAIMS, OR CITY'S NEGLIGENCE.**

17.6. **COMPANY SHALL RECEIVE NO FINANCIAL COMPENSATION FOR DELAY OR HINDRANCE TO THE WORK. IN NO EVENT SHALL THE CITY BE LIABLE TO COMPANY OR ANY SUBCONTRACTOR OR SUPPLIER, ANY OTHER PERSON OR ANY SURETY FOR OR ANY EMPLOYEE OR AGENT OF ANY OF THEM, FOR ANY DAMAGES ARISING OUT OF OR ASSOCIATED WITH ANY DELAY OR HINDRANCE TO THE WORK, REGARDLESS OF THE SOURCE OF THE DELAY OR HINDRANCE, INCLUDING EVENTS OF FORCE MAJEURE, AND EVEN IF SUCH DELAY OR HINDRANCE RESULTS FROM, ARISES OUT OF OR IS DUE, IN WHOLE OR IN PART, TO THE NEGLIGENCE OF THE CITY. COMPANY'S SOLE REMEDY IN ANY SUCH CASE SHALL BE AN EXTENSION OF TIME.**

18. **No Third Party Beneficiary:** City's approval of this contract does not create a third party beneficiary. There is no third party beneficiary to this contract. No person or entity who is not a party to this contract shall have any third party beneficiary or other rights hereunder.

19. **WAIVER OF ATTORNEY FEES: BY EXECUTING THIS CONTRACT, COMPANY AGREES TO WAIVE AND DOES HEREBY KNOWINGLY, CONCLUSIVELY, VOLUNTARILY AND INTENTIONALLY WAIVE ANY CLAIM IT HAS OR MAY HAVE IN THE FUTURE AGAINST CITY, REGARDING THE AWARD OF ATTORNEY'S FEES, WHICH ARE IN ANY WAY RELATED TO THE CONTRACT, OR THE CONSTRUCTION,**

INTERPRETATION OR BREACH OF THE CONTRACT. COMPANY SPECIFICALLY AGREES THAT IF COMPANY BRINGS OR COMMENCES ANY LEGAL ACTION OR PROCEEDING RELATED TO THIS CONTRACT, THE CONSTRUCTION, INTERPRETATION, VALIDITY OR BREACH OF THIS CONTRACT, INCLUDING BUT NOT LIMITED TO ANY ACTION PURSUANT TO THE PROVISIONS OF THE TEXAS UNIFORM DECLARATORY JUDGMENTS ACT (TEXAS CIVIL PRACTICE AND REMEDIES CODE SECTION 37.001, ET SEQ., AS AMENDED), OR CHAPTER 271 OF THE TEXAS LOCAL GOVERNMENT CODE, COMPANY AGREES TO ABANDON, WAIVE AND RELINQUISH ANY AND ALL RIGHTS TO THE RECOVERY OF ATTORNEY'S FEES TO WHICH COMPANY MIGHT OTHERWISE BE ENTITLED.

COMPANY AGREES THAT THIS IS THE VOLUNTARY AND INTENTIONAL RELINQUISHMENT AND ABANDONMENT OF A PRESENTLY EXISTING KNOWN RIGHT. COMPANY ACKNOWLEDGES THAT IT UNDERSTANDS ALL TERMS AND CONDITIONS OF THE CONTRACT. COMPANY FURTHER ACKNOWLEDGES AND AGREES THAT THERE WAS AND IS NO DISPARITY OF BARGAINING POWER BETWEEN CITY AND COMPANY. THIS SECTION SHALL NOT BE CONSTRUED OR INTERPRETED AS A WAIVER OF GOVERNMENTAL IMMUNITY.

COMPANY AND CITY ARE RELYING ON THEIR OWN JUDGMENT. EACH PARTY HAD THE OPPORTUNITY TO DISCUSS THIS CONTRACT WITH COMPETENT LEGAL COUNSEL PRIOR TO ITS EXECUTION.

20. **Governmental Immunity:** By executing this contract City is not waiving its right of governmental immunity. City is retaining its immunity from suit. City is not granting consent to be sued by legislative resolution or action.

THERE IS NO WAIVER OF GOVERNMENTAL IMMUNITY.

21. **Insurance:**

Company shall at all times during the term of this Contract maintain and keep in full force and effect insurance in the following types and minimum amounts with companies authorized to do business in the State of Texas:

Commercial General Liability (including Contractual liability):

-Personal Injury:	$1,000,000.00 per person
	$1,000,000.00 per occurrence
-Property Damage:	$500,000.00 per occurrence

Business Automobile Liability:	$250,000.00 combined single limit - Personal Injury and Property Damage
Workers' Compensation:	Statutory limits
Employers' Liability:	$500,000.00 per accident or occurrence

The Commercial General Liability shall be on a per project aggregate, including completed operations, and shall be on a claims-occurred basis. This insurance shall name City as an additional insured and waive subrogation in favor of City.

The Business Automobile Liability insurance provided by Company shall cover any auto for bodily injury and property damage, including owned vehicles, hired and non-city vehicles, and employee non-ownership, and the amount of such policy shall be a minimum of $250,000.00 covering any vehicle used for the execution of the work that is the subject of this Contract. This insurance shall name City as an additional insured and waive subrogation in favor of City.

The Workers' Compensation coverage provided by Company shall inure to the benefit of employees injured during the course and scope of their employment by Company pursuant to this Contract. The Workers' Compensation shall waive all rights of subrogation in favor of City.

All insurance required pursuant to this Contract shall provide for a waiver of subrogation in favor of City. All insurance required pursuant to this Contract, except for Workers' Compensation Insurance, shall name City as an additional insured on a claims occurred basis. City shall be provided the notice by Company's insurance provider not later than thirty (30) days prior to any reduction or termination of such coverage.

Company shall contractually require all contractors, subcontractors, and sub-subcontractors that work on any portion of the work that is the subject of this Contract to obtain insurance coverage that meets or exceeds the policy requirements and minimum amounts specified herein. All contractors, subcontractors, and sub-subcontractors shall obtain insurance policies that provide blanket waivers of subrogation in favor of the City of Midland and policies that name the City of Midland as an additional insured on a claims occurred basis (except workers' compensation).

The parties agree that, prior to the execution of the Contract, Company shall provide one or more certificates of insurance specifically stating that these requirements have been met and subject to the approval of City. City shall not be required to provide any insurance whatsoever pursuant to this Contract.

Company certifies that the certificate of insurance provided as required herein complies with the requirements of Chapter 1811 of the Texas Insurance Code. Company shall not use an unapproved certificate of insurance or insert inappropriate language on a certificate. Compliance with state law is the sole responsibility of Company.

22. **Assignment**: Company shall not, either directly or indirectly, assign all or any part of this Contract

or any interest, right or privilege herein, without the prior written consent of City. The issue on whether or not to grant consent to an assignment is in the sole discretion of City.

23. **RELEASE: NOTWITHSTANDING ANY OTHER PROVISIONS, COMPANY HEREBY RELEASES, ACQUITS, RELINQUISHES AND FOREVER DISCHARGES CITY, CITY'S EMPLOYEES AND OFFICERS, FROM ANY AND ALL DEMANDS, CLAIMS, DAMAGES, OR CAUSES OF ACTION OF ANY KIND WHATSOEVER WHICH COMPANY HAS OR MIGHT HAVE IN THE FUTURE, INCLUDING BUT NOT LIMITED TO BREACH OF CONTRACT, QUANTUM MERUIT, CLAIMS UNDER THE DUE PROCESS AND TAKINGS CLAUSES OF THE TEXAS AND UNITED STATES CONSTITUTIONS, TORT CLAIMS, OR CITY'S NEGLIGENCE**.

24. **Governing Law and Venue:** This Contract shall be governed by the laws of the State of Texas. All performance and payment made pursuant to this Contract shall be deemed to have occurred in Midland County, Texas. Exclusive venue for any claims, suits or any other action arising from or connected in any way to this Contract or the performance of this Contract shall be in Midland County, Texas. The obligations and undertakings of each of the parties to this Contract shall be deemed to have occurred in Midland County, Texas. This Contract shall be governed by, interpreted, enforced and construed under the law of the State of Texas. The laws of the State of Texas shall govern, construe and enforce all the rights and duties of the parties, including but not limited to tort claims and any and all contractual claims or disputes, arising from or relating in any way to the subject matter of this Contract, without regard to conflict on laws and rules that would direct application of the laws of another jurisdiction.

25. **Independent Contractor:** It is expressly understood and agreed that Company shall perform all work and services described herein as an independent contractor and not as an officer, agent, servant or employee of City; that Company shall have exclusive control of and the exclusive right to control the details of the services and work performed hereunder, and all persons performing the same; and shall be solely responsible for the acts and omissions of its officers, agents, employees, contractors and subcontractors; that the doctrine of respondeat superior shall not apply as between City and Company, its officers, agents, employees, contractors and subcontractors; and that nothing herein shall be construed as creating a partnership or joint enterprise between City and Company. No person performing any of the work and services described hereunder by Company shall be considered an officer, agent, servant or employee of the City. Further, it is specifically understood and agreed that nothing in this Contract is intended or shall be construed as creating a "Community of Pecuniary Interest" or "An Equal Right of Control" which would give rise to vicarious liability. Company shall be an independent contractor under this Contract and shall assume all of the rights, obligations and liabilities, applicable to it as such

independent contractor hereunder. City does not have the power to direct the order in which the work is done. City shall not have the right to control the means, methods or details of the Company's work. Company shall assume exclusive responsibility for the work. Company is entirely free to do the work in its own way.

26. **Notice of Alleged Breach; Statutory Prerequisites:** As a condition precedent to filing suit for alleged damages incurred by an alleged breach of an express or implied provision of this Contract, Company or its legal representative, shall give the City Manager, or any other reasonable official of City, notice in writing (consisting of one original and seven copies of notice attached to a copy of this Contract) of such damages, duly verified, within one-hundred fifty (150) days after the same has been sustained. The discovery rule does not apply to the giving of this notice. The notice shall include when, where and how the damages occurred, the apparent extent thereof, the amount of damages sustained, the amount for which Company will settle, the physical and mailing addresses of Company at the time and date the claim was presented and the physical and mailing addresses of Company for the six months immediately preceding the occurrence of such damages, and the names and addresses of the witnesses upon whom Company relies to establish its claim; and a failure to so notify the City Manager within the time and manner provided herein shall exonerate, excuse and except City from any liability whatsoever. City is under no obligation to provide notice to Company that Company's notice is insufficient. City reserves the right to request reasonable additional information regarding the claim. Said additional information shall be supplied within thirty (30) days after receipt of notice.

The statutory prerequisites outlined herein constitute jurisdictional requirements pursuant to Section 271.154 of the Texas Local Government Code and Section 311.034 of the Texas Government Code. Notwithstanding any other provision, Company's failure to comply with the requirements herein shall perpetually bar Company's claim for damages under Chapter 271 of the Texas Local Government Code, and Section 311.034 of the Texas Government Code, regardless if City has actual or constructive notice or knowledge of said claim or alleged damages. Company agrees that the requirements of this entire Contract are reasonable.

27. **Consideration:** The terms of this Contract are supported by good and valuable consideration, the receipt and sufficiency of which is hereby acknowledged by the parties named herein.

28. **Termination At Will:** City may terminate this Contract at will for no or any reason upon giving at least one hundred eighty (180) days written notice to Company. The parties to this Contract understand and agree that it is in City's sole discretion to cancel the Contract during the term of the Contract without penalty to City. Company has no expectation and has received no guarantees that this Contract will not be

terminated before the end of the Contract term. The parties have bargained for the flexibility of terminating this Contract upon tender of the requisite notice at any time during the term of the Contract. All work and services under the Contract shall be suspended upon termination of the Contract becoming effective.

29. **Compliance:** Company agrees that it shall comply with Texas Government Code Section 2252.908, *et seq.*, as amended. Company agrees that it shall comply with Texas Local Government Code Section 176.006, *et seq.*, as amended.

30. To the extent that Tex. Gov't Code section 2270.002 applies to this Contract, Company hereby verifies that Company does not boycott Israel and will not boycott Israel during the term of this Contract. If Tex. Gov't Code section 2270.002 does not apply to this Contract, such verification is not required, and Company shall be deemed to have not made such verification.

31. **Records Retention and Production of Information.** To the extent that this Contract is a contract described by Section 552.371 of the Texas Government Code, Company shall (1) preserve all contracting information related to the Contract as provided by the records retention requirements applicable to City for the duration of the contract, (2) promptly provide to City any contracting information related to the Contract that is in the custody or possession of Company on request of City, and (3) on completion of the Contract, either (i) provide at no cost to City all contracting information related to the Contract that is in the custody or possession of Company, or (ii) preserve the contracting information related to the Contract as provided by the records retention requirements applicable to City.

32. **Public Information.** To the extent that this Contract is a contract described by Section 552.371 of the Texas Government Code, Company agrees as follows in accordance with Section 552.372(b) of the Texas Government Code: The requirements of Subchapter J, Chapter 552, Government Code, may apply to this contract, and the contractor or vendor agrees that the contract can be terminated if the contractor or vendor knowingly or intentionally fails to comply with a requirement of that subchapter.

33. **Conflict of Terms.** If a conflict of terms or language exists between (i) any of the provisions of this Contract and (ii) any of the provisions contained in Exhibit A, precedence shall be given to the provisions of this Contract. For the avoidance of any doubt, the provisions contained in this Contract shall supersede any and all conflicting provisions contained in Exhibit A.

EXECUTED IN DUPLICATE the day and year first above mentioned.

Notary Public, State of Texas

EXHIBIT C

Bonding Requirements

The successful bidder shall be required to furnish a Performance & Payment Bond* for bids in excess of $50,000.00, in an amount equal to one hundred percent (100%) of the total contract price, such bond to be executed in five (5) original counterparts by a Corporate Surety authorized to do business in the State of Texas and acceptable to the City of Midland. All bonds must be executed on forms contained in these contract documents. The form of agreement which the successful bidder, as contractor, will be required to execute is also included herewith. The form of agreement and the form of the bonds should be carefully examined by the bidder.

A certified check, cashier's check, bank money order, or irrevocable letter of credit issued by a bank satisfactory to the City, or a bidder's bond on the form provided, in the amount of five percent (5%) of the largest possible lump sum bid submitted, payable without recourse to the City, must accompany the bidder's proposal, as a guaranty that the bidder will enter a contract and execute the required payment bond and guaranty in the forms provided within fifteen (15) days after notice of award of contract to him. Bids or proposals without the required bid guaranty will not be considered. All bid sureties and payment bonds shall name the City of Midland as Obligee.

*A cash security such as a cashier's check or irrevocable letter of credit issued by a bank satisfactory to the City for 100 % of the contract amount may be supplied in lieu of the Performance and Payment Bonds. The check will be returned un-cashed upon satisfactory completion of the work and evidence of payment of all obligations due for the contract.

HEAVY & HIGHWAY CONSTRUCTION PROJECTS

Note: Under Executive Order (EO) 13658, an hourly minimum wage of $10.80 for calendar year 2020 applies to all contracts subject to the Davis-Bacon Act for which the contract is awarded (and any solicitation was issued) on or after January 1, 2015. If this contract is covered by the EO, the contractor must pay all workers in any classification listed on this wage determination at least $10.80 per hour (or the applicable wage rate listed on this wage determination, if it is higher) for all hours spent performing on the contract in calendar year 2020. If this contract is covered by the EO and a classification considered necessary for performance of work on the contract does not appear on this wage determination, the contractor must pay workers in that classification at least the wage rate determined through the conformance process set forth in 29 CFR 5.5(a)(1)(ii) (or the EO minimum wage rate, if it is higher than the conformed wage rate). The EO minimum wage rate will be adjusted annually. Please note that this EO applies to the above-mentioned types of contracts entered into by the federal government that are subject to the Davis-Bacon Act itself, but it does not apply to contracts subject only to the Davis-Bacon Related Acts, including those set forth at 29 CFR 5.1(a)(2)-(60). Additional information on contractor requirements and worker protections under the EO is available at www.dol.gov/whd/govcontracts.

==========

Note: Executive Order (EO) 13706, Establishing Paid Sick Leave for Federal Contractors applies to all contracts subject to the Davis-Bacon Act for which the contract is awarded (and any solicitation was issued) on or after January 1, 2017. If this contract is covered by the EO, the contractor must provide employees with 1 hour of paid sick leave for every 30 hours they work, up to 56 hours of paid sick leave each year. Employees must be permitted to use paid sick leave for their own illness, injury or other health-related needs, including preventive care; to assist a family member (or person who is like family to the employee) who is ill, injured, or has other health-related needs, including preventive care; or for reasons resulting from, or to assist a family member (or person who is like family to the employee) who is a victim of, domestic violence, sexual assault, or stalking. Additional information on contractor requirements and worker protections under the EO is available at www.dol.gov/whd/govcontracts.

Unlisted classifications needed for work not included within the scope of the classifications listed may be added after award only as provided in the labor standards contract clauses (29CFR 5.5 (a) (1) (ii)).

The body of each wage determination lists the classification and wage rates that have been found to be prevailing for the cited type(s) of construction in the area covered by the wage determination. The classifications are listed in alphabetical order of ""identifiers"" that indicate whether the particular rate is a union rate (current union negotiated rate for local), a survey rate (weighted average rate) or a union average rate (weighted union average rate).
Union Rate Identifiers

A four letter classification abbreviation identifier enclosed in dotted lines beginning with characters other than ""SU"" or ""UAVG"" denotes that the union classification and rate were

prevailing for that classification in the survey. Example: PLUM0198-005 07/01/2014. PLUM is an abbreviation identifier of the union which prevailed in the survey for this classification, which in this example would be Plumbers. 0198 indicates the local union number or district council number

where applicable, i.e., Plumbers Local 0198. The next number, 005 in the example, is an internal number used in processing the wage determination. 07/01/2014 is the effective date of the most current negotiated rate, which in this example is July 1, 2014.

Union prevailing wage rates are updated to reflect all rate changes in the collective bargaining agreement (CBA) governing this classification and rate.

Survey Rate Identifiers

Classifications listed under the ""SU"" identifier indicate that no one rate prevailed for this classification in the survey and the published rate is derived by computing a weighted average rate based on all the rates reported in the survey for that classification. As this weighted average rate includes all rates reported in the survey, it may include both union and non-union rates. Example: SULA2012-007 5/13/2014. SU indicates the rates are survey rates based on a weighted average calculation of rates and are not majority rates. LA indicates the State of Louisiana. 2012 is the year of survey on which these classifications and rates are based. The next number, 007 in the example, is an internal number used in producing the wage determination. 5/13/2014 indicates the survey completion date for the classifications and rates under that identifier.

Survey wage rates are not updated and remain in effect until a new survey is conducted.

Union Average Rate Identifiers

Classification(s) listed under the UAVG identifier indicate that no single majority rate prevailed for those classifications; however, 100% of the data reported for the classifications was union data. EXAMPLE: UAVG-OH-0010 08/29/2014. UAVG indicates that the rate is a weighted union average rate. OH indicates the state. The next number, 0010 in the example, is an internal number used in producing the wage determination. 08/29/2014 indicates the survey completion date for the classifications and rates under that identifier.

A UAVG rate will be updated once a year, usually in January of each year, to reflect a weighted average of the current negotiated/CBA rate of the union locals from which the rate is based.

WAGE DETERMINATION APPEALS PROCESS

1.) Has there been an initial decision in the matter? This can be:

* an existing published wage determination
* a survey underlying a wage determination
* a Wage and Hour Division letter setting forth a position on a wage determination matter
* a conformance (additional classification and rate) ruling

On survey related matters, initial contact, including requests for summaries of surveys, should be with the Wage and Hour Regional Office for the area in which the survey was conducted because those Regional Offices have responsibility for the Davis-Bacon survey program. If the response from this initial contact is not satisfactory, then the process described in 2.) and 3.) should be followed.

With regard to any other matter not yet ripe for the formal process described here, initial contact should be with the Branch of Construction Wage Determinations. Write to:

Branch of Construction Wage Determinations
Wage and Hour Division
U.S. Department of Labor
200 Constitution Avenue, N.W.
Washington, DC 20210

2.) If the answer to the question in 1.) is yes, then an interested party (those affected by the action) can request review and reconsideration from the Wage and Hour Administrator (See 29 CFR Part 1.8 and 29 CFR Part 7). Write to:

Wage and Hour Administrator
U.S. Department of Labor
200 Constitution Avenue, N.W.
Washington, DC 20210

The request should be accompanied by a full statement of the interested party's position and by any information (wage payment data, project description, area practice material, etc.) that the requestor considers relevant to the issue.

3.) If the decision of the Administrator is not favorable, an interested party may appeal directly to the Administrative Review Board (formerly the Wage Appeals Board). Write to:

Administrative Review Board
U.S. Department of Labor
200 Constitution Avenue, N.W.
Washington, DC 20210

4.) All decisions by the Administrative Review Board are final.

TRUCK DRIVER: Flatbed Truck	$ 19.65	8.57
TRUCK DRIVER: Semi-Trailer Truck	$ 12.50	0.00
TRUCK DRIVER: Water Truck	$ 12.00	4.11

WELDERS - Receive rate prescribed for craft performing operation to which welding is incidental.

==========

Note: Executive Order (EO) 13706, Establishing Paid Sick Leave for Federal Contractors applies to all contracts subject to the Davis-Bacon Act for which the contract is awarded (and any solicitation was issued) on or after January 1, 2017. If this contract is covered by the EO, the contractor must provide employees with 1 hour of paid sick leave for every 30 hours they work, up to 56 hours of paid sick leave each year. Employees must be permitted to use paid sick leave for their own illness, injury or other health-related needs, including preventive care; to assist a family member (or person who is like family to the employee) who is ill, injured, or has other health-related needs, including preventive care; or for reasons resulting from, or to assist a family member (or person who is like family to the employee) who is a victim of, domestic violence, sexual assault, or stalking. Additional information on contractor requirements and worker protections under the EO is available at www.dol.gov/whd/govcontracts.

Unlisted classifications needed for work not included within the scope of the classifications listed may be added after award only as provided in the labor standards contract clauses (29CFR 5.5 (a) (1) (ii)).

The body of each wage determination lists the classification and wage rates that have been found to be prevailing for the cited type(s) of construction in the area covered by the wage

determination. The classifications are listed in alphabetical order of ""identifiers"" that indicate whether the particular rate is a union rate (current union negotiated rate for local), a survey rate (weighted average rate) or a union average rate (weighted union average rate).

Union Rate Identifiers

A four letter classification abbreviation identifier enclosed in dotted lines beginning with characters other than ""SU"" or ""UAVG"" denotes that the union classification and rate were prevailing for that classification in the survey. Example: PLUM0198-005 07/01/2014. PLUM is an abbreviation identifier of the union which prevailed in the survey for this classification, which in this example would be Plumbers. 0198 indicates the local union number or district council number where applicable, i.e., Plumbers Local 0198. The next number, 005 in the example, is an internal number used in processing the wage determination. 07/01/2014 is the effective date of the most current negotiated rate, which in this example is July 1, 2014.

Union prevailing wage rates are updated to reflect all rate changes in the collective bargaining agreement (CBA) governing this classification and rate.

Survey Rate Identifiers

Classifications listed under the ""SU"" identifier indicate that no one rate prevailed for this classification in the survey and the published rate is derived by computing a weighted average rate based on all the rates reported in the survey for that classification. As this weighted average rate includes all rates reported in the survey, it may include both union and non-union rates. Example: SULA2012-007 5/13/2014. SU indicates the rates are survey rates based on a weighted average calculation of rates and are not majority rates. LA indicates the State of Louisiana. 2012 is the year of survey on which these classifications and rates are based. The next number, 007 in the example, is an internal number used in producing the wage determination. 5/13/2014 indicates the survey completion date for the classifications and rates under that identifier.

Survey wage rates are not updated and remain in effect until a new survey is conducted.

Union Average Rate Identifiers

Classification(s) listed under the UAVG identifier indicate that no single majority rate prevailed for those classifications; however, 100% of the data reported for the classifications was union data. EXAMPLE: UAVG-OH-0010 08/29/2014. UAVG indicates that the rate is a weighted union average rate. OH indicates the state. The next number, 0010 in the example, is an internal number used in producing the wage determination. 08/29/2014 indicates the survey completion date for the classifications and rates under that identifier.

A UAVG rate will be updated once a year, usually in January of each year, to reflect a weighted average of the current negotiated/CBA rate of the union locals from which the rate is based.

WAGE DETERMINATION APPEALS PROCESS

1.) Has there been an initial decision in the matter? This can be:

* an existing published wage determination
* a survey underlying a wage determination
* a Wage and Hour Division letter setting forth a position on a wage determination matter
* a conformance (additional classification and rate) ruling

On survey related matters, initial contact, including requests for summaries of surveys, should be with the Wage and Hour Regional Office for the area in which the survey was conducted because those Regional Offices have responsibility for the Davis-Bacon survey program. If the response from this initial contact is not satisfactory, then the process described in 2.) and 3.) should be followed.

With regard to any other matter not yet ripe for the formal process described here, initial contact should be with the Branch of Construction Wage Determinations. Write to:

Branch of Construction Wage Determinations
Wage and Hour Division
U.S. Department of Labor
200 Constitution Avenue, N.W.
Washington, DC 20210

2.) If the answer to the question in 1.) is yes, then an interested party (those affected by the action) can request review and reconsideration from the Wage and Hour Administrator (See 29 CFR Part 1.8 and 29 CFR Part 7). Write to:

Wage and Hour Administrator
U.S. Department of Labor
200 Constitution Avenue, N.W.
Washington, DC 20210

The request should be accompanied by a full statement of the interested party's position and by any information (wage payment data, project description, area practice material, etc.) that the requestor considers relevant to the issue.

3.) If the decision of the Administrator is not favorable, an interested party may appeal directly to the Administrative Review Board (formerly the Wage Appeals Board). Write to:

Administrative Review Board
U.S. Department of Labor
200 Constitution Avenue, N.W.
Washington, DC 20210

4.) All decisions by the Administrative Review Board are final.

==========

END OF GENERAL DECISION"

PERFORMANCE BOND

THE STATE OF TEXAS §

COUNTY OF MIDLAND § SURETY NO _____

KNOW ALL MEN BY THESE PRESENTS, THAT _____ (Hereinafter called the Principal[s]), as Principal(s), and _____ (Hereinafter called the Surety), as Surety, are held and firmly bound unto the City of Midland, Texas a home rule municipal corporation of Midland County, Texas, (hereinafter called the Obligee), in the amount of _____ DOLLARS ($ _____) for the payment whereof the said Principal and surety bind themselves, and their heirs, administrators, executors, successors and assigns, jointly and severally, firmly by these presents.

WHEREAS, the Principal has entered into a certain written contract with the Obligee, dated the _____day of _____ , 20___ , for the furnishing of materials and equipment to perform all labor and work necessary for the construction of _____ , specifically including in the scope of this work and bond, the additional maintenance guaranty provisions set forth in the contract conditions, which contract is hereby referred to and made a part hereof as fully and to the same extent as if copies at length herein, as well as the Principal's primary obligation to perform according to plans and specifications.

NOW, THEREFORE, THE CONDITION OF THIS OBLIGATION IS SUCH, that if the said Principal shall faithfully perform the work in accordance with the plans, specifications, instructions to bidder, general and special conditions and other contract documents, including any addendum thereto, then this obligation shall be void; otherwise to remain in full force and effect.

PROVIDED further that if any legal action be filed upon this Bond venue shall lie in Midland County, State of Texas.

Surety, for value received, stipulates and agrees that no change, extension of time, alteration or addition to the terms of the contract, or to the work performed thereunder, or the plans, specifications or drawings accompanying the same, or any assignment of the contract as may be provided for in the instructions to bidders, shall in anywise affect its obligation on this Bond, and it does waive notice of any such change, extension of time, alteration or addition to the terms of the contract, assignment thereof, or the work to be performed thereunder.

IN WITNESS WHEREOF, the said Principal and surety do sign and seal this instrument, this _____ day of _____ , 20___.

PAYMENT BOND

THE STATE OF TEXAS §

COUNTY OF MIDLAND §

SURETY NO _____

KNOW ALL MEN BY THESE PRESENTS, THAT _____ of the City of _____ of the County of _____ and State of Texas as Principal, and _____, as Surety, are held and firmly bound unto the City of Midland, Texas, as Obligee, in the amount of _____ DOLLARS ($ _____) for the payment whereof the said Principal and Surety bind themselves, their heirs, administrators, executors, successors and assigns, jointly and severally, firmly by these presents.

WHEREAS, the Principal has entered into a certain written contract with the Obligee, dated the _____ day of _____, 20__, for the furnishing of materials, equipment to perform all labor and work necessary for _____, hereof as fully and to the same extent as if copied at length herein.

NOW, THEREFORE, the condition of the obligation is that if the said Principal shall pay all claimants supplying labor and material to him or a subcontractor in the prosecution of the work provided for in said contract, then this obligation shall be null and void; otherwise, it is to remain in full force and effect.

Surety, for value received, stipulates and agrees that no change, extension of time alteration or addition to the terms of the contract, or to the work performed there under, or the plans, specifications of drawings accompanying the same, or any assignment of the contract as may be provided for in the instructions to bidders, shall in anywise affect its obligation on this Bond, and it does waive notice of any such change, extension of

time, alteration or addition to the terms of the contract, assignment thereof, or to the work to be performed there under.

IN WITNESS WHEREOF the said Principal and Surety have signed and sealed this instrument, this _____ day of _____ , 20__ .

STANDARD GENERAL CONDITIONS OF THE CONSTRUCTION CONTRACT

ARTICLE 1—DEFINITIONS AND TERMINOLOGY

1.01 *Defined Terms*

A. Wherever used in the Bidding Requirements or Contract Documents, a term printed with initial capital letters, including the term's singular and plural forms, will have the meaning indicated in the definitions below. In addition to terms specifically defined, terms with initial capital letters in the Contract Documents include references to identified articles and paragraphs, and the titles of other documents or forms.

1. *Addenda*—Written or graphic instruments issued prior to the opening of Bids which clarify, correct, or change the Bidding Requirements or the proposed Contract Documents.

2. *Agreement*—The written instrument, executed by Owner and Contractor, that sets forth the Contract Price and Contract Times, identifies the parties and the Engineer, and designates the specific items that are Contract Documents.

3. *Application for Payment*—The document prepared by Contractor, in a form acceptable to Engineer, to request progress or final payments, and which is to be accompanied by such supporting documentation as is required by the Contract Documents.

4. *Bid*—The offer of a Bidder submitted on the prescribed form setting forth the prices for the Work to be performed.

5. *Bidder*—An individual or entity that submits a Bid to Owner.

6. *Bidding Documents*—The Bidding Requirements, the proposed Contract Documents, and all Addenda.

7. *Bidding Requirements*—The Advertisement or invitation to bid, Instructions to Bidders, Bid Bond or other Bid security, if any, the Bid Form, and the Bid with any attachments.

8. *Change Order*—A document which is signed by Contractor and Owner and authorizes an addition, deletion, or revision in the Work or an adjustment in the Contract Price or the Contract Times, or other revision to the Contract, issued on or after the Effective Date of the Contract.

9. *Change Proposal*—A written request by Contractor, duly submitted in compliance with the procedural requirements set forth herein, seeking an adjustment in Contract Price or Contract Times; contesting an initial decision by Engineer concerning the requirements of the Contract Documents or the acceptability of Work under the Contract Documents; challenging a set-off against payments due; or seeking other relief with respect to the terms of the Contract.

10. *Claim*

a. A demand or assertion by Owner directly to Contractor, duly submitted in compliance with the procedural requirements set forth herein, seeking an adjustment of Contract Price or Contract Times; contesting an initial decision by Engineer concerning the

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

PACKET 10.1913 December 15, 2020

requirements of the Contract Documents or the acceptability of Work under the Contract Documents; contesting Engineer's decision regarding a Change Proposal; seeking resolution of a contractual issue that Engineer has declined to address; or seeking other relief with respect to the terms of the Contract.

b. A demand or assertion by Contractor directly to Owner, duly submitted in compliance with the procedural requirements set forth herein, contesting Engineer's decision regarding a Change Proposal, or seeking resolution of a contractual issue that Engineer has declined to address.

c. A demand or assertion by Owner or Contractor, duly submitted in compliance with the procedural requirements set forth herein, made pursuant to Paragraph 12.01.A.4, concerning disputes arising after Engineer has issued a recommendation of final payment.

d. A demand for money or services by a third party is not a Claim.

11. *Constituent of Concern*—Asbestos, petroleum, radioactive materials, polychlorinated biphenyls (PCBs), lead-based paint (as defined by the HUD/EPA standard), hazardous waste, and any substance, product, waste, or other material of any nature whatsoever that is or becomes listed, regulated, or addressed pursuant to Laws and Regulations regulating, relating to, or imposing liability or standards of conduct concerning, any hazardous, toxic, or dangerous waste, substance, or material.

12. *Contract*—The entire and integrated written contract between Owner and Contractor concerning the Work.

13. *Contract Documents*—Those items so designated in the Agreement, and which together comprise the Contract.

14. *Contract Price*—The money that Owner has agreed to pay Contractor for completion of the Work in accordance with the Contract Documents.

15. *Contract Times*—The number of days or the dates by which Contractor shall: (a) achieve Milestones, if any; (b) achieve Substantial Completion; and (c) complete the Work.

16. *Contractor*—The individual or entity with which Owner has contracted for performance of the Work.

17. *Cost of the Work*—See Paragraph 13.01 for definition.

18. *Drawings*—The part of the Contract that graphically shows the scope, extent, and character of the Work to be performed by Contractor.

19. *Effective Date of the Contract*—The date, indicated in the Agreement, on which the Contract becomes effective.

20. *Electronic Document*—Any Project-related correspondence, attachments to correspondence, data, documents, drawings, information, or graphics, including but not limited to Shop Drawings and other Submittals, that are in an electronic or digital format.

21. *Electronic Means*—Electronic mail (email), upload/download from a secure Project website, or other communications methods that allow: (a) the transmission or communication of Electronic Documents; (b) the documentation of transmissions, including sending and receipt; (c) printing of the transmitted Electronic Document by the

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

recipient; (d) the storage and archiving of the Electronic Document by sender and recipient; and (e) the use by recipient of the Electronic Document for purposes permitted by this Contract. Electronic Means does not include the use of text messaging, or of Facebook, Twitter, Instagram, or similar social media services for transmission of Electronic Documents.

22. *Engineer*—The individual or entity named as such in the Agreement.

23. *Field Order*—A written order issued by Engineer which requires minor changes in the Work but does not change the Contract Price or the Contract Times.

24. *Hazardous Environmental Condition*—The presence at the Site of Constituents of Concern in such quantities or circumstances that may present a danger to persons or property exposed thereto.

    a. The presence at the Site of materials that are necessary for the execution of the Work, or that are to be incorporated into the Work, and that are controlled and contained pursuant to industry practices, Laws and Regulations, and the requirements of the Contract, is not a Hazardous Environmental Condition.

    b. The presence of Constituents of Concern that are to be removed or remediated as part of the Work is not a Hazardous Environmental Condition.

    c. The presence of Constituents of Concern as part of the routine, anticipated, and obvious working conditions at the Site, is not a Hazardous Environmental Condition.

25. *Laws and Regulations; Laws or Regulations*—Any and all applicable laws, statutes, rules, regulations, ordinances, codes, and binding decrees, resolutions, and orders of any and all governmental bodies, agencies, authorities, and courts having jurisdiction.

26. *Liens*—Charges, security interests, or encumbrances upon Contract-related funds, real property, or personal property.

27. *Milestone*—A principal event in the performance of the Work that the Contract requires Contractor to achieve by an intermediate completion date, or by a time prior to Substantial Completion of all the Work.

28. *Notice of Award*—The written notice by Owner to a Bidder of Owner's acceptance of the Bid.

29. *Notice to Proceed*—A written notice by Owner to Contractor fixing the date on which the Contract Times will commence to run and on which Contractor shall start to perform the Work.

30. *Owner*—The individual or entity with which Contractor has contracted regarding the Work, and which has agreed to pay Contractor for the performance of the Work, pursuant to the terms of the Contract.

31. *Progress Schedule*—A schedule, prepared and maintained by Contractor, describing the sequence and duration of the activities comprising Contractor's plan to accomplish the Work within the Contract Times.

32. *Project*—The total undertaking to be accomplished for Owner by engineers, contractors, and others, including planning, study, design, construction, testing, commissioning, and start-up, and of which the Work to be performed under the Contract Documents is a part.

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

33. *Resident Project Representative*—The authorized representative of Engineer assigned to assist Engineer at the Site. As used herein, the term Resident Project Representative (RPR) includes any assistants or field staff of Resident Project Representative.

34. *Samples*—Physical examples of materials, equipment, or workmanship that are representative of some portion of the Work and that establish the standards by which such portion of the Work will be judged.

35. *Schedule of Submittals*—A schedule, prepared and maintained by Contractor, of required submittals and the time requirements for Engineer's review of the submittals.

36. *Schedule of Values*—A schedule, prepared and maintained by Contractor, allocating portions of the Contract Price to various portions of the Work and used as the basis for reviewing Contractor's Applications for Payment.

37. *Shop Drawings*—All drawings, diagrams, illustrations, schedules, and other data or information that are specifically prepared or assembled by or for Contractor and submitted by Contractor to illustrate some portion of the Work. Shop Drawings, whether approved or not, are not Drawings and are not Contract Documents.

38. *Site*—Lands or areas indicated in the Contract Documents as being furnished by Owner upon which the Work is to be performed, including rights-of-way and easements, and such other lands or areas furnished by Owner which are designated for the use of Contractor.

39. *Specifications*—The part of the Contract that consists of written requirements for materials, equipment, systems, standards, and workmanship as applied to the Work, and certain administrative requirements and procedural matters applicable to the Work.

40. *Subcontractor*—An individual or entity having a direct contract with Contractor or with any other Subcontractor for the performance of a part of the Work.

41. *Submittal*—A written or graphic document, prepared by or for Contractor, which the Contract Documents require Contractor to submit to Engineer, or that is indicated as a Submittal in the Schedule of Submittals accepted by Engineer. Submittals may include Shop Drawings and Samples; schedules; product data; Owner-delegated designs; sustainable design information; information on special procedures; testing plans; results of tests and evaluations, source quality-control testing and inspections, and field or Site quality-control testing and inspections; warranties and certifications; Suppliers' instructions and reports; records of delivery of spare parts and tools; operations and maintenance data; Project photographic documentation; record documents; and other such documents required by the Contract Documents. Submittals, whether or not approved or accepted by Engineer, are not Contract Documents. Change Proposals, Change Orders, Claims, notices, Applications for Payment, and requests for interpretation or clarification are not Submittals.

42. *Substantial Completion*—The time at which the Work (or a specified part thereof) has progressed to the point where, in the opinion of Engineer, the Work (or a specified part thereof) is sufficiently complete, in accordance with the Contract Documents, so that the Work (or a specified part thereof) can be utilized for the purposes for which it is intended. The terms "substantially complete" and "substantially completed" as applied to all or part of the Work refer to Substantial Completion of such Work.

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

43. *Successful Bidder*—The Bidder to which the Owner makes an award of contract.

44. *Supplementary Conditions*—The part of the Contract that amends or supplements these General Conditions. Supplementary Conditions are established by redline edits to these Standard General Conditions of the Construction Contract.

45. *Supplier*—A manufacturer, fabricator, supplier, distributor, or vendor having a direct contract with Contractor or with any Subcontractor to furnish materials or equipment to be incorporated in the Work by Contractor or a Subcontractor.

46. *Technical Data*

    a. Those items expressly identified as Technical Data in the Supplementary Conditions, with respect to either (1) existing subsurface conditions at or adjacent to the Site, or existing physical conditions at or adjacent to the Site including existing surface or subsurface structures (except Underground Facilities) or (2) Hazardous Environmental Conditions at the Site.

    b. If no such express identifications of Technical Data have been made with respect to conditions at the Site, then Technical Data is defined, with respect to conditions at the Site under Paragraphs 5.03, 5.04, and 5.06, as the data contained in boring logs, recorded measurements of subsurface water levels, assessments of the condition of subsurface facilities, laboratory test results, and other factual, objective information regarding conditions at the Site that are set forth in any geotechnical, environmental, or other Site or facilities conditions report prepared for the Project and made available to Contractor.

    c. Information and data regarding the presence or location of Underground Facilities are not intended to be categorized, identified, or defined as Technical Data, and instead Underground Facilities are shown or indicated on the Drawings.

47. *Underground Facilities*—All active or not-in-service underground lines, pipelines, conduits, ducts, encasements, cables, wires, manholes, vaults, tanks, tunnels, or other such facilities or systems at the Site, including but not limited to those facilities or systems that produce, transmit, distribute, or convey telephone or other communications, cable television, fiber optic transmissions, power, electricity, light, heat, gases, oil, crude oil products, liquid petroleum products, water, steam, waste, wastewater, storm water, other liquids or chemicals, or traffic or other control systems. An abandoned facility or system is not an Underground Facility.

48. *Unit Price Work*—Work to be paid for on the basis of unit prices.

49. *Work*—The entire construction or the various separately identifiable parts thereof required to be provided under the Contract Documents. Work includes and is the result of performing or providing all labor, services, and documentation necessary to produce such construction; furnishing, installing, and incorporating all materials and equipment into such construction; and may include related services such as testing, start-up, and commissioning, all as required by the Contract Documents.

50. *Work Change Directive*—A written directive to Contractor issued on or after the Effective Date of the Contract, signed by Owner and recommended by Engineer, ordering an addition, deletion, or revision in the Work.

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

1.02 *Terminology*

A. The words and terms discussed in Paragraphs 1.02.B, C, D, and E are not defined terms that require initial capital letters, but, when used in the Bidding Requirements or Contract Documents, have the indicated meaning.

B. *Intent of Certain Terms or Adjectives*: The Contract Documents include the terms "as allowed," "as approved," "as ordered," "as directed" or terms of like effect or import to authorize an exercise of professional judgment by Engineer. In addition, the adjectives "reasonable," "suitable," "acceptable," "proper," "satisfactory," or adjectives of like effect or import are used to describe an action or determination of Engineer as to the Work. It is intended that such exercise of professional judgment, action, or determination will be solely to evaluate, in general, the Work for compliance with the information in the Contract Documents and with the design concept of the Project as a functioning whole as shown or indicated in the Contract Documents (unless there is a specific statement indicating otherwise). The use of any such term or adjective is not intended to and shall not be effective to assign to Engineer any duty or authority to supervise or direct the performance of the Work, or any duty or authority to undertake responsibility contrary to the provisions of Article 10 or any other provision of the Contract Documents.

C. *Day*: The word "day" means a calendar day of 24 hours measured from midnight to the next midnight.

D. *Defective*: The word "defective," when modifying the word "Work," refers to Work that is unsatisfactory, faulty, or deficient in that it:

1. does not conform to the Contract Documents;

2. does not meet the requirements of any applicable inspection, reference standard, test, or approval referred to in the Contract Documents; or

3. has been damaged prior to Engineer's recommendation of final payment (unless responsibility for the protection thereof has been assumed by Owner at Substantial Completion in accordance with Paragraph 15.03 or Paragraph 15.04).

E. *Furnish, Install, Perform, Provide*

1. The word "furnish," when used in connection with services, materials, or equipment, means to supply and deliver said services, materials, or equipment to the Site (or some other specified location) ready for use or installation and in usable or operable condition.

2. The word "install," when used in connection with services, materials, or equipment, means to put into use or place in final position said services, materials, or equipment complete and ready for intended use.

3. The words "perform" or "provide," when used in connection with services, materials, or equipment, means to furnish and install said services, materials, or equipment complete and ready for intended use.

4. If the Contract Documents establish an obligation of Contractor with respect to specific services, materials, or equipment, but do not expressly use any of the four words "furnish," "install," "perform," or "provide," then Contractor shall furnish and install said services, materials, or equipment complete and ready for intended use.

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

F. *Contract Price or Contract Times*: References to a change in "Contract Price or Contract Times" or "Contract Times or Contract Price" or similar, indicate that such change applies to (1) Contract Price, (2) Contract Times, or (3) both Contract Price and Contract Times, as warranted, even if the term "or both" is not expressed.

G. Unless stated otherwise in the Contract Documents, words or phrases that have a well-known technical or construction industry or trade meaning are used in the Contract Documents in accordance with such recognized meaning.

ARTICLE 2—PRELIMINARY MATTERS

2.01 *Delivery of Performance and Payment Bonds; Evidence of Insurance*

A. *Performance and Payment Bonds*: When Contractor delivers the signed counterparts of the Agreement to Owner, Contractor shall also deliver to Owner the performance bond and payment bond (if the Contract requires Contractor to furnish such bonds).

B. *Evidence of Contractor's Insurance*: When Contractor delivers the signed counterparts of the Agreement to Owner, Contractor shall also deliver to Owner, with copies to each additional insured (as identified in the Contract), the certificates, endorsements, and other evidence of insurance required to be provided by Contractor in accordance with Article 6, except to the extent the Supplementary Conditions expressly establish other dates for delivery of specific insurance policies.

C. *Evidence of Owner's Insurance*: After receipt of the signed counterparts of the Agreement and all required bonds and insurance documentation, Owner shall promptly deliver to Contractor, with copies to each additional insured (as identified in the Contract), the certificates and other evidence of insurance required to be provided by Owner under Article 6.

2.02 *Copies of Documents*

A. Owner shall furnish to Contractor four printed copies of the Contract (including one fully signed counterpart of the Agreement), and one copy in electronic portable document format (PDF). Additional printed copies will be furnished upon request at the cost of reproduction.

B. Owner shall maintain and safeguard at least one original printed record version of the Contract, including Drawings and Specifications signed and sealed by Engineer and other design professionals. Owner shall make such original printed record version of the Contract available to Contractor for review. Owner may delegate the responsibilities under this provision to Engineer.

2.03 *Before Starting Construction*

A. *Preliminary Schedules*: Within 10 days after the Effective Date of the Contract (or as otherwise required by the Contract Documents), Contractor shall submit to Engineer for timely review:

1. a preliminary Progress Schedule indicating the times (numbers of days or dates) for starting and completing the various stages of the Work, including any Milestones specified in the Contract;

2. a preliminary Schedule of Submittals; and

3. a preliminary Schedule of Values for all of the Work which includes quantities and prices of items which when added together equal the Contract Price and subdivides the Work

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

into component parts in sufficient detail to serve as the basis for progress payments during performance of the Work. Such prices will include an appropriate amount of overhead and profit applicable to each item of Work.

2.04 *Preconstruction Conference; Designation of Authorized Representatives*

A. Before any Work at the Site is started, a conference attended by Owner, Contractor, Engineer, and others as appropriate will be held to establish a working understanding among the parties as to the Work, and to discuss the schedules referred to in Paragraph 2.03.A, procedures for handling Shop Drawings, Samples, and other Submittals, processing Applications for Payment, electronic or digital transmittals, and maintaining required records.

B. At this conference Owner and Contractor each shall designate, in writing, a specific individual to act as its authorized representative with respect to the services and responsibilities under the Contract. Such individuals shall have the authority to transmit and receive information, render decisions relative to the Contract, and otherwise act on behalf of each respective party.

2.05 *Acceptance of Schedules*

A. At least 10 days before submission of the first Application for Payment a conference, attended by Contractor, Engineer, and others as appropriate, will be held to review the schedules submitted in accordance with Paragraph 2.03.A. No progress payment will be made to Contractor until acceptable schedules are submitted to Engineer.

1. The Progress Schedule will be acceptable to Engineer if it provides an orderly progression of the Work to completion within the Contract Times. Such acceptance will not impose on Engineer responsibility for the Progress Schedule, for sequencing, scheduling, or progress of the Work, nor interfere with or relieve Contractor from Contractor's full responsibility therefor.

2. Contractor's Schedule of Submittals will be acceptable to Engineer if it provides a workable arrangement for reviewing and processing the required submittals.

3. Contractor's Schedule of Values will be acceptable to Engineer as to form and substance if it provides a reasonable allocation of the Contract Price to the component parts of the Work.

4. If a schedule is not acceptable, Contractor will have an additional 10 days to revise and resubmit the schedule.

2.06 *Electronic Transmittals*

A. Except as otherwise stated elsewhere in the Contract, the Owner, Engineer, and Contractor may send, and shall accept, Electronic Documents transmitted by Electronic Means.

B. If the Contract does not establish protocols for Electronic Means, then Owner, Engineer, and Contractor shall jointly develop such protocols.

C. Subject to any governing protocols for Electronic Means, when transmitting Electronic Documents by Electronic Means, the transmitting party makes no representations as to long-term compatibility, usability, or readability of the Electronic Documents resulting from the recipient's use of software application packages, operating systems, or computer hardware differing from those used in the drafting or transmittal of the Electronic Documents.

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

ARTICLE 3—CONTRACT DOCUMENTS: INTENT, REQUIREMENTS, REUSE

3.01 *Intent*

A. The Contract Documents are complementary; what is required by one Contract Document is as binding as if required by all.

B. It is the intent of the Contract Documents to describe a functionally complete Project (or part thereof) to be constructed in accordance with the Contract Documents.

C. Unless otherwise stated in the Contract Documents, if there is a discrepancy between the electronic versions of the Contract Documents (including any printed copies derived from such electronic versions) and the printed record version, the printed record version will govern.

D. The Contract supersedes prior negotiations, representations, and agreements, whether written or oral.

E. Engineer will issue clarifications and interpretations of the Contract Documents as provided herein.

F. Any provision or part of the Contract Documents held to be void or unenforceable under any Law or Regulation will be deemed stricken, and all remaining provisions will continue to be valid and binding upon Owner and Contractor, which agree that the Contract Documents will be reformed to replace such stricken provision or part thereof with a valid and enforceable provision that comes as close as possible to expressing the intention of the stricken provision.

G. Nothing in the Contract Documents creates:

1. any contractual relationship between Owner or Engineer and any Subcontractor, Supplier, or other individual or entity performing or furnishing any of the Work, for the benefit of such Subcontractor, Supplier, or other individual or entity; or

2. any obligation on the part of Owner or Engineer to pay or to see to the payment of any money due any such Subcontractor, Supplier, or other individual or entity, except as may otherwise be required by Laws and Regulations.

3.02 *Reference Standards*

A. *Standards Specifications, Codes, Laws and Regulations*

1. Reference in the Contract Documents to standard specifications, manuals, reference standards, or codes of any technical society, organization, or association, or to Laws or Regulations, whether such reference be specific or by implication, means the standard specification, manual, reference standard, code, or Laws or Regulations in effect at the time of opening of Bids (or on the Effective Date of the Contract if there were no Bids), except as may be otherwise specifically stated in the Contract Documents.

2. No provision of any such standard specification, manual, reference standard, or code, and no instruction of a Supplier, will be effective to change the duties or responsibilities of Owner, Contractor, or Engineer from those set forth in the part of the Contract Documents prepared by or for Engineer. No such provision or instruction shall be effective to assign to Owner or Engineer any duty or authority to supervise or direct the performance of the Work, or any duty or authority to undertake responsibility

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

inconsistent with the provisions of the part of the Contract Documents prepared by or for Engineer.

3.03 *Reporting and Resolving Discrepancies*

A. *Reporting Discrepancies*

1. *Contractor's Verification of Figures and Field Measurements*: Before undertaking each part of the Work, Contractor shall carefully study the Contract Documents, and check and verify pertinent figures and dimensions therein, particularly with respect to applicable field measurements. Contractor shall promptly report in writing to Engineer any conflict, error, ambiguity, or discrepancy that Contractor discovers, or has actual knowledge of, and shall not proceed with any Work affected thereby until the conflict, error, ambiguity, or discrepancy is resolved by a clarification or interpretation by Engineer, or by an amendment or supplement to the Contract issued pursuant to Paragraph 11.01.

2. *Contractor's Review of Contract Documents*: If, before or during the performance of the Work, Contractor discovers any conflict, error, ambiguity, or discrepancy within the Contract Documents, or between the Contract Documents and (a) any applicable Law or Regulation, (b) actual field conditions, (c) any standard specification, manual, reference standard, or code, or (d) any instruction of any Supplier, then Contractor shall promptly report it to Engineer in writing. Contractor shall not proceed with the Work affected thereby (except in an emergency as required by Paragraph 7.15) until the conflict, error, ambiguity, or discrepancy is resolved, by a clarification or interpretation by Engineer, or by an amendment or supplement to the Contract issued pursuant to Paragraph 11.01.

3. Contractor shall not be liable to Owner or Engineer for failure to report any conflict, error, ambiguity, or discrepancy in the Contract Documents unless Contractor had actual knowledge thereof.

B. *Resolving Discrepancies*

1. Except as may be otherwise specifically stated in the Contract Documents, the provisions of the part of the Contract Documents prepared by or for Engineer take precedence in resolving any conflict, error, ambiguity, or discrepancy between such provisions of the Contract Documents and:

a. the provisions of any standard specification, manual, reference standard, or code, or the instruction of any Supplier (whether or not specifically incorporated by reference as a Contract Document); or

b. the provisions of any Laws or Regulations applicable to the performance of the Work (unless such an interpretation of the provisions of the Contract Documents would result in violation of such Law or Regulation).

3.04 *Requirements of the Contract Documents*

A. During the performance of the Work and until final payment, Contractor and Owner shall submit to the Engineer in writing all matters in question concerning the requirements of the Contract Documents (sometimes referred to as requests for information or interpretation—RFIs), or relating to the acceptability of the Work under the Contract Documents, as soon as possible after such matters arise. Engineer will be the initial interpreter of the requirements of the Contract Documents, and judge of the acceptability of the Work.

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

B. Engineer will, with reasonable promptness, render a written clarification, interpretation, or decision on the issue submitted, or initiate an amendment or supplement to the Contract Documents. Engineer's written clarification, interpretation, or decision will be final and binding on Contractor, unless it appeals by submitting a Change Proposal, and on Owner, unless it appeals by filing a Claim.

C. If a submitted matter in question concerns terms and conditions of the Contract Documents that do not involve (1) the performance or acceptability of the Work under the Contract Documents, (2) the design (as set forth in the Drawings, Specifications, or otherwise), or (3) other engineering or technical matters, then Engineer will promptly notify Owner and Contractor in writing that Engineer is unable to provide a decision or interpretation. If Owner and Contractor are unable to agree on resolution of such a matter in question, either party may pursue resolution as provided in Article 12.

3.05 *Reuse of Documents*

A. Contractor and its Subcontractors and Suppliers shall not:

1. have or acquire any title to or ownership rights in any of the Drawings, Specifications, or other documents (or copies of any thereof) prepared by or bearing the seal of Engineer or its consultants, including electronic media versions, or reuse any such Drawings, Specifications, other documents, or copies thereof on extensions of the Project or any other project without written consent of Owner and Engineer and specific written verification or adaptation by Engineer; or

2. have or acquire any title or ownership rights in any other Contract Documents, reuse any such Contract Documents for any purpose without Owner's express written consent, or violate any copyrights pertaining to such Contract Documents.

B. The prohibitions of this Paragraph 3.05 will survive final payment, or termination of the Contract. Nothing herein precludes Contractor from retaining copies of the Contract Documents for record purposes.

ARTICLE 4—COMMENCEMENT AND PROGRESS OF THE WORK

4.01 *Commencement of Contract Times; Notice to Proceed*

A. The Contract Times will commence to run on the 30th day after the Effective Date of the Contract or, if a Notice to Proceed is given, on the day indicated in the Notice to Proceed. A Notice to Proceed may be given at any time within 30 days after the Effective Date of the Contract. In no event will the Contract Times commence to run later than the 60th day after the day of Bid opening or the 30th day after the Effective Date of the Contract, whichever date is earlier.

4.02 *Starting the Work*

A. Contractor shall start to perform the Work on the date when the Contract Times commence to run. No Work may be done at the Site prior to such date.

4.03 *Reference Points*

A. Owner shall provide engineering surveys to establish reference points for construction which in Engineer's judgment are necessary to enable Contractor to proceed with the Work. Contractor shall be responsible for laying out the Work, shall protect and preserve the

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

established reference points and property monuments, and shall make no changes or relocations without the prior written approval of Owner. Contractor shall report to Engineer whenever any reference point or property monument is lost or destroyed or requires relocation because of necessary changes in grades or locations, and shall be responsible for the accurate replacement or relocation of such reference points or property monuments by professionally qualified personnel.

4.04 *Progress Schedule*

A. Contractor shall adhere to the Progress Schedule established in accordance with Paragraph 2.05 as it may be adjusted from time to time as provided below.

1. Contractor shall submit to Engineer for acceptance (to the extent indicated in Paragraph 2.05) proposed adjustments in the Progress Schedule that will not result in changing the Contract Times.

2. Proposed adjustments in the Progress Schedule that will change the Contract Times must be submitted in accordance with the requirements of Article 11.

B. Contractor shall carry on the Work and adhere to the Progress Schedule during all disputes or disagreements with Owner. No Work will be delayed or postponed pending resolution of any disputes or disagreements, or during any appeal process, except as permitted by Paragraph 16.04, or as Owner and Contractor may otherwise agree in writing.

4.05 *Delays in Contractor's Progress*

A. If Owner, Engineer, or anyone for whom Owner is responsible, delays, disrupts, or interferes with the performance or progress of the Work, then Contractor shall be entitled to an equitable adjustment in Contract Price or Contract Times.

B. Contractor shall not be entitled to an adjustment in Contract Price or Contract Times for delay, disruption, or interference caused by or within the control of Contractor. Delay, disruption, and interference attributable to and within the control of a Subcontractor or Supplier shall be deemed to be within the control of Contractor.

C. If Contractor's performance or progress is delayed, disrupted, or interfered with by unanticipated causes not the fault of and beyond the control of Owner, Contractor, and those for which they are responsible, then Contractor shall be entitled to an equitable adjustment in Contract Times. Such an adjustment will be Contractor's sole and exclusive remedy for the delays, disruption, and interference described in this paragraph. Causes of delay, disruption, or interference that may give rise to an adjustment in Contract Times under this paragraph include but are not limited to the following:

1. Severe and unavoidable natural catastrophes such as fires, floods, epidemics, and earthquakes;

2. Abnormal weather conditions;

3. Acts or failures to act of third-party utility owners or other third-party entities (other than those third-party utility owners or other third-party entities performing other work at or adjacent to the Site as arranged by or under contract with Owner, as contemplated in Article 8); and

4. Acts of war or terrorism.

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

5. Weather-Related Delays

   a. If "abnormal weather conditions" as set forth in Paragraph 4.05.C.2 of the General Conditions are the basis for a request for an equitable adjustment in the Contract Times, such request must be documented by data substantiating each of the following: 1) that weather conditions were abnormal for the period of time in which the delay occurred, 2) that such weather conditions could not have been reasonably anticipated, and 3) that such weather conditions had an adverse effect on the Work as scheduled.

   b. The existence of abnormal weather conditions will be determined on a month-by-month basis in accordance with the following:

      1) Every workday on which one or more of the following conditions exist will be considered a "bad weather day":

         i) Total precipitation (as rain equivalent) occurring between 7:00 p.m. on the preceding day (regardless of whether such preceding day is a workday) through 7:00 p.m. on the workday in question equals or exceeds 2 inches of precipitation (as rain equivalent, based on the snow/rain conversion indicated in the table entitled Foreseeable Bad Weather Days; such table is hereby incorporated in this SC-4.05.C by reference.

         ii) Ambient outdoor air temperature at 11:00 a.m. is equal to or less than the following low temperature threshold: 20 degrees Fahrenheit; or, at 3:00 p.m. the ambient outdoor temperature is equal to or greater than the following high temperature threshold: 110 degrees Fahrenheit.

      2) Determination of actual bad weather days during performance of the Work will be based on the weather records measured and recorded by National Weather Service weather monitoring station at Midland International Air and Space Port.

      3) Contractor shall anticipate the number of foreseeable bad weather days per month indicated in the table in Exhibit A—Foreseeable Bad Weather Days.

      4) In each month, every bad weather day exceeding the number of foreseeable bad weather days established in the table in Exhibit A—Foreseeable Bad Weather Days will be considered as "abnormal weather conditions." The existence of abnormal weather conditions will not relieve Contractor of the obligation to demonstrate and document that delays caused by abnormal weather are specific to the planned work activities or that such activities thus delayed were on Contractor's then-current Progress Schedule's critical path for the Project.

D. Contractor's entitlement to an adjustment of Contract Times or Contract Price is limited as follows:

   1. Contractor's entitlement to an adjustment of the Contract Times is conditioned on the delay, disruption, or interference adversely affecting an activity on the critical path to completion of the Work, as of the time of the delay, disruption, or interference.

   2. Contractor shall not be entitled to an adjustment in Contract Price for any delay, disruption, or interference if such delay is concurrent with a delay, disruption, or interference caused by or within the control of Contractor. Such a concurrent delay by

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

Contractor shall not preclude an adjustment of Contract Times to which Contractor is otherwise entitled.

3. Adjustments of Contract Times or Contract Price are subject to the provisions of Article 11.

E. Each Contractor request or Change Proposal seeking an increase in Contract Times or Contract Price must be supplemented by supporting data that sets forth in detail the following:

1. The circumstances that form the basis for the requested adjustment;

2. The date upon which each cause of delay, disruption, or interference began to affect the progress of the Work;

3. The date upon which each cause of delay, disruption, or interference ceased to affect the progress of the Work;

4. The number of days' increase in Contract Times claimed as a consequence of each such cause of delay, disruption, or interference; and

5. The impact on Contract Price, in accordance with the provisions of Paragraph 11.07.

Contractor shall also furnish such additional supporting documentation as Owner or Engineer may require including, where appropriate, a revised progress schedule indicating all the activities affected by the delay, disruption, or interference, and an explanation of the effect of the delay, disruption, or interference on the critical path to completion of the Work.

F. Delays, disruption, and interference to the performance or progress of the Work resulting from the existence of a differing subsurface or physical condition, an Underground Facility that was not shown or indicated by the Contract Documents, or not shown or indicated with reasonable accuracy, and those resulting from Hazardous Environmental Conditions, are governed by Article 5, together with the provisions of Paragraphs 4.05.D and 4.05.E.

G. Paragraph 8.03 addresses delays, disruption, and interference to the performance or progress of the Work resulting from the performance of certain other work at or adjacent to the Site.

ARTICLE 5—SITE; SUBSURFACE AND PHYSICAL CONDITIONS; HAZARDOUS ENVIRONMENTAL CONDITIONS

5.01 *Availability of Lands*

A. Owner shall furnish the Site. Owner shall notify Contractor in writing of any encumbrances or restrictions not of general application but specifically related to use of the Site with which Contractor must comply in performing the Work.

B. Upon reasonable written request, Owner shall furnish Contractor with a current statement of record legal title and legal description of the lands upon which permanent improvements are to be made and Owner's interest therein as necessary for giving notice of or filing a mechanic's or construction lien against such lands in accordance with applicable Laws and Regulations.

C. Contractor shall provide for all additional lands and access thereto that may be required for temporary construction facilities or storage of materials and equipment.

5.02 *Use of Site and Other Areas*

A. *Limitation on Use of Site and Other Areas*

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

1. Contractor shall confine construction equipment, temporary construction facilities, the storage of materials and equipment, and the operations of workers to the Site, adjacent areas that Contractor has arranged to use through construction easements or otherwise, and other adjacent areas permitted by Laws and Regulations, and shall not unreasonably encumber the Site and such other adjacent areas with construction equipment or other materials or equipment. Contractor shall assume full responsibility for (a) damage to the Site; (b) damage to any such other adjacent areas used for Contractor's operations; (c) damage to any other adjacent land or areas, or to improvements, structures, utilities, or similar facilities located at such adjacent lands or areas; and (d) for injuries and losses sustained by the owners or occupants of any such land or areas; provided that such damage or injuries result from the performance of the Work or from other actions or conduct of the Contractor or those for which Contractor is responsible.

2. If a damage or injury claim is made by the owner or occupant of any such land or area because of the performance of the Work, or because of other actions or conduct of the Contractor or those for which Contractor is responsible, Contractor shall (a) take immediate corrective or remedial action as required by Paragraph 7.13, or otherwise; (b) promptly attempt to settle the claim as to all parties through negotiations with such owner or occupant, or otherwise resolve the claim by arbitration or other dispute resolution proceeding, or in a court of competent jurisdiction; and (c) to the fullest extent permitted by Laws and Regulations, indemnify and hold harmless Owner and Engineer, and the officers, directors, members, partners, employees, agents, consultants and subcontractors of each and any of them, from and against any such claim, and against all costs, losses, and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all court or arbitration or other dispute resolution costs) arising out of or relating to any claim or action, legal or equitable, brought by any such owner or occupant against Owner, Engineer, or any other party indemnified hereunder to the extent caused directly or indirectly, in whole or in part by, or based upon, Contractor's performance of the Work, or because of other actions or conduct of the Contractor or those for which Contractor is responsible.

B. *Removal of Debris During Performance of the Work*: During the progress of the Work the Contractor shall keep the Site and other adjacent areas free from accumulations of waste materials, rubbish, and other debris. Removal and disposal of such waste materials, rubbish, and other debris will conform to applicable Laws and Regulations.

C. *Cleaning*: Prior to Substantial Completion of the Work Contractor shall clean the Site and the Work and make it ready for utilization by Owner. At the completion of the Work Contractor shall remove from the Site and adjacent areas all tools, appliances, construction equipment and machinery, and surplus materials and shall restore to original condition all property not designated for alteration by the Contract Documents.

D. *Loading of Structures*: Contractor shall not load nor permit any part of any structure to be loaded in any manner that will endanger the structure, nor shall Contractor subject any part of the Work or adjacent structures or land to stresses or pressures that will endanger them.

5.03 *Subsurface and Physical Conditions*

A. *Reports and Drawings*: The Supplementary Conditions identify:

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

1. Those reports of explorations and tests of subsurface conditions at or adjacent to the Site that contain Technical Data;

2. Those drawings of existing physical conditions at or adjacent to the Site, including those drawings depicting existing surface or subsurface structures at or adjacent to the Site (except Underground Facilities), that contain Technical Data; and

3. Technical Data contained in such reports and drawings.

B. *Underground Facilities*: Underground Facilities are shown or indicated on the Drawings, pursuant to Paragraph 5.05, and not in the drawings referred to in Paragraph 5.03.A. Information and data regarding the presence or location of Underground Facilities are not intended to be categorized, identified, or defined as Technical Data.

C. *Reliance by Contractor on Technical Data*: Contractor may rely upon the accuracy of the Technical Data expressly identified in the Supplementary Conditions with respect to such reports and drawings, but such reports and drawings are not Contract Documents. If no such express identification has been made, then Contractor may rely upon the accuracy of the Technical Data as defined in Paragraph 1.01.A.46.b.

D. *Limitations of Other Data and Documents*: Except for such reliance on Technical Data, Contractor may not rely upon or make any claim against Owner or Engineer, or any of their officers, directors, members, partners, employees, agents, consultants, or subcontractors, with respect to:

1. the completeness of such reports and drawings for Contractor's purposes, including, but not limited to, any aspects of the means, methods, techniques, sequences, and procedures of construction to be employed by Contractor, and safety precautions and programs incident thereto;

2. other data, interpretations, opinions, and information contained in such reports or shown or indicated in such drawings;

3. the contents of other Site-related documents made available to Contractor, such as record drawings from other projects at or adjacent to the Site, or Owner's archival documents concerning the Site; or

4. any Contractor interpretation of or conclusion drawn from any Technical Data or any such other data, interpretations, opinions, or information.

E. The following table lists the reports of explorations and tests of subsurface conditions at or adjacent to the Site that contain Technical Data, and specifically identifies the Technical Data in the report upon which Contractor may rely:

Report Title	Date of Report	Technical Data
Appendix 1 – Geotechnical Investigation Report	April 24, 2019	Geotechnical Investigation for Northeast Elevated Tank Site

F. The following table lists the drawings of existing physical conditions at or adjacent to the Site, including those drawings depicting existing surface or subsurface structures at or adjacent to the Site (except Underground Facilities), that contain Technical Data, and specifically identifies the Technical Data upon which Contractor may rely:

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

PACKET 10.1928 December 15, 2020

Drawings Title	Date of Drawings	Technical Data
None		

5.04 *Differing Subsurface or Physical Conditions*

A. *Notice by Contractor*: If Contractor believes that any subsurface or physical condition that is uncovered or revealed at the Site:

1. is of such a nature as to establish that any Technical Data on which Contractor is entitled to rely as provided in Paragraph 5.03 is materially inaccurate;

2. is of such a nature as to require a change in the Drawings or Specifications;

3. differs materially from that shown or indicated in the Contract Documents; or

4. is of an unusual nature, and differs materially from conditions ordinarily encountered and generally recognized as inherent in work of the character provided for in the Contract Documents;

then Contractor shall, promptly after becoming aware thereof and before further disturbing the subsurface or physical conditions or performing any Work in connection therewith (except in an emergency as required by Paragraph 7.15), notify Owner and Engineer in writing about such condition. Contractor shall not further disturb such condition or perform any Work in connection therewith (except with respect to an emergency) until receipt of a written statement permitting Contractor to do so.

B. *Engineer's Review*: After receipt of written notice as required by the preceding paragraph, Engineer will promptly review the subsurface or physical condition in question; determine whether it is necessary for Owner to obtain additional exploration or tests with respect to the condition; conclude whether the condition falls within any one or more of the differing site condition categories in Paragraph 5.04.A; obtain any pertinent cost or schedule information from Contractor; prepare recommendations to Owner regarding the Contractor's resumption of Work in connection with the subsurface or physical condition in question and the need for any change in the Drawings or Specifications; and advise Owner in writing of Engineer's findings, conclusions, and recommendations.

C. *Owner's Statement to Contractor Regarding Site Condition*: After receipt of Engineer's written findings, conclusions, and recommendations, Owner shall issue a written statement to Contractor (with a copy to Engineer) regarding the subsurface or physical condition in question, addressing the resumption of Work in connection with such condition, indicating whether any change in the Drawings or Specifications will be made, and adopting or rejecting Engineer's written findings, conclusions, and recommendations, in whole or in part.

D. *Early Resumption of Work*: If at any time Engineer determines that Work in connection with the subsurface or physical condition in question may resume prior to completion of Engineer's review or Owner's issuance of its statement to Contractor, because the condition in question has been adequately documented, and analyzed on a preliminary basis, then the Engineer may at its discretion instruct Contractor to resume such Work.

E. *Possible Price and Times Adjustments*

1. Contractor shall be entitled to an equitable adjustment in Contract Price or Contract Times, to the extent that the existence of a differing subsurface or physical condition, or any related delay, disruption, or interference, causes an increase or decrease in

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

Contractor's cost of, or time required for, performance of the Work; subject, however, to the following:

a. Such condition must fall within any one or more of the categories described in Paragraph 5.04.A;

b. With respect to Work that is paid for on a unit price basis, any adjustment in Contract Price will be subject to the provisions of Paragraph 13.03; and,

c. Contractor's entitlement to an adjustment of the Contract Times is subject to the provisions of Paragraphs 4.05.D and 4.05.E.

2. Contractor shall not be entitled to any adjustment in the Contract Price or Contract Times with respect to a subsurface or physical condition if:

a. Contractor knew of the existence of such condition at the time Contractor made a commitment to Owner with respect to Contract Price and Contract Times by the submission of a Bid or becoming bound under a negotiated contract, or otherwise;

b. The existence of such condition reasonably could have been discovered or revealed as a result of any examination, investigation, exploration, test, or study of the Site and contiguous areas expressly required by the Bidding Requirements or Contract Documents to be conducted by or for Contractor prior to Contractor's making such commitment; or

c. Contractor failed to give the written notice required by Paragraph 5.04.A.

3. If Owner and Contractor agree regarding Contractor's entitlement to and the amount or extent of any adjustment in the Contract Price or Contract Times, then any such adjustment will be set forth in a Change Order.

4. Contractor may submit a Change Proposal regarding its entitlement to or the amount or extent of any adjustment in the Contract Price or Contract Times, no later than 30 days after Owner's issuance of the Owner's written statement to Contractor regarding the subsurface or physical condition in question.

F. *Underground Facilities; Hazardous Environmental Conditions*: Paragraph 5.05 governs rights and responsibilities regarding the presence or location of Underground Facilities. Paragraph 5.06 governs rights and responsibilities regarding Hazardous Environmental Conditions. The provisions of Paragraphs 5.03 and 5.04 are not applicable to the presence or location of Underground Facilities, or to Hazardous Environmental Conditions.

5.05 *Underground Facilities*

A. *Contractor's Responsibilities*: Unless it is otherwise expressly provided in the Supplementary Conditions, the cost of all of the following are included in the Contract Price, and Contractor shall have full responsibility for:

1. reviewing and checking all information and data regarding existing Underground Facilities at the Site;

2. complying with applicable state and local utility damage prevention Laws and Regulations;

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

3. verifying the actual location of those Underground Facilities shown or indicated in the Contract Documents as being within the area affected by the Work, by exposing such Underground Facilities during the course of construction;

4. coordination of the Work with the owners (including Owner) of such Underground Facilities, during construction; and

5. the safety and protection of all existing Underground Facilities at the Site, and repairing any damage thereto resulting from the Work.

B. *Notice by Contractor*: If Contractor believes that an Underground Facility that is uncovered or revealed at the Site was not shown or indicated on the Drawings, or was not shown or indicated on the Drawings with reasonable accuracy, then Contractor shall, promptly after becoming aware thereof and before further disturbing conditions affected thereby or performing any Work in connection therewith (except in an emergency as required by Paragraph 7.15), notify Owner and Engineer in writing regarding such Underground Facility.

C. *Engineer's Review*: Engineer will:

1. promptly review the Underground Facility and conclude whether such Underground Facility was not shown or indicated on the Drawings, or was not shown or indicated with reasonable accuracy;

2. identify and communicate with the owner of the Underground Facility; prepare recommendations to Owner (and if necessary issue any preliminary instructions to Contractor) regarding the Contractor's resumption of Work in connection with the Underground Facility in question;

3. obtain any pertinent cost or schedule information from Contractor; determine the extent, if any, to which a change is required in the Drawings or Specifications to reflect and document the consequences of the existence or location of the Underground Facility; and

4. advise Owner in writing of Engineer's findings, conclusions, and recommendations.

During such time, Contractor shall be responsible for the safety and protection of such Underground Facility.

D. *Owner's Statement to Contractor Regarding Underground Facility*: After receipt of Engineer's written findings, conclusions, and recommendations, Owner shall issue a written statement to Contractor (with a copy to Engineer) regarding the Underground Facility in question addressing the resumption of Work in connection with such Underground Facility, indicating whether any change in the Drawings or Specifications will be made, and adopting or rejecting Engineer's written findings, conclusions, and recommendations in whole or in part.

E. *Early Resumption of Work*: If at any time Engineer determines that Work in connection with the Underground Facility may resume prior to completion of Engineer's review or Owner's issuance of its statement to Contractor, because the Underground Facility in question and conditions affected by its presence have been adequately documented, and analyzed on a preliminary basis, then the Engineer may at its discretion instruct Contractor to resume such Work.

F. *Possible Price and Times Adjustments*

1. Contractor shall be entitled to an equitable adjustment in the Contract Price or Contract Times, to the extent that any existing Underground Facility at the Site that was not shown

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

or indicated on the Drawings, or was not shown or indicated with reasonable accuracy, or any related delay, disruption, or interference, causes an increase or decrease in Contractor's cost of, or time required for, performance of the Work; subject, however, to the following:

a. With respect to Work that is paid for on a unit price basis, any adjustment in Contract Price will be subject to the provisions of Paragraph 13.03;

b. Contractor's entitlement to an adjustment of the Contract Times is subject to the provisions of Paragraphs 4.05.D and 4.05.E; and

c. Contractor gave the notice required in Paragraph 5.05.B.

2. If Owner and Contractor agree regarding Contractor's entitlement to and the amount or extent of any adjustment in the Contract Price or Contract Times, then any such adjustment will be set forth in a Change Order.

3. Contractor may submit a Change Proposal regarding its entitlement to or the amount or extent of any adjustment in the Contract Price or Contract Times, no later than 30 days after Owner's issuance of the Owner's written statement to Contractor regarding the Underground Facility in question.

4. The information and data shown or indicated on the Drawings with respect to existing Underground Facilities at the Site is based on information and data (a) furnished by the owners of such Underground Facilities, or by others, (b) obtained from available records, or (c) gathered in an investigation conducted in accordance with the current edition of ASCE 38, Standard Guideline for the Collection and Depiction of Existing Subsurface Utility Data, by the American Society of Civil Engineers. If such information or data is incorrect or incomplete, Contractor's remedies are limited to those set forth in this Paragraph 5.05.F.

5.06 *Hazardous Environmental Conditions at Site*

A. *Reports and Drawings*: The Supplementary Conditions identify:

1. those reports known to Owner relating to Hazardous Environmental Conditions that have been identified at or adjacent to the Site;

2. drawings known to Owner relating to Hazardous Environmental Conditions that have been identified at or adjacent to the Site; and

3. Technical Data contained in such reports and drawings.

4. The following table lists the reports known to Owner relating to Hazardous Environmental Conditions at or adjacent to the Site, and the Technical Data (if any) upon which Contractor may rely:

Report Title	Date of Report	Technical Data
None		

5. The following table lists the drawings known to Owner relating to Hazardous Environmental Conditions at or adjacent to the Site, and Technical Data (if any) contained in such Drawings upon which Contractor may rely:

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

Drawings Title	Date of Drawings	Technical Data
None		

B. *Reliance by Contractor on Technical Data Authorized*: Contractor may rely upon the accuracy of the Technical Data expressly identified in the Supplementary Conditions with respect to such reports and drawings, but such reports and drawings are not Contract Documents. If no such express identification has been made, then Contractor may rely on the accuracy of the Technical Data as defined in Paragraph 1.01.A.46.b. Except for such reliance on Technical Data, Contractor may not rely upon or make any claim against Owner or Engineer, or any of their officers, directors, members, partners, employees, agents, consultants, or subcontractors, with respect to:

1. the completeness of such reports and drawings for Contractor's purposes, including, but not limited to, any aspects of the means, methods, techniques, sequences and procedures of construction to be employed by Contractor, and safety precautions and programs incident thereto;

2. other data, interpretations, opinions, and information contained in such reports or shown or indicated in such drawings; or

3. any Contractor interpretation of or conclusion drawn from any Technical Data or any such other data, interpretations, opinions or information.

C. Contractor shall not be responsible for removing or remediating any Hazardous Environmental Condition encountered, uncovered, or revealed at the Site unless such removal or remediation is expressly identified in the Contract Documents to be within the scope of the Work.

D. Contractor shall be responsible for controlling, containing, and duly removing all Constituents of Concern brought to the Site by Contractor, Subcontractors, Suppliers, or anyone else for whom Contractor is responsible, and for any associated costs; and for the costs of removing and remediating any Hazardous Environmental Condition created by the presence of any such Constituents of Concern.

E. If Contractor encounters, uncovers, or reveals a Hazardous Environmental Condition whose removal or remediation is not expressly identified in the Contract Documents as being within the scope of the Work, or if Contractor or anyone for whom Contractor is responsible creates a Hazardous Environmental Condition, then Contractor shall immediately: (1) secure or otherwise isolate such condition; (2) stop all Work in connection with such condition and in any area affected thereby (except in an emergency as required by Paragraph 7.15); and (3) notify Owner and Engineer (and promptly thereafter confirm such notice in writing). Owner shall promptly consult with Engineer concerning the necessity for Owner to retain a qualified expert to evaluate such condition or take corrective action, if any. Promptly after consulting with Engineer, Owner shall take such actions as are necessary to permit Owner to timely obtain required permits and provide Contractor the written notice required by Paragraph 5.06.F. If Contractor or anyone for whom Contractor is responsible created the Hazardous Environmental Condition in question, then Owner may remove and remediate the Hazardous Environmental Condition, and impose a set-off against payments to account for the associated costs.

F. Contractor shall not resume Work in connection with such Hazardous Environmental Condition or in any affected area until after Owner has obtained any required permits related

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

thereto, and delivered written notice to Contractor either (1) specifying that such condition and any affected area is or has been rendered safe for the resumption of Work, or (2) specifying any special conditions under which such Work may be resumed safely.

G. If Owner and Contractor cannot agree as to entitlement to or on the amount or extent, if any, of any adjustment in Contract Price or Contract Times, as a result of such Work stoppage, such special conditions under which Work is agreed to be resumed by Contractor, or any costs or expenses incurred in response to the Hazardous Environmental Condition, then within 30 days of Owner's written notice regarding the resumption of Work, Contractor may submit a Change Proposal, or Owner may impose a set-off. Entitlement to any such adjustment is subject to the provisions of Paragraphs 4.05.D, 4.05.E, 11.07, and 11.08.

H. If, after receipt of such written notice, Contractor does not agree to resume such Work based on a reasonable belief it is unsafe, or does not agree to resume such Work under such special conditions, then Owner may order the portion of the Work that is in the area affected by such condition to be deleted from the Work, following the contractual change procedures in Article 11. Owner may have such deleted portion of the Work performed by Owner's own forces or others in accordance with Article 8.

I. To the fullest extent permitted by Laws and Regulations, Owner shall indemnify and hold harmless Contractor, Subcontractors, and Engineer, and the officers, directors, members, partners, employees, agents, consultants, and subcontractors of each and any of them, from and against all claims, costs, losses, and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals, and all court, arbitration, or other dispute resolution costs) arising out of or relating to a Hazardous Environmental Condition, provided that such Hazardous Environmental Condition (1) was not shown or indicated in the Drawings, Specifications, or other Contract Documents, identified as Technical Data entitled to limited reliance pursuant to Paragraph 5.06.B, or identified in the Contract Documents to be included within the scope of the Work, and (2) was not created by Contractor or by anyone for whom Contractor is responsible. Nothing in this Paragraph 5.06.I obligates Owner to indemnify any individual or entity from and against the consequences of that individual's or entity's own negligence.

J. To the fullest extent permitted by Laws and Regulations, Contractor shall indemnify and hold harmless Owner and Engineer, and the officers, directors, members, partners, employees, agents, consultants, and subcontractors of each and any of them, from and against all claims, costs, losses, and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all court or arbitration or other dispute resolution costs) arising out of or relating to the failure to control, contain, or remove a Constituent of Concern brought to the Site by Contractor or by anyone for whom Contractor is responsible, or to a Hazardous Environmental Condition created by Contractor or by anyone for whom Contractor is responsible. Nothing in this Paragraph 5.06.J obligates Contractor to indemnify any individual or entity from and against the consequences of that individual's or entity's own negligence.

K. The provisions of Paragraphs 5.03, 5.04, and 5.05 do not apply to the presence of Constituents of Concern or to a Hazardous Environmental Condition uncovered or revealed at the Site.

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

ARTICLE 6—BONDS AND INSURANCE

6.01 *Performance, Payment, and Other Bonds*

A. Contractor shall furnish a performance bond and a payment bond, each in an amount at least equal to the Contract Price, as security for the faithful performance and payment of Contractor's obligations under the Contract. These bonds must remain in effect until one year after the date when final payment becomes due or until completion of the correction period specified in Paragraph 15.08, whichever is later, except as provided otherwise by Laws or Regulations, the terms of a prescribed bond form, the Supplementary Conditions, or other provisions of the Contract.

B. Contractor shall also furnish such other bonds (if any) as are required by the Supplementary Conditions or other provisions of the Contract.

C. All bonds must be in the form included in the Bidding Documents or otherwise specified by Owner prior to execution of the Contract, except as provided otherwise by Laws or Regulations, and must be issued and signed by a surety named in "Companies Holding Certificates of Authority as Acceptable Sureties on Federal Bonds and as Acceptable Reinsuring Companies" as published in Department Circular 570 (as amended and supplemented) by the Bureau of the Fiscal Service, U.S. Department of the Treasury. A bond signed by an agent or attorney-in-fact must be accompanied by a certified copy of that individual's authority to bind the surety. The evidence of authority must show that it is effective on the date the agent or attorney-in-fact signed the accompanying bond.

D. Contractor shall obtain the required bonds from surety companies that are duly licensed or authorized, in the state or jurisdiction in which the Project is located, to issue bonds in the required amounts.

E. If the surety on a bond furnished by Contractor is declared bankrupt or becomes insolvent, or the surety ceases to meet the requirements above, then Contractor shall promptly notify Owner and Engineer in writing and shall, within 20 days after the event giving rise to such notification, provide another bond and surety, both of which must comply with the bond and surety requirements above.

F. If Contractor has failed to obtain a required bond, Owner may exclude the Contractor from the Site and exercise Owner's termination rights under Article 16.

G. Upon request to Owner from any Subcontractor, Supplier, or other person or entity claiming to have furnished labor, services, materials, or equipment used in the performance of the Work, Owner shall provide a copy of the payment bond to such person or entity.

H. Upon request to Contractor from any Subcontractor, Supplier, or other person or entity claiming to have furnished labor, services, materials, or equipment used in the performance of the Work, Contractor shall provide a copy of the payment bond to such person or entity.

6.02 *Insurance—General Provisions*

A. Owner and Contractor shall obtain and maintain insurance as required in this article and in the Supplementary Conditions.

B. All insurance required by the Contract to be purchased and maintained by Owner or Contractor shall be obtained from insurance companies that are duly licensed or authorized in the state or jurisdiction in which the Project is located to issue insurance policies for the

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

required limits and coverages. Unless a different standard is indicated in the Supplementary Conditions, all companies that provide insurance policies required under this Contract shall have an A.M. Best rating of A-VII or better.

1. Contractor may obtain worker's compensation insurance from an insurance company that has not been rated by A.M. Best, provided that such company (a) is domiciled in the state in which the Project is located, (b) is certified or authorized as a worker's compensation insurance provider by the appropriate state agency, and (c) has been accepted to provide worker's compensation insurance for similar projects by the state within the last 12 months.

C. Alternative forms of insurance coverage, including but not limited to self-insurance and "Occupational Accident and Excess Employer's Indemnity Policies," are not sufficient to meet the insurance requirements of this Contract, unless expressly allowed in the Supplementary Conditions.

D. Contractor shall deliver to Owner, with copies to each additional insured identified in the Contract, certificates of insurance and endorsements establishing that Contractor has obtained and is maintaining the policies and coverages required by the Contract. Upon request by Owner or any other insured, Contractor shall also furnish other evidence of such required insurance, including but not limited to copies of policies, documentation of applicable self-insured retentions (if allowed) and deductibles, full disclosure of all relevant exclusions, and evidence of insurance required to be purchased and maintained by Subcontractors or Suppliers. In any documentation furnished under this provision, Contractor, Subcontractors, and Suppliers may block out (redact) (1) any confidential premium or pricing information and (2) any wording specific to a project or jurisdiction other than those applicable to this Contract.

E. Owner shall deliver to Contractor, with copies to each additional insured identified in the Contract, certificates of insurance and endorsements establishing that Owner has obtained and is maintaining the policies and coverages required of Owner by the Contract (if any). Upon request by Contractor or any other insured, Owner shall also provide other evidence of such required insurance (if any), including but not limited to copies of policies, documentation of applicable self-insured retentions (if allowed) and deductibles, and full disclosure of all relevant exclusions. In any documentation furnished under this provision, Owner may block out (redact) (1) any confidential premium or pricing information and (2) any wording specific to a project or jurisdiction other than those relevant to this Contract.

F. Failure of Owner or Contractor to demand such certificates or other evidence of the other party's full compliance with these insurance requirements, or failure of Owner or Contractor to identify a deficiency in compliance from the evidence provided, will not be construed as a waiver of the other party's obligation to obtain and maintain such insurance.

G. In addition to the liability insurance required to be provided by Contractor, the Owner, at Owner's option, may purchase and maintain Owner's own liability insurance. Owner's liability policies, if any, operate separately and independently from policies required to be provided by Contractor, and Contractor cannot rely upon Owner's liability policies for any of Contractor's obligations to the Owner, Engineer, or third parties.

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

H. Contractor shall require:

1. Subcontractors to purchase and maintain worker's compensation, commercial general liability, and other insurance that is appropriate for their participation in the Project, and to name as additional insureds Owner and Engineer (and any other individuals or entities identified in the Supplementary Conditions as additional insureds on Contractor's liability policies) on each Subcontractor's commercial general liability insurance policy; and

2. Suppliers to purchase and maintain insurance that is appropriate for their participation in the Project.

I. If either party does not purchase or maintain the insurance required of such party by the Contract, such party shall notify the other party in writing of such failure to purchase prior to the start of the Work, or of such failure to maintain prior to any change in the required coverage.

J. If Contractor has failed to obtain and maintain required insurance, Contractor's entitlement to enter or remain at the Site will end immediately, and Owner may impose an appropriate set-off against payment for any associated costs (including but not limited to the cost of purchasing necessary insurance coverage), and exercise Owner's termination rights under Article 16.

K. Without prejudice to any other right or remedy, if a party has failed to obtain required insurance, the other party may elect (but is in no way obligated) to obtain equivalent insurance to protect such other party's interests at the expense of the party who was required to provide such coverage, and the Contract Price will be adjusted accordingly.

L. Owner does not represent that insurance coverage and limits established in this Contract necessarily will be adequate to protect Contractor or Contractor's interests. Contractor is responsible for determining whether such coverage and limits are adequate to protect its interests, and for obtaining and maintaining any additional insurance that Contractor deems necessary.

M. The insurance and insurance limits required herein will not be deemed as a limitation on Contractor's liability, or that of its Subcontractors or Suppliers, under the indemnities granted to Owner and other individuals and entities in the Contract or otherwise.

N. All the policies of insurance required to be purchased and maintained under this Contract will contain a provision or endorsement that the coverage afforded will not be canceled, or renewal refused, until at least 10 days prior written notice has been given to the purchasing policyholder. Within three days of receipt of any such written notice, the purchasing policyholder shall provide a copy of the notice to each other insured and Engineer.

6.03 *Contractor's Insurance*

A. *Required Insurance*: Contractor shall purchase and maintain Worker's Compensation, Commercial General Liability, and other insurance pursuant to the specific requirements of the Supplementary Conditions.

B. *General Provisions*: The policies of insurance required by this Paragraph 6.03 as supplemented must:

1. include at least the specific coverages required;

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

2. be written for not less than the limits provided, or those required by Laws or Regulations, whichever is greater;

3. remain in effect at least until the Work is complete (as set forth in Paragraph 15.06.D), and longer if expressly required elsewhere in this Contract, and at all times thereafter when Contractor may be correcting, removing, or replacing defective Work as a warranty or correction obligation, or otherwise, or returning to the Site to conduct other tasks arising from the Contract;

4. apply with respect to the performance of the Work, whether such performance is by Contractor, any Subcontractor or Supplier, or by anyone directly or indirectly employed by any of them to perform any of the Work, or by anyone for whose acts any of them may be liable; and

5. include all necessary endorsements to support the stated requirements.

C. *Additional Insureds*: The Contractor's commercial general liability, automobile liability, employer's liability, umbrella or excess, pollution liability, and unmanned aerial vehicle liability policies, if required by this Contract, must:

1. include and list as additional insureds Owner and Engineer, and any individuals or entities identified as additional insureds in the Supplementary Conditions;

2. include coverage for the respective officers, directors, members, partners, employees, and consultants of all such additional insureds;

3. afford primary coverage to these additional insureds for all claims covered thereby (including as applicable those arising from both ongoing and completed operations);

4. not seek contribution from insurance maintained by the additional insured; and

5. as to commercial general liability insurance, apply to additional insureds with respect to liability caused in whole or in part by Contractor's acts or omissions, or the acts and omissions of those working on Contractor's behalf, in the performance of Contractor's operations.

D. Reference Item 23 of the City of Midland Standard Purchasing Terms and Conditions.

6.04 *Builder's Risk and Other Property Insurance*

A. *Builder's Risk*: Unless otherwise provided in the Supplementary Conditions, Contractor shall purchase and maintain builder's risk insurance upon the Work on a completed value basis, in the amount of the Work's full insurable replacement cost (subject to such deductible amounts as may be provided in the Supplementary Conditions or required by Laws and Regulations). The specific requirements applicable to the builder's risk insurance are set forth in the Supplementary Conditions.

B. *Property Insurance for Facilities of Owner Where Work Will Occur*: Owner is responsible for obtaining and maintaining property insurance covering each existing structure, building, or facility in which any part of the Work will occur, or to which any part of the Work will attach or be adjoined. Such property insurance will be written on a special perils (all-risk) form, on a replacement cost basis, providing coverage consistent with that required for the builder's risk insurance, and will be maintained until the Work is complete, as set forth in Paragraph 15.06.D.

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

C. *Property Insurance for Substantially Complete Facilities*: Promptly after Substantial Completion, and before actual occupancy or use of the substantially completed Work, Owner will obtain property insurance for such substantially completed Work, and maintain such property insurance at least until the Work is complete, as set forth in Paragraph 15.06.D. Such property insurance will be written on a special perils (all-risk) form, on a replacement cost basis, and provide coverage consistent with that required for the builder's risk insurance. The builder's risk insurance may terminate upon written confirmation of Owner's procurement of such property insurance.

D. *Partial Occupancy or Use by Owner*: If Owner will occupy or use a portion or portions of the Work prior to Substantial Completion of all the Work, as provided in Paragraph 15.04, then Owner (directly, if it is the purchaser of the builder's risk policy, or through Contractor) will provide advance notice of such occupancy or use to the builder's risk insurer, and obtain an endorsement consenting to the continuation of coverage prior to commencing such partial occupancy or use.

E. *Insurance of Other Property; Additional Insurance*: If the express insurance provisions of the Contract do not require or address the insurance of a property item or interest, then the entity or individual owning such property item will be responsible for insuring it. If Contractor elects to obtain other special insurance to be included in or supplement the builder's risk or property insurance policies provided under this Paragraph 6.04, it may do so at Contractor's expense.

6.05 *Property Losses; Subrogation*

A. The builder's risk insurance policy purchased and maintained in accordance with Paragraph 6.04 (or an installation floater policy if authorized by the Supplementary Conditions), will contain provisions to the effect that in the event of payment of any loss or damage the insurer will have no rights of recovery against any insureds thereunder, or against Engineer or its consultants, or their officers, directors, members, partners, employees, agents, consultants, or subcontractors.

1. Owner and Contractor waive all rights against each other and the respective officers, directors, members, partners, employees, agents, consultants, and subcontractors of each and any of them, for all losses and damages caused by, arising out of, or resulting from any of the perils, risks, or causes of loss covered by such policies and any other property insurance applicable to the Work; and, in addition, waive all such rights against Engineer, its consultants, all individuals or entities identified in the Supplementary Conditions as builder's risk or installation floater insureds, and the officers, directors, members, partners, employees, agents, consultants, and subcontractors of each and any of them, under such policies for losses and damages so caused.

2. None of the above waivers extends to the rights that any party making such waiver may have to the proceeds of insurance held by Owner or Contractor as trustee or fiduciary, or otherwise payable under any policy so issued.

B. Any property insurance policy maintained by Owner covering any loss, damage, or consequential loss to Owner's existing structures, buildings, or facilities in which any part of the Work will occur, or to which any part of the Work will attach or adjoin; to adjacent structures, buildings, or facilities of Owner; or to part or all of the completed or substantially completed Work, during partial occupancy or use pursuant to Paragraph 15.04, after Substantial Completion pursuant to Paragraph 15.03, or after final payment pursuant to

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

Paragraph 15.06, will contain provisions to the effect that in the event of payment of any loss or damage the insurer will have no rights of recovery against any insureds thereunder, or against Contractor, Subcontractors, or Engineer, or the officers, directors, members, partners, employees, agents, consultants, or subcontractors of each and any of them, and that the insured is allowed to waive the insurer's rights of subrogation in a written contract executed prior to the loss, damage, or consequential loss.

1. Owner waives all rights against Contractor, Subcontractors, and Engineer, and the officers, directors, members, partners, employees, agents, consultants and subcontractors of each and any of them, for all losses and damages caused by, arising out of, or resulting from fire or any of the perils, risks, or causes of loss covered by such policies.

C. The waivers in this Paragraph 6.05 include the waiver of rights due to business interruption, loss of use, or other consequential loss extending beyond direct physical loss or damage to Owner's property or the Work caused by, arising out of, or resulting from fire or other insured peril, risk, or cause of loss.

D. Contractor shall be responsible for assuring that each Subcontract contains provisions whereby the Subcontractor waives all rights against Owner, Contractor, all individuals or entities identified in the Supplementary Conditions as insureds, the Engineer and its consultants, and the officers, directors, members, partners, employees, agents, consultants, and subcontractors of each and any of them, for all losses and damages caused by, arising out of, relating to, or resulting from fire or other peril, risk, or cause of loss covered by builder's risk insurance, installation floater, and any other property insurance applicable to the Work.

6.06 *Receipt and Application of Property Insurance Proceeds*

A. Any insured loss under the builder's risk and other policies of property insurance required by Paragraph 6.04 will be adjusted and settled with the named insured that purchased the policy. Such named insured shall act as fiduciary for the other insureds, and give notice to such other insureds that adjustment and settlement of a claim is in progress. Any other insured may state its position regarding a claim for insured loss in writing within 15 days after notice of such claim.

B. Proceeds for such insured losses may be made payable by the insurer either jointly to multiple insureds, or to the named insured that purchased the policy in its own right and as fiduciary for other insureds, subject to the requirements of any applicable mortgage clause. A named insured receiving insurance proceeds under the builder's risk and other policies of insurance required by Paragraph 6.04 shall maintain such proceeds in a segregated account, and distribute such proceeds in accordance with such agreement as the parties in interest may reach, or as otherwise required under the dispute resolution provisions of this Contract or applicable Laws and Regulations.

C. If no other special agreement is reached, Contractor shall repair or replace the damaged Work, using allocated insurance proceeds.

ARTICLE 7—CONTRACTOR'S RESPONSIBILITIES

7.01 *Contractor's Means and Methods of Construction*

A. Contractor shall be solely responsible for the means, methods, techniques, sequences, and procedures of construction.

B. If the Contract Documents note, or Contractor determines, that professional engineering or other design services are needed to carry out Contractor's responsibilities for construction means, methods, techniques, sequences, and procedures, or for Site safety, then Contractor shall cause such services to be provided by a properly licensed design professional, at Contractor's expense. Such services are not Owner-delegated professional design services under this Contract, and neither Owner nor Engineer has any responsibility with respect to (1) Contractor's determination of the need for such services, (2) the qualifications or licensing of the design professionals retained or employed by Contractor, (3) the performance of such services, or (4) any errors, omissions, or defects in such services.

7.02 *Supervision and Superintendence*

A. Contractor shall supervise, inspect, and direct the Work competently and efficiently, devoting such attention thereto and applying such skills and expertise as may be necessary to perform the Work in accordance with the Contract Documents.

B. At all times during the progress of the Work, Contractor shall assign a competent resident superintendent who will not be replaced without written notice to Owner and Engineer except under extraordinary circumstances.

7.03 *Labor; Working Hours*

A. Contractor shall provide competent, suitably qualified personnel to survey and lay out the Work and perform construction as required by the Contract Documents. Contractor shall maintain good discipline and order at the Site.

B. Contractor shall be fully responsible to Owner and Engineer for all acts and omissions of Contractor's employees; of Suppliers and Subcontractors, and their employees; and of any other individuals or entities performing or furnishing any of the Work, just as Contractor is responsible for Contractor's own acts and omissions.

C. Except as otherwise required for the safety or protection of persons or the Work or property at the Site or adjacent thereto, and except as otherwise stated in the Contract Documents, all Work at the Site will be performed during regular working hours, Monday through Friday. Contractor will not perform Work on a Saturday, Sunday, or any legal holiday. Contractor may perform Work outside regular working hours or on Saturdays, Sundays, or legal holidays only with Owner's written consent, which will not be unreasonably withheld.

7.04 *Services, Materials, and Equipment*

A. Unless otherwise specified in the Contract Documents, Contractor shall provide and assume full responsibility for all services, materials, equipment, labor, transportation, construction equipment and machinery, tools, appliances, fuel, power, light, heat, telephone, water, sanitary facilities, temporary facilities, and all other facilities and incidentals necessary for the performance, testing, start up, and completion of the Work, whether or not such items are specifically called for in the Contract Documents.

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

B. All materials and equipment incorporated into the Work must be new and of good quality, except as otherwise provided in the Contract Documents. All special warranties and guarantees required by the Specifications will expressly run to the benefit of Owner. If required by Engineer, Contractor shall furnish satisfactory evidence (including reports of required tests) as to the source, kind, and quality of materials and equipment.

C. All materials and equipment must be stored, applied, installed, connected, erected, protected, used, cleaned, and conditioned in accordance with instructions of the applicable Supplier, except as otherwise may be provided in the Contract Documents.

7.05 *"Or Equals"*

A. *Contractor's Request; Governing Criteria*: Whenever an item of equipment or material is specified or described in the Contract Documents by using the names of one or more proprietary items or specific Suppliers, the Contract Price has been based upon Contractor furnishing such item as specified. The specification or description of such an item is intended to establish the type, function, appearance, and quality required. Unless the specification or description contains or is followed by words reading that no like, equivalent, or "or equal" item is permitted, Contractor may request that Engineer authorize the use of other items of equipment or material, or items from other proposed Suppliers, under the circumstances described below.

1. If Engineer in its sole discretion determines that an item of equipment or material proposed by Contractor is functionally equal to that named and sufficiently similar so that no change in related Work will be required, Engineer will deem it an "or equal" item. For the purposes of this paragraph, a proposed item of equipment or material will be considered functionally equal to an item so named if:

a. in the exercise of reasonable judgment Engineer determines that the proposed item:

1) is at least equal in materials of construction, quality, durability, appearance, strength, and design characteristics;

2) will reliably perform at least equally well the function and achieve the results imposed by the design concept of the completed Project as a functioning whole;

3) has a proven record of performance and availability of responsive service; and

4) is not objectionable to Owner.

b. Contractor certifies that, if the proposed item is approved and incorporated into the Work:

1) there will be no increase in cost to the Owner or increase in Contract Times; and

2) the item will conform substantially to the detailed requirements of the item named in the Contract Documents.

B. *Contractor's Expense*: Contractor shall provide all data in support of any proposed "or equal" item at Contractor's expense.

C. *Engineer's Evaluation and Determination*: Engineer will be allowed a reasonable time to evaluate each "or-equal" request. Engineer may require Contractor to furnish additional data about the proposed "or-equal" item. Engineer will be the sole judge of acceptability. No "or-equal" item will be ordered, furnished, installed, or utilized until Engineer's review is complete

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

and Engineer determines that the proposed item is an "or-equal," which will be evidenced by an approved Shop Drawing or other written communication. Engineer will advise Contractor in writing of any negative determination.

D. *Effect of Engineer's Determination*: Neither approval nor denial of an "or-equal" request will result in any change in Contract Price. The Engineer's denial of an "or-equal" request will be final and binding, and may not be reversed through an appeal under any provision of the Contract.

E. *Treatment as a Substitution Request*: If Engineer determines that an item of equipment or material proposed by Contractor does not qualify as an "or-equal" item, Contractor may request that Engineer consider the item a proposed substitute pursuant to Paragraph 7.06.

7.06 *Substitutes*

A. *Contractor's Request; Governing Criteria*: Unless the specification or description of an item of equipment or material required to be furnished under the Contract Documents contains or is followed by words reading that no substitution is permitted, Contractor may request that Engineer authorize the use of other items of equipment or material under the circumstances described below. To the extent possible such requests must be made before commencement of related construction at the Site.

1. Contractor shall submit sufficient information as provided below to allow Engineer to determine if the item of material or equipment proposed is functionally equivalent to that named and an acceptable substitute therefor. Engineer will not accept requests for review of proposed substitute items of equipment or material from anyone other than Contractor.

2. The requirements for review by Engineer will be as set forth in Paragraph 7.06.B, as supplemented by the Specifications, and as Engineer may decide is appropriate under the circumstances.

3. Contractor shall make written application to Engineer for review of a proposed substitute item of equipment or material that Contractor seeks to furnish or use. The application:

   a. will certify that the proposed substitute item will:

      1) perform adequately the functions and achieve the results called for by the general design;

      2) be similar in substance to the item specified; and

      3) be suited to the same use as the item specified.

   b. will state:

      1) the extent, if any, to which the use of the proposed substitute item will necessitate a change in Contract Times;

      2) whether use of the proposed substitute item in the Work will require a change in any of the Contract Documents (or in the provisions of any other direct contract with Owner for other work on the Project) to adapt the design to the proposed substitute item; and

      3) whether incorporation or use of the proposed substitute item in connection with the Work is subject to payment of any license fee or royalty.

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

c. will identify:

1) all variations of the proposed substitute item from the item specified; and

2) available engineering, sales, maintenance, repair, and replacement services.

d. will contain an itemized estimate of all costs or credits that will result directly or indirectly from use of such substitute item, including but not limited to changes in Contract Price, shared savings, costs of redesign, and claims of other contractors affected by any resulting change.

B. *Engineer's Evaluation and Determination*: Engineer will be allowed a reasonable time to evaluate each substitute request, and to obtain comments and direction from Owner. Engineer may require Contractor to furnish additional data about the proposed substitute item. Engineer will be the sole judge of acceptability. No substitute will be ordered, furnished, installed, or utilized until Engineer's review is complete and Engineer determines that the proposed item is an acceptable substitute. Engineer's determination will be evidenced by a Field Order or a proposed Change Order accounting for the substitution itself and all related impacts, including changes in Contract Price or Contract Times. Engineer will advise Contractor in writing of any negative determination.

C. *Special Guarantee*: Owner may require Contractor to furnish at Contractor's expense a special performance guarantee or other surety with respect to any substitute.

D. *Reimbursement of Engineer's Cost*: Engineer will record Engineer's costs in evaluating a substitute proposed or submitted by Contractor. Whether or not Engineer approves a substitute so proposed or submitted by Contractor, Contractor shall reimburse Owner for the reasonable charges of Engineer for evaluating each such proposed substitute. Contractor shall also reimburse Owner for the reasonable charges of Engineer for making changes in the Contract Documents (or in the provisions of any other direct contract with Owner) resulting from the acceptance of each proposed substitute.

E. *Contractor's Expense*: Contractor shall provide all data in support of any proposed substitute at Contractor's expense.

F. *Effect of Engineer's Determination*: If Engineer approves the substitution request, Contractor shall execute the proposed Change Order and proceed with the substitution. The Engineer's denial of a substitution request will be final and binding, and may not be reversed through an appeal under any provision of the Contract. Contractor may challenge the scope of reimbursement costs imposed under Paragraph 7.06.D, by timely submittal of a Change Proposal.

7.07 *Concerning Subcontractors and Suppliers*

A. Contractor may retain Subcontractors and Suppliers for the performance of parts of the Work. Such Subcontractors and Suppliers must be acceptable to Owner. The Contractor's retention of a Subcontractor or Supplier for the performance of parts of the Work will not relieve Contractor's obligation to Owner to perform and complete the Work in accordance with the Contract Documents.

B. Contractor shall retain specific Subcontractors and Suppliers for the performance of designated parts of the Work if required by the Contract to do so.

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

C. Subsequent to the submittal of Contractor's Bid or final negotiation of the terms of the Contract, Owner may not require Contractor to retain any Subcontractor or Supplier to furnish or perform any of the Work against which Contractor has reasonable objection.

D. Prior to entry into any binding subcontract or purchase order, Contractor shall submit to Owner the identity of the proposed Subcontractor or Supplier (unless Owner has already deemed such proposed Subcontractor or Supplier acceptable during the bidding process or otherwise). Such proposed Subcontractor or Supplier shall be deemed acceptable to Owner unless Owner raises a substantive, reasonable objection within 5 days.

E. Owner may require the replacement of any Subcontractor or Supplier. Owner also may require Contractor to retain specific replacements; provided, however, that Owner may not require a replacement to which Contractor has a reasonable objection. If Contractor has submitted the identity of certain Subcontractors or Suppliers for acceptance by Owner, and Owner has accepted it (either in writing or by failing to make written objection thereto), then Owner may subsequently revoke the acceptance of any such Subcontractor or Supplier so identified solely on the basis of substantive, reasonable objection after due investigation. Contractor shall submit an acceptable replacement for the rejected Subcontractor or Supplier.

F. If Owner requires the replacement of any Subcontractor or Supplier retained by Contractor to perform any part of the Work, then Contractor shall be entitled to an adjustment in Contract Price or Contract Times, with respect to the replacement; and Contractor shall initiate a Change Proposal for such adjustment within 30 days of Owner's requirement of replacement.

G. No acceptance by Owner of any such Subcontractor or Supplier, whether initially or as a replacement, will constitute a waiver of the right of Owner to the completion of the Work in accordance with the Contract Documents.

H. On a monthly basis, Contractor shall submit to Engineer a complete list of all Subcontractors and Suppliers having a direct contract with Contractor, and of all other Subcontractors and Suppliers known to Contractor at the time of submittal.

I. Contractor shall be solely responsible for scheduling and coordinating the work of Subcontractors and Suppliers.

J. The divisions and sections of the Specifications and the identifications of any Drawings do not control Contractor in dividing the Work among Subcontractors or Suppliers, or in delineating the Work to be performed by any specific trade.

K. All Work performed for Contractor by a Subcontractor or Supplier must be pursuant to an appropriate contractual agreement that specifically binds the Subcontractor or Supplier to the applicable terms and conditions of the Contract for the benefit of Owner and Engineer.

L. Owner may furnish to any Subcontractor or Supplier, to the extent practicable, information about amounts paid to Contractor for Work performed for Contractor by the Subcontractor or Supplier.

M. Contractor shall restrict all Subcontractors and Suppliers from communicating with Engineer or Owner, except through Contractor or in case of an emergency, or as otherwise expressly allowed in this Contract.

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

7.08 *Patent Fees and Royalties*

A. Contractor shall pay all license fees and royalties and assume all costs incident to the use in the performance of the Work or the incorporation in the Work of any invention, design, process, product, or device which is the subject of patent rights or copyrights held by others. If an invention, design, process, product, or device is specified in the Contract Documents for use in the performance of the Work and if, to the actual knowledge of Owner or Engineer, its use is subject to patent rights or copyrights calling for the payment of any license fee or royalty to others, the existence of such rights will be disclosed in the Contract Documents.

B. To the fullest extent permitted by Laws and Regulations, Owner shall indemnify and hold harmless Contractor, and its officers, directors, members, partners, employees, agents, consultants, and subcontractors, from and against all claims, costs, losses, and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals, and all court or arbitration or other dispute resolution costs) arising out of or relating to any infringement of patent rights or copyrights incident to the use in the performance of the Work or resulting from the incorporation in the Work of any invention, design, process, product, or device specified in the Contract Documents, but not identified as being subject to payment of any license fee or royalty to others required by patent rights or copyrights.

C. To the fullest extent permitted by Laws and Regulations, Contractor shall indemnify and hold harmless Owner and Engineer, and the officers, directors, members, partners, employees, agents, consultants and subcontractors of each and any of them, from and against all claims, costs, losses, and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all court or arbitration or other dispute resolution costs) arising out of or relating to any infringement of patent rights or copyrights incident to the use in the performance of the Work or resulting from the incorporation in the Work of any invention, design, process, product, or device not specified in the Contract Documents.

7.09 *Permits*

A. Unless otherwise provided in the Contract Documents, Contractor shall obtain and pay for all construction permits, licenses, and certificates of occupancy. Owner shall assist Contractor, when necessary, in obtaining such permits and licenses. Contractor shall pay all governmental charges and inspection fees necessary for the prosecution of the Work which are applicable at the time of the submission of Contractor's Bid (or when Contractor became bound under a negotiated contract). Owner shall pay all charges of utility owners for connections for providing permanent service to the Work.

7.10 *Taxes*

A. Contractor shall pay all sales, consumer, use, and other similar taxes required to be paid by Contractor in accordance with the Laws and Regulations of the place of the Project which are applicable during the performance of the Work.

B. Owner is exempt from payment of sales and compensating use taxes of the State of Texas and of cities and counties thereof on all materials to be incorporated into the Work.

1. Owner will furnish the required certificates of tax exemption to Contractor for use in the purchase of supplies and materials to be incorporated into the Work.

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

2. Owner's exemption does not apply to construction tools, machinery, equipment, or other property purchased by or leased by Contractor, or to supplies or materials not incorporated into the Work

7.11 *Laws and Regulations*

A. Contractor shall give all notices required by and shall comply with all Laws and Regulations applicable to the performance of the Work. Neither Owner nor Engineer shall be responsible for monitoring Contractor's compliance with any Laws or Regulations.

B. If Contractor performs any Work or takes any other action knowing or having reason to know that it is contrary to Laws or Regulations, Contractor shall bear all resulting costs and losses, and shall indemnify and hold harmless Owner and Engineer, and the officers, directors, members, partners, employees, agents, consultants, and subcontractors of each and any of them, from and against all claims, costs, losses, and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all court or arbitration or other dispute resolution costs) arising out of or relating to such Work or other action. It is not Contractor's responsibility to make certain that the Work described in the Contract Documents is in accordance with Laws and Regulations, but this does not relieve Contractor of its obligations under Paragraph 3.03.

C. Owner or Contractor may give written notice to the other party of any changes after the submission of Contractor's Bid (or after the date when Contractor became bound under a negotiated contract) in Laws or Regulations having an effect on the cost or time of performance of the Work, including but not limited to changes in Laws or Regulations having an effect on procuring permits and on sales, use, value-added, consumption, and other similar taxes. If Owner and Contractor are unable to agree on entitlement to or on the amount or extent, if any, of any adjustment in Contract Price or Contract Times resulting from such changes, then within 30 days of such written notice Contractor may submit a Change Proposal, or Owner may initiate a Claim.

7.12 *Record Documents*

A. Contractor shall maintain in a safe place at the Site one printed record copy of all Drawings, Specifications, Addenda, Change Orders, Work Change Directives, Field Orders, written interpretations and clarifications, and approved Shop Drawings. Contractor shall keep such record documents in good order and annotate them to show changes made during construction. These record documents, together with all approved Samples, will be available to Engineer for reference. Upon completion of the Work, Contractor shall deliver these record documents to Engineer.

7.13 *Safety and Protection*

A. Contractor shall be solely responsible for initiating, maintaining, and supervising all safety precautions and programs in connection with the Work. Such responsibility does not relieve Subcontractors of their responsibility for the safety of persons or property in the performance of their work, nor for compliance with applicable safety Laws and Regulations.

B. Contractor shall designate a qualified and experienced safety representative whose duties and responsibilities are the prevention of Work-related accidents and the maintenance and supervision of safety precautions and programs.

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

C. Contractor shall take all necessary precautions for the safety of, and shall provide the necessary protection to prevent damage, injury, or loss to:

1. all persons on the Site or who may be affected by the Work;

2. all the Work and materials and equipment to be incorporated therein, whether in storage on or off the Site; and

3. other property at the Site or adjacent thereto, including trees, shrubs, lawns, walks, pavements, roadways, structures, other work in progress, utilities, and Underground Facilities not designated for removal, relocation, or replacement in the course of construction.

D. All damage, injury, or loss to any property referred to in Paragraph 7.13.C.2 or 7.13.C.3 caused, directly or indirectly, in whole or in part, by Contractor, any Subcontractor, Supplier, or any other individual or entity directly or indirectly employed by any of them to perform any of the Work, or anyone for whose acts any of them may be liable, shall be remedied by Contractor at its expense (except damage or loss attributable to the fault of Drawings or Specifications or to the acts or omissions of Owner or Engineer or anyone employed by any of them, or anyone for whose acts any of them may be liable, and not attributable, directly or indirectly, in whole or in part, to the fault or negligence of Contractor or any Subcontractor, Supplier, or other individual or entity directly or indirectly employed by any of them).

E. Contractor shall comply with all applicable Laws and Regulations relating to the safety of persons or property, or to the protection of persons or property from damage, injury, or loss; and shall erect and maintain all necessary safeguards for such safety and protection.

F. Contractor shall notify Owner; the owners of adjacent property; the owners of Underground Facilities and other utilities (if the identity of such owners is known to Contractor); and other contractors and utility owners performing work at or adjacent to the Site, in writing, when Contractor knows that prosecution of the Work may affect them, and shall cooperate with them in the protection, removal, relocation, and replacement of their property or work in progress.

G. Contractor shall comply with the applicable requirements of Owner's safety programs, if any. Any Owner's safety programs that are applicable to the Work are identified or included in the Supplementary Conditions or Specifications.

H. Contractor shall inform Owner and Engineer of the specific requirements of Contractor's safety program with which Owner's and Engineer's employees and representatives must comply while at the Site.

I. Contractor's duties and responsibilities for safety and protection will continue until all the Work is completed, Engineer has issued a written notice to Owner and Contractor in accordance with Paragraph 15.06.C that the Work is acceptable, and Contractor has left the Site (except as otherwise expressly provided in connection with Substantial Completion).

J. Contractor's duties and responsibilities for safety and protection will resume whenever Contractor or any Subcontractor or Supplier returns to the Site to fulfill warranty or correction obligations, or to conduct other tasks arising from the Contract Documents.

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

7.14 *Hazard Communication Programs*

A. Contractor shall be responsible for coordinating any exchange of safety data sheets (formerly known as material safety data sheets) or other hazard communication information required to be made available to or exchanged between or among employers at the Site in accordance with Laws or Regulations.

7.15 *Emergencies*

A. In emergencies affecting the safety or protection of persons or the Work or property at the Site or adjacent thereto, Contractor is obligated to act to prevent damage, injury, or loss. Contractor shall give Engineer prompt written notice if Contractor believes that any significant changes in the Work or variations from the Contract Documents have been caused by an emergency, or are required as a result of Contractor's response to an emergency. If Engineer determines that a change in the Contract Documents is required because of an emergency or Contractor's response, a Work Change Directive or Change Order will be issued.

7.16 *Submittals*

A. *Shop Drawing and Sample Requirements*

1. Before submitting a Shop Drawing or Sample, Contractor shall:

a. review and coordinate the Shop Drawing or Sample with other Shop Drawings and Samples and with the requirements of the Work and the Contract Documents;

b. determine and verify:

1) all field measurements, quantities, dimensions, specified performance and design criteria, installation requirements, materials, catalog numbers, and similar information with respect to the Submittal;

2) the suitability of all materials and equipment offered with respect to the indicated application, fabrication, shipping, handling, storage, assembly, and installation pertaining to the performance of the Work; and

3) all information relative to Contractor's responsibilities for means, methods, techniques, sequences, and procedures of construction, and safety precautions and programs incident thereto;

c. confirm that the Submittal is complete with respect to all related data included in the Submittal.

2. Each Shop Drawing or Sample must bear a stamp or specific written certification that Contractor has satisfied Contractor's obligations under the Contract Documents with respect to Contractor's review of that Submittal, and that Contractor approves the Submittal.

3. With each Shop Drawing or Sample, Contractor shall give Engineer specific written notice of any variations that the Submittal may have from the requirements of the Contract Documents. This notice must be set forth in a written communication separate from the Submittal; and, in addition, in the case of a Shop Drawing by a specific notation made on the Shop Drawing itself.

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

B. *Submittal Procedures for Shop Drawings and Samples*: Contractor shall label and submit Shop Drawings and Samples to Engineer for review and approval in accordance with the accepted Schedule of Submittals.

1. *Shop Drawings*

    a. Contractor shall submit the number of copies required in the Specifications.

    b. Data shown on the Shop Drawings must be complete with respect to quantities, dimensions, specified performance and design criteria, materials, and similar data to show Engineer the services, materials, and equipment Contractor proposes to provide, and to enable Engineer to review the information for the limited purposes required by Paragraph 7.16.C.

2. *Samples*

    a. Contractor shall submit the number of Samples required in the Specifications.

    b. Contractor shall clearly identify each Sample as to material, Supplier, pertinent data such as catalog numbers, the use for which intended and other data as Engineer may require to enable Engineer to review the Submittal for the limited purposes required by Paragraph 7.16.C.

3. Where a Shop Drawing or Sample is required by the Contract Documents or the Schedule of Submittals, any related Work performed prior to Engineer's review and approval of the pertinent submittal will be at the sole expense and responsibility of Contractor.

C. *Engineer's Review of Shop Drawings and Samples*

1. Engineer will provide timely review of Shop Drawings and Samples in accordance with the accepted Schedule of Submittals. Engineer's review and approval will be only to determine if the items covered by the Submittals will, after installation or incorporation in the Work, comply with the requirements of the Contract Documents, and be compatible with the design concept of the completed Project as a functioning whole as indicated by the Contract Documents.

2. Engineer's review and approval will not extend to means, methods, techniques, sequences, or procedures of construction, or to safety precautions or programs incident thereto.

3. Engineer's review and approval of a separate item as such will not indicate approval of the assembly in which the item functions.

4. Engineer's review and approval of a Shop Drawing or Sample will not relieve Contractor from responsibility for any variation from the requirements of the Contract Documents unless Contractor has complied with the requirements of Paragraph 7.16.A.3 and Engineer has given written approval of each such variation by specific written notation thereof incorporated in or accompanying the Shop Drawing or Sample. Engineer will document any such approved variation from the requirements of the Contract Documents in a Field Order or other appropriate Contract modification.

5. Engineer's review and approval of a Shop Drawing or Sample will not relieve Contractor from responsibility for complying with the requirements of Paragraphs 7.16.A and B.

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

6. Engineer's review and approval of a Shop Drawing or Sample, or of a variation from the requirements of the Contract Documents, will not, under any circumstances, change the Contract Times or Contract Price, unless such changes are included in a Change Order.

7. Neither Engineer's receipt, review, acceptance, or approval of a Shop Drawing or Sample will result in such item becoming a Contract Document.

8. Contractor shall perform the Work in compliance with the requirements and commitments set forth in approved Shop Drawings and Samples, subject to the provisions of Paragraph 7.16.C.4.

D. *Resubmittal Procedures for Shop Drawings and Samples*

1. Contractor shall make corrections required by Engineer and shall return the required number of corrected copies of Shop Drawings and submit, as required, new Samples for review and approval. Contractor shall direct specific attention in writing to revisions other than the corrections called for by Engineer on previous Submittals.

2. Contractor shall furnish required Shop Drawing and Sample submittals with sufficient information and accuracy to obtain required approval of an item with no more than two resubmittals. Engineer will record Engineer's time for reviewing a third or subsequent resubmittal of a Shop Drawing or Sample, and Contractor shall be responsible for Engineer's charges to Owner for such time. Owner may impose a set-off against payments due Contractor to secure reimbursement for such charges.

3. If Contractor requests a change of a previously approved Shop Drawing or Sample, Contractor shall be responsible for Engineer's charges to Owner for its review time, and Owner may impose a set-off against payments due Contractor to secure reimbursement for such charges, unless the need for such change is beyond the control of Contractor.

E. *Submittals Other than Shop Drawings, Samples, and Owner-Delegated Designs*

1. The following provisions apply to all Submittals other than Shop Drawings, Samples, and Owner-delegated designs:

   a. Contractor shall submit all such Submittals to the Engineer in accordance with the Schedule of Submittals and pursuant to the applicable terms of the Contract Documents.

   b. Engineer will provide timely review of all such Submittals in accordance with the Schedule of Submittals and return such Submittals with a notation of either Accepted or Not Accepted. Any such Submittal that is not returned within the time established in the Schedule of Submittals will be deemed accepted.

   c. Engineer's review will be only to determine if the Submittal is acceptable under the requirements of the Contract Documents as to general form and content of the Submittal.

   d. If any such Submittal is not accepted, Contractor shall confer with Engineer regarding the reason for the non-acceptance, and resubmit an acceptable document.

2. Procedures for the submittal and acceptance of the Progress Schedule, the Schedule of Submittals, and the Schedule of Values are set forth in Paragraphs 2.03. 2.04, and 2.05.

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

F. Owner-delegated Designs: Submittals pursuant to Owner-delegated designs are governed by the provisions of Paragraph 7.19.

7.17 *Contractor's General Warranty and Guarantee*

A. Contractor warrants and guarantees to Owner that all Work will be in accordance with the Contract Documents and will not be defective. Engineer is entitled to rely on Contractor's warranty and guarantee.

B. Owner's rights under this warranty and guarantee are in addition to, and are not limited by, Owner's rights under the correction period provisions of Paragraph 15.08. The time in which Owner may enforce its warranty and guarantee rights under this Paragraph 7.17 is limited only by applicable Laws and Regulations restricting actions to enforce such rights; provided, however, that after the end of the correction period under Paragraph 15.08:

1. Owner shall give Contractor written notice of any defective Work within 60 days of the discovery that such Work is defective; and

2. Such notice will be deemed the start of an event giving rise to a Claim under Paragraph 12.01.B, such that any related Claim must be brought within 30 days of the notice.

C. Contractor's warranty and guarantee hereunder excludes defects or damage caused by:

1. abuse, or improper modification, maintenance, or operation, by persons other than Contractor, Subcontractors, Suppliers, or any other individual or entity for whom Contractor is responsible; or

2. normal wear and tear under normal usage.

D. Contractor's obligation to perform and complete the Work in accordance with the Contract Documents is absolute. None of the following will constitute an acceptance of Work that is not in accordance with the Contract Documents, a release of Contractor's obligation to perform the Work in accordance with the Contract Documents, or a release of Owner's warranty and guarantee rights under this Paragraph 7.17:

1. Observations by Engineer;

2. Recommendation by Engineer or payment by Owner of any progress or final payment;

3. The issuance of a certificate of Substantial Completion by Engineer or any payment related thereto by Owner;

4. Use or occupancy of the Work or any part thereof by Owner;

5. Any review and approval of a Shop Drawing or Sample submittal;

6. The issuance of a notice of acceptability by Engineer;

7. The end of the correction period established in Paragraph 15.08;

8. Any inspection, test, or approval by others; or

9. Any correction of defective Work by Owner.

E. If the Contract requires the Contractor to accept the assignment of a contract entered into by Owner, then the specific warranties, guarantees, and correction obligations contained in the

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

assigned contract will govern with respect to Contractor's performance obligations to Owner for the Work described in the assigned contract.

7.18 *Indemnification*

A. To the fullest extent permitted by Laws and Regulations, and in addition to any other obligations of Contractor under the Contract or otherwise, Contractor shall indemnify and hold harmless Owner and Engineer, and the officers, directors, members, partners, employees, agents, consultants and subcontractors of each and any of them, from losses, damages, costs, and judgments (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals, and all court or arbitration or other dispute resolution costs) arising from third-party claims or actions relating to or resulting from the performance or furnishing of the Work, provided that any such claim, action, loss, cost, judgment or damage is attributable to bodily injury, sickness, disease, or death, or to damage to or destruction of tangible property (other than the Work itself), including the loss of use resulting therefrom, but only to the extent caused by any negligent act or omission of Contractor, any Subcontractor, any Supplier, or any individual or entity directly or indirectly employed by any of them to perform any of the Work, or anyone for whose acts any of them may be liable.

B. In any and all claims against Owner or Engineer, or any of their officers, directors, members, partners, employees, agents, consultants, or subcontractors, by any employee (or the survivor or personal representative of such employee) of Contractor, any Subcontractor, any Supplier, or any individual or entity directly or indirectly employed by any of them to perform any of the Work, or anyone for whose acts any of them may be liable, the indemnification obligation under Paragraph 7.18.A will not be limited in any way by any limitation on the amount or type of damages, compensation, or benefits payable by or for Contractor or any such Subcontractor, Supplier, or other individual or entity under workers' compensation acts, disability benefit acts, or other employee benefit acts.

7.19 *Delegation of Professional Design Services*

A. Owner may require Contractor to provide professional design services for a portion of the Work by express delegation in the Contract Documents. Such delegation will specify the performance and design criteria that such services must satisfy, and the Submittals that Contractor must furnish to Engineer with respect to the Owner-delegated design.

B. Contractor shall cause such Owner-delegated professional design services to be provided pursuant to the professional standard of care by a properly licensed design professional, whose signature and seal must appear on all drawings, calculations, specifications, certifications, and Submittals prepared by such design professional. Such design professional must issue all certifications of design required by Laws and Regulations.

C. If a Shop Drawing or other Submittal related to the Owner-delegated design is prepared by Contractor, a Subcontractor, or others for submittal to Engineer, then such Shop Drawing or other Submittal must bear the written approval of Contractor's design professional when submitted by Contractor to Engineer.

D. Owner and Engineer shall be entitled to rely upon the adequacy, accuracy, and completeness of the services, certifications, and approvals performed or provided by the design professionals retained or employed by Contractor under an Owner-delegated design, subject

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

to the professional standard of care and the performance and design criteria stated in the Contract Documents.

E. Pursuant to this Paragraph 7.19, Engineer's review, approval, and other determinations regarding design drawings, calculations, specifications, certifications, and other Submittals furnished by Contractor pursuant to an Owner-delegated design will be only for the following limited purposes:

1. Checking for conformance with the requirements of this Paragraph 7.19;

2. Confirming that Contractor (through its design professionals) has used the performance and design criteria specified in the Contract Documents; and

3. Establishing that the design furnished by Contractor is consistent with the design concept expressed in the Contract Documents.

F. Contractor shall not be responsible for the adequacy of performance or design criteria specified by Owner or Engineer.

G. Contractor is not required to provide professional services in violation of applicable Laws and Regulations.

ARTICLE 8—OTHER WORK AT THE SITE

8.01 *Other Work*

A. In addition to and apart from the Work under the Contract Documents, the Owner may perform other work at or adjacent to the Site. Such other work may be performed by Owner's employees, or through contracts between the Owner and third parties. Owner may also arrange to have third-party utility owners perform work on their utilities and facilities at or adjacent to the Site.

B. If Owner performs other work at or adjacent to the Site with Owner's employees, or through contracts for such other work, then Owner shall give Contractor written notice thereof prior to starting any such other work. If Owner has advance information regarding the start of any third-party utility work that Owner has arranged to take place at or adjacent to the Site, Owner shall provide such information to Contractor.

C. Contractor shall afford proper and safe access to the Site to each contractor that performs such other work, each utility owner performing other work, and Owner, if Owner is performing other work with Owner's employees, and provide a reasonable opportunity for the introduction and storage of materials and equipment and the execution of such other work.

D. Contractor shall do all cutting, fitting, and patching of the Work that may be required to properly connect or otherwise make its several parts come together and properly integrate with such other work. Contractor shall not endanger any work of others by cutting, excavating, or otherwise altering such work; provided, however, that Contractor may cut or alter others' work with the written consent of Engineer and the others whose work will be affected.

E. If the proper execution or results of any part of Contractor's Work depends upon work performed by others, Contractor shall inspect such other work and promptly report to Engineer in writing any delays, defects, or deficiencies in such other work that render it

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

unavailable or unsuitable for the proper execution and results of Contractor's Work. Contractor's failure to so report will constitute an acceptance of such other work as fit and proper for integration with Contractor's Work except for latent defects and deficiencies in such other work.

F. The provisions of this article are not applicable to work that is performed by third-party utilities or other third-party entities without a contract with Owner, or that is performed without having been arranged by Owner. If such work occurs, then any related delay, disruption, or interference incurred by Contractor is governed by the provisions of Paragraph 4.05.C.3.

8.02 *Coordination*

A. If Owner intends to contract with others for the performance of other work at or adjacent to the Site, to perform other work at or adjacent to the Site with Owner's employees, or to arrange to have utility owners perform work at or adjacent to the Site, the following will be set forth in the Supplementary Conditions or provided to Contractor prior to the start of any such other work:

1. The identity of the individual or entity that will have authority and responsibility for coordination of the activities among the various contractors;

2. An itemization of the specific matters to be covered by such authority and responsibility; and

3. The extent of such authority and responsibilities.

B. Unless otherwise provided in the Supplementary Conditions, Owner shall have sole authority and responsibility for such coordination.

8.03 *Legal Relationships*

A. If, in the course of performing other work for Owner at or adjacent to the Site, the Owner's employees, any other contractor working for Owner, or any utility owner that Owner has arranged to perform work, causes damage to the Work or to the property of Contractor or its Subcontractors, or delays, disrupts, interferes with, or increases the scope or cost of the performance of the Work, through actions or inaction, then Contractor shall be entitled to an equitable adjustment in the Contract Price or the Contract Times. Contractor must submit any Change Proposal seeking an equitable adjustment in the Contract Price or the Contract Times under this paragraph within 30 days of the damaging, delaying, disrupting, or interfering event. The entitlement to, and extent of, any such equitable adjustment will take into account information (if any) regarding such other work that was provided to Contractor in the Contract Documents prior to the submittal of the Bid or the final negotiation of the terms of the Contract, and any remedies available to Contractor under Laws or Regulations concerning utility action or inaction. When applicable, any such equitable adjustment in Contract Price will be conditioned on Contractor assigning to Owner all Contractor's rights against such other contractor or utility owner with respect to the damage, delay, disruption, or interference that is the subject of the adjustment. Contractor's entitlement to an adjustment of the Contract Times or Contract Price is subject to the provisions of Paragraphs 4.05.D and 4.05.E.

B. Contractor shall take reasonable and customary measures to avoid damaging, delaying, disrupting, or interfering with the work of Owner, any other contractor, or any utility owner performing other work at or adjacent to the Site.

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

1. If Contractor fails to take such measures and as a result damages, delays, disrupts, or interferes with the work of any such other contractor or utility owner, then Owner may impose a set-off against payments due Contractor, and assign to such other contractor or utility owner the Owner's contractual rights against Contractor with respect to the breach of the obligations set forth in this Paragraph 8.03.B.

2. When Owner is performing other work at or adjacent to the Site with Owner's employees, Contractor shall be liable to Owner for damage to such other work, and for the reasonable direct delay, disruption, and interference costs incurred by Owner as a result of Contractor's failure to take reasonable and customary measures with respect to Owner's other work. In response to such damage, delay, disruption, or interference, Owner may impose a set-off against payments due Contractor.

C. If Contractor damages, delays, disrupts, or interferes with the work of any other contractor, or any utility owner performing other work at or adjacent to the Site, through Contractor's failure to take reasonable and customary measures to avoid such impacts, or if any claim arising out of Contractor's actions, inactions, or negligence in performance of the Work at or adjacent to the Site is made by any such other contractor or utility owner against Contractor, Owner, or Engineer, then Contractor shall (1) promptly attempt to settle the claim as to all parties through negotiations with such other contractor or utility owner, or otherwise resolve the claim by arbitration or other dispute resolution proceeding or at law, and (2) indemnify and hold harmless Owner and Engineer, and the officers, directors, members, partners, employees, agents, consultants and subcontractors of each and any of them from and against any such claims, and against all costs, losses, and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all court or arbitration or other dispute resolution costs) arising out of or relating to such damage, delay, disruption, or interference.

ARTICLE 9—OWNER'S RESPONSIBILITIES

9.01 *Communications to Contractor*

A. Except as otherwise provided in these General Conditions, Owner shall issue all communications to Contractor through Engineer.

9.02 *Replacement of Engineer*

A. Owner may at its discretion appoint an engineer to replace Engineer, provided Contractor makes no reasonable objection to the replacement engineer. The replacement engineer's status under the Contract Documents will be that of the former Engineer.

9.03 *Furnish Data*

A. Owner shall promptly furnish the data required of Owner under the Contract Documents.

9.04 *Pay When Due*

A. Owner shall make payments to Contractor when they are due as provided in the Agreement.

9.05 *Lands and Easements; Reports, Tests, and Drawings*

A. Owner's duties with respect to providing lands and easements are set forth in Paragraph 5.01.

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

B. Owner's duties with respect to providing engineering surveys to establish reference points are set forth in Paragraph 4.03.

C. Article 5 refers to Owner's identifying and making available to Contractor copies of reports of explorations and tests of conditions at the Site, and drawings of physical conditions relating to existing surface or subsurface structures at the Site.

9.06 *Insurance*

A. Owner's responsibilities, if any, with respect to purchasing and maintaining liability and property insurance are set forth in Article 6.

9.07 *Change Orders*

A. Owner's responsibilities with respect to Change Orders are set forth in Article 11.

9.08 *Inspections, Tests, and Approvals*

A. Owner's responsibility with respect to certain inspections, tests, and approvals is set forth in Paragraph 14.02.B.

9.09 *Limitations on Owner's Responsibilities*

A. The Owner shall not supervise, direct, or have control or authority over, nor be responsible for, Contractor's means, methods, techniques, sequences, or procedures of construction, or the safety precautions and programs incident thereto, or for any failure of Contractor to comply with Laws and Regulations applicable to the performance of the Work. Owner will not be responsible for Contractor's failure to perform the Work in accordance with the Contract Documents.

9.10 *Undisclosed Hazardous Environmental Condition*

A. Owner's responsibility in respect to an undisclosed Hazardous Environmental Condition is set forth in Paragraph 5.06.

9.11 *Evidence of Financial Arrangements*

A. Upon request of Contractor, Owner shall furnish Contractor reasonable evidence that financial arrangements have been made to satisfy Owner's obligations under the Contract (including obligations under proposed changes in the Work).

9.12 *Safety Programs*

A. While at the Site, Owner's employees and representatives shall comply with the specific applicable requirements of Contractor's safety programs of which Owner has been informed.

B. Owner shall furnish copies of any applicable Owner safety programs to Contractor.

ARTICLE 10—ENGINEER'S STATUS DURING CONSTRUCTION

10.01 *Owner's Representative*

A. Engineer will be Owner's representative during the construction period. The duties and responsibilities and the limitations of authority of Engineer as Owner's representative during construction are set forth in the Contract.

Copyright© 2018 National Society of Professional Engineers, American Council of Engineering Companies, and American Society of Civil Engineers. All rights reserved.

10.02 *Visits to Site*

A. Engineer will make visits to the Site at intervals appropriate to the various stages of construction as Engineer deems necessary in order to observe, as an experienced and qualified design professional, the progress that has been made and the quality of the various aspects of Contractor's executed Work. Based on information obtained during such visits and observations, Engineer, for the benefit of Owner, will determine, in general, if the Work is proceeding in accordance with the Contract Documents. Engineer will not be required to make exhaustive or continuous inspections on the Site to check the quality or quantity of the Work. Engineer's efforts will be directed toward providing for Owner a greater degree of confidence that the completed Work will conform generally to the Contract Documents. On the basis of such visits and observations, Engineer will keep Owner informed of the progress of the Work and will endeavor to guard Owner against defective Work.

B. Engineer's visits and observations are subject to all the limitations on Engineer's authority and responsibility set forth in Paragraph 10.07. Particularly, but without limitation, during or as a result of Engineer's visits or observations of Contractor's Work, Engineer will not supervise, direct, control, or have authority over or be responsible for Contractor's means, methods, techniques, sequences, or procedures of construction, or the safety precautions and programs incident thereto, or for any failure of Contractor to comply with Laws and Regulations applicable to the performance of the Work.

10.03 *Resident Project Representative*
